Version	Date	Action	Change Tracking
1	August 10, 2005	<ol style="list-style-type: none"> 1. Changed incorrect use of certain hyphens (-) to “en dash (-).” 2. Hyphenated “30-day” when used as adjective. 3. Changed standard header to be consistent with standard “Title.” 4. Initial capped heading “Definitions of Terms Used in Standard.” 5. Added “periods” to items where appropriate. 6. Changed “Timeframe” to “Time Frame” in item D, 1.2. 7. Lower cased all words that are not “defined” terms — drafting team, self-certification. 8. Changed apostrophes to “smart” symbols. 9. Added comma in all word strings “Procedures, Processes, or Plans,” etc. 10. Added hyphens to “Reliability Coordinator-to-Reliability Coordinator” where used as adjective. 11. Removed comma in item 2.1.2. 12. Removed extra spaces between words where appropriate. 	January 20, 2006
1	February 7, 2006	Approved by BOT	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
2	TBD	Revised per SAR for Project 2006-6, RC SDT ; <u>Revised existing requirements for clarity, retired R3 and R4 and incorporated requirements from IRO-015-1 and IRO-016-1 into this standard.</u>	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.
10. Third posting of revised standards on January 4, 2010 with comment period closed on February 18, 2010.
11. The fourth draft of the standards was posted for a comment period with an Initial Ballot that ended on March 7, 2011.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting is for the recirculation ballot. The initial ballot was conducted as a single vote for a set of standards and their associated implementation plans and definitions. Following the initial ballot the Standards Committee authorized the team to separate the standards and post the standards that have achieved consensus for individual recirculation ballots. This is the fifth posting of this standard.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Standards posted for recirculation ballots.	July 2011
2. Standards sent to BOT for approval.	August 2011
3. Standards filed with regulatory authorities.	September 2011

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

The RC SDT proposes the following modified definition:

Adverse Reliability Impact: The impact of an event that results in Bulk Electric System instability or Cascading.

A. Introduction

1. **Title:** ~~Procedures, Processes, or Plans to Support~~ **Coordination Between**Among Reliability Coordinators
2. **Number:** IRO-014-~~12~~
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinator
- ~~5. **Effective Date:** ~~November 1, 2006~~~~
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after Board of Trustees approval.

B. Requirements

- ~~R1.~~ TheEach Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans ~~in place~~ for activities that require notification, exchange of information or coordination of actions ~~with one or more that may impact~~ other Reliability ~~Coordinators~~Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall ~~address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators.~~
- ~~R2.~~R1. ~~These Operating Procedures, Processes, or Plans shall~~ collectively address, ~~as a minimum,~~ the following: [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]
- 2.1.1.1. Communications and notifications, including the mutually agreed to conditions⁺ under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
 - 2.2.1.2. Energy and capacity shortages.
 - 2.3.1.3. Planned or unplanned outage information.

⁺ ~~Examples of conditions when one Reliability Coordinator may need to notify another Reliability Coordinator may include (but aren't limited to) sabotage events, Interconnection Reliability Operating Limit violations, voltage reductions, insufficient resources, arming of special protection systems, etc.~~

~~2.4.1.4. Voltage control~~Control of voltage, including the coordination of reactive resources ~~for voltage control.~~

~~2.5.1.5.~~ Coordination of information exchange to support reliability assessments.

~~2.6.1.6.~~ Authority to act to prevent and mitigate ~~instances of causing~~system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.

1.7. Weekly conference calls

R2. ~~Each Reliability Coordinator's~~Coordinator shall maintain its Operating Procedure, Process~~Procedures, Operating Processes, or Plan~~Operating Plans identified in Requirement R1 as follows: [Violation Risk Factor: Lower] [Time Horizon: Same Day Operations and Operations Planning]

2.1. Review and update annually with no more that requires 15 months between reviews.

2.2. Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update.

2.3. Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.

R3. Each Reliability Coordinator shall make notifications and exchange reliability-related information with other Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]

R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement 1, Part 1.7) with other Reliability Coordinators within the same Interconnection. [Violation Risk Factor: Lower][Time Horizon: Real-time Operations]

R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify all other Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R6. During each instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact each impacted Reliability Coordinator shall operate as though the problem exists. [Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R7. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, the Reliability Coordinator that identified the Adverse Reliability Impact shall develop an action plan to resolve the Adverse Reliability Impact. [Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability

Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

C. Measures

M1. Each Reliability Coordinator shall have available the latest approved documented version of its Operating Procedures, Processes, and Operating Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators for conditions or activities that impact other Reliability Coordinator Areas. This documentation shall include dated, current in force documentation with the specified elements. (R1)

M1.M2. Each Reliability Coordinator shall have dated evidence that the Operating Procedures, Processes, and Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) ~~shall be~~ be:

2.1 Reviewed and updated annually with no more than 15 months between reviews.

1.12.2 Agreed to, in writing, by all the Reliability Coordinators required to take the indicated action(s).

1.22.3 Distributed within 30 days of an update to all Reliability Coordinators that are required to take the indicated action(s).

~~R3. A Reliability Coordinator's Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan shall include:~~

~~3.1. A reference to the associated Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan.~~

~~3.2. The agreed-upon actions from the associated Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan.~~

~~R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:~~

~~4.1. Include version control number or date.~~

~~4.2. Include a distribution list.~~

~~4.3. Be reviewed, at least once every three years, and updated if needed.~~

C. Measures

~~M2. The Reliability Coordinator's System Operators shall have available for Real-time use, the latest approved version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions between Reliability Coordinators.~~

~~2.1 These Operating Procedures, Processes, or Plans shall address:~~

~~2.1.1 — Communications and notifications, including the conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.~~

~~M1.1.2 — Energy and capacity shortages.~~

~~M1.1.3 — Planned or unplanned outage information.~~

~~M1.1.4 — Voltage control, including the coordination of reactive resources for voltage control.~~

~~M1.1.5 — Coordination of information exchange to support reliability assessments.~~

~~M1.1.6 — Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.~~

~~M3. — The Reliability Coordinator shall have evidence that these Operating Procedures, Processes, or Plans were:~~

~~3.1 — Agreed to by all the Reliability Coordinators required to take the indicated action(s).~~

~~3.2 — Distributed to all Reliability Coordinators that are required to take the indicated action(s).~~

~~M4. — The Reliability Coordinator's Operating Procedures, Processes, or Plans developed (for its System Operators' internal use) to support a Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan received from another Reliability Coordinator shall:~~

~~4.1 — Be available to the Reliability Coordinator's System Operators for Real-time use;~~

~~4.2 — Include a reference to the associated source document, and~~

~~4.3 — Support the agreed-upon actions from the source document.~~

~~M5. — The Reliability Coordinator's Operating Procedures, Processes, or Plans that addresses Reliability Coordinator to Reliability Coordinator coordination shall each include a version control number or date and a distribution list. The Reliability Coordinator shall have evidence that these Operating Procedures, Processes, or Plans were reviewed within the last three years.~~

~~This evidence may include, but is not limited to dated documentation with confirmation of receipt, dated notice of acceptance or agreement to take specified actions, or dated electronic communications with confirmation of receipt and acceptance or agreement to take specified actions. (R2)~~

~~M3. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it made notifications and exchanged reliability-related information with~~

impacted Reliability Coordinators in accordance with the Operating Procedures, Processes, or Plans identified in Requirement R1. (R3)

M4. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it participated in agreed upon (at least weekly) conference calls with other Reliability Coordinators within the same Interconnection. (R4)

M5. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it, upon identification of an Adverse Reliability Impact, notified other Reliability Coordinators. (R5)

M6. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it operated under the assumption that the Adverse Reliability Impact existed during each instance where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact. (R6)

M7. Each Reliability Coordinator that identified an Adverse Reliability Impact shall have evidence and provide evidence that it developed an action plan during those instances where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact. This evidence may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation. (R7)

M8. Each impacted Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it implemented the action plan developed by the Reliability Coordinator who has the identified the Adverse Reliability Impact when a Reliability Coordinator has identified an Adverse Reliability Impact and the impacted Reliability Coordinators disagree on an action unless such actions would have violated safety, equipment, or regulatory or statutory requirements. (R8)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance ~~Monitoring Responsibility~~ Enforcement Authority

~~Regional Reliability Organization~~

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring Period and Reset Time Frame

~~The Performance Reset Period shall be one calendar year.~~

~~Not Applicable~~

1.3. Compliance Monitoring and Enforcement Processes:

~~Compliance Audit~~

~~Self-Certification~~

~~Spot Checking~~

~~Compliance Violation Investigation~~

~~Self-Reporting~~

~~Complaint~~

1.3.1.4. Data Retention

~~The Reliability Coordinator shall keep documentation for the prior calendar year and the current calendar year. The Compliance Monitor shall keep data or evidence to show compliance data for a minimum of three years or until the Reliability Coordinator has achieved full compliance, whichever is longer.~~

1.4. Additional Compliance Information

~~The Reliability Coordinator shall demonstrate compliance through self-certification submitted to as identified below unless directed by its Compliance Monitor annually. The Compliance Monitor shall also use a scheduled on-site review at least once every three years and investigations upon complaint. The Compliance Monitor shall conduct an Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation upon a complaint within 30 days of the alleged infraction's discovery date. The Compliance Monitor shall complete the investigation within 45 days after the start of the investigation. As part of an audit or investigation, the Compliance Monitor shall interview other Reliability Coordinators to identify Operating Procedures, Processes or Plans that were distributed to the Reliability Coordinator being audited to verify that these documents are available for Real-time use by the receiving Reliability Coordinator's System Operators.:~~

- ~~o The Each Reliability Coordinator shall have the following retain its current, in force document and any documents available for inspection during an on-site in force since the last compliance audit or within five business days for Requirements R1, R2, and Measures M1, M2.~~
- ~~o Each Reliability Coordinator shall retain its most recent 12 months of a request as part evidence for Requirement R3, R4, R5 and Measure M3, M4, M5.~~
- ~~o Each Reliability Coordinator shall retain 3 calendar years plus current calendar year of an investigation upon a complaint: evidence for Requirements R6 through R8 and Measures M6 through M8.~~

~~**1.4.1** The latest version of its Operating Procedures, Processes, or Plans that require notification, exchange of-If a Reliability Coordinator is found non-compliant,~~

~~it shall keep information, or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability.~~

~~1.4.2—Evidence of distribution of Operating Procedures, Processes, or Plans.~~

~~1.—Levels of Non-Compliance~~

~~1.1. Level 1:—There shall be a level one non-compliance if either of the following conditions is present:~~

~~1.1.1—The latest versions of Operating Procedures, Processes, or Plans (identified through self-certification) that require notification, exchange of information, or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability do not include a version control number or date, and a distribution list.~~

~~1.1.2—The latest versions of Reliability Coordinator internal documents developed to support action(s) required as a result of other Reliability Coordinators do not include both a reference to the source Operating Procedure, Process, or Plan and the agreed-upon actions from the source Operating Procedure, Process, or Plan.~~

~~1.2. Level 2:—There shall be a level two related to the non-compliance if any of the following conditions is present:~~

~~1.2.1—Documents required by this standard were not distributed to all entities on the distribution list.~~

- ~~○ Documents required by this standard were not available until found compliant, or for System Operators' Real-time use period specified above, whichever is longer.~~

~~1.2.2—Documents required by this standard do not address all required topics.~~

~~1.3. Level 3:—Documents required by this standard do not address any of the six required topics in Reliability Standard IRO-014 R1.~~

~~1.4. Level 4:—Not Applicable.~~

- ~~○ The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.~~

IRO-014-2 – Coordination Among Reliability Coordinators

Prerequisite Approvals

None

Revisions to Glossary Terms

Adverse Reliability Impact - The impact of an event that results in ~~frequency-related Bulk Electric System instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that affects a widespread area of the interconnection.~~

Applicable Entities

Reliability Coordinator

Conforming Changes to Other Standards

Modify IRO-001.1 to eliminate R7, as discussed below.

Effective Dates

In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after Board of Trustees approval.

Retirements

IRO-014-1, IRO-015-1 and IRO-016-1 should be retired at midnight of the day immediately prior to the Effective Date of IRO-014-2 in the particular jurisdiction in which the new standard is becoming effective.

Summary of Changes

The Reliability Coordination Standard Drafting Team (RC SDT) revised the standard and proposes retiring two requirements (R3 and R4). New requirements were brought into this standard from IRO-015-1 (R1-R2) and IRO-016-1 (R1 and its sub requirements). Changes were made to eliminate redundancies between standards (existing and proposed), eliminate administrative items, and align with NERC’s Rules of Procedure and to address issues in FERC Order 693.

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1.1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.</p>	<p>IRO-014-2</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p> <p>1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p> <p>1.2. Energy and capacity shortages.</p> <p>1.3. Planned or unplanned outage information.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	1.4. Control of voltage, including the coordination of reactive resources. 1.5. Coordination of information exchange to support reliability assessments. 1.6. Authority to act to prevent and mitigate system conditions which could instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. 1.7. Weekly conference calls
Notes: The RC SDT proposes retiring IRO-001.1 R7, as it is redundant with IRO-014, R1.	
IRO-014-1 R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i> R1.1 These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: <i>[Violation Risk Factor: Lower]</i> R1.1.1 Communications and notifications, including the conditions ¹ under which one Reliability Coordinator notifies	IRO-014-2 R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i> 1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the

<p>IRO-014-1</p> <p>R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be:</p> <p>R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p>	<p>IRO-014-2</p> <p>R2. Each Reliability Coordinator shall maintain its Operating Procedure, Operating Process, or Operating Plan identified in Requirement R1 as follows: <i>[Violation Risk Factor: Lower]</i> <i>[Time Horizon: Same Day Operations Planning and Long-term Planning]</i></p> <p>2.1 Review and update annually with no more that 15 months between reviews. <i>[Violation Risk Factor: Lower]</i></p> <p>2.2 Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p>each update. <i>[Violation Risk Factor: Lower]</i></p> <p>2.3 Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.</p>
<p>Notes: The RC SDT added a Time Horizon to the requirement and eliminated the VRFs that were applied to the subrequirements.</p>	
<p>IRO-014-1</p> <p>R3. A Reliability Coordinator’s Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan shall include:</p> <p>R3.1. A reference to the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p> <p>R3.2. The agreed-upon actions from the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p>	<p>None. Retire the requirement</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R3 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	
<p>IRO-014-1</p> <p>R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:</p> <p>R4.1. Include version control number or date.</p> <p>R4.2. Include a distribution list.</p> <p>R4.3. Be reviewed, at least once every three years, and updated if needed</p>	<p>None. Retire the requirement.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R4 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-015-1</p> <p>R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas. <i>[Violation Risk Factor: Medium]</i></p> <p>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R2.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p> <p>R3. The Reliability Coordinator shall provide reliability-related information as requested by other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R3. Each Reliability Coordinator shall make notifications and exchange reliability-related information with other Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]</i></p> <p>R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement 1, Part 1.7) with other Reliability Coordinators within the same Interconnection. <i>[Violation Risk Factor: Lower] [Time Horizon: Real-time Operations]</i></p>
<p>Notes: The RC SDT recommends retiring Standard IRO-015 and moving Requirements R1 and R2 to IRO-014-2 and revising as shown. The RC SDT proposes retiring R3 (as shown in the left column) as it is redundant with proposed R5 above. Reliability Coordinators already have several requirements aimed at providing data or information to other Reliability Coordinators in support of Reliability Coordinator responsibilities. For example, Reliability Coordinators provide reliability-related information to other Reliability Coordinators as part of IRO-010-1, R3 – they share information as they try to confirm the existence of operating issues as part of IRO-014-2 R5, etc.</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1</p> <p>R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2 If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.1 If time permits, this re-evaluation shall be done before taking corrective actions. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.2 If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.3 If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify all other Reliability Coordinators that are involved. <i>[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R6. During each instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact each impacted Reliability Coordinator shall operate as though the problem exists. <i>[Violation Risk Factor: High [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R7. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, the Reliability Coordinator that identified the Adverse Reliability Impact shall develop an action plan to resolve the Adverse Reliability Impact. <i>[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact , each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. <i>[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Notes: IRO-014-2 R5 and R6 are revised versions of IRO-016-1, R1 and its subrequirements which were moved to this standard. The RC SDT removed the wording relating to the “most conservative solution” because it can not be measured. We are proposing to use the mitigation plan of the RC who is experiencing the issue in cases where an agreed to mitigation plan can not be developed. Note that stakeholders proposed revisions to these requirements, and the RC SDT subdivided the requirements to add more clarity.</p>	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1 R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.</p>	<p>IRO-014-2 None. Retire the requirement as it is a measure of Requirement R1.</p>

Implementation Plan
for IRO-014-2 — Coordination Among Reliability Coordinators

Approvals Required

IRO-014-2 – Coordination Among Reliability Coordinators

Prerequisite Approvals

None ~~required~~

~~Conforming Changes to Requirements in Already Approved Standards~~

- ~~• IRO-001-2 — Reliability Coordination — Responsibilities and Authorities~~
- ~~• IRO-015-1 — Notifications and Information Exchange Between Reliability Coordinators~~
- ~~• IRO-016-1 — Coordination of Real-time Activities between Reliability Coordinators~~

~~Revision Summary~~

~~The Reliability Coordination SDT (RC SDT) revised the standard and is proposing retiring two requirements (R3 and R4). New requirements were brought into this standard from IRO-015-1 (R1-R2) and IRO-016-1 (R1 and its sub-requirements). Changes were made to eliminate redundancies between standards (existing and proposed), eliminate administrative items, align with NERC's Rules of Procedure and to address issues in FERC Order 693.~~

~~Functions that Must Comply with the Requirements in the Standard~~

Revisions to Glossary Terms

~~Adverse Reliability Impact - The impact of an event that results in frequency-related Bulk Electric System instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that affects a widespread area of the Interconnection.~~

Applicable Entities

Reliability Coordinator

Conforming Changes to Other Standards

Modify IRO-001.1 to eliminate R7, as discussed below.

Effective Dates

In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after Board of Trustees approval.

~~Revisions or Retirements~~

~~IRO-014-1, IRO-015-1 and IRO-016-1 should be retired at midnight of the day immediately prior to the Effective Date of IRO-014-2 in the particular jurisdiction in which the new standard is becoming effective.~~

Summary of Changes

The Reliability Coordination Standard Drafting Team (RC SDT) revised the standard and proposes retiring two requirements (R3 and R4). New requirements were brought into this standard from IRO-015-1 (R1-R2) and IRO-016-1 (R1 and its sub requirements). Changes were made to eliminate redundancies between standards (existing and proposed), eliminate administrative items, ~~Already Approved Standards~~ and align with NERC’s Rules of Procedure and to address issues in FERC Order 693.

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. ~~If the drafting team is recommending the retirement or revision of a requirement, that text is blue.~~

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1.1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.</p>	<p>IRO-014-2</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p> <p>1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p> <p>1.2. Energy and capacity shortages.</p> <p>1.3. Planned or unplanned outage information.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	1.4. Control of voltage, including the coordination of reactive resources. 1.5. Coordination of information exchange to support reliability assessments. 1.6. Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas. 1.7. Weekly conference calls
Notes: The RC SDT proposes retiring IRO-001.1 R7, as it is redundant with IRO-014, R1.	
IRO-014-1 R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i> R1.1 These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: <i>[Violation Risk Factor: Lower]</i> R1.1.1 Communications and notifications, including the conditions ¹ under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in	IRO-014-2 R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i> 1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the

¹ Examples of conditions when one Reliability Coordinator may need to notify another Reliability Coordinator may include (but aren't limited to) sabotage events, Interconnection Reliability Operating Limit violations, voltage reductions, insufficient resources, arming of special protection systems, etc.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>making those notifications; and the data and information to be exchanged with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1.2 Energy and capacity shortages. [Violation Risk Factor: Medium]</p> <p>R1.1.3 Planned or unplanned outage information. [Violation Risk Factor: Medium]</p> <p>R1.1.4 Voltage control, including the coordination of reactive resources for voltage control. [Violation Risk Factor: Medium]</p> <p>R1.1.5 Coordination of information exchange to support reliability assessments. [Violation Risk Factor: Lower]</p> <p>R1.1.6 Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. [Violation Risk Factor: Lower]</p>	<p>data and information to be exchanged with other Reliability Coordinators.</p> <p>1.2 Energy and capacity shortages.</p> <p>1.3 Planned or unplanned outage information.</p> <p>1.4 Control of voltage, including the coordination of reactive resources.</p> <p>1.5 Coordination of information exchange to support reliability assessments.</p> <p>1.6 Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.</p> <p>1.7 Weekly conference calls</p> <p>Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.</p>
<p>Notes: Revise R1 as shown and delete the footnote.</p>	
<p>IRO-014-1</p> <p>R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be:</p> <p>R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p>	<p>IRO-014-2</p> <p>R2. Each Reliability Coordinator shall maintain its Operating Procedure, Operating Process, or Operating Plan identified in Requirement R1 as follows: <i>[Violation Risk Factor: Lower]</i> <i>[Time Horizon: Same Day Operations Planning and Long-term Planning]</i></p> <p>2.1 Review and update annually with no more that 15 months between reviews. <i>[Violation Risk Factor: Lower]</i></p> <p>2.2 Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update. <i>[Violation Risk Factor: Lower]</i></p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p>2.3 Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.</p>
<p>Notes: The RC SDT added a Time Horizon to the requirement and eliminated the VRFs that were applied to the subrequirements.</p>	
<p>IRO-014-1 R3. A Reliability Coordinator’s Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan shall include:</p> <p>R3.1. A reference to the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p> <p>R3.2. The agreed-upon actions from the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p>	<p>None. Retire the requirement</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R3 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	
<p>IRO-014-1 R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:</p> <p>R4.1. Include version control number or date.</p> <p>R4.2. Include a distribution list.</p> <p>R4.3. Be reviewed, at least once every three years, and updated if needed</p>	<p>None. Retire the requirement.</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
retiring R4 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-015-1</p> <p>R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas. <i>[Violation Risk Factor: Medium]</i></p> <p>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R2.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p> <p>R3. The Reliability Coordinator shall provide reliability-related information as requested by other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R3. Each Reliability Coordinator shall make notifications and exchange reliability-related information with other Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]</i></p> <p>R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement 1, Part 1.7) with other Reliability Coordinators within the same Interconnection. <i>[Violation Risk Factor: Lower] [Time Horizon: Real-time Operations]</i></p>
<p>Notes: The RC SDT recommends retiring Standard IRO-015 and moving Requirements R1 and R2 to IRO-014-2 and revising as shown. The RC SDT proposes retiring R3 (as shown in the left column) as it is redundant with proposed R5 above. Reliability Coordinators already have several requirements aimed at providing data or information to other Reliability Coordinators in support of Reliability Coordinator responsibilities. For example, Reliability Coordinators provide reliability-related information to other Reliability Coordinators as part of IRO-010-1, R3 – they share information as they try to confirm the existence of operating issues as part of IRO-014-2 R5, etc.</p>	
Already Approved Standard	Proposed Replacement Requirement(s)

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1</p> <p>R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2 If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.1 If time permits, this re-evaluation shall be done before taking corrective actions. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.2 If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.3 If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R5. A. Introduction

1. **Title:** **Reliability Coordination — Responsibilities and Authorities**
2. **Number:** IRO-001-2
3. **Purpose:** Reliability Coordinators must have the authority, plans, and agreements in place to immediately direct reliability entities within their Reliability Coordinator Areas to re-dispatch generation, reconfigure transmission, or reduce load to mitigate critical conditions to return the system to a reliable state. If a Reliability Coordinator delegates tasks to others, the Reliability Coordinator retains its responsibilities for complying with NERC and regional standards. Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another.
4. **Applicability**
 - 4.1. Reliability Coordinators.
 - 4.2. Regional Reliability Organizations.
 - 4.3. Transmission Operator.
 - 4.4. Balancing Authorities.
 - 4.5. Generator Operators.
 - 4.6. Transmission Service Providers.
 - 4.7. Load-Serving Entities.
 - 4.8. Purchasing-Selling Entities.
5. **Effective Date:**

B. Requirements

- R1.** Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries.
- R2.** The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee.
- R3.** The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.
- R4.** Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator.
- R5.** The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks.
- R6.** The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel.

- R7.** Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions.
- R8.** The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity.

C. Measures

- M1.** Each Regional Reliability Organization shall have, and provide upon request, evidence that could include, but is not limited to signed agreements or other equivalent evidence that will be used to confirm that it established one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries as described in Requirement 1.
- M2.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, job descriptions, signed agreements, an authority letter signed by an officer of the company, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to act as described in Requirement 3.
- M3.** The Reliability Coordinator shall have and provide upon request current formal operating agreements with entities that have been delegated any Reliability Coordinator tasks (Requirement 4 Part 1).
- M4.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, job descriptions, signed agreements, records of training sessions, monitoring procedures or other equivalent evidence that will be used to confirm that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area (Requirement 4 Part 2 and Requirement 5).
- M5.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, records that show each operating person assigned to perform a Reliability Coordinator delegated task has a NERC Reliability Coordinator certification credential, or equivalent evidence confirming that delegated tasks were carried out by NERC certified Reliability Coordinator operating personnel, as specified in Requirement 6.
- M6.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, or other equivalent evidence that will be used to confirm that it did comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, it informed the Reliability Coordinator immediately. (Requirement 7)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

NERC shall be responsible for compliance monitoring of the Regional Reliability Organization.

Regional Reliability Organizations shall be responsible for compliance monitoring of the Reliability Coordinators, Transmission Operators, Generator Operators, Distribution Providers, and Load Serving Entities.

1.2. Compliance Monitoring Period and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Regional Reliability Organization shall have its current, in-force document for Measure 1.

Each Reliability Coordinator shall have its current, in-force documents or the latest copy of a record as evidence of compliance to Measures 2 through 6.

Each Transmission Operator, Generator Operator, Transmission Service Provider, and Load Serving Entity shall keep 90 days of historical data (evidence) for Measure 6.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels:

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	N/A	N/A	N/A	N/A
R2.	N/A	N/A	N/A	The Reliability Coordinator did not comply with the regional reliability plan approved by the NERC Operating Committee.
R3.	N/A	N/A	The Reliability Coordinator cannot demonstrate that it has clear authority to act or direct actions to preserve transmission security and reliability of the Bulk Electric System.	The Reliability Coordinator failed to take or direct action to preserve the reliability and security of the Bulk Electric System within 30 minutes of identifying those actions.
R4.		The Reliability Coordinator has delegated tasks to other entities and had formal operating agreements with each of these entities but could not verify that delegated tasks were understood, communicated, and addressed within its Reliability Coordinator Area.		The Reliability Coordinator has delegated tasks to other entities but failed to have a formal operating agreement delegating tasks to each of these entities.
R5.	5% or less of the delegate entities are not identified in the reliability plan.	More than 5% up to (and including) 10% of the delegate entities are not identified in the reliability plan.	More than 10% up to (and including) 15% of the delegate entities are not identified in the reliability plan.	There is no reliability plan OR More than 15% of the delegate entities are not identified in the reliability plan.
R6.	There is no reliability plan OR More than 15% of the delegate	The Reliability Coordinator failed to demonstrate that more than 5% up to (and including) 10% of its delegated tasks were being	The Reliability Coordinator failed to demonstrate that more than 10% up to (and including) 15% of its delegated tasks were being	The Reliability Coordinator failed to demonstrate that more than 15% of its delegated tasks were being performed by NERC

2	To be determined	Retired Requirement R7 to eliminate redundancy with IRO-014-2, Requirement R1	Project 2006-06

A. Introduction

1. **Title:** **Reliability Coordination — Responsibilities and Authorities**
2. **Number:** IRO-001-~~1.1.2~~
3. **Purpose:** Reliability Coordinators must have the authority, plans, and agreements in place to immediately direct reliability entities within their Reliability Coordinator Areas to re-dispatch generation, reconfigure transmission, or reduce load to mitigate critical conditions to return the system to a reliable state. If a Reliability Coordinator delegates tasks to others, the Reliability Coordinator retains its responsibilities for complying with NERC and regional standards. Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another.
4. **Applicability**
 - 4.1. Reliability Coordinators.
 - 4.2. Regional Reliability Organizations.
 - 4.3. Transmission Operator.
 - 4.4. Balancing Authorities.
 - 4.5. Generator Operators.
 - 4.6. Transmission Service Providers.
 - 4.7. Load-Serving Entities.
 - 4.8. Purchasing-Selling Entities.
5. **Effective Date:** ~~May 13, 2009~~

B. Requirements

- R1.** Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries.
- R2.** The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee.
- R3.** The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.
- R4.** Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator.
- R5.** The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks.

R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel.

~~**R7.** The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.~~

~~**R8.**~~**R7.** Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions.

~~**R9.**~~**R8.** The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity.

C. Measures

M1. Each Regional Reliability Organization shall have, and provide upon request, evidence that could include, but is not limited to signed agreements or other equivalent evidence that will be used to confirm that it established one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries as described in Requirement 1.

M2. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, job descriptions, signed agreements, an authority letter signed by an officer of the company, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to act as described in Requirement 3.

M3. The Reliability Coordinator shall have and provide upon request current formal operating agreements with entities that have been delegated any Reliability Coordinator tasks (Requirement 4 Part 1).

M4. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, job descriptions, signed agreements, records of training sessions, monitoring procedures or other equivalent evidence that will be used to confirm that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area (Requirement 4 Part 2 and Requirement 5).

M5. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, records that show each operating person assigned to perform a Reliability Coordinator delegated task has a NERC Reliability Coordinator certification credential, or equivalent evidence confirming that delegated tasks were carried out by NERC certified Reliability Coordinator operating personnel, as specified in Requirement 6.

~~**M6.** The Reliability Coordinator shall have and provide upon request as evidence, signed agreements with adjacent Reliability Coordinators that will be used to confirm that it will coordinate corrective actions in the event SOL and IROL mitigation actions within neighboring areas must be taken. (Requirement 7)~~

~~**M7.**~~**M6.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, or other equivalent evidence that will be used to confirm that it did comply with the Reliability Coordinator's directives, or if for safety, equipment,

regulatory or statutory requirements it could not comply, it informed the Reliability Coordinator immediately. (Requirement ~~87~~)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

NERC shall be responsible for compliance monitoring of the Regional Reliability Organization.

Regional Reliability Organizations shall be responsible for compliance monitoring of the Reliability Coordinators, Transmission Operators, Generator Operators, Distribution Providers, and Load Serving Entities.

1.2. Compliance Monitoring Period and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Regional Reliability Organization shall have its current, in-force document for Measure 1.

Each Reliability Coordinator shall have its current, in-force documents or the latest copy of a record as evidence of compliance to Measures 2 through 6.

Each Transmission Operator, Generator Operator, ~~Transmission Service Provider~~, and Load Serving Entity shall keep 90 days of historical data (evidence) for Measure ~~76~~.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels:

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	N/A	N/A	N/A	N/A
R2.	N/A	N/A	N/A	The Reliability Coordinator did not comply with the regional reliability plan approved by the NERC Operating Committee.
R3.	N/A	N/A	The Reliability Coordinator cannot demonstrate that it has clear authority to act or direct actions to preserve transmission security and reliability of the Bulk Electric System.	The Reliability Coordinator failed to take or direct action to preserve the reliability and security of the Bulk Electric System within 30 minutes of identifying those actions.
R4.		The Reliability Coordinator has delegated tasks to other entities and had formal operating agreements with each of these entities but could not verify that delegated tasks were understood, communicated, and addressed within its Reliability Coordinator Area.		The Reliability Coordinator has delegated tasks to other entities but failed to have a formal operating agreement delegating tasks to each of these entities.
R5.	5% or less of the delegate entities are not identified in the reliability plan.	More than 5% up to (and including) 10% of the delegate entities are not identified in the reliability plan.	More than 10% up to (and including) 15% of the delegate entities are not identified in the reliability plan.	There is no reliability plan OR More than 15% of the delegate entities are not identified in the reliability plan.
R6.	There is no reliability plan OR More than 15% of the delegate	The Reliability Coordinator failed to demonstrate that more than 5% up to (and including) 10% of its delegated tasks were being	The Reliability Coordinator failed to demonstrate that more than 10% up to (and including) 15% of its delegated tasks were being	The Reliability Coordinator failed to demonstrate that more than 15% of its delegated tasks were being performed by NERC

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
	entities are not identified in the reliability plan.	performed by NERC certified Reliability Coordinator operating personnel	performed by NERC certified Reliability Coordinator Operating personnel.	certified Reliability Coordinator operating personnel.
R7.	The Reliability Coordinator has demonstrated the existence of coordination agreements with adjacent Reliability Coordinators but the agreements are not clear or comprehensive.	N/A	The Reliability Coordinator has demonstrated the existence of coordination agreements with adjacent Reliability Coordinators but the agreements do not coordinate actions required in the adjacent Reliability Coordinator Area to mitigate SOL and IROL violations in its own Reliability Coordinator area.	The Reliability Coordinator has failed to demonstrate the existence of any coordination agreements with adjacent Reliability Coordinators.
R8.	N/A	The responsible entity could not comply with a directive due to qualified reasons (violation of safety, equipment or regulatory or statutory requirements) and did not immediately inform the Reliability Coordinator.	N/A	The responsible entity did not follow the Reliability Coordinator's directive.
R9.	N/A	N/A	N/A	The Reliability Coordinator did not act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of one or more other entities.

E. Regional Differences

None identified.

NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Standards Announcement

Project 2006-06 – Reliability Coordination
Recirculation Ballots and Non-binding Polls
Now Open for Three Standards
July 15 – 25, 2011

Now available at: <https://standards.nerc.net/Ballots.aspx>

Recirculation ballots of three standards and their implementation plans, and non-binding polls for the associated VRFs and VSL for each standard, are open through **8:00 p.m. Eastern on Monday, July 25, 2011**. Each standard is being balloted separately, with a separate non-binding poll of the VRFs and VSLs for each standard. The three standards are:

- IRO-002-3 – Reliability Coordination – Analysis Tools
- IRO-005-4 – Reliability Coordination – Current Day Operations
- IRO-014-2 – Coordination Among Reliability Coordinators

Note that the implementation plan for IRO-014-2 includes a conforming change (removal of Requirement R7) to IRO-001.1 - Reliability Coordination — Responsibilities and Authorities.

The drafting team has considered all comments received during an initial ballot and formal comment period that ended on March 7, 2011. The team received few comments or suggested modifications for the three standards and has made minor, non-substantive changes to each standard and its associated implementation plan.

The Standards Committee authorized the team to subdivide the set of standards and conduct individual recirculation ballots with those standards without substantive changes. Three other standards that are part of this project, COM-001-2, COM-002-3, IRO-001-3, have also been revised but because the revisions were more substantive, those standards have been submitted for quality review. Once the drafting team has responded to the feedback from the quality review, the standards will be posted for a parallel 30-day formal comment period and successive ballot.

Note: A version of IRO-001-2 showing only the revision proposed in the IRO-014-2 Implementation Plan (removal of IRO-001-1 R7) has been posted for information. If IRO-014-2 is approved, then the posted version of IRO-001-2 will be submitted to the Board of Trustees for adoption and subsequently filed for regulatory approval. Additional revisions to IRO-001 to respond to comments the drafting team received from the last posting would become IRO-001-3.

Instructions

In the recirculation ballot, votes are counted by exception. Only members of the ballot pool may cast a ballot; all ballot pool members may change their prior votes. A ballot pool member who failed to cast a ballot during

the last ballot window may cast a ballot in the recirculation ballot window. If a ballot pool member does not participate in the recirculation ballot, that member's last vote cast in the successive ballot that ended on May 31, 2011 will be carried over.

Members of the ballot pool associated with this project may log in and submit their votes (one vote and one non-binding opinion per standard) in the ballots and non-binding polls for each of the standards from the following page: <https://standards.nerc.net/CurrentBallots.aspx>

Documents associated with this project, including clean and redline copies of each standard and implementation plan that is being balloted, have been posted on the project Web page at:
http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standards IRO-003-2.

For more information review the project Web page:

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

Next Steps

Ballot results will be announced when the recirculation ballots close. If the standards are approved by a two-thirds majority, each standard that is approved by its ballot pool will be submitted for adoption by the NERC Board of Trustees prior to filing with regulatory authorities for approval.

Standards Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

Standards Announcement Project 2006-06 Reliability Coordination Recirculation Ballot Results

Now available at: <https://standards.nerc.net/Ballots.aspx>

Ballot Results for Three Reliability Coordination Standards

Recirculation ballots on revisions to IRO-002-3 – Reliability Coordination – Analysis Tools; IRO-005-4 – Reliability Coordination – Current Day Operations; and IRO-014-2 – Coordination Among Reliability Coordinators concluded on Monday, July 25, 2011. Non-binding polls of the VRFs and VSLs associated with each standard concluded on Tuesday, July 26. All three standards were approved by the associated ballot pool.

Voting statistics for each standard are listed in the table below, and the [Ballot Results](#) Web page provides a link to the detailed results.

Standard	Ballot Results	Non-binding Poll Results
IRO-002-3 – Reliability Coordination – Analysis Tools	Quorum: 94.13% Approval: 76.99 %	75.37% of those who registered to participate provided an opinion or abstention; 93% of those who provided an opinion indicated support for the VRFs and VSLs
IRO-005-4 – Reliability Coordination – Current Day Operations	Quorum: 94.13% Approval: 75.17 %	75.66% of those who registered to participate provided an opinion or abstention; 93% of those who provided an opinion indicated support for the VRFs and VSLs
IRO-014-2 – Coordination Among Reliability Coordinators	Quorum: 94.13% Approval: 76.27 %	75.37% of those who registered to participate provided an opinion or abstention; 89% of those who provided an opinion indicated support for the VRFs and VSLs

Next Steps

The three standards will be presented to the NERC Board of Trustees for adoption and filed with regulatory authorities.

Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standards IRO-003-2.

Project 2006-06 also includes three other standards, (IRO-001, COM-001 and COM-002) which are still under development.

For more information review the project Web page:

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

Standards Development Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. For more information or assistance, please contact Monica Benson at monica.benson@nerc.net.

Some stakeholders have asked for clarification on the process applied when a ballot pool member joins a ballot pool but is replaced (by his or her company) with another ballot pool member before the balloting has been finalized. This is rare, but does occur when, for instance, the original ballot pool member retires before completion of the balloting for a project. If an entity has a member registered to participate in the ballot pool and that person is replaced in the registered ballot body before the balloting has been completed we do allow the replacement balloter to cast a vote, but the vote is entered manually. The permanent record can only retain one name, and the name that is retained is the name of the person that originally joined the ballot pool.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.
10. Third posting of revised standards on January 4, 2010 with comment period closed on February 3, 2010.
11. Initial Ballot conducted February 25 through March 7, 2011.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. Following the initial ballot the project was subdivided with some standards moving forward ahead of others. Proposed modifications to IRO-001 were subdivided into two phases – with the first phase the recommended retirement of Requirement R7 as a conforming change associated with approval of IRO-014-2. IRO-001-3 is the second phase and includes more extensive edits to the standard. The current posting contains revisions based on stakeholder comments on the initial ballot. The team is posting for a successive ballot.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post Standards for a successive ballot.	January-February 2012
2. Respond to comments on Successive ballot	March - April 2012
3. Standards posted for recirculation ballot	May 2012
4. Standards to be sent to BOT for approval.	June 2012
5. Standards filed with regulatory authorities.	August 2012

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

The RC SDT proposes the following new definition:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

This defined term is contained in draft COM-002-3 and IRO-001-3.

As a reference, we have included the existing definition of Emergency and the BOT approved definition of Adverse Reliability Impact¹:

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

Adverse Reliability Impact: The impact of an event that results in Bulk Electric System instability or Cascading.

¹ This definition was approved by the NERC Board of Trustees on August 4, 2011. Filing with regulatory authorities is pending.

A. Introduction

1. **Title:** **Reliability Coordination – Responsibilities and Authorities**
2. **Number:** IRO-001-3
3. **Purpose:** To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.
4. **Applicability**
 - 4.1. Reliability Coordinator
 - 4.2. Transmission Operator
 - 4.3. Balancing Authority
 - 4.4. Generator Operator
 - 4.5. Distribution Provider
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

B. Requirements

- R1.** Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]
- R2.** Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [*Violation Risk Factor: High*] [*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]
- R3.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. [*Violation Risk Factor: High*] [*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]

C. Measures

- M1.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it has the authority to take action or direct action, which could have included issuing Reliability Directive(s), to prevent identified events or mitigate the magnitude or duration of actual events that caused Adverse Reliability Impacts within its Reliability Coordinator Area. (R1)
- M2.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used

to determine that it complied with its Reliability Coordinator's direction(s) unless the direction could not be implemented or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2)

- M3.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it informed the Reliability Coordinator of its inability to perform as directed in accordance with Requirement R3. (R3)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

For Reliability Coordinators that work for their Regional Entity, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Electric reliability Organization shall retain its evidence for 5 calendar years for Requirement R1, Measure M1.

- The Reliability Coordinator shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2, Measure M2.
- The Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 calendar months for documentation for Requirements R3 and R4, Measures M3 and M4.
- If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider is found non-compliant, it shall keep information related to the non-compliance until notified by the Compliance Enforcement Authority that the evidence is no longer needed.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	<p>The Reliability Coordinator failed to take action or direct actions, to prevent an identified event that resulted in an Adverse Reliability Impact.</p> <p>OR</p> <p>The Reliability Coordinator failed to take action or direct actions to mitigate the magnitude or duration of an event that resulted in an Adverse Reliability Impact.</p>
R2	N/A	N/A	N/A The responsible entity initiated the action directed by the RC, but failed to fully comply with the RC's directive.	The responsible entity did not comply with the Reliability Coordinator's directive.
R3	N/A	N/A	N/A	The responsible entity failed to inform its Reliability Coordinator upon recognition of its inability to perform as directed.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Approved by FERC — Effective Date	New
1	May 19, 2011	Replaced Levels of Noncompliance with FERC-approved VSLs	VSL Order
2	To be determined	Retired Requirement R7 to eliminate redundancy with IRO-014-2, Requirement R1.	Project 2006-06
3	TBD	Revised in accordance with SAR for project 2006-6, Reliability Coordination; Revised the standard and retired six requirements (R2, R4, R5, R6, and R8).	Project 2006-06

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RCSDT/RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.
10. Third posting of revised standards on January 4, 2010 with comment period closed on February 3, 2010.
11. Initial Ballot conducted February 25 through March 7, 2011.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. Following the initial ballot the project was subdivided with some standards moving forward ahead of others. Proposed modifications to IRO-001 were subdivided into two phases – with the first phase the recommended retirement of Requirement R7 as a conforming change associated with approval of IRO-014-2. IRO-001-3 is the second phase and includes more extensive edits to the standard. The current posting contains revisions based on stakeholder comments on the second draft initial ballot. The team is posting for a 30 day pre-successive ballot review.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Respond to comments on third posting Post Standards for a <u>successive ballot.</u>	March 2010 <u>January-February 2012</u>
2. Post Standards for pre- Respond to comments on <u>Successive</u> ballot period.	January 2011 <u>March - April 2012</u>
3. Standards posted for initial and recirculation ballots <u>ballot</u>	February 2011 <u>May 2012</u>

4. Standards <u>to be</u> sent to BOT for approval.	April 2011 <u>June 2012</u>
5. Standards filed with regulatory authorities.	June 2011 <u>August 2012</u>

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

The RC SDT proposes ~~modifying~~ the following ~~approved~~new definition:

~~**Adverse Reliability Impact:** The impact of an event that results in Bulk Electric System instability uncontrolled separation or Cascading.~~

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an ~~actual or expected~~ Emergency or Adverse Reliability Impact.

This defined term is contained in draft COM-002-~~23~~ and IRO-001-~~23~~.

As a reference, we have included the existing definition of Emergency and the BOT approved definition of Adverse Reliability Impact¹:

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

Adverse Reliability Impact: The impact of an event that results in Bulk Electric System instability or Cascading.

¹ This definition was approved by the NERC Board of Trustees on August 4, 2011. Filing with regulatory authorities is pending.

A. Introduction

1. **Title:** Reliability Coordination – Responsibilities and Authorities
2. **Number:** IRO-001-~~23~~
3. **Purpose:** To establish the ~~capability and~~ authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.
4. **Applicability**
 - 4.1. Reliability ~~Coordinators~~ Coordinator
 - 4.2. Transmission ~~Operators~~ Operator
 - 4.3. Balancing ~~Authorities~~ Authority
 - 4.4. Generator ~~Operators~~ Operator
 - ~~4.5. Interchange Coordinators.~~
 - ~~4.6.4.5. _____~~ Distribution Providers ~~Provider~~
 - ~~4.7. Electric Reliability Organization.~~
5. **Effective Date:** _____ In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the ~~first~~second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

B. Requirements

- ~~R1. The Electric Reliability Organization Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish certify at least one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within each region and across the regional boundaries. [Violation Risk Factor: High][Time Horizon: Operations Assessment]~~
- ~~R2-R1. _____~~ Each Reliability Coordinator shall ~~take actions~~have the authority to act or direct ~~actions, others to act~~ (which could include issuing Reliability Directives, ~~of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area~~) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. *[Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- ~~R3-R2. _____~~ Each Transmission Operator, Balancing Authority, Generator Operator, ~~Interchange Coordinator and~~ Distribution Provider shall comply with its Reliability Coordinator's direction ~~per Requirement R2~~ unless compliance with the direction ~~per Requirement R2 can not~~cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- ~~R4-R3. _____~~ Each Transmission Operator, Balancing Authority, Generator Operator, ~~Interchange Coordinator and~~ and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed ~~per~~in accordance with Requirement

~~R3R2.~~ *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

- ~~R5.~~ Each Reliability Coordinator that identifies an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- ~~R6.~~ Each Reliability Coordinator that identifies an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- ~~R7.~~ ~~[SC1]~~ Each Reliability Coordinator shall provide its System Operators with the authority to approve, deny or cancel planned outages of its own analysis tools. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- ~~R8.~~ Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]* ~~[SC2]~~

C. Measures

~~M1.~~ The Electric reliability Organization shall have and provide evidence which may include, but is not limited to, dated documentation indicating that it certified at least one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries.

~~M2.~~ M1. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, **electronic communications**, or equivalent documentation, that will be used to determine that it has ~~taken~~ **the authority to take** action or ~~directed~~ **direct** action, which could have included issuing Reliability Directive(s), to prevent identified events or mitigate the magnitude or duration of actual events that caused Adverse Reliability Impacts within its Reliability Coordinator Area. (R1)

~~M3.~~ M2. Each Transmission Operator, Balancing Authority, Generator Operator, ~~Interchange Coordinator~~ and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction(s) ~~per Requirement R1~~ unless the direction ~~per Requirement R1~~ could not be implemented or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, ~~Interchange Coordinator~~ or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2)

~~M4.~~ M3. Each Transmission Operator, Balancing Authority, Generator Operator, ~~Interchange Coordinator~~ and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or

equivalent documentation, that will be used to determine that it informed the Reliability Coordinator of its inability to perform as directed perin accordance with Requirement ~~R4~~R3. (R3)

~~M5. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when it identified a real or potential condition with Adverse Reliability Impacts, within its Reliability Coordinator Area. (R4)~~

~~M6. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when a real or potential condition with Adverse Reliability Impacts within its Reliability Coordinator Area had been mitigated. (R5)~~

~~M7. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its System Operator with the authority to approve, deny or cancel planned outages of its own analysis tools. (R6)~~

~~M8. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that that the Reliability Coordinator has procedures in place to mitigate the effects of analysis tool outages. (R7)~~

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

~~Regional Entity~~

For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

For Reliability Coordinators that work for their Regional Entity, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance ~~Audits~~Audit

Self-~~Certifications~~Certification

Spot Checking

Compliance Violation ~~Investigations~~Investigation

Self-Reporting

~~Complaints~~

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider, ~~or Interchange Coordinator~~ shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Electric reliability Organization shall retain its evidence for 5 calendar years for Requirement R1 ~~and~~ Measure M1.
- The Reliability Coordinator shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2 ~~and~~ Measure M2.
- The Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider ~~or Interchange Coordinator~~ shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 calendar months for documentation for Requirements R3 and R4, Measures M3 and M4.
- ~~○ The Reliability Coordinator shall retain its current, in force document and any documents in force for the current year and previous calendar year for Requirements R6 and R7 and Measures M6 and M7.~~
- If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider ~~or Interchange Coordinator~~ is found non-compliant, it shall keep information related to the non-compliance until found compliant notified by the Compliance Enforcement Authority that the evidence is no longer needed.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4	N/A	N/A	N/A	The Regional Entity failed to ensure that at least one Reliability Coordinator was certified in its region.
R2R1	N/A	N/A	N/A	<p>The Reliability Coordinator failed to take action or direct actions, which could have included issuing Reliability Directive(s), for actions to be taken to prevent <u>an</u> identified event<u>event</u> that resulted in <u>an</u> Adverse Reliability Impacts<u>Impact</u>.</p> <p>OR</p> <p>The Reliability Coordinator failed to take action or direct actions, which could have included issuing Reliability Directive(s), for actions to be taken to mitigate the magnitude or duration of <u>actual events</u><u>an event</u> that resulted in <u>an</u> Adverse Reliability Impacts<u>Impact</u>.</p>
R3R2	N/A	N/A	<u>N/A/N/A The responsible entity initiated the action directed by the RC, but failed to fully comply with the RC's directive.</u>	The responsible entity did not comply with the Reliability Coordinator's direction per Requirement R4 <u>directive</u> .
R4R3	N/A	N/A	N/A	The responsible entity failed to inform its Reliability Coordinator upon recognition of the <u>its</u> inability to perform as directed per Requirement R4 .

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Approved by FERC — Effective Date	New

<u>23</u>	TBD	Revised per <u>in accordance with</u> SAR for project 2006-6, reliability <u>Reliability</u> Coordination; added VRFs <u>Revised the standard</u> and VSLs as approved from VRF <u>Retired six requirements (R2, R4, R5, R6, and VSL projects R8).</u>	Revised <u>Project 2006-06</u>

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OCPD SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.
10. Third posting of revised standards on January 4, 2010 with comment period closed on February 3, 2010.
11. Initial Ballot conducted February 25 through March 7, 2011.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. Following the initial ballot the project was subdivided with some standards moving forward ahead of others. Proposed modifications to IRO-001 were subdivided into two phases – with the first phase the recommended retirement of Requirement R7 as a conforming change associated with approval of IRO-014-2. IRO-001-3 is the second phase and includes more extensive edits to the standard. The current posting contains revisions based on stakeholder comments on the initial ballot. The team is posting for a successive ballot.

Future Development Plan:

<u>Anticipated Actions</u>	<u>Anticipated Date</u>
<u>1. Post Standards for a successive ballot.</u>	<u>January-February 2012</u>
<u>2. Respond to comments on Successive ballot</u>	<u>March - April 2012</u>
<u>3. Standards posted for recirculation ballot</u>	<u>May 2012</u>
<u>4. Standards to be sent to BOT for approval.</u>	<u>June 2012</u>
<u>5. Standards filed with regulatory authorities.</u>	<u>August 2012</u>

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

The RC SDT proposes the following new definition:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

This defined term is contained in draft COM-002-3 and IRO-001-3.

As a reference, we have included the existing definition of Emergency and the BOT approved definition of Adverse Reliability Impact¹:

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

Adverse Reliability Impact: The impact of an event that results in Bulk Electric System instability or Cascading.

¹ This definition was approved by the NERC Board of Trustees on August 4, 2011. Filing with regulatory authorities is pending.

A. Introduction

1. **Title:** Reliability Coordination — Responsibilities and Authorities
2. **Number:** IRO-001-~~23~~
- ~~3. **Purpose:** Reliability Coordinators must have the authority, plans, and agreements in place to immediately direct reliability entities within their Reliability Coordinator Areas to re-dispatch generation, reconfigure transmission, or reduce load to mitigate critical conditions to return the system to a reliable state. If a Reliability Coordinator delegates tasks to others, the Reliability Coordinator retains its responsibilities for complying with NERC and regional standards. Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another.~~
3. **Purpose:** To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.
4. **Applicability**
 - 4.1. Reliability ~~Coordinators.Coordinator~~
 - ~~4.2. Regional Reliability Organizations.~~
 - ~~4.3.4.2. Transmission Operator.~~
 - ~~4.4.4.3. Balancing Authorities.Authority~~
 - ~~4.5.4.4. Generator Operators.Operator~~
 - ~~4.6. Transmission Service Providers.~~
 - ~~4.7. Load Serving Entities.~~
 - ~~4.8. Purchasing Selling Entities.~~
5. **Effective Date:** ~~_____~~
 - ~~4.5. Distribution Provider~~
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

B. Requirements

- ~~R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries.~~
- ~~R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee.~~
- ~~R3. The Reliability Coordinator shall have clear decision-making the authority to act and to or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load Serving Entities, and Purchasing Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the~~

~~Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.~~

- ~~**R4.R1.** Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to others to act (which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator, could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. *[Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*~~
- ~~**R5.** The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks.~~
- ~~**R6.** The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel.~~
- ~~**R7.R2.** Each Transmission OperatorsOperator, Balancing AuthoritiesAuthority, Generator Operators, Transmission Service Providers, Load Serving Entities, and Purchasing-Selling EntitiesOperator, Distribution Provider shall comply with Reliability Coordinator directivesits Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions.*[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*~~
- ~~**R8.** The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity.~~

~~C. Measures~~

- ~~**M1.** Each Regional Reliability Organization shall have, and provide upon request, evidence that could include, but is not limited to signed agreements or other equivalent evidence that will be used to confirm that it established one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries as described in Requirement 1.~~
- ~~**M2.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, job descriptions, signed agreements, an authority letter signed by an officer of the company, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to act as described in Requirement 3.~~
- ~~**M3.** The Reliability Coordinator shall have and provide upon request current formal operating agreements with entities that have been delegated any Reliability Coordinator tasks (Requirement 4 Part 1).~~
- ~~**M4.** The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, job descriptions, signed agreements, records of training sessions, monitoring procedures or other equivalent evidence that will be used to confirm that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area (Requirement 4 Part 2 and Requirement 5).~~

~~M5.~~ The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, records that show each operating person assigned to perform a Reliability Coordinator delegated task has a NERC Reliability Coordinator certification credential, or equivalent evidence confirming that delegated tasks were carried out by NERC certified Reliability Coordinator operating personnel, as specified in Requirement 6.

R3. Each Transmission Operator, Balancing Authority, Generator Operator, ~~Transmission Service and Distribution~~ Provider, ~~Load-Serving Entity, or Purchasing-Selling Entity~~ shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. [*Violation Risk Factor: High*] [*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]

C. Measures

M1. Each Reliability Coordinator shall have and provide ~~upon request~~ evidence ~~that could~~ which may include, but is not limited to, dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it has the authority to take action or direct action, which could have included issuing Reliability Directive(s), to prevent identified events or mitigate the magnitude or duration of actual events that caused Adverse Reliability Impacts within its Reliability Coordinator Area. (R1)

M2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or ~~other~~ equivalent evidence documentation, that will be used to ~~confirm~~ determine that it ~~did not comply~~ complied with ~~the~~ its Reliability Coordinator's ~~directives~~ direction(s) unless the direction could not be implemented or if ~~for~~ such actions would have violated safety, equipment, regulatory or statutory requirements it could not comply. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2)

~~M6.~~M3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it informed the Reliability Coordinator ~~immediately~~ (of its inability to perform as directed in accordance with Requirement 7)-R3. (R3)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance ~~Monitoring Responsibility~~ Enforcement Authority

~~NERC shall be responsible~~ For entities that do not work for ~~compliance monitoring~~ of the Regional ~~Reliability Organization~~.

~~Entity, the Regional Reliability Organizations~~ Entity shall be responsible for ~~compliance monitoring~~ of ~~serve as~~ the Compliance Enforcement Authority.

~~For Reliability Coordinators, Transmission Operators, Generator Operators, Distribution Providers, and Load-Serving Entities.~~

1.2. Compliance Monitoring Period and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for that work for their Regional Entity, the investigation. An entity may request an extension of the preparation period and the extension will be considered ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Monitor on a case-by-case basis.) Enforcement Authority.

The Performance Reset Period shall be 12 months from the last finding of non-compliance.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.3. Data Retention

~~Each Regional Reliability~~ The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- o ~~The Electric reliability~~ Organization shall ~~have~~ retain its ~~current, in force~~ documents/evidence for 5 calendar years for Requirement R1, Measure M1.
- o ~~Each~~ The Reliability Coordinator shall ~~have its current, in force documents or the latest copy of a record as evidence of compliance to Measures 2 through 6.~~ retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2, Measure M2.

- o ~~Each~~The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service or Distribution Provider, and Load Serving Entity shall ~~keep 90 days of historical data (retain its evidence) for Measure 6~~ the most recent 90 calendar days for voice recordings or 12 calendar months for documentation for Requirements R3 and R4, Measures M3 and M4.

If ~~an entity is a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider is~~ found non-compliant ~~the entity, it~~ shall keep information related to the ~~noncompliance~~ non-compliance until ~~found compliant~~ or for two years plus the current year, whichever is longer.

- ~~Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined~~ notified by the Compliance ~~Monitor~~ Enforcement Authority that the evidence is no longer needed.
- The Compliance ~~Monitor~~ Enforcement Authority shall keep the last ~~periodic~~ audit report ~~records~~ and all requested and submitted subsequent ~~compliance~~ audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels:

R #	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1.	N/A	N/A	N/A	N/A
R2.	N/A	N/A	N/A	The Reliability Coordinator did not comply with the regional reliability plan approved by the NERC Operating Committee.
R3.	N/A	N/A	The Reliability Coordinator cannot demonstrate that it has clear authority to act or direct actions to preserve transmission security and reliability of the Bulk Electric System.	The Reliability Coordinator failed to take or direct action to preserve the reliability and security of the Bulk Electric System within 30 minutes of identifying those actions.
R4.		The Reliability Coordinator has delegated tasks to other entities and had formal operating agreements with each of these entities but could not verify that delegated tasks were understood, communicated, and addressed within its Reliability Coordinator Area.		The Reliability Coordinator has delegated tasks to other entities but failed to have a formal operating agreement delegating tasks to each of these entities.
R5.	5% or less of the delegate entities are not identified in the reliability plan.	More than 5% up to (and including) 10% of the delegate entities are not identified in the reliability plan.	More than 10% up to (and including) 15% of the delegate entities are not identified in the reliability plan.	There is no reliability plan OR More than 15% of the delegate entities are not identified in the reliability plan.

Implementation Plan and Mapping Document for IRO-001-3 - Reliability Coordination — Responsibilities and Authorities

Approvals Requested

The RC SDT requests the approval of IRO-001-3 – Reliability Coordination – Responsibilities and Authorities.

Prerequisite Approvals

- None

Conforming Changes to Requirements in Already Approved Standards

- None

Revision Summary

- The RC SDT revised the standard and is proposing retiring six requirements (R2, R4, R5, R6, R7 and R9). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERCs Rules of Procedure and to address issues in FERC Order 693.

Effective Dates

In those jurisdictions where regulatory approval is required, IRO-001-3 shall become effective on the first day of the second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

Retirements

IRO-001-2 should be retired at midnight of the day immediately prior to the Effective Date of IRO-001-3 in the particular jurisdiction in which the new standard is becoming effective.

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p>This requirement was retired as it is addressed in the NERC Rules of Procedure, Section 503, item 2.2:</p> <p>“Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”</p> <p>R1.</p>
Notes:	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p>IRO-001-3</p> <p>None – The RC SDT proposes retiring these requirements.</p>
Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by</p>	<p>IRO-001-3</p> <p>R1. Each Reliability Coordinator shall take have the authority to actions or direct others to actions (which</p>

<p>Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. <i>[Violation Risk Factor: High]</i></p>	<p>could include issuing Reliability Directives) by Transmission Operators, Balancing Authorities, Generator Operators, and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p>
---	--

Notes:

- The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROLs are contained in other standards (e.g., TOP-007, R2).
- The Distribution Provider was added as an applicable entity per FERC Order 693.

<p>Already Approved Standard</p>	<p>Proposed Replacement Requirement(s)</p>
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-001-3</p> <p>None – retire the requirement</p> <p>RC SDT proposes that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, section 500 and should be retired from the standard. Section 501 states:</p> <p>“The purpose of the compliance registry will be to clearly identify those entities that are responsible for compliance with reliability standards. Organizations listed on the registry will be responsible for knowing the content of and for complying with the NERC reliability standards.”</p> <p>Also, section 507, item 2 addresses written agreements;</p> <p>Joint registration pursuant to written agreement.</p>

“Where a JRO and any of its members or related entities agree, in writing, upon a division of compliance responsibility among them for one or more reliability standard(s) applicable to a particular function, and/or for one or more requirements within particular reliability standard(s), both the JRO and such member(s) or related entit(ies) shall register as an organization responsible for that function. The JRO and its member(s) or related entit(ies) must have a written agreement that clearly specifies their respective responsibilities, which shall be submitted as part of the joint registration. Neither NERC nor the regional entity shall be parties to any such agreement between a JRO and its member or related entity(ies), nor shall NERC or the regional entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the joint registration.”

Notes: The RC SDT recommends the retirement of IRO-001-1 R4.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1 R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-001-3 None – retire requirement because it is redundant with: PER-003-0 R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions: R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System.</p>

R1.2. Positions directly responsible for complying with NERC standards.

Notes: The RC SDT recommends retiring IRO-001-1 R6 as it is redundant with PER-003-0 R1.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1 R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-3 None – requirement should be retired because it is redundant with: IRO-014-2 R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p>

Notes: The RC SDT recommends the retirement of IRO-001-1 R7 as this is redundant with IRO-014-1 R1.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1 R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing</p>	<p>IRO-001-3 R2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator’s direction in accordance with Requirement R2 unless compliance with the direction in accordance with Requirement R2 the direction cannot be physically implemented or unless such actions would violate</p>

<p>Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>safety, equipment, regulatory or statutory requirements. <i>[Violation Risk Factor: High]</i> <i>[Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>R4. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. <i>[Violation Risk Factor: High]</i> <i>[Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
--	--

Notes: The RC SDT added the Distribution Provider per FERC Order 693 and added the blue text shown in the requirements above. The RC SDT proposes the replacement of IRO-001-1, R8 with two requirements IRO-001-3, R3, and R4. This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in R1, which states that the Reliability Coordination will act or direct actions to mitigate issues. Stakeholders indicated issues with the ability to measure compliance with the phrase, “without intentional delay” and this was removed.

Relating to First Energy’s comment in FERC Order 693, the requirements address both personnel safety and equipment. There is no reference to a chain of command in the requirements. The standard is written such that decision-making authority rests with the Reliability Coordinator. No further revisions to the standard are required.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-3</p> <p>None – retire the requirement as redundant.</p>

Notes: The RC SDT proposes retiring this requirement. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the RC Area and the Interconnection. Section 6 of the NERC Standard Development Procedure states that NERC develops and maintains Reliability Standards. Equity issues are covered under the Reliability Coordinator Standards of Conduct.

Functions that Must Comply with the Requirements in the Standards

Standard	Functions that Must Comply With the Requirements							
	Reliability Coordinator	Balancing Authority	Distribution Provider	Transmission Operator	Transmission Service Provider	Purchasing Selling Entity	Generator Operator	Load Serving Entity
IRO-001-3	X	X	X	X			X	

Implementation Plan ~~and Mapping Document~~ for IRO-001-~~32~~ - Reliability Coordination — Responsibilities and Authorities

Approvals Requested

~~The RC SDT requests the approval of IRO-001-32 – Reliability Coordination – Responsibilities and Authorities. Also, the RC SDT requests the approval of one existing NERC Glossary term and the approval of one new term.~~

Prerequisite Approvals

- None

~~Revisions to Defined Terms in the NERC Glossary~~

~~The RC SDT proposes modifying the following approved definition:~~

~~**Adverse Reliability Impact**—The impact of an event that results in Bulk Electric System instability or Cascading.~~

~~This defined term is also contained in draft IRO-014-2.~~

~~The RC SDT proposes the following new definition:~~

~~**Reliability Directive:** A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency.~~

~~This defined term is contained in draft COM-002-3 and IRO-001-2.~~

Conforming Changes to Requirements in Already Approved Standards

- None

Revision Summary

- The RC SDT revised the standard and is proposing retiring ~~several~~six requirements (R2, R4, R5, R6, R7 and ~~R10~~R9). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERCs Rules of Procedure and to address issues in FERC Order 693.

Effective Dates

In those jurisdictions where regulatory approval is required, ~~this standard~~IRO-001-3 shall become effective on the first day of the ~~first~~second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

Retirements

IRO-001-2 should be retired at midnight of the day immediately prior to the Effective Date of IRO-001-3 in the particular jurisdiction in which the new standard is becoming effective.

Mapping Document for IRO-001-3

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p><u>IRO-001-2</u>This requirement was retired as it is addressed in the NERC Rules of Procedure, Section 503, item 2.2: “Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”</p> <p>R1. The Electric Reliability Organization shall certify at least one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within each region and across the regional boundaries. [Violation Risk Factor: High][Time Horizon: Operations Assessment]</p>

Notes: ~~After discussion with NERC legal staff, the above requirement was proposed as a revision to existing R1.~~

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p><u>IRO-001-2</u><u>IRO-001-3</u></p> <p>None – The RC SDT proposes retiring these requirements.</p>

Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2 <u>IRO-001-3</u></p> <p>R2. <u>R1.</u> <u>Each Reliability Coordinator shall take have the authority to actions or direct others to actions (which could include issuing Reliability Directives) by Transmission Operators, Balancing Authorities, Generator Operators, and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</u></p> <p>Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. [Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</p>
<p>Notes:</p> <ul style="list-style-type: none"> The RC SDT is proposing to remove the blue text in the first sentence. The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROLs are contained in other standards (e.g., TOP-007, R2). 	

- The Distribution Provider was added as an applicable entity per FERC Order 693.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-001-2IRO-001-3</p> <p>None – retire the requirement</p> <ul style="list-style-type: none"> ▪ RC SDT proposes that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, section 500 and should be retired from the standard. Section 501 states: ▪ “The purpose of the compliance registry will be to clearly identify those entities that are responsible for compliance with reliability standards. Organizations listed on the registry will be responsible for knowing the content of and for complying with the NERC reliability standards.” ▪ Also, section 507, item 2 addresses written agreements; ▪ Joint registration pursuant to written agreement. ▪ “Where a JRO and any of its members or related entities agree, in writing, upon a division of compliance responsibility among them for one or more reliability standard(s) applicable to a particular function, and/or for one or more requirements within particular reliability standard(s), both the JRO and such member(s) or related entit(ies) shall register as an organization responsible for that function. The JRO and its member(s) or related entit(ies) must have a written agreement that clearly specifies their respective responsibilities, which shall be submitted as part of the joint registration. Neither NERC nor the regional entity shall be parties to any such agreement between a JRO and its member or related entity(ies), nor shall NERC or the regional entity have responsibility for reviewing or approving any

	such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the joint registration.”
Notes: The RC SDT recommends the retirement of IRO-001-1 R4.	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. [<i>Violation Risk Factor: Medium</i>]</p>	<p>IRO-001-2IRO-001-3</p> <p>None – retire requirement because it is redundant with:</p> <p>PER-003-0</p> <p>R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions:</p> <p>R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System.</p> <p>R1.2. Positions directly responsible for complying with NERC standards.</p>
Notes: The RC SDT recommends retiring IRO-001-1 R6 as it is redundant with PER-003-0 R1.	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.</p>	<p>IRO-001-2IRO-001-3</p> <p>None – requirement should be retired because it is redundant with:</p> <p>• IRO-014-12</p> <p>R1. <u>Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of</u></p>

<p><i>[Violation Risk Factor: High]</i></p>	<p><u>information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</u></p> <p>For conditions or activities that impact other Reliability Coordinator Areas, each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following:</p>
---	--

Notes: The RC SDT recommends the retirement of IRO-001-1 R7 as this is redundant with IRO-014-1 R1.

<p>Already Approved Standard</p>	<p>Proposed Replacement Requirement(s)</p>
<p>IRO-001-1 R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2 <u>IRO-001-3</u></p> <p>▪ <u>R2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator’s direction in accordance with Requirement R2 unless compliance with the direction in accordance with Requirement R2 the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</u> R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with its Reliability Coordinator’s direction per</p>

	<p>Requirement R2 unless the direction per Requirement R2 can not be implemented or such actions would violate safety, equipment, or regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations]</p> <p>R4. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R23. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <ul style="list-style-type: none"> R4. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform as directed per Requirement R2. [Violation Risk Factor: High] [Time Horizon: Real-time Operations]
<p>Notes: The RC SDT added the Distribution Provider per FERC Order 693 and added the blue text shown in the requirements above. The RC SDT proposes the replacement of IRO-001-1, R8 with two requirements IRO-001-2<u>IRO-001-3</u>, R3, and R4. This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in R1, which states that the Reliability Coordination will act or direct actions to mitigate issues. Stakeholders indicated issues with the ability to measure compliance with the phrase, “without intentional delay” and this was removed.</p> <p>Relating to First Energy’s comment in FERC Order 693, the requirements address both personnel safety and equipment. Background

The RCSDT has revised the COM-001-2, COM-002-3 and IRO-001-1 standards based on stakeholder comments received during the initial ballot and formal comment period and quality reviews of each standard.

The RCSDT has addressed comments on the applicability of all three standards and implementation plans by aligning COM-001-2, COM-002-3, and IRO-001-2 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards and implementation plans.

Several commenters had suggestions for improvements to the requirement language and applicability of COM-001-2. The RCSDT believes the standard correctly and adequately requires each applicable entity that would have capability to receive Interconnection and operating information to have Interpersonal Communications, and Alternative Interpersonal Communications to be used when the Interpersonal Communication is not available. The RCSDT made the following changes to COM-001-2 based on stakeholder suggestions:

1. The following Requirement parts were added to COM-001-2:
 - 3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection
 - 4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection
 - 5.5 Adjacent Balancing Authorities
 - 6.3 Adjacent Balancing Authorities
2. The phrase "to exchange Interconnection and operating information" was removed from requirements R1 through R8 to clarify that the intent of this capability is NOT for the exchange of data.
3. A new requirement was added for clarity regarding what is required of Distribution Providers and Generator Operators (i.e., collaboration between entities to restore a failed communications capability):
 - R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to

restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]

The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

As a reference, we have included the existing definition of Emergency and the BOT approved definition of Adverse Reliability Impact¹:

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

Adverse Reliability Impact: The impact of an event that results in Bulk Electric System instability or Cascading.

Based on stakeholder feedback regarding IRO-001, the RCSDT removed Requirement R1. Other requirements were removed from IRO-001 and placed in more appropriate standards. These requirements did not fit with the purpose statement of IRO-001. Requirements R5 and R6 were removed from IRO-001 and placed in IRO-005-4. Requirements R7 and R8 were removed from IRO-001 and placed in IRO-002-2. These requirements were balloted and approved by stakeholders in July of 2011 and subsequently approved by the NERC BOT on August 4, 2011.

In addition, minor clarifications were made to the language of requirements and measures in COM-002-3 and IRO-001-3 based on suggestions from quality reviews of those standards.

¹ This definition was approved by the NERC Board of Trustees on August 4, 2011. Filing with regulatory authorities is pending.

You do not have to answer all questions. Enter all comments in Simple Text Format.

1. The RCSDT has revised the applicability of the standards and implementation plans by aligning COM-001-2, COM-002-3, and IRO-001-2 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards. Do you agree with this change in applicability to the three standards? If not, please explain in the comment area below.

Yes

No

Comments:

2. Do you agree with the addition of "Adjacent" entities in COM-001-2, Parts 3.5, 4.3, 5.5 and 6.3 of COM-001-2? If not, please explain in the comment area below

Yes

No

Comments:

3. The RCSDT removed the phrase "to exchange Interconnection and operating information" in COM-001-2, Requirements R1 through R8 based on stakeholder comments. Do you agree with the revision? If not, please explain in the comment area below.

Yes

No

Comments:

4. A new requirement was added for clarity regarding what is required of Distribution Providers and the Generator Operators:

R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]

This requirement requires collaboration between entities to restore a failed communications capability. Do you agree with the new requirement? If not, please explain in the comment area below

Yes

No

Comments:

5. The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

Do you agree with the proposed definition? If not, please explain in the comment area below

Yes

No

Comments:

6. Do you have any other comment, not expressed in questions above, for the RC SDT?

Comments:

Violation Risk Factor and Violation Severity Level Assignments

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in IRO-001-3 — Reliability Coordination – Responsibilities and Authorities.

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

Justification for Assignment of Violation Risk Factors in IRO-001-3:

The SDT applied the following NERC criteria when proposing VRFs for the requirements in COM-001-2:

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame

that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:¹

Guideline (1) — Consistency with the Conclusions of the Final Blackout Report

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:²

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) — Consistency within a Reliability Standard

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

Guideline (3) — Consistency among Reliability Standards

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) — Consistency with NERC’s Definition of the Violation Risk Factor Level

¹ North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh’g and compliance filing, 120 FERC ¶ 61,145 (2007) (“VRF Rehearing Order”).

² Id. at footnote 15.

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC's definition of that risk level.

Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC's VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC's Reliability Standards and implies that these requirements should be assigned a "High" VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are three requirements in IRO-001-3 and all were assigned a "High" VRF.

VRF for IRO-001-2, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in EOP-002-2.1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to having responsibility to act to ensure reliability.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to act, direct actions or issue Reliability Directives may directly affect the electrical state or the capability of the bulk power system and may lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-001-2, Requirement R2 contains only one objective, therefore only one VRF was assigned.

VRF for IRO-001-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels for Project 2006-06 – Reliability Coordination

- FERC’s Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in TOP-001-1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to the complying with directives unless the following the directive would violate safety, equipment, regulatory or statutory requirements.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to comply with a reliability directive could lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-001-2 Requirement R3 contains only one objective, therefore only one VRF was assigned.

VRF for IRO-001-2, Requirement R3:

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. . There is a similar requirement (Requirement R3) in TOP-001-1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to informing the Reliability Coordinator when a directive can not be performed.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to inform the Reliability Coordinator of the inability to perform a reliability directive would prevent the Reliability Coordinator from developing an alternative solution to the reliability concern. This could lead to directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-003-2, Requirement R4 has only one objective, therefore only one VRF was assigned.

Justification for Assignment of Violation Severity Levels for IRO-001-3:

In developing the VSLs for the TOP standard, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:

Lower	Moderate	High	Severe
<p>Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full intent of the requirement.</p>	<p>Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.</p>	<p>Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.</p>	<p>Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.</p>

FERC’s VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in IRO-001-3 meet the FERC Guidelines for assessing VSLs:

Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a “binary” type requirement must be a “Severe” VSL.

Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

**Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation,
Not on A Cumulative Number of Violations**

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VSLs for IRO-001-3 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is comparable to approved EOP-002-2, Requirement. That is a binary requirement and thus, the VSL in the proposed standard is assigned a Severe VSL.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for IRO-001-2 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is comparable to approved TOP-001-1, Requirement R3. That VSL is binary but the RCSDT notes that there are two possible levels of violation for this requirement. The two conditions are that 1) the responsible entity did not comply (severe) or 2) the responsible initiated action but did not fully comply (high).. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels for Project 2006-06 – Reliability Coordination

		setting VSLs that are less punitive than those already proposed.			
--	--	--	--	--	--

VSLs for IRO-001-2 Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is comparable to approved TOP-001-1, Requirement R3. That VSL is binary and the proposed VSL is also binary. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Standards Announcement

Project 2006-06 Reliability Coordination

Three Ballot Windows Extended, Three Non-binding poll Windows **Extended One Day**
Formal Comment Period **Extended One Day**
Through 8 p.m. Eastern TODAY (Thursday, February 9, 2012)

[Now Available](#)

Three non-binding polls of the VRFs and VSLs associated with the standards listed below failed to achieve a quorum and have been extended by one day. In addition, to accommodate ballot pool members and other stakeholders affected by a brief unavailability of NERC web services at the end of the ballot and comment period window, the formal comment period and three ballots of these standards and their associated implementation plans will also be extended one day. The non-binding polls, ballots, and formal comment period will close at **8 p.m. Eastern TODAY, Thursday, February 9, 2012.**

- COM-001-2 – Communications
- COM-002-3 – Communication and Coordination
- IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Please log in and cast your ballots for these standards, and opinions in the non-binding polls, if you have not already done so.

Standards Development Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. For more information or assistance, please contact Monica Benson at monica.benson@nerc.net.

*For more information or assistance, please contact Monica Benson,
Standards Process Administrator, at monica.benson@nerc.net or at 404-446-2560.*

Standards Announcement

Project 2006-06 Reliability Coordination

Three Ballot Windows and Three Non-binding Poll Windows Now Open
January 30 - February 8, 2012

[Now Available](#)

Ballot windows are open through **8 p.m. Eastern on Wednesday, February 8, 2012** for three successive ballots (one for each of the following standards and the associated implementation plans) and three non-binding polls of the VRFs and VSLs associated with each standard:

- COM-001-2 – Communications
- COM-002-3 – Communication and Coordination
- IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Clean and redline versions of each standard and the associated implementation plan and VRFs and VSLs are posted on the [project webpage](#). In addition, the following supporting materials have been posted on the project page:

- Mapping Document for each standard - Identifies each requirement in the approved version of the standard and how the requirement has been treated in the current draft.
- VRF and VSL Justification – Identifies how the proposed VRFs and VSLs for each standard meet NERC and FERC guidelines.
- Last approved versions of COM-001 and COM-002 – Because the changes from the last approved versions of these two standards are so extensive, a redline showing changes against that last approved version is not useful. The last approved versions are posted as a convenience to stakeholders.

Instructions for Balloting

Members of the ballot pools associated with this project may log in and submit their votes for the standards and opinions for the non-binding polls from the following page:

<https://standards.nerc.net/CurrentBallots.aspx>.

Instructions for Commenting

A formal comment period is open through **8 p.m. Eastern on Wednesday, February 8, 2012**. Please use this [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, please contact Monica Benson at monica.benson@nerc.net. An off-line, unofficial copy of the comment form is posted on the [project page](#).

Special Instructions for Submitting Comments With a Ballot or Non-binding Poll

Please note that comments submitted during the formal comment period, the ballots for the standards,

and the non-binding polls of VRFs and VSLs all use the same electronic form, and will be compiled into a single report with duplicate comments submitted by the same entity removed and duplicate comments submitted by multiple entities consolidated. **Therefore, it is NOT necessary for ballot pool members to submit more than one set of comments. The drafting team requests that all stakeholders (ballot pool members as well as other stakeholders) submit all comments through the electronic comment form.**

Next Steps

The drafting team will consider all comments submitted to determine whether to make additional revisions to the standards.

Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standard IRO-003-2.

The following three standards that are part of this project were approved by the ballot pool and were adopted by the NERC Board of Trustees in August 2012: IRO-002-3 Reliability Coordination – Analysis Tools; IRO-005-4 - Reliability Coordination-Current Day Operations; and IRO-014-2 – Coordination Among Reliability Coordinators. Additional information is available on the [project webpage](#).

Standards Development Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. For more information or assistance, please contact Monica Benson at monica.benson@nerc.net.

Standards Announcement

Project 2006-06 Reliability Coordination

Formal Comment Period Open January 9 – February 8, 2012
Three Ballot Windows and Three Non-binding Poll Windows Open
January 30 - February 8, 2012

[Now Available](#)

The following standards, and the associated implementation plans and VRFs and VSLs, have been posted for a formal comment period through **8 p.m. Eastern on Wednesday, February 8, 2012**:

- COM-001-2 – Communications
- COM-002-3 – Communication and Coordination
- IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Clean and redline versions of each standard and the associated implementation plan and VRFs and VSLs are posted on the [project webpage](#). In addition, the following supporting materials have been posted on the project page:

- Mapping Document for each standard - Identifies each requirement in the approved version of the standard and how the requirement has been treated in the current draft.
- VRF and VSL Justification – Identifies how the proposed VRFs and VSLs for each standard meet NERC and FERC guidelines.
- Last approved versions of COM-001 and COM-002 – Because the changes from the last approved versions of these two standards are so extensive, a redline showing changes against that last approved version is not useful. The last approved versions are posted as a convenience to stakeholders.

Three successive ballots (one for each standard and its implementation plan) and three nonbinding polls of the VRFs and VSLs associated with each standard will be conducted beginning on Monday, January 30, 2012 through **8 p.m. Eastern on Wednesday, February 8, 2012**.

Instructions for Commenting

A formal comment period is open through **8 p.m. Eastern on Wednesday, February 8, 2012**. Please use this [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, please contact Monica Benson at monica.benson@nerc.net. An off-line, unofficial copy of the comment form is posted on the [project page](#).

Special Instructions for Submitting Comments with a Ballot or Non-binding Poll

Please note that comments submitted during the formal comment period, the ballots for the standards, and the non-binding polls of VRFs and VSLs all use the same electronic form, and will be compiled into a single report with duplicate comments submitted by the same entity removed and duplicate comments submitted by multiple entities consolidated. **Therefore, it is NOT necessary for ballot pool members to submit more than one set of comments. The drafting team requests that all stakeholders (ballot pool members as well as other stakeholders) submit all comments through the electronic comment form.**

The new requirement presents us with a paradoxical situation. The communication has failed, so we must consult: yet consultation requires communication. We note that the SDT used the word "any", implying that multiple communication paths are required. The reality of the situation at Central Lincoln, due to our remote location, is that a single backhoe incident at the right location can take out all of our of our communication capability (including the terrestrial portion of the cellular networks) with our BAV/O, making this requirement impossible to meet for this circumstance using our present capabilities. We also note that no time limit was indicated. Most interruptions are brief, and fixed before consultation could reasonably take place. CEAs will be finding entities non-compliant for quickly fixing problems at their end without first consulting to ensure the restoration time was agreeable. To avoid non-compliance, entities will be forced delay repairs while they investigate alternative communication paths for consultation purposes. We fail to see how such an outcome improves reliability. The new requirement is one sided, requiring the DP and GOP to consult with no corresponding requirement for the TO or BA to have personnel available for such a consultation. Consultation failure or failure to mutually agree due to actions or inactions on the part of the TO or BA should not result in an enforcement action against the DP or GOP, yet that is how the requirement is written. The new requirement fails to add any "clarity" to the other requirements, and we don't see that the stakeholders thought there was a problem with DP/GOP obligation clarity. Instead, it adds new obligations with no justification for how they enhance reliability. We suggest removing the requirement.
Yes
As stated in our prior comments, we continue to have problems with COM-002 R2 and R3 as written. The SDT's answer ("It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive") addresses our concern perfectly, and we would agree with such an expectation. Unfortunately, the expressed expectation is not in the proposed standard or even in a proposed guideline for the standard.

Yes
No
We are concerned regarding communications between Transmission Operators on opposite ends of DC ties which may or may not be in the same interconnection. Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous. The measures should also be verified to ensure that they align properly with the final requirements.
Yes
We suggest that this phrase should also be removed from the "Purpose" statement.
No
We suggest Requirement 11 should be deleted as the generic nature of the term "...any of its Interpersonal Communications capabilities..." could be interpreted to include communications capabilities used for internal DP/GO purposes. Such DP/GO internal communications capability would not be critical to BES reliability. Also, no BES reliability benefit is realized by the parties simply agreeing to a time for the restoration of the failed Interpersonal Communication capability.
No
We suggest adding the words "and identified as a reliability directive to the recipient" at the end of the definition of Reliability Directive. As written, this definition could lead to a dispute of what communications are Reliability Directives: leading to further dispute as to what Requirements are applicable. By adding this clarity in the definition of this term, clarity will not be needed in the application of this definition as is proposed in COM-002-3, Req 1. This would allow the removal of R1 from COM-002-3
COM-001-2 Comments Definition of Alternative Interpersonal Communication: The proposed definition uses the term "medium". What is the scope of that? Telephony is a "medium" but there is wired, wireless, satellite, etc. Was "medium" intended to differentiate voice, paper, text, email, teletype, or something else? Does the qualifying term "same" when modifying infrastructure mean something like voice versus written? What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the "same infrastructure" but a different "medium" R1 and R2 - We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or alternate Interpersonal communications. R1 - In later requirements it is proposed that the entity "...shall designate an...". It is suggested that for consistently and audit ability, this concept be used for R1, R3, R5, R7 and R8. In addition, the qualifier of "primary" should be used such that the requirements read "... shall have designated, primary Interpersonal Communications capability with the following entities:." Although it is appropriate that "Alternative" be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication) that bounds acceptable alternative methods, we do not see the need to capital "primary". R9 - The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the sub-requirements of R2, R4, and R6. There is no expectation of testing the primary Interpersonal Communications - is this intentional or an oversight? Although functional testing of this should be done as a normal course of business, should an explicit test be required with each entity in the sub-requirements of R1, R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct? R10 - The following scenario seems plausible: The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation? Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well? M9 reads "at least on a monthly basis". We suggest that this be changed to "at least once per calendar month" as written in R9. This change should also be corrected in the VSLs. M8 - We suggest removing the second "that" in the first sentence of the measure. M10 - We suggest this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read: "Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10)." * M12 needs to be removed. We question why the first paragraph of Section 1.3 - Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard. COM-002-3 Comments R2 - We recommend that the following phrase (in quotes) be added to R2: Each Balancing Authority, Transmission Operator and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive "immediately upon receiving it." As written, there is no limit as to when the entity must repeat it (i.e. they could wait 2 hours) The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call). For example, is a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3? IRO-001-3 Comments We recommend that where the verb "direct/directed" or noun "direction" is used in Purpose, R1, R2 and R3, that it be replaced with the verb "instruct/instructed" or noun "instruction", as appropriate. This would help the industry avoid confusion often referred to as "big D" or "little d" directives. It is noted that the term "Reliability Directive" does that to a great degree but avoiding the

verb/noun "direct/direction" would augment the difference. R1 - At what point in time is "identified" referring to in "...to prevent identified events or...? Is it referring to current or future events? One might assume both since the "Time Horizon" is defined as Real-time Operations, Same Day Operations and Operations Planning, but the requirement may be enhanced if explicitly stated ("...to prevent events identified in real-time or in the future or to mitigate the magnitude..."). For clarity, the scope of the authority should be limited to the Reliability Coordinator Area ("...that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area"). As written, it implies the authority should extend outside its RC Area. R2 - We question the phrase "physically implemented" and recommend that the intent be clarified in the language. We note the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011: "IRO-001 R2, R3, and R4 have replaced "Directives" with the word direction in lower case (while it appears that "Directives" is a subset of "directions"). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use "Directives" and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (eg Reliability Coordinator, market operator, etc) the staff at these entities is fulfilling. Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC "shall take actions or direct actions, which could include issuing Reliability Directives, ". This is the "direction in accordance with Requirement R2" stated in R3 and the "direction in accordance with Requirement R3" stated in R4." We believe the entity's comments remain valid and the response provided by the SDT does not address all aspects of the concern. We suggest that the language be changed to "Reliability Directive" consistent with COM-002. R3 - The requirement states the responsible entities shall "inform" its RC when unable to perform as directed but it is unclear when the notification needs to take place. Although the term "as soon as practical" may seem to be unmeasurable, as written now there is no time deadline to perform the notification - i.e. it could be 4 hours later after recognition. M2 - need to add the following words "compliance with, physically, unless" which were included in R2, therefore M2 should read "Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time -stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2) - Section 1.3, the second bullet: need to add calendar to 12 calendar months "The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers."

As per COM-001-2, R7, "Each Distribution Provider shall have Interpersonal Communications capability with the following entities..." R11 states that the DP or GO that experiences a failure of its Interpersonal Communications ability shall consult with TOPs and BAs and agree on how to restore Interpersonal Communications. We believe better language might be, "Restore Interpersonal Communications with your TOP/BA as soon as operationally feasible."
Yes
The PNGC Comment Group believes COM-002-3, R2, lacks justification for applicability to a Distribution Provider (DP). RCs in the WECC region do not communicate reliability directives to DP only entities. Having this requirement apply to DPs seems to indicate that we will need 24/7 communications capability to record and respond to calls that will never come in order to satisfy the requirement with no improvement to reliability. The SDT's response from the last round of comments: "It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive". Nowhere is this expectation provided for in the written standard. If the issuer of a reliability directive has already called the DP, are they going to then re-issue the reliability directive after the DP calls them back?

NERC uses the terms "adjacent" and "neighboring" in various standards. It is generally believed that those terms have the same meanings, but there are those who believe those terms, as used, are intended to have different meanings. To ensure a consistent usage and understanding, the definition of the term adjacent must be made known before its addition to the standard. Consideration should be given to using only one term in all standards if adjacent and neighboring are intended to mean the same thing. Both terms are used in NERC Standards, sometimes both in the same standard. For example, EOP-001-2b uses "neighboring" in R5, and "adjacent" in R3.3.

For COM-001: 1. R1.2 and R2.2: The phrase "within the same Interconnection" is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to coordinate reliability issues including curtailing interchange transactions crossing an Interconnection boundary). The SDT's response to industry comments on the previous posting that the phrase was added to address the ERCOT situation (that ERCOT does not need to communicate with other RCs and that such coordination takes place between TOPs) leaves a reliability gap. 2. R3.5 and R4.3: The phrase "synchronously connected within the same Interconnection" is also improper; it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). The reason that was used in response to the above comments (coordination among TOPs for DC tie operation) contradicts with the inclusion of this phrase in R3.5 and R4.3. 3. R4 and R6: Not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin with to enable BAs to communicate with these entities (such as operating instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails. 4. To preclude the possibility of problems arising from having different languages spoken between entities, COM-001-1.1 R4 should remain as it was or those ideas kept in the revised requirement. R4 read: "R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations." 5. Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised. For IRO-001: The Data Retention Section does not reflect the revised requirements. As examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1. Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2. And, in the Data Retention Section, R4 and M4 are mentioned. However, there are only three requirements with their corresponding measures in the standard.

There is a risk of not properly identifying an abnormal condition (Emergency or Adverse Reliability Impact) in time to require specific use of the statement 'this is a Reliability Directive' when issuing switching on the system in the event of an emergency. This is a deviation from consistently using 3-way communication when an emergency occurs. It may not be apparent that an emergency exists and breaking from consistent use of expected 3-way communication could cause confusion.

Edward J Davis
Entergy Services, Inc
No
R3 adds additional responsibilities for the TOP to have Interpersonal Communications capability with EACH DP and GOP in its footprint. Similarly, R4 gives the TOP responsibility to have alternative communications capability with each of these entities. This is a significant additional responsibility for the TOP to document and perhaps arrange for additional means of communication with these entities. The short time frame provided for implementation of these requirements is not consistent with the additional effort and compliance documentation that is necessary to implement these requirements. Entergy recommends that the implementation time frame for these new requirements that apply to new entities, or expand the application of COM-001 for existing entities have an effective date 12 months beyond the applicable regulatory approval. Additionally, the implementation of the requirements that apply to the DP and GOP will represent an increase in the amount of documentation that must be retained to demonstrate compliance, and in some cases may also result in their having to purchase equipment or install new alternate means of communication. What is the improvement in reliability expected as a result of these new requirements?
Yes
Entergy agrees with the inclusion of the term "Adjacent" in these requirements to limit the entities that the BA or TOP must have communications capability with to those that they border.
Yes
Yes, the requirements of this standard pertain to having communications capability. The specific content of that communication should not be the subject of the standard.
No
The DP or GOP should have to notify the TOP and BA of its communications failure, similar to the requirement in R10 for TOP and BA. The DP or GOP should restore the communications capability as soon as possible. Entergy does not agree that the TOP or BA should have to negotiate the restoration time with the DP or GOP. This is an unreasonable burden on the BA and TOP.
No
An Adverse Reliability Impact is a type of Emergency. Including a new term for Adverse Reliability Impact and including both terms in the definition for Reliability Directive doesn't add clarity. I suggest changing the definition for Reliability Directive to remove phrase "or Adverse Reliability Impact."
Entergy does not agree with including the DP and GOP in this standard. However, if they are to be included and are required to have the communications capability indicated, they should be included in R10. Why would it be important for the TOP to notify the DP that their communications method has failed, but it is not important for the DP to notify the TOP when their communications method has failed. The distinction doesn't seem reasonable or meaningful. Additionally, in the draft of COM-002-3 requirement 2 contains the language that the recipient of the directive shall "repeat, restate, rephrase or recapitulate" the directive. Why are so many synonyms of repeat necessary. Repeat or restate should be sufficient to get the point across.
Individual
Michael Falvo
Independent Electricity System Operator
No
In COM-001, we commented earlier that the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. The SDT's response indicates that the suggested change is not needed since additionally requiring DP and GOP entities to have Alternative Interpersonal Communication capability would impose more cost on smaller DP and GOP entities that have little or no risk impact to the bulk electric system. We disagree with this assessment since the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability. If Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, then it is deemed necessary that such communication be provided at all times, which indicates the need for an alternative capability. We once again urge the SDT to make the list of entities in R5 and R6 to be the same.
No
(1) We agree with the addition of "Adjacent" entities in the quoted parts except the qualifier "synchronously connected within the same Interconnection" need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations. (2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.
No
In the last posting, we suggest removing the phrase "within the same Interconnection" from R1 (now R2.2) since there are RCs between two Interconnections that need to communicate with each other for reliability coordination (e.g. between Quebec and the RCs in the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT's response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.
Yes
Yes
(1) The proposed implementation plan conflicts with Ontario regulatory practice respecting the effective date of the standard. It is suggested that this conflict be removed by appending to the implementation plan wording, after "applicable regulatory approval" in the Effective Dates Section A5 on P. 4 of the draft standard COM-001, COM-002 and IRO-001, and on P. 2 of COM-001's Implementation Plan and P. 1 of COM-002's and IRO-001's Implementation Plans, to the following effect: ", or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities." (2) COM-001: Measure M9: "monthly basis". Suggest changing "monthly basis" to "at least once per calendar month" to be consistent with the wording in R9. (3) IRO-001: Measures M1, M2, M3 - The types of evidence are listed in paragraph form. This is not consistent with presentation style in COM-001-2 Measures, where evidence is listed in bullet format. Suggest using bullet form for consistency. (4) IRO-001, Data Retention Section: i. The retention requirements do not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4. ii. Section 1.3, second paragraph: "The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider... shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation." The word "or" between Generator Operator and Distribution Provider should be changed to "and".
Group
MRO NSRF
Will Smith
Yes
No
NERC has formally defined "Adjacent Balancing Authority" in the NERC Glossary of Terms, but not "Adjacent Transmission Operator". The MRO NSRF recommends that "Adjacent Transmission Operator" be defined similar to the "Adjacent Balancing Authority" definition in the NERC Glossary of Terms.

Yes
No
Please note that the use of the word "any" as in "Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities..." will be viewed as meaning every Interpersonal Communication medium that an Entity has or uses. The NSRF recommends that the word "any" be removed from this Requirement. The NSRF recommends that R11 be revised to read: "Each Distribution Provider and Generator Operator that experiences a failure of any of its primary (or defined) Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority..." In that way it focuses it down to the communications issues with the TOP or BA. In lieu of "primary" the SDT could state "defined" as long as it is not meant to be "any". The latter part of R11 states: "...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability." This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. The NSRF recommends this be rewritten as: "...shall consult with inform their Transmission Operator or Balancing Authority as applicable as to the status of the Interpersonal Communication capability". So the new R11 would read: "Each Distribution Provider and Generator Operator that experiences a failure of its primary (or designated) Interpersonal Communication with their Transmission Operator or Balancing Authority shall inform them, as applicable, as to the status of the Interpersonal Communication capability."
Yes
Has the SDT looked at combining COM-002-3 and IRO-001-3 into a single Standard? It would allow Entities a one stop shopping place to refer to issuing and receiving a Reliability Directive. The definition of Interpersonal Communication is: "Any medium that allows two or more individuals to interact, consult, or exchange information". As stated in Question 4, the use of the word any will bring in mediums that are outside the scope of this Standard. The NSRF recommends the following: Interpersonal Communication: The primary (or designated) medium that allows two or more individuals to interact, consult, or exchange information. In Standard COM-002-3 the MRO NSRF recommends that the Effective Date be the first day of the second calendar quarter after applicable regulatory approval, to be the same as COM-001-2 and IRO-001-3. In that way all 3 standards would be effective at the same time, making implementation much smoother. The below section will lead to entities hold evidence past the 12 month retention period. This ambiguous wording will force entities to hold data past the 12 month period as stated in the following paragraph, after the below sighting. Recommend that the first paragraph within 1.3 be deleted in its entirety. 1.3. Data Retention The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Hydro-Quebec TransEnergie
For COM-001: R1.2 and R2.2: The phrase "within the same Interconnection" is improper: it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPPC region to coordinate reliability issues including curtailing interchange transactions crossing an Interconnection boundary). The SDT's response to industry comments on the previous posting that the phrase was added to address the ERCOT situation (that ERCOT does not need to communicate with other RCs and that such coordination takes place between TOPs) leaves a reliability gap. 2. R3.5 and R4.3: The phrase "synchronously connected within the same Interconnection" is also improper: it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). The reason that was used in response to the above comments (coordination among TOPs for DC tie operation) contradicts with the inclusion of this phrase in R3.5 and R4.3. 3. R4 and R6: Not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin with to enable BAs to communicate with these entities (such as operating instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails. 4. To preclude the possibility of problems arising from having different languages spoken between entities, COM-001-1.1 R4 should remain as it was or those ideas kept in the revised requirement. R4 read: "R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations." 5. Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised. For IRO-001: The Data Retention Section does not reflect the revised requirements. As examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1. Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2. And, in the Data Retention Section, R4 and M4 are mentioned. However, there are only three requirements with their corresponding measures in the standard.

The phrase "mutually agreeable time" needs to be replaced in order to make this standard acceptable. This phrasing creates a potential violation if equipment functionality cannot be restored in the time frame preferred by another entity, even if the time of repair is beyond the control of the RE. This phrase should be replaced with "inform their TO or BA as applicable of the failure, and provide estimates as to the time the Interpersonal Communication capabilities will be restored".

If the Interpersonal Communication is down, and no backup is required for the DP and GOP, how are they to consult and collaborate?
The question of whether one is in a state of Emergency or Instability, or in an Abnormal Condition can be still be subjective: it may be difficult to provide evidence for an audit.
In IRO-001 R2 an "and" is missing after Generator Operator, and the comma should be removed. Why are there 3 different Effective Dates for this project, each standard being different? To simplify, can't they all be made identical?

for COM-001-2 Oncor takes the position that contacting all impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer as prescribed in R1 through R6 is not doable within the ERCOT interconnect for a Transmission Operator. Oncor takes the position that notification only to the RC and BA is sufficient and that those two entities have the operational functionality to contact within the prescribed time all affected Distribution Providers, Generator Operators, and other Transmission Operators. R10 - Oncor takes the position that the word "impacted" added to R10 will clarify that notification only needs to be made to the entities that are effected by the failure of a communication path. This will also more align with the language in M10 For COM-002-3 Oncor request clarity about what constitutes a "recipient". For example, if a Transmission Grid Operator performing the functions of a Transmission Operator issues a Reliability Directive to its own field operations personnel to perform an action on behalf of the same entity, does the field operations personnel as the recipient become in affect a "Transmission Operator" subject to R2.

Regarding COM-002 Requirement R1, we recommend that this requirement be reworded as follows: "When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall require that the Reliability Directive be communicated using three-part communications as described in Requirements R2 and R3 of this standard". The reason for this recommended rewording are threefold: 1. Good operating practice calls for use of three-part communications at all times. The recommended re-write encourages the use of the good operating practice of three-part communications at all times, but does not require it. 2. It is not good operating practice to require that an additional (unnecessary) phrase be used during emergency situations. During emergency situations, it is best to use standard operating protocols so as to limit unnecessary burdens on operating personnel during critical and stressful times. 3. By implementing the proposed new R1 requirement, it would effectively weaken the need for rigorous compliance with any and all directives issued by the RC's, TO's or BA's. Regarding IRO-001 Requirement R1, we recommend that the current requirement R3 be reinstated as the new requirement R1. That is, the new requirement R1 should read as follows: R1. The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. We do not support any further dilution of Reliability Coordinator authority to enforce Reliability Directives through deletion of the 30 minute maximum response time period. The timely actions in response to any Reliability Coordinator issued Reliability Directives is an essential part of the process.

R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4. R11 is not clear on the purpose of the statement " determine a mutually agreeable time for restoration" this could be driven by forces outside the control any of the entities. I think" provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage" would be better. Update M9 accordingly
Yes
The definition is acceptable, but as used may imply that all Emergency communications must be Reliability Directives.
COM-001, Although a great improvement over existing COM-001, and eliminates the data component see comments: •For R5.1 Can the solutions included to meet R1 be included, same R3.2 and R5.2, same R5.3 and R7.2, same R5.4 and R8.1 •For R5.2 Can the solutions included to meet R2 be included, same R4.2 and R6.2 •R9 a 2 hour response for a once a month test seems extreme, as would require a secondary Alternate Interpersonal Communications capability •M9 is reasonable, but should include something about communication actual repair and or time estimates •R10 The use of R1 through R6 implies notification of both Interpersonal Communications and Alternate Interpersonal Communications failures. Do you notify if you become aware after the link is back up if it was down for GT 30 minutes, and Doesn't address notifying when restored •R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4. R11 is not clear on the purpose of the statement " determine a mutually agreeable time for restoration" this could be driven by forces outside the control any of the entities. I think" provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage" would be better. Update M9 accordingly COM-002 •Since all the Requirements are related to Reliability Directives, is it implied that all "Emergency Communications" are Reliability Directives even if not designated as such per R1. •The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. A recipient's phone may not be recorded but a initiator's always should. If a receiver refused to meet the R2 requirement, an initiator should have an alternative. I.e. repeat the directive and provide potential penalties if recipient refuses to comply. Should the initiator have responsibility for providing the entire 3-way evidence as M3 implies? IRO-001, Although a great improvement over existing IRO-001, see comments: •R2 needs to be clear that it is the Reliability Coordinator's Reliability Directive that must be complied with not just any Reliability Coordinator's direction as stated. •The M2 measure could be difficult, as the operator would have to have access to documents proving the safety, equipment, regulatory or statutory requirements, which may be the assessment of an individual applying the safety rule. Is the measure requiring a deposition of the individual to be performed for each instance? With an assumed data retention of 90 day (voice) 12 month document retention the deposition would be unlikely to be acquired prior to the retention period ending. •R3 needs to be clear that it is the inability to perform the Reliability Coordinator's Reliability Directive that must be communicated not just any "Reliability Coordinator's as directed". •The Data Retention section does not align with the standard: The Reliability Coordinator shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2, Measure M2. R2 and M2 apply to the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider. There is no R4 and M4.

In R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply/demand balance is not local and in markets that allow retail competition, I'm thinking LSE is the right functional entity. For Florida, it doesn't really matter. If the LSE is the "correct" entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added

<p>IMPA does not believe that this requirement is necessary in order to ensure communication lines are restored by Distribution Providers and Generator Operators. If this requirement is kept, IMPA does not think the use of the words "a failure of any of its Interpersonal Communication capabilities" is acceptable. The wording is too inclusive and should apply to only primary Interpersonal Communication capabilities. IMPA is also concerned about how entities are supposed to know when the telephone companies may have equipment repaired in order to determine a mutually agreeable time to restore Interpersonal Communication capability. The entity may have no control over the restoration and hence would not be able to set a time other than whenever the capabilities are restored by for instance the telephone company. In addition, entities will have to keep evidence to show that a "mutually" agreeable time was reached by two or more entities. The most workable solution would be to require notification if primary Interpersonal Communication is lost and a follow-up notification when that capability is restored.</p>
No comment.
For R2 in IRO-001-3, the requirement needs to have the entities comply with their Reliability Coordinator's direction received in R1. Currently, requirement 2 directions are not linked back to R1 which means entities would have to comply with all Reliability Coordinator's directions regardless if they are associated with R1. For R7 in COM-001-2, IMPA does not believe that every Distribution Provider needs to be included in requirement 7. IMPA recommends stating that requirement 7 only applies to Distribution Providers who own an UFLS or UFLS system.

<p>IRO-001-3 R1 is not consistent with the direction taken in COM-002-3 which requires the Reliability Coordinator to identify Reliability Directive as such. The same approach should be taken with IRO-001-3 R1 so that the Reliability Coordinator is required to identify directions that are made to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts as such prior to or when issuing the directions. This extra specification is needed to eliminate any possible confusion in areas where the market operator and Reliability Coordinator are the same entity. In these areas, the Reliability Coordinator/market operator routinely gives directions to other entities that are not to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. Without the added clarification the receiving entity may not know the urgency of the situation and may not know to inform the Reliability Coordinator if they are unable to perform as required by R3.</p>

As we commented on Project 2007-03 TOP-001-2, the definition of Reliability Directive is an improvement but the definition must capture the identification concept that is reflected in the Requirement (R1). As a result, when Reliability Directive is used elsewhere, it would be clear that the communication must be identified as a Reliability Directive. We suggest the following revision to the definition and it should follow through to Project 2006-06 IRO-001-3 and Project 2007-03 TOP-001-2, eventually being added to the Reliability Standards Glossary of Terms. A communication identified as a Reliability Directive by a Reliability Coordinator, Transmission Operator, or Balancing Authority to initiate action by the recipient to address an Emergency or Adverse Reliability Impact.
Comments: IRO-001-3 uses the term "direct" in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following: To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System, R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator's request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given. R3: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.

NextEra Energy, Inc.
Yes
Yes
Yes
No
No
NextEra Energy, Inc. (NextEra), which includes Florida Power & Light Company, believes that Requirement 11 of COM-001-2, as drafted, is too vague to be adopted as a mandatory Reliability Standard. For example, it is unclear what is meant by "shall consult." The North American Electric Reliability Corporation's (NERC) Rules of Procedure state that a foundation of any Reliability Standard is that: "... [the] reliability standard shall be stated using clear and unambiguous language. Responsible entities, using reasonable judgment and in keeping with good utility practices, are able to arrive at a consistent interpretation of the required performance." The term "shall consult" is not a term generally understood or used in the electric utility industry, and, therefore, does not enable a consistent interpretation of the performance required. Accordingly, NextEra requests that Requirement 11 either: (i) be deleted; or (ii) be redrafted to read more like Requirement 10.
No
NextEra objects to the use of "Adverse Reliability Impact" in Reliability Standards COM-002-3 and IRO-001-3. NextEra requests that the use of Adverse Reliability Impact be revised as suggested below or be deleted from the definition of Reliability Directive. NextEra does not agree with the use of Adverse Reliability Impact in the definition of "Reliability Directive" for the following reasons: 1. This term Adverse Reliability Impact is ambiguous. In part, the term is ambiguous because it includes in its definition the term "instability," which has led to considerable misunderstanding and confusion in the industry. There are also differing views on what is (and is not) Cascading, because the definition is not sufficiently clear. For example, some believe instability and Cascading occur when an event affects multiple substations of one Transmission Operator, while others believe instability or Cascading only occur when the event affects more than one Transmission Operator's system. As mentioned in response to item 4, above, Reliability Standards must be clear and consistently interpreted. It is not appropriate to issue a Standard that perpetuates the use of terms that lack consistent interpretation. 2. While not perfect, the term Emergency is better understood in the industry, and it may include many or all of the instances of instability or Cascading intended to be captured by Adverse Reliability Impact. Consequently, it is not advisable to introduce Adverse Reliability Impact as a new term, when it is not clearly distinguishable from Emergency. NextEra is concerned that an unclear and imprecise term, such as Adverse Reliability Impact, does not promote reliability, and, such a term is particularly troublesome in the context of real time system operations. Therefore, for the reasons stated above, NextEra believes that the term Adverse Reliability Impact should be deleted from the definition of Reliability Directive. In the alternative, if Adverse Reliability Impact is not deleted from the definition of Reliability Directive in Reliability Standards COM-002-3 and IRO-001-3, NextEra requests that Adverse Reliability Impact be revised to read: "an event or condition on the Bulk Electric System that may, or is leading to, Cascading over more than one Bulk Electric System transmission system."
NextEra has the following additional comments. COM-002-3 The purpose of COM-002-3 is: "To ensure Emergency communications between operating personnel are effective." This stated purpose is not the same as the specific requirement that three-way communication is used for a Reliability Directive. Thus, NextEra requests that the purpose be revised to read as follows: "To ensure that when a Reliability Directive is given that the Reliability Directive is explicitly stated and three-way communication is used." Consolidation of COM-002-3 and IRO-001-3 NextEra notes a continuing area of concern with the somewhat unsynchronized approach taken in the drafting process. Reliability Standards COM-002 and IRO-001 are now on version three, and still there is a somewhat unsynchronized approach being proposed. A clear and consolidated approach seems easily achievable with minimal effort. Thus, as proposed below, NextEra requests that COM-002-3 and IRO-001-3 be combined, which also would appear to allow for the retirement of certain requirements, such as TOP-001-1 R1-4. NextEra also is concerned that the current approach may have contributed to several significant misstatements in IRO-001-3, R1-3, which use the terms "direct," "direction" and "directed," instead of the term Reliability Directive as used in COM-002-3. COM-002-3 and IRO-001-3 indicate that three-way communication only is required when a Reliability Directive is issued. This begs the question of what are the potentially other, lower classes of directives in IRO-001-3 R1-3? And why do they need to be followed with or without three-way communication? Thus, at a minimum, NextEra requests that the terms direct, direction and directed be deleted from IRO-001-3 R1-3, respectively, and that Reliability Directive be inserted. This change, and other proposed changes, are reflected in NextEra's overall proposal to combine COM-002-3 and IRO-001-3 into one COM-002-3 standard: (Note: If the term Adverse Reliability Impact is revised as proposed by NextEra, then the term would not need to be stricken) R1. Each Reliability Coordinator shall have the authority to act and to issue a Reliability Directive to a Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider within its operating region to prevent identified events that may lead to, or to mitigate the magnitude or duration of, an Emergency. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R1.1 Each Transmission Operator shall have the authority to act or issue a Reliability Directive to a Balancing Authority, Generator Operator and Distribution Provider within its operating region to prevent identified events that may lead to, or to mitigate the magnitude or duration of, an Emergency. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R1.2 Each Balancing Authority shall have the authority to act or issue a Reliability Directive to a Generator Operator and Distribution Provider within its balancing region to prevent identified events that may lead to, or to mitigate the magnitude or duration of, an Emergency. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R2. When a Reliability Coordinator, Transmission Operator or Balancing Authority issues a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time] R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive. [Violation Risk Factor: High][Time Horizon: Real-Time] R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive shall either [Violation Risk Factor: High][Time Horizon: Real-Time]: • Confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate, or • Reissue the Reliability Directive to resolve any misunderstandings. R4. Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator's Reliability Directive, unless compliance with the Reliability Directive cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R4.1 Each Transmission Operator, Balancing Authority, Generator Operator, and

Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform a Reliability Directive in accordance with Requirement R4. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R5. Each Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Transmission Operator's Reliability Directive, unless compliance with the Reliability Directive cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R5.1. Each Balancing Authority, Generator Operator, and Distribution Provider shall inform its Transmission Operator upon recognition of its inability to perform a Reliability Directive in accordance with Requirement R5. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R6. Each Generator Operator or Distribution Provider shall comply with its Balancing Authority's Reliability Directive, unless compliance with the Reliability Directive cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R6.1. Each Generator Operator or Distribution Provider shall inform its Balancing Authority upon recognition of its inability to perform a Reliability Directive in accordance with Requirement R6. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Conclusion Given the importance of having clear and concise Reliability Standards on the issue of directives and three-way communication, until the above concerns raised by NextEra in Items 4 through 6 are addressed, NextEra intends to continue to vote "no" on COM-001-2, COM-002-3 and IRO-001-3.

Regarding R11, as written it is unclear when the DP and GOP are required to consult with their TOP or BA. "[A] failure of any of its Interpersonal Communication capabilities" could be construed to mean any internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP's or GOP's ability to communicate with the TOP or BA. It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional. Furthermore, what exactly is required in "consultation" and who would be responsible if the "consulting" entities did not come to a "mutually agreeable time" are questions that are left unanswered. LG&E and KU Services Company suggest the following language: R11. Each Distribution Provider and Generator Operator that experiences a failure of more than one of its Means for Interpersonal Communications or failure of its Alternative Means for Interpersonal Communication with their Transmission Operator or Balancing Authority shall notify their Transmission Operator or Balancing Authority regarding the time to restore the impacted Means for Interpersonal Communication or Alternative Means for Interpersonal Communication.
Yes
COM-001-2 Regarding COM-001-2 and proposed definitions, LG&E and KU Services recommends changing the terms being defined from "Interpersonal Communications" and "Alternative Interpersonal Communication" to "Means for Interpersonal Communication" and "Alternative Means for Interpersonal Communication." A communication is an exchange of information, not a medium. The medium is simply the means. LG&E and KU Services Company further recommend that each requirement be rewritten with these new defined terms as appropriate and that the word "capabilities" currently following the defined terms be removed from each of the requirements. We suggest the definition for "Means for Interpersonal Communication" be "A medium utilizing electromagnetic energy that allows two or more individuals to interact, consult or exchange information." We suggest the definition for "Alternative Means for Interpersonal Communication" be "Any Means for Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Means for Interpersonal Communications used for day-to-day operation." Finally, LG&E and KU Services Company request clarification that the requirements to have in place Interpersonal Communications and Alternative Interpersonal Communications do not establish noncompliance for the unavailability of either medium provided the reporting requirements set forth in the standard are otherwise met. All Proposed Standards LG&E and KU Services Company suggest that the first paragraph in section 1.3 Data Retention be removed from all proposed standards. It states: "...For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit. While LG&E and KU Services Company is confident that the SDT intended to clarify entities' data retention responsibilities, this paragraph could be clarified to indicate that it does not require that any additional evidence be retained and provided beyond that written in the standard's requirements

Yes
No
COM-001-2 R11 does not specify a timeline in which entities have to come up with a 'mutually agreeable' time to restore Interpersonal Communication capability. Manitoba Hydro believes this omission creates a reliability gap and suggests that wording be revised as follows: '... shall consult with their Transmission Operator or Balancing Authority as applicable and determine a mutually agreeable time to restore the Interpersonal Communication capability within 24 hours of experiencing the failure.'
Yes
COM-001-2 -Definition 'Interpersonal Communication' - for clarity, the definition should explicitly state that data exchange is not included. -R9 - for clarity, the wording '... within 2 hours' should be replaced with '... within 2 hours of the unsuccessful test'. Conforming change required to M9 as well. -R10 - for clarity, the wording '... as identified in R1 through R6...' should be replaced with '... with which it is required to have Interpersonal Communications capability or Alternative Interpersonal Communication capability...'. -M6 - the term 'Adjacent' needs to be capitalized in the last sentence of the paragraph as 'Adjacent Balancing Authority' is a NERC defined term. -M7 - 'that' in the first line is repeated -M9 - the wording 'on a monthly basis' should be replaced with 'once per calendar month' to be consistent with the wording of the R9. -M11 - the words 'that experiences a failure of any of its Interpersonal Communications capabilities' should be added after Operator to be consistent with the wording of the Requirement -Compliance - 1.3 bulleted sentences - the term 'historical data' should be removed. The term 'evidence' is sufficiently descriptive and is consistently used in other requirements -Data Retention (1.3) - The data retention requirements are too uncertain for two reasons. First, the requirement to 'provide other evidence' if the evidence retention period specified is shorter than the time since the last audit introduces uncertainty because a responsible entity has no means of knowing if or when an audit may occur of the relevant standard. Secondly, it is unclear what 'other evidence' besides the specified logs, recordings and emails, an entity may be asked to provide to demonstrate it was compliant for the full time period since their last audit. This comment also applies to COM-002-3 and IRO-001-3. -Data Retention (1.3) - COM-002-3 requires that voice recordings are kept for the most recent 3 calendar months but COM-001-2 requires that they be kept for the most recent 12 calendar months. Manitoba Hydro does not see the reliability benefit of storing voice recordings for longer than 3 months and suggests that voice recordings be removed as evidence for COM-001-2. Evidence of the availability of Interpersonal Communications and Alternative Interpersonal Communications can be demonstrated using the other forms of evidence listed. -VSLs (general comment) - for clarity, use for example R1.1 and R1.2 to refer to requirements instead of Part 1.1 and Part 1.2. -VSL R4 - a reference to R4.3 is missing COM-002-3 -Title - to capture the purpose and intent of the standard, the title should be changed to 'Emergency Communications'. -R2 - for clarity, the words 'back to the sender' should be added to the end of the sentence -R3 - for clarity, the words 'to the recipient' should be added to both of the bulleted sentences after 'confirm' and 'reissue'. The words 'evident from the response' should be added to the end of the second bullet. -A question for the drafting team: has it been discussed whether there should be an additional requirement which indicates that the Reliability Coordinator, Transmission Operator and Balancing Authority shouldn't take any action in a Reliability Directive until such time as it has been confirmed accurate by the sender? If so, does the team feel that it's a worthwhile requirement to consider? -M2 - the words 'restated, rephrased or recapitulated' should be added after 'repeated' to be consistent with wording of the requirement. -M3 - the words 'to show' should be deleted from the end of this paragraph. IRO 001-3 -Purpose - the words 'to the Bulk Electric System' already appear in the definitions of Emergency and Adverse Reliability Impact and do not need to be repeated here. -Effective Date - the effective date should be changed to the 2nd calendar quarter following BOT approval in jurisdictions not requiring regulatory approval to be consistent with jurisdictions requiring regulatory approval. -General comment - There are repeated references to 'identified events' - it is not clear what this is referring to. M1 - M1 refers to Adverse Reliability Impacts 'within its Reliability Coordinator Area'. The requirement does not refer to 'within its Reliability Coordinator Area' - the wording in the measure and in the requirement should be consistent. -M2 - missing the word 'physically' when describing that a direction could not be implemented, should be consistent with the wording in the requirement. -Compliance - the entire section needs to be updated as it refers to requirements and measures that don't exist. -VSLs R2 - the reference to 'fully comply' is very vague. It is only a violation if the entity does not fall within the exception. - R2 VSL - For clarity, change 'RC's directive' to 'Reliability Coordinator's Reliability Directive'.

Yes
No
We are concerned regarding communications between Transmission Operators on opposite ends of DC ties which may or may not be in the same interconnection. Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous. The measures should also be verified to ensure that they align properly with the final requirements.
Yes
We suggest that this phrase should also be removed from the "Purpose" statement.
No
We suggest the following changes: 1. Requirement 10 should include Distribution Providers and Generator Operators, 2. Entities to be notified should be "as identified in requirements R1 through R8", 3. Requirement 11 should be deleted, and, 4. Measures (M10) and VSLs should be adjusted accordingly.
No
This definition would encompass more communication than is now included. The definition now requires that a directive be declared as a part of the three part communication. For example, sending out the voltage schedule each morning would be included as a directive using the new definition. We suggest adding the words "and identified as a reliability directive to the recipient" at the end of the definition of Reliability Directive. This would allow the removal of R1 from COM-002-3
We question why the first paragraph of Section 1.3 - Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard. We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or alternate interpersonal communications (R1 and R2). COM-001-2 Dominion VP: COM-001-2, M9 reads "at least on a monthly basis". Dominion suggests that this be changed to "at least once per calendar month" as written in R9. This change should also be corrected in the VSLs. M8 - We suggest removing the second "that" in the first sentence of the measure. M10 - Dominion suggests this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read: "Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.) * M12 needs to be removed. Southern: Definition of Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communications used for day-to-day operation. Comments: • The proposed definition uses the term "medium". What is the scope of that? Telephony is a "medium" but there is wired, wireless, satellite, etc. Was "medium" intended to differentiate voice, paper, text, email, teletype, or something else? • Similar to that last question - does the qualifying term "same" when modifying infrastructure mean something like voice versus written? What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the "same infrastructure" but a different "medium" R1 Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities: Comments • In later requirements it is proposed that the entity "...shall designate an...". It is suggested that for consistency and auditability, this concept be used for R1, R3, R5, R7 and R8. In addition, the qualifier of "primary" should be used such that the requirements read "...shall have designated, primary Interpersonal Communications capability with the following entities." Although it is appropriate that "Alternative" be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication) that bounds acceptable alternative methods, we do not see the need to capital "primary". R9 Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test its Alternative Interpersonal Communications capability at least once per calendar month. Comments • The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the subrequirements of R2, R4, and R6. • There is no expectation of testing the primary Interpersonal Communications is this intentional or an oversight? Although functional testing of this should be done as a normal course of business, should an explicit test be required with each entity in the subrequirements of R1, R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct? R10 Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall notify entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer. Comments • The following scenario seems plausible: The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation? General Question • Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well? COM-002-3 Southern R1 When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. Comment • It is recommended that the requirement be clarified that the Reliability Directive be identified as such during its delivery. (e.g. "...shall identify the action as a Reliability Directive to the recipient during its delivery.") R2 Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive. Comment • It is recommended that the requirement be clarified that an entity receiving a Reliability Directive repeat, restate, rephrase or recapitulate it immediately upon receiving it. (e.g. "...shall shall repeat, restate, rephrase or recapitulate the Reliability Directive immediately upon receiving it.") As written, there is not limit as to when the entity must repeat it (i.e. they could wait 2 hours) General Question • The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call). Is, for example, a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by Individual confirmation required in R3? IRO-001-3 Dominion VP R2 - Dominion questions the phrase "physically implemented" and recommends that the intent be clarified in the language. Dominion notes the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011: "IRO-001 R2, R3, and R4 have replaced 'Directives' with the word direction in lower case (while it appears that 'Directives' is a subset of 'directions'). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use 'Directives' and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (eg Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling. Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC "shall take actions or direct actions, which could include issuing Reliability Directives, ". This is the "direction in accordance with Requirement R2" stated in R3 and the "direction in accordance with Requirement R3" stated in R4." Dominion believes the entity's comments remain valid and the response provided by the SDT does not address all aspects of the concern. Dominion suggests that the language be changed to "Reliability Directive" consistent with COM-002. M2 - need to add the following words "compliance with, physically, unless" which were included in R2, therefore M2 should read "Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time -stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2) Section 1.3, the second bullet, need to add calendar to 12 calendar months Southern General recommendation • It is recommended that where the verb "direct/directed" or noun "direction" is used in Purpose, R1, R2 and R3, that it be replaced with the verb "instruct/instructed" or noun "instruction", as appropriate. This would help the industry avoid confusion often referred to as "big D" or "little d" directives. It is noted that the term "Reliability Directive" does that to a great degree but avoiding the verb/noun "direct/direction" would augment the difference. R1 Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. Comment • At what point in time is "identified" referring to in "...to prevent identified events or..." Is it referring to current or future events? One might assume both since the "Time Horizon" is defined as Real-time Operations, Same Day Operations and Operations Planning but the requirement may be enhanced if explicitly stated ("...to prevent events identified in real-time or in the future or to mitigate the magnitude..."). • For clarity, the scope of the authority should be limited to the Reliability Coordinator Area ("...that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area"). As written, it implies the authority should extend outside its RC Area. R2 Editorial comment - The words "compliance with" are in a different font in the posted version. R3 Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. Comment The requirement states the responsible entities shall "inform" its RC when unable to perform as directed but it is unclear when the notification needs to take place. Although the term "as soon as practicable" may seem be unmeasurable, as written now there is no time deadline to perform the notification - i.e. it could be 4 hours later after recognition.

No
PPL has concerns with the use of the word "any" in this requirement. PPL recommends striking the words "any of" and instead using "Its primary" as follows: Each Distribution Provider and Generator Operator that experiences a failure of its primary Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...". In the current version, it is unclear when the DP and GOP are required to consult with their TOP or BA. "[A] failure of any of its Interpersonal Communication capabilities" could be construed to mean an internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP's or the GOP's ability to communicate with the TOP or BA. It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional.
Individual

Great River Energy
Yes
No
"to exchange interconnection and operation information" was removed from the requirements in COM-001-2 but remains in the purpose. For consistency it needs to be removed. It could read "To establish Interpersonal Communication capabilities for the exchange of information necessary to maintain reliability."
No
Capability is not used consistently in R7 and R11. It changes from singular to plural.
In IRO-001-3 "authority" should be removed and the verbage returned to "shall act." In COM-002-3 R2 and in Applicability we suggest removing the Distribution Provider as the RC would not likely give a Reliability Directive to a Distribution Provider. The Reliability Directive would more likely come from the Transmission Operator to the Distribution Provider. In COM-002-3 R3 we suggest replacing "Reissue" with "Restate." You are not technically reissuing the Reliability Directive.

Yes
Yes
Regarding COM-002 Requirement R1, we recommend that this requirement be reworded as follows: "When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall require that the Reliability Directive be communicated using three-part communications as described in Requirements R2 and R3 of this standard". The reason for this recommended rewording are threefold: 1. Good operating practice calls for use of three-part communications at all times. The recommended re-write encourages the use of the good operating practice of three-part communications at all times, but does not require it. 2. It is not good operating practice to require that an additional (unnecessary) phrase be used during emergency situations. During emergency situations, it is best to use standard operating protocols so as to limit unnecessary burdens on operating personnel during critical and stressful times. 3. By implementing the proposed new R1 requirement, it would effectively weaken the need for rigorous compliance with any and all directives issued by the RC's, TO's or BA's. Regarding IRO-001 Requirement R1, we recommend that the current requirement R3 be reinstated as the new requirement R1. That is, the new requirement R1 should read as follows: R1. The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. We do not support any further dilution of Reliability Coordinator authority to enforce Reliability Directives through deletion of the 30 minute maximum response time period. The timely actions in response to any Reliability Coordinator issued Reliability Directives is an essential part of the process.

Yes
We concur with the addition of "Adjacent" but ask that the SDT give some consideration to allowing an exemption in R6.3 for relatively small loads, less than 20 MW, that are pseudo tied into a Balancing Authority. Loss of these facilities would not place a burden on the BES and should not require Alternative Interpersonal Communications capabilities.
Yes
No
We would suggest deleting the phrase "any of" in the Requirement. It would then read "Each DP and GOP that experiences a failure of its Interpersonal Communication...". Also, how does the DP or GOP consult with its TOP or BA when it loses its Interpersonal Communications capability? To do this wouldn't they have to have an Alternative Interpersonal Communications capability?
Yes
COM-001-2: Requirement 10 is too open ended as written. The measure, M10, indicates that only impacted entities need to be notified. The requirement should be changed to make it consistent with the measure. The requirement would then read "Each RC, TOP And BA shall notify impacted entities as identified...". Requirements 3 and 5 places the responsibility for establishing Interpersonal Communication capability on the TOP and BA. It is quite conceivable that a TOP or BA may not know all, or newly, registered DPs and GOPs in its respective area. In Requirements 7 and 8, the DP and GOP, respectively, are in turn responsible for establishing Interpersonal Communication capability. The TOPs/BAs and the DPs/GOPs should not be responsible for this. The DPs and GOPs should be held accountable for requesting that capability of their TOP and BA. Therefore, we suggest adding the following phrase at the end of Requirements 3.3, 3.4, 5.3 and 5.4 – "that has requested Interpersonal Communications capability." Then R3.3 would read "Each Distribution Provider within its Transmission Operator Area that has requested Interpersonal Communications capability." COM-002-3: Requirement 2/Measure 2: There is an inconsistency between the requirement and the measure. The requirement allows the recipient to repeat, restate, rephrase or recapitulate the directive. Measure 1 only mentions repeating the directive.

Georgia System Operations
No
While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related. Accordingly, NERC's Reliability Functional Model V5 describes and identifies the DP's relationships with other Functional Entities to the TOP and BA with respect to Real Time. Real Time 7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority. 8. Implements system restoration plans as coordinated by the Transmission Operator. 9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment.
Yes
No
: The intent of this requirement is not yet clear. Technically, the air we breathe, as well as other mediums like "any" cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. The burden for compliance evidence to demonstrate failure of "any of its Interpersonal Communication capability" would seem unobtainable and could prove to be a daily occurrence (dropped phone calls, etc.). The following is suggested: R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capability shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.
Yes
Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator "to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact". Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3. COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: "When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive". What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact? Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. It is recommended that the treatment of Reliability Directives shall be consistent with those being developed for TOP-001-2 as proposed by the Real-Time Operations drafting team (Project 2007-03). As such, consider using the following language for R2: "Each TOP, BA, and GOP shall comply with each identified Reliability Directive issued and identified as such by its RC, unless such actions would violate safety, equipment, regulatory, or statutory requirements." Accordingly, please consider using the following language for R3: "Each TOP, BA, and GOP shall inform its RC of its inability to perform an identified Reliability Directive issued by that RC." Again, we do not believe the DP would receive an identified Reliability Directive directly from the RC and the DP applicability should be removed from this standard. The DP is appropriately captured under COM-002 and TOP-001 with respect to Reliability Directives. Accordingly, NERC's Reliability Functional Model V5 describes and identifies the DP's relationships with other functional entities to TOP and BA with respect to Real Time. Real Time 7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority. 8. Implements system restoration plans as coordinated by the Transmission Operator. 9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment. The following comments are regarding COM-001-2. The SDT should include an additional qualifier to Interpersonal Communications within the context of these requirements, for example (operational or dispatch center communications??). Technically, the air we breathe, as well as other mediums like "any" cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. Assuming at least one employed individual can speak, all entities could demonstrate compliance of this capability at all times, therefore, it is not clear the intent of these requirements are accurately being presented. It is recommended to include the use of "signed attestation letters" as examples of evidence under M4 and M11 and other measures as appropriate.

FirstEnergy
Sam Ciccone
Yes
Yes
Yes
No
Although we agree with the intent of the requirement, we are concerned with the use of "any of its Interpersonal Communication". The word "any" is very inclusive and the team should consider narrowing it down to those capabilities that may adversely impact reliability.
Yes
Definition of Interpersonal Communications - We understand that the team does not want to be prescriptive as far as the specific types of communication mediums since we live in an age of many forms of communication. But in this case it may be helpful to give examples in the definition. An auditor may interpret Interpersonal Communication to strictly include voice-related and two-way conversations. Depending on the circumstances, other mediums may be adequate, such as blast calls or instant messaging. This should be clarified in the definition. COM-001-2 - In R9, it should be clear that the 2 hour timeframe is for initiation of corrective action because mitigation may take much longer. We suggest the last sentence of R9 state: "If the test is unsuccessful, the responsible entity shall, within 2 hours, initiate action to repair or designate a replacement Alternative Interpersonal Communications capability." - In R10, the phrase "R1 through R6" should state "R1 through R8". COM-002-3 - In R2, the use of the term recapitulate may not be appropriate. This term means "to summarize" the directive. Three-part communication during emergency situations should assure that the essential details of the directives are understood and a summary may inadvertently leave out important information. - The effective date of COM-002-3 should be consistent with COM-001-2 and IRO-001-3 and state "the 1st calendar day of the 2nd calendar quarter". It currently shows the "1st calendar quarter in the standard and implementation plan. IRO-001-3 - The third bullet under Data Retention addresses requirement R4 and measure M4 neither of which exist in the standard. - In R1, the word "and" is missing between Generator Operator and Distribution Provider. - VSL for R2 - "NA" should be removed from the High VSL - Furthermore, the VSL should include language for instances when the entity cannot meet the RC's directive as afforded by R2.

Michelle D'Antuono
Ingleside Cogeneration LP
Yes
Ingleside Cogeneration LP believes that the intent of these three standards is to ensure reliable normal and emergency communications between BES operating entities. It should be the rare exception that BES-critical information must be communicated directly to an LSE, PSE, and TSP and IC. The impact of the Standards would be lessened if diffusely applied to multiple entities who do not normally engage in operations communications.
No
In the background section of this ballot, the project team indicates that the removal of the phrase is intended to signal that these requirements do NOT apply to the exchange of data. Although Ingleside Cogeneration LP agrees that the phrase is not a helpful description of the need for inter-entity communications - and should be removed - we do not see how the remaining language achieves the project team's purpose. It seems the confusion stems from the multitude of data communication types. Email messages between operating entities may be a valid communications path under COM-001-2, while telemetry/control is covered under other Standards. We believe that a technical guideline may be an appropriate vehicle to distinguish what types of communications are subject to these requirements, and which are not.
No
Most of Ingleside Cogeneration's communications capabilities rely on carriers who will immediately deploy technicians to repair land-based or wireless systems when they break. Although we may contact the carrier to inform them that the systems are not available - or to determine their progress - we do not want them waiting for our go-ahead before proceeding. If the intent of this requirement is to validate the operation of the repaired connection, or to establish interim means of communications with other operating entities, then Ingleside Cogeneration believes a re-write is in order. There is no reliability purpose being served otherwise that we can tell.
Yes
Ingleside Cogeneration agrees that it is important to clearly denote when a directive must be issued. In previous definitions, we believed that imprecise language made it difficult for the BA, RC, or TOP to determine if a gray area situation required a directive or not. With a more precise definition, it will eliminate second guessing by auditors that a directive was necessary because an outcome turned out poorly - even if an Emergency was not declared or an Adverse Reliability Impact did not occur.
Ingleside Cogeneration LP is concerned that the entity-to-entity organization of the COM Standards is quickly being outdated by voice and video conferencing or one-to-many broadcasts. In addition, email may be a preferred mode of most communications to and from small Generator Operators. It is not clear that these technologies are precluded from consideration by COM-001 and COM-002 - which means that some auditors may believe that they are. This leads to inconsistent application of the compliance criteria, and may discourage the use of some powerful technologies. It appears to us that some technical guidelines would be appropriate to help entities and auditors decide which are applicable under these Standards.

MISO Standards Collaborators
Marie Knox
Yes
(1) In COM-001, the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. Although the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability, the proposed standard does not require the capability in all cases. At the same time, this standard does not preclude such capability. Even though Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, there are other communications paths which can be used in the case of the loss of that capability. Since TOPs are also required to have the capability, the BA can call the TOP and ask the TOP to contact the DP/GOP for them until they can implement capability. In addition, it is difficult to visualize entities which would not have the public telephone system or even cell phones available for use in the event of the loss of the capability.
Yes

(1) We agree with the addition of "Adjacent" entities in the quoted parts. However, there are some entities which may need the capability even though they are not "synchronously connected within the same interconnection". This standard does not require them to have the capability, but it does not preclude such capability. In these cases, those entities should evaluate whether the need for the capability is a reliability need or market coordination. If the entities were connected synchronously, actions taken by an entity could have immediate effect upon other entities. However, if not synchronously connected, changes in flows across the asynchronous ties would have to follow the interchange scheduling process with approval by all involved entities before changes could be enacted. Some TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). (2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.
Yes
We urge the SDT to remove the phrase. If necessary, regional situations can be addressed by a regional variance.
Yes
Yes
The Data Retention Section in IRO-001 does not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4. Additional comments associated with COM-002 We are concerned with the use of "shall" in the measurement sections. "Shall" statements should only be used in the Requirements, as these are the only enforceable items in the standard. The measures should not limit how we show compliance. If there are specific issues that the drafting team is proposing to be a requirement, they should be added to the requirements section of the standard. Measurement M1 should also allow entities to develop procedures, that are distributed to and trained on, in advance with recipients of directives that meet the requirements for the communication of what constitutes a Reliability Directive. The last sentence in the measurement should be revised to read: "Such evidence could include, but is not limited to, dated and time-stamped voice recordings, dated and time-stamped transcripts of voice recordings, or dated operator logs to show that it identified the action as a Reliability Directive to the recipient or approved procedures that identify what constitutes a Reliability Directive and when Reliability Directives are issued." (R1) The Data Retention section states: "For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit." It is unclear on how an entity would be expected to provide evidence beyond 3 months when requested if the data retention period and established procedures do not require the evidence to be retained. The SDT should provide examples of what other types of evidence could be expected or the phrase should be removed.
Group
Florida Municipal Power Agency
Frank Gaffney
Yes
In COM-001-2 R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, it may be that the LSE is the more appropriate functional entity. For instance, the Functional Model when discussing LSE on page 55 states that one of the LSE's real time duties is: "12. Receives requests from the Balancing Authority and Distribution Provider for voluntary load curtailment." If the LSE is the more appropriate entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added. For Florida, which does not have retail competition, it doesn't matter whether the DP or the LSE is more appropriate; hence, the "yes" answer.
Yes
Yes
No
By use of the term "any" in the phrase "a failure of any of its Interpersonal Communication" the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk. To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which does not require DPs or GOPs to have Alternative Interpersonal Communications capability. A possible solution is through use of the terms "Primary" for R3 and "Alternate" for R4 and then make R11 applicable to Primary only.
Yes
In the definition of Interpersonal Communication, the use of the word "medium" is ambiguous. Suggestions for alternatives: "system", "channel". COM-001-2, R1 and R3, the phrase: "have Interpersonal Communications capabilities", what if the communication system fails? Is that an immediate non-compliance (especially R3.3 and R3.4 which do not require a redundant system). Suggest using EOP-008 type of language to allow restoration of failed equipment without non-compliance. COM-001-2 R9 - "Each... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity. In addition, the type of testing is unclear and ambiguous. There is also ambiguity in the terms "direct", "directive", "direction" and "Reliability Directive". The SDT may want to consider using the terms "instruct" and "instruction" in place of "direct", "directive", "direction" to more clearly distinguish from a Reliability Directive.
Individual
Greg Rowland
Duke Energy
Yes
Yes
However, we believe that the phrase "synchronously connected within the same Interconnection" should be struck, because TOPs are controlling DC ties and should be required to have communications with each other.
Yes
However, the definition of Interpersonal Communication should also be expanded to clearly include the drafting team's intent that the capability is NOT for the exchange of data. The phrase "for the exchange of Interconnection and operating information" should also be struck from the Purpose statement.
No
The phrase "consult with... to determine a mutually agreeable time" makes this requirement too open-ended to be auditable and enforceable. We question why R11 does not establish a timeframe for notification similar to R10, which requires the RC, TOP or BA to make notification within 60 minutes of failure detection. We also question why DPs and GOPs are not required to have Alternative Interpersonal Communications capability in order to be able to make such notifications.
No
• Since FERC has not yet approved the new definition of Adverse Reliability Impact, we believe the term "Adverse Reliability Impact" should be replaced by the words of the BOT-approved definition: "the impact of an event that results in Bulk Electric System instability or cascading". • Also, add the phrase "and the communication is identified as a reliability directive to the recipient" to the end of the definition of Reliability Directive. This will eliminate potential confusion regarding when a communication is a Reliability Directive, and when a communication is a routine instruction. Revising the definition in this manner may also eliminate the need Requirement R1 of COM-002-3. If R1 is retained, we suggest rewording as follows: "Each Reliability Coordinator, Transmission Operator, or Balancing Authority shall identify a Reliability Directive to the recipient when it issues a Reliability Directive that requires an action or actions to be executed." • Proposed reworded definition: "Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or the impact of an event that results in Bulk Electric System instability or cascading, and the communication is identified as a Reliability Directive to the recipient."
• COM-001-2 does not specify how much time an entity is allowed to restore failed Interpersonal Communications capability or failed Alternative Interpersonal Communications capability. R1 through R6 require that the RC, TOP and BA have both. R7 and R8 require that DPs and GOPs have Interpersonal Communications capability. An auditor could find an entity non-compliant with these requirements upon failure of either capability. R9, R10 and R11 specify actions to take upon failure, but do not relieve entities of responsibility under R1 through R8. • COM-001-2 R9, M9 and VSLs – M9 and VSLs should be revised to be consistent with wording of R9 phrase "at least once per calendar month". • COM-001-2 R10, M10 and VSLs – Clarity is needed regarding when the 60-minute clock starts. For example, suppose a failure is detected immediately upon occurrence of the failure. Does the 60-minute clock start immediately, or after the failure has lasted 30 minutes? When does the 60-minute clock start if a failure is detected and the entity is unsure when it occurred? • COM-001-2 R10, M10 and VSLs – If the failure only lasts for 35 minutes, it appears that the RC, TOP or BA is still required to notify entities identified in R1 through R6. Is this the drafting team's intent? • COM-001-2 R10, M10 and VSLs – Should be revised since the RC, TOP and BA are only required to have Alternative Interpersonal Communications capability with other RCs, TOPs and BAs per R2, R4 and R6. Suggested rewording for R10: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify entities with which it is required to have Alternative Interpersonal Communications capability as identified in R2, R4 and R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer." • COM-001-2 M11 and VSL – Replace the word "their" with the word "its". • COM-001-2 Data Retention – The way Data Retention is being enforced, this whole section could just be reduced to a blanket statement that an entity must be able to provide evidence that it has been in compliance since its last audit. • COM-002-3 R2, M2 and VSL – Replace "and" with "or". Also, the phrase "repeat, restate, rephrase or recapitulate" seems excessive and may be intended to avoid a violation where an entity fails to repeat the Reliability Directive word for word. Suggested rewording: "Each Balancing Authority, Transmission Operator, Generator Operator or Distribution Provider that is the recipient of a Reliability Directive shall repeat the Reliability Directive back to the issuer with sufficient accuracy so that understanding can be confirmed." • COM-002-3 R3, M3 - Replace "and" with "or". • IRO-001-3 – We believe that the Purpose and the Requirements of this standard should be focused solely on situations where the Reliability Coordinator issues Reliability Directives to prevent an Emergency or Adverse Reliability Impact. • IRO-001-3 – The Purpose should be rewritten as follows: "To establish the authority of Reliability Coordinators to issue Reliability Directives to other entities to prevent an Emergency or the impact of an event that results in Bulk Electric System instability or cascading." • IRO-001-3 – R1 should be rewritten as follows: "Each Reliability Coordinator shall have authority to act or to issue Reliability Directives to others, including but not limited to the Transmission Operator, Balancing Authority and Generator Operator within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or the impact of an event that results in Bulk Electric System instability or cascading." • IRO-001-3 – R2 should be rewritten as follows: "Each Transmission Operator, Balancing Authority, Generator Operator or Distribution Provider shall comply with a Reliability Directive issued by the Reliability Coordinator unless the Reliability Directive cannot be physically implemented or unless such action would violate safety, equipment, regulatory, or statutory requirements." • IRO-001-3 – R3 should be rewritten as follows: "Each Transmission Operator, Balancing Authority, Generator Operator or Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to comply with a Reliability Directive in accordance with Requirement R2." • IRO-001-3 Measures and VSLs – Should be revised to conform with the above suggested revisions to requirements.

ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process. Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).
No

Some concern for removal of LSE in particular from R2 and R3 from current IRO-001-2 R7 for the ERCOT region. ERCOT Region has QSE's that manage Load Resources. There may be some QSEs that are not registered as a GOP that deploy Load Resources. Per the current LSE JRO, QSEs with Load Resources are registered as LSEs. Not requiring them to deploy Load Resource directives could be perceived as a reliability gap created from previous version to this version. PSEs could be removed as long as they fall under BA authority.
Yes
These changes will clarify intentions regarding the undefined term "adjacent".
Yes
Yes
Yes
The definition of Reliability Directive appropriately clarifies the importance of knowing the level of importance of any instructions being issued. If there is no room for variance from the specific action required, or if there is no time to further negotiate or discuss the action required, it is important that the instruction be identified as a Reliability Directive and for such instructions to be followed in a timely fashion. Normal operating instructions typically do not rise to this level of urgency and some variation from the words will not result in unmanageable reliability impacts. Also, there typically may be time for addressing the instructions in more than one way.
Regarding COM-001-2: We are not clear on the time horizon of requirements for COM-001-2. Based upon the purpose statement, it appears that establishment would be ahead of real time. Wording in the requirements could be construed as maintaining at all times vs. establishing communications. The timeline for mandatory/effectiveness may not be acceptable to establish communications with DPs if hardware procurement/projects must take place. Regarding IRO-001-3: We have some concern for the removal of LSE in particular from R2 and R3 from current IRO-001-2 for the ERCOT region. The ERCOT region has QSEs that manage Load Resources. There may be some QSEs that are not registered as a GOP that deploy Load Resources. Per the current LSE JRO, QSEs with Load Resources are registered as LSEs. Not requiring them to deploy Load Resource directives could be perceived as a reliability gap created from the previous version to this version. PSEs could be removed as long as they fall under BA authority. The Data Retention section should be corrected to match the new requirements numbers and elimination of the previous version R1 with ERO. The Version History mentions six requirements retired, but only details five.

ReliabilityFirst
Yes
Yes
ReliabilityFirst agrees with adding the term adjacent but is unclear what the term adjacent is referring to. Does it mean directly connected or is it more than one layer out.
Yes
No
ReliabilityFirst believes Distribution Provider and Generator Operator should be added to Requirement R10 and Requirement R11 should be removed. Finite time frames should be prescribed for each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities. ReliabilityFirst believes that the failure of Interpersonal Communication between Distribution Providers/Generator Operators and Transmission Operators/Balancing Authorities could have the same negative effects similar to the failure of Interpersonal Communication by the Reliability Coordinator, Transmission Operator, and Balancing Authority.
No
ReliabilityFirst believes the definition of "Reliability Directive" should be all inclusive and include "all" actions initiated by the Reliability Coordinator, Transmission Operator or Balancing Authority (not just Emergency or Adverse Reliability Impacts). Even though Emergency or Adverse Reliability Impacts are defined, during operations, it may become a gray area to whether or not it falls under the intent of a "Reliability Directive." Furthermore, if the system falls under a condition that results in an Adverse Reliability Impact, it may be too late for a Reliability Coordinator, Transmission Operator or Balancing Authority to issue a Reliability Directive. ReliabilityFirst recommends the following for revision to the term "Reliability Directive": Reliability Directive - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where an action by the recipient is required.
Comments on COM-001-2 1. Applicability Section a. RFC recommends adding the Generator Owner to the applicability section of the standard along with corresponding Requirements R8 and R11. ReliabilityFirst believes to maintain system reliability and based on certain business practices in effect, Generator Owners need to be required to have associated Interpersonal Communications with its Balancing Authority and Transmission Operator. 2. Requirement R7 and R8 a. ReliabilityFirst seeks further clarity on why the Distribution Provider and Generator Operator are not required to designate an Alternative Interpersonal Communications capability? Requirements R7 and R8 require the Distribution Providers and Generator Operators to have Interpersonal Communications capability but there is not corresponding requirement to have an Alternative Interpersonal Communications capability. ReliabilityFirst recommends adding two new requirements for the Distribution Provider and Generator Operator to designate an Alternative Interpersonal Communications capability. This will be consistent with how Requirements R1 through R6 are set up. 3. Requirement R9 a. Assuming new requirements for the Distribution Provider and Generator Operator to designate an Alternative Interpersonal Communications capability (based on previous comment) are added to the standard, the Distribution Provider and Generator Operator will need to be added to Requirement R9 to test its Alternative Interpersonal Communications capability at least once per calendar month. 4. Requirement R10 a. Based on the ReliabilityFirst comment submitted for Question 4, ReliabilityFirst believes the Distribution Provider and Generator Operator should be included in Requirement R10. b. Since Interpersonal Communications capabilities is a very important piece of operating the BES in a reliable manner, ReliabilityFirst believes the timeframe in which an entity is required to notify the entities is too long. ReliabilityFirst recommends the following language for Requirement R10: i. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall notify entities as identified in Requirements R1 through R8 of a failure of its Interpersonal Communications capabilities that lasts 15 minutes or longer. The notification shall be made within 30 minutes of the detection of a failure. 5. VSLs for Requirement R1 through R8 a. ReliabilityFirst suggest gradating the VSLs for R1 through R8. Listed below is an example of how to grade the VSL for R1. The same type of approach could be used for R2 through R8 as well. i. High VSL- the Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 and 1.2. ii. Severe VSL- The Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 and 1.2. 6. VSL for Requirement R9 a. For consistency with the requirement language, ReliabilityFirst recommends adding the words "at least on a monthly basis" to the Lower, Moderate and High VSLs and adding the words "if the test was unsuccessful" to the end of the Lower, Moderate and High VSLs. Listed below is an example of the Lower VSL. i. The responsible entity tested the Alternative Interpersonal Communications capability at least once per calendar month but failed to initiate action to repair or designate a replacement Alternative Interpersonal Communications in more than 2 hours and less than or equal to 4 hours if the test was unsuccessful. 7. VSL for Requirement R10 a. ReliabilityFirst provided alternate language for R10 in the comments listed above. If the alternate language is not incorporated, ReliabilityFirst recommends the following language for the Lower VSL. Similar language could be used for the Moderate, High and Severe VSLs as well. i. The responsible entity failed to notify entities as identified in Requirements R1 through R6 more than 60 minutes but less than or equal to 70 minutes of the detection of a failure of its Interpersonal Communications capabilities. b. If the alternate language for R10, in the comments listed above, is incorporated, ReliabilityFirst recommends the following language for the Lower VSL. Similar language could be used for the Moderate, High and Severe VSLs as well. i. The responsible entity failed to notify entities as identified in Requirements R1 through R6 more than 30 minutes but less than or equal to 740 minutes of the detection of a failure of its Interpersonal Communications capabilities c. For Moderate VSL (the VSL after the OR statement), ReliabilityFirst recommends using a percentage rather than the "least one, but not all" statement. For example, if there is say 100 impacted entities and the applicable entity only notify 1, they would only fall under the Moderate. In another scenario there is say 100 impacted entities and the applicable entity only notified 99, they would also fall under the Moderate as well. The use of percentages will help even this out. 8. VSL for Requirement R11 a. For consistency with the requirement language, ReliabilityFirst recommends the following language: i. The responsible entity that experiences a failure of any of its Interpersonal Communication capabilities failed to consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. Comments on COM-002-3 1. Requirement R1 a. Based on ReliabilityFirst suggested change to the definition of "Reliability Directive" as noted in Question 5, ReliabilityFirst recommends deleting Requirement R1. Based on the suggested definition, any communication initiated, where an action by the recipient is required, is considered a "Reliability Directive." Thus, there would no longer be a need for responsible entity to identify the action as a "Reliability Directive" to the recipient. 2. VSL for Requirement R3 a. For consistency with the requirement language, ReliabilityFirst recommends the following language: i. The responsible entity issued a Reliability Directive, but failed to confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate. Comments on IRO-001-3 1. Requirement R1 a. ReliabilityFirst seeks further clarity on why Requirement R1 only requires the Reliability Coordinator to have the "authority to act" rather than requiring the Reliability Coordinator to actually "take action" to prevent identified events that result in an Emergency or Adverse Reliability Impacts. Having the "authority to act" does not inherently require the Reliability Coordinator to take action, if appropriate. b. ReliabilityFirst seeks further clarity on the language "to prevent identified events." If the event was already identified, how can the Reliability Coordinator act to prevent it? ReliabilityFirst recommends adding the word "potential" in between the words "prevent" and "identified." 2. Requirement R3 a. There is no time qualifier specified in Requirement R3 dealing with the timeframe in which the applicable entity has to inform its Reliability Coordinator of its inability to perform as directed in accordance with Requirement R2. Without a time qualifier, Requirement R3 is open ended and could cause issues if the applicable entity does not inform its Reliability Coordinator upon recognition of its inability to perform as directed in a timely manner. ReliabilityFirst recommends the following language for Requirement R3: i. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator within 30 minutes upon recognition of its inability to perform as directed in accordance with Requirement R2. 3. VSL for Requirement R1 a. Requirement R1 requires the Reliability Coordinator to "... have the authority to act" - and the VSL does not reflect this language. ReliabilityFirst had questioned why Requirement R1, does not specifically require the RC to take action or direct actions in a comment submitted under Requirement R1. If the SDT does not change the language in Requirement R1, ReliabilityFirst recommends the following language: i. The Reliability Coordinator failed to have the authority to take action or direct actions, to prevent an identified event that resulted in an Adverse Reliability Impact

4. VSL for Requirement R2 a. For the High VSL, the words "fully comply" are ambiguous and open to interpretation. ReliabilityFirst recommends only having a Severe VSL. b. The Severe VSL states "directive" while Requirement R2 states "direction". To be consistent, ReliabilityFirst recommends the following language: i. "The Responsible Entity failed to comply with its Reliability Coordinator's direction"

In COM-001-2 R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, it may be that the LSE is the more appropriate functional entity. For instance, the Functional Model when discussing LSE on page 55 states that one of the LSE's real time duties is: "12. Receives requests from the Balancing Authority and Distribution Provider for voluntary load curtailment." If the LSE is the more appropriate entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added. For Florida, which does not have retail competition, it doesn't matter whether the DP or the LSE is more appropriate; hence, the "yes" answer.
Yes
Yes
No
By use of the term "any" in the phrase "a failure of any of its Interpersonal Communication" the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk. To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which does not require DPs or GOPs to have Alternative Interpersonal Communications capability. A possible solution is through use of the terms "Primary" for R3 and "Alternate" for R4 and then make R11 applicable to Primary only.
Yes
In the definition of Interpersonal Communication, the use of the word "medium" is ambiguous. Suggestions for alternatives: "system", "channel". COM-001-2, R1 and R3, the phrase: "have Interpersonal Communications capabilities", what if the communication system fails? Is that an immediate non-compliance (especially R3.3 and R3.4 which do not require a redundant system). Suggest using EOP-008 type of language to allow restoration of failed equipment without non-compliance. COM-001-2, R9 - "Each ... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity. In addition, the type of testing is unclear and ambiguous. The is also ambiguity in the terms "direct", "directive", "direction" and "Reliability Directive". The SDT may want to consider using the terms "instruct" and "instruction" in place of "direct", "directive", "direction" to more clearly distinguish from a Reliability Directive.

Yes
Agree, however, the ability for a DP or GOP to have such consultation with its TOP or BA would likely be hampered by the failure of the Interpersonal Communications itself. DP and GOP are only required to have a single source for this Interpersonal Communications.
Yes
The meaning of R9 is open to some interpretation. It states that if the monthly test is unsuccessful, the entity shall "initiate action to repair or designate a replacement" AIC within 2 hours. The meaning of this is unclear in several ways: First, does "initiate action" apply to the remainder of the sentence or just to the "repair" option? Second, what constitutes initiation of action? Is it the intent of the SDT that the alternate interpersonal communications be restored within a 2-hour limit? If so, the words do not clearly state that, and it seems an impossible task to ensure no more than 2-hr outage to an alternate communications medium. I am voting affirmative under the interpretation that one must only "initiate" the repair or "initiate" the designation of a replacement option within this tight 2-hour limit.

MISO requests clarification regarding (1) when Distribution Providers/Generator Operators have an obligation to collaborate with Transmission Operators versus Balancing Authorities; and (2) the obligation of Transmission Operators to inform Balancing Authorities (and vice versa) of an agreed upon time for restoration of Interpersonal Communication capability when collaboration occurs only between Transmission Operators and Distribution Providers/Generator Operators or, conversely, Balancing Authorities and Distribution Providers/Generator Operators.
No
The proposed definition of Reliability Directive is unacceptable because the use of the defined terms "Emergency" and "Adverse Reliability Impact" results in an undefined, broadened scope of responsibility for Reliability Coordinators when coupled with the definition of the Bulk Electric System. This may lead to confusion/ambiguity for Reliability Coordinators that must be clarified to ensure compliance. Further, this broadened scope may mis-direct Reliability Coordinator's attention and mitigation efforts to small-scale, localized issues that represent no true threat to the operation of the Interconnection.
COM-001-2, R2 and R6: MISO requests clarification as to whether the designation of Interpersonal Communications and Alternative Interpersonal Communications methods by Responsible Entities must be formally documented and/or agreed upon with those entities with which communications capability must be established. COM-001-2, R9: MISO suggests that the designation of Alternative Interpersonal Communications methods should not require formal documentation and may be agreed upon (when necessary) informally with those entities with which communications capability must be established in the event of an unsuccessful test of its Alternative Interpersonal Communications capability. COM-001-2, Requirement R10: MISO requests clarification as to whether "impacted entities" refers to those entities with which the Responsible Entity must have Interpersonal Communications and Alternative Interpersonal Communications capability. Further, MISO requests clarification as to whether the notification required by R10 must be made using the Alternative Interpersonal Communications method selected by the Responsible Entity. COM-002-3, R1 - R3: MISO respectfully submits that, while it appreciates the distinction in responsibilities proposed in the new COM-002-3 and acknowledges that such distinction is beneficial, these requirements increase compliance risk and potential penalty liability without attendant benefit to the reliability of the Bulk Electric System. MISO respectfully suggests that Requirements 2 and 3 be converted into sub-requirements as follows: R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time] R1.1. When the Reliability Coordinator, Transmission Operator or Balancing Authority identifies a stated action as a Reliability Directive, the receiving Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider shall repeat, restate, rephrase or recapitulate the Reliability Directive to the Issuing Reliability Coordinator, Transmission Operator or Balancing Authority. [Violation Risk Factor: High][Time Horizon: Real-Time] R1.2. When the Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive receives a response from the receiving Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider, it shall then either [Violation Risk Factor: High][Time Horizon: Real-Time]: • Confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate, or • Reissue the Reliability Directive to resolve any misunderstandings.

Texas Reliability Entity
Yes
No
(1) Requirements R1, R2, R3 and R4 should apply to all adjacent Reliability Coordinators and Transmission Operators, regardless of whether they are in the same Interconnection. The ERCOT Interconnection is asynchronously connected to adjacent Interconnections, and it is imperative that Functional Entities within Texas RE's purview be able to exchange operating information with Transmission Operators and Reliability Coordinators in those adjacent areas, even if they are in a different Interconnection. (2) Requirement parts R5.5 and R6.3 refer to "Adjacent Balancing Authorities." Measures M5 and M6 refer to "adjacent Balancing Authority" - note the small "a" on adjacent. "Adjacent Balancing Authority" is a defined term in the NERC Glossary, which has a more specific meaning than "adjacent Balancing Authority." Which term is intended in R5.5 and R6.3? If you don't intend to use the defined term, perhaps use a word like "contiguous" or "neighboring" rather than "adjacent."
Yes
No
(1) Why does R10 refer to "failure of its Interpersonal Communications capabilities" while R11 refers to "failure of **any of** its Interpersonal Communications capabilities"? What is the distinction that is

intended by addition of the words "any of"? (2) As a Compliance Enforcement Authority, we have several fundamental questions regarding what is intended in this standard. It appears the drafting team is using the defined term "Interpersonal Communications" to refer to a designated primary communication medium, and the term "Alternative Interpersonal Communications" to refer to one or more designated backup communication mediums. Is that correct? This should be clarified in the Standard. (3) There is ambiguity in the current draft because the defined term "Interpersonal Communications" appears to include primary, back-up and all other mediums that may be available (which may include landline phone, cell phone, satellite phone, instant messaging, email, and data links, all in one facility), including any "Alternative Interpersonal Communications". Do R10 and R11 apply to ALL available mediums, or just to the designated primary and back-up mediums? Does R9 apply to ALL available back-up mediums, or just to a specifically designated back-up medium?

No

We oppose the definition of Reliability Directive as it is currently being proposed in this standard because three-part communication should not be required only after an Emergency or Adverse Reliability Impact actually occurs. In particular we object to the removal of the word "expected" (or "anticipated") from the definition, because Reliability Directives may be required before a situation escalates to an Emergency, in order to prevent the Emergency from occurring. This proposed change potentially undermines efforts required to avoid emergencies and events. We note that there are instances in other Reliability Standards where "anticipated" conditions require actions to be taken (e.g. TOP-001-1 R5 and EOP-002 R4), when clear, concise, and definitive communication, verbal or electronic, is required to avoid or mitigate an impending emergency

(1) There are numerous errors in the Mapping Document in referencing the current version of the standard and requirement. Specifically, referencing IRO-001-2 where it appears that the document should reference standard IRO-001-3. In addition, the notes on page 2 of COM-002-3 are incorrect. (2) In the VRF/VSL Justification document, there are numerous errors in referring to standard versions and requirements: (3) In IRO-001-3, R1 – What is an "identified event," and who "identifies" an event that requires compliance with this requirement R1? An RC may choose not to "identify" an event, such as a limit violation, and run the risk of causing or exacerbating an emergency. If the RC does not "identify" the event, it may become an actual event and then fall within the standard. (4) In the VSL for IRO-001-3, R1, there should be language in the VSL to capture the term "Emergency," which was added in the Requirement. The High VSL for R2 needs to be fixed. (5) In IRO-001-3, R1, remove the "s" in the phrase "Adverse Reliability Impacts." (6) Referring to the Implementation Plan for IRO-001 – There is a different list in the Implementation Plan (R2, R4, R5, R6, R7, R9) than the Revision History of the Standard (R2, R4, R5, R6, R8). Where is the retirement of R1 shown? (7) Referring to COM-001-2: Measure 7, the word "that" is inadvertently repeated in the first sentence. (8) In COM-001-2, Measure 9, is "at least on a monthly basis" to be interpreted differently than "at least once per calendar month" as stated in the requirement? (9) In COM-001-2, there is a "Measure 12" bullet that should be removed. (10) Referring to COM-002-3: Electronic directives (which may be issued over many different types of electronic communication channels) are increasingly necessary to manage the modern, dynamic Bulk Power System (generation and transmission) on a real-time basis. The effective use of electronic directives is undermined by this proposed Standard in its current form. This draft standard, in conjunction with other standards that refer to directives, appears to require that directives (at least Reliability Directives) be given verbally. The failure of the NERC standards to address electronic directives may cause significant manpower issues for BAs with large portfolios of generation to manage. (11) In the VSL for COM-001-2 R4, a reference to Part 4.3 should be added. (12) In IRO-001-3, Part 1.3 Data Retention, the reference in the first bullet to "Electric reliability Organization" is incorrect. We think it should say "Reliability Coordinator" instead. The other references to entities and to Requirements in this Part 1.3 also appear to be incorrect and need to be updated and corrected. (13) Referring to COM-001-2, the prior version of this standard included Requirement R5: "Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities." This Requirement has been removed from the present draft of COM-001-2. The mapping document seems to suggest that this Requirement was moved to EOP-008, but it is not there. We are concerned that removal of this Requirement will result in a reduction in the level of BES reliability and introduce a potential reliability gap.

David Kiguel

Hydro One Networks Inc.

Yes

No

(1) We agree with the addition of "Adjacent" entities in the quoted parts except the qualifier "synchronously connected within the same Interconnection" need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with each other in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations. (2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.

No

(1) In the last posting, there were suggestions of removing the phrase "within the same Interconnection" from R1 (now R2.2) since there are RCs between two Interconnections that need to communicate with each other for reliability coordination (e.g. between Quebec and the RCs the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT's response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.

Yes

Yes

(1) The proposed implementation plan conflicts with Ontario regulatory practice respecting the effective date of the standard. It is suggested that this conflict be removed by appending to the implementation plan wording, after "applicable regulatory approval" in the Effective Dates: Section A5 on P. 4 of the draft standard COM-001, COM-002 and IRO-001, and on P. 2 of COM-001's Implementation Plan and P. 1 of COM-002's and IRO-001's Implementation Plans, to the following effect: ", or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities." (2) COM-001: Measure M9: - "monthly basis". Suggest changing "monthly basis" to "at least once per calendar month" to be consistent the wording in R9. (3) IRO-001: Measures M1, M2, M3 – The types of evidence are listed in paragraph form. This is not consistent with presentation style in COM-001-2 Measures, where evidence is listed in bullet format. Suggest using bullet form for consistency. (4) IRO-001, Data Retention Section: i. The retention requirements do not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4. ii. Section 1.3, second paragraph: "The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider... shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation." The word "or" between Generator Operator and Distribution Provider should be changed to "and".

Yes

No

It is not clear the distinction between an Emergency and ARI. We would like to confirm that since ARI is the impact of an event that results in instability or cascading, that an ARI is a subset of an emergency? Or said differently is an ARI simply instability or cascading? Ultimately if ARI is a subset of Emergency, then why do we need both in the requirement?

COM-001 The drafting team has complicated the requirements by having different requirements between RC/TOP/BA and other entities such as GOP/LSE/DP. The proposal is for redundancy to be required only between RC/TOP/BA. The requirement should be simplified to require all identified entities to have plans for loss of primary communication channels. This could include third parties as a communication channel. COM-002 The drafting team added a requirement to identify a Reliability Directive is being initiated during an emergency to track 3-part communication for compliance purposes. This will change and complicate the communication protocols between normal and emergency operations simply to simplify compliance assessments. The NYISO is asking for clarification that an entity may identify Reliability Directives as a category of communications to be communicated through procedures and training; and will not require a different communication protocol between normal and emergency operations. Affective communications can only be achieved through consistent processes for all conditions. Compliance assessments should be made on when we are in an emergency or not, and not on how the dialogue was initiated.

We are pleased that the drafting team addition provides additional description on the process for communicating failed Interpersonal Communication. However additional clarity should be made regarding if there is an expectation that the Interpersonal Communication should be available 24x7. There are many Distribution Providers that do not have a 24x7 managed facility that can view and respond to a communication received in real time on the Interpersonal Communication device. These DP's rely on on-call personnel for off-hour emergencies such as an outage on the distribution system. The on-call personnel may use a cell phone, pager, etc. In other cases the Transmission Operator or Balancing Authority may communicate by email and response is provided during business hours. In these cases, if the Transmission Operator or Balancing Authority had a system emergency they have the ability to isolate the distribution system from the grid and therefore do not require a 24x7 manned distribution. If the intent of the Standard is for ensuring real-time communication than the applicability should be limited to those Distribution Providers who have been required by the Transmission Operator or Balancing Authority to have a manned 24x7 manned facility. Many of the DP's referred to here have not received a real-time call in the last 20 years. Requiring them to staff 24x7 for a condition likely not to occur is cost prohibited and does not improve reliability.

While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.
Yes
Yes
We thank the drafting team for making this change and for the clear communication that the intent of this standard is not for data exchange in the response to comments. However, we do believe one additional change is necessary to make the intent absolutely clear. The purpose of statement of COM-001-2 still includes the phrase "to exchange Interconnection and operating information". Since a standard must stand on its own, we believe it is necessary to remove that phrase from the purpose statement to avoid misinterpretations in the future. Auditors and enforcement personnel are not required to understand the development history when enforcing the standard. Furthermore, the purpose is really to enable communications between these functional entities.
No
Requirement R11 does not fully address the issue of what is required by Distribution Providers and Generator Operators and introduces new issues. First, while the standard is intended to clarify that the Distribution Provider and Generator Operator do not need backup communications capability, it simply does not. Distribution Providers and Generator Operators are required to have an Interpersonal Communications capability in Requirement R7 and R8 respectively. Unfortunately, the effectiveness of these requirements persists even when the Distribution Provider or Generator Operator experiences a failure of its Interpersonal Communications capability. When Requirement R11 applies, the Distribution Provider or Generator Operator will still be obligated to comply with Requirements R7 and R8 respectively and will, in fact, be in violation of these requirements because the Distribution Provider or Generator Operator no longer has the capability. Second, capability is used inconsistently between Requirement R7 and R11 which leads to confusion. In Requirement R7, it is singular while in Requirement R11 is plural. It needs to be clear that only the failure of the capability identified in R7 and R8 needs to be reported by the Distribution Provider and Generator Operator respectively. Third, if the requirements focused on communications devices rather than capabilities, they would come closer to communicating the intent. Requirement R11 would better complement Requirement R7 and R8 if the focus was on having a communication medium or device. A Generator Operator with an installed communications device or medium still has that device or medium even when it is not functioning properly and could still meet Requirements R7 and R8. However, they don't have the Interpersonal Communications capability if the device is not functioning properly.
Yes
The following comments are regarding IRO-001-3. We disagree with including "authority" in this standard. FERC Order 693a, paragraph 112, made it clear that the authority of a registered entity is established through the approval of the standards by FERC. Thus, a Reliability Coordinator gets its authority to issue Reliability Directives by having a requirement that states it must issue Reliability Directives approved by the Commission. Please change "shall have authority to act" in Requirement R1 back to "shall act". Please also remove all other vestiges of authority from the standards including in the purpose, measures and VSLs. Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator "to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact". Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3. COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: "When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive". What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact? Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. For clarity and consistency, Requirement R2 and R3 should also be clear that the responsible entities will respond to the Reliability Coordinator's Reliability Directives. Furthermore, this would make the standard consistent with how Reliability Directives are handled by the Transmission Operator in the draft TOP-001-2 standard proposed by the Real-Time Operations drafting team (Project 2007-03). The Data Retention section needs to be modified. The first bullet applies to the Electric Reliability Organization and Requirement R1 and Measure M1. The actual requirement and measure apply to the Reliability Coordinator. Furthermore, five calendar years exceeds the audit period of three years for a Reliability Coordinator. The second bullet incorrectly applies to the Reliability Coordinator and Requirement R2 and Measure M2. Requirement R2 and Measurement M2 apply to Transmission Operators, Balancing Authorities, Generator Operators and Distribution Providers. The third bullet mentions Requirement R4 and Measurement M4. There is no Requirement R4 and Measurement M4 in the standard. The VSLs for Requirement R1 are not consistent with the requirement. The VSL states that it is for failure to act while the requirement compels the Reliability Coordinator to have the authority to act. This modifies the requirement which is not allowed under FERC VSL guidelines. The VSLs for Requirement R2 need to include the "unless" clause from the requirement. Otherwise, the VSL implies that the responsible entity violated the requirement for failing to follow the directive even if they could not for one of the reasons listed in the requirement. This again is not consistent with FERC guidelines that state VSLs cannot modify the requirement. The following comments pertain to COM-001-2. We recommend striking "capability" from all of the requirements. It is not clear to us how this helps when a definition for Interpersonal Communications is written already and applies to a communication medium. Furthermore, we think it causes confusion and actually contradicts the intent of the standard. Because Requirements R1, R3, R5, R7 and R8 focus on capability, the responsible entity will be in violation anytime it medium that it uses for the primary capability does not function properly. Whereas if the requirement stated that the responsible entity was to designate a primary communications medium, the responsible entity is not in violation if that medium is not functioning properly. It would be clear that Requirement R2, R4 and R6 are intended to be complementary. Furthermore, it is not clear why Requirements R1, R3, R5, R7 and R8 state that the responsible entity shall "have" when the companion Requirements R2, R4, and R6 state "designate." Since Requirement R10 deals with a failure of its Interpersonal Communications capabilities and not Alternate Interpersonal Communications capability, it should only refer to the entities in Requirements R1, R3, and R5. Currently, it includes R1 through R6. We suggest changing "physical assets" to "demonstration of physical assets". Since evidence is provided to the auditor and the auditor takes the evidence with them, providing them evidence that is a "physical asset" would be problematic. We believe that the VSLs could be written to provide more gradations. For example, if a Transmission Operator or Balancing Authority failed to have Interpersonal Communications capability with a Distribution Provider but had Interpersonal Communications capability with all other required entities, it has met the vast majority of the requirement. Since VSLs are a measure of how much the requirement was missed by the responsible entity, jumping to a Severe VSL does not seem to adequately capture that the responsible entity met the vast majority of the requirement. Requirements R4 and R6 even seem to recognize this by not including Distribution Provider in the list of entities to which the Transmission Operator or Balancing Authority are required to designate Alternate Interpersonal Communications capability. The following comments pertain to COM-002-3. While COM-002-3 is well written to explain the three-part communications requirements and makes it perfectly clear when Reliability Directive has been issued, the opening clause leaves the responsible entity open to second guessing on whether they should have issued a Reliability Directive. This problem could be solved by changing the opening clause to "When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive". In the second bullet of Requirement R3, we suggest using "Restate" in place of "Reissue". The responsible entity is not really reissuing the Reliability Directive. They are still in the act of trying to get the Reliability Directive issued and are simply re-communicating it because it was not understood.

Kansas City Power & Light
Michael Gammon
Yes
No
Requirements R4.3 and R6.3 require TOP's and BA's to establish alternative means of "interpersonal communications" with other TOP's and BA's without regard to the reliability impact each TOP or BA has on the interconnection. Why would it be necessary for a TOP with one 161kv transmission line or a BA with 100 MW of total load, or one GOP with a 30MW unit to realize additional costs when the facilities they operate have little reliability impact? Rationale criteria should be included here to identify the TOP's and BA's where alternative means of "interpersonal communications" should be implemented. Furthermore, these requirements do not recognize the condition when another party refuses to install alternative communication equipment. TOP's and BA's have no authority over other TOP's and BA's to establish alternative means of communication. Requirements that are dependent on the actions of other parties over which you have no control or authority are poor requirements. In addition, most RC's have established satellite telephone systems as back-up communication with TOP's and BA's. Some RC's may have to establish additional communication systems with some BA's as these requirements impose to avoid Standards of Conduct issues.
Yes
No
How does a DP or GOP experiencing a failure of its "interpersonal communications" consult with its TOP or BA to determine a mutually agreeable time for restoration of "interpersonal communications"? There are no requirements that require alternative "interpersonal communications" for the DP and GOP. This requirement cannot be fulfilled and should be removed.
Yes
R9 – considering the reliability of communication systems and System Operator attention may be on more important operational concerns, a 2 hour response to a problem with the alternative means of communication is over sensitive. Allowing for sometime in an operating shift would be more in line, such as 8 hours. Violation Severity Levels for COM-001-2: The VSL's for requirements R1-R8 and R11 do not recognize the efforts of Entities to meet the requirements. If an Entity failed to establish communications or alternative communications with 1 Entity out of 20 should that be Severe? Implementation Plan for COM-001-2: The implementation plan is too aggressive at completing in 6 months after regulatory approvals. Establishing agreements with other RC's, TOP's and BA's for alternative "interpersonal communications" regarding the various types of communications available that meet these requirements will take more than 6 months. Recommend 12 months to allow Entities sufficient time to reach agreements and to establish the communications.

Consideration of Comments

Reliability Coordination – Project 2006-06

The Reliability Coordination Drafting Team thanks all commenters who submitted comments on the fifth formal posting for Project 2006-06—Reliability Coordination. These standards were posted for a 30-day public comment period from January 9, 2012 through February 8, 2012. Stakeholders were asked to provide feedback on the standards and associated documents through a special electronic comment form. There were 62 sets of comments, including comments from approximately 170 different people from approximately 106 companies representing 9 of the 10 Industry Segments, as shown in the table on the following pages.

Summary Consideration

The RCSDT received comments from stakeholders, where a majority of those comments were focused on compliance elements of the standards, various errors, and other ambiguities. The RCSDT believes it has been responsive to the many comments and has either provided adequate explanation, where applicable, as well as incorporating the needed clarifications or corrections. There were no strong minority issues revealed in the comments which the RCSDT could not address. Revisions made to the standards are summarized in the following sections by standard.

COM-001-2

In the last posting and successive ballot, the standard received approval from about half of the ballot body with numerous comments. The RCSDT made substantive changes to the standard based on comments. The changes to COM-001-2, R3 and R4 require the standard to undergo a second successive ballot. The RCSDT believes it has addressed stakeholder comments and concerns in such a way that the standard is improved and meets the expectation expressed in comments for reliability and industry approval. Upon achieving industry consensus, this standard will advance to a recirculation ballot.

Purpose: Removed the text “for the exchange of Interconnection and operating information” based on comments received and due to the fact that the standard is for capability, which enables information exchange under other standards.

Effective Date: The language in the effective date was made consistent with current Standard Drafting Guidelines.

Requirements: Most changes were minor. In places where the capitalized word “Adjacent” began the requirement Parts, the RCSDT added the word “Each” and made “Adjacent” lowercase to avoid the perception of a defined glossary term. This change occurred in Parts 1.2, 2.2, 3.5, 4.3, 5.5, and 6.3. A significant change occurred in requirements R3 and R4. The RCSDT addressed stakeholders concerns

about the use of “synchronously connected within the same Interconnection.” This was addressed by removing the phrase “within the same Interconnection;” however, other comments were concerned that synchronously did not address DC ties. The RCSDT addressed this by adding a Part, which reads, “Each Transmission Operator asynchronously connected” to Requirements R3 and R4. Requirement R10 was updated to more accurately reflect the reference to other requirements. It should not have referenced R1 through R6; but, rather, R1, R3, and R5. Requirement R11 was updated to address stakeholder concerns about reaching a “mutually agreeable time,” so was changed to “mutually agreeable action.” Other minor changes included making plural terms singular and replacing “per” for “each” for readability and understanding.

Some commenters had concerns about conditions of non-compliance if the entity’s Interpersonal Communication capability failed. To address this concern, the RCSDT added conforming language to Requirements R1, R3, R5, R7 and R8 that bridges the potential gap in non-compliance for a failed Interpersonal Communication capability.

Measures: Most changes to the measures were non-substantive and provided better formatting for readability. Measures M3 and M4 were updated to align with the changes to the parts of Requirements R3 and R4 regarding synchronous and asynchronous. Several measures had inconsistent example evidence for the performance of the requirement. For example, time (hour/minute) based elements are introduced in R9 and R10; however, the measures did not note using dated and “time-stamped” evidence. Likewise, previous requirements did make use of “time-stamped” where there was no time based (hour/minute) performance. The RCSDT found this an unnecessary compliance burden. Other minor changes included making plural terms singular and replacing “per” for “each,” for readability and understanding.

Compliance, Compliance Enforcement Authority: The language in the CEA section was made consistent with current Standard Drafting Guidelines.

Compliance, Data Retention: The language in the data retention section was made consistent with current Standard Drafting Guidelines. The bulleted items were reformatted for consistency and readability.

Violation Severity Levels: Clarifying changes were made to the VSLs. Terms were made singular, the word “Requirement” added to appropriately designate the applicable requirement, and added the two newly-created parts from Requirements R3 and R4. The RCSDT added High VSLs for Requirements R1 through R8 to conform with VSL Guidelines. Requirements R1 through R8 are not binary only.

COM-002-3

The changes to COM-002-3 are considered non-substantive; therefore, the standard will advance to a recirculation ballot. The RCSDT believes it addressed stakeholder comments and concerns in such a

way that the updated sections of the standard is improved and overall meets industry's expectation for approval. Following approval, this standard will be submitted for adoption by the NERC Board of Trustees

Effective Date: The language in the effective date was made consistent with current Standard Drafting Guidelines.

Requirements: For the named functional entities in Requirements R2 and R4, the conjunction "and" previously used has been changed to "or," based on comments received from stakeholders.

Measures: Corresponding changes to Measures M2 and M3 were made in regards to Requirement R2 and R3. Measure M2 received an addition to include the phrasing, "restated, rephrased, or recapitulated" for consistency with Requirement R2.

Compliance, Compliance Enforcement Authority: The language in the CEA section was made consistent with current Standard Drafting Guidelines.

Compliance, Data Retention: The language in the data retention section was made consistent with current Standard Drafting Guidelines. Some bulleted items were corrected to accurately align them with the respective requirements.

Violation Severity Levels: One clarifying change was made to the R3 VSL. The RCSDT added a High VSL to accurately capture the condition where the entity failed to confirm the response of the recipient and removed the first part of the Severe VSL.

IRO-001-3

The changes to IRO-001-3 are considered nonsubstantive; therefore, the standard will advance to a recirculation ballot. The RCSDT believes it addressed stakeholder comments and concerns in such a way that the updated sections of the standard are improved and overall meets industry's expectation for approval. Following approval, this standard will be submitted for adoption by the NERC Board of Trustees

Effective Date: The language in the effective date was made consistent with current Standard Drafting Guidelines.

Requirements: In requirement R1, the last word (glossary term) was made singular for clarity and consistency with the definition. Requirement R2 was missing a conjunction in the functional entities, and this has been added.

Measures: Measure M1 was updated to use past tense language, consistent with drafting guidelines. Also, the parenthetical on “Reliability Directive(s)” was removed and the glossary term made singular for consistency with R1. Measure M2 addressed stakeholder comments by adding the word “physically,” phrase now reads, “physically implemented” to be consistent with Requirement R2, as well as making the term “direction” singular.

Compliance, Compliance Enforcement Authority: The language in the CEA section was made consistent with current Standard Drafting Guidelines.

Compliance, Data Retention: The language in the data retention section was made consistent with current Standard Drafting Guidelines. Some bulleted items were corrected to accurately align them with the respective requirements and remove inaccurate bullets from previous postings.

Violation Severity Levels: Clarifying changes were made to the R1 VSL. The phrase, “exercise its authority” was added, based on stakeholder comment, to more accurately reflect Requirement R1. The RCSDT removed the High VSL from R2, and more accurately incorporated it into the Sever VSL.

Additional Information

All comments submitted may be reviewed in their original format on the standard’s project page:

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President of Standards and Training, Herb Schrayshuen, at 404-446-2560, or at herb.schrayshuen@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Standard Processes Manual: http://www.nerc.com/files/Appendix_3A_StandardsProcessesManual_20120131.pdf

Index to Questions, Comments, and Responses

1. The RCSDT has revised the applicability of the standards and implementation plans by aligning COM-001-2, COM-002-3, and IRO-001-2 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards. Do you agree with this change in applicability to the three standards? If not, please explain in the comment area below. ... 14
2. Do you agree with the addition of “Adjacent” entities in COM-001-2, Parts 3.5, 4.3, 5.5 and 6.3 of COM-001-2? If not, please explain in the comment area below. 28
3. The RCSDT removed the phrase "to exchange Interconnection and operating information" in COM-001-2, Requirements R1 through R8 based on stakeholder comments. Do you agree with the revision? If not, please explain in the comment area below. 39
4. A new requirement was added for clarity regarding what is required of Distribution Providers and the Generator Operators: R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations] This requirement requires collaboration between entities to restore a failed communications capability. Do you agree with the new requirement? If not, please explain in the comment area below..... 47
5. The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact. Do you agree with the proposed definition? If not, please explain in the comment area below. 76
6. Do you have any other comment, not expressed in questions above, for the RC SDT?..... 96

The Industry Segments are:

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities

1. The RCSDT has revised the applicability of the standards and implementation plans by aligning COM-001-2, COM-002-3 and IRO-001-3 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards. Do you agree with this change in applicability to the three standards? If not, please explain in the comment area below.

Summary Consideration: Most commenters agreed with removing the LSE, PSE, and TSP from the three standards. Some did not agree with keeping the Distribution Provider (DP) within the standards. The RCSDT in being responsive to the FERC directive in Order No. 693, Paragraph 487, considered the DP entity; however, concluded having the DP is appropriate in responding to the directive to allow for reliable operations in normal and emergency situations. In reference to the implementation for DPs and GOPs, the RCSDT believes there is not a significant burden for most DP and GOP entities to implement an Interpersonal Communication capability. Some comments referenced the NERC Functional Model V5 concerning DP and GOP entities; however, the model is clear on the basic activities and supports the DP and GOP being applicable to the standards. The model also supports the removal of LSEs, for example. The RCSDT did not modify the applicability of the standards with regard to functional entities.

Organization	Yes or No	Question 1 Comment
ACES Power Marketing Standards Collaborators	No	While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.
<p>Response: The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP in COM-001, and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p>		
Entergy Services, Inc	No	R3 adds additional responsibilities for the TOP to have Interpersonal Communications capability with EACH DP and GOP in its footprint. Similarly, R4 gives the TOP responsibility to have alternative

Organization	Yes or No	Question 1 Comment
		<p>communications capability with each of these entities. This is a significant additional responsibility for the TOP to document and perhaps arrange for additional means of communication with these entities.</p> <p>The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP and GOP. The intent is to have Interpersonal Communication capability with the DP and GOP, and not to build additional communication facilities, but to be able “to interact, consult, or exchange information.” In contrast to R3, R4 does not include the DP or GOP. No change made.</p> <p>The short time frame provided for implementation of these requirements is not consistent with the additional effort and compliance documentation that is necessary to implement these requirements. Entergy recommends that the implementation time frame for these new requirements that apply to new entities, or expand the application of COM-001 for existing entities have an effective date 12 months beyond the applicable regulatory approval.</p> <p>Additionally, the implementation of the requirements that apply to the DP and GOP will represent an increase in the amount of documentation that must be retain to demonstrate compliance, and in some cases may also result in their having to purchase equipment or install new alternate means of communication.</p> <p>The RCSDT believes that six months is adequate, considering additional facilities should not have to be built to establish communications with the DP and GOP; similarly, compliance documentation should not impose significant work on the entities part. No change made.</p> <p>What is the improvement in reliability expected as a result of these new requirements?</p> <p>The expected reliability result is addressed in the FERC directive (P487, Order 693), “...ensure there is no reliability gap during normal and</p>

Organization	Yes or No	Question 1 Comment
		<p>emergency operations. For example, during a blackstart when normal communications may be disrupted, it is essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators.” No change made.</p>
<p>Response: See response above.</p>		
<p>Independent Electricity System Operator</p>	<p>No</p>	<p>In COM-001, we commented earlier that the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. The SDT’s response indicates that the suggested change is not needed since additionally requiring DP and GOP entities to have Alternative Interpersonal Communication capability would impose more cost on smaller DP and GOP entities that have little or no risk impact to the bulk electric system.</p> <p>We disagree with this assessment since the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability. If Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, then it is deemed necessary that such communication be provided at all times, which indicates the need for an alternative capability.</p> <p>We once again urge the SDT to make the list of entities in R5 and R6 to be the same.</p>
<p>Response: The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Additionally, requiring DP and GOP entities to have Alternative Interpersonal Communication capability only imposes more cost on smaller DP and GOP entities that have little or no risk impact to the Bulk Electric System. No change made.</p>		

Organization	Yes or No	Question 1 Comment
Georgia System Operations	No	<p>While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.</p> <p>The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP in COM-001, and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p> <p>Accordingly, NERC’s Reliability Functional Model V5² describes and identifies the DP’s relationships with other Functional Entities to the TOP and BA with respect to Real Time.</p> <p>Real Time³</p> <p>7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority.</p> <p>8. Implements system restoration plans as coordinated by the Transmission Operator.</p> <p>9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment.</p> <p>With respect to the Functional Model V5, please see Page 31, “18. Issues</p>

² NERC Functional Model Version 5, (http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf)

³ NERC Functional Model Version 5, “Functional Entity – Distribution Provider,” pg 47, (http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf)

Organization	Yes or No	Question 1 Comment
		corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.
Response: See response above.		
ERCOT ISO	No	Some concern for removal of LSE in particular from R2 and R3 from current IRO-001-2 R7 for the ERCOT region. ERCOT Region has QSE’s ⁴ that manage Load Resources. There may be some QSEs that are not registered as a GOP that deploy Load Resources. Per the current LSE JRO, QSEs with Load Resources are registered as LSEs. Not requiring them to deploy Load Resource directives could be perceived as a reliability gap created from previous version to this version. PSEs could be removed as long as they fall under BA authority.
Response: The RCSDT believes the DP is the correct entity because the LSE does not own assets. The definition of LSE is, “The functional entity that secures energy and transmission service (and reliability related services) to serve the electrical demand and energy requirements of its end use customers.” In contrast, the definition of a DP is, “The functional entity that provides facilities that interconnect an End-use Customer load and the electric system for the transfer of electrical energy to the End-use Customer.” Additionally, the Functional Model V5 demonstrates this under the Reliability Coordinator, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.		
City of Green Cove Springs	Affirmative	COM-001-2: In R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, I'm thinking LSE is the right functional entity. For Florida,

⁴ Qualifying Scheduling Entities, (<http://www.ercot.com/services/rq/qse/>)

Organization	Yes or No	Question 1 Comment
		<p>it doesn't really matter. If the LSE is the "correct" entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added.</p> <p>The RCSDT believes the DP should be included and that the LSE should not because the Functional Model V5 addresses this case. See Page 47, "Distribution Provider," of the Functional Model V5, Item 9. "Directs Load-Serving Entities to communicate requests for voluntary load curtailment." The DP is the asset owner and would direct the LSE to perform actions. No change made.</p> <p>COM-001-2, R9 – "Each ... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity.</p> <p>The RCSDT believes the additional phrasing has little value to the overall requirement. The requirement specifically applies to those responsible entities listed, and it further aligns with R2, R4 and R6. No change made.</p>
<p>Response: See response above.</p>		
<p>Beaches Energy Services</p>	<p>Affirmative</p>	<p>COM-001-2: In R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply/demand balance is not local and in markets that allow retail competition, I'm thinking LSE is the right functional entity. For Florida, it doesn't really matter. If the LSE is the "correct" entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added.</p>
<p>Response: The RCSDT believes the DP should be included and not the LSE because the Functional Model V5 addresses this case. See Page 47, "Distribution Provider," of the Functional Model V5, Item 9. "Directs Load-Serving Entities to communicate requests for voluntary load curtailment." With regard to R7, the DP is the asset owner and would direct the LSE to perform actions. No</p>		

Organization	Yes or No	Question 1 Comment
change made.		
MISO Standards Collaborators	Yes	<p>(1) In COM-001, the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. Although the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability, the proposed standard does not require the capability in all cases. At the same time, this standard does not preclude such capability. Even though Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, there are other communications paths which can be used in the case of the loss of that capability.</p> <p>Since TOPs are also required to have the capability, the BA can call the TOP and ask the TOP to contact the DP/GOP for them until they can implement capability. In addition, it is difficult to visualize entities which would not have the public telephone system or even cell phones available for use in the event of the loss of the capability.</p>
<p>Response: The RCSDT stresses the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Additionally, requiring DP and GOP entities to have Alternative Interpersonal Communication capability only imposes more cost on smaller DP and GOP entities that have little or no risk impact to the Bulk Electric System. No change made.</p>		
Florida Municipal Power Agency	Yes	<p>In COM-001-2 R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, it may be that the LSE is the more appropriate functional entity. For instance, the Functional Model when discussing LSE on page 55</p>

Organization	Yes or No	Question 1 Comment
		<p>states that one of the LSE’s real time duties is: “12. Receives requests from the Balancing Authority and Distribution Provider for voluntary load curtailment.”⁵</p> <p>The RCSDT believes the DP should be included and not the LSE because the Functional Model V5 addresses this case. See Page 47, “Distribution Provider,” of the Functional Model V5, Item 9. “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.” In this case (COM-001), the load curtailment is voluntary and would generally be for economics, the exchange of operating information and not reliability actions. No change made.</p> <p>If the LSE is the more appropriate entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added.</p> <p>For Florida, which does not have retail competition, it doesn’t matter whether the DP or the LSE is more appropriate; hence, the “yes” answer.</p> <p>With regard to R7, the DP is the asset owner and would direct the LSE to perform actions. No change made.</p>
<p>Response: See response above.</p>		
<p>Georgia Transmission Corporation</p>	<p>Yes</p>	<p>While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. Reliability Directives received by Distribution Providers will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related. Accordingly, NERC’s Reliability Functional Model V5</p>

Organization	Yes or No	Question 1 Comment
		<p>describes and identifies the DP’s relationships with other Functional Entities to the TOP and BA with respect to Real Time.</p> <p>Real Time⁶</p> <p>7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority.</p> <p>8. Implements system restoration plans as coordinated by the Transmission Operator.</p> <p>9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment.</p> <p>The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP in COM-001, and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. With respect to the Functional Model V5, please see Page 31, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.</p> <p>Lastly, we believe that Distribution Providers requirements with respect to complying with Reliability Directives received by TOPs and BAs are adequately covered by Reliability Standards TOP-001 and COM-002.</p> <p>The RCSDT agrees that TOP-001 and COM-002 apply to DP complying with Reliability Directives; however, IRO-001 applies to having the authority to act or direct others act and may not necessarily be done by issuing a</p>

⁶ NERC Functional Model Version 5, “Functional Entity – Distribution Provider,” pg 47, (http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf)

Organization	Yes or No	Question 1 Comment
		Reliability Directive. No change made.
Response: See response above.		
Ingleside Cogeneration LP	Yes	Ingleside Cogeneration LP believes that the intent of these three standards is to ensure reliable normal and emergency communications between BES operating entities. It should be the rare exception that BES-critical information must be communicated directly to an LSE, PSE, and TSP and IC. The impact of the Standards would be lessened if diffusely applied to multiple entities who do not normally engage in operations communications.
Response: Thank you for your comment.		
City of Vero Beach	Yes	<p>In COM-001-2 R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, it may be that the LSE is the more appropriate functional entity. For instance, the Functional Model when discussing LSE on page 55 states that one of the LSE’s real time duties is:</p> <p>“12. Receives requests from the Balancing Authority and Distribution Provider for voluntary load curtailment.”⁷</p> <p>The RCSDT notes that the LSE should not be included because the Functional Model V5 addresses this case. See Page 47, “Distribution Provider,” of the Functional Model V5, Item 9. “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.” No change made.</p>

⁷ NERC Functional Model Version 5, “Functional Entity – Load Serving Entity,” pg 55, (http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf)

Organization	Yes or No	Question 1 Comment
		<p>If the LSE is the more appropriate entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added.</p> <p>For Florida, which does not have retail competition, it doesn't matter whether the DP or the LSE is more appropriate; hence, the "yes" answer.</p> <p>With regard to R7, the DP is the asset owner and directs the LSE to perform actions. No change made.</p>

City of Jacksonville Beach dba/ Beaches Energy Services		<p>In R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply/demand balance is not local and in markets that allow retail competition, I'm thinking LSE is the right functional entity. For Florida, it doesn't really matter. If the LSE is the "correct" entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added</p>
<p>Response: The RCSDT notes that the LSE not should be included because the Functional Model V5 addresses this case. See Page 47, "Distribution Provider," of the Functional Model V5, Item 9. "Directs Load-Serving Entities to communicate requests for voluntary load curtailment." With regard to R7, the DP is the asset owner and directs the LSE to perform actions. No change made.</p>		
Indiana Municipal Power Agency		No comment.

2. Do you agree with the addition of “Adjacent” entities in COM-001-2, Parts 3.5, 4.3, 5.5 and 6.3 of COM-001-2? If not, please explain in the comment area below.

Summary Consideration: The majority of comments were regarding COM-001-2, R3 and R4. Concerns included issues with the use of “Adjacent Transmission Operators” and “synchronously connected within the same Interconnection.” The capitalized word “Adjacent,” beginning the requirement gives the appearance of an undefined glossary term. Therefore, the RCSDT addressed this by starting the applicable Parts of those requirements with “Each” to form “Each adjacent Transmission Operator...” and avoiding the need for another glossary term for something that is widely understood within the industry. The RCSDT made an additional clarifying change to address the issue that some Transmission Operators may not be adjacent for situations other than synchronously connected within the same Interconnection in the traditional understanding. For example, some entities have connections beyond the interconnection and some connections are asynchronous. To address this concern, the RCSDT separated the requirements to identify “synchronously connected” and “asynchronously connected,” and removed the “within the same Interconnection” criteria. Other minor formatting and reference errors were noted and corrected.

Organization	Yes or No	Question 2 Comment
SERC OC Standards Review Group	No	<p>We are concerned regarding communications between Transmission Operators on opposite ends of DC ties, which may or may not be in the same interconnection.</p> <p>Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous.</p> <p>The measures should also be verified to ensure that they align properly with the final requirements.</p>
<p>Response: The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators, and has eliminated the phrase “within the same interconnection.” See change in COM-001-2, R3 and R4. Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p>		

Organization	Yes or No	Question 2 Comment
Northeast Power Coordinating Council	No	<p>NERC uses the terms “adjacent” and “neighboring” in various standards. It is generally believed that those terms have the same meanings, but there are those who believe those terms, as used, are intended to have different meanings. To ensure a consistent usage and understanding, the definition of the term adjacent must be made known before its addition to the standard. Consideration should be given to using only one term in all standards if adjacent and neighboring are intended to mean the same thing. Both terms are used in NERC Standards, sometimes both in the same standard. For example, EOP-001-2b uses “neighboring” in R5, and “adjacent” in R3.3.</p>
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarify changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
MRO NSRF	No	<p>NERC has formally defined “Adjacent Balancing Authority” in the NERC Glossary of Terms, but not “Adjacent Transmission Operator.” The MRO NSRF recommends that “Adjacent Transmission Operator” be defined similar to the “Adjacent Balancing Authority” definition in the NERC Glossary of Terms.</p>
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarify changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
Kansas City Power & Light	No	<p>Requirements R4.3 and R6.3 require TOP’s and BA’s to establish alternative means of “interpersonal communications” with other TOP’s and BA’s without regard to the reliability impact each TOP or BA has on the interconnection. Why would it be necessary for a TOP with one 161kv transmission line or a BA with 100 MW of total load, or one GOP with a 30MW unit to realize additional costs when the facilities they operate have little reliability impact?</p> <p>Rationale criteria should be included here to identify the TOP’s and BA’s where</p>

Organization	Yes or No	Question 2 Comment
		<p>alternative means of “interpersonal communications” should be implemented.</p> <p>Furthermore, these requirements do not recognize the condition when another party refuses to install alternative communication equipment. TOP’s and BA’s have no authority over other TOP’s and BA’s to establish alternative means of communication. Requirements that are dependent on the actions of other parties over which you have no control or authority are poor requirements.</p> <p>In addition, most RC’s have established satellite telephone systems as back-up communication with TOP’s and BA’s. Some RC’s may have to establish additional communication systems with some BA’s as these requirements impose to avoid Standards of Conduct issues.</p>
<p>Response: The RCSDT has not placed any limiting applicability on entities in being responsive to the FERC directive (P487, Order 693), “...ensure there is no reliability gap during normal and emergency operations. For example, during a blackstart when normal communications may be disrupted, it is essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators.” The RCSDT does not prescribe the criteria for alternative means of Interpersonal Communication capability, so each entity may determine its own needs to meet the requirement. With regard to requiring other BAs or TOPs to install Alternative Interpersonal Communication capability as registered entities, other BAs or TOPs have the same responsibility to comply with the requirement. Having a satellite backup is an acceptable form of communication; however, the RCSDT does not understand the comment about the Standards of Conduct issues. No change made.</p>		
Southern Company	No	<p>We are concerned regarding communications between Transmission Operators on opposite ends of DC ties, which may or may not be in the same interconnection.</p> <p>Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous.</p> <p>The measures should also be verified to ensure that they align properly with the final requirements.</p>
<p>Response: The RCSDT has made clarifying changes by adding Parts to R3 and R4 to address asynchronous connections between</p>		

Organization	Yes or No	Question 2 Comment
<p>Transmission Operators and have eliminated the phrase “within the same interconnection.” See change in COM-001-2, R3 and R4. Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinators from one Interconnection to another. No change made.</p>		
Xcel Energy	No	<p>In COM-001-2, R4.3. Adjacent Transmission Operators synchronously connected within the same Interconnection. This new requirement has a term that is not defined Adjacent Transmission Operators.</p>
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarifying changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
Independent Electricity System Operator	No	<p>(1) We agree with the addition of “Adjacent” entities in the quoted parts except the qualifier “synchronously connected within the same Interconnection” need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same interconnection.” See change in COM-001-2, R3 and R4.</p> <p>(2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for catching this oversight. The corresponding TOP entity in R3.5 has been added to the Measure M3.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 2 Comment
Exelon	No	May have an unintended effect on registrations as some GOPs use an intermediately dispatch organization that perform actions on behalf of the generating units.
<p>Response: Having an intermediary dispatching actions for generation units is okay; however, the responsible GOP should have adequate agreements to perform these activities; for example, a Joint Registration Organization (Type 1) or Coordinated Functional Registration (Formerly Type 2). No change made.</p>		
ISO New England	No	<p>ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).</p>
<p>Response: Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. No change made.</p>		
Texas Reliability Entity	No	<p>(1) Requirements R1, R2, R3 and R4 should apply to all adjacent Reliability Coordinators and Transmission Operators, regardless of whether they are in the same Interconnection.</p> <p>The ERCOT Interconnection is asynchronously connected to adjacent Interconnections, and it is imperative that Functional Entities within Texas RE's purview be able to exchange operating information with Transmission Operators and Reliability Coordinators in those adjacent areas, even if they are in a different Interconnection.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase "within the same Interconnection." See change in COM-001-2, R3 and R4.</p> <p>(2) Requirement parts R5.5 and R6.3 refer to "Adjacent Balancing Authorities."</p>

Organization	Yes or No	Question 2 Comment
		<p>Measures M5 and M6 refer to “adjacent Balancing Authority” - note the small “a” on adjacent. “Adjacent Balancing Authority” is a defined term in the NERC Glossary, which has a more specific meaning than “adjacent Balancing Authority.” Which term is intended in R5.5 and R6.3? If you don’t intend to use the defined term, perhaps use a word like “contiguous” or “neighboring” rather than “adjacent.”</p> <p>The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarifying changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>
<p>Response: See response above.</p>		
<p>Hydro One Networks Inc.</p>	<p>No</p>	<p>(1) We agree with the addition of “Adjacent” entities in the quoted parts except the qualifier “synchronously connected within the same Interconnection” need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p> <p>(2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for catching this oversight. The corresponding TOP entity in R3.5 has been added to the Measure M3.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 2 Comment
SPP Standards Review Group	Yes	We concur with the addition of “Adjacent” but ask that the SDT give some consideration to allowing an exemption in R6.3 for relatively small loads, less than 20 MW, that are pseudo tied into a Balancing Authority. Loss of these facilities would not place a burden on the BES and should not require Alternative Interpersonal Communications capabilities.
<p>Response: The RCSDT has not placed any limiting applicability on entities in being responsive to the FERC directive (P487, Order 693), “...ensure there is no reliability gap during normal and emergency operations. For example, during a blackstart when normal communications may be disrupted, it is essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators.” The RCSDT does not prescribe the criteria for alternative means of Interpersonal Communication capability so each entity may determine its own needs to meet the requirement. With regard to requiring other BAs or TOPs to install Alternative Interpersonal Communication capability as registered entities, other BAs or TOPs have the same responsibility to comply with the requirement. Having a satellite backup is an acceptable form of communication. No change made.</p>		
MISO Standards Collaborators	Yes	<p>(1) We agree with the addition of “Adjacent” entities in the quoted parts. However, there are some entities which may need the capability even though they are not “synchronously connected within the same Interconnection.” This standard does not require them to have the capability, but it does not preclude such capability. In these cases, those entities should evaluate whether the need for the capability is a reliability need or market coordination. If the entities were connected synchronously, actions taken by an entity could have immediate effect upon other entities. However, if not synchronously connected, changes in flows across the asynchronous ties would have to follow the interchange scheduling process with approval by all involved entities before changes could be enacted. Some TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors).</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the</p>

Organization	Yes or No	Question 2 Comment
		<p>phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p> <p>(2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for catching this oversight. The corresponding TOP entity in R3.5 has been added to the Measure M3.</p>
<p>Response: See response above.</p>		
<p>Entergy Services, Inc</p>	<p>Yes</p>	<p>Entergy agrees with the inclusion of the term “Adjacent” in these requirements to limit the entities that the BA or TOP must have communications capability with to those that they border.</p>
<p>Response: Thank you for your comment.</p>		
<p>Duke Energy</p>	<p>Yes</p>	<p>However, we believe that the phrase “synchronously connected within the same Interconnection” should be struck, because TOPs are controlling DC ties and should be required to have communications with each other.</p>
<p>Response: The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p>		
<p>ERCOT ISO</p>	<p>Yes</p>	<p>These changes will clarify intentions regarding the undefined term "adjacent."</p>
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made conforming measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
<p>ReliabilityFirst</p>	<p>Yes</p>	<p>ReliabilityFirst agrees with adding the term adjacent but is unclear what the term adjacent is referring to. Does it mean directly connected or is it more than one layer out.</p>

Organization	Yes or No	Question 2 Comment
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. 3. The RCSDT removed the phrase "to exchange Interconnection and operating information" in COM-001-2, Requirements R1 through R8 based on stakeholder comments. Do you agree with the revision? If not, please explain in the comment area below.

Summary Consideration: Several commenters noted the phrase “to exchange Interconnection and operating information” should also be removed from the Purpose statement. The RCSDT agrees and removed this phrase from the Purpose statement. Some concerns also noted COM-001-2 should also add additional language to clarify the standard is not for the exchange of data. Since the standard focuses on having communication capability, the additional clarity is not needed; therefore, the RCSDT made no change. Some commenters noted items which have been addressed in the questions above.

Organization	Yes or No	Question 3 Comment
Global Engineering and Energy Solutions	No	
Independent Electricity System Operator	No	<p>In the last posting, we suggest removing the phrase “within the same Interconnection” from R1 (now R2.2) since there are RCs between two Interconnections that need to communicate with each other for reliability coordination (e.g. between Quebec and the RCs in the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT’s response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.</p>
<p>Response: The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p>		

Organization	Yes or No	Question 3 Comment
Great River Energy	No	<p>"to exchange interconnection and operation information" was removed from the requirements in COM-001-2 but remains in the purpose. For consistency, it needs to be removed. It could read,</p> <p><i>"To establish Interpersonal Communication capabilities for the exchange of information necessary to maintain reliability."</i></p>
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001. See revised Purpose statement.</p>		
Ingleside Cogeneration LP	No	<p>In the background section of this ballot, the project team indicates that the removal of the phrase is intended to signal that these requirements do NOT apply to the exchange of data. Although Ingleside Cogeneration LP agrees that the phrase is not a helpful description of the need for inter-entity communications - and should be removed - we do not see how the remaining language achieves the project team's purpose.</p> <p>It seems the confusion stems from the multitude of data communication types. Email messages between operating entities may be a valid communications path under COM-001-2, while telemetry/control is covered under other Standards. We believe that a technical guideline may be an appropriate vehicle to distinguish what types of communications are subject to these requirements, and which are not.</p>
<p>Response: The RCSDT has drafted performance requirements that are intended to be flexible enough to accommodate different technologies and innovation by industry. It is not the intent of the drafting team to establish all the possible methods of communicating. Drafting teams generally do not create guidelines. No change made.</p>		
ISO New England	No	<p>ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to</p>

Organization	Yes or No	Question 3 Comment
		have communications facilities (electronic or voice).
<p>Response: Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. No change made.</p>		
Hydro One Networks Inc.	No	<p>(1) In the last posting, there were suggestions of removing the phrase “within the same Interconnection” from R1 (now R2.2) since there are RCs between two Interconnections that need to communication with each other for reliability coordination (e.g. between Quebec and the RCs the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT’s response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.</p>
<p>Response: Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinators from one Interconnection to another. No change made.</p>		
SERC OC Standards Review Group	Yes	We suggest that this phrase should also be removed from the “Purpose” statement.
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
MISO Standards Collaborators	Yes	We urge the SDT to remove the phrase. If necessary, regional situations can be addressed by a regional variance.
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		

Organization	Yes or No	Question 3 Comment
ACES Power Marketing Standards Collaborators	Yes	<p>We thank the drafting team for making this change and for the clear communication that the intent of this standard is not for data exchange in the response to comments. However, we do believe one additional change is necessary to make the intent absolutely clear.</p> <p>The purpose of statement of COM-001-2 still includes the phrase “to exchange Interconnection and operating information.” Since a standard must stand on its own, we believe it is necessary to remove that phrase from the purpose statement to avoid misinterpretations in the future. Auditors and enforcement personnel are not required to understand the development history when enforcing the standard. Furthermore, the purpose is really to enable communications between these functional entities.</p>
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
Southern Company	Yes	We suggest that this phrase should also be removed from the “Purpose” statement.
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
Entergy Services, Inc	Yes	Yes, the requirements of this standard pertain to having communications capability. The specific content of that communication should not be the subject of the standard.
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
We Energies	Yes	Please add "does not include telemetered or derived data"
<p>Response: The standard COM-001 is for Interpersonal Communication capability, which facilitates the communication (i.e., “... to interact, consult, or exchange information.”) and not the exchange of data which is addressed in IRO-010. No change made.</p>		
Duke Energy	Yes	However, the definition of Interpersonal Communication should also be expanded to clearly include the drafting team’s intent that the capability is NOT for the exchange

Organization	Yes or No	Question 3 Comment
		<p>of data.</p> <p>The phrase “for the exchange of Interconnection and operating information” should also be struck from the Purpose statement.</p>
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p> <p>The standard COM-001 is for Interpersonal Communication capability, which facilitates the communication (i.e., “... to interact, consult, or exchange information.”) and not the exchange of data which is addressed in IRO-010. 4. **A new requirement was added for clarity regarding what is required of Distribution Providers and the Generator Operators: R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations] This requirement requires collaboration between entities to restore a failed communications capability. Do you agree with the new requirement? If not, please explain in the comment area below.**

Summary Consideration: Most of the comments pertain to compliance and clarity concerns; for example, the use of “any of” in the requirement. The phrase “any of” has been eliminated to resolve this concern. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure. Other comments recommended using the terms, such as, “primary,” “secondary,” “device,” “means,” and “medium” with regard to the proposed definitions. The RCSDT emphasizes the requirements are for “capability” and adding such proposed terms is not needed to achieve the necessary clarity. Some commenters raised concerns about being able to reach “mutually agreeable time” for restoration. The RCSDT addressed these concerns by revising the phrase to “mutually agreeable action,” which allows the applicable entities to reach consensus on the effort needed to restore communications. This change also provides flexibility to the entities in addressing the steps to restore communications rather than focusing on the time for restoration. The requirement does not limit the sources of information. Allowing the DP and GOP to reach a mutually agreeable action, eliminates the need for Alternative Interpersonal Communication capability considering the limited impact a failure might have on DPs and GOPs overall. From a compliance standpoint, the DP or GOP that is working to restore its Interpersonal Communication capability is not out of compliance as far as the entity is meeting the requirement for taking action to restore its capability. Other similar concerns pertained to having 24/7 dispatch, which is an operational function. The requirements are constructed around having communication capability. The RCSDT understands there may be entities that have certain operations where there is not 24/7 staffing and these cases should be addressed by their operation with other entities through agreements, procedures or other means as needed for reliable operations. Other minor corrections and formatting issues noted were reviewed and corrected accordingly.

Some commenters were concerned that large entities would not be capable of meeting the 60-minute notification upon the loss of their Interpersonal Communication capability. The RCSDT notes this pertains to the BA, RC, and TOP, which are required to have an Alternative Interpersonal Communication capability, and should have the ability to accomplish the required notification. Also, the loss of Interpersonal Communication capability may not always impact the entire capability. This time frame does not apply to the DP and GOP since the Alternative Interpersonal Communication capability is not required for these functional entities. Other minor formatting and corrections to references were made, such as, focusing on using the singular form of words rather than the plural to avoid confusion.

Organization	Yes or No	Question 4 Comment
Alliant Energy Corp. Services, Inc.	Negative	COM-001-2: Alliant Energy is opposed to the use of the word "any" as it is too broad. It should be revised to the primary Interpersonal Communication capabilities with the Transmission Operator or Balancing Authority.
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>		
Wisconsin Electric Power Marketing; Wisconsin Electric Power Co.	Negative	R11 is not clear on the purpose of the statement “determine a mutually agreeable time for restoration” this could be driven by forces outside the control any of the entities. I think, “provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage” would be better.
<p>Response: The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>		
Lakeland Electric	Negative	Use of the term "any" in the new R11 and immediate non-compliance if there is a failure in a communication system.
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
SERC OC Standards Review Group	No	We suggest Requirement 11 should be deleted as the generic nature of the term “...any of its Interpersonal Communications capabilities...” could be interpreted to include communications capabilities used for internal DP/GO purposes. Such DP/GO internal communications capability would not be critical to BES reliability. Also, no BES reliability benefit is realized by the parties simply agreeing to a time for the

Organization	Yes or No	Question 4 Comment
		restoration of the failed Interpersonal Communication capability.
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
Pacific Northwest Generating Cooperative	No	<p>As per COM-001-2, R7, “Each Distribution Provider shall have Interpersonal Communications capability with the following entities...” R11 states that the DP or GOP that experiences a failure of its Interpersonal Communications ability shall consult with TOPs and BAs and agree on how to restore Interpersonal Communications. We believe better language might be, “Restore Interpersonal Communications with your TOP/BA as soon as operationally feasible.”</p>
<p>Response: The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable restoration time for its Interpersonal Communication capability with its TOP or BA. That is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>		
MRO NSRF	No	<p>Please note that the use of the word “any” as in “Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities...” will be viewed as meaning every Interpersonal Communication medium that an Entity has or uses. The NSRF recommends that the word “any” be removed from this Requirement.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The NSRF recommends that R11 be revised to read:</p>

Organization	Yes or No	Question 4 Comment
		<p><i>“Each Distribution Provider and Generator Operator that experiences a failure of any of its primary (or defined) Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...”</i></p> <p>In that way it focuses it down to the communications issues with the TOP or BA. In lieu of “primary” the SDT could state “defined” as long as it is not meant to be “any.”</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p> <p>The latter part of R11 states; “...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.” This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. The NSRF recommends this be rewritten as:</p> <p><i>“...shall consult with inform their Transmission Operator or Balancing Authority as applicable as to the status of the Interpersonal Communication capability.”</i></p> <p>So the new R11 would read:</p> <p><i>“Each Distribution Provider and Generator Operator that experiences a failure of its primary (or designated) Interpersonal Communication with their Transmission Operator or Balancing Authority shall inform them, as applicable, as to the status of the Interpersonal Communication capability.”</i></p> <p>The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 4 Comment
<p>LG&E and KU Services Company</p>	<p>No</p>	<p>Regarding R11, as written it is unclear when the DP and GOP are required to consult with their TOP or BA. “[A] failure of any of its Interpersonal Communication capabilities” could be construed to mean any internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP’s or GOP’s ability to communicate with the TOP or BA.</p> <p>If the DP or GOP loses its Interpersonal Communication with an entity it is required to have the capability with, then the entity must consult with that entity to determine a mutually agreeable action (was time) to restore. A failure of the entity’s capability means the entity is no longer able to communicate with its BA or TOP, then it must consult with the affected entity.</p> <p>It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional.</p> <p>Furthermore, what exactly is required in “consultation” and who would be responsible if the “consulting” entities did not come to a “mutually agreeable time” are questions that are left unanswered.</p> <p>LG&E and KU Services Company suggest the following language:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of more than one of its Means for Interpersonal Communications or failure of its Alternative Means for Interpersonal Communication with their Transmission Operator or Balancing Authority shall notify their Transmission Operator or Balancing Authority regarding the time to restore the impacted Means for Interpersonal Communication or Alternative Means for Interpersonal Communication.</i></p> <p>The RCSDT thanks you for your comment; however, great lengths were taken in communicating mediums regarding IC and AIC and finds that adding “Means” to the proposed terms being defined diminishes clarity of the definition. No change made.</p>

Organization	Yes or No	Question 4 Comment
<p>Response: See response above.</p>		
<p>PPL Electric Utilities and PPL Supply NERC Registered Organizations</p>	<p>No</p>	<p>PPL has concerns with the use of the word “any” in this requirement. PPL recommends striking the words “any of” and instead using “its primary” as follows:</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p><i>Each Distribution Provider and Generator Operator that experiences a failure of its primary Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...” In the current version, it is unclear when the DP and GOP are required to consult with their TOP or BA.</i></p> <p>The RCSDT notes that the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p> <p>“[A] failure of any of its Interpersonal Communication capabilities” could be construed to mean an internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP’s or the GOP’s ability to communicate with the TOP or BA.</p> <p>It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional.</p> <p>The RCSDT believes an entity meets the intent of the requirement when it has Interpersonal Communication capability, whether through a single capability or multiple capabilities. A single failure of an entity’s capability would not require any consultation if the entity continues to have the capability. The drafting team has removed the phrase “any of” as a clarifying change. Additionally, the RCSDT made a</p>

Organization	Yes or No	Question 4 Comment
		clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.
Response: See response above.		
SPP Standards Review Group	No	<p>We would suggest deleting the phrase ‘any of’ in the Requirement. It would then read:</p> <p><i>‘Each DP and GOP that experiences a failure of its Interpersonal Communication...’</i></p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Also, how does the DP or GOP consult with its TOP or BA when it loses its Interpersonal Communications capability?</p> <p>To do this wouldn’t they have to have an Alternative Interpersonal Communications capability?</p> <p>The RCSDT believes each entity must determine how to accomplish this (R11) and having another requirement or change would be overly prescriptive. No change made.</p>
Response: See response above.		
Western Electricity Coordinating Council	No	<p>We have two concerns with R11 as worded.</p> <p>First, the term "as applicable" is undefined. Who decides what is applicable. We suggest that words clarifying which entity, TOP or BA, the DP and GO experiencing a failure of any of its Interpersonal Communication capabilities must consult with.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “as applicable” in COM-001, R11.</p>

Organization	Yes or No	Question 4 Comment
		<p>Second, the inclusion of the "mutually agreeable" time to restore the Interpersonal Communication capability is problematic. Although unlikely, two entities could "mutually agree" to an exceptionally long time frame for restoration (two years) and that unreasonable timeframe would meet the requirement as long as they both agreed. Suggest some finite time limit be included.</p> <p>The RCSDT has made clarifying changes to R11 to reference "mutually agreeable action," rather than "time" for restoration. The use of "action" eliminates the need for a timeframe. New information regarding the restoration parameters may change under a mutually agreeable action.</p>
<p>Response: See response above.</p>		
FirstEnergy	No	<p>Although we agree with the intent of the requirement, we are concerned with the use of "any of its Interpersonal Communication." The word "any" is very inclusive and the team should consider narrowing it down to those capabilities that may adversely impact reliability.</p>
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase "any of" in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
Florida Municipal Power Agency	No	<p>By use of the term "any" in the phrase "a failure of any of its Interpersonal Communication" the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase "any of" in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which</p>

Organization	Yes or No	Question 4 Comment
		<p>does not require DPs or GOPs to have Alternative Interpersonal Communications capability.</p> <p>A possible solution is through use of the terms “Primary” for R3 and “Alternate” for R4 and then make R11 applicable to Primary only.</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard except that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p>
<p>Response: See response above.</p>		
<p>Global Engineering and Energy Solutions</p>	<p>No</p>	<p>We are pleased that the drafting team addition provides addition description on the process for communicating failed Interpersonal Communication. However additional clarity should be made regarding if there is an expectation that the Interpersonal Communication should be available 24x7. There are many Distribution Providers that do not have a 24x7 managed facility that can view and respond to a communication received in real time on the Interpersonal Communication device. These DPs rely on on-call personnel for off-hour emergencies such as an outage on the distribution system. The on-call personnel may use a cell phone, pager, etc. In other cases, the Transmission Operator or Balancing Authority may communicate by email and response is provided during business hours. In these cases, if the Transmission Operator or Balancing Authority had a system emergency they have the ability to isolate the distribution system from the grid and therefore do not require a 24x7 manned distribution.</p> <p>If the intent of the Standard is for ensuring real-time communication than the</p>

Organization	Yes or No	Question 4 Comment
		<p>applicability should be limited to those Distribution Providers who have been required by the Transmission Operator or Balancing Authority to have a manned 24x7 manned facility. Many of the DPs referred to here have not received a real-time call in the last 20 years. Requiring them to staff 24x7 for a condition likely not to occur is cost prohibited and does not improve reliability.</p>
<p>Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The Purpose of COM-001-2 is, “To establish Interpersonal Communication capabilities necessary to maintain reliability. No change made.</p>		
<p>ACES Power Marketing Standards Collaborators</p>	<p>No</p>	<p>Requirement R11 does not fully address the issue of what is required by Distribution Providers and Generator Operators and introduces new issues.</p> <p>The RCSDT notes that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability requires restoration. This would provide allowances for those entities, which have little or no impact on the reliability of the BES. No change made.</p> <p>First, while the standard is intended to clarify that the Distribution Provider and Generator Operator do not need backup communications capability, it simply does not. Distribution Providers and Generator Operators are required to have an Interpersonal Communications capability in Requirement R7 and R8 respectively. Unfortunately, the effectiveness of these requirements persists even when the Distribution Provider or Generator Operator experiences a failure of its Interpersonal Communications capability. When Requirement R11 applies, the Distribution Provider or Generator Operator will still be obligated to comply with Requirements R7 and R8 respectively and will, in fact, be in violation of these requirements because the Distribution Provider or Generator Operator no longer has the capability.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The</p>

Organization	Yes or No	Question 4 Comment
		<p>intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>Second, capability is used inconsistently between Requirement R7 and R11, which leads to confusion. In Requirement R7, it is singular while in Requirement R11 is plural. It needs to be clear that only the failure of the capability identified in R7 and R8 needs to be reported by the Distribution Provider and Generator Operator respectively.</p> <p>The RCSDT thanks you for your observation and has modified COM-001-2 R11 to be singular and to more clearly address the entities being consulted with upon a failure.</p> <p>Third, if the requirements focused on communications devices rather than capabilities, they would come closer to communicating the intent. Requirement R11 would better complement Requirement R7 and R8 if the focus was on having a communication medium or device.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity. In regards to a device not functioning properly is contrary to R10, notification of Interpersonal Communication capability failure. Please refer to the definition of Interpersonal Communication and Alternative Interpersonal Communication. No change made.</p> <p>A Generator Operator with an installed communications device or medium still has that device or medium even when it is not functioning properly and could still meet Requirements R7 and R8. However, they don't have the Interpersonal Communications capability if the device is not functioning properly.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p>

Organization	Yes or No	Question 4 Comment
<p>Response: See response above.</p>		
<p>Kansas City Power & Light</p>	<p>No</p>	<p>How does a DP or GOP experiencing a failure of its “interpersonal communications” consult with its TOP or BA to determine a mutually agreeable time for restoration of “interpersonal communications”? There are no requirements that require alternative “interpersonal communications” for the DP and GOP. This requirement cannot be fulfilled and should be removed.</p>
<p>Response: The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable restoration time for its Interpersonal Communication capability with its TOP or BA; that is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. The RCSDT has made clarifying changes to R11 to use mutually agreeable action, rather than time for restoration.</p>		
<p>Southern Company</p>	<p>No</p>	<p>We suggest the following changes:</p> <ol style="list-style-type: none"> Requirement 10 should include Distribution Providers and Generator Operators, The RCSDT stresses that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities, which have little or no impact on the reliability of the BES, while not requiring them to obtain Alternative Interpersonal Communication capabilities. Making the proposed changes would eliminate this flexibility. Removing R11 takes away the RCSDT’s effort to include those provisions in the standard. No change made. Entities to be notified should be “as identified in requirements R1 through R8”, The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.

Organization	Yes or No	Question 4 Comment
		<p>3. Requirement 11 should be deleted, and, The RCSDT thanks you for your comment. COM-001-2 R11 requires the entity to consult with its BA or TOP when it experiences a failure of its Interpersonal Communication capability. The BA or TOP need to know communication is compromised between the DP or GOP.</p> <p>4. Measures (M10) and VSLs should be adjusted accordingly. The RCSDT did not elect to include the DP and GOP in R10; therefore, Measure, M10 and the corresponding VSLs were not adjusted. No change made.</p>
<p>Response: See response above.</p>		
Central Lincoln	No	<p>The new requirement presents us with a paradoxical situation. The communication has failed, so we must consult; yet consultation requires communication. We note that the SDT used the word “any”, implying that multiple communication paths are required. The reality of the situation at Central Lincoln, due to our remote location, is that a single back hoe incident at the right location can take out all of our of our communication capability (including the terrestrial portion of the cellular networks) with our BA/TO; making this requirement impossible to meet for this circumstance using our present capabilities.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Furthermore, R11 addresses the direction given in Order 693 that DP and GOP entities do not necessarily need to have Alternative Interpersonal Communication capability. The requirement allows flexibility in “consult with” by not naming the method. If all communications are out, then the DP or GOP may have to meet the requirement by an in-person consultation.</p>

Organization	Yes or No	Question 4 Comment
		<p>We also note that no time limit was indicated. Most interruptions are brief, and fixed before consultation could reasonably take place. CEAs will be finding entities non-compliant for quickly fixing problems at their end without first consulting to ensure the restoration time was agreeable. To avoid non-compliance, entities will be forced delay repairs while they investigate alternative communication paths for consultation purposes. We fail to see how such an outcome improves reliability.</p> <p>The DP and GOP are only required to have Interpersonal Communication capability. If the DP or GOP restores its Interpersonal Communication capability before it could reasonably contact the affected entity by another method, there is no failure to comply. The DP or GOP could then consult with the affected entity to determine a mutually agreeable action. In this case, the RCSDT believes the "action" would then be the entities acknowledging the failure and the repair; therefore, no mutually agreeable action is needed. The RCSDT recognizes there is no way to account for all the various circumstances in a failure. To comply, the DP and GOP are still required to consult the entity which the failure affected regardless of whether the Interpersonal Communication capability was restored or is still failed. No change made.</p> <p>The new requirement is one sided, requiring the DP and GOP to consult with no corresponding requirement for the TO or BA to have personnel available for such a consultation. Consultation failure or failure to mutually agree due to actions or inactions on the part of the TO or BA should not result in an enforcement action against the DP or GOP, yet that is how the requirement is written.</p> <p>The RCSDT notes that once the failure has been detected, the responsible entity must make the consultation with the BA or TOP; that relieves the compliance burden. While the RCSDT understands your concern about single points of failure, the question becomes should this relieve the DP or GOP of the requirement for having Interpersonal Communication capabilities. No change made.</p> <p>The new requirement fails to add any "clarity" to the other requirements, and we don't see that the stakeholders thought there was a problem with DP/GOP obligation</p>

Organization	Yes or No	Question 4 Comment
		<p>clarity. Instead, it adds new obligations with no justification for how they enhance reliability. We suggest removing the requirement.</p> <p>Based on the RCSDT’s understanding of the comments received on the previous posting, the industry desired additional clarity on specifically what communication capabilities the DP and GOP were required to have. There was confusion that the standard did not specifically say that the DP and GOP were required to have Alternative Interpersonal Communication capabilities. R11 clarifies that a DP and GOP are not required to have Alternative Interpersonal Communication capability if the DP or GOP consult with their TOP or BA, whichever is applicable in the given situation, and they mutually agree that the restoration action does not adversely impact the reliability of the BES. No change made.</p>
<p>Response: See response above.</p>		
<p>Entergy Services, Inc</p>	<p>No</p>	<p>The DP or GOP should have to notify the TOP and BA of its communications failure, similar to the requirement in R10 for TOP and BA. The DP or GOP should restore the communications capability as soon as possible. Entergy does not agree that the TOP or BA should have to negotiate the restoration time with the DP or GOP. This is an unreasonable burden on the BA and TOP.</p>
<p>Response: The RCSDT notes that R11 does not exempt the DP or GOP from notifying its TOP or BA when they experience a communication failure. There is nothing in R11 that says a DP or GOP does not have to restore its communications capability. What is in R11 is flexibility. The RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. While one could consider this a negotiation, the notification is required so some sort of communication must be made. All that is being asked of the BA and TOP is to give some consideration for the entities involved and the overall situation. The SDT modified the requirement so mutual agreement must be reached on an “action” for restoration rather than a “time” for restoration.</p>		
<p>Liberty Electric Power LLC</p>	<p>No</p>	<p>The phrase "mutually agreeable time" needs to be replaced in order to make this standard acceptable. This phrasing creates a potential violation if equipment functionality cannot be restored in the time frame preferred by another entity, even</p>

Organization	Yes or No	Question 4 Comment
		<p>if the time of repair is beyond the control of the RE. This phrase should be replaced with "inform their TO or BA as applicable of the failure, and provide estimates as to the time the Interpersonal Communication capabilities will be restored."</p>
<p>Response: The RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn't mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. However, what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are and a determination of what is amicable to both parties. The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>		
We Energies	No	<p>R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4.</p> <p>R11 is not clear on the purpose of the statement "determine a mutually agreeable time for restoration" this could be driven by forces outside the control any of the entities. I think" provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage" would be better.</p> <p>Update M9 accordingly.</p>
<p>Response: The RCSDT has made clarifying changes to R11 to use mutually agreeable action, rather than time for restoration.</p>		
Indiana Municipal Power Agency	No	<p>IMPA does not believe that this requirement is necessary in order to ensure communication lines are restored by Distribution Providers and Generator Operators. If this requirement is kept, IMPA does not think the use of the words "a failure of any of its Interpersonal Communication capabilities" is acceptable.</p> <p>The RCSDT notes the intent of this requirement is not to ensure that DP and GOP communication lines are restored. The intent of this requirement is to provide some flexibility for the DP or GOP that does not have an impact on the reliability of the BES. Depending on the impact of the given entity, the TOP or BA can be flexible in specifying when the Interpersonal Communication capability must be restored,</p>

Organization	Yes or No	Question 4 Comment
		<p>rather than requiring the availability and use of an Alternative Interpersonal Communication capability. No change made.</p> <p>The wording is too inclusive and should apply to only primary Interpersonal Communication capabilities. IMPA is also concerned about how entities are supposed to know when the telephone companies may have equipment repaired in order to determine a mutually agreeable time to restore Interpersonal Communication capability. The entity may have no control over the restoration and hence would not be able to set a time other than whenever the capabilities are restored by for instance the telephone company.</p> <p>The RCSDT deliberately avoided the use of primary and secondary mediums and elected to use communications capabilities. As such, R11 applies to Interpersonal Communication capabilities of the DP and GOP. The RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. No change made.</p> <p>It does not mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. However, what transpires in the consultation is a realization of the situation, what the impacts to reliability are and a determination of what is amicable to both parties. No change made. The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p> <p>In addition, entities will have to keep evidence to show that a “mutually” agreeable time was reached by two or more entities. The most workable solution would be to require notification if primary Interpersonal Communication is lost and a follow-up notification when that capability is restored.</p> <p>The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable restoration action for its Interpersonal Communication capability with its TOP or BA; that is precisely why R11 is written in</p>

Organization	Yes or No	Question 4 Comment
		<p>this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. No change made.</p>
<p>Response: See response above.</p>		
<p>NextEra Energy, Inc.</p>	<p>No</p>	<p>NextEra Energy, Inc. (NextEra), which includes Florida Power & Light Company, believes that Requirement 11 of COM-001-2, as drafted, is too vague to be adopted as a mandatory Reliability Standard.</p> <p>For example, it is unclear what is meant by “shall consult.” The North American Electric Reliability Corporation’s (NERC) Rules of Procedure state that a foundation of any Reliability Standard is that: “. . . [the] reliability standard shall be stated using clear and unambiguous language. Responsible entities, using reasonable judgment and in keeping with good utility practices, are able to arrive at a consistent interpretation of the required performance.” The term “shall consult” is not a term generally understood or used in the electric utility industry, and, therefore, does not enable a consistent interpretation of the performance required. Accordingly, NextEra requests that Requirement 11 either:</p> <ul style="list-style-type: none"> (i) be deleted; or (ii) be redrafted to read more like Requirement 10.
<p>Response: The RCSDT believes the term, “consult,” is well understood. Basically, entities must have a conversation. No change made.</p>		
<p>Manitoba Hydro</p>	<p>No</p>	<p>COM-001-2 R11 does not specify a timeline in which entities have to come up with a ‘mutually agreeable’ time to restore Interpersonal Communication capability. Manitoba Hydro believes this omission creates a reliability gap and suggests that wording be revised as follows: ‘... shall consult with their Transmission Operator or</p>

Organization	Yes or No	Question 4 Comment
		Balancing Authority as applicable and determine a mutually agreeable time to restore the Interpersonal Communication capability within 24 hours of experiencing the failure.'
<p>Response: The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration. The RCSDT believes R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities, which have little or no impact on the reliability of the BES while not requiring them to obtain Alternative Interpersonal Communication capabilities. No change made.</p>		
Great River Energy	No	Capability is not used consistently in R7 and R11. It changes from singular to plural.
<p>Response: The RCSDT thanks you for your observation. Generally, the singular implies the plural or vice-versa. The RCSDT has corrected R10 and R11 to be consistent with the singular application.</p>		
American Electric Power	No	Regarding COM-001-02 R10 and R11, some of the entity pairs (for example, BA to a GO) are not required to have alternative inter-personnel communication. How can the notification occur with 60 minutes for example, when primary communication is not available for a role that doesn't require an alternate means of communication? In addition, requiring notification within 60 minutes in Requirement 10 would not be feasible for larger entities that might have hundreds of contacts to make.
<p>Response: The RCSDT thanks you for your comment. The notification within 60 minutes found in R10 pertains to the BA, RC and TOP; therefore, these entities are required to have designated Alternative Interpersonal Communication capability with other entities and more specifically other BA, TOP and RC entities. It is understood by virtue of R11 that the DP and GOP may not have Alternative Interpersonal Communication capability and may not be notified within 60 minutes. No change made.</p>		
Georgia Transmission Corporation	No	The intent of this requirement is not yet clear. Technically, the air we breathe, as well as other mediums like "any" cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. The burden for compliance evidence to demonstrate failure of "any of its Interpersonal Communication capability" would seem unobtainable and could prove to be a daily

Organization	Yes or No	Question 4 Comment
		<p>occurrence (dropped phone calls, etc.). The following is suggested to utilize the singular form of capability rather than plural form of capabilities:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of its Interpersonal Communication capability shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.</i></p>
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
Nebraska Public Power District	No	<p>We would suggest deleting the phrase ‘any of’ in the Requirement. It would then read:</p> <p><i>‘Each DP and GOP that experiences a failure of its Interpersonal Communication...’</i></p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Also, how does the DP or GOP consult with its TOP or BA when it loses its Interpersonal Communications capability?</p> <p>To do this wouldn’t they have to have an Alternative Interpersonal Communications capability?</p> <p>The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing mutually agreeable action for restoration for its Interpersonal Communication capability with its TOP or BA; that is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be</p>

		allowed without requiring the acquisition of Alternative Interpersonal Communication capability. No change made.
Response: See response above.		
Georgia System Operations	No	<p>The intent of this requirement is not yet clear. Technically, the air we breathe, as well as other mediums like “any” cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. The burden for compliance evidence to demonstrate failure of “any of its Interpersonal Communication capability” would seem unobtainable and could prove to be a daily occurrence (dropped phone calls, etc.). The following is suggested:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capability shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.</i></p>
Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.		
Ingleside Cogeneration LP	No	<p>Most of Ingleside Cogeneration’s communications capabilities rely on carriers who will immediately deploy technicians to repair land-based or wireless systems when they break. Although we may contact the carrier to inform them that the systems are not available – or to determine their progress – we do not want them waiting for our go-ahead before proceeding. If the intent of this requirement is to validate the operation of the repaired connection, or to establish interim means of communications with other operating entities, then Ingleside Cogeneration believes a re-write is in order. There is no reliability purpose being served otherwise that we can tell.</p>
Response: The RCSDT believes there is nothing in R11 that says repairs by communication technicians should wait on anyone for a		

Organization	Yes or No	Question 4 Comment
		<p>go-ahead. The RCSDT sees it working this way: When a communication link goes down, a communication technician is dispatched as soon as the failure is noted and according to the agreements regarding repair between the provider and the user. When the user contacts the provider, an estimate of the anticipated repair time should be provided. One would expect this type of arrangement in service agreements. The user, DP or GOP, then takes that time to the consultation with the TOP or BA. Based on this anticipated restoration time and the impact the DP or GOP has on the reliability of the BES, a mutually agreed to restoration action is established. No change made.</p>
<p>Duke Energy</p>	<p>No</p>	<p>The phrase “consult with... to determine a mutually agreeable time” makes this requirement too open-ended to be auditable and enforceable.</p> <p>The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p> <p>We question why R11 does not establish a timeframe for notification similar to R10, which requires the RC, TOP or BA to make notification within 60 minutes of failure detection.</p> <p>The RCSDT thanks you for your comment. The notification within 60 minutes found in R10 pertains to the BA, RC and TOP; therefore, these entities are required to have designated Alternative Interpersonal Communication capability with other entities and more specifically other BA, TOP and RC entities. It is understood by virtue of R11 that the DP and GOP would not have Alternative Interpersonal Communication capability and would not be notified within 60 minutes. No change made.</p> <p>We also question why DPs and GOPs are not required to have Alternative Interpersonal Communications capability in order to be able to make such notifications.</p> <p>The RCSDT believes that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities which have little or no impact on the reliability of the BES while not requiring them to obtain Alternative Interpersonal Communication capabilities. The requirement allows flexibility in “consult with” by not naming the method. If all communications are out,</p>

Organization	Yes or No	Question 4 Comment
		then the DP or GOP may have to meet the requirement by an in-person consultation. No change made.
Response: See response above.		
ISO New England	No	ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such “requirements” (i.e. capabilities) should be verified through an entity certification process. Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).
Response: Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. No change made.		
ReliabilityFirst	No	ReliabilityFirst believes Distribution Provider and Generator Operator should be added to Requirement R10 and Requirement R11 should be removed. Finite time frames should be prescribed for each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities. ReliabilityFirst believes that the failure of Interpersonal Communication between Distribution Providers/Generator Operators and Transmission Operators/Balancing Authorities could have the same negative effects similar to the failure of Interpersonal Communication by the Reliability Coordinator, Transmission Operator, and Balancing Authority.
Response: If the RCSDT made the changes proposed, the standards loses the flexibility of the TOP and BA to work with DPs and GOPs which have little or no adverse reliability impact on the BES. The RCSDT feels we need to maintain this flexibility. In fact, FERC directed NERC to do so in Order 693. No change made.		
City of Vero Beach	No	By use of the term “any” in the phrase “a failure of any of its Interpersonal

Organization	Yes or No	Question 4 Comment
		<p>Communication” the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which does not require DPs or GOPs to have Alternative Interpersonal Communications capability. A possible solution is through use of the terms “Primary” for R3 and “Alternate” for R4 and then make R11 applicable to Primary only.</p> <p>The RCSDT deliberately stayed away from the use of primary and secondary mediums and prefers to use communications capabilities. Further, the RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn’t mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. But what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are and a determination of what is amicable to both parties. No change made.</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>
<p>Response: See response above.</p>		
Midwest Independent	No	MISO requests clarification regarding

Organization	Yes or No	Question 4 Comment
Transmission System Operator		<p>(1) when Distribution Providers/Generator Operators have an obligation to collaborate with Transmission Operators versus Balancing Authorities; and</p> <p>(2) the obligation of Transmission Operators to inform Balancing Authorities (and vice versa) of an agreed upon time for restoration of Interpersonal Communication capability when collaboration occurs only between Transmission Operators and Distribution Providers/Generator Operators or, conversely, Balancing Authorities and Distribution Providers/Generator Operators.</p>
<p>Response: The RCSDT believes, (1) As specified in R11, the DP and GOP have an obligation to consult with their TOP and/or BA with who they are experiencing an Interpersonal Communication capability failure. If the DP or GOP experiences a failure with the TOP, then they consult with the TOP. If that failure is with the BA, they consult with the BA. If the failure is with both the TOP and BA, they consult with both. (2) There is no such obligation. Both the TOP and BA are required to have Alternative Interpersonal Communication capability, which would be used as a substitute for the Interpersonal Communication capability. No change made.</p>		
Texas Reliability Entity	No	<p>(1) Why does R10 refer to “failure of its Interpersonal Communications capabilities” while R11 refers to “failure of **any of** its Interpersonal Communications capabilities”?</p> <p>What is the distinction that is intended by addition of the words “any of”?</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>(2) As a Compliance Enforcement Authority, we have several fundamental questions regarding what is intended in this standard. It appears the drafting team is using the defined term “Interpersonal Communications” to refer to a designated primary communication medium, and the term “Alternative Interpersonal Communications” to refer to one or more designated backup communication mediums.</p> <p>Is that correct?</p>

Organization	Yes or No	Question 4 Comment
		<p>This should be clarified in the Standard.</p> <p>(2) The RCSDT deliberately stayed away from the use of primary and secondary mediums and prefers to use communications capabilities. However, you are correct in considering the Alternative Interpersonal Communication capability as a substitute for the Interpersonal Communication capability, as specified in their respective definitions. No change made.</p> <p>(3) There is ambiguity in the current draft because the defined term “Interpersonal Communications” appears to include primary, back-up and all other mediums that may be available (which may include landline phone, cell phone, satellite phone, instant messaging, email, and data links, all in one facility), including any “Alternative Interpersonal Communications.”</p> <p>(3) Interpersonal Communication capability could use any of the mediums mentioned in your comment. Likewise, the Alternative Interpersonal Communication capability could be any of those mediums, as well, provided that it did not use the same infrastructure as the Interpersonal Communication capability. No change made.</p> <p>Do R10 and R11 apply to ALL available mediums, or just to the designated primary and back-up mediums?</p> <p>Does R9 apply to ALL available back-up mediums, or just to a specifically designated back-up medium?</p> <p>The RCSDT deliberately stayed away from the use of primary and secondary mediums and prefers to use communications capabilities. Further, the RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn’t mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. But what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are</p>

Organization	Yes or No	Question 4 Comment
		and a determination of what is amicable to both parties. No change made.
Response: See response above.		
Dominion	Yes	<p>Dominion agrees with the intent of R11; however, suggest language changes for consistency with R10 as follows:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>
Response: The RCSDT has made clarifying changes to R11 to use mutually agreeable action, rather than time for restoration.		
NV Energy	Yes	Agree, however, the ability for a DP or GOP to have such consultation with its TOP or BA would likely be hampered by the failure of the Interpersonal Communications itself. DP and GOP are only required to have a single source for this Interpersonal Communications.
Response: RCSDT did not want to burden the DP and GOP with having Alternative Interpersonal Communication capability based on Paragraph 508 of Order No. 693. There are multiple avenues of communication technology available to comply with R11. No change made.		
NIPSCO		If the Interpersonal Communication is down, and no backup is required for the DP and GOP, how are they to consult and collaborate?
Response: RCSDT did not want to burden the DP and GOP with having Alternative Interpersonal Communication capability based on Paragraph 508 of Order No. 693. There are multiple avenues of communication technology available to comply with R11. No change made.

5. The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact. Do you agree with the proposed definition? If not, please explain in the comment area below.

Summary Consideration: There were a significant number of comments about the definition of Reliability Directive with accompanying suggested language; for example, having the definition to prescribe a level of performance. The practice of writing a level of performance within a definition is discouraged and generally prevents future use of the term. Several comments pertained to compliance with the requirements; for example, would an entity be required to use three-part communication for a voltage schedule? The requirements do not preclude an entity from doing so; however, the requirements focus on the situation of addressing an Emergency or Adverse Reliability Impact. Other concerns were raised that the terms “Emergency” and “Adverse Reliability Impact” are the same. The RCSDT believes these terms capture independent conditions. The term “Emergency” implies situations where the event is anticipated or currently happening. Likewise, Adverse Reliability Impact clearly identifies a potential or actual event in the phrase, “an event that results in.” The RCSDT notes the definition of Adverse Reliability Impact is the revised term, which is NERC Board of Trustees adopted and is pending regulatory filing in IRO-014-2. Additionally, using the currently adopted version does not capture the full spectrum of the proposed definition by the RCSDT.

The development of the term Reliability Directive concept places a heightened awareness on actions that are required to avoid an Adverse Reliability Impact. Additionally, the use of “direct” is consistent with the uses of “direct” in other standards. A commenter had a concern about the removal of “issued in a clear, concise, and definitive manner” would lead to repeating the process. The RCSDT believes it to be in the interest of the issuer to do this without the burden of a requirement. Additionally, this type of requirement would be difficult to measure and by virtue of the issuer having to confirm the Reliability Directive; it is to the issuer’s advantage to be clear for efficient communications. Other minor formatting and corrections to references were made to align requirements, measures, and compliance components. Several other comments were made that are addressed in the questions above.

Organization	Yes or No	Question 5 Comment
Constellation Power Source Generation, Inc.	Negative	As we commented on Project 2007-03 TOP-001-2, the definition of Reliability Directive is an improvement but the definition must capture the identification concept that is reflected in the Requirement (R1). As a result, when Reliability

Organization	Yes or No	Question 5 Comment
		<p>Directive is used elsewhere, it would be clear that the communication must be identified as a Reliability Directive.</p> <p>We suggest the following revision to the definition and it should follow through to Project 2006-06 IRO-001-3 and Project 2007-03 TOP-001-2, eventually being added to the Reliability Standards Glossary of Terms.</p> <p><i>A communication identified as a Reliability Directive by a Reliability Coordinator, Transmission Operator, or Balancing Authority to initiate action by the recipient to address an Emergency or Adverse Reliability Impact.</i></p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p> <p>IRO-001-3 uses the term ‘direct’ in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following:</p> <p>To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.</p> <p><i>R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or</i></p>

Organization	Yes or No	Question 5 Comment
		<p><i>Adverse Reliability Impacts.</i></p> <p><i>R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given.</i></p> <p><i>R3: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.</i></p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. The RCSDT believes using the word “request” makes the requirement conditional and is not consistent with the purpose of the standard. No change made.</p>
<p>Response: See response above.</p>		
<p>MidAmerican Energy Co.</p>	<p>Negative</p>	<p>Do not nest definitions.</p> <p>The use of the word “any” in the COM-002-3 and IRO-001-3 definition of “Emergency” is too broad and should be deleted. The use of “any” in regulatory standards almost always causes unintended consequences.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The definition should be shortened to read:</p> <p><i>“Abnormal system condition that requires automatic or immediate manual actions to prevent or limit Bulk Electric System transmission facility or generation failures that</i></p>

Organization	Yes or No	Question 5 Comment
		<p><i>could result in instability, uncontrolled separation, or cascading.”</i></p> <p>The RCSDT appreciates the suggested rewording of the definition. The suggestion creates a disconnect with the already approved NERC glossary term. Additionally, the proposed definition adds new words which were not included originally. The RCSDT does not propose a new definition of Emergency. No change made.</p>
<p>Response: See response above.</p>		
<p>Tennessee Valley Authority</p>	<p>Negative</p>	<p>We suggest adding the words “and identified as a reliability directive to the recipient” at the end of the definition of Reliability Directive.</p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. <p>Arizona Public Service Company</p>	<p>No</p>	<p>There is a risk of not properly identifying an abnormal condition (Emergency or Adverse Reliability Impact) in time to require specific use of the statement ‘this is a Reliability Directive’ when issuing switching on the system in the event of an emergency.</p> <p>The RCSDT believes that it is the responsibility of each entity to identify abnormal conditions when it requires an action to be executed as a Reliability Directive. If conditions are not identified as having Emergency or Adverse Reliability Impact, then the requirement is not applicable. No change made.</p> <p>This is a deviation from consistently using 3-way communication when an emergency occurs. It may not be apparent that an emergency exists and breaking from consistent use of expected 3-way communication could cause confusion.</p> <p>The RCSDT believes this does not preclude an entity from utilizing 3-part communications for activities other than Reliability Directives. No change made.</p>
<p>Response: See response above.</p>		
<p>Southern Company</p>	<p>No</p>	<p>This definition would encompass more communication than is now included. The definition now requires that a directive be declared as a part of the three part communication. For example, sending out the voltage schedule each morning would be included as a directive using the new definition.</p> <p>The RCSDT thanks you for your comment; however, we believe the definition of Reliability Directive is specific in the nature of the communication while providing</p>

Organization	Yes or No	Question 5 Comment
		<p>adequate flexibility for the responsible entity to define those conditions that would rise to the level of a Reliability Directive. No change made.</p> <p>We suggest adding the words “and identified as a reliability directive to the recipient” at the end of the definition of Reliability Directive. This would allow the removal of R1 from COM-002-3</p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p>
<p>Response: See response above.</p>		
Entergy Services, Inc	No	<p>An Adverse Reliability Impact is a type of Emergency. Including a new term for Adverse Reliability Impact and including both terms in the definition for Reliability Directive doesn’t add clarity. I suggest changing the definition for Reliability Directive to remove phrase “or Adverse Reliability Impact.”</p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Likewise, the definition of Adverse Reliability Impact clearly identifies as a potential or actual event in the phrase, “an event that results in.” Both conditions are important to the definition. The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk</p>		

Organization	Yes or No	Question 5 Comment
Electric System instability or Cascading.” No change made.		
NextEra Energy, Inc.	No	<p>NextEra objects to the use of “Adverse Reliability Impact” in Reliability Standards COM-002-3 and IRO-001-3. NextEra requests that the use of Adverse Reliability Impact be revised as suggested below or it be deleted from the definition of Reliability Directive. NextEra does not agree with the use of Adverse Reliability Impact in the definition of “Reliability Directive” for the following reasons:</p> <ol style="list-style-type: none"> 1. This term Adverse Reliability Impact is ambiguous. In part, the term is ambiguous because it includes in its definition the term “instability,” which has lead to considerable misunderstanding and confusion in the industry. There are also differing views on what is (and is not) Cascading, because the definition is not sufficiently clear. For example, some believe instability and Cascading occur when an event affects multiple substations of one Transmission Operator, while others believe instability or Cascading only occur when the event affects more than one Transmission Operator’s system. As mentioned in response to item 4, above, Reliability Standards must be clear and consistently interpreted. It is not appropriate to issue a Standard that perpetuates the use of terms that lack consistent interpretation. 2. While not perfect, the term Emergency is better understood in the industry, and it may include many or all of the instances of instability or Cascading intended to be captured by Adverse Reliability Impact. Consequently, it is not advisable to introduce Adverse Reliability Impact as a new term, when it is not clearly distinguishable from Emergency. NextEra is concerned that an unclear and imprecise term, such as Adverse Reliability Impact, does not promote reliability, and, such a term is particularly troublesome in the context of real time system operations. Therefore, for the reasons stated above, NextEra believes that the term Adverse Reliability Impact should be deleted from the definition of Reliability Directive. In the alternative, if Adverse Reliability Impact is not deleted from the definition of Reliability Directive in Reliability Standards COM-002-3 and IRO-001-3, NextEra

Organization	Yes or No	Question 5 Comment
		<p>requests that Adverse Reliability Impact be revised to read:</p> <p><i>“an event or condition on the Bulk Electric System that may, or is leading to, Cascading over more than one Bulk Electric System transmission system.”</i></p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Likewise, the definition of Adverse Reliability Impact clearly identifies as a potential or actual event in the phrase, “an event that results in.” Both conditions are important to the definition. The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” No change made.</p>		
<p>Niagara Mohawk (dba National Grid)</p>	<p>No</p>	<p>The "adverse reliability impact" definition is not clear, is this an actual event or contingency? The words imply it is an actual event, which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p>
<p>Response: The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
<p>BGE</p>	<p>No</p>	<p>BGE would prefer that the definition of Reliability Directive include the requirement to identify the fact that a Reliability Directive is being issued. See the following proposed definition:</p> <p><i>Reliability Directive: A communication initiated and identified as a Reliability Directive, by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse</i></p>

Organization	Yes or No	Question 5 Comment
		<i>Reliability Impact.</i>
<p>Response: The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p>		
Duke Energy	No	<p>-Since FERC has not yet approved the new definition of Adverse Reliability Impact, we believe the term “Adverse Reliability Impact” should be replaced by the words of the BOT-approved definition: “the impact of an event that results in Bulk Electric System instability or Cascading.”</p> <p>The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The RCSDT thanks you for your comment; however, by inserting the text of the currently adopted version of the Adverse Reliability Impact definition would create a loss of continuity in the intent of the pending definition. No change made.</p> <p>-Also, add the phrase “and the communication is identified as a reliability directive to the recipient” to the end of the definition of Reliability Directive. This will eliminate potential confusion regarding when a communication is a Reliability Directive, and when a communication is a routine instruction. Revising the definition in this manner may also eliminate the need Requirement R1 of COM-002-3.</p> <p>If R1 is retained, we suggest rewording as follows:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, or Balancing Authority shall identify a Reliability Directive to the recipient when it issues a Reliability Directive</i></p>

Organization	Yes or No	Question 5 Comment
		<p><i>that requires an action or actions to be executed.”</i></p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p> <p>-Proposed reworded definition:</p> <p><i>“Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or the impact of an event that results in Bulk Electric System instability or Cascading, and the communication is identified as a Reliability Directive to the recipient.”</i></p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. Organization	Yes or No	Question 5 Comment
<p>Response: See response above.</p>		
<p>ReliabilityFirst</p>	<p>No</p>	<p>ReliabilityFirst believes the definition of “Reliability Directive” should be all inclusive and include “all” actions initiated by the Reliability Coordinator, Transmission Operator or Balancing Authority (not just Emergency or Adverse Reliability Impacts). Even though Emergency or Adverse Reliability Impacts are defined, during operations, it may become a gray area to whether or not it falls under the intent of a “Reliability Directive.”</p> <p>The RCSDT appreciates your comment about including all actions initiated by the BA, RC and TOP; however, the RCSDT has determined that the development of the Reliability Directive concept improves reliability by placing a heightened awareness on actions that are required to avoid an Adverse Reliability Impact. Additionally, the industry does not support the proposed suggestion above based on previous postings and comments. No change made.</p> <p>Furthermore, if the system falls under a condition that results in an Adverse Reliability Impact, it may be too late for a Reliability Coordinator, Transmission Operator or Balancing Authority to issue a Reliability Directive. ReliabilityFirst recommends the following for revision to the term “Reliability Directive”:</p> <p><i>Reliability Directive - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where an action by the recipient is required.</i></p> <p>The RCSDT has determined that the development of the Reliability Directive concept as currently drafted, improves reliability by placing a heightened awareness on actions that are required to avoid an Adverse Reliability Impact. Additionally, the industry does not support the proposed suggestion above based on previous postings and comments. No change made.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 5 Comment
Midwest Independent Transmission System Operator	No	<p>The proposed definition of Reliability Directive is unacceptable because the use of the defined terms “Emergency” and “Adverse Reliability Impact” results in an undefined, broadened scope of responsibility for Reliability Coordinators when coupled with the definition of the Bulk Electric System. This may lead to confusion/ambiguity for Reliability Coordinators that must be clarified to ensure compliance. Further, this broadened scope may mis-direct Reliability Coordinator’s attention and mitigation efforts to small-scale, localized issues that represent no true threat to the operation of the Interconnection.</p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition actually narrows the responsibility by framing the condition(s) within which it is appropriate for anticipated actions necessary to address an Emergency or Adverse Reliability Impact. The IRO standards require the Reliability Coordinator to respond to issues regardless of the scale of issues. No change made.</p>		
Texas Reliability Entity	No	<p>We oppose the definition of Reliability Directive as it is currently being proposed in this standard because three-part communication should not be required only after an Emergency or Adverse Reliability Impact actually occurs.</p> <p>In particular, we object to the removal of the word “expected” (or “anticipated”) from the definition, because Reliability Directives may be required before a situation escalates to an Emergency, in order to prevent the Emergency from occurring. This proposed change potentially undermines efforts required to avoid emergencies and events.</p> <p>We note that there are instances in other Reliability Standards where “anticipated” conditions require actions to be taken (e.g. TOP-001-1 R5 and EOP-002 R4), when clear, concise, and definitive communication, verbal or electronic, is required to avoid or mitigate an impending emergency.</p>
<p>Response: The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the</p>		

Organization	Yes or No	Question 5 Comment
<p>application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
<p>New York Independent System Operator</p>	<p>No</p>	<p>It is not clear the distinction between an Emergency and ARI. We would like to confirm that Since ARI is the impact of an event that results in instability or cascading, that an ARI is a subset of an emergency?</p> <p>Or said differently is an ARI simply instability or cascading? Ultimately, if ARI is a subset of Emergency, then why do we need both in the requirement?</p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Additionally, the term “Adverse Reliability Impact” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential impacts of events and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
<p>Oncor Electric Delivery</p>	<p>Affirmative</p>	<p>"Oncor requests clarity about what constitutes a “recipient.”</p> <p>For example, if a Transmission Grid Operator performing the functions of a Transmission Operator issues a Reliability Directive to its own field operations personnel to perform an action on behalf of the same entity, does the field operations personnel as the recipient become in affect a “Transmission Operator” subject to R2?"</p>
<p>Response: The term “recipient” in this case is referring to entity-to-entity communication and is inferred by Requirement R2 naming the entities. No change made.</p>		
<p>Constellation Energy</p>	<p>Affirmative</p>	<p>As we commented on Project 2007-03 TOP-001-2, the definition of Reliability</p>

Organization	Yes or No	Question 5 Comment
Commodities Group		<p>Directive is an improvement but the definition must capture the identification concept that is reflected in the Requirement (R1).</p> <p>As a result, when Reliability Directive is used elsewhere, it would be clear that the communication must be identified as a Reliability Directive.</p> <p>We suggest the following revision to the definition and it should follow through to Project 2006-06 IRO-001-3 and Project 2007-03 TOP-001-2, eventually being added to the Reliability Standards Glossary of Terms.</p> <p><i>“A communication identified as a Reliability Directive by a Reliability Coordinator, Transmission Operator, or Balancing Authority to initiate action by the recipient to address an Emergency or Adverse Reliability Impact.”</i></p>
<p>Response: The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). The definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p>		
National Grid	Affirmative	<p>Delete reference to "adverse reliability impact" in R1. The "adverse reliability impact" definition is not clear, is this an actual event or contingency?</p> <p>The words imply it is an actual event which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Additionally, the term “Adverse Reliability Impact” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-</p>

<p>014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
Wisconsin Public Service Corp.	Affirmative	<p>The Standards Drafting Team has provided a great deal of clarity regarding Reliability Directives, however we believe BES reliability would be further enhanced if Reliability Directives were still required to be issued in a clear, concise, and definitive manner. Under Emergency conditions, we feel this would enhance communications effectiveness and expedite parties taking necessary actions quickly.</p>
<p>Response: The RCSDT believes the current form of the requirements accomplish this objective. If the issuer is not clear, concise and definitive, it would lead to the issuer having to repeat the process. It is incumbent and beneficial to the issuer to meet this performance without a specific requirement to instruct. Additionally, measuring clear, concise and definitive manner poses significant issues. No change made.</p>		
We Energies	Yes	<p>The definition is acceptable, but as used may imply that all Emergency communications must be Reliability Directives.</p>
<p>Response: The RCSDT thanks you for your comment; however, definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p>		
Ingleside Cogeneration LP	Yes	<p>Ingleside Cogeneration agrees that it is important to clearly denote when a directive must be issued. In previous definitions, we believed that imprecise language made it difficult for the BA, RC, or TOP to determine if a gray area situation required a directive or not. With a more precise definition, it will eliminate second guessing by auditors that a directive was necessary because an outcome turned out poorly - even if an Emergency was not declared or an Adverse Reliability Impact did not occur.</p>
<p>Response: Thank you for your comment.</p>		

Organization	Yes or No	Question 5 Comment
ERCOT ISO	Yes	The definition of Reliability Directive appropriately clarifies the importance of knowing the level of importance of any instructions being issued. If there is no room for variance from the specific action required, or if there is no time to further negotiate or discuss the action required, it is important that the instruction be identified as a Reliability Directive and for such instructions to be followed in a timely fashion. Normal operating instructions typically do not rise to this level of urgency and some variation from the words will not result in unmanageable reliability impacts. Also, there typically may be time for addressing the instructions in more than one way.
Response: Thank you for your comment.		
NIPSCO		The question of whether one is in a state of Emergency or Instability, or in an Abnormal Condition can be still be subjective; it may be difficult to provide evidence for an audit.
Response: The responsible entity determines “state of Emergency or instability” and acts accordingly. No change made.

6. Do you have any other comment, not expressed in questions above, for the RC SDT?

Summary Consideration: This question yielded the most comments overall and many are duplicative of previous comments. For those duplicative comments, the RCSDT respectfully directs summary consideration of those comments to the above questions. Several commenters noted these standards are not “results-based” and this is mainly due to the project’s ongoing work. The standard(s), in a way, appear more results-based by not being prescriptive; however, the specific standards do not implement the results-based formatting. There were many comments about aligning the three standards to have the same implementation plan. The RCSDT agrees and aligned all three with the same implementation. Some comments questioned the need to have an authority requirement for the Reliability Coordinator in IRO-001-3, R1 because it appears to be granted under the ERO registration criteria. The ERO criteria does not provide for this authority. Additionally, IRO-001-3 does not limit the Reliability Coordinator’s authority to issuing only Reliability Directives. The Reliability Coordinator has the authority to direct, which could include Reliability Directives (a subset of direction or directing) is the theme carried out in each requirement. Some comments asked about direct, direction, and when an Emergency or Adverse Reliability Impact would be identified. The terms “direct” and “direction” are consistent with the intent of the standard in its authority and “identify” is upon recognition, which is a condition when the Reliability Coordinator would be acting or directing others to act. The requirements do not preclude the Reliability Coordinator from taking action for other situations, even if it is aware of situations beyond its area. A few comments concerned adding a time element to the requirements, such as, preventing events in Real-time; however, the assigned Time Horizons provide for this under Real-time Operations and Same Day Operations.

Comments noted a difference in “shall have” and “shall designate” within the requirements of COM-001-2. The intent of allowing an entity to “designate” allows the entity to designate the Alternative Interpersonal Communication capability providing greater flexibility in meeting the requirement. Additionally, there were comments about testing the Interpersonal Communication capability in addition to the Alternative Interpersonal Communication capability. The RCSDT intentionally omitted testing the Interpersonal Communication capability because routine use is sufficient to demonstrate functionality. The standard COM-001-2 measures have been updated to appropriately reflect the specific requirements and make the evidence examples clearer. There were several concerns about the designating a replacement Alternative Interpersonal Communication capability within two hours. The RCSDT notes the performance is to designate a replacement, not to accomplish the repairs. The reliability need is to designate what the Alternative Interpersonal Communication capability will be, should it be called upon. Commenters raised concerns about most of the VSLs in COM-001-2 being Severe. These VSLs are Severe because there are essential to reliability. By the construction of the requirement, VSLs are binary, which requires the VSLs to be Severe according to NERC VSL Guidelines. Some comments questioned the removal of requirement, R4. This requirement remains enforce until the approval of COM-003-1 under Project 2007-02.

Several commenters noted that COM-002-3 seems to be requiring the “how” to accomplish the communication coordination. The RCSDT emphasizes the requirements state the “what,” rather than “how.” In a basic sense, the “what” is highlighted by R1 by

identifying the communication as a Reliability Directive, next in R2 the recipient responds accordingly, and R3 the issuer confirms the communication. How the process is accomplished is up to the entity.

Some commenters were concerned about the measures and evidence. The measures are examples, and the entity is not limited to the examples provided; including letters of attestation, where appropriate. The RCSDT addressed other document errors, formatting issues, referencing, and mismatch issues raised in the comments. The Effective Date, Compliance, and Data Retention sections have been updated to the most current language used in standards through the standard review process.

Organization	Yes or No	Question 6 Comment
Alberta Electric System Operator	Abstain	IRO-001-3: The Alberta version of IRO-001 will outline limitations to the authority of the RC, that are required by Alberta legislation.
<p>Response: The standard drafting team (SDT) has drafted requirements to address the purpose of the standard, repeated here: To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System. The requirements have been drafted within the context established by the NERC Functional Model V5, and describes interrelationships of the functional entities in accordance with the Functional Model V5. Please address any variations from this structure, which may be required by Alberta legislation, with NERC as the ERO. No change made.</p>		
City Utilities of Springfield, Missouri	Affirmative	City Utilities of Springfield, Missouri supports comments submitted by SPP.
<p>Response: Thank you for your comment.</p>		
United Illuminating Co.	Affirmative	COM-001-2: UI votes Affirmative with the comment that R1 through R9 are requirements in the Planning Horizon not the Real Time Operations horizon. These requirements are scoped to the establishment of communication processes with other entities not with actions taken by operations.
<p>Response: The RCSDT recognizes that, in most instances, the establishment of communications capability and the designation of Alternative Interpersonal Communications capability will have taken place at some time in the past (which could be the operations planning horizon for the present Real-time instance). However, the full reason for such action is to be sure that the communications capability is in place and functional during the Real-time Operations horizon for use in Real-time operating actions. Therefore, the</p>		

Organization	Yes or No	Question 6 Comment
<p>RCSDT has established the applicable time horizon to be the Real-Time Operations horizon. No change made.</p>		
<p>SERC Reliability Corporation</p>	<p>Affirmative</p>	<p>COM-002-3 Comments</p> <p>R2: We recommend that the following phrase (in quotes) be added to R2: Each Balancing Authority, Transmission Operator and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive "immediately upon receiving it."</p> <p>As written, there is no limit as to when the entity must repeat it (i.e. they could wait 2 hours) The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call).</p> <p>For example, is a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3?</p>
<p>Response: The requirement aims at being a performance-based requirement, and states a description of “what” communication must take place, but does not prescribe “how” the communication is to be made. Adding the suggested phrase “immediately upon receiving it” introduces the ambiguous term “immediately,” for which there is neither plain meaning nor simple explanation. What must happen is that the recipient must respond in such a way that the issuer may determine whether the message has been properly understood. The RCSDT concludes that the proposed language gives plain meaning. No change made.</p> <p>The question about whether a roll call of receiving entities is expected to be held is asking for prescription of “how” to accomplish what is required. The RCSDT recognizes that there is more than one way to accomplish the confirmation when more than one entity received a Reliability Directive at the same time. What is required is for the recipient to respond in such a way that the issuer may determine whether the message has been properly understood. One way for that to occur would be, as you suggest, for the entities to individually respond. Another way would be for a pre-established protocol or procedure (e.g., roll-call, all-call, etc.) to be in place and used in such cases. The RCSDT has determined that prescribing “how” to ensure that “what” is required has been accomplished is not required and that the individually adopted procedures or protocols could offer many different ways to ensure effectiveness. No change made. The RCSDT concept is that “All Call” compliance is related to having a document that explains how the entity responds. No change made.</p>		

Organization	Yes or No	Question 6 Comment
Alliant Energy Corp. Services, Inc.	Affirmative	COM-002-3: Alliant Energy recommends that the Effective Date be the first day of the second calendar quarter after applicable regulatory approval, to be the same as COM-001-2 and IRO-001-3. In that way all 3 standards would be effective at the same time, making implementation much smoother.
<p>Response: Thank you for your comment. The RCSDT will adjust the standards to have the same implementation date.</p>		
Wisconsin Electric Power Co.	Affirmative	<p>COM-002-3: Since all the Requirements are related to Reliability Directives, is it implied that all “Emergency Communications” are Reliability Directives even if not designated as such per R1?</p> <p>-The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. A recipient’s phone may not be recorded but an initiator’s always should. If a receiver refused to meet the R2 requirement, an initiator should have an alternative (i.e., repeat the directive and provide potential penalties if recipient refuses to comply).</p> <p>Should the initiator have responsibility for providing the entire 3-way evidence as M3 implies?</p>
<p>Response: The RCSDT would like to highlight that communications is not a defined term in the NERC Glossary of Terms used in Reliability Standards, nor is it defined in this standard. Thus, the plain meaning of communications is intended. The RCSDT has not implied a defined term in the wording of the purpose statement of the standard, nor in the requirements themselves, that any communication is a Reliability Directive unless the issuing functional entity identifies the actions to be taken as a Reliability Directive. Therefore, not all communications during Emergencies will be Reliability Directives. No change made.</p> <p>COM-002, R2: The RCSDT included some examples of how to provide the evidence needed for Measure M2. The examples are not intended to be an all-inclusive list. The RCSDT does point out, though, that dated operator logs could provide such evidence. The RCSDT does not believe that the recipient has the alternative to refuse to perform, as required. However, the RCSDT does bring attention to standard IRO-001-3, which requires entities to comply with directions unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. No change made.</p>		

Organization	Yes or No	Question 6 Comment
<p>COM-002 M3: The Measure is correct as written. The issuer only needs the evidence that it confirmed the response was accurate or reissued according to the requirement. Evidence does not necessarily mean the entity must have the entire three-way conversation captured (i.e., recording), but evidence the entity confirmed or reissued according to requirement. No change made.</p>		
<p>Wisconsin Electric Power Marketing</p>	<p>Affirmative</p>	<p>COM-002-3: Since all the Requirements are related to Reliability Directives, is it implied that all “Emergency Communications” are Reliability Directives even if not designated as such per R1.</p> <p>The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. A recipient’s phone may not be recorded but an initiator’s always should. If a receiver refused to meet the R2 requirement, an initiator should have an alternative. i.e., repeat the directive and provide potential penalties if recipient refuses to comply. Should the initiator have responsibility for providing the entire 3-way evidence as M3 implies?</p>
<p>Response: The RCSDT would like to highlight that communications is not a defined term in the Glossary of Terms used in NERC Reliability Standards, nor is it defined in this standard. Thus, the plain meaning of communications is intended. The RCSDT has not implied in the wording of the purpose statement of the standard, nor in the Requirements statements themselves, that any communication is a Reliability Directive unless the issuing functional entity identifies the actions to be taken as a Reliability Directive. No change made.</p> <p>COM-002, R2: The RCSDT included some examples of how to provide the evidence needed for measure M2. The examples are not intended to be an all-inclusive list. The RCSDT does point out, though, that dated operator logs could provide the evidence. The RCSDT does not believe that the recipient has the alternative to refuse to perform as required. No change made.</p> <p>COM-002 M3: The Measure is correct as written. The issuer only needs the evidence that it confirmed the response was accurate or reissued according to the requirement. Evidence does not necessarily mean the entity must have the entire three-way conversation captured (i.e., recording), but evidence the entity confirmed or reissued according to requirement. No change made.</p>		
<p>Southwest Transmission Cooperative, Inc.</p>	<p>Affirmative</p>	<p>COM-002-3: While COM-002-3 is well written to explain the three-part communications requirements and makes it perfectly clear when a Reliability Directive has been issued, the opening clause leaves the responsible entity open to second guessing on whether they should have issued a Reliability Directive. This</p>

Organization	Yes or No	Question 6 Comment
		<p>problem could be solved by changing the opening clause to “When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.”</p> <p>In the second bullet of Requirement R3, we suggest using “Restate” in place of “Reissue.” The responsible entity is not really reissuing the Reliability Directive. They are still in the act of trying to get the Reliability Directive issued and are simply re-communicating it because it was not understood.</p>
<p>Response: The RCSDT believes the offered suggestion does not improve COM-002-3, R1. No change made.</p> <p>COM-002-3, R3: The communications described are not intended to be a once-through process. Effective communications, sometimes referred to as three-part or three-way, often may be effective only after numerous iterations. The RCSDT believes the likely first effort to clarify would be to re-issue the instructions just to determine whether the recipient simply “heard wrong.” Using the word re-state seems to imply that the wording is incorrect in some way or for some other reason needs to be said a different way. The RCSDT believes it is more likely that the issuer is attempting to bet the recipient to understand and therefore believes that reissue is more appropriate. No change made.</p>		
Public Utility District No. 1 of Okanogan County	Affirmative	IRO-001-3: Need to correct language in Data Retention section 1.3. references R3 R4 and M3 and M4. There is no R4 and M4.
<p>Response: The RCSDT agrees and thanks you for your comment. The language has been changed to eliminate R4 and M4 references.</p>		
Sierra Pacific Power Co.	Affirmative	<p>IRO-001-3: R1 appears to be unnecessary due to the authority that is already inherent through the functional model.⁸</p> <p>Further, the measure for R1 does not properly cover the requirement that the RC "have authority"; rather, it measures whether the RC exercised that authority.</p>

⁸ NERC Functional Model Version 5, (http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf)

Organization	Yes or No	Question 6 Comment
<p>Response: The RCSDT agrees that the standard requirements language is consistent with the authority that is inherent in the Functional Model V5. However, the Functional Model V5 does not constitute enforceable requirements for entities to follow. Such requirements are established within the Reliability Standards. The Functional Model V5 provides good guidance for a consistent structure throughout the Reliability Standards. In addition, the Reliability Coordinator’s reliability certification is established through Regional Entities and the authority to act is measured. No change made.</p>		
<p>Platte River Power Authority; Portland General Electric Co.; U.S. Army Corps of Engineers</p>	<p>Affirmative</p>	<p>IRO-001-3: Requirement R1 of IRO-001-3, requiring the Reliability Coordinator to have the authority to act or direct actions, appears to be unnecessary because it seems that this authority is granted when the entity is certified as the Reliability Coordinator.</p> <p>Additionally, the associated Measure M1, as worded, does not provide evidence that the Reliability Coordinator has the authority to act or direct other to act, but rather provides evidence that the Reliability Coordinator acted or took action to direct others.</p>
<p>Response: IRO-001-3, R1: The RCSDT agrees that the requirement is consistent with intended functions of a Reliability Coordinator when the entity is recognized as a Reliability Coordinator. The RCSDT has been informed by the ERO that registration criteria do not provide for certification of this authority In addition, the Reliability Coordinator’s reliability certification is established through Regional Entities and the authority to act is measured. No change made.</p>		
<p>National Grid</p>	<p>Negative</p>	<p>- Requiring RCs, TOPs and BAs to state an action as a "reliability directive" complicates communications during a time when response time and clarity are important. If those issuing a directive don't get a repeat back they just need to ask for one. The requirement just needs to define "what" is required not "how." This can be handled by procedures and training.</p> <p>COM-002-3, R1: The requirement states “what” must be done: the action(s) are to be identified as a Reliability Directive. The requirement does not establish “how” the action is to be done. The RCSDT agrees that, under conditions such as you describe, time may be of the essence. Much as in military operations, discussion time is over and action is required when the recipient understands an order has been given.</p>

Organization	Yes or No	Question 6 Comment
		<p>Discussion of disagreement or alternatives may occur later, if and as needed, but no more time can be consumed discussing the directions given. The RCSDT has not prescribed “how” these things must be done, and the RCSDT recognizes there is more than one way. The RCSDT has determined it is appropriate to place the responsibility on the recipient to give a response. The RCSDT agrees that the issuer may ask for a response if one has not been given, but the responsible entity to perform the action is the recipient. The RCSDT agrees that procedures and training are good practices appropriate for this process, but the standard requirements establish what must be done, not how personnel are prepared to do it. No change made.</p> <p>- Delete reference to "adverse reliability impact" from the "Directive" definition. The "adverse reliability impact" definition is not clear, is this an actual event or contingency?</p> <p>The words imply it is an actual event which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p> <p>The RCSDT notes that the term, “Adverse Reliability Impact” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>
<p>Response: See response above.</p>		
SERC Reliability Corporation	Negative	COM-001-2 Comments Definition of Alternative Interpersonal Communication: The proposed definition uses the term "medium."

Organization	Yes or No	Question 6 Comment
		<p>What is the scope of that? Telephony is a "medium", but there is wired, wireless, satellite, etc.</p> <p>Was "medium", intended to differentiate voice, paper, text, email, teletype, or something else? Does the qualifying term "same", when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the "same infrastructure" but a different "medium."</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity. Please refer to the definition of Interpersonal Communication and Alternative Interpersonal Communication. Medium: the plain meaning of the word medium in noun form is a vehicle for ideas, a means of conveying ideas or information. The RCSDT recognizes there are many differing technologies for accomplishing communications and it is not necessary to prescribe which to use. A common medium is telephony, and the commenter is correct that there are different technological forms of telephony. What is required is that there be a medium in place so that Interpersonal Communication capability exists. No change made.</p> <p>R1 and R2 - We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or Alternate Interpersonal Communications.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>R1 - In later requirements it is proposed that the entity "shall designate an." It is</p>

Organization	Yes or No	Question 6 Comment
		<p>suggested that for consistency and audit ability, this concept be used for R1, R3, R5, R7 and R8.</p> <p>The RCSDT believes the requirements achieve the desired intent of the standard. Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>In addition, the qualifier of "primary" should be used such that the requirements read:</p> <p><i>"shall have designated, primary Interpersonal Communications capability with the following entities:"</i></p> <p>Although it is appropriate that "Alternative" be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication) that bounds acceptable alternative methods , we do not see the need to capital "primary."</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p> <p>R9 - The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the sub-requirements of R2, R4, and R6. There is no expectation of testing the primary Interpersonal Communications - is this intentional or an oversight?</p> <p>Although functional testing of this should be done as a normal course of business,</p>

Organization	Yes or No	Question 6 Comment
		<p>should an explicit test be required with each entity in the sub-requirements of R1, R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct?</p> <p>The RCSDT intends each Alternative Interpersonal Communication capability to be verified functional by testing. If an entity has only one such capability, then only one test would be required. You further ask whether the absence of required testing of the “primary” (word is not in the requirement) Interpersonal Communication capability is intentional. The RCSDT intentionally left it out because the communications capability is used routinely and the use is sufficient to demonstrate functionality. With respect to phone numbers, these are procedural matters to be addressed by each individual entity and by including phone numbers it would make the requirement prescriptive. The requirement is to test capability. No change made.</p> <p>R10 - The following scenario seems plausible: The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation?</p> <p>Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well?</p> <p>Yes, the entity experiencing the failure is required by R10 to notify the entities as identified within the 60-minute time frame. The RCSDT believes these situations would be few in numbers and not overly burdensome to perform. No change made.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>M9 reads “at least on a monthly basis.” We suggest that this be changed to “at least once per calendar month” as written in R9. This change should also be corrected in the VSLs.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT agrees and has changed the language in COM-001-2, M9 to agree with the language in R9.</p> <p>M8 - We suggest removing the second “that” in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional “that”.</p> <p>M10 - We suggest this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</i></p> <p>The RCSDT agrees and has changed the language in COM-001-2, M10 to include language consistent with the language in R10.</p> <p>M12 needs to be removed.</p> <p>COM-001-2, M12: The RCSDT agrees that the heading “M12” has no corresponding requirement and was overlooked in format clean-up. The “M12” heading has been removed.</p> <p>We question why the first paragraph of Section 1.3” Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>

Organization	Yes or No	Question 6 Comment
Response: See response above.		
Independent Electricity System Operator	Negative	<p>COM-001-2:</p> <p>1. R1.2 and R2.2: The phrase “within the same Interconnection” is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to curtail interchange transactions crossing Interconnection boundary). The SDT’s response that the phrase was added to address the ERCOT situation and citing that ERCOT does not need to communicate with other RCs leaves a reliability gap.</p> <p>Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p> <p>2. R3.5 and R4.3: The phrase “synchronously connected within the same Interconnection” is also improper; it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors).</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and have eliminated the phrase “within the same interconnection.”</p> <p>3. R4 and R6: not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin with to enable BAs to communicate with these entities (such as operating</p>

Organization	Yes or No	Question 6 Comment
		<p>instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails.</p> <p>The RCSDT refers the Order No. 693 in Paragraph 508 to clarify the reason the DP and GOP are not required to have Alternative Interpersonal Communication and is as follows: “(1) expands the applicability to include Generator Operators and Distribution Providers and includes Requirements for their telecommunications facilities; (2) identifies specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation and (3) includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions.” In addition, R11 requires the DP and GOP to consult with its BA and TOP to determine a mutually agreeable action for restoration. No change made.</p> <p>4. Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make to COM-001-2, M3.</p>
<p>Response: See response above.</p>		
<p>Wisconsin Electric Power Marketing; Wisconsin Electric Power Co.</p>	<p>Negative</p>	<p>COM-001-2: Although a great improvement over existing COM-001, and eliminates the data component see comments:</p> <ul style="list-style-type: none"> -For R5.1 Can the solutions included to meet R1 be included, same R3.2 and R5.2, same R5.3 and R7.2, same R5.4 and R8.1. -For R5.2 Can the solutions included to meet R2 be included, same R4.2 and R6.2. <p>COM-001-2, R5: In a word: Yes. The requirement is to have capability, and that capability does not have to be different from what the entity on the other end has. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R9 a 2 hour response for a once a month test seems extreme, as would require a secondary Alternate Interpersonal Communications capability.</p> <p>-M9 is reasonable, but should include something about communication actual repair and or time estimates.</p> <p>COM-001-2, R9: The requirement is to “initiate action to repair or designate a replacement Alternative Interpersonal Communication capability...” within two hours. The RCSDT recognizes that many different contracts or other arrangements may exist to address repair. However, the RCSDT finds that entities should know what they have and how to initiate repair and those two hours to do so is reasonable. No change made.</p> <p>COM-001-2, M9: The requirement is to have evidence that either repair was initiated or an Alternative Interpersonal Communication capability was designated within two hours. The RCSDT understands that, in extreme cases, the entity may need to make its initial Alternative Interpersonal Communication capability its Interpersonal Communication capability and then designate another Alternative Interpersonal Communication capability, if the repair times are so long that to continue in that mode for that long would present a reliability risk. Such arrangements, if they exist at all, are very rare. No change made.</p> <p>-R10 The use of R1 through R6 implies notification of both Interpersonal Communications and Alternate Interpersonal Communications failures. Do you notify if you become aware after the link is back up if it was down for GT 30 minutes, and doesn’t address notifying when restored?</p> <p>COM-001-2, R10: The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>Yes, there is no requirement to notify identified entities the Interpersonal Communication have been restored. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4.</p> <p>Update M9 accordingly.</p> <p>COM-001-2, R11: The RCSDT believes you intended to refer to R7 and R8, rather than R8 and R9. The RCSDT does not believe that the language implies that the communications capability required by R7 and R8 are independent, but they may be. If the entity which is registered as a DP is also registered as a GOP, although unlikely, then the capability could be met by the same medium. Neither does the RCSDT believe that R11 implies that R7 and R8 are redundant to R3.3 and R3.4 or to R5.3 and R5.4. No change made.</p>
<p>Response: See response above.</p>		
Tampa Electric Co.	Negative	<p>COM-001-2:</p> <p>By use of the term “any” in the phrase “a failure of any of its Interpersonal Communication” the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk. It needs to be limited to primary Interpersonal Communications with its TOP and/or BA.</p>
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p>		
Cogentrix Energy, Inc.	Negative	<p>COM-001-2:</p>

Organization	Yes or No	Question 6 Comment
		<p>Definition of Alternative Interpersonal Communication: The proposed definition uses the term “medium.”</p> <p>What is the scope of that? Telephony is a “medium” but there is wired, wireless, satellite, etc. Was “medium” intended to differentiate voice, paper, text, email, teletype, or something else?</p> <p>Does the qualifying term “same” when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system.</p> <p>That is the “same infrastructure” but a different “medium” R8 Revision:</p> <p>GOP cannot dictate to the BA or TOP what types of Interpersonal Communication will be used, but they can work with them to establish a common tool.</p> <p>COM-001-2, “Medium”: the plain meaning of the word medium in noun form is a vehicle for ideas, a means of conveying ideas or information. The RCSDT recognizes there are many differing technologies for accomplishing communications, and it is not necessary to prescribe which to use. A common medium is telephony, and the commenter is correct that there are different technological forms of telephony. What is required is that there be a medium in place so that Interpersonal Communication capability exists. Your comment poses compliance questions but does not suggest changes. No change made.</p> <p>COM-001-2, Definition of Alternative Interpersonal Communication: You ask whether the use of the word “same” as a modifier of infrastructure mean something like voice versus written? It could, but is not required to. The RCSDT intends the language to indicate that whatever causes the loss of the Interpersonal Communication capability should not be a common cause of failure of the Alternative Interpersonal Communication capability. Thus, one telephone number could serve as the Interpersonal Communication capability and another telephone</p>

Organization	Yes or No	Question 6 Comment
		<p>number could serve as the Alternative Interpersonal Communication capability, as long as whatever causes the failure of the Interpersonal Communication capability does not automatically cause the failure of the Alternative Interpersonal Communication capability. No change made.</p> <p>R8 Balloting:</p> <p>R8. Each Generator Operator shall have Interpersonal Communications capability with the following entities:</p> <p>R8.1 Balancing Authority</p> <p>R8.2 Transmission Operator</p> <p>R8 Suggestion:</p> <p><i>R8. Each Generator Operator shall coordinate with the BA and TOP to establish Interpersonal Communications capability as requested by the BA and TOP.</i></p> <p>The standard establishes requirement for communication capability appropriate to ensure reliability. There is no requirement for it to be different from the Interpersonal Communication capability that its Balancing Authority has with it, nor the Interpersonal Communication capability that its Transmission Operator has with it. Cooperation and coordination is always encouraged and is an excellent practice, but is not required by this standard. Thank you for your suggestion. No change made.</p>
<p>Response: See response above.</p>		
Oncor Electric Delivery	Negative	<p>COM-001-2:</p> <p>Oncor takes the position that contacting all impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer as prescribed in R1 through R6 is not doable within the ERCOT interconnect for a Transmission Operator.</p>

Organization	Yes or No	Question 6 Comment
		<p>The standard establishes requirement for Interpersonal Communication capability between entities for reliability purposes. The RCSDT recognizes that there are many different organizational arrangements and structures within the North American continent. The standard establishes “what” is required, but does not prescribe “how” it must be done. No change made.</p> <p>Oncor takes the position that notification to the RC and BA only is sufficient and that those two entities have the operational functionality to contact within the prescribed time all affected Distribution Providers, Generator Operators, and other Transmission Operators.</p> <p>Oncor also takes the position adding the word “impacted” to R10 will clarify that notification needs to be made only to the entities that are affected by the failure of a communication path.</p> <p>This will also more align with the language in M10."</p> <p>Thank you for your suggestion. The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p>
<p>Response: See response above.</p>		
National Grid	Negative	<p>COM-001-2:</p> <p>Overly prescriptive, not results-based. R7 & R8 are not necessary. Every entity at a minimum has a contact with a phone as their "Interpersonal Communications capability." Just need to require that every entity has a plan if they lose their primary communication channel ("Interpersonal Communications capability").</p>
<p>Response: The standard establishes requirement for communication capability appropriate to ensure reliability. In addition, R7 and R8 are responsive to FERC Order No. 693. Entities may use the telephone cited in the example as their Interpersonal Communication</p>		

Organization	Yes or No	Question 6 Comment
<p>capability. Requirement R11 as modified addresses the loss of Interpersonal Communication capability. No change made.</p>		
<p>Lincoln Electric System</p>	<p>Negative</p>	<p>COM-001-2: Please clarify whether R10 is intended to address both Interpersonal and Alternative Interpersonal Communications or only Interpersonal Communication.</p> <p>Although R10 identifies only Interpersonal Communication within the requirement, the reference to Requirements R1-R6 appears to include Alternative Interpersonal Communication as well. LES is concerned that if an entity's Interpersonal Communication is fully functional but discovers a failure in its Alternative Interpersonal Communication, the entity would still be required to notify entities per R10.</p>
<p>Response: The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than "R1 through R6," since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p>		
<p>ISO New England, Inc.</p>	<p>Negative</p>	<p>COM-001-2: Please see comments submitted with the project... ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).</p>
<p>Response: Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. The RCSDT will forward your comment to NERC staff for consideration.</p>		
<p>Commonwealth of Massachusetts Department of Public Utilities</p>	<p>Negative</p>	<p>COM-001-2: Primary concern here is with the phrase "within the same interconnection" which appears in R1.2 and R2.2. This removes any standard requirement for adjacent RCs that may not be in the same interconnection from communicating with each other. This constitutes a "gap" in reliability and is a</p>

Organization	Yes or No	Question 6 Comment
		concern.
<p>Response: Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p>		
Detroit Edison Company	Negative	<p>COM-001-2:</p> <p>R9. I believe 2 hours is too short, suggest "within 24 hours."</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>R11. "mutually agreeable time" creates issues. What if TO and BA have differing time frames?</p> <p>Which entity bears the violation if agreement cannot be reached?</p> <p>Alexander Eizans</p> <p>COM-001-2, R11, For, “mutually agreeable time,” the “what” is required is to consult and determine a mutually agreeable time and the “How” that is to be done is too prescriptive to be included within a standard because of the great number of possible scenarios, organizational arrangement, and sizes of entities involved. No change made.</p> <p>I am concerned with the evidence listed under the measures (see M6, M7 and M8).</p>

Organization	Yes or No	Question 6 Comment
		<p>Dated equipment specifications and installation documentation is to much. I know this is listed as "could include" but at one point could become "must include."</p> <p>Jeffrey DePriest</p> <p>COM-001-2, M6, M7, and M8, "could include" may some day become "must include": "What" is required is to provide evidence. A list, which could include but is not limited to various forms of evidence is presented for consideration, but the entity may, and is encouraged to do so when it is appropriate, provide other forms of equally appropriate evidence. No change made.</p> <p>R9 define "unsuccessful test."</p> <p>Is it a mechanical failure of equipment or failure of one or more entities to respond to the test?</p> <p>If mechanical failure, does the 2 hour window to initiate repairs mean notification to proper business unit or do repairs have to actually begin (crew investigating). If crews need to be on site 2 hours is too limiting.</p> <p>COM-001-2, R9, define "unsuccessful test": The RCSDT notes that your words are a paraphrase of the actual standard requirement language. In its simple form, a test is unsuccessful when the capability fails to perform as expected. The entity may have an elaborate contract in place with very specific technical specifications within which the capability is to perform. The test may be unsuccessful if it does not meet those technical specifications, although the intent of the standard is for the entities to be able to communicate, usually verbally, with one another so as to operate reliably. The standard does not prescribe the performance expectations for the capability apart from the expectation that communication capability is to exist. The RCSDT recognizes that there may be many variations of service, maintenance, and repair agreement implemented for these communication capabilities. Whatever the agreement provides for initiation of the response and repair is what is required. This standard cannot prescribe all the possible combinations or scenarios. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>- R11. Mutual Agreeable time is vague.</p> <p>Barbara Holland</p> <p>COM-001-2, R11, “mutual agreeable time” is too vague: “What” is required is to consult and determine a mutually agreeable time. “How” that is to be done is too prescriptive to be included within a standard because of the great number of possible scenarios, organizational arrangement, and sizes of entities involved. No change made.</p>
<p>Response: See response above.</p>		
<p>Madison Gas and Electric Co.</p>	<p>Negative</p>	<p>COM-001-2:</p> <p>The definition of Interpersonal Communication is: “Any medium that allows two or more individuals to interact, consult, or exchange information.” Recommend that the word "any" be removed from Interpersonal Communication and recommend the new definition be "The primary (or designated) medium that allows two or more individuals to interact, consult, or exchange information."</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>R11, Please note that the use of the word “any” as in “Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities...” will be viewed as meaning every Interpersonal Communication medium that an Entity has or uses.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Recommend R11 be updated to read:</p> <p><i>“Each Distribution Provider and Generator Operator that experiences a failure of any of its primary (or defined) Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...”</i></p> <p>In that way it focuses it down to the communications issues with the TOP or BA.</p> <p>In lieu of “primary” the SDT could state “defined” as long as it is not meant to be “any.” The latter part of R11 states; “...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.” This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. Recommend this to be “...shall consult with inform their Transmission Operator or Balancing Authority as applicable as to determine a mutually agreeable time to restore the status of the Interpersonal Communication capability.”</p> <p>Thus R11 is recommended to read as:</p> <p><i>“Each Distribution Provider and Generator Operator that experiences a failure of its primary (or designated) Interpersonal Communication with their Transmission Operator or Balancing Authority shall inform them, as applicable, as to the status of the Interpersonal Communication capability.”</i></p>

Organization	Yes or No	Question 6 Comment
		<p>This allows for situational awareness and supports the reliability of each system. Additionally, the RCSDT notes that the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>
<p>Response: See response above.</p>		
<p>New York Independent System Operator</p>	<p>Negative</p>	<p>COM-001-2: The drafting team has complicated the requirements by having different requirements between RC/TOP/BA and other entities such as GOP/LSE/DP. The proposal is for redundancy to be required only between RC/TOP/BA. The requirement should be simplified to require all entities to have plans for loss of primary communication channels. This can include third parties as a communication channel.</p>
<p>Response: The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. The DP and GOP are not required to have Alternative Interpersonal Communication; however, R11 addresses the loss of communication capability (plan). No change made.</p>		
<p>Public Utility District No. 1 of Lewis County</p>	<p>Negative</p>	<p>COM-001-2: This standard should be combined with COM-002.</p>
<p>Response: The standard COM-001-2 is capability based (equipment) and COM-002-3 is communication and coordination based. Each fulfills independent concepts. No change made.</p>		
<p>Southwest Transmission</p>	<p>Negative</p>	<p>COM-001-2:</p>

Organization	Yes or No	Question 6 Comment
Cooperative, Inc.		<p>We believe that the VSLs could be written to provide more gradations. For example, if a Transmission Operator or Balancing Authority failed to have Interpersonal Communications capability with a Distribution Provider but had Interpersonal Communications capability with all other required entities, it has met the vast majority of the requirement. Since VSLs are a measure of how much the requirement was missed by the responsible entity, jumping to a Severe VSL does not seem to adequately capture that the responsible entity met the vast majority of the requirement. Requirements R4 and R6 even seem to recognize this by not including Distribution Provider in the list of entities to which the Transmission Operator or Balancing Authority are required to designate Alternate Interpersonal Communications capability.</p>
<p>Response: The RCSDT has applied the VSL to the Severe column because not having Interpersonal Communication capability with any entity is detrimental to reliability. No change made.</p>		
Tennessee Valley Authority	Negative	<p>COM-001-2: We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or Alternate Interpersonal Communications (R1 and R2).</p>
<p>Response: The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p>		
Southwest Transmission Cooperative, Inc.	Negative	<p>COM-001-2: We thank the drafting team for its efforts but believe there are still issues that need to be addressed. We thank the drafting team for clarifying that the intent of this</p>

Organization	Yes or No	Question 6 Comment
		<p>standard is not for data exchange in the response to comments.</p> <p>However, we do believe one additional change is necessary to make the intent absolutely clear. The purpose of statement of COM-001-2 still includes the phrase “to exchange Interconnection and operating information.” Since a standard must stand on its own, we believe it is necessary to remove that phrase from the purpose statement to avoid misinterpretations in the future. Auditors and enforcement personnel are not required to understand the development history when enforcing the standard. Furthermore, the purpose is really to enable communications between these functional entities.</p> <p>The SDT agrees and has made a conforming change to the purpose of COM-001.</p> <p>Requirement R11 does not fully address the issue of what is required by Distribution Providers and Generator Operators and introduces new issues.</p> <p>For, “mutually agreeable,” the “what” is required is to consult and determine a mutually agreeable time and the “how” that is to be done is too prescriptive to be included within a standard because of the great number of possible scenarios, organizational arrangement, and sizes of entities involved. No change made.</p> <p>First, while the standard is intended to clarify that the Distribution Provider and Generator Operator do not need backup communications capability, it simply does not. Distribution Providers and Generator Operators are required to have an Interpersonal Communications capability in Requirement R7 and R8 respectively. Unfortunately, the effectiveness of these requirements persists even when the Distribution Provider or Generator Operator experiences a failure of its Interpersonal Communications capability. When Requirement R11 applies, the Distribution Provider or Generator Operator will still be obligated to comply with Requirements R7 and R8 respectively and will, in fact, be in violation of these requirements because the Distribution Provider or Generator Operator no longer has the capability.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The</p>

Organization	Yes or No	Question 6 Comment
		<p>intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>Second, capability is used inconsistently between Requirement R7 and R11 which leads to confusion. In Requirement R7, it is singular while in Requirement R11 is plural. It needs to be clear that only the failure of the capability identified in R7 and R8 needs to be reported by the Distribution Provider and Generator Operator respectively.</p> <p>The RCSDT thanks you for your observation. Generally, the singular implies the plural or vice-versa. The RCSDT has corrected R10 and R11 to be consistent with the singular application.</p> <p>Third, if the requirements focused on communications devices rather than capabilities, they would come closer to communicating the intent. Requirement R11 would better complement Requirement R7 and R8 if the focus was on having a communication medium or device. A Generator Operator with an installed communications device or medium still has that device or medium even when it is not functioning properly and could still meet Requirements R7 and R8. However, they don't have the Interpersonal Communications capability if the device is not functioning properly.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>We recommend striking "capability" from all of the requirements. It is not clear to us how this helps when a definition for Interpersonal Communications is written already and applies to a communication medium. Furthermore, we think it causes confusion and actually contradicts the intent of the standard. Because Requirements R1, R3, R5, R7 and R8 focus on capability, the responsible entity will be in violation anytime its medium that it uses for the primary capability does not function</p>

Organization	Yes or No	Question 6 Comment
		<p>properly. Whereas if the requirement stated that the responsible entity was to designate a primary communications medium, the responsible entity is not in violation if that medium is not functioning properly. It would be clear that Requirement R2, R4 and R6 are intended to be complementary.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>Furthermore, it is not clear why Requirements R1, R3, R5, R7 and R8 state that the responsible entity shall “have” when the companion Requirements R2, R4, and R6 state “designate.”</p> <p>Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>Since Requirement R10 deals with a failure of its Interpersonal Communications capabilities and not Alternate Interpersonal Communications capability, it should only refer to the entities in Requirements R1, R3, and R5. Currently, it includes R1 through R6.</p> <p>The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p>
<p>Response: See response above.</p>		
New York Independent	Negative	COM-002-3: The drafting team added a requirement to identify a Reliability Directive is being initiated during an emergency to track 3-part communication for compliance

Organization	Yes or No	Question 6 Comment
System Operator		<p>purposes. This will change and complicate the communication protocols between normal and emergency operations simply to simplify compliance assessments. The NYISO is asking for clarification that an entity may identify Reliability Directives as a category of communications to be communicated through procedures and training; and will not require a different communication protocol between normal and emergency operations. Affective communications can only be achieved through consistent processes for all conditions. Compliance assessments should be made on when we are in an emergency or not, and not on how the dialogue was initiated.</p>
<p>Response: The RCSdT believes the standard allows for this condition, and the method of implementation is up to the entity. No change made.</p>		
Illinois Municipal Electric Agency	Negative	<p>Illinois Municipal Electric Agency supports and encourages SDT consideration of comments submitted by the SERC OC Standards Review Group.</p>
<p>Response: Thank you for your comment. See response to SERC comments.</p>		
Wisconsin Public Service Corp.	Negative	<p>In COM-002-3, the Standards Drafting Team provided great clarity to the industry and also reduced risk to the BES, by clearly defining Reliability Directives and how the RC, TOP, and BA must utilize them. Unfortunately, they failed to maintain this level of clarity in IRO-001-3, where they state:</p> <p><i>R2. Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p><i>R3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. [Violation Risk</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>The use of “direction” and “directed” essentially makes any request equivalent to a Reliability Directive. In addition, IRO-001-3 as written is largely redundant of COM-002-3. Given this, we recommend that the Standards Drafting Team consider granting the RC authority to issue Reliability Directives by adding this requirement to COM-002-3 and then eliminate IRO-001-3.</p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. No change made.</p>
<p>Response: See response above.</p>		
<p>Wisconsin Electric Power Marketing; Wisconsin Electric Power Co.</p>	<p>Negative</p>	<p>IRO-001-03: Although a great improvement over existing IRO-001, see comments:</p> <ul style="list-style-type: none"> -R2 needs to be clear that it is the Reliability Coordinator’s Reliability Directive that must be complied with not just any Reliability Coordinator’s direction as stated. <p>The RCSDT notes that the intent of the standard is not intended to limit the RC authority to Reliability Directives. The Reliability Coordinator issuing the Reliability Directive is the one, which the recipient must comply. It is assumed that a BA or TOP has a relationship with one, and only one, RC for a given Balancing Area or Transmission Operator Area (some may have multiple, disconnected areas, that are subject to different RCs). No change made.</p> <ul style="list-style-type: none"> -The M2 measure could be difficult, as the operator would have to have access to documents proving the safety, equipment, regulatory or statutory requirements, which may be the assessment of an individual applying the safety rule. Is the measure requiring a deposition of the individual to be performed for each instance? <p>In the RCSDT’s opinion, the Measure M2 does not contemplate depositions. If an entity cannot comply with a Reliability Directive for one of the stated reasons, it should have documentation, such as an attestation, to support that stated reason</p>

Organization	Yes or No	Question 6 Comment
		<p>available during an audit. No change made.</p> <p>With an assumed data retention of 90 day (voice) or 12 month document retention, the deposition would be unlikely to be acquired prior to the retention period ending.</p> <p>Data retention is a significant issue when the data being recorded is voluminous, supporting a 90-day retention period. No change made.</p> <p>-R3 needs to be clear that it is the inability to perform the Reliability Coordinator’s Reliability Directive that must be communicated not just any “Reliability Coordinator’s as directed.”</p> <p>The RCSDT believes R3 contains the full communication set of “action or direction” and the subset, Reliability Directive, is included; therefore, the respective entity is still required to inform the RC. The RCSDT believes the requirement is clear in regards to Reliability Directives. No change made.</p> <p>-The Data Retention section does not align with the standard: The Reliability Coordinator shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2, Measure M2.</p> <p>R2 and M2 apply to the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider.</p> <p>There is no R4 and M4.</p> <p>Data retention related to IRO-001-2, R2/M2 was changed to agree with your suggestion. The changes were more involved – several sections were changed, including removing the reference to R4/M4.</p>
<p>Response: See response above.</p>		
<p>SERC Reliability Corporation</p>	<p>Negative</p>	<p>IRO-001-3 Comments</p> <p>We recommend that where the verb "direct/directed" or noun "direction" is used in Purpose, R1, R2 and R3, that it be replaced with the verb "instruct/instructed" or</p>

Organization	Yes or No	Question 6 Comment
		<p>noun "instruction", as appropriate. This would help the industry avoid confusion often referred to as "big D" or "little d" directives. It is noted that the term "Reliability Directive" does that to a great degree but avoiding the verb/noun "direct/direction" would augment the difference.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1 - At what point in time is "identified" referring to in "to prevent identified events or"? Is it referring to current or future events?</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See Standards IRO-008 and IRO-009. No change made.</p> <p>One might assume both since the "Time Horizon" is defined as Real-time Operations, Same Day Operations and Operations Planning, but the requirement may be enhanced if explicitly stated ("to prevent events identified in real-time or in the future or to mitigate the magnitude"). For clarity, the scope of the authority should be limited to the Reliability Coordinator Area (that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area). As written, it implies the authority should extend outside its RC Area.</p> <p>R2 - We question the phrase, “physically implemented,” and recommend that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions were an entity might not be able to physically implement the direction. For example, entities that do not have the right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>We note the following comment and response posted under Consideration of Comments on Initial Ballot , ” Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25, ” March 7, 2011:</p>

Organization	Yes or No	Question 6 Comment
		<p><i>“IRO-001 R2, R3, and R4 have replaced “Directives with the word direction in lower case (while it appears that “Directives is a subset of “directions). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g. Reliability Coordinator, market operator, etc) the staff at these entities is fulfilling.</i></p> <p><i>Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the “direction in accordance with Requirement R2 stated in R3 and the “direction in accordance with Requirement R3 stated in R4. We believe the entity comments remain valid and the response provided by the SDT does not address all aspects of the concern.</i></p> <p>We suggest that the language be changed to “Reliability Directive consistent with COM-002.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>R3 - The requirement states the responsible entities shall “inform its RC when unable to perform as directed but it is unclear when the notification needs to take place. Although the term “as soon as practical may seem be un-measurable, as written now there is no time deadline to perform the notification” i.e. it could be 4 hours later after recognition.</p> <p>M2,” need to add the following words “compliance with, physically, unless which</p>

Organization	Yes or No	Question 6 Comment
		<p>were included in R2, therefore M2 should read,</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator’s direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator direction. (R2)”</i></p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2 Measure M2.</p> <p>Section 1.3, the second bullet; need to add calendar to 12 calendar months</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>
<p>Response: See response above.</p>		
<p>Dominion Virginia Power; Dominion Resources, Inc.</p>	<p>Negative</p>	<p>IRO-001-3: Dominion does not support the use of “Reliability Coordinator’s direction” in IRO-001-3 and would prefer that the language be changed to “Reliability Directive” consistent with the use in COM-002-3.</p>
<p>Response: The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. No</p>		

Organization	Yes or No	Question 6 Comment
change made.		
Constellation Energy Commodities Group	Negative	<p>IRO-001-3:</p> <p>IRO-001-3 uses the term ‘direct’ in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following: To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.</p> <p><i>R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts.</i></p> <p><i>R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given.</i></p> <p><i>R3: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.</i></p>
<p>Response: This standard provides for the authority of the RC to act or direct actions, and not request. The RCS DT believes by using the word “request” make the requirement conditional and is not consistent with the purpose of the standard. No change made.</p>		
Tampa Electric Co.	Negative	<p>IRO-001-3:</p> <p>R1 VSL should have the phrase "exercise their authority" inserted between "to" and "take" in the first sentence. Otherwise it could be read that the RC would be in violation of the standard requirement for any event that resulted in an Adverse</p>

Organization	Yes or No	Question 6 Comment
		Reliability Impact whether he issued a Reliability Directive or not.
<p>Response: Thank you for your comment. The RCSDT has added the additional clarifying language.</p>		
Independent Electricity System Operator	Negative	<p>IRO-001-3: The IESO is unable to support this standard as written since Data Retention Section does not reflect the revised requirements. For examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4.</p>
<p>Response: The RCSDT agrees and has made conforming changes in Data Retention.</p>		
Southwest Transmission Cooperative, Inc.	Negative	<p>IRO-001-3: We thank the drafting team for their efforts but believe this standard needs additional work. We disagree with including “authority” in this standard. FERC Order 693a, paragraph 112, made it clear that the authority of a registered entity is established through the approval of the standards by FERC. Thus, a Reliability Coordinator gets its authority to issue Reliability Directives by having a requirement that states it must issue Reliability Directives approved by the Commission. Please change “shall have authority to act” in Requirement R1 back to “shall act.” Please also remove all other vestiges of authority from the standards including in the purpose, measures and VSLs. Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator “to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.” Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and</p>

Organization	Yes or No	Question 6 Comment
		<p>trigger the use of three-part communications identified in COM-002-3.</p> <p>The RCSDT believes that other standards (i.e., IRO-009 - R3 & R4, EOP-002 - R1 and R8) address the action of others; and if the term “authority” is omitted, creates a generic requirement. Such as what has been suggested puts the RC in a double jeopardy situation. No change made.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: “When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact?</p> <p>Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. For clarity and consistency, Requirement R2 and R3 should also be clear that the responsible entities will respond to the Reliability Coordinator’s Reliability Directives.</p> <p>The RCSDT notes that IRO-001-3 addresses direction, which may include a Reliability Directive. The responsible entity receiving the direction, at a minimum, must comply with the RC’s direction, unless the receiver cannot physically implement or unless such actions would violate safety, equipment, regulatory, or statutory requirements. The standard IRO-001-3 is not limited to only actions that are Reliability Directives. On the other hand, the standard COM-002-3 requires the BA, RC, and TOP to identify the communication as a Reliability Directive and to use three-part communication when actions are required to be executed as a Reliability Directive. No change made.</p> <p>Furthermore, this would make the standard consistent with how Reliability Directives are handled by the Transmission Operator in the draft TOP-001-2 standard proposed by the Real-Time Operations drafting team (Project 2007-03). We do not agree with</p>

Organization	Yes or No	Question 6 Comment
		<p>the need to include Distribution Provider in IRO-001-3. The Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.</p> <p>The RCSDT notes that IRO-001-3 is an authority standard, the DP may not likely receive a Reliability Directive from the RC; however, in the case they do, they are required to comply with the requirement. No change made.</p>
<p>Response: See response above.</p>		
Northeast Utilities	Negative	NU contributed in and joins on the comments submitted by NPCC.
<p>Response: Thank you for your comment.</p>		
MidAmerican Energy Co.	Negative	<p>COM-001-2:</p> <p>The definition of Interpersonal Communication is too broad and should be revised to read,</p> <p><i>"the primary defined communication system used to communicate between NERC defined reliability entities when operating the Bulk Electric System."</i></p> <p>Examples may include a telephone system as a primary system and an email system as an alternative system.</p> <p>R11 is too broad and should either be deleted or revised to read:</p> <p><i>"Each Distribution Provider and Generator Operator that experiences a failure of its defined primary Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority..."</i></p> <p>The RCSDT deliberately avoided the use of primary and secondary mediums and elected to use communications capabilities. As such, R11 applies to Interpersonal Communication capabilities of the DP and GOP. The RCSDT has gone to great lengths</p>

Organization	Yes or No	Question 6 Comment
		<p>to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn't mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. No change made.</p> <p>The use of the word "any" could end up applying to an intercom and not to a primary mode of communication such as telephone system or email system.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase "any of" in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The latter part of R11 states; "...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability." This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. This statement should be deleted or revised to read:</p> <p><i>"Each Distribution Provider and Generator Operator that experiences a failure of its defined primary Interpersonal Communication with their Transmission Operator or Balancing Authority shall notify the applicable TOP or BA as to the status of the Interpersonal Communication capability."</i></p> <p>The RCSDT believes non-compliance is not due solely to the failure of any Interpersonal Communication capability, but must be accompanied by a failure to consult with the applicable Transmission Operator or Balancing Authority to establish mutually agreeable action for restoration. No change made.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 6 Comment
<p>SERC OC Standards Review Group</p>		<p>COM-001-2 Comments</p> <p>Definition of Alternative Interpersonal Communication:</p> <p>The proposed definition uses the term “medium.”</p> <p>What is the scope of that?</p> <p>Telephony is a “medium” but there is wired, wireless, satellite, etc. Was “medium” intended to differentiate voice, paper, text, email, teletype, or something else?</p> <p>Does the qualifying term “same” when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the “same infrastructure” but a different “medium” R1 and R2 –</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or alternate Interpersonal communications.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity;</p>

Organization	Yes or No	Question 6 Comment
		<p>therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>R1 - In later requirements it is proposed that the entity “...shall designate an...” It is suggested that for consistency and audit ability, this concept be used for R1, R3, R5, R7 and R8.</p> <p>In addition, the qualifier of “primary” should be used such that the requirements read:</p> <p><i>“... shall have designated, primary Interpersonal Communications capability with the following entities:”</i></p> <p>Although it is appropriate that “Alternative” be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication”) that bounds acceptable alternative methods , we do not see the need to capital “primary.”</p> <p>Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>R9 - The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the sub-requirements of R2, R4, and R6.</p> <p>There is no expectation of testing the primary Interpersonal Communications - is this intentional or an oversight?</p> <p>Although functional testing of this should be done as a normal course of business, should an explicit test be required with each entity in the sub-requirements of R1,</p>

Organization	Yes or No	Question 6 Comment
		<p>R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct?</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is not to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>R10 - The following scenario seems plausible:</p> <p>The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation?</p> <p>The RCSDT proposes that upon detection of failure that continues at least 30 minutes, starts the 60-minute clock. The 30 minutes allows an entity time to restore or determine if they can restore its Interpersonal Communication capability before the clock starts. No change made.</p> <p>Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well?</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the</p>

Organization	Yes or No	Question 6 Comment
		<p>flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>M9 reads <i>“at least on a monthly basis.”</i> We suggest that this be changed to <i>“at least once per calendar month”</i> as written in R9. This change should also be corrected in the VSLs.</p> <p>The RCSDT agrees and the language in M9 has been changed to agree with the language in R9 and the VSL.</p> <p>M8 - We suggest removing the second <i>“that”</i> in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional <i>“that.”</i></p> <p>M10 - We suggest this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</i></p> <p>The word <i>“impacted”</i> was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word <i>“impacted”</i> to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, <i>“R1 through R6”</i> to <i>“R1, R3, and R5,”</i> to clarify that it applies to the capabilities with the RC, the TOP and the BA.</p> <p>M12 needs to be removed.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT appreciates your comment and has deleted Measure M12 that was left in error.</p> <p>We question why the first paragraph of Section 1.3 - Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p> <p>COM-002-3 Comments</p> <p>R2 - We recommend that the following phrase (in quotes) be added to R2:</p> <p>Each Balancing Authority, Transmission Operator and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive “immediately upon receiving it.” As written, there is no limit as to when the entity must repeat it (i.e. they could wait 2 hours)The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call). For example, is a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3?</p> <p>The requirement is aimed at being a performance-based requirement and states a description of “what” communication must take place, but does not prescribe “how” the communication is to be made. Adding the suggested phrase “immediately upon receiving it” introduces the ambiguous term “immediately,” for which there is neither plain meaning nor simple explanation. What must happen is that the recipient must respond in such a way that the issuer may determine whether the message has been properly understood. The RCSDT concludes that the proposed language gives plain meaning. No change made.</p> <p>IRO-001-3 Comments</p>

Organization	Yes or No	Question 6 Comment
		<p>We recommend that where the verb “direct/directed” or noun “direction” is used in Purpose, R1, R2 and R3, that it be replaced with the verb “instruct/instructed” or noun “instruction”, as appropriate. This would help the industry avoid confusion often referred to as “big D” or “little d” directives. It is noted that the term “Reliability Directive” does that to a great degree but avoiding the verb/noun “direct/direction” would augment the difference.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1 - At what point in time is “identified” referring to in “...to prevent identified events or...?” Is it referring to current or future events? One might assume both since the “Time Horizon” is defined as Real-time Operations, Same Day Operations and Operations Planning, but the requirement may be enhanced if explicitly stated (“...to prevent events identified in real-time or in the future or to mitigate the magnitude...”).</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. No change made.</p> <p>For clarity, the scope of the authority should be limited to the Reliability Coordinator Area (“...that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area”). As written, it implies the authority should extend outside its RC Area.</p> <p>The RCSDT believes that limiting the scope to the RC’s area would be too limiting and not account for potential conditions where an adjacent RC may have lost its wide-area view and requests the assistance of another RC or vice-versa. No change made.</p> <p>R2 - We question the phrase “physically implemented” and recommend that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions where an entity may not be able to physically implement the direction. For example, an entity that does not have the</p>

Organization	Yes or No	Question 6 Comment
		<p>right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>We note the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011:</p> <p><i>“IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g., Reliability Coordinator, market operator, etc) the staff at these entities is fulfilling. Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the “direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.”We believe the entity’s comments remain valid and the response provided by the SDT does not address all aspects of the concern.</i></p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>We suggest that the language be changed to “Reliability Directive” consistent with COM-002.</p> <p>R3 - The requirement states the responsible entities shall “inform” its RC when</p>

Organization	Yes or No	Question 6 Comment
		<p>unable to perform as directed but it is unclear when the notification needs to take place. Although the term “as soon as practical” may seem be un-measurable, as written now there is no time deadline to perform the notification - i.e. it could be 4 hours later after recognition.</p> <p>The proposed requirement uses the term “upon recognition.” No change made.</p> <p>M2 - need to add the following words “compliance with, physically, unless” which were included in R2, therefore M2 should read:</p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2, Measure M2.</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator’s direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator’s direction”</i></p> <p>(R2) “Section 1.3, the second bullet; need to add calendar to 12 calendar months.” The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers.”</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: See response above.</p>		
<p>Pacific Northwest Generating Cooperative</p>		<p>The PNGC Comment Group believes COM-002-3, R2, lacks justification for applicability to a Distribution Provider (DP). RCs in the WECC region do not communicate reliability directives to DP only entities. Having this requirement apply to DPs seems to indicate that we will need 24/7 communications capability to record and respond to calls that will never come in order to satisfy the requirement with no improvement to reliability. The SDT’s response from the last round of comments:</p> <p>“It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive.” Nowhere is this expectation provided for in the written standard. If the issuer of a reliability directive has already called the DP, are they going to then re-issue the reliability directive after the DP calls them back?</p>
<p>Response: In COM-002-3, the DP may or may not receive a Reliability Directive from the RC; however, in the case they do, they are required to comply with the requirement. The measures do not require recordings. Evidence may include things like dated operator logs. No change made.</p>		
<p>Northeast Power Coordinating Council</p>		<p>For COM-001:</p> <p>1. R1.2 and R2.2: The phrase “within the same Interconnection” is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to coordinate reliability issues including curtailing interchange transactions crossing an Interconnection boundary). The SDT’s response to industry comments on the previous posting that the phrase was added to address the ERCOT situation (that ERCOT does not need to communicate with other RCs and that such coordination takes place between TOPs) leaves a reliability gap.</p> <p>Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal</p>

Organization	Yes or No	Question 6 Comment
		<p>Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p> <p>2. R3.5 and R4.3: The phrase “synchronously connected within the same Interconnection” is also improper; it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). The reason that was used in response to the above comments (coordination among TOPs for DC tie operation) contradicts with the inclusion of this phrase in R3.5 and R4.3.</p> <p>The RCSDT has made clarifying changes by adding Parts to R3 and R4 to address asynchronous connections between Transmission Operators and have eliminated the phrase “within the same interconnection.”</p> <p>COM-001-2, R3.5 and R4.3: Use of the phrase “within the same interconnection.” The RCSDT recognizes that operating activities occurring inside an interconnection that is not synchronously interconnected with another interconnection cannot cause immediate effects upon that interconnection. Any changes in flow across any asynchronous tie between those interconnections must take place through a coordinated interchange energy scheduling process, except for contingency loss the asynchronous ties. In the case of the latter, there is no other path which can be used to address the loss of the asynchronous tie, nor is any synchronous tie immediately affected. The standard does not require such involved RCs to have Interpersonal Communication capability, but does not preclude it. Any rearrangement of scheduled flows on other asynchronous ties must be done through a pre-existing interchange energy scheduling process. No change made.</p> <p>3. R4 and R6: Not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin</p>

Organization	Yes or No	Question 6 Comment
		<p>with to enable BAs to communicate with these entities (such as operating instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails.</p> <p>The RCSDT refers the Order No. 693 in Paragraph 508 to clarify the reason the DP and GOP are not required to have Alternative Interpersonal Communication and is as follows: “(1) expands the applicability to include Generator Operators and Distribution Providers and includes Requirements for their telecommunications facilities; (2) identifies specific requirements for telecommunications facilities for use in normal and Emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation and (3) includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions.” In addition, R11 requires the DP and GOP to consult with its BA and TOP to determine a mutually agreeable action for restoration. No change made.</p> <p>4. To preclude the possibility of problems arising from having different languages spoken between entities, COM-001-1.1 R4 should remain as it was or those ideas kept in the revised requirement. R4 read:</p> <p><i>“R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.”</i></p> <p>According to the proposed implementation plan for COM-001-2, R4 pertaining to the use of English will remain in effect upon the effective date of COM-001-3. This requirement is being revised and will be included in Standard COM-003-1, Operating Personnel Communications Protocols. COM-001-1.1, R4 will be retired at midnight the day before COM-003-1 becomes effective. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>5. Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make to Measure, M3.</p> <p>For IRO-001:</p> <p>The Data Retention Section does not reflect the revised requirements. As examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1.</p> <p>Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2.</p> <p>And, in the Data Retention Section, R4 and M4 are mentioned. However, there are only three requirements with their corresponding measures in the standard.</p>
<p>Response: The RCSDT thanks you for your comment and has made conforming changes to IRO-001-3.</p>		
MRO NSRF		<p>Has the SDT looked at combining COM-002-3 and IRO-001-3 into a single Standard? It would allow Entities a one stop shopping place to refer to issuing and receiving a Reliability Directive.</p> <p>The RCSDT understands some of the benefits with combining the standards; however, at this juncture, it would further delay the progress of the standards. No change made.</p> <p>The definition of Interpersonal Communication is:</p> <p>“Any medium that allows two or more individuals to interact, consult, or exchange information.” As stated in Question 4, the use of the word “any” will bring in mediums that are outside the scope of this Standard.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying</p>

Organization	Yes or No	Question 6 Comment
		<p>change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The NSRF recommends the following:</p> <p>Interpersonal Communication: The primary (or designated) medium that allows two or more individuals to interact, consult, or exchange information.</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p> <p>In Standard COM-002-3 the MRO NSRF recommends that the Effective Date be the first day of the second calendar quarter after applicable regulatory approval, to be the same as COM-001-2 and IRO-001-3. In that way all 3 standards would be effective at the same time, making implementation much smoother.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to adjust IRO-001 to be the same as COM-001 and COM-002.</p> <p>The below section will lead to entities hold evidence past the 12 month retention period. This ambiguous wording will force entities to hold data past the 12 month period as stated in the following paragraph, after the below sighting. Recommend that the first paragraph within 1.3 be deleted in its entirety.</p> <p>1.3. Data Retention The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: See response above.</p>		
<p>CCG, CPG, CECD</p>		<p>Comments: IRO-001-3 uses the term ‘direct’ in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following: To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. The RCSDT believes by using the word “request” make the requirement conditional and is not consistent with the purpose of the standard. No change made.</p> <p>R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. The RCSDT believes by using the word “request” make the requirement conditional and is not consistent with the purpose of the standard. No change made.</p> <p>R3: Each Transmission Operator, Balancing Authority, Generator Operator, and</p>

Organization	Yes or No	Question 6 Comment
		<p>Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. The RCSDT believes by using the word “request” make the requirement conditional and is not consistent with the purpose of the standard. No change made.</p>
<p>Response: See response above.</p>		
<p>LG&E and KU Services Company</p>		<p>COM-001-2</p> <p>Regarding COM-001-2 and proposed definitions, LG&E and KU Services recommends changing the terms being defined from “Interpersonal Communications” and “Alternative Interpersonal Communication” to “Means for Interpersonal Communication” and “Alternative Means for Interpersonal Communication.” A communication is an exchange of information, not a medium. The medium is simply the means. LG&E and KU Services Company further recommend that each requirement be rewritten with these new defined terms as appropriate and that the word “capabilities” currently following the defined terms be removed from each of the requirements.</p> <p>We suggest the definition for “Means for Interpersonal Communication” be: “A medium utilizing electromagnetic energy that allows two or more individuals to interact, consult or exchange information.”</p> <p>We suggest the definition for “Alternative Means for Interpersonal Communication” be: “Any Means for Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Means for Interpersonal Communications used for day-to-day operation.”</p> <p>The RCSDT thanks you for your comment; however, great lengths were taken in communicating mediums regarding IC and AIC and finds that adding “Means” to the</p>

Organization	Yes or No	Question 6 Comment
		<p>proposed terms being defined diminishes clarity of the definition. No change made.</p> <p>Finally, LG&E and KU Services Company request clarification that the requirements to have in place Interpersonal Communications and Alternative Interpersonal Communications do not establish non-compliance for the unavailability of either medium provided the reporting requirements set forth in the standard are otherwise met.</p> <p>The RCSDT believes a condition of non-compliance will not be created if the entity meets all of the requirements for Interpersonal Communication and Alternative Interpersonal Communication capability. For example, the applicable entity has a failure of the IC and notifies the identified entities and begins using its AIC. No change made.</p> <p>All Proposed Standards LG&E and KU Services Company suggest that the first paragraph in section 1.3 Data Retention be removed from all proposed standards. It states: ...For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit. While LG&E and KU Services Company is confident that the SDT intended to clarify entities' data retention responsibilities, this paragraph could be clarified to indicate that it does not require that any additional evidence be retained and provided beyond that written in the standard's requirements.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>
<p>Response: See response above.</p>		
<p>Bonneville Power Administration</p>		<p>BPA supports COM-001-2, COM-002-3 and IRO-001-3 as written and has no comments or concerns at this time.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: Thank you for your comment.</p>		
<p>SPP Standards Review Group</p>		<p>COM-001-2: Requirement 10 is too open ended as written.</p> <p>The measure, M10, indicates that only impacted entities need to be notified. The requirement should be changed to make it consistent with the measure. The requirement would then read:</p> <p><i>“Each RC, TOP And BA shall notify impacted entities as identified...”</i></p> <p>Requirements 3 and 5 places the responsibility for establishing Interpersonal Communication capability on the TOP and BA. It is quite conceivable that a TOP or BA may not know all, or newly, registered DPs and GOPs in its respective area.</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>In Requirements 7 and 8, the DP and GOP, respectively, are in turn responsible for establishing Interpersonal Communication capability. The TOPs/BAs and the DPs/GOPs should not be responsible for this. The DPs and GOPs should be held accountable for requesting that capability of their TOP and BA.</p> <p>The standard establishes requirement for communication capability appropriate to ensure reliability. There is no requirement for it to be different from the Interpersonal Communication capability that its Balancing Authority has with it, nor the Interpersonal Communication capability that its Transmission Operator has with it. Cooperation and coordination is always encouraged and is an excellent practice, but is not required by this standard. Thank you for your suggestion. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>Therefore, we suggest adding the following phrase at the end of Requirements 3.3, 3.4, 5.3 and 5.4 - 'that has requested Interpersonal Communications capability.' Then R3.3 would read:</p> <p><i>"Each Distribution Provider within its Transmission Operator Area that has requested Interpersonal Communications capability."</i></p> <p>The SDT does not agree that these changes to R3.3, R3.4, R5.3 and R5.4 are necessary. The current R7 and R8 require the DP and the GOP to have this capability. It is not a request. No change made.</p> <p>COM-002-3:</p> <p>Requirement 2/Measure 2: There is an inconsistency between the requirement and the measure. The requirement allows the recipient to repeat, restate, rephrase or recapitulate the directive. Measure 1 only mentions repeating the directive.</p> <p>The RCSDT agrees that M2 needs to match the phrasing used in R2 and has made clarifying changes.</p>
<p>Response: See response above.</p>		
<p>Dominion</p>		<p>COM-001-2; M9 reads <i>"at least on a monthly basis"</i>, Dominion suggests that this be changed to <i>"at least once per calendar month"</i> as written in R2.</p> <p>The RCSDT agrees and the language in M9 has been changed to agree with the language in COM-001-2, R9.</p> <p>M8 Dominion suggests removing the second <i>"that"</i> in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional <i>"that."</i></p> <p>M10 Dominion suggests this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6),</p>

Organization	Yes or No	Question 6 Comment
		<p>therefore M10 should read:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</i></p> <p>The RCSDT thanks you for your comment and has made conforming changes to make change “impacted” to “identified” entities.</p> <p>M12 needs to be removed.</p> <p>The RCSDT appreciates your comment and has deleted Measure M12 that was left in error.</p> <p>IRO-001-3;</p> <p>R2 - Dominion questions the phrase “physically implemented” and recommends that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions were an entity may not be able to physically implement the direction. For example, an entity that does not have the right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>Dominion notes the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011:”</p> <p><i>IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>“Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g., Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling.</i></p> <p><i>Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the “direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.”Dominion believes the entity’s comments remain valid and the response provided by the SDT does not address all aspects of the concern.</i></p> <p>Dominion suggests that the language be changed to “Reliability Directive” consistent with COM-002.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>M2 - need to add the following words “compliance with, physically, unless” which were included in R2, therefore M2 should read:</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator’s direction. (R2)“</i></p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2 Measure M2.</p> <p>Section 1.3, the second bullet; need to add calendar to 12 calendar months</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>
<p>Response: See response above.</p>		
<p>FirstEnergy</p>		<p>Definition of Interpersonal Communications.</p> <p>We understand that the team does not want to be prescriptive as far as the specific types of communication mediums since we live in an age of many forms of communication. But in this case it may be helpful to give examples in the definition. An auditor may interpret Interpersonal Communication to strictly include voice-related and two-way conversations. Depending on the circumstances, other mediums may be adequate, such as blast calls or instant messaging. This should be clarified in the definition.</p> <p>COM-001-2.</p> <p>In R9, it should be clear that the 2-hour timeframe is for initiation of corrective action because mitigation may take much longer. We suggest the last sentence of R9 state: “If the test is unsuccessful, the responsible entity shall, within 2 hours, initiate action to repair or designate a replacement Alternative Interpersonal Communications capability.</p>

Organization	Yes or No	Question 6 Comment
		<p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>In R10, the phrase “R1 through R6” should state “R1 through R8.”</p> <p>The RCSDT thanks you for your comment; alternatively, the RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>COM-002-3</p> <p>In R2, the use of the term recapitulate may not be appropriate. This term means “to summarize” the directive. Three-part communication during emergency situations should assure that the essential details of the directives are understood and a summary may inadvertently leave out important information.</p> <p>The RCSDT carefully considered the use of the term “recapitulate,” and believes it correctly captures the intent. No change made.</p> <p>The effective date of COM-002-3 should be consistent with COM-001-2 and IRO-001-3 and state “the 1st calendar day of the 2nd calendar quarter.” It currently shows the “1st calendar quarter in the standard and implementation plan.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to adjust IRO-001 to be the same as COM-001 and COM-002.</p> <p>IRO-001-3</p> <p>The third bullet under Data Retention addresses requirement R4 and measure M4</p>

Organization	Yes or No	Question 6 Comment
		<p>neither of which exist in the standard.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>In R1, the word “and” is missing between Generator Operator and Distribution Provider.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to IRO-001, R2.</p> <p>VSL for R2 - “N/A” should be removed from the High VSL - Furthermore, the VSL should include language for instances when the entity cannot meet the RC’s directive as afforded by R2.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to IRO-001, R2 VSL.</p>
<p>Response: See response above.</p>		
<p>MISO Standards Collaborators</p>		<p>The Data Retention Section in IRO-001 does not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>Additional comments associated with COM-002</p> <p>We are concerned with the use of ‘shall’ in the measurement sections. ‘Shall’ statements should only be used in the Requirements, as these are the only enforceable items in the standard. The measures should not limit how we show compliance. If there are specific issues that the drafting team is proposing to be a requirement, they should be added to the requirements section of the standard.</p> <p>The RCSDT has checked the usage of “shall” in other standards and has found it to be</p>

Organization	Yes or No	Question 6 Comment
		<p>consistent with writing measures. The RCSDT notes the measures are examples and the entity is not limited to those examples. No change made.</p> <p>Measurement M1 should also allow entities to develop procedures that are distributed to and trained on in advance with recipients of directives that meet the requirements for the communication of what constitutes a Reliability Directive. The last sentence in the measurement should be revised to read:</p> <p><i>“Such evidence could include, but is not limited to, dated and time-stamped voice recordings, dated and time-stamped transcripts of voice recordings, or dated operator logs to show that it identified the action as a Reliability Directive to the recipient or approved procedures that identify what constitutes a Reliability Directive and when Reliability Directives are issued.”</i></p> <p>The RCSDT believes that M1 does not preclude an entity from developing, having or utilizing procedures as evidence to address Reliability Directives. No change made.</p> <p>(R1) The Data Retention section states; ‘For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.’</p> <p>It is unclear on how an entity would be expected to provide evidence beyond 3 months when requested if the data retention period and established procedures do not require the evidence to be retained.</p> <p>The SDT should provide examples of what other types of evidence could be expected or the phrase should be removed.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 6 Comment
<p>Florida Municipal Power Agency</p>		<p>In the definition of Interpersonal Communication, the use of the word “medium” is ambiguous. Suggestions for alternatives: “system”, “channel.”</p> <p>The RCSDT deliberately stayed away from the use of primary and secondary mediums, and prefers to use communications capabilities. Further, the RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn’t mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. But what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are and a determination of what is amicable to both parties. No change made.</p> <p>COM-001-2, R1 and R3, the phrase:</p> <p>“have Interpersonal Communications capabilities”, what if the communication system fails? Is that an immediate non-compliance (especially R3.3 and R3.4 which do not require a redundant system).</p> <p>Suggest using EOP-008 type of language to allow restoration of failed equipment without non-compliance.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>COM-001-2, R9 - "Each ... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity. In addition, the type of testing is unclear and ambiguous.</p> <p>The RCSDT proposes that R9 correctly identifies and provides clarity for the entities required to have Alternative Interpersonal Communication capability. No change made</p> <p>The is also ambiguity in the terms "direct", "directive", "direction" and "Reliability Directive." The SDT may want to consider using the terms "instruct" and "instruction" in place of "direct", "directive", "direction" to more clearly distinguish from a Reliability Directive.</p> <p>The RCSDT feels the use of "direct" and "directed" is consistent with the purpose and application of those terms in other standards. No change made.</p>
<p>Response: See response above.</p>		
<p>ACES Power Marketing Standards Collaborators</p>		<p>The following comments are regarding IRO-001-3.</p> <p>We disagree with including "authority" in this standard. FERC Order 693a, paragraph 112, made it clear that the authority of a registered entity is established through the approval of the standards by FERC. Thus, a Reliability Coordinator gets its authority to issue Reliability Directives by having a requirement that states it must issue Reliability Directives approved by the Commission. Please change "shall have authority to act" in Requirement R1 back to "shall act."</p> <p>Please also remove all other vestiges of authority from the standards including in the purpose, measures and VSLs.</p> <p>The RCSDT believes that other standards (i.e., IRO-009 - R3 & R4, EOP-002 - R1 & R8) address the action of others and if the term "authority" is omitted, creates a generic requirement such as what has been suggested puts the RC in a double jeopardy</p>

Organization	Yes or No	Question 6 Comment
		<p>situation. No change made.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator “to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.” Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3.</p> <p>The RCSDT views R1 as an authority requirement to direct others, which could include a subset of direction called, Reliability Directive. Requirement R2 is the response requirement for the recipient. The judgment the recipient is under is that the recipient must comply with the direction, unless the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. Requirement R3 is simply requires the recipient to inform the issuer of its inability to perform the direction. No change made.</p> <p>COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause:</p> <p>“When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.”</p> <p>What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact?</p> <p>Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. For clarity and consistency, Requirement R2 and R3 should also be clear that the responsible entities will respond to the Reliability Coordinator’s Reliability Directives.</p>

Organization	Yes or No	Question 6 Comment
		<p>Furthermore, this would make the standard consistent with how Reliability Directives are handled by the Transmission Operator in the draft TOP-001-2 standard proposed by the Real-Time Operations drafting team (Project 2007-03).</p> <p>The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and therefore does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p> <p>The Data Retention section needs to be modified. The first bullet applies to the Electric Reliability Organization and Requirement R1 and Measure M1. The actual requirement and measure apply to the Reliability Coordinator. Furthermore, five calendar years exceeds the audit period of three years for a Reliability Coordinator.</p> <p>The RCSDT thanks you for your comment and has removed this bullet.</p> <p>The second bullet incorrectly applies to the Reliability Coordinator and Requirement R2 and Measure M2. Requirement R2 and Measurement M2 apply to Transmission Operators, Balancing Authorities, Generator Operators and Distribution Providers. The third bullet mentions Requirement R4 and Measurement M4.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>There is no Requirement R4 and Measurement M4 in the standard.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>The VSLs for Requirement R1 are not consistent with the requirement. The VSL states that it is for failure to act while the requirement compels the Reliability Coordinator to have the authority to act. This modifies the requirement which is not allowed under FERC VSL guidelines.</p> <p>The RCSDT thanks you for your comment and will correct the R1 VSL to have the phrase "exercise their authority" inserted between "to" and "take" in the first</p>

Organization	Yes or No	Question 6 Comment
		<p>sentence.</p> <p>The VSLs for Requirement R2 need to include the “unless” clause from the requirement. Otherwise, the VSL implies that the responsible entity violated the requirement for failing to follow the directive even if they could not for one of the reasons listed in the requirement. This again is not consistent with FERC guidelines that state VSLs cannot modify the requirement.</p> <p>The RCSDT did not include the “unless such actions would violate safety, equipment, regulatory or statutory requirements” portion of the requirement in the VSL because if an entity could not perform the directed action, there is no violation. No change made.</p> <p>The following comments pertain to COM-001-2.</p> <p>We recommend striking “capability” from all of the requirements. It is not clear to us how this helps when a definition for Interpersonal Communications is written already and applies to a communication medium. Furthermore, we think it causes confusion and actually contradicts the intent of the standard. Because Requirements R1, R3, R5, R7 and R8 focus on capability, the responsible entity will be in violation anytime its medium that it uses for the primary capability does not function properly. Whereas if the requirement stated that the responsible entity was to designate a primary communications medium, the responsible entity is not in violation if that medium is not functioning properly. It would be clear that Requirement R2, R4 and R6 are intended to be complementary.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>Furthermore, it is not clear why Requirements R1, R3, R5, R7 and R8 state that the</p>

Organization	Yes or No	Question 6 Comment
		<p>responsible entity shall “have” when the companion Requirements R2, R4, and R6 state “designate.”</p> <p>The RCSDT believes the requirements achieve the desired intent of the standard. Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>Since Requirement R10 deals with a failure of its Interpersonal Communications capabilities and not Alternate Interpersonal Communications capability, it should only refer to the entities in Requirements R1, R3, and R5. Currently, it includes R1 through R6.</p> <p>COM-001-2, R10: The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>(COM-001 M1)</p> <p>We suggest changing “physical assets” to “demonstration of physical assets.” Since evidence is provided to the auditor and the auditor takes the evidence with them, providing them evidence that is a “physical asset” would be problematic. We believe that the VSLs could be written to provide more gradations. For example, if a Transmission Operator or Balancing Authority failed to have Interpersonal Communications capability with a Distribution Provider but had Interpersonal Communications capability with all other required entities, it has met the vast majority of the requirement. Since VSLs are a measure of how much the requirement was missed by the responsible entity, jumping to a Severe VSL does not seem to adequately capture that the responsible entity met the vast majority of the requirement. Requirements R4 and R6 even seem to recognize this by not including Distribution Provider in the list of entities to which the Transmission Operator or</p>

Organization	Yes or No	Question 6 Comment
		<p>Balancing Authority are required to designate Alternate Interpersonal Communications capability.</p> <p>The following comments pertain to COM-002-3.</p> <p>The RCSDT believes the Measures address the needed examples of evidence. No change made.</p> <p>While COM-002-3 is well written to explain the three-part communications requirements and makes it perfectly clear when Reliability Directive has been issued, the opening clause leaves the responsible entity open to second guessing on whether they should have issued a Reliability Directive. This problem could be solved by changing the opening clause to:</p> <p>“When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” In the second bullet of Requirement R3, we suggest using “Restate” in place of “Reissue.”</p> <p>The responsible entity is not really reissuing the Reliability Directive. They are still in the act of trying to get the Reliability Directive issued and are simply re-communicating it because it was not understood.</p>
<p>Response: The RCSDT believe the offered suggestion does not improve COM-002-3, R1. No change made.</p>		
<p>Kansas City Power & Light</p>		<p>R9 - considering the reliability of communication systems and System Operator attention may be on more important operational concerns, a 2-hour response to a problem with the alternative means of communication is over sensitive. Allowing for sometime in an operating shift would be more in line, such as 8 hours.</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate</p>

Organization	Yes or No	Question 6 Comment
		<p>another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>Violation Severity Levels for COM-001-2: The VSL’s for requirements R1-R8 and R11 do not recognize the efforts of Entities to meet the requirements. If an Entity failed to establish communications or alternative communications with 1 Entity out of 20 should that be Severe?</p> <p>The RCSDT believes the requirements are essential to reliable operations; however, the requirement is Severe more so because it is a pass-fail requirement, and by definition makes it Severe (binary requirement). No change made.</p> <p>Implementation Plan for COM-001-2: The implementation plan is too aggressive at completing in 6 months after regulatory approvals. Establishing agreements with other RC’s, TOP’s and BA’s for alternative “interpersonal communications” regarding the various types of communications available that meet these requirements will take more than 6 months. Recommend 12 months to allow Entities sufficient time to reach agreements and to establish the communications.</p> <p>The RCSDT believes that six months is adequate considering additional facilities should not have to be built to establish communications with the DP and GOP; similarly, compliance documentation should not impose significant work on the entities’ part. No change made.</p>
<p>Response: See response above.</p>		
Southern Company		<p>We question why the first paragraph of Section 1.3 - Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been</p>

Organization	Yes or No	Question 6 Comment
		<p>updated to be consistent with the Standards Drafting Guidelines.</p> <p>We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or alternate Interpersonal communications (R1 and R2).</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>COM-001-2 Dominion VP:</p> <p>COM-001-2; M9 reads “at least on a monthly basis”, Dominion suggests that this be changed to “at least once per calendar month” as written in R9. This change should also be corrected in the VSLs.</p> <p>The RCSDT agrees and the language in M9 has been changed to agree with the language in R9 and the R9 VSL.</p> <p>M8 - We suggest removing the second “that” in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional “that.”</p> <p>M10 - Dominion suggests this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read:</p>

Organization	Yes or No	Question 6 Comment
		<p>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>M12 needs to be removed.</p> <p>The RCSDT thanks you for your comment and has made the deletion.</p> <p>Southern: Definition of Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communications used for day-to-day operation.</p> <p>Comments:</p> <p>-The proposed definition uses the term “medium.”</p> <p>What is the scope of that?</p> <p>Telephony is a “medium” but there is wired, wireless, satellite, etc. Was “medium” intended to differentiate voice, paper, text, email, teletype, or something else?</p> <p>-Similar to that last question - does the qualifying term “same” when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet</p>

Organization	Yes or No	Question 6 Comment
		<p>Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the “same infrastructure” but a different “medium”</p> <p>R1 Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities: ...”</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>Comments</p> <p>-In later requirements it is proposed that the entity “...shall designate an...” It is suggested that for consistency and auditability, this concept be used for R1, R3, R5, R7 and R8.</p> <p>Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>In addition, the qualifier of “primary” should be used such that the requirements read “... shall have designated, primary Interpersonal Communications capability with the following entities:” Although it is appropriate that “Alternative” be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication”) that bounds acceptable alternative methods , we do not see the need to capital “primary.”</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>R9 Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test its Alternative Interpersonal Communications capability at least once per calendar month.</p> <p>Comments</p> <ul style="list-style-type: none"> -The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the subrequirements of R2, R4, and R6. -There is no expectation of testing the primary Interpersonal Communications is this intentional or an oversight? <p>Although functional testing of this should be done as a normal course of business, should an explicit test be required with each entity in the subrequirements of R1, R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct?</p> <p>The RCSDT intends each Alternative Interpersonal Communication capability to be verified functional by testing. If an entity has only one such capability, then only one test would be required. You further ask whether the absence of required testing of the “primary” (word is not in the requirement) Interpersonal Communication capability is intentional. The RCSDT intentionally left it out because the Communication capability is used routinely and the use is sufficient to demonstrate functionality. With respect to phone numbers, these are procedural matters to be addressed by each individual entity and by including phone numbers it would make the requirement prescriptive. The requirement is to test capability. No change made.</p> <p>R10 Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall notify entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer.</p>

Organization	Yes or No	Question 6 Comment
		<p>Comments</p> <p>-The following scenario seems plausible: The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation?</p> <p>The RCSDT proposes that upon detection of failure that continues at least 30 minutes, starts the 60-minute clock. The 30 minutes allows an entity time to restore or determine if it can restore its Interpersonal Communication capability before the clock starts. No change made.</p> <p>General Question</p> <p>-Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well?</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>COM-002-3 Southern</p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient.</p> <p>Comment</p> <p>It is recommended that the requirement be clarified that the Reliability Directive be identified as such during its delivery. (e.g., "...shall identify the action as a Reliability Directive to the recipient during its delivery.")</p> <p>The RCSDT believes the suggestion is overly prescriptive and limits the ability for an</p>

Organization	Yes or No	Question 6 Comment
		<p>entity to meet the requirement. No change made.</p> <p>R2 Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive.</p> <p>Comment</p> <p>-It is recommended that the requirement be clarified that an entity receiving a Reliability Directive repeat, restate, rephrase or recapitulate it immediately upon receiving it. (e.g., "...shall repeat, restate, rephrase or recapitulate the Reliability Directive immediately upon receiving it."). As written, there is not limit as to when the entity must repeat it (i.e. they could wait 2 hours).</p> <p>The proposed requirement uses the term "upon recognition." No change made.</p> <p>General Question</p> <p>-The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call) . Is, for example, a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3?</p> <p>The question about whether a roll call of receiving entities is expected to be held is asking for prescription of "how" to accomplish what is required. The RCSDT recognizes that there is more than one way to accomplish the confirmation when more than one entity received a Reliability Directive at the same time. What is required is for the recipient to respond in such a way that the issuer may determine whether the message has been properly understood. One way for that to occur would be, as you suggest, for the entities to individually respond. Another way would be for a pre-established protocol or procedure (e.g. roll-call, all-call, etc.) to be in place and used in such cases. The RCSDT has determined that prescribing "how" to ensure that "what" is required has been accomplished is not required and that the individually adopted procedures or protocols could offer many different ways to</p>

Organization	Yes or No	Question 6 Comment
		<p>ensure effectiveness. No change made. The RCSDT concept is that “All Call” compliance is related to having a document that explains how the entity responds. No change made.</p> <p>IRO-001-3 Dominion VP:</p> <p>R2 - Dominion questions the phrase “physically implemented” and recommends that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions where an entity may not be able to physically implement the direction; for example, an entity that does not have the right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>Dominion notes the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011:</p> <p><i>“IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g., Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling.</i></p> <p><i>Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>“direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.”Dominion believes the entity’s comments remain valid and the response provided by the RCSDT does not address all aspects of the concern. Dominion suggests that the language be changed to “Reliability Directive” consistent with COM-002.</i></p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>M2 - need to add the following words “compliance with, physically, unless” which were included in R2, therefore M2 should read:</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator’s direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator’s direction.”</i></p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2 Measure, M2.</p> <p>(R2) “Section 1.3, the second bullet; need to add calendar to 12 calendar months Southern General recommendation</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>

Organization	Yes or No	Question 6 Comment
		<p>-It is recommended that where the verb “direct/directed” or noun “direction” is used in Purpose, R1, R2 and R3, that it be replaced with the verb “instruct/instructed” or noun “instruction”, as appropriate. This would help the industry avoid confusion often referred to as “big D” or “little d” directives. It is noted that the term “Reliability Directive” does that to a great degree but avoiding the verb/noun “direct/direction” would augment the difference.</p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1 Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts.</p> <p>Comment</p> <p>-At what point in time is “identified” referring to in “...to prevent identified events or...” Is it referring to current or future events? One might assume both since the “Time Horizon” is defined as Real-time Operations, Same Day Operations and Operations Planning but the requirement may be enhanced if explicitly stated (“...to prevent events identified in real-time or in the future or to mitigate the magnitude...”).</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. No change made.</p> <p>-For clarity, the scope of the authority should be limited to the Reliability Coordinator Area (“...that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area”). As written, it implies the authority should extend outside its RC Area.</p> <p>The RCSDT believes that limiting the scope to the RC’s area would be too limiting and not account for potential conditions where an adjacent RC may have lost its wide-</p>

Organization	Yes or No	Question 6 Comment
		<p>area view and requests the assistance of another RC or vice-versa. No change made.</p> <p>R2 Editorial comment - The words “compliance with” are in a different font in the posted version.</p> <p>The RCSDT thanks you for your comment and has corrected the font in IRO-001, R2.</p> <p>R3 Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2.</p> <p>Comment</p> <p>The requirement states the responsible entities shall “inform” its RC when unable to perform as directed but it is unclear when the notification needs to take place. Although the term “as soon as practical” may seem be un-measurable, as written now there is no time deadline to perform the notification - i.e. it could be 4 hours later after recognition.</p> <p>The proposed requirement uses the term “upon recognition.” No change made.</p>
<p>Response: See response above.</p>		
Central Lincoln		<p>As stated in our prior comments, we continue to have problems with COM-002, R2 and R3 as written. The SDT’s answer (“It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive”) addresses our concern perfectly, and we would agree with such an expectation. Unfortunately, the expressed expectation is not in the proposed standard or even in a proposed guideline for the standard.</p>
<p>Response: The RCSDT believes this is a process or procedure question that should be determined by the entity in how it handles communication with the RC. The standard, as written does, not preclude the entity from having a procedure. No change made.</p>		

Organization	Yes or No	Question 6 Comment
<p>Entergy Services, Inc</p>		<p>Entergy does not agree with including the DP and GOP in this standard. However, if they are to be included and are required to have the communications capability indicated, they should be included in R10. Why would it be important for the TOP to notify the DP that their communications method has failed, but it is not important for the DP to notify the TOP when their communications method has failed? The distinction doesn't seem reasonable or meaningful.</p> <p>The RCSDT stresses that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities, which have little or no impact on the reliability of the BES while not requiring them to obtain Alternative Interpersonal Communication capabilities. Making the proposed changes would eliminate this flexibility. Removing R11, takes away the RCSDT's effort to include those provisions in the standard. No change made.</p> <p>Additionally, in the draft of COM-002-3 requirement 2 contains the language that the recipient of the directive shall "repeat, restate, rephrase or recapitulate" the directive. Why are so many synonyms of repeat necessary? Repeat or restate should be sufficient to get the point across.</p> <p>The RCSDT used the additional words to facilitate complete understanding. No change.</p>
<p>Response: See response above.</p>		
<p>Independent Electricity System Operator</p>		<p>(1) The proposed implementation plan conflicts with Ontario regulatory practice respecting the effective date of the standard. It is suggested that this conflict be removed by appending to the implementation plan wording, after "applicable regulatory approval" in the Effective Dates Section A5 on P. 4 of the draft standard COM-001, COM-002 and IRO-001, and on P. 2 of COM-001's Implementation Plan and P. 1 of COM-002's and IRO-001's Implementation Plans, to the following effect:", or as otherwise made effective pursuant to the laws applicable to such ERO</p>

Organization	Yes or No	Question 6 Comment
		<p>governmental authorities.”</p> <p>The RCSDT is uncertain where the conflict exists. The standard IRO-001 uses the term “after applicable” and the others “following applicable.” The RCSDT has updated the standards to use the most current effective date language.</p> <p>(2) COM-001: Measure M9: - “monthly basis.” Suggest changing “monthly basis” to “at least once per calendar month” to be consistent the wording in R9.</p> <p>The RCSDT thanks you for your comment and has made the conforming change in the COM-001, Measure M9.</p> <p>(3) IRO-001: Measures M1, M2, M3 - The types of evidence are listed in paragraph form. This is not consistent with presentation style in COM-001-2 Measures, where evidence is listed in bullet format. Suggest using bullet form for consistency.</p> <p>The RCSDT agrees and has made all the Measures bullet form in COM-001-2, but not in COM-002-3 and IRO-001-3.</p> <p>(4) IRO-001, Data Retention Section:</p> <p>i. The retention requirements do not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4.</p> <p>Data retention related to IRO-001-2, R2/M2 was changed to agree with your suggestion. The changes were more involved – several sections were changed, including removing the reference to R4/M4.</p> <p>ii. Section 1.3, second paragraph: “The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider... shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of</p>

Organization	Yes or No	Question 6 Comment
		<p>time as part of an investigation:</p> <p>"The word "or" between Generator Operator and Distribution Provider should be changed to "and."</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p>
<p>Response: See response above.</p>		
<p>Hydro-Quebec TransEnergie</p>		<p>For COM-001:</p> <p>R1.2 and R2.2: The phrase "within the same Interconnection" is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to coordinate reliability issues including curtailing interchange transactions crossing an Interconnection boundary). The SDT's response to industry comments on the previous posting that the phrase was added to address the ERCOT situation (that ERCOT does not need to communicate with other RCs and that such coordination takes place between TOPs) leaves a reliability gap.</p> <p>Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator's from one interconnection to another. No change made.</p> <p>2. R3.5 and R4.3: The phrase "synchronously connected within the same Interconnection" is also improper; it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). The reason that was used in response to the above comments (coordination among TOPs for DC tie operation) contradicts with the inclusion of this</p>

Organization	Yes or No	Question 6 Comment
		<p>phrase in R3.5 and R4.3.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and have eliminated the phrase “within the same interconnection.”</p> <p>3. R4 and R6: Not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin with to enable BAs to communicate with these entities (such as operating instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails.</p> <p>The RCSDT refers the Order No. 693 in Paragraph 508 to clarify the reason the DP and GOP are not required to have Alternative Interpersonal Communication and is as follows: “(1) expands the applicability to include Generator Operators and Distribution Providers and includes Requirements for their telecommunications facilities; (2) identifies specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation and (3) includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions.” In addition, R11 requires the DP and GOP to consult with its BA and TOP to determine a mutually agreeable action for restoration. No change made.</p> <p>4. To preclude the possibility of problems arising from having different languages spoken between entities, COM-001-1.1 R4 should remain as it was or those ideas kept in the revised requirement. R4 read: “R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.” 5. Measure M3</p>

Organization	Yes or No	Question 6 Comment
		<p>does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>According to the proposed implementation plan for COM-001-2, R4 pertaining to the use of English will remain in effect upon the effective date of COM-001-3. This requirement is being revised and will be included in Standard COM-003-1, Operating Personnel Communications Protocols. COM-001-1.1, R4 will be retired at midnight the day before COM-003-1 becomes effective. No change made.</p> <p>For IRO-001:</p> <p>The Data Retention Section does not reflect the revised requirements. As examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Data Retention section.</p> <p>Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2.</p> <p>The RCSDT has made conforming changes by correcting an error in the data retention section</p> <p>And, in the Data Retention Section, R4 and M4 are mentioned. However, there are only three requirements with their corresponding measures in the standard.</p> <p>The RCSDT has made conforming changes by correcting an error in the data retention section</p>
<p>Response: See response above.</p>		
<p>NIPSCO</p>		<p>In IRO-001 R2 an "and" is missing after Generator Operator, and the comma should be removed.</p> <p>Why are there 3 different Effective Dates for this project, each standard being</p>

Organization	Yes or No	Question 6 Comment
		different? To simplify, can't they all be made identical?
<p>Response: The RCSDT thanks you for your comment and has made conforming changes to IRO-001 R2 and the effective dates to the second quarter after regulatory approval.</p>		
<p>Oncor Electric Delivery Company LLC</p>		<p>For COM-001-2</p> <p>Oncor takes the position that contacting all impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer as prescribed in R1 through R6 is not doable within the ERCOT interconnect for a Transmission Operator.</p> <p>Oncor takes the position that notification only to the RC and BA is sufficient and that those two entities have the operational functionality to contact within the prescribed time all affected Distribution Providers, Generator Operators, and other Transmission Operators.</p> <p>The RCSDT proposes that upon detection of failure that continues at least 30 minutes, starts the 60-minute clock. The 30 minutes allows an entity time to restore or determine if they can restore Interpersonal Communication capability before the clock starts. No change made.</p> <p>R10 - Oncor takes the position that the word “impacted” added to R10 will clarify that notification only needs to be made to the entities that are effected by the failure of a communication path. This will also more align with the language in M10.</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>For COM-002-3</p> <p>Oncor request clarity about what constitutes a “recipient.” For example, if a</p>

Organization	Yes or No	Question 6 Comment
		<p>Transmission Grid Operator performing the functions of a Transmission Operator issues a Reliability Directive to its own field operations personnel to perform an action on behalf of the same entity, does the field operations personnel as the recipient become in affect a “Transmission Operator” subject to R2?</p> <p>The term “recipient” in this case is referring to Functional entity to Functional entity communication. No change made.</p>
<p>Response: See response above.</p>		
<p>Consolidated Edison Co. of NY, Inc.</p>		<p>Regarding COM-002 Requirement R1, we recommend that this requirement be reworded as follows: “When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall require that the Reliability Directive be communicated using three-part communications as described in Requirements R2 and R3 of this standard.”</p> <p>The reason for this recommended rewording are threefold:</p> <ol style="list-style-type: none"> 1. Good operating practice calls for use of three-part communications at all times. The recommended re-write encourages the use of the good operating practice of three-part communications at all times, but does not require it. 2. It is not good operating practice to require that an additional (unnecessary) phrase be used during emergency situations. During emergency situations, it is best to use standard operating protocols so as to limit unnecessary burdens on operating personnel during critical and stressful times. 3. By implementing the proposed new R1 requirement, it would effectively weaken the need for rigorous compliance with any and all directives issued by the RC’s, TO’s or BA’s. <p>The RCSDT respectfully disagrees, the recipient needs clarity when a Reliability Directive is communicated. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>Regarding IRO-001 Requirement R1, we recommend that the current requirement R3 be reinstated as the new requirement R1. That is, the new requirement R1 should read as follows: R1. The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.</p> <p>We do not support any further dilution of Reliability Coordinator authority to enforce Reliability Directives through deletion of the 30-minute maximum response time period. The timely actions in response to any Reliability Coordinator issued Reliability Directives is an essential part of the process.</p> <p>The RCSDT believe these concerns are addressed in other performance-based standards (IRO-008 and IRO-009) that require action and contain timing requirement when addressing IROs. The omission of TSP, LSE, and PSE does not diminish reliability and brings the standard into conformity with COM-001 and COM-002. No change made.</p>
<p>Response: See response above.</p>		
<p>We Energies</p>		<p>COM-001, Although a great improvement over existing COM-001, and eliminates the data component see comments:</p> <ul style="list-style-type: none"> -For R5.1 Can the solutions included to meet R1 be included, same R3.2 and R5.2, same R5.3 and R7.2, same R5.4 and R8.1 -For R5.2 Can the solutions included to meet R2 be included, same R4.2 and R6.2 <p>COM-001-2, R5: In a word: Yes. The requirement is to have capability and that capability does not have to be different than the entity on the other end has. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R9 a 2 hour response for a once a month test seems extreme, as would require a secondary Alternate Interpersonal Communications capability</p> <p>-M9 is reasonable, but should include something about communication actual repair and or time estimates</p> <p>COM-001-2, R9: The requirement is to “initiate action to repair or designate a replacement Alternative Interpersonal Communication capability...” within two hours. The RCSDT recognizes that many different contracts or other arrangements may exist to address repair. However, the RCSDT finds that entities should know what they have and how to initiate repair and those two hours to do so is reasonable. No change made.</p> <p>COM-001-2, M9: The requirement is to have evidence that either repair was initiated or an Alternative Interpersonal Communication capability was designated within two hours. The RCSDT understands that, in extreme cases, the entity may need to make its initial Alternative Interpersonal Communication capability its Interpersonal Communication capability and then designate another Alternative Interpersonal Communication capability if the repair times are so long that to continue in that mode for that long would present a reliability risk. Such arrangements, if they exist at all, are very rare. No change made.</p> <p>-R10 The use of R1 through R6 implies notification of both Interpersonal Communications and Alternate Interpersonal Communications failures. Do you notify if you become aware after the link is back up if it was down for GT 30 minutes, and Doesn't address notifying when restored?</p> <p>COM-001-2, R10: The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>Yes, there is no requirement to notify identified entities the Interpersonal Communication have been restored.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4.</p> <p>COM-001-2, R11: The RCSDT believes you intended to refer to R7 and R8, rather than R8 and R9. The RCSDT does not believe that the language implies that the communications capability required by R7 and R8 are independent, but they may be. If the entity which is registered as a DP is also registered as a GOP (probably unlikely), then the capability could be met by the same medium. Neither does the RCSDT believe that R11 implies that R7 and R8 are redundant to R3.3 and R3.4 or to R5.3 and R5.4. No change made.</p> <p>R11 is not clear on the purpose of the statement “determine a mutually agreeable time for restoration” this could be driven by forces outside the control any of the entities. I think” provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage” would be better.</p> <p>The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable action for restoration of its Interpersonal Communication capability with its TOP or BA. That is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. No change made.</p> <p>Update M9 accordingly</p> <p>See comment above concerning R9.</p> <p>COM-002</p> <p>-Since all the Requirements are related to Reliability Directives, is it implied that all “Emergency Communications” are Reliability Directives even if not designated as such per R1.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT would like to highlight that communications is not a defined term in the NERC Glossary of Terms used in Reliability Standards ,nor is it defined in this standard. Thus, the plain meaning of communications is intended. The RCSDT has not implied a defined term in the wording of the purpose statement of the standard, nor in the Requirements themselves, that any communication is a Reliability Directive unless the issuing functional entity identifies the actions to be taken as a Reliability Directive. Therefore, not all communications during Emergencies will be Reliability Directives. No change made.</p> <p>COM-002, R2: The RCSDT included some examples of how to provide the evidence needed for Measure M2. The examples are not intended to be an all-inclusive list. The RCSDT does point out, though, that dated operator logs could provide such evidence. The RCSDT does not believe that the recipient has the alternative to refuse to perform as required. However, the RCSDT does bring attention to standard IRO-001-3, which requires entities to comply with directions unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. No change made.</p> <p>-The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. A recipient’s phone may not be recorded but an initiator’s always should. If a receiver refused to meet the R2 requirement, an initiator should have an alternative. i.e., repeat the directive and provide potential penalties if recipient refuses to comply. Should the initiator have responsibility for providing the entire 3-way evidence as M3 implies?</p> <p>The RCSDT would like to highlight that communications is not a defined term in the NERC Glossary of Terms used in Reliability Standards nor is it defined in this standard. Thus, the plain meaning of communications is intended. The RCSDT has not implied a defined term in the wording of the purpose statement of the standard, nor in the Requirements themselves, that any communication is a Reliability Directive unless the issuing functional entity identifies the actions to be taken as a Reliability Directive. Organization	Yes or No	Question 6 Comment
		<p>Reliability Directives. No change made.</p> <p>COM-002 M3: The Measure is correct as written. The issuer only needs the evidence that it confirmed the response was accurate or reissued according to the requirement. Evidence does not necessarily mean the entity must have the entire three-way conversation captured (i.e., recording), but evidence the entity confirmed or reissued according to requirement. No change made.</p> <p>IRO-001</p> <p>Although a great improvement over existing IRO-001, see comments:</p> <ul style="list-style-type: none"> -R2 needs to be clear that it is the Reliability Coordinator’s Reliability Directive that must be complied with not just any Reliability Coordinator’s direction as stated. -The M2 measure could be difficult, as the operator would have to have access to documents proving the safety, equipment, regulatory or statutory requirements, which may be the assessment of an individual applying the safety rule. <p>Is the measure requiring a deposition of the individual to be performed for each instance?</p> <p>The RCSDT notes that the intent of the standard is not intended to limit the RC authority to issue Reliability Directives. The Reliability Coordinator issuing the Reliability Directive is the one, which the recipient must comply. It is assumed that a BA or TOP has a relationship with one and only one RC for a given Balancing Area or Transmission Operator Area (some may have multiple, disconnected areas, that are subject to different RCs). Still need a way to communicate to mutually agree. No change made.</p> <p>With an assumed data retention of 90 day (voice) or 12 month document retention the deposition would be unlikely to be acquired prior to the retention period ending.</p> <p>Data retention is a significant issue when the data being recorded is voluminous, supporting a 90-day retention period. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R3 needs to be clear that it is the inability to perform the Reliability Coordinator’s Reliability Directive that must be communicated not just any “Reliability Coordinator’s as directed.”</p> <p>The RCSDT believes there is a misunderstanding about IRO-001, R3. The requirement specifically says “direction” and is in alignment with Requirement R1. Please note a Reliability Directive is a subset of “direction” that the RC may perform in accordance with R1. No change made.</p> <p>-The Data Retention section does not align with the standard:</p> <p>The Reliability Coordinator shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2, Measure M2.</p> <p>The RCSDT thanks you for your comment. The RC has been removed from the measure and replaced with the corresponding R2 responsible entities (BA, DP, GOP, and TOP).</p> <p>R2 and M2 apply to the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider.</p> <p>There is no R4 and M4.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p>
<p>Response: See response above.</p>		
<p>City of Jacksonville Beach dba/ Beaches Energy Services</p>		<p>COM-001-2, R9 - "Each ... shall test its Alternative Interpersonal Communications capability." I would suggest adding the phrase "...to each entity for which Alternative Interpersonal Communications is required." to add clarity.</p>
<p>Response: The RCSDT proposes that R9 correctly identifies and provides clarity for the entities required to have Alternative Interpersonal Communication capability. No change made.</p>		

Organization	Yes or No	Question 6 Comment
<p>Indiana Municipal Power Agency</p>		<p>For R2 in IRO-001-3, the requirement needs to have the entities comply with their Reliability Coordinator’s direction received in R1. Currently, requirement 2 directions are not linked back to R1 which means entities would have to comply with all Reliability Coordinator’s directions regardless if they are associated with R1.</p> <p>The RCSDT agrees with your comment and believes the requirements does not need a linkage. No change made.</p> <p>For R7 in COM-001-2, IMPA does not believe that every Distribution Provider needs to be included in requirement 7. IMPA recommends stating that requirement 7 only applies to Distribution Providers who own an UFLS or UFLS system.</p> <p>The expectation is that a Distribution Provider that is registered with NERC is obligated to comply. No change made.</p>
<p>Response: See response above.</p>		
<p>Luminant Energy Company LLC</p>		<p>IRO-001-3 R1 is not consistent with the direction taken in COM-002-3 which requires the Reliability Coordinator to identify Reliability Directive as such. The same approach should be taken with IRO-001-3 R1 so that the Reliability Coordinator is required to identify directions that are made to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts as such prior to or when issuing the directions. This extra specification is needed to eliminate any possible confusion in areas where the market operator and Reliability Coordinator are the same entity. In these areas, the Reliability Coordinator/market operator routinely gives directions to other entities that are not to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. Without the added clarification the receiving entity may not know the urgency of the situation and may not know to inform the Reliability Coordinator if they are unable to perform as required by R3.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: The RCSDT views R1 as an authority requirement to direct others, which could include a subset of direction called Reliability Directive. Requirement R2 is the response requirement for the recipient. The judgment the recipient is under is that the recipient must comply with the direction, unless the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. Requirement R3 simply requires the recipient to inform the issuer of its inability to perform the direction. No change made.</p>		
<p>NextEra Energy, Inc.</p>		<p>NextEra has the following additional comments.</p> <p>COM-002-3</p> <p>The purpose of COM-002-3 is:</p> <p>“To ensure Emergency communications between operating personnel are effective.”</p> <p>This stated purpose is not the same as the specific requirement that three-way communication is used for a Reliability Directive. Thus, NextEra requests that the purpose be revised to read as follows:</p> <p>“To ensure that when a Reliability Directive is given that the Reliability Directive is explicitly stated and three-way communication is used.”</p> <p>The majority of stakeholders did not raise any issues with the purposed statement, and the RCSDT believes the current purpose statement is adequate. No change made.</p> <p>Consolidation of COM-002-3 and IRO-001-3</p> <p>NextEra notes a continuing area of concern with the somewhat unsynchronized approach taken in the drafting process. Reliability Standards COM-002 and IRO-001 are now on version three, and still there is a somewhat unsynchronized approach being proposed. A clear and consolidated approach seems easily achievable with minimal effort. Thus, as proposed below, NextEra requests that COM-002-3 and IRO-001-3 be combined, which also would appear to allow for the retirement of certain requirements, such as TOP-001-1 R1-4.</p> <p>The standard TOP-001-1, R1 through R4 is under the purview of another team. No</p>

Organization	Yes or No	Question 6 Comment
		<p>change made.</p> <p>NextEra also is concerned that the current approach may have contributed to several significant misstatements in IRO-001-3, R1-3, which use the terms “direct,” “direction” and “directed,” instead of the term Reliability Directive as used in COM-002-3. COM-002-3 and IRO-001-3 indicate that three-way communication only is required when a Reliability Directive is issued.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction,” No change made.</p> <p>This begs the question of what are the potentially other, lower classes of directives in IRO-001-3 R1-3?</p> <p>And why do they need to be followed with or without three-way communication?</p> <p>Reliability Directives are identified as such at the time they are issued so the recipient understands the magnitude of the action being directed. No change made.</p> <p>Thus, at a minimum, NextEra requests that the terms direct, direction and directed be deleted from IRO-001-3 R1-3, respectively, and that Reliability Directive be inserted. This change, and other proposed changes, are reflected in NextEra’s overall proposal to combine COM-002-3 and IRO-001-3 into one COM-002-3 standard: {Note: If the term Adverse Reliability Impact is revised as proposed by NextEra, then the term would not need to be stricken.</p> <p>The RCSDT understands some of the benefits with combining the standards; however, at this point, it would further delay the progress of the standards.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p><i>R1. Each Reliability Coordinator shall have the authority to act and to issue a Reliability Directive to a Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider within its operating region to prevent identified events that may lead to, or to mitigate the magnitude or duration of, an Emergency.</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>[Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p><i>R1.1 Each Transmission Operator shall have the authority to act or issue a Reliability Directive to a Balancing Authority, Generator Operator and Distribution Provider within its operating region to prevent identified events that may lead to, or to mitigate the magnitude or duration of, an Emergency. Organization	Yes or No	Question 6 Comment
		<p><i>accordance with Requirement R6. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>Conclusion</p> <p>Given the importance of having clear and concise Reliability Standards on the issue of directives and three-way communication, until the above concerns raised by NextEra in items 4 through 6 are addressed, NextEra intends to continue to vote “no” on COM-001-2, COM-002-3 and IRO-001-3.</p> <p>The RCSDT thanks you for your comment and believes the revisions made to this set of standards is valuable to the industry and within the scope of the project. No change made.</p>
<p>Response: See response above.</p>		
<p>Manitoba Hydro</p>		<p>COM-001-2-Definition ‘Interpersonal Communication’ - for clarity, the definition should explicitly state that data exchange is not included.</p> <p>The standard COM-001 is for Interpersonal Communication capability, which facilitates the communication (i.e., “... to interact, consult, or exchange information.”) and not the exchange of data which is addressed in IRO-010. No change made.</p> <p>-R9 - for clarity, the wording ‘... within 2 hours’ should be replaced with ‘... within 2 hours of the unsuccessful test’. Conforming change required to M9 as well.</p> <p>The RCSDT proposes that R9 correctly identifies and provides clarity for the entities required to have Alternative Interpersonal Communication capability. No change made.</p> <p>-R10 - for clarity, the wording ‘... as identified in R1 through R6...’ should be replaced with ‘... with which it is required to have Interpersonal Communications capability or Alternative Interpersonal Communication capability...’.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>-M6 - the term ‘Adjacent’ needs to be capitalized in the last sentence of the paragraph as ‘Adjacent Balancing Authority’ is a NERC defined term.</p> <p>The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made conforming measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p> <p>-M7 - ‘that’ in the first line is repeated</p> <p>The RCSDT thanks you for your comment and has made conforming changes to remove the additional word “that.”</p> <p>-M9 - the wording ‘on a monthly basis’ should be replaced with ‘once per calendar month’ to be consistent with the wording of the R9.</p> <p>The RCSDT agrees and the language in M9 has been changed to agree with the language in R9 and the R9 VSL.</p> <p>-M11 - the words ‘that experiences a failure of any of its Interpersonal Communications capabilities’ should be added after Operator to be consistent with the wording of the Requirement</p> <p>The RCSDT thanks you for your comment and has made the conforming changes to Measure M11.</p> <p>-Compliance</p> <p>- 1.3 bulleted sentences - the term ‘historical data’ should be removed. The term ‘evidence’ is sufficiently descriptive and is consistently used in other requirements</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Data Retention section.</p>

Organization	Yes or No	Question 6 Comment
		<p>-Data Retention</p> <p>(1.3) - The data retention requirements are too uncertain for two reasons. First, the requirement to “provide other evidence” if the evidence retention period specified is shorter than the time since the last audit introduces uncertainty because a responsible entity has no means of knowing if or when an audit may occur of the relevant standard.</p> <p>Secondly, it is unclear what ‘other evidence’, besides the specified logs, recordings and emails, an entity may be asked to provide to demonstrate it was compliant for the full time period since their last audit.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p> <p>This comment also applies to COM-002-3 and IRO-001-3.</p> <p>-Data Retention (1.3) - COM-002-3 requires that voice recordings are kept for the most recent 3 calendar months but COM-001-2 requires that they be kept for the most recent 12 calendar months. Manitoba Hydro does not see the reliability benefit of storing voice recordings for longer than 3 months and suggests that voice recordings be removed as evidence for COM-001-2.</p> <p>The RCSDT thanks you for your comment and has provided a retention period of 90 days for voice recordings, if chosen by the entity, as a matter of media storage, and 12 months for all other evidence.</p> <p>Evidence of the availability of Interpersonal Communications and Alternative Interpersonal Communications can be demonstrated using the other forms of evidence listed.</p> <p>The RCSDT thanks you for your comment. The measures provide a significant listing of potential evidence, which allows for compliance flexibility. The measures are examples and the entity is not limited to those examples. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-VSLs (general comment)</p> <p>- for clarity, use for example R1.1 and R1.2 to refer to requirements instead of Part 1.1 and Part 1.2.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Data Retention section.</p> <p>-VSLs R4 - a reference to R4.3 is missing</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the VSL section.</p> <p>COM-002-3-Title</p> <p>- to capture the purpose and intent of the standard, the title should be changed to 'Emergency Communications'.</p> <p>The RCSDT believes the title adequately captures the standard's scope. No change made.</p> <p>-R2 - for clarity, the words 'back to the sender' should be added to the end of the sentence</p> <p>The RCSDT believes the current wording clearly identifies the issuer. No change made.</p> <p>-R3 - for clarity, the words 'to the recipient' should be added to both of the bulleted sentences after 'confirm' and 'reissue'. The words 'evident from the response' should be added to the end of the second bullet.</p> <p>The RCSDT believes the current wording is clear as to who is the recipient. No change made.</p> <p>-A question for the drafting team: has it been discussed whether there should be an additional requirement which indicates that the Reliability Coordinator, Transmission Operator and Balancing Authority shouldn't take any action in a Reliability Directive</p>

Organization	Yes or No	Question 6 Comment
		<p>until such time as it has been confirmed accurate by the sender?</p> <p>If so, does the team feel that it's a worthwhile requirement to consider?</p> <p>RCSDT believes having an additional requirement is unnecessary and would be overly prescriptive. No change made.</p> <p>-M2 - the words 'restated, rephrased or recapitulated' should be added after 'repeated' to be consistent with wording of the requirement.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Measure, M2 in COM-002.</p> <p>-M3 - the words 'to show' should be deleted from the end of this paragraph.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Measure, M3 in COM-002.</p> <p>IRO 001-3-Purpose</p> <p>- the words 'to the Bulk Electric System' already appear in the definitions of Emergency and Adverse Reliability Impact and do not need to be repeated here.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Purpose in IRO-001.</p> <p>-Effective Date</p> <p>- the effective date should be changed to the 2nd calendar quarter following BOT approval in jurisdictions not requiring regulatory approval to be consistent with jurisdictions requiring regulatory approval.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make IRO-001 the same as COM-001 and COM-002.</p> <p>-General comment</p> <p>- There are repeated references to 'identified events'</p>

Organization	Yes or No	Question 6 Comment
		<p>- it is not clear what this is referring to.</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. No change made.</p> <p>M1 - M1 refers to Adverse Reliability Impacts “within its Reliability Coordinator Area.” The requirement does not refer to ‘within its Reliability Coordinator Area’ - the wording in the measure and in the requirement should be consistent.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to IRO-001, M1 to remove the phrase “within its Reliability Coordinator Area.”</p> <p>M2 - missing the word ‘physically’ when describing that a direction could not be implemented, should be consistent with the wording in the requirement.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make IRO-001 measure M2.</p> <p>Compliance</p> <p>- the entire section needs to be updated as it refers to requirements and measures that don’t exist.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make IRO-001 Compliance section 1.3 to remove the invalid references.</p> <p>-VSLs R2 - the reference to ‘fully comply’ is very vague. It is only a violation if the entity does not fall within the exception.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make IRO-001, R2, High VSL to be more consistent with the R2.</p> <p>- R2 VSL - For clarity, change “RC’s directive” to “Reliability Coordinator’s Reliability Directive.”</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make</p>

Organization	Yes or No	Question 6 Comment
		IRO-001, VSL R2, High VSL.
Response: See response above.		
Great River Energy		<p>In IRO-001-3 "authority" should be removed and the verbiage returned to "shall act."</p> <p>The RCSDT believes that other standards (i.e., IRO-009, R3 & R4 and EOP-002, R1 & R8) address the action of others and if the term "authority" is omitted, creates a generic requirement such as what has been suggested puts the RC in a double jeopardy situation. No change made.</p> <p>In COM-002-3 R2 and in Applicability we suggest removing the Distribution Provider as the RC would not likely give a Reliability Directive to a Distribution Provider. The Reliability Directive would more likely come from the Transmission Operator to the Distribution Provider.</p> <p>The RCSDT believes that other standards (i.e., IRO-009 - R3 & R4, EOP-002 - R1 & R8) address the action of others and if the term "authority" is omitted, creates a generic requirement such as what has been suggested puts the RC in a double jeopardy situation. No change made.</p> <p>In COM-002-3 R3 we "replacing "Reissue" with "Restate." You are not technically reissuing the Reliability Directive.</p> <p>COM-002-3, R3: The communications described are not intended to be a once-through process. Effective communications, sometimes referred to as three-part or three-way, often may be effective only after numerous iterations. The RCSDT believes the likely first effort to clarify would be to re-issue the instructions just to determine whether the recipient simply "heard wrong." Using the word re-state seems to imply that the wording is incorrect in some way or for some other reason needs to be said a different way. The RCSDT believes it is more likely that the issuer is attempting to bet the recipient to understand and therefore believes that reissue is more appropriate. No change made.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: See response above.</p>		
<p>Orange and Rockland Utilities, Inc.</p>		<p>Regarding COM-002 Requirement R1, we recommend that this requirement be reworded as follows:</p> <p><i>“When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall require that the Reliability Directive be communicated using three-part communications as described in Requirements R2 and R3 of this standard.”</i></p> <p>The reason for this recommended rewording are threefold:</p> <ol style="list-style-type: none"> <i>1. Good operating practice calls for use of three-part communications at all times. The recommended re-write encourages the use of the good operating practice of three-part communications at all times, but does not require it.</i> <i>2. It is not good operating practice to require that an additional (unnecessary) phrase be used during emergency situations. During emergency situations, it is best to use standard operating protocols so as to limit unnecessary burdens on operating personnel during critical and stressful times.</i> <i>3. By implementing the proposed new R1 requirement, it would effectively weaken the need for rigorous compliance with any and all directives issued by the RC’s, TO’s or BA’s. Regarding IRO-001 Requirement R1, we recommend that the current requirement R3 be reinstated as the new requirement R1.</i> <p>That is, the new requirement R1 should read as follows:</p> <p><i>“R1. The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>without delay, but no longer than 30 minutes.”</i></p> <p>We do not support any further dilution of Reliability Coordinator authority to enforce Reliability Directives through deletion of the 30 minute maximum response time period. The timely actions in response to any Reliability Coordinator issued Reliability Directives is an essential part of the process.</p>
<p>Response: The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and, therefore, does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p>		
<p>Niagara Mohawk (dba National Grid)</p>		<p>COM-001-3</p> <p>- Some requirements are overly prescriptive and not results based.</p> <p>R7 & R8 are not necessary. Every entity at a minimum has a contact with a phone as their "Interpersonal Communications capability." Just need to require that every entity has a plan if they lose their primary communication channel ("Interpersonal Communications capability").</p> <p>The standard establishes requirement for communication capability appropriate to ensure reliability. There is no requirement for it to be different from the Interpersonal Communication capability that its Balancing Authority has with it nor the Interpersonal Communication capability that its Transmission Operator has with it. Cooperation and coordination is always encouraged and is an excellent practice, but is not required by this standard. Thank you for your suggestion. No change made.</p> <p>COM-002-3</p> <p>- Requiring RCs, TOPs and BAs to state an action as a "reliability directive" complicates communications during a time when response time and clarity are important. If those issuing a directive don't get a repeat back they just need to ask for one. The requirement just needs to define "what" is required not "how." This</p>

Organization	Yes or No	Question 6 Comment
		<p>can be handled by procedures and training.</p> <p>The requirement is aimed at being a performance-based requirement and states a description of “what” communication must take place, but does not prescribe “how” the communication is to be made. Adding the suggested phrase “immediately upon receiving it” introduces the ambiguous term “immediately” for which there is neither plain meaning nor simple explanation. What must happen is that the recipient must respond in such a way that the issuer may determine whether the message has been properly understood. The RCSDT concludes that the proposed language gives plain meaning. No change made.</p> <p>- Delete reference to "adverse reliability impact" from the "Directive" definition. The "adverse reliability impact" definition is not clear, is this an actual event or contingency?</p> <p>The words imply it is an actual event which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Likewise, the definition of Adverse Reliability Impact clearly identifies as a potential or actual event in the phrase, “an event that results in.” Both conditions are important to the definition. The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term. The term as it appears in the standard is the revised term is the NERC Board of Trustee adopted term: The impact of an event that results in Bulk Electric System instability or Cascading. No change made.</p>		
American Electric Power		<p>COM-001-02</p> <p>R9: A two hour limit to repair or designate a replacement Alternative Interpersonal Communications capability is overly aggressive.</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the</p>

Organization	Yes or No	Question 6 Comment
		<p>entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>COM-002-03</p> <p>R1: Should this requirement also include references to a manual action?</p> <p>The RCSDT believes adding the word “manual” is unnecessary and overly prescriptive. No change made.</p> <p>COM-002-03</p> <p>R3:The text “to resolve any misunderstandings” is unnecessary and should be removed.</p> <p>The RCSDT believes this phrase is essential to the process of communications. No change made.</p> <p>COM-002-3 VSL’s:</p> <p>As we have stated on previous projects, all severity levels need to be commensurate with both:</p> <p>a) the degree by which the requirement was violated, and</p> <p>The RCSDT has followed the VSL Guidelines in properly assigning the VSL as binary. No change made.</p> <p>b) by the impact of the violation to the BES. In this case, a single VSL of “Severe” violates both principles.</p> <p>The RCSDT notes the Violation Risk Factors define the potential impact to the BES; whereas, the VSL is how badly an entity violated the requirement. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>There needs to be more gradients across the severity levels, and the single VSL of “Severe” incorrectly makes the assumption that the impact to the BES was severe.</p> <p>The RCSDT has followed the VSL Guidelines in properly assigning the VSL as binary. No change made.</p> <p>IRO-001-3</p> <p>R1, R2, R3: Having this requirement apply to actions and/or directions (which may be different than Reliability Directives) may put the recipient in a position that they are judged on whether or not they acted on communication that was not a Reliability Directive.</p> <p>The RCSDT views R1 as an authority requirement to direct others, which could include a subset of direction called, Reliability Directive. Requirement R2 is the response requirement for the recipient. The judgment the recipient is under is that the recipient must comply with the direction, unless the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. Requirement R3 is simply requires the recipient to inform the issuer of its inability to perform the direction. No change made.</p> <p>The draft states that the purpose of this standard is “To establish the capability and authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.” The key word used is “direct”, so communications that need to be acted upon should be Reliability Directives only. The addition of any non-defined term is in conflict with the definition and intent of the term Reliability Directive. This could potentially cause confusion, especially at critical times when communication is key.</p>
<p>Response: See response above.</p>		
Georgia Transmission		The following comments are regarding IRO-001-3.

Organization	Yes or No	Question 6 Comment
Corporation		<p>Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator “to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.” Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3.</p> <p>The RCSDT views R1 as an authority requirement to direct others, which could include a subset of direction called, Reliability Directive. Requirement R2 is the response requirement for the recipient. The judgment the recipient is under is that the recipient must comply with the direction, unless the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. Requirement R3 is simply requires the recipient to inform the issuer of its inability to perform the direction. No change made.</p> <p>COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause:</p> <p>“When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact?</p> <p>Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent.</p> <p>The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and, therefore, does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p> <p>It is recommended that the treatment of Reliability Directives shall be consistent</p>

Organization	Yes or No	Question 6 Comment
		<p>with those being developed for TOP-001-2 as proposed by the Real-Time Operations drafting team (Project 2007-03).</p> <p>The RCSDT is using the term in the same context in this standard as it is in TOP-001-2. No change made.</p> <p>As such, consider using the following language for R2: “Each TOP, BA, and GOP shall comply with each identified Reliability Directive issued and identified as such by its RC, unless such actions would violate safety, equipment, regulatory, or statutory requirements.”</p> <p>The RCSDT is addressing a directive (P487, Order 693) to include the DP in COM-001 and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p> <p>Accordingly, please consider using the following language for R3:</p> <p>“Each TOP, BA, and GOP shall inform its RC of its inability to perform an identified Reliability Directive issued by that RC.” Again, we do not believe the DP would receive an identified Reliability Directive directly from the RC and the DP applicability should be removed from this standard. The DP is appropriately captured under COM-002 and TOP-001 with respect to Reliability Directives.</p> <p>Accordingly, NERC’s Reliability Functional Model V5 describes and identifies the DP’s relationships with other functional entities to TOP and BA with respect to Real Time.</p> <p>Real Time⁹</p> <p>7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority.</p>

⁹ NERC Functional Model Version 5, “Functional Entity – Distribution Provider,” pg 47, (http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf)

Organization	Yes or No	Question 6 Comment
		<p>8. Implements system restoration plans as coordinated by the Transmission Operator.</p> <p>9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment.</p> <p>The following comments are regarding COM-001-2.</p> <p>With respect to the Functional Model V5, please see Page 31, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.</p> <p>The SDT should include an additional qualifier to Interpersonal Communications within the context of these requirements, for example (operational or dispatch center communications??). Technically, the air we breathe, as well as other mediums like “any” cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. Assuming at least one employed individual can speak, all entities could demonstrate compliance of this capability at all times, therefore, it is not clear the intent of these requirements are accurately being presented.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>It is recommended to include the use of “signed attestation letters” as examples of evidence under M4 and M11 and other measures as appropriate.</p> <p>The RCSDT proposes that R4 and R11 allow for compliance flexibility. A “signed attestation letter” is one form of evidence. The measures are examples and the entity is not limited to those examples. No change made.</p>

Organization	Yes or No	Question 6 Comment
Response: See response above.		
BGE		No comment.
Response: No comment provided.		
Nebraska Public Power District		<p>Comments: COM-001-2:</p> <p>Requirement 10 is too open ended as written. The measure, M10, indicates that only impacted entities need to be notified. The requirement should be changed to make it consistent with the measure. The requirement would then read ‘Each RC, TOP And BA shall notify impacted entities as identified...’Requirements 3 and 5 place the responsibility for establishing Interpersonal Communication capability on the TOP and BA. It is quite conceivable that a TOP or BA may not know all, or newly, registered DPs and GOPs in its respective area.</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>In Requirements 7 and 8, the DP and GOP, respectively, are in turn responsible for establishing Interpersonal Communication capability. The TOPs/BAs and the DPs/GOPs should not be responsible for this. The DPs and GOPs should be held accountable for requesting that capability of their TOP and BA. Therefore, we suggest adding the following phrase at the end of Requirements 3.3, 3.4, 5.3 and 5.4 - ‘that has requested Interpersonal Communications capability.’</p> <p>Then R3.3 would read ‘Each Distribution Provider within its Transmission Operator Area that has requested Interpersonal Communications capability.’</p> <p>The standard establishes requirement for communication capability appropriate to</p>

Organization	Yes or No	Question 6 Comment
		<p>ensure reliability. There is no requirement for it to be different from the Interpersonal Communication capability that its Balancing Authority has with it nor the Interpersonal Communication capability that its Transmission Operator has with it. Cooperation and coordination is always encouraged and is an excellent practice, but is not required by this standard. Thank you for your suggestion. No change made.</p> <p>Requirement 9: could be construed to mean that the repair or replacement due to an unsuccessful test should be completed within 2 hours. In any case a rewording of the second sentence of Requirement 9 would make it clear and we would suggest the following:</p> <p>“ The responsible entity shall, within 2 hours of the unsuccessful test, provide notification to the proper authority in order to initiate repair or designate a replacement Alternative Interpersonal Communications capability. “</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability; and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>COM-002-3:</p> <p>Requirement 2/Measure 2: There is an inconsistency between the requirement and the measure. The requirement allows the recipient to repeat, restate, rephrase or recapitulate the directive. Measure 1 [See M2] only mentions repeating the directive.</p> <p>The RCDST appreciates your observation. The phrases “restate, rephrase or</p>

Organization	Yes or No	Question 6 Comment
		<p>recapitulate,” have been added to Measure, M2.</p> <p>Requirement 3: The second bullet in Requirement 3 appears to require the reissuance of an entire Reliability Directive if only a single point in the directive is not correctly repeated, restated, rephrased or recapitulated. Is this what the SDT intended?</p> <p>Shouldn’t consideration be given for that portion of the directive that was communicated properly? Then only a new, revised directive containing the portion of the original directive that was misunderstood would need to be reissued.</p> <p>The RCSDT’s intention of the requirement is to confirm the communication is confirmed accurate and, if not, any misunderstanding is corrected. The requirement does not limit the entity to reissuing the entire Reliability Directive. So an entity is not precluded from only correcting the portion of the misunderstanding. No change made.</p>
<p>Response: See response above.</p>		
<p>Georgia System Operations</p>		<p>Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator “to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.” Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3.</p> <p>COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: “When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact? Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and</p>

Organization	Yes or No	Question 6 Comment
		<p>COM-002-3 R1 inconsistent.</p> <p>The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and, therefore, does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p> <p>It is recommended that the treatment of Reliability Directives shall be consistent with those being developed for TOP-001-2 as proposed by the Real-Time Operations drafting team (Project 2007-03).</p> <p>The RCSDT is using the term in the same context in this standard as it is in TOP-001-2. No change made.</p> <p>As such, consider using the following language for R2: “Each TOP, BA, and GOP shall comply with each identified Reliability Directive issued and identified as such by its RC, unless such actions would violate safety, equipment, regulatory, or statutory requirements.”</p> <p>Accordingly, please consider using the following language for R3:</p> <p>“Each TOP, BA, and GOP shall inform its RC of its inability to perform an identified Reliability Directive issued by that RC.” Again, we do not believe the DP would receive an identified Reliability Directive directly from the RC and the DP applicability should be removed from this standard. The DP is appropriately captured under COM-002 and TOP-001 with respect to Reliability Directives.</p> <p>The RCSDT believes the latitude afforded in R2 and R3 allows for normal operational dialogue that may not require the use of Reliability Directive. The RC determines when Reliability Directive is applicable. No change made.</p> <p>With respect to the Functional Model V5, please see Page 31, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution</p>

Organization	Yes or No	Question 6 Comment
		<p>Providers, and Interchange Coordinators.” No change made.</p> <p>The RCSDT is addressing a directive (P487, Order 693) to include the DP in COM-001 and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p> <p>Accordingly, NERC’s Reliability Functional Model V5 describes and identifies the DP’s relationships with other functional entities to TOP and BA with respect to Real Time. Real Time¹⁰</p> <p>7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority.</p> <p>8. Organization	Yes or No	Question 6 Comment
		<p>this proposed definition of Interpersonal Communication. Assuming at least one employed individual can speak, all entities could demonstrate compliance of this capability at all times, therefore, it is not clear the intent of these requirements are accurately being presented.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The RCSDT agrees with your assessment of “medium” and included the term to allow flexibility for an entity to communicate as they determine and demonstrate compliance. Two or more individuals are required for communication to occur where they interact, consult or exchange information. No change made.</p> <p>The RCSDT proposes that R4 allows for compliance flexibility. “Signed attestation letters” could qualify as “equivalent evidence” as stated in M4 and M11. No change made. It is recommended to include the use of “signed attestation letters” as examples of evidence under M4 and M11 and other measures as appropriate.</p> <p>The RCSDT proposes that R4 and R11 allow for compliance flexibility. A “signed attestation letter” is one form of evidence. The measures are examples and the entity is not limited to those examples. No change made.</p>
<p>Response: See response above.</p>		
<p>Ingleside Cogeneration LP</p>		<p>Ingleside Cogeneration LP is concerned that the entity-to-entity organization of the COM Standards is quickly being outdated by voice and video conferencing or one-to-many broadcasts. In addition, email may be a preferred mode of most communications to and from small Generator Operators.</p> <p>It is not clear that these technologies are precluded from consideration by COM-001 and COM-002 - which means that some auditors may believe that they are. This leads to inconsistent application of the compliance criteria, and may discourage the</p>

Organization	Yes or No	Question 6 Comment
		<p>use of some powerful technologies. It appears to us that some technical guidelines would be appropriate to help entities and auditors decide which are applicable under these Standards.</p>
<p>Response: The RCSDT proposes that COM-001-2 and COM-002-3, as written, allows flexibility for an entity to communicate where two or more individuals are required for communication to occur and they interact, consult or exchange information. Compliance is contained in the measures and an entity must determine if their communication method can demonstrate compliance with the requirements. No change made.</p>		
<p>Duke Energy</p>		<p>- COM-001-2 does not specify how much time an entity is allowed to restore failed Interpersonal Communications capability or failed Alternative Interpersonal Communications capability.</p> <p>R1 through R6 require that the RC, TOP and BA have both. R7 and R8 require that DPs and GOPs have Interpersonal Communications capability. An auditor could find an entity non-compliant with these requirements upon failure of either capability.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>R9, R10 and R11 specify actions to take upon failure, but do not relieve entities of responsibility under R1 through R8.</p> <p>The RCSDT believes non-compliance is not due solely to the failure of any Interpersonal Communication capability, but must be accompanied by a failure to consult with the applicable Transmission Operator or Balancing Authority to establish mutually agreeable action for restoration. No change made.</p> <p>-COM-001-2 R9, M9 and VSLs - M9 and VSLs should be revised to be consistent with wording of R9 phrase “at least once per calendar month.”</p> <p>The RCSDT agrees with your comments and has aligned M9 and the R9 VSL to the R9</p>

Organization	Yes or No	Question 6 Comment
		<p>to use “once each calendar month.”</p> <p>-COM-001-2 R10, M10 and VSLs - Clarity is needed regarding when the 60-minute clock starts. For example, suppose a failure is detected immediately upon occurrence of the failure. Does the 60-minute clock start immediately, or after the failure has lasted 30 minutes? When does the 60-minute clock start if a failure is detected and the entity is unsure when it occurred?</p> <p>The RCSDT proposes that upon detection of failure that continues at least 30 minutes, starts the 60-minute clock. The 30 minutes allows an entity time to restore or determine if it can restore its Interpersonal Communication capability before the clock starts. No change made.</p> <p>-COM-001-2 R10, M10 and VSLs - If the failure only lasts for 35 minutes, it appears that the RC, TOP or BA is still required to notify entities identified in R1 through R6. Is this the drafting team’s intent?</p> <p>Yes. The clock starts upon detection of failure of at least 30 minutes. No change made.</p> <p>-COM-001-2 R10, M10 and VSLs - Should be revised since the RC, TOP and BA are only required to have Alternative Interpersonal Communications capability with other RCs, TOPs and BAs per R2, R4 and R6.</p> <p>For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>Suggested rewording for R10:</p> <p><i>“Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify entities with which it is required to have Alternative Interpersonal Communications capability as identified in R2, R4 and R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer.”</i></p>

Organization	Yes or No	Question 6 Comment
		<p>-COM-001-2 M11 and VSL - Replace the word “their” with the word “its.” The RCSDT agrees and has modified M11 and VSL, as you suggested.</p> <p>-COM-001-2 Data Retention - The way Data Retention is being enforced, this whole section could just be reduced to a blanket statement that an entity must be able to provide evidence that it has been in compliance since its last audit. The RCSDT has provided the Data Retention section consistent with the approved Standard Drafting Team Guidelines. No change made.</p> <p>-COM-002-3 R2, M2 and VSL - Replace “and” with “or.” The RCSDT agrees with your comment and modifies R2, M2, and VSL accordingly. Also, the phrase “repeat, restate, rephrase or recapitulate” seems excessive and may be intended to avoid a violation where an entity fails to repeat the Reliability Directive word for word. Suggested rewording: “Each Balancing Authority, Transmission Operator, Generator Operator or Distribution Provider that is the recipient of a Reliability Directive shall repeat the Reliability Directive back to the issuer with sufficient accuracy so that understanding can be confirmed.” The RCSDT believes the term suggested “sufficient accuracy” is subject to interpretation. The RCSDT proposes the terms to allow a recipient to convey the message back to the issuer without a word-for-word requirement as long as the issuer confirms the accuracy of the response or reissues it to resolve any misunderstanding. No change made.</p> <p>-COM-002-3 R3, M3 - Replace “and” with “or.” The RCSDT agrees with your comment and modifies R3, M3, and VSL accordingly.</p> <p>-IRO-001-3 - We believe that the Purpose and the Requirements of this standard should be focused solely on situations where the Reliability Coordinator issues Reliability Directives to prevent an Emergency or Adverse Reliability Impact.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and, therefore, does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p> <p>IRO-001-3 - The Purpose should be rewritten as follows: “To establish the authority of Reliability Coordinators to issue Reliability Directives to other entities to prevent an Emergency or the impact of an event that results in Bulk Electric System instability or Cascading.”</p> <p>The RCSDT appreciates the suggested rewording; however, the RCSDT development of the IRO-001-3 Purpose Statement allows for instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. The requirements of IRO-001-3 allow the RC to issue a Reliability Directive if they determine one should be issued. No change made.</p> <p>-IRO-001-3 - R1 should be rewritten as follows: “Each Reliability Coordinator shall have authority to act or to issue Reliability Directives to others, including but not limited to the Transmission Operator, Balancing Authority and Generator Operator within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or the impact of an event that results in Bulk Electric System instability or Cascading.”</p> <p>The RCSDT appreciates the suggested rewording; however, the Functional Model V5 addresses the scope of the RC function. No change made.</p> <p>-IRO-001-3 - R2 should be rewritten as follows: <i>“Each Transmission Operator, Balancing Authority, Generator Operator or Distribution Provider shall comply with a Reliability Directive issued by the Reliability Coordinator unless the Reliability Directive cannot be physically implemented or unless such action would violate safety, equipment, regulatory, or statutory requirements.”</i></p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT appreciates the suggested rewording; however, as written R2 allows for normal operational dialogue without having to invoke a Reliability Directive by the RC. No change made.</p> <p>-IRO-001-3 - R3 should be rewritten as follows: “Each Transmission Operator, Balancing Authority, Generator Operator or Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to comply with a Reliability Directive in accordance with Requirement R2.</p> <p>The RCSDT appreciates the suggested rewording; however, as written R2 allows for normal operational dialogue without having to invoke a Reliability Directive by the RC. No change made.</p> <p>-IRO-001-3 Measures and VSLs - Should be revised to conform with the above suggested revisions to requirements.</p>
<p>Response: See response above.</p>		
<p>ISO New England</p>		<p>none</p>
<p>ERCOT ISO</p>		<p>Regarding COM-001-2:</p> <p>We are not clear on the time horizon of requirements for COM-001-2. Based upon the purpose statement, it appears that establishment would be ahead of real time. Wording in the requirements could be construed as maintaining at all times vs. establishing communications.</p> <p>The RCSDT proposes that compliance with requirements of the standard must be demonstrated. The Purpose Statement is not measured. No change made.</p> <p>The timeline for mandatory/effectiveness may not be acceptable to establish communications with DPs if hardware procurement/projects must take place.</p> <p>The RCSDT considered concerns about the implementation of the requirements by DP and GOPs and concluded the requirements are achievable within the</p>

Organization	Yes or No	Question 6 Comment
		<p>implementation period. No change made.</p> <p>Regarding IRO-001-3:</p> <p>We have some concern for the removal of LSE in particular from R2 and R3 from current IRO-001-2 for the ERCOT region. The ERCOT region has QSEs that manage Load Resources. There may be some QSEs that are not registered as a GOP that deploy Load Resources. Per the current LSE JRO, QSEs with Load Resources are registered as LSEs. Not requiring LSEs to deploy Load Resource directives could be perceived as a reliability gap created from the previous version to this version. PSEs could be removed as long as they fall under BA authority.</p> <p>The RCSDT believes the DP is the correct entity because the LSE does not own assets. The definition of LSE is, “The functional entity that secures energy and transmission service (and reliability related services) to serve the electrical demand and energy requirements of its end use customers.” In contrast, the definition of a DP is, “The functional entity that provides facilities that interconnect an End-use Customer load and the electric system for the transfer of electrical energy to the End-use Customer. Additionally, the Functional Model V5 demonstrates this under the Reliability Coordinator, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.</p> <p>The Data Retention section should be corrected to match the new requirements numbers and elimination of the previous version R1 with ERO.</p> <p>The Version History mentions six requirements retired, but only details five.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 6 Comment
ReliabilityFirst		<p>Comments on COM-001-2</p> <p>1. Applicability Section</p> <p>a. RFC recommends adding the Generator Owner to the applicably section of the standard along with corresponding Requirements R8 and R11. ReliabilityFirst believes to maintain system reliability and based on certain business practices in effect, Generator Owners need to be required to have associated Interpersonal Communications with its Balancing Authority and Transmission Operator.</p> <p>The RCSDT considered this situation and have concluded Generator Owners do not operate facilities of the BES. Under the Functional Model V5 Generator Owners have these Relationships with Other Functional Entities. The following is an excerpt from the Functional Model V5 concerning the Generator Owner. No change made.</p> <ol style="list-style-type: none"> 1. Provides generator information to the Transmission Operator, Reliability Coordinator, Balancing Authority, Transmission Planner, and Resource Planner. 2. Provides unit maintenance schedules and unit retirement plans to the Transmission Operator, Balancing Authority, Transmission Planner, and Resource Planner. 3. Develops an interconnection agreement with Transmission Owner on a facility basis. 4. Receives approval or denial of transmission service request from Transmission Service Provider. 5. Provides reliability related services to Purchasing-Selling Entity pursuant to agreement. 6. Reports the annual maintenance plan to the Reliability Coordinator, Balancing Authority and Transmission Operator. 7. Revises the generation maintenance plans as requested by the Reliability Coordinator.

Organization	Yes or No	Question 6 Comment
		<p>2. Requirement R7 and R8</p> <p>a. ReliabilityFirst seeks further clarity on why the Distribution Provider and Generator Operator are not required to designate an Alternative Interpersonal Communications capability?</p> <p>Requirements R7 and R8 require the Distribution Providers and Generator Operators to have Interpersonal Communications capability but there is not corresponding requirement to have an Alternative Interpersonal Communications capability.</p> <p>ReliabilityFirst recommends adding two new requirements for the Distribution Provider and Generator Operator to designate an Alternative Interpersonal Communications capability. This will be consistent with how Requirements R1 through R6 are set up.</p> <p>The standard establishes requirement for communication capability appropriate to ensure reliability. In addition, R7 and R8 are responsive to FERC Order No. 693. Entities may use the telephone cited in the example as their Interpersonal Communication capability. Requirement R11, as modified, addresses the loss of Interpersonal Communication capability. No change made.</p> <p>3. Requirement R9</p> <p>a. Assuming new requirements for the Distribution Provider and Generator Operator to designate an Alternative Interpersonal Communications capability (based on previous comment) are added to the standard, the Distribution Provider and Generator Operator will need to be added to Requirement R9 to test its Alternative Interpersonal Communications capability at least once per calendar month.</p> <p>The RCSDT thanks you for your comment and believes the DP and GOP only need Interpersonal Communication capability and it meets the respective FERC directive. No change made.</p> <p>4. Requirement R10</p> <p>a. Based on the ReliabilityFirst comment submitted for Question 4, ReliabilityFirst</p>

Organization	Yes or No	Question 6 Comment
		<p>believes the Distribution Provider and Generator Operator should be included in Requirement R10.</p> <p>The RCSDT proposes that DP and GOP are included in the requirement. "... shall notify entities..." as identified in R1 through R6. No change made.</p> <p>b. Since Interpersonal Communications capabilities is a very important piece of operating the BES in a reliable manner, ReliabilityFirst believes the timeframe in which an entity is required to notify the entities is too long. ReliabilityFirst recommends the following language for Requirement R10:</p> <p>i. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall notify entities as identified in Requirements R1 through R8 of a failure of its Interpersonal Communications capabilities that lasts 15 minutes or longer. The notification shall be made within 30 minutes of the detection of a failure.</p> <p>The RCSDT proposed the time frame to allow sufficient time for an entity to determine if IC could be restored. No change made.</p> <p>5. VSLs for Requirement R1 through R8</p> <p>a. ReliabilityFirst suggest gradating the VSLs for R1 through R8. Listed below is an example of how to gradate the VSL for R1. The same type of approach could be used for R2 through R8 as well.</p> <p>i. High VSL- the Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 or 1.2.</p> <p>ii. Severe VSL - The Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 and 1.2.</p> <p>The RCSDT has applied the VSL to the Severe column because not having Interpersonal Communication capability with any entity is detrimental to reliability.</p>

Organization	Yes or No	Question 6 Comment
		<p>No change made.</p> <p>6. VSL for Requirement R9</p> <p>a. For consistency with the requirement language, ReliabilityFirst recommends adding the words “at least on a monthly basis” to the Lower, Moderate and High VSLs and adding the words “if the test was unsuccessful” to the end of the Lower, Moderate and High VSLs.</p> <p>Listed below is an example of the Lower VSL.</p> <p>i. The responsible entity tested the Alternative Interpersonal Communications capability at least once per calendar month but failed to initiate action to repair or designate a replacement Alternative Interpersonal Communications in more than 2 hours and less than or equal to 4 hours if the test was unsuccessful.</p> <p>The RCSDT notes the requirement requires the entity to perform the test each month. If the test is not performed during each month, there is no other option for gradating the severity of the violation. No change made.</p> <p>7. VSL for Requirement R10</p> <p>a. ReliabilityFirst provided alternate language for R10 in the comments listed above. If the alternated language is not incorporated, ReliabilityFirst recommends the following language for the Lower VSL. Similar language could be used for the Moderate, High and Severe VSLs as well.</p> <p>i. The responsible entity failed to notify entities as identified in Requirements R1 through R6 more than 60 minutes but less than or equal to 70 minutes of the detection of a failure of its Interpersonal Communications capabilities.</p> <p>b. If the alternate language for R10, in the comments listed above, is incorporated, ReliabilityFirst recommends the following language for the Lower VSL. Similar language could be used for the Moderate, High and Severe VSLs as well.</p> <p>i. The responsible entity failed to notify entities as identified in Requirements R1</p>

Organization	Yes or No	Question 6 Comment
		<p>through R6 more than 30 minutes but less than or equal to 740 minutes of the detection of a failure of its Interpersonal Communications capabilities</p> <p>c. For Moderate VSL (the VSL after the OR statement), ReliabilityFirst recommends using a percentage rather than the “least one, but not all” statement. For example, if there is say 100 impacted entities and the applicable entity only notify 1, they would only fall under the Moderate. In another scenario there is say 100 impacted entities and the applicable entity only notified 99, they would also fall under the Moderate as well. The use of percentages will help even this out.</p> <p>The RCSDT made conforming changes to the VSLs to address a number of comments and changes to the requirements.</p> <p>8. VSL for Requirement R11</p> <p>a. For consistency with the requirement language, ReliabilityFirst recommends the following language:</p> <p>i. The responsible entity that experiences a failure of any of its Interpersonal Communication capabilities failed to consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.</p> <p>Comments on COM-002-3</p> <p>The RCSDT has made conforming changes to the VSLs due to comments received about the R11.</p> <p>1. Requirement R1</p> <p>a. Based on ReliabilityFirst suggested change to the definition of “Reliability Directive” as noted in Question 5, ReliabilityFirst recommends deleting Requirement R1. Based on the suggested definition, any communication initiated, where an action by the recipient is required, is considered a “Reliability Directive.” Thus, there would no longer be a need for responsible entity to identify the action as a</p>

Organization	Yes or No	Question 6 Comment
		<p>“Reliability Directive” to the recipient.</p> <p>In coordination with the RTOSDT work on the TOP family of standards, the RCSDT does not propose that the Reliability Directive definition contain a requirement for action to be taken. Therefore, R1 is retained as a requirement for the “action” to be taken. No change made.</p> <p>2. VSL for Requirement R3</p> <p>a. For consistency with the requirement language, ReliabilityFirst recommends the following language:</p> <p>The RCSDT has followed the VSL Guidelines in properly assigning the VSL as binary. No change made.</p> <p><i>i. The responsible entity issued a Reliability Directive, but failed to confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate.</i></p> <p>Comments on IRO-001-3</p> <p>1. Requirement R1</p> <p>a. ReliabilityFirst seeks further clarity on why Requirement R1 only requires the Reliability Coordinator to have the “authority to act” rather than requiring the Reliability Coordinator to actually “take action” to prevent identified events that result in an Emergency or Adverse Reliability Impacts. Having the “authority to act” does not inherently require the Reliability Coordinator to take action, if appropriate.</p> <p>The RCSDT proposes that R1 reflects the Purpose of IRO-001-3. No change made.</p> <p>b. ReliabilityFirst seeks further clarity on the language “to prevent identified events.” If the event was already identified, how can the Reliability Coordinator act to prevent it? ReliabilityFirst recommends adding the word “potential” in between the words “prevent” and “identified.”</p> <p>The context of “identified” is when a set of system conditions is recognized that</p>

Organization	Yes or No	Question 6 Comment
		<p>could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. No change made.</p> <p>2. Requirement R3</p> <p>a. There is no time qualifier specified in Requirement R3 dealing with the timeframe in which the applicable entity has to inform its Reliability Coordinator of its inability to perform as directed in accordance with Requirement R2. Without a time qualifier, Requirement R3 is open ended and could cause issues if the applicable entity does not inform its Reliability Coordinator upon recognition of its inability to perform as directed in a timely manner. ReliabilityFirst recommends the following language for Requirement R3:</p> <p><i>i. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator within 30 minutes upon recognition of its inability to perform as directed in accordance with Requirement R2.</i></p> <p>The RCSDT proposes the term “upon recognition of its inability to perform” does not require a time limit. No change made.</p> <p>The Measure M3, has been updated to include the phrase “upon recognition of its inability” to be consistent with R3.</p> <p>3. VSL for Requirement R1</p> <p>a. Requirement R1 requires the Reliability Coordinator to “...have the authority to act” - and the VSL does not reflect this language. ReliabilityFirst had questioned why Requirement R1, does not specifically require the RC to take action or direct actions in a comment submitted under Requirement R1. If the SDT does not change the language in Requirement R1, ReliabilityFirst recommends the following language:</p> <p><i>i. The Reliability Coordinator failed to have the authority to take action or direct actions, to prevent an identified event that resulted in an Adverse Reliability Impact.</i></p> <p>The RCSDT made conforming changes to the VSL.</p>

Organization	Yes or No	Question 6 Comment
		<p>4. VSL for Requirement R2</p> <p>a. For the High VSL, the words “fully comply” are ambiguous and open to interpretation. ReliabilityFirst recommends only having a Severe VSL.</p> <p>b. The Severe VSL states “directive” while Requirement R2 states “direction.” To be consistent, ReliabilityFirst recommends the following language:</p> <p><i>i. “The Responsible Entity failed to comply with its Reliability Coordinator’s direction”</i></p> <p>The RCSDT thanks you for your comment and has made conforming changes to the VSL.</p>
<p>Response: See response above.</p>		
<p>City of Vero Beach</p>		<p>In the definition of Interpersonal Communication, the use of the word “medium” is ambiguous. Suggestions for alternatives: “system”, “channel.”</p> <p>The RCSDT proposes the term “medium” to allow entities flexibility on how they communicate and meet compliance with the requirements. No change made.</p> <p>COM-001-2, R1 and R3, the phrase: “have Interpersonal Communications capabilities”, what if the communication system fails?</p> <p>The RCSDT proposes that AIC is in force at that time. No change made.</p> <p>Is that an immediate non-compliance (especially R3.3 and R3.4 which do not require a redundant system). Suggest using EOP-008 type of language to allow restoration of failed equipment without non-compliance.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the</p>

Organization	Yes or No	Question 6 Comment
		<p>flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>COM-001-2, R9 - "Each ... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity. In addition, the type of testing is unclear and ambiguous.</p> <p>The RCSDT proposes that R9 correctly identifies and provides clarity for the entities required to have Alternative Interpersonal Communication capability. No change made.</p> <p>The is also ambiguity in the terms "direct", "directive", "direction" and "Reliability Directive." The SDT may want to consider using the terms "instruct" and "instruction" in place of "direct," "directive," or "direction" to more clearly distinguish from a Reliability Directive.</p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards and is consistent with previous postings. No change made.</p>
<p>Response: See response above.</p>		
<p>NV Energy</p>		<p>The meaning of R9 is open to some interpretation. It states that if the monthly test is unsuccessful, the entity shall "initiate action to repair or designate a replacement" AIC within 2 hours. The meaning of this is unclear in several ways:</p> <p>First, does "initiate action" apply to the remainder of the sentence or just to the "repair" option?</p> <p>Second, what constitutes initiation of action?</p> <p>Is it the intent of the SDT that the alternate interpersonal communications be</p>

Organization	Yes or No	Question 6 Comment
		<p>restored within a 2-hour limit?</p> <p>If so, the words do not clearly state that, and it seems an impossible task to ensure no more than 2-hr outage to an alternate communications medium. I am voting affirmative under the interpretation that one must only "initiate" the repair or "initiate" the designation of a replacement option within this tight 2-hour limit.</p>
<p>Response: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability; and then, if it decides to do so, designate another, if you may, "new" Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p>		
<p>Midwest Independent Transmission System Operator</p>		<p>COM-001-2, R2 and R6:</p> <p>MISO requests clarification as to whether the designation of Interpersonal Communications and Alternative Interpersonal Communications methods by Responsible Entities must be formally documented and/or agreed upon with those entities with which communications capability must be established.</p> <p>The RCSDT has provided flexibility to the responsible entity with regard to implementation and compliance. Please note that Interpersonal Communication is a "shall have" and Alternative Interpersonal Communication capability is "designate." Please refer to the Measures for suitable evidence, which may be used to support compliance with the requirement. No change made.</p> <p>COM-001-2, R9:</p> <p>MISO suggests that the designation of Alternative Interpersonal Communications methods should not require formal documentation and may be agreed upon (when necessary) informally with those entities with which communications capability must be established in the event of an unsuccessful test of its Alternative Interpersonal</p>

Organization	Yes or No	Question 6 Comment
		<p>Communications capability.</p> <p>The RCSDT has provided flexibility to the responsible entity with regard to implementation and compliance. Please note that Interpersonal Communication is a “shall have” and Alternative Interpersonal Communication capability is “designate.” Please refer to the Measures for suitable evidence, which may be used to support compliance with the requirement. No change made.</p> <p>COM-001-2, Requirement R10:</p> <p>MISO requests clarification as to whether “impacted entities” refers to those entities with which the Responsible Entity must have Interpersonal Communications and Alternative Interpersonal Communications capability.</p> <p>Further, MISO requests clarification as to whether the notification required by R10 must be made using the Alternative Interpersonal Communications method selected by the Responsible Entity.</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>With respect to the method used by the Responsible Entity, the standard does not provide the “how” or any prescriptive method for accomplishing the requirement. No change made.</p> <p>COM-002-3, R1 - R3:</p> <p>MISO respectfully submits that, while it appreciates the distinction in responsibilities proposed in the new COM-002-3 and acknowledges that such distinction is beneficial, these requirements increase compliance risk and potential penalty liability without attendant benefit to the reliability of the Bulk Electric System. MISO respectfully suggests that Requirements 2 and 3 be converted into sub-requirements</p>

Organization	Yes or No	Question 6 Comment
		<p>as follows:</p> <p><i>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p><i>R1.1. When the Reliability Coordinator, Transmission Operator or Balancing Authority identifies a stated action as a Reliability Directive, the receiving Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider shall repeat, restate, rephrase or recapitulate the Reliability Directive to the issuing Reliability Coordinator, Transmission Operator or Balancing Authority. [Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p><i>R1.2. When the Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive receives a response from the receiving Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider, it shall then either [Violation Risk Factor: High][Time Horizon: Real-Time]:</i></p> <ul style="list-style-type: none"> -Confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate, or -Reissue the Reliability Directive to resolve any misunderstandings. <p>The RCSDT contends the requirements in the proposed standard have been constructed in accordance with standard development guidelines to have only one performance per requirement. The suggested change places three independent actions within one requirement. No change made.</p>
<p>Response: See response above.</p>		
Texas Reliability Entity		<p>(1) There are numerous errors in the Mapping Document in referencing the current version of the standard and requirement. Specifically, referencing IRO-001-2 where it appears that the document should reference standard IRO-001-3. In addition, the</p>

Organization	Yes or No	Question 6 Comment
		<p>notes on page 2 of COM-002-3 are incorrect.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(2) In the VRF/VSL Justification document, there are numerous errors in referring to standard versions and requirements.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(3) In IRO-001-3, R1 - What is an “identified event,” and who “identifies” an event that requires compliance with this requirement R1? An RC may choose not to “identify” an event, such as a limit violation, and run the risk of causing or exacerbating an emergency. If the RC does not “identify” the event, it may become an actual event and then fall within the standard.</p> <p>The context of “identified” is when a set of system conditions are recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. The RC named in R1 is the entity that identifies the even that requires compliance. No change made.</p> <p>(4) In the VSL for IRO-001-3, R1, there should be language in the VSL to capture the term “Emergency,” which was added in the Requirement. The High VSL for R2 needs to be fixed.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections. The “N/A” in R2 of COM-002-3 was removed.</p> <p>(5) In IRO-001-3, R1, remove the “s” in the phrase “Adverse Reliability Impacts.”</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(6) Referring to the Implementation Plan for IRO-001 - There is a different list in the Implementation Plan (R2, R4, R5, R6, R7, R9) than the Revision History of the Standard (R2, R4, R5, R6, R8). Where is the retirement of R1 shown?</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(7) Referring to COM-001-2: Measure 7, the word “that” is inadvertently repeated in</p>

Organization	Yes or No	Question 6 Comment
		<p>the first sentence.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in Measure M8 has been changed to delete the additional “that.”</p> <p>(8) In COM-001-2, Measure 9, is “at least on a monthly basis” to be interpreted differently than “at least once per calendar month” as stated in the requirement?</p> <p>The RCSDT thanks you for your comments and has made conforming corrections to Measure M9 and the R9 VSL.</p> <p>(9) In COM-001-2, there is a “Measure 12” bullet that should be removed.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(10) Referring to COM-002-3: Electronic directives (which may be issued over many different types of electronic communication channels) are increasingly necessary to manage the modern, dynamic Bulk Power System (generation and transmission) on a real-time basis. The effective use of electronic directives is undermined by this proposed Standard in its current form. This draft standard, in conjunction with other standards that refer to directives, appears to require that directives (at least Reliability Directives) be given verbally. The failure of the NERC standards to address electronic directives may cause significant manpower issues for BAs with large portfolios of generation to manage.</p> <p>The RCSDT proposes that COM-001-2 and COM-002-3, as written, allows flexibility for an entity to communicate where two or more individuals are required for communication to occur and they interact, consult or exchange information. Compliance is contained in the Measures and an entity must determine if its communication method can demonstrate compliance with the requirements. No change made.</p> <p>(11) In the VSL for COM-001-2 R4, a reference to Part 4.3 should be added.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p>

Organization	Yes or No	Question 6 Comment
		<p>(12) In IRO-001-3, Part 1.3 Data Retention, the reference in the first bullet to “Electric reliability Organization” is incorrect. We think it should say “Reliability Coordinator” instead.</p> <p>The other references to entities and to Requirements in this Part 1.3 also appear to be incorrect and need to be updated and corrected.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>(13) Referring to COM-001-2, the prior version of this standard included Requirement R5: “Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities.” This Requirement has been removed from the present draft of COM-001-2.</p> <p>The RCSDT removed this requirement because it did not have a reliability benefit. No change made.</p> <p>The mapping document seems to suggest that this Requirement was moved to EOP-008, but it is not there. We are concerned that removal of this Requirement will result in a reduction in the level of BES reliability and introduce a potential reliability gap.</p> <p>As stated in the Implementation Plan, the RCSDT proposes retiring COM-001-1, R5 as it is redundant with EOP-008-0, R1 as well as replacement EOP-008-1, R1. No change made.</p>
<p>Response: See response above.</p>		
<p>Hydro One Networks Inc.</p>		<p>(1) The proposed implementation plan conflicts with Ontario regulatory practice respecting the effective date of the standard. It is suggested that this conflict be removed by appending to the implementation plan wording, after “applicable regulatory approval” in the Effective Dates Section A5 on P. 4 of the draft standard</p>

Organization	Yes or No	Question 6 Comment
		<p>COM-001, COM-002 and IRO-001, and on P. 2 of COM-001’s Implementation Plan and P. 1 of COM-002’s and IRO-001’s Implementation Plans, to the following effect:”, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.”</p> <p>The RCSDT is uncertain where the conflict exists. The standard IRO-001 uses the term “after applicable” and the others “following applicable.” The RCSDT has updated the standards to use the most current effective date language.</p> <p>(2) COM-001: Measure M9: - “monthly basis.” Suggest changing “monthly basis” to “at least once per calendar month” to be consistent the wording in R9.</p> <p>The RCSDT thanks you for your comment and has made conforming changes the Measure M9 and the R9 VSL.</p> <p>(3) IRO-001: Measures M1, M2, M3 - The types of evidence are listed in paragraph form. This is not consistent with presentation style in COM-001-2 Measures, where evidence is listed in bullet format. Suggest using bullet form for consistency.</p> <p>The RCSDT appreciates your comments and has made all the Measures bullet form in COM-001-2, but not in COM-002-3 and IRO-001-3.</p> <p>(4) IRO-001, Data Retention Section:</p> <p>i. The retention requirements do not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4.</p> <p>ii. Section 1.3, second paragraph:</p> <p>“The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider... shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to</p>

Organization	Yes or No	Question 6 Comment
		<p>retain specific evidence for a longer period of time as part of an investigation:"</p> <p>The word "or" between Generator Operator and Distribution Provider should be changed to "and."</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Data Retention section.</p>
<p>Response: See response above.</p>		
<p>New York Independent System Operator</p>		<p>COM-001</p> <p>The drafting team has complicated the requirements by having different requirements between RC/TOP/BA and other entities such as GOP/LSE/DP. The proposal is for redundancy to be required only between RC/TOP/BA. The requirement should be simplified to require all identified entities to have plans for loss of primary communication channels. This could include third parties as a communication channel.</p> <p>The RCSDT refers the Order No. 693 in Paragraph 508 to clarify the reason the DP and GOP are not required to have Alternative Interpersonal Communication and is as follows: "(1) expands the applicability to include Generator Operators and Distribution Providers and includes Requirements for their telecommunications facilities; (2) identifies specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation and (3) includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions." In addition, R11 requires the DP and GOP to consult with its BA and TOP to determine a mutually agreeable action for restoration. No change made.</p> <p>COM-002</p> <p>The drafting team added a requirement to identify a Reliability Directive is being initiated during an emergency to track 3-part communication for compliance</p>

Organization	Yes or No	Question 6 Comment
		<p>purposes. This will change and complicate the communication protocols between normal and emergency operations simply to simplify compliance assessments. The NYISO is asking for clarification that an entity may identify Reliability Directives as a category of communications to be communicated through procedures and training; and will not require a different communication protocol between normal and emergency operations. Affective communications can only be achieved through consistent processes for all conditions. Compliance assessments should be made on when we are in an emergency or not, and not on how the dialogue was initiated.</p> <p>The RCSDT believes the standard allows for this condition, and the method of implementation is up to the entity. No change made.</p>
<p>Response: See response above.</p>		

END OF REPORT

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.
10. Third posting of revised standards on January 4, 2010 with comment period closed on February 3, 2010.
11. Initial Ballot conducted February 25 through March 7, 2011.
12. Draft version 5 of the standard and response to comments March 7, 2011 - January 9, 2012.
13. Fifth posting of revised standards on January 9, 2012 with comment period closed on February 9, 2012.
14. Successive ballot conducted January 30 through February 9, 2011.
15. Draft version 6 of the standard and response to comments February 9, 2011 – June 5, 2012.
16. Recirculation ballot conducted June 27 through July 6, 2012.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. Following the initial ballot the project was subdivided with some standards moving forward ahead of others. Proposed modifications to IRO-001-2 were subdivided into two phases – with the first phase the recommended retirement of Requirement R7 as a conforming change associated with approval of

IRO-014-2. IRO-001-3 is the second phase and includes more extensive edits to the standard. The current posting contains revisions based on stakeholder comments on the initial ballot. The team is posting for a successive ballot.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post standards for a successive ballot.	January-February 2012
2. Respond to comments on Successive ballot	March - April 2012
3. Standards posted for recirculation ballot	June 2012
4. Standards to be sent to BOT for approval.	August 2012
5. Standards filed with regulatory authorities.	October 2012

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

The RC SDT proposes the following new definition:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

This defined term is contained in draft COM-002-3 and IRO-001-3.

As a reference, we have included the existing definition of Emergency and the BOT approved definition of Adverse Reliability Impact:¹

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

Adverse Reliability Impact: The impact of an event that results in Bulk Electric System instability or Cascading.

¹ This definition was approved by the NERC Board of Trustees on August 4, 2011. Filing with regulatory authorities is pending.

A. Introduction

1. **Title: Reliability Coordination – Responsibilities and Authorities**
2. **Number:** IRO-001-3
3. **Purpose:** To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.
4. **Applicability**
 - 4.1. Reliability Coordinator
 - 4.2. Transmission Operator
 - 4.3. Balancing Authority
 - 4.4. Generator Operator
 - 4.5. Distribution Provider
5. **Effective Date:** The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

B. Requirements

- R1.** Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact. *[Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R2.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R3.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

C. Measures

- M1.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or

equivalent documentation, that will be used to determine that it had the authority to take action or direct action, which could have included issuing Reliability Directives, to prevent identified events or mitigate the magnitude or duration of actual events that resulted in an Emergency or Adverse Reliability Impact within its Reliability Coordinator Area. (R1.)

M2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction, unless the direction could not be physically implemented, or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2.)

M3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it informed the Reliability Coordinator of its inability to perform as directed in accordance with Requirement R2. (R3.)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity shall serve as the Compliance Enforcement Authority (CEA) unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases, the ERO or a Regional Entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances

where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator for Requirement R1, Measure M1 shall retain voice recordings for the most recent 90 calendar days or documentation for the most recent 12 calendar months.
- The Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall retain for Requirements R2 and R3, Measures M2 and M3 shall retain voice recordings for the most recent 90 calendar days or documentation for the most recent 12 calendar months.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	<p>The Reliability Coordinator failed to take action or direct actions, to prevent an identified event that resulted in an Emergency or Adverse Reliability Impact.</p> <p>OR</p> <p>The Reliability Coordinator failed to take action or direct actions to mitigate the magnitude or duration of an event that resulted in an Emergency or Adverse Reliability Impact.</p>
R2	N/A	N/A	N/A	<p>The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider did not comply with the Reliability Coordinator's direction, and compliance with the direction could have been physically implemented and such actions would not have violated safety, equipment, regulatory, or statutory requirements.</p>
R3	N/A	N/A	N/A	<p>The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider failed to inform its Reliability Coordinator upon recognition of its inability to perform as directed.</p>

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Approved by FERC — Effective Date	New
1	May 19, 2011	Replaced Levels of Noncompliance with FERC-approved VSLs	VSL Order
2	To be determined	Retired Requirement R7 to eliminate redundancy with IRO-014-2, Requirement R1.	Project 2006-06
3	TBD	Revised in accordance with SAR for Project 2006-06, Reliability Coordination (RC SDT). Revised the standard and retired six requirements (R1, R2, R4, R5, R6, and R9). Requirement R3 becomes the new R1 and R8 becomes the new R2 and R3.	Project 2006-06

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.
10. Third posting of revised standards on January 4, 2010 with comment period closed on February 3, 2010.
11. Initial Ballot conducted February 25 through March 7, 2011.
- [12. Draft version 5 of the standard and response to comments March 7, 2011 - January 9, 2012.](#)
- [13. Fifth posting of revised standards on January 9, 2012 with comment period closed on February 9, 2012.](#)
- [14. Successive ballot conducted January 30 through February 9, 2011.](#)
- [15. Draft version 6 of the standard and response to comments February 9, 2011 – MONTH DAY June 5, 2012.](#)
- [16. Recirculation ballot conducted MONTH XX through MONTH XX June 27 through July 6, 2012.](#)

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. Following the initial ballot the project was subdivided with some standards moving forward ahead of others. Proposed modifications to IRO-001-2 were subdivided into two phases – with the first phase the recommended retirement of Requirement R7 as a conforming change associated with approval of IRO-014-2. IRO-001-3 is the second phase and includes more extensive edits to the standard. The current posting contains revisions based on stakeholder comments on the initial ballot. The team is posting for a successive ballot.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post standards <u>Standards</u> for a successive ballot.	January-February 2012
2. Respond to comments on Successive ballot	March - April 2012
3. Standards posted for recirculation ballot	June <u>May</u> 2012
4. Standards to be sent to BOT for approval.	August <u>June</u> 2012
5. Standards filed with regulatory authorities.	October <u>August</u> 2012

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

The RC SDT proposes the following new definition:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

This defined term is contained in draft COM-002-3 and IRO-001-3.

As a reference, we have included the existing definition of Emergency and the BOT approved definition of Adverse Reliability Impact:^{1,2}

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

Adverse Reliability Impact: The impact of an event that results in Bulk Electric System instability or Cascading.

¹ ~~This definition was approved by the NERC Board of Trustees on August 4, 2011. Filing with regulatory authorities is pending.~~

² ~~This definition was approved by the NERC Board of Trustees on August 4, 2011. Filing with regulatory authorities is pending.~~

A. Introduction

1. **Title:** **Reliability Coordination – Responsibilities and Authorities**
2. **Number:** IRO-001-3
3. **Purpose:** To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.
4. **Applicability**
 - 4.1. Reliability Coordinator
 - 4.2. Transmission Operator
 - 4.3. Balancing Authority
 - 4.4. Generator Operator
 - 4.5. Distribution Provider
5. **Effective Date:** The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes~~this standard shall become effective on the first day of the second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become~~ effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC~~after~~ Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.~~approval.~~

B. Requirements

- R1. Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.~~Impacts.~~ [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]
- R2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]
- R3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]

C. Measures

- M1. ~~Each~~ Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it ~~had~~has the authority to take action or direct action, which could have included issuing Reliability Directives,~~Directive(s),~~ to prevent identified events or mitigate the magnitude or duration of actual events that resulted

~~in an Emergency or caused~~ Adverse Reliability ~~Impact~~Impacts within its Reliability Coordinator Area. (R1.)

- M2.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction,~~(s)~~ unless the direction could not be physically implemented, or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2.)
- M3.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it informed the Reliability Coordinator of its inability to perform as directed in accordance with Requirement R2. (R3.)~~-(R3)~~

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

~~The For entities that do not work for the~~ Regional Entity, ~~the Regional Entity~~ shall serve as the Compliance Enforcement Authority (CEA) unless the applicable entity is owned, operated, or controlled by the-

~~For Reliability Coordinators that work for their~~ Regional Entity. In such cases, the ERO or a Regional Entity approved by ~~the ERO and~~ FERC or other applicable governmental ~~authority~~authorities shall serve as the CEA.~~Compliance Enforcement Authority.~~

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance ~~Violation~~ Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- ~~○ The Electric reliability Organization shall retain its evidence for 5 calendar years for Requirement R1, Measure M1.~~
- The Reliability Coordinator ~~for Requirement R1, Measure M1 shall~~ retain ~~voice recordings its evidence~~ for the most recent 90 calendar days ~~or for voice recordings or 12 months for~~ documentation for the most recent 12 calendar months ~~Requirement R2, Measure M2.~~
- The Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall retain for Requirements R2 and R3, Measures M2 and M3 shall retain voice recordings its evidence for the most recent 90 calendar days ~~for voice recordings or 12 calendar months for~~ documentation for the most recent 12 calendar months. ~~Requirements R3 and R4, Measures M3 and M4.~~
- If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time specified above, whichever is longer. ~~notified by the Compliance Enforcement Authority that the evidence is no longer needed.~~
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	<p>The Reliability Coordinator failed to take action or direct actions, to prevent an identified event that resulted in an <u>Emergency or</u> Adverse Reliability Impact.</p> <p>OR</p> <p>The Reliability Coordinator failed to take action or direct actions to mitigate the magnitude or duration of an event that resulted in an <u>Emergency or</u> Adverse Reliability Impact.</p>
R2	N/A	N/A	<p>N/A/N/A The responsible entity initiated the action directed by the RC, but failed to fully comply with the RC's directive.</p>	<p>The <u>Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider</u>responsible entity did not comply with the Reliability Coordinator's <u>direction, and compliance with the direction could have been physically implemented and such actions would not have violated safety, equipment, regulatory, or statutory requirements</u>directive.</p>
R3	N/A	N/A	N/A	<p><u>The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider</u>The responsible entity failed to inform its Reliability Coordinator upon recognition of its inability to perform as directed.</p>

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Approved by FERC — Effective Date	New
1	May 19, 2011	Replaced Levels of Noncompliance with FERC-approved VSLs	VSL Order
2	To be determined	Retired Requirement R7 to eliminate redundancy with IRO-014-2, Requirement R1.	Project 2006-06
3	TBD	Revised in accordance with SAR for Project project 2006- 066 , Reliability Coordination (RC SDT).; Revised the standard and retired six requirements (R1 , R2 , R4 , R5 , R6 , and R9). Requirement R3 becomes the new R1 and R8 becomes the new R2 and R3.	Project 2006-06

Implementation Plan and Mapping Document

IRO-001-3 Reliability Coordination – Responsibilities and Authorities

Requested Approval

The RC SDT requests the approval of IRO-001-3 – Reliability Coordination – Responsibilities and Authorities.

Requested Retirement

The RC SDT request the retirement of standard IRO-001-2 – Responsibilities and Authorities, Requirements R1 and R2, and the associated sub-requirements.

Prerequisite Approvals

None.

Defined Terms in the NERC Glossary

The RC SDT proposes the following new definition:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

Conforming Changes to Requirements in Already Approved Standards

None.

Revision Summary

The RC SDT is proposing the following revisions. Requirement, R1 will be retired because it is addressed in the NERC Rules of Procedure, Section 501 and 503. Requirements, R2 and R5 are proposed for retirement. Requirement, R3 will become the new Requirement R1, the authority to act and direct others to act, which may include Reliability Directives. Requirement, R4 is proposed for retirement because it is redundant with the NERC Rules of Procedure, Section 501 and 508. Requirement, R6 is proposed for retirement because PER-003-0 provides the necessary reliability replacement with no gap in reliability. Requirement, R7 is proposed for retirement because IRO-014-2, R1 provides the necessary reliability replacement with no gap in reliability. Requirement, R8 is proposed for replacement by the new IRO-001-3, Requirement R2 and R3. Requirements, R9 is proposed for retirement because it is redundant with other requirements and it is covered under the Reliability Coordinator's Standard of Conduct.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Transmission Operator Generator Operator
- Distribution Provider

Effective Dates

The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

New or Revised Standard

IRO-001-3 In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees adoption.

Standard for Retirement

IRO-001-2 Midnight of the day immediately prior to the Effective Date of IRO-001-3 in the particular Jurisdiction in which the new standard is becoming effective.

Implementation Plan for Definition

Reliability Directive: Entities shall use this definition when implementing the standard IRO-001-3, which uses this defined term.

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard becomes effective. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p>The RC SDT proposes retiring the requirement as it is addressed in the NERC Rules of Procedure, March 15, 2012:</p> <p>Section 503, 2 (2.1)</p> <p>“Regional Entities shall verify that all Reliability Coordinators, Balancing Authorities, and Transmission Operators meet the Registration requirements of Section 501(1.4).”</p> <p>Section 501 (1.4)</p> <p>“1.4 For all geographical or electrical areas of the Bulk Power System, the Registration process shall ensure that (1) no areas are lacking any entities to perform the duties and tasks identified in and required by the Reliability Standards to the fullest extent practical, and (2) there is no unnecessary duplication of such coverage or of required oversight of such coverage. In particular the process shall:</p> <p style="padding-left: 40px;">1.4.1 Ensure that all areas are under the oversight of one and</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p>only one Reliability Coordinator.</p> <p>1.4.2 Ensure that all Balancing Authorities and Transmission Operator entities¹ are under the responsibility of one and only one Reliability Coordinator.</p> <p>1.4.3 Ensure that all transmission Facilities of the Bulk Power System are the responsibility and under the control of one and only one Transmission Planner, Planning Authority, and Transmission Operator.</p> <p>1.4.4 Ensure that all loads and generators are under the responsibility and control of one and only one Balancing Authority.”</p>
<p>Notes:</p>	
<p>IRO-001-1</p> <p>R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p>None – The RC SDT proposes retiring the requirements.</p>
<p>Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how a Reliability</p>	

¹ Some organizations perform the listed functions (e.g., Balancing Authority, Transmission Operator) over areas that transcend the Footprints of more than one Reliability Coordinator. Such organizations will have multiple Registrations, with each such Registration corresponding to that portion of the organization’s overall area that is within the Footprint of a particular Reliability Coordinator.

Already Approved Standard	Proposed Replacement Requirement(s)
Coordinator will comply with all other NERC Standards, making this requirement redundant.	
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-3</p> <p>R1. Each Reliability Coordinator shall take have the authority to actions or direct others to actions (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROs are contained in other standards (e.g., TOP-007, R2). This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in IRO-001-1, R1, which states that the Reliability Coordination will act or direct actions to mitigate issues. Additionally, stakeholders indicated issues with the ability to measure compliance with the phrase, “without intentional delay” and this was removed.</p>	
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability</p>	<p>None – The RC SDT proposes retiring the requirement.</p> <p>RC SDT contends that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, Section 500 (March 15, 2012) and should be retired from the standard.</p> <p>(Section 501)</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>“The purpose of the Organization Registration Program is to clearly identify those entities that are responsible for compliance with the FERC approved Reliability Standards. Organizations that are registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable Reliability Standards.”</p> <p>(Section 508)</p> <p>Provisions Relating to Coordinated Functional Registration (CFR) Entities</p> <p>In addition to registering as an entity responsible for all functions that it performs itself, multiple entities may each register using a CFR for one or more Reliability Standard(s) and/or for one or more Requirements/sub-Requirements within particular Reliability Standard(s) applicable to a specific function. The CFR submission must include a written agreement that governs itself and clearly specifies the entities’ respective compliance responsibilities. The Registration of the CFR is the complete Registration for each entity. Additionally, each entity shall take full compliance responsibility for those Reliability Standards and/or Requirements/sub-Requirements it has registered for in the CFR. Neither NERC nor the Regional Entity shall be parties to any such agreement, nor shall NERC or the Regional Entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the CFR.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Notes: Section 508 addresses written agreements.</p>	
<p>IRO-001-1</p> <p>R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – The RC SDT proposes retiring the requirement because it is covered by PER-003-0, R1.</p> <p>PER-003-0</p> <p>R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions:</p> <p style="padding-left: 40px;">R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System.</p> <p style="padding-left: 40px;">R1.2. Positions directly responsible for complying with NERC standards.</p>
<p>Notes: The RC SDT recommends retiring IRO-001-1, R6 as it is redundant with PER-003-0, R1, R1.1., and R1.2.</p>	
<p>IRO-001-1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability</p>	<p>None – The RC SDT proposes retiring the requirement because it is covered by IRO-014-2, R1.</p> <p>IRO-014-2</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Coordinator Areas are coordinated. <i>[Violation Risk Factor: High]</i></p>	<p>notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT proposes retiring the retirement of IRO-001-1, R7 as this is redundant with IRO-014-1 R1.</p>	
<p>IRO-001-1</p> <p>R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-3</p> <p>R2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator’s direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT added the Distribution Provider per FERC Order 693. The RC SDT proposes the replacement of IRO-001-1, R8 with two requirements IRO-001-3, R2, and R3.</p> <p>The Distribution Provider was added as an applicable entity per FERC Order 693.</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity. <i>[Violation Risk Factor: High]</i></p>	<p>None – Retire requirement because it is redundant.</p>
<p>Notes: The RC SDT proposes retiring this requirement. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the RC Area and the Interconnection. Section 6 of the NERC Standard Development Procedure states that NERC develops and maintains Reliability Standards. Equity issues are covered under the Reliability Coordinator Standards of Conduct.</p>	

Functions that Must Comply with the Requirements in the Standards

Standard	Functions that Must Comply With the Requirements							
	Reliability Coordinator	Balancing Authority	Distribution Provider	Transmission Operator	Transmission Service Provider	Purchasing Selling Entity	Generator Operator	Load Serving Entity
IRO-001-2	X	X	X	X			X	

Implementation Plan and Mapping Document

~~for IRO-001-3 – Reliability Coordination~~ – Responsibilities and Authorities

Approvals Requested Approval

The RC SDT requests the approval of IRO-001-3 – Reliability Coordination – Responsibilities and Authorities.

Requested Retirement

The RC SDT request the retirement of standard IRO-001-2 – Responsibilities and Authorities, Requirements R1 and R2, and the associated sub-requirements.

Prerequisite Approvals

- None.

Defined Terms in the NERC Glossary

The RC SDT proposes the following new definition:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

Conforming Changes to Requirements in Already Approved Standards

- None.

Revision Summary

The RC SDT is proposing the following revisions. Requirement, R1 will be retired because it is addressed in the NERC Rules of Procedure, Section 501 and 503. Requirements, R2 and R5 are proposed for retirement. Requirement, R3 will become the new Requirement R1, the authority to act and direct others to act, which may include Reliability Directives. Requirement, R4 is proposed for retirement because it is redundant with the NERC Rules of Procedure, Section 501 and 508. Requirement, R6 is proposed for retirement because PER-003-0 provides the necessary reliability replacement with no gap in reliability. Requirement, R7 is proposed for retirement because IRO-014-2, R1 provides the necessary reliability replacement with no gap in reliability. Requirement, R8 is proposed for replacement by the new IRO-001-3, Requirement R2 and R3. Requirements, R9 is proposed for retirement because it is redundant with other requirements and it is covered under the Reliability Coordinator’s Standard of Conduct.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Transmission Operator Generator Operator
- Distribution Provider
 - ~~The RC SDT revised the standard and is proposing retiring six requirements (R2, R4, R5, R6, R7 and R9). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERC's Rules of Procedure and to address issues in FERC Order 693.~~

Effective Dates

~~The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in~~ those jurisdictions where regulatory approval is not required, the standard becomes ~~IRO-001-3 shall become effective on the first day of the second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become~~ effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC ~~After~~ Board of Trustees, or as otherwise made effective pursuant ~~approval.~~

Retirements

~~IRO-001-2 should be retired at midnight of the day immediately prior to the laws applicable to such ERO governmental authorities. Effective Date of IRO-001-3 in the particular jurisdiction in which the new standard is becoming effective.~~

New or Revised Standard

<u>IRO-001-3</u>	<u>In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees adoption.</u>
------------------	--

Standard for Retirement

<u>IRO-001-2</u>	<u>Midnight of the day immediately prior to the Effective Date of IRO-001-3 in the particular Jurisdiction in which the new standard is becoming effective.</u>
------------------	---

Implementation Plan for Definition

Reliability Directive: Entities shall use this definition when implementing the standard IRO-001-3, which uses this defined term.

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard becomes effective.~~is implemented~~. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p><u>The RC SDT proposes retiring the</u>This requirement was retired as it is addressed in the NERC Rules of Procedure, <u>March 15, 2012:</u></p> <p>Section 503, item 2 (-2.1):</p> <p>“Regional Entitiesentities shall verify that all Reliability Coordinators, Balancing Authorities, balancing authorities and Transmission Operators meet the Registration requirements of Section 501(1.4).”</p> <p><u>Section 501 (1.4)</u></p> <p><u>“1.4 For all geographical or electrical areas of the Bulk Power System, the Registration process shall ensure that (1) no areas are lacking any entities to perform the duties and tasks identified in and required by the Reliability Standards to the fullest extent practical, and (2) there is no unnecessary duplication of such coverage or of required oversight of such coverage. In particular the process shall:</u></p> <p style="padding-left: 40px;"><u>1.4.1 Ensure that all areas are under the oversight of one and only one Reliability Coordinator.</u></p> <p style="padding-left: 40px;"><u>1.4.2 Ensure that all Balancing Authorities and Transmission Operator entities¹transmission operators are under the responsibility of one and only one Reliability Coordinator. a reliability coordinator”²</u></p> <p style="padding-left: 40px;"><u>1.4.3 Ensure that all transmission Facilities of the Bulk Power</u></p>

¹ Some organizations perform the listed functions (e.g., Balancing Authority, Transmission Operator) over areas that transcend the Footprints of more than one Reliability Coordinator. Such organizations will have multiple Registrations, with each such Registration corresponding to that portion of the organization’s overall area that is within the Footprint of a particular Reliability Coordinator.

	<p><u>System are the responsibility and under the control of one and only one Transmission Planner, Planning Authority, and Transmission Operator.</u></p> <p><u>1.4.4 Ensure that all loads and generators are under the responsibility and control of one and only one Balancing Authority.”R1.—</u></p>
--	--

Notes:

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R2.- The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. -The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p>IRO-001-2</p> <p>None – The RC SDT proposes retiring thethese requirements.</p>

Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how a Reliability Coordinator~~an RC~~ will comply with all other NERC Standards, making this requirement redundant.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no</p>	<p>IRO-001-32</p> <p>R1. —Each Reliability Coordinator shall take have the authority to actions or direct others to actions (which could include issuing Reliability Directives) by Transmission Operators, Balancing Authorities, Generator Operators, and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse</p>

longer than 30 minutes. <i>[Violation Risk Factor: High]</i>	Reliability Impacts. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]
--	---

Notes:

- The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROLs are contained in other standards (e.g., TOP-007, R2).
- ~~The Distribution Provider was added as an applicable entity per FERC Order 693. This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in IRO-001-1, R1, which states that the Reliability Coordination will act or direct actions to mitigate issues. Additionally, stakeholders indicated issues with the ability to measure compliance with the phrase, “without intentional delay” and this was removed.~~

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-001-2</p> <p>None – The RC SDT proposes retiring retire the requirement.</p> <p>RC SDT contendsproposes that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, Sectionsection 500 <u>(March 15, 2012)</u> and should be retired from the standard.</p> <p>(–Section 501)–states:</p> <p>“The purpose of the <u>Organization Registration Program</u> iscompliance registry will be to clearly identify those entities that are responsible for compliance with <u>the FERC approved Reliability Standards</u>reliability standards. Organizations <u>that are registered are included</u>listed on the <u>NERC Compliance Registry (NCR)</u> and areregistry will be responsible for knowing the content of and for complying with <u>all applicable Reliability Standards</u>the NERC reliability standards.”</p>

(Section 508)

Provisions Relating to Coordinated Functional Registration (CFR) Entities

In addition to registering as an entity responsible for all functions that it performs itself, multiple Also, section 507, item 2 addresses written agreements;

Joint registration pursuant to written agreement.

~~“Where a JRO and any of its members or related entities may each register using a CFR agree, in writing, upon a division of compliance responsibility among them for one or more Reliability Standard(s) reliability standard(s) applicable to a particular function, and/or for one or more Requirements/sub-Requirements requirements within particular Reliability Standard reliability standard(s) applicable to a specific), both the JRO and such member(s) or related entity(ies) shall register as an organization responsible for that function. The CFR submission JRO and its member(s) or related entity(ies) must include have a written agreement that governs itself and clearly specifies the entities’ their respective compliance responsibilities. The Registration, which shall be submitted as part of the CFR is the complete Registration for each entity. Additionally, each entity shall take full compliance responsibility for those Reliability Standards and/or Requirements/sub-Requirements it has registered for in the CFR. joint registration. Neither NERC nor the Regional Entity regional entity shall be parties to any such agreement, between a JRO and its member or related entity(ies), nor shall NERC or the Regional Entity regional entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities -consistent with the CFR. joint registration.”~~

Notes: ~~Section 508 addresses written agreements~~The RC SDT recommends the retirement of IRO-001-1 R4.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1 R6.- The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-001-2 None – The RC SDT proposes retiring therequirement because it is <u>covered by PER-003-0, R1.</u>redundant with:</p> <p>PER-003-0 R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions:</p> <p>R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System.</p> <p>R1.2. Positions directly responsible for complying with NERC standards.</p>

Notes: The RC SDT recommends retiring IRO-001-1, R6 as it is redundant with PER-003-0, R1, R1.1., and R1.2.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1 R7.- The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2 None – The RC SDT proposes retiring therequirement should be retiredbecause it is <u>covered by IRO-014-2, R1.</u>redundant with:</p> <p>IRO-014-2 R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability</p>

	<p>Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p>
--	---

Notes: The RC SDT ~~proposes retiring~~recommends the retirement of IRO-001-1, R7 as this is redundant with IRO-014-1 R1.

Already Approved Standard	Proposed Replacement Requirement(s)
----------------------------------	--

<p>IRO-001-1 R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-32 R2. _____ Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator’s direction in accordance with Requirement R2 unless compliance with the direction in accordance with Requirement R2 the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>R3. R4. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
---	--

Notes: The RC SDT added the Distribution Provider per FERC Order 693 ~~and added the blue text shown in the requirements above.~~ The RC SDT proposes the replacement of IRO-001-1, R8 with two requirements IRO-001-~~3~~, R2, and~~2~~, R3, and~~4~~. ~~This will add clarity and measurability to the standard.~~

The ~~Distribution Provider~~ last part of the second sentence should be removed as it is implicit in R1, which states that the Reliability Coordinator will act or direct actions to mitigate issues. Stakeholders indicated issues with the ability to measure compliance with the phrase, “without intentional delay” and this was ~~added as an applicable entity per FERC Order 693~~.
 Relating to First Energy’s comment in FERC Order 693, the requirements address both personnel safety and equipment. There is no reference to a chain of command in the requirements. The standard is written such that decision-making authority rests with the Reliability Coordinator. No further revisions to the standard are required.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1 R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2 None – Retire retire the requirement <u>because it is</u> redundant.</p>
<p>Notes: The RC SDT proposes retiring this requirement. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the RC Area and the Interconnection. Section 6 of the NERC Standard Development Procedure states that NERC develops and maintains Reliability Standards. Equity issues are covered under the Reliability Coordinator Standards of Conduct.</p>

Violation Risk Factor and Violation Severity Level Justifications

IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Violation Risk Factor and Violation Severity Level Justifications

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in: IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

The Reliability Coordination Standard Drafting Team (SDT) applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSL for the requirements under this project.

NERC Criteria – Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or

restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Violation Risk Factor Guidelines

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:¹

Guideline 1 – Consistency with the Conclusions of the Final Blackout Report

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:²

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders

¹ North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").

² Id. at footnote 15.

- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief

Guideline 2 – Consistency within a Reliability Standard

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

Guideline 3 – Consistency among Reliability Standards

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline 4 – Consistency with NERC’s Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC’s definition of that risk level.

Guideline 5 – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC’s VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC’s Reliability Standards and implies that these requirements should be assigned a “High” VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are three requirements in IRO-001-3. None of the requirements were assigned a “Lower” VRF. Requirements R1, R2, and R3 are assigned a “High” VRF because this standard’s purpose is to establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impact.

NERC Criteria – Violation Severity Levels

Violation Severity Levels (VSLs) define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple “degrees” of noncompliant performance, and may have only one, two, or three VSLs.

Violation severity levels should be based on the guidelines shown in the table below:

Lower	Moderate	High	Severe
<p>Missing a minor element (or a small percentage) of the required performance</p> <p>The performance or product measured has significant value as it almost meets the full intent of the requirement.</p>	<p>Missing at least one significant element (or a moderate percentage) of the required performance.</p> <p>The performance or product measured still has significant value in meeting the intent of the requirement.</p>	<p>Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component.</p> <p>The performance or product has limited value in meeting the intent of the requirement.</p>	<p>Missing most or all of the significant elements (or a significant percentage) of the required performance.</p> <p>The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.</p>

FERC Order of Violation Severity Levels

FERC’s VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline 1 – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2 – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a “binary” type requirement must be a “Severe” VSL.

Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

Guideline 3 – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline 4 – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VRF and VSL Justifications

VRF Justifications – IRO-001-3, R1	
Proposed VRF	High
NERC VRF Discussion	
FERC VRF G1 Discussion	Guideline 1- Consistency w/ Blackout Report: N/A
FERC VRF G2 Discussion	Guideline 2- Consistency within a Reliability Standard: The requirement has no sub-requirements; only one VRF was assigned so there is no conflict
FERC VRF G3 Discussion	Guideline 3- Consistency among Reliability Standards: There is a similar requirement (Requirement R1) in EOP-002-2.1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to having responsibility to act to ensure reliability.
FERC VRF G4 Discussion	Guideline 4- Consistency with NERC Definitions of VRFs: Failure to act, direct actions or issue Reliability Directives may directly affect the electrical state or the capability of the bulk power system and may lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.
FERC VRF G5 Discussion	Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation: The requirement contains only one objective; therefore, only one VRF was assigned.

Proposed VSLs for IRO-001-3, R1				
R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	<p>The Reliability Coordinator failed to exercise its authority to take action or direct actions, to prevent an identified event that resulted in an Emergency or Adverse Reliability Impact.</p> <p>OR</p> <p>The Reliability Coordinator failed to exercise its authority to take action or direct actions to mitigate the magnitude or duration of an event that resulted in an Emergency or Adverse Reliability Impact.</p>
VSL Justifications – IRO-001-3, R1				
NERC VSL Guidelines			Meets NERC’s VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	
<p>FERC VSL G1</p> <p>Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance</p>			<p>The proposed requirement is comparable to approved EOP-002-2, Requirement. That is a binary requirement and thus, the VSL in the proposed standard is assigned a Severe VSL.</p>	
<p>FERC VSL G2</p> <p>Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties</p> <p>Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent</p> <p>Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language</p>			<p>Guideline 2a:</p> <p>N/A</p> <p>Guideline 2b:</p> <p>The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.</p>	

<p>FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</p>	<p>The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.</p>
<p>FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</p>	<p>The VSL is based on a single violation and not cumulative violations.</p>

VRF Justifications – IRO-001-3, R2	
Proposed VRF	High
NERC VRF Discussion	
FERC VRF G1 Discussion	<p>Guideline 1- Consistency w/ Blackout Report: N/A</p>
FERC VRF G2 Discussion	<p>Guideline 2- Consistency within a Reliability Standard: The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.</p>
FERC VRF G3 Discussion	<p>Guideline 3- Consistency among Reliability Standards: There is a similar requirement (Requirement R3) in TOP-001-1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to the complying with directives unless the following the directive would violate safety, equipment, regulatory or statutory requirements.</p>
FERC VRF G4 Discussion	<p>Guideline 4- Consistency with NERC Definitions of VRFs: Failure to comply with a reliability directive could lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.</p>
FERC VRF G5	<p>Guideline 5- Treatment of Requirements that Co-mingle More than One</p>

VRF Justifications – IRO-001-3, R2	
Proposed VRF	High
Discussion	Obligation: The requirement contains only one objective; therefore, only one VRF was assigned.

Proposed VSLs for IRO-001-3, R2				
R#	Lower	Moderate	High	Severe
R7	N/A	N/A	N/A	The responsible entity did not comply with the Reliability Coordinator’s direction, unless compliance with the direction could not be physically implemented or unless such actions would have violated safety, equipment, regulatory, or statutory requirements.

VSL Justifications – IRO-001-3, R2	
NERC VSL Guidelines	Meets NERC’s VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The proposed requirement is comparable to approved TOP-001-1, Requirement R3. That VSL is binary but the SDT notes that there are two possible levels of violation for this requirement. The two conditions are that 1) the responsible entity did not comply (severe) or 2) the responsible initiated action but did not fully comply (high). Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties	Guideline 2a: N/A Guideline 2b:

<p>Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent</p> <p>Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language</p>	<p>The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.</p>
<p>FERC VSL G3</p> <p>Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</p>	<p>The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.</p>
<p>FERC VSL G4</p> <p>Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</p>	<p>The VSL is based on a single violation and not cumulative violations</p>

VRF Justifications – IRO-001-3, R3	
Proposed VRF	High

Violation Risk Factor and Violation Severity Level

Justifications Assignments

IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Violation Risk Factor and Violation Severity Level Justifications

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in: IRO-001-3 – Reliability Coordination – Responsibilities and Authorities:

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

Justification for Assignment of Violation Risk Factors in IRO-001-3:

The Reliability Coordination Standard Drafting Team (SDT) applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSL for the requirements under this project: COM-001-2:

NERC Criteria – Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk

electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Violation Risk Factor Guidelines

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:^{1,2}

Guideline (1 ~~→~~) — Consistency with the Conclusions of the Final Blackout Report

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

— In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System.^{3,4}

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange

² [North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 \(2007\) \(“VRF Rehearing Order”\).](#)

³ [Id. at footnote 15.](#)

⁴ [Id. at footnote 15.](#)

- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) — Consistency within a Reliability Standard

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

Guideline (3) — Consistency among Reliability Standards

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) — Consistency with NERC’s Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC’s definition of that risk level.

Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC’s VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC’s Reliability Standards and implies that these requirements should be assigned a “High” VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are three requirements in IRO-001-3. None of the requirements were assigned a “Lower” VRF. Requirements R1, R2, and R3 are assigned a “High” VRF because this standard’s purpose is to establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impact, and all were assigned a “High” VRF.

NERC Criteria – Violation Severity Levels

Violation Severity Levels (VSLs) define the degree to which compliance with a VRF for IRO-001-2, Requirement R1:

- ~~FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement was not achieved. Each has no sub-requirements; only one VRF was assigned so there is no conflict.~~
- ~~FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement must have at least one VSL. While it is preferable (Requirement R1) in EOP-002-2.1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to having responsibility to have four VSLs for each requirement, some requirements do not have multiple "degrees" act to ensure reliability.~~
- ~~FERC's Guideline 4 — Consistency with NERC's Definition of noncompliant performance, a VRF. Failure to act, direct actions or issue Reliability Directives may directly affect the electrical state or the capability of the bulk power system and may have lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.~~
- ~~FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-001-2, Requirement R2 contains only one, two, or three VSLs. objective, therefore only one VRF was assigned.~~

VRF for IRO-001-2, Requirement R2:

- ~~FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.~~
- ~~FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in TOP-001-1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to the complying with directives unless the following the directive would violate safety, equipment, regulatory or statutory requirements.~~
- ~~FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with a reliability directive could lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.~~
- ~~FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-001-2 Requirement R3 contains only one objective, therefore only one VRF was assigned.~~

VRF for IRO-001-2, Requirement R3:

Justification for Assignment of Violation Risk Factors and Violation Severity Levels for Project 2006-06 – Reliability Coordination

- ~~FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.~~
- ~~FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in TOP-001-1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to informing the Reliability Coordinator when a directive can not be performed.~~
- ~~FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to inform the Reliability Coordinator of the inability to perform a reliability directive would prevent the Reliability Coordinator from developing an alternative solution to the reliability concern. This could lead to directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures.~~
- ~~FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-003-2, Requirement R4 has only one objective, therefore only one VRF was assigned.~~

Justification for Assignment of Violation severity levels should be Severity Levels for IRO-001-3:

~~In developing the VSLs for the TOP standard, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the guidelines shown in the table below none compliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:~~

Lower	Moderate	High	Severe
Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full intent of the requirement.	Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.	Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.	Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.

FERC Order of Violation Severity Levels

FERC’s VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard IRO-001-3 meet the FERC Guidelines for assessing VSLs:

Guideline 1 – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2 – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a “binary” type requirement must be a “Severe” VSL.

Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

Guideline 3 ~~–~~: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline 4 ~~–~~: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

Standards Announcement

Project 2006-06 Reliability Coordination

Ballot Window Extended for COM-001-2 – Successive Ballot and Non-Binding Poll

Extended

The ballot window for the successive ballot of COM-001-2 and a non-binding poll of the associated VRF/VSLs will be **extended one day at a time until a quorum is achieved**.

Instructions

Members of the ballot pools associated with this project may log in and submit their vote for the Standards and opinion in the non-binding polls of the associated VRFs and VSLs by clicking [here](#).

Next Steps

The drafting team will consider all comments received for COM-001-2 during the formal comment and ballot period and, if needed, make revisions to the standard. If the comments do not show the need for significant revisions, the standard will proceed to a recirculation ballot.

Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measureable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to the scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standard IRO-003-2.

Additional information is available on the [project page](#).

Standards Development Process

The [Standards Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

Standards Announcement Project 2006-06 Reliability Coordination

Formal Comment Period: June 7-July 6, 2012

Upcoming: June 27 – July 6, 2012
Successive and Non-Binding Poll: COM-001-2
Recirculation and Non-Binding Polls: COM-002-3 and IRO-001-3

[Now Available](#)

A formal comment period for **COM-001-2 – Communications** is open through **8 p.m. Eastern on Friday, July 6, 2012**. In response to industry comments, the Drafting Team made substantive changes to COM-001-2 – Communications requiring an additional comment period and successive ballot. The Drafting Team made minor changes to the VSLs but did not make substantive changes to **COM-002-3 – Communication and Coordination** and **IRO-001-3 – Reliability Coordination – Responsibilities and Authorities** requirements which passed the previous successive ballots.

Instructions for Commenting

A formal comment period for COM-001-2 is open through **8 p.m. Eastern on Friday, July 6, 2012**. Please use this [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, please contact Monica Benson at monica.benson@nerc.net. An off-line, unofficial copy of the comment form is posted on the [project page](#).

Commenters and voters **must** submit comments through the [electronic comment form](#). Due to modifications to NERC's balloting software, voters are no longer able to submit comments via the balloting software.

Next Steps

A successive ballot for COM-001-2 and a non-binding poll of the associated VRF/VSLs and recirculation ballots for COM-002-3 and IRO-001-3 and non-binding polls for the associated VRF/VSLs will be conducted on Wednesday, June 27 through 8 p.m. Eastern on Friday, July 6, 2012.

Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measureable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization

Request (PER-004 and PRC-001) were moved to other projects due to the scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standard IRO-003-2. Additional information is available on the [project page](#).

The Project 2006-06 standards are an important part of the ERO's strategic goal to develop technically sufficient standards with requirements that provide clear and unambiguous performance expectations and reliability benefits.

Standards Announcement Project 2006-06 Reliability Coordination

Successive, Recirculation and Non-Binding Poll Results

[Now Available](#)

A successive ballot for **COM-001-2 – Communications** and a non-binding poll of the associated VRF/VSLs and recirculation ballots for **COM-002-3 – Communication and Coordination** and **IRO-001-3 – Reliability Coordination – Responsibilities and Authorities** and non-binding polls for the associated VRF/VSLs concluded on Friday, July 6, 2012.

Voting statistics for each ballot are listed below, and the [Ballots Results](#) page provides a link to the detailed results.

Standard	Approval	Non-binding Poll Results
COM-001-2 (Successive)	Quorum: 75.37% Approval: 72.16%	Quorum: 75.37% Supportive Opinions: 73.71%
COM-002-3 (Recirculation)	Quorum: 85.34% Approval: 81.71%	Quorum: 84.16% Supportive Opinions: 79.16%
IRO-001-3 (Recirculation)	Quorum: 85.04% Approval: 81.72%	Quorum: 83.87 % Supportive Opinions: 86.91%

Next Steps

The drafting team is considering all comments submitted for COM-001-2, and based on the comments will determine whether to make additional changes. If the drafting team determines that no substantive changes to the standard are required, the team will submit the standard and associated documents for a recirculation ballot. If the drafting team makes substantive changes to the standard, the team will submit its consideration of comments, along with the revised standard and associated documents, for a quality review prior to posting for another successive ballot.

COM-002-3 – Communication and Coordination and IRO-001-3 – Reliability Coordination – Responsibilities and Authorities will be presented to the NERC Board of Trustees for adoption and subsequently filed with regulatory authorities. The VRFs and VSLs for both standards (unchanged from

those included in the versions of the standards posted for recirculation ballot) will be presented to the board for approval.

Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to the scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standard IRO-003-2.

Non-binding Poll Results				
Non-binding Poll Name:	Project 2006-06 Non-binding Poll IRO-001-3			
Poll Period:	6/27/2012 - 7/6/2012			
Total # Opinions:	286			
Total Ballot Pool:	341			
Summary Results:	83.87% of those who registered to participate provided an opinion or an abstention; 86.91% of those who provided an opinion indicated support for the VRFs and VSLs.

Standard Drafting Team Roster for NERC Standards Development
Project 2006-06 Reliability Coordination

**Project 2006-06 Reliability Coordination
Standard Drafting Team**

Name and Title	Company and Address	Contact Info	Bio
<p>William M. Hardy SDT Chair</p>	<p>Southern Company Services, Inc. 600 18th Street North PCC PCC-Corp HQ Birmingham, Alabama 35203-2206</p>	<p>wmhardy@southernco.com</p>	<p>Mike Hardy has 39 years of power industry experience at Southern Company. He currently is system operations supervisor in the Bulk Power Operations Power Coordination Center for Southern Company Transmission responsible for integrity of system control data and transmission energy accounting. Earlier, Mike supervised the load forecasting, maintenance scheduling and unit commitment processes in operations planning. He has system operator experience at the BA, TOP, RC and IA real-time operation functions of Southern Company. While at Georgia Power, Mike was an operator in its transmission control centers at the corporate and division levels. Prior to his move to operations, Mike worked as substation maintenance electrician in transmission and distribution maintenance. He started his career with Southern at Alabama Power as a tree trimmer for its distribution operations in Eufaula, Alabama.</p> <p>Mike serves as chair of the Reliability Coordination standard drafting team and also served as a member of the Interconnected Reliability Operating Limits standard drafting team for NERC. Most recently, he served as chair of the Scheduling Coordination Service taskforce for SERC.</p> <p>Mike holds a Bachelor of Science in Business Management from the University of Alabama-Birmingham. He earned certification in Industrial Electricity from Columbus Technical College in Columbus, Georgia and is also NERC certified as a System Operator-Reliability.</p>

<p>Earl A. Barber Telecommunication Engineering Manager</p>	<p>National Grid 300 Erie Blvd. West Syracuse, NY 13202</p>	<p>earl.barber@us.ngrid.com</p>	<p>Earl Barber is a Principle Substations Engineering at National Grid. With over twenty five years experience in the utility industry, Earl has mainly held positions in electric engineering, and engineering management. Recently, Earl held the position of Manager - Telecommunication Engineering where he was responsible for providing engineering support for wide band connectivity, wireless private voice communication networks, and for supporting initiatives such as the SMART program. Earl graduated with a BS in Electrical Engineering Technology from Rochester Institute of Technology, followed by a MBA in Marketing and Management from St. Bonaventure University. Earl has been an active member of the Utilities Telecom Counsel (UTC) Board of Directors and the Shared Telecom Networks (STN)) Management Committee. He has also served his community through sitting on the Executive Board of Aids Community Resources (ACR), United Way's Fiscal Management Team, Power Engineering Chair of the Syracuse Section of IEEE and a volunteer for Junior Achievement.</p>
<p>Timothy A. Beach</p>	<p>American Transmission Company LLC Transmission Reliability Administrator 2489 Rinden Road Cottage Grove, WI 53527-9598</p>	<p>tbeach@atcllc.com tbeach@caiso.com</p>	<p>Timothy A. Beach worked at American Transmission Company (ATC) as a Transmission Reliability Administrator, from 2001-20011. Prior to ATC, he worked at Alliant Energy and Wisconsin Power and Light, beginning in 1985. He served as the Operations Chair for the 9-18 Separation Event Analysis Team, as well as serving on the Operations Planning Working Group with the Midwest-ISO. Tim's work at ATC primarily encompasses liaison work with the System Planning, Engineering\ Projects, Maintenance, Compliance, as well as ATC management staff. Additionally Tim provided support to Real-Time Operations on reliability issues, outage planning as well as Operating Guide review and approval, and is the author of several ATC Transmission Operating Procedures. In August 2011 Tim began working for California-ISO as a Transmission Dispatcher, where his duties</p>

			are to coordinate the day-to-day operation of the transmission system managed by the California ISO, consistent with NERC Reliability Standards, WECC Regional Reliability Standards, applicable ISO Tariff and procedures to ensure the safe and reliable operation of the ISO controlled grid.
Paul Bleuss Shift Supervisor	California Independent System Operator Corp. Folsom, CA 95630		Paul Bleuss has been in the electrical industry for over 25 years. He is currently a shift supervisor at the California Independent System Operator Corp., a position he has held for the last three years. Prior to this position Paul was a Reliability Coordinator responsible for the California and Mexico sub-region of the WECC for seven years. Earlier positions include generation dispatcher, transmission dispatcher, and interchange scheduler at the CAISO dating back to 1998. Paul also was a system dispatcher, instrument & control tech., and power plant operator for the Northern California Power Agency dating back to 1986.
James S. Case, PE Member	Entergy Services, Inc. 6540 Watkins Drive Jackson, MS 39213-8208	jcase@entergy.com	<p>Jim S. Case was named director of weekly operations in June, 2008. Immediately prior to being named to this position, Case served in transmission operations as manager of transmission system security.</p> <p>As director of weekly operations, Case is responsible for the design, implementation and maintenance of procedures and processes necessary to ensure compliance with Entergy's transmission tariff on file with the Federal Energy Regulatory Commission that governs Entergy's weekly procurement process.</p> <p>Case is also responsible for developing and managing the processes to enable Entergy's Energy Delivery function to integrate into the MISO Regional Transmission Organization.</p> <p>Case has over thirty-eight years of electric utility experience, most recently in transmission operations. He has experience in all phases of transmission</p>

			<p>and distribution, including field engineering, construction management, distribution standards and bulk power operations. He currently directs a group that performs security-constrained unit commitment including independent offers on a week-ahead basis for Entergy. In addition to his previous assignment in transmission operations, he has served as manager of transmission security coordination. staff engineer in distribution standards, and district engineer in the south-central district of Entergy Mississippi. Before joining Entergy, Case worked for the Union Carbide Nuclear Division and Gulf Power Company.</p> <p>Case is active nationally in NERC. He is a member of the NERC Operating Committee, past Chair of the SERC Operating Committee, Chair of the NERC Real Time Operations Standards Drafting Team, member of the Reliability Coordination Standards Drafting Team, past member of the Interconnected Reliable Operations Standards Drafting Team, the Version 0 Standards Drafting Team, the Reliability Coordination Working Group, the Congestion Management Working Group and the ANSI C62 working group concerned with surge arrester standards.</p> <p>He has a bachelor's in electrical engineering from Mississippi State University and a master's in business administration from the University of Arkansas at Little Rock. Case is a senior member of Institute of Electrical and Electronics Engineers, Inc., member of the Power Engineering Society and is a registered professional engineer in Mississippi.</p> <p>Case is a member of Eta Kappa Nu, Tau Beta Pi, Beta Gamma Sigma and Alpha Epsilon Lambda.</p>
Albert DiCaprio Strategist	PJM Interconnection , L.L.C.	dicapram@pjm.com	Albert DiCaprio has been employed by PJM since 1970. His experience at PJM includes System Operations Department in

955 Jefferson
Avenue Valley
Forge
Corporate
Center
Norristown,
Pennsylvania
19403-2497

which he helped developed PJM generation control program, PJM's Accounting for regulation program and PJM's Fuel Supply Emergency procedures; in the System Performance Department he initiated performance monitoring and benchmarking programs, and PJM's Energy by Fuel type tracking system; and he helped launch PJM's first retail customer support program. As Senior Strategist, Al provides analysis and support for PJM positions on NERC standards and FERC initiatives.

Al has served on various NERC committees most notably as Chairman of the Performance Subcommittee when the first Control Performance Standard was approved and he served on the Task Force whose efforts led to the development of the NERC Functional Model. Al serves as the chairman of the ISO/RTO's Standards Review Committee who review and comment on NERC Reliability Standards, NAESB Business Practices and FERC initiatives related to reliability standards.

Active in the IEEE, he is a senior member and has published various papers and has served on Technical Activities committees for two Joint IEEE-CIGRE conferences.

Internationally, Al serves as the chairman of the International Group on Comparison of Transmission Operation Practices. Al has been part of CIGRE's initiative into Energy Markets and has been active with Study Committee C5 (Markets and Regulation) since its beginning in 2000 and received CIGRE 2009 Technical Committee Award for his contributions to the Study Committee. He is also active in a Joint Working Group with Markets and Operations, and Working groups on System Design (WG C5-7) and on Integration of Renewable resources and Demand-side Management (WG C5-11).

He has a bachelor's in electrical engineering from Drexel University in

			Philadelphia and a Master's in System Operations from the University of Pennsylvania.
Anthony P. Jankowski Manager Electric System Operations	We Energies W237 N1500 Busse Road Waukesha, WI 53188	tony.jankowski@we-energies.com	Tony Jankowski is the Manager of Electric System Operations at Wisconsin Electric Power Company d/b/a/ We Energies. He is responsible for the safe, reliable Bulk Electric System operation of the transmission dependant utility's Balancing Authority Area within the Midwest ISO. Mr. Jankowski has 25 years of experience in the Electric Utility Industry through various assignments involving nuclear and fossil generation, wholesale merchant business and Bulk Electric System operations. He is a NERC Certified Reliability Operator and has been involved in regulatory and industry policy issues for over 17 years. Mr. Jankowski actively participates in MISO, RFC and NERC committees as: Chair of the MISO Reliability Subcommittee; a member of the RFC Reliability Committee, NERC Operating Reliability Subcommittee, NERC Functional Model Working Group, and MISO Balancing Authority Committee. He has also been a member of several past and present RFC and NERC Standard Drafting Teams, along with numerous past group or committee positions.
Al Miller (Retired)			Al Miller has over 32 years experience in ensuring the reliable operation of the power system and the facilitation of energy markets in Ontario with the Independent Electricity System Operator. Initially, as a Shift Operator/Reliability Coordinator and later managing the department that oversaw the operation of markets while ensuring reliability in the day-ahead/near-term time frames. Over the years, Al has also provided operational and reliability expertise to many Industry Working Groups, Committees and Standard Drafting Teams. These included, Chairing a number of the Pre-seasonal Assessment Working Groups for NPCC, being an active member of a number of NERC Standard Drafting Teams including the Co-Chair of the Version Zero

			<p>Standard Drafting Team and Chair of the NERC Operating Committee's - Operating Limit Definition Task Force whose Reliability Concepts Document provided the basis for the NERC's Adequate Level of Reliability definition.</p>
<p>H. Steven Myers Principal, Operating & Planning Standards</p>	<p>Electric Reliability Council of Texas, Inc. 2705 West Lake Drive Taylor, Texas 76574-2136</p>	<p>smyers@ercot.com</p>	<p>Steve Myers, Principal, Operating & Planning Standards at the Electric Reliability Council of Texas (ERCOT), has over forty-three years of electric system operations experience.</p> <p>Mr. Myers first joined ERCOT in 1996 as the Security Center Manager at the inception of the ERCOT Independent System Operator (ISO). During his time at ERCOT, he has served as Security Center Manager, Manager of System Operations, Manager of Operations Support, Manager of Operating Standards, and now as Principal, Operating & Planning Standards.</p> <p>Prior to joining ERCOT, Mr. Myers served as Manager of the North Texas Security Center. He also served as Operations Supervisor and as Supervisor of Operations Engineering for an investor-owned electric utility; including generation and transmission operations. As a more junior engineer, he served as an engineer in electrical distribution, with responsibilities including supervision of a transformer repair shop, supervision of an underground network group, and as an operations engineer at the system control center.</p> <p>Mr. Myers is a graduate of New Mexico State University, with a Bachelor of Science in Electrical Engineering (BSEE). He has a Master of Business Administration (MBA) degree in Management from the University of Texas at Arlington, and is a Registered Professional Engineer in the State of Texas.</p> <p>Mr. Myers served as an officer in the U. S. Naval Reserve as an Assistant Resident Officer in Charge of Construction in San</p>

			<p>Diego, California. His electrical engineering training enabled his oversight of all contracts for electrical systems on all bases in the San Diego area. He also gained experience with oversight of contracts of every nature on three assigned Navy bases in the area.</p>
<p>Robert C. Rhodes, Jr. Manager, Reliability Standards</p>	<p>Southwest Power Pool Suite 140, Plaza West 415 N. McKinley Little Rock, AR 72205</p>	<p>rrhodes@spp.org</p>	<p>Robert Rhodes is the Manager, Reliability Standards at Southwest Power Pool (SPP) where he has been employed since 2000. In his previous role at SPP he was Manager, Reliability Coordination for over 10 years. Prior to joining SPP, Robert worked at Progress Energy (Carolina Power & Light Company) in Raleigh, NC for over 26 years in various positions in transmission maintenance, operations and planning. In his current capacity, Robert works with SPP members, SPP staff and other industry experts to ensure that reliability standards necessary to maintain a reliable bulk electric system are in place. He coordinates SPP members and registered entities in the development, refinement, maintenance, communication, training and implementation of national and regional reliability standards and policies.</p> <p>Robert is active at NERC currently serving on the Operating Reliability Subcommittee, the Resources Subcommittee and the Reliability Coordination Standard Drafting Team. He has previously served on the Reliability Coordinator Working Group, the Interchange Distribution Calculator Working Group and was Vice Chair of the Distribution Factor Working Group. Additionally, he has served on committees, working groups and task forces in SPP, SERC and VACAR.</p> <p>Robert received an Associate in Science degree from Rockingham Community College in 1970, a Bachelor of Science degree in Electrical Engineering from North Carolina State University in 1972 and a Master of Engineering degree from Rensselaer Polytechnic Institute in 1974.</p>

			<p>He is a member of Tau Beta Pi, Eta Kappa Nu, Order of the Engineer, the Institute of Electrical and Electronics Engineers and its Power Engineering Society, the National Society of Professional Engineers and is a registered professional engineer in the State of North Carolina.</p>
<p>Eric Senkowicz Manager of Operations</p>	<p>Florida Reliability Coordinating Council 1408 N. Westshore Blvd. Suite 1002 Tampa, Florida 33607</p>	<p>esenkowicz@frcc.com</p>	<p>Eric Senkowicz has been with the FRCC since January 2005 and is currently the Director of Operations. His primary responsibilities include facilitator and liaison to various operating committees and reliability groups within the FRCC structure. Eric is also active in representing FRCC reliability within the NERC standards development process and has been active on various drafting teams and working groups.</p> <p>Eric has been working in the utility industry for over 18 years. His experience includes nuclear plant design engineering, systems engineer, component failure analysis specialist and protective relaying installation and maintenance. Eric's experience also includes five years in grid operations with various responsibilities including load forecasting, system dispatch, transmission operations, operations planning and system operator for the FPL system (approximate 20,000 MW peak at the time).</p> <p>Prior to joining the FRCC staff, Eric worked for FPL, the FRCC RC Agent and spent three years as an on-shift FRCC Regional Reliability Coordinator based out of Miami, Florida.</p> <p>Eric holds a degree in Electrical Engineering and is a NERC Certified System Operator, Reliability area. Eric is also a registered Professional Engineer in the State of Florida.</p>
<p>Scott Barfield-McGinnis Standards Development Advisor</p>	<p>North American Electric Reliability Corporation 3353 Peachtree Road, NE</p>	<p>scott.barfield@nerc.net</p>	<p>Scott Barfield-McGinnis, as a Standards Development Advisor supports NERC's continual mission of managing and improving standard development, revisions, interpretations and other reliability related projects through the</p>

	<p>North Tower – Suite 600 Atlanta, GA 30326</p>		<p>valued participation of industry technical experts. Before joining NERC, he was the Bulk Electric System Compliance Manager at Georgia System Operations Corporation.</p> <p>Other positions held throughout his 27-year career in power include system engineer, planner, and engineering manager with oversight in energy control systems, planning and forecasting, as well as, asset management. He received an undergraduate electrical engineering degree in Power Systems from Southern Polytechnic State University and earned his Master of Business Administration from Mercer University’s Stetson School of Business. Scott is also a registered Professional Engineer in the state of Georgia.</p> <p>Scott is a member of the Institute of Electronics and Electrical Engineers (IEEE) and a past Board Member of the Central Georgia Section and continues to provide technical presentations at IEEE meetings.</p>
<p>Stephen Crutchfield Standards Development Coordinator</p>	<p>North American Electric Reliability Corporation 3353 Peachtree Road, NE North Tower – Suite 600 Atlanta, GA 30326</p>	<p>stephen.crutchfield@nerc.net</p>	<p>Stephen Crutchfield is began his career with NERC in May 2007. Prior to joining NERC, Stephen was a Project Manager with Shaw Energy Delivery Services, managing engineering and construction projects in the substation and transmission line fields. Stephen’s background also includes experience with PJM as Manager of RTO Integration, working on the operations and markets integration of new members (AEP, ComEd, Dayton, Dominion and Duquesne) into PJM and southern seams operations issues with Progress Energy, Duke and TVA.</p> <p>Stephen also helped lead the team that was developing GridSouth in the dual roles of Organization Architect and Manager of Customer Support. Prior to GridSouth, Stephen was the Manager of Power System Operations Training at Progress Energy where he spent over 10 years training System Operators and Engineers. Overall, Stephen was with Progress Energy</p>

			<p>for 16 years.</p> <p>Stephen received his Bachelor of Arts in Physics from the University of Virginia and Masters of Science in Electrical Engineering from North Carolina State University. Stephen also holds a Master of Science in Management degree, also from North Carolina State University.</p>
