

Exhibit A

Order No. 672 Criteria

EXHIBIT A

Demonstration that the proposed Reliability Standards are just, reasonable, not unduly discriminatory or preferential and in the public interest

Order No. 672 Criteria

In Order No. 672, FERC identified a number of criteria it will use to analyze Reliability Standards proposed for approval to ensure they are just, reasonable, not unduly discriminatory or preferential, and in the public interest.⁴⁶ The discussion below identifies these factors and explains how the proposed Reliability Standard have met or exceeded the criteria:

1. *Proposed Reliability Standards must be designed to achieve a specified reliability goal and must contain a technically sound method to achieve that goal.*

Order No. 672 at P 321. The proposed Reliability Standard must address a reliability concern that falls within the requirements of section 215 of the FPA. That is, it must provide for the reliable operation of Bulk-Power System facilities. It may not extend beyond reliable operation of such facilities or apply to other facilities. Such facilities include all those necessary for operating an interconnected electric energy transmission network, or any portion of that network, including control systems. The proposed Reliability Standard may apply to any design of planned additions or modifications of such facilities that is necessary to provide for reliable operation. It may also apply to Cybersecurity protection.

Order No. 672 at P 324. The proposed Reliability Standard must be designed to achieve a specified reliability goal and must contain a technically sound means to achieve this goal. Although any person may propose a topic for a Reliability Standard to the ERO, in the ERO's process, the specific proposed Reliability Standard should be developed initially by persons within the electric power industry and community with a high level of technical expertise and be based on sound technical and engineering criteria. It should be based on actual data and lessons learned from past operating incidents, where appropriate. The process for ERO approval of a proposed Reliability Standard should be fair and open to all interested persons.

The proposed IRO-001-3 Reliability Standard achieves the specific reliability goal of establishing the authority of a Reliability Coordinator to direct other entities to prevent an Emergency or Adverse Reliability Impact to the Bulk Electric System. The proposed standard

⁴⁶ Section 215(d)(2)(A) of the FPA; 18 C.F.R. §39.5.

achieves this goal by requiring the Reliability Coordinator to have the responsibility and authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact. The goal is further achieved by requiring those entities that would receive direction (which could include Reliability Directives) from the Reliability Coordinator to comply with its Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. These reliability entities include the Balancing Authority, Distribution Provider, Generator Operator, and Transmission Operator, which are required to inform its Reliability Coordinator upon recognition of its inability to comply with its Reliability Coordinator's direction. Because the Reliability Coordinator is the functional entity charged with maintaining the Real-time operating reliability of the Bulk Electric System within a Reliability Coordinator Area, it must have the authority necessary to direct others to prevent an Emergency or Adverse Reliability Impact. The Reliability Coordinator, who has complete visibility with its Reliability Coordinator area, enhances Real-time operation of the Bulk Electric System by ensuring that direction is being administered by a single functional entity that has the wide-area awareness necessary to mitigate an Emergency or Adverse Reliability Impact.

Proposed IRO-002-3 achieves the specific reliability goal of ensuring that analysis tools are available to the Reliability Coordinator and having a mitigation plan in the event that the analysis tools are unavailable. The requirements provide the system operator with the authority to approve, deny or cancel planned outages to the analysis tools, and specify that the responsible entity have procedures in place to mitigate the effects of analysis tool outages.

Proposed IRO-005-4 achieves the specific reliability goal of ensuring that entities are notified when an expected or actual event with Adverse Reliability Impacts is identified and when the event has ended or been mitigated. The requirements apply to the Reliability Coordinator and specify when such notifications are required.

The purpose of Proposed IRO-014-2 is to ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations. The Requirements of the Reliability Standard achieve this reliability goal by requiring the Reliability Coordinator to have Operating Processes, Operating Procedures or Operating Plans in place to coordinate operations with other Reliability Coordinators.

2. Proposed Reliability Standards must be applicable only to users, owners and operators of the bulk power system, and must be clear and unambiguous as to what is required and who is required to comply.

Order No. 672 at P 322. The proposed Reliability Standard may impose a requirement on any user, owner, or operator of such facilities, but not on others.

Order No. 672 at P 325. The proposed Reliability Standard should be clear and unambiguous regarding what is required and who is required to comply. Users, owners, and operators of the Bulk-Power System must know what they are required to do to maintain reliability.

The proposed IRO-001-3 Reliability Standard is applicable only to users, owners and operators of the North American bulk power system, and not others. The proposed IRO-001-3 standard applies to Balancing Authorities, Distribution Providers, Generator Operators, Transmission Operators, and Reliability Coordinators, and is clear and unambiguous as to what is required and who is required to comply, in accordance with Order No. 672.

The proposed IRO-002-3, IRO-005-4, and IRO-014-2 Reliability Standards are applicable only to Reliability Coordinators. No other registered entities are required to comply with these requirements.

Additionally, the requirements are structured to set out who shall do what and under what conditions by identifying a Functional Entity that is obligated to comply with each requirement. The requirements also include a statement that identifies the specific expectations for those Functional Entities. Measures are also provided for each requirement and include examples of evidence that are acceptable to demonstrate compliance with the requirement.

3. *A proposed Reliability Standard must include clear and understandable consequences and a range of penalties (monetary and/or non-monetary) for a violation.*

Order No. 672 at P 326. *The possible consequences, including range of possible penalties, for violating a proposed Reliability Standard should be clear and understandable by those who must comply.*

The proposed Reliability Standards include clear and understandable consequences. A Time Horizon, VRF and VSL is provided for each main requirement. Upon approval by FERC, the range of penalties for violations will be based on the applicable Time Horizon, VRF and VSL and will be administered based on the sanctions table and supporting penalty determination process described in the FERC-approved NERC Sanction Guidelines, Appendix 4B in NERC's Rules of Procedure. Therefore, responsible entities understand the potential impacts of non-compliance to the proposed requirements.

4. *A proposed Reliability Standard must identify clear and objective criterion or measure for compliance, so that it can be enforced in a consistent and non-preferential manner.*

Order No. 672 at P 327. There should be a clear criterion or measure of whether an entity is in compliance with a proposed Reliability Standard. It should contain or be accompanied by an objective measure of compliance so that it can be enforced and so that enforcement can be applied in a consistent and non-preferential manner.

The proposed Reliability Standards contain measures that support each standard requirement and that clearly identifies what is required and how the requirements will be enforced. These measures help ensure that the requirements will be enforced in a clear, consistent, and non-preferential manner and without prejudice to any party.

5. *Proposed Reliability Standards should achieve a reliability goal effectively and efficiently*

— but do not necessarily have to reflect “best practices” without regard to implementation cost.

Order No. 672 at P 328. The proposed Reliability Standard does not necessarily have to reflect the optimal method, or “best practice,” for achieving its reliability goal without regard to implementation cost or historical regional infrastructure design. It should however achieve its reliability goal effectively and efficiently.

The proposed IRO-001-3 Reliability Standard includes requirements to provide authority to the Reliability Coordinator and guidance on the delegation of tasks. These requirements will be mandatory and effective in the United States and do not impose an undue cost for implementation. The proposed standard is effective in that it removed unnecessary requirements on the Load-Serving Entity, Purchase-Selling Entity, Transmission Service Provider, and Regional Reliability Organization and retains the focus on the key functional entities responsible for Real-time operations. Those entities are the Balancing Authority, Distribution Provider, Generator Operator, and Reliability Coordinator. Clearly identifying the role of the Reliability Coordinator is effective and efficient because it clearly gives the Reliability Coordinator authority to take action when it identifies actions required to mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.

The proposed IRO-002-3 Reliability Standard provides the system operator with the authority to approve, deny or cancel planned outages of its own analysis tools. The standard further requires that the Reliability Coordinator have procedures in place to mitigate the effects of analysis tool outages. These requirements are procedural in nature and are not burdensome or costly for an entity to comply with.

The proposed Reliability Standard IRO-005-4 achieves the specific reliability goal of ensuring that entities are notified when an expected or actual event with Adverse Reliability Impacts is identified and when the event has ended or been mitigated. The requirements apply to

the Reliability Coordinator and specify when such notifications are required. Because entities are required to comply with similar standards, the cost to implement is negligible.

The proposed Reliability Standard IRO-014-2 achieves the specific reliability goal of ensuring that operations are coordinated among Reliability Coordinators by having Operating Processes, Operating Plans and Operating Procedures that address notifications and information exchange as well as actions to be taken by each party. The requirements apply to the Reliability Coordinator and specify when such notifications, information exchange and action are required. Because entities are required to comply with similar standards, the cost to implement is negligible.

6. *Proposed Reliability Standards cannot be “lowest common denominator,” i.e., cannot reflect a compromise that does not adequately protect bulk power system reliability. Proposed Reliability Standards can consider costs to implement for smaller entities, but not at consequences of less than excellence in operating system reliability.*

Order No. 672 at P 329. The proposed Reliability Standard must not simply reflect a compromise in the ERO’s Reliability Standard development process based on the least effective North American practice — the so-called “lowest common denominator” — if such practice does not adequately protect Bulk-Power System reliability. Although FERC will give due weight to the technical expertise of the ERO, we will not hesitate to remand a proposed Reliability Standard if we are convinced it is not adequate to protect reliability.

Order No. 672 at P 330. A proposed Reliability Standard may take into account the size of the entity that must comply with the Reliability Standard and the cost to those entities of implementing the proposed Reliability Standard. However, the ERO should not propose a “lowest common denominator” Reliability Standard that would achieve less than excellence in operating system reliability solely to protect against reasonable expenses for supporting this vital national infrastructure. For example, a small owner or operator of the Bulk-Power System must bear the cost of complying with each Reliability Standard that applies to it.

The proposed Reliability Standards do not reflect a “lowest common denominator” approach. To the contrary, the proposed standards represent a direct improvement over the currently-effective versions of the Reliability Standards. Additionally, the proposed Reliability Standards were not developed or adopted with the intent of protecting against the imposition of reasonable expenses. The standard drafting team considered and evaluated the effect these

standards would have on the applicable entities and determined that no entities would be unduly burdened by the cost to implement its requirements. No special accommodation was made for smaller entities, and the proposed standards will apply equally to all applicable entities in a consistent manner.

7. *Proposed Reliability Standards must be designed to apply throughout North America to the maximum extent achievable with a single Reliability Standard while not favoring one area or approach.*

Order No. 672 at P 331. A proposed Reliability Standard should be designed to apply throughout the interconnected North American Bulk-Power System, to the maximum extent this is achievable with a single Reliability Standard. The proposed Reliability Standard should not be based on a single geographic or regional model but should take into account geographic variations in grid characteristics, terrain, weather, and other such factors; it should also take into account regional variations in the organizational and corporate structures of transmission owners and operators, variations in generation fuel type and ownership patterns, and regional variations in market design if these affect the proposed Reliability Standard.

The proposed Reliability Standard applies throughout North America and does not favor one area or approach. There is no regional variation in the organization and corporate structures of Transmission Owners and Operators, variations in generation fuel type and ownership patterns, and regional variations in market design that affect the proposed Requirements in this Reliability Standard.

8. *Proposed Reliability Standards should cause no undue negative effect on competition or restriction of the grid.*

Order No. 672 at P 332. As directed by section 215 of the FPA, FERC itself will give special attention to the effect of a proposed Reliability Standard on competition. The ERO should attempt to develop a proposed Reliability Standard that has no undue negative effect on competition. Among other possible considerations, a proposed Reliability Standard should not unreasonably restrict available transmission capability on the Bulk-Power System beyond any restriction necessary for reliability and should not limit use of the Bulk-Power System in an unduly preferential manner. It should not create an undue advantage for one competitor over another.

The proposed Reliability Standard does not restrict the available transmission capability or limit use of the BES in a preferential manner. Proposed IRO-001-3 achieves the specific

reliability goal of establishing Reliability Coordinators and defining their authority to act to preserve the integrity of the BES. The requirements in the other proposed standards should cause no restriction of the grid because having clear responsibilities and authorities assure that the Bulk Electric System operates in a safe and reliable manner in all conditions.

9. *The implementation time for the proposed Reliability Standards must be reasonable.*

Order No. 672 at P 333. In considering whether a proposed Reliability Standard is just and reasonable, FERC will consider also the timetable for implementation of the new requirements, including how the proposal balances any urgency in the need to implement it against the reasonableness of the time allowed for those who must comply to develop the necessary procedures, software, facilities, staffing or other relevant capability.

The proposed effective date for IRO-001-3, included in the corresponding implementation plan proposed for approval, is the first day of the second calendar quarter beyond the date that this standard is approved by FERC. This will allow applicable entities adequate time to develop the documentation and other evidence necessary to exhibit compliance with the requirements.

The proposed effective date for IRO-002-3 is the first day of the first calendar quarter following the effective date of a Final Rule in this docket. Because this is a revision to an existing mandatory and enforceable standard, applicable entities are already complying with the existing standard.

The proposed effective date for IRO-005-4 is the first day of the first calendar quarter following the effective date of a Final Rule in this docket. Because this is a revision to an existing mandatory and enforceable standard, applicable entities are already in compliance with a similar requirement.

The proposed effective date for IRO-014-2 is the first day of the first calendar quarter that is 12 months following the effective date of a Final Rule in this docket. Because this is a revision to existing mandatory and enforceable standards, applicable entities should only have to

make minor revisions to their Operating Plans, Operating Processes or Operating Procedures to show compliance.

10. The Reliability Standard development process must be open and fair.

Order No. 672 at P 334. Further, in considering whether a proposed Reliability Standard meets the legal standard of review, we will entertain comments about whether the ERO implemented its Commission-approved Reliability Standard development process for the development of the particular proposed Reliability Standard in a proper manner, especially whether the process was open and fair. However, we caution that we will not be sympathetic to arguments by interested parties that choose, for whatever reason, not to participate in the ERO's Reliability Standard development process if it is conducted in good faith in accordance with the procedures approved by FERC.

The proposed Reliability Standards were developed in accordance with NERC's FERC-approved, ANSI- accredited process for developing and approving Reliability Standards. This process included, among other things, multiple comment periods, pre-ballot review periods, and balloting periods. In addition, all standard drafting team meetings were noticed and open to the public. The initial and recirculation ballots both achieved a quorum and the required ballot pool approvals. NERC considers the comments of all stakeholders and a vote of stakeholders and the NERC Board of Trustees is required to approve a proposed Reliability Standard for submission to the Commission. Therefore, NERC developed the proposed standards in a manner that is open and fair.

11. Proposed Reliability Standards must balance with other vital public interests.

Order No. 672 at P 335. Finally, we understand that at times development of a proposed Reliability Standard may require that a particular reliability goal must be balanced against other vital public interests, such as environmental, social and other goals. We expect the ERO to explain any such balancing in its application for approval of a proposed Reliability Standard.

NERC has identified no competing public interests regarding the request for approval of these proposed Reliability Standards. No comments were received that indicated the proposed standards conflict with other vital public interests.

12. Proposed Reliability Standards must consider any other relevant factors.

Order No. 672 at P 323. In considering whether a proposed Reliability Standard is just and reasonable, we will consider the following general factors, as well as other factors that are appropriate for the particular Reliability Standard proposed.

No other factors relevant to whether the proposed Reliability Standards are just and reasonable were identified.

Exhibit B

Reliability Standards submitted for Approval

A. Introduction

1. **Title: Reliability Coordination – Responsibilities and Authorities**
2. **Number:** IRO-001-3
3. **Purpose:** To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.
4. **Applicability**
 - 4.1. Reliability Coordinator
 - 4.2. Transmission Operator
 - 4.3. Balancing Authority
 - 4.4. Generator Operator
 - 4.5. Distribution Provider
5. **Effective Date:** The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

B. Requirements

- R1.** Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact. *[Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R2.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R3.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

C. Measures

- M1.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it had the authority to take

action or direct action, which could have included issuing Reliability Directives, to prevent identified events or mitigate the magnitude or duration of actual events that resulted in an Emergency or Adverse Reliability Impact within its Reliability Coordinator Area. (R1.)

- M2.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction, unless the direction could not be physically implemented, or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall have and provide copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2.)
- M3.** Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it informed the Reliability Coordinator of its inability to perform as directed in accordance with Requirement R2. (R3.)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity shall serve as the Compliance Enforcement Authority (CEA) unless the applicable entity is owned, operated, or controlled by the Regional Entity. In such cases, the ERO or a Regional Entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since

the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator for Requirement R1, Measure M1 shall retain voice recordings for the most recent 90 calendar days or documentation for the most recent 12 calendar months.
- The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider for Requirements R2 and R3, Measures M2 and M3 shall retain voice recordings for the most recent 90 calendar days or documentation for the most recent 12 calendar months.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or for the time specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	<p>The Reliability Coordinator failed to take action or direct actions, to prevent an identified event that resulted in an Emergency or Adverse Reliability Impact.</p> <p>OR</p> <p>The Reliability Coordinator failed to take action or direct actions to mitigate the magnitude or duration of an event that resulted in an Emergency or Adverse Reliability Impact.</p>
R2	N/A	N/A	N/A	<p>The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider did not comply with the Reliability Coordinator's direction, and compliance with the direction could have been physically implemented and such actions would not have violated safety, equipment, regulatory, or statutory requirements.</p>
R3	N/A	N/A	N/A	<p>The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider failed to inform its Reliability Coordinator upon recognition of its inability to perform as directed.</p>

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Approved by FERC — Effective Date	New
1	May 19, 2011	Replaced Levels of Noncompliance with FERC-approved VSLs	VSL Order
2	To be determined	Retired Requirement R7 to eliminate redundancy with IRO-014-2, Requirement R1.	Project 2006-06
3	TBD	Revised in accordance with SAR for Project 2006-06, Reliability Coordination (RC SDT). Revised the standard and retired six requirements (R1, R2, R4, R5, R6, and R9). Requirement R3 becomes the new R1 and R8 becomes the new R2 and R3.	Project 2006-06
3	August 16, 2012	Adopted by Board of Trustees	

A. Introduction

1. Title: Reliability Coordination — Responsibilities and Authorities

2. Number: IRO-001-~~1.13~~

~~3. Purpose: Reliability Coordinators must have the authority, plans, and agreements in place to immediately direct reliability entities within their Reliability Coordinator Areas to re-dispatch generation, reconfigure transmission, or reduce load to mitigate critical conditions to return the system to a reliable state. If a Reliability Coordinator delegates tasks to others, the Reliability Coordinator retains its responsibilities for complying with NERC and regional standards. Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another.~~

~~3. Purpose: To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.~~

4. Applicability

~~4.1. Reliability Coordinators.Coordinator~~

~~4.2. Regional Reliability Organizations.~~

~~4.3.4.2. Transmission Operator.~~

~~4.4.4.3. Balancing Authorities.Authority~~

~~4.5.4.4. Generator Operators.Operator~~

~~4.6. Transmission Service Providers.~~

~~4.7. Load Serving Entities.~~

~~4.8. Purchasing Selling Entities.~~

~~5. Effective Date: May 13, 2009~~

~~4.5. Distribution Provider~~

~~5. Effective Date: The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.~~

B. Requirements

~~R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries.~~

~~R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee.~~

- ~~R3.~~ ~~The Reliability Coordinator shall have clear decision-making the authority to act and to~~ direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load Serving Entities, and Purchasing Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.
- ~~R4.~~ ~~Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to others to act (which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator.~~
- ~~R5.~~ ~~The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks.~~
- ~~R6.~~ ~~The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel.~~
- ~~R7.R1.~~ The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or Intereconnection Reliability Operating Limit violation mitigation requiring actions duration of actual events that result in adjacent Reliability Coordinator Areas are coordinated: an Emergency or Adverse Reliability Impact. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]
- ~~R2.~~ Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load Serving Entities, and Purchasing Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service and Distribution Provider, Load Serving Entity shall comply with its Reliability Coordinator's direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or Purchasing Selling Entity shall immediately statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]
- ~~R8.R3.~~ Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform the its Reliability Coordinator upon recognition of the its inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions, as directed in accordance with Requirement R2. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]

~~R9.~~— The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity.

C. Measures

- ~~M1.~~ Each ~~Regional Reliability Organization~~Coordinator shall have, and provide upon request, evidence ~~that could~~which may include, but is not limited to ~~signed agreements or other dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence documentation,~~ that will be used to ~~confirm~~determine that it ~~established one or more~~had the authority to take action or direct action, which could have included ~~issuing Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries as described in Requirement 1.~~Directives, to prevent identified events or mitigate the magnitude or duration of actual events that resulted in an Emergency or Adverse Reliability Impact within its Reliability Coordinator Area. (R1.)
- ~~M2.~~— Each ~~Reliability Coordinator~~Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide upon request evidence ~~that could~~which may include, but is not limited to, ~~job descriptions, signed agreements, an authority letter signed by an officer of the company, dated operator logs, dated records, dated and time-stamped voice recordings or other dated transcripts of voice recordings, electronic communications, or equivalent evidence documentation,~~ that will be used to ~~confirm that~~determine that it complied with its Reliability Coordinator's direction, unless the direction could not be physically implemented, or such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Reliability Coordinator has the authority to act as described in Requirement 3.
- ~~M3.~~~~M2.~~ The ~~Reliability Coordinator~~Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider shall have and provide upon request current formal operating agreements with entities that have been delegated any Reliability Coordinator tasks (Requirement 4 Part 1).~~copies of the safety, equipment, regulatory, or statutory requirements as evidence for not complying with the Reliability Coordinator's direction.~~ (R2.)
- ~~M4.~~— The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, job descriptions, signed agreements, records of training sessions, monitoring procedures or other equivalent evidence that will be used to confirm that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area (Requirement 4 Part 2 and Requirement 5).
- ~~M5.~~— The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, records that show each operating person assigned to perform a Reliability Coordinator delegated task has a NERC Reliability Coordinator certification credential, or equivalent evidence confirming that delegated tasks were carried out by NERC certified Reliability Coordinator operating personnel, as specified in Requirement 6.

~~M6.~~—The Reliability Coordinator shall have and provide upon request as evidence, signed agreements with adjacent Reliability Coordinators that will be used to confirm that it will coordinate corrective actions in the event SOL and IROL mitigation actions within neighboring areas must be taken. (Requirement 7)

~~M7.M3.~~ Each Transmission Operator, Balancing Authority, Generator Operator, ~~Transmission Service and Distribution~~ Provider, ~~Load-Serving Entity, or Purchasing-Selling Entity~~ shall have and provide upon request evidence ~~that could~~ which may include, but is not limited to, dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, ~~or other electronic communications, or~~ equivalent evidencedocumentation, that will be used to ~~confirm~~determine that it ~~did comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, it informed the Reliability Coordinator immediately. (of its inability to perform as directed in accordance with~~ Requirement 8)~~R2. (R3.)~~

D. Compliance

1. Compliance Monitoring Process

~~1.1. Compliance Monitoring Responsibility~~

~~NERC shall be responsible for compliance monitoring of the Regional Reliability Organization.~~

~~Regional Reliability Organizations shall be responsible for compliance monitoring of the Reliability Coordinators, Transmission Operators, Generator Operators, Distribution Providers, and Load-Serving Entities.~~

~~1.2. Compliance Monitoring Period and Reset Time Frame~~

~~One or more of the following methods will be used to assess compliance:~~

- ~~—Self-certification (Conducted annually with submission according to schedule.)~~
- ~~—Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)~~
- ~~—Periodic Audit (Conducted once every three years according to schedule.)~~
- ~~—Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)~~

~~The Performance Reset Period shall be 12 months from the last finding of non-compliance.~~

1.1. Compliance Enforcement Authority

The Regional Entity shall serve as the Compliance Enforcement Authority (CEA) unless the applicable entity is owned, operated, or controlled by the Regional

Entity. In such cases, the ERO or a Regional Entity approved by FERC or other applicable governmental authority shall serve as the CEA.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

~~Each Regional Reliability Organization shall have its current, in-force document for Measure 1.~~

~~Each~~The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

~~The Reliability Coordinator shall have its current, in-force documents or the latest copy of a record as evidence of compliance to Measures 2 through 6.~~

~~Each~~, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service and Distribution Provider, and Load Serving Entity shall keep 90 days of historical data (evidence) or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for Measure 7— a longer period of time as part of an investigation:

- The Reliability Coordinator for Requirement R1, Measure M1 shall retain voice recordings for the most recent 90 calendar days or documentation for the most recent 12 calendar months.
- The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider for Requirements R2 and R3, Measures M2 and M3 shall retain voice recordings for the most recent 90 calendar days or documentation for the most recent 12 calendar months.

~~If an entity is a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider is found non-compliant the entity, it shall keep information related to the non-compliance~~non-compliance until found compliant mitigation is complete and approved or for two years plus the current year~~time specified above, whichever is longer.~~

~~Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,~~

The Compliance ~~Monitor~~Enforcement Authority shall keep the last ~~periodic~~-audit ~~report~~records and all requested and submitted subsequent ~~compliance~~audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels of Non-Compliance: for a

<u>R#</u>	<u>Lower VSL</u>	<u>Moderate VSL</u>	<u>High VSL</u>	<u>Severe VSL</u>
<u>R1</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>	<p><u>The Reliability Coordinator failed to take action or direct actions, to prevent an identified event that resulted in an Emergency or Adverse Reliability Impact.</u></p> <p><u>OR</u></p> <p><u>The Reliability Coordinator failed to take action or direct actions to mitigate the magnitude or duration of an event that resulted in an Emergency or Adverse Reliability Impact.</u></p>
<u>R2</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>	<p><u>The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider did not comply with the Reliability Coordinator's direction, and compliance with the direction could have been physically implemented and such actions would not have violated safety, equipment, regulatory, or statutory requirements.</u></p>
<u>R3</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>	<p><u>The Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider failed to inform its Reliability Coordinator upon recognition of its inability to perform as directed.</u></p>

2.E. Regional Reliability Organization: Variances

~~2.1. Level 1: Not applicable~~

~~2.2. Level 2: Not applicable~~

~~2.3. Level 3: Not applicable~~

~~2.4. Level 4: Does not have evidence it established one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries as described in Requirement 1.~~

~~3. Levels of Non-Compliance for a Reliability Coordinator:~~

~~3.1. Level 1: Not applicable.~~

~~3.2. Level 2: Not applicable.~~

~~3.3. Level 3: Not applicable.~~

~~3.4. Level 4: There shall be a separate Level 4 non-compliance for every one of the following requirements that is in violation:~~

~~3.4.1 Does not have the authority to act as described in R3.~~

~~3.4.2 Does not have formal operating agreements with entities that have been delegated any Reliability Coordinator tasks, as specified in R4, Part 1.~~

~~3.4.3 Did not confirm that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area and that they are being performed in a manner that complies with NERC and regional standards for the delegated tasks as per R4, Part 2.~~

~~3.4.4 Did not verify that delegated tasks are being carried out by NERC Reliability Coordinator certified staff as specified in R6.~~

~~3.4.5 Does not have agreements with adjacent Reliability Coordinators that confirm that they will coordinate corrective actions in the event SOL and IROL mitigation actions must be taken (R7).~~

~~4. Levels of Non-Compliance for a Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity:~~

~~4.1. Level 1: Not applicable.~~

~~4.2. Level 2: Not applicable.~~

~~4.3. Level 3: Not applicable.~~

~~4.4. Level 4: There shall be a separate Level 4 non-compliance for every one of the following requirements that is in violation:~~

~~4.4.1 Did not comply with a Reliability Coordinator directive for reasons other than safety, equipment, or regulatory or statutory requirements. (R8)~~

~~4.4.2—Did not inform the Reliability Coordinator immediately after it was determined that it could not follow a Reliability Coordinator directive. (R8)~~

~~E. Regional Differences~~

None identified.

1.13	May 13, 2009 <u>TBD</u>	FERC Approved <u>Revised in accordance with SAR for Project 2006-06, Reliability Coordination (RC SDT). Revised the standard and retired six requirements (R1, R2, R4, R5, R6, and R9). Requirement R3 becomes the new R1 and R8 becomes the new R2 and R3.</u>	Revised <u>Project 2006-06</u>
<u>3</u>	<u>August 16, 2012</u>	<u>Adopted by Board of Trustees</u>	

A. Introduction

1. **Title:** **Reliability Coordination – Analysis Tools**
2. **Number:** IRO-002-3
3. **Purpose:** To ensure that Reliability Coordinators provide their System Operators with authority with respect to analysis tool outages and to have procedures to mitigate effects of analysis tool outages.
4. **Applicability**
 - 4.1. Reliability Coordinator
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

B. Requirements

- R1. Each Reliability Coordinator shall provide its System Operators with the authority to approve, deny or cancel planned outages of its own analysis tools. [*Violation Risk Factor: Medium*] [*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]
- R2. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. [*Violation Risk Factor: Medium*] [*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]

C. Measures

- M1. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its System Operators with the authority to approve, deny or cancel planned outages of its own analysis tools. (R1)
- M2. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that that the Reliability Coordinator has procedures in place to mitigate the effects of analysis tool outages. (R2)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting
Complaint

1.3. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator shall retain its current, in force document and any documents in force for the current year and previous calendar year for Requirements R1 and R2 and Measures M1 and M2.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

Violation Severity Levels				
R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	The Reliability Coordinator failed to provide its System Operator with the authority to approve, deny or cancel planned outages of its own analysis tools.
R2	N/A	N/A	N/A	The Reliability Coordinator failed to have a procedure to mitigate the effects of analysis tool outages.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	
1	April 4, 2007	Replaced Levels of Non-compliance with the Feb 28, BOT approved Violation Severity Levels (VSLs) Corrected typographical errors in BOT approved version of VSLs	Revised to add missing measures and compliance elements
2	October 17, 2008	Deleted R2, M3 and associated compliance elements as conforming changes associated with approval of IRO-010-1	Revised as part of IROL Project
2	October 17, 2008	Adopted by NERC Board of Trustees	IROL Project
2	March 23, 2011	Order issued by FERC approving IRO-002-2 (approval effective 5/23/11)	
3	August 4, 2011	Retired R1-R8 under Project 2006-06.	Project 2006-06
3	August 4, 2011	Adopted by the Board of Trustees	

A. Introduction

1. **Title:** Reliability Coordination — ~~Facilities~~ Analysis Tools
2. **Number:** IRO-002-~~23~~
3. **Purpose:** ~~To ensure that~~ Reliability Coordinators ~~need information, tools and other capabilities to perform~~ provide their ~~responsibilities~~ System Operators with authority with respect to analysis tool outages and to have procedures to mitigate effects of analysis tool outages.
4. **Applicability**
 - 4.1. Reliability ~~Coordinators~~ Coordinator

~~5.~~ **Proposed Effective Date:**

~~In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, ~~the~~ this standard shall become effective on the ~~latter of either April 1, 2009 or the~~ first day of the first calendar quarter; ~~three months~~ after Board of ~~Trustee~~ adoption.~~

- ~~5.~~ ~~In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.~~ Trustees approval.

B. Requirements

- ~~Each Reliability Coordinator shall have adequate communications facilities (voice and data links) to appropriate entities within~~ provide its Reliability Coordinator Area. ~~These communications facilities shall be staffed and available to act in addressing a real-time emergency condition.~~
- ~~Each Reliability Coordinator — or its Transmission System Operators and Balancing Authorities — shall provide, or arrange provisions for, data exchange to other Reliability Coordinators or Transmission Operators and Balancing Authorities via a secure network.~~
- ~~Each Reliability Coordinator shall have multi-directional communications capabilities with its Transmission Operators and Balancing Authorities, and with neighboring Reliability Coordinators, for both voice and data exchange as required to meet reliability needs with the authority to approve, deny or cancel planned outages of the Interconnection.~~
- ~~Each Reliability Coordinator shall have detailed real-time monitoring capability of its Reliability Coordinator Area and sufficient monitoring capability of its surrounding Reliability Coordinator Areas to ensure that potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations are identified. Each Reliability Coordinator shall have monitoring systems that provide information that can be easily understood and interpreted by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.~~
- ~~Each Reliability Coordinator shall monitor Bulk Electric System elements (generators, transmission lines, buses, transformers, breakers, etc.) that could result in SOL or IROL violations within its Reliability Coordinator Area. Each Reliability Coordinator shall monitor both real and reactive power system flows, and operating reserves, and the status of Bulk~~

~~Electric System elements that are or could be critical to SOLs and IROLs and system restoration requirements within its Reliability Coordinator Area.~~

~~**R6.R1.** Each Reliability Coordinator shall have adequate its own analysis tools such as state estimation, pre and post contingency analysis capabilities (thermal, stability, and voltage), and wide area overview displays. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*~~

~~Each Reliability Coordinator shall continuously monitor its Reliability Coordinator Area. Each Reliability Coordinator shall have provisions for backup facilities that shall be exercised if the main monitoring system is unavailable. Each Reliability Coordinator shall ensure SOL and IROL monitoring and derivations continue if the main monitoring system is unavailable.~~

~~**R8.R2.** Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*~~

C. Measures

~~**M1.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a document that lists its voice communications facilities with Transmission Operators, Balancing Authorities and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators, that will be used to confirm that it has communication facilities in accordance with Requirements 1 and 3.~~

~~**M2.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a data link facility description document, computer print-out, training document, or other equivalent evidence that will be used to confirm that it has data links with entities within its Reliability Coordinator Area and with neighboring Reliability Coordinators, as specified in Requirements 1 and 3.~~

~~**M3.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, Energy Management System description documents, computer printouts, SCADA data collection system communications performance or equivalent evidence to demonstrate that it has real-time monitoring capability of its Reliability Coordinator Area and monitoring capability of its surrounding Reliability Coordinator Areas to identify potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations.~~

~~**M4.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, documentation from suppliers, operating and planning staff training documents, examples of studies, or other equivalent evidence to show that it has analysis tools in accordance with Requirement 6.~~

~~**M5.** Each Reliability Coordinator shall provide evidence such as equipment specifications, operating procedures, staff records of their involvement in training, or other equivalent evidence to show that it has a backup monitoring facility that can be used to identify and monitor SOLs and IROLs. (Requirement 7)~~

~~**M6.M1.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its System Operators with the authority to vet approve, deny or cancel planned outages to of its own analysis tools, including final approvals for planned maintenance as specified in Requirement 8 Part 1. (R1)~~

~~M7.M2.~~ Each Reliability Coordinator shall have and provide upon request ~~its~~ current evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that that the Reliability Coordinator has procedures used in place to mitigate the effects of analysis tool outages as specified in Requirement 8 Part 2. (R2)

D. Compliance

1. Compliance Monitoring Process

~~1.1. Compliance Monitoring Responsibility~~

~~Regional Reliability Organizations shall be responsible for compliance. Monitoring.~~

~~1.2. Compliance Monitoring and Reset Time Frame~~

~~One or more of the following methods will be used to assess compliance:~~

- ~~— Self-certification (Conducted annually with submission according to schedule.)~~
- ~~— Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)~~
- ~~— Periodic Audit (Conducted once every three years according to schedule.)~~
- ~~— Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)~~

~~The Performance Reset Period shall be 12 months from the last finding of non-compliance.~~

1.1. Compliance Enforcement Authority

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.3. Data Retention

~~Each~~The Reliability Coordinator shall ~~have~~keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- ~~The Reliability Coordinator shall retain its current, in-force document and any documents used to show compliance within force for the current year and previous calendar year for Requirements R1 and R2 and Measures 1 through 7~~M1 and M2.

If ~~an entity~~a Reliability Coordinator is found non-compliant ~~the entity, it~~ shall keep information related to the ~~noncompliance~~non-compliance until found compliant ~~or for two years plus the current year, whichever is longer.~~

- ~~Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor.~~
- ~~The Compliance~~ MonitorEnforcement Authority shall keep the last periodic audit ~~report~~records and all requested and submitted subsequent ~~compliance~~audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels:

<u>Violation Severity Levels</u>				
<u>Requirement R#</u>	<u>Lower VSL</u>	<u>Moderate VSL</u>	<u>High VSL</u>	<u>Severe VSL</u>
R1	The Reliability Coordinator has demonstrated communication facilities for both voice and data exist to all appropriate entities and that they are staffed and available but they are less than adequate.	The Reliability Coordinator has failed to demonstrate that is has: 1) Voice communication links with one appropriate entity or 2) Data links with one appropriate entity.	The Reliability Coordinator has failed to demonstrate that is has: 1) Voice communication links with two appropriate entities or 2) Data links with two appropriate entities.	The Reliability Coordinator has failed to demonstrate that is has: 1) Voice communication links with more than two appropriate entities or 2) Data links with more than two appropriate entities or 3) Communication facilities are not staffed or 4) Communication facilities are not ready.

R2	N/A	The Reliability Coordinator or designated Transmission Operator and Balancing Authority has failed to demonstrate it provided or arranged provision for the exchange of data with one of the other Reliability Coordinators or Transmission Operators and Balancing Authorities.	The Reliability Coordinator or designated Transmission Operator and Balancing Authority has failed to demonstrate it provided or arranged provision for the exchange of data with two of the other Reliability Coordinators or Transmission Operators and Balancing Authorities.	The Reliability Coordinator or designated Transmission Operator and Balancing Authority has failed to demonstrate it provided or arranged provision for the exchange of data with three of the other Reliability Coordinators or Transmission Operators and Balancing Authorities.
R3R1	N/A	The Reliability Coordinator has failed to demonstrate multi-directional communication capabilities to one of the Transmission Operators and Balancing Authorities in its Reliability Coordinator Area and with	The Reliability Coordinator has failed to demonstrate multi-directional communication capabilities to two or more of the Transmission Operators and Balancing Authorities in its Reliability Coordinator	The Reliability Coordinator has failed to demonstrate multi-directional communication capabilities to all of the Transmission Operators and Balancing Authorities in provide its Reliability Coordinator

		neighboring Reliability Coordinators: <u>N/A</u>	Area and with neighboring Reliability Coordinators: <u>N/A</u>	Area and System Operator with all neighboring Reliability Coordinators: <u>the authority to approve, deny or cancel planned outages of its own analysis tools.</u>
<u>R4R2</u>	The Reliability Coordinator's monitoring systems provide information in a way that is not easily understood and interpreted by the Reliability Coordinator's operating personnel or particular emphasis was not given to alarm management	The Reliability Coordinator has failed to demonstrate that is has detailed real-time monitoring capabilities in its Reliability Coordinator Area and sufficient monitoring capabilities of its surrounding Reliability Coordinator Areas to ensure that one potential or actual SOL or IROL violation	The Reliability Coordinator has failed to demonstrate that is has detailed real-time monitoring capabilities in its Reliability Coordinator Area and sufficient monitoring capabilities of its surrounding Reliability Coordinator Areas to ensure that two or more potential and actual SOL and IROL	The Reliability Coordinator has failed to demonstrate that is has detailed real-time monitoring capabilities in its Reliability Coordinator Area and sufficient monitoring capabilities of its surrounding Reliability Coordinator Areas to ensure that all potential and actual SOL and IROL

	and awareness systems; automated data transfers and synchronized information systems- <u>N/A</u>	is not identified- <u>N/A</u>	violations are not identified- <u>N/A</u>	violations are identified- <u>The Reliability Coordinator failed to have a procedure to mitigate the effects of analysis tool outages.</u>
R5	The Reliability Coordinator failed to monitor: 1) the status, real power flow or reactive power flow of Bulk Electric System elements that could result in one SOL violations or 2) or operating reserves for a small portion of the Reliability Authority Area.	The Reliability Coordinator failed to monitor: 1) the status, real power flow or reactive power flow of Bulk Electric System elements critical to assessing one IROL or to system restoration; 2) the status, real power flow or reactive power flow of Bulk Electric System elements that could result in multiple SOL violations, or 3) operating reserves.	The Reliability Coordinator failed to monitor: 1) the status, real power flow or reactive power flow of Bulk Electric System elements critical to assessing two or more IROLs; or one IROL and to system restoration, 2) the status, real power flow or reactive power flow of Bulk Electric System elements that could result in multiple SOL violations and operating reserves, or 3) the status, real power flow or	The Reliability Coordinator failed to monitor: 1) the status, real power flow or reactive power flow of Bulk Electric System elements critical to assessing all IROLs and to system restoration, or 2) the status, real power flow or reactive power flow of Bulk Electric System elements critical to assessing all SOL violations and operating reserves.

<u>3</u>	<u>August 4, 2011</u>	<u>Adopted by the Board of Trustees</u>	

Introduction

1. **Title:** **Reliability Coordination — Current Day Operations**
2. **Number:** IRO-005-4
3. **Purpose:** To ensure that entities are notified when an expected or actual event with Adverse Reliability Impacts is identified.
4. **Applicability:**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

A. Requirements

- R1.** When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R2.** Each Reliability Coordinator that identifies an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

B. Measures

- M1.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when it identified an anticipated or actual condition with Adverse Reliability Impacts, within its Reliability Coordinator Area. (R1)
- M2.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area had been mitigated. (R2)

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.3. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator shall retain its evidence for the most recent 90 days for voice recordings or 12 months for other documentation for Requirements R1 and R2 and Measures M1 and M2.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records or for the time period specified above, whichever is longer.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to one, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to two, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to three, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. OR The Reliability Coordinator who identified an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area (in cases where there are less than three impacted entities).
R2	The Reliability Coordinator failed to notify one, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated. Introduction

1. **Title:** Reliability Coordination — Current Day Operations
2. **Number:** IRO-005-~~3.1a4~~
- ~~3. **Purpose:** The Reliability Coordinator must be continuously aware of conditions within its Reliability Coordinator Area and include this information in its reliability assessments. The Reliability Coordinator must monitor Bulk Electric System parameters that may have significant impacts upon the Reliability Coordinator Area and neighboring Reliability Coordinator Areas.~~
- ~~4. **Applicability**~~
- ~~3. **Purpose:** To ensure that entities are notified when an expected or actual event with Adverse Reliability Impacts is identified.~~
- ~~4. **Applicability:**~~
 - ~~4.1. Reliability Coordinators.~~
 - ~~4.2. Balancing Authorities.~~
 - ~~4.3. Transmission Operators.~~
 - ~~4.4. Transmission Service Providers.~~
 - ~~4.5. Generator Operators.~~
 - ~~4.6. Load-Serving Entities.~~
 - ~~4.7. Purchasing-Selling Entities.~~
- ~~5. **Effective Date:**~~

~~**In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval.** In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.~~
- ~~5. **In those jurisdictions where regulatory approval is required, the this** standard shall become effective on the ~~latter~~**first day of the first calendar quarter after Board of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.** Trustees approval.~~

A. Requirements

- ~~**R1.** When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]~~

- ~~**R1.**— Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following:~~
- ~~**R1.1.**— Current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading.~~
 - ~~**R1.2.**— Current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan’s viability and scope.~~
 - ~~**R1.3.**— Current post-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan’s viability and scope.~~
 - ~~**R1.4.**— System real and reactive reserves (actual versus required).~~
 - ~~**R1.5.**— Capacity and energy adequacy conditions.~~
 - ~~**R1.6.**— Current ACE for all its Balancing Authorities.~~
 - ~~**R1.7.**— Current local or Transmission Loading Relief procedures in effect.~~
 - ~~**R1.8.**— Planned generation dispatches.~~
 - ~~**R1.9.**— Planned transmission or generation outages.~~
 - ~~**R1.10.**— Contingency events.~~
- ~~**R2.**— Each Reliability Coordinator shall monitor its Balancing Authorities’ parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard and Disturbance Control Standard requirements. If necessary, the Reliability Coordinator shall direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. The identifies an anticipated or actual condition with Adverse Reliability Coordinator shall issue Energy Emergency Alerts as needed and at the request of its Balancing Authorities and Load-Serving Entities.~~
- ~~**R3.**— Each Reliability Coordinator shall ensure its Transmission Operators and Balancing Authorities are aware of Geo-Magnetic Disturbance (GMD) forecast information and assist as needed in the development of any required response plans.~~
- ~~**R4.**— The Reliability Coordinator shall disseminate information within its Reliability Coordinator Area, as required.~~
- ~~**R5.**— Each Reliability Coordinator shall monitor system frequency and its Balancing Authorities’ performance and direct any necessary rebalancing to return to CPS and DCS compliance. The Transmission Operators and Balancing Authorities shall utilize all resources, including firm load shedding, as directed by its Reliability Coordinator to relieve the emergent condition.~~
- ~~**R6.**— The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, CPS, or DCS violations. The Reliability~~

~~Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next day reliability analysis timeframes.~~

- ~~**R7.** As necessary, the Reliability Coordinator shall assist the Balancing Authorities in its Reliability Coordinator Area in arranging for assistance from neighboring Reliability Coordinator Areas or Balancing Authorities.~~
- ~~**R8.** The Reliability Coordinator shall identify sources of large Area Control Errors that may be contributing to Frequency Error, Time Error, or Inadvertent Interchange and shall discuss corrective actions with the appropriate Balancing Authority. The Reliability Coordinator shall direct its Balancing Authority to comply with CPS and DCS.~~
- ~~**R9.** Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows. The Transmission Operator shall immediately inform the Reliability Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected.~~
- ~~**R10.** In instances where there is a difference in derived limits, the Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.~~
- ~~**R11.** The Transmission Service Provider shall respect SOLs and IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.~~
- ~~**R12.R2.** Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) Impacts within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its notify all impacted Transmission Operators and Balancing Authorities. The in its Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, Area when the transmission problem has been mitigated. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]~~

B. Measures

- ~~**M1.** TheEach Reliability Coordinator shall have and provide upon request evidence that could which may include, but is not limited to, Energy Management System description documents, computer printouts, a prepared report specifically detailing compliance to each of the bullets in Requirement 1, EMS availability, SCADA data collection system communications performance dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic~~

~~communications, or equivalent evidencedocumentation, that will be used to confirmdetermine that it monitors thenotified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area parameters specified in Requirements 1.1 through 1.9,when it identified an anticipated or actual condition with Adverse Reliability Impacts, within its Reliability Coordinator Area. (R1)~~

- ~~M2. If one of its Balancing Authorities has insufficient operating reserves, the Each Reliability Coordinator shall have and provide upon requestevidence that couldwhich may include, but is not limited to computer printouts, operating logs, voice recordings or transcripts of voice recordings, or equivalent evidence that will be used to determine if the Reliability Coordinator directed and, if needed, assisted the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. (Requirement 2 and Requirement 7)~~
- ~~M3. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidencedocumentation, that will be used to determine if it informed Transmission Operators and Balancing Authorities of Geo-Magnetic Disturbance (GMD) forecast information and provided assistance as needed in the development of any required response plans. (Requirement 3)~~
- ~~M4. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, Hot Line recordings, electronic communications or equivalent evidence that will be used to determine if that it disseminated information within its Reliability Coordinator Area in accordance with Requirement 4.~~
- ~~M5. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, computer printouts, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it monitored system frequency and Balancing Authority performance and directed any necessary rebalancing, as specified in Requirement 5 Part 1.~~
- ~~M6. The Transmission Operators and Balancing Authorities shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it utilized all resources, including firm load shedding, as directed by its Reliability Coordinator, to relieve an emergent condition. (Requirement 5 Part 2)~~
- ~~M7. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, operator logs or equivalent evidence that will be used to determine if it coordinated with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, CPS, or DCS violations including the coordination of pending~~

~~generation and transmission maintenance outages with Transmission Operators, Balancing Authorities and Generator Operators. (Requirement 6 Part 1)~~

~~M8. If a large Area Control Error has occurred, the Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, Hot Line recordings, electronic communications or equivalent evidence that will be used to determine if it identified sources of the Area Control Errors, and initiated corrective actions with the appropriate Balancing Authority if the problem was within the Reliability Coordinator's Area (Requirement 8 Part 1)~~

~~M9. If a Special Protection System is armed and that system could have had an inter-area impact, the Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, agreements with their Transmission Operators, procedural documents, operator logs, computer analysis, training modules, training records or equivalent evidence that will be used to confirm that it was aware of the impact of that Special Protection System on inter-area flows. (Requirement 9)~~

~~M10. If there is an instance where there is a disagreement on a derived limit, the Transmission Operator, Balancing Authority, Generator Operator, Load-serving Entity, Purchasing-selling Entity and Transmission Service Provider involved in the disagreement shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications or equivalent evidence that will be used to determine if it operated to the most limiting parameter. (Requirement 10)~~

~~M11. The Transmission Service Providers shall have and provide upon request evidence that could include, but is not limited to, procedural documents, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it respected the SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes. (Requirement 11)~~

~~M12. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it issued alerts when it foresaw a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area, **to notified** all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area as specified in Requirement 12 Part 1.~~

~~M13. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that upon receiving information such as an SOL or IROL violation, loss of reactive reserves, etc. it disseminated the information to its impacted Transmission Operators and Balancing Authorities as specified in Requirement 12 Part 2.~~

~~M14.M2. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or~~

~~transcripts of voice recordings, electronic communications or equivalent evidence that will be used to confirm that it notified all impacted Transmission Operators, Balancing Authorities and Reliability Coordinators when a transmission problem has~~ when an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area had been mitigated. (~~Requirement 12 Part 3R2~~)

C. Compliance

~~1.~~ **1. Compliance Monitoring Process**

~~1.1.~~ **1.1. Compliance Monitoring Responsibility**

~~Regional Reliability Organizations shall be responsible for compliance monitoring.~~

~~1.2.~~ **1.2. Compliance Monitoring and Reset Time Frame**

One or more of the following methods will be used to assess **1.1. Compliance Enforcement Authority**

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.3. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance:

~~— Self certification (Conducted annually with submission according to schedule.)~~

~~— Spot Check Audits (Conducted anytime with up as identified below unless directed by its Compliance Enforcement Authority to 30 days notice given to prepare.)~~

~~— Periodic Audit (Conducted once every three years according to schedule.)~~

~~– Triggered Investigations (Notification retain specific evidence for a longer period of time as part of an investigation must be made within 60 days of an event)~~

~~or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.):~~

~~The Performance Reset Period Reliability Coordinator shall ~~be~~ retain its evidence for the most recent 90 days for voice recordings or 12 months ~~from the last finding of non-compliance.~~~~

~~1.3.~~ **Data Retention**

~~For Measures 1 for other documentation for Requirements R1 and 9, each Reliability Coordinator shall have its current in-force documents as evidence.~~

~~For Measures 2 8 R2 and Measures 12 through 13, the Reliability Coordinator shall keep 90 days of historical data (evidence).~~

- ~~• For Measure 6, the Transmission Operator M1 and Balancing Authority shall keep 90 days of historical data (evidence). M2.~~

~~For Measure 10, the Transmission Operator, Balancing Authority, and Transmission Service Provider shall keep 90 days of historical data (evidence).~~

~~For Measure 11, the Transmission Service Provider shall keep 90 days of historical data (evidence).~~

- ~~• If an entity a Reliability Coordinator is found non-compliant ~~the entity, it~~ shall keep information related to the ~~noncompliance~~ non-compliance until found compliant ~~or for two years plus the current year, whichever is longer.~~~~

~~Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,~~

- ~~• The Compliance Monitor Enforcement Authority shall keep the last periodic audit ~~report~~ records and all requested and submitted subsequent compliance ~~records~~ audit records or for the time period specified above, whichever is longer.~~

~~1.4.~~ **1.4. Additional Compliance Information**

~~None.~~

2. Violation Severity Levels:

Requirement#	Lower <u>VSL</u>	Moderate <u>VSL</u>	High <u>VSL</u>	Severe <u>VSL</u>
R1	The Reliability Coordinator failed to monitor one (1) of the elements listed in IRO-005-1 R1.1 through R1.10.	The Reliability Coordinator failed to monitor two (2) of the elements listed in IRO-005-1 R1.1 through R1.10.	The Reliability Coordinator failed to monitor three (3) of the elements listed in IRO-005-1 R1.1 through R1.10.	The Reliability Coordinator failed to monitor more than three (3) of the elements listed in IRO-005-1 R1.1 through R1.10.
R1.1	The Reliability Coordinator failed to monitor the current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading.	N/A	N/A	N/A
R1.2	The Reliability Coordinator failed to monitor current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and	N/A	N/A	N/A

Appendix 1

Requirement Number and Text of Requirement

TOP-005-1 Requirement R3

~~Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1 TOP-005-0 “Electric System Reliability Data,” unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.~~

~~*The above referenced Attachment 1—TOP-005-0 specifies the following data as item 2.6: New or degraded special protection systems. [Underline added for emphasis.]*~~

IRO-005-1 Requirement R12[†]

~~**R12.** Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows. The Transmission Operator shall immediately inform the Reliability Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected. [Underline added for emphasis.]~~

PRC-012-0 Requirements R1 and R1.3

~~**R1.** Each Regional Reliability Organization with a Transmission Owner, Generator Owner, or Distribution Providers that uses or is planning to use an SPS shall have a documented Regional Reliability Organization SPS review procedure to ensure that SPSs comply with Regional criteria and NERC Reliability Standards. The Regional SPS review procedure shall include:~~

~~**R1.3.** Requirements to demonstrate that the SPS shall be designed so that a single SPS component failure, when the SPS was intended to operate, does not prevent the interconnected transmission system from meeting the performance requirements defined in Reliability Standards TPL-001-0, TPL-002-0, and TPL-003-0.~~

Background Information for Interpretation

~~The TOP-005-1 standard focuses on two key obligations. The first key obligation (Requirement R1) is a “responsibility mandate.” Requirement R1 establishes who is responsible for the obligation to provide operating data “required” by a Reliability Coordinator within the framework of the Reliability Coordinator requirements defined in the IRO standards. The second key obligation (Requirement R3) is a “performance mandate.” Requirement R3 defines the obligation to provide data “requested” by other reliability entities that is needed “to perform~~

[†] In the current version of the Standard (IRO-005-3a), this requirement is R9.

assessments and to coordinate operations.”

The Attachment to TOP-005-1 is provided as a guideline of what “can be shared.” The Attachment is not an obligation of “what must be shared.” Enforceable NERC Requirements must be explicitly contained within a given Standard’s approved requirements. In this case, the standard only requires data “upon request.” If a Reliability Coordinator or other reliability entity were to request data such as listed in the Attachment, then the entity being asked would be mandated by Requirements R1 and R3 to provide that data (including item 2.6, whether it is or is not in some undefined “degraded” state).

IRO-002-1 requires the Reliability Coordinator to have processes in place to support its reliability obligations (Requirement R2). Requirement R4 mandates that the Reliability Coordinator have communications processes in place to meet its reliability obligations, and Requirement R5 et al mandate the Reliability Coordinator to have the tools to carry out these reliability obligations.

IRO-003-2 (Requirements R1 and R2) requires the Reliability Coordinator to monitor the state of its system.

IRO-004-1 requires that the Reliability Coordinator carry out studies to identify Interconnection Reliability Operating Limits (Requirement R1) and to be aware of system conditions via monitoring tools and information exchange.

IRO-005-1 mandates that each Reliability Coordinator monitor predefined base conditions (Requirement R1), collect additional data when operating limits are or may be exceeded (Requirement R3), and identify actual or potential threats (Requirement R5). The basis for that request is left to each Reliability Coordinator. The Purpose statement of IRO-005-1 focuses on the Reliability Coordinator’s obligation to be aware of conditions that may have a “significant” impact upon its area and to communicate that information to others (Requirements R7 and R9). Please note: it is from this communication that Transmission Operators and Balancing Authorities would either obtain or would know to ask for SPS information from another Transmission Operator.

The IRO-005-1 (Requirement R12) standard implies that degraded is a condition that will result in a failure to operate as designed. If the loss of a communication channel will result in the failure of an SPS to operate as designed then the Transmission Operator would be mandated to report that information. On the other hand, if the loss of a communication channel will not result in the failure of the SPS to operate as designed, then such a condition can be, but is not mandated to be, reported.

Conclusion

The TOP-005-1 standard does not provide, nor does it require, a definition for the term “degraded.”

The IRO-005-1 (R12) standard implies that degraded is a condition that will result in a failure of an SPS to operate as designed. If the loss of a communication channel will result in the failure of an SPS to operate as designed, then the Transmission Operator would be mandated to report that information. On the other hand, if the loss of a communication channel will not result in the failure of the SPS to operate as designed, then such a condition can be, but is not mandated to be,

~~reported.~~

~~To request a formal definition of the term degraded, the Reliability Standards Development Procedure requires the submittal of a Standards Authorization Request.~~

A. Introduction

1. **Title:** Coordination Among Reliability Coordinators
2. **Number:** IRO-014-2
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinator
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after Board of Trustees approval.

B. Requirements

- R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: [*Violation Risk Factor: Medium*] [*Time Horizon: Same Day Operations and Operations Planning*]
 - 1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
 - 1.2. Energy and capacity shortages.
 - 1.3. Planned or unplanned outage information.
 - 1.4. Control of voltage, including the coordination of reactive resources.
 - 1.5. Coordination of information exchange to support reliability assessments.
 - 1.6. Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.
 - 1.7. Weekly conference calls
- R2. Each Reliability Coordinator shall maintain its Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1 as follows: [*Violation Risk Factor: Lower*] [*Time Horizon: Same Day Operations and Operations Planning*]
 - 2.1. Review and update annually with no more that 15 months between reviews.
 - 2.2. Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update.

- 2.3.** Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.
- R3.** Each Reliability Coordinator shall make notifications and exchange reliability-related information with other Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]*
- R4.** Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement 1, Part 1.7) with other Reliability Coordinators within the same Interconnection. *[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]*
- R5.** Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify all other Reliability Coordinators. *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R6.** During each instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact each impacted Reliability Coordinator shall operate as though the problem exists. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R7.** During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, the Reliability Coordinator that identified the Adverse Reliability Impact shall develop an action plan to resolve the Adverse Reliability Impact. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R8.** During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

C. Measures

- M1.** Each Reliability Coordinator shall have available the latest approved documented version of its Operating Procedures, Processes, and Operating Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators for conditions or activities that impact other Reliability Coordinator Areas. This documentation shall include dated, current in force documentation with the specified elements. (R1)
- M2.** Each Reliability Coordinator shall have dated evidence that the Operating Procedures, Processes, and Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:
- 2.1** Reviewed and updated annually with no more than 15 months between reviews.

- 2.2** Agreed to, in writing, by all the Reliability Coordinators required to take the indicated action(s).
- 2.3** Distributed within 30 days of an update to all Reliability Coordinators that are required to take the indicated action(s).

This evidence may include, but is not limited to dated documentation with confirmation of receipt, dated notice of acceptance or agreement to take specified actions, or dated electronic communications with confirmation of receipt and acceptance or agreement to take specified actions. (R2)

- M3.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it made notifications and exchanged reliability-related information with impacted Reliability Coordinators in accordance with the Operating Procedures, Processes, or Plans identified in Requirement R1. (R3)
- M4.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it participated in agreed upon (at least weekly) conference calls with other Reliability Coordinators within the same Interconnection. (R4)
- M5.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it, upon identification of an Adverse Reliability Impact, notified other Reliability Coordinators. (R5)
- M6.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it operated under the assumption that the Adverse Reliability Impact existed during each instance where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact. (R6)
- M7.** Each Reliability Coordinator that identified an Adverse Reliability Impact shall have evidence and provide evidence that it developed an action plan during those instances where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact. This evidence may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation. (R7)
- M8.** Each impacted Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it implemented the action plan developed by the Reliability Coordinator who has the identified the Adverse Reliability Impact when a Reliability Coordinator has identified an Adverse Reliability Impact and the impacted Reliability

Coordinators disagree on an action unless such actions would have violated safety, equipment, or regulatory or statutory requirements. (R8)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring Period and Reset Time Frame

Not Applicable

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.4. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator shall retain its current, in force document and any documents in force since the last compliance audit for Requirements R1, R2, and Measures M1, M2.
- Each Reliability Coordinator shall retain its most recent 12 months of evidence for Requirement R3, R4, R5 and Measure M3, M4, M5.
- Each Reliability Coordinator shall retain 3 calendar years plus current calendar year of evidence for Requirements R6 through R8 and Measures M6 through M8.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant, or for the time period specified above, whichever is longer.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one of the topical areas identified in Parts 1.1 through 1.7.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address two of the topical areas identified in Parts 1.1 through 1.7.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three of the topical areas identified in Parts 1.1 through 1.7.	The Reliability Coordinator failed to have Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability to address three or more of the topical areas identified in Parts 1.1 through 1.7.
R2	N/A	The Reliability Coordinator Operating Procedures, Operating Processes, or Operating Plans identified in R1 but failed to distribute these to all Reliability Coordinators that are required to take action.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans identified in R1 but failed to obtain agreement from all Reliability Coordinators that are required to take action. OR Failed to review and update the Operating Procedures, Operating Processes, and Operating Plans identified in R1 annually.	The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans identified in R1 but failed to review and update annually and obtain written agreement from all Reliability Coordinators that are required to take action and failed to distribute these to all Reliability Coordinators that are required to take action.
R3	N/A	N/A	The Reliability Coordinator failed to make notifications OR exchange reliability-related information with impacted Reliability Coordinators.	The Reliability Coordinator failed to make notifications AND exchange reliability-related information with impacted Reliability Coordinators.

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4	N/A	N/A	N/A	The Reliability Coordinator failed to participate in an agreed upon (at least weekly) conference call with impacted Reliability Coordinators within the same Interconnection.
R5	N/A	The Reliability Coordinator failed to notify one, but not all, of the impacted Reliability Coordinators upon identification of an Adverse Reliability Impact.	N/A	The Reliability Coordinator failed to notify more than one impacted Reliability Coordinators upon identification of an Adverse Reliability Impact. OR The Reliability Coordinator failed to notify the impacted Reliability Coordinator (when there is only one impacted Reliability Coordinator) upon identification of an Adverse Reliability Impact.
R6	N/A	N/A	N/A	The Reliability Coordinator failed to operate under the assumption that the Adverse Reliability Impact existed during an instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact.
R7	N/A	N/A	N/A	The Reliability Coordinator that identified the Adverse Reliability Impact failed to develop an action plan to resolve the Adverse Reliability Impact during an instance where Reliability Coordinators disagreed on the existence of an Adverse Reliability

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
				Impact.
R8	N/A	N/A	N/A	The Reliability Coordinator failed to implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact during an instance where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact.

None identified.

F. Associated Documents**Version History**

Version	Date	Action	Change Tracking
1	August 10, 2005	<ol style="list-style-type: none"> 1. Changed incorrect use of certain hyphens (-) to “en dash (-).” 2. Hyphenated “30-day” when used as adjective. 3. Changed standard header to be consistent with standard “Title.” 4. Initial capped heading “Definitions of Terms Used in Standard.” 5. Added “periods” to items where appropriate. 6. Changed “Timeframe” to “Time Frame” in item D, 1.2. 7. Lower cased all words that are not “defined” terms — drafting team, self-certification. 8. Changed apostrophes to “smart” symbols. 9. Added comma in all word strings “Procedures, Processes, or Plans,” etc. 10. Added hyphens to “Reliability Coordinator-to-Reliability Coordinator” where used as adjective. 11. Removed comma in item 2.1.2. 12. Removed extra spaces between words where appropriate. 	January 20, 2006
1	February 7, 2006	Approved by BOT	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
2	August 4, 2011	Revised per Project 2006-6; Revised existing requirements for clarity, retired R3 and R4 and incorporated requirements from IRO-015-1 and IRO-016-1 into this standard.	Revised
2	August 4, 2011	Adopted by Board of Trustees	

A. Introduction

1. **Title:** ~~Procedures, Processes, or Plans to Support~~ Coordination
~~Between~~Among Reliability Coordinators _____
2. **Number:** IRO-014-~~12~~
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinator
- ~~5. **Effective Date:** _____ November 1, 2006 _____~~
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after Board of Trustees approval.

B. Requirements

~~R1. The~~Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans ~~in place~~ for activities that require notification, exchange of information or coordination of actions ~~with one or more that may impact~~ other Reliability ~~Coordinators~~Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall ~~address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators.~~

~~R1.1.R1. _____~~ ~~These Operating Procedures, Processes, or Plans shall~~ collectively address, ~~as a minimum,~~ the following: [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]

~~R1.1.1.1. _____~~ Communications and notifications, including the mutually agreed to conditions⁴ under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.

~~R1.1.2.1.2. _____~~ Energy and capacity shortages.

~~R1.1.3.1.3. _____~~ Planned or unplanned outage information.

~~R1.1.4.1.4. _____~~ ~~Voltage control~~Control of voltage, including the coordination of reactive resources ~~for voltage control.~~

~~R1.1.5.1.5. _____~~ Coordination of information exchange to support reliability assessments.

⁴Examples of conditions when one Reliability Coordinator may need to notify another Reliability Coordinator may include (but aren't limited to) sabotage events, Interconnection Reliability Operating Limit violations, voltage reductions, insufficient resources, arming of special protection systems, etc.

R1.1.6.1.6. Authority to act to prevent and mitigate ~~instances of causing system conditions which could cause~~ Adverse Reliability Impacts to other Reliability Coordinator Areas.

1.7. Weekly conference calls

R2. Each Reliability ~~Coordinator's~~Coordinator shall maintain its ~~Operating Procedure, Process~~Procedures, Operating Processes, or ~~Plan~~Operating Plans identified in Requirement R1 as follows: *[Violation Risk Factor: Lower] [Time Horizon: Same Day Operations and Operations Planning]*

2.1. Review and update annually with no more than ~~requires~~15 months between reviews.

2.2. Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update.

2.3. Distribute to all Reliability Coordinators that are required to take the indicated action(s) within 30 days of an update.

R3. Each Reliability Coordinator shall make notifications and exchange reliability-related information with other Reliability Coordinators in accordance with the ~~Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1.~~ *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]*

R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement 1, Part 1.7) with other Reliability Coordinators within the same Interconnection. *[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]*

R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify all other Reliability Coordinators. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

R6. During each instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact each impacted Reliability Coordinator shall operate as though the problem exists. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

R7. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, the Reliability Coordinator that identified the Adverse Reliability Impact shall develop an action plan to resolve the Adverse Reliability Impact. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

C. Measures

M1. Each Reliability Coordinator shall have available the latest approved documented version of its Operating Procedures, Processes, and Operating Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators for conditions or activities that impact other Reliability Coordinator Areas. This documentation shall include dated, current in force documentation with the specified elements. (R1)

R2.M2. Each Reliability Coordinator shall have dated evidence that the Operating Procedures, Processes, and Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) ~~shall beware~~:

2.1 Reviewed and updated annually with no more than 15 months between reviews.

R2.1.2.2 Agreed to, in writing, by all the Reliability Coordinators required to take the indicated action(s).

R2.2.2.3 Distributed within 30 days of an update to all Reliability Coordinators that are required to take the indicated action(s).

~~R3.~~ A Reliability Coordinator's Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan shall include:

~~3.1.~~ A reference to the associated Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan.

~~3.2.~~ The agreed upon actions from the associated Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan.

~~R4.~~ Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:

~~4.1.~~ Include version control number or date.

~~4.2.~~ Include a distribution list.

~~4.3.~~ Be reviewed, at least once every three years, and updated if needed.

C. Measures

~~M1.~~ The Reliability Coordinator's System Operators shall have available for Real-time use, the latest approved version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions between Reliability Coordinators:

~~1.1~~ These Operating Procedures, Processes, or Plans shall address:

~~1.1.1~~ Communications and notifications, including the conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and

~~the data and information to be exchanged with other Reliability Coordinators.~~

~~1.1.2 — Energy and capacity shortages.~~

~~1.1.3 — Planned or unplanned outage information.~~

~~1.1.4 — Voltage control, including the coordination of reactive resources for voltage control.~~

~~1.1.5 — Coordination of information exchange to support reliability assessments.~~

~~1.1.6 — Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.~~

~~M2. The Reliability Coordinator shall have evidence that these Operating Procedures, Processes, or Plans were:~~

~~2.1 — Agreed to by all the Reliability Coordinators required to take the indicated action(s).~~

~~2.2 — Distributed to all Reliability Coordinators that are required to take the indicated action(s).~~

~~M3. The Reliability Coordinator's Operating Procedures, Processes, or Plans developed (for its System Operators' internal use) to support a Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan received from another Reliability Coordinator shall:~~

~~3.1 — Be available to the Reliability Coordinator's System Operators for Real-time use;~~

~~3.2 — Include a reference to the associated source document, and~~

~~3.3 — Support the agreed-upon actions from the source document.~~

~~M4. The Reliability Coordinator's Operating Procedures, Processes, or Plans that addresses Reliability Coordinator to Reliability Coordinator coordination shall each include a version control number or date and a distribution list. The Reliability Coordinator shall have evidence that these Operating Procedures, Processes, or Plans were reviewed within the last three years.~~

This evidence may include, but is not limited to dated documentation with confirmation of receipt, dated notice of acceptance or agreement to take specified actions, or dated electronic communications with confirmation of receipt and acceptance or agreement to take specified actions. (R2)

M3. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it made notifications and exchanged reliability-related information with impacted Reliability Coordinators in accordance with the Operating Procedures, Processes, or Plans identified in Requirement R1. (R3)

- M4. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it participated in agreed upon (at least weekly) conference calls with other Reliability Coordinators within the same Interconnection. (R4)
- M5. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it, upon identification of an Adverse Reliability Impact, notified other Reliability Coordinators. (R5)
- M6. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it operated under the assumption that the Adverse Reliability Impact existed during each instance where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact. (R6)
- M7. Each Reliability Coordinator that identified an Adverse Reliability Impact shall have evidence and provide evidence that it developed an action plan during those instances where Reliability Coordinators disagreed on the existence of an Adverse Reliability Impact. This evidence may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation. (R7)
- M8. Each impacted Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent dated documentation, that will be used to determine that it implemented the action plan developed by the Reliability Coordinator who has the identified the Adverse Reliability Impact when a Reliability Coordinator has identified an Adverse Reliability Impact and the impacted Reliability Coordinators disagree on an action unless such actions would have violated safety, equipment, or regulatory or statutory requirements. (R8)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance ~~Monitoring Responsibility~~Enforcement Authority

~~Regional Reliability Organization~~

The Regional Entity is the Compliance Enforcement Authority except where the Reliability Coordinator works for the Regional Entity. Where the Reliability Coordinator works for the Regional Entity, the Regional Entity will establish an agreement with the ERO or another entity approved by the ERO and FERC (i.e. another Regional Entity), to be responsible for compliance enforcement.

1.2. Compliance Monitoring Period and Reset Time Frame

~~The Performance Reset Period shall be one calendar year.~~

Not Applicable

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

1.3.1.4. Data Retention

~~The Reliability Coordinator shall keep documentation for the prior calendar year and the current calendar year. The Compliance Monitor shall keep data or evidence to show compliance data for a minimum of three years or until the Reliability Coordinator has achieved full compliance, whichever is longer.~~

1.1. Additional Compliance Information

~~The Reliability Coordinator shall demonstrate compliance through self-certification submitted to as identified below unless directed by its Compliance Monitor annually. The Compliance Monitor shall also use a scheduled on-site review at least once every three years and investigations upon complaint. The Compliance Monitor shall conduct an Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation upon a complaint within 30 days of the alleged infraction's discovery date. The Compliance Monitor shall complete the investigation within 45 days after the start of the investigation. As part of an audit or investigation, the Compliance Monitor shall interview other Reliability Coordinators to identify Operating Procedures, Processes or Plans that were distributed to the Reliability Coordinator being audited to verify that these documents are available for Real-time use by the receiving Reliability Coordinator's System Operators.:~~

- ~~o The~~Each Reliability Coordinator shall ~~have the following~~retain its current, in force document and any documents available for inspection during an on-site in force since the last compliance audit or within five business days for Requirements R1, R2, and Measures M1, M2.
- ~~o Each Reliability Coordinator shall retain its most recent 12 months of a request as part~~evidence for Requirement R3, R4, R5 and Measure M3, M4, M5.
- ~~o Each Reliability Coordinator shall retain 3 calendar years plus current calendar year of an investigation upon a complaint.~~evidence for Requirements R6 through R8 and Measures M6 through M8.

~~1.1.1 The latest version of its Operating Procedures, Processes, or Plans that require notification, exchange of~~If a Reliability Coordinator is found non-compliant,

~~it shall keep information, or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability.~~

~~1.1.1 Evidence of distribution of Operating Procedures, Processes, or Plans.~~

~~2. Levels of Non-Compliance~~

~~2.1. Level 1: There shall be a level one non-compliance if either of the following conditions is present:~~

~~2.1.1 The latest versions of Operating Procedures, Processes, or Plans (identified through self-certification) that require notification, exchange of information, or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability do not include a version control number or date, and a distribution list.~~

~~2.1.2 The latest versions of Reliability Coordinator internal documents developed to support action(s) required as a result of other Reliability Coordinators do not include both a reference to the source Operating Procedure, Process, or Plan and the agreed-upon actions from the source Operating Procedure, Process, or Plan.~~

~~2.2. Level 2: There shall be a level two related to the non-compliance if any of the following conditions is present:~~

~~2.2.1 Documents required by this standard were not distributed to all entities on the distribution list.~~

~~2.2.2 Documents required by this standard were not available until found compliant, or for System Operators' Real-time use period specified above, whichever is longer.~~

~~2.2.3 Documents required by this standard do not address all required topics.~~

~~2.3. Level 3: Documents required by this standard do not address any of the six required topics in Reliability Standard IRO-014 R1.~~

~~2.4. Level 4: Not Applicable.~~

~~o The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.~~

2. Violation Severity Levels

<u>R#</u>	<u>Lower VSL</u>	<u>Moderate VSL</u>	<u>High VSL</u>	<u>Severe VSL</u>
<u>R1</u>	<u>The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one of the topical areas identified in Parts 1.1 through 1.7.</u>	<u>The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address two of the topical areas identified in Parts 1.1 through 1.7.</u>	<u>The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three of the topical areas identified in Parts 1.1 through 1.7.</u>	<u>The Reliability Coordinator failed to have Operating Procedures, Operating Processes, or Operating Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability to address three or more of the topical areas identified in Parts 1.1 through 1.7.</u>
<u>R2</u>	<u>N/A</u>	<u>The Reliability Coordinator Operating Procedures, Operating Processes, or Operating Plans identified in R1 but failed to distribute these to all Reliability Coordinators that are required to take action.</u>	<u>The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans identified in R1 but failed to obtain agreement from all Reliability Coordinators that are required to take action.</u> <u>OR</u> <u>Failed to review and update the Operating Procedures, Operating Processes, and Operating Plans identified in R1 annually.</u>	<u>The Reliability Coordinator has Operating Procedures, Operating Processes, or Operating Plans identified in R1 but failed to review and update annually and obtain written agreement from all Reliability Coordinators that are required to take action and failed to distribute these to all Reliability Coordinators that are required to take action.</u>
<u>R3</u>	<u>N/A</u>	<u>N/A</u>	<u>The Reliability Coordinator failed to make notifications OR exchange reliability-related information with impacted Reliability Coordinators.</u>	<u>The Reliability Coordinator failed to make notifications AND exchange reliability-related information with impacted Reliability Coordinators.</u>

Implementation Plans and Mapping Documents submitted for Approval

Implementation Plan and Mapping Document

IRO-001-3 Reliability Coordination – Responsibilities and Authorities

Requested Approval

The RC SDT requests the approval of IRO-001-3 – Reliability Coordination – Responsibilities and Authorities.

Requested Retirement

The RC SDT request the retirement of standard IRO-001-2 – Responsibilities and Authorities, Requirements R1 and R2, and the associated sub-requirements.

Prerequisite Approvals

None.

Defined Terms in the NERC Glossary

The RC SDT proposes the following new definition:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

Conforming Changes to Requirements in Already Approved Standards

None.

Revision Summary

The RC SDT is proposing the following revisions. Requirement, R1 will be retired because it is addressed in the NERC Rules of Procedure, Section 501 and 503. Requirements, R2 and R5 are proposed for retirement. Requirement, R3 will become the new Requirement R1, the authority to act and direct others to act, which may include Reliability Directives. Requirement, R4 is proposed for retirement because it is redundant with the NERC Rules of Procedure, Section 501 and 508. Requirement, R6 is proposed for retirement because PER-003-0 provides the necessary reliability replacement with no gap in reliability. Requirement, R7 is proposed for retirement because IRO-014-2, R1 provides the necessary reliability replacement with no gap in reliability. Requirement, R8 is proposed for replacement by the new IRO-001-3, Requirement R2 and R3. Requirements, R9 is proposed for retirement because it is redundant with other requirements and it is covered under the Reliability Coordinator’s Standard of Conduct.

Applicable Entities

- Reliability Coordinator
- Balancing Authority
- Transmission Operator Generator Operator
- Distribution Provider

Effective Dates

The first day of the second calendar quarter beyond the date that this standard is approved by applicable regulatory authorities, or in those jurisdictions where regulatory approval is not required, the standard becomes effective on the first day of the first calendar quarter beyond the date this standard is approved by the NERC Board of Trustees, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

New or Revised Standard

IRO-001-3 In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the second calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees adoption.

Standard for Retirement

IRO-001-2 Midnight of the day immediately prior to the Effective Date of IRO-001-3 in the particular Jurisdiction in which the new standard is becoming effective.

Implementation Plan for Definition

Reliability Directive: Entities shall use this definition when implementing the standard IRO-001-3, which uses this defined term.

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard becomes effective. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p>The RC SDT proposes retiring the requirement as it is addressed in the NERC Rules of Procedure, March 15, 2012:</p> <p>Section 503, 2 (2.1)</p> <p>“Regional Entities shall verify that all Reliability Coordinators, Balancing Authorities, and Transmission Operators meet the Registration requirements of Section 501(1.4).”</p> <p>Section 501 (1.4)</p> <p>“1.4 For all geographical or electrical areas of the Bulk Power System, the Registration process shall ensure that (1) no areas are lacking any entities to perform the duties and tasks identified in and required by the Reliability Standards to the fullest extent practical, and (2) there is no unnecessary duplication of such coverage or of required oversight of such coverage. In particular the process shall:</p> <p style="padding-left: 40px;">1.4.1 Ensure that all areas are under the oversight of one and</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p>only one Reliability Coordinator.</p> <p>1.4.2 Ensure that all Balancing Authorities and Transmission Operator entities¹ are under the responsibility of one and only one Reliability Coordinator.</p> <p>1.4.3 Ensure that all transmission Facilities of the Bulk Power System are the responsibility and under the control of one and only one Transmission Planner, Planning Authority, and Transmission Operator.</p> <p>1.4.4 Ensure that all loads and generators are under the responsibility and control of one and only one Balancing Authority.”</p>
<p>Notes:</p>	
<p>IRO-001-1</p> <p>R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p>None – The RC SDT proposes retiring the requirements.</p>
<p>Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how a Reliability</p>	

¹ Some organizations perform the listed functions (e.g., Balancing Authority, Transmission Operator) over areas that transcend the Footprints of more than one Reliability Coordinator. Such organizations will have multiple Registrations, with each such Registration corresponding to that portion of the organization’s overall area that is within the Footprint of a particular Reliability Coordinator.

Already Approved Standard	Proposed Replacement Requirement(s)
Coordinator will comply with all other NERC Standards, making this requirement redundant.	
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-3</p> <p>R1. Each Reliability Coordinator shall take have the authority to actions or direct others to actions (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROs are contained in other standards (e.g., TOP-007, R2). This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in IRO-001-1, R1, which states that the Reliability Coordination will act or direct actions to mitigate issues. Additionally, stakeholders indicated issues with the ability to measure compliance with the phrase, “without intentional delay” and this was removed.</p>	
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability</p>	<p>None – The RC SDT proposes retiring the requirement.</p> <p>RC SDT contends that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, Section 500 (March 15, 2012) and should be retired from the standard.</p> <p>(Section 501)</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>“The purpose of the Organization Registration Program is to clearly identify those entities that are responsible for compliance with the FERC approved Reliability Standards. Organizations that are registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable Reliability Standards.”</p> <p>(Section 508)</p> <p>Provisions Relating to Coordinated Functional Registration (CFR) Entities</p> <p>In addition to registering as an entity responsible for all functions that it performs itself, multiple entities may each register using a CFR for one or more Reliability Standard(s) and/or for one or more Requirements/sub-Requirements within particular Reliability Standard(s) applicable to a specific function. The CFR submission must include a written agreement that governs itself and clearly specifies the entities’ respective compliance responsibilities. The Registration of the CFR is the complete Registration for each entity. Additionally, each entity shall take full compliance responsibility for those Reliability Standards and/or Requirements/sub-Requirements it has registered for in the CFR. Neither NERC nor the Regional Entity shall be parties to any such agreement, nor shall NERC or the Regional Entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the CFR.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Notes: Section 508 addresses written agreements.</p>	
<p>IRO-001-1</p> <p>R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – The RC SDT proposes retiring the requirement because it is covered by PER-003-0, R1.</p> <p>PER-003-0</p> <p>R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions:</p> <ul style="list-style-type: none"> R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System. R1.2. Positions directly responsible for complying with NERC standards.
<p>Notes: The RC SDT recommends retiring IRO-001-1, R6 as it is redundant with PER-003-0, R1, R1.1., and R1.2.</p>	
<p>IRO-001-1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability</p>	<p>None – The RC SDT proposes retiring the requirement because it is covered by IRO-014-2, R1.</p> <p>IRO-014-2</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Coordinator Areas are coordinated. <i>[Violation Risk Factor: High]</i></p>	<p>notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT proposes retiring the retirement of IRO-001-1, R7 as this is redundant with IRO-014-1 R1.</p>	
<p>IRO-001-1</p> <p>R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-3</p> <p>R2. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator’s direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT added the Distribution Provider per FERC Order 693. The RC SDT proposes the replacement of IRO-001-1, R8 with two requirements IRO-001-3, R2, and R3.</p> <p>The Distribution Provider was added as an applicable entity per FERC Order 693.</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity. <i>[Violation Risk Factor: High]</i></p>	<p>None – Retire requirement because it is redundant.</p>
<p>Notes: The RC SDT proposes retiring this requirement. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the RC Area and the Interconnection. Section 6 of the NERC Standard Development Procedure states that NERC develops and maintains Reliability Standards. Equity issues are covered under the Reliability Coordinator Standards of Conduct.</p>	

Functions that Must Comply with the Requirements in the Standards

Standard	Functions that Must Comply With the Requirements							
	Reliability Coordinator	Balancing Authority	Distribution Provider	Transmission Operator	Transmission Service Provider	Purchasing Selling Entity	Generator Operator	Load Serving Entity
IRO-001-2	X	X	X	X			X	

Implementation Plan
IRO-002-3 – Reliability Coordination – Analysis Tools

Approvals Required

IRO-002-3 – Reliability Coordination – Analysis Tools

Prerequisite Approvals

None

Revisions to Glossary Terms

None

Applicable Entities

Reliability Coordinator

Conforming Changes to Other Standards

None

Effective Dates

IRO-002-3 shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

Retirements

IRO-002-2 should be retired at midnight of the day immediately prior to the Effective Date of IRO-002-3 in the particular jurisdiction in which the new standard is becoming effective.

Summary of Changes

The RCSDT revised the standard and is proposing retiring several requirements (R1, R3, R4, R5, R6, R7 and R8). Changes were made to eliminate redundancies between standards (existing and proposed), align with NERCs Rules of Procedure, and to address the FERC Order 693 directive for IRO-002:

In addition we direct the ERO to develop a modification to IRO-002-1 through the Reliability Standards development process that requires a minimum set of tools that should be made available to reliability coordinators.

RCSDT response: The development of a minimum set of tools should be addressed through the work of the Real-Time Tools Best Practices Task Force. Their charge was to develop a list of tools required to perform real time operations functions and submit SARs based on their work. As requirements for these tools are developed, appropriate standards projects will be initiated to incorporate the tools within the NERC Organization Registration and Certification Process, and the applicable reliability standards. The RCSDT submits that this directive be addressed in that effort. This action is accommodated by the Standards Development Work Plan.

The following table identifies the sections of approved standards that shall be retired or revised when this standard is implemented.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-2</p> <p>R1. Each Reliability Coordinator shall have adequate communications facilities (voice and data links) to appropriate entities within its Reliability Coordinator Area. These communications facilities shall be staffed and available to act in addressing a real-time emergency condition. [<i>Violation Risk Factor: High</i>]</p>	<p>The first sentence of this requirement should be retired because it is a basic facility issue that should be addressed in certification. The second sentence is redundant with PER-004, R1 which requires the RC to be staffed 24x7.</p> <p>PER-004-1</p> <p>R1. Each Reliability Coordinator shall be staffed with adequately trained and NERC-certified Reliability Coordinator operators, 24 hours per day, seven days per week.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-2</p> <p>R2. Each Reliability Coordinator — or its Transmission Operators and Balancing Authorities — shall provide, or arrange provisions for, data exchange to other Reliability Coordinators or Transmission Operators and Balancing Authorities via a secure network. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]</p>	<p>None. Retire requirement as it is redundant with:</p> <p>TOP-005-1</p> <p>R1. Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area. (This requirement will be retired upon the implementation of IRO-010-1)</p> <p>IRO-014-1</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p> <p>R1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p> <p>R1.2. Energy and capacity shortages.</p> <p>R1.3. Planned or unplanned outage information.</p> <p>R1.4. Control of voltage, including the coordination of reactive resources.</p> <p>R1.5. Coordination of information exchange to support reliability assessments.</p> <p>R1.6. Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.</p> <p>R1.7. Weekly conference calls</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Notes: The “secure network” provisions of IRO-002-2 R2 are covered under the NERC Rules of Procedure, Section 1002 which states:</p> <p><i>NERC will provide tools and other support services for the benefit of reliability coordinators and other system operators, including the Area Control Error (ACE) and Frequency Monitoring System, NERC Hotline, Real-time Flows, System Data Exchange (SDX), Reliability Coordinator Information System (RCIS), Transmission Services Information Network (TSIN), Interchange Distribution Calculator (IDC), Interregional Security Network (ISN), and Central Repository for Security Events (CRC). To accomplish this goal, NERC will:</i></p> <ol style="list-style-type: none"> <i>1. Maintain the reliability and effectiveness of all mission-critical operating reliability support systems and services;</i> <i>2. Continue to support maintenance of a transmission provider curtailment report on the CRC site in response to Federal Energy Regulatory Commission Order 605;</i> <i>3. Investigate and analyze the use of high-speed real-time system measurements, including phasors, in predicting the behavior and performance of the Eastern Interconnection; and</i> <i>4. Facilitate real-time voice and data exchange services among reliability coordinators (e.g., Hotline, Interregional Security Network, NERCnet, System Data Exchange, etc.).</i> 	
<p>IRO-002-2</p> <p>R3. Each Reliability Coordinator shall have multi-directional communications capabilities with its Transmission Operators and Balancing Authorities, and with neighboring Reliability Coordinators, for both voice and data exchange as required to meet reliability needs of the Interconnection. <i>[Violation Risk Factor: Medium]</i></p>	<p>None. Retire this requirement.</p> <p>R3 is addressed in COM-001-1, R1 as well as the proposed revisions to COM-001-2, R1-R8.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-2</p> <p>R4. Each Reliability Coordinator shall have detailed real-time monitoring capability of its Reliability Coordinator Area and sufficient monitoring capability of its surrounding Reliability Coordinator Areas to ensure that potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations are identified. Each Reliability Coordinator shall have monitoring systems that provide information that can be easily understood and interpreted by the Reliability Coordinator’s operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.</p> <p>R5. Each Reliability Coordinator shall monitor Bulk Electric System elements (generators, transmission lines, buses, transformers, breakers, etc.) that could result in SOL or IROL violations within its Reliability Coordinator Area. Each Reliability Coordinator shall monitor both real and reactive power system flows, and operating reserves, and the status of Bulk Electric System elements that are or could be critical to SOLs and IROLs and system restoration requirements within its Reliability Coordinator Area.</p>	<p>None. Both should be retired based on the notes below.</p>
<p>Notes: R4 is a basic facility requirement that should be addressed in certification. For R5, real-time monitoring is a supporting activity and is only one of several processes used to support operation within SOLs or IROLs. It is not practical to measure real-time monitoring, nor is this necessary. The real reliability objective is to operate within identified parameters, not to monitor.</p>	
<p>IRO-002-2</p> <p>R6. Each Reliability Coordinator shall have adequate analysis tools such as state estimation, pre- and post-contingency analysis capabilities (thermal, stability, and voltage), and wide-area overview displays. <i>[Violation Risk Factor: High]</i></p>	<p>None. Retire this requirement. R7 is a basic facility requirement that should be addressed in certification.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-2</p> <p>R7. Each Reliability Coordinator shall continuously monitor its Reliability Coordinator Area. Each Reliability Coordinator shall have provisions for backup facilities that shall be exercised if the main monitoring system is unavailable. Each Reliability Coordinator shall ensure SOL and IROL monitoring and derivations continue if the main monitoring system is unavailable. <i>[Violation Risk Factor: High]</i></p>	<p>None. This requirement should be retired because it is redundant with:</p> <p>EOP-008-0</p> <p>R1. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have a plan to continue reliability operations in the event its control center becomes inoperable. The contingency plan must meet the following requirements:</p> <p>The contingency plan shall not rely on data or voice communication from the primary control facility to be viable.</p> <p>R1.2. The plan shall include procedures and responsibilities for providing basic tie line control and procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.</p> <p>R1.3. The contingency plan must address monitoring and control of critical transmission facilities, generation control, voltage control, time and frequency control, control of critical substation devices, and logging of significant power system events. The plan shall list the critical facilities.</p> <p>R1.4. The plan shall include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.</p> <p>R1.5. The plan shall include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.</p> <p>R1.6. The plan shall include procedures and responsibilities for providing annual training to ensure that operating personnel are able to implement the contingency plans.</p> <p>R1.7. The plan shall be reviewed and updated annually.</p> <p>R1.8. Interim provisions must be included if it is expected to take more than one hour to implement the contingency plan for loss of primary control facility.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Notes: Real-time monitoring is a supporting activity and is only one of several processes used to support operation within SOLs or IROLs. It is not practical to measure real-time monitoring, nor is this necessary. The real reliability objective is to operate within SOLs and IROLs, not to monitor.</p> <p>The proposed revisions to EOP-008 require the RC to have specific backup capabilities sufficient to, among other things, provide visualization capabilities that ensure that operating personnel have situational awareness of the BES.</p>	
<p>IRO-002-2</p> <p>R8. Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-002-2</p> <p>R2. Each Reliability Coordinator shall provide its System Operators with the authority to approve, deny or cancel planned outages of its own analysis tools. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>R3. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>

Retirements

IRO-005-3a should be retired at midnight of the day immediately prior to the Effective Date of IRO-005-4 in the particular jurisdiction in which the new standard is becoming effective.

Summary of Changes

The RC SDT proposes retiring other requirements and revising R15 into two separate requirements.

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-3a R1. and sub-requirements Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following: <i>[Violation Risk Factor: High]</i></p>	<p>Retire R1 and its sub-requirements – Monitoring capability can be objectively measured and is essential to real-time operations – however real-time monitoring is a supporting activity and is only one of several processes used to support operation within defined parameters. Monitoring capability should be assessed during certification and not as a requirement.</p>
<p>IRO-005-3a R2. Each Reliability Coordinator shall monitor its Balancing Authorities’ parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard (CPS) and Disturbance Control Standard (DCS) requirements. If necessary, the Reliability Coordinator shall direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. The Reliability Coordinator shall issue Energy Emergency Alerts as needed and at the request of its Balancing Authorities and Load-Serving Entities. <i>[Violation Risk Factor: High]</i></p>	<p>None. The RCSDT proposes that this requirement be retired. The BA has its own requirements regarding compliance with CPS and DCS standards as well as requesting emergency assistance. We view these as vestiges of an earlier program that no longer apply given the current mandatory requirements with which the BA must comply. This requirement should be retired. The requirement is also redundant with existing EOP-002-2.</p>
<p>Notes: EOP-002-2 R1. Each Balancing Authority and Reliability Coordinator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its respective area and shall exercise specific authority to alleviate capacity and energy</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
	<p>emergencies.</p> <p>R2. Each Balancing Authority shall implement its capacity and energy emergency plan, when required and as appropriate, to reduce risks to the interconnected system.</p> <p>R3. A Balancing Authority that is experiencing an operating capacity or energy emergency shall communicate its current and future system conditions to its Reliability Coordinator and neighboring Balancing Authorities.</p> <p>R4. A Balancing Authority anticipating an operating capacity or energy emergency shall perform all actions necessary including bringing on all available generation, postponing equipment maintenance, scheduling interchange purchases in advance, and being prepared to reduce firm load.</p> <p>R5. A deficient Balancing Authority shall only use the assistance provided by the Interconnection’s frequency bias for the time needed to implement corrective actions. The Balancing Authority shall not unilaterally adjust generation in an attempt to return Interconnection frequency to normal beyond that supplied through frequency bias action and Interchange Schedule changes. Such unilateral adjustment may overload transmission facilities.</p> <p>R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. These remedies include, but are not limited to:</p> <ul style="list-style-type: none"> R6.1. Loading all available generating capacity. R6.2. Deploying all available operating reserve. R6.3. Interrupting interruptible load and exports. R6.4. Requesting emergency assistance from other Balancing Authorities. R6.5. Declaring an Energy Emergency through its Reliability Coordinator; and R6.6. Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads. <p>R7. Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall:</p> <ul style="list-style-type: none"> R7.1. Manually shed firm load without delay to return its ACE to zero; and R7.2. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0 “Energy Emergency Alert Levels.” <p>R8. A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002-0 “Energy Emergency Alert Levels.” The Reliability</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.</p> <p>R9. When a Transmission Service Provider expects to elevate the transmission service priority of an Interchange Transaction from Priority 6 (Network Integration Transmission Service from Non-designated Resources) to Priority 7 (Network Integration Transmission Service from designated Network Resources) as permitted in its transmission tariff (See Attachment 1-IRO-006-0 “Transmission Loading Relief Procedure” for explanation of Transmission Service Priorities):</p> <p>R9.1. The deficient Load-Serving Entity shall request its Reliability Coordinator to initiate an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0.</p> <p>R9.2. The Reliability Coordinator shall submit the report to NERC for posting on the NERC Website, noting the expected total MW that may have its transmission service priority changed.</p> <p>R9.3. The Reliability Coordinator shall use EEA 1 to forecast the change of the priority of transmission service of an Interchange Transaction on the system from Priority 6 to Priority 7.</p> <p>R9.4. The Reliability Coordinator shall use EEA 2 to announce the change of the priority of transmission service of an Interchange Transaction on the system from Priority 6 to Priority 7.</p>	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R3. Each Reliability Coordinator shall ensure its Transmission Operators and Balancing Authorities are aware of Geo-Magnetic Disturbance (GMD) forecast information and assist as needed in the development of any required response plans.</p>	<p>The RCSDT proposes retiring this requirement as it is addressed in R15 below. A GMD is one of the “expected or actual threats with Adverse Reliability Impacts”.</p> <p>IRO-005-4 (proposed)</p> <p>R2. Each Reliability Coordinator that identifies an expected or actual condition with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated. <i>[Violation Risk Factor: Medium]</i> <i>[Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>IRO-005-3</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
<p>R4. The Reliability Coordinator shall disseminate information within its Reliability Coordinator Area, as required.</p>	<p>None. The RCSDT recommends retiring this requirement.</p>
<p>Notes: The RCSDT proposes that this requirement is too vague and ambiguous to measure. We recommend retiring this requirement.</p>	
<p>IRO-005-3a</p> <p>R5. Each Reliability Coordinator shall monitor system frequency and its Balancing Authorities' performance and direct any necessary rebalancing to return to CPS and DCS compliance. The Transmission Operators and Balancing Authorities shall utilize all resources, including firm load shedding, as directed by its Reliability Coordinator to relieve the emergent condition.</p>	<p>None. The BA has its own requirements regarding compliance with CPS and DCS standards as well as requesting emergency assistance. RCSDT views these as vestiges of an earlier program that no longer apply given the current mandatory requirements with which the BA must comply. The second sentence is redundant with EOP-002, R4, R6, R7, and R9. This requirement should be retired.</p> <p>The RCSDT recommends retiring this requirement as it is redundant with:</p> <p>TOP-006-1</p> <p>R7. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall monitor system frequency.</p> <p>EOP-002-2</p> <p>R4. A Balancing Authority anticipating an operating capacity or energy emergency shall perform all actions necessary including bringing on all available generation, postponing equipment maintenance, scheduling interchange purchases in advance, and being prepared to reduce firm load.</p> <p>R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so.</p> <p>These remedies include, but are not limited to:</p> <p>R6.1. Loading all available generating capacity.</p> <p>R6.2. Deploying all available operating reserve.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p>R6.3. Interrupting interruptible load and exports.</p> <p>R6.4. Requesting emergency assistance from other Balancing Authorities.</p> <p>R6.5. Declaring an Energy Emergency through its Reliability Coordinator; and</p> <p>R6.6. Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads.</p> <p>R7. Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall:</p> <p>R7.1. Manually shed firm load without delay to return its ACE to zero; and</p> <p>R7.2. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0 “Energy Emergency Alert Levels.”</p>
<p>IRO-005-2</p> <p>R6. The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.</p>	<p>None. The RCSDT proposes to retire this requirement from IRO-005.</p> <p>The RCSDT proposes retiring this requirement as it is redundant with TOP-003 and IRO-004 (all requirements) for next day requirements. The RC has the authority to coordinate pending outages in real-time through IRO-001-2, R1 (proposed). The issue of CPS and DCS is covered in EOP-002-2, R6, R7 and R8 (see above).</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Notes:</p> <p>TOP-003-0</p> <p>R1. Generator Operators and Transmission Operators shall provide planned outage information.</p> <p>R1.1. Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements.</p> <p>R1.2. Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements.</p> <p>R1.3. Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.</p> <p>R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators as required.</p> <p>R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.</p> <p>R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.</p> <p>IRO-004-1</p> <p>R1. Each Reliability Coordinator shall conduct next-day reliability analyses for its Reliability Coordinator Area to ensure that the Bulk Electric System can be operated reliably in anticipated normal and Contingency event conditions. The Reliability Coordinator shall conduct Contingency analysis studies to identify potential interface and other SOL and IROL violations, including overloaded transmission lines and transformers, voltage and stability limits, etc.</p> <p>R2. Each Reliability Coordinator shall pay particular attention to parallel flows to ensure one Reliability Coordinator Area does not place an unacceptable or undue Burden on an adjacent Reliability Coordinator Area.</p> <p>R3. Each Reliability Coordinator shall, in conjunction with its Transmission Operators and Balancing Authorities, develop action plans that may be required, including reconfiguration of the transmission system, re-dispatching of generation, reduction or curtailment of Interchange</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
<p>Transactions, or reducing load to return transmission loading to within acceptable SOLs or IROLs.</p> <p>R4. Each Transmission Operator, Balancing Authority, Transmission Owner, Generator Owner, Generator Operator, and Load-Serving Entity in the Reliability Coordinator Area shall provide information required for system studies, such as critical facility status, Load, generation, operating reserve projections, and known Interchange Transactions. This information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.</p> <p>R5. Each Reliability Coordinator shall share the results of its system studies, when conditions warrant or upon request, with other Reliability Coordinators and with Transmission Operators, Balancing Authorities, and Transmission Service Providers within its Reliability Coordinator Area. The Reliability Coordinator shall make study results available no later than 1500 Central Standard Time for the Eastern Interconnection and 1500 Pacific Standard Time for the Western Interconnection, unless circumstances warrant otherwise.</p> <p>R6. If the results of these studies indicate potential SOL or IROL violations, the Reliability Coordinator shall direct its Transmission Operators, Balancing Authorities and Transmission Service Providers to take any necessary action the Reliability Coordinator deems appropriate to address the potential SOL or IROL violation.</p> <p>R7. Each Transmission Operator, Balancing Authority, and Transmission Service Provider shall comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events.</p> <p>IRO-001-2, R1 (proposed)</p> <p>R1. The Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p>	<p>None. The RCSdT proposes to retire this requirement as it is redundant with:</p> <p>EOP-002-2</p> <p>R7.2. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0 “Energy Emergency Alert Levels.”</p> <p>R8. A Reliability Coordinator that has any Balancing Authority within its</p>
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-3a</p> <p>R7. As necessary, the Reliability Coordinator shall assist the Balancing Authorities in its Reliability Coordinator Area in arranging for assistance from neighboring Reliability Coordinator Areas or Balancing Authorities. <i>[Violation Risk Factor: High]</i></p>	<p>None. The RCSdT proposes to retire this requirement as it is redundant with:</p> <p>EOP-002-2</p> <p>R7.2. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0 “Energy Emergency Alert Levels.”</p> <p>R8. A Reliability Coordinator that has any Balancing Authority within its</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p>Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002-0 "Energy Emergency Alert Levels." The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.</p>
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-3a R8. The Reliability Coordinator shall identify sources of large Area Control Errors that may be contributing to Frequency Error, Time Error, or Inadvertent Interchange and shall discuss corrective actions with the appropriate Balancing Authority. The Reliability Coordinator shall direct its Balancing Authority to comply with CPS and DCS.</p>	<p>None. The RCSDT recommends retiring this requirement as it is redundant with: IRO-001-2 (proposed) R2. Each Reliability Coordinator shall take actions or direct actions (which could include issuing Reliability Directives) by Transmission Operators, Balancing Authorities, Generator Operators, and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i> TOP-006-1, R7 (existing) R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.</p>
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-3a R9. Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is</p>	<p>None. The RCSDT recommends retiring this requirement as it is redundant with proposed IRO-010: IRO-010-1 R1. The Reliability Coordinator shall have a documented data</p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows. The Transmission Operator shall immediately inform the Reliability Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected.</p>	<p>specification for data and information to build and maintain models to support Real-Time monitoring, Operational Planning Analyses, and Real-time Assessments. The specification shall include the following: <i>(Violation Risk Factor: Low) (Time Horizon: Operations Planning)</i></p> <p>R1.1. List of required data and information.</p> <p>R1.2. Mutually agreeable format.</p> <p>R1.3. Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses).</p> <p>R1.4. Process for data provision when automated Real-Time system operating data is unavailable.</p> <p>R2. The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator. <i>(Violation Risk Factor: Low) (Time Horizon: Operations Planning)</i></p> <p>R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. The data and information is limited to data needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments. <i>(Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</i></p>
<p>Notes: The RCSDT recommends retiring this requirement as it is redundant with proposed IRO-010, R1 and R3. Also, the scope of project</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
2007-3 includes enhancing the SPS provisions of TOP-005. IRO-003, R1 indicates the RC will monitor all items that will impact reliability, and SPSs are a part of that.	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-3a</p> <p>R10. In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.</p>	<p>None. The RCSDT recommends retiring the requirement as it is a facet of the SOL / IROL methodology required in FAC-010-1, FAC-011-1 and FAC-014-1.</p>
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-3a</p> <p>R11. The Transmission Service Providers shall respect these SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.</p>	<p>None. The RC SDT proposes retiring this requirement. The concept of this requirement is more appropriately addressed in the proposed MOD standards under project 2006-7. As written, this requirement is not measureable and unenforceable as a TSP's tariff may supersede the requirement.</p>
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-3a</p> <p>R12. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its</p>	<p>IRO-005-4</p> <p>R1. When the results of an Operational Planning Analysis or Real-time Assessment indicate an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time</i></p>

Already Approved Standard	Proposed Replacement Requirement(s)
<p>impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated.</p>	<p><i>Operations, Same Day Operations and Operations Planning</i></p> <p>R2. The Each Reliability Coordinator that identifies an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>

Implementation Plan IRO-014-2 – Coordination Among Reliability Coordinators

Approvals Required

IRO-014-2 – Coordination Among Reliability Coordinators

Prerequisite Approvals

None

Revisions to Glossary Terms

Adverse Reliability Impact - The impact of an event that results in Bulk Electric System instability or Cascading.

Applicable Entities

Reliability Coordinator

Conforming Changes to Other Standards

Modify IRO-001.1 to eliminate R7, as discussed below.

Effective Dates

In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after Board of Trustees approval.

Retirements

IRO-014-1, IRO-015-1 and IRO-016-1 should be retired at midnight of the day immediately prior to the Effective Date of IRO-014-2 in the particular jurisdiction in which the new standard is becoming effective.

Summary of Changes

The Reliability Coordination Standard Drafting Team (RC SDT) revised the standard and proposes retiring two requirements (R3 and R4). New requirements were brought into this standard from IRO-015-1 (R1-R2) and IRO-016-1 (R1 and its sub requirements). Changes were made to eliminate redundancies between standards (existing and proposed), eliminate administrative items, and align with NERC’s Rules of Procedure and to address issues in FERC Order 693.

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1.1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.</p>	<p>IRO-014-2</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p> <p>1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p> <p>1.2. Energy and capacity shortages.</p> <p>1.3. Planned or unplanned outage information.</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	<p>1.4. Control of voltage, including the coordination of reactive resources.</p> <p>1.5. Coordination of information exchange to support reliability assessments.</p> <p>1.6. Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.</p> <p>1.7. Weekly conference calls</p>
<p>Notes: The RC SDT proposes retiring IRO-001.1 R7, as it is redundant with IRO-014, R1.</p>	
<p>IRO-014-1</p> <p>R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: <i>[Violation Risk Factor: Lower]</i></p> <p>R1.1.1 Communications and notifications, including the conditions¹ under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in</p>	<p>IRO-014-2</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information or coordination of actions that may impact other Reliability Coordinator Areas to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p> <p>1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the</p>

¹ Examples of conditions when one Reliability Coordinator may need to notify another Reliability Coordinator may include (but aren't limited to) sabotage events, Interconnection Reliability Operating Limit violations, voltage reductions, insufficient resources, arming of special protection systems, etc.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>making those notifications; and the data and information to be exchanged with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1.2 Energy and capacity shortages. [Violation Risk Factor: Medium]</p> <p>R1.1.3 Planned or unplanned outage information. [Violation Risk Factor: Medium]</p> <p>R1.1.4 Voltage control, including the coordination of reactive resources for voltage control. [Violation Risk Factor: Medium]</p> <p>R1.1.5 Coordination of information exchange to support reliability assessments. [Violation Risk Factor: Lower]</p> <p>R1.1.6 Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. [Violation Risk Factor: Lower]</p>	<p>data and information to be exchanged with other Reliability Coordinators.</p> <p>1.2 Energy and capacity shortages.</p> <p>1.3 Planned or unplanned outage information.</p> <p>1.4 Control of voltage, including the coordination of reactive resources.</p> <p>1.5 Coordination of information exchange to support reliability assessments.</p> <p>1.6 Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.</p> <p>1.7 Weekly conference calls</p> <p>Authority to act to prevent and mitigate system conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.</p>
<p>Notes: Revise R1 as shown and delete the footnote.</p>	
<p>IRO-014-1</p> <p>R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be:</p> <p>R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p>	<p>IRO-014-2</p> <p>R2. Each Reliability Coordinator shall maintain its Operating Procedure, Operating Process, or Operating Plan identified in Requirement R1 as follows: <i>[Violation Risk Factor: Lower]</i> <i>[Time Horizon: Same Day Operations and Long-term Planning]</i></p> <p>2.1 Review and update annually with no more that 15 months between reviews.</p> <p>2.2 Obtain written agreement from all of the Reliability Coordinators required to take the indicated action(s) for each update.</p> <p>2.3 Distribute to all Reliability Coordinators that are required</p>

Already Approved Standard	Proposed Replacement Requirement(s)
	to take the indicated action(s) within 30 days of an update.
<p>Notes: The RC SDT added a Time Horizon to the requirement and eliminated the VRFs that were applied to the subrequirements.</p>	
<p>IRO-014-1</p> <p>R3. A Reliability Coordinator’s Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan shall include:</p> <p>R3.1. A reference to the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p> <p>R3.2. The agreed-upon actions from the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p>	<p>None. Retire the requirement</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R3 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	
<p>IRO-014-1</p> <p>R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:</p> <p>R4.1. Include version control number or date.</p> <p>R4.2. Include a distribution list.</p> <p>R4.3. Be reviewed, at least once every three years, and updated if needed</p>	<p>None. Retire the requirement.</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R4 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
the operating procedures, processes or plans.	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-015-1</p> <p>R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas. <i>[Violation Risk Factor: Medium]</i></p> <p>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R2.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p> <p>R3. The Reliability Coordinator shall provide reliability-related information as requested by other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R3. Each Reliability Coordinator shall make notifications and exchange reliability-related information with other Reliability Coordinators in accordance with the Operating Procedures, Operating Processes, or Operating Plans identified in Requirement R1. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]</i></p> <p>R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement 1, Part 1.7) with other Reliability Coordinators within the same Interconnection. <i>[Violation Risk Factor: Lower] [Time Horizon: Real-time Operations]</i></p>
<p>Notes: The RC SDT recommends retiring Standard IRO-015 and moving Requirements R1 and R2 to IRO-014-2 and revising as shown. The RC SDT proposes retiring R3 (as shown in the left column) as it is redundant with proposed R5 above. Reliability Coordinators already have several requirements aimed at providing data or information to other Reliability Coordinators in support of Reliability Coordinator responsibilities. For example, Reliability Coordinators provide reliability-related information to other Reliability Coordinators as part of IRO-010-1, R3 – they share information as they try to confirm the existence of operating issues as part of IRO-014-2 R5, etc.</p>	
Already Approved Standard	Proposed Replacement Requirement(s)

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1</p> <p>R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2 If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.1 If time permits, this re-evaluation shall be done before taking corrective actions. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.2 If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.3 If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify all other Reliability Coordinators. <i>[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R6. During each instance where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact each impacted Reliability Coordinator shall operate as though the problem exists. <i>[Violation Risk Factor: High [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R7. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, the Reliability Coordinator that identified the Adverse Reliability Impact shall develop an action plan to resolve the Adverse Reliability Impact. <i>[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact , each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. <i>[Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p>
<p>Notes: IRO-014-2 R5 and R6 are revised versions of IRO-016-1, R1 and its subrequirements which were moved to this standard. The RC SDT</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
<p>removed the wording relating to the “most conservative solution” because it can not be measured. We are proposing to use the mitigation plan of the RC who is experiencing the issue in cases where an agreed to mitigation plan can not be developed. Note that stakeholders proposed revisions to these requirements, and the RC SDT subdivided the requirements to add more clarity.</p>	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1 R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both.</p>	<p>IRO-014-2 None. Retire the requirement as it is a measure of Requirement R1.</p>

Exhibit D

Violation Risk Factors and Violation Severity Levels Analysis

Violation Risk Factor and Violation Severity Level Justifications

IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Violation Risk Factor and Violation Severity Level Justifications

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in: IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

The Reliability Coordination Standard Drafting Team (SDT) applied the following NERC criteria and FERC Guidelines when proposing VRFs and VSL for the requirements under this project.

NERC Criteria – Violation Risk Factors

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or

restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

FERC Violation Risk Factor Guidelines

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:¹

Guideline 1 – Consistency with the Conclusions of the Final Blackout Report

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:²

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders

¹ North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").

² Id. at footnote 15.

- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief

Guideline 2 – Consistency within a Reliability Standard

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

Guideline 3 – Consistency among Reliability Standards

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline 4 – Consistency with NERC’s Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC’s definition of that risk level.

Guideline 5 – Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC’s VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC’s Reliability Standards and implies that these requirements should be assigned a “High” VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are three requirements in IRO-001-3. None of the requirements were assigned a “Lower” VRF. Requirements R1, R2, and R3 are assigned a “High” VRF because this standard’s purpose is to establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impact.

NERC Criteria – Violation Severity Levels

Violation Severity Levels (VSLs) define the degree to which compliance with a requirement was not achieved. Each requirement must have at least one VSL. While it is preferable to have four VSLs for each requirement, some requirements do not have multiple “degrees” of noncompliant performance, and may have only one, two, or three VSLs.

Violation severity levels should be based on the guidelines shown in the table below:

Lower	Moderate	High	Severe
<p>Missing a minor element (or a small percentage) of the required performance</p> <p>The performance or product measured has significant value as it almost meets the full intent of the requirement.</p>	<p>Missing at least one significant element (or a moderate percentage) of the required performance.</p> <p>The performance or product measured still has significant value in meeting the intent of the requirement.</p>	<p>Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component.</p> <p>The performance or product has limited value in meeting the intent of the requirement.</p>	<p>Missing most or all of the significant elements (or a significant percentage) of the required performance.</p> <p>The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.</p>

FERC Order of Violation Severity Levels

FERC’s VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in the standard meet the FERC Guidelines for assessing VSLs:

Guideline 1 – Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2 – Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a “binary” type requirement must be a “Severe” VSL.

Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

Guideline 3 – Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline 4 – Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VRF and VSL Justifications

VRF Justifications – IRO-001-3, R1	
Proposed VRF	High
NERC VRF Discussion	
FERC VRF G1 Discussion	Guideline 1- Consistency w/ Blackout Report: N/A
FERC VRF G2 Discussion	Guideline 2- Consistency within a Reliability Standard: The requirement has no sub-requirements; only one VRF was assigned so there is no conflict
FERC VRF G3 Discussion	Guideline 3- Consistency among Reliability Standards: There is a similar requirement (Requirement R1) in EOP-002-2.1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to having responsibility to act to ensure reliability.
FERC VRF G4 Discussion	Guideline 4- Consistency with NERC Definitions of VRFs: Failure to act, direct actions or issue Reliability Directives may directly affect the electrical state or the capability of the bulk power system and may lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.
FERC VRF G5 Discussion	Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation: The requirement contains only one objective; therefore, only one VRF was assigned.

Proposed VSLs for IRO-001-3, R1				
R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	<p>The Reliability Coordinator failed to exercise its authority to take action or direct actions, to prevent an identified event that resulted in an Emergency or Adverse Reliability Impact.</p> <p>OR</p> <p>The Reliability Coordinator failed to exercise its authority to take action or direct actions to mitigate the magnitude or duration of an event that resulted in an Emergency or Adverse Reliability Impact.</p>
VSL Justifications – IRO-001-3, R1				
NERC VSL Guidelines			Meets NERC’s VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance			The proposed requirement is comparable to approved EOP-002-2, Requirement. That is a binary requirement and thus, the VSL in the proposed standard is assigned a Severe VSL.	
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language			Guideline 2a: N/A Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	

<p>FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</p>	<p>The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.</p>
<p>FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</p>	<p>The VSL is based on a single violation and not cumulative violations.</p>

VRF Justifications – IRO-001-3, R2	
Proposed VRF	High
NERC VRF Discussion	
FERC VRF G1 Discussion	<p>Guideline 1- Consistency w/ Blackout Report: N/A</p>
FERC VRF G2 Discussion	<p>Guideline 2- Consistency within a Reliability Standard: The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.</p>
FERC VRF G3 Discussion	<p>Guideline 3- Consistency among Reliability Standards: There is a similar requirement (Requirement R3) in TOP-001-1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to the complying with directives unless the following the directive would violate safety, equipment, regulatory or statutory requirements.</p>
FERC VRF G4 Discussion	<p>Guideline 4- Consistency with NERC Definitions of VRFs: Failure to comply with a reliability directive could lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.</p>
FERC VRF G5	Guideline 5- Treatment of Requirements that Co-mingle More than One

VRF Justifications – IRO-001-3, R2	
Proposed VRF	High
Discussion	Obligation: The requirement contains only one objective; therefore, only one VRF was assigned.

Proposed VSLs for IRO-001-3, R2				
R#	Lower	Moderate	High	Severe
R7	N/A	N/A	N/A	The responsible entity did not comply with the Reliability Coordinator’s direction, unless compliance with the direction could not be physically implemented or unless such actions would have violated safety, equipment, regulatory, or statutory requirements.

VSL Justifications – IRO-001-3, R2	
NERC VSL Guidelines	Meets NERC’s VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	The proposed requirement is comparable to approved TOP-001-1, Requirement R3. That VSL is binary but the SDT notes that there are two possible levels of violation for this requirement. The two conditions are that 1) the responsible entity did not comply (severe) or 2) the responsible initiated action but did not fully comply (high). Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.
FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties	Guideline 2a: N/A Guideline 2b:

<p>Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent</p> <p>Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language</p>	<p>The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.</p>
<p>FERC VSL G3</p> <p>Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</p>	<p>The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.</p>
<p>FERC VSL G4</p> <p>Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</p>	<p>The VSL is based on a single violation and not cumulative violations</p>

VRF Justifications – IRO-001-3, R3	
Proposed VRF	High
NERC VRF Discussion	
FERC VRF G1 Discussion	Guideline 1- Consistency w/ Blackout Report: N/A
FERC VRF G2 Discussion	Guideline 2- Consistency within a Reliability Standard: The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
FERC VRF G3	Guideline 3- Consistency among Reliability Standards:

VRF Justifications – IRO-001-3, R3	
Proposed VRF	High
Discussion	There is a similar requirement (Requirement R3) in TOP-001-1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to informing the Reliability Coordinator when a directive cannot be performed.
FERC VRF G4 Discussion	Guideline 4- Consistency with NERC Definitions of VRFs: Failure to inform the Reliability Coordinator of the inability to perform a reliability directive would prevent the Reliability Coordinator from developing an alternative solution to the reliability concern. This could lead to directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures.
FERC VRF G5 Discussion	Guideline 5- Treatment of Requirements that Co-mingle More than One Obligation: The requirement contains only one objective; therefore, only one VRF was assigned.

Proposed VSLs for IRO-001-3, R3				
R#	Lower	Moderate	High	Severe
R7	N/A	N/A	N/A	The responsible entity failed to inform its Reliability Coordinator upon recognition of its inability to perform as directed.

VSL Justifications – IRO-001-3, R3	
NERC VSL Guidelines	Meets NERC’s VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.
FERC VSL G1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level	The proposed requirement is comparable to approved TOP-001-1, Requirement R3. That VSL is binary and the proposed VSL is also binary. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.

<p>of Compliance</p>	
<p>FERC VSL G2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties</p> <p>Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent</p> <p>Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language</p>	<p>Guideline 2a: N/A</p> <p>Guideline 2b: The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.</p>
<p>FERC VSL G3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</p>	<p>The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.</p>
<p>FERC VSL G4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</p>	<p>The VSL is based on a single violation and not cumulative violations.</p>

Violation Risk Factor and Violation Severity Level Assignments

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in:

- IRO-002-3 — Reliability Coordination – Analysis Tools
- IRO-005-4 — Reliability Coordination – Current Day Operations
- IRO-014-2 — Coordination Among Reliability Coordinators

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

Justification for Assignment of Violation Risk Factors in IRO-002-3, IRO-005-4, and IRO-014-2:

The SDT applied the following NERC criteria when proposing VRFs for the requirements in IRO-002-3, IRO-005-4, and IRO-014-2:

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:¹

Guideline (1) — Consistency with the Conclusions of the Final Blackout Report

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:²

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) — Consistency within a Reliability Standard

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

¹ North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) (“VRF Rehearing Order”).

² Id. at footnote 15.

Guideline (3) — Consistency among Reliability Standards

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) — Consistency with NERC’s Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC’s definition of that risk level.

Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC’s VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC’s Reliability Standards and implies that these requirements should be assigned a High VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance, therefore, concentrated its approach on the reliability impact of the requirements.

VRF for IRO-002-3:

There are two requirements in IRO-002-3 and both are assigned a Medium VRF.

VRF for IRO-002-3, Requirement R1:

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. This is a unique requirement and is partially replacing IRO-002-1, Requirement R9 that is assigned a Medium VRF.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to provide System Operators with the authority to deny or cancel outages of its analysis tools does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures.

However, it greatly increases the likelihood of such problems; therefore, this requirement is assigned a Medium VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-002-3, Requirement R5 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-002-3, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a unique requirement and is partially replacing IRO-002-2, Requirement R8 that is assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to have a procedures to mitigate the effect of outages of analysis tools does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. However, it greatly increases the likelihood of such problems; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-003-2, Requirement R5 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-005-4:

There are two requirements in IRO-005-4. Requirement R1 was assigned a High VRF while Requirement R2 was assigned a Medium VRF.

VRF for IRO-005-4, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This requirement is similar to TOP-001-1, Requirement R5, which is assigned a High VRF. The requirements are viewed as similar since they both refer to notifying other entities of emergency or similar conditions.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify impacted Transmission Operators or Balancing Authorities of actual or expected conditions with Adverse Reliability Impacts could affect the electrical state or the capability of the bulk power system and may lead to bulk power system instability, separation, or cascading failures. However, it greatly increases the likelihood of such problems; therefore, this requirement is assigned a High VRF.

- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-005-4, Requirement R5 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-005-4, Requirement R2:

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. There is not a similar requirement in the standards.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to notify impacted Transmission Operators or Balancing Authorities when actual or expected conditions with Adverse Reliability Impacts are mitigated, does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. However, it greatly increases the likelihood of such problems; therefore, this requirement is assigned a Medium VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-005-4, Requirement R2 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-014-2:

There are eight requirements in IRO-014-2 and of those eight requirements, two were assigned a Lower VRF, three a Medium VRF, and three a High VRF.

VRF for IRO-014-2, Requirement R1:

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has seven parts specifying what is to be included in the Operating Procedures, Operating Processes, or Operating Plans. The VRF applies only to the main requirement. Only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. There is a similar requirement in the proposed IRO-009-1, Requirement R2 that is assigned a Medium VRF. The requirements are viewed as similar since they both refer to having Operating Plans, Operating Processes, or Operating Procedures for notifications, exchange of information, or acting to preserve reliability.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to have Operating Procedures, Operating Processes, or Operating Plans for activities that require notification, exchange of information, or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. However, it greatly increases the likelihood of such problems; therefore, this requirement is assigned a Medium VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-014-2, Requirement R1 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-014-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has three parts but the VRF is only applied to the main requirement. Only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement in the proposed IRO-010-1, Requirement R1 that is assigned a Lower VRF. The requirements are viewed as similar since they both refer to documentation.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to agree to the contents of Operating Plans, Operating Process, or Operating Procedures or their distribution does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. This requirement is administrative in nature; therefore, this requirement is assigned a Lower VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-014-2, Requirement R2 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-014-2, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement in the proposed IRO-008-1, Requirement R3 that is assigned a Medium VRF. The requirements are viewed as similar since they both refer to making notifications and sharing information.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide make notifications or share information does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. However, it greatly increases the likelihood of such problems; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-014-2, Requirement R3 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-014-2, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. This is a unique requirement and there are no other similar requirements in the standards. This requirement is a revision to IRO-015-1, Requirement R2, which has an approved Lower VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide participate on weekly conference calls does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. However, it greatly increases the likelihood of such problems; therefore, this requirement is assigned a Lower VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-014-2, Requirement R4 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-014-2, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement in the proposed IRO-008-1, Requirement R3 that is assigned a Medium VRF. The requirements are viewed as similar since they both refer to making notifications and sharing information.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide make notifications or share information does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. However, it greatly increases the likelihood of such problems; therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-014-2, Requirement R5 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-014-2, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement in the proposed IRO-009-1, Requirement R5 that is assigned a High VRF. The requirements are viewed as similar since they both refer to disagreement between entities as to the nature or the reliability issue.

- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to operate as though a problem exists could directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. Therefore, the requirement is assigned a High VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-014-2, Requirement R6 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-014-2, Requirement R7:

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. There is a similar requirement in the proposed IRO-009-1, Requirement R5 that is assigned a High VRF. The requirements are viewed as similar since they both refer to disagreement between entities as to the nature or the reliability issue.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to operate as though a problem exists could directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. Therefore, the requirement is assigned a High VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-014-2, Requirement R7 contains only one objective. Therefore, only one VRF was assigned.

VRF for IRO-014-2, Requirement R8:

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. There is a similar requirement in the proposed IRO-009-1, Requirement R5 that is assigned a High VRF. The requirements are viewed as similar since they both refer to disagreement between entities as to the nature or the reliability issue.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to operate as though a problem exists could directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. Therefore, the requirement is assigned a High VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. IRO-014-2, Requirement R8 contains only one objective. Therefore, only one VRF was assigned.

Justification for Assignment of Violation Severity Levels for COM-001-2, COM-002-3, IRO-001-2, IRO-002-3, IRO-005-4, and IRO-014-2:

In developing the VSLs for the IRO standards, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:

Lower	Moderate	High	Severe
Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full intent of the requirement.	Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.	Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.	Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.

FERC’s VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in IRO-002-3, IRO-004-5, and IRO-014-2 meet the FERC Guidelines for assessing VSLs:

Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a “binary” type requirement must be a “Severe” VSL.

Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-002-3 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is a revision of IRO-002-2, R8 which was originally a compound requirement. The RCSDT created two requirements that resulted in them being binary in nature. The Severe VSL was assigned for this binary requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-002-3 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is a revision of IRO-002-2, Requirement R8 which was originally a compound requirement. The RCSDT created two requirements that resulted in them being binary in nature. The Severe VSL was assigned for this binary requirement.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-005-4 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is a revision of IRO-005-3.1a, Requirement R12 which was originally a compound requirement. The RCSDT created two requirements that resulted in them being incremental in nature. The Reliability Coordinator is expected to notify multiple entities per the requirement. VSLs were assigned based on the incremental nature of the requirement. The VSLs do not lower the current level of compliance.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-005-4 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is a revision of IRO-005-3.1a, Requirement R12 which was originally a compound requirement. The RCSDT created two requirements that resulted in them being incremental in nature. The Reliability Coordinator is expected to notify multiple entities per the requirement. VSLs were assigned based on the incremental nature of the requirement. The VSLs do not lower the current level of compliance.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-014-2 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is a revision of IRO-014-1, Requirement R1 and its sub-requirements along with IRO-001-1, Requirement R7. The approved VSLs are incremental as are the proposed VSLs. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-014-2 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is a revision of IRO-014-1, Requirement R2 and its sub-requirements. The approved VSLs are binary and applied to the sub-requirements as well. The proposed VSLs are applied only to the requirement and are incremental. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-014-2 Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines - Requirements with Parts that Contribute Equally to the Requirement: If a requirement has several parts, and the parts contribute equally to the reliability-related objective of the requirement, the VSLs should be set either on counts (e.g., missing one of four components) or percentages (e.g., missing 5% of the components).	The proposed requirement is a revision of IRO-015-1, Requirement R1. The proposed VSLs are assigned as High and Severe as there are two components of the requirement – making notifications and sharing information. The approved VSLs are Moderate and Severe. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-014-2 Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is a revision of IRO-015-1, Requirement R2. Both the approved VSLs and the proposed VSLs are binary and have been assigned a Severe VSL. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-014-2 Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is derived from IRO-016-1, Requirement R1 and its sub-requirements. The approved VSLs have been applied at both the requirement and sub-requirement level. The proposed requirement has been written to require only one reliability concept and is binary in nature. The VSL assigned is Severe. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-014-2 Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R6.	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is derived from IRO-016-1, Requirement R1 and its sub-requirements. The approved VSLs have been applied at both the requirement and sub-requirement level. The proposed requirement has been written to require only one reliability concept and is binary in nature. The VSL assigned is Severe. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-014-2 Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R7.	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is derived from IRO-016-1, Requirement R1 and its sub-requirements. The approved VSLs have been applied at both the requirement and sub-requirement level. The proposed requirement has been written to require only one reliability concept and is binary in nature. The VSL assigned is Severe. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Justification for Assignment of Violation Risk Factors and Violation Severity Levels

VSLs for IRO-014-2 Requirement R8:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R8.	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is derived from IRO-016-1, Requirement R1 and its sub-requirements. The approved VSLs have been applied at both the requirement and sub-requirement level. The proposed requirement has been written to require only one reliability concept and is binary in nature. The VSL assigned is Severe. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Consideration of Comments Reports

Project 2006-06 Reliability Coordination

Related Files

Status:

First set of standards:

The industry approved IRO-002, IRO-005, and IRO-014 on July 25, 2011. The BOT approved the standards at their August 4, 2011 meeting. Currently, NERC staff are preparing the filing for these BOT approved standards.

Second set of standards:

The standard COM-001-2 (Communications) is posted for recirculation ballot from September 6 through September 17, 2012. The standard IRO-001-3 was adopted by the Board of Trustees (BOT) at the August 2012 meeting. The COM-002-3 is expected to proceed to the BOT for adoption upon industry stakeholder approval of COM-001-2.

Purpose/Industry Need:

To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

Standards Draft SAR Version 2	Info>> Submit Comments>>	(closed)		
Draft SAR Version 1 Reliability Coordination Standards Draft SAR Version 1	Comment Period Info>> Submit Comments>>	01/15/07 - 02/14/07 (closed)	Comments Received>>	Consideration of Comments(1)

Consideration of Comments on 1st Posting of Reliability Coordination SAR

The Reliability Coordination SAR Requesters thank all commenters who submitted comments on Draft 1 of the Reliability Coordination SAR. This SAR was posted for a 30- day public comment period from January 15 through February 14, 2007. The requesters asked stakeholders to provide feedback on the standard through a special standard Comment Form. There were 11 sets of comments, including comments from more than 31 different people from more than 15 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

While most stakeholders agreed with the reliability-related need to modify the standards addressed by this SAR, most stakeholders disagreed with the proposed scope of the original SAR and the drafting team made the following revisions to reduce the scope:

- Revised the purpose statement to more narrowly focus on the reliability-related purpose of revising the set of standards addressed by the SAR
- Removed the standards that were listed in the original SAR that are still under development, including the certification standards (ORG-020-1 through ORG-027-1), the Version 1 IROL Standards that are still under development (IRO-007-1 through IRO-013-1) and the standards that are identified in the Version 1 IROL Implementation Plan as proposed for retirement when the Version 1 IROL Standards become effective (IRO-003-1, IRO-004-1).
- Removed the paragraph that referenced facilities.
- Removed the paragraph that would have allowed the standard drafting team to make 'any' additions to requirements as long as those additions met stakeholder approval.
- Added more specificity to the drafting team's approach to modifying the set of standards identified in the SAR.

Based on the comments received, the drafting team is posting the revised SAR for another comment period.

In this "Consideration of Comments" document stakeholder comments have been organized so that it is easier to see the responses associated with each question. All comments received on the standards can be viewed in their original format at:

http://www.nerc.com/~filez/standards/Reliability-Coordination_Project_2006-6.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

Index to Questions, Comments, and Responses

- 1. Do you agree that there is a reliability-related need for the proposed revisions to this set of standards? If not, please explain in the comment area. 4
- 2. Do you agree with the scope of the SAR? If not, please explain in the comment area. 6
- 3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?11

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

1. Do you agree that there is a reliability-related need for the proposed revisions to this set of standards? If not, please explain in the comment area.

Summary Consideration: Most commenters indicated that they do believe that there is a reliability-related need for the proposed revisions to the standards.

Question #1			
Commenter	Yes	No	Comment
ISO/RTO Council ISO New England	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>The IRC and ISO-NE agrees with the objective but does not agree with the process.</p> <p>We agree there is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.</p> <p>The SRC believes that the wide perspective proposed by this SAR could compromise the internal consistency within individual standards. Subject Matter experts created interrelated requirements in given areas. This SAR proposes to impose a vertically integrated prospective, linking standards in widely dispersed areas of operational expertise. While a review of the vertical integration is useful and in places needed, it is recommended that the results of the review should themselves be sent as recommended SARs for industry consideration by the SMEs for the individual standards, and not as a proposed ad hoc standard. Grouping them as proposed in the SAR may result in unintended disconnects within the other standards, and in the worst case result in an ongoing series of iterative SARs.</p>
<p>Response: The intent is not to develop a single standard from the list of standards. The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			
Midwest ISO Stakeholders Standards Collaboration Participants	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree there is a general need to consolidate where necessary and clean up the standards. However, this SAR covers too large a swath of standards. It very confusing what the overall goal is. Additionally, we are concerned that the range of expertise required by this SAR will result in a drafting team that is too large and will result in little to no progress unless the drafting team is subdivided. If the drafting team is subdivided,</p>

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

Question #1			
Commenter	Yes	No	Comment
			then this SAR should be subdivided into other SARs.
<p>Response: The SAR was revised to more clearly define the scope of work. The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			
Independent Electricity System Operator	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	The IESO agrees with the objective but does not agree with the process. There is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.
<p>Response: The SAR was revised to more clearly define the scope of work. The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			
ITC Transmission	<input checked="" type="checkbox"/>		Yes, there is a reliability need to revise the Standards identified in this SAR. Not all of the revisions described, however, are reliability related and in fact should not be included in the standards (e.g., exempting an operator from liability).
<p>Response: The SAR was revised to omit the reference to the liability exemption.</p>			
American Transmission Co.	<input checked="" type="checkbox"/>		
Hydro One Networks, Inc. Hydro Québec TransÉnergie	<input checked="" type="checkbox"/>		
Salt River Project	<input checked="" type="checkbox"/>

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Summary Consideration: Most commenters disagreed with the scope of the original SAR and the drafting team made major modifications to reduce the scope of the SAR to only include standards that are already approved and to identify more specifically the range of changes contemplated to the standards that remain in the revised SAR.

Question #2			
Commenter	Yes	No	Comment
Hydro One Networks, Inc. Hydro Québec TransÉnergie		<input checked="" type="checkbox"/>	Please see our answer to question No. 3.
Response: Please see the response to question 3.			
ITC		<input checked="" type="checkbox"/>	<p>The Standard Drafting Team should not be given latitude to "include other improvements to the standards deemed appropriate by the drafting team." The purpose of the SAR is to identify the changes contemplated by the need for the Standard Revision. If there are changes that the SAR requestor would like to make to the Standard, they should be spelled out in the SAR. If the SAR requestor does not really know the changes that should be made to the standard, then the SAR should be withdrawn until the need for a SAR can be adequately justified.</p> <p>The remainder of the SAR is very broad; perhaps too broad. The requestor should consider reducing the scope of the SAR to make specific changes to the standards, rather than try to consolidate all of the Standards in one swift stroke.</p>
<p>Response: The intent is not to develop a single standard from the list of standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The intent of the <i>original</i> SAR was to give the Standard Drafting Team enough latitude to address requirements that fall within a list of performance requirements. Looking to the future, the Standard Drafting Team cannot expand on the scope of its SAR but may develop a set of requirements that is smaller than the scope of the SAR. Based on stakeholder comments, the scope has been revised and is more clearly and more narrowly defined.</p>			
ISO/RTO Council ISO New England		<input checked="" type="checkbox"/>	<p>We do agree the standards should be consolidated and redundancies eliminated where appropriate.</p> <p>However, it is not appropriate to include standards in this SAR that have not yet been approved. For example, it is not necessary to expand on the requirement to have facilities in place by adding a testing requirement. If an entity is required to</p>

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

Question #2			
Commenter	Yes	No	Comment
			<p>have facilities in place and they are not maintained and available, they do not meet the requirement.</p> <p>The "boiler plate" language that this "development may include other improvements deemed appropriate by the drafting team" is too vague and essentially opens the scope to include anything the drafting team wants to do with the standard. This is not appropriate. The scope should be specific and the drafting team should only focus on those specifics.</p> <p>The SRC supports the approach of prioritizing and revising individual standards to FERC's comments as part of the consideration process. Only a few standards should be revised at a time to make the process more manageable.</p>
<p>Response: The SAR was revised to omit all of the standards that were listed in the original SAR but weren't approved (draft IROL Standards and the draft Certification Standards).</p> <p>The SAR was revised to omit the paragraph that referenced facilities. Note that there is a new performance objective in the revised SAR that indicates the resultant standards will have requirements to address the RC's facility capabilities.</p> <p>The intent of the <i>original</i> SAR was to give the Standard Drafting Team enough latitude to address requirements that fall within a list of performance requirements. Looking to the future, the Standard Drafting Team cannot expand on the scope of its SAR but may develop a set of requirements that is smaller than the scope of the SAR. Based on stakeholder comments, the scope has been revised and is more clearly and more narrowly defined. The drafting team revised the SAR to omit the 'boiler plate' language.</p> <p>The intent is not to develop a single standard from the list of standards. The SAR DT can recommend that the standards be revised in a specific sequence but the final determination of which standards are revised or developed first is a decision that belongs to the Standards Committee. The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards.</p>

American Transmission Co.		<input checked="" type="checkbox"/>	<p>ATC agrees with the spirit of the SAR but believes that more details should be provided.</p> <p>Identify which of the redundant requirements will be deleted.</p> <p>Lastly ATC does not understand how a SDT can tackle the ORG -020 – 027 when these standards have not been approved by the board. In other words how can the SDT move forward on the scope when eight of the standards are still in being worked on? To approve the scope of the SAR references to ORG-020 – 027 should be deleted and considered out of bounds for the SDT.</p>
<p>Response: The SAR drafting team will let the standard drafting team determine what requirements will be deleted.</p> <p>The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

Question #2			
Commenter	Yes	No	Comment
Independent Electricity System Operator	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree with the intent to fill in the gaps and eliminate duplications among standards, and applaud the SDT for taking on this huge and challenging task. We are concerned, however, that the scope itself is too wide but yet not wide enough.</p> <p>Some of the listed standards are still being commented on, for example: IROL-007 to IRO-010, while some others had been commented on but are now in a dormant state, for example: the organization certification standards. These standards are not yet approved, and hence are subject to change and become moving targets for this holistic review task.</p> <p>The scope description does not suggest an approach to deal with ongoing changes to the standards identified. We are concerned that the wide scope and the massive task may not ensure that a one time change will cover all affected standards - those approved and those under development.</p> <p>We suggest the SDT compare this approach to an alternative approach which is to revise a few standards at a time, on a priority basis and considering FERC's views on the status of the standards, thereby limiting the corresponding changes within a more manageable scope. Overtime, when all standards have gone through revisions, all corresponding changes will be duly made.</p>
<p>Response: The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards. The SAR was modified to state that the standard drafting team will work with stakeholders to:</p> <ul style="list-style-type: none"> - Eliminate redundancy in the requirements. - Identify requirements that should be moved into other SARs - Eliminate requirements that do not support bulk power system reliability - Transfer requirements that need to be in place before an entity begins operation as an RC to certification. - Fill identified gaps in the requirements for Reliability Coordination <p>The intent is not to develop a single standard from the list of standards. The SAR DT can recommend that the standards be revised in a specific sequence but the final determination of which standards are revised or developed first is a decision that belongs to the Standards Committee.</p>			

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

Question #2			
Commenter	Yes	No	Comment
<p>The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards.</p>			
WECC Reliability Coordination Comments Work Group	<input checked="" type="checkbox"/>		We believe that the drafting needs to verify that requirements exempt the reliability coordinator real-time supervision, as well as the real-time operator from liability when making a good faith effort at preserving reliability.
<p>Response: The drafting team removed the reference to liability from the SAR.</p>			
Salt River Project	<input checked="" type="checkbox"/>		
PSC of South Carolina	<input checked="" type="checkbox"/>		

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Question #3			
Commenter	Yes	No	Comment
ITC Transmission			Uncertain to say what they would be at this point.
Hydro One Networks, Inc. Hydro Québec TransÉnergie	<input checked="" type="checkbox"/>		<p>This project involves the revision of 27 NERC Standards, not a small task by any measure. The extent of the proposed work and the necessary expertise is beyond what can be found in one single SAR team and drafting team.</p> <p>We respectfully submit that the project be divided into as many SARs and teams as necessary with the work directed and monitored by the Standards Committee.</p>
<p>Response: The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards.</p>			
Independent Electricity System Operator	<input checked="" type="checkbox"/>		<p>There are likely additional standard revisions beyond those identified, but we find it's almost impossible to pre-determine which other standards will be affected as a result of changes to those identified in this SAR.</p> <p>For example, changes currently proposed for IRO-007 to IRO-010 will precipitate corresponding changes to other affected standards, e.g. TOP-003, TOP-005, etc. However, we are unable to provide any specific list of standards that will require corresponding changes not knowing what changes will be made to the standards listed in the SAR.</p> <p>Given the above, it should not be taken for granted that the list is exhaustive in terms of revisions required.</p>
<p>Response: The intent of the <i>original</i> SAR was to give the Standard Drafting Team enough latitude to address requirements that fall within a list of performance requirements. Looking to the future, the Standard Drafting Team cannot expand on the scope of its SAR but may develop a set of requirements that is smaller than the scope of the SAR. Based on stakeholder comments, the SAR DT eliminated the paragraph that would have allowed the Standard Drafting Team to expand the scope of activities to address new issues that may come up after the SAR is finalized. If new ideas are identified during standard drafting, the standard drafting team will need to revise its SAR or develop a new SAR to address those additional ideas.</p>

Question #3			
Commenter	Yes	No	Comment
WECC Reliability Coordination Comments Work Group	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>The WECC RCCWG believes that the FERC Staff Report suggestion that COM-001 "generation owners missing" should not translate to addition of generation owners in the applicability. "Generator Operator" is an applicable entity, but not "Generator Owner".</p> <p>The WECC RCCWG believes the Reliability Coordination SAR should address those V0 comments on requirements, when those specific are no longer part of the standard referenced in the V0 comments identified in Attachment 1 of the SAR if those comments were not previously addressed. One example: posted "V0 Industry Comments" suggest inclusion of sabotage and security in R2 of COM-002. That comment is no longer applicable to COM-002 R2 - the standard requirements have changed. That said, the comment intent should not be lost</p>
<p>Response: The FERC comments are 'issues to consider' but are not directives for changes to the standards. The SAR was revised and any outdated V0 comments (or other organization or committee comments) comments have been removed.</p>			
Midwest ISO Stakeholders Standards Collaboration Participants	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>Because of the overbroad nature of this SAR, the answer is likely yes. However, it is nearly impossible to determine all the additional required changes without missing important items. This SAR needs to be broken down to address individual standards.</p>
<p>Response: The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards. The SAR was modified to state that the standard drafting team will work with stakeholders to:</p> <ul style="list-style-type: none"> - Eliminate redundancy in the requirements. - Identify requirements that should be moved into other SARs - Eliminate requirements that do not support bulk power system reliability - Transfer requirements that need to be in place before an entity begins operation as an RC to certification. - Fill identified gaps in the requirements for Reliability Coordination

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

Question #3			
Commenter	Yes	No	Comment
Salt River Project		<input checked="" type="checkbox"/>	
PSC of South Carolina		<input checked="" type="checkbox"/>	

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

The SAR to Modify Reliability Coordinator standards requesters thank all commenters who submitted comments on Draft 1 of the SAR. This SAR was posted for a 30-day public comment period from March 19 through April 17, 2007. The requesters asked stakeholders to provide feedback on the SAR through a special SAR Comment Form. There were 19 sets of comments, including comments from 52 different people from more than 40 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

Based on comments received, the drafting team made two changes to the SAR:

- Replaced references to the FERC NOPR with references to the FERC Order 693
- Added a bullet to the detailed description that says, "Improve clarity of, improve measureability of, and remove abiguity from the requirement" and revised the bullets in the brief description to match this language.

The drafting team is recommending that the Standards Committee authorize moving the SAR forward to the standard drafting stage of the standards process.

In this "Consideration of Comments" document stakeholder comments have been organized so that it is easier to see the responses associated with each question. All comments received on the standards can be viewed in their original format at:

http://www.nerc.com/~filez/standards/Reliability-Coordination_Project_2006-6.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

Index to Questions, Comments, and Responses

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.5

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:8

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project? 12

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach? 14

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here. 18

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Summary Consideration: Most stakeholders agreed with the modifications made to reduce the scope of this SAR.

Question #1			
Commenter	Yes	No	Comment
Entergy		<input checked="" type="checkbox"/>	<p>We agree with the reduction of standards to be included in this body of work. However, we suggest PRC-001 should also be eliminated from this SAR.</p> <p>The title of the SAR is Reliability Coordination, but the purpose is to ensure requirements applicable to the Reliability Coordinator are clear, etc., etc. The second part of the Purpose is to ensure that "this set of requirements" is sufficient... , referring back to the first part of the sentence. PRC-001 does not apply to the Reliability Coordinators and is out of place in this SAR.</p> <p>PRC-001 should not be included in this SAR nor the resulting standard development work under this SAR. First, PRC-001 does not apply to Reliability Coordinators and there is already a significantly large amount of work related to Reliability Coordinators under this SAR. Second, the SDT's attention should not be redirected to system protection coordination among BAs, TOPs, and GOPs. We disagree if the intent of the Requestor is to make PRC-001 applicable to Reliability Coordinators under this SAR; If that is the intent we suggest it be done in a separate SAR activity.</p>
<p>Response: Requirement 2.2 in PRC-001 states: If a protective relay or equipment failure reduces system reliability, the Transmission Operator shall notify its Reliability Coordinator and affected Transmission Operators and Balancing Authorities. The Transmission Operator shall take corrective action as soon as possible.</p> <p>This is 'incomplete' because there is no requirement for the RC to use that information. The intent in including PRC-001 in this SAR was to 'complete' this requirement. As envisioned, the new requirement may go in one of the existing RC standards, or may go into a new standard – but because it is something for the RC to do, it seems appropriate to include the consideration of this requirement as part of the RC SAR.</p>			
FirstEnergy		<input checked="" type="checkbox"/>	<p>While IRO-007-1 through IRO-010-1 are currently open for a 30-day comment period until 4/20/07, this standards work plan effort should leave no stone unturned in developing quality standards. Consequently, IRO-007-1 through IRO-010-1 may contain requirements that are valuable and easily consolidated with the standards under review</p>

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #1			
Commenter	Yes	No	Comment
			by this SAR. In addition, they may also contain duplicative requirements that could be consolidated as part of the review process of this SAR.
<p>Response: The Implementation Plan posted with IRO-007 through IRO-010 already calls for modification to some of the standards included in this SAR. However, the changes identified with the implementation plan for IRO-007 through IRO-011 are limited to those changes resulting from adoption of the proposed standards. If changes are needed to IRO-007 through IRO-010, they can be addressed with a new SAR.</p>			
Constellation	<input checked="" type="checkbox"/>		CECD feels that given the number of standards that IRO-007-1 and IRO-010-1 may impact [IRO-002-1 R2, IRO-002-1 R6, IRO-003-2, IRO-004-1 R4 and R5, IRO-005-2 R1, TOP-003-0 R1.2, TOP-005-1 R1] CECD disagrees with removing them from consideration. We do agree with the decision to exclude ORG-027-1.
<p>Response: Please review the Implementation Plan posted with IRO-007 through IRO-010. The proposed changes to the list of standards you identified are limited to those changes resulting from adoption of the proposed standards. . If changes are needed to IRO-007 through IRO-010, they can be addressed with a new SAR.</p>			
MRO	<input checked="" type="checkbox"/>		We agree with excluding standards still under development.
<p>Response: Thank you for your support – most commenters agreed with omitting all standards still under development.</p>

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #1			
Commenter	Yes	No	Comment
SRP	<input checked="" type="checkbox"/>		
WECC RCCWG	<input checked="" type="checkbox"/>		

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:
- Modify the requirement to improve its quality
 - Move the requirement (into another SAR or Standard or to the certification process or standards)
 - Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Summary Consideration: Most stakeholders agreed with this approach to reviewing the requirements in the standards associated with this SAR.

Question #2			
Commenter	Yes	No	Comment
SRP		<input checked="" type="checkbox"/>	The FERC NOPR and FERC Staff comments under Standard PRC-001-0, System Protection Coordination, do not apply to Reliability Coordination. In fact, the current Standard, PRC-001-1, does not apply to Reliability Coordinators. This Standard should be removed from the scope of this SAR.
<p>Response: The FERC NOPR has now been replaced with FERC Order 693 and includes the following language regarding PRC-001-1:</p> <p>1449. The Commission approves Reliability Standard PRC-001-1 as mandatory and enforceable. In addition, the Commission directs the ERO to develop modifications to PRC-001-1 through the Reliability Standards development process that:</p> <p>(1) correct the references for Requirements and</p> <p>(2) include a requirement that upon the detection of failures in relays or protection system elements on the Bulk-Power System that threaten reliable operation, relevant transmission operators must be informed promptly, but within a specified period of time that is developed in the Reliability Standards development process, whereas generator operators must also promptly inform their transmission operators and</p> <p>(3) clarifies that, after being informed of failures in relays or protection system elements that threaten reliability of the Bulk-Power System, transmission operators must carry out corrective control actions, i.e., return a system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes after they receive notice of the failure.</p> <p>The existing PRC-001-1 Requirement 2.2 states:</p> <p>If a protective relay or equipment failure reduces system reliability, the Transmission Operator shall notify its Reliability Coordinator and affected Transmission Operators and Balancing Authorities. The Transmission Operator shall take corrective action as soon as possible.</p>			

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #2			
Commenter	Yes	No	Comment
<p>This is 'incomplete' because there is no requirement for the RC to use that information. The intent in including PRC-001 in this SAR was to 'complete' this requirement. As envisioned, the new requirement may go in one of the existing RC standards, or may go into a new standard – but because it is something for the RC to do, it seems appropriate to include the consideration of this requirement as part of the RC SAR.</p>			
Ameren Services Midwest SCG	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability.</p> <p>It isn't clear what stakeholders will be involved to improve these standards. Is it the ballot body as a whole or some other forum? Since there is no drafting team roster, we are not sure who is working on this project and who are the stakeholders suggesting the changes to requirements.</p>
<p>Response: The Reliability Standards Development Procedure will be used to collect stakeholder feedback. If the Standards Committee (SC) accepts this SAR, then the SC can either appoint the existing drafting team to work with stakeholders to make revisions to the standards, or the SC can have the standards staff send a notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions to let everyone know that the SC is seeking volunteers to work on a new drafting team. In either case, the drafting team will 'propose' revisions and post those for comment. NERC's standards staff will send an email notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions – the notice will tell people that some proposed revisions have been posted for comment and will seek feedback on the proposed revisions through a comment form – the same process as used to collect feedback on this SAR. The drafting team will use the responses to the questions on the comment form to determine which changes are supported by stakeholders, and will continue to make modifications until the drafting team feels that they have a set of proposed changes that meets the consensus of the stakeholders who participated in the comment periods.</p> <p>The drafting team that is working on the IROL standards submitted this Reliability Coordination SAR – the SC did not assign a separate drafting team to address the SAR comments. The roster for this team is posted on the related files page of the IROL standards. Here is a link to the roster: ftp://www.nerc.com/pub/sys/all_updl/standards/dt/GroupRoster_IROLSDT.pdf</p>			
MRO	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability. We do not see a listing of the drafting team members and it is unclear what stakeholders will be involved to improve these standards.</p>
<p>Response: The Reliability Standards Development Procedure will be used to collect stakeholder feedback. If the Standards Committee (SC) accepts this SAR, then the SC can either appoint the existing drafting team to work with stakeholders to make revisions to the standards, or the SC can have the standards staff send a notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions to let everyone know that the SC is seeking volunteers to work on a new drafting team. In either case, the drafting team will 'propose' revisions and post those</p>			

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #2			
Commenter	Yes	No	Comment
<p>for comment. NERC's standards staff will send an email notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions – the notice will tell people that some proposed revisions have been posted for comment and will seek feedback on the proposed revisions through a comment form – the same process as used to collect feedback on this SAR. The drafting team will use the responses to the questions on the comment form to determine which changes are supported by stakeholders, and will continue to make modifications until the drafting team feels that they have a set of proposed changes that meets the consensus of the stakeholders who participated in the comment periods.</p> <p>The drafting team that is working on the IROL standards submitted this Reliability Coordination SAR – the SC did not assign a separate drafting team to address the SAR comments. The roster for this team is posted on the related files page of the IROL standards. Here is a link to the roster: ftp://www.nerc.com/pub/sys/all_updl/standards/dt/GroupRoster_IROLSDT.pdf</p>			
FirstEnergy	<input checked="" type="checkbox"/>		Rather than using the word quality to describe the outcome, the first bullet point above should say, "Modify the requirement to improve clarity and measureability while removing ambiguity." This way the drafting team could use a check list against each requirement to test whether it is clear, measureable, and unambiguous.
<p>Response: The drafting team has adopted this suggestion and modified the SAR so that the revised bullet now says: – Modify the requirement to improve its clarity and measureability while removing ambiguity</p>			
Manitoba Hydro	<input checked="" type="checkbox"/>		However, this is a large scope (a large amount of work) for the standard drafting team. Wherever possible, it is recommended that the drafting team list and explain the criteria it is using so that it may be easier to achieve stakeholder consensus where many related changes are made. With such a large scope the drafting team should consider carefully how the changes are balloted so ballots don't fail because stakeholders object to a minor subset of issues in a particular ballot.
<p>Response: Agreed.</p>			
WECC RCCWG	<input checked="" type="checkbox"/>		The WECC RCCWG agrees with the overall approach. That said, there is currently another SAR in process that addresses communications protocols and paths. The referenced SAR, "Operating Personnel Communications Protocols" is also meant to address FERC comments relative to communications protocols. Having two separate SARs that address the same comment seems redundant.
<p>Response: There are a couple of standards that are in more than one 'project' in the Reliability Standards Work Plan 2007-2009. The coordinators working with the drafting teams for these projects are aware of this duplication and will 'hand off' requirements between one another to ensure that each requirement is addressed and that only one drafting team works on modifying each requirement.</p>

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Summary Consideration: The drafting team made the following modifications to the SAR based on stakeholder suggestions for additional revisions:

- Replaced references to the FERC NOPR with references to the FERC Order 693
- Added a bullet to the detailed description that says, "Improve clarity of, improve measureability of, and remove abiguity from the requirement"

Question #3			
Commenter	Yes	No	Comment
MRO	<input checked="" type="checkbox"/>		<p>The FERC NOPR should not be used to change the standards. Items in the final order should be considered.</p> <p>Several of V0 comments items are not clear. It would help if these fill comments were posted somewhere for reference.</p> <p>We disagree with the assignment of Violation Severity Levels (VSL). VSLs should not be skewed to inflate the sanctions associated with a requirement. The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. The proposed breakdown in the SAR is not part of the Sanctions Guidelines and has not be vetted in the industry.</p>
<p>Response: Agreed. The drafting team has modified the SAR to replace the references to the NOPR with references to FERC Order 693.</p> <p>The Version 0 comments are posted on the Approved Standards web page – here is the link to that set of comments: ftp://www.nerc.com/pub/sys/all_updl/standards/rs/Standards_V0_Industry_Comments_20060105.pdf</p> <p>The proposed breakdown in VSLs was not included in the Sanctions Guidelines – but it was supported by both the Standards Committee and the Compliance and Certification Committee on December 14, 2006. The Stanards Committee supported having drafting teams use the breakdown that appears in the SAR – and that breakdown was included in the Reliability Standards Development Work Plan 2007-2009.</p>			
Ameren Services Midwest SCG	<input checked="" type="checkbox"/>		<p>The FERC NOPR should not be used to change the standards. Items in the final order should be given due consideration.</p> <p>Several of V0 comments items are not clear. They are primarily bullet notes with no context. Is there additional information about these comments somewhere?</p>
<p>Response: Agreed. The drafting team has modified the SAR to replace the references to the NOPR with references to FERC Order 693.</p>			

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Summary Consideration: Stakeholders who responded to this question overwhelmingly indicated support for having firm boundaries on what could be changed with the associated standards by removing the open-ended language from the original SAR.

Question #4			
Commenter	Yes	No	Comment
BPA		<input checked="" type="checkbox"/>	
FirstEnergy	<input checked="" type="checkbox"/>		This effort should leave no stone unturned in developing quality standards within the expertise and domain of this effort. Therefore, every effort must be made to ensure this round of work plan related standard revisions is as complete and all encompassing as is humanly possible to ensure to the extent possible that this standards process reaches a point that these standards are complete, accurate and only minor revisions are required to maintain them going forward. Tying the hands of the drafting team as suggested by "Several stakeholders" will only prolong the industry's work to achieve good, high quality requirements and standards. In addition, we should be using our resources as efficiently as possible. Allowing some latitude to the drafting teams to find and fix issues with standards that are related to the standards within their area of expertise and charge is a good thing to do at this point in the standards evolution process and conducive to the efficient use of resources. As a practical matter this process may never end, but it should reach a point that is much more manageable sooner rather than later.
Response: Stakeholders overwhelmingly indicated support for having firm boundaries on what could be changed with the associated standards.			
ATC LLC	<input checked="" type="checkbox"/>		The SAR identified standards IRO-014 and IRO-015 on its first page but does not address these standards in Attachment 1. The SAR needs to be updated to either acknowledge that these two standards will not be changed or identify what needs to be corrected. Attachment 1: COM-001-0 NERC has a current effort to address communication facilities in standard EOP-008. This

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #4			
Commenter	Yes	No	Comment
			<p>group needs to be aware of that effort and should insure that any change to COM-001 does not counter that effort of EOP-008.</p> <p>How will this effort differ from the other NERC effort?</p> <p>COM-002-1 NERC has a current effort to address communication protocol in emergencies with "Operating Personnel Communications Protocols." Similar to our previous comment this group needs to be aware of that effort and should insure that any change to COM-002 does not counter that groups efforts. How will this effort differ from the other NERC effort?</p> <p>IRO-001-0 Please provide additional information on the following bullet point: "Reflect the process set forth in the NERC Rules of Procedures" What specific sections of NERC Rules of Procedure will be reflected in IRO-001-0?</p> <p>IRO-005-1 The first bullet point does not seem to fall within the goal of this SAR. "Propose that the ERO conduct a survey of IROL practices and experiences." This effort does not need to go through NERC Reliability Standards Development Process to be performed. NERC could take up this effort at any time and it will slow down this process if it is going to be included in this SAR.</p> <p>PER-004-0 NERC has another group that is looking into to these concerns. How will this effort differ from that effort?</p>
<p>Response: The two coordinate operations standards highlighted (IRO-014 and IRO-015), did not have any suggestions from FERC for improvements, and they were not part of Version 0 so there were no suggestions for improvements to these standards from the Version 0 process.</p> <p>COM-001 and COM-002 both contain requirements that are assigned to several different functions – and both include a mix of 'preparedness' requirements as well as some 'real-time' notification requirements as well as some requirements that may end up being converted into a new standard for 'communications protocols'. The intent in including the standards in multiple projects was to ensure that each requirement was fully addressed and ended up where it belonged. The coordinators</p>			

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #4			
Commenter	Yes	No	Comment
			<p>supporting these projects are aware of this duplication and are working to ensure that there is a 'hand off' of requirements between teams to eliminate gaps and duplication.</p> <p>IRO-001 In Order 693, FERC explains what it meant by the bullet, 'Reflect the process set forth in the NERC Rules of Procedure':</p> <p style="padding-left: 40px;">896. In the NOPR, the Commission proposed to approve the Reliability Standard as mandatory and enforceable. In addition, as a separate action under section 215(d)(5), the NOPR proposed to direct the ERO to develop modifications to Requirement R1 to substitute "Regional Entity" for "regional reliability organization" and reflect NERC's Rules of Procedure for registering, certifying and verifying entities, including reliability coordinators.</p> <p>IRO-005-1 The bullet point you've highlighted may or may not be addressed by the drafting team. As envisioned, the results of a survey may prove useful in determining a need for additional modifications to the standards. Note that FERC Order 693 has replaced the NOPR and the SAR has been updated to reflect this. The survey is still identified in Order 693 – and FERC clarified that the intent of the survey is to determine if additional modifications to IRO-005 are necessary.</p> <p>PER-004 includes a mix of preparation and real-time requirements. The intent in placing the standard in more than one project is to ensure that each requirement is reviewed by an appropriate team, and that all requirements that are needed end up in an appropriate standard.</p>

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

Summary Consideration: The drafting team did not make any conforming changes to the SAR based on comments provided in response to question 5.

Question #5			
Commenter	Yes	No	Comment
Ameren Services			<p>We disagree with the assignment of Violation Severity Levels (VSL). The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. Yes/No requirements should not arbitrarily be counted as Severe violations. The proposed VSL breakdown in the SAR is not part of the Sanctions Guidelines and the proposed process has not been vetted in the industry.</p> <p>To the extent that requirements are modified or moved, care should be taken to make sure that the two-way exchange of information between RC and TOP and RC and BA should be preserved.</p>
<p>Response: Violation Severity Levels identify how badly you missed the intent of a requirement – not all requirements lend themselves to 4 different VSLs. The guidelines for determining a VSL are just ‘guidelines’ – however these guidelines were endorsed by the SC and the CCC and the SDT would need a strong reason for not using these guidelines.</p>			
Midwest SCG			<p>We disagree with the assignment of Violation Severity Levels (VSL). BPA		<input checked="" type="checkbox"/>	No comments at this time. We will comment when the standards are up for comment.
<p>Response:</p>			
WECC RCCWG			<p>The WECC RCCWG believes that revision to each existing Standard, as a result of this SAR, should be individually balloted, instead of grouped together in one ballot on the entire group of changes.</p>
<p>Response: The SDT appointed to work on the standards will identify how to ballot the standards modified as part of this set of standards.</p>			

Consideration of Comments on Set of Reliability Coordination Standards (Project 2006-06)

The Reliability Coordination Standards Drafting Team (RC SDT) thanks all commenters who submitted comments on the set of Reliability Coordination Standards. These standards were posted for a 45-day public comment period from August 5, 2008 through September 16, 2008. Stakeholders were asked to provide feedback on the standards through a special electronic standard comment form. There were 29 sets of comments, including comments from more than 70 different people from approximately 50 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

The following standards remain within the scope of this project:

- COM-001-2 — Communications
- COM-002-3 — Communication and Coordination
- IRO-001-2 — Reliability Coordination — Responsibilities and Authorities
- IRO-002-2 — Reliability Coordination — Facilities
- IRO-005-1 — Reliability Coordination — Current Day Operations
- IRO-014-2 — Coordination among Reliability Coordinators
- IRO-015-1 — Notifications and Information Exchange between Reliability Coordinators
- IRO-016-1 — Coordination of Real-time Activities between Reliability Coordinators

The RC SDT has revised some of the requirements, measures, violation risk factors and violation severity levels for COM-001, COM-002, and IRO-001, and IRO-014 based on the comments received. A summary of the drafting team's consideration of comments follows:

Requirements, Measures and VSLs in COM-001-2

Requirements: The RC SDT received several comments regarding the intent of the term "telecommunications facilities". For COM-001-2, the RC SDT envisions telecommunications to be voice or message communication between operating personnel. The standard has been renamed "Communications" and the term "telecommunications facilities" was replaced with "interpersonal communications capabilities" throughout the standard to better reflect the intent of the RC SDT.

We also received comments regarding the applicability of the standard that suggested adding the other entities listed in IRO-001 (Transmission Service Provider, Load-serving Entity and Purchasing-Selling Entity). The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the Reliability Coordinator ...either directly or through other entities (e.g. – a Distribution Provider may receive a directive from the Transmission Operator who received it from the Reliability Coordinator). We have not expanded the applicability as suggested as we feel that this expands the standard beyond the reliability intent. The RC SDT contends that the addition of the Transmission Service Provider, Load-Serving Entity and Purchasing Selling Entity to COM-001 adds no reliability benefit as the interactions with these entities are commercial in nature. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity. The SDT did, however add the Transmission Service Provider, Load-serving Entity and Purchasing-Selling Entity to the list of entities in R3 that must use English Language for inter-entity communications.

| Other commenters had concerns with regard to R2 and the intent with regard to length of outages. The requirement was revised as:

R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its their normal interpersonal communications capabilities-telecommunications facilities, and verify the alternate means of telecommunications are functional.

The informational (last) sentence of R3 was removed per stakeholder suggestions:

R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. ~~Transmission Operators and Balancing Authorities may use an alternate language for internal operations.~~

Measures: Commenters suggested general as well as specific revisions to the measures. One general comment suggested making the language consistent among the measures regarding evidence. M1-M3 were revised to include the phrase “shall have and provide upon request evidence that ...”.

Several commenters suggested revisions to M3. The RC SDT revised M3 based on the comments received suggesting that the applicability be expanded and added the Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-selling Entity, and Load-serving Entity to the measure. Several entities commented that M3 did not match R3 which included an explanatory sentence that allowed an entity to use a language other than English for its internal communications. The informational second sentence was removed from Requirement R3, thus eliminating the “disconnect” between the requirement and the measure. All measures were revised as necessary to reflect revisions to requirements.

VSLs: The RC SDT made revisions to the VSL’s based on the comments received and also to reflect revisions to the associated requirements. The SDT received comments that the VSLs for R1 and R2 were based on multiple violations rather than a single violation and revised the VSLs to reflect a single violation, which is one of FERC’s guidelines for VSLs.

Requirements, Measures and VSLs in COM-002-3

The work of the IROL SDT resulted in the retirement of R1 from the standard. The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall require the recipient of the directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. *[Violation Risk Factor: High][Time Horizon: Real-Time]*

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall repeat the intent of the directive back to the issuer of the directive. *[Violation Risk Factor: High][Time Horizon: Real-Time]*

The purpose statement was also revised to reflect the revisions to the standard: “To ensure communications by operating personnel are effective.”

The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission

Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The measures were revised to:

- M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall have evidence such as voice recordings or transcripts of voice recordings to show that it required the recipient of the directive to repeat the intent of the directive back; and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings.
- M2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall have evidence such as voice recordings or transcripts of voice recordings to show that it repeated the intent of the directive back to the issuer of the directive.

VSLs: The RC SDT received comments recommending revisions to the VSLs based on revisions to the requirements and measures. The RC SDT did this and created new VSLs for new Requirement R2.

Requirements, Measures and VSLs in IRO-001-2

The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring delay time.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This would obviate the need for providing a measure for “intent”, but still maintain the reliability intent of the original requirement.

The VSLs were revised to reflect revisions to the requirements as well as the comments of stakeholders. Several comments suggested that there was no fundamental difference between the RC “acting” or “directing actions”. The RC SDT agreed and removed the High VSL for R1 and revised the Severe VSL accordingly. Other commenters suggested removing the High VSL from R2 as the VSL contradicted the requirement. The RC SDT agreed and removed the VSL.

Requirements, Measures and VSLs in IRO-002-2

Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired IRO-002-2 Requirement R1. The team also received concern about eliminating the requirement to monitor frequency. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability. The team declined to delete R2 (Reliability Coordinator veto over analysis tool outages) as it was a specific recommendation from the 2003 Blackout report. This requirement was revised and moved into IRO-001-2 as R6.

Retirement of IRO-005-1

Several commenters had concerns around removing the requirement to monitor frequency (IRO-005-1 R8). The intent of this monitoring activity was incorporated into IRO-002-2, R1. Other commenters had concerns with the removal of other monitoring requirements in the standard. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity

associated with any attempt to measure “Monitoring.” It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification process requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.

Requirements, Measures and VSLs in IRO-014-2

Several commenters expressed concerns with the term “impacted” and suggested replacing this with “other”. The RC SDT believes “impacted” directly relates to the purpose statement. The original wording of “one or more other” is vague and difficult to measure. Using the word “other” presents a similar situation. The RC SDT chose to use the word “impacted” to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous Reliability Coordinators to have “Reliability Coordinator Agreements”, but to have Procedures, Processes, or Plans with impacted Reliability Coordinators. Other commenters suggested striking the term “as a minimum” in R1 and the RC SDT agrees and has modified R1 accordingly.

Some commenters did not agree with the wording of the two new requirements in IRO-014 that were formerly in IRO-016. The SDT modified and subdivided the requirements into four requirements (R5 – R8) shown below:

- R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
- R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
- R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
- R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

Several commenters suggested that the High and Severe VSLs for R2 contradicted the requirement. The RC SDT agreed and removed the “nots” from the VSLs. Several commenters had suggested revisions for the VSLs for R6, which was imported from IRO-016. VSLs were changed to support the revised requirements.

IRO-015-2

Stakeholders agree with the proposal to move the requirements into IRO-014-2 and retire IRO-015 as a separate standard.

IRO-016-1

Stakeholders agree with the concept of moving the requirements of IRO-016-1 into IRO-014-2. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements are listed above in IRO-014-2 summary.

Implementation Plan - Proposed Effective Dates

The RC SDT received comments that COM-001-2, R5 should have an effective date immediately upon regulatory approval. The RC SDT agrees and will request an effective date that is the first possible effective date – the first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

1. Do you agree with the revisions to the Requirements in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT received several comments regarding the intent of the term “telecommunications facilities”. For COM-001-2, the RC SDT envisions telecommunications to be voice or message communication between operating personnel. The standard has been renamed “Communications” and the term “telecommunications facilities” was replaced with “interpersonal communications capabilities” throughout the standard to better reflect the intent of the RC SDT. Based on stakeholder comments, R1 was changed as follows:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis ~~at a minimum,~~ alternative [interpersonal telecommunications facilities capabilities used for communicating real-time operating information.](#) ~~to ensure the availability of their use when normal telecommunications facilities fail. If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities.~~

We also received comments regarding the applicability of the standard that suggested adding other entities listed in IRO-001. The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the RC...either directly or through other entities (e.g. – a Distribution Provider may receive the directive from the Transmission Operator who received it from the Reliability Coordinator). We have not expanded the applicability of R1 to include the TSP, LSE and PSE as suggested as we feel that this expands the standard beyond the reliability intent. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity. The TSP, LSE and PSE were, however, added to R3 to add these entities to the list of entities that must use the English language when exchanging inter-entity information.

Other commenters had concerns with regard to R2 and the intent with regard to length of outages. The requirement was revised as follows:

R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities [within 60 minutes of the detection](#) of ~~the a~~ failure [\(30 minutes or longer\)](#) of its normal [interpersonal tele](#)communications [facilities capabilities.](#) ~~, and shall verify that alternate means of telecommunications are functional.~~

The TSP, LSE and PSE were added to the list of responsible entities and the informational (last) sentence of R3 was removed per stakeholder suggestions:

R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, ~~Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity,~~ and Distribution Provider shall use English as the

language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. ~~Transmission Operators and Balancing Authorities may use an alternate language for internal operations.~~

Organization	Question 1:	Question 1 Comments:
AEP	No	<p>A precise definition of telecommunications facilities needs to be established in this standard.</p> <p>R2 needs to be clarified regarding impacted utilities. FERC Order 693 suggests that this standard should apply Distribution Providers (DP) along with Generation Operators (GOP). AEP acknowledges that there needs to be some level of coordination and communication between DPs and other function model entities; however, the requirements, as applied to the DP, for telecommunications with the TOP and BA might not address the current communication paths adequately. Today, the DP usually does not communicate with the RTO (performing the BA and/or TOP function), but the DP could either communicate directly or through a joint action agency to the IOU that may serve as the TO (or maybe the TOP). As this draft is written the DPs would be required to have telecommunication facilities with the RTO in this scenario. There will likely be many exceptions to the rule that the requirements and measures create when applied to the DP. We ask that the drafting team consider the applicability, some of the current channels of communications, and options for addressing the FERC comments without creating telecommunication paths that do not make practical sense.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or text communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" to better reflect the intent.</p> <p>In R2, the phrase, "impacted entities" refers to any entity with whom the TC, TOP or BA has lost interpersonal communications capabilities. The requirements were written to address the differences in any entity's facility needs allowing for adequate flexibility to incorporate cost effective solutions as well as accommodate future technologies (FERC Order 693 directives).</p>		
ElectriCities of North Carolina, Inc.	No	<p>We are a joint action agency registered on behalf of our member municipalities, who are all TDUs, neither own nor operate any Bulk Electric System facilities, and perform no real-time operations or operations planning for the BES. There are currently other standards that already apply to us that require us to have processes and means to communicate with our RC, BA, TOP, etc. The proposed modifications to this standard would now make our members subject to this standard as well, based</p>

Organization	Question 1:	Question 1 Comments:
		<p>on the DP registration designation. Given that, we believe there needs to be additional clarification of specifically what type of "telecommunications facilities" are required to be considered compliant with this standard. Maybe in the past when this standard applied to TOPs, BAs, and RCs, it was intuitive what type of telecommunications facilities they needed to communicate with each other. However, when you bring in small DPs, it doesn't seem so clear. Obviously we already communicate with our TOP and BA, and have done so for years. As written, the standard is ambiguous in terms of what more, if anything, we would have to put in place to satisfy this standard.</p>
<p>Response: The RC SDT thanks you for your comment. COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or text communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" to better reflect the intent. The purpose statement is revised as:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>The requirement R4 was written to meet a FERC directive with respect to COM-001. The requirement states:</p> <p>Each Distribution Provider and Generation Operator shall demonstrate the existence of its interpersonal communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p> <p>Compliance with NERC requirements can be achieved through agreements with other entities to meet the intent of the requirement. The RC SDT can not address compliance issues, as this is the scope of NERC Compliance.</p>		
US Army Corps of Engineers, Northwestern Division	No	R3 needs to have the last sentence revised to allow the Generator Operator and Distribution Provider to use an alternate language for internal operations.
<p>Response: The RC SDT thanks you for your comment. The requirement and measure were revised to delete the last sentence as it was not a requirement, but only information.</p>		
US Bureau of Reclamation	No	Purpose Distribution Providers and Generator Operators were added to the applicability; the Purpose should be revised to reflect that.
<p>Response: The RC SDT thanks you for your comment. The Purpose Statement was revised to:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p>		

Organization	Question 1:	Question 1 Comments:
CU of Springfield	No	<p>City Utilities of Springfield, Missouri (CU) supports the effort of the drafting team to add Distribution Providers and Generator Operators to the "Applicability" section, the change in language regarding testing of alternate telecommunication facilities and the future effort to move COM-001-2 R3 to the new COM-003-1 standard.</p> <p>However, it is still necessary to define all parties that are responsible for having "adequate and reliable telecommunication facilities" and to require them to have both primary and backup telecommunication facilities. Since this standard is designed to address telecommunication facilities, any redundancy that exists should be removed from other standards instead. The proposal from the drafting team to remove all of the language from COM-001-1 R1 will create a gap in responsibility, since none of the standards mentioned in the Implementation Plan specifically require a RC, BA or TOP to have these facilities. It is the opinion of CU that you have defined the parties that need to communicate "Interconnection and operating information" in IRO-001-2, where a BA, TOP, GOP, TSP, LSE, DP and PSE receive and comply with directives from the RC. Therefore to maintain consistency are not all of these entities expected to have "adequate and reliable" telecommunication facilities?</p> <p>CU suggests that COM-001-2 R4 be moved to R1 and standard language changed to say:</p> <p>Purpose: Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity needs adequate and reliable telecommunications facilities internally and with others in the Reliability Coordinator's area, for the exchange of Interconnection and operating information necessary to maintain reliability.</p> <p>R1. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall have primary and backup telecommunications facilities for the exchange of Interconnection and operating information.</p> <p>R2. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>R3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling</p>

Organization	Question 1:	Question 1 Comments:
		<p>Entity shall notify impacted entities of the failure of its normal telecommunications facilities, and shall verify that alternate means of telecommunications are functional.</p> <p>R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.</p> <p>The end result will be a standard that requires all applicable entities to:</p> <ul style="list-style-type: none"> A. Have primary and backup telecommunication facilities. B. Test the telecommunication facilities. C. Utilize the telecommunication facilities.
<p>Response: The RC SDT thanks you for your comment.</p> <p>Applicability: You are correct with regards to IRO-001 and the entities involved in carrying out directives. The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the RC...either directly or through other entities (e.g. – a Distribution Provider may receive the directive from the Transmission Operator who received it from the Reliability Coordinator). The RC SDT has changed the name of this standard to “Communications and revised the Purpose Statement to:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>We have replaced the term “Telecommunications Facilities” with “interpersonal communications capabilities” to better reflect the intent of the standard. We have not expanded the applicability of R1 or R2 as you suggest as we feel that this expands the standard beyond the reliability intent. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity. The SDT did, however, expand the applicability for the requirement to use English language to include the TSP, LSE and PSE in support of your suggestion.</p>		
Northern California Power Agency	No	R3 should include in the last sentence that the Generator Operator and Distribution Provider may use alternate language for internal operations.
<p>Response: The RC SDT thanks you for your comment. The requirement and measure were revised to delete the last sentence since it was informational only and not a requirement.</p>		

Organization	Question 1:	Question 1 Comments:
<p>MRO NERC SDT Standards Review Subcommittee</p>	<p>No</p>	<p>The new R2 requirement is too verbose. We suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional. This clause is similar to the old requirement one that the drafting team appropriately struck.</p> <p>We tend to agree that striking R1 makes sense due to the drafting team's reasoning. However, we are not clear why the new R4 is necessary then. If the drafting team does not believe R1 is necessary shouldn't they respond to the FERC directive with the same reason why R4 is not really necessary?</p> <p>The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF.</p> <p>In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "... is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."</p>
<p>Response: The RC SDT thanks you for your comments.</p> <p>R2: The RC SDT deleted the final clause as you suggest.</p> <p>R4: This was added because of the FERC directive:</p> <p>Include generator operators and distribution provider as applicable entities and include requirements for their telecommunications.</p> <p>VRF: We concur and have modified the VRF.</p>		

Organization	Question 1:	Question 1 Comments:
<p>Data Retention: We have revised the Data Retention to section to comport with your comment.</p>		
<p>Southern Company Transmission</p>	<p>No</p>	<p>1.1 - In R1, we suggest that "operationally test by way of operator action" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities".</p> <p>1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. The VSL should be consistent with the language of the requirement. A very short, insignificant telecom outage with no notification could result in a severe violation as the requirement is presently written and VSL's applied.</p> <p>1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated.</p> <p>1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>1.1: The RC SDT removed the word "operationally" from the requirement. The requirement was revised to remove the "assurance" part as it does not add to the requirement. We have changed to term "telecommunications facilities" to "interpersonal communication capabilities" to better reflect the intent of the standard.</p> <p>1.2: We have revised the requirement to place time bounds on outages that require notification. The new R2 is: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>1.3: The RC SDT contends that the addition of the TSP, LSE and PSE to R1 and R2 of COM-001 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3.</p> <p>1.4: We have removed the informational (last) sentence as it is not a requirement. Others can use an alternate language, but the entities must agree to do so. This is in the first sentence of the requirement which states "Unless agreed to otherwise..." R3 was revised so that the last</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 1:	Question 1 Comments:
sentence, which was explanatory and did not include any required performance, was deleted.		
Progress Energy Carolinas	No	<p>R1 - The proposed requirement R1 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>R2 - The proposed requirement R2 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>R4 - The proposed requirement R4 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p>
<p>Response: The RC SDT thanks you for your comment. COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or message communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" throughout the standard to better reflect the intent.</p>		
NPCC	No	<p>There is inconsistency between R3 and M3. In R3, there is a provision for agreement between entities (RC, TOP, BA, GOP, DP) to use a language other than English in their communications. In M3, that option is not presented. M3 should reflect what is written in R3.</p>
<p>Response: The RC SDT thanks you for your comment. The provision that you mention was removed from the requirement since it is not a requirement, but an informational statement. The English language Requirement begins with the phrase "Unless agreed to otherwise...". This allows for the use of other languages where agreed to.</p>		
ISO New England Inc.	No	<p>ISO New England does not support the removal of Requirement 1.</p> <p>Also, we believe Requirement 3 is written such that it may pose an unnecessary requirement on the</p>

Organization	Question 1:	Question 1 Comments:
		Hydro Quebec area given the terminology "inter-entity" and support further clarification.
<p>Response: The RC SDT thanks you for your comment. The majority of commenters agreed with the removal of R1. The last sentence of the requirement 3 was deleted as it was an informational statement only. The English language Requirement begins with the phrase "Unless agreed to otherwise..." This allows for the use of other languages where agreed to.</p>		
FirstEnergy	No	<p>Purpose - The purpose does not include the GOP and DP entities. It may be better if the purpose was written more generally as "To ensure adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information necessary to maintain BES reliability".</p> <p>R1 - This requirement makes no distinction between data and voice communications facilities and assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communications. Lastly, the requirements need to be much more specific concerning the criticality of the facilities to be tested to improve the measurability of the standard. The drafting team dropped the phrase "for the exchange of Interconnection and operating data" from the standard requirement. This deletion appears to open the application of this standard to virtually every communication path used by an RC, BA, TOP whether or not it is used for communicating real-time operating information or not. We do not believe this was the intention of the drafting team and suggest this phrase be reinserted or another one added that limits applicability to only those communication paths that support the real-time reliability of the bulk electric system.</p> <p>R2 - It is not clear who the "impacted entities" would be in this requirement. The SDT should consider specifying these entities.</p> <p>R3 - The last sentence of this requirement should be deleted. It is not a requirement, it does not add clarity, and the first sentence is very specific as to the communications covered by the requirement.</p> <p>R4 - This requirement makes no distinction between data and voice communications facilities and</p>

Organization	Question 1:	Question 1 Comments:
		<p>assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communication.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>Purpose: To better reflect the intent of the standard, we have modified the Purpose Statement to: To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>R1: The standard has been revised to remove the term “telecommunications facilities” and replace it with “interpersonal communications capabilities”. This reflects the intent of the standard, which is to have voice and message communication capabilities. R1 has been revised as: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test, on a quarterly basis, alternative interpersonal communications capabilities used for communicating real-time operating information. If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p> <p>R2: The term “impacted entities” indicates those entities with which you have lost interpersonal communications capabilities. R2 has been revised to: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>R3: We concur and have deleted the sentence.</p> <p>R4: COM-001-2 only covers voice and message communications and R4 has no provision for primary / alternate capabilities.</p>		
Duke Energy	No	<p>Purpose - The purpose statement does not read very well. It either needs another sentence or changes to the current sentence. The purpose of the standard is to assure proper communications, not to suggest entities need proper communications as currently written. Suggest changing to, “To</p>

Organization	Question 1:	Question 1 Comments:
		<p>assure each Reliability Coordinator, Transmission Operator and Balancing Authority develops and maintains”.</p> <p>Requirement R1 - What is the definition of "alternative telecommunications facilities"? Is there another requirement somewhere to have alternative telecommunications facilities — or is this a new requirement being introduced by this standard? What is the relationship, if any, between "alternative telecommunications facilities" and EOP-008-1? What is the requirement for maintaining and testing "alternative telecommunications facilities"; what does “operationally test” mean Just because an alternative facility works when it is tested does not mean it will work during an actual failure of the primary system. Furthermore, what do we do if the “test” fails — are we still compliant? The word “ensure” needs to be changed to “assure”.</p> <p>Requirement R2 - What does "impacted entity" mean?</p> <p>Requirement R3 - Why can't others use alternate language — this limits alternate language to just TOPs and BAs internal operations. TOs, GOPs, and others may want to use alternate language internally. Need to define language to be used with and between other relationships — BA to PSE, as an example. Is this a reliability issue or a certification issue? Simply state that: “Entities may use alternative language for internal operations”. This will allow any entity to use alternative language for internal operations. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-001-2 applicability and requirements concerning the use of English as the approved language.</p> <p>Requirement R4 - Remove R4 and add DP and GO, as well as all of the other entities listed in IRO-001-2, to R1 thru R3.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>Purpose: To better reflect the intent of the standard, we have modified the Purpose Statement to:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>R1: “Alternative telecommunications facilities” was used in place of “redundant”. Many entities have multiple “primary facilities” which could be construed as redundant. The use of “alternative” is intended to indicate at least one primary and one other facility.</p> <p>R2: The term “impacted entities” indicates those entities with which you have lost communications capabilities. Based on other’s comments, R2 has been revised to:</p> <p>Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of</p>		

Organization	Question 1:	Question 1 Comments:
		<p>a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>R3: The second sentence was removed as it was a statement and not a requirement. Others can use an alternate language, but the entities must agree to do so. This is in the first sentence of the requirement which states "Unless agreed to otherwise..."</p> <p>R4: The DP and GOP were added to this standard per a FERC directive (paragraph 509 of Order 693). Putting these entities in R1-R3 would add requirements not envisioned by the directive and provide no additional reliability benefit. The RC SDT contends that the addition of the TSP, LSE and PSE (from IRO-001) to COM-001 R1 and R2 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3.</p>
<p>ISO/RTO Council Standards Review Subcommittee</p>	<p>Yes and No</p>	<p>We suggest that a definition of telecommunications be written by the drafting team because it is not clear what all telecommunications is intended to be included. Does this requirement apply to data, voice, rtus, networks, etc?</p> <p>For requirement R2, we suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional.</p> <p>The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF.</p> <p>In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "...is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."</p>

Organization	Question 1:	Question 1 Comments:
<p>Response: The RC SDT thanks you for your comment. The intent of this standard is reflected in the revised purpose statement: To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>COM-001-2 only deals with voice or message communications. We have renamed the standard to “Communications” and replaced the term “telecommunications facilities’ with “interpersonal communications capabilities” throughout the standard.</p> <p>R2: We have revised R2 as you suggest. R2 has been revised to: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>VRF: We concur and have modified the VRF.</p> <p>Data Retention: We have revised the Data Retention as you suggested.</p>		
<p>SERC OC Standards Review Group</p>	<p>Yes and No</p>	<p>1.1 - In R1, we suggest that "operationally test" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities".</p> <p>1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation.</p> <p>1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated.</p> <p>1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>1.1: The RC SDT removed the word “operationally” from the requirement. The requirement was revised remove the “assurance” part as it does not add to the requirement. We have changed to term “facilities” to “capabilities” as you suggest.</p>		

Organization	Question 1:	Question 1 Comments:
		<p>1.2: We have revised the requirement to place time bounds on outages that require notification. The new R2 is: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>1.3: The RC SDT contends that the addition of the TSP, LSE and PSE to COM-001 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3.</p> <p>1.4: We have removed the informational (last) sentence as it is not a requirement. Others can use an alternate language, but the entities must agree to do so. This is in the first sentence of the requirement which states "Unless agreed to otherwise..."</p>
Buckeye Power, Inc.	Yes and No	What constitutes "telecommunications facilities"?
		<p>Response: The RC SDT thanks you for your comment. COM-001-2 deals with voice or message communications only and has been renamed "Communications. We have replaced the phrase "telecommunications facilities" with "interpersonal communications capabilities" throughout the standard to better reflect the intent. The purpose statement has been revised to</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p>
American Transmission Company	Yes and No	<p>If some language is clarified, we support the revisions. R2 states that "Each TO shall notify impacted entities of the failure of its normal telecommunications facilities". If a phone line goes down and an alternate phone line is used, it is an excessive requirement to notify the impacted entities when there is no impact upon communication or the BES. The wording should be clear that notification is only required if an alternate means of communication is necessary. A defined timeframe for notification should be added to the requirement. It is possible that the loss of telecommunication facilities can occur without the loss of a control center. So, the redundancy with EOP-008 to R4 should be clarified.</p>
		<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT believes that entities should contact others when their normal communication capability is lost. For example, the normal phone line could be cut and someone trying to contact that entity may only get a busy signal and have no idea that alternate communications is necessary.</p> <p>We have revised the requirement to place time bounds on outages that require notification as you suggest. The new R2 is: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of</p>

Organization	Question 1:	Question 1 Comments:
<p>a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>Based on these revisions, we do not believe further clarification with regards to EOP-008 is necessary.</p>		
PJM Interconnection	Yes	We agree with the revisions, but recommend adding applicability to Distribution Providers and Generator Operators for data retention requirements.
<p>Response: The RC SDT thanks you for your comment. The data retention requirements have been revised as you suggested.</p>		
Entergy Services, Inc	Yes	The drafting team should consider expanding the second sentence of R3 to apply to internal communications of any affected entity not just BAs and TOPs.
<p>Response: The RC SDT thanks you for your comment. We concur with your sentiment and the second sentence has been removed as it was not a requirement, but an informational statement. Use of an alternate language by any entity is allowed under the requirement which begins with the phrase: "Unless agreed to otherwise..." The requirement has been revised to:</p> <p>R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>		
Salt River Project	Yes	
Manitoba Hydro	Yes	
Ameren	Yes	
Independent Electricity System Operator - Ontario	Yes

Comment Working Group		
PPL Supply Group	Yes	
Bonneville Power Administration	Yes	

2. Do you agree with the revisions to the Measures in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Commenters suggested general as well as specific revisions to the measures. One general comment suggested making the language consistent among the measures regarding evidence. M1-M3 were revised to include the phrase “shall have and provide upon request evidence that ...”.

The revisions to M1 are shown below:

M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request, evidence that could include, but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, it operationally tested, on a quarterly basis-at a minimum, alternative interpersonal telecommunications facilities-capabilities used for communicating real-time operating information. to ensure the availability of their use when normal telecommunications facilities fail. If the test was unsuccessful, the entity shall have and provide upon request evidence that it developed a mitigation plan to restore the interpersonal communications capabilities.

Several commenters suggested revisions to M3. The RC SDT revised M3 based on the comments received suggesting that the applicability be expanded to include Generator Operators, Transmission Service Providers, Load-Serving Entities, Purchasing-Selling Entities, and Distribution Providers. Several entities commented that M3 did not match R3 which included an explanatory sentence that allowed an entity to use a language other than English for its internal communications. The informational second sentence was removed from Requirement R3, thus eliminating the “disconnect” between the requirement and the measure.

The revisions to M3 are shown below:

M3. ~~The Each~~ Reliability Coordinator, Transmission Operator or Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language.

M4 was revised based on stakeholder comments as follows:

M4. Each Distribution Provider and Generation Operator shall demonstrate the existence of ~~has its tele~~interpersonal communications ~~facilities~~capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.

All measures were revised as necessary to reflect revisions to requirements.

Organization	Question 2:	Question 2 Comments:
NPCC	No	There is inconsistency between R3 and M3. In R3, there is a provision for agreement between entities (RC, TOP, BA, GOP, DP) to use a language other than English in their communications. In M3, that option is not presented. M3 should reflect what is written in R3.
<p>Response: The RC SDT thanks you for your comment. The informational second sentence was removed from the requirement so there is no longer a disconnect between the requirement and the measure.</p>		
CU of Springfield	No	<p>CU suggests that COM-001-2 M4 be moved to M1 and language in the measures changed to:</p> <p>M1. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall have evidence of primary and backup telecommunication facilities.</p> <p>M2.Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall provide evidence that it operationally tested, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional.</p> <p>M4. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall have and provide upon request evidence that could include, but is not limited to operator</p>

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 2:	Question 2 Comments:
		logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES.
<p>Response: The RC SDT thanks you for your comment. We have revised the requirements for COM-001 based on the comments received from all stakeholders. We also revised the measures to reflect the new verbiage of the requirements.</p> <p>We have replaced the term “Telecommunications Facilities” with “interpersonal communications capabilities” to better reflect the intent of the standard.</p> <p>The RC SDT contends that the addition of the TSP, LSE and PSE to COM-001 to R1 and R2 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity.</p>		
Independent Electricity System Operator - Ontario	No	M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.
<p>Response: The RC SDT thanks you for your comment. The informational second sentence was removed from the requirement so there is no longer a requirement for evidence regarding this.</p>		
Reliability Coordinator Comment Working Group	No	On Measure 3 need to remove the word "all" in reference to voice logs. Measure needs to include evidence of concurrence for using a language other than English
<p>Response: The RC SDT thanks you for your comment. The informational second sentence was removed from the requirement so there is no longer a requirement for evidence regarding this.</p>		
Northern California Power Agency	No	M3 should include Generator Operator and Distribution Provider in the applicability.
<p>Response: The RC SDT thanks you for your comment. The measure has been revised to include the Generator Operator and Distribution Provider.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 2:	Question 2 Comments:
ElectriCities of North Carolina, Inc.	No	See comments on Question 1
<p>Response: Please see response to question 1.</p>		
US Army Corps of Engineers, Northwestern Division	No	M3 needs to include the GO and DP in its requirement for inter-utility communications in English.
<p>Response: The RC SDT thanks you for your comment. The measure has been revised to include the Generator Operator and Distribution Provider.</p>		
MRO NERC SDTandards Review Subcommittee	No	M4 does not appear to be worded as a measurement. If R4 is kept, we suggest the following modification: "The Distribution Provider and Generation Operator shall demonstrate the existence of its telecommunication systems identified in R4."
<p>Response: The RC SDT thanks you for your comment. We have revised M4 per your suggestion.</p>		
Southern Company Transmission	No	<p>2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards.</p> <p>2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation.</p> <p>2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>2.1 - The measures for this standard have all been revised per your comment.</p> <p>2.2 – The requirement for this measure has been modified to reflect time frames for notification as well as a length of time applicable to the outage. The measure has been revised accordingly.</p>		

Organization	Question 2:	Question 2 Comments:
<p>2.3 - The Data Retention section for this standard has been revised to comport with NERC Compliance guidelines. DP and GOP have been added to the measure.</p>		
ISO New England Inc.	No	See answer to #1.
<p>Response: Please see response to question 1.</p>		
Salt River Project	No	M3 should include providing evidence of concurrence to use a language other than English. This will better align the measure with the VSL language.
<p>Response: The RC SDT thanks you for your comment. We have revised the measure by adding the following sentence: If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language.</p>		
SERC OC Standards Review Group	Yes and No	<p>2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards.</p> <p>2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation.</p> <p>2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>2.1 - The measures for this standard have all been revised per your comment.</p> <p>2.2 – The requirement for this measure has been modified to reflect time frames for notification as well as a length of time applicable to the outage. The measure has been revised accordingly.</p> <p>2.3 - The Data Retention section for this standard has been revised to comport with NERC Compliance guidelines. DP and GOP have been added to the measure.</p>		

Organization	Question 2:	Question 2 Comments:
Progress Energy Carolinas	No	<p>M1 - The proposed measure M1 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>M2 - The proposed measure M2 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>M4 - The proposed measure M4 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p>
<p>Response: The RC SDT thanks you for your comment. COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or text communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" to better reflect the intent.</p>		
FirstEnergy	No	The measures should be modified per our suggested modifications in question 1.
<p>Response: The RC SDT thanks you for your comment. The measures were revised based on the revisions to requirements that resulted from stakeholder comments.</p>		
Duke Energy	No	<p>General comments - Not using consistent language regarding "provide evidence" and "shall have and provide upon request evidence". Also need to add corresponding requirement number after each measure.</p> <p>Measure M1 - Just because an alternate facility works when it is tested does not mean it will work during an actual failure of the primary system. - what do we do if the "test" fails — are we complaint? Clarify that the requirement and measure is to "test" not "to test successfully". We may test and find that something does not work as expected.</p>

Organization	Question 2:	Question 2 Comments:
<p>Response: The RC SDT thanks you for your comment. We have modified the “evidence” language for consistency. Each measure corresponds to the measure with the same number. There is a one-to-one relationship between requirements and measures – however the SDT did add the requirement numbers to ensure this is clear to all stakeholders.</p> <p>M1: We have added the following sentence to R1 and M1.</p> <p>R1: If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities.</p> <p>M1: If the test was unsuccessful, the entity shall have and provide upon request evidence that it developed a mitigation plan to restore the interpersonal communications capabilities.</p>		
AEP	No	M2 needs to be clarified regarding impacted functions.
<p>Response: The RC SDT thanks you for your comment. The requirement, as written, has sufficient clarity regarding the impacted entities.</p>		
American Transmission Company	No	M2 should be changed to reflect the comments noted in Question 1 for R2.
<p>Response: The RC SDT thanks you for your comment. The RC SDT believes that entities should contact others when their normal communication capability is lost. For example, the normal phone line could be cut and someone trying to contact that entity may only get a busy signal and have no idea that alternate communications is necessary. We have revised the requirement to place time bounds on outages that require notification. The new R2 is:</p> <p>Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>The measure reflects the new requirement.</p>		
ISO/RTO Council Standards Review Subcommittee	Yes and No	M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.
<p>Response: The RC SDT thanks you for your comment. The measure has been revised as:</p> <p>M1: The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include,</p>		

Organization	Question 2:	Question 2 Comments:
<p>but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language.</p>		
PJM Interconnection	Yes	<p>M4 should be revised to reflect that each Distribution Provider and Generation Operator has evidence demonstrating the functionality of telecommunications facilities with the TOP and BA for the exchange of interconnection and operating information.</p>
<p>Response: The RC SDT thanks you for your comment. The measure was modified as: Each Distribution Provider and Generation Operator shall demonstrate the existence of its interpersonal communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p>		
Buckeye Power, Inc.	Yes and No	Abstain
US Bureau of Reclamation	Yes	
Bonneville Power Administration	Yes	
Manitoba Hydro	Yes	
Ameren	Yes	
PPL Supply Group	Yes	
Entergy Services, Inc	Yes	

3. Do you agree with the Violation Severity Levels proposed in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT made revisions to the VSLs based on the comments received and also to reflect revisions to the associated requirements. We received comments that the VSLs for R1 and R2 were based on multiple violations, which do not support FERC's Guideline 4 for VSLs - Guideline 4 requires that a VSL should be based on a single violation. We agreed and revised the VSLs to reflect a single violation.

Organization	Question 3:	Question 3 Comments:
Independent Electricity System Operator - Ontario	No	<p>R1: Suggest to revise the conditions for all levels to read "failed to operationally test the alternative communication facilities within the last???"</p> <p>R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affect entities, then the second condition should be an "OR".</p> <p>R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time operations by itself does not constitute a violate of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>We have revised the VSLs per your suggestions and comments from other stakeholders, and revisions made to the wording of the associated requirement.</p> <p>We have revised the VSLs per your suggestions and the revisions made to the associated requirement</p> <p>We have revised the VSLs per your suggestions.</p>		
CU of Springfield	No	Revise to reflect proposed changes above
<p>Response: The RC SDT thanks you for your comment. The Requirement, Measures and VSLs have been revised per your and other</p>		

Organization	Question 3:	Question 3 Comments:
stakeholders' comments.		
ElectriCities of North Carolina, Inc.	No	Depends of what is meant by "telecommunications facilities"
<p>Response: The RC SDT thanks you for your comment. We have clarified the requirements and measures to use the term "interpersonal communications capabilities" rather than "telecommunications facilities".</p>		
MRO NERC SDTandards Review Subcommittee	No	<p>The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter."</p> <p>The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: We have revised the VSLs per the guideline and the revised requirement.</p> <p>R2: We have revised the requirement to have time constraints for the length of an outage as well as a timeframe for notification. The VSL has been revised to reflect the revised requirement.</p>		
PJM Interconnection	No	<p>Recommend the following VSLs for R1:</p> <p>Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion.</p>

Organization	Question 3:	Question 3 Comments:
		<p>Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions.</p> <p>Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions.</p> <p>Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions.</p> <p>Recommend the following VSLs for R2:</p> <p>Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion.</p> <p>Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions.</p> <p>Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions.</p> <p>Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions.</p> <p>Recommend the following VSLs for R4:</p> <p>Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority or Transmission Operator for the exchange of Interconnection and operating information.</p> <p>Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority and Transmission Operator for the exchange of Interconnection and operating information.</p>
<p>Response: The RC SDT thanks you for your comment.</p>		

Organization	Question 3:	Question 3 Comments:
<p>R1: The proposed VSLs reflect multiple violations of the requirement. Each VSL must be written for a single violation (failure to test quarterly).</p> <p>R2: The proposed VSLs reflect multiple violations of the requirement and are a duplication of the VSLs proposed for R1, not for R2.</p> <p>R4: We have revised the VSLs per your suggestion.</p>		
FirstEnergy	No	<p>The VSL should be modified per our suggested modifications in question 1.R1 VSL - The statement in the VSL that the responsible entity did not "operationally test" is too broad. It should be more specific with the language used in the requirement.</p>
<p>Response: The RC SDT thanks you for your comment. The requirement, measure and VSLs have been revised per stakeholder comments and the phrase, "operationally test" is no longer used in the standard.</p>		
Duke Energy	No	<p>VSL for Requirement R1 - The VSL for R1 seems to imply that an operational test needs to have been performed in the last 90 days — this is read in conjunction with the data retention requirements. Need to clarify in the requirement how ?quarter basis? is defined - is it the calendar quarter, or a rolling 90 days? In addition, the VSLs for Requirement R1 appear to violate NERC guidelines, since the Moderate, High and Severe VSLs are based upon cumulative violations of the Lower VSL.</p>
<p>Response: The RC SDT thanks you for your comment. The data retention was changed from three months to three years. The VSLs were revised to reflect the guidelines as you suggested. There are now 2 VSLs.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter."</p> <p>The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The</p>

Organization	Question 3:	Question 3 Comments:
		<p>drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2.</p> <p>(i) R1: Suggest to revise the conditions for all levels to read "...failed to operationally test the alternative communication facilities within the last....."</p> <p>(ii) R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affect entities, then the second condition should be an "OR".</p> <p>(iii) R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time operations by itself does not constitute a violate of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: We have revised the requirement to have a provision to test as well as a provision to develop a mitigation plan when a test fails. The VSLs reflect the revised requirement.</p> <p>R2: (i) We have revised the requirement to have a provision to test as well as a provision to develop a mitigation plan when a test fails. The VSLs reflect the revised requirement.</p> <p style="padding-left: 40px;">The second part of the VSL was removed.</p> <p style="padding-left: 40px;">The VSL was revised to:</p> <p>The responsible entity failed to provide evidence of concurrence to use a language other than English for communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected Bulk Electric System when a language other than English was used.</p>		
SERC OC Standards Review Group	Yes and No	3.1 - The expanded list of entities recommended in comment 1.3 and 1.4 need to be included the VSLs

4. Do you agree with the revisions to the Requirements in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The work of the IROL SDT resulted in the retirement of R1 from the standard. The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R2 (now R1) into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall ~~issue directives in a clear, concise, and definitive manner; shall ensure~~require the recipient of the verbal directive to repeats the intent of the directive back ~~information back correctly~~; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings.

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall repeat the intent of the directive back to the issuer of the directive

The purpose statement was also revised to reflect the revisions to the standard:

~~To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications and that these communications capabilities are staffed and available for addressing a real time emergency condition.~~ To ensure emergency communications by between operating personnel are effective.

Organization	Question 4:	Question 4 Comments:
Southern Company Transmission	No	4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3: 4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard. 4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2. 4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to

Organization	Question 4:	Question 4 Comments:
		<p>measure. We suggest they be replaced with "the RC shall direct".</p> <p>4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1).</p> <p>4.6 - Grammatical changes are suggested. The revised requirement reads as follows: " To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications; to ensure that these communication capabilities are staffed and available for addressing a real-time emergency condition; and to ensure effective communications by operating personnel."</p> <p>4.7 - At the Data Retention section, the reference to 'Requirement 3, Measure 3' should be consistent with the modified standard. The revised standard only has one requirement.</p> <p>4.8 - The use of calendar days in the Data Retention section is inconsistent with related standards where 'months' are used.</p>
<p>Response: The RC SDT thanks you for your comments.</p> <p>4.2 - We have revised the purpose statement to: To ensure emergency communications between operating personnel are effective.</p> <p>4.3 – We have changed the applicability of COM-002 to match that of IRO-001.</p> <p>4.4 and 4.5 - We have separated the requirement into two requirements to ensure that the requirements are measurable and distinct. We concur with your comments and have revised the requirements to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall require the recipient of the verbal directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>4.6 - We have revised the purpose statement to: To ensure emergency communications between operating personnel are effective.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 4:	Question 4 Comments:
4.7 and 4.8 – We have updated the data retention section with the latest compliance template information.		
ISO New England Inc.	No	ISO New England believes it is inefficient to have a (temporary) Standard with only one Requirement and recommend including this Requirement in COM-001, with COM-001 renamed to "Communications."
<p>Response: The RC SDT thanks you for your comments. Based on other stakeholder feedback, we have added applicable entities and another requirement for those entities. This standard will be retired upon adoption of COM-003-1.</p>		
US Bureau of Reclamation	No	Purpose: Since Generator Operators were deleted from the applicability; the Purpose should be revised to reflect that and include Reliability Coordinators. The language is somewhat redundant, recommend it be simplified to "To ensure Balancing Authorities, Reliability Coordinators, and Transmission Operators communicate in an effective manner."
<p>Response The RC SDT thanks you for your comments. Several entities were added to the applicability and the purpose statement was revised to: To ensure emergency communications between operating personnel are effective.</p>		
FirstEnergy	No	<p>Purpose - The GOP is still shown in the purpose statement although it was removed from the applicability. Also, it may be better if the purpose was written more generally as "To ensure adequate communications capabilities for addressing real-time emergency conditions and ensure communications by operating personnel are effective to maintain BES reliability".</p> <p>Applicability - In the SDT's document "Scope of Work Assigned to the Reliability Coordination Standard Drafting Team", the team decided to not include the FERC directive to include the DP in the applicability with the following reasoning "The proposed revisions do not include the DP entity because they are not applicable." We would like clarification on this.</p> <p>R1 - It does not appear that the implementation plan addresses the FERC direction to consider comments from Santa Clara, FirstEnergy, and Six Cities per 693 par. 539 regarding staffing requirements. Santa Clara asks that these requirements apply "only to operating staff available on site at all times or includes repair personnel who are available only on an on-call basis". FirstEnergy asks that the "term [staffed] should not require a physical presence at all facilities at all times because some units, such as peaking units, are not staffed 24 hours a day". FirstEnergy also suggest "because nuclear units are already subject to communications requirements in their operating</p>

Organization	Question 4:	Question 4 Comments:
		<p>procedures, their compliance with NRC operating procedures should be deemed in compliance with the NERC Reliability Standards". Six Cities "states that, to avoid unnecessary staffing burdens, particularly for smaller entities, the Commission should direct NERC to clarify COM-002-2 by providing that identification of an emergency contact person on call to respond to real-time emergency conditions will constitute adequate compliance".</p> <p>R1 - Just as an FYI, with regard to the proposed replacement requirement statement in the implementation plan: "TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC", per recently stakeholder approved ballots, R1 of TOP-005-1 has been retired and now covered in new standard IRO-010-1.R1.1 - The existing requirement includes "through predetermined communication paths of any condition that could threaten the reliability of its area or when firm load shedding is anticipated". The proposed replacement requirements do not address the need for "predetermined communication paths".</p>
<p>Response: The RC SDT thanks you for your comments.</p> <p>Purpose: Several entities were added to the applicability and the purpose statement was revised to: To ensure emergency communications between operating personnel are effective.</p> <p>Applicability: The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity.</p> <p>R1: The RC SDT considered these comments when developing the proposed COM-001-2 specification requirements. We have revised the requirement to indicate that directives being issued relate to real-time operating emergencies. We do not feel that this would place an undue burden on any entity with respect to staffing as the requirement makes no mention of staffing.</p> <p>R1 FYI: Thank you for the FYI.</p>		
Duke Energy	No	<p>Requirement R1 - As defined by Merriam Webster, the use of the word "ensure" implies virtual guarantee <the government has ensured the safety of the refugees>; while the use of the alternative word "assure" implies the removal of doubt and suspense from a person's mind. We suggest that "assure" is more appropriate than "ensure" in this context in the standards. The use of words like "clear, concise, and definitive manner" is subject to interpretation. This same language is used in the VSLs. Depending on the interpretation of this phrase, an entity could be found to be in a "Severe" violation level. The issuer of the directive should not be subject to non-compliance if the recipient of</p>

Organization	Question 4:	Question 4 Comments:
		<p>the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-002-3 requirement concerning repeat-backs. What is a “directive”? The regional compliance processes are having difficulty in auditing this existing standard due to lack of clarity of what constitutes a directive. "Directive" should be defined as being associated with real-time operational emergency conditions, and not ordinary day-to-day communications. Otherwise a VRF of High is not warranted.</p>
<p>Response: The RC SDT thanks you for your comments. We concur with your comments and have revised the requirements to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall require the recipient of the verbal directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
Northern California Power Agency	Yes and No	Remove Generator Operator from the Purpose Statement. The re-written standard no longer applies to GOP
<p>Response: The RC SDT thanks you for your comments. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity.</p> <p>We have revised the purpose statement to: “To ensure emergency communications between operating personnel are effective[ML1].”</p>		
SERC OC Standards Review Group	Yes and No	<p>4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3:</p> <p>4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard.</p> <p>4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2.</p> <p>4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to</p>

Organization	Question 4:	Question 4 Comments:
		measure. We suggest they be replaced with "the RC shall direct". 4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1).
<p>Response: The RC SDT thanks you for your comments.</p> <p>4.2 - We have revised the purpose statement to: To ensure emergency communications between operating personnel are effective.</p> <p>4.3 – We have changed the applicability of COM-002 to match that of IRO-001.</p> <p>4.4 and 4.5 - We have separated the requirement into two requirements to ensure that the requirements are measurable and distinct. We concur with your comments and have revised the requirements to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall require the recipient of the verbal directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
Buckeye Power, Inc.	Yes and No	Abstain
PJM Interconnection	Yes	We note that this requirement really is "3-part communication" and will be moved to the new communications standard, COM-003-1.
<p>Response: The RC SDT thanks you for your comments. As envisioned, the 3-part communication requirements in this standard are temporary – they will be retired when COM-003-1 becomes effective.</p>		
CU of Springfield	Yes	CU supports moving R1 to COM-003 and retiring COM-002.
<p>Response: The RC SDT thanks you for your comment. As envisioned, the 3-part communication requirements in this standard are temporary – they will be retired when COM-003-1 becomes effective.</p>

5. Do you agree with the revisions to the Measures in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements and measures were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall ~~issue directives in a clear, concise, and definitive manner; shall ensure~~ require the recipient of the verbal directive to repeats ~~the information intent of the directive~~ back ~~correctly;~~ and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. *[Violation Risk Factor: High][Time Horizon: Real-Time]*

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. [Violation Risk Factor: High][Time Horizon: Real-Time]

M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall have evidence such as voice recordings or transcripts of voice recordings to show that it ~~required issued directives in a clear, concise, and definitive manner; ensured~~ the recipient of the verbal directive to repeated ~~the information intent of the directive~~ back ~~correctly;~~ and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings.

M2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1 shall have evidence such as voice recordings or transcripts of voice recordings to show that it repeated the intent of the directive back to the issuer of the directive.

Organization	Question 5:	Question 5 Comments:
Southern Company	No	5.1 - The measures need to be revised to match the new requirements.

6. Do you agree with the Violation Severity Levels proposed in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT received comments recommending revisions to the VSLs based on revisions to the requirements and measures. The RC SDT did this and created new VSLs for new Requirement R2. The revised VSLs are:

Requirement	Lower	Moderate	High	Severe
R1	N/A	The responsible entity provided a clear issued a verbal directive in a clear, concise and definitive manner associated with real-time operating emergency conditions and required the recipient to repeat the directive intent of the directive, but did not acknowledge the recipient was correct in the repeated directive <u>OR failed to repeat the intent of the original statement to resolve any misunderstandings.</u>	The responsible entity provided a clear issued a verbal directive associated with real-time operating emergency conditions in a clear, concise and definitive manner , but did not require the recipient to repeat the intent of the directive.	<u>The responsible entity issued a verbal directive associated with real-time operating emergency conditions and required the recipient to repeat the intent of the directive, but did not acknowledge the recipient was correct in the repeated directive AND failed to repeat the intent of the original statement to resolve any misunderstandings..</u> The responsible entity failed to provide a clear directive in a clear, concise and definitive manner when required.
<u>R2</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>	<u>The responsible entity that is the recipient of a verbal directive issued per Requirement R1 failed to repeat the intent of the directive back to the issuer of the directive.</u>

Organization	Question 6:	Question 6 Comments:
Southern Company Transmission	No	6.1 - The severity levels need to be revised to match the new requirements.
<p>Response: The RC SDT thanks you for your comment. The VSLs were revised based on revisions to the requirements.</p>		
SERC OC Standards Review Group	No	6.1 - The severity levels need to be revised to match the new requirements
<p>Response: The RC SDT thanks you for your comment. The VSLs were revised based on revisions to the requirements.</p>		
PJM Interconnection	No	<p>The word "clear" is redundantly used in the High and Severe columns.</p> <p>Recommend that "Moderate" should read: "The Responsible Entity provided a directive in a clear, concise and definitive manner, but did not require the recipient to repeat the directive back to the originator."</p> <p>Recommend that "High" should read: "The Responsible Entity failed to issue a directive in a clear, concise and definitive manner while ensuring the recipient of the directive repeated the information back correctly with acknowledgment by the originator that the response was correct."</p> <p>Recommend that "Severe" should read: "The Responsible Entity failed on more than one occasion to issue a directive in a clear, concise and definitive manner while ensuring the recipient of the directive repeated the information back correctly with acknowledgment by the originator that the response was correct."</p>
<p>Response: The RC SDT thanks you for your comment. We have removed the language "clear, concise and definitive manner" from the requirements, measures and VSLs. Based on the requirements, the VSLs were revised as shown above in the Summary Consideration section. We do not agree with your suggestion on the Severe VSL regarding the number of occasions. The requirement is a stand alone which requires the entity to perform it each time.</p>		
FirstEnergy	No	The VSL should be modified if our comments in question 4 result in changes to the proposed requirements.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 6:	Question 6 Comments:
<p>Response: The RC SDT thanks you for your comment. The VSLs were revised based on revisions to the requirements.</p>

7. Do you agree with the revisions to the Requirements in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring time delay.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

R2 was modified as shown below – note that the phrase, “without intentional delay” was removed from all requirements, measures and VSLs:

R2. Each Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall ~~act without intentional delay to~~ comply with its Reliability Coordinator’s directives unless such actions would violate safety, equipment, or regulatory or statutory requirements.

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This revision would obviate the need for providing a measure for “intent”, while still maintaining the reliability intent of the original requirement.

The SDT proposes to re-post the standard to obtain stakeholder feedback on the suggested revisions

Organization	Question 7:	Question 7 Comments:
Manitoba Hydro	No	<p>I do not agree with the way IRO-001-2 R1 is written. In the present form the requirement may infer that directing action is not an action. It may also infer that the RC is only required to do "act "or "direct actions" but not both. The way it is written also leads to problems with the VSLs. Perhaps R1 can be edited along the lines of:</p> <p>R1. The Reliability Coordinator shall act to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. When required, the actions initiated by the Reliability Coordinator will include, but is not limited to, directing the actions to be taken by Transmission</p>

Organization	Question 7:	Question 7 Comments:
		<p>Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area.</p> <p>I agree with the other Requirements in IRO-001-2 with the exception of the "High" Violation Risk Factor assigned to IRO-001-2 requirement R5. This should be a "Medium" VRF at the most. If the emergency has been mitigated, and the entities are not aware, they will still be operating to restrictions, which means the grid is operating well within limits. Not notifying the entities that the problem has been mitigated may have some financial implications but it should not place the grid at risk.</p>
<p>Response: The RC SDT thanks you for your comment. The recommended language change is what the requirement means. The SDT did not modify the original language as they say the same thing.</p> <p>The RC SDT agrees and modified the VRF for R5 to medium.</p>		
Independent Electricity System Operator - Ontario	No	<p>R2: the phrase "act without intentional delay" is not necessary since the urgency of taking any actions as directed by the RC's are generally understood to be conveyed in the RC's directives.</p> <p>R3: Given R2 requires the responsible entities to comply with the RC directives, the part that says "immediately confirm the ability to comply with the directive or" is not needed. R3 should simply require the responsible entities to notify the RC upon recognition of the inability to perform the directive.</p> <p>The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT agrees to remove this phrase. The majority of commenters found this to be unnecessary.</p> <p>Agreed, the RC SDT modified R3 to remove "immediately confirm the ability to comply with the directive or"</p> <p>The RC SDT agrees and modified the VRF for R5 to medium.</p>		
MRO NERC SDTandards Review	No	New requirement R2 should omit act without intentional delay. The desired outcome is for the responsible entity to comply with the RC directive. Adding act without intentional delay only confuses

Organization	Question 7:	Question 7 Comments:
Subcommittee		<p>the situation and adds questions. What is an intentional delay? The word act implies that the requirement is met simply if the responsible entity attempted to meet the directive but was unable to do so. That is already considered in with the clause that begins "unless such actions would violate ...". Thus, the word act is not necessary.</p> <p>The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not function properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violated safety, equipment, statutory, or regulatory requirements.</p> <p>Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees to remove this phrase. The majority of commenters found this to be unnecessary.</p> <p>The RC SDT agrees. We have modified R3 to remove "immediately" and "confirm the ability to comply with the directive or".</p> <p>The RC SDT does not agree with regard to R4 and R5, as some impacted entities may not need to take action or be issued directives but would benefit from the situational awareness associated with knowing the status of operating issues.</p>		
Southern Company	No	7.1 - Applicability 4.2 - Transmission Operator should be plural.

Organization	Question 7:	Question 7 Comments:
Transmission		<p>7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process.</p> <p>7.3 - In R2 insert the word "its" before Reliability Coordinator.</p> <p>7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>7.1 agreed, The RC SDT modified the applicability section.</p> <p>7.2 The revision to the definition will be placed in the correct location on the next posting and will be balloted along with the standard revisions.</p> <p>7.3 The RC SDT agrees and modified R2, the expectation is the entity's RC will issue the directives, not a different RC.</p> <p>7.4 R3 has been modified and changed "the" with "its" before RC. Note that based on comments from other stakeholders, the phrase, "immediately confirm the ability to comply" has been omitted from the revised requirement.</p>		
ISO New England Inc.	Yes and No	We believe the word "threat" should be replaced with "events" in Requirements 4 and 5.
<p>Response: The RC SDT thanks you for your comment. The RC SDT chose the term "threat with Adverse Reliability Impacts" to convey the concept that action may be taken to prevent an event when an RC identified a potential threat. This will help better ensure reliability by mitigating threats rather than waiting for an event to occur.</p>		
Entergy Services, Inc	No	PER-003 R1 does not specifically address delegated functions; therefore, this requirement is not redundant with IRO-001 R6 without changes to PER-003 to specifically deal with employees performing delegated functions.
<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT references the NERC ROP in the Implementation plan which address your delegation concern. -</p> <p>Per NERC ROP appendix 5, Organization Registration and Certification Manual v3.3 Sec IV and V:</p> <p>The applicant retains the responsibility for all delegated tasks. The applicant shall identify to the review team all tasks that have been delegated</p>		

Organization	Question 7:	Question 7 Comments:
<p>to another entity prior to the on-site visit. The review team shall conduct at least one on-site visit to the applicant's facilities. This may also apply to the facilities of entities responsible for delegated tasks. During the visit, the review team will:</p> <ul style="list-style-type: none"> a. Review with the applicant the data collected through the questionnaires; b. Interview the operations and management personnel; c. Inspect the facilities and equipment; d. Request a demonstration of all tools identified in the certification standard; e. Review all necessary documents and data including all agreements, processes, and procedures identified in the certification standard; f. Review certification documents and projected system operator work schedules; and g. Review any additional documentation that is needed to support the completed questionnaire or inquiries arising during the site-visit. 		
MEAG Power	No	<p>Directives that are mandatory under R2 of IRO-001-2 should have boundaries consistent with the proper role of an RC. For example, if an RC directs an LSE with a 15% planning reserve margin to execute purchase power agreements until its reserve margin is at least 20% and the LSE refuses, then the LSE may have violated this standard. Other examples of improper RC directives are directives to increase coal inventories, buy firm fuel transportation rights, reconductor transmission lines, purchase spare equipment, etc. Granted entities may be able to conjure up a regulatory or statutory basis for refusing many improper RC directives but in some instances there may be no permissible grounds to refuse. The appropriate solution is to modify the standard to ensure that improper directives are never mandatory in the first place. Specifically, NERC is urged to state that RC directives are mandatory only if they pertain to specific categories such as: switching orders to reconfigure the BES, orders to postpone scheduled outages of BES equipment, orders to change generator output, orders to curtail transactions or orders to curtail load.</p>
<p>Response: The RC SDT thanks you for your comment. It is envisioned by the RC SDT that such RC directives consist of real-time and same-day operating actions that prevent or mitigate events that may or will cause Adverse Reliability impacts.</p>		
FirstEnergy	No	<p>R3 - should be a sub requirement of R2. These two requirements are sequential in nature and should be measured at the same time. The VRFs and Time Horizons are the same for both requirements lending to their combination into a requirement with a sub requirement. In the VSL for R2, an entity is being penalized with a high severity level for not completely following an RC directive even though it violated safety, equipment, statutory, or regulatory requirements. Measuring R2 and R3 at the same</p>

Organization	Question 7:	Question 7 Comments:
		<p>time allows for the process to complete prior to the measurement taking place.</p> <p>R3 - The "or" between "Distribution Provider" and "Purchasing-Selling Entity" should be replaced with an "and".</p> <p>R4 - Should be revised by adding the phrase "of the expected or actual threat" to the end of the requirement to add clarity.</p> <p>Existing R7 requirement - This requirement is proposed for retirement because it is redundant with IRO-014-1 R1. However, it is not clear how the existing requirement to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated" is covered in IRO-014-1 R1. IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. IRO-014-1 only vaguely covers the existing requirement R7 of IRO-001-1.</p>
<p>Response: The RC SDT thanks you for your comment. The intent of the drafting team is to have distinct requirements that are measured independently. Having one as a subrequirement will not allow that to occur.</p> <p>The RC SDT revised the "or" to an "and".</p> <p>R4, The recommended language change is what the requirement means. The RC SDT did not modify the original language as they say the same thing.</p> <p>R7, The industry comments do not support being more specific in IRO-014-1 R1 in order to retire IRO-001-1 R7.</p>		
SERC OC Standards Review Group	Yes and No	<p>7.1 - Applicability 4.2 - Transmission Operator should be plural.</p> <p>7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process.</p> <p>7.3 - In R2 insert the word "its" before Reliability Coordinator</p> <p>7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.</p>

Organization	Question 7:	Question 7 Comments:
<p>Response: The RC SDT thanks you for your comment.</p> <p>7.1 The RC SDT agrees and will modify the applicability section.</p> <p>7.2 The revision to the definition will be placed in the correct location on the next posting and will be balloted along with the standard revisions.</p> <p>7.3 Agreed, The RC SDT modified R2, the expectation is the entities RC will issue the directives, not a different RC.</p> <p>7.4 R3 has been modified and changed “the” with “its” before RC. Note that based on comments from other stakeholders, the phrase, “immediately confirm the ability to comply” has been omitted from the revised requirement.</p>		
US Bureau of Reclamation	No	R4. and R5. Both of these Requirements use the phrase “without intentional delay” to describe the urgency of the notification to impacted entities. In both requirements we recommend the language be changed from “notify, without intentional delay” to “immediately notify”.
<p>Response: The RC SDT thanks you for your comment. We have removed the phrase from the requirements.</p>		
American Transmission Company	No	R2 refers to "intentional delay". The determination of intent should be left to the VSL portion of the standard, not the requirement portion.
<p>Response: The RC SDT thanks you for your comment. The RC SDT has removed “without intentional delay” from the proposed requirement.</p>		
Consolidated Edison Co. of NY, Inc.	Yes and No	<p>Wording in question: R.2/M.2 Each Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without intentional delay to comply with the Reliability Coordinator's directives.R.3/M.3 Each — Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives.</p> <p>[1] Question: Is this wording absolutely necessary? And then, is it sufficient, if needed? Comment: First, we would question whether there is a specific need to include this wording. Is the IRO-001 Reliability Standard sufficient without it?</p> <p>[2] Question: Is this wording unambiguous? Comment: The wording seems somewhat vague and ambiguous. Analysis: The wording appears to establish performance standards ("without intentional delay", "shall immediately confirm") and evidentiary requirements ("evidence that it acted" or "evidence that it confirmed"), but without using pre-existing defined terms, establishing new defined</p>

Organization	Question 7:	Question 7 Comments:
		<p>terms, or defining these terms as used in context.</p> <p>[3] Intentional vs. Unintentional, Valid Intentional vs. Inappropriate Intentional? How does one differentiate between intentional and unintentional delay? When is and how much delay is valid or inappropriate? Isn't some intentional delay necessary to ensure that the other parts of the requirement being are met, e.g., — unless such actions would violate safety, equipment, or regulatory or statutory requirements?? Mightn't some acceptable amount of valid intentional delay be necessary to insure that any such RC directive and entity action would not in fact violate these safety, equipment, or regulatory or statutory requirements?</p> <p>[4] What is the timeliness standard?</p> <p>How are the terms “without delay” and “immediately conform” defined? What standard commercial measures would apply, e.g., “reasonably efforts” vs. “best efforts”? Are these terms measured in units of time (seconds or minutes) or in units of performance quality? Does a poorly considered “immediate” reply meet the standard, while a well considered reply, which is intentionally delayed, yet still appropriate, fail to meet this standard? Is that the best outcome?</p> <p>[5] What is this Evidentiary Standard? Is the sought-after “evidence” sufficiently well defined, e.g., phone logs, computer e-mail, control center computer logs, hand-written operator journals, etc.? What form of evidence is necessary and sufficient to demonstrate that the entity met this evidentiary standard? How is failure to meet this uncertain standard measured, judged and penalized?</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT has removed the phrases “immediately” and “without intentional delay” from the proposed requirements.</p>		
Duke Energy	No	<p>Requirement R1 - What happens if the RC failed to recognize that such an event was happening as opposed to failed to take action? Is this intended to cover both scenarios? The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision development of this definition needs to go thru Due Process. The inclusion of TSPs, LSEs, and PSEs here indicates the need to include these functions in the COM-001-2 requirements concerning the use of English as the approved language. In addition, this also indicates the need for all of these listed entities to be included in COM-002-3 requirements concerning repeat-backs. The RC, TOP, and BA should not be placed in a possible non-complaint state because the counter party refuses a repeat-back AND these requirements are not applicable to the counter party.</p>

Organization	Question 7:	Question 7 Comments:
		<p>Requirement R2 - The language in the Moderate VSL of R2 recognizes another potential reason for delay in execution of a directive. Requirement 2 of the Standards needs to be modified to also recognize this potential.</p> <p>Requirements R2 and R3 - Clarify that entities are obligated to take action and confirm directives only from their Reliability Coordinators, not from any Reliability Coordinator. Requirements R2, R3, R4, R5 - Inconsistent use of “timing” words in the standards — "without intentional delay" and "immediately". Suggest deleting these words due to the difficulty of determining compliance.</p> <p>Requirement R4 - The term “Adverse Reliability Impacts?” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.</p> <p>Requirement R5 - The VRF should be "Lower" instead of "High" since the notification is that the threat has been mitigated. Also, the term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1 Both scenarios are envisioned by the requirement. The proposed revision to the definition will be balloted along with the standard revision. & R4, &R5. The TSPs, LSEs, and PSEs have been added to COM-001 and COM-002 as you suggest.</p> <p>R2, already included in R2 “unless such actions would violate safety, equipment, or regulatory or statutory requirements.”</p> <p>R2, R3, The RC SDT modified R2, R3 to identify “its” RC. The phrases “immediately” and “without intentional delay” have been removed from the standard.</p> <p>R4 The revision to the definition will be placed in the correct location on the next posting and will be balloted along with the standard revisions.</p> <p>R5, The RC SDT modified the VRF for R5 to medium based on other industry comments.</p>		
Buckeye Power, Inc.	Yes and No	abstain
ISO/RTO Council Standards Review Subcommittee	Yes and No	New requirement R2 should omit act without intentional delay. Use of intentional implies willful disregard for compliance for the requirement. Intention should not be addressed as part of the compliance with the requirement but rather through the enforcement process once the compliance auditor has identified a violation.

Organization	Question 7:	Question 7 Comments:
		<p>The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not functioning properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violate safety, equipment, statutory, or regulatory requirements.</p> <p>Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary.</p> <p>The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT has removed the phrases "immediately" and "without intentional delay" from the proposed requirements. The RC SDT modified R3 based on industry comments and the phrase, "shall immediately confirm the ability to comply with the directive or" was removed from the requirement.</p> <p>The RC SDT does not agree with regard to R4 and R5, as some impacted entities may not need to take action or be issued directives but would benefit from the situational awareness associated with knowing the status of operating issues.</p> <p>The RC SDT modified the VRF for R5 to medium based on industry comments.</p>		
CU Springfield	Yes	CU supports the effort to consolidate redundant requirements in the standards.

Salt River Project	Yes	
NPCC	Yes	
Ameren	Yes	
Reliability Coordinator Comment Working Group	Yes	
Northern California Power Agency	Yes	
Bonneville Power Administration	Yes	
AEP	Yes	

8. Do you agree with the revisions to the Measures in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration:

The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring time delay.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This revision would obviate the need for providing a measure for “intent”, while still maintaining the reliability intent of the original requirement.

The SDT proposes to re-post the standard to obtain stakeholder feedback on the suggested revisions.

Organization	Question 8:	Question 8 Comments:
CU of Springfield	No	M2 and M3 should include Distribution Provider as one of the entities to comply with directives from the Reliability Coordinator.
<p>Response: The RC SDT thanks you for your comment. The SDT will correct the oversight.</p>		
Independent Electricity System Operator - Ontario	No	Wording in some of the Measures needs to be revised to reflect changes to R2 and/or R3, if our proposed changes are accepted. Also, we suggest the Requirement numbers be referenced in the Measures.
<p>Response: The RC SDT thanks you for your comment. The SDT has revised the R2 and R3 and the associated measures per stakeholder comments. We have also added the associated requirement number to each measure.</p>		

Organization	Question 8:	Question 8 Comments:
Reliability Coordinator Comment Working Group	No	Measures do not align with VSLs (see question 9)
<p>Response: The RC SDT thanks you for your comment. We will ensure that the VSLs and measures align.</p>		
MRO NERC SDT Standards Review Subcommittee	No	<p>Some compliance auditors have been taking the need for evidence to the extreme. We have encountered actual situations where if a measure states evidence shall be provided for requirements that are event based, the compliance auditor expected evidence even if no event occurred. For example, some RCs rarely issue directives. As M1 is written, some compliance auditors would require the RC to provide evidence that no reliability directives were issued. This is not possible. We suggest modifying the measurement to: Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area if needed. If there were no directives issues (assuming there are no complaints or evidence to the contrary of the need to issue a directive), no evidence is necessary."</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees with the principle (i.e. should not have to prove a negative to an auditor). This issue should be addressed with NERC or Regional Compliance personnel. The RC SDT has the obligation to draft measures based on the requirements. The measure (M1) for R1 accomplishes that as written.</p>		
Southern Company Transmission	No	<p>8.1 - In M2 and M3, Add Distribution Provider. 8.2 - In M2 add "intentional" between "without" and "delay". 8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator. 8.4 - In M5, change "has" to "had".</p>
<p>Response: The RC SDT thanks you for your comment. We have added DP to the measures M2 and M3. We have removed the phrases "immediately" and "without intentional delay" from the measures. The RC SDT has left the word "inability" in the measure to mirror the requirement. We have made the other revisions that you suggested.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 8:	Question 8 Comments:
MEAG Power	No	The M2 measure should not mandate compliance with RC directives that are improper as defined in my response to question 7.
<p>Response: The RC SDT thanks you for your comment. It is envisioned by the RC SDT that RC directives consist of real-time and same-day operating actions that prevent or mitigate events that may or will cause Adverse Reliability impacts.</p>		
SERC OC Standards Review Group	Yes and No	<p>8.1 - In M2 and M3, Add Distribution Provider.</p> <p>8.2 - In M2 add "intentional" between "without" and "delay".</p> <p>8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator.</p> <p>8.4 - In M5, change "has" to "had".</p>
<p>Response: The RC SDT thanks you for your comment. We have added DP to the measures M2 and M3. We have removed the phrases "immediately" and "without intentional delay" from the measures. The RC SDT has left the word "inability" in the measure to mirror the requirement. We have made the other revisions that you suggested.</p>		
US Bureau of Reclamation	No	M4. and M5. In both Measures, recommend "without intentional delay" be changed as described above for R4. and R5.
<p>Response: The RC SDT thanks you for your comment. Based on stakeholder comments, we have removed "without intentional delay" from the requirement and measure.</p>		
Progress Energy Carolinas		
FirstEnergy	No	M2 - The word "intentional" should be added between "without" and "delay".
<p>Response: The RC SDT thanks you for your comment. Based on stakeholder comments, we have removed the phrase "without intentional delay" from the requirement and measure.</p>		
Duke Energy	No	Measures M2, M4 and M5 use the terms "without delay" and "without intentional delay". Suggest deleting these words due to the difficulty of determining compliance. The term "Adverse Reliability

9. Do you agree with the Violation Severity Levels proposed in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The VSLs were revised to reflect revisions to the requirements as well as the comments of stakeholders. Several comments suggested that there was no fundamental difference between the RC “acting” or “directing actions”. The RC SDT agreed and removed the High VSL for R1 and revised the Severe VSL accordingly. Other commenters suggested removing the High VSL from R2 as the VSL contradicted the requirement. The RC SDT agreed and removed the VSL. All of the revised VSLs are in the table below.

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	The Reliability Coordinator failed to act or direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts
R2	N/A	N/A	N/A	The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements. The responsible entity did not follow the Reliability Coordinators directive per requirement 2.
R3	N/A	N/A	N/A	The responsible entity failed to inform the-its Reliability Coordinator upon recognition of the-its inability to perform the directive.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

R4	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to one, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to two, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to three or more, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
R5	The Reliability Coordinator <u>issued an alert failed to notify entities of a transmission problem but failed</u> to notify one, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator <u>issued an alert to notify entities of a transmission problem but</u> failed to notify two, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator <u>issued an alert to notify entities of a transmission problem but</u> failed to notify three or more, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator <u>issued an alert to notify entities of a transmission problem but</u> failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.
R6	N/A	N/A	N/A	The Reliability Coordinator failed to provide its Operating-operating Personnel-personnel with the authority to veto planned outages of its own analysis tools.

Organization	Question 9:	Question 9 Comments:
Manitoba Hydro	No	<p>IRO-001-2 R1 VSLs: You can not split "shall act" and "or direct actions" into separate VSLs. They are one and same. If the RC directs action then they have acted. If the RC failed to direct action or have failed to other wise act then they have failed to act appropriately. Perhaps the VSLs can be drafted along the lines of the following:</p> <p>IRO-001-2 R1 High VSL... The Reliability Coordinator's action was incomplete in that it failed to demonstrate a specific action to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts.</p> <p>IRO-001-2 R1 Severe VSL... The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of</p>

Organization	Question 9:	Question 9 Comments:
		<p>Adverse Reliability Impacts.</p> <p>IRO-001-2 R2 VSLs: (1) Entities may be justified in an intentional delay in responding to an RC directive. A justified intentional delay may be due to equipment problems, a generator's ramp rate or system voltage adjustments prior to large system reconfiguration or large transmission loading changes. (2) An entity cannot be faulted for not following an RC directive because to do so would violate safety, equipment, regulatory or statutory requirements. Perhaps the VSLs can be drafted along the lines of the following: Moderate VSL... should be deleted. High VSL... The responsible entity followed the Reliability Coordinator's directive but with an unjustified delay. Severe VSL... no edits required.</p> <p>IRO-001-2 R5 VSLs: Perhaps the VSLs can be drafted along the lines of the following to reflect to what degree the RC missed the mark: Lower VSL... The Reliability Coordinator failed to notify <25% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated. Moderate VSL... The Reliability Coordinator failed to notify >24% but <50% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated. High VSL... The Reliability Coordinator failed to notify >49% but <75% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated. Severe VSL... The Reliability Coordinator failed to notify >74% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding "act" and direct actions. Based on your and other stakeholders' comments, we have removed the High VSL and revised the severe VSL.</p> <p>R2: 1. The SDT removed the "intentional delay" wording. 2. We concur with your statement. The RC SDT believes that the revised requirement is a binary and thus only requires one VSL. We have removed the High VSL and revised the severe VSL to:</p> <p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.</p> <p>R5: The RC SDT developed a revised set of VSLs that are graded in a way that gives consideration to the number of impacted entities since some entities will have a very small number of entities to contact, and using percentages may not be effective.</p>		
Independent Electricity System	No	<p>R1: There should not be any distinction made between an RC acting and an RC directing others to act. Failure to mitigate adverse reliability impacts is a severe violation of the requirement. We therefore suggest to revise the High and Severe levels as: High if the RC did not act or direct actions to prevent an Adverse Reliability Impact; Severe if the RC did not act or</p>

Organization	Question 9:	Question 9 Comments:
Operator - Ontario		<p>direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact.</p> <p>R2: The High VSL seems contradictory to the requirement, which already has provision of not fully complying with the RC directives due to safety, equipment, or regulatory or statutory requirements.</p> <p>R3: We have proposed some wording change to R3, which if adopted, would precipitate a need to revise the VSLs for R3 accordingly.</p> <p>(iv) R4 and R5: The VSLs for these two requirements could be graded by assessing the number and/or timing of notifying the affected entities.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT agrees with you regarding “act” and “direct actions”. Based on yours and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL.</p> <p>We agree and have removed the High VSL.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p> <p>R4 and R5: We concur and have expanded the VSLs to include notification of a varying number of entities.</p>		
Reliability Coordinator Comment Working Group	No	<p>R1 talks about "shall act or direct actions to be taken".</p> <p>High VSL - failure to act.</p> <p>Severe VSL - failure to act and direct. Does "act" mean any action taken short of issuing a directive? Change Severe VSL to failure to act or direct and eliminate the High VSL all together.</p> <p>R2 delay in issuing a directive due to equipment problems should be included in the moderate VSL and the body of the requirement and in the measure. The High VSL should be removed because not following the directive for equipment failure is allowed per R2.</p> <p>R5 - Severe VSL should be changed to moderate VSL since the problem has been mitigated and the system is stable and it does not adversely impact reliability.</p> <p>M3 talks about the ability of reliability entities to meet a directive. What constitutes evidence that confirms you are able to immediately comply with the directive? If the entity agrees to the directive and then is unable to comply due to events outside of their control, such as a CT not starting, do they meet the measure? If the entity, based on the circumstances at the time of the directive, agrees to comply in good faith are they compliant? The Lower VSL should be made N/A because it is not practical for an entity to immediately confirm they are able to meet the directive in all cases.</p>
<p>Response: The RC SDT thanks you for your comment.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 9:	Question 9 Comments:
<p>R1 - The RC SDT agrees with you regarding “act” and “direct actions” and has removed the High VSL and revised the Severe VSL.</p> <p>R2 - Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL.</p> <p>R5: The VSL relates to how badly an entity missed the requirement, not the threat to reliability (this is the VRF). The requirement is to notify “all”. The RC SDT has developed a revised set of graded VSLs for this requirement.</p> <p>M3. The requirement was revised to remove words such as “immediately” and intentional delay:</p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform a directive.</p> <p>The measure was revised to reflect the new requirement which addresses your concerns. The Lower VSL was revised to N/A.</p>		
<p>MRO NERC SDTandards Review Subcommittee</p>	<p>No</p>	<p>The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don’t believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact.</p> <p>The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements.</p> <p>In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL.</p> <p>In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses "that, as a general rule, gradated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels". Given that it is possible to define gradated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.</p>
<p>Response: The RC SDT thanks you for your comment.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 9:	Question 9 Comments:
<p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to include failure to “act or direct actions”.</p> <p>R2. We have removed the “intentional delay” verbiage and subsequently removed the Moderate VSL. We agree with you regarding the High VSL and have removed it from the table. The Severe VSL was revised per your suggestion.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p> <p>R4 and R5: We concur and have expanded the VSLs to include notification of a varying number of entities.</p>		
Southern Company Transmission	No	<p>9.1 - R1 is a binary requirement and should have only a severe VSL. The RC either acts or he doesn't - If he fails to act, he fails to direct and mitigate the problem by default.</p> <p>9.2 - R2 VSLs need to be rewritten to recognize that some directives may not be followed because of safety, regulatory or statutory requirements.</p> <p>9.3 - Remove the Lower severity level in R3 to conform to changes in R3 and M3.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL. This is now treated as a binary requirement with just one VSL.</p> <p>R2. We agree and have removed the High VSL and revised the severe VSL to:</p> <p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p>		
Entergy Services, Inc	No	The VSL for R2 does not seem consistent with the language in the requirement. It is not clear why the entity should be subject to a high VSL if the entity did not comply with an RC directive due to safety or regulatory prohibition, and made the RC aware of same.
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. The High VSL for R2 was removed.</p>		
Salt River Project	No	<p>R1 states the RC must act OR direct. The R1 VSLs attempt to distinguish between act and direct. The requirement allows for either action. I suggest that the High VSL be removed and replaced by an N/A. The Severe VSL should be amended so that the words "act and direct" are replaced by the words "act OR direct" as is consistent with the requirement and the measure.</p> <p>R2: The moderate VSL introduces the phrase "equipment problems" for the first time in the Standard. "Equipment Problems" needs to be included in the Requirement, R2, and defined in the Measure for</p>

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 9:	Question 9 Comments:
		R2.R5: The Severe VSL needs to be moved to the Moderate category. This condition does not constitute an Adverse Reliability Impact that severely threatens the BES.
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to use the phrase, “act or direct.”</p> <p>R2. The moderate VSL was removed.</p> <p>R5: The VSL relates to how badly an entity missed the requirement, not the threat to reliability (this is the VRF). The requirement is to notify “all”. The RC SDT believes it has developed appropriate VSLs for this requirement.</p>		
FirstEnergy	No	R2 VSL - The Severe VSL should include after the word directive: "that would not violate safety, equipment, statutory or regulatory requirements".
<p>Response: The RC SDT thanks you for your comment. We agree with your premise, but the suggested wording of the VSL appears cumbersome. The VSL has been revised to:</p> <p>The responsible entity did not follow the Reliability Coordinator’s directive per Requirement R2.</p>		
Duke Energy	No	<p>The language in R1 of the VSL is not consistent with the requirements and measures in the standard. The VSL needs to recognize that the RC may EITHER act or give direction to others to act.</p> <p>The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.</p> <p>The language in R2 of the VSL places an entity in Moderate or High violation level even if failure is “allowed” in the standard; i.e. failure to act is due to violation of safety, regulatory, statutory requirements.</p> <p>The language in R2 of the VSL recognizes another potential reason for delay in execution of a directive. Requirement R2 of the Standard needs to be modified to also recognize this potential.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to use the phrase, “act or direct.”</p> <p>The proposed revision to the term, “Adverse Reliability Impact” will be posted for stakeholder comment with the next version of the standard.</p> <p>R2. We agree and have removed the Moderate and High VSLs and revised the Severe VSL to :</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 9:	Question 9 Comments:
<p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements. The requirement already addresses equipment.</p>		
<p>American Transmission Company</p>	<p>No</p>	<p>VSLs for R2 and R3 are not appropriate. In order to assess a situation we may not be able to immediately inform the RC of our ability to comply with the directive. The high VSL for R2 currently states that if we do not follow the directive because of safety, statutory or regulatory requirements, it is a high VSL. An entity should not be penalized for not breaking the law.</p>
<p>Response: The RC SDT thanks you for your comment. R2: We agree and have removed the Moderate and high VSLs. R3. The requirement was revised to remove the “immediately” verbiage and the VSLs were revised accordingly – the Lower VSL was removed.</p>		
<p>ISO/RTO Council Standards Review Subcommittee</p>	<p>No</p>	<p>The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don't believe there is any. NPCC	Yes	
Ameren	Yes	
US Bureau of Reclamation	Yes	
PJM Interconnection	Yes	
Bonneville Power Administration	Yes	
AEP	Yes	

10. Do you agree with the revisions to the Requirements in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The last proposed version of IRO-002-2 had two requirements – R1 required the Reliability Coordinator to request data from other entities; R2 required the Reliability Coordinator to provide its operating personnel with authority to veto planned outages of analysis tools.

Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees’ approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired IRO-002 Requirement R1 and eliminated the need for the proposed R2.

The team received comments expressing concern about eliminating the requirement to monitor frequency which had been in an earlier approved version of IRO-002. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in Certification Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability. The team retained the remaining requirement (Reliability Coordinator’s authority to veto analysis tool outages) as it was a specific recommendation from the 2003 Blackout report. This requirement was revised and moved into IRO-001-2, R6.

R6. Each Reliability Coordinator shall ~~have~~provide its operating personnel with the authority to veto planned outages to its own analysis tools, ~~including final approvals for planned maintenance.~~ *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

Organization	Question 10:	Question 10 Comments:
Independent Electricity System Operator - Ontario	No	two. R1: There is a duplicating requirement in TOP-005 R1.1. Suggest to eliminate one of the We do not agree with eliminating all of R5 to R8. There is a fundamental need for RCs to

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 10:	Question 10 Comments:
		<p>monitor its area, and even some portion of its adjacent areas to be aware of situations that require preventive and mitigating actions. While arguments can be made that requiring RCs to prevent and mitigate adverse reliability impacts would imply monitoring, the latter is a fundamental duty of any RCs to ensure system reliability. If monitoring is not explicitly stated as a requirement, then the same argument may be extended to training and operational facilities. We do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. Measuring can be illustrated, for example, by a compliance audit to review system logs and assess the extent to which an RC follows and assesses system conditions.</p>
<p>Response: R1: The RC SDT thanks you for your comment. Several NERC drafting teams are working on related standards. The RTO SDT just posted changes to TOP-005 that will retire that standard upon approval. Therefore, there will be no redundancy because TOP-005 R1.1 will be removed.</p> <p>Monitoring: While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure "Monitoring" can provide. It is the SDT's contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in Certification Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p>		
Reliability Coordinator Comment Working Group	No	<p>For R1, this should be 2 separate requirements and measures. R1 should have a methodology for determining what data is needed and then a R2 should be a requirement to request this data from the reliability entities.</p>
<p>Response: The RC SDT appreciates your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1.</p>		
MRO NERC SDT Standards Review Subcommittee	No	<p>New Requirement R1 is duplicate to the requirement TOP-005-1 R1.1. If the drafting team can't delete TOP-005-1 R1.1, they should notify other appropriate drafting teams of the need to remove the requirement.</p> <p>We do not agree with eliminating requirements R5, R6, R7, and R8 in their entirety. The requirements as they are written are problematic. However, we do believe that there is a need for a basic</p>

Organization	Question 10:	Question 10 Comments:
		<p>requirement to monitor the system. The requirements should be that the RC should compare actual system flows to SOLs and IROLs. While some will argue SOLs are not the responsibility of the RC, failure to monitor SOLs could cause the RC to miss unknown IROLs since an SOL can become an IROL. Several SOL violations in a given area also can be indicative of a broader system problem the RC should be addressing. We also do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. It is very easy to measure. As an example, a compliance auditor could select a day and an SOL or IROL and ask for the system flows from that day or hour etc. This is generally easy for any RC to produce with today's data archiving software. We believe that there should be a requirement that the RC have a state estimator and real-time contingency analysis as well (RTCA). The drafting team needs to be careful in the construction of these requirements to make them practical and measurable. For instance, making the requirement to have a state estimator and RTCA is measurable in that the compliance auditor can verify their existence but this is not stringent enough because they may only run once a week. At the same time, if we create a requirement that SE and RTCA must run every 5 minutes, we could inadvertently create a requirement that any missing 5 minute run of RTCA and SE could be construed as a violation. There also needs to be a requirement that there is a real-time assessment of voltage as well.</p> <p>New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.</p>
<p>Response: The RC SDT appreciates your comments. The RTO SDT has recently posted the proposed retirement of TOP-005. This eliminates the redundancy with R1.</p> <p>The RC SDT appreciates your comments and recognizes that NERC standards historically have included requirements to ensure that each entity is acting responsibly in the portion of the Interconnect over which it has authority. The IRO-014, as proposed by this team, requires RCs to act in coordinated fashion to protect the Interconnection. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p> <p>The RC must respond to these situations proactively in order to prevent separation or cascading events.</p> <p>The RC SDT agrees philosophically with your comment regarding the redundancy of Requirement R2, however, this issue was enumerated in</p>		

Organization	Question 10:	Question 10 Comments:
<p>the report on the 2003 Blackout as a key improvement. The team believes that, while this is redundant as you stated, it is too soon to remove it from standards. At some point in the future after the industry assimilates the set of changes currently proposed, this requirement could be proposed for deletion.</p>		
<p>Southern Company Transmission</p>	<p>No</p>	<p>10.1 - We propose that R1 and R2 should be moved to the RC Certification Procedure and this standard retired. If this standard is not retired then we recommend Comments</p> <p>10.2 and 10.3.10.2 - At Requirement R2, the RC is given 'veto' authority. Is a standard an appropriate place to give this type of authority?</p> <p>10.3 - The revised Purpose basically provides that the RC will have access to information and control of analysis tools. What is the correlation of information/control to veto authority/approval of planned maintenance?</p>
<p>Response: The RC SDT appreciates your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1.</p> <p>R2. This is a Blackout recommendation and therefore is appropriate within a standard. We revised the wording to indicate that the RC will provide its Operating Personnel the authority. This clarified the intent of the requirement. This requirement will also be moved into IRO-001-2, R6.</p> <p>10.3 This standard will be retired making the purpose statement moot.</p>		
<p>ISO New England Inc.</p>	<p>Yes and No</p>	<p>Suggest changing with word "request" to "document" in Requirement 1.</p>
<p>Response: The RC SDT appreciates your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1.</p>		
<p>Entergy Services, Inc</p>	<p>No</p>	<p>IRO-002-1 R9, the deleted language of the second sentence is not adequately covered by the language in EOP-008-0 R1, unless those outages are tied to the loss of a control center. EOP-008-0 is in the process of being revised and this language could be included in the revision, but it isn't adequately addressed by the version 0 standard.</p>

Organization	Question 10:	Question 10 Comments:
<p>Response: The RC SDT appreciates your comments. The RC SDT took this comment into consideration when making revisions to this requirement as well as to COM-001-2 regarding specifications. The data specification required in IRO-010 should address mitigation plans for analysis tool outages and proposed COM-001 specifications should include mitigation plans for communications outages.</p>		
<p>US Bureau of Reclamation</p>	<p>No</p>	<p>R2. This requirement provides authority to the Reliability Coordinator to veto planned outages and approve planned maintenance to “analysis tools”. It is not clear in this standard what these “analysis tools” are. Per FERC Order 693, NERC was to identify a minimum set of analysis tools and the task was assigned to the Real-Time Tools Best Practices Task Force. Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.</p>
<p>Response: The RC SDT appreciates your comments. The Reliability Coordinator has a set of tools in use to monitor and analyze its area as well as to provide a wide area view. These tools may include a SCADA system, state estimator and contingency analysis programs. It is the responsibility of the Reliability Coordinator to ensure that these tools are operational or that a plan or procedure is in place to mitigate their outages. The Real-time Tools Best Practices Task Force work has resulted in the inception of a new standard development project. It is scheduled to begin in 2009.</p>		
<p>FirstEnergy</p>	<p>No</p>	<p>R2 - As written, this requirement does not clearly define the scope of the authority of the Reliability Coordinator over analysis tools. Is it the intent of the drafting team to give the RC authority over analysis tools owned and operated by the RC. Is it the intent of the drafting team to give the RC authority over the analysis tools owned and operated by the BA, TOP, GOP, etc.? Are the tools intended to be the real-time (EMS) or the off-line engineering planning analysis tools or any analysis tool used in real-time. Does this include the analysis tools used by field personnel? This requirement should be revised to specify exactly the analysis tools under the authority of the Reliability Coordinator.</p>
<p>Response: The RC SDT thanks you for your comment. The intent of the requirement is to have veto authority over its own tools. The requirement is revised to:</p> <p>R2. Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>The intended tools are any tools that the Reliability Coordinator needs to perform its reliability functions.</p>		

Organization	Question 10:	Question 10 Comments:
Duke Energy	No	<p>Requirement R1 - This requirement is in the wrong standard — this is a Facilities standard. This requirement belongs in another standard. Question: Is there a requirement in another standard that compels the TOPS, BAs, etc to provide the requested data? Requirement R2 - Need to clarify whose analysis tools (I assume it is the RCs analysis tools, not the analysis tools of another entity) and planned maintenance to what — is it tools, facilities, transmission, generation, etc. Depending on the answer above, this requirement is in the wrong standard — this is a Facilities standard. This requirement belongs in another standard. Question: Where is the Requirement for the RC to have analysis tools? It appears that the Requirement the RC has analysis tools have been removed in the revisions to the standard.</p>
<p>Response: The RC SDT thanks you for your comment. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1 and does compel entities to provide data to the Reliability Coordinator</p> <p>For R2, the intent of the requirement is to have veto authority over its own tools. The requirement is revised to:</p> <p>R2. Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>The intended tools are any tools that the Reliability Coordinator needs to perform its reliability functions.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.</p>
<p>Response: The RC SDT agrees philosophically with your comment regarding the redundancy of Requirement R2, however, this issue was enumerated in the report on the 2003 Blackout as a key improvement. The team believes that, while this is redundant as you stated, it is too soon to remove it from standards. At some point in the future after the industry assimilates the set of changes currently proposed, this requirement could be proposed for deletion.</p>		
SERC OC	Yes and No	10.1 - We propose that R1 and R2 should be moved to the RC Certification Procedure and this

11. Do you agree with the revisions to the Measures in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1 and M1.

For R2, the intent of the requirement is to have veto authority over its own tools. The requirement and measure have been revised based on stakeholder comment and moved into IRO-001-2 as Requirement R6. The revisions made are shown below:

R6. Each Reliability Coordinator shall ~~have~~ provide its operating personnel with the authority to veto planned outages to its own analysis tools ~~including final approvals for planned maintenance~~. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]

M6. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its operating personnel with the authority to veto planned outages ~~to of its own~~ analysis tools, ~~including final approvals for planned maintenance as specified in Requirement 2.~~

Organization	Question 11:	Question 11 Comments:
Independent Electricity System Operator - Ontario	No	M1: We suggest to change the word "letter" to "documented request" If our recommendations to retain some of R5 to R9, some measures will need to be provided.
<p>Response: The RC SDT thanks you for your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1 and M1.</p> <p>As stated in our response to your comments in Question 10, we do not intend to retain R5 through R9.</p>		
MRO NERC SDT Standards Review	No	Measure 1 should not focus on a letter as evidence. A more appropriate measure would be a data specification document and actual verification that data has been received. The letter or equivalent is only needed if data has not been supplied. Demonstration of the actual receipt the data would be

12. Do you agree with the Violation Severity Levels proposed in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1 and M1. The RC SDT has revised R2 and M2 and moved them to IRO-001-2, as Requirement R6 and Measure M6. The VSLs have been revised to reflect the modifications made to the requirement and measure and in response to stakeholders who indicated this is a “binary” requirement.

R6	Reliability Coordinator has approval rights for planned outages of analysis tools but does not have approval rights for maintenance on analysis tools.	N/A	N/A	Reliability Coordinator failed to provide its operating personnel with the authority to veto approval is not required for planned maintenance or planned outages of its own analysis tools.
--------------------	---	-----	-----	---

Organization	Question 12:	Question 12 Comments:
Independent Electricity System Operator - Ontario	No	<p>R1: The wording for Low VSL is contradictory (e.g. it determined and requested in the first part but did not request in the second part). Suggest to revise it.</p> <p>R1: We suggest to grade the VSLs according to the extent to which the percentage of data specification and/or the number of entities not requested.</p> <p>R2: The RC either has the right or it doesn't, and hence it's a binary requirement. The VSL should be developed accordingly. Further, the wording for the Severe VSL does not correspond to the requirement and measure. The condition should simply be that the Reliability Coordinator failed to demonstrate that it had the authority to veto planned outages to analysis tools, including final approvals for planned maintenance.</p>
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 12:	Question 12 Comments:
of the IROL project. The lower VSL was removed as proposed for the second requirement.		
Southern Company Transmission	No	12.1 - Moving R1 and R2 to the RC Certification Procedure will eliminate VSL requirements.
Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. R1 was retired – and R2 was moved into IRO-001 as Requirement R6. The VSLs for R6 are still needed.		
US Bureau of Reclamation	No	Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.
Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. As envisioned, the intent is to protect the analysis tools used by real time operating personnel – and not all companies have the same set of tools, so the SDT will not name specific tools in this standard. The intent is to give the real time operating personnel control over the availability of their tools so that the real time operating personnel will always know if their tools are “unavailable” due to maintenance. Names of specific tools are not needed to enforce the intent of this requirement.		
MRO NERC SDT Standards Review Subcommittee	No	For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document.

Organization	Question 12:	Question 12 Comments:
		<p>We suggest that the VSLs should be:</p> <p>Severe: The RC did not determine it data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>R2 VSLs are not needed or paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.</p>
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part of the IROL project. For R2, based on your comments and the comments of others, the VSLs were modified – the lower was removed and the requirement was treated as binary with just a Severe VSL rephrased to more closely match the language in the revised requirement.</p>		
FirstEnergy	No	The VSL should be modified per our suggested modifications in question 10.
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above.</p>		
Duke Energy	No	<p>R1 VSL - As a general comment, this VSL is unclear and would be difficult to audit. This VSL uses subjective terms like “material impact” and “minimal impact”. These terms are not used in the associated requirement or measure and should be removed from the VSL. This VSL uses terms like “majority, but not all”; “some, but less than a majority” which provides an opportunity for</p>

Organization	Question 12:	Question 12 Comments:
		<p>a subjective review by Compliance as to what a complete listing of data requirements should be. This term is not used in the Requirements or Measures and should be removed from the VSL. This VSL introduces a concept, data the RC needs for ?? administrative purposes, such as data reporting ??. This concept is not included in the Requirements or Measures portions of the Standard and should be removed from the VSL. This VSL should be written to simply assess whether the RC has made determination of what its data needs are and whether those needs have been communicated to the entities in the footprint.</p> <p>R2 VSL - This VSL clarifies the questions posed above regarding what the RC needs approval rights over. R2 needs to be modified to include this clarity. This VSL needs to clarify that the RC approval rights are for the RC's tools, not tools of other entities. The Severe level of this VSL needs to be re-written along the lines of: The RC does not have approval rights for planned maintenance or outages to its analysis tools.</p>
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part of the IROL project. For R2, based on your comments and the comments of others, the requirement, measure and VSLs were all modified – the lower was removed and the requirement was treated as binary with just a Severe VSL rephrased to more closely match the language in the revised requirement.</p>		
<p>ISO/RTO Council Standards Review Subcommittee</p>	<p>No</p>	<p>For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document.</p>

Organization	Question 12:	Question 12 Comments:
		<p>We suggest that the VSLs should be:</p> <p>Severe: The RC did not determine it data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>R2 VSLs are not needed er paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.</p>
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part of the IROL project. For R2, based on your comments and the comments of others, the requirement, measure and VSLs were all modified – the lower was removed and the requirement was treated as binary with just a Severe VSL rephrased to more closely match the language in the revised requirement.</p>		
SERC OC Standards Review Group	Yes and No	12.1 - Moving R1 and R2 to the RC Certification Procedure will eliminate VSL requirements.
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. R1 was retired – and R2 was moved into IRO-001 as Requirement R6. The VSLs for R6 are still needed.</p>

13. Do you agree with the revisions to IRO-005-1 as shown in the posted Standard and Implementation Plan? The RC SDT is recommending retiring or moving all of the requirements and retiring this standard. If not, please explain in the comment area.

Summary Consideration: Several commenters had concerns around removing the requirement to monitor frequency. Other commenters had concerns with the removal of other monitoring requirements in the standard. While the Standard Drafting Team (SDT) recognizes the concerns raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in assessing and responding to situations or events that could have an adverse impact on reliability.

Organization	Question 13:	Question 13 Comments:
Independent Electricity System Operator - Ontario	No	<p>R1: We not agree with removing this requirement for the same reason given for the proposal to remove R5 to R8 from IRO-002 (see comments on 10 (ii), above).</p> <p>R8: We do not agree with completely removing this requirement, especially that part that requires an RC to monitor system frequency. While DCS and CPS are largely a BA's responsibility, the RC is the last line of defense for abnormal system performance and needs to monitor its BAs' performance including their ability to address large frequency deviations, and direct or take corrective actions as needed including requesting emergency assistance on the BAs' behalf and directing load shedding.</p> <p>R9: The second part of this requirement needs to be retained. IRO-004 covers operational planning, not current day operations. Coordinating pending generator and transmission facility outages is an essential and necessary task by the RC to ensure reliability.</p> <p>R11: The RC needs to monitor ACE, detect and identify the cause of any abnormal ACE, and direct its BAs to take necessary actions to return ACE to within a normal range.</p> <p>R13: We do not agree with removing the latter part of R13. The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set</p>

Organization	Question 13:	Question 13 Comments:
		exists is a necessary requirement for reliable operation.
<p>Response: The RC SDT thanks you for your comment.</p> <p>I While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p> <p>li With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in assessing and responding to situations or events that could have an adverse impact on reliability.</p> <p>lii The RC SDT proposes retiring this requirement as it is redundant with TOP-003 and IRO-004 (all requirements) for next day requirements. The RC has the authority to coordinate pending outages in real-time through IRO-001-2, R1 (proposed).</p> <p>Iv The SDT feels that there are better avenues to ensure BAs operate within established and acceptable thresholds as described in the BAL-001 and BAL-002 standards. Current standards projects are addressing revisions to the BAL set of standards.</p> <p>V The SDT believes this requirement is redundant with FAC-014. FAC-014 states the requirement for developing and sharing SOL and IROL between the RC, PA, TP and TOP in both the planning and operating time frames.</p>		
American Transmission Company	No	The accountability and monitoring addressed in this Standard is still required. The drafting team's intent was that the ability to monitor is part of the certification process. However, certification is to Standards, and if there is not a Standard which addresses this issue, then an entity cannot certify to it.
<p>Response: The RC SDT thanks you for your comment. While the Standard Drafting Team (SDT) recognizes the concerns raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT's contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p>		
MRO NERC SDT standards	No	R1 includes many requirements for monitoring the system that are important, measurable and should be retained. Monitoring is too critical to operating the system to completely eliminate these

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 13:	Question 13 Comments:
Review Subcommittee		<p>requirements.</p> <p>R4, R8 and R11 are problematic as currently written. However, there have been actual instances of a large BA intentionally operating short hundreds of MWs of energy. I believe this occurred during the summer of 1999. Thus, the RC should be monitoring the BAs ACE and directing the BA to correct it if it becomes too large. It is not necessary or even useful for the RC to monitor the BA CPS performance.</p>
<p>Response: The RC SDT thanks you for your comment. The SDT feels that there are better avenues to ensure BAs operate within established and acceptable thresholds as described in the BAL-001 and BAL-002 standards. If a BA chooses to operate off schedule then the BAL standards need to be revisited and tightened up. This is being done in the current projects addressing the BAL standards. Monitoring capability can be objectively measured and is essential to real-time operations – however real-time monitoring is a supporting activity and is only one of several processes used to support operation within defined parameters. Monitoring capability should be assessed during the entity registration certification process and should not be a requirement. Note that certification is aimed at verifying that an entity has the “capability” of operating reliably. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in assessing and responding to situations or events that could have an adverse impact on reliability.</p>		
Ameren	Yes and No	<p>While we agree that most of the requirements are redundancies that properly belong elsewhere, we are concerned that Requirement 4 and Requirement 8 are not properly represented elsewhere and should not be retired until they re-surface in another standard explicitly. We believe it is still very important for an RC to monitor their respective BAs reserves and CPS performance. Likewise in R8, while the frequency monitoring is a BA function, we think that it is important enough to also be included as an RC function explicitly.</p>
<p>Response: The RC SDT thanks you for your comment. The SAR for this project included eliminating redundancies within the standards. In the Implementation Plan for this standard, we show the redundancy between this requirement, R4, and EOP-002-2. (please see pages 6-8 of the Implementation Plan). While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p>

14. Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Several commenters expressed concerns with the term “impacted” and suggested replacing this with “other”. The RC SDT believes “impacted” directly relates to the purpose statement. The original wording of “one or more other” is vague and difficult to measure. Using the word “other” presents a similar situation. The RC SDT chose to use the word “impacted” to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous reliability coordinators to have “RC agreements”, but to have Procedures, Processes, or Plans with impacted reliability coordinators. Other commenters suggested striking the term “as a minimum” in R1 and the RC SDT agrees and has modified R1 accordingly. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. The requirement that was transferred from IRO-016 has been translated into 4 requirements in IRO-014:

R5. ~~When an expected or actual reliability issue is detected, the~~ Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. ~~confirm the existence of the issue with the impacted Reliability Coordinators.~~

R6. ~~In the event that the issue cannot be confirmed, e~~ Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators.

R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists.

~~R6~~R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when ~~When an expected or actual reliability issue exists and~~ the impacted Reliability Coordinators cannot agree on a mitigation plan, ~~all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue.~~

Organization	Question 14:	Question 14 Comments:
Independent Electricity System	No	We suggest to replace the word "impacted" with "other" since there is a preconception that the concerned RC makes an assessment of which other RCs are impacted by the coordinated actions,

Organization	Question 14:	Question 14 Comments:
Operator - Ontario		which may not be the perspective of the other RCs who may in fact be impacted by any coordinated actions among other RCs.
<p>Response: The RC SDT thanks you for your comment. The RC SDT believes “impacted” directly relates to the purpose statement. The original wording of “one or more other” is vague and difficult to measure. Using the word “other” presents a similar situation. The RCSDT chose to use the word “impacted” to tighten the requirement and remove ambiguity. Additionally, R1.1 reconciles the preconception of the Reliability Coordinator making an assessment:</p> <p>R1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p>		
MRO NERC SDT standards Review Subcommittee	No	<p>Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A.</p> <p>Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary?</p> <p>Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be address per R1.1.</p> <p>R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm.</p> <p>R6 appears to be a rewrite of requirements R1, R2 and their sub-requirements in IRO-016. We agree that those requirements do need to be written more succinctly or removed altogether. However, R6 does not accomplish the goal and only confuses that matter further. The reason the RCs may not be able to agree on a mitigation plan is that RC with the reliability issue may be requesting mitigations that the other RCs believe may cause them reliability issues. This requirement appears to suggest that the solution to a disagreement on the mitigation plan is cut and dried. Generally, the reason the disagreement arises is due to one RC not fully understanding the impact of their actions on another RC. The bottom line is that the RCs may have disagreements and there is no way to require a solution in these types of situations. Please revise R6 to require using the mitigation plan developed by the Reliability Coordinator who has the reliability issue provided that the mitigation plan does not cause a reliability issue in the other region.</p> <p>As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The</p>

Organization	Question 14:	Question 14 Comments:
		<p>drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with striking “as a minimum” and the requirement is modified accordingly. The RC SDT believes that the term “collectively” addresses the interpretation of R1 (your last comment).</p> <p>R1.6: The RC SDT disagrees with the MRO interpretation of 693-A and believes R1.6 reinforces the Commission’s determination in paragraph 112 of 693-A which clarifies the reliability coordinator’s authority stating “...authority to issue directives arises out of the Commission’s approval of Reliability Standards that mandate compliance with such directives.”</p> <p>R1.1: R1.1 provides the conditions under which the RC’s will communicate or notify each other. R2 deals with actions that are to be taken beyond notifications.</p> <p>R4 and R4.1: The RC SDT disagrees with the duplicity. R1.1 is a sub-requirement of R1 which requires the reliability coordinator “to have” procedures, processes, or plans, and R4 requires “participation.”</p> <p>R5 & R6: Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>		

Organization	Question 14:	Question 14 Comments:
Southern Company Transmission	No	<p>14.1 - R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC?</p> <p>14.2 - We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken.</p> <p>14.3 - We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly.</p> <p>14.4 - R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous" or a similar term.</p> <p>14.5 - We suggest rewriting R5 to read: In the event that a reliability issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.</p> <p>14.6 - At Requirement R1, the use of the phrase "as a minimum" seems to add some flexibility for development of procedures, processes and plans. A negative consequence is that it introduces more ambiguity. The recommendation is to strike the phrase.</p> <p>14.7 - At Requirement R1.6, consider the following: "Authority to act to prevent and mitigate instances 'that have the potential to cause' Adverse Reliability Impacts to other Reliability Coordinator Areas."</p>
<p>Response: The RC SDT thanks you for your comments.</p> <p>14.1: The RC SDT believes "impacted" directly relates to the purpose statement. The original wording of "one or more other" is vague and difficult to measure. Using the word "other" presents a similar situation. The RCSDT chose to use the word "impacted" to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous reliability coordinators to have "RC agreements", but to have Procedures, Processes, or Plans with impacted reliability coordinators.</p> <p>14.2: The RC SDT respectfully disagrees with your comment. R6 requires implementation ("shall implement") and R1 is a "shall have" requirement; keeping these separate provides clarity of related measures. The Dispute Resolution process is more administrative in nature regarding compliance, certification, audit processes, or contracts.</p>		

Organization	Question 14:	Question 14 Comments:
		<p>14.3: The RC SDT deleted 4.1 modified R4 to: “The RC shall participate in agreed upon conference calls at least weekly and other communication forums with impacted Reliability Coordinators.”</p> <p>14.4: The RC SDT chose the word “impacted” after much discussion. Impacted has the implication that the RC is immediately impacted or the RC may be impacted by a future situation. We feel that the requirement for weekly calls addresses your concern.</p> <p>14.5: R5 & R6: Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>14.6: The RC SDT agrees with striking “as a minimum” and the requirement is modified accordingly.</p> <p>14.7: The RC SDT believes that if a reliability coordinator acts to prevent or mitigate instances the “potential to cause” already exists.</p>
ISO New England Inc.	Yes and No	As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees that the term “collectively” addresses your interpretation and it is already included in R1.</p>		

Organization	Question 14:	Question 14 Comments:
FirstEnergy	No	<p>R1 - Should be revised as follows to improve readability and clarity:</p> <p>R1.3 - Add "Exchanging" before "Planned"</p> <p>R1.4 - Add "Control of voltage" at the beginning of the requirement and delete "for voltage control" at the end of the requirement.</p> <p>Add a new R1.7 as follows: "A process for resolution of the disagreement covered by R6 of this standard."</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1.3: The RC SDT believes adding the term "Exchanging" before "Planned" is redundant with "... exchange of information" stated in R1.</p> <p>R1.4: The RC SDT modified R1.4 to read as "Control of voltage including the coordination of reactive resources."</p> <p>R1.7: R6: To address the process for resolution of disagreements, the RC SDT proposes the 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>		
Duke Energy	No	<p>R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows:</p>

Organization	Question 14:	Question 14 Comments:
		<p>R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly.</p> <p>R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous". We suggest rewriting R5 to read: In the event that an operating issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1 and R2: The RC SDT believes "impacted" directly relates to the purpose statement. The original wording of "one or more other" is vague and difficult to measure. Using the word "other" presents a similar situation. The RC SDT chose to use the word "impacted" to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous reliability coordinators to have "RC agreements", but to have Procedures, Processes, or Plans with impacted reliability coordinators.</p> <p>To address your comments on the process for resolution of disagreements and R5, the RC SDT proposes the 4 requirements:</p> <p>R5. 15. Do you agree with the revisions to the Measures in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT received comments to revise M1 to remove “System operators” as it added to the requirement and to remove “for real-time use”. The RC SDT agrees and has modified the measure as shown below:

M1. The Reliability Coordinator ~~’s System Operators~~ shall have available ~~for Real-time use,~~ the latest approved [documented](#) version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators. [This documentation may include, but is not limited to, dated, current in force documentation with the specified elements.](#)

~~M1.1 These Operating Procedures, Processes, or Plans shall address:~~

- ~~–M1.1.1— Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.~~
- ~~–M1.1.2— Energy and capacity shortages.~~
- ~~–M1.1.3— Planned or unplanned outage information.~~
- ~~–M1.1.4— Voltage control, including the coordination of reactive resources for voltage control.~~
- ~~–M1.1.5— Coordination of information exchange to support reliability assessments.~~
- ~~–M1.1.6— Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.~~

~~Most o~~ [Other The](#) measures were ~~also~~ revised to conform to changes in the requirements [and to provide samples of acceptable evidence.](#)

Organization	Question 15:	Question 15 Comments:
Independent Electricity System Operator -	No	Measure 1 actually contains a number of subrequirements that should be stipulated in R1, not M1. If indeed these are required, they should be stipulated in the Requirement section, not the Measures Section.

Organization	Question 15:	Question 15 Comments:
Ontario		
<p>Response: The RC SDT thanks you for your comment. The RC SDT modified M1 deleting “System Operators” and the submeasures were removed and included only in the requirement.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. There should be the single measurement to verify the Operating Processes, Procedures, and Plans have been developed and address the sub-requirements. This really points out the problem with making the criteria that must be considered in the Operating Processes, Procedures, and Plans sub-requirements in the first place. They aren't requirements of any sort. They represent criteria. The drafting team should consider making them a bulleted list without the Rs, then the drafting team won't feel compelled to write sub-measures that don't measure anything.</p>
<p>Response: The RC SDT thanks you for your comment. . The RC SDT modified M1 deleting “System Operators” and the submeasures were removed and included only in the requirement. As the list includes topics for every RC is required to address, these are mandatory and should be numbered rather than bulleted.</p>		
MRO NERC SDTandards Review Subcommittee	No	<p>Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. AEP	Yes	
American Transmission Company		Abstain

16. Do you agree with the Violation Severity Levels proposed in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Several commenters suggested that the High and Severe VSLs for R2 contradicted the requirement. The RC SDT agreed and removed the "nots" from the VSLs to correct this error.

The VSL for R4 was originally proposed as a binary requirement with only a Lower VSL – since that time, a determination was made that noncompliance with any binary requirement must be classified a Severe VSL – thus the VSL for R4 was changed from Lower to Severe.

Several commenters had suggested revisions for the VSLs for R6. This requirement was imported from IRO-016 and several commenters suggested expanding the set of requirements regarding the Implementation Plan. The RC SDT expanded the requirements to 4 separate requirements and developed VSLs for these requirements (R5-R8). This made some of the comments on the VSLs moot.

Organization	Question 16:	Question 16 Comments:
Independent Electricity System Operator - Ontario	No	<p>R2: the High and Severe VSLs contradict with the requirement. We believe all of the "nots" should be removed.</p> <p>R6: The Low VSL should be a High since not agreeing to a plan but implementing one that has not been agreed to is a high violation of the requirement.</p> <p>The VSLs for R1 may need to be revised if our comments on M1 are adopted.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>We have revised the VSL based on your comment.</p> <p>R6 – The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p> <p>The VSL for R1 was unchanged as R1 remained unchanged.</p>		
MRO NERC SDTandards Review	No	For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed. We don't agree with the VSLs in R4 since we believe R4 should be struck.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 16:	Question 16 Comments:
Subcommittee		The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.
<p>Response: The RC SDT thanks you for your comment.</p> <p>We have revised the VSL for R2 per your suggestion.</p> <p>R4 – R4 remains in the standard</p> <p>R6 - The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p>		
Southern Company Transmission	No	<p>16.1 - In R2, severe should be "... and no action was taken by the RC".</p> <p>16.2 - In R5, severe should also include "... or that the RC failed to operate as though the problem existed."</p> <p>16.3 - Modify the VSLs to be consistent with changes requested in R1, R2, R4, R4.1 and R5.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>16.1 The requirement is to have agreed to plans and to distribute the plans. Other requirements address the actions to be taken.</p> <p>16.2 The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p> <p>16.3 The VSLs were revised based on stakeholder comments and revised requirements.</p>		
FirstEnergy	No	The VSL should be modified per our suggested modifications in question 14.
<p>Response: The RC SDT thanks you for your comment. The VSLs were revised to reflect revisions to the requirements.</p>		
Duke Energy	No	See comments #14 and #15 above - VSLs need to be revised to correspond to the revised Requirements and Measures.
<p>Response: The RC SDT thanks you for your comment. Please see responses to comment 14 and 15 above. VSLs were revised to reflect</p>		

Organization	Question 16:	Question 16 Comments:
revised requirements.		
ISO/RTO Council Standards Review Subcommittee	No	<p>For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed.</p> <p>We don't agree with the VSLs in R4 since we believe R4 should be struck.</p> <p>The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>The VSL for R2 was revised per your suggestion.</p> <p>R4 – R4 remains in the standard. The VSLs were revised to reflect that noncompliance with a binary requirement is Severe.</p> <p>R6 – The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p>		
SERC OC Standards Review Group	Yes and No	<p>16.1 - In R2, severe should be "no action was taken by the RC".</p> <p>16.2 - In R5, severe should also include that the RC failed to operate as though the problem existed.</p> <p>16.3 - Modify the VSLs to be consistent with changes requested in R1, R2, R4, R4.1 and R5.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>16.1 - The requirement is to have agreed to plans and to distribute the plans. Other requirements address the actions to be taken.</p> <p>16.2 - The requirements were revised and additional requirements were added for clarity. American Transmission Company		Abstain

18. Do you agree with the revisions to IRO-016-1 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Stakeholders agree with the concept of moving the requirements of IRO-016-1 into IRO-014-2. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements formed to cover the intent of the requirement transferred from IRO-016:

R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

Organization	Question 18:	Question 18 Comments:
Duke Energy	No	See comment #14 above regarding re-write needed for Requirement R6 of IRO-014-2.
Response: The RC SDT thanks you for your comment. Please see response in #14 above.		
MRO NERC SDT Standards Review Subcommittee	Yes	We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-2.

Organization	Question 18:	Question 18 Comments:

19. If you have any other comments, not expressed in questions above, on this set of revisions, please provide your comments here.

Summary Consideration: The RC SDT received comments that COM-001-2, R5 should be retired upon regulatory approval. The RC SDT will propose the earliest possible retirement date – the first day of the first calendar quarter following applicable regulatory approval, or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following BOT adoption.

Organization	Question 19:
Southern Company Transmission	19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability.
Response: The RC SDT thanks you for your comment. We concur and will request an effective date as you suggest.	
SERC OC Standards Review Group	19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability
Response: The RC SDT thanks you for your comment. We concur and will request an effective date as you suggest.	
Entergy Services, Inc	Overall, we think the coordinated set of standards being developed by the RTOSDT and IROLSDT are good for reliability, crisp, and tightens up the reliability concepts.
Response: The RC SDT thanks you for your comment.	
MEAG Power	My other concerns are addressed in the comments of the SERC OC Standards Review Group.
Response: The RC SDT thanks you for your comment.	
Salt River Project	I appreciate the new comment form in Word version. his allows me to comment on each requirement specifically addressing the requirement, measure or the VSL's

Organization	Question 19:
<p>Response: The RC SDT thanks you for your comment.</p>	
<p>#2 Standards Interface Subcommittee/Compliance Elements Development Resource Pool</p>	<p>Standard – COM-001-2 Telecommunications:</p> <p>Requirement 1: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>Proposed Measure: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide evidence that it operationally tested, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>SDT Proposed Lower VSL The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last quarter.</p> <p>CEDRP Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in one of the previous four quarters.</p> <p>SDT Proposed Moderate VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 2 quarters.</p> <p>CEDRP Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in two of the previous four quarters.</p> <p>SDT Proposed High VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 3 quarters.</p> <p>CEDRP Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in three of the previous four quarters.</p>

Organization	Question 19:
	<p>SDT Proposed Severe VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 4 quarters.</p> <p>CEDRP Proposed Severe VSL: The Responsible Entity failed to operationally test alternative telecommunications every quarter on more than three separate occasions (i.e. more than any three different quarters).</p> <p>=====</p> <p>Standard – COM-001-2 R2 Telecommunications Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities of the failure of its normal telecommunications facilities, and shall verify that alternate means of telecommunications are functional.</p> <p>Proposed Measure: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional.</p> <p>Discussion - This requirement needs to be re-written to be more clearly define who the entities are that are “impacted.” The key attributes appear to be notification of ALL (communication) impacted entities (possible omission if some, but not all are not notified). The requirement does not give any guidance on the “verification” side – this is a problem, one entity can interpret that to mean “we looked and it was working”, another may be to verify with all impacted entities that alternate communication is working. We suggest this requirement needs a little more clarification.</p> <p>Response: The RC SDT believes that entities should contact others when their normal communication capability is lost. For example, the normal phone line could be cut and someone trying to contact that entity may only get a busy signal and have no idea that alternate communications is necessary.</p> <p>We have revised the requirement to place time bounds on outages that require notification. The requirement was rewritten to:</p> <p>R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>The CEDRP does not feel it can write a valid VSL for this requirement as currently worded.</p> <p>SDT Proposed Lower VSL:</p>

Organization	Question 19:
	<p>The Reliability Coordinator, Transmission Operator or Balancing Authority notified all impacted entities of the failure of their normal telecommunications facilities, but failed to verify the alternate means of telecommunications are functional. CEDRP Proposed Lower VSL: See Discussion</p> <p>SDT Proposed Moderate VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority notified some, but not all, impacted entities of the failure of their normal telecommunications facilities, and failed to verify the alternate means of telecommunications are functional. CEDRP Proposed Moderate VSL: See Discussion:</p> <p>SDT Proposed High VSL: N/A CEDRP Proposed High VSL: See Discussion</p> <p>SDT Proposed Severe VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority failed to notify any impacted entities of the failure of their normal telecommunications facilities, and failed verify the alternate means of telecommunications are functional. CEDRP Proposed Severe VSL: See Discussion</p> <hr/> <p>Standard – COM-001-2 R3 Telecommunications Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. Proposed Measure: The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used</p>

Organization	Question 19:
	<p>to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES.</p> <p>NOTE: OK with this as is because the requirement and VSLs have been re-written, will be removed from this standard shortly, and included in the new COM-003-1 standard.</p> <p>Response: Thank you for your comment.</p> <p>SDT Proposed Severe VSL: The Responsible Entity failed to provide evidence of concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System.</p> <p>CEDRP Proposed Severe VSL: The Responsible Entity failed to provide evidence of the concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System.</p> <p>=====</p> <p>Standard – COM-001-2 R4 Telecommunications Each Distribution Provider and Generation Operator shall have telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p> <p>Proposed Measure: Each Distribution Provider and Generation Operator has telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p> <p>“has” telecomm with TOP and BA Discussion – Telecommunication Facilities is ambiguous and is not included in the NERC glossary of terms – the CEDRP recommend deleting the word “facilities” from the requirement and measure and leaving it just as “telecommunications” with its TOP and BA .</p> <p>Response: The term “telecommunications facilities” was replaced with “interpersonal communications</p>

Organization	Question 19:
	<p>capabilities” to clarify the intent of the requirement.</p> <p>SDT Proposed High VSL: N/A</p> <p>CEDRP Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority OR Transmission Operator for the exchange of Interconnection and operating information.</p> <p>SDT Proposed Severe VSL: The Distribution Provider or Generation Operator failed to have telecommunications facilities with its Transmission Operator and Balancing Authority</p> <p>CEDRP Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority AND Transmission Operator for the exchange of Interconnection and operating information.</p> <p>5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes, considering the wording of the requirement as written. More specifically, the word “have” as used in the requirement is a bit vague. A better choice could have been, “established and maintains.”</p> <p>Response: Thank you for your comment.</p> <p>=====</p> <p>Standard: COM-002-3 Communications and Coordination</p>
	<p>Response: The RC SDT thanks you for your comments. Please see responses embedded above.</p> <p>In the future, please do not submit comments in this format. It is extremely burdensome on the drafting team in trying to respond to the comments. Please answer each question individually. If you encounter difficulty, please contact NERC for assistance.</p>
Standards Interface Subcommittee/Compliance Elements Drafting	<p>Standard – IRO-001 R1</p> <p>The Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. [Violation Risk</p>

Organization	Question 19:
	<p>Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area Discussion –</p> <ol style="list-style-type: none"> 1. As currently worded it can be interpreted that any time an event occurs the RC would be in violation of the standard simply because they had failed “to prevent” an event. 2. This requirement does not have a “timing” element included, although it implies timing based on the “duration of the event”. Including that “duration of the event” is problematic – it appears to imply that human intervention may provide a more timely response than relay operation, we would suggest more clarification about what the “duration” element of the requirement is intended to address (e.g. generation re-dispatch?). 3. There also appears to be a “quality” element included based on the mitigation of magnitude of the event. As a result we believe that timeliness, effectiveness and communication should be the basis of the VSLs. 4. The VSLs as differentiate between directing actions and acting. Practically, there is no difference. The RC is still giving the directive. It is just a matter of who is carrying it out. This is not a valid basis for differentiating between VSLs. We suggest the VSLs be defined based on actual system impact (i.e. Was the RC acting or directing actions to prevent or to mitigate?) and to either modify the requirement to remove timing aspects or to add the timing aspects to the VSLs. <p>Response:</p> <ol style="list-style-type: none"> 1. The RC SDT does not agree that there would be a violation any time an event occurred. The RC should always be looking ahead. Even though events can occur that were not foreseeable or due to catastrophic failures of system equipment. 2. The intent of the phrase of “duration of the event” is to emphasize that there are actions that can be taken to shorten the duration of an event. These include ordering redispatch and system reconfiguration (including load shedding) to mitigate an Adverse Reliability Impact, thus shortening the event and its impact on the interconnection. 3. The VSL has been re-written to include only a Severe VSL. 4. We agree and have revised the VSL to only have a Severe VSL. <p>SDT Proposed High VSL IRO-001 R1</p>

Organization	Question 19:
	<p>The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. CEDRP Proposed VSL The Reliability Coordinator failed to act to prevent the magnitude or duration of Adverse Reliability Impacts.</p> <p>SDT Proposed Severe VSL IRO-001 R1 The Reliability Coordinator failed to act and direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts CEDRP Proposed VSL The Reliability Coordinator failed to act and direct actions to mitigate the magnitude or duration of Adverse Reliability Impacts</p> <p>CAE Resource Pool Comments The Enforcement Authority Statement, “NERC shall be responsible for compliance monitoring of the Regional Entity.” Is not clear, if it is intended to encompass Regional Entities that perform RC functions is should be clearly stated, if not it should not be included in the Enforcement Authority section.</p> <p>=====</p> <p>Standard – IRO-001 R2 Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall act without intentional delay to comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without delay to comply with the Reliability Coordinator’s directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Discussion - The team would suggest “intentional delay” be eliminated from the requirement – e.g. “shall act to...”). To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement.</p>

Organization	Question 19:
	<p>The measure and VSLs do not consider the exceptions for not following the RC objective. The drafting team should consider combining requirements R2 and R3. Thus, one VSL would become failure to notify the RC of the inability to comply. The drafting team could consider applying the numerical category of VSLs for some directives such as an order to redispach. Obviously, it would not work well if the directive was to reconfigure the system.</p> <p>Response:</p> <p>The term “intentional delay” was eliminated from the standard as you suggested. The VSLs were revised to reflect the requirement.</p> <p>SDT Proposed Moderate Moderate High VSL The responsible entity followed the Reliability Coordinators directive unless such actions would violate safety, equipment, or regulatory or statutory requirements with a delay. not caused by equipment problems.</p> <p>CEDRP Proposed VSL IRO-001 R2 The team does not agree that this is a valid VSL.</p> <p>SDT Proposed High VSL The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements.</p> <p>CEDRP Proposed VSL IRO-001 R2 The team does not agree that this is a valid VSL. The word majority implies some ability to numerically measure the response to the directive. Thus, the drafting team should consider applying the numerical category of the VSL guidelines.</p> <p>SDT Proposed Severe VSL The responsible entity did not follow the Reliability Coordinators directive. The responsible entity did not follow the Reliability Coordinators directive, the directive would not have violated safety, equipment, regulatory, or statutory requirements, and responsible entity did not communicate the inability to follow the directive to the Reliability Coordinator.</p> <p>CEDRP Proposed VSL IRO-001 R2 The responsible entity did not follow the Reliability Coordinators directive, the directive would not have violated safety, equipment, regulatory, or statutory requirements, and responsible entity did not communicate the inability to follow the directive to the Reliability Coordinator.</p>

Organization	Question 19:
	<p>=====</p> <p>Standard - IRO-001 R3 The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the Reliability Coordinator upon recognition of the inability to perform the directive. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</p> <p>Proposed Measure</p> <p>Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, informed the Reliability Coordinator upon recognition of the inability to comply.</p> <p>Discussion – The requirement appears to be based on communication and can be problematic by including the requirement to immediately confirm the ability to comply, a directive can be issued to one entity or several entities at one time (e.g. conference call, all call, electronic notification) that may create several issues when attempting to process all confirmations, the requirement language presents a risk of being found out of compliance for following a directive but not providing an “immediate” confirmation to the RC. The CEDRP believes it to be a reasonable expectation that all entities will comply with reliability directives and notification should be made only on exception. The SDT should consider combining this requirement with R2.</p> <p>Response:</p> <p>The phrase “immediately confirm the ability to comply” was removed from the requirement. The new wording is:</p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, or Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform the directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p>SDT Proposed Lower VSL IRO-001 R3</p> <p>The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator.</p>

Organization	Question 19:
	<p>CEDRP Proposed VSL See above discussion note</p> <p>=====</p> <p>Standard - IRO-001 R4</p> <p>Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure</p> <p>Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area.</p> <p>Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. This requirement appears to fit the numerical category of the VSL guidelines best.</p> <p>Response:</p> <p>The term “intentional delay” was eliminated from the standard as you suggested. The VSLs were revised as you suggested.</p> <p>SDT Proposed Lower VSL IRO-001 R4 N/A CEDRP Proposed VSL</p> <p>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>SDT Proposed Moderate VSL IRO-001 R4 N/A CEDRP Proposed VSL</p>

Organization	Question 19:
	<p>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>SDT Proposed High VSL IRO-001 R4 N/A CEDRP Proposed VSL</p> <p>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>SDT Proposed Severe VSL: IRO-001 R4 The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.</p> <p>CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>=====</p> <p>Standard - IRO-001 R5</p> <p>Each Reliability Coordinator who identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when the real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area has been mitigated.</p>

Organization	Question 19:
	<p>Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. Measure 5 is written implying that there is an Adverse Reliability Impact. The drafting team should consider wording the measurement to consider that there may not be an Adverse Reliability Impact requiring a directive. The Commission in paragraph 27 of the VSL order has stated that multiple VSLs are preferable where possible. Suggest applying the numerical category of the VSL Guidelines based on the number of entities notified.</p> <p>Response:</p> <p>The term “intentional delay” was eliminated from the standard as you suggested. The VSLs were revised per your suggestion.</p> <p>SDT Proposed Lower VSL: IRO-001 R5 N/A CEDRP Proposed Lower VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>SDT Proposed Moderate VSL: IRO-001 R5 N/A CEDRP Proposed Moderate VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>SDT Proposed High VSL: IRO-001 R5 N/A CEDRP Proposed High VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the</p>

Organization	Question 19:
	<p>impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>SDT Proposed Severe VSL: IRO-001 R5 The Reliability Coordinator failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.</p> <p>CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>=====</p> <p>Standard – IRO-002-2 R1 Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a letter to Transmission Operators, Balancing Authorities, Transmission Owners, Generator Owners, Generator Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has requested the data required to support its reliability coordination tasks.</p> <p>Discussion – The VSLs attempt to measure the quality of the data requirements. They require the compliance auditor to judge if another RC has material impact and what data is administrative and what data is substantial. Given the typical length of a compliance audit, it is doubtful that the compliance auditor can make these types of judgments about the quality of the data and the material impact of another RC. The drafting team should consider applying numerical category of VSLs based on the number of entities the data request is made from. It is interesting that the measure also does not require</p>

Organization	Question 19:
	<p>any documentation of a data specification.</p> <p>Response:</p> <p>The requirement was retired by the work of the IROLSDT. It is no longer in the standard.</p> <p>SDT Proposed Lower VSL: The Reliability Coordinator demonstrated that it</p> <ol style="list-style-type: none"> 1) determined its data requirements and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with a material impact on the Bulk Electric System in its Reliability Coordination Area but did not request the data from Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with minimal impact on the Bulk Electric System in its Reliability Coordination Area or 2) determined its data requirements necessary to perform its reliability functions with the exceptions of data that may be needed for administrative purposes such as data reporting. <p>CEDRP Proposed Lower VSL: IRO-002-2 R1</p> <p>The Reliability Coordinator failed to request data to support its reliability coordination tasks from 25% or less of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.</p> <p>SDT Proposed Moderate VSL: The Reliability Coordinator demonstrated that it determined the majority but not all of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p> <p>CEDRP Proposed Moderate VSL: IRO-002-2 R1</p> <p>The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 25% but less than or equal to 50% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.</p> <p>SDT Proposed High VSL: The Reliability Coordinator demonstrated that it determined</p> <ol style="list-style-type: none"> 1) some but less than the majority of its data requirements necessary to support its reliability

Organization	Question 19:
	<p>coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators</p> <p>Or</p> <p>2) all of its data requirements necessary to support its reliability coordination functions but failed to demonstrate that it requested data from two of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p> <p>CEDRP Proposed High VSL: IRO-002-2 R1 The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 50% but less than or equal to 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.</p> <p>SDT Proposed Severe VSL: The Reliability Coordinator failed to demonstrate that it</p> <p>1) determined its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators</p> <p>Or</p> <p>2) requested the data from three or more of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p> <p>CEDRP Proposed Severe VSL: IRO-002-2 R1 The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators,</p>

Organization	Question 19:
	<p>Or,</p> <p>The Reliability Coordinator failed to determine data requirements to support its reliability coordination tasks.</p> <p>Standard – IRO-002-2 R2</p> <p>Each Reliability Coordinator shall have the authority to veto planned outages to analysis tools, including final approvals for planned maintenance. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure</p> <p>Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement 2.</p> <p>Is this requirement needed? R1 IRO-001-2 requires the RC to mitigate Adverse Reliability Impacts. R2 IRO-001-2 requires responsible entities to comply with the RC directives. Wouldn't the RC thus have the right to cancel all types of outages (i.e. analysis tools, transmission equipment, etc). FERC has stated in paragraph 112 of Order 693-A that an RC does not derive their authority from agreements but rather from FERC's approval of the standards.</p> <p>Barring the team's decision to remove this requirement, the Severe VSL is confusing. We have suggested different wording.</p> <p>Response:</p> <p>While the RC SDT agrees that the other requirements should cover this subject, this is a direct response to the 2003 blackout and is included here. We have revised the Severe VSL to reflect the revised requirement.</p> <p>SDT Proposed Severe VSL IRO-002-2 R2 Reliability Coordinator approval is not required for planned maintenance or planned outages. CEDRP Proposed VSL Reliability Coordinator does not approve planned maintenance or planned outages.</p>

Organization	Question 19:
	<p>=====</p> <p>Standard – IRO-014-2 R1 No comments</p> <p>=====</p> <p>Standard – IRO-014-2 R2</p> <p>R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: [Violation Risk Factor: Lower] [Time Horizon: Real-time Operations and Operations Planning]</p> <p>R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p> <p>Proposed Measure</p> <p>M2. The Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:</p> <p>M2.1 Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>M2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p> <p>Discussion – The High and Severe VSLs appear to use “not” incorrectly.</p> <p>Response:</p> <p>We agree and have revised the VSLs.</p> <p>SDT Proposed Moderate VSL: IRO-014-2 R2</p> <p>The Reliability Coordinator failed to did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action.</p> <p>CEDRP Proposed Moderate VSL: IRO-014-2 R2</p> <p>The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take</p>

Organization	Question 19:
	<p>action.</p> <p>SDT Proposed High VSL: The Reliability Coordinator failed to did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action</p> <p>CEDRP Proposed High VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action</p> <p>SDT Proposed Severe VSL: The Reliability Coordinator failed to did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action and were not distributed to all Reliability Coordinators that are required to take action</p> <p>CEDRP Proposed Severe VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action and were distributed to all Reliability Coordinators that are required to take action</p> <p>=====</p> <p>Standard – IRO-014-2 R3 [Response: The SDT appreciates the comments. To better emphasize the distinction, the SDT decided to underline the “and” and the “or”.] Requirement (including sub-requirements) R3. The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. [Violation Risk Factor: Medium][Time</p>

Organization	Question 19:
	<p>Horizon: Real-time Operations and Operations Planning]</p> <p>Proposed Measure M3. The Reliability Coordinator shall have evidence it made notifications and exchanged reliability–related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information.</p> <p>Discussion: The VSLs appear to be appropriate. Since the only difference is the use of the “and” and “or”, we suggest emphasizing those words in bold. We read this more than once before we noticed the difference.</p> <p>Response: We revised the VSL to emphasize the “OR” and “AND” parts.</p> <p>SDT Proposed High VSL: The Reliability Coordinator failed to make notifications or exchange reliability–related information with impacted Reliability Coordinators. CEDRP Proposed High VSL: IRO-014-2 R3 The Reliability Coordinator failed to make notifications or exchange reliability–related information with impacted Reliability Coordinators.</p> <p>SDT Proposed Severe VSL: The Reliability Coordinator failed to make notifications and exchange reliability–related information with impacted Reliability Coordinators. CEDRP Proposed Severe VSL: IRO-014-2 R3 The Reliability Coordinator failed to make notifications and exchange reliability–related information with impacted Reliability Coordinators.</p> <p>=====</p> <p>Standard – IRO-014-2 R4 R4. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted Reliability Coordinators. [Violation Risk Factor: Lower][Time</p>

Organization	Question 19:
	<p>Horizon: Real-time Operations]</p> <p>The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.</p> <p>Proposed Measure</p> <p>M4. The Reliability Coordinator shall have evidence it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.</p> <p>Discussion – This requirement is purely administrative and probably does not rise to a level of a reliability standard requirement.</p> <p>It is in essence redundant, with R1.1 IRO-014-2? It appears R1.1 addresses the same information that would be expected to be discussed in a weekly conference call. Should the drafting team disagree and retain this requirement, please consider applying multiple VSLs based on how often the RC participates in conference calls, how many they missed, or how many impacted RCs they participated in conference calls with.</p> <p>Response:</p> <p>R1.1 is a sub-requirement of R1 which requires the reliability coordinator “to have” procedures, processes, or plans, and R4 requires “participation.” R4 requires participation on calls. If the RC fails to participate, that is a violation of the requirement, making it a binary requirement with only one VSL.</p> <p>SDT Proposed Lower VSL: The Reliability Coordinator failed to participate in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.</p> <p>CEDRP Proposed Lower VSL: IRO-014-2 R4 The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators bi-weekly, Or the Reliability Coordinator failed to participate in one weekly conference call, Or the Reliability Coordinator agreed to participate in conference calls with 25% or less of the impacted Reliability Coordinators.</p> <p>SDT Proposed Moderate VSL: N/A</p>

Organization	Question 19:
	<p>CEDRP Proposed Moderate VSL: IRO-014-2 R4 The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators every third week, Or the Reliability Coordinator failed to participate in two weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 25% but less than or equal to 50% of the impacted Reliability Coordinators.</p> <p>SDT Proposed High VSL: N/A CEDRP Proposed High VSL: IRO-014-2 R4 The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators fourth week, Or the Reliability Coordinator failed to participate in three weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 50% but less than or equal to 75% of the impacted Reliability Coordinators.</p> <p>SDT Proposed Severe VSL: N/A CEDRP Proposed Severe VSL: IRO-014-2 R4 The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators at least every fifth week, Or the Reliability Coordinator failed to participate in four weekly conference calls, Or the Reliability Coordinator failed to agree to participate in any conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 75% but less than 100% of the impacted Reliability Coordinators.</p> <p>=====</p>

Organization	Question 19:
	<p>Standard – IRO-014-2 R5</p> <p>R5. When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the impacted Reliability Coordinators. Until in the event that the issue cannot be has been proven to not exist, confirmed, each Reliability Coordinator shall operate as though the problem exists. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>Proposed Measure</p> <p>The Reliability Coordinator shall have evidence that, in cases when an expected or actual reliability issue was detected, it has confirmed the existence of the issue with the impacted Reliability Coordinators.</p> <p>Discussion – This requirement is confusing in the way it is worded. We think it is trying to say that the RC should operate as though the reliability issue (should this be Adverse Reliability Impact) is detected until the issue is confirmed not to exist. The way it is worded might imply that if one doesn't confirm it to exist, operate as though it does. This leaves open the interpretation that a confirmation that it doesn't exist must still be operated to as though it does exist.</p> <p>The drafting team should consider splitting operating to prevent from operating to mitigate an existing event in the VSLs.</p> <p>Response:</p> <p>The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk</p>

Organization	Question 19:
	<p>Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan,. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>The RC SDT has revised / created VSLs based on the new requirements.</p> <p>SDT Proposed Lower VSL The Reliability Coordinator that detected an expected or actual reliability issue contacted the other Reliability Coordinator(s) to confirm that there was a problem but could not confirm that the problem existed and failed to operate as though the problem existed. CEDRP Proposed VSL IRO-014-2 R5 N/A</p> <p>SDT Proposed High VSL N/A CEDRP Proposed VSL IRO-014-2 R5 The Reliability Coordinator that detected an expected reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem.</p> <p>SDT Proposed Severe VSL The Reliability Coordinator that detected an expected or actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. CEDRP Proposed VSL IRO-014-2 R5 The Reliability Coordinator that detected an actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem.</p> <p>===== Standard – IRO-014-2 R6 When an expected or actual reliability issue exists and the impacted Reliability Coordinators cannot agree on a mitigation plan, all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] Proposed Measure</p>

Organization	Question 19:
	<p>The affected Reliability Coordinators shall have evidence that, in cases when an expected or actual reliability issue existed and the impacted Reliability Coordinators could not agree on a mitigation plan, they implemented the mitigation plan developed by the Reliability Coordinator who has the reliability issue.</p> <p>Discussion: We are concerned the validity of this requirement, it may force an RC to implement a solution that they don't agree with and ultimately result in an Adverse Reliability Impact. The RC may not agree with the solution because it may not be reliable for their footprint. They need to have the ability to veto mitigation plans that cause Adverse Reliability Impacts in their footprint without incurring a compliance violation.</p> <p>Response:</p> <p>R6 was brought into this standard from IRO-016, R1 and R2. The RC SDT removed the wording relating to the "most conservative solution" because it can not be measured. We are proposing to use the mitigation plan of the RC who is experiencing the issue in cases where an agreed to mitigation plan can not be developed.</p> <p>SDT Proposed Lower VSL The Reliability Coordinator did not agree on a mitigation plan and implemented a plan other than the one developed by the Reliability Coordinator who had the reliability issue. CEDRP Proposed VSL IRO-014-2 R6 N/A</p> <p>SDT Proposed Severe VSL The Reliability Coordinator did not agree on a mitigation plan and did not implement a mitigation plan. CEDRP Proposed VSL IRO-014-2 R6 What if the RC is correct in disagreeing and the mitigation plan would have caused an Adverse Reliability Impact on their system?</p>
<p>Response: The RC SDT thanks you for your comments. Please see responses embedded above.</p> <p>In the future, please do not submit comments in this format. It is extremely burdensome on the drafting team in trying to respond to the comments. Please answer each question individually. If you encounter difficulty, please contact NERC for assistance.</p>	

Consideration of Comments on Reliability Coordination — Project 2006-06

The Reliability Coordination Standard Drafting Team (RC SDT) thanks all commenters who submitted comments proposed revisions to the standards for Project 2006-06: Reliability Coordination. These standards were posted for a 30-day public comment period from July 10, 2009 through August 9, 2009. The stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 31 sets of comments, including comments from more than 87 different people from over 62 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

All comments received have been reformatted so that all comments received in response to the first question appear following the first question, etc. All comments have been posted at the following site:

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

Changes to Requirements, Measures and Violation Severity Levels in COM-001-2: Stakeholders suggested that there is a need to define Interpersonal Communications for this standard. The RC SDT is proposing the following definitions:

Interpersonal Communication: Any method that allows two or more individuals to interact, consult, or exchange information.

Alternative Interpersonal Communication: Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

Other stakeholders suggested edits to the requirements. The RC SDT revised the wording of R2 to add clarity and revised R3 to include the phrase “unless dictated by law...” to address legal requirements in some areas.

Several stakeholders suggested removing the mitigation plan from R1 and M1. The RC SDT agreed and made revisions to other measures to reflect changes to the requirements.

Stakeholders suggested adding more VSLs for R2. The RC SDT agreed and drafted additional VSLs reflecting timing and the number of entities notified. Other changes to the VSLs were made based on revisions to the requirements.

Stakeholders suggested removing the Distribution Provider and Generator Operator from the Data Retention section for R1 of COM-001. Since these are not applicable entities in R1, they were removed from Data Retention for the requirement.

The standard and the proposed definitions will be posted for an additional comment period.

Changes to Requirements, Measures and Violation Severity Levels in COM-002-3 Stakeholder consensus has been achieved with respect to the retirement of R1 and M1 from the last approved version of the standard. In response to the majority of the comments, the drafting team has modified and rearranged the order of the remaining requirements, and coined a definition for “Reliability Directive”. The drafting team is also coordinating with the RTO SDT (Project 2007-03) and the OPCP SDT (Project 2007-02) on the definition and usage of the term “Reliability Directive”.

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

As a reference, we have included the existing definition of Emergency:

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

In accord with the majority of commenters, the drafting team made changes to the Measures to bring them into conformance with the adopted suggestions from question 4 for improving the Requirements.

Changes to Requirements, Measures and Violation Severity Levels in IRO-001-2

Stakeholders generally agreed with the revisions to the requirements. Several stakeholders suggested adding the words “an issued” before “directive” in R3. The RC SDT agreed and made the change. No further revisions were made to the requirements. The proposed revisions to the definition of Adverse Reliability Impacts is being posted for comment.

Stakeholders agreed with the measures for IRO-001-2. The measure M3 was revised to reflect the revision to R3. No other revisions were suggested for the measures.

The VLS for R3 was revised to add the word “issued” before directive to match the revised requirement. Stakeholders suggested minor revisions to the VSLs for R4 and R5. The RC SDT agreed and made the revisions.

The RC SDT believes that stakeholder consensus has been achieved on IRO-001-2. The definition of Adverse Reliability Impacts is included in this posting for comment.

Changes to Requirements, Measures and Violation Severity Levels in IRO-014-2

Stakeholders suggested revising R8 to include provisions for avoiding implementing actions that would violate safety, equipment or regulatory or statutory requirements. The RC SDT agreed and added this to the requirement. Other stakeholders suggested adding “For conditions or activities that impact other Reliability Coordinator Areas,...” at the beginning of R1 and R3. The RC SDT agreed and added this to the requirements. The Time Horizons for R2 were revised as suggested to “Same Day Operations and Operations Planning”. Several stakeholders expressed concerns regarding having R6-R8 as separate requirements. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT contends the requirements should be separate requirements as they identify distinctly different actions and are adequate as written.

Stakeholders agreed with the Measures, except to make conforming changes for revisions to the requirements. The RC SDT has revised the measures based on the new requirements. One stakeholder suggested revision to the Data Retention for R5-R8. Data Retention was revised for R5 to 12 months, however the RC SDT believes that three years is the correct period for R6-R8.

Several stakeholders suggested developing four VSLs for R5. Typically, in the course of BES operations, the number of impacted Reliability Coordinators will be a small number. The SDT effort in this regard was to write the VSLs to represent both the large and small

scenarios containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios. Other stakeholders suggested four VSLs for R4. The essence of R4 is written to require impacted RC's to talk at least weekly and is singular in nature. VSL's can not be written for conference calls that exceed the singular requirement.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Reliability Standards Development Procedures:
<http://www.nerc.com/standards/newstandardsprocess.html>.

1. Do you agree with the revisions made to the Requirements in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Most stakeholders agreed with the requirements in COM-001. Stakeholders suggested that there is a need to define Interpersonal Communications for this standard. The RC SDT is proposing the following definitions:

Interpersonal Communication: Any method that allows two or more individuals to interact, consult, or exchange information.

Alternative Interpersonal Communication: Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

Other stakeholders suggested edits to the requirements. The RC SDT revised the wording of R2 to add clarity, revised R3 to include the phrase “unless dictated by law...” to address legal requirements in some areas, and removed references to the mitigation plan in R1.

Organization	Yes or No	Question 1 Comment
Central Lincoln		<p>Comments: The inclusion of load serving entities and distribution providers does not address any present reliability gap. R4 is extremely vague, and is not likely to be interpreted consistently. What form of evidence will be acceptable? Photos of telephones?</p>
<p>Response: The RC SDT thanks you for your comment. The LSE and DP were added as applicable entities to R3 as a result of stakeholder comments during the previous posting. The DP and GOP were added as applicable entities in R4 per FERC Order 693 directives. The Measure M4 for Requirement R4 was revised to:</p> <p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)</p>		
JEA		<p>R2 I would suggest that R2 be clarified so that it is understood that the 60 minutes starts at the beginning of the outage (or the end of the 30 minute period, if that was instead the intent) so that there can be no confusion about when the clock starts for notification periods. Otherwise, the wording of these standards is clearer than the current version.</p> <p>R4 I am concerned that with the word "capabilities" that the DP/GO's will be expected by the auditors to demonstrate that its "capability" was working every single second of every day since their last audit, especially since you have not included a data retention period (especially since this is rated a "high" VRF).</p>

Organization	Yes or No	Question 1 Comment
<p>Response: The RC SDT thanks you for your comment.</p> <p>R2: We have revised the wording to clarify the intent:</p> <p>Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal Interpersonal Communications capabilities that lasts 30 minutes or longer. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>R4: The Measure 4 for Requirement R4 was revised to:</p> <p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)</p> <p>Data retention for R4, M4 was added to the revised standard.</p>		
Northwest LSE Group	No	<p>The RC STD has done a commendable effort. However, it is questionable how expanding the applicability to include LSEs, DPs, & PSEs that are non-scheduling/tagging entities will increase reliability of the BES. In fact, we believe that increasing the applicability could do just the opposite. Many of these entities that are only registered as a LSE, DP, and/or PSE do not have a 24/7 desk/dispatch facility to receive RC/BA/TOP reliability directives, and are too small (10s of MW) to effectively assist during a reliability crisis. In addition, the Regional Entities (WECC in this case) are overwhelmed as it is, asking them to take on even more audit responsibilities is unrealistic, and not worth the effort.</p> <p>In addition, for the small Registered Entity, what would constitute compliance with R3 & R4 if no TOP/BA real-time directives were received? Everyone employed speaks English and there is at least one phone on the premises? Will the small DP and/or LSE be required to monitor its communication system 24/7 with competent personnel for an unlikely TOP/BA directive?</p>
<p>Response: The RC SDT thanks you for your comment. The LSE, DP and PSE were added as applicable entities to R3 as suggested by other stakeholders in the last posting. The Distribution Provider and Generator Operator are in R4 per FERC Order 693 directives.</p> <p>The measures for the requirements specify what would constitute evidence needed to demonstrate compliance. Note that R3 and R4 are not focused solely on communication related to “directives.” Requirement R3 is focused on all “. . . inter-entity Bulk Electric System (BES) reliability communications . . . “ The drafting team feels that R4 as written allows flexibility to the entities in meeting the performance requirement. Note that R4 only applies to Distribution Providers and Generator Operators, not to LSEs.</p>		
American Transmission Company	No	<p>We believe that the team needs to define the term “interpersonal communications capabilities”. It’s our understanding that the term refers to how entities will communicate (i.e. phone, cell phone, video conferencing, email or satellite phone) with each other, but that is not being clearly communicated by the requirement. A clear definition of the term “interpersonal communication capabilities” will likely provide needed clarity to the requirement.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
		<p>Requirement 1 seems to imply that an entity will be judge based on a single test of its alternative communication system within any given quarter, and if that test fails they must develop a mitigation plan. Our concern is that the requirement should allow for multiple testing and only if all or a reoccurring issue is found should you document and fix the issue. (Example: An entity performs weekly tests of its alternative communication system. One of the test’s fails. All other tests, following the failed test, are successful. Would the entity have to develop a mitigation plan based on the one failure, or are the other successful tests sufficient to show compliance?)</p> <p>In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. To clarify, we suggest that the language be changed to: Each RC, TOP and BA shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communication systems lasting longer than 30 minutes.</p>
<p>Response: The RC SDT thanks you for your comment. Several stakeholders have expressed a concern with the definition of interpersonal communications capabilities. The RC SDT concurs and has drafted a definition that will be posted for comment.</p> <p>R1: Other stakeholders also expressed concern with developing a mitigation plan in this requirement. The RC SDT has revised the requirement to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>The RC SDT feels that this will address your comment.</p> <p>R2: We concur and have revised the requirement as you suggest.</p>		
Northeast Power Coordinating Council	No	<p>Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication.</p> <p>Having alternative interpersonal communications should be specified as a requirement.</p> <p>Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and in fact is already, in English. Accordingly, R3 should be modified as the proposition below: R3. Unless dictated by law or otherwise agreed to,</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>The RC SDT agrees with your comment regarding the alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
<p>Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>We concur with your suggestion regarding R3 and have made the suggested revision.</p>		
SERC OC Standards Review Group	No	The STD should clarify what types of communications are considered in the standard is it voice or data communications or both?
<p>Response: The RC SDT thanks you for your comment. Interpersonal communication does not include data (see IRO-010-1) and includes more than voice, such as instant messaging, text messaging and email. The RC SDT has developed a draft definition of interpersonal communications capabilities that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p>		
IRC Standards Review Committee	No	<p>(1) We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. If repairing the system would be a lengthy process, then a mitigation plan may be developed to document that the entity is in process to fix the system. There is no associated requirement to have an alternate interpersonal communication capability along with R1 to test it. Thus, if a responsible entity did not have an alternate interpersonal communication capability, R1, in essence, does not apply. We suggest adding a requirement to have an alternate interpersonal communication capability to address this gap. Alternatively, the requirement to have an alternate interpersonal communication capability along with requirements to test and fix it could be stipulated in the Organization Certification Requirements.</p> <p>(2) In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes."</p> <p>(3) R3 is not necessary. This requirement results in the waste of compliance resources managing and auditing documentation associated with it with no measurable improvement to reliability.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement for alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
		<p>restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>2) We concur with your comment and have revised the requirement accordingly.</p> <p>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</p>
Midwest ISO Standards Collaborators	No	<p>We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system.</p> <p>In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes."</p> <p>R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement for alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>2) We concur with your comment and have revised the requirement accordingly.</p> <p>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</p>		
ReliabilityFirst Corporation	No	FERC 693 excludes distribution providers if they are not a user, owner or operator of BES. This should be reflected in R4 of the standard
<p>Response: The RC SDT thanks you for your comment. FERC Order 693 endorses the NERC Statement of Compliance Registry criteria (paragraph 512) and also adopted the proposal to require the ERO to modify COM-001 to apply to distribution providers and generator operators (paragraph 493).</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
E.ON U.S.	No	<p>E.ON U.S. suggests deleting “interpersonal” from the term “interpersonal communications capabilities”. The need for and meaning of the term “interpersonal” isn’t clear. Does it infer communications must be to/from a specific individual rather than to/from another reliability entity? Verbal vs electronic communications? All non-data communications? E.ON U.S. believes that the term “interpersonal” must be clarified if it is to remain in the standard.</p> <p>In the proposed R1 “how extensive must the quarterly testing be “ establish contact or verify all functions? Does the term “alternative” include the "normal" communication medium or only the “backup” mediums? Does the alternative imply ALL possible communication alternatives? E.ON U.S. suggests replacing the term “alternative” with “planned backup” or similar. Quarterly testing needs to be limited to only established/planned backup communication methods not any potential "alternative" communication method.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees with several stakeholders that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>The testing requirement is to ensure that the alternative (not “normal”) interpersonal communications capability works as a minimum. Entities may go above and beyond the requirement if they desire. The requirement was edited to identify the alternative and test it.</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its alternative Interpersonal Communication capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p>		
Manitoba Hydro	No	<p>do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary as it would delay repairing the interpersonal communication capability.</p> <p>R2 assumed that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes?</p> <p>R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
<p>for alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>2) We concur with your comment and have revised the requirement accordingly.</p> <p>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</p>		
Georgia Transmission Corporation	No	<p>Per the NERC Reliability Standards Development Procedure, under the definition of a Reliability Standard? The obligations or requirements must be material to reliability and measurable? With regards to R3. - It goes without saying that inter-entity BES reliability communications must be in a common language between the entities for understanding operation instructions. From an audit/measurability standpoint, the evidence to the requirement would not converge to a finite amount of material. The amount of evidence required to demonstrate compliance of this requirement would be a huge administrative burden. It seems this concept (for use of the English language) could be captured under the "Entity Tasks and Interrelationships" section of the NERC Reliability Functional Model which defines the set of functions that must be performed to ensure the reliability of the bulk electric system. It also explains the relationship between and among the entities responsible for performing the tasks within each function. Additionally, this concept (for use of the English language) could further be explained under each applicable registration type (BA, GOP, TSP, LSE, PSE, and DP) in the NERC Reliability Functional Model. The Second option for R3 is to remove the Requirement from the continent wide Standards and have the effected entities/regions create a "Regional Standard" where entities involved in inter-entity BES reliability communications have a history of language barrier concerns.</p> <p>As a separate issue to R3, it also seems conflicting that a written requirement would provide the option of "Unless agreed to otherwise". This option described in the language of the requirement implies that it is not a requirement but an option which further supports the suggestions above.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement. The Reliability Functional Model is not an enforceable standard.</p>		
Illinois Municipal Electric Agency	No	<p>The IMEA supports comments submitted by the MISO Standards Collaboration Group indicating R3 is not necessary. Similarly, IMEA questions the necessity of R4. Therefore, we question the need to expand the applicability of COM-001 to DP, LSE, and PSE since R3 and R4 are the only two Requirements applicable to those functions.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement. R4 is included per FERC Order 693 directive.</p>		
Exelon	No	<p>Agree with the revisions with the following exception/recommendation: COM-001: purpose is to address communication facilities / capabilities (technical/hardware). COM-002: purpose is to address effectiveness (protocols).COM-001: R.1-3 address telecommunication facility requirements. R4 requires English use. Recommend the drafting team move COM-001 R4 (use English) to COM-002 where effectiveness of communications (protocols) between entities is addressed.</p>
<p>Response: The RC SDT thanks you for your comment. COM-001 Requirement R3 (English use) is being incorporated into COM-003-1 by the Operations Personnel Communications Protocols SDT (Project 2007-02). It will be retired from this standard upon approval of COM-003-1. We see no benefit to moving it to COM-002 at this time.</p>		
Hydro-Québec TransEnergie (HQT)	No	<p>Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication.</p> <p>Having alternative interpersonal communications should be specified as a requirement since there is actually no requirement to have that alternative way of communication in the first place.</p> <p>Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and is in fact already, in English. Accordingly, R3 should be modified as the proposition below: R3. Unless determined by law or otherwise agreed to,</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>The RC SDT agrees with your comment regarding the alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>We concur with your suggestion regarding R3 and have made the suggested revision.</p>		
Duke Energy	No	<p>R1 requires an entity to “develop a mitigation plan” if a test of alternative communications capabilities is unsuccessful. We believe that this phrase should be changed to “take action”, reflecting that an entity’s response to an unsuccessful test may</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
		<p>be to simply call or email a repair order. The phrase “develop a mitigation plan” implies that an entity must establish a backup to the alternative communications capabilities rather than just restore the alternative communications capabilities.</p>
<p>Response: The RC SDT thanks you for your comment. We concur with your comment regarding the mitigation plan and have revised the requirement to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its alternative Interpersonal Communication capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p>		
Northeast Utilities	No	<p>It is understood that the use of the term "interpersonal communications" and "interpersonal communications capabilities" were selected by the RC SDT to better reflect the intent of the Standard. However, NU reviewers are concerned over the new terminology and believe that it is unclear and not universally accepted to mean the same thing to all parties. NU's belief is that the original use of the terms "telecommunications" and "telecommunications facilities" are clearer and universally understood. NU recommends that the original terms be re-instated or the term "interpersonal communications" be replaced to reflect the intent of the Standard is to ensure "voice and text equipment" is adequate for communicating real-time operating information.</p> <p>R1 ? the requirement has evolved to test alternative equipment, versus a requirement to have primary and alternative equipment. Standard should require entities to have the equipment such as in the -1 version.R2 is to notify impacted entities in the event of a loss of normal communications. With backup communications operating correctly do we assume there is no impact and therefore notification is not required? This is unclear from a compliance perspective and unnecessary if backup communications are available. Alternative communications often go several layers deep including cell phones, satellite phones, radio, etc.</p>
<p>Response: The RC SDT thanks you for your comment. Several stakeholders have expressed a concern about the definition of interpersonal communications. The RC SDT is proposing a definition that will be posted for comment to address those concerns as well as your comment.</p> <p>R1: The intent of the requirement is as you suggest. This requirement has been revised to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>Notification of a failure of the normal interpersonal communications is still required by R2. The testing requirement is for one designated alternative. No notification is required for the failure of a non-designated alternative.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
Independent Electricity System Operator	No	<p>We suggest the SDT review the applicability to Transmission Service Providers, Load-Serving Entities and Purchasing Entities from a real time operating perspective. We do not believe they are active participants in real time operation for which they require to have the same communication capability as the RCs, TOPs, BAs and DPs.</p> <p>Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication.</p> <p>Having alternative interpersonal communications should also be specified as a requirement.</p> <p>Work communication within Quebec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and already is, in English. Accordingly, R3 should be modified as proposed below: R3. Unless dictated by law or otherwise agreed to,</p> <p>R4: We believe “Interconnection” should be replaced by “interconnection” since the former is not a defined term.</p>
<p>Response: The RC SDT thanks you for your comment. TSP, LSE and PSE are not required to have the same Interpersonal communication as RC, TOP or BA. The only requirement applicable to TSP, LSE and PSE is R3 (English language).</p> <p>The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>The RC SDT agrees with your comment regarding the alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>We concur with your suggestion regarding R3 and have made the suggested revision.</p> <p>R4: Interconnection is a defined term in the NERC Glossary of Terms (Updated on April 20, 2009).</p>		
MRO NSRS	No	<p>(1) The MRO NSRS does not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. Please create a definition for the interpersonal communication capability (or systems) term used in the response to comments to draft 1 in the summary of consideration for question 1.</p> <p>(2) In R2, MRO NSRS assumes that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. MRO NSRS thinks this would be clearer if the requirement were revised to: “Each Reliability Coordinator,</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
		<p>Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes.”</p> <p>(3) R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement for alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>The team has drafted a definition for both the term “Interpersonal Communication” and the term, “Alternative Interpersonal Communication.”</p> <p>2) We concur with your comment and have revised the requirement accordingly.</p> <p>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</p>		
Xcel Energy	No	<p>(1) While an improvement from the terminology used in version 1, the term "interpersonal communications" is still vague. We feel the intent of the drafting team was to include non-verbal communication as well, like email. However, as drafted, this point is not clear. We feel a definition is needed in order avoid disparity in its interpretation.</p> <p>(2) It appears that the requirement for RCs, TOPs and BAs to have communication capabilities (whether primary or backup/alternative) was removed from the standard. Yet, R1 requires the RC, TOP and BA to test alternative communications capabilities. Requirements to have primary and backup/alternative communication capabilities should be explicitly stated.</p> <p>(3) Additionally, we feel that the DP and GOP should have testing requirements for their communication capabilities with their TOP and BA.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>2) The RC SDT does not agree with your assertion regarding R1. The requirement for alternate interpersonal communications capability implies that primary interpersonal communications are in place.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
<p>3) The DP and GOP were added as applicable entities in R4 per FERC Order 693 directives. The RC SDT does not agree with your assertion regarding the need for testing requirements. However, your concerns may be addressed in the Measure 4 revision:</p>		
<p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)</p>		
Western Area Power Administration	Yes	R4 should say "Generator Operator" rather than "Generation Operator"
<p>Response: The RC SDT thanks you for your comment. We have made this revision.</p>		
American Electric Power	Yes	AEP does generally agree with the revisions, but the use of the term "interpersonal communication capabilities" needs a NERC-approved definition. Otherwise, what is in scope? Are e-mail or text messages acceptable, and, if so, what type of guaranteed delivery is necessary?
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p>		
FirstEnergy	Yes	We agree with many of the changes made to the standard including the change of title to reflect communications (voice and text messages). The parenthesis around 30 minutes or longer should be removed as parenthesis by definition mean a word, phrase, or sentence inserted in a passage to explain or modify the thought. This phrase is more than an explanation of the term failure. It sets forth a time requirement that is an integral part of R1. We suggest rewording the requirement as "Each RC, TOP, and BA shall notify impacted entities within 60 minutes of a failure of its normal interpersonal communications capabilities that lasts 30 minutes or longer."
<p>Response: The RC SDT thanks you for your comment. We concur with your comment and have revised the requirement accordingly.</p>		
Bonneville Power Administration	Yes	
PacifiCorp	Yes	
Southern Company	Yes

Organization	Yes or No	Question 1 Comment
Calpine Corporation	Yes	

2. Do you agree with the revisions made to the Measures in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Most commenters agreed with the measures for COM-001. The measures were revised based on revisions to the requirements as well as comments received below. Several stakeholders suggested removing the mitigation plan from R1 and M1. The RC SDT agreed and made the revision. M3 and M4 were revised as:

M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that its personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language. (R3.)

M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information (R4).

Organization	Yes or No	Question 2 Comment
Northwest LSE Group	No	To demonstrate compliance the small Registered Entities will be in the position of proving a negative: i.e., there is no real-time BES operational communication from or to any other entity. Currently, for the smaller entities, communication with the Transmission Operator or Balancing Authority is strictly for operational safety and local reliability of service, not operational reliability for the BES as defined by NERC. It is not clear how the small entity will show compliance. If R4 requires the small load-only DP and/or LSE to have 24/7 monitoring of its phone, and contracted answering service is unable to contact anyone, will this be a violation?
<p>Response: The RC SDT thanks you for your comment. R4 is applicable only to registered Distribution Providers and Generator Operators. The RC SDT has revised the measure to prevent having to prove a negative:</p> <p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 2 Comment
<p>There is no 24/7 monitoring requirement in R4.</p>		
<p>Northeast Power Coordinating Council</p>	<p>No</p>	<p>See our comment for R3 in Q1. Accordingly, M3 should be modified as the proposition below: M3. “ that will be used to determine that personnel used English “or another language” as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, both parties shall have and provide upon request, evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement shall be provided to explain the use of the alternate language. (R3.) M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT has revised the measure to conform to revisions in the requirement:</p> <p>M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language.</p> <p>The RC SDT feels that agreement is not required prior to the call, but only prior to the conversation using the alternate language.</p>		
<p>Bonneville Power Administration</p>	<p>No</p>	<p>Issue #1: Measure M3 The measure states that entities “shall have and provide” evidence that “personnel used English as the language for all” communications. This infers that all communications must be documented in some form or fashion and that any outage of the normal communication system must be met with alternative processes which will meet this measure, even if the alternative is the preparation of handwritten notes of each person’s conversations, noting that the communications occurred in English. Unfortunately, there have been times where our Dictaphone stopped recording phone calls, and nobody knew it for days! This measure sets us up for a violation! It’s just a matter of time.</p>
<p>Response: The RC SDT thanks you for your comment. The measure as written is consistent with the requirement. The RC SDT did not receive any other comments to modify this measure.</p>		
<p>IRC Standards Review Committee</p>	<p>No</p>	<p>Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.</p>
<p>Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 2 Comment
Midwest ISO Standards Collaborators	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.		
Central Lincoln	No	Comments: M4 is of little help regarding R4. How does an entity perform this demonstration, especially in the case of an off-site audit? If left to the regions, there will be no consistency.
Response: The RC SDT thanks you for your comment. Based on comments received on R4 and M4, the RC SDT has revised M4 to: M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)		
ReliabilityFirst Corporation	No	No measures are posted for R4 of the revised standard
Response: The RC SDT thanks you for your comment. A measure M4 is in both the redline and clean version of the posted standard.		
E.ON U.S.	No	E.ON U.S. believes that he M1 must be clarified to address whether the testing entity is responsible to develop and implement a mitigation plan when a test is unsuccessful due to an issue at the other end (i.e. non-testing entity).
Response: The RC SDT thanks you for your comment. We have removed the mitigation plan from the requirement and measure.		
Manitoba Hydro	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.		
Georgia Transmission Corporation	No	See comments to Question 1 in regards to measurability.
Response: The RC SDT thanks you for your comment. Please see response to question 1.		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 2 Comment
Illinois Municipal Electric Agency	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in Question 1.
Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.		
Exelon	No	See answer to #1
Response: The RC SDT thanks you for your comment. See response to question 1.		
Hydro-Québec TransÉnergie (HQT)	No	Comments: See our comment for R3 in Q1. Accordingly, M3 should be modify to read as the proposition below: M3. “ that will be used to determine that personnel used English “or another language determine otherwise” as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, upon request, evidence shall be provided to explain the use of the alternate language. (R3.)M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?
<p>Response: The RC SDT thanks you for your comment. The RC SDT has revised the measure to conform to revisions in the requirement:</p> <p>M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that its personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language.</p> <p>The RC SDT feels that agreement is not required prior to the call, but only prior to the conversation using the alternate language.</p>		
Duke Energy	No	Replace the phrase “develop a mitigation plan” with the phrase “take action” per our comment on Requirement R1 above. Also, the DP and GOP should be deleted from the Data Retention section requirements for R1/M1 and R2/M2. Need to add a Data Retention requirement for R4/M4 for the DP and GOP.
Response: The RC SDT thanks you for your comment. The measure M1 was revised to conform to suggested revisions to R1. We have also revised the Data Retention section.		
Independent Electricity System	No	M3 and M4 may need to be revised depending on the response to our comments under Q1, above.

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 2 Comment
Operator		
<p>Response: The RC SDT thanks you for your comment. Conforming revisions were made to the measures based on revisions to the requirements.</p>		
MRO NSRS	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
<p>Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.</p>		
Xcel Energy	No	Measures should be modified to reflect changes to requirements suggested in question 1.
<p>Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.</p>		
American Transmission Company	No	See our comment to question 1
<p>Response: The RC SDT thanks you for your comment. See response to question 1.</p>		
JEA	Yes	<p>M1 - very nice, probably we will also be held responsible for completing the mitigation plans, so perhaps you should go ahead and add that so no one gets caught without sufficient evidence in that regard</p> <p>M2 – fine</p> <p>M3 - this measure would indicate that operators have the authority to agree among themselves to speak other languages, rather than a more formal agreement between entities, which is how I read the language of the requirement. If that is not what is meant, then I would suggest the examples include Memorandums of Agreement or Understanding, Contracts or other more formal mechanisms.</p> <p>M4 - fine</p>
<p>Response: The RC SDT thanks you for your comment. M1: We removed the mitigation plan from R1 and M1.</p> <p>M3: The requirement does not preclude individuals from using an alternate language as long as they agree to do so prior to the conversation.</p>		
FirstEnergy	Yes	However, it is not clear whether to show compliance the voice recordings and associated transcripts are of the test done or of the conversations across those facilities.
<p>Response: The RC SDT thanks you for your comment. Since the requirement is to test, the evidence provided should be sufficient to show that the test</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

3. Do you agree with the revisions made to the Violation Severity Levels in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholders suggested adding more VSLs for R2. The RC SDT agreed and drafted additional VSLs reflecting time and the number of entities notified. Other changes to the VSLs were made based on revisions to the requirements.

Organization	Yes or No	Question 3 Comment
Northwest LSE Group	No	With the vague verbiage of R4 coupled with the High and Severe VSL, it is important to clarify R4 with the small DP in mind, and possibly include Lower and Moderate VSLs for smaller load-only DP violations.
<p>Response: The RC SDT thanks you for your comment. Based on the requirement, the RC SDT does not feel that additional VSLs can be written for R4. The intent of the requirement is missed if the responsible entity does not have Interpersonal Communication Capabilities with both its TOP or its BA.</p>		
Northeast Power Coordinating Council	No	see M3 comment for question 2
<p>Response: The RC SDT thanks you for your comment. See response to question 2.</p>		
IRC Standards Review Committee	No	<p>(1) Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1.</p> <p>(2) FERC expressed its desire in the June 2008 order on VSLs to have as many VSLs as possible. We suggest since R2 also has a time component in the requirement four VSLs could be written based on the timeliness of the notification as well as the number of impacted entities that were not notified. The VSLs should reflect both components.</p>
<p>Response: The RC SDT thanks you for your comment. 1) Conforming changes were made to the VSLs based on the modifications to the requirements. 2) We have added VSLs based on the time requirements.</p>		
Midwest ISO Standards Collaborators	No	<p>Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1.</p> <p>In addition, we suggest since R2 has a time component in the requirement, four VSLs could be written based on the timeliness of the notification. This would be consistent with the FERC's expressed desire in the June 2008 order on VSLs in which they stated that as many VSLs should be developed as possible.</p>
<p>Response: The RC SDT thanks you for your comment. Conforming changes were made to the VSLs based on the modifications to the requirements.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 3 Comment
<p>We have added VSLs based on the time requirements.</p>		
Central Lincoln	No	<p>The severity levels have little or no relationship to reliability. Failure to provide a evidence of an agreement per R3, for example, has no impact on reliability by itself; yet it carries the maximum VSL. In reality, the impact would only be severe if the use of an alternate language resulted in a miscommunication.</p>
<p>Response: The RC SDT thanks you for your comment. The VSLs are a metric applied after a requirement has been violated. The intent is to provide a relative measure of how far the action or inaction was from the threshold set in the requirement. Some requirements lend themselves to a relative measure of meeting the threshold (i.e. “almost met”, 12 minutes when the requirement was 10 minutes, etc), and some do not. Those that do not are often termed “binary” requirements (either you meet the threshold or you do not). The relative risk to the bulk electric system of not meeting a requirement is specifically reflected in the requirement’s VRF. The relative size of a registered entity is beyond the scope of the standard drafting team and is addressed through the NERC Statement of Compliance Registry Criteria or taken into account as a mitigating factor through the Regional compliance enforcement programs.</p>		
E.ON U.S.	No	<p>E.ON U.S. suggests that R1 be modified to include the language that when an RC, BA and/or TOP issue a directive it must state: “This is a directive” and the entity receiving the directive must state: "I understand this is a directive". E.ON U.S. also requests that language be added to the requirement that states that this communication protocol is only for reliability related directives and not for other operational directives.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R1. The purpose of R1 is to ensure that operating entities have adequate Interpersonal Communications capabilities.</p>		
Manitoba Hydro	No	<p>Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. In addition, since R2 has a time component in the requirement four VSLs could be written based on the timeliness of the notification.</p>
<p>Response: The RC SDT thanks you for your comment. Conforming changes were made to the VSLs based on the modifications to the requirements. We have also added VSLs based on the time requirements.</p>		
Georgia Transmission Corporation	No	<p>Again, Requirement 3 seems to be an option.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 3 Comment
Illinois Municipal Electric Agency	No	Conforming changes are required to the VSLs based on the suggested modifications to the requirements in Question 1.
Response: The RC SDT thanks you for your comment. Conforming changes were made to the VSLs based on the modifications to the requirements.		
Hydro-Québec TransEnergie (HQT)	No	see M3 comment for question 2
Response: The RC SDT thanks you for your comment. See response to question 2.		
Duke Energy	No	Replace the phrase “develop a mitigation plan” with the phrase “take action to restore the capabilities” per our comment on Requirement R1 above.
Response: The RC SDT thanks you for your comment. Mitigation plan was removed from the requirement.		
Independent Electricity System Operator	No	The VSLs for R3 may have to be changed based on the outcome of our comments in Q2 regarding the language of communication.
Response: The RC SDT thanks you for your comment. Conforming changes were made to the VSLs based on the modifications to the requirements.		
MRO NSRS	No	Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. In addition, the MRO NSRS suggests since R2 has a time component in the requirement four VSLs could be written based on the timeliness of the notification. This would be consistent with the FERC’s expressed desire in the June 2008 order on VSLs in which they stated that as many VSLs should be developed as possible.
Response: The RC SDT thanks you for your comment. Conforming changes were made to the VSLs based on the modifications to the requirements. We have also added VSLs based on the time requirements.		
SERC OC Standards Review Group	Yes	
Bonneville Power Administration	Yes

Western Area Power Administration	Yes	
Southern Company	Yes	
ReliabilityFirst Corporation	Yes	
American Electric Power	Yes	
Northeast Utilities	Yes	

4. Do you agree with the revisions made to the Requirements in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholder consensus has been achieved with respect to the retirement of R1 (the requirement for the TOP and BA to each have data and voice communication with RCs, BAs and TOPs). In response to the majority of the comments, the drafting team has added a new R1 to require that “Reliability Directives” be identified as such, revised and rearranged the two requirements from the last posting so that the new R2 focuses on repeating the intent of a reliability directive and the new R3 focuses on responding to that repeated directive. The drafting team is also coordinating with the RTO SDT and the OPCP SDT (Project 2007-02) on the definition and usage of the term “Reliability Directive”.

The new R1 through R3 are:

R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat the intent of the Reliability Directive back to the issuer of the Reliability Directive. [Violation Risk Factor: High][Time Horizon: Real-Time]

R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that identifies an action as a Reliability Directive shall acknowledge the response from the recipient of the Reliability Directive in R2 as correct or reissue the Reliability Directive to resolve any misunderstandings. [Violation Risk Factor: High][Time Horizon: Real-Time]

The proposed definition for Reliability Directive is:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

Organization	Yes or No	Question 4 Comment
Northwest LSE Group	No	<p>It would be advantageous to exempt certain smaller Registered Entities (LSE, DP, & PSE) that are non-scheduling/tagging entities. In addition to not having a scheduling/tagging desk, many of these entities do not have a 24/7 desk to receive RC/BA/TOP reliability directives/calls, and are too small (10s of MW) to even be substantially significant in a reliability crisis. Instead of making this Standard applicable to all DPs, LSEs, and PSEs, we suggest that the RC, BAs, and TOPs to yearly publish those LSEs, DPs, and PSEs responsible for responding to emergency reliability directives.</p> <p>Also, it would be advisable for the RC, BA, and TOP giving a reliability directive to clearly preface the instruction with “The following is an emergency reliability directive” to differentiate from normal operations communications. Many smaller entities</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
		<p>do not have the resources to install reliable voice recording equipment, but having access to such recordings would be beneficial towards compliance documentation; thus, it would be helpful to require the directive issuing RC, BA, or TOP to provide a digital copy of the voice recording, or transcript if available on request to the recipient of the directive. Short of a recording or transcript of the recording, it will be difficult to determine how a small entity without recorded line would show compliance other than writing down the directive as it is given and reading it back to the issuer. If the directive is lengthy, this will slow down the process and probably defeat the purpose and value of quick action. Further, there is no guarantee that the receiver will accurately retain a complicated directive if not immediately documented in some way to allow review.</p> <p>Last of all, what is meant by the word “intent”? Must the recipient understand and demonstrate the “why” the directive is given and the intended “outcome,” or merely paraphrase the directive to demonstrate understanding? If the recipient repeats word for word the directive back to the issuer without any other indication that the directive is understood, is this a violation??</p>
<p>Response: The RC SDT thanks you for your comment. The requirements of COM-002 for LSE, DP and PSE simply state that the entity has to repeat the intent of the directive back. The issue you raise concerning smaller entities is valid, but this standard is not the venue at which to make this argument. Registration criteria are outside the scope of this project.</p> <p>We have included a new requirement R1:</p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>The word “intent” was chosen so that the recipient did not have to repeat the directive verbatim and to also indicate an understanding of the directive. If a recipient repeats the directive verbatim, it is not a violation of the requirement, as it would also capture the intent.</p>		
Northeast Power Coordinating Council	No	<p>Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements: A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer. R2 leave as is. A new R3 If not repeated, then issuer shall request the receiving Entity to repeat the communication directive. A new R4 The issuer will acknowledge the correctness of the repetition of the communications directive.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not see a reliability benefit to having an Operational Procedure requirement, as</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
<p>it would be redundant since the standard COM-002 would be mandatory and enforceable and requires the actions in the Operational Procedure that you suggest. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement.</p>		
<p>SERC OC Standards Review Group</p>	<p>No</p>	<p>The term “emergency” has a broad definition and other standards use “adverse conditions” or “adverse reliability impact”. There should be a consistency of terms when describing a system condition. The STD should include a definition of “directive” that includes more than “Emergency” operational conditions. Should this requirement be modified to include the term “Directive” and the definition of this term added to the NERC Glossary?</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. The RC SDT appreciates the baggage that comes with the defined term “Emergency”. However, it is the best fit with the normal messaging that has historically occurred in the bulk electric reliability community. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p>		
<p>Midwest ISO Standards Collaborators</p>	<p>Yes</p>	<p>We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this directive issue by developing a definition for directive. We propose the following definition: Directive or Directive A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact.</p> <p>In requirement 1, we do believe that another word than “require” should be used. Consider using “request”. An RC, BA, and TOP can’t force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>2) The RC SDT has revised the requirement to remove that part since original R2 required the recipient to repeat the intent of the directive.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
Central Lincoln	No	The inclusion of load serving entities and distribution providers does not address any present BES reliability gap.
<p>Response: The RC SDT thanks you for your comment. Loads are under the direct control of Load Serving Entities while underfrequency relays are often under the direct control of distribution providers. Current NERC standards do not address the possibility that a Reliability Directive may be issued to either of these entities. The requirements of COM-002 for LSE and DP simply state that the entity has to repeat the intent of the directive back since these entities may receive reliability directives.</p>		
JEA	No	R1: just to avoid possible auditor misunderstandings the SDT might consider replacing the words "or repeat the original statement" to "reissue the directive" so that the RC does not get into trouble if the second statement is not verbatim of the first. This also helps clarify that another statement is required from the recipient along with a final acknowledgement from the RC that the intent is correct.
<p>Response: The RC SDT appreciates your comment. You have identified a potential problem; the RC SDT agrees with your comment and has replaced the words "repeat the original statement" with "reissue the Reliability Directive".</p>		
Liberty Electric Power LLC	No	The proposed standard does not require the RC, TO, or BA to declare an emergency to the GO when issuing a directive. There has been confusion at times in the past as to whether the entity is issuing a directive based on economics or due to an emergency. The standard should be amended to require the RC/TO/BA to state the directive is due to a declared emergency. The GO is required to repeat back the intent of an emergency directive, but is not required to repeat back the intent of economic directive. This can lead to a finding of a severe VSL non-compliance on the part of the GO due to a failure of the RC/TO/BA to clearly state the nature of the directive.
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTOSDT (Project 2007-03) is also working on a similar path and the RC SDT are coordinating with that team. A new R1 has been developed that states:</p> <p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
ReliabilityFirst	No	FERC 693 excludes distribution providers if they are not a user, owner or operator of BES. This should be reflected in R2 of

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
Corporation		the standard
<p>Response: The RC SDT thanks you for your comment. Any distribution provider excluded by FERC Order 693 would not be held to the standard since standards only apply to registered entities. FERC Order 693 endorses the NERC Statement of Compliance Registry criteria (paragraph 512) and also adopted their proposal to require the ERO to modify COM-002 to apply to distribution providers and generator operators (paragraph 512). The Functional Model describes the real-time relationships between entities. Among those relationships, the DP:</p> <ul style="list-style-type: none"> • Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority <p>Such directives fall under COM-002 requirements.</p>		
Illinois Municipal Electric Agency	No	<p>IMEA questions the necessity of expanding the applicability of COM-002 as proposed in R2, particularly to the DP, LSE, and PSE functions. IMEA recommends accomplishing the intent of COM-002-3 R2 by simply referring to COM-002-3 R1 in IRO-001-2 R2 which requires those entities to comply with the RC directive. Thus it would be understood that the functional entity had repeated the directive in order to comply with it; thereby avoiding the necessity of expanding applicability to another reliability standard.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT feels that there is a difference between complying with a directive and communicating the directive effectively. The requirements of COM-002 for LSE, PSE and DP simply state that the entity has to repeat the intent of the directive back since these entities may receive reliability directives. The drafting team feels that the current draft adds clarity to the requirements.</p>		
Exelon	No	See answer # 1
<p>Response: The RC SDT thanks you for your comment. See response to answer #1.</p>		
Hydro-Québec TransEnergie (HQT)	No	<p>Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer R2 leave as is. A new R3 If not repeated, then issuer shall request the receiving Entity to repeat the communication directive. A new R4 The issuer will acknowledge the correctness of the repetition of the communications directive</p>
<p>Response: The RC SDT thanks you for your comment. There are no examples in any of the requirements of COM-002-3 as posted. There are no compound requirements remaining in COM-002-3 as posted. The RC SDT does not see a reliability benefit to having an Operational Procedure requirement, as it would be redundant since the standard COM-002 would be mandatory and enforceable and requires the actions in the Operational Procedure that you suggest. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement that is internally consistent.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
Indiana Municipal Power Agency	No	<p>The requirements do not consider a pre-recorded communication that might be sent out from the Transmission Operator to Generator Operators or any other entity. If this communication is a directive associated with a real-time operational emergency condition (depending on the judgment used by an entity or auditor), it does not make sense to repeat back a pre-recorded message on the phone. It might be good to clearly state in the standard that pre-recorded messages do not need to be repeated back.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RC SDT can not envision a situation, regardless of the technology, where a Reliability Directive would be issued without confirmation from the recipient and acknowledgement of accuracy. However, even if there were an occasion as suggested by your comment, the bulk electric system can only remain reliable by coordinating actions between reliability entities. A pre-recorded communication is a broadcast, not a coordinating activity. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT are coordinating with that team.</p>		
Duke Energy	No	<p>We agree with adding the clarification that these requirements refer to “emergency” communications, but we think the word “Emergency” should be capitalized to further clarify that it is a defined term in the NERC Glossary.</p> <p>Also, the phrase “require the recipient of the verbal directive to repeat the intent of the directive back” should be changed to “have the recipient of the verbal directive repeat the intent of the directive back”. This avoids making the issuer of the directive make a statement requiring a repeat back unless the recipient actually fails to repeat back as normally expected.</p>
<p>Response: The RC SDT thanks you for your comment. We have removed the word “emergency” and are proposing a definition of Reliability Directive which includes the defined term “Emergency” and which is being posted for comment.</p> <p>The RC SDT agrees with the intent of your comment. The phrase you mention has been removed from R1 as it is required by R2. We have made other edits to tighten the requirements as well.</p>		
Consumers Energy Company	No	<p>COM-002 R2 specifies the Generator Operator that receives a directive from the Transmission Operator, Reliability Coordinator or Balancing Authority must repeat the intent of the directive back to the Transmission Operator. COM-002 M2 specifies that evidence must be retained in the form of either voice recordings or transcripts by the generator operator. Since the Transmission Operator, Reliability Coordinator and Balancing Authority already have voice recording capability (centrally located), it is not necessary for the Generator to also install voice recording capability at each generating station. We suggest the wording of COM-002 be changed such that only the Transmission Operator, Reliability Coordinator and Balancing</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
		Authority be required to keep voice recordings or transcripts.
<p>Response: The RC SDT thanks you for your comment. While recordings may be available from other entities, a Generator Operator has mandatory requirements with which it must comply. Generator Operators must have evidence that they complied with the requirement. The evidence mentioned in the measures is a suggestion of possible methods of evidence. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</p>		
Independent Electricity System Operator	No	<p>(i) We suggest the word "emergency" be capitalized since it is a defined term which generally covers the conditions under which directives are issued.</p> <p>(ii) We further suggest that to avoid confusion between operating instructions and directives, the term directive should be defined as suggested below: Directive or Directive A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires complying action by the recipient to prevent or mitigate an Adverse Reliability Impact.</p> <p>(iii) Since R1 contains two requirements, there may be some benefit in separating these since that would make the VSLs clearer, i.e. separate the requirements placed on the issuer of the directive to (a) request the recipient to repeat the intent of the directive and (b) to acknowledge the response of the recipient as correct.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>i) We have removed the word "emergency" and are proposing a definition of Reliability Directive which includes the defined term "Emergency" and which is being posted for comment.</p> <p>ii) The RC SDT is proposing a definition of Reliability Directive that will be posted for comment. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>iii) The RC SDT agrees and has modified R1. Since R2 requires the recipient to repeat the intent of the directive, we have removed the part of R1 that states the issues shall require the recipient to repeat the directive. This removed the compound requirement.</p>		
MRO NSRS	No	<p>The MRO NSRS largely agrees with the changes to the requirements and believes it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. MRO NSRS believes that the SDT could further support resolution to this directive issue by developing a definition for directive. MRO NSRS proposes the following definition:</p> <p>Directive or Directive – A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
		<p>that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact.</p> <p>In requirement 1, MRO NSRS does believe that another word than “require” should be used. Consider using “request”. An RC, BA, and TOP can’t force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTOSDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive.</p>		
American Transmission Company	No	<p>are supportive of the language regarding “directives” which clarifies that directives are those which involve operating emergencies. However, in R1, we believe that the word “requires” should be changed to “request”. An entity can request that another entity repeat back a directive but we cannot “require” it.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a definition of Reliability Directive that will be posted for comment. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive.</p>		
IRC Standards Review Committee	Yes	<p>(1) We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as Directives. This makes it clear that only Directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this Directive issue by developing a definition for Directive. We propose the following definition: Directive A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact. Please note that AESO already has this term defined. The above suggested definition may be different from the AESO’s definition.</p> <p>(2) In requirement 1, we do believe that another word than “require” should be used. Consider using “request”. An RC, BA,</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
		and TOP can't force the recipient of the Directive to repeat it back. They can ask or request it be repeated back though.
<p>Response: The RC SDT thanks you for your comment.</p> <p>1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>2) The RC SDT has revised the requirement to remove that part since original R2 required the recipient to repeat the intent of the directive.</p>		
Calpine Corporation	Yes	Calpine supports three part communications when verbal directives are issued during real-time operational emergency conditions. Calpine believes all issued directives should be explicitly identified as such.
<p>Response: The RC SDT thanks you for your comment. A new R1 has been developed that states:</p> <p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
Western Area Power Administration	Yes	This is a very good improvement. Some Regional Entities were interpreting every communication from a control room as a "directive" and stating that "directives" were equal to any "normal instruction" that related to operations of the power system. Making it clear that the directives are associated with emergency conditions is a big improvement. The drafting team may wish to consider additional clarification, such as, "The entity that issues a verbal directive shall make it known during the communication that, "This is a directive"? . All parties to the communication would be clear that the real-time situation was an emergency condition, and that the requirements for repeating the intent were in effect.
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team. A new R1 has been developed that states:</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
<p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
American Electric Power	Yes	<p>AEP does generally agree with the revisions, but we have concerns with the much wider scope of three part communications that expand the required voice or transcript evidence. There is no rationale provided for changing the text in R1 and M1, and adding a new R2 and M2. We would recommend that these items remain as stated in Version 2.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT's intent was to create a consistent set of noncompound requirements and to provide clarity according to the scope of the drafting team.</p>		
Manitoba Hydro	Yes	<p>For the most part agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. The SDT could further support resolution to this directive issue by developing a definition for directive.</p> <p>In requirement 1, I would use another word than "require". Consider using "request". An RC, BA, and TOP can't force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTOSDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team. 2) The RC SDT has revised the requirement to remove that part since original R2 required the recipient to repeat the intent of the directive.</p>		
FirstEnergy	Yes	<p>1. We agree with the clarification in R1 that a directive per COM-002-3 is a "verbal directive associated with real-time operational emergency conditions". We understand this to be a "Reliability" directive used during times of emergency or in situations where reliability may be an issue. Also, with this clarification, it confirms that the term "directive", as used in this standard, does not include "Operational" directives issued by System Operators during normal system conditions to change the status of an element such as a circuit breaker.</p> <p>2. The industry does not appear to have a clear, consistent definition of what constitutes a directive. We suggest the standard require the person issuing a directive to use the phrase "I am directing you to ?", "I am ordering you to ?" or something similar</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
		<p>to invoke the three part communication requirement.</p> <p>3. Since this standard deals with communications and coordination during emergency conditions, it may be helpful to change the title of the standard to "Communications and Coordination Emergency Conditions".</p> <p>4. The phrase "the intent of the directive" could be difficult to comply with and measure. The words "the intent of" should be removed from Requirements R1 and R2.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>2) We agree and have included a new R1 that states:</p> <p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>3) The RC SDT disagrees. This standard covers all interpersonal communications, not just emergency communications. The title stays as is.</p> <p>4) The phrase was included so that the recipient did not have to repeat the directive verbatim and to also indicate an understanding of the directive. If a recipient repeats the directive verbatim, it is not a violation of the requirement, as it would also capture the intent. The goal of the RC SDT is to assure continued reliability without creating a trap by requiring word-for-word repetition.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

5. Do you agree with the revisions made to the Measures in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholder consensus has been achieved with respect to the retirement of R1 and M1 from the last approved version of this standard. In accord with the majority of commenters, the drafting team made changes to the Measures to bring them into conformance with the adopted suggestions from question 4 for improving the Requirements. Specifically, a new R1 was added to require that reliability directives be identified as such – and the two requirements from the last posting were rephrased and rearranged for clarity. The Measures were changed to match the revised requirements.

Organization	Yes or No	Question 5 Comment
Illinois Municipal Electric Agency		Conforming changes are required to the Measures based on the suggested modifications to the requirements in Question 4.
Response: The RC SDT thanks you for your comment. The measures were revised to reflect changes to the requirements.		
Hydro-Québec TransEnergie (HQT)	No	Address the new proposed Requirements above in Question 4.
Northeast Power Coordinating Council	No	Addressed the new proposed Requirements above in Question 4.
Response: The RC SDT thanks you for your comment. The measures were revised to reflect changes to the requirements.		
Duke Energy	No	Change “emergency” to “Emergency” per comment on R1 above. Also change the phrase “required the recipient of the verbal directive to repeat” to “had the recipient of the verbal directive repeat” per our comment on R1 above.
Response: The RC SDT thanks you for your comment. We have removed the word “emergency” and are proposing a definition of Reliability Directive which includes the defined term “Emergency” and which is being posted for comment.		
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
Response: The RC SDT thanks you for your comment. See response to Question 4. The measures have been revised to reflect changes to the requirements.		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 5 Comment
Central Lincoln	No	M2 goes beyond R2 in requiring recordings. This will be cost prohibitive for small entities that have little impact on the BES. Telephone recording equipment will be needed on company phones, and some way to handle the recording of directives and responses that occur after hours on home or cell phones must be handled. Drafters seem to have missed the fact that not all the applicable entities have 24/7 dispatch centers.
<p>Response: The RC SDT thanks you for your comment. The measure lists possible examples of evidence to prove compliance with the requirement. It does not impose any additional requirements or the purchase of recording systems. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</p>		
JEA	No	Not all entities have recorded lines. The standard does not directly require the to record their lines, but the measure implies it. It seems that a written log should be sufficient. Since both sides of the conversation gets audited, the auditors will have ample opportunity to check up on both sides.
<p>Response: The RC SDT thanks you for your comment. The measure lists possible examples of evidence to prove compliance with the requirement. It does not impose any additional requirements or the purchase of recording systems. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</p>		
Northeast Utilities	No	NU agrees with expanding the applicability of the Standard beyond the Reliability Coordinators, Balancing Authorities and Transmission Operators to ensure that the recipient of a verbal directive repeats back the directive to the issuer (R2). Despite NU's agreement with R2, NU believes that M2 is duplicative to the intent of M1 and unnecessarily requires the installation of voice recording capabilities at the entities other than a RC, BA or TOP. It is our belief that the voice recordings of the RC, BA and TOP (M1) provide the evidentiary support required by all applicable entities.
<p>Response: The RC SDT thanks you for your comment. The measure lists possible examples of evidence to prove compliance with the requirement. It does not impose any additional requirements or the purchase of recording systems. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</p>		
Independent Electricity System Operator	No	Comments: Some changes may be necessary based on the SDT's response to our suggestion in Q4.
<p>Response: The RC SDT thanks you for your comment. See response to your comments on question 4.</p>		
MRO NSRS	No	MRO NSRS largely agrees with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 5 Comment
Response: The RC SDT thanks you for your comment. "Require" was removed from the requirement and the measure edited appropriately.		
American Transmission Company	No	See our comments to question 4
Response: The RC SDT thanks you for your comment. See response to your comments on question 4.		
IRC Standards Review Committee	Yes	We largely agree with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.
Midwest ISO Standards Collaborators	Yes	We largely agree with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.
Response: The RC SDT thanks you for your comment. "Require" was removed from the requirement and the measure edited appropriately.		
American Electric Power	Yes	As described in the question 4 response, there is no rationale provided for changing the text in R1 and M1, and adding a the new R2 and M2. We would recommend that these items remain as stated in Version 2.
Response: The RC SDT thanks you for your comment. See response to question 4.		
Manitoba Hydro	Yes	For the most part agree with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.
Response: The RC SDT thanks you for your comment. "Require" was removed from the requirement and the measure edited appropriately.

6. Do you agree with the revisions made to the Violation Severity Levels in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Several stakeholders suggested revisions to the VSLs based on suggested revisions to the requirements. The RC SDT made changes to the VSLs to conform to revisions to the requirements.

Organization	Yes or No	Question 6 Comment
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
Response: The RC SDT thanks you for your comment. The Measures have been revised to reflect changes to the requirements.		
Northeast Power Coordinating Council	No	Address the new proposed Requirements.
Response: The RC SDT thanks you for your comment. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement. The new proposed Requirements have been addressed.		
Bonneville Power Administration	No	<p>Comments: Issue #1: Violation Severity Level. The Moderate and Severe VSLs for Requirement R1 can lead to confusion. For instance, the Moderate VSL states that the responsible entity “did not acknowledge the recipient was correct in the repeated directive OR (emphasis theirs) failed to repeat the intent of the original statement to resolve any misunderstandings. ”What is it saying here? Is it dinging the responsible entity for making no response at all to the recipient after they repeated the intent of the message? Or is that what the Severe VSL is dinging for when it includes an AND rather than an OR in the statement? I can’t tell what the drafting team was intending with their statements, but one of the statements seem to infer that the responsible entity can actually be dinged for not doing both, acknowledging the recipient as being correct in their response and at the very same time repeating the intent of the original statement to resolve any misunderstandings because the recipient was incorrect in their response. This then argues that the recipient can be both correct and incorrect at the same time. I didn’t think that was possible “similar to binary code” either you get a one or a zero, but not both and never neither!</p> <p>I would argue that the drafting team should rewrite their VSLs to succinctly state that the responsible entity failed to respond after the recipient repeated the intent of the message. With that in mind, either the Moderate or the Severe VSL will be rewritten in an understandable way and the other VSL will disappear in the realms of impossible things.</p>
Response: The RC SDT thanks you for your comment. We have eliminated the Moderate VSL and only have the Severe.		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 6 Comment
IRC Standards Review Committee	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Additionally, we believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the Directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the Directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p>Response: The RC SDT thanks you for your comment. We have modified all the requirements in a way that addresses your comments. Conforming changes to the VSLs have been made.</p>		
Midwest ISO Standards Collaborators	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Additionally, we believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p>Response: The RC SDT thanks you for your comment. We have modified all the requirements in a way that addresses your comments. Conforming changes to the VSLs have been made.</p>		
American Electric Power	No	<p>AEP is concerned that the severe VSL assigned to Requirement 2 is excessive and should be reconsidered.</p>
<p>Response: The RC SDT thanks you for your comment. We believe that R2 is a binary requirement which results in a Severe VSL. The entity either performed the requirement or did not.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 6 Comment
Manitoba Hydro	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Additionally, believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p>Response: The RC SDT thanks you for your comment. We have modified all the requirements in a way that addresses your comments. Conforming changes to the VSLs have been made.</p>		
Illinois Municipal Electric Agency	No	<p>Conforming changes are required to the VSLs based on the suggested modifications to the requirements in Question 4.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT feels that there is a difference between complying with a Reliability Directive and communicating the Reliability Directive effectively. The requirements of COM-002 for LSE, PSE and DP simply state that the entity has to repeat the intent of the directive back since these entities may receive Reliability Directives. The drafting team feels that the current draft adds clarity to the requirements. The VSLs were revised to match the revised requirements.</p>		
Hydro-Québec TransEnergie (HQT)	No	<p>address the new proposed Requirements.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not see a reliability benefit to having an Operational Procedure requirement, as it would be redundant since the Standard COM-002 would be mandatory and enforceable and requires the actions in the Operational Procedure that you suggest. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement.</p>		
Duke Energy	No	<p>Change “emergency” to “Emergency” in the VSLs per our comment on R1 above. Also, we don’t see a tangible difference between the Moderate and Severe VSLs, and the High VSL should really be the Severe VSL. We suggest having just a High and a Severe VSL as follows:” High VSL: “The responsible entity issued a verbal directive associated with real-time operating Emergency conditions and had the recipient repeat back the intent of the directive, but did not either acknowledge the recipient was correct in the repeated directive or failed to repeat the intent of the original statement to resolve any misunderstandings.” Severe VSL: “The responsible entity issued a verbal directive associated with real-time operating</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 6 Comment
		Emergency conditions, but did not have the recipient repeat back the intent of the directive.”
<p>Response: The RC SDT thanks you for your comment. We have removed the word “emergency” and are proposing a definition of Reliability Directive which will be posted for comment. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive. Conforming changes to the VSLs have been modified.</p>		
Independent Electricity System Operator	No	<p>The sequence of communication required under R1 is intended to ensure that directives from the issuing entities are clearly understood. The earlier this sequence is broken, the greater the uncertainty that this goal is achieved and the greater should be the severity level. Thus, failure to request that the recipient entity repeat the intent of the directive “ the earliest step in the sequence - should attract the “Severe” VSL.Also, failing to repeat the original directive when there is any misunderstanding, again, in our view, leaves the intent of the directive equally unclear and should also attract a “Severe” VSL.Failing to acknowledge the recipient was correct in the repeating the intent of the directive “ the last step in the sequence “ is already assigned a “Moderate” VSL and this should not be repeated in the “Severe” VSL.We therefore suggest that the two conditions under “High” and “Severe” in R1 be combined as one under “Severe” as follows: The responsible entity issued a verbal directive associated with real-time operating emergency conditions but did not require the recipient to repeat the intent of the directive;ORThe responsible entity issued a verbal directive associated with real-time operating emergency conditions and required the recipient to repeat the intent of the directive, but failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p>Response: The RC SDT thanks you for your comment. In the revised standard, R2 requires the recipient to repeat the intent of the directive. We have removed the part of R1, (now R3), that states the issuer shall “require” the recipient to repeat the directive. We have made revisions to the VSLs to match the requirements.</p>		
MRO NSRS	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Additionally, MRO NSRS believes the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, MRO NSRS believes the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. MRO NSRS agrees that these distinctions make sense but offer the following changes to clarify the intent.</p> <p>Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient</p>

7. Do you agree with the revisions to the definition of Adverse Reliability Impacts (IRO-001-2)? If not, please explain in the comment area.

Summary Consideration: Stakeholders suggested removing the word “outages” after “cascading” as per the NERC Glossary of Terms and a FERC Directive issued December 27, 2007. The RC SDT made the revision. There were no other suggested revisions to the definition.

Organization	Yes or No	Question 7 Comment
Northeast Power Coordinating Council	No	Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
Hydro-Québec TransEnergie (HQT)	No	Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
Northeast Utilities	No	Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
Independent Electricity System Operator	No	Comments: Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
Response: The RC SDT thanks you for your comment. The RC SDT agrees and has removed “outages”. We have also capitalized “Cascading”		
FirstEnergy	Yes	If the term "cascading" used in the definition is referring to the NERC-defined term, it should be capitalized.
Response: The RC SDT thanks you for your comment. The RC SDT agrees and has capitalized “Cascading”		
IRC Standards Review Committee	Yes	The drafting team should consider that NERC is moving away from using the term "cascading outages". FERC has directed NERC to rescind this definition, and use the defined term "cascading" instead.
Response: The RC SDT thanks you for your comment. The RC SDT agrees and has removed “outages”. We have also capitalized “Cascading”		
SERC OC Standards Review Group	No	What is the difference between “Adverse Reliability Impacts” and the definition of an IROL? Is this going to replace an IROL?

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 7 Comment
<p>Response: The RC SDT thanks you for your comment. Adverse Reliability Impacts is already a defined term that the RC SDT is proposing to revise. IROL is a limit, while ARI is the impact of events. ARI will not replace IROL.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

8. Do you agree with the revisions to the Requirements in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholders generally agreed with the revisions to the requirements. Several stakeholders suggested adding the words “an issued” before “directive in R3. The RC SDT agreed and made the change. No further revisions were made to the requirements.

Organization	Yes or No	Question 8 Comment
Northwest LSE Group	No	<p>To reduce the compliance burden on smaller entities that would never receive a Reliability Coordinator directive and reduce needless Regional Entity auditing, it would be most helpful to require the RC to publish its list of entities responsible for receiving reliability directives.</p> <p>Also, any Registered Entity should be able to request copies of digital audio recordings or transcripts of the audio recordings if available from the RC.</p>
<p>Response: The RC SDT thanks you for your comment. An RC may issue a directive to any registered entity within its footprint. The burden of compliance is assigned by the NERC registration process and is outside of the scope of this drafting team.</p> <p>The requirements of IRO-001 do not preclude an entity from requesting copies of digital audio recordings or transcripts from the RC.</p>		
Northeast Power Coordinating Council	No	<p>Add “an issued” to the wording as shown following: The Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and/or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the its Reliability Coordinator upon recognition of its inability to perform the issued directive.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees and has added “an issued” before directive. We have also changed directive to Reliability Directive and included the definition at the beginning of IRO-001 and COM-002</p> <p>Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p>		
SERC OC Standards Review Group	No	<p>If R2 of IRO-001-1 is retired, what process is in place to ensure that reliability plans are kept up to date and are reviewed to approve footprint changes?</p>
<p>Response: The RC SDT thanks you for your comment. As stated in the posted implementation of IRO-001, this is covered in NERC Rules of Procedure, Section 503, item 2.2:</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 8 Comment
<p>“Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”. The RC SDT proposed retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.</p>		
FirstEnergy	No	<p>Regarding the retirement of IRO-001-1 R7 We are not convinced that this requirement is redundant with IRO-014-1 R1. The existing requirement requires the RC to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated". IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. For IRO-001-1 R7 to be properly retired, the "mitigation of SOL and IROL violations" should be explicitly stated in IRO-014-2 R1 as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT believes that R1.6 of IRO-014-2 addresses your concern as the procedures, processes or plans include:</p> <p style="padding-left: 40px;">Authority to act to prevent and mitigate conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.</p> <p>The definitions of each are:</p> <p>IROL: A System Operating Limit that, if violated, could lead to instability, uncontrolled separation, or Cascading Outages that adversely impact the reliability of the Bulk Electric System.</p> <p>Adverse Reliability Impacts: The impact of an event that results in Bulk Electric System instability; uncontrolled separation or Cascading.</p>		
Midwest ISO Standards Collaborators	No	<p>We agree with many of the changes. However, we believe R5 is not necessary for reliability. We agree the RC should notify impacted entities when the transmission problem has been mitigated; however, if the RC fails to notify the impacted entities, it will not result in an Adverse Reliability Impact. Thus, it is not necessary as a sanctionable requirement.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 notifies entities when the system is in a stable state and facilitates Interpersonal Communication between entities.</p>		
Liberty Electric Power LLC	No	<p>Similar objection to COM-002-3: There should be a requirement to the RC to declare the nature of the directive, emergency or economic.</p>
<p>Response: The RC SDT thanks you for your comment. The reliability standards do not address economic issues. The RC SDT has developed a</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 8 Comment
<p>proposed definition of Reliability Directive that should address your concern.</p> <p>Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p>		
Manitoba Hydro	No	R5 does not make sense as it doesn't create an adverse reliability impact should the RC fail to notify impacted entities.
<p>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 let's entities know when the system is in a stable state and facilitates Interpersonal Communication between entities.</p>		
Illinois Municipal Electric Agency	No	<p>IMEA supports the comments submitted by the MISO Standards Collaboration Group.</p> <p>In addition, while we agree with the proposed revisions to IRO-001-2 R2, IMEA recommends (as indicated in our comments to Question 4) that a reference be made to COM-002-3 R1 in IRO-001-2 R2. By including this reference, it is understood the applicable entities successfully repeated the directive in order to comply with the directive.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 notifies entities when the system is in a stable state and facilitates Interpersonal Communication between entities.</p> <p>We have included our proposed definition of Reliability Directive in both COM-002 and IRO-001 and used the term in the appropriate requirements. This will provide the linkage you suggest.</p>		
Hydro-Québec TransEnergie (HQT)	No	Add "an issued" to the wording as shown following: Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform "an issued" directive.
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees and has added "an issued" before directive. We have also changed directive to Reliability Directive and included the definition at the beginning of IRO-001 and COM-002.</p> <p>Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p>		
Northeast Utilities	No	The intent of R3 is not clear - i.e., " shall inform its Reliability Coordinator upon recognition of its inability to perform a directive". Does this requirement pre-suppose a directive has been given? Suggest adding clarifying language that

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 8 Comment
		indicates that the requirement is applicable subsequent to a directive being received. It is our belief that the wording of Measure M3 supports the suggested changes to R3.
<p>Response: The RC SDT thanks you for your comment. R3 has been revised to add clarity per your comment:</p>		
<p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform an issued Reliability Directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p>		
Independent Electricity System Operator	No	Comments: Change “inability to perform a directive.” to “inability to perform an issued directive.”
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees and has added “an issued” before directive. We have also changed directive to Reliability Directive and included the definition at the beginning of IRO-001 and COM-002.</p>		
<p>Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency</p>		
MRO NSRS	No	MRO NSRS agrees with many of the changes. However, we believe R5 is not necessary for reliability. MRO NSRS agrees the RC should notify impacted entities when the transmission problem has been mitigated; however, if the RC fails to notify the impacted entities, it will not result in an Adverse Reliability Impact. Thus, it is not necessary as a sanctionable requirement.
<p>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 notifies entities when the system is in a stable state and facilitates Interpersonal Communication between entities.</p>		
Xcel Energy	No	R6 – while this requirement has merits, it does not appear to fall under the stated purpose of the standard “To establish requirements for issuance of and complying with Reliability Coordinator directives or notification within the Reliability Coordinator Areas.”. Either the purpose should be modified or this requirement should be placed in a more appropriate location, e.g. IRO-002-2 (along with R8).
<p>Response: The RC SDT thanks you for your comment. The RC SDT moved this requirement into IRO-001 from IRO-002 rather than have a single requirement standard.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 8 Comment
Western Area Power Administration	Yes	Suggest changing the word "complying" to "compliance" in the purpose statement.
Response: The RC SDT thanks you for your comment. The RC SDT had made the suggested edit.

10. Do you agree with the revisions to the Violation Severity Levels in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Several stakeholders suggested revisions to the VSLs for R4 and R5. The RC SDT concurs that improvements are warranted for the VSLs for R4 and R5. The VSLs have been changed accordingly. The VSL for R3 was revised to add the word “issued” before Reliability Directive to match the revised requirement. The VSLs for R4 and R5 were modified to clarify that if the responsible entity did not notify any others, then this is a Severe VSL.

Organization	Yes or No	Question 10 Comment
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
Response: The RC SDT thanks you for your comment. The measures were revised to reflect changes to the requirements as necessary.		
Northeast Power Coordinating Council	No	<p>(i) R4: Since failing to issue an alert to 3 entities already attracts a “High” VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a “Severe” VSL. We suggest to change the High VSL to: “failed to issue an alert to three, but not all, impacted”. and the Severe VSL to: “failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a “Severe” violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a “High” violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a “Severe” violation.</p> <p>(ii) (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.</p>
Response: The RC SDT thanks you for your comment. We concur that improvements are warranted for the VSLs for R4 and R5. The VSLs have been revised per your suggestion accordingly.		
Midwest ISO Standards Collaborators	No	The Commission stated in their order on VSLs in June of 2008 their preference for as many VSLs as possible. We believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause “but not all”. It is not necessary.
Response: The RC SDT thanks you for your comment. The VSL for R1 was revised as recommended. There is not a Moderate VSL for R2.		
Liberty Electric Power LLC	No	The VSL's have a "Severe" VSL attached to a GO who fails to inform the RC when the Go becomes aware it is are unable to fully comply with a directive. However, the RC failing to inform two TO's - who potentially could have many

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 10 Comment
		GOs supplying power to their systems - of an emergency is only a "Moderate" VSL.
Response: The RC SDT thanks you for your comment. The VSLs for R4 and R5 have been revised to more closely fit the intent of the requirements.		
E.ON U.S.	No	E.ON U.S. suggests that the VSL for R4 should be binary with the Severe VSL for failing to notify all entities as per R4. Partially meeting R4 is not consistent with the language in R4. E.ON U.S. also suggests that the VSL for R5 should be binary with the Severe VSL for failing to notify all entities as per R5. Partially meeting R5 is not consistent with the language in R5 but the reliability impact of partially meeting R5 is low.
Response: The RC SDT thanks you for your comment. The requirements R4 and R5 are not binary in nature and therefore do not meet the VSL guideline for binary. We have revised the High and Severe VSLs for R4 and R5 (see comment of NPCC above).		
Manitoba Hydro	No	Believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause "but not all". It is not necessary.
Response: The RC SDT thanks you for your comment. We concur with your suggestion to split the single VSL into two separate VSLs, one addressing prevention and one mitigation. The VSLs for R1 have been changed accordingly.		
Illinois Municipal Electric Agency	No	IMEA supports the comments submitted by the MISO Standards Collaboration Group.
Response: The RC SDT thanks you for your comment. Please review the response to MISO SCG comments.		
Hydro-Québec TransEnergie (HQT)	No	<p>(i) R4: Since failing to issue an alert to 3 entities already attracts a "High" VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a "Severe" VSL. We suggest to change the High VSL to: "failed to issue an alert to three, but not all, impacted". and the Severe VSL to: "failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a "Severe" violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a "High" violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a "Severe" violation.</p> <p>(ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.</p>
Response: The RC SDT thanks you for your comment. We concur that improvements are warranted for the VSLs for R4 and R5. The VSLs have been

Georgia Transmission Corporation	Yes	
Duke Energy	Yes	

11. Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholders suggested revising R8 to include provisions for avoiding implementing actions that would violate safety, equipment or regulatory or statutory requirements. The RC SDT agreed and added this to the requirement. Other stakeholders suggested adding "For conditions or activities that impact other Reliability Coordinator Areas,..." at the beginning of R1 and R3. The RC SDT agreed and added this to the requirements. The Time Horizons for R2 were revised as suggested to "Same Day Operations and Operations Planning". Several stakeholders expressed concerns regarding having R6-R8 as separate requirements. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT contends the requirements are adequate as written.

Organization	Yes or No	Question 11 Comment
Northwest LSE Group		Abstain
Northeast Power Coordinating Council	No	The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.
<p>Response: The RC SDT thanks you for your comment. The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. This was done to eliminate a compound requirement (a requirement that contained multiple separate requirements). Each requirement is different and requires different specific actions. Please see the posted implementation plan for IRO-014 for details.</p> <p>http://www.nerc.com/docs/standards/sar/IRO-014-2_Implementation_Plan_Clean_2009July9.pdf</p>		
SERC OC Standards Review Group	No	Does the STD intend to give a Reliability Coordinator the authority to direct reliability outside their reliability area? This appears to be in conflict with IRO-001.
<p>Response: The RC SDT thanks you for your comment. IRO-014 deals with coordinating plans, processes and procedures ahead of time. The requirements state that RCs will follow these agreed to plans, processes or procedures.</p>		
FirstEnergy	No	See our comments from Questions 8. If IRO-001 R7 is retired and deemed covered by IRO-014 R1, then IRO-014 R1 should include the "mitigation of SOL and IROL violations" as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.

Organization	Yes or No	Question 11 Comment
<p>Response: The RC SDT thanks you for your comment. Please see response to question 8. The RC SDT did not make any revisions as this issue is covered by R1.6 relating to Adverse Reliability Impacts.</p>		
<p>IRC Standards Review Committee</p>	<p>No</p>	<p>(1) R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, placing the burden on the same RC to obtain the agreement of impacted RCs may not be appropriate since the RC experiencing the Adverse Reliability Impact may not be able to force impacted RC to concur. We suggest the SDT to consider: a. Remove the bullet to require agreement from the impacted RC; b. Add a new requirement that the impacted RC shall acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given.</p> <p>(2) We realize that R7 implies that the RC experiencing the Adverse Reliability Impact has come up with an alternative plan when its initial plan was not agreed to, but the alternative may still be disagreed by the impacted RC. Simply implementing the alternative plan, as stipulated in R8, could expose the impacted RC to operate in an unreliable or unsafe domain. We therefore request the SDT to assess if any requirements need to be introduced to resolve this difference with due regard to reliability concerns in both RC areas when agreement cannot be reached even on the alternative plan.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>1) R2 deals with procedures, processes and plans identified and developed ahead of time. If the plan of one RC requires action from another RC, the RC SDT feels it is necessary to get agreement from the second RC to take action, otherwise the plan is not a plan that will maintain reliability. The intent of R6, 7, and 8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT believes the requirements are adequate as written.</p> <p>2) We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement.</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations</i></p>		
<p>Midwest ISO Standards Collaborators</p>	<p>No</p>	<p>Requirements R2 and R8 need additional work. R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 11 Comment
		<p>Further, the drafting team needs to clarify that R2 also applies to the mitigation plan in R7. Because R7 requires the RC experiencing the Adverse Reliability Impact to develop the mitigation plan, the mitigation plan may not be agreed to by the impacted RC. The impacted RC may have a perfectly valid reliability, statutory, legal, or regulatory reason for not agreeing to the mitigation plan. R8 still obligates the RC to implement the mitigation plan developed in R7 though it may be contrary to reliability. R8 needs to allow the RC to refuse to implement the mitigation plan if the impacted RC has a reliability, statutory, legal or regulatory reason. Further the drafting team should consider if the impacted RC could refuse because the RC experiencing the Adverse Reliability Impact has not implemented comparable measures in their own area. R8 as written could allow an RC to simply pass cost on to the neighboring RC in the name of reliability. For example, the RC may not want to order a unit to be committed to avoid certain startup costs but they ask the neighboring RC to start up a unit in their footprint.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R2 deals with procedures, processes and plans identified and developed ahead of time. If the plan of one RC requires action from another RC, the RC SDT feels it is necessary to get agreement from the second RC to take action, otherwise the plan is not a plan that will maintain reliability. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT believes the requirements are adequate as written.</p> <p>R7/R8: We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement.</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>The second comment deals with economic issues and not with reliability. We cannot address economic issues, but it would be reasonable to expect that plans developed in advance could include equity considerations. Also, it is possible to postulate a scenario where the RC experiencing the Adverse Reliability Impact may not have actions to take that are effective and the other impacted RC could have very effective actions to take and should take them regardless of whether the RC developing the mitigation plan has taken comparable measures in its own area.</p>		
Southern Company	No	<p>IRO-001-1 Requirement 3 states that, “The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing- Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System.” This does not give one RC the authority to direct another RC. Requirement 7 and 8 would allow one RC to give a directive to another RC if they disagree. This would allow an RC with bad information to require another RC to carry out a mitigation plan that could degrade system reliability. For example, RC1 identifies a possible SOL violation in RC2s reliability area due to RC1s generation pattern. RC1 and RC2 can’t agree that there is a problem. In order to mitigate the SOL a mitigation plan is developed by RC1 that requires RC2 to redispatch generation and reconfigure transmission in RC2’s area so that the generation and transmission in RC1’s area won’t have</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 11 Comment
		<p>to be redispached or reconfigured. Suggested rewording of R7 and R8</p> <p>R7. When Reliability Coordinators can not agree that a problem exists a mitigation plan will be developed by each Reliability Coordinator that will restore system reliability in their respective reliability areas. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed to relieve the identified Adverse Reliability Impact in their reliability area when the impacted Reliability Coordinators can not agree that a problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>
<p>Response: The RC SDT thanks you for your comment. IRO-014 deals with coordinating plans, processes and procedures ahead of time. Duke Energy	No	<p>R1 introduces the concept of “impacted Reliability Coordinators” which is unclear. Revise R1 as follows: R1. For conditions or activities that may impact other Reliability Coordinator Areas, each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for notification, exchange of information or coordination of actions with those impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following:</p> <p>R2 Time Horizon should not include Long-term Planning.</p> <p>R3 is unclear. Revise R3 as follows:R3. For conditions or activities that may impact other Reliability Coordinator Areas, each Reliability Coordinator shall make notifications and exchange reliability-related information with those impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans, or other available means to</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 11 Comment
		<p>accomplish the notifications and exchange of reliability-related information.</p> <p>R4 could be interpreted to require a weekly conference call even if there is no need for a call. Revise R4 as follows:R4. When there are conditions or activities that may impact other Reliability Coordinator areas, each Reliability coordinator shall participate in agreed upon conference calls, at least weekly, and other communication forums with those impacted Reliability Coordinators.”</p> <p>R5 “ Insert the word “all” before impacted Reliability Coordinators for clarity.”</p> <p>R6, R7 and R8 are interrelated and unclear. Combine these three requirements into one clear requirement as follows:</p> <p>R6. When the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, the Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan and each impacted Reliability Coordinator shall implement the plan.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: We have revised R1 to include the phrase “For conditions or activities that impact other Reliability Coordinator Areas,...” We removed the word “may” to tighten up the requirement.</p> <p>R2: The RC SDT removed Long term Planning and revised the Time Horizon of R2 to match that of R1: <i>Same Day Operations and Operations Planning</i></p> <p>R3: We have revised R3 to include the phrase “For conditions or activities that impact other Reliability Coordinator Areas,...” We removed the word “may” to tighten up the requirement.</p> <p>R4: The collective experience of the RC SDT members indicates a clear need to have at least weekly conference calls among impacted Reliability Coordinators among impacted Reliability Coordinators.</p> <p>R5: The RC SDT agrees and added the word “all” as suggested.</p> <p>R6-8: These requirements were developed from IRO-016, R1 which was a compound requirement (it contained multiple requirements for different actions in a single requirement). The RC SDT separated these into distinct requirements for clarity and measurability.</p>		
Northeast Utilities	No	The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.
<p>Response: The RC SDT thanks you for your comment. The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. This was done to eliminate a compound requirement (it contained multiple requirements for different actions in a single requirement. Each requirement is different and requires different specific actions. Please see the posted implementation plan for IRO-014 for details.</p> <p>http://www.nerc.com/docs/standards/sar/IRO-014-2_Implementation_Plan_Clean_2009July9.pdf</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 11 Comment
Independent Electricity System Operator	No	<p>(i) Definition of Adverse Reliability Impact is duplicated as it is already defined in IRO-001-2</p> <p>(ii) We do not see the need for R7 and R8 since R6 already stipulates the necessary actions to be taken, it is not necessary for the Reliability Coordinator with the identified Adverse Reliability Impact to develop (re-develop?) a mitigation plan when the impacted Reliability Coordinators did not agree that the problem exists. What may be needed is the insertion of “shall develop a mitigation plan” before “notify impacted Reliability Coordinators” in R5. We suggest removing these requirements (R7 and R8).</p>
<p>Response: The RC SDT thanks you for your comment. i)...The SDT acknowledges that the definition of Adverse Reliability Impact is duplicated in IRO-001-2 and in IRO-014-2. The SDT repeated it in the two standards to facilitate review and consistency. When the standards are approved, the definition will be moved into the NERC Glossary of Terms...only once.</p> <p>ii) The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. This was done to eliminate a compound requirement (it contained multiple requirements for different actions in a single requirement. Each requirement is different and requires different specific actions. Please see the posted implementation plan for IRO-014 for details.</p> <p>http://www.nerc.com/docs/standards/sar/IRO-014-2_Implementation_Plan_Clean_2009July9.pdf</p>		
MRO NSRS	No	<p>In bullet 2.1 of Requirement R2, what does the requirement that all RCs that are required to take action must agree to it really mean? Does this mean that if the RCs don't agree that in reality an Operating Procedure, Process or Plan doesn't really exist and thus is not subject to R2? Further, how can one RC require another RC to agree with an Operating Procedure, Process or Plan? Either they agree or they don't. Isn't what is really needed is a requirement for the impacted RC to review and acknowledge the plan? That is give it a thumbs up or a thumbs down?</p> <p>In requirement R4, the clause “at least weekly” should be struck. If the RCs agree that a bi-weekly call is sufficient unless conditions change significantly why must they be held to a weekly standard. Our experience has been that most RCs participate in daily calls anyway based on an agreed need.</p> <p>Please strike IRO-014-2 R7 as it is redundant with IRO-001-2 R1. IRO-001-2 R1 already requires that RC with the identified Adverse Reliability Impact to act or direct actions to prevent or mitigate the magnitude or duration of the event.</p> <p>MRO NSRS does not believe IRO-014-2 R8, yet properly considers why the RCs may not agree on a mitigation plan. If RC A develops a mitigation plan for an identified Adverse Reliability Impact on their system and RC B does not agree with RC A's mitigation plan, RC B will be in violation of R8 if they do not follow the mitigation plan. What if the mitigation plan has an Adverse Reliability Impact on RC B's footprint? They should not have to follow the mitigation plan.</p>
<p>Response: The RC SDT thanks you for your comment. Requirement R2 addresses processes, procedures, and plans developed in advance. Such plans reasonably can be expected to contain agreement. The goal is to ensure reliability; refusal to agree based upon equity issues is unacceptable. If inability to agree is based upon differing opinions as to whether the problem exists, then the coordination requirements are out of</p>

Organization	Yes or No	Question 11 Comment
<p>compliance. Technical assessments reasonably can be expected to predict the same effects upon the system.</p> <p>The collective experience of the RC SDT members indicates a clear need to have at least weekly conference calls.</p> <p>IRO-014-2 R7 applies to scenarios and coordination between RCs. IRO-001-2 R1 applies to scenarios and coordination between an RC and TOPs, BAs, GOPs, TSPs, LSEs, DPs, and PSEs within its RC Area. The SDT believes it is appropriate to leave both requirements in place.</p> <p>R8: We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement.</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations</i></p>

Georgia Transmission Corporation		N/A
Response: The RC SDT thanks you for your comment.		

12. Do you agree with the revisions to the Measures in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholders agreed with the Measures, except to make conforming changes for revisions to the requirements (M1, M3 and M8). The RC SDT has revised the measures based on the new requirements. One stakeholder suggested revision to the Data Retention for R5-R8. Data Retention was revised for R5 to 12 months, however the RC SDT believes that three years is the correct period for R6-8.

Organization	Yes or No	Question 12 Comment
Northwest LSE Group		Abstain
Northeast Power Coordinating Council	No	The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
Response: The RC SDT thanks you for your comment. R7 and R8 were not removed, therefore the measures will remain in place.		
IRC Standards Review Committee	No	Conforming changes to the Measurements will be required if changes as suggested in Question 11 are introduced.
Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements.		
Midwest ISO Standards Collaborators	No	Conforming changes to the Measurements will be required for accepted changes from question 11.
Manitoba Hydro	No	Conforming changes to the Measurements will be required for accepted changes from question 11.
Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements.		
Hydro-Québec TransEnergie (HQT)	No	The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 12 Comment
Response: The RC SDT thanks you for your comment. R7 and R8 were not removed, therefore the measures will remain in place		
Duke Energy	No	Need to revise the Measures to coincide with the recommended changes to the requirements in #11 above. Also under Data Retention, 12 months of evidence is needed for R3, R4 and M3, M4. However 3 years plus the current year is required for R5 through R8 and M5 through M8. We see no reason the data requirements to be different and believe 12 months is the proper amount of data retention.
Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements. The RC SDT concurs with the suggested revision to Data Retention for R5. The infrequency of occurrences of R6-8 clearly support a 3 year retention period.		
Northeast Utilities	No	The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
Response: The RC SDT thanks you for your comment. R7 and R8 were not removed, therefore the measures will remain in place		
Independent Electricity System Operator	No	Depending on the response of the SDT, changes to M5 to M8 may be required.
Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements		
MRO NSRS	No	Conforming changes to the Measurements will be required for accepted changes from question 11.

13. Do you agree with the revisions to the Violation Severity Levels in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Several stakeholders suggested developing four VSLs for R5. Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSLs to represent both the large and small scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios. Other stakeholders suggested four VSLs for R4. The essence of R4 is written to require impacted RC's to talk at least weekly and is singular in nature. VSL's can not be written for conference calls that exceed the singular requirement.

Organization	Yes or No	Question 13 Comment
Northwest LSE Group		Abstain
Northeast Power Coordinating Council	No	(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT's response to our comments under Q11.
<p>Response: The RC SDT thanks you for your comment. Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSLs to represent both the large and small scenario containing an Adverse Reliability Impact. Southern Company	No	Reliability problems identified in other reliability areas are based on modeling information obtained from another reliability region. The fact that one RC will not agree that the model of an adjacent RC’s reliability area may be more accurate than their model of the adjacent reliability area is no reason to impose a severe violation on the RC with the more accurate

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 13 Comment
		<p>model of their own reliability region.</p> <p>Example: RC1 identifies a contingency overload of a transformer bank in an adjacent reliability area. The transformer bank was replaced the week before with a larger bank. When RC1 contacts RC2, RC2 explains that the bank overload is not valid because of the replacement. RC2 does not identify a problem due to the fact that the model RC2 is using has been updated with the new transformer bank. RC1 will not agree and requires RC2 to open a tie line with another reliability area to relieve the contingency overload. If RC2 does not follow the instructions of RC1, making the interconnection weaker to relieve a problem that does not exist, RC2 is out of compliance and a severe violation will be imposed.</p>
<p>Response: The RC SDT thanks you for your comment. The scenario you describe is essentially a modeling problem, as such the discrepancy would be vetted and corrected during the discovery phase. Further, an RC1 cannot tell RC2 how to rate facilities owned by entities within the RC2 area. The SDT believes that your scenario would play out like this: RC1 calls RC2 and says, “we show an overload on transformer bank X.” RC2 says, “we do not, what rating are you using?” RC1 replies with the old rating, RC2 states that it is wrong, and here is the correct rating, which RC1 implements, problem solved. RC1 cannot come back and say the rating that you have for transformer bank X is incorrect. Each entity within the RC Area (TO or GO) is responsible for the rating of the facilities it owns. (Taking the scenario even farther, if RC1 believes that the TO or GO has an incorrect rating, then RC1 can challenge the rating methodology of that TO or GO under the FAC standards.)</p>		
Manitoba Hydro	No	<p>Believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any.</p>
<p>Response: The RC SDT thanks you for your comment. In regards to R4: The essence of R4 is that it is written to require impacted RC’s to talk at least weekly and is singular in nature. VSL’s can not be written for conference calls that exceed the singular requirement.</p> <p>In regards to R5: Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSL to represent a typical scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC’s. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC’s.</p>		
Hydro-Québec TransÉnergie (HQT)	No	<p>(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. American Electric Power		Not applicable.
Georgia Transmission Corporation		N/A

14.If you have any other comments, not expressed in questions above, for the RC SDT on any of the other changes made to this set of standards and their associated implementation plans, please provide them here.

Summary Consideration: Stakeholders suggested removing the Distribution provider and Generator Operator from the Data Retention section for R1 of COM-001. Since these are not applicable entities in R1, they were removed from Data Retention for the requirement.

Organization	Question 14 Comment
Northeast Power Coordinating Council	NPCC appreciates the work of the Drafting Team. No additional comments.
Response: The RC SDT thanks you for your comment.	
SERC OC Standards Review Group	"The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers."
Response: The RC SDT thanks you for your comment.	
Bonneville Power Administration	<p>Issue #2: Data Retention Why would the Distribution Provider and Generator Operator be required to store historical data (three years in the case of Requirement R1 and Measure M1; twelve months in the case of Requirement R2 and Measure M2) to show that these requirements and measures have been successfully implemented when these two entities (Distribution Provider and Generator Operator) aren't even included either in Requirements R1 and R2 or in Measure M1 and M2?It would appear that they should only have to provide historical data for three months as required by the data retention time for Requirement 3 and Measure 3.</p> <p>Issue #1: Data Retention: The first bullet in this section states that all entities are responsible for retaining documents associated with all Requirements and Measures associated with this standard. In reality, Requirements R1, R4, R5 and R6 and the corresponding Measures are the responsibility of the Reliability Coordinator. Requirements R2 and R3 and their corresponding Measures are implemented by the Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity and the Load Serving Entity. The Data Retention section should be rewritten to reflect this so that entities are not required to maintain documents that they aren't suppose to even possess in some cases.</p>
Response: The RC SDT thanks you for your comment. COM-001 removed DP and GOP from the data retention section regarding R1 and R2. IRO-001-2 changed "all" to "applicable."	

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Question 14 Comment
IRC Standards Review Committee	AESO abstains from commenting on VSLs. VSLs for Alberta will be developed by provincial authorities.
Response: The RC SDT thanks you for your comment.	
E.ON U.S.	COM-001-2 R1 and R2 and the associated M1 and M2 are only applicable to the RC, TOP and BA but the “Data Retention” for R1/R2 and M1/M2 require the DP and GOP to retain data for the Requirements and Measures. E.ON U.S. suggests that the requirement for data retention of the DP and GOP be eliminated from the standard.
Response: The RC SDT thanks you for your comment. COM-001 removed DP and GOP from the data retention section regarding R1 and R2.	
Illinois Municipal Electric Agency	In order to minimize the number of reliability standards and the details covered in requirements - particularly those dealing with communications - it is recommended that an up-front provision/requirement be included as part of the compliance registration process that certain functional entities (e.g., DP, LSE, PSE, etc.) shall be responsible for providing the necessary information to transact services and for complying with the directives/requests of certain functional authorities (e.g., BA, PC, RC, etc.) in order to maintain/enhance reliability of the BES.
Response: The RC SDT thanks you for your comment. The registration process is not in the scope of this SDT project	
Northeast Utilities	Northeast Utilities appreciates the work of the Drafting Team. No additional comments.
Response: The RC SDT thanks you for your comment.	
Independent Electricity System Operator	In our comments on the previous posting, we expressed a disagreement with a proposed to remove IRO-005, in particular the latter part of R13, which stipulated that: In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter. Our rationale was that The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities may come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set exists is a necessary requirement for reliable operation. The SDT responded by suggesting that this requirement is redundant with FAC-014 which -014 states the requirement for developing and sharing SOL and IROL between the RC, PA, TP and TOP in both the planning and operating time frames. However, this response fails to address the situation where during operation, the situation of disagreeing SOLs or IROLs does arise. FAC-014 or any other standards do not currently have a requirement to ensure that all entities operate to the lower limit before the difference is resolved. This leaves room for unreliable operation. We suggest the SDT to consider restating this requirement somewhere. Note that this requirement is similar to R6 of IRO-014

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Question 14 Comment
	that when in doubt, the more conservative approach should be taken. If it is necessary to have an R6 to deal with an uncertain identification/notification of an Adverse Reliability Impact, we don't see why it is not necessary to operate to a lower SOL or IROL when there is an unresolved difference.
Response: The RC SDT thanks you for your comment. The SDT team still feels this is covered in FAC-010, 011, and 14. For real-time operations, as you mention, this is covered with IRO-014, R6	

Consideration of Comments on Reliability Coordination (Project 2006-06)

The Reliability Coordination Standard Drafting Team thanks all commenters who submitted comments on the proposed revisions to the standards for Project 2006-06 — Reliability Coordination. These standards were posted for a 45-day public comment period from January 4, 2010 through February 18, 2010. The stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 42 sets of comments, including comments from more than 150 different people from over 50 companies representing all of the 10 Industry Segments as shown in the table on the following pages.

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

Summary Consideration:

Stakeholders had three general concerns with the definition of Interpersonal Communications.

- 1) The definition of Interpersonal Communication to be ambiguous in terms of distinguishing between verbal communications and data transfers; The SDT believes that Webster's definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.

The RCSDT believes that data communication is covered under IRO-010, R3 which states:

Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)

- 2) The definition should also clarify that the communication is between individuals in different entities or physical locations; The SDT believes that the revised Requirements of COM-001-2 satisfy this concern.

- 3) Use of the term "method" may imply a communication style; The RCSDT changed "method" to "medium" in definition.

Several stakeholders indicated that a definition of Alternative Interpersonal Communications was not needed. The RCSDT disagrees because there is an important part of the definition of "Alternative Interpersonal Communications" that distinguishes it from simply being an alternative "Interpersonal Communications". The proposed definition contains the words: "which does not utilize the same infrastructure (medium)". Also, some stakeholders had concerns with the usage of "normal". The RCSDT does not propose defining "Normal" Interpersonal Communications and has removed it from the definition. Based on the consensus of stakeholders, we have revised the two definitions to:

Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.

Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.

Stakeholders pointed out that COM-001, R1 was a compound requirement and suggested creating separate requirements. Stakeholders also suggested revising the VRF to "Medium" as it does not meet the guidelines for a "High" VRF. The intent of R1 was three-fold.

- 1 Identify (have) an Alternative Interpersonal Communication capability**
- 2 Test that capability periodically and**
- 3 If the test failed, fix it or identify another Alternative Communications Capability.**

Based on comments received, we have revised R1 (now R9) to eliminate the compound requirement and therefore created more specific requirements to delineate Interpersonal and Alternative Interpersonal Communication, and applicable entity responsibility. The VRF is changed to "Medium."

The RCSDT also made extensive revisions to COM-001 to provide explicit Interpersonal Communications and Alternative Interpersonal Communications capabilities based on the relationships between various entities. The RCSDT believes that the proposed requirements meet the reliability objectives of the standard as well as the FERC Order 693 directives.

The comments received regarding the definition of Reliability Directive (for COM-002 and IRO-001) ranged from the being "too open-ended" (PPL) to not "flexible" enough (Public Service Enterprise Group Companies). The SDT expected and viewed these as attempting to reach middle ground.

There were also value added comments such as removing the unnecessary and redundant terms "actual or expected" from the definition, which the SDT agrees with. The definition was revised to:

A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency.

A number of commenter's expressed a concern about the definition not including three-part communication, clearly identifying a Reliability Directive at the time of issue, and applying to verbal communications. The SDT believes responsibilities should not be imbedded in a definition and, as drafted, the requirements of COM-002 with the proposed definition of Reliability Directive fully address the identification and verbal concerns.

The bulk of the comments received on COM-002 regarded the VSL for R3. The SDT agreed with suggestions for the VSLs and has deleted the Severe VSL and moved the High VSL to Severe. We believe that there are two possible actions within the requirement and failure to perform either warrants a Severe VSL.

Several commenter's expressed concern about three-part communication. The SDT believes that the requirements as drafted, with the issue, repeat back, and acknowledgement of a Reliability Directive, three-part communication is covered.

There was one commenter suggesting the addition of the DP to the applicability. The RCSdT notes that, per the Functional Model, a DP may “direct” an LSE to communicate requests for voluntary load curtailment and not reliability situations: Item 9 on page 47 of version 5 of the Functional Model: “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.” Furthermore, The RCSdT will forward this comment to the FMWG for their consideration in revising the language.

The comments regarding the use of Reliability Directive in IRO-001 ranged from small entities being excluded to whether regulatory or statutory requirements covers NERC standards. The SDT addressed these by noting registration is not in the SDT scope and NERC’s general council should be contacted for regulatory issues.

A few commenter’s expressed concern with the VSL for R2 and one suggested the words “per Requirement 2,” should be added. The SDT believes the phrase “per Requirement 2” is not necessary as a VSL is only applied AFTER a compliance violation is determined.

Value added comments such as a concern of the use of the word “threat” as it can be defined as cyber-related and suggested replacing “Operating Personnel” with “System Operator” were also made. The SDT concurred and removed the word “threat” and replaced it with “condition” and also made the revision to System Operator.

There were numerous comments regarding the definition of Reliability Directive with multiple wording suggestions. While slightly out of scope for question six, the SDT expected and viewed these as attempting to reach middle ground.

Some commenter’s expressed concern over clarify that the RC has three separate actions. The RC can act, direct others to act, or issue Reliability Directives. The SDT modified R1 to read: “Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts”

Note: Based on discussions with FERC Staff, the SDT agreed to make the following changes:

IRO-001-2 Requirements R4, R5 and associated Measures and VSLs are moved to IRO-005-4

IRO-001-2 Requirements R6, R7 and associated Measures and VSLs are moved to IRO-002-2

Several commenters made suggestions regarding IRO-014, R2. The original requirement was designed to accomplish in one requirement what is proposed by the commenters as three procedural requirements. R2 is worded to focus on defining what a “compliant plan” is. In the current requirement a “proposed plan” is not the same as a “compliant plan”.

The SDT viewed what the commenters are suggesting as follows:

- The initiating RC would submit its “proposed plan” to the other RCs
- The receiving RCs would provide the initiating RC with their responses indicating whether or not they agree with the proposed roles/actions offered by the initiating RC

- If one or more RCs do not agree with the roles/actions, then the initiating RC would be required to offer an alternative proposal (and go back to the first bullet)
- When all RCs acknowledge that the proposed roles/actions in the revised "proposed plan" are acceptable, then and only then would the "proposed plan" become a "compliant plan"

A closer reading of the current R2 would show the current R2 accomplishes the exact same result but does so without interjecting the need for documenting the intervening processes. The SDT does not see the need to document why each proposal was or was not accepted; nor does the SDT see the need to document the negotiations that are involved in getting to "an agreed to plan". For example the comments' subrequirement to show the RC submitted its plan would require a paper trail for the request; followed by a paper trail for the responses, followed by more paperwork if the RCs are not in agreement. In the end, the only action that matters (in both the SDT version and in the commenters alternative version) is a plan that works, and a plan that if others are involved must have their concurrence that those others will participate.

R2 does not impose a requirement to get agreements; what R2 does is to require that a "compliant plan" be developed. A proposed plan does not solve problems. That proposed plan is NOT compliant with R2 if it only assumes that other RC will effect the actions in the proposal; neither is it compliant if the proposed actions are not acceptable to the other RCs who are required to act. To be compliant the initiating RC must either have the concurrence (i.e. agreement) of the other RCs for their respective part(s) in the proposed plans OR the plan must not include those RCs.

R2 says to be compliant the other RC must agree with the "proposed plan" before that "proposed plan" is acceptable as a "compliant plan". Having a plan that requires someone else to do an action, but that other entity will not effect that action, will not resolve the problem at hand. Further having documentation that someone refuses to participate in the proposed plan does nothing to solve the problem at hand.

In general, the RC SDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with the applicable parts of the directives in FERC Order 693. The work of the RC SDT along with the OCPD SDT and the RTO SDT, as currently recognized, will cover the original intent of COM-002 and still provide a "defense in depth strategy" as suggested by commenters. Consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RC SDT have developed for COM-002. This will further the efforts of the OCPD SDT in achieving stakeholder consensus for their proposed requirements in COM-003. The intent of this DT is to preserve a method for RCs, BAs and TOPs to make the determination of "what actions are required" and clearly communicate the importance to the receiver at a heightened method to normal day-to-day operational communications. The trigger of "Reliability Directive" by the issuer highlights these actions as needed to maintain BES reliability and shall be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement per the language of the requirement) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can

support and enhance the development of the OPCP SDT. The RCSDT has also attempted to eliminate redundancy and ambiguity while not creating any reliability gaps. Several comments were received on the RC's ability to "act". The RC must "act" (ie. do something, "to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts". This may include analysis, coordination of cooperative actions or the issuance of "Reliability Directives". "Act" does not imply solely the manipulation of BES elements.

RC control of "analysis tools" is critical to maintaining the wide area view. Control by the RC over the tools is imperative and beyond administrative, since it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication are a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES. Failure of the RC to control outages of analysis tools was mentioned as a contributing factor in the 2003 blackout.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

Index to Questions, Comments, and Responses

1. Do you agree with the proposed definition of Interpersonal Communication (COM-001-2)? If not, please explain in the comment area.	15
2. Do you agree with the proposed definition of Alternative Interpersonal Communication (COM-001-2)? If not, please explain in the comment area. ...	25
3. Do you agree with the revisions made to Requirement 1 in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	34
4. Do you agree with the definition of Reliability Directive (COM-002-2)? If not, please explain in the comment area.	46
5. Do you agree with the revisions to the Requirements in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	56
6. Do you agree with the use of the defined term “Reliability Directive” in revisions to the Requirements in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	67
7. Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	77
8. Do you have any other comment, not expressed in questions above, for the RC SDT?	89

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

The Industry Segments are:

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities
- 4 — Transmission-dependent Utilities
- 5 — Electric Generators
- 6 — Electricity Brokers, Aggregators, and Marketers
- 7 — Large Electricity End Users
- 8 — Small Electricity End Users
- 9 — Federal, State, Provincial Regulatory or other Government Entities
- 10 — Regional Reliability Organizations, Regional Entities

- 1 Do you agree with the proposed definition of Interpersonal Communication (COM-001-2)? If not, please explain in the comment area.

Summary Consideration: Stakeholders had three general concerns with the definition of Interpersonal Communications.

- 1) **The definition of Interpersonal Communication to be ambiguous in terms of distinguishing between verbal communications and data transfers; The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.**

The RCSDT believes that data communication is covered under IRO-010, R3 which states:

Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)

- 2) **The definition should also clarify that the communication is between individuals in different entities or physical locations; The SDT believes that the revised Requirements of COM-001-2 satisfy this concern.**
- 3) **Use of the term “method” may imply a communication style; changed “method” to “medium” in definition.**

Organization	Yes or No	Question 1 Comment
Calpine Corporation		
North Carolina Municipal Power Agency #1		
Public Service Enterprise Group Companies		
We Energies		

Organization	Yes or No	Question 1 Comment
Operating Personnel Communications Protocols SDT		No comment
CECD	No	CECD agrees that the term should be very broad and allow a registered entity to establish appropriate communication tools, devices, processes or systems to suit their operation. However, there is a need to include the term "normal" interpersonal communication methods based on the definition of alternative interpersonal communication.
<p>Response: The RCSDT thanks you for your comment. RCSDT does not propose defining “Normal” Interpersonal Communications and has removed it from the alternative definition and included “...used for day-to-day operation.” Based on the consensus of stakeholders, we have revised the two definitions to:</p> <p>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</p> <p>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</p>		
ITC Holdings	No	Comments: As written, the definition could be interpreted to include data communications. Suggest modifying the definition to “Any method that allows two or more individuals to verbally interact, consult, or exchange information.” Interpersonal Communication to operate the BES must be timely and non voice communication cannot be relied upon to be timely in all situations.
<p>Response: The RCSDT thanks you for your comment. The intent of this definition is to exclude data, but not preclude e-mail, text, etc.</p> <p>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</p> <p>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p>		
NERC	No	Comments: NERC staff believes the definition is unnecessary. “Interpersonal” is a common term and this definition provides no additional clarity. In addition, COM-001 should maintain the current coverage of voice and data. The requirements should address both primary and alternative/backup capabilities for voice and data. Approved standards including TOP-005-1.1 and IRO-010-1, as well as several others under development rely on the communication capabilities specified in COM-001. By limiting the focus of COM-001-

Organization	Yes or No	Question 1 Comment
		2 to this definition of Interpersonal Communication, there will no longer be an obligation to ensure that data telecommunication paths between entities are adequate and reliable.
<p>Response: The RCSDT thanks you for your comment. The RCSDT and the industry disagree with NERC staff’s assessment. A strong industry request to clarify “facilities” led to the definition of interpersonal communication which has been modified to:</p> <p>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</p> <p>Primary communication is inferred when reference to alternative is made. Moreover, the primary capability is used/tested on a daily basis.</p> <p>The RCSDT contends that IRO-010 covers the requirement for data and information that includes a requirement for providing specified data when automated Real-Time system operating data is unavailable.</p>		
Exelon	No	Definition is vague and subject to interpretation. Requirement should be to have primary and backup capabilities. Disagree that a definition is required.
<p>Response: The RCSDT thanks you for your comment. The RCSDT and the industry disagree. A strong industry demand to clarify “facilities” led to the definition of interpersonal communication which has been modified to:</p> <p>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</p> <p>Primary communication is inferred when reference to alternative is made. Moreover, the primary capability is used/tested on a daily basis.</p>		
Southern Company Services	No	If there is going to be an alternative definition, than this should be a definition for Normal Interpersonal Communication.
<p>Response: The RCSDT thanks you for your comment. Primary communication is inferred when reference to alternative is made. Moreover, the primary capability is used/tested on a daily basis.</p>		
Ameren	No	In previous postings, the drafting team confirmed that they intended for COM-001-2 to apply only to verbal communication systems and not data. However, the phrase “or exchange information.” could still imply data (information). We suggest that the team should explicitly exclude data in definition.
Midwest ISO Standards Collaborators	No	In previous postings, the drafting team confirmed that they intended for COM-001-2 to apply only to verbal communication systems. We believe this definition had inadvertently brought data back into the standard. Specifically, we are concerned about “or exchange information.” Data can be considered information and thus some may now interpret SCADA and ICCP being included. We suggest the definition would be sufficient with the “or exchange information” redacted and would avoid this confusion.

Organization	Yes or No	Question 1 Comment
<p>Response: The RCSDT thanks you for your comment. The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</p> <p>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</p> <p>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p>		
<p>NERC Standards Review Subcommittee</p>	<p>No</p>	<p>In previous postings, the drafting team confirmed that they intended for COM-001-2 to apply only to verbal communication systems. We believe this definition had inadvertently brought data back into the standard. Specifically, we are concerned about “or exchange information.” Data can be considered information and thus some may now interpret SCADA and ICCP being included. To avoid this confusion, we suggest the definition would be sufficient with the “or exchange information” redacted.</p> <p>We believe the proposed definition for the term “Interpersonal Communication” is too broad and ambiguous. We recommend the following instead: “Verbal Communication between two or more registered entities (not within the same organization) to exchange reliability-related information.” The inclusion of this term “registered entities” removes the ambiguity which we believe is contained in the proposed definition. In addition, the inclusion of the phrase “not within the same organization” clarifies that the focus of definition is to address communication between different registered entities.</p>
<p>Response: The RCSDT thanks you for your comment. The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</p> <p>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</p> <p>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p> <p>Also, the SDT believes that the revised Requirements of COM-001-2 satisfy your ambiguity concern.</p>		
<p>Southwest Power Pool</p>	<p>No</p>	<p>It appears as if the following two definitions have the same meaning: COM-001-2 Interpersonal Communication: Any method that allows two or more individuals to interact, consult, or exchange information. COM-003 -1 Interoperability Communication - Communication between two or more entities to exchange reliability-related information to be used by the entities to change the state or status of an element or facility of</p>

Organization	Yes or No	Question 1 Comment
		<p>the Bulk Electric System. SPP recommends changing the word “method” to medium in Interpersonal Communication. For Alternative Interpersonal Communication, that definition uses the term “infrastructure (medium)” as in type of equipment used. These terms should use consistent words if they are referring to the same thing.</p>
<p>Response: The RCSDT thanks you for your comment. We concur and have revised the two definitions to: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information. Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</p>		
Duke Energy	No	<p>Need to revise this definition to clarify that Interpersonal Communication is the primary method of communication, and that it is limited to verbal or written communications (not data such as SCADA data), and that it is limited to real-time operations (time horizon is Real-time Operations). Suggested wording: Interpersonal Communication: The primary verbal or written method that allows two or more individuals to interact, consult, or exchange information for real-time operations.</p>
<p>Response: The RCSDT thanks you for your comment. . The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</p> <p>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</p> <p>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p> <p>The RCSDT does not believe “primary” is needed because “primary” communication is inferred when reference to “alternative” is made.</p>		
PPL	No	<p>The definition should be clarified to state that it is interpersonal communications between functional entities and not interpersonal communications within the functional entity that the standard is addressing.</p>
<p>Response: The RCSDT thanks you for your comment. The SDT believes that the revised Requirements of COM-001-2 satisfy your concern</p>		
Hydro-Québec TransEnergie (HQT)	No	<p>The definition should be worded to be more explicit, such as: When two or more individuals interact, consult, or exchange information.</p>

Organization	Yes or No	Question 1 Comment
Northeast Power Coordinating Council	No	The definition should be worded to be more explicit, such as: When two or more individuals interact, consult, or exchange information.
<p>Response: The RCSDT thanks you for your comment. We concur and have revised the definition to: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</p>		
Electric Market Policy	No	The SDT has proposed a definition that is meant to limit the standard to two-way person-to-person communication between functional entities. However, as written the definition can also be viewed as so open-ended as to apply to pens and papers used by system operators to show another system operator in the same control room some operational data. The proposed standard does further constrain the application to “real-time operation information”, but may be better served to explicitly constrain the definition to functional-entity-to-functional entity. It is these media that the standard means to address.
<p>Response: The RCSDT thanks you for your comment. The SDT believes that the revised Requirements of COM-001-2 satisfy your concern</p>		
Bonneville Power Administration	No	The term, ‘interpersonal communication’ as defined by common usage and Webster’s Dictionary is sufficient for the work at hand. To provide an additional definition via the NERC Standards Development Process unnecessarily adds to an already convoluted task and provides no further benefit to the user of this proposed standard.
<p>Response: The RCSDT thanks you for your comment. The RCSDT and the industry disagree. A strong industry request to clarify “facilities” led to the definition of interpersonal communication which has been modified to: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</p>		
Northeast Utilities	No	The use of “Any method” as the start of the definition of Interpersonal Communication is too board a qualifier. In normal interpersonal communications only 5 to 10% of the total communication is verbal while 90 to 95% is non-verbal. As it is not the intent of this standard to address non-verbal communications the use of “Any method” should be eliminated from the definition and more specific terms that clearly convey the intent of the standard should be used.

Organization	Yes or No	Question 1 Comment
<p>Response: The RCSDT thanks you for your comment. We concur and have modified the definition to: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</p>		
FirstEnergy	No	<p>This definition should be revised as follows to ensure clarity of scope by excluding electronic data exchange and for consistency with the proposed requirements: "Interpersonal Communication Capability: Any method that allows two or more individuals to interact, consult, or exchange real-time Bulk Electric System operating information using verbal communication equipment."</p>
<p>Response: The RCSDT thanks you for your comment. We agree in principle; however, the SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</p> <p>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</p> <p>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p>		
Manitoba Hydro	No	<p>When “Interpersonal Communication” is added to the NERC Glossary without the obvious reference to COM-001-2 which is “To ensure that operating entities have adequate Interpersonal capabilities” could and does infer that the definition means “protocol or forum of speaking, interacting or exchanging” information. The suggested definition does not immediately indicate the normal medium of communications, such a land line, mobile, radio, electronic, etc. A suggested definition: Interpersonal Communication: The normal mediums that carry messages, verbal or electronic, between two or more entities, internal or external, for the operation of the Interconnected Bulk Electric System.</p>
<p>Response: The RCSDT thanks you for your comment. We agree in principle and have modified the definition to: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information. The SDT believes that the revised Requirements of COM-001-2 satisfy your concern of communication between entities.</p>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

		<p>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p> <ol style="list-style-type: none"> 2. The SDT believes that the revised Requirements of COM-001-2 satisfy your concern of communication in different physical locations. 3. The RCSDT concurs and revised the definition, Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.

2 Do you agree with the proposed definition of Alternative Interpersonal Communication (COM-001-2)? If not, please explain in the comment area.

Summary Consideration: Several stakeholders indicated that a definition of Alternative Interpersonal Communications was not needed. The RCSDT disagrees because there is an important part of the definition of “Alternative Interpersonal Communications” that distinguishes it from simply being an alternative “Interpersonal Communications”. The proposed definition contains the words: “which does not utilize the same infrastructure (medium)”. Also, some stakeholders had concerns with the usage of “normal”. The RCSDT does not propose defining “Normal” Interpersonal Communications and has removed it from the definition. Based on the consensus of stakeholders, we have revised the two definitions to:

Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.

Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.

Operating Personnel Communications Protocols SDT		No Comment

Organization	Yes or No	Question 2 Comment
Manitoba Hydro	No	<p>“Alternative Interpersonal Communication” also when added to the NERC Glossary without the obvious reference to COM-001-2 which is “To ensure that operating entities have adequate Interpersonal capabilities” could and does infer that the definition means “ other protocols or forums of speaking, interacting or exchanging” information. The suggested definition does not immediately indicate the backup or alternate mediums of communications, such a redundant land lines, Satellite phones, battery or diesel back up electronics, etc. A suggested definition: Alternative Interpersonal Communication: Backup or alternate mediums that during planned or failure of normal medium systems, that can carry messages, verbal or electronic, between two or more entities, internal or external, for the operation of the Interconnected Bulk Electric System.</p>
<p>Response: The RCSDT thanks you for your comment. We have revised the definition to: Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation. The RCSDT believes “medium” stands alone in the definition and needs no descriptors.</p>		
Exelon	No	Disagree that a definition is required.
<p>Response: The RCSDT thanks you for your comment. The RCSDT disagrees because there is an important part of the definition of “Alternative Interpersonal Communications” that distinguishes it from simply being an alternative “Interpersonal Communications”. The proposed definition contains the words: “which does not utilize the same infrastructure (medium)”.</p>		
Western Electricity Coordinating Council	No	Do not need an alternate definition
<p>Response: The RCSDT thanks you for your comment. The RCSDT disagrees because there is an important part of the definition of “Alternative Interpersonal Communications” that distinguishes it from simply being an alternative “Interpersonal Communications”. The proposed definition contains the words: “which does not utilize the same infrastructure (medium)”.</p>		
Southern Company Services	No	Interpersonal Communication includes any method. If this includes all possibilities why is an additional definition needed?
<p>Response: The RCSDT thanks you for your comment. The RCSDT revised the definition as: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information. The RCSDT believes that an important part of the definition of “Alternative Interpersonal Communications” that distinguishes it from simply being an</p>		

Organization	Yes or No	Question 2 Comment
<p>alternative “Interpersonal Communications” are the words: “which does not utilize the same infrastructure (medium)”.</p>		
Duke Energy	No	<p>Need to revise this definition to clarify that Alternative Interpersonal Communication is the identified substitute method for the Interpersonal Communication method. Suggested wording: Alternative Interpersonal Communication: The identified verbal or written method that is able to serve as the substitute for and is redundant to Interpersonal Communication and does not utilize the same infrastructure (medium) as Interpersonal Communication.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT does not believe that the definition should be revised as suggested as “Alternative” is clear when the requirements are viewed.</p>		
Southwest Power Pool	No	<p>Replace Alternative Interpersonal Communication definition with: Backup Interpersonal Communication: Any method that is able to serve as a substitute for and is redundant to the primary normal Interpersonal Communication and does not utilize the same infrastructure (medium) as the primary normal Interpersonal Communications. Consistent terms should be used across standards if they are referring to the same thing.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT feels that the use of “Alternative” is appropriate and provides flexibility within this standard. The RCSDT does not believe that the definition should be revised as suggested as “Alternative” is clear when the requirements are viewed. There is sufficient stakeholder support to retain “Alternative”.</p>		
NERC	No	<p>See response to Question 1.</p>
<p>Response: The RCSDT thanks you for your comment. Please see response to Question 1.</p>		
E.ON U.S.	No	<p>Suggested edit to definition: Alternative Interpersonal Communication: A Interpersonal Communication method that is able to serve as a substitute for and is functionally redundant to the normal Interpersonal Communication method but does not utilize the same infrastructure (medium) as the normal Interpersonal Communication method. The intent of the edit is to clarify that the entity must to have identified one (1) normal Interpersonal Communication and one (1) Alternative Intercommunication method.</p>
<p>Response: The RCSDT thanks you for your comment. A definition can not impose requirements that are not explicitly stated in the standard. The suggested edit is not necessary as the requirements define what an entity must do to be compliant. The RCSDT has also removed the words “and is redundant to” from the definition based on other stakeholders comments.</p>		

Organization	Yes or No	Question 2 Comment
Bonneville Power Administration	No	The proposed definition adds value for the user of this proposed standard by adding the ideas of the alternate mode of communications being both independent and redundant to normal communications. However, this having been said, the term chosen by the SDT, the term 'Alternative Interpersonal Communication' appears to focus attention on the wrong aspect of what's being discussed. Since the definition focuses on an alternative mode or 'method' of communicating, clarity would be added if the SDT changed the term to be defined to either 'Alternative Mode of Communication' or 'Alternative Method of Communication.' The use of the word 'interpersonal' would be optional, but not necessary.
<p>Response: The RCSDT thanks you for your comment. To clarify our intent, the RCSDT changed “method” to “medium” in the definition. The proposed definition is:</p> <p>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</p>		
Hydro-Québec TransEnergie (HQT)	No	The proposed definition of Alternative Interpersonal Communication is equally ambiguous as the aforementioned definition of Interpersonal Communication. A precise definition of Interpersonal Communication and “Normal” Interpersonal Communication is required before an agreed upon definition of Alternative Interpersonal Communication can be reached.
Northeast Power Coordinating Council	No	The proposed definition of Alternative Interpersonal Communication is equally ambiguous as the aforementioned definition of Interpersonal Communication. A precise definition of Interpersonal Communication and “Normal” Interpersonal Communication is required before an agreed upon definition of Alternative Interpersonal Communication can be reached.
Northeast Utilities	No	The proposed definition of Alternative Interpersonal Communication is equally ambiguous as the aforementioned definition of Interpersonal Communication. A precise definition of Interpersonal Communication and “Normal” Interpersonal Communication is required before an agreed upon definition of Alternative Interpersonal Communication can be reached.
<p>Response: The RCSDT thanks you for your comment. The RCSDT does not propose defining “Normal” Interpersonal Communications and has removed it from the definition. Based on the consensus of stakeholders, we have revised the two definitions to:</p> <p>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</p> <p>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same</p>		

Organization	Yes or No	Question 2 Comment
infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.		
FirstEnergy	No	The word "normal" in the proposed definition adds some ambiguity to the definition. This definition should be revised as follows to ensure clarity of scope by excluding electronic data exchange and for consistency with the proposed requirements: Alternative Interpersonal Communication Capability: Any verbal communication equipment that is able to serve as a substitute for and is redundant to Interpersonal Communication equipment used during day-to-day operations and does not utilize the same infrastructure as the Interpersonal Communication equipment.
<p>Response: The RCSDT thanks you for your comment. The RCSDT does not propose defining “Normal” Interpersonal Communications and have removed it from the definition. Based on the consensus of stakeholders, we have revised the two definitions to:</p> <p>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</p> <p>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</p>

PPL	Yes	
Puget Sound Energy	No	<p>As for the proposed term for “Interpersonal Communication”, the proposed definition for this term addresses a method of communication, but not the communication itself. As a result, the defined term is incomplete as proposed. Recommend the addition of the word “capability” so that the defined term is “Alternative Interpersonal Communication Capability”. The addition of this word to the term is also consistent with the use of the term in the proposed standard language, where Alternative Interpersonal Communication is consistently used in conjunction with the words “capability” or “capabilities”.</p>
<p>Response: The RCSDT thanks you for your comment. Based on a consensus of stakeholder comments, the RCSDT has revised the proposed definitions to: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information. The definition itself describes “capability.”</p> <p>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</p>		
South Carolina Electric and Gas	Yes	
US Bureau of Reclamation	Yes	
Western Area Power Administration	Yes	

Organization	Yes or No	Question 2 Comment
Xcel Energy	Yes	
American Transmission Company	Yes	However, clarity is needed for the word “infrastructure (medium)”. ATC’s interpretation is that satellite phones, cell phones, radio and land lines are all different mediums.
<p>Response: The RCSDT thanks you for your comment. The RCSDT agrees that the types of communication that you list are all different media which could be used as a form of Alternative Interpersonal Communications.</p>		
ITC Holdings	Yes	None
NERC Standards Review Subcommittee	Yes	Please clarify. We believe the proposed definition for the term “Interpersonal Communication” is too broad and ambiguous. We recommend the following instead: “Verbal Communication between two or more registered entities (not within the same organization) to exchange reliability-related information.” The inclusion of this term “registered entities” removes the ambiguity which we believe is contained in the proposed definition. In addition, the inclusion of the phrase “not within the same organization” clarifies that the focus of definition is to address communication between different registered entities.
<p>Response: The RCSDT thanks you for your comment. The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</p> <p>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</p> <p>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p> <p>The SDT believes that the revised Requirements of COM-001-2 satisfy your concern of communication in different physical locations.</p>		
Electric Market Policy	Yes	Subject to adequate resolution of comments provided for Question 1
<p>Response: The RCSDT thanks you for your comment. Please see response to question 1 comments.</p>		
ERCOT ISO	No	Although this definition indirectly clarifies the intent of the definition of Interpersonal Communication by noting that communication mediums/infrastructure are at issue, it does not specify verbal or data communication, and needs to be clarified accordingly; ERCOT notes clarification of Interpersonal Communication (IC) on this issue will indirectly clarify this point with respect to the Alternative IC definition.

Organization	Yes or No	Question 2 Comment
		<p>Furthermore, ERCOT ISO considers the definition of Alternative Interpersonal Communication unnecessary. The Standard could simply say an entity must have multiple (at least two) ICs, one of which is primary and others that serve as back-ups. This would eliminate the need for yet another defined term susceptible to conflicting interpretations.</p> <p>In additions, calling the Alternative Interpersonal Communication a substitute and redundant also seems contradictory, or at least confusing in terms of timing. Redundant implies that the entity has two means that are applied at the same time. Substitute seems to mean that the entity have a back-up that only has to be used when the primary isn't used.</p> <p>Also, if Interpersonal Communication is intended to be verbal communication, what are considered acceptable alternates (i.e.: fax, email, etc)? Examples here would be helpful. Is it sufficient to have redundant/substitute means of verbal communication (i.e.: satellite phones, cell phones, etc.). ERCOT ISO believes non-verbal proxies for verbal communications should be eligible ICs – e.g. email.</p> <p>As noted above, ERCOT ISO believes the most efficient way to approach this is to eliminate the use of Alternative Interpersonal Communication and have the standard require that entities have to have at least two means of Interpersonal Communication.</p>
<p>Response: The RCSDT thanks you for your comment.</p> <p>. The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</p> <p>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</p> <p>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p> <p>The RCSDT disagrees that the definition is not needed because there is an important part of the definition of “Alternative Interpersonal Communications” that distinguishes it from simply being an alternative “Interpersonal Communications”. The proposed definition contains the words: “which does not utilize the same infrastructure (medium)”.</p> <p>We concur and have removed the “redundant” portion of the definition.</p> <p>Interpersonal Communication can include voice and text; examples are satellite phones, cell phones, radio and land lines. We have revised the proposed definitions to add clarity:</p> <p>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</p>		

Organization	Yes or No	Question 2 Comment
Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.		

3 Do you agree with the revisions made to Requirement 1 in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Stakeholders pointed out that R1 was a compound requirement and suggested creating separate requirements. Stakeholders also suggested revising the VRF to “Medium” as it does not meet the guidelines for a “High” VRF. The intent of R1 was three-fold.

- 4 Identify (have) an Alternative Interpersonal Communication capability**
- 5 Test that capability periodically and**
- 6 If the test failed, fix it or identify another Alternative Communications Capability.**

Based on comments received, we have revised R1, now R9, to eliminate the compound requirement and therefore created more specific requirements to delineate Interpersonal and Alternative Interpersonal Communication, and applicable entity responsibility. The VRF is changed to “Medium.”

Requirement R1 is now R9; R2 is now R10; R3 is now R11; R4 is now R7 and R8.

Organization	Yes or No	Question 3 Comment
Calpine Corporation		
North Carolina Municipal Power Agency #1		
Operating Personnel Communications Protocols SDT		No Comment
American Electric Power	No	AEP is concerned with the use of a sixty minute window without having a broadcast methodology in place to support the required notifications. As mentioned in other comments, perhaps RCIS could be modified to help support communications and the confirmation of such communications.
<p>Response: The RCSDT thanks you for your comment. Having a failure of the Alternative Interpersonal Communications per R1 does not indicate that the Interpersonal Communications used in day-to-day operations is out of service. It is expected that the Interpersonal Communications used in day-to-day operations is indeed operational to make the notifications required in R3 regarding alternative failure.</p>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 3 Comment
We Energies	No	An Alternative Personnel Communications (APC) is intended for use at a Primary Control Center for real-time voice communications. That needs to be clear in the definitions and standards. The time to either restore or recognize that the Alternative Communications cannot be re-established should be aligned with proposed EOP-008 which allows 2 hours. This should also apply to COM-001 R2 which would give an hour past the 2 hours that the APC is unavailable to contact impacted parties. Along with conforming changes to measures and the like...
<p>Response: The RCSDT thanks you for your comment. The Alternative Interpersonal Communications capability is intended for use as an alternative for the Interpersonal Communications capability, regardless of whether the normal capability continues to be available or regardless of the location, be it a primary control center or a back-up facility. R1, now R9, includes “...If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.”</p>		
ITC Holdings	No	Comments: The intent of the 60 minute requirement is unclear. As written, the 60 minute requirement could be interpreted to apply to the initiation of restoration or, alternatively, to the completion of restoration. If the latter is the intent, then effectively 3 voice communication mediums would be required to ensure compliance which we believe is not warranted. Suggest modifying the requirement to “If the test is unsuccessful, the entity shall take action within 60 minutes to initiate restoration of the identified alternative or...”. In addition, we would suggest separating R1 into two requirements. From an audit perspective, there are two discrete actions being identified: quarterly testing and initiating repairs.
<p>Response: The RCSDT thanks you for your comment. We concur with your comment and have changed the requirement R1, now R9, to state “...If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.” The SDT believes that R1, now R9, has a discreet relationship with successful and unsuccessful tests and therefore should remain as one requirement for clarity.</p>		
Public Service Enterprise Group Companies	No	Initiating actions within the hour should be specified, rather than taking action. It could take longer than an hour to take (complete) action that resolves the issue.
<p>Response: The RCSDT thanks you for your comment. We concur with your comment and have changed the requirement to state “...If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.”</p>		
Southern Company Services	No	It is quite possible for entities to interpret this requirement as not applicable if they include all of there communications as interpersonal communication.
<p>Response: The RCSDT thanks you for your comment. The requirement states that an entity will “designate” an Alternative Interpersonal</p>		

Organization	Yes or No	Question 3 Comment
<p>Communications capability. To do so, the entity would not be able to declare all communications as Interpersonal Communications.</p>		
FirstEnergy	No	<p>It should be clear that this requirement applies only to BES information. The requirement should be revised as follows to improve clarity: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time Bulk Electric System operating information.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT does not believe that adding BES to the requirement adds any clarity as NERC standards apply to the BES.</p>		
Duke Energy	No	<ul style="list-style-type: none"> o Need to clarify who the RC, TOP and BA are required to have Interpersonal Communications and Alternative Interpersonal Communications capability with (i.e., each other and the DP and GOP). We believe that R4 is redundant to R1, and the entities in R4 could be added to R1, and R4 deleted. Also make conforming changes to the Measures, Data Retention and VSLs. o Need to clarify that that the requirement is to take action to restore the Alternative Interpersonal Communications capability, or take action to identify a substitute within 60 minutes, (not actually restore or identify a substitute within 60 minutes - which may not be possible). Also need to revise the Measure and the Lower VSL to conform with this clarification to the requirement o Need to strike the phrase “used for communicating real-time operating information”, because this should be included in the definition of Interpersonal Communication, as we propose in Comment #1 above, and it would be redundant to also include it in R1. o The VRF for R1 should be Medium instead of High, because this is a quarterly test of the alternative capability - doesn’t meet the criteria for a High VRF. o Need to clarify in Requirement R2 that the 60 minute clock for notifications BEGINS when you KNOW you have a failure that has lasted for 30 or more minutes. o Strike the word “normal” in Requirement R2, because the definition of Interpersonal Communications as proposed above already includes the word “primary”.
<p>Response: The RCSDT thanks you for your comment.</p> <ul style="list-style-type: none"> o To provide better clarity the SDT created more specific requirements to delineate Interpersonal and Alternative Interpersonal Communication, and applicable entity responsibility. o The RCSDT has revised the requirement R1, now R9, to state “...If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.” The Measure and VSL for R1, now R9, reflect the revision 		

Organization	Yes or No	Question 3 Comment
		<ul style="list-style-type: none"> ○ The definition was not revised to include the phrase “used for communicating real-time operating information” since the Time Horizon is designated as Real-time Operations. ○ VRF: The RCSDT agrees and has revised the VRF to “Medium.” ○ R2 now R10: The RCSDT believes the requirement as written satisfies your request. The “detection” of failure is the beginning. ○ “Normal”: The RCSDT revised R2, now R10, and deleted “normal.”
Exelon	No	<p>R1. It is not possible to test without identifying, “identify and” is not required. Suggest the requirement say: The applicable entities shall have primary and backup communication capabilities used for communicating real-time operating information. The entities shall test and demonstrate system capabilities on a quarterly basis. Telling someone to “take action” if they identify a failure in their systems is unnecessary. It must be presumed that an entity will “take action”; otherwise they will be non-compliant with the standard. Allowing an entity to “identify a substitute” in lieu of taking action to restore within 60 minutes points to the difficulties inherent in writing prescriptive requirements. The drafting team recognizes all entities may not be able to restore their capabilities within 60 minutes and therefore provides an alternative. The 60 minute requirement becomes a guideline, not a requirement under these conditions it is left to auditors to evaluate the technical and business case that an entity makes for why they can not make the 60 minute deadline.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT has revised requirements of COM-001, R1 is now R9, to require an entity to “designate” an Alternative Interpersonal Communication capability rather than to “identify”. The RCSDT agrees with you that an entity must identify something in order to be able to designate it or to test it. An Alternative Interpersonal Communication capability is an alternative regardless of whether one is considering the primary location or a back-up facility. Back-up tends to indicate that it would only be used in the case of the loss of some other primary capability; that is not the intent. The intent is that an alternative is to be designated and periodically tested to verify its continued availability and functionality. The alternative capability may or may not be used in normal operations activities. The SDT changed “take action” to “initiate action” in the requirement and believes the verbiage is needed to identify the start of timing to satisfy “...repair or designate a replacement Alternative Interpersonal Communications within 2 hours.</p>		
Manitoba Hydro	No	<p>R1. Removal of “develop a mitigation plan” and replacing with “take action within 60 minutes” has been done, this improves the Requirement.</p> <p>R2. As suggested in a previous SAR, the time line should be delineated further, “if the ICC will not be in service within 30 minutes, the impacted entities shall be notified within 60 minutes of the detection of the failure”.</p> <p>R3. The addition of “dictated by law or otherwise” disclaimers defogs the requirement for Canadian entities that have varying laws, mandates and obligations: Canada’s basic definition of “Official bilingualism” was</p>

Organization	Yes or No	Question 3 Comment
		found as follows: <ul style="list-style-type: none"> o The federal government must conduct its business and provide services in both official languages English and French. o The law encourages or mandates lower tiers of government such as provinces, territories and municipalities to provide services in both official languages. o The law places obligations on private sectors to provide access to services in both official languages, including that products be labeled in both English and French. o The government provides support to sectors to encourage and promote the use of one or the other of the two official languages, for instance English speaking minorities in Quebec and French Speaking minorities in other provinces. o New Brunswick is the only official bilingual province and Quebec is officially unilingual (French only).
<p>Response: The RCSDT thanks you for your comment. Thank you for your affirmations with respect to R1 and R3. With respect to R2 (now R10), it is the intent of the RCSDT to have notifications performed for outages of 30 minutes or longer within 60 minutes</p>		
E.ON U.S.	No	Requiring a 60 minute response to a problem with the Alternative Interpersonal Communication method which is only tested quarterly doesn't seem reasonable. One (or more) entities may need to involve IT/telecom personnel or order parts or material to resolve the problem or agree to the substitute Alternative Interpersonal Communication method. A 48 hour response requirement would be more appropriate.
<p>Response: The RCSDT thanks you for your comment. Requirement R1, now R9, has been revised to clarify the intent for the entity to "initiate actions to repair or designate a replacement Alternative Interpersonal Communications within 2 hours."</p>		
Puget Sound Energy	Yes	
CECD	No	The requirement to identify an alternative interpersonal communication method within 60 minutes should only apply if the registered entity only has a single alternative interpersonal communication method in place.
<p>Response: The RCSDT thanks you for your comment. Requirement R1, now R9, has been revised to clarify the intent for the entity to "initiate actions to repair or designate a replacement Alternative Interpersonal Communications within 2 hours."</p>		
NERC	No	There is a disparity in the timing requirements listed in COM-001. If it is important that a known communication path interruption be restored in 60 minutes, why would it be necessary to check a path quarterly only? The drafting team should consider proposing that no concurrent outage of primary and alternative/backup paths can exceed 5 minutes for voice paths. Additionally, NERC staff believes that data path concerns still need to be addressed. As written, there is no requirement coverage for ensuring that data telecommunication paths between entities are adequate and reliable.
<p>Response: The RCSDT thanks you for your comment. The requirement R1, now R9, does not state that a communication path be restored in 60</p>		

Organization	Yes or No	Question 3 Comment
<p>minutes but “...shall initiate action to repair or designate a replacement Alternative Interpersonal Communication within 2 hours.” The SDT believes that it is not feasible to propose that concurrent outages of a primary or backup communication cannot exceed 5 minutes. The SDT believes that IRO-010-1 Requirement R1 and specifically R1.4, adopted by the NERC BOT, address your concerns regarding data paths.</p>		
Southwest Power Pool	No	<p>This standard does want the RC, TOP, and BA to report in R2 if Interpersonal Communication goes down within 60mins to report it. However, we cannot find a specific requirement that subjects the RC, TOP, and BA to have Interpersonal Communication in the first place.</p>
<p>○ Response: The RCSDT thanks you for your comment. To provide better clarity the SDT created more specific requirements to delineate Interpersonal and Alternative Interpersonal Communication, and applicable entity responsibility.</p>		
Hydro-Québec TransEnergie (HQT)	No	<p>We agree with the revisions made to R1 to remove the requirement for developing a mitigation plan but have a concern with “...shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communication Capability”. This can be interpreted to mean completing the repair within 60 minutes, and hence can present a difficulty for the responsible entity if the spare parts to facilitate a repair or if a new piece of equipment cannot be obtained within that time frame. More time is needed to fully repair or replace the lost capability. A suggested rewording is “shall initiate action within 60 minutes to restore....” Alternatively, the requirement can be revised to require the identification of a substitute Alternative Interpersonal Communication means within the 60 minute time frame.</p>
Independent Electricity System Operator	No	<p>We agree with the revisions made to R1 to remove the requirement for developing a mitigation plan but have a concern with “...shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communication Capability”. This can be interpreted to mean completing the repair within 60 minutes, and hence can present a difficulty for the responsible entity if the spare parts to facilitate a repair or if a new piece of equipment cannot be obtained within that time frame. More time is needed to fully repair or replace the lost capability. We suggest the wording be revised to “shall initiate action within 60 minutes to restore....” Alternatively, the requirement can be revised to require the identification of a substitute Alternative Interpersonal Communication means within the 60 minute time frame.</p>
Northeast Power Coordinating Council	No	<p>We agree with the revisions made to R1 to remove the requirement for developing a mitigation plan but have a concern with “...shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communication Capability”. This can be interpreted to mean completing the repair within 60 minutes, and hence can present a difficulty for the responsible entity if the spare parts to facilitate a repair or if a new piece of equipment cannot be obtained within that time frame. 		restore..." Alternatively, the requirement can be revised to require the identification of a substitute Alternative Interpersonal Communication means within the 60 minute time frame.
<p>Response: The RCSDT thanks you for your comment. The RCSDT agrees and has revised R1, now R9, to clarify the intent for the entity to “intiate actions to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.”</p>		
Western Electricity Coordinating Council	No	We do not need the definition for alternate, when the definition for interpersonal communication states all methods of communications. What we think the drafting team is getting at is that we need to test our back up communication systems.
<p>Response: The RCSDT thanks you for your comment. The RCSDT has revised R1, now R9, and R2, now R10, to clarify that an Alternative Interpersonal Communication capability be designated and that alternative capability to be tested at least monthly to verify an alternative is available should the capability normally used be lost. If the test of the Alternative Interpersonal Communication capability is failed, then the entity must initiate actions within 60 minutes. The RCSDT has intentionally avoided the concept of back-up because back-up could be mistakenly believed to apply only in back-up facilities or in the case of loss of some unnecessarily designated primary capability.</p>		
Midwest ISO Standards Collaborators	No	We mostly agree with the revisions and thank the drafting team for modifying the requirement to remove the need for a mitigation plan per our comments from the last posting. However, we do believe that introduction of a requirement to fix the Alternate Interpersonal Communication within 60 minutes could be a compliance problem. Our issue is with the time requirement. For example, our stakeholders have experienced situations with certain communications systems in which a part had to be shipped overnight to fix the communication system. While we still don’t believe a mitigation plan is necessary in this case, we are concerned that ordering the part may not be viewed as taking action. Please confirm that SDT believes that the 60 minutes applies to beginning to repair the Alternative Interpersonal Communication and not to full restoration of the Alternative Interpersonal Communication. Further, please confirm that identification of a substitute Alternative Interpersonal Communication could simply mean relying on an already existing and identified secondary or tertiary Alternative Interpersonal Communication? Similar to our concern identified in Q1, we are concerned about the clause “used for communicating real-time operating information.” We believe data could be drawn into the requirement with this clause. Redacting the clause from the requirement will clarify that the requirement applies to only verbal communications.
NERC Standards Review Subcommittee	No	We mostly agree with the revisions and thank the drafting team for modifying the requirement to remove the need for a mitigation plan per our comments from the last posting. However, we do believe that introduction of a requirement to fix the Alternate Interpersonal Communication within 60 minutes could be a compliance problem. Our issue is with the time requirement. For example, our stakeholders have experienced situations with certain communications systems in which a part had to be shipped overnight to fix the communication system. While we still don’t believe a mitigation plan is necessary in this case, we are concerned that

		<p>ordering the part may not be viewed as taking action. Please confirm that SDT believes that the 60 minutes applies to beginning to repair the Alternative Interpersonal Communication and not to full restoration of the Alternative Interpersonal Communication. Further, please confirm that identification of a substitute Alternative Interpersonal Communication could simply mean relying on an already existing and identified secondary or tertiary Alternative Interpersonal Communication. Similar to our concern identified in Q1, we are concerned about the clause “used for communicating real-time operating information.” We believe data could be drawn into the requirement with this clause. Redacting the clause from the requirement will clarify that the requirement applies to only verbal communications.</p>
<p>Response: The RCSDT thanks you for your comment. R1, now R9, has been revised to clarify the intent for the entity to “intiate actions to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.” The verbiage, “used for communicating real-time operating information” is redacted as you suggest. The SDT believes that Alternative Interpersonal Communication is clearly defined.</p>		
Ameren	No	<p>We mostly agree with the revisions. However, we believe that introduction of a requirement to fix the Alternate Interpersonal Communication (AIC) within 60 minutes could be a compliance problem. The issue is with the time requirement. It seems illogical to only test the AIC every 90 days but have to replace the capability in 60 minutes when the IC means is working, It seems more reasonable to have the 60 minutes apply when both are out.</p> <p>Similar to our concern expressed in response to Q1 above, we are concerned about the phrase “used for communicating real-time operating information.”, which could also imply data. We suggest that the team should remove this phrase from the requirement to clarify that the requirement applies to only verbal communications.</p>
<p>Response: The RCSDT thanks you for your comment. R1, now R9, has been revised to clarify the intent for the entity to “intiate actions to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.” Verbiage “used for communicating real-time operating information” is redacted.</p>		
OC Standards Review Group	No	<p>We suggest changing “its” in the first sentence to “their respective” such that the sentence will read, “Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, “their respective”” We also suggest that the risk factor should be “Medium”</p>
<p>Response: The RCSDT thanks you for your comment. The SDT believes that “its” shows appropriate ownership for each respective entity. The risk factor is revised to “Medium” as suggested.</p>		
IRC Standards Review	No	<p>We thank the drafting team for modifying the requirement to remove the need for a mitigation plan per our comments from the last posting. However, we do believe that introduction of a requirement to fix the</p>

PNGC Power (15 member utilities)	Yes	
PPL	Yes	
South Carolina Electric and Gas	Yes	
US Bureau of Reclamation	Yes	
Western Area Power Administration	Yes	
Xcel Energy	Yes	
American Transmission Company	Yes	If the “infrastructure” is defined as we have noted in question 2, then we support the revisions to this Requirement.
Response: The RCSDT thanks you for your comment.		
Electric Market Policy	Yes	Subject to adequate resolution of comments provided for Question 1
Response: The RCSDT thanks you for your comment. Please see response to question1.		
ERCOT ISO	No	To follow on the concern noted in Question 1, ERCOT ISO requests that the scope of Interpersonal Communication be clarified. Without specifically limiting Alternative Interpersonal Communication to verbal communications, ERCOT ISO considers this requirement to be too broad in that it could potentially encompass all types of data exchanges and the means for such exchanges.

Organization	Yes or No	Question 3 Comment
		<p>ERCOT ISO also has concerns regarding the intent of the 60 minute requirement. Is noting the failure and identified remedy within 60 minutes sufficient? If not, it may take significantly longer to acquire new equipment or parts to address a problem thereby making compliance with the 60-minute timeframe practically impossible. ERCOT ISO recommends that the 60 minute requirement be replaced with “as soon as practical/possible” to provide the flexibility necessary to cover those types of situations. ERCOT recognizes that the requirement gives the entity the option of restoring the means within 60-minutes or identifying another alternative, but to the extent an entity only has two options available and/or identified, the 60-minute restoration option would practically be the only option. With respect to the third option (i.e. the option if the first “alternative” fails), the requirement does not state any need to test that communication option. It only requires the entity to identify the additional alternative. If the intent is that the second alternative needs to be tested, that should be clarified. If the intent is merely to identify it and then test it on the next quarterly schedule, that should also be clarified./</p> <p>Also, the need to “identify” the Alternative ICs for the quarterly test seems pointless. The Alternative ICs would already be identified; presumably the entity would have established these means in advance of having to test them. It seems like a pointless exercise to “identify” means already identified. The requirement should impose an obligation to establish ICs and Alternative ICs, and the testing of those should be an independent requirement.</p> <p>With respect to R2, ERCOT recommends clarifying the scope of “impacted entities”. ERCOT ISO believes that the scope should be left to the discretion of the RC/TOP/BA, or that it should be expressly limited to the entities that were the subject of the failed communication.</p> <p>For R3, ERCOT ISO recommends deleting the pre-condition language related to “inter entity” BES “reliability communications”. This introduces confusion as to the scope and timing of communications under this requirement, especially where other standards are subject to Reliability Directives. For example, is a reliability communication a Reliability Directive? If not, what constitutes a reliability communication? The requirement should simply state that English is required for communications from the relevant functional entities.</p> <p>Finally, the risk factor seems inappropriate for the requirement. This is a testing requirement, not real time. The entity has 60 minutes to correct any issues or have a third option already identified and ready to deploy. This requirement does not seem to indicate the need for a high risk factor.</p>
<p>Response: The RCSDT thanks you for your comment. R1 is now R9; R2 is now R10; R3 is now R11; R4 is now R7 and R8.</p> <p>The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange and, SDT believes that data communication is covered under IRO-010, R3 which states:</p> <p>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission</p>		

Organization	Yes or No	Question 3 Comment
		<p>Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p> <p>The SDT believes that the revised Requirements of COM-001-2 now satisfy your concern regarding R1, R2 and R3.</p>

4 Do you agree with the definition of Reliability Directive (COM-002-2)? If not, please explain in the comment area.

Summary Consideration:

The comments received regarding the definition of Reliability Directive ranged from the being “to open-ended” (PPL) to not “flexible” enough (Public Service Enterprise Group Companies). The SDT expected and viewed these as attempting to reach middle ground.

There were also value added comments such as removing the unnecessary and redundant terms “actual or expected” from the definition, which the SDT agrees with.

A number of commenter’s expressed a concern about the definition not including three-part communication, clearly identifying a Reliability Directive at the time of issue, and applying to verbal communications. While valid concerns, the SDT believes responsibilities should not be imbedded in a definition and, as drafted, the requirements of COM-002 fully address the identification and verbal concerns.

While outside of the scope of question four, one commenter suggested assigning the COM standard project to either the OPCPRC or RCSDT projects. The SDT explained the close coordination and collaboration between the two projects.

Organization	Yes or No	Question 4 Comment
Calpine Corporation		
North Carolina Municipal Power Agency #1		
Operating Personnel Communications Protocols SDT		The OPCP SDT received NERC staff comments to our proposed draft of COM-003-1. In those comments NERC staff proposed the term “Operating Communication”, defined as “communication with the intent to change or maintain the state, status, output, or input of an Element or Facility of the Bulk Electric System.” The OPCP SDT is accepting this proposed term in the next version of COM-003-1 for posting. Per agreement reached during the November 17, 2009 joint meeting of the OPCP, RC and RTO SDTs in Charlotte, NC,

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 4 Comment
		<p>pending the outcome of the industry evaluation of your proposed “Reliability Directive” term, the OPCP SDT will incorporate the term into COM-003-1 Requirement R?. The OPCP SDT recommends adding the Transmission Owner to the entities that may issue a Reliability Directive because in many cases (e.g., PJM) Transmission Owners “operate” the transmission system from local control centers.</p> <p>The OPCP SDT points out however that the RC SDT have not adhered to scope coordination efforts between our projects. At the outset of both SDT’s work, the OPCP project would focus upon Requirement R2 of COM-002-2 and the RC SDT would focus on Requirement R1 of COM-002-2.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT does not believe that the Transmission Owner should be added to the definition as this would be inconsistent with the Functional Model and the registration process.</p> <p>Regarding the scope issue: The RCSDT received strong consensus comments on our first posting to make revisions to the original R2. The RCSDT began making these revisions in response to stakeholder comments.</p>		
American Electric Power	No	<p>AEP would recommend that the words "actual or expected" be removed from the definition as unnecessary and redundant. Since, Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System, then an "expected emergency" is by definition the same as an emergency. If you already have an 'expected' emergency that causes intervention of some sort, then you are already in and "emergency." Therefore, you are either in an emergency condition or not in an emergency condition.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT agrees with your comment and we have struck “actual or expected” from the proposed definition.</p>		
Southwest Power Pool	No	<p>By NERC’s Functional Model the RC, BA, TOP, and DP issues directives. (DP to LSE)Reliability Directive - A communication initiated by a RC, TOP, BA or DP where action by the recipient is necessary to address an actual or expected Emergency.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT notes that, per the Functional Model, a DP may “direct” an LSE to communicate requests for voluntary load curtailment and not reliability situations:</p> <p>Item 9 on page 47 of version 5 of the Functional Model: “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.”</p> <p>The RCSDT will forward this comment to the FMWG for their consideration in revising the language.</p>		
Public Service Enterprise Group	No	<p>It is reasonable to require the directing entity to identify which of its communications is a Reliability Directive</p>

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 4 Comment
Companies		either when first communicated or if questioned by the recipient. Flexibility is the key.
<p>Response: The RCSDT thanks you for your comment. The SDT agrees it might be reasonable however, it is not appropriate to imbed requirements in definitions.</p>		
<p>Also please see Requirement R1 of COM-002-3 (When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient.) If the RC, BA, and TOP comply with R1 there is no need for the recipient to question if it is Reliability Directive.</p>		
NERC	No	<p>NERC staff proposed the term “Operating Communication” in our comments to Project 2007-02 Operating Personnel Communications Protocols. Operating Communication would be defined as “communication with the intent to change or maintain the state, status, output, or input of an Element or Facility of the Bulk Electric System.” This captures all communication that affects BES reliability, not just communication between function entities and Reliability Coordinators. If the proposed COM-003 is adopted with the definition of “Operating Communication” and the corresponding three-part communication requirements, this term “Reliability Directive” is not needed in the COM standard family. However because we cannot pre-judge the outcome of the changes proposed in Project 2007-02, we must view the proposal here on its own merits. The proposal herein limits the scope of coverage to emergency situations, a regression from the current coverage in FERC-approved COM-002 and eliminates a key component of the defense in depth strategy the standards as a body attempt to provide.</p> <p>Furthermore, we believe that COM-002 is outside the scope of Project 2006-06 Reliability Coordination and should properly be addressed by Project 2007-02 Operating Personnel Communications Protocols. The fact that two teams are addressing aspects of the same standard and requirements is confusing and because the projects are not linked, there is a real potential to be disjointed if one or the other project modifies its approach. This could create a gap in reliability coverage. One team should be the primary “owner” of this issue. Analysis of past Bulk Electric System reliability events has shown that the lack of three-part communication has been a contributing factor to adverse reliability issues. We believe it is absolutely imperative that standards concerning all verbal instructions to change or maintain the state of a BES element must involve three-part communication in order to provide defense-in-depth and reduce human error in these events.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that we are addressing the Blackout Recommendation #26 regarding “tighten communications protocols, especially during alert and emergency situations”. Our contention is that we have made a good faith effort at addressing the scope of our SAR and feel that this current position has been validated by stakeholder comments and the NERC Standards Committee (see November 17, 2009 meeting of RCSDT, OPCPSDT and RTOSDT concerning this issue). We understand the concerns expressed above and fully support proceeding with the efforts of the OPCP SDT at improving all communications protocols.</p> <p>However, the RCSDT recognizes that the scope of our proposed revisions to COM-002 is limited to Emergency situations only. The RCSDT feels that</p>		

Organization	Yes or No	Question 4 Comment
<p>the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RCSDT along with the OPCPSDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy”. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RCSDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003.</p>		
Western Electricity Coordinating Council	No	<p>No, we think IRO 001 R3 covers this more effectively and may be expanded to include transmission operators and balancing authorities. “The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.”</p>
<p>Response: The RCSDT thanks you for your comment. The revised IRO-001, R3 is to establish the authority of the RC to act or issue Reliability Directives. It does not identify the protocols under which a Reliability Directive needs to be issued, acknowledged and carried out. This is handled through the proposed definition as well as the requirements of COM-002.</p>		
Manitoba Hydro	No	<p>Reliability Directive is more clearly defined in the FRCC website: “Reliability Directives are used during times of emergency or in situations where reliability may be an issue. A Reliability Directive is usually issued to control or prevent emergency situations. ”Extrapolated from proposed and FRCC: Reliability Directive: An instruction initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority that is used during emergencies or reliability issue which will be used to prevent, control or resolve the situation. This definition makes it clear that it is for reliability issues (Thus Reliability Directive) and clarifies better that this is to be used to control or prevent emergency situations. The existing proposed definition doesn’t fully infer this. With the addition of this glossary term, so should the addition of a definition for Operational Directive (though not used in this requirement). The new items would further compliment and assist each other in the understanding of the two new Glossary terms. From the FRCC website: “Operational Directives are issued by System Operators when it is necessary to perform a critical function on the BPS, i.e., to manipulate or change the status of a BES element such as a circuit breaker or substation disconnects. For example, Balancing Authorities often issue Operational Directives to Generator Operators to raise or lower the MW or MVAR output of generators during the course of balancing load and generation on the BPS. Transmission Operators often issue Operational Directives to substation operators to change the status of voltage control devices or clearing BPS substation equipment or transmission lines for routine maintenance, etc”. Extrapolated from proposed and FRCC: Operational Directive: An instruction initiated by a Transmission Operator or Balancing Authority that is used to perform planned or routine critical functions on the Bulk Power System.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that our proposed definition of Reliability Directive along with the existing</p>		

Organization	Yes or No	Question 4 Comment
<p>definition of Emergency address all of the concepts that you suggest.</p> <p>The comments regarding Operational Directive are more suited to the work of the OPCP SDT as they are developing requirements along this line. We will forward your comment to that team for their consideration.</p>		
Midwest ISO Standards Collaborators	No	<p>The combination of the COM-002-3 standard and the definition of Reliability directive do not clearly specify that the communication is verbal and between only two responsible entities. Otherwise, the communication could be considered a blast call, written correspondence or conversation between operators within the same responsible entity. We believe that the Reliability Directive definition should be: “A verbal communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority to another responsible entity where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”</p>
NERC Standards Review Subcommittee	No	<p>The combination of the COM-002-3 standard and the definition of Reliability directive do not clearly specify that the communication is verbal and between only two responsible entities. Otherwise, the communication could be considered a blast call, written correspondence or conversation between operators within the same responsible entity. We believe that the Reliability Directive definition should be: “A verbal communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority to another registered entity where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”</p>
<p>Response: The RCSDT thanks you for your comment. First issue: verbal communication: The intent of the definition is to not preclude text or other forms of communication for issuing Reliability Directives. However, entities are still obligated to comply with the requirements of COM-002.</p> <p>Second issue: “to another registered entity”: The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Adding this verbiage is not appropriate.</p> <p>Third issue: By adding “clearly identifies in the communication that this is a Reliability Directive”, we would have added a requirement to the definition. This is better included in the requirements rather than the definition.</p>		
We Energies	No	<p>The measures of COM-002-3 imply verbal one-to one communication which needs to be clear within the definition. Recommend replacing “A communication” with the draft defined term “Interpersonal Communication” assuming it gets approved.</p>
<p>Response: The RCSDT thanks you for your comment. The intent of the definition and requirements of COM-002 is to not preclude text or other forms of communication to issue Reliability Directives. However, entities are still obligated to comply with the requirements of COM-002. Interpersonal Communications is a medium rather than a protocol or message.</p>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 4 Comment
PPL	No	The proposed definition is too open-ended especially since this definition will be used in other standards. Limiting the application of the standard to announced Reliability Directives in the definition itself will ensure only announced Reliability Directives are covered by this standard and other standards.
<p>Response: The RCSDT thanks you for your comment. Including the language that you suggest would impose a requirement within the definition. Potential use of the definition in other requirements would have to be reconciled with COM-002 requirements through the standard development process.</p>		
E.ON U.S.	No	The term “Interoperability Communication” has been proposed and defined in COM-003 (Project 2007-02), but, the term and definition have not been finalized. Is a “Reliability Directive” communication different from, a subset of, or related to Interoperability Communication? The definition of Reliability Directive should recognize and clarify the linkage to Interoperability Communication.
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that we are addressing the Blackout Recommendation #26 regarding “tighten communications protocols, especially during alert and emergency situations” in our proposed definition and requirements for COM-002. The RCSDT feels that the concept of a Reliability Directive is unique and an important tool for the RC, BA and TOP to maintain reliability. The proposed definition and revisions to COM-002 are consistent with parts of the directives in FERC Order 693. The work of the RCSDT and the OPCPSDT (Project 2007-02) compliment each other and will be coordinated.</p>		
Southern Company Services	No	This definition is not needed with the way that the requirements of the standard are written. This definition used with the definition of Emergency could be interpreted to include such routine operations as turning on capacitor banks and next day planning. Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority to an entity inside their Reliability, Transmission, or Balancing Areas where action outside of normal operating practices by the recipient is necessary to address an actual or expected Emergency or when an action is identified as a reliability directive.
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that the proposed definition of Reliability Directive, along with the existing definition of Emergency, provides the heightened awareness that is the goal of the standard and it comports with the directives of Order 693.</p>		
Ameren	No	We believe that a reference in the question is to COM-002-3 and not -2. The definition of Reliability directive is not clear to indicate that it only applies to verbal communications. We suggest the definition should be: “A verbal communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority to another responsible entity where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”

Organization	Yes or No	Question 4 Comment
<p>Response: The RCSDT thanks you for your comment. The question does reference COM-002-3 as suggested. First issue: verbal communication: The intent of the definition is to not preclude text or other forms of communication for issuing Reliability Directives. However, entities are still obligated to comply with the requirements of COM-002.</p> <p>Second issue: “to another registered entity”: The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Adding this verbiage is not appropriate.</p> <p>Third issue: By adding “clearly identifies in the communication that this is a Reliability Directive”, we would have added a requirement to the definition. This is better included in the requirements rather than the definition.</p>		
Hydro-Québec TransEnergie (HQT)	No	We believe that the Reliability Directive definition as defined in COM-002-3 should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
Northeast Power Coordinating Council	No	We believe that the Reliability Directive definition as defined in COM-002-3 should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
IRC Standards Review Committee	No	We believe that the Reliability Directive definition should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
ISO New England Inc	No	We believe that the Reliability Directive definition should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
<p>Response: The RCSDT thanks you for your comment. First issue: verbal communication: The intent of the definition is to not preclude text or other forms of communication for issuing Reliability Directives. However, entities are still obligated to comply with the requirements of COM-002.</p> <p>Second issue: “to another registered entity”: The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Adding this verbiage is not appropriate.</p> <p>Third issue: By adding “clearly identifies in the communication that this is a Reliability Directive”, we would have added a requirement to the</p>

Organization	Yes or No	Question 4 Comment
<p>definition. This is better included in the requirements rather than the definition.</p>		
FirstEnergy	No	<p>We believe that this standard should be either handed to the OPCPSDT (Project 2007-02) or the OPCPSDT should hand over the COM-003-1 standard to this RCSDT (Project 2006-06); and then COM-002 and COM-003 should be merged. For further explanation of our suggestions, see our comments in Question #8.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RCSDT along with the OPCPSDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RCSDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003. Merging of the two standards is a work in progress and will ultimately be decided by stakeholder consensus.</p>		
Independent Electricity System Operator	No	<p>We suggest the Reliability Directive definition be modified as follows to further clarify the communication protocol: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority and made clear by the initiating entity that this is a Reliability Directive which requires action by the recipient to address an actual or expected Emergency.”</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that your suggested revision would impose a requirement within the definition.</p>		
Duke Energy	No	<p>We think that Requirement R1 should be folded into the definition, and R1 deleted. Also delete the Measure and VSL. Suggested rewording of the definition: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority, and identified as a Reliability Directive to the recipient, where action by the recipient is necessary to address an actual or expected Emergency.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that your suggested revision would impose a requirement within the definition.</p>

Organization	Yes or No	Question 4 Comment
Administration		Emergency.”
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that your proposed revision does not materially add clarity to the proposed definition. Stakeholders generally concur with our proposed definition.</p>		
Electric Market Policy	Yes	<p>While I technically agree with the definition, I think it should be expanded to state that a directive that meets this definition must be clearly identified as such by the issuing BA, RC or TOP. In other words, action is mandatory on the recipient’s part only if the issuing party clearly states “this is a Reliability Directive”. In many organized markets, participants (particularly LSE, GOP and PSE) are required to follow instructions only if an Emergency is declared. This concept has historically been used throughout this industry although such use may have been implicit.</p>
<p>Response: The RCSDT thanks you for your comment. Your concerns are covered by the requirement R1 of COM-002 which states:</p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient.</p> <p>A requirement can not be imposed by a definition.</p>		
ERCOT ISO	No	<p>ERCOT ISO is concerned about defining Reliability Directive in terms of “expected” emergencies. Obviously all relevant entities will operate to avoid emergency situations. However, the term “expected” is vague and ambiguous, and, as such, is open to subjective interpretation thereby creating uncertainty for regulated entities. The definition should put entities on clear notice as to when they have to comply with the relevant requirements. The only way to provide that certainty is to establish a clear, identifiable trigger. To accomplish this, the definition should be limited to actual emergencies. Actual emergencies are specifically defined, not subjective, and lend themselves to demonstration of compliance in an audit. The definition of Emergency lends itself to alignment with specific circumstances that clearly indicate to a regulated entity that it must use Reliability Directives and follow the rules that apply to such directives – “expected emergencies” do not.</p> <p>The requirement should also be revised to clarify that Reliability Directives only apply to communications between separate entities in distinct locations and do not apply to employees of the same company communicating in person in the same location – e.g. a control center.</p>
<p>Response: The RCSDT thanks you for your comment. We have removed the words “actual or expected” from the definition. The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance.</p>		

5 Do you agree with the revisions to the Requirements in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The bulk of the comments were about the VSL. The SDT agreed and has deleted the Severe VSL and moved the High VSL to Severe. We believe that there are two possible actions within the requirement and failure to perform either warrants a Severe VSL

Several commenters’s expressed concern about three-part communication. The SDT believes that as drafted with the issue, repeat back, and acknowledgement three-part communication is covered.

There was one commenter suggesting the addition of the DP to the applicability The RCSDT notes that, per the Functional Model, a DP may “direct” an LSE to communicate requests for voluntary load curtailment and not reliability situations: Item 9 on page 47 of version 5 of the Functional Model: “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.” Furthermore, The RCSDT will forward this comment to the FMWG for their consideration in revising the language.

While outside of the scope of question five, one commenter suggested assigning the COM standard project to either the OPCPRC or RCSDT projects. The SDT explained the close coordination and collaboration between the two projects.

Organization	Yes or No	Question 5 Comment
Operating Personnel Communications Protocols SDT		<p>The OPCP SDT offers the following Requirements language that addresses a Three-Part Communication Protocol. (It is comprised of two primary Requirements and contains a footnote):</p> <p>R_. Each Reliability Coordinator, Balancing Authority, Transmission Operator, and Transmission Owner that issues a Reliability Directive during verbal Operating Communications shall employ three-part Communication Protocol to ensure that the receiving party has repeated the communication, and shall verbally confirm the communication to be correct or reinitiate the communication until a correct response is given by the recipient. An exception is allowed for Reliability Directives that are issued via “All-Call”, during which the initiator shall ensure that all the receiving parties have positively acknowledged receipt of message rather than verbally repeating the message. [Violation Risk Factor: High][Time Horizon: Real-time Operations]</p> <p>R_. Each Reliability Coordinator, Balancing Authority, Transmission Owner, Transmission Operator, Generator Operator, Transmission Service Provider, Load Serving Entity, Distribution Provider and Purchasing-Selling Entity that receives a Reliability Directive during verbal Operating Communications shall employ three-part communication protocol [footnote 1] to repeat the communication back to the initiator and await verbal confirmation from the initiator. An exception is allowed for the recipient of an “All-Call” Reliability Directive to acknowledge receipt of the message and is responsible to contact initiator if message is not understood rather than verbally repeating the message. [Violation Risk Factor: High][Time Horizon: Real time]</p> <p>Footnote 1: A Communication Protocol where information is verbally stated by a party initiating a communication, the information is repeated back correctly (not necessarily verbatim) to the party that initiated the communication by the second party that received the communication, and the same information is verbally confirmed to be correct by the party who initiated the communication.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that we are addressing the Blackout Recommendation #26 regarding “tighten communications protocols, especially during alert and emergency situations” in our proposed definition and requirements for COM-002. We have not precluded issuance of Reliability Directives by non-verbal means and the requirements of proposed COM-002 would apply. Respecting the importance of Reliability Directives during Emergency situations, the RCSDT does not believe that exceptions to the clear, concise three part communications indicated in COM-002 are appropriate regardless of the medium used to communicate. In addition, the current format of the requirements provides more effective way to measure compliance.</p>		
Ameren	No	(1) As stated in #4 above, the definition of Reliability Directive is not clear. (2) The VSLs for R3 appear to have some redundancy. (3) Also in R3, the phrase regarding R2 should be changed to “(as described in R2, above)”
<p>Response: The RCSDT thanks you for your comment.</p> <p>1) Please see response to question 4.</p>		

Organization	Yes or No	Question 5 Comment
<p>2) The RCSDT concurs. We have deleted the Severe VSL and moved the High VSL to the Severe category.</p> <p>3) We have revised the phrase to be consistent with the verbiage in R2 as follows: “per Requirement R2” which meets the intent of your comment “as described”.</p>		
Southwest Power Pool	No	<p>1) By NERC’s Functional Model the RC, BA, TOP, and DP issues directives. (DP to LSE)COM-002-3 R2... the recipient of a Reliability Directive issued per Requirement R1, shall repeat the intent of the Reliability Directive back to the issuer of the Reliability Directive.</p> <p>2) COM-003-1 R5... shall use Three-part Communications when issuing a directive during verbal Interoperability Communications. Implementation Plan for COM-002-3 states R2 will stay, for COM-003-1 states that COM_002-3 R2 will go away. The two requirements don’t agree with each other, COM-002-3 R2 wants the Intent repeated back, where COM-003-1 R5 per the Three-part Communication definition “...the information is repeated back correctly to the party that initiated the communication”.</p>
<p>Response: The RCSDT thanks you for your comment. 1) The RCSDT notes that, per the Functional Model, a DP may “direct” an LSE to communicate requests for voluntary load curtailment and not reliability situations:</p> <p>Item 9 on page 47 of version 5 of the Functional Model: “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.”</p> <p>The RCSDT will forward this comment to the FMWG for their consideration in revising the language.</p> <p>2) The RCSDT believes that we are addressing the Blackout Recommendation #26 regarding “tighten communications protocols, especially during alert and emergency situations” in our proposed definition and requirements for COM-002. The RCSDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RCSDT along with the OPCPSDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RCSDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003. Merging of the two standards is a work in progress and will ultimately be decided by stakeholder consensus.</p>		
Central Lincoln	No	<p>Consider the following example. Director calls Directee. Telephone is answered by the Directee’s receptionist. Director states that he has a Reliability Directive, and proceeds to deliver it. Receptionist manages to parrot the directive, but has no clue what is being asked. Director confirms receptionist has parroted the directive accurately. Both parties have met the requirements (avoiding a high risk, severe violation), but the three way conversation only wasted the time of both parties and delayed the performance of the directive. The Director should be required to attempt to reach someone with the authority and understanding needed to carry out the</p>

Organization	Yes or No	Question 5 Comment
		directive.
<p>Response: The RCSDT thanks you for your comment. The requirements of the standard do not consider how staffing at a particular functional entity is achieved. This is covered in the PER standards. It is incumbent on the registered entity to comply with the requirements of the COM-002 standard as well as all other requirements, some of which will likely be violated in the example above.</p>		
CECD	No	<p>For R3, the drafting team should clarify that if a directive is reissued due to a misunderstanding the receiving party should repeat the reissued directive so that the RC, BA or TOP can verify that the directive is understood correctly.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that this situation is covered by R2.</p>		
Duke Energy	No	<ul style="list-style-type: none"> o It is not clear whether Requirements R2 and R3 are intended to apply to other than verbal Reliability Directives. We have difficulty envisioning how “repeat back” and “acknowledge the response” would be expected to work with electronic communications. o Delete the phrase “issued per Requirement R1” from R2, since R1 should be deleted per our Comment #4 above. o Revise R3 as follows, to conform to our proposed revised definition in Comment #4 above: “Each Reliability Coordinator, Transmission Operator, and Balancing Authority that initiates a Reliability Directive shall acknowledge the response from the recipient as correct, or reissue the Reliability Directive to resolve any misunderstandings.” o We believe that only 2 VSLs are appropriate for R3. <ul style="list-style-type: none"> o Lower - The responsible entity issued a Reliability Directive, but did not acknowledge that the recipient repeated the intent of the Reliability Directive correctly. o Severe - The responsible entity issued a Reliability Directive and failed to reissue the Reliability Directive to resolve any misunderstandings when the intent of the Reliability Directive was not repeated correctly by the recipient.
<p>Response: The RCSDT thanks you for your comment. The requirements of COM-002 do not preclude non-verbal issuance of directives. It is incumbent on the entity to ensure compliance with the requirements</p> <p>R2: We have not retired R1 (see response to Q4) and therefore do not feel this is an appropriate revision.</p> <p>R3: See response to question 4. The RCSDT believes that R3 is appropriate as written.</p> <p>VSL: The RCSDT has deleted the Severe VSL and moved the High VSL to Severe. We believe that there are two possible actions within the</p>		

Organization	Yes or No	Question 5 Comment
requirement and failure to perform either warrants a Severe VSL.		
Exelon	No	Please clarify R2 to 'repeat back' a Directive; the definition of Directive does not distinguish between verbal and other methods of communication. Is an electronic response to a verbal or non-verbal Directive allowed?
Response: The RCSDT thanks you for your comment. The requirements of COM-002 do not preclude non-verbal issuance of directives. It is incumbent on the entity to ensure compliance with the requirements.		
Manitoba Hydro	No	R2 requires “recipient to repeat back” and R3 requires “RC, TOP, BA to acknowledge”. This procedure is NOT identified as Three Part Communication which in fact is. Three Part Communication should be a common theme for all entities, including RC’s. So why not use the same or similar Requirement as used in COM-002-2 R2 Three-Part Communication.
Response: The RCSDT thanks you for your comment. The concept of three part communication is in existing COM-002-2, R2 and a definition for the term is being proposed by the OCPD SDT. The RCSDT feels that the concept of a Reliability Directive is a unique and important tool for RC, BA and TOP to maintain reliability that is separate from that effort. The requirements of COM-002 are explicit for Reliability Directives and are consistent with parts of the directives in FERC Order 693. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RCSDT have developed for COM-002. This will further the efforts of the OCPD SDT in achieving stakeholder consensus for their proposed requirements in COM-003. Merging of the two standards is a work in progress and will ultimately be decided by stakeholder consensus.		
E.ON U.S.	No	See comment to question 8.

NERC	No	See response to Question 4.
Response: The RCSDT thanks you for your comment. Please see response to question 4.		
PPL	No	Suggest removing Purchasing-Selling Entity from the standard as a PSE does not receive Reliability Directives from a BA, RC, or TOP.
Response: The RCSDT thanks you for your comment. Prior stakeholder comments (during previous postings of this standard) indicated that PSE should be an applicable entity.		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 5 Comment
Independent Electricity System Operator	No	The High and Severe VSLs for R3 appear to be the same. We suggest to remove the High VSL and change the Severe VSL to: "The responsible entity issued a Reliability Directive, but did not acknowledge that the recipient in R2 repeated the intent of the Reliability Directive correctly OR resolve any misunderstandings when the intent of the Reliability Directive was not repeated correctly by the recipient."
<p>Response: The RCSDT thanks you for your comment. We have deleted the Severe VSL and moved the High VSL to the Severe category. We believe this meets the intent of your comment.</p>		
South Carolina Electric and Gas	No	The SDT needs to evaluate the redundancy associated with COM-003-1 Req 5 and COM-002-3 Req 2&3.
<p>Response: The RCSDT thanks you for your comment. The RSDT does not believe that there is redundancy between the standards. COM-002 relates only to Reliability Directives while COM-003 deals with other forms of communication.</p>		
Hydro-Québec TransEnergie (HQT)	No	The VSLs for R3 appear to have some redundancy. The Severe VSL and the second condition in the High VSL appear to be similar or the same. We suggest remove the High VSL, and revise the Severe VSL to:"The responsible entity issued a Reliability Directive, but did not acknowledge that the recipient in R2 repeated the intent of the Reliability Directive correctly OR resolve any misunderstandings when the intent of the Reliability Directive was not repeated correctly by the recipient."
Northeast Power Coordinating Council	No	The VSLs for R3 appear to have some redundancy. The Severe VSL and the second condition in the High VSL appear to be similar or the same. Suggest removing the High VSL, and revise the Severe VSL to:"The responsible entity issued a Reliability Directive, but did not acknowledge that the recipient in R2 repeated the intent of the Reliability Directive correctly OR resolve any misunderstandings when the intent of the Reliability Directive was not repeated correctly by the recipient."
<p>Response: The RCSDT thanks you for your comment. We have deleted the Severe VSL and moved the High VSL to the Severe category. We believe this meets the intent of your comment.</p>		
PNGC Power (15 member utilities)	No	There is a chance that a reliability directive given to a smaller entity will be taken by a receptionist or answering service. Requirement R2 should be more specific about contacting an operational authority directly to relay reliability directives.
<p>Response: The RCSDT thanks you for your comment. The requirements of the standard do not consider how staffing at a particular functional entity is achieved. This is covered in the PER standards. It is incumbent on the registered entity to comply with the requirements of the COM-002 standard as well as all other requirements, some of which will likely be violated in the example above.</p>		

Organization	Yes or No	Question 5 Comment
Midwest ISO Standards Collaborators	No	<p>We agree with most of this standard and the apparent intent. However, there are some specific issues. For instance, measurement of compliance to R1 could be challenging. As the VSL is written, it would appear the compliance auditor could judge if a Reliability Directive should have been issued. The VSL language that is problematic is “The responsible entity that required actions to be executed”. Who determines that actions were required? One could argue that failure to identify a communication as a Reliability Directive means that actions weren’t required but it is doubtful the compliance authorities would take this approach. Thus, there would appear to be great judgment left to the compliance auditor in determining if a Reliability Directive should have been issued. The combination of the COM-002-3 standard and the definition of Reliability directive do not clearly specify that the communication is verbal and between only two responsible entities. Otherwise, the communication could be considered a blast call, written correspondence or conversation between operators within the same responsible entity. We have offered proposed modifications to the definition of Reliability Directive in Q5 to solve this issue. Alternatively, the issue could be addressed by modifying the requirements. The VSLs for R3 appear to have some redundancy. The Severe VSL and the second condition in the High VSL appear to be similar or the same.</p>
NERC Standards Review Subcommittee	No	<p>We agree with most of this standard and the apparent intent. However, there are some specific issues. For instance, measurement of compliance to R1 could be challenging. As the VSL is written, it would appear the compliance auditor could judge if a Reliability Directive should have been issued. The VSL language that is problematic is “The responsible entity that required actions to be executed”. Who determines that actions were required? One could argue that failure to identify a communication as a Reliability Directive means that actions weren’t required but it is doubtful the compliance authorities would take this approach. Thus, there would appear to be great judgment left to the compliance auditor in determining if a Reliability Directive should have been issued.</p> <p>The combination of the COM-002-3 standard and the definition of Reliability directive do not clearly specify that the communication is verbal and between only two responsible entities. The Severe VSL and the second condition in the High VSL appear to be similar or the same.</p>
<p>Response: The RCSDT thanks you for your comment.</p> <p>R1: The VSL is a compliance tool that is ONLY used after a violation of the requirement has been determined. COM-002 does not provide guidance on when to issue a Reliability Directive, only that, when they issue Reliability Directives, they comply with the requirements of COM-002. Proposed IRO-</p>		

Organization	Yes or No	Question 5 Comment
<p>001-2, R1 covers the issue of conditions that merit issuing a Reliability Directive.</p> <p>Blast Call: The intent of the definition is to not preclude text or other forms of communication for issuing Reliability Directives. However, entities are still obligated to comply with the requirements of COM-002.</p> <p>VSL: We have deleted the Severe VSL and moved the High VSL to the Severe category. We believe this meets the intent of your comment.</p>		
FirstEnergy	No	<p>We believe that this standard should be either handed to the OPCPSDT (Project 2007-02) or the OPCPSDT should hand over the COM-003-1 standard to this RCSDT (Project 2006-06); and then COM-002 and COM-003 should be merged. For further explanation of our suggestions, see our comments in Question #8.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RCSDT along with the OPCPSDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RCSDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003. Merging of the two standards is a work in progress and will ultimately be decided by stakeholder consensus.</p>		
American Transmission Company	Yes

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 5 Comment
Pepco Holdings, Inc	Yes	
Southern Company Services	Yes	
US Bureau of Reclamation	Yes	
Western Area Power Administration	Yes	
Western Electricity Coordinating Council	Yes	
Puget Sound Energy	No	Under the current proposed language of R2, it appears possible that a recipient of a Reliability Directive not identified as such may still be held responsible for failing to comply with R2, because the word “per” has several meanings. While those meanings do include “in accordance with”, it would be clearer to simply use that phrase. As a result, recommend the replacement of the phrase “issued per” with “identified as such in accordance with”.
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that the suggested revision does not provide additional clarity to the requirements.</p>		
ITC Holdings	Yes	None
Northeast Utilities	Yes	Support the intent of the changes. However, it is unclear if the mechanics of R1 require the initiator to actually state “This is a Reliability Directive ...”.
<p>Response: The RCSDT thanks you for your comment. The RCSDT intends for such a statement to be made. Using that exact verbiage in a requirement is too prescriptive and we leave the exact language up to the issuer as long as they identify it as a Reliability Directive.</p>		
American Electric Power	Yes	Why is the term “three part communications” not used in this set of requirements?
<p>Response: The RCSDT thanks you for your comment. While the requirements embody three part communications, the RCSDT believes it is clearer to have explicit requirements for each part of the process that requires a specific action.</p>		
ERCOT ISO	No	R1: ERCOT ISO recommends that the requirement be revised to simply state that the entity has to identify

Organization	Yes or No	Question 5 Comment
		<p>when it is a reliability directive, such that it reads as follows:</p> <p>R1. When applicable, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>The deleted language introduces subjectivity and is unnecessary. The use of the defined term implicitly determines when Reliability Directives are issued and it is unnecessary to impose the condition precedent of identifying an action as Reliability Directive. This is unnecessary and just creates confusion.</p> <p>R2: ERCOT ISO recommends removal of “the intent” such that it reads as follows:</p> <p>R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat the Reliability Directive back to the issuer of the Reliability Directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>ERCOT ISO believes using “intent” in this requirement was intended to mitigate the practical fact that it is difficult to repeat, verbatim, a directive. However, use of the word intent could introduce confusion. A directive will require certain actions to accomplish a specific purpose or to solve a specific problem. Thus, the intent of a directive has two components to the intent; the first is the specific actions to be taken and the second is the underlying reason for those actions. The recipient will obviously be privy to the former, but perhaps not the latter. To remove any ambiguity as to whether intent means the actions or the issue to be solved by such actions, the word should be removed. ERCOT believes there is little risk that an auditor will issue a violation if a repeated directive is not verbatim, but reflects the actions to be taken pursuant to the directive.</p> <p>Further, ERCOT ISO recommends working closely with the Operating Personnel Communication Protocol SDT to address all-calls as exceptions. It is practically unreasonable to require multiple recipients on the same communication to repeat the directive back. In fact, it is counterproductive because the time it takes to do that would delay the recipients from taking the needed reliability action(s). ERCOT recommends the following language to address “all-calls”:</p> <p>(COM-003) R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive shall repeat the Reliability Directive back to the issuer of the Reliability Directive. An exception is allowed for Reliability Directives that are issued via “All-Call” communications. For All-Calls, the entity issuing the directive shall require recipients to acknowledge receipt of message.</p>

Organization	Yes or No	Question 5 Comment
		<p>R3: ERCOT ISO recommends that R3 be combined with R2. Regardless of whether it is combined with R2, the identification precondition should be removed such that the requirement reads as follows:</p> <p>R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive shall acknowledge the response from the recipient of the Reliability Directive in R2 as correct or reissue the Reliability Directive to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>The identification pre-condition is unnecessary – again, the defined term is self-executing in terms of situational application. Imposition of this superfluous language merely creates the potential for confusion.</p> <p>M1: ERCOT ISO recommends removing “required actions to be taken” language for the same reason this pre-condition does not make sense in the requirement, as described above.</p> <p>M3: ERCOT ISO recommends that “Directive” be replaced with “Reliability Directive” because Directive is not the full defined term.</p>
<p>Response: The RCSDT thanks you for your comment.</p> <p>R1: The RCSDT believes that the requirement, as written is clear and disagrees that it introduces subjectivity. COM-002 does not provide guidance on when to issue a Reliability Directive, only that, when they issue Reliability Directives, they comply with the requirements of COM-002. We feel that adding the phrase “When applicable” adds subjectivity to the requirement.</p> <p>R2: Without the words “the intent”, the requirement could be interpreted to mean a verbatim repeat of the Reliability Directive. The RCSDT does not intend for this to be the case and believes that the requirement, as written, is clear and provides sufficient flexibility to meet the requirement. The requirements of COM-002 do not preclude non-verbal (e.g. “all calls”) issuance of directives regardless of the medium. It is incumbent on the entity to ensure compliance with the requirements. The RCSDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RCSDT along with the OPCSDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment.</p> <p>R3: The RCSDT believes that the steps in R2 and R3 are separate and distinct actions that require separate requirements. Otherwise, we would have compound requirements. We concur with your suggested edit to R3.</p> <p>M1; We did not make the revision to R1 and therefore M1 is sufficient as written.</p> <p>M3: We have revised M3 as suggested and to conform to revised R3.</p>		

6 Do you agree with the use of the defined term “Reliability Directive” in revisions to the Requirements in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The comments regarding question six ranged from small entities being excluded to if regulatory or statutory requirements covers NERC standards. The SDT addressed these by noting registration is not in the SDT scope and NERC’s general council should be contacted for regulatory issues.

A few commenter’s expressed concern with the VSL for R2 and one suggested the words “per Requirement 2,” should be added. The SDT believes the phrase “per Requirement 2” is not necessary as a VSL is only applied AFTER a compliance violation is determined.

Value added comments such as a concern of the use of the word “threat” as it can be defined as cyber-related and suggested replacing “Operating Personnel” with “System Operator” were also made. The SDT concurred and removed the word “threat” and replaced it with “condition” and also made the revision to System Operator.

There were numerous comments regarding the definition of Reliability Directive with multiple wording suggestions. While slightly out of scope for question six, the SDT expected and viewed these as attempting to reach middle ground.

Some commenter’s expressed concern over clarify that the RC has three separate actions. The RC can act, direct others to act, or issue Reliability Directives. The SDT modified R1 to read: “ Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.”

Note: Based on discussions with FERC staff, the SDT agreed to make the following changes:

IRO-001-2 Requirements R4, R5 and associated Measures and VSLs are moved to IRO-005-4

IRO-001-2 Requirements R6, R7 and associated Measures and VSLs are moved to IRO-002-2

Organization	Yes or No	Question 6 Comment
Calpine Corporation		

Organization	Yes or No	Question 6 Comment
Public Service Enterprise Group Companies		
Operating Personnel Communications Protocols SDT		No Comment
FirstEnergy	No	Although we agree that a clear definition of Reliability Directive should be included in IRO-001-2, the definition should be revised per our comments in Question #8.
Response: The RCSDT thanks you for your comment. Please see response to question 8.		
North Carolina Municipal Power Agency #1	No	For IRO-001-2, the VSL for R2 should retain the words "per Requirement 2," because the requirement itself provides for exceptions to when it is permissible for a directive not to be followed. Requirement 3 then addresses the required action an entity must take in a case where these exceptions apply. Without these words, it appears that a VSL of "Severe" may be assigned if a directive isn't followed under any circumstances.
Response: The RCSDT thanks you for your comment. The phrase "per Requirement 2" is not necessary as a VSL is only applied AFTER a compliance violation is determined. The requirement provides the exceptions and compliance will be judged based on this.		
NERC	No	<p>In principle, NERC staff disagrees with the necessity of defining a term "Reliability Directive." However, the principle involved in the standard is valid. The standard needs to ensure that if the Reliability Coordinator directs an entity to take action that results in an adverse reliability impact, that entity has a chance to raise valid objection to that action.</p> <p>Additional clarification is needed to determine if regulatory or statutory requirements covers NERC standards. One possible solution would be to modify R3 from "its inability to perform" to "its inability or concern to perform."</p> <p>Furthermore, in R4 and R5 the RC is expected to identify "threats" and notify all impacted parties. We have concerns that "threat" can be defined as cyber-related. Was the standard intended to cover all anticipated threats, or just transmission/operating issues?</p> <p>R6 Since Operating Personnel is not a NERC defined term, we suggest replacing "Operating Personnel" with "System Operator."</p>
Response: The RCSDT thanks you for your comment.		

Organization	Yes or No	Question 6 Comment
<p>“Concern”: We believe that your concern is covered by the “unless such actions would violate safety, equipment, or regulatory or statutory requirements” statement in R2.</p> <p>Regulatory: The RCSDT suggests that NERC staff seek input from NERC’s General Counsel in regards to this issue.</p> <p>R4 and R5: The word threat was not intended to be cyber related. The CIP standards cover cyber “threats”. To that end, we have removed the word “threat” and replaced it with “condition”. R4, R5 and associated Measures and VSLs are moved to IRO-005-4.</p> <p>R6: We concur and have made this revision.</p>		
OC Standards Review Group	No	<p>In R1, we suggest adding “direct” in the sentence to read: “Each Reliability Coordinator shall act, “direct” or issue Reliability Directives....” During adverse reliability impact events, system operators should not be bound by a cumbersome three part communications regime that could prevent prompt responses to the event. The suggested change would allow for non reliability directives to be issued to correct adverse reliability impacts.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT agrees in principle with adding “direct” to the requirement. In addition, the requirements of COM-002 should be complied with, especially in such situations. We have revised R1 to state: Each Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. To address comments received on R1, we have also revised the Purpose Statement to: To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <p>Conforming revisions to M1 and the VSLs for R1 were also made.</p>		
Southern Company Services	No	<p>Including the requirement of issuing directives every time an action is required by an entity assumes that entities cannot work in a spirit of cooperation to maintain the reliability of the Bulk Electric System.</p>
<p>Response: The RCSDT thanks you for your comment. To address your concern, we have revised R1 to state: “Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p>To address comments received on R1, we have also revised the Purpose Statement to: To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p>		

Organization	Yes or No	Question 6 Comment
We Energies	No	<p>IRO-001-2 R1 opens the door for determining if the RC should have issued a Reliability Directive to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts which goes beyond the intention of Emergency. The RC should have any and all options to achieve the required actions, one of which is a Reliability Directive. Agreed if the RC issues a Reliability Directive it needs to be followed or notified why it can't be followed. In IRO-009"the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of" Recommend "Each Reliability Coordinator, in it's sole discretion, shall take action independently or by others or issue Reliability Directives for actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. "In addition the measures assume the RC only works through others, and others only act under Directive from the RC and do not allow for operational data to be used to show action was taken like SCADA logs, or system parameter records for any entity.</p> <p>The Data Retention is excessive, RC, BA, TOP are on a 3 yr audit cycle, others on a 6yr cycle this is way too long, recommend one full calendar year plus the current year.</p>
<p>Response: The RCSDT thanks you for your comment. To address your concern, we have revised R1 to state: Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p>To address comments received on R1, we have also revised the Purpose Statement to: To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <ul style="list-style-type: none"> o We have revised the data retention section to: The Reliability Coordinator shall retain its evidence for 90 days for Requirements R1 and Measures M1. o The Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity shall retain its evidence for 90 days for Requirements R2 and R3, Measures M2 and M3. 		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 6 Comment
American Electric Power	No	Please refer to our response to question #4.
Hydro-Québec TransEnergie (HQT)	No	Please see our proposed wording change under Q4.
Independent Electricity System Operator	No	Please see our proposed wording change under Q4.
IRC Standards Review Committee	No	Please see our proposed wording change under Q4.
Northeast Power Coordinating Council	No	Please see our proposed wording change under Question 4.
Response: The RCSDT thanks you for your comment. Please see response to Question 4.		
E.ON U.S.	No	See comments to question 4 and question 8.
Response: The RCSDT thanks you for your comment. Please see response to Question 4 and Question 8.		
Ameren	No	See response to #4.
Electric Market Policy	No	See response to Q4
Response: The RCSDT thanks you for your comment. Please see response to Question 4.		
PNGC Power (15 member utilities)	No	Small non 24/7 entities in WECC should be excluded from these requirements. Not doing so will create a financial burden for little discernable effect.
Response: The RCSDT thanks you for your comment. It is beyond the scope of the RCSDT to determine registration or compliance issues.		
Manitoba Hydro	No	The use of this definition in this requirement appears appropriate at this time, but the definition of Reliability Directive issue remain the same as identified on Question 4 of this document.

Organization	Yes or No	Question 6 Comment
Response: The RCSDT thanks you for your comment. Please see response to question 4.		
Central Lincoln	No	These requirements should be waived in the WECC region, where the RC has stated they will not be interacting with most of the registered entities. http://www.bpa.gov/corporate/business/reliability/Docs/2007/PNSC_RE_Data_Letter_2_070723.pdf
Response: The RCSDT thanks you for your comment. It is beyond the scope of the RCSDT to determine registration or compliance issues.		
US Bureau of Reclamation	No	This change is problematic in that any automatic protective element operation that trips a BES element could be construed to be an Adverse Reliability Impact. The modification eliminated the phrase “that affects a widespread area of the Interconnection” which clarified the scope of “uncontrolled separation”. We would need the definition to be adjusted to delete “uncontrolled separation” as it is included in the definition of Cascading.
Response: The RCSDT thanks you for your comment. We concur with your comment and have removed “uncontrolled separation” from the proposed definition revision.		
ISO New England Inc	No	We believe that the Reliability Directive definition should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
Response: The RCSDT thanks you for your comment. The RCSDT believes that your suggested revision would impose a requirement within the definition.		
Western Electricity Coordinating Council	No	We do not agree with the definition (see above question 4) but it does clear up when a directive is required.
Response: The RCSDT thanks you for your comment. Please see response to question 4.		
Midwest ISO Standards Collaborators	No	We largely agree with the use of the Reliability Directive term but have some suggested some refinements in the previous questions to the definition and requirements.
NERC Standards Review Subcommittee	No	We largely agree with the use of the Reliability Directive term but have some suggested some refinements in the previous questions to the definition and requirements.

Organization	Yes or No	Question 6 Comment
<p>Response: The RCSDT thanks you for your comment. Please see responses to questions 4 and 5.</p>		
<p>Duke Energy</p>	<p>No</p>	<p>We propose a revised definition of the term “Reliability Directive” in our Comment #4 above. Requirement R1 should be reworded to clarify that the RC has three separate actions. The RC can act, direct others to act, or issue Reliability Directives. Requirements R2 and R3 should be revised to include the fact that the listed entities must comply with RC directions as well as Reliability Directives, or inform the RC of their inability to comply. Measures and VSLs should also be revised accordingly.</p>
<p>Response: The RCSDT thanks you for your comment.</p> <p>Definition: Please see response to question 4 with respect to the definition.</p> <p>R1: To address your comment as well as the comments of other stakeholders, we have revised R1 to state: Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts..</p> <p>We have also revised the Purpose Statement to: To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <p>Conforming revisions to M1 and the VSLs for R1 were also made.</p> <p>R2 and R3: The RCSDT believes that revised R2 and R3 now satisfy your requested revision.</p>		
<p>American Transmission Company</p>	<p>Yes</p>	
<p>Bonneville Power Administration</p>	<p>Yes</p>

Western Area Power Administration	Yes	
Xcel Energy	Yes	
ITC Holdings	Yes	None
Pepco Holdings, Inc	Yes	Requirement R1 should recognize the RC's option to "direct others to act"
<p>Response: The RCSDT thanks you for your comment. R1: To address your comment as well as the comments of other stakeholders, we have revised R1 to state: Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p>We have also revised the Purpose Statement to: To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <p>Conforming revisions to M1 and the VSLs for R1 were also made.</p>		
ERCOT ISO	No	As an initial matter, ERCOT ISO disagrees with the definition of Reliability Directive - See response to Question 4.

Organization	Yes or No	Question 6 Comment
		<p>With respect to the use of Reliability Directive in IRO-001-2, ERCOT ISO does not necessarily take issue with using the term in this context. However, by doing so, the Drafting Team should consider whether doing so effectively defines Emergency in terms of the specific conditions that define Adverse Reliability Impact (i.e. instability, uncontrolled separation or cascading), because Reliability Directives, by definition, are only issued during emergencies, and pursuant to R1 of IRO-001-2, the relevant entities issue a Reliability Directive for instances that result in Adverse Reliability Impacts. Accordingly, use of Reliability Directive in this Standard may effectively revise the definition of Emergency (although it is arguable that the relevant specific conditions are clearly Emergency conditions), and ERCOT ISO questions whether this is appropriate. It may be advisable to not use the term here or to revise the definition to explicitly include these conditions.</p> <p>In addition, ERCOT ISO recommends the following non-substantive revisions to R1, R2 and R3.</p> <p style="text-align: center;"><u>R1</u></p> <p style="text-align: center;">SDT PROPOSED LANGUAGE</p> <p>R1. Each Reliability Coordinator shall act or issue Reliability Directives for actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p style="text-align: center;">ERCOT PROPOSED LANGUAGE</p> <p>R1. Each Reliability Coordinator shall act to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. RC actions pursuant to this requirement may include the issuance of Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p style="text-align: center;"><u>R2</u></p> <p style="text-align: center;">SDT PROPOSED LANGUAGE</p> <p>R2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with its Reliability Coordinator's Reliability Directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p>

		<p style="text-align: center;">ERCOT PROPOSED LANGUAGE</p> <p>R2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with Reliability Directives issued pursuant to R1 unless such actions would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p style="text-align: center;"><u>R3</u></p> <p style="text-align: center;">SDT PROPOSED LANGUAGE</p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform an issued Reliability Directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p style="text-align: center;">ERCOT PROPOSED LANGUAGE</p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator if it cannot perform a Reliability Directive because it would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p>
<p>Response: The RCSDT thanks you for your comment. Please see responses to your comments on questions 4 and 5.</p> <p>Definitions: An Emergency is a system condition or event. Adverse Reliability Impact is the result of an Emergency or some other condition or event.</p> <p>To address your comment as well as the comments of other stakeholders, we have revised R1 to state: Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p>We have also revised the Purpose Statement to: To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <p>Conforming revisions to M1 and the VSLs for R1 were also made.</p> <p>R1, R2, R3: The RCSDT thanks you for your suggested revisions to R1, R2 and R3. Revised wording best reflects stakeholder consensus. The RCSDT developed wording of the requirements provides clear direction for actions of applicable entities and to provide clarity regarding compliance.</p>		

Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Several commenters made suggestions regarding R2. The original requirement was designed to accomplish in one requirement what is proposed by the commenters as three procedural requirements. R2 is worded to focus on defining what a “compliant plan” is. In the current requirement a “proposed plan” is not the same as a “compliant plan”.

The SDT viewed what the commenters are suggesting as follows:

- The initiating RC would submit its “proposed plan” to the other RCs
- The receiving RCs would provide the initiating RC with their responses indicating whether or not they agree with the proposed roles/actions offered by the initiating RC
- If one or more RCs do not agree with the roles/actions, then the initiating RC would be required to offer an alternative proposal (and go back to the first bullet)
- When all RCs acknowledge that the proposed roles/actions in the revised “proposed plan” are acceptable, then and only then would the “proposed plan” become a “compliant plan”

A closer reading of the current R2 would show the current R2 accomplishes the exact same result but does so without interjecting the need for documenting the intervening processes. The SDT does not see the need to document why each proposal was or was not accepted; nor does the SDT see the need to document the negotiations that are involved in getting to “an agreed to plan”. For example the comments’ subrequirement to show the RC submitted its plan would require a paper trail for the request; followed by a paper trail for the responses, followed by more paperwork if the RCs are not in agreement. In the end, the only action that matters (in both the SDT version and in the commenters alternative version) is a plan that works, and a plan that if others are involved must have their concurrence that those others will participate.

R2 does not impose a requirement to get agreements; what R2 does is to require that a “compliant plan” be developed. A proposed plan does not solve problems. That proposed plan is NOT compliant with R2 if it only assumes that other RC will effect the actions in the proposal; neither is it compliant if the proposed actions are not acceptable to the other RCs who are required to act. To be compliant the initiating RC must either have the concurrence (i.e. agreement) of the other RCs for their respective part(s) in the proposed plans OR the plan must not include those RCs.

R2 says to be compliant the other RC must agree with the “proposed plan” before that “proposed plan” is acceptable as a “compliant plan”. Having a plan that requires someone else to do an action, but that other entity will not effect that action, will not resolve the problem at hand. Further having documentation that someone refuses to participate in the proposed plan does nothing to solve the problem at hand.

<p>documentation that someone refuses to participate in the proposed plan does nothing to solve the problem at hand.</p>		
<p>Midwest ISO Standards Collaborators</p>	<p>No</p>	<p>R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable. There is an extra “or” in the R8 clause: “unless such actions would violate safety, equipment, or regulatory or statutory requirements”.</p> <p>IRO-014-2 R2 VSLs differentiate violations based on whether the plans, processes, and procedures were distributed or agreed to. How can another RC agree to them if it has not received them? Because it is unlikely that an RC will make notifications without exchanging reliability information or vice versa for IRO-014-2 R3, we suggest a more appropriate delineation for the VSLs would be based on the number of other impacted RCs that were not informed. IRO-014-2 R4 VSLs should be defined based upon the number of conference calls the RC does not participate in. R4 requires each RC to participate in “agreed upon conference calls”. Because the statement “conference calls” is plural, VSLs need to be set based on the aggregate of calls not participated in. Failure to assign VSLs in this way is equivalent to setting the requirement to “agreed upon conference call” and causes the VSLs to be in violation guideline 3 that the Commission established in their June 2008 Order on VSLs. Guideline 3 states that the VSL must be consistent with the requirement and cannot “redefine or undermine the requirement”. Clearly, these VSLs do. R5’s Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSLs since Severe uses the word any. Based on the SDT’s response to our comment from the last time, we believe instead of any they mean “no impacted”. Unfortunately, “any impacted” could be one or two or higher. If it is one, it matches the Moderate VSL. The VSL for R8 needs to include the “unless such actions would violate safety, equipment, regulatory or statutory requirement” clause.</p> <p>In R1, should “Operating Procedures, Processes, or Plans” be “Operating Procedures, Operating Processes, or Operating Plans” to comport with the definitions in the NERC Glossary of Terms. We believe “Operating” is implied on “Processes” and “Plans” but believe it is more appropriate to make the meaning explicit with this modification since we are dealing with formal definitions.</p>

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 7 Comment
NERC Standards Review Subcommittee	No	<p>R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable. There is an extra “or” in the R8 clause: “unless such actions would violate safety, equipment, or regulatory or statutory requirements”.</p> <p>IRO-014-2 R2 VSLs differentiate violations based on whether the plans, processes, and procedures were distributed or agreed to. How can another RC agree to them if it has not received them? Because it is unlikely that an RC will make notifications without exchanging reliability information or vice versa for IRO-014-2 R3, we suggest a more appropriate delineation for the VSLs would be based on the number of other impacted RCs that were not informed. IRO-014-2 R4 VSLs should be defined based upon the number of conference calls the RC does not participate in. R4 requires each RC to participate in “agreed upon conference calls”. Because the statement “conference calls” is plural, VSLs need to be set based on the aggregate of calls not participated in. Failure to assign VSLs in this way is equivalent to setting the requirement to “agreed upon conference call” and causes the VSLs to be in violation guideline 3 that the Commission established in their June 2008 Order on VSLs. Guideline 3 states that the VSL must be consistent with the requirement and cannot “redefine or undermine the requirement”. Clearly, these VSLs do. R5’s Severe VSL is redundant with the Moderate VSL. Unfortunately, “any impacted” could be one or two or higher. If it is one, it matches the Moderate VSL. The VSL for R8 needs to include the “unless such actions would violate safety, equipment, regulatory or statutory requirement” clause.</p>
Independent Electricity System Operator	No	<p>R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, Subrequirements R2.1 places a burden to the initiating RC for actions over which it may not have any control, viz. agreeing to the procedures, process or plan by the receiving RCs that are required to take actions. We believe there should be requirements for: a. The initiating RC to seek agreements by the other RCs that are required to take actions; b. The receiving RCs to indicate agreement, or otherwise with a reason; and c. The initiating RC to revise the procedures, process or plan. These requirements would place the needed responsibilities to the appropriate entities. If the SDT agrees with revising R2 as suggested, then other requirements that may be affected by this change may need to be revised accordingly. There is an extra “or” in the R8 clause: “unless such</p>

Organization	Yes or No	Question 7 Comment
		<p>actions would violate safety, equipment, or regulatory or statutory requirements”.</p> <p>IRO-014-2 R2 VSLs differentiate violations based on whether the plans, processes, and procedures were distributed or agreed to. If an intended RC never received the plans, processes and procedures, it would not be aware of the need to agree to them. Hence, if the plans, etc. were not distributed, then the initiating RC will be assigned a Moderate VSL but never any higher VSLs even if no agreements were received (since no other RCs had received the plans to begin with). We suggest the SDT to consider rearranging the VSLs and in accordance with any changes to R2 reflecting our suggested changes summarized under Q7. Because it is unlikely that an RC will make notifications without exchanging reliability information or vice versa for IRO-014-2 R3, we suggest a more appropriate delineation for the VSLs would be based on the number of other impacted RCs that were not informed.</p> <p>IRO-014-2 R4 VSLs should be defined based upon the number of conference calls the RC does not participate in. R4 requires each RC to participate in “agreed upon conference calls”. Because the statement “conference calls” is plural, VSLs need to be set based on the aggregate of calls not participated in. A proposed plan does not solve problems. That proposed plan is NOT compliant with R2 if it only assumes that other RC will effect the actions in the proposal; neither is it compliant if the proposed actions are not acceptable to the other RCs who are required to act. To be compliant the initiating RC must either have the concurrence (i.e. agreement) of the other RCs for their respective part(s) in the proposed plans OR the plan must not include those RCs.</p> <p>R2 says to be compliant the other RC must agree with the “proposed plan” before that “proposed plan” is acceptable as a “compliant plan”. Having a plan that requires someone else to do an action, but that other entity will not effect that action, will not resolve the problem at hand. Further having documentation that someone refuses to participate in the proposed plan does nothing to solve the problem at hand.</p> <p>IRO-014 VSLs: R2: The VSLs are differentiated as you suggest.</p> <p>R3: The RCSDT does not believe that is the correct delineation of the requirement which requires notification of each impacted RC. What if there is only one and there was no notification?</p> <p>R4: The RCSDT contends that the requirement specifies participation in all agreed upon calls. If the RC misses an agreed upon call, it has failed to meet the requirement.</p> <p>R5: The RCSDT disagrees. If there is only one impacted RC and no notification is made, it should be a Severe violation.</p> <p>R8: The phrase does not need to be in the VSL. If a plan was not implemented due to safety reasons, then the requirement was not violated and the VSL would not be considered.</p> <p>R1: We have revised the requirement per your suggestion to R1, R2 and R3.</p>
Electric Market Policy	No	<p>Agree with most. However, the language proposed for use in IRO-014-2 @ R5 and R6 needs clarity. There needs to be a way to determine who is required to do what depending upon whether the party is a) Reliability Coordinator who has the identified Adverse Reliability Impact) An impacted affected Reliability Coordinator. Suggest revising so that these read similar to R7 and R8.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT does not understand your comment. We believe that the requirements are clear as written as to what each entity must do.</p>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 7 Comment
Western Area Power Administration	No	Comments: In R1 & R2, the first sentence is redundant. The phrase which was added “For conditions or activities that impact other RC Areas...” should be removed.
Response: The RCSDT thanks you for your comment. The SDT agrees and has made the suggested revision.		
OC Standards Review Group	No	In R1.6, we suggest adding “BES” before “conditions” such that the sentence reads: “Authority to act to prevent and mitigate “BES” conditions.....”
<p>Response: The RCSDT thanks you for your comment. The SDT disagrees. Adverse Reliability Impact is defined as follows:</p> <p><i>The impact of an event that results in frequency-related instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that affects a widespread area of the Interconnection.</i></p> <p>If a condition will cause interconnection “cascading, instability, ...” the RC should be mandated to act whether or not the initiating condition is part of the BES.</p>		
Florida Municipal Power Agency and Some Members	No	In requirements R7 and R8, the term mitigation plan is used. Since mitigation plan has another specific meaning (e.g., a mitigation plan for non-compliance with a standard), FMPA suggests using a different term with the same meaning, e.g., ameliorative plan, alleviation plan, abatement plan, to help avoid confusion.
Response: The RCSDT thanks you for your comment. The SDT disagrees. Lower case “mitigation” is a proper English word		
NERC	No	NERC staff believes that the original language in IRO-016-1 was clearer than the proposed requirements R5 through R8. Additionally, we believe that this standard is already covered in the certification process. We recommend that this standard, with the exception of R4, be retired and the certification process be revisited to ensure that IRO-016-1 R1 is covered. Furthermore, operating guidelines should be developed to address the content of R5 through R8.
<p>Response: The RCSDT thanks you for your comment. The RCSDT is not clear how requirements to make notifications, develop and implement mitigations plans belong in the certification process. We are also unclear what constitutes an operating guideline. Based on this, we will retain the requirements in IRO-014 as supported through the stakeholder process. Requirements R5 through R8 were brought into IRO-014 from IRO-016 as you state. These requirements were revised to eliminate compound requirements. The RCSDT feels that requirements are clear as written and stakeholder comments indicate consensus has been achieved.</p>		
Duke Energy	No	R1.6 - We believe that the word “system” should be added before the word “conditions” to provide additional

Organization	Yes or No	Question 7 Comment
		clarity.
Response: The RCSDT thanks you for your comment. We agree and have made the suggested edit.		
US Bureau of Reclamation	No	We would suggest that the language should indicate the plans need to address “neighboring RC areas” to limit the scope of the plans for "other RC areas" and not try to cover the whole NERC footprint.
Response: The RCSDT thanks you for your comment. The requirements deal with those RC that are seen to have an impact on a problem. To the extent that one RC expects another RC to be part of a solution, the requirement allows the initiating RC to “propose” a plan of actions and to seek help. If the other RC disagrees with the proposal, the latter RC would not give agreement.		
Bonneville Power Administration	Yes	
Central Lincoln	Yes	
FirstEnergy	Yes	
Pepco Holdings, Inc	Yes	
PNGC Power (15 member utilities)	Yes	
PPL	Yes	
South Carolina Electric and Gas	Yes

Western Electricity Coordinating Council	Yes	
Xcel Energy	Yes	

Organization	Yes or No	Question 7 Comment
ITC Holdings	Yes	None
American Electric Power	Yes	The use of “. . . act and/or issue . . .” may be more descriptive in Requirement 1 rather than “. . . act or issue . . .”
Response: The RCSDT thanks you for your comment.		
ERCOT ISO	No	<p>ERCOT ISO would like to add clarification to the Purpose statement and the following requirements (1-4) to alleviate potential interpretation issues. The remaining requirements in IRO-014 are adequately addressed with respect to “within the Interconnection” if the Adverse Reliability Impact term is modified as identified above in response to Question All the recommendations tie together.</p> <p>Purpose: To ensure that each Reliability Coordinator’s operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas “within its Interconnection” and to preserve the reliability benefits of interconnected operations.</p> <p>R1. For conditions or activities that impact other Reliability Coordinator Areas “within its Interconnection”, each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following:</p> <p>R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators “within its Interconnection” to take action (e.g., make notifications, exchange information, or coordinate actions) shall be:</p> <p>R3. For conditions or activities that impact other Reliability Coordinator Areas “within its Interconnection”, each Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information.</p> <p>R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly, and other communication forums with impacted Reliability Coordinators “within its Interconnection”.</p> <p>Additionally, ERCOT ISO recommends that the weekly minimum be eliminated and such meeting should be pursuant to an “agreed upon schedule” at the discretion of the Reliability Coordinators. The language notes “impacted” Reliability Coordinators. The “impacted” implies that it is relative to a discrete incident or time period, which is consistent with the purpose of the standard. Accordingly, it is unclear on the need for and</p>

Organization	Yes or No	Question 7 Comment
		<p>unbounded ongoing meeting obligation.</p> <p>ERCOT ISO also suggests changing the R4 VSL to allow lower VSL for missing an occasional meeting. The VSL can be elevated based on the number of missed calls or meetings. Severe would seem to be more appropriate if the entity refused to participate or calls were not initiated at all.</p> <p>Furthermore, with respect to R4, It is not clear what value this requirement adds generally. The requirement is related to “impacted” RCs. This implies that the meetings are relative to discrete incidents/time periods, which is consistent with the purpose of the standard. Accordingly, given the apparent temporary, incident specific nature of an “impacted” entity, it doesn’t make sense to impose an unbounded ongoing meeting obligation. Furthermore, the establishment of the general procedures governs the objective actions impacted RCs will take for all situations. If there is an incident where an RC is “impacted”, it will manage the situation by application of the established objective procedures – that is the intent of having those procedures in place under the standard. Accordingly, it is questionable whether the weekly meeting obligation is necessary or serves any purpose. At a minimum, the weekly meeting obligation should be eliminated and such meeting should be pursuant to an “agreed upon schedule” to give discretion to the RCs.</p> <p>Finally, with respect to R1 – 1.6, in order to provide certainty to the regulated community, ERCOT ISO does not support the change to the condition precedent for action under the requirement from actual to potential Adverse Reliability Impacts. Defining an obligation in terms of “potential” situations is vague and ambiguous. This should generally be avoided because it creates ambiguity and uncertainty for both the regulated entity and regulator.</p>
<p>Response: The RCSDT thanks you for your comment.</p> <p>R1-R3: The SDT disagrees. If an RC does not have any other impacted RCs, then no operating processes, procedures or plans would be necessary. This would mean the R1-R3 would not apply to that RC.</p> <p>R4 and VSL- The RCSDT has revised R4 to add the words “within the same Interconnection” to the end of R4. We have revised the VSL accordingly. The RCSDT contends that the requirement specifies participation in all agreed upon calls. If the RC misses an agreed upon call, it has failed to meet the requirement.</p> <p>R1.6 – This refers to studying various system conditions and developing operating processes, plans or procedures to address them. If an entity has run a study and determined that there is an impact on another RC, then a process/plan/procedure should be developed and agree to in order to address the issue.</p>		

7 Do you have any other comment, not expressed in questions above, for the RC SDT?

Summary Consideration: The RC SDT thanks all commenters for their review of these proposed revisions and has incorporated many of the comments in the next revision of these requirements. In general, the RC SDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with the applicable parts of the directives in FERC Order 693. The work of the RC SDT along with the OCPD SDT and the RTO SDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by commenters. Consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RC SDT have developed for COM-002. This will further the efforts of the OCPD SDT in achieving stakeholder consensus for their proposed requirements in COM-003. The intent of this DT is to preserve a method for RCs, BAs and TOPs to make the determination of “what actions are required” and clearly communicate the importance to the receiver at a heightened method to normal day-to-day operational communications. The trigger of “Reliability Directive” by the issuer highlights these actions as needed to maintain BES reliability and shall be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement per the language of the requirement) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can support and enhance the development of the OCPD SDT. The DT has also attempted to eliminate redundancy and ambiguity while not creating any reliability gaps. Several comments were received on the RC’s ability to “act”. The RC must “act” (ie. do something, “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordination of cooperative actions or the issuance of “Reliability Directives”. “Act” does not imply solely the manipulation of BES elements.

Several comments on VSL language were received. We have attempted to clarify intent and have revised some in response to comments.

Several comments were received that reference a “performance based initiative” endorsed by the NERC BOT. The DT appreciates this new initiative, and to the extent possible, requirements proposed by this DT reflect that desire. [We have had no official instruction nor direction regarding this initiative in relation to this project.]

RC control of “analysis tools” is critical to maintaining the wide area view. Control by the RC over the tools is imperative and beyond administrative, since it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication are a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they

impact the BES. Failure of the RC to control outages of analysis tools was mentioned as a contributing factor in the 2003 blackout.

Overall, it is the intent of the DT to make the requirements flexible and adaptive to new technologies and methods as directed in order 693 and ensure that no matter how many forms of interpersonal communications are available. An entity can select a functional alternative to meet the intent of the requirement. The 60 minute timeframe appears reasonable based on industry comments. The term Interconnection is appropriate as it is.

Effective communications rely on an effective hierarchy. It is crucial for a host TOP or BA to have effective communications with GOs attached to their systems so that BES operations can be coordinated. Much like RCs must be able to communicate effectively with the systems within its footprint, effective communications allows BAs/TOPs to disseminate Interconnection information to DPs/GOPs that are impacted by system conditions outside of their operating visibility. The RCS DT has relied on the authority hierarchy (RC/ BA/ TOP / DP) to ensure accountability with the current performance type requirements, while not over-burdening the standards with prescriptive administrative-type requirements.

Organization	Question 8 Comment
Western Area Power Administration	
Western Electricity Coordinating Council	
CECD	<p>(1). The 60 minute timeframe should be lengthened if normal interpersonal communication paths are in service. Furthermore, the requirement to take corrective action or identify an alternative interpersonal communication method within 60 minutes should only apply if the registered entity only has a single alternative interpersonal communication method in place.</p> <p>(2). For COM-001 Requirement 4: The use of the term "Interconnection" seems inappropriate when describing communications between the DP/GOP and its BA/TOP and should be deleted. The NERC glossary of terms defines this as any one of the three major electric system networks in North America: Eastern, Western, and ERCOT. The requirement to be able to exchange operating information should be subject to the limitation as requested by the BA or TOP.</p>
<p>Response: The RCSDT thanks you for your comment. 1) It is the intent of the DT to make the requirement flexible and adaptive to new technologies and methods as directed in order 693 and ensure that no matter how many forms of interpersonal communications are available. An entity can select a functional alternative to meet the intent of the requirement. The timeframe has been revised to 2 hours. 2) We concur and have removed "Interconnection" from the requirement.</p>	
Hydro-Québec TransEnergie (HQT)	<p>(i) For IRO-001-2 R1, "act" should be removed. The RC can't act but can only issue Reliability Directives per the functional model.</p> <p>(ii) The NERC BOT recently approved pursuing the Results/Performance Based standards development activity. Based on this recent decision, the BOT has signaled their intent to remove administrative types of requirements from all standards. The IRO-001-2 R6 for the RC to have the authority to veto outages of their analysis tools and the COM-001-2 R3 requirement to use the English language are clearly not results or performance based, but rather administrative. If an operator used non-English, where it has not been agreed to or subject to law, to issue a Reliability Directive they will not be able to satisfy three-part communications in COM-002-3 in addition to many other standards and requirements they could not comply with. Even if an RC has veto authority over analysis tools, failure to exercise it would render the authority meaningless. Furthermore, the RC would not be able to meet other requirements and standards such as operating within IROL because they would not be able to assess the system appropriately.</p>
<p>Response: The RCSDT thanks you for your comments.</p> <p>a. The RC must "act" (ie. do something "to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts". This may include analysis, coordinate cooperative actions or issue "Reliability Directives".</p>	

Organization	Question 8 Comment
b.	<p>R6 is beyond administrative; it is intended to prevent planned reliability tool outages with the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication is a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES.</p>
Midwest ISO Standards Collaborators	<p>1) For IRO-001-2 R1, “act” should be removed. The RC can’t act but can only issue Reliability Directives per the functional model.</p> <p>2) IRO-001-2 R4 and R5 Severe VSLs need to have “any or” removed. The VSL should only apply for three or more and “any or” conflicts with this.COM-001-2 R2 Severe VSL conflicts with other VSLs. Specifically, the use of the word “any” in the Severe VSL is problematic. Notifying one entity at 65 minutes fits both the Lower VSL and Severe VSL as well. We suggest deleting the first portion of the Severe VSL that reads, “The responsible entity failed to notify any impacted entities of the failure of its normal Interpersonal Communications capabilities within 60 minutes.”</p> <p>3) The NERC BOT recently approved the pursuing the Results/Performance Based standards development activity. Based on this recent decision, we believe the BOT has signaled their intent to remove administrative types of requirements from all standards. The IRO-001-2 R6 for the RC to have the authority to veto outages of their analysis tools and the COM-001-2 R3 requirement to use the English language are clearly not result or performance based but rather administrative. If an operator used Portuguese to issue a Reliability Directive they will not be able to satisfy three-part communications in COM-002-3 in addition to many other standards and requirements they could not comply with. Even if an RC has veto authority over analysis tools, failure to exercise it would render the authority meaningless. Furthermore, the RC would not be able to meet a host of other requirements and standards such as operating within IROL because they would not be able to assess the system appropriately.</p>
<p>Response: The RCSDT thanks you for your comments.</p> <p>1) The RC must “act” (ie. do something “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordinate cooperative actions or issue “Reliability Directives”.</p> <p>2) The VSL language is intended to accommodate scenarios where only one entity is impacted or several entities are impacted. “The Reliability Coordinator failed to notify any or more than three impacted Transmission Operators, Balancing Authorities...” and provide the same measurability level.</p> <p>3) R6 is beyond administrative; it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication is a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard</p>	

Organization	Question 8 Comment
<p>requirements due to ineffective communications before they impact the BES.</p>	
<p>Northeast Power Coordinating Council</p>	<p>(i) For IRO-001-2 R1, “act” should be removed. The RC can’t act but can only issue Reliability Directives as per the functional model.</p> <p>(ii) The NERC BOT recently approved pursuing the Results/Performance Based standards development activity. Based on this recent decision, the BOT has signaled their intent to remove administrative types of requirements from all standards. The IRO-001-2 R6 requirement for the RC to have the authority to veto outages of their analysis tools and the COM-001-2 R3 requirement to use the English language are clearly not results or performance based, but rather administrative. If an operator used non-English to issue a Reliability Directive they will not be able to satisfy three-part communications in COM-002-3, in addition to many other standards and requirements they could not comply with. Even if an RC has veto authority over analysis tools, failure to exercise it would render the authority meaningless. Furthermore, the RC would not be able to meet other requirements and standards such as operating within an IROL because they would not be able to assess the system appropriately.</p>
<p>Response: The RCS DT thanks you for your comments.</p> <p>I) The RC must “act” (ie. do something “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordinate cooperative actions or issue “Reliability Directives”.</p> <p>II) R6 is beyond administrative; it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity. Effective communication is a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES.</p>	
<p>Independent Electricity System Operator</p>	<p>(i) For IRO-001-2 R1, “act” should be removed. The RC can’t act but can only issue Reliability Directives per the functional model.</p> <p>(ii) The NERC BOT recently approved pursuing the Results/Performance Based standards development activity. Organization	Question 8 Comment
	<p>(iii) COM-001-2 R2 Severe VSL conflicts with other VSLs. Specifically, the condition of failing to notify any impacted entities within 60 minutes means that no entities received a notification within 60 minutes. But how about they all received this in 65 minutes? Would this be the same condition as the Low VSL? And if they all received this in 75 minutes, the condition would be the same as the Moderate VSL. We suggest the SDT to review and revise these VSLs to eliminate the duplication/ambiguity.</p>
<p>Response: The RCSDT thanks you for your comments.</p> <ul style="list-style-type: none"> I) The RC must “act” (ie. do something “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordinate cooperative actions or issue “Reliability Directives”. II) R6 is beyond administrative; it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity. Effective communication is a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES. III) The DT did not consider R1 and R2 to be parallel requirements, and consequently did not attempt to force parallelism between the VSLs for R1 and R2. The only failure that is severe in this context is the failure to test the Alternative Interpersonal Communications capability on at least a quarterly basis. 	
<p>IRC Standards Review Committee</p>	<p>(i) IRO-001-2 R4 and R5 Severe VSLs need to have “any or” removed. The VSL should only apply for three or more and “any or” conflicts with this.</p> <p>(ii) For IRO-001-2 R1, “act” should be removed. The RC can’t act but can only issue Reliability Directives per the functional model.</p> <p>(iii) COM-001-2 R2 Severe VSL conflicts with other VSLs. Specifically, the condition of failing to notify any impacted entities within 60 minutes means that no entities received a notification within 60 minutes. Organization	Question 8 Comment
	<p>be able to meet a host of other requirements and standards such as operating within IROL because they would not be able to assess the system appropriately.</p> <p>(v) The VSLs for COM-002-3 R3 appear to have some redundancy. The Severe VSL and the second condition in the High VSL appear to be similar or the same.</p> <p>(vi) Measurement of compliance to COM-002-3 R1 could be challenging. As the VSL is written, it would appear the compliance auditor could judge if a Reliability Directive should have been issued. The VSL language that is problematic is “The responsible entity that required actions to be executed”. Please remove: “required actions to be executed as...”. Who determines that actions were required? One could argue that failure to identify a communication as a Reliability Directive means that actions weren’t required but it is doubtful the compliance authorities would take this approach. Thus, there would appear to be great judgment left to the compliance auditor in determining if a Reliability Directive should have been issued.</p> <p>(vii) IRO-014-2 R2 VSLs differentiate violations based on whether the plans, processes, and procedures were distributed or agreed to. If an intended RC never received the plans, processes and procedures, it would be aware of the need to agree to them. Hence, if the plans, etc. were not distributed, then the initiating RC will be assigned a Moderate VSL but never any higher VSLs even if no agreements were received (since no other RCs had received the plans to begin with). We suggest the SDT to consider rearranging the VSLs and in accordance with any changes to R2 reflecting our suggested changes summarized under Q7.</p> <p>(viii) Because it is unlikely that an RC will make notifications without exchanging reliability information or vice versa for IRO-014-2 R3, we suggest a more appropriate delineation for the VSLs would be based on the number of other impacted RCs that were not informed.</p> <p>(ix) IRO-014-2 R4 VSLs should be defined based upon the number of conference calls the RC does not participate in. R4 requires each RC to participate in “agreed upon conference calls”. Because the statement “conference calls” is plural, VSLs need to be set based on the aggregate of calls not participated in. Failure to assign VSLs in this way is equivalent to setting the requirement to “agreed upon conference call” and causes the VSLs to be in violation guideline 3 that the Commission established in their June 2008 Order on VSLs. Guideline 3 states that the VSL must be consistent with the requirement and cannot “redefine or undermine the requirement”. Clearly, these VSLs do.</p> <p>(x) IRO-014-2 R5’s Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSLs since Severe uses the word any. Based on the SDT’s response to our comment from the last time, we believe instead of any they mean “no impacted”. Unfortunately, “any impacted” could be one or two or higher. If it is one, it matches the Moderate VSL.</p> <p>(xi) The VSL for IRO-014-2 R8 needs to include the “unless such actions would violate safety, equipment, regulatory or statutory requirement” clause.</p>

Organization	Question 8 Comment
	<p>Response: The RCS DT thanks you for your comments.</p> <p>I) The VSL language is intended to accommodate scenarios where only one entity is impacted or several entities are impacted. “The Reliability Coordinator failed to notify any or more than three impacted Transmission Operators, Balancing Authorities...” and provide the same measurability level.</p> <p>II) The RC must “act” (ie. do something “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordinate cooperative actions or issue “Reliability Directives”.</p> <p>III) The DT does not agree. The Severe VSL has “any impacted entities”, meaning that no entity was notified within 60 minutes. This is intentional. The Lower, Moderate and High VSLs address individual entities that may not have met the standard of 60 minutes.</p> <p>IV) R6 is beyond administrative, it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication are a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES.</p> <p>V) The VSLs were set to be flexible in measuring cases where an 1) acknowledgement is not made at all to a correctly repeated directive and 2) an acknowledgement is not made at all AND a directive repeated incorrectly was not corrected.</p> <p>VI) The intent of the DT is to allow the issuing entity to make the determination of “what actions are required” to clearly communicate the importance to the receiver. The word “required actions to be executed” are integral to the requirement and cannot be removed to meet the intent. In other words, the trigger of “Reliability Directive” by the issuer highlights these actions as needed to maintain BES reliability and should be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement etc) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and cannot pre-judge the behaviors of compliance auditors.</p> <p>VII) The DT agrees and will make clarifying changes.</p> <p>VIII) The DT agrees and will make clarifying changes.</p> <p>IX) The DT feels this is a core RC responsibility and therefore treated this requirement as binary. RCs must be responsive to other RCs that need to discuss BES reliability. However, we agree to change “calls” to “call(s)” in R4, to read as follows:</p> <p>R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement 1, Part 1.7) with other Reliability Coordinators within the same Interconnection. [<i>Violation Risk Factor: Lower</i>][<i>Time Horizon: Real-time Operations</i>]</p> <p>X) The DT disagrees. “Failure to notify any” means that none were notified. If there is only a total of one impacted RC, then the VSL would be Severe.</p> <p>XI) If the action plan could not be implemented for such instances, then there would be no violation of the requirement and the VSL would not apply.</p>
OC Standards Review Group	“The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or

Organization	Question 8 Comment
	its officers.”
Response: The RCSDT thanks you for your comments.	
FirstEnergy	<p>1. We believe that this standard should be either handed to the OPCPSDT (Project 2007-02) or the OPCPSDT should hand over the COM-003-1 standard to this RCSDT (Project 2006-06); and then COM-002 and COM-003 should be merged. Per our comments in Draft 1 of COM-003-1 (OPCPSDT Project 2007-02) we believe that the Reliability Directive definition should be broadened to include communications associated with BES related information (similar to the proposed definition of Interoperability Communication from the OPCPSDT). The following are specifics: a. For better project coordination, since the plan of the OPCPSDT (2007-02) is to eventually incorporate the COM-002-3 requirements into the new COM-003-1 standard, we believe this should be done now by one SDT. b. The definition of Reliability Directive should be broadened to include any actions that affect the BES reliability. We suggest the following change to the term Reliability Directive: "A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where the recipient is directed to change the state or report the status of an Element or Facility of the Bulk Electric System." c. Per our suggestion to broaden the definition of Reliability Directive in "b" above, the proposed definition of Interoperability Communication proposed by the OPCPSDT can be eliminated. d. With respect to the proposed R2 and R3 of COM-002-3 and requirement R5 of COM-003-1 which all which essentially discuss three-part communication, could be combined and covered by COM-002-3. e. R1 of COM-003-1 that requires communication protocols procedures can be covered in COM-002-3.2.</p> <p>Implementation Plan - The proposed timeline for implementing these standards changes is the 1st day of the 1st quarter after applicable regulatory approvals. We believe that since there are numerous changes to and retirement of requirements, this will place a significant compliance burden on industry and warrants more time to adjust compliance evidence and tracking. Furthermore, standard COM-001-2 is adding the Distribution Provider and Generator Operator as applicable entities which will cause these entities to show compliance with a requirement they previously were not responsible for. Therefore, we believe that a minimum of two calendar quarters for implementing these changes is appropriate.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT feels that the Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RC SDT along with the OPCP SDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment. Consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RC SDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003. The intent of the DT is to preserve a method for RCs, BAs and TOP to make the determination of “what actions are required” and clearly communicate the importance to the receiver above normal day-to-day operational communications. The trigger of “Reliability Directive” by the issuer highlights these actions as needed to maintain BES reliability and should be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement per the language of the requirement) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can support and enhance the development of the OPCP SDT.</p>	

Organization	Question 8 Comment
Ameren	<p>1.In COM-001 R2, this “impacted entities’ language is unworkable. Some entities might be impacted because they get information from the RC, i.e indirectly from the entity with the loss. Team should address direct relationships somehow.2.In COM-001,R4, does the team consider the need for this for the AIC?3.The team should note that there is no requirement to even have AIC. Thus R1 would only apply if you have one.</p>
<p>Response: The RCSDT thanks you for your comment. The DT feels that impacted adds clarity to the requirement by limiting the obligation appropriately. Industry consensus appears to support that “impacted” is a reasonable clarification.</p>	
NERC	<p>As stated in the response to Question 1, the scope of COM-001-2 is unclear as to whether it applies to both verbal and data communication. We believe that it should.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that data communication is covered under IRO-010, R3 which states: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p>	
Central Lincoln	<p>COM-001 M3, M4, COM-002 M2, and IRO-001 M1, and M2 all require evidence of DPs and/or LSEs “which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation. ”While we appreciate the inclusion of “equivalent documentation”, we are unsure what might qualify and who determines what qualifies as equivalent. We still believe COM-001 should not apply to DPs and LSEs, since these entities do not own or operate BES assets. Please consider this stakeholder input as well. While CIP-001 M4 can show that documented communication proves capability for R4, an entity has no way of proving capability if such communications did not take place during the audit period. We are unsure if the SDT realizes that not all of the entities subject to these standards maintain 24/7 dispatch desks. Much effort will go into complying with standards dealing with afterhour’s directives that will never come, because the issuing entity will realize any action requested will not be timely enough and plan accordingly.</p>
<p>Response: The RCSDT thanks you for your comment. DP and LSE were included in this standard per FERC Order 693 Directive. “Equivalent” documentation is included to provide potential alternatives for entities to provide to prove compliance with the requirement. Compliance audit personnel will review all documentation to determine compliance with a requirement.</p>	
Exelon	<p>COM-001-2 R2. Please consider in place of “impacted entities”, substitute “all applicable entities”.</p>
<p>Response: The RCSDT thanks you for your comment. The proposed substitute language has the same net effect as the current language and</p>	

Organization	Question 8 Comment
<p>therefore no change was made.</p>	
<p>ITC Holdings</p>	<p>Comments: IRO-001-2 R4 has an errant comma after the first occurrence of the word “Impacts”. IRO-014-2 R8 should have the first occurrence of the word “or” removed. Also, a new R9 (and associated M9) should be added requiring the RC who cannot agree on the mitigation plan due to safety, equipment, regulatory, or statutory requirements to notify the RC experiencing the Adverse Reliability Impact of the reason for the inability to implement the mitigation plan.</p>
<p>Response: The RCSDT thanks you for your comment. The comma in IRO-001-2 R4 has been removed.</p> <p>The first “or” in IRO-014-2 R8 has been removed.</p> <p>The suggested R9/M9 are unnecessary. Any RC that claims that a mitigation plan would violate safety, equipment, regulatory or statutory requirements would have to document that as part of complying with R8.</p>	
<p>Northeast Utilities</p>	<p>For IRO-001-2, the VSL language for R1, R4, and R5 is not clear. Specifically, for the R1 VSL the text appears to be reversed between High and Severe; and for R4 and R5, please clarify what is meant by “any or more than three”.</p>
<p>Response: The RCSDT thanks you for your comment. The High VSL and Severe VSL language is not reversed. The failure to act to mitigate existing Adverse Reliability Impacts is more negatively-impactful to BES reliability than the failure to prevent future Adverse Reliability Impacts.</p> <p>“Any or more than three” means that if no TOPs or BAs were notified or, in the case of an RC having four or more TOPs and BAs in its area, more than 3 of them were not notified.</p>	
<p>Bonneville Power Administration</p>	<p>In most proposed NERC standards, it seems the tried and true method of writing a requirement is to list the entities required to implement the action, list the required action, and then list any exceptions to the required action. In proposed standard COM-001-2, Requirement R3, the SDT lists the exceptions before the rule. In proposed standard COM-001-2, Measure M1, when it is discussing quarterly testing, it uses the term, “alternative Interpersonal Communications.” The word “alternative” should be capitalized. (Please see our comment on question #2 regarding the overall use of the term ‘Alternative Interpersonal Communications.’) we agree and made the change</p> <p>In proposed standard COM-001-2, Measure M1, after the word, “substitute,” the word “Alternative” should be added in order to use similar language in both Requirement R1 and in Measure M1. (Again, please see my comment on question #2 regarding the overall use of the term ‘Alternative Interpersonal Communications.’) we agree and made the change</p> <p>In proposed standard COM-001-2, Measure M2, it uses the wording “normal communications capabilities.” If our comment on question #1 is acceptable in its entirety, and the SDT decides not to use the term, ‘Interpersonal Communication,’ then the wording of Measure M2 is also acceptable. However, if the SDT decides to continue with their use of that term, then this phrase should be replaced with “normal Interpersonal Communications capabilities” in order to use similar language in both</p>

Organization	Question 8 Comment
	<p>Requirement R2 and in Measure M2. we agree and made the change</p> <p>In proposed standard COM-001-2, VSL for R2, the Lower VSL uses the word “failed” to describe notifying the impacted entities within the tight bounds of a time frame, in this case, “more than 60 minutes but less than or equal to 70 minutes”. According to the given wording, every entity that is fully compliant with this standard would have “failed” to notify the impacted entities within the narrow bounds of the Lower VSL’s time constraint! A similar comment could be made for the Moderate, High and Severe VSL descriptions also. The wording “failed to notify” needs to be taken out and replaced with “notified.” Related to this, in the Moderate VSL, the description of a responsible entity notifying at least one, but not all impacted entities within 60-minutes would tend to negate the Lower VSL. If the SDT were trying to force a responsible entity into making at least one phone call of notification to one of the impacted entities within 60-minutes, the Severe VSL’s description accomplishes this feat all by itself. However, if the SDT were insistent on all impacted entities being notified within 60-minutes or a Moderate VSL will result, then that action makes the Lower VSL rather useless. VSLs are only applied when there is a violation. The time bounds are appropriate for a violation of the requirement</p> <p>In proposed standard COM-002-3, Measure M3, it uses the term “Directive” by itself. It seems appropriate for what is being discussed that the term “Reliability Directive” should have been used. We added Reliability</p> <p>In proposed standard COM-002-3, VSL for R3, the High VSL describes the responsible entity failing to respond appropriately, either by acknowledging the recipient when they repeated the intent correctly or by failing to reissue when the recipient did not repeat the intent correctly. This would seem to take care of the options...either the recipient was correct or they were incorrect, but not both. However, the Severe VSL, by using the word “AND” connects the two thoughts and provides for the recipient to be both correct and incorrect at the same time. Therefore, the Severe VSL seems to contradict itself, while the spirit of the VSL seems to be handled quite nicely by the High VSL by itself. It is therefore suggested that the SDT consider replacing the Severe VSL with the High VSL. The rcsdt believes that the VSLs are appropriate as written</p> <p>In proposed standard IRO-001-2, Measure M3, on the second to the last line, the measure repeats the wording “that it,” making it redundant. We have made the edit</p> <p>In proposed standard IRO-001-2, Data Retention (Part D, Section 1.3), on the first bullet, the word “operator” (following “Generator”) should be capitalized. We have made the edit</p> <p>In proposed standard IRO-001-2, High and Severe VSLs for Requirement R1, we don’t really see the utility of separating the parts of failing to prevent Adverse Reliability Impacts and failing to mitigate the magnitude or duration of such impacts. Maybe the SDT could give some examples, because we would be just as fine combining the two into one VSL and therefore simplifying the VSL part of the standard. VSL drafting guidelines indicate that multiple VSLs should be written for a requirement when feasible. It is feasible for this requirement.</p> <p>In proposed standard IRO-001-2, Severe VSL for Requirement R2, the VSL should include wording to indicate that an</p>

Organization	Question 8 Comment
	<p>exception can be granted to the responsible entity failing to comply with the given Reliability Directive due to safety, equipment, or regulatory or statutory requirements. Otherwise, the responsible entity will be given a Severe VSL every time one of these exceptions comes up. If an entity did not comply with a directive for a safety issue, then the entity did not violate the requirement. The VSL only applies when a requirement is violated.</p> <p>In proposed standard IRO-001-2, Severe VSL for Requirement R4, we are not entirely sure what the SDT was trying to say, but the spirit of the VSL would seem to be captured if the SDT removed the wording “any or” and left the VSL to say in part, “...failed to issue an alert to more than three...”In a related way, for the Severe VSL for Requirement R5, the spirit of the VSL would seem to be captured if the SDT removed the wording “any or” and left the VSL to say in part “...failed to notify more than three...” The intent of the wording is to allow multiple VSLs for the requirement. The word “any” indicates that there were no notifications made when there were less than three notifications to be made.</p>
<p>Response: The RCSDT thanks you for your comment. See responses above.</p>	
<p>Florida Municipal Power Agency and Some Members</p>	<p>IRO-001-2, R5 refers to only transmission problems being mitigated and not to other types of issues that could result in a threat of an Adverse Reliability Impacts, such as a large supply / demand imbalance (capacity or energy Emergency). IRO-001-2, R6 FMPA does not quite understand the requirement, is the intent to allow Operating Personnel the authority to veto planned outages "in" its own analysis tools, rather than "to"?</p>
<p>Response: The RCSDT thanks you for your comment. We have removed the word “transmission” from the requirement.</p> <p>R5: Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>Regarding IRO-001-2, R6, the planned outages mentioned are actual outages of the analysis tools themselves, not planned outages of transmission elements. No changes made.</p>	
<p>PPL</p>	<p>No additional comments.</p>
<p>Operating Personnel Communications Protocols SDT</p>	<p>No Comment</p>

Organization	Question 8 Comment
PacifiCorp	No comment.
American Electric Power	Nothing additional at this time.
PNGC Power (15 member utilities)	<p>PNGC (15 members) would like to associate itself with Steve Alexanderson's (Central Lincoln PUD) comments re 2006-06:"COM-001 M3, M4, COM-002 M2, and IRO-001 M1, and M2 all require evidence of DPs and/or LSEs "which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation. "While we appreciate the inclusion of "equivalent documentation", we are unsure what might qualify and who determines what qualifies as equivalent. We still believe COM-001 should not apply to DPs and LSEs, since these entities do not own or operate BES assets. Please consider this stakeholder input as well. While CIP-001 M4 can show that documented communication proves capability for R4, an entity has no way of proving capability if such communications did not take place during the audit period. We are unsure if the SDT realizes that not all of the entities subject to these standards maintain 24/7 dispatch desks. Much effort will go into complying with standards dealing with afterhour's directives that will never come, because the issuing entity will realize any action requested will not be timely enough and plan accordingly."</p>
<p>Response: The RCSDT thanks you for your comment. The DT included DPs and LSEs per FERC Order 693.</p> <p>The DT believes your comment regarding "CIP-001 M4" is actually in reference to COM-001-2 M4". While the DT is concerned that any proposed requirements must be clear and reasonably simple for which to document compliance, in this instance, a simple test phone call at a regular interval would prove capability (assuming it were recorded.)</p>	
Manitoba Hydro	<p>R2 2.1 If these actions are required as real time action, "Agreed to" should be opened up to "Acknowledged by". "Agreed to" in this requirement would be acceptable when there is time for impacted RC to study the other RC plans to determine impact on their system. To further justify this suggestion, R3 says "make notifications . . . with impacted RC". This statement indicates no commitment to the notifications and therefore presumes "acknowledgement".R7. Move this requirement to R2 and label as R2.3. R2 is "Agreed to" and R7 is "Not Agreed to". R8 covers the action required when "Not agreed to"R8. The only suggested addition to this is "When an RC with the identified Adverse Reliability Impact has created and implemented a plan with other affected RC", there should be an R8.1 stating "No RC shall place a burden on other RC's" and or/and an R8.2 stating, that "Reliability will override economics". The addition of these two sub requirements would also enhance R7 by removing all other reasoning that an impacted RC may dwell on to "not agree to".</p>
<p>Response: The RCSDT thanks you for your comment. We assume that this comment is in reference to IRO-014-2. The RCSDT does not agree with your proposed revision. The intent of the requirements is to have the parties agree to the course of action required to maintain reliability.</p>	
Calpine Corporation	Regarding COM-001-2 R4. Many PURPA Qualifying Facilities and tolled Facilities communicate only with a scheduling

Organization	Question 8 Comment
	<p>coordinator or similar entity, not necessarily directly with the Transmission Operator and/or Host Balancing Authority. The standard should be rewritten to clarify that direct communications between these Generator Operators and their Transmission Operator and/or Host Balancing Authority is either not required or that communications through their established paths of communication meets the requirement.</p>
<p>Response: The RCSDT thanks you for your comments. Effective communications rely on an effective hierarchy. It is crucial for a host TOP or BA to have effective communications with GOs attached to their systems so that BES operations can be coordinated, much like RCs must be able to communicate effectively with the system within its footprint. PURPA qualifying facilities can impact BES reliability, and, as such, are included here.</p>	
<p>Duke Energy</p>	<p>Requirement R6 of IRO-001-2 contains the capitalized term “Operating Personnel”. This is not a NERC-defined term and should not be capitalized. As a general comment on new and revised NERC-defined terms, we believe that when such terms are introduced in a project with multiple standards, the terms should be included in the “Definitions of Terms Used in Standard” section of each standard. For example, in this project the term “Adverse Reliability Impact” is revised in IRO-001-2, but while it is also used in IRO-014-2, it no longer appears in the “Definitions of Terms Used in Standard” section of IRO-014-2.</p>
<p>Response: The RCSDT thanks you for your comment and has changed “Operating Personnel” to “System Operator”.</p>	
<p>Southwest Power Pool</p>	<p>SPP has also worked collaboratively with the IRC SRC on the comments submitted by that group on this standard and we fully support those. However, SPP found additional concerns at the last minute which could not be included in the SRC set due to the submittal deadline and has chosen to submit these separately. There are 10 other standards where the word “Directive” is used. Will the term Reliability Directive replace them, or will we get a different definition for Directive, or will both terms be the same?</p>
<p>The RC SDT believes that “directive” is lowercase in the other instances in NERC standards. The RTO SDT, OPCP SDT and RC SDT have attempted to move toward “Reliability Directive” in concert so as to remove the remaining ambiguity from NERC standards.</p> <p>The intent of the DT is to preserve a method for RCs, BAs and TOP to make the determination of “what actions are required” and clearly communicate the importance to the receiver above normal day-to-day operational communications. The trigger of “Reliability Directive” by the issuer highlights these actions as needed to maintain BES reliability and should be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement per the language of the requirement) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can support and enhance the development of the OPCP SDT and subsequent expansion of the term “Reliability Directive”.</p>	
<p>E.ON U.S.</p>	<p>The definition of Reliability Directive should be incorporated into COM-003-1 with an associated single requirement that requires the use of Three-part Communication during the communication of a Reliability Directive.</p>

Organization	Question 8 Comment
<p>Response: The RCSDT thanks you for your comment. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can support and enhance the development of the OPCSDT and subsequent expansion of the term “Reliability Directive”.COM-003 is outside the scope of the RCSDT project.</p>	
<p>Public Service Enterprise Group Companies</p>	<p>The PSEG Companies are generally in agreement with the proposal.</p>
<p>Response: The RCSDT thanks you for your comment.</p>	
<p>Southern Company Services</p>	<p>These standards are more restrictive and prescriptive each time that a revision is issued for comments. It appears that the SDT does not believe that entities operating the Bulk Electric System cannot operate the system in a reliable manner using cooperation between parties.</p>
<p>Response: The RCSDT thanks you for your comment. The DT feels that these standard requirements have been improved to benefit reliability and act as a “backstop” to prevent the breakdown of cooperation between parties and incent effective communications between operators of the BES.</p>	
<p>NERC Standards Review Subcommittee</p>	<ol style="list-style-type: none"> 1) This standard could be boiled down to one requirement and that is to maintain the continuous ability to communicate with other appropriate registered entities regardless of the need for a backup system. 2) For IRO-001-2 R1, “act” should be removed. The RC can’t act but can only issue Reliability Directives per the functional model. 3) IRO-001-2 R4 and R5 Severe VSLs need to have “any or” removed. The VSL should only apply for three or more and “any or” conflicts with this.COM-001-2 R2 Severe VSL conflicts with other VSLs. Specifically, the use of the word “any” in the Severe VSL is problematic. Notifying one entity at 65 minutes fits both the Lower VSL and Severe VSL as well. We suggest deleting the first portion of the Severe VSL that reads, “The responsible entity failed to notify any impacted entities of the failure of its normal Interpersonal Communications capabilities within 60 minutes.” 4) COM-001-2 R2 needs to be coordinated with EOP-008-1 since EOP-008-1 R1.5 is requiring 2 hours. COM-001-2 R1 should be clarified to remove 60 minutes. Perhaps the specific time frame is too administrative and too dependent on the circumstances and doesn’t purport to directly impact reliability of the backup functionality. If a time frame is desired perhaps the registered entity which knows their backup functionality capabilities and their plan to actuate these capabilities could be the best entity to define a reasonable immediate time frame. 5) The NERC BOT recently approved the pursuing the Results/Performance Based standards development activity. Based on this recent decision, we believe the BOT has signaled their intent to remove administrative types of requirements from all standards. The IRO-001-2 R6 for the RC to have the authority to veto outages of their analysis tools and the COM-001-2 R3 requirement to use the English language are clearly not result or performance based but

Organization	Question 8 Comment
	<p>rather administrative. If an operator used Portuguese to issue a Reliability Directive they will not be able to satisfy three-part communications in COM-002-3 in addition to many other standards and requirements they could not comply with. Even if an RC has veto authority over analysis tools, failure to exercise it would render the authority meaningless. Furthermore, the RC would not be able to meet a host of other requirements and standards such as operating within IROL because they would not be able to assess the system appropriately.</p>
<p>Response: The RCSDT thanks you for your comments.</p> <ol style="list-style-type: none"> 1. The DT has attempted to eliminate redundancy and ambiguity while not creating any reliability gaps. As written, the requirements are geared to incent folks to have effective communications in-place at all times while flexible enough to accommodate technology changes and process improvements by the industry. 2. The RC must “act” (ie. do something “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordinate cooperative actions or issue “Reliability Directives”. “Act” does not imply solely the manipulation of BES elements. 3. The VSL language is intended to accommodate scenarios where only one entity is impacted or several entities are impacted. “The Reliability Coordinator failed to notify any or more than three impacted Transmission Operators, Balancing Authorities...” and provide the same measurability level. 4. The RCSDT notes that EOP-008-1 is a proposed standard that has not been approved for enforcement. Also, EOP-008-1 deals with an entire control center where COM-001 deals with Interpersonal Communications capability with another entity. We will retain the original 60 minute timeframe. 5. R6 is beyond administrative, it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication are a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES. 	
<p>Xcel Energy</p>	<p>We would like to restate our belief that the Standard should explicitly state the requirement for RCs, TOPs and BAs to have both primary and alternate means of communication. To “imply” a required element within a Standard is inconsistent with the NERC Reliability Standards Development Procedure, which states “All mandatory requirements of a reliability standard shall be within an element of the standard.” We would suggest a requirement language that simply states “Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall maintain a means for both primary Interpersonal Communication as well as Alternative Interpersonal Communication used to communication real-time operating information.”</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT has crafted the latest versions (as supported by stakeholder comments) to support reliable communications by better describing how industry communicates and providing flexibility for the adoption of alternative communication media. The RCSDT also tried to minimize over-prescriptive requirements that result in no value to reliability and impose an</p>	

Organization	Question 8 Comment
administrative burden.	
Electric Market Policy	<p>We would like to thank, AND highly commend this SDT for their effort. This is the type of effort that every SDT should strive for. Elimination of requirements that are either redundant or unnecessary, and therefore distract entities, is every bit as important to the standards process as is the creation of new standards where reliability gaps are found. The proliferation of new and revised standards is becoming a concern for many in this industry and many of us feel the effort going into the review and compliance documentation is reducing the focus on monitoring and otherwise insuring that reliable operations can be maintained.</p>
<p>Response: The RCSDT thanks you for your comments and agrees reducing redundancy and ambiguity in the standards improves industry focus and therefore reliability of the BES.</p>	
ERCOT ISO	<p>ERCOT ISO offers the following additional comments:</p> <p><u>COM-001-2</u></p> <ol style="list-style-type: none"> 1) The SDT should consider coordinating their efforts with the OPCP drafting team efforts (COM-003) to ensure consistency across the standards. 2) For R4 – ERCOT ISO recommends considering adding Load-Serving Entity to the applicability due to their role in capacity and energy emergencies. 3) With respect to the Measures, “alternative” needs to be capitalized in M1. Also, if the intent is to include items such as regular phones or data links that are daily use items then Measures should reflect this. 4) ERCOT ISO suggests the following change to the terms Adverse Reliability Impact and Emergency. We think these simple changes will tie all the terms together.
<p>Response: The RC SDT thanks you for your comments.</p> <p>1) The RC SDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RC SDT along with the OPCP SDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RC SDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003. 2) The RCSDT has relied on the authority hierarchy (RC/ BA/ TOP / DP) to ensure accountability with the current FM, while not over-prescribing requirements. The RC SDT notes that, per the Functional Model, a DP may “direct” an LSE to communicate <i>requests</i> for voluntary load curtailment and not reliability situations:</p> <p>Item 9 on page 47 of version 5 of the Functional Model: “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.”</p>	

Organization	Question 8 Comment
	<p>The RCSDT will forward this comment to the FMWG for their consideration in revising the language.</p> <p>3) & 4) Please see previous responses to your comments assuming those are the referenced comments.</p>

Consideration of Comments on Reliability Coordination — Project 2006-06

The Reliability Coordination Drafting Team thanks all commenters who submitted comments on the proposed revisions to COM-001-2, IRO-001-2, IRO-002-2 and IRO-005-4. These standards were posted for a 30-day public comment period from February 25, 2011 through March 7, 2011. The stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 41 sets of comments, including comments from more than 168 different people from approximately 112 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Herb Schrayshuen, at 609-452-8060 or at herb.schrayshuen@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

Summary Consideration:

The RCSDT thanks all stakeholders for their comments. Many stakeholders provided comments suggesting revisions to the standards. Many of these suggestions were incorporated into the standards. As a result of the revisions, the RCSDT is moving COM-001-2, COM-002-3 and IRO-001-2 to a successive ballot. The RCSDT made a few clarifying edits to the remaining standards based on stakeholder comments. Therefore, IRO-002-3, IRO-005-4 and IRO-014-2 are being moved to recirculation ballot. Because of this approach, the SDT will be proposing an interim change to IRO-001: the elimination of Requirement R7, as it is duplicative of one of the requirements in IRO-014-2.

For the COM-001 standard, several commenters had suggestions for improvements to the requirement language and applicability. The RCSDT believes the standard correctly and adequately requires each applicable entity that would have capability to receive Interconnection and operating information to have Interpersonal Communications and Alternative Interpersonal Communications to be used when the Interpersonal Communication is not available. The RCSDT has addressed the applicability of the standards and implementation plans by aligning COM-001-2, and COM-002-3 to include the same entities and by removing LSE, PSE and TSP from the COM standards.

Many comments were concerned about both the medium (e.g. cellular, satellite, etc.) and media (e.g. voice, email, etc.) used for Interpersonal Communications. The current language avoids being prescriptive and allows each entity to determine what is suitable. Interpersonal Communication and Alternative Interpersonal Communication is between the applicable entities which may include multiple locations (e.g. a primary and back-up control center).

The RCSDT added the following Requirement Parts at the suggestion of stakeholders:

- 3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection
- 4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection
- 5.6 Adjacent Balancing Authorities
- 6.3 Adjacent Balancing Authorities

The RCSDT agrees with the many industry comments and removed the phrase "to exchange Interconnection and operating information" in requirements R1 through R8. This removal clarifies that the intent of this capability is NOT for the exchange of data.

¹ The appeals process is in the Reliability Standards Development Procedures:
<http://www.nerc.com/standards/newstandardsprocess.html>.

A few commenters also expressed concerns about the frequency of testing Alternative Interpersonal Communications capability. The RCSDT believes that the proposed testing frequency is supported by the majority of stakeholders and is not overly burdensome.

Several commenters suggested that VSLs should be written based on the percent of entities rather than by an occurrence of a violation. VSLs must be written on a violation occurrence basis in accordance with FERC guidelines. The requirements specify which entities must be included in communications capabilities. If a single entity is missing, this is a violation of the requirement. According to VSL guidelines, if missing any part of the requirement could have the same reliability outcome as missing the entire requirement, the requirement is binary and the VSL must be severe.

A new requirement was added to COM-001 for clarity regarding responsibilities of the Distribution Provider and the Generator Operator when either entity experiences a failure of its Interpersonal Communication capability:

R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with its Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*

This requirement requires collaboration between entities to restore a failed communications capability.

The RCSDT asked stakeholders if they believed that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel's comment as directed in FERC Order 693. The original justification that the RCSDT posited for not adding a requirement to directly address Xcel Energy's comments in paragraph 516 and FERC's related recommendation in paragraph 523 was that TOP-001-1 R3 was considered to address this concern. Since that time, the RTO SDT has proposed to retire TOP-001-1 R3. However, NERC has since retired IRO-004-1 R3 and R5 along with IRO-005-3 R5. Because these are retired, there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency. Therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirements," the TOP may respond to the RC that it cannot comply.

Stakeholders were asked if they agree with the revision to IRO-001, R1 for certifying Reliability Coordinators. Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.

A significant revision to IRO-001-2 was made by removing the Interchange Coordinator from the standard. The RCSDT made this revision because the Balancing Function is responsible for implementing interchange (see NERC Reliability Functional Model, version 5, page 32, item 7) and to operate the Balancing Authority Area to maintain load-interchange-generation balance (item 3).

The RCSDT asked stakeholders if they agree with moving two requirements from IRO-001 back to IRO-002 relating to Analysis Tool outages. All stakeholders that responded agreed and there were no comments received.

The RCSDT asked stakeholders if they agree with moving two requirements from IRO-001 back to IRO-005 relating to Reliability Coordinator notifications. Several commenters noted a typographical error in R1 which was corrected to read:

When the results of an Operational Planning Analysis or Real-time Assessment indicate an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify ~~issue an alert to~~ all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

One commenter also asked that an errant yellow text box be removed from Page 1, which was also done.

The RCSDT received a number of comments regarding the applicability of COM-001, and COM-002. The RCSDT agrees with these comments and has removed PSE and LSE from the COM-001-2 implementation plan. The RCSDT also addressed minor issues involving typos, formatting and style.

The RCSDT received comments suggesting clarification of COM-002-3. The RCSDT intends the communication of Reliability Directives to be person-to-person and in such a manner that the Reliability Directive is understood and not necessarily repeated verbatim. COM-002-3 is not intended to be prescriptive on how the Reliability Directive is issued. Spoken or written communications are valid methods (i.e. using the telephone, radio, electronic texting, email, etc.). The purpose of COM-002-3 is to ensure emergency communications between operating personnel are effective. There is no proxy requirement for 24/7 operating personnel regarding small entities. Only “capability” as provided for in COM-001-2 is applicable. The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols would be addressed in the COM-003 standard being developed in Project 2007-02.

Some commenters suggested revisions to IRO-014, requirement R8 to conform to similar requirements R6 and R7. The RCSDT made the suggested revision by re-ordering R8:

R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

IRO-014-2, requirement R4 is applicable to those Reliability Coordinators engaged in activities related to requirement R1 and part 1.7. It is unlikely that Reliability Coordinators geographically and electrically distant from one another will have mutually agreed upon operating procedures (per requirement R1), and therefore requirement R4 would not be applicable. The RCSDT believes IRO-014-2, requirement R4 (which requires weekly communication) provides reasonable contact and flexibility – and this requirement is in effect today.

The RCSDT coordinated the use of the NERC Glossary term “Adverse Reliability Impact” with the Real-Time Operations team and continues the practice of informing all RCs of Adverse Reliability Impacts in requirement R5.

The RCSDT has revised IRO-014-2, requirements R6-R8 to clarify that when one RC identified a problem and presents an action plan for another RC, the second RC is obligated to implement the action plan. The RCSDT will forward the concern about RC's identifying themselves and the receiver to establish authority to the Project 2007-02, Operating Personnel Communications Protocols SDT. The Project 2007-02 team is developing a standard that includes requirements for use of specific communications protocols.

Index to Questions, Comments, and Responses

1. Do you agree with COM-001 requirements for Interpersonal Communications capability and Alternative Interpersonal Communications capability (R1-R8)? If not, please explain in the comment area below.	14
2. The RCSDT believes that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel’s comment. Do you agree? If not, please explain in the comment area below.....	39
3. Do you agree with the revision to IRO-001, R1 for certifying Reliability Coordinators? If not, please explain in the comment area below.	45
4. Do you agree with moving two requirements from IRO-001 back to IRO-002 relating to Analysis Tool outages? If not, please explain in the comment area below.	51
5. Do you agree with moving two requirements from IRO-001 back to IRO-005 relating to Reliability Coordinator notifications? If not, please explain in the comment area below.	55
6. Do you have any other comment, not expressed in questions above, for the RC SDT?	58

Consideration of Comments on Reliability Coordination — Project 2006-06

The Industry Segments are:

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities
- 4 — Transmission-dependent Utilities
- 5 — Electric Generators
- 6 — Electricity Brokers, Aggregators, and Marketers
- 7 — Large Electricity End Users
- 8 — Small Electricity End Users
- 9 — Federal, State, Provincial Regulatory or other Government Entities
- 10 — Regional Reliability Organizations, Regional Entities

1. Do you agree with COM-001 requirements for Interpersonal Communications capability and Alternative Interpersonal Communications capability (R1-R8)? If not, please explain in the comment area below.

Summary Consideration:

For the COM-001 standard, several commenters had suggestions for improvements to the requirement language and applicability. The RCSDT believes the standard correctly and adequately requires each applicable entity that would have capability to receive Interconnection and operating information to have Interpersonal Communications and Alternative Interpersonal Communications to be used when the Interpersonal Communication is not available. The RCSDT has addressed the applicability of the standards and implementation plans by aligning COM-001-2, and COM-002-3 to include the same entities and by removing LSE, PSE and TSP from the COM standards.

Many comments were concerned about both the medium (e.g. cellular, satellite, etc.) and media (e.g. voice, email, etc.) used for Interpersonal Communications. The current language avoids being prescriptive and allows each entity to determine what is suitable. Interpersonal Communication and Alternative Interpersonal Communication is between the applicable entities which may include multiple locations (e.g. a primary and back-up control center).

The RCSDT added the following Requirement Parts at the suggestion of stakeholders:

3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection

4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection

5.6 Adjacent Balancing Authorities

6.3 Adjacent Balancing Authorities

The RCSDT agrees with the many industry comments and removed the phrase "to exchange Interconnection and operating information" in requirements R1 through R8. This removal clarifies that the intent of this capability is NOT for the exchange of data.

A few commenters also expressed concerns about the frequency of testing Alternative Interpersonal Communications capability. The RCSDT believes that the proposed testing frequency is supported by the majority of stakeholders and is not overly burdensome.

Several commenters suggested that VSLs should be written based on the percent of entities rather than by an occurrence of a violation. VSLs must be written on a violation occurrence basis in accordance with FERC guidelines. The requirements specify which entities must be included in communications capabilities. If a single entity is missing, this is a violation of the requirement. According to VSL guidelines, if missing any part of the requirement could have the same reliability outcome as missing the entire requirement, the requirement is binary and the VSL must be severe.

A new requirement was added for clarity regarding responsibilities of the Distribution Provider and the Generator Operator when either entity experiences a failure of its Interpersonal Communication capability:

R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with its Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations*]

This requirement requires collaboration between entities to restore a failed communications capability.

Organization	Yes or No	Question 1 Comment
ERCOT ISO	No	<p>We expressed in the last posting that we felt the definition of Interpersonal Communications might inadvertently include data. The SDT responded that it does not by referring to Interpersonal in the name of the definition. Clearly, you cannot refer to the word you are defining in order to define it. However, it is possible “allows two or more individuals to ...” may solve this problem. Clarity should be sought in the next posting, if possible. This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. We request the sub-requirements be modified into bulleted lists. Consider striking “to exchange Interconnection and operating information” in R1, R3, R5, R7, and R8. It is redundant to the use of Interpersonal Communications “to interact, consult, or exchange information” in the definition. Consider striking “to exchange Interconnection and operating information” in R2, R4, R6. It is redundant to the use of Alternative Interpersonal Communications which uses Interpersonal Communications in its definition. Interpersonal Communications includes “to interact, consult, or exchange information” in its definition. For R2, why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications. For R3, affected neighboring Transmission Operators should be included. For R4 and R6, the sub-requirement list is different than for than for the associated Interpersonal Communications requirements R3 and R5 respectively. We believe these should be duplicate. That is the sub-requirement list for R4 should match R3 and the R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications. Again, we would suggest replacing sub-requirements with bulleted lists. For R5, why are neighboring Balancing Authorities not included? Additionally R5 should only read Contact with Interchange Coordinator within same Interconnection. They certainly need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE. Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is “shall have” while in R2, R4, and R6, the requirement is “shall designate”. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, it seems the same wording should be used. We do not believe R2.2 and R1.2 should be limited to Reliability Coordinators in the same Interconnection only. We suggest modifying “within the same Interconnection” to “within the same Interconnection, and, as appropriate, between a-synchronously connected RCs which are not precluded by law from scheduling interchange energy (for schedule changes, curtailments, etc.)” since reliability coordination may be required among the RCs on both sides of an Interconnection boundary. The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal</p>

Organization	Yes or No	Question 1 Comment
		<p>Communications. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost a duplicate to the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p>
ISO New England	No	<p>We expressed in the last posting that we felt the definition of Interpersonal Communications might inadvertently include data. The SDT responded that it does not by referring to Interpersonal in the name of the definition. Clearly, you cannot refer to the word you are defining in order to define it. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, it seems the same wording should be used. We do not believe R2.2 and R1.2 should be limited to Reliability Coordinators in the same Interconnection only. We suggest modifying “within the same Interconnection” to “within the same Interconnection, and, as appropriate, between a-synchronously connected RCs which are not precluded by law from scheduling interchange energy (for schedule changes, curtailments, etc.)” since reliability</p>

Organization	Yes or No	Question 1 Comment
		<p>coordination may be required among the RCs on both sides of an Interconnection boundary. The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal Communications. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost a duplicate to the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p>
<p>IRC Standards Review Committee</p>	<p>No</p>	<p>We expressed in the last posting that we felt the definition of Interpersonal Communications might inadvertently include data. The SDT responded that it does not by referring to Interpersonal in the name of the definition. Clearly, you cannot refer to the word you are defining in order to define it. However, it is possible “allows two or more individuals to ...” may solve this problem. Clarity should be sought in the next posting, if possible. This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. We request the sub-requirements be modified into bulleted lists. Consider striking “to exchange Interconnection and operating information” in R1, R3, R5, R7, and R8. It is redundant to the use of Interpersonal Communications “to interact, consult, or exchange information” in the definition. Consider striking “to exchange Interconnection and operating information” in R2, R4, R6. It is redundant to the use of Alternative Interpersonal Communications which uses Interpersonal Communications in its definition. Interpersonal Communications includes “to interact, consult, or exchange information” in its definition. For R2, why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications. For R3, affected neighboring Transmission Operators should be included. For R4 and R6, the sub-requirement list is different than for than for the associated Interpersonal Communications requirements R3 and R5 respectively. We believe these should be duplicate. That is the sub-requirement list for R4 should match R3 and the R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications. Again, we would suggest replacing sub-requirements with bulleted lists. For R5, why are neighboring Balancing Authorities not included? Additionally R5 should only read Contact with Interchange Coordinator within same Interconnection. They certainly need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE. Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is “shall have” while in R2, R4, and R6, the requirement is “shall designate”. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, it seems the same wording should be used. We do not believe R2.2 and R1.2 should be limited to Reliability Coordinators in the same Interconnection only. We suggest modifying “within the same Interconnection” to “within the same</p>

		<p>Alternative Interpersonal Communications. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost duplicate to the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p>
<p>Northeast Power Coordinating Council</p>	<p>No</p>	<p>It was expressed in the last posting that the definition of Interpersonal Communications might inadvertently include data. The SDT responded that it does not by referring to Interpersonal in the wording of the definition. The word being defined shouldn't be in the definition. However, incorporating "allows two or more individuals to ..." is an option that may solve this problem. The next posting should clarify this.</p> <p>Response: The RCSDT has clarified in previous responses to comments that the requirements of COM-001 do not apply to data. The current proposed definition of Interpersonal Communications includes the phrase "allows two or more individuals to...". In an effort to make this more clear, the RCSDT has revised Requirements R1-R8 to remove the phrase "to exchange Interconnection and operating information" as you and others have suggested. This will provide the needed clarity for stakeholders that COM-001 does not include "data exchange."</p> <p>This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. The sub-requirements should be modified into bulleted lists.</p> <p>Response: The information filing did not propose to eliminate the use of numbered items altogether, but proposed changing the manner in which they were numbered. Bulleted lists are used to indicate sets of options; numbered lists are used when each of the listed items are required.</p> <p>Consider striking "to exchange Interconnection and operating information" in R1, R3, R5, R7, and R8. It is redundant to the use of Interpersonal Communications "to interact, consult, or exchange information" in the definition.</p> <p>Response: The RCSDT agrees and we have removed the phrase "to exchange Interconnection and operating information" from R1-R8. This helps clarify the intent that the capability is NOT for data exchange as data is covered under the provisions of the recently approved IRO-010-1a.</p> <p>Consider striking "to exchange Interconnection and operating information" in R2, R4, R6. 		<p>operating information from R1-R8. This helps clarify the intent that the capability is NOT for data exchange as data is covered under the provisions of the recently approved IRO-010-1a.</p> <p>For R2, why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications.</p> <p>Response: R1 is dealing with the “normal” communications. R2 deals with the default reliability needs. The normal communications include Interchange Coordinators because they are part of the administration of Interchange. The SDT predicated R2 on being in an unusual situation in which only the basic reliability functions were needed. In such times, the Interchange Function is seen as sacrificial because the BA itself could operate reliably (not necessarily efficiently) by simply dealing with it is adjacent BAs and “scheduling” interchange on a BA to BA basis (as opposed to a PSE to PSE basis). The Interchange Coordinator is only needed to ensure all of the commercial arrangements are validated by all parties. In stressed conditions those checkouts can be by-passed and dealt with after-the-fact. That <u>does not mean</u> that when an entity goes to backup is expected to bypass the Interchange Coordinator. The requirement R2 merely focused on the worst case situation.</p> <p>This requirement is not meant to define the alternate backup system; it is merely mandating the lowest mandatory requirements on the backup system. For example during the Y2K operations backup systems included satellite phones which did not cover all entities involved in normal operations. The SDT wrote the requirements to assure that such an event would not cause all RCs, BAs and TOPs to be non-compliant.</p> <p>For R3, affected neighboring Transmission Operators should be included.</p> <p>Response: The SDT has included the following Part 3.5 of Requirement R3:</p> <p style="padding-left: 40px;">3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection</p> <p>For R4 and R6, the sub-requirement list is different from the associated Interpersonal Communications requirements R3 and R5 respectively. These should be duplicate. The sub-requirement list for R4 should match R3, and the sub-requirement list for R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications.</p> <p>Response: The SDT has included the following Part 4.3 of Requirement R4:</p> <p style="padding-left: 40px;">4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection</p> <p>The SDT has included the following Part 6.3 of Requirement R6:</p> <p style="padding-left: 40px;">6.3 Adjacent Balancing Authorities</p>

Organization	Yes or No	Question 1 Comment
		<p>The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Not requiring DP and GOP entities to have Alternative Interpersonal Communication capability meets FERC’s intention as stated here: “We (FERC) clarify that the NOPR did not propose to require redundancy on generator operators’ or distribution providers’ telecommunication facilities...” (Order 693, RM06-16-000, Paragraph 487).</p> <p>The sub-requirements should be bulleted lists.</p> <p>Response: Bulleted lists are used to indicate sets of options; numbered lists are used when each of the listed items are required.</p> <p>For R5, why are neighboring Balancing Authorities not included?</p> <p>Response: The SDT has included the following Part 5.6 of Requirement R5:</p> <p style="padding-left: 40px;">5.6 Adjacent Balancing Authorities</p> <p>Note that this is a defined term in the glossary: “A Balancing Authority Area that is interconnected (to) another Balancing Authority Area either directly or via a multi-party agreement or transmission tariff.”</p> <p>Additionally, R5 should only read Contact with Interchange Coordinator within the same Interconnection. They need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE.</p> <p>Response: The RCSDT has removed the Interchange Coordinator from the standard (R1 and R5) as the BA is responsible for the reliability implications of Interchange. The reliability relationship lies between BA’s.</p> <p>Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is “shall have” while in R2, R4, and R6, the requirement is “shall designate”. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, the same wording should be used.</p> <p>Response: The SDT inserted the different terminology because there may be more than one type backup system, Some entities have land lines; cell phones; satellite phones; voice over internet; and/or teleconferencing. The language is intended to provide flexibility to allow entities to have one or more types of backup while designating one for Alternative Interpersonal Communications.</p> <p>R2.2 and R1.2 should not be limited to Reliability Coordinators in the same Interconnection only. Modify “within the same Interconnection” to “within the same Interconnection, and, as appropriate, between a-synchronously connected RCs which are not precluded by law from scheduling interchange energy (for schedule changes, curtailments, etc.)” since reliability coordination may be required among the RCs on both sides of an Interconnection boundary.</p>

Organization	Yes or No	Question 1 Comment
		<p>Response: The requirement proposed by NPCC is predicated on “as appropriate.” Such subjective phrases cannot be used in a standard. The issue of asynchronous entities is not germane to the requirement but the requirement does not preclude additional coordination to meet the specifics of ERCOT, HQ and WECC. A regional variance may be an option for you to consider.</p> <p>The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal Communications with. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs.</p> <p>Response: Each entity listed in Requirements R1-R8 is required to meet the contents with respect to each other entity listed in the requirement. Failure to have the capability with a single entity is a single violation of the requirement. For example, if an RC has 5 BA’s within it Area and fails to have Interpersonal Communications with two of them, then the RC has violated the requirement twice. The VSLs are written to address each violation of the Requirement. We have removed the words “or more” from the VSLs.</p> <p>The second half of the Severe VSL for R9 is almost a duplicate of the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p> <p>Response: The R9 Severe VSL was revised to remove “within 2 hours”. It now reads:</p> <p style="padding-left: 40px;">“The responsible entity tested the Alternative Interpersonal Communications capability and identified a problem but didn’t initiate action to repair or designate a replacement Alternative Interpersonal Communications.”</p>
<p>Response: The RCSdT thanks you for your comment. Please see responses embedded above.</p>		
PNGC Power member owners	No	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications</p>

Organization	Yes or No	Question 1 Comment
		<p>requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window."Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication."We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
<p>Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support, the requirement is to have communications capability. The type of system (i.e. On-Call) is not prescribed in the standard and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is "To ensure emergency communications between operating personnel are <u>effective</u>." It is not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication, in many cases this may be via a receptionist, or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>		
PPL	Yes	
PSEG	No	Com-001-2 implementation plan lists that this is applicable to PSE's and LSE's however, PSE's and LSE's were removed from the actual standard. The implementation plan should be revised.
<p>Response: The RCSDT thanks you for your comment. We have revised as you suggested.</p>		
Dominion	No	The monthly testing requirement for Alternative Interpersonal Communications is overly burdensome without any evidence to support that it is necessary to insure reliability. We believe that an entity will take necessary

Organization	Yes or No	Question 1 Comment
		<p>steps to insure the Alternative Interpersonal Communications is functioning properly, especially if it experiences problems with its Interpersonal Communications, it. We can support quarterly testing as we believe it strikes a reasonable balance.</p>
<p>Response: The RCSDT thanks you for your comment. The drafting team has not received a large number of comments that suggest that the frequency of the testing is burdensome and believes that the testing could occur in the normal course of daily activities. Therefore, the SDT believes the frequency of testing will not be burdensome.</p>		
<p>South Carolina Electric and Gas</p>	<p>No</p>	<p>Each sub-requirement should not have an “R” in front of the number in order to be consistent with NERC’s August 10, 2009 filing at FERC on this subject. Requirement R3 and R4 should include adjacent TOPs as a sub-requirement. Requirements R5 and R6 should include adjacent BAs as a sub-requirement. ”to exchange Interconnection and operating information” should be deleted from requirements R1 through R8 as it is redundant with the definition of Interpersonal Communications. The last page of the Implementation Plan includes LSEs, PSE, and TSPs as being responsible entities under this standard, yet the standard does not include them. Please correct the implementation plan.</p>
<p>SERC OC Standards Review Group</p>	<p>No</p>	<p>Each sub-requirement should not have an “R” in front of the number in order to be consistent with NERC’s August 10, 2009 filing at FERC on this subject.</p> <p>Response: The RCSDT agrees and this change has been made.</p> <p>Requirement R3 and R4 should include adjacent TOPs as a sub-requirement.</p> <p>Response: The SDT has included the following Part 3.5 of Requirement R3 and 4.3 of R4: Adjacent Transmission Operators synchronously connected within the same Interconnection</p> <p>Requirements R5 and R6 should include adjacent BAs as a sub-requirement.</p> <p>Response: The SDT has included the following Part 5.6 of Requirement R5 and Part 6.3 of R6: Adjacent Balancing Authorities</p> <p>Note that this is a defined term in the glossary: “A Balancing Authority Area that is interconnected to another Balancing Authority Area either directly or via a multi-party agreement or transmission tariff.”</p> <p>”to exchange Interconnection and operating information” should be deleted from requirements R1 through R8 as it is redundant with the definition of Interpersonal Communications.</p> <p>Response: The RCSDT agrees and we have removed the phrase “to exchange Interconnection and operating information from R1-R8.</p>

Organization	Yes or No	Question 1 Comment
		<p>The last page of the Implementation Plan includes LSEs, PSE, and TSPs as being responsible entities under this standard, yet the standard does not include them. Please correct the implementation plan.</p> <p>Response: The RCSDT agrees and we have made the revision.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
<p>MRO's NERC Standards Review Subcommittee</p>	<p>No</p>	<p>A. R5.5 states a BA shall have Interpersonal Communications with each Interchange Coordinator within its BA area and adjacent Interchange Coordinators. NERC Registry Criteria (v5) uses the term “Interchange Authority” not Interchange Coordinator, please clarify.</p> <p>Response: The RCSDT has removed the Interchange Coordinator from the standard based on stakeholder feedback.</p> <p>B. Upon review of the NERC Compliance Registry, there are only 56 BA’s that are also registered as an IA but 138 total BA’s within the registry. R5.5 is not clearly written because many BA’s do not have an IA within their BA area. Though a BA will use an IA to schedule interchange, a possible rewrite of R5.5 may be “Each Interchange Authority that the BA actively uses to arrange Interchange”.</p> <p>Response: The RCSDT has removed the Interchange Coordinator from the standard based on stakeholder feedback.</p> <p>C. R10 states that the RC, TOP, BA, DP and GOP shall notify “impacted entities” within 60 minutes... Please clarify if the SDT means the entities within the applicability section or is this to be determined by the entity. A possible rewrite may be; “Each RC shall notify TOP’s, BA’s, and IA’s within its RC area along with adjacent RC’s within the same Interconnection”. This break down would need to be required for each affected entity and would provide clarity to the industry.</p> <p>Response: R10 specifies only “impacted entities”. That phrase is used to limit the scope of the requirement. If an entity has a failure of its Interpersonal Communications capability with only one entity, then <i>that</i> entity is the “impacted entity” and they should be notified of the failure.</p> <p>D. We do not agree with a DP and GOP need to be held to the same level of compliance as a RC, BA or TOP. FERC Order 693 (paragraph 487) directed the DP and GOP to be included in this standard by stating:” We expect the telecommunication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process”. A DP and GOP may not be staffed 24 hours a day like a BA or TOP and the SDT did not take this into consideration.</p> <p>Response: There is no requirement that requires identical communications systems. The requirement is to have “a” communication capability. The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Not requiring DP</p>

Organization	Yes or No	Question 1 Comment
		<p>and GOP entities to have Alternative Interpersonal Communication capability meets FERC's intention as stated here: "We (FERC) clarify that the NOPR did not propose to require redundancy on generator operators' or distribution providers' telecommunication facilities..." (Order 693, RM06-16-000, Paragraph 487). A new requirement was also added concerning the failure of a DP or GOP Interpersonal Communications capability:</p> <p style="padding-left: 40px;">R11 Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with its Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>E. We understand that the DP and GOP need a means of communicating with their BA and TOP (R7 and R8) but would this not be the same Interpersonal Communications capability that as stated in R3 and R5 for the TOP and BA? Example: If the BA uses a phone line as their Interpersonal Communication medium to contact the DP wouldn't the DP also use the same medium to communicate with their BA? Yes, there could be different mediums but 99% of the time it will be the same medium.</p> <p>Response: The RCSDT agrees with your assumption; however a reciprocal requirement is necessary. Without R7 and R8, there would be no requirement for the DP or GOP.</p> <p>F. R10 could mean that if there is a logging system that detects an Interpersonal Communication failure, then all applicable entities will need to monitor that monitoring device. Since this requirement applies to all applicable entities, and Interpersonal Communication mediums will most likely be the same, there will always be two entities found non compliant if the 60 minute threshold is passed.</p> <p>Response: There is no requirement to monitor or log Interpersonal Communications capability, only to test. R10 requires the entity to notify the impacted entities upon a failed test or the detection of a failure.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
FirstEnergy	No	<p>It is not clear from the definition of Interpersonal Communications if certain communications "mediums" such as email, instant messaging, etc. are included.</p> <p>Response: The requirements are for communications between two or more persons. Mediums are not listed to avoid being prescriptive in the requirement. The measures provide examples of mediums.</p> <p>Furthermore, the Measures for these requirements all include "electronic communications" as acceptable evidence. If the drafting team does not intend these mediums be included, then it should be clarified in the</p>

Organization	Yes or No	Question 1 Comment
		<p>definition. We suggest the following wording of the definition: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information. This interaction consists of verbal, spoken words exchanged in Real-time.</p> <p>Response: The use of verbal communication only is not the intent of the requirement. Written communication is also an acceptable form of Interpersonal Communication.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
SPP Standards Development	No	<p>We would suggest that the applicability of COM-001-2 be expanded to that listed in COM-002-3. How can the directives to be issued in COM-002 be delivered and confirmed without having Interpersonal Communications capability?</p> <p>Response: The RCSDT has revised the applicability of COM-001 and COM-002 such that they contain the same functional entities. These are: RC, TOP, BA, GOP, and DP.</p> <p>All of the functional entities listed in R1.1 should also be listed in R2.1. Similarly the sub-requirements of R3 should also be applied to R4. The same holds true for R5 and R6.</p> <p>Response: The requirements for Alternative Interpersonal Communications are different than for Interpersonal Communications. There is not necessarily a reliability need to have redundant capability with each and every entity such as DP and GOP.</p> <p>If the SDT intends to exclude data communications from Interpersonal Communications and Alternative Interpersonal Communications, we suggest the SDT be more specific in the definition to specifically exclude data communications in the definition. It is not readily apparent that these terms do not apply to data communications and without a clarification, confusion exists.</p> <p>Consider</p> <p>Response: The RCSDT agrees and have removed the phrase “to exchange Interconnection and operating information from R1-R8. This helps clarify the intent that the capability is NOT for data exchange, as data is covered under the provisions of the recently approved IRO-010-1a.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
Kansas City Power & Light	No	<p>These requirements require TOP’s, BA’s, and GOP’s to establish alternative means of “interpersonal” communications with other BA’s, GOP’s, and BA’s respectively without regard to the reliability impact each TOP, BA or GOP has on the interconnection. Why would it be necessary for a TOP with one 161kv transmission line or a BA with 100 MW of total load, or one GOP with a 30MW unit to realize additional costs</p>

Organization	Yes or No	Question 1 Comment
		<p>when the facilities they operate have little reliability impact?</p> <p>Response: The RCSDT believes that any NERC Registered Entity capable of issuing or receiving a directive is an applicable party to COM-001.</p> <p>In addition, most RC's have established satellite telephone systems as back-up communication with TOP's. RC's may have to establish additional communication systems with BA's as these requirements impose to avoid Standards of Conduct issues.</p> <p>Response: It is unclear how this scenario would present Standards of Conduct issues for communication between reliability entities. The requirements pertain to reliability functions, not commercial functions or the way in which entities are structured internally.</p> <p>R9 - considering the reliability of communication systems, a 2 hour response to a problem with the alternative means of communication is over sensitive. Allowing for sometime in an operating shift would be more in line, such as 8 hours.</p> <p>Response: The requirement is to initiate action within 2 hours, not complete it. The two hour time reference aligns with the timing shown in EOP-008 for back-up facilities.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
Competitive Suppliers		
Exelon	No	<p>1. COM-001-2, 4.4 - Distribution Providers and 4.5, Generation Operators should be highlighted and communicated as a substantive change since entities may not be aware that they are being added to the applicability section of the standard.</p> <p>Response: These revisions were done based on FERC Order 693 directives. They have been widely distributed in redline form. NERC will ensure that the change in applicability is highlighted in the announcement of the next posting.</p> <p>2. COM-001-2, R10 - should have the following underlined clarifying text added, shall notify impacted entities within 60 minutes of the detection of a failure “of all primary and alternative “ Interpersonal Communications capabilities that lasts 30 minutes or longer. Exelon believes that the intent of R10 is for complete loss of communication ability and should not be applied to facilities that have multiple backups.</p> <p>Response: The RCSDT developed R10 based on R3 of COM-001-1. The intent is to ensure that entities know not to use the primary and to use the alternative.</p> <p>3. COM-001-2, M1 thru 9 - Suggest that network diagrams and / or communications schematics be added as</p>

Organization	Yes or No	Question 1 Comment
		<p>suggested evidence.</p> <p>Response: The measure only provides examples of the types of evidence that may be used for compliance and the list is not all inclusive. The term "...evidence that could include, but is not limited to..." addresses your suggestion.</p> <p>4. COM-001-2, VSL for R9 - Regarding failure to test the Alternative Interpersonal Communication, the Severity Level does not align with the potential impact to the BES. The Severity Level for simply missing a test should be revised to a High VSL.</p> <p>Response: The VSL does not relate to risk to the BES (this is covered in the Violation Risk Factor). The VSL only indicates how badly an entity missed the mark with respect to the requirement. A Severe VSL is appropriate.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
PacifiCorp	Yes	
Arizona Public Service Company	Yes	
Southern Company	No	<p>Comments: Standard COM-001-2R10. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer. Comment: It is not clear whether the notification requirements identified in R10 apply to failure of ALL available Interpersonal Communications or ANY Interpersonal Communications. We suggest that the existence of functioning Alternative Interpersonal Communications precludes the requirement for notification of impacted entities.</p> <p>Response: The intent of R10 is to ensure that entities know not to use the primary and to use the alternative. Notification is required for the failure of the primary capability.</p> <p>D. Compliance 1. Compliance Monitoring Process 1.3 Data Retention Each Generator Operator shall keep the most recent twelve months of historical data (evidence) for Requirements R8 and R10, Measures M8 and M10. Comment: The data retention requirements specified for the Generator Operator in Para. 1.3 (above) are not consistent with the 3-year audit interval for the GOP. Question: When audited on this Standard is the expectation that the GOP will have 12 months of evidence or 36 months of evidence?</p> <p>Response: The Data Retention section of the standard conforms to the NERC guidelines. The RCSDT has also added the following to the data retention section:</p>

Organization	Yes or No	Question 1 Comment
		<p>The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.</p> <p>Standard COM-002-3R2. Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message has been confirmed. Comment: The term “Reliability Directive” is currently not defined in the NERC Glossary of Terms. However, in the Implementation Plan for COM-002-3 the RC SDT proposes a definition for Reliability Directive. It is implied in the standard that the Reliability Directive is issued as a voice command which precludes the use of our preferred method of Interpersonal Communication. However, this is not definitively stated in either the standard or the proposed definition. I think this needs to be made clearer if the Reliability Directive must be issued as a voice command.</p> <p>Response: The RCSDT disagrees with your assumption that the requirement implies that a Reliability Directive must be issued verbally. In a previous version of the draft standard, the RCSDT had included “verbal” issuance of directives. This was removed to allow the use of other than voice capability to issue a Reliability Directive.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
<p>Green Country Energy, Green Country Operating Services</p>	<p>No</p>	<p>COM-001 General question/comment. The reference to infrastructure should be removed and just keep the word “medium”. Here's why: What communication medium (infrastructure) does not use satellite at some point unless entities are within a close geographical proximity? How likely is it to have 2 different mediums? o Local phone and fax hard-wire likely. o Long distance phone and fax - satellite o Cell phone - satellite o Internet - satellite o Radio - antenna The reason for mentioning this is, if all we have is satellite then the reference to infrastructure should be removed and just keep the word “medium”.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT believes that the language of the definition is clearer with the existing verbiage.</p>		
<p>Central Lincoln</p>	<p>No</p>	<p>See Q 6 below.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses to Q6.</p>		

Organization	Yes or No	Question 1 Comment
Lakeland Electric	Yes	
Manitoba Hydro	Yes	
NextEra Energy, Inc.	No	<p>As drafted, COM-001 is not clear or complete. At this stage in the evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. Thus, NextEra Energy Inc. (NextEra) has numerous recommended corrections to provide clarity and completeness to COM-001. For example, the requirement to designate an Alternative Interpersonal Communication capability is not clear. Does the designator solely designate for the designator’s knowledge or does the designator need to inform the entity on the other end of the connection. In R2, for instance, the Reliability Coordinator must designate, but it is also not clear whether the Reliability Coordinator must inform the Balancing Authorities or Transmission Operators. It is further unclear whether the designation must be documented, or if any informing of the Balancing Authorities or Transmission Operators must be documented. Thus, it is recommended that the drafters decide what was intended regarding the designation and clearly state the requirements.</p> <p>Response: The Requirement R2 is for the RC to designate an Alternative Interpersonal Communication and inform the other entity (BA, TOP, etc.) as to what that Alternative Interpersonal Communication is. The Measure M2 provides examples of the types of evidence which may be used to prove compliance with the requirement.</p> <p>In R9 it states that “. . . on at least a monthly basis.” There are two issues to consider here. If the sentence stays, grammatically it should read “. . . on, at least, a monthly basis. . . However, from a compliance and technical perspective, the term “at least” has no significance and should be deleted. The requirement is to test on a monthly basis - the phrase “at least” only introduces ambiguity and implies that the party should consider every two or three weeks. If the drafting team believes a best practice is less than a month, there are other NERC educational tools to explain a best practice.</p> <p>Response: The RCSDT used this term to allow more frequent testing to be performed.</p> <p>In R10, it states “. . . shall notify the impacted entity . . .” It would be clearer to state: “. . . shall notify the impacted Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator . . .”</p> <p>Response: The RCSDT believes your suggestion adds unnecessary verbiage to the requirement and does not provide additional clarity.</p>

Organization	Yes or No	Question 1 Comment
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
<p>United Illuminating Company</p>	<p>No</p>	<p>COM-001-2 does not specify the amount of time a DP has to reestablish the Interpersonal Communication Capability after the capability fails before it is assessed non-compliance for not having the communication. Is an entity non-compliant the minute the communication capability is unavailable? If so, then to be compliant a tertiary (or secondary capability for DP) must be installed by the entity. Something similar was discussed with EOP-008 R3: "To avoid requiring a tertiary facility, a backup facility is not required during: o Planned outages of the primary or backup facilities of two weeks or less o Unplanned outages of the primary or backup facilities". UI suggests the drafting team incorporate something similar.</p> <p>Response: The RCSDT is proposing a new requirement to address your concerns for the DP. We have included the GOP as well:</p> <p style="padding-left: 40px;">R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>The VSL for R7 is severe only and states: "The Distribution Provider failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 7.1 or 7.2." I believe there should be a time component to the VSL and the VSL staged. For example, failure to have communication established for less than 60 minutes would be Lower, anything over 1 hour severe. Also needed is a phrase to state when the violation begins. Does the violation begin when the loss of Communication Capability is detected or when it occurred? In other words, does the violation start when the operator attempts to use the phone and it is not functional, or did it occur when the phone line functionality failed but was not yet detected because no attempt to use the phone was made. So the VSL for R7 would follow a format of: "The Distribution Provider failed to have Interpersonal Communication Capability with one or more entities listed in Parts 7.1 or 7.2 for a continual 60 minutes period as measured from the time the ICC failure was detected". An alternative remedy is to alter the language of R7 to allow for unplanned outage.</p> <p>Response: The VSL represents a single violation of the requirement. For this requirement, the DP must have Interpersonal Communication with its TOP and BA. The VSL was revised to remove "or more" to conform to the requirement.</p> <p>NERC does not have a Reliability Requirement for a DP to staff a control room 24/7. COM-0001 can be interpreted to imply that a DP needs to be staffed 24/7 to facilitate interpersonal communications. If NERC wants to extend the requirement for a 24/7 staffed operating position at the DP then the appropriate method is</p>

Organization	Yes or No	Question 1 Comment
		<p>thru a SAR to PER-002.</p> <p>Response: COM-001 is not intended to imply a 24/7 requirement.</p> <p>COM-001 R7 should have a sub-requirement added recognizing that DP's are not required to staff 24/7 and many do not staff overnight. UI suggests adding R7.3: DP's will notify their TOP and/or BA when it is not staffing an operating desk.</p> <p>Response: While the SDT does not disagree this would be good practice, other methods of addressing this situation (e.g., having an answering service, an on –call staff, or something similar) would be valid as well. The SDT does not believe it would be appropriate to limit this to only one method.</p> <p>R7: Should address the instance if the DP is not required to have communication with the BA, because the BA communicates thru the TOP.</p> <p>Response: The intent of the standard is that the DP will have communication with their BA. Ti is not prescriptive as to how that communication will be implemented.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
American Electric Power	No	The applicability of COM-001 and COM-002 appear to be at odds with each other. The requirements may need to be re-written so that they are in sync.
<p>Response: The RCSDT thanks you for your comment. The RCSDT has made revisions to COM-001 and COM-002 such that the applicability is compatible.</p>		
Pepco Holdings Inc	Yes	
American Transmission Company	Yes	ATC agrees with the understanding that the line of demarcation is up to the point where ATC owns the equipment.

WECC	Yes	
BGE	Yes	BGE has no additional comments.
Constellation Energy Commodities Group	Yes	

Organization	Yes or No	Question 1 Comment
Duke Energy	No	<p>o We question how far the definition of Alternative Interpersonal Communication goes in requiring separate infrastructure from Interpersonal Communication. For example, wireless communications sometime utilize fiber optic networks.</p> <p>Response: The definition requires the use of different infrastructure (medium) than the Interpersonal Communication used for day to day ops. The RCSDT cannot be prescriptive regarding the specific medium to be employed. This is intended to apply to assets and access to media that is within the control of the entity responsible for complying with the Requirement. For example, the way cell phone signals are routed is not within your control.</p> <p>o We question why the requirements state that entities must “have” Interpersonal Communications capability, but must “designate” Alternative Interpersonal Communications capability?</p> <p>Response: Many entities have multiple Alternative Interpersonal Communication capabilities. Allowing them to designate which one they want to employ allows for flexibility in which one they use for AIC.</p> <p>o R1.2 and R2.2 - Why is this limited to the same interconnection?</p> <p>Response: The phrase “within the same interconnection” is added for the case of ERCOT, which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>o R3 - need to add neighboring TOPs.</p> <p>Response: Agreed.</p> <p>o R5 - need to add adjacent BAs.</p> <p>Response: Agreed.</p> <p>o Interchange Coordinator - Add IC to the Applicability Section, and add a requirement that the IC have Interpersonal Communication capability with its BA and adjacent BAs.</p> <p>Response: The RCSDT has eliminated the Interchange Coordinator from COM-001-2 based on other stakeholder comments..</p> <p>o Requirements to “designate” Alternative Interpersonal Communication should carry a “Medium” VRF instead of “High”, because they are a backup capability. The word “designate” carries the connotation that these are documentation requirements.</p> <p>Response: The requirement to designate is for the entity to have an Alternative Interpersonal Communications capability and to designate what that is. In many cases, an entity will have multiple</p>

Organization	Yes or No	Question 1 Comment
		<p>alternatives and neighboring entities need to know how to contact them in case of a failure of the primary. If an entity does not designate its AIC, in an emergency it may not be able to issue or comply with directions or instructions which could directly contribute to BES instability, separation, or cascading failure.” The VRF should remain as high.</p> <p>o R9 requires a monthly test of Alternative Interpersonal Communications capability. This was quarterly in the last draft. We question how these requirements for “Alternative Interpersonal Communications” capability are related to requirements for “backup functionality” in EOP-008-1, which requires an annual test of backup functionality. Clarity on the relationship between “Interpersonal Communications”, “Alternative Interpersonal Communications”, “primary control center functionality” and “backup control center functionality” would be appreciated.</p> <p>Response: Interpersonal Communication and Alternative Interpersonal Communication should be in both the primary and back up control center. IC and AIC are between entities as well. These capabilities are in the primary and back up control centers. The requirement applies to the primary control center. EOP-008 applies to the back up control center. An entity may test its AIC in the normal course of daily activities.</p> <p>o R11 - is this requirement being moved to COM-003?</p> <p>Response: The OPCP SDT is vetting this requirement and it will be in COM-003.</p> <p>o Data Retention - Is data retention really going to be just 12 months? Most auditors seem to be asking for everything since the last audit.</p> <p>Response: The Data Retention section of the standard conforms to the NERC guidelines. The RCSDT has also added the following to the data retention section:</p> <p style="padding-left: 40px;">The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>		
CECD	No	<p>Based on the drafting teams response that the definition of Interpersonal" clarifies the exclusion of media dedicated to Telemetry or other data exchange, the term Interpersonal Communication should be replaced with verbal communication capabilities. The term Alternative Interpersonal Communication should be replaced with alternative verbal communication capability that is able to serve as a substitute for and does not</p>

Organization	Yes or No	Question 1 Comment
		utilize the same infrastructure (medium) as verbal communications capabilities used for day-to-day operations.
<p>Response: The RCSDT thanks you for your comment. The RCSDT wrote the definitions to include verbal as well as written communication, and the Measures provide examples of person to person communications.</p>		
Indeck Energy Services	No	
City of Springfield, IL - City Water Light and Power (CWLP)	No	<p>The definition of “Interpersonal Communications” is overly broad and does not address the functional needs of reliability coordination. The definition should be limited to systems utilized for essential reliability functions. While the Purpose statement in the standard does address this intent, the explicit inclusion in the definition removes all ambiguity. Further, the definition of “Alternative Interpersonal Communications” without corresponding explicit definition of Primary Interpersonal Communications may lead to confusion and unnecessary duplication of efforts in testing and maintenance.</p>
<p>Response: The RCSDT thanks you for your comment. The overall mission of reliability standards is for entities to address essential reliability functions.</p>		
Independent Electricity System Operator	No	<p>(1) NERC filed with FERC on August 10, 2009 indicating that it would discontinue the use of sub-requirements in standards. All draft standards posted since have the format of Part Numbers within each main Requirement. Please revise the standards in this project accordingly.</p> <p>Response: The RCSDT agrees and this revision will be made.</p> <p>(2) Having defined the terms Interpersonal Communication and Alternative Interpersonal Communication, the phrase “to exchange Interconnection and operating information” in a number of requirements is redundant and can be removed. Further, for R1, we suggest removing the phrase “within the same Interconnection since there RCs between two Interconnections still need to communication with each other for reliability coordination (e.g. curtailment of interchange transactions crossing Interconnection boundary, as stipulated in IRO-006).</p> <p>Response: The RCSDT agrees and have removed the phrase “to exchange Interconnection and operating information” from R1-R8. This helps clarify the intent that the capability is NOT for data exchange, as data is covered under the provisions of the recently approved IRO-010-1a.</p> <p>The phrase “within the same interconnection” is added for the case of ERCOT which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>(3) R2: Suggest to add Purchasing-Selling Entity and Interchange Authority (INT-004 and INT-005 have requirements for communication between the RC and the PSE and IA), and remove the phrase “within the</p>

Organization	Yes or No	Question 1 Comment
		<p>same Interconnection since there RCs between two Interconnections still need to communication with each other for reliability coordination (e.g. curtailment of interchange transactions crossing Interconnection boundary, as stipulated in IRO-006).</p> <p>Response: The applicability of COM-001 and COM-002 were revised to include the same reliability entities: RC, TOP, BA, DP and GOP. LSE, PSE and TSP were removed from the applicability of these standards per stakeholder suggestion.</p> <p>The phrase “within the same interconnection” is added for the case of ERCOT which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>(4) R3: Suggest to add adjacent Transmission Operator and Purchasing-Selling Entity (the latter needed for meeting INT-004 requirements).</p> <p>Response: The SDT has included the following Part 3.5 of Requirement R3:</p> <p style="padding-left: 40px;">3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection</p> <p>The applicability of COM-001 and COM-002 were revised to include the same reliability entities: RC, TOP, BA, DP and GOP. LSE, PSE and TSP were removed from the applicability of these standards per stakeholder suggestion.</p> <p>(5) The list of entities in R4 and R6 is different from those in R3 and R5. They should be the same for having Alternative Interpersonal Communication capability.</p> <p>Response: The RCSdT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Additionally requiring DP and GOP entities to have Alternative Interpersonal Communication capability only imposes more cost on smaller DP and GOP entities that have little or no risk impact to the bulk electric system.</p> <p>(6) R5: Suggest to add adjacent Balancing Authority as adjoining BAs need to communication with each to check schedules and other balancing information.</p> <p>Response: The SDT has included the following Part 5.6 of Requirement R5:</p> <p style="padding-left: 40px;">5.6 Adjacent Balancing Authorities</p> <p>Note that this is a defined term in the glossary: “A Balancing Authority Area that is interconnected (to) another Balancing Authority Area either directly or via a multi-party agreement or transmission tariff.”</p> <p>(7) There are a number of parts in Requirements R1 to R8 each of which must be complied with. However, the VSLs for R1 to R8 are binary which do not provide any distinction in partial failure of each of these requirements. We suggest the SDT to apply the VSL guideline and re-establish the various levels of violation</p>

Organization	Yes or No	Question 1 Comment
		severity for these requirements. Response: Each entity listed in Requirements R1-R8 is required to meet the contents with respect to each other entity listed in the requirement. Failure to have the capability with a single entity is a single violation of the requirement. For example, if an RC has 5 BA's within it Area and fails to have Interpersonal Communications with two of them, then the RC has violated the requirement twice. The VSLs are written to address each violation of the Requirement. We have removed the words "or more" from the VSLs.
Response: The RCSDT thanks you for your comment. Please see responses above.		
Bonneville Power Administration	Yes	
Xcel Energy	No	We feel that either the definitions, or the requirements, should make it clear whether data is included.
Response: The RCSDT thanks you for your comment. The SDT has made modifications to attempt to make this as clear as possible.		

2. The RCSDT believes that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel’s comment. Do you agree? If not, please explain in the comment area below.

Summary Consideration:

The original justification that the RCSDT posited for not adding a requirement to directly address Xcel Energy’s comments in paragraph 516 and FERC’s related recommendation in paragraph 523 was that TOP-001-1 R3 was considered to address this concern. Since that time, the RTO SDT has proposed to retire TOP-001-1 R3. However, FERC has since retired IRO-004-1 R3 and R5 along with IRO-005-3 R5. Because these are retired, there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirements,” the TOP may respond to the RC that it cannot comply.

Organization	Yes or No	Question 2 Comment
Northeast Power Coordinating Council	No	If the requirement were going to remain, but the Project 2007-03 Real-Time Operations SDT proposed to retire that requirement during their last posting. There needs to be better coordination with that SDT.
<p>Response: The RCSDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirement,” the TOP may respond to the RC that it cannot comply.</p>		
Bonneville Power Administration	Yes	
PPL	Yes	
Dominion	Yes	
SERC OC Standards Review Group	No	Top-001-1, Requirement R3, which is what the SDT appears to be using as its justification for not adding a requirement here is proposed to be deleted by the RTO-SDT on Project 2007-03.
<p>Response: The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. ISO New England	No	It might if the requirement were going to remain but the Project 2007-03 Real-Time Operations SDT proposed to retire that requirement during their last posting. We believe there needs to be better coordination with that SDT.
<p>Response: The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirement,” the TOP may respond to the RC that it cannot comply.</p>		
ERCOT ISO	No	It might if the requirement were going to remain but the Project 2007-03 Real-Time Operations SDT proposed to retire that requirement during their last posting. We believe there needs to be better coordination with that SDT.

Constellation Energy Commodities Group	Yes	

Consideration of Comments on Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 2 Comment
Duke Energy	No	Requirements of TOP-001-1 are being revised under Project 2007-03, which may not continue to adequately address Xcel's concern.
<p>Response: The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirement," the TOP may respond to the RC that it cannot comply.</p>		
Indeck Energy Services	Yes	
City of Springfield, IL - City Water Light and Power (CWLP)	No	TOP-001 is in the process of being substantially modified by Project 2007-03. These changes may conflict with the matter addressed by Xcel's comment. Thus, Xcel's concern should be addressed independently but in the context of the TOP-001-2 revisions proposed by Project 2007-03.
<p>Response: The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirement," the TOP may respond to the RC that it cannot comply.</p>		
South Carolina Electric and Gas	No	Top-001-1, Requirement R3, which is what the SDT appears to be using as its justification for not adding a requirement here is proposed to be deleted by the RTO-SDT on Project 2007-03.
<p>Response: The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirement," the TOP may respond to the RC that it cannot comply.</p>		
Independent Electricity System Operator	No	TOP-001 is being revised and some of the requirements that fulfill this need may have been removed. We suggest the SDT check with the latest draft version of TOP-001 and coordinate with the Real-time Operation SDT to ensure there are not gaps.
<p>Response: The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirement," the TOP may respond to the RC that it cannot comply.</p>		

Organization	Yes or No	Question 2 Comment
Xcel Energy	No	<p>We are concerned that the drafting team may not have understood Xcel Energy’s comments and FERC’s directive in Order 693. FERC had asked that NERC consider Xcel Energy’s suggestion. This consideration does not necessarily equate to the development of additional requirements, however that may be the solution. We recognize that R1 and R2 of TOP-001-1 give the TOP authority to take immediate actions necessary to alleviate operating emergencies. We were concerned with the potential situation where the RC’s directive (R3 of IRO-001-2) may conflict with actions the TOP has ALREADY taken. In this situation, we do not feel the TOP should be held at fault for the actions it took prior to the RC’s directive. (R3 of IRO-001-2 is currently in effect under TOP-001-1 R3.) Additionally, R1 and R2 of TOP-001-1 have been removed from the latest draft of version 2. So, if TOP-001-2 and IRO-001-2 are approved as drafted, it would appear that all rights and protections of the TOP to take immediate actions will be removed and our initial issue, as detailed in Order 693, still exists.</p>
<p>Response: The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirement,” the TOP may respond to the RC that it cannot comply.</p> <p>The SDT appreciates this clarification by Xcel Energy. At any time in the future, Reliability Directives may be received that, based on the best available information at the time, change or reverse operating actions taken in the past, even the immediate past. The TOP is not held at fault for past actions that it took to protect the BES by any current or proposed NERC requirements. As written in TOP-001-2 R1, R3 and R4 as proposed by the RTO SDT, the TOP is not prevented from acting or telling the RC that for specific safety, equipment, regulatory or statutory reasons, it cannot comply.</p>		

3. Do you agree with the revision to IRO-001, R1 for certifying Reliability Coordinators? If not, please explain in the comment area below.

Summary Consideration: Stakeholders were asked if they agree with the revision to IRO-001, R1 for certifying Reliability Coordinators. Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.

Organization	Yes or No	Question 3 Comment
ERCOT ISO	No	<p>The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be.</p> <p>The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES is covered under a Reliability Coordinator.</p> <p>In R2, should “of” be “to”? Reliability Directives are issued to TOPs, BA, etc.</p> <p>The VSL for R1 is not consistent with the requirement. The requirement applies to the ERO but the VSL applies to the Regional Entity.</p>
ISO New England	No	<p>The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be.</p> <p>The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES is covered under a Reliability Coordinator.</p> <p>In R2, should “of” be “to”? Organization	Yes or No	Question 3 Comment
Northeast Power Coordinating Council	No	<p>The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be.</p> <p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES are covered under a Reliability Coordinator.</p> <p>Response: R1 has been removed from the standard based on stakeholder comments.</p> <p>In R2, should “of” be “to”? Reliability Directives are issued to TOPs, BA, etc.</p> <p>Response: The requirement was rewritten for clarity as follows:</p> <p style="padding-left: 40px;">R2. Each Reliability Coordinator shall take actions or direct actions (which could include issuing Reliability Directives) by Transmission Operators, Balancing Authorities, Generator Operators, and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p>The VSL for R1 is not consistent with the requirement. The requirement applies to the ERO but the VSL applies to the Regional Entity.</p> <p>Response: R1 has been removed from the standard based on stakeholder comments.</p>
Response: The RCSDT thanks you for your comment.		
Bonneville Power Administration	Yes	
PPL	Yes	
SERC OC Standards Review Group	No	<p>We think you are attempting to create a requirement similar to BAL-005, R1. That language copied here is clear and concise - All generation, transmission, and load operating within an Interconnection must be included within the metered boundaries of a Balancing Authority Area.</p>
Response: The RCSDT thanks you for your comment. Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.		
MRO's NERC Standards Review	No	<p>A. R1, As written it is unclear what level of certification this will entail? Presently written within the NERC Reliability Standards, responsibility is given to RC's to manage the reliability of their areas. Recommend</p>

Organization	Yes or No	Question 3 Comment
Subcommittee		<p>deleting this requirement. The ERO has pushed back in other Standards to having a responsibility for any NERC Requirements, since they are not a user, owner, or operator of the BES (see EOP-004-2).</p> <p>Response: Many commenters also suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>If this does move forward and an RC is certified by the ERO and then the RC is found non-compliant by a Regional Entity, for an associated certified item, will the ERO be held responsible, too?</p> <p>Response: The RCSDT has removed R1 from IRO-001-2.</p> <p>If the SDT selects to keep R1, there are some issues with how the requirement is written. The requirement places emphasis on regions and regional boundaries when no emphasis should be placed there. There are multiple Reliability Coordinators the span multiple regions.</p> <p>Response: The RCSDT has removed R1 from IRO-001-2.</p> <p>The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect on what the standards are enforceable.</p> <p>The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES is covered under a Reliability Coordinator.</p> <p>B. In R2, should “of” be “to”. Reliability Directives are issued to TOPs, BA, etc.</p> <p>C. The VSL for R1 is not consistent with the requirement. The requirement applies to the ERO but the VSL applies to the Regional Entity.</p> <p>Response: Please see the response to the comments from NPCC above on these same topics..</p>
<p>Response: The RCSDT thanks you for your comment.</p>		
FirstEnergy	Yes	
Midwest ISO Standards Collaborators	No	<p>In general, we are not opposed to the concept of the ERO certifying the Reliability Coordinators; however, there are some issues with how the requirement is written.</p> <p>Response: Thank you.</p> <p>The requirement places emphasis on regions and regional boundaries when no emphasis should be placed</p>

Organization	Yes or No	Question 3 Comment
		<p>there. 6. Do you have any other comment, not expressed in questions above, for the RC SDT?

Summary Consideration:

The RCSDT received comments suggesting clarification of COM-002-3. The RCSDT intends the communication of Reliability Directives to be person-to-person and in such a manner that the Reliability Directive is understood and not necessarily repeated verbatim. COM-002-3 is not intended to be prescriptive on how the Reliability Directive is issued. Spoken or written communications are valid methods (i.e. using the telephone, radio, electronic texting, email, etc.). The purpose of COM-002-3 is to ensure emergency communications between operating personnel are effective. There is no proxy requirement for 24/7 operating personnel regarding small entities. Only “capability” as provided for in COM-001-2 is applicable. The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols would be addressed in the COM-003 standard being developed in Project 2007-02.

Some commenters suggested revisions to IRO-014, requirement R8 to conform to similar requirements R6 and R7. The RCSDT made the suggested revision by re-ordering R8:

R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

IRO-014-2, requirement R4 is applicable to those Reliability Coordinators engaged in activities related to requirement R1 and part 1.7, it is unlikely that Reliability Coordinators geographically and electrically distant from one another will have mutually agreed upon operating procedures (per requirement R1), and therefore requirement R4 would not be applicable. The RCSDT believes IRO-014-2, requirement R4 which requires weekly communication provides reasonable contact and flexibility – and this requirement is in effect today. The RCSDT coordinated the use of the NERC Glossary term “Adverse Reliability Impact” with the Real-Time Operations team and continues the practice of informing all RCs of Adverse Reliability Impacts in requirement R5. The RCSDT has revised IRO-014-2, requirements R6-R8 to clarify that when one RC identified a problem and presents an action plan for another RC, the second RC is obligated to implement the action plan. The RCSDT will forward the concern about RC's identifying themselves and the receiver to establish authority to the Project 2007-02, Operating Personnel Communications Protocols SDT. The Project 2007-02 team is developing a standard that includes requirements for use of specific communications protocols.

Organization	Yes or No	Question 6 Comment
Northeast Power Coordinating		The SDT did not address all concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be

Organization	Yes or No	Question 6 Comment
Council		<p>confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving as the Transmission Operator or Balancing Authority. It should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, standards should be made clear that the Reliability Directive is directed to another company. In place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations for three-part communications to their sub-operating entities.</p> <p>Therefore, we suggest modifying R1 to be</p> <p>“When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]”</p> <p>Response: COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p>“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be</p>

Organization	Yes or No	Question 6 Comment
		<p>required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>Also, the definition of Emergency as currently cited in these draft Standards and included in the existing NERC Glossary should be modified to include the NERC Glossary term Adverse Reliability Impact to make the Standards more crisp, clear and enforceable. Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team.</p> <p>Response: With respect to the suggestion of modifying the definition of Emergency. The RCSDT believes that the term Emergency relates to the actual state of the system, including local and wide area, while an Adverse Reliability Impact is the impact resulting from an event resulting in instability or cascading that affects a widespread area of an Interconnection. There could be an Emergency that is local, or that threatens equipment but which does not necessarily result in cascading or instability; it is in this regard that the RCSDT believes that the definition of Emergency should not be dependent upon or pertain only to Adverse Reliability Impact events. The RCSDT coordinated the use of Adverse Reliability Impacts with the Real-Time Operations team.</p> <p>There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation that indicates requirements are being move to this standard. Delete the text box.</p> <p>Response: We have deleted the text box.</p> <p>Strike IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p>Response: The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators. These activities are listed as sub requirements. R1.7 requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further, the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>With respect to the relation of IRO-14-2 R1.7 and R4. R1.7 is requires you to have a procedure relating to</p>

Organization	Yes or No	Question 6 Comment
		<p>weekly conference calls while R4 requires participation in weekly calls.</p> <p>Requirement R2 in IRO-001 contains the words “which could include issuing Reliability Directives”, but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. These words should be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.</p> <p>Response: R2 requires the Reliability Coordinator to act. These actions could include Reliability Directives in the case of an Emergency; however, issuing Reliability Directives might not always be necessary, as the Reliability Coordinator may be acting proactively well in advance of an emergency. R2 promotes this proactive approach, but reserves the use of Reliability Directives for circumstances that require its use.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
PPL		<p>We are providing the following comments for the Standards Drafting Team to consider.</p> <p>1) Consider changing R1 to ‘Each RC shall have the capability for Interpersonal Communications with the following entities to exchange Interconnection and operating information...’ for clarity as Interpersonal Communications and capability are both nouns.</p> <p>Response: Thank you for your suggestion to modify the sentence structure into a noun phrase, however the RCSDT believes the current form is unambiguous.</p> <p>2) We feel changing the applicability of the standard is important to the accuracy of the standard. The purpose of COM-002 is ‘To ensure emergency communications between operating personnel are effective’. Since operating personnel are covered by the applicability of RC, BA, TOP and GOP, we suggest the applicability to TSP, LSE, and PSE be removed from COM-002-3.</p> <p>Response: We agree and have removed those entities</p> <p>3) Additionally, we would like to bring to the attention of the Standards Drafting Team, that the implementation plan for COM-001-2 and IRO-001-2 still includes TSP, LSE, and PSE although the revised standard does not include these entities in the Applicability Section. For COM-001-2 refer to the implementation plan, page 1. For IRO-001-2 refer to the implementation plan for new R2, new R3, new R4</p>

Organization	Yes or No	Question 6 Comment
		<p>and the chart on the last page. Thank you for your consideration in addressing these comments.</p> <p>Response: The RCSDT has revised the applicability of COM-001, COM-002 and IRO-001 to align with each other. TSP, LSE and PSE are no longer in either standard.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
PSEG		<p>IRO COM-002-3 standard continues to include PSE. PSE's do not play an active role and have no authority or ability to perform reliability coordination. PSE's should be removed from the standard.-001-2 references PSE's in the implementation for R2, R3, R4 and "Functions that must comply with the requirements in this standard" table. PSE's were removed from the standard and should be removed from the implementation plan.</p>
<p>Response: The RCSDT thanks you for your comments. The RCSDT has revised the applicability of COM-001 and COM-002 to align with each other. TSP, LSE and PSE are no longer in either standard.</p>		
Dominion		<p>We do not agree with the addition of weekly conference calls as required in R4. We believe that RCs should schedule calls as needed but do not agree that a weekly scheduled call improves reliability.</p>
<p>Response: The RCSDT thanks you for your comments. The requirement for weekly conference calls exists in IRO-015-1. The RCSDT has revised the requirement and incorporated it into proposed IRO-014-2.</p> <p>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators.</p> <p>R2.1. The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.</p>		
SERC OC Standards Review Group		<p>Reliability Directives may be issued by blast calls from Reliability Coordinators. It is inefficient and may be a hindrance to reliability to require 3-part communications in these instances.</p> <p>Response: The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. However the essence of accurately implementing Reliability Directives is accomplished by use of 3-part communications. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation.</p> <p>There are several organizations registered as BAs, RCs and TOPs. It is not uncommon for those entities to be distributed across multiple desks in the same control room without regard to how an entity is registered.</p>

Organization	Yes or No	Question 6 Comment
		<p>Thus, a single System Operator may perform functions that are categorized under two or more of those functional entities. The drafting team should clarify that under no circumstances should that System Operator be required to issue a Reliability Directive to himself. This is a corporate governance issue.</p> <p>Response: COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p style="padding-left: 40px;">“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>In IRO-014, R1, delete sub-requirement 1.7. The requirement for weekly conference calls related to operating procedures is duplicative to R4 and could be burdensome while adding very little value under certain circumstances. In IRO-014, R4, delete the phrase “(per Requirement 1, Part 1.7)” as a conforming change.</p> <p>Response: The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators. These activities are listed as sub requirements. R1.7 requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further, the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>In IRO-014, Requirements R6-R8 allow at least the theoretical possibility that an RC may determine an Adverse Reliability Impact in another RC’s area that the other RC neither can see nor believes that any</p>

Organization	Yes or No	Question 6 Comment
		<p>action should be taken. R7 puts the burden on the first RC to develop a plan that it cannot implement because it has no agreement with the BAs and TOPs in the other RC area. As such, this requirement is unenforceable.</p> <p>Response: Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone's model or processes or procedures. The RC's are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent. R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p> <p>IRO-014-2, Revised R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p> <p>Please review all the implementation plans to be sure the applicable entities match those in the standards.</p> <p>Response: These have been updated.</p> <p>"The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers."</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
<p>IRC Standards Review Committee</p>		<p>The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to</p>

Organization	Yes or No	Question 6 Comment
		<p>their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company.</p> <p>Response: COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p style="padding-left: 40px;">“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>We believe that, in place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations of three-part to their sub-operating entities. Therefore, we suggest modifying R1 to be</p> <p>“When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]”</p> <p>Response: In regards to your suggested modification of R1 to include “or in advance through documented</p>

Organization	Yes or No	Question 6 Comment
		<p>procedures”, the intent of R1 in its current form is to provide that ability, as such any documented procedure would require stating such implemented action is considered a response to a Reliability Directive. And would follow acknowledge and confirmation requirements.</p> <p>Also, we believe that the definition of Emergency, as currently cited in these draft Standards and included in the existing NERC Glossary should be modified to include the NERC Glossary term Adverse Reliability Impact to make the Standards more crisp, clear and enforceable. Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team.</p> <p>Response: The RCSDT believes that the term Emergency relates to the actual state of the system, including local and wide area, while an Adverse Reliability Impact is the impact resulting from an event resulting in instability or cascading that affects a widespread area of an Interconnection. There could be an Emergency that is local, or that threatens equipment but which does not necessarily result in cascading or instability; it is in this regard that the RCSDT believes that the definition of Emergency should not be dependent upon or pertain only to Adverse Reliability Impact events. The RCSDT coordinated the use of Adverse Reliability Impacts with the Real-Time Operations team.</p> <p>There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard.</p> <p>Response: The text box was removed.</p> <p>Please delete the text box. IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p>Response: The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators, these activities are listed as sub requirements. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes. The relation of IRO-14-2 R1.7 to R4 is that R1.7 requires having a conference call, R4 requires participation by all impacted Reliability Coordinators, as such, neither replaces the other.</p> <p>In the definition of Reliability Directive, we suggest changing “to address an Emergency” to “to address a reliability constraint or a declared Emergency”. The RCSDT believes that reliability constraint is ambiguous and undefined, thus introducing confusion. Further modifying Reliability Directive by including “declared Emergency” would add unnecessary step in mitigation of the Emergency</p>

Organization	Yes or No	Question 6 Comment
		<p>Further, Requirement R2 in IRO-001 contains the words “which could include issuing Reliability Directives” but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest that these words be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.</p> <p>Response: R2 requires the Reliability Coordinator to act, these actions could in include Reliability Directives in the case of an Emergency, however issuing Reliability Directives it might not always be necessary, as the Reliability Coordinator may be acting pro-active well in advance of an emergency. R2 promotes this pro-active approach, but reserves the use of Reliability Directives for circumstances that require its use.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
<p>Midwest ISO Standards Collaborators</p>		<p>The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company.</p> <p>Response: COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p>“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-</p>

Organization	Yes or No	Question 6 Comment
		<p>002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>We also are concerned about the need to conduct three-part communications for a Reliability Directive issued through a blast call. Under these circumstances, the need for immediate action of multiple parties may require a blast call and there may not be time for all parties to complete three-part communications before initiating actions. Thus, we believe blast calls should be treated separately and that should be made clear.</p> <p>Response: The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. However the essence of accurately implementing Reliability Directives is accomplished by use of 3-part communications. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation.</p> <p>COM-002-3 R2 needs to be rewritten as it is too verbose. The point is for the recipient of the original message to get the issuer to confirm that the message was understood. We suggest rewording R2 to “Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.” Once the receiver has completed this requirement, the ball is in the issuer’s court per Requirement R3. No additional words are necessary in the requirement.</p> <p>Response: The RCSDT believes that the additional verbiage is necessary to ensure that an entity understands the Reliability Directive and is able to communicate that understanding back to the Reliability</p>

Organization	Yes or No	Question 6 Comment
		<p>Coordinator. It is not necessary to repeat the exact same verbiage of the Reliability Directive, but rather the intent of the actions required. Having to repeat verbiage of the Reliability Directive word-for-word could be an impediment to achieving the reliability intent of the Reliability Directive when the focus is on repeating verbatim.</p> <p>Per COM-002-3 R1, who decides that actions need to be issued as a Reliability Directive? Shouldn't it be the responsible entity? Thus, can we assume that if the responsible entity does not identify a communication as a Reliability Directive that it is not a Reliability Directive per the requirement? After all, why would an entity require actions but not issue a Reliability Directive. Following this logic, the VSL for R1 would never apply. Would a compliance auditor second guess if an action required a Reliability Directive?</p> <p>Response: Those orders issued as a Reliability Directive, and identified as such, will heighten awareness, tighten communications and require the receiver of the Reliability Directive to prioritize its response. Moreover, linking Reliability Directives to Emergencies establishes that normal non-Emergency operating communications or actions are not applicable to COM-002.</p> <p>Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team.</p> <p>Response: The RCSDT coordinated the use of Adverse Reliability Impacts with the Real-Time Operations team</p> <p>There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box.</p> <p>Response: The text box has been removed.</p> <p>Please strike part IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p>Response: The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted</p>

Organization	Yes or No	Question 6 Comment
		<p>Reliability Coordinators, these activities are listed as sub requirements. R1.7 is requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>IRO-014-2 R4 is overly broad and would require Reliability Coordinators that will not impact one another to participate on conference calls with one another without any reliability benefit. The issue is created by the addition of the clause “within the same Interconnection” to the requirement. ISO-NE, FRCC, Midwest ISO, and SPP are all in the same Interconnection. It is hard to fathom there being reliability benefit to SPP and ISO-NE conversing weekly or Midwest ISO and FRCC conversing weekly. We suggest limiting the requirement to adjacent Reliability Coordinators.</p> <p>Response: IRO-14-2 R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently R1.7, it is unlikely that Reliability Coordinators whom are geographically and electrically distant will have <i>mutually agreed upon</i> operating procedures (per R1), and as such they are not applicable to R4.</p> <p>For IRO-014-2 R5, we suggest replacing “other” with “impacted” to limit the notification of Adverse Reliability Impacts to only those Reliability Coordinators that need to know. Because the definition of Adverse Reliability Impact includes “Bulk Electric System instability or Cascading”, it is possible that the cascading of 138 kV lines serving a load pocket or generator outlet stability issues could require a Reliability Coordinator to notify all other Reliability Coordinators regardless of impact. This would include Reliability Coordinators outside of the Interconnection with the problem. It would also include Reliability Coordinators that are not impacted. For instance, an issue in New England that would not pose a threat outside the northeast would require ISO-NE to notify SPP and FRCC and Reliability Coordinators in the Western Interconnection. There is no reliability benefit to this notification.</p> <p>Response: This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>IRO-014-2 R6-R8 are problematic and need to be refined to make clear that the Reliability Coordinators shall operate to the most conservative limit. It should not require a Reliability Coordinator that disagrees with an action plan to implement the action plan. The Reliability Coordinator will be disagreeing with the action plan for reliability reasons. Assuming they are correct, the requirement to implement said action plan will actually put the Interconnection at greater risk. These requirements inappropriately attempt to codify the debate and analysis that occurs between and within Reliability Coordinators when there are differing results in reliability</p>

Organization	Yes or No	Question 6 Comment
		<p>analysis. This is part of the problem with having a Wide Area view that results in Reliability Coordinators having a view into other Reliability Coordinator Areas. Their results and conclusions may be different. There should be a hierarchical structure for whose results should be used. It should be the Reliability Coordinator with primary responsibility unless the other Reliability Coordinator has evidence to demonstrate that the Reliability Coordinator with primary responsibility is incorrect. What this should do is to trigger both to review their models and data to assess the problem. None of this needs to be codified in the standards though.</p> <p>Response: Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone's model or processes or procedures. The RC's are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p>In the definition of Reliability Directive, we suggest changing "to address an Emergency" to "to address a declared Emergency". This would help limit second guessing for a situation where a System Operator took action because he truly believed he was an Emergency but after the fact analysis demonstrates there really was not an Emergency.</p> <p>Response: Modifying Reliability Directive by including "declared Emergency" would add an unnecessary step in mitigation of the Emergency. The act of issuing a Reliability Directive to address an Emergency (per the proposed definition) is sufficient.</p> <p>The drafting team should expand its rationale for deleting IRO-002-1 R3. Currently, TOP-005 R1 is referenced. The Real-Time Operations drafting team proposed to retire TOP-005-2 R1 in its most recent posting.</p> <p>Response: The data provisions are covered in recently approved IRO-010-1, R1-R3 which replaced TOP-005-1, R1. The secure network provisions are covered in the CIP body of standards.</p> <p>We disagree with deleting IRO-002-1 R5 and R7 which establish tools and monitoring capabilities. There should be basic tools requirements established for Reliability Coordinators. Project 2009-02 Real-time Reliability Monitoring and Analysis Capabilities will be addressing these issues in more detail. Thus, it does not make sense to delete these requirements until that drafting team completes its task.</p> <p>Response: Each RC has been certified to continue operations as an RC or been certified prior to beginning operations as an RC. The minimum set of tools and capabilities for an RC are "checked off" during the certification process. The reliability objective of R5 and R7 is to perform analyses to ensure reliability of the</p>

Organization	Yes or No	Question 6 Comment
		<p>BES by specifying capability rather than mandating specific tools. The analysis provisions of R5 and R7 are covered under IRO-008-1, Requirements R1 (perform Operational Planning Analysis) and R2 (perform Real-time Analysis). It is anticipated that Project 2009-02 team will address this issue more fully.</p>
<p>MRO's NERC Standards Review Subcommittee</p>		<p>A. COM-002-3, R2 As stated in FERC Order 693, section 512, it is essential that RCs, BA's and TOP's have communications with DPs. R2 also applies to TSPs, LSEs and PSEs. There is no directive for this and it is going to be almost impossible to communicate with a DP since DPs are usually not operated 24 hours per day as like a RC, TOP, or BA. Many DPs have answering services that will relay a message once they receive it and then pass it along to someone. An answering company could repeat the directive word for word but this will not add to any reliability level. The SDT should reconsider the applicability section of this Standard to only apply to a RC, TOP and BA for the issuance of a Reliability Directive. BA's should have the responsibility to have an Interpersonal Communication medium with DPs in their BA area per COM-001-2.</p> <p>Response: The purpose of COM-002 is "To ensure emergency communications between operating personnel are effective." It is not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication, in many cases this may be via a receptionist, or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p> <p>B. IRO-002-2, R1, Recommend that "System Operators" be replaced with "system operators" since NERC has defined System Operator to be an individual at a control center (BA, TOP, GOP, or RC). The lower cased system operator will only point to the RC system operator that will have this R1 authority.</p> <p>Response: IRO-002-2 is applicable only to Reliability Coordinators, as such the using System Operator as it defined by the NERC Glossary of terms is appropriate.</p> <p>C. The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity</p>

Organization	Yes or No	Question 6 Comment
		<p>coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company.</p> <p>Response: COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p style="padding-left: 40px;">“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>D. We also are concerned about the need to conduct three-part communications for a Reliability Directive issued through a blast call. Under these circumstances, the need for immediate action of multiple parties may require a blast call and there may not be time for all parties to complete three-part communications before initiating actions. Thus, we believe blast calls should be treated separately and that should be made clear.</p> <p>Response: The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation.</p> <p>E. COM-002-3 R2 needs to be rewritten as it is too verbose. The point is for the recipient of the original message to get the issuer to confirm that the message was understood. We suggest rewording R2 to</p> <p>“Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient</p>

Organization	Yes or No	Question 6 Comment
		<p>of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.”</p> <p>Once the receiver has completed this requirement, the ball is in the issuer’s court per Requirement R3. No additional words are necessary in the requirement.</p> <p>Response: The RCSDT believes that the additional verbiage is necessary to ensure that an entity understands the Reliability Directive and is able to communicate that understanding back to the Reliability Coordinator. It is not necessary to repeat the exact same verbiage of the Reliability Directive, but rather the intent of the actions required. Having to repeat verbiage of the Reliability Directive word-for-word could be an impediment to achieving the reliability intent of the Reliability Directive when the focus is on repeating verbatim.</p> <p>F. Per COM-002-3 R1, who decides that actions need to be issued as a Reliability Directive? Shouldn’t it be the responsible entity? Thus, can we assume that if the responsible entity does not identify a communication as a Reliability Directive that it is not a Reliability Directive per the requirement? After all, why would an entity require actions but not issue a Reliability Directive. Following this logic, the VSL for R1 would never apply. Would a compliance auditor second guess if an action required a Reliability Directive?</p> <p>Response: Those orders issued as a Reliability Directive, and identified as such, will heighten awareness, tighten communications and require the receiver of the Reliability Directive to prioritize its response. Moreover, linking Reliability Directives to Emergencies establishes that normal non-Emergency operating communications or actions are not applicable to COM-002.</p> <p>G. Because the Project 2007-03 (“Real-Time Operations SDT”) proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team.</p> <p>Response: The RCSDT coordinated the use of Adverse Reliability Impacts with the Real-Time Operations team</p> <p>H. There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box.</p> <p>Response: The text box has been removed.</p> <p>I. Please strike part IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures,</p>

Organization	Yes or No	Question 6 Comment
		<p>Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p>Response: The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators, these activities are listed as sub requirements. R1.7 is requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>J. IRO-014-2 R4 is overly broad and would require Reliability Coordinators that will not impact one another to participate on conference calls with one another without any reliability benefit. The issue is created by the addition of the clause “within the same Interconnection” to the requirement. ISO-NE, FRCC, Midwest ISO, and SPP are all in the same Interconnection. It is hard to fathom there being reliability benefit to SPP and ISO-NE conversing weekly or Midwest ISO and FRCC conversing weekly. We suggest limiting the requirement to adjacent Reliability Coordinators.</p> <p>Response: IRO-14-2 R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently R1.7, it is unlikely that Reliability Coordinators whom are geographically and electrically distant will have <i>mutually agreed upon</i> operating procedures (per R1), and as such they are not applicable to R4.</p> <p>K. For IRO-014-2 R5, we suggest replacing “other” with “impacted” to limit the notification of Adverse Reliability Impacts to only those Reliability Coordinators that need to know. Because the definition of Adverse Reliability Impact includes “Bulk Electric System instability or Cascading”, it is possible that the cascading of 138 kV lines serving a load pocket or generator outlet stability issues could require a Reliability Coordinator to notify all other Reliability Coordinators regardless of impact. This would include Reliability Coordinators outside of the Interconnection with the problem. It would also include Reliability Coordinators that are not impacted. For instance, an issue in New England that would not pose a threat outside the northeast would require ISO-NE to notify SPP and FRCC and Reliability Coordinators in the Western Interconnection. There is no reliability benefit to this notification.</p> <p>Response: This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>L. IRO-014-2 R6-R8 are problematic and need to be refined to make clear that the Reliability Coordinators shall operate to the most conservative limit. It should not require a Reliability Coordinator that disagrees with an action plan to implement the action plan. The Reliability Coordinator will be disagreeing with the action plan for a reliability reasons. Assuming they are correct, the requirement to implement said action plan will actually put the Interconnection at greater risk. These requirements inappropriately attempt to codify the debate and analysis that occurs between and within Reliability Coordinators when there are differing results in reliability analysis. This is part of the problem with having a Wide Area view that results in Reliability Coordinators</p>

Organization	Yes or No	Question 6 Comment
		<p>having a view into other Reliability Coordinator Area. Their results and conclusions may be different. There should be a hierarchical structure for whose results should be used. It should be the Reliability Coordinator with primary responsibility unless the other Reliability Coordinator has evidence to demonstrate that the Reliability Coordinator with primary responsibility is incorrect. What this should do is, to trigger both to review their models and data to assess the problem. None of this needs to be codified in the standards though.</p> <p>Response: Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone’s model or processes or procedures. The RC’s are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p>M. In the definition of Reliability Directive, we suggest changing “to address an Emergency” to “to address a declared Emergency”. This would help limit second guessing for a situation where a System Operator took action because he truly believed he was in an Emergency but after the fact analysis demonstrates there really was not an Emergency.</p> <p>Response: Modifying Reliability Directive by including “declared Emergency” would add an unnecessary step in mitigation of the Emergency. The act of issuing a Reliability Directive to address an Emergency (per the proposed definition) is sufficient.</p> <p>N. The drafting team should expand its rationale for deleting IRO-002-1 R3. Currently, TOP-005 R1 is referenced. The project 2007-03 (“Real-Time Operations SDT”) proposed to retire TOP-005-2 R1 in its most recent posting.</p> <p>Response: The data provisions are covered in recently approved IRO-010-1, R1-R3 which replaced TOP-005-1, R1. The secure network provisions are covered in the CIP body of standards.</p> <p>O. We disagree with deleting IRO-002-1 R5 and R7 which establishes tools and monitoring capabilities. There should be basic tool requirements established for Reliability Coordinators. The project 2009-02 (“Real-time Reliability Monitoring and Analysis Capabilities”) will be addressing these issues in more detail. Thus, it does not make sense to delete these requirements until that drafting team completes its task.</p> <p>Response: Each RC has been certified to continue operations as an RC or been certified prior to beginning</p>

Organization	Yes or No	Question 6 Comment
		<p>operations as an RC. The minimum set of tools and capabilities for an RC are “checked off” during the certification process. The reliability objective of R5 and R7 is to perform analyses to ensure reliability of the BES by specifying capability rather than mandating specific tools. The analysis provisions of R5 and R7 are covered under IRO-008-1, Requirements R1 (perform Operational Planning Analysis) and R2 (perform Real-time Analysis). It is anticipated that Project 2009-02 team will address this issue more fully.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
FirstEnergy		<p>FirstEnergy offers the following additional comments:</p> <ol style="list-style-type: none"> <li data-bbox="709 521 1965 703">1. The effective dates of the standards indicate an effective date of the first day of the first calendar quarter following regulatory approval. The changes to these standards will require changes to existing compliance evidence, as well as the creation of compliance evidence for some entities such as the Generator Operator which is a new applicable entity in COM-001. Therefore, to give entities ample time to get their compliance evidence in place, we suggest the effective state “the first day of the second quarter after regulatory approval”. <p>Response: The RCSDT agrees and will change the implementation plan to reflect the “first day of the second quarter after regulatory approval.”</p> <ol style="list-style-type: none"> <li data-bbox="709 846 1965 995">3. With regard to the requirements for Alternative Interpersonal Communications, we question why the Generator Operator or Distribution Provider is not required to have backup communication. It would be difficult for a Reliability Coordinator, for instance, to contact a Generator Operator whose primary communications have been disabled if that entity does not have a backup. We suggest that the drafting team consider adding the GOP and DP as applicable entities requiring alternative communications. <p>Response: The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Not requiring DP and GOP entities to have Alternative Interpersonal Communication capability meets FERC’s intention as stated here: “We (FERC) clarify that the NOPR did not propose to require redundancy on generator operators’ or distribution providers’ telecommunication facilities...” (Order 693, RM06-16-000, Paragraph 487).</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
SPP Standards Development		<p>IRO-001-2, R2 implies that the RC could interrupt the normal chain of command from the TOP and/or BA to their respective GOPs, ICs and DPs thereby circumventing the coordinating process that currently exists. In fact, these entities may not even know their RCs nor be able to identify them and as such any directive from</p>

Organization	Yes or No	Question 6 Comment
		<p>the RC may not be implemented in a timely manner. We would like to see a qualifier on this requirement that does not remove the normal coordination role from the TOP with his DP, etc.</p> <p>Response: There may be unusual circumstances whereby the requirement may indeed circumvent the normal coordinating process in the interest of time / reliability. The RC has the ultimate authority with respect to BES reliability.</p> <p>We would suggest that "with enough details that the accuracy of the message has been confirmed" be deleted from COM-002-3, R2.</p> <p>Response: The RCSDT believes that the additional verbiage is necessary to ensure that an entity understands the Reliability Directive and is able to communicate that understanding back to the Reliability Coordinator. It is not necessary to repeat the exact same verbiage of the Reliability Directive, but rather the intent of the actions required. Having to repeat verbiage of the Reliability Directive word-for-word could be an impediment to achieving the reliability intent of the Reliability Directive when the focus is on repeating verbatim.</p> <p>We would suggest the use of the term 'instruction" and its derivatives rather than 'direct' in IRO-001-2, R2, R3 and R4.</p> <p>Response: This proposed change is stylistic in nature. Stakeholder consensus indicates that this is not an issue for the overwhelming majority of commenters.</p> <p>Delete 'issue an alert to' in IRO-005-4, R1. There are yellow boxes in IRO-005-4, redline versions, which indicate that this standard is being retired, but it isn't because two requirements from IRO-001 are being returned to this standard.</p> <p>Response: These are typos and have been corrected as noted.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
Kansas City Power & Light		<p>There are more requirements that are being removed in the IRO standards than are currently proposed. It would be helpful if the SDT would consider a mapping of each requirement that is being eliminated and whether the requirement is duplicated elsewhere, moved elsewhere and where, or is deemed not needed would be helpful in judging if the changes are appropriate. Without this mapping it is difficult to fully support all the proposed changes to all these Standards.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: The RCSDT thanks you for your comments. The implementation plan contains the requested mapping.</p>		
<p>Competitive Suppliers</p>		<p>EPSA is the trade association for competitive suppliers including both generators and marketers that represent over 700 entities in the NERC compliance registry. As such, the EPSA membership includes members registered as Purchasing Selling Entities (PSE) in each NERC region. Moreover, many of EPSA's members are also registered as LSEs in several regions. In general, EPSA supports the progress made in revising COM-001, COM-002 and IRO-001 in Project 2006-06, particularly the improvements made to the definition of Reliability Directive.</p> <p>However, EPSA also has concerns with some proposed changes to the applicability sections of the revised standards. In addition, EPSA requests that the implementation plans be be changed so that they are consistent with the standard.</p> <p>Regarding applicability, EPSA agrees that COM-001 should continue to not apply to Purchasing Selling Entity (PSE) and Load Serving Entity (LSE) functions.</p> <p>However, the implementation plan for COM-001-2 still includes a reference that PSEs and LSEs must comply (page 11 of the implementation plan). Additionally, EPSA supports the removal of LSEs and PSEs from IRO-001-2. Much like the situation with COM-001-2, the implementation plan for IRO-001-2 still includes a reference that LSEs and PSEs must comply (page 11 of the implementation plan). In both the implementation plans for COM-001-2 and IRO-001-2 these references should be removed. For reasons similar to those underlying why COM-001-2 and IRO-001-2 do not apply to PSEs and LSEs, EPSA opposes the addition of PSEs to the COM-002-3 applicability. The purpose of the emergency communications in these standards is "To ensure emergency communications between operating personnel are effective." The removal would recognize that PSEs and LSEs do not play an active role in reliability coordination under this standard since they have no authority, nor ability to assume or perform responsibilities associated with reliability coordination. When a RC, TOP, or BA needs to address an Emergency they do not contact, consult, or direct a PSE to take action to address the Emergency. Reliability is neither improved nor degraded by having these Standards applicable to PSEs or LSEs; therefore, COM-001, COM-002 and IRO-001 need not be applicable to PSEs or LSEs. Thanks to the drafting team members for their effort on revising the Project 2006-06 standards.</p>
<p>Response: The RCSDT thanks you for your comments.</p> <p>The RCSDT has removed the PSE and LSE from the COM-001-2 and IRO-001-2 implementation plans.</p> <p>For COM-002, the RCSDT believes that all registered NERC entities engaged in daily operational activities must adhere to requirements related to Reliability</p>		

Organization	Yes or No	Question 6 Comment
<p>Directives. While LSE and PSE's are not engaged in coordination activities, they are engaged in load serving, as well as purchasing and selling activities on a daily basis. These activities could be subject to Reliability Directives, either in the form of load reduction, or schedule curtailments.</p>		
<p>Exelon</p>		<ol style="list-style-type: none"> 1. COM-002-2, R2 - Remove the word "recapitulate", feel that "restate or rephrase" is adequate. The word "recapitulate" is not commonly used and is somewhat obscure. Response: The proposed changes are stylistic in nature. The RCSDT included the phrase including "recapitulate" at the suggestion of another stakeholder, and has decided to leave the phrase "restate, rephrase, or recapitulate" intact as suggested by the other stakeholder. 2. COM-002-2, R3 - Suggest using the words "repeat back" rather than "state or respond that" to more clearly identify the expectation with more commonly used language. Response: The proposed changes are stylistic in nature. The RCSDT included the phrase including "recapitulate" at the suggestion of another stakeholder, and has decided to leave the phrase "restate, rephrase, or recapitulate" intact as suggested by the other stakeholder. 3. IRO-001-2, R3 - While we appreciate that the SDT has defined the term "directive" as a much needed definition, IRC-001-2 R.3 now introduces a new term "direction", what is a "direction" and how does it differ from "directive"? If a new term is going to be introduced it needs to be defined, if the intent was to use the word "directive" then "direction" should be replaced with "directive." Response: The requirement language specifically ties back to Requirement R2 which states that the RC "shall take actions or direct actions, which could include issuing Reliability Directives, ". This is the "direction in accordance with Requirement R2" stated in R3 and the "direction in accordance with Requirement R3" stated in R4. 3. IRO-001-2, R4 - Again the term "as directed" is confusing, recommend that the text be changed to align with the term directive, "unable to perform the directive per Requirement R3." Response: The requirement language specifically ties back to Requirement R2 which states that the RC "shall take actions or direct actions, which could include issuing Reliability Directives, ". This is the "direction in accordance with Requirement R2" stated in R3 and the "direction in accordance with Requirement R3" stated in R4.
<p>Response: The RCSDT thanks you for your comments.</p>		
<p>PacifiCorp</p>		

Organization	Yes or No	Question 6 Comment
Arizona Public Service Company		
LG&E and KU Energy		<p>1) LG&E/KU suggests that the definitions and related Reliability Standards be edited to provide a clearer understanding of what is required. When used in the requirements of COM-001, the proposed definitions for Interpersonal Communication and Alternative Interpersonal Communication read improperly (i.e., a “medium capability”). This may cause confusion as to what is required by the Applicable entities. Any further use of these terms may cause greater confusion. Suggested Alternative: Interpersonal Communication: Any instance where two or more individuals interact, consult, or exchange information. The definition of “Alternative Interpersonal Communication” would not have to be changed since it is dependent upon the definition of “Interpersonal Communication.”The change of the definitions of Interpersonal Communication and Alternative Interpersonal Communication shifts their focus to the communication itself-the event. This makes the Requirements themselves much clearer since the Requirements focus on the need that entities have the capabilities-the medium. It appears the SDT’s intent is to ensure that the event takes place by requiring that the medium for those events are in place. This is much clearer if there is a distinction between the two (the event and the medium) than if they have similar definitions (a medium and a “medium capability”).</p> <p>Response: The RCSDT chose to use “medium” so as to not preclude the use of text, voice, electronic or other technology. The intent of the definition as well as the requirements is to require that functional entities have a means to communicate.</p> <p>2) LG&E/KU question the consistency of the Applicability sections as they pertain to the TSP, LSE and PSE functions between COM-001 and COM-002. The deletion of the TSP, LSE and PSE from COM-001 is supported, but if these entities are not required to establish Interpersonal Communication (or Alternative Interpersonal Communication) capability with reliability entities (RC, BA, TOP), should they still be required to follow the reliability directive process of COM-002? If the probability of issuing a Reliability Directive to a TSP, LSE or PSE is so low that Interpersonal Communications capabilities with reliability entities is not justified under COM-001, why are the TSP, LSE and PSE still held to the</p> <p>3 way communication requirements of COM-002? Suggest the Applicability of COM-002 to TSP, LSE and PSE and associated requirements be deleted.</p> <p>Response: The RCSDT has revised the applicability of COM-001 and COM-002 such that they contain the same functional entities. These are: RC, TOP, BA, GOP, and DP.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		

Consideration of Comments on Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 6 Comment
Southern Company		<p>Comments: It appears that the requirements for entities designated in the IRO standards to have tools to access and/or monitor the system have been moved to pending standards that are not enforceable. It seems that if the newest revisions of the IRO standards are not implemented as a group there will be either missing requirements or duplicate requirements in the IRO standards.</p>
<p>Response: The RCSDT thanks you for your comments. The implementation plans note prerequisite approvals that must occur prior to retiring requirements. FERC recently approved IRO-008, 009 and 010. The standards under this project will be filed together with FERC.</p>		
Green Country Energy, Green Country Operating Services		<p>IRO-001-2 as proposed does not include the PSE in the applicability, nor does it require the PSE to respond to a directive. However, COM-002 requires them to repeat the directive back... If the directive is that important to repeat back should they not have to act upon the directive? I think the PSE should be included in IRO-001-2 this standard as they represent and direct generation facility deployment in many cases. Including the PSE in COM-001 may be a good idea too, just for the situations listed above.</p>
<p>Response: The RCSDT thanks you for your comments. The RCSDT has revised the applicability of COM-001 and COM-002 such that they contain the same functional entities. These are: RC, TOP, BA, GOP, and DP.</p>		
Central Lincoln		<p>The stated purpose of COM-002 is:</p> <p>“To ensure emergency communications between operating personnel are effective.” As written, the standard fails to meet this purpose because the three requirements only deal with communications at the entity level. There is no requirement for the directing entity to even try to reach operating personnel at the receiving entity. The directing entity may follow all the requirements of this standard by following R1 and R3 with the receiving entity’s receptionist, answering service, janitor, night watchman, etc. The receiving entity only needs to meet R2, parroting the directive. Again this could be accomplished by anyone with no assurance the directive reaches the operating personnel who can implement it. When we stated a similar objection during the last comment period, The SDT’s answer suggested this was a PER staffing issue, but none of the PER requirements even apply to DP/LSE directive recipients. We suggest the entity issuing the directive should be required to make an attempt to get it to those who are competent to understand and implement the directive. This is not a staffing, training, or credentials issue; it is a performance issue that falls squarely within the stated purpose of this standard.</p> <p>COM-001 R10 presents a paradoxical situation to an entity attempting to comply. Consider an interpersonal communication capability failure that lasts longer than 60 minutes past initial detection. At or before 60 minutes, the affected entity is expected to notify impacted entities. If it has no interpersonal communication capability, how shall it make this notification? And if the entity does manage to make such a notification, it has thereby proven that it does have interpersonal communication capability making such notification</p>

Organization	Yes or No	Question 6 Comment
		<p>unnecessary.</p> <p>Response: The DP or GOP has access to additional Interpersonal Communications, in all likelihood, to make notifications for failure. There is not a requirement for an alternative, but it is highly unlikely that someone couldn't use their cell phone to make the notification.</p> <p>We again ask the SDT to consider that not all the entities in the applicability sections of COM-001 and 002 have 24/7 dispatch centers. These are typically smaller entities that were required to register because they exceed 25 MW or were asked in the past to voluntarily provide UFLS. They do not and do not need to continuously communicate with TOPs, BAs, RCs, etc; and a "reliability directive" is a theoretical thing that has never happened during the memories of thirty year employees. The directive issuing entities simply realize the limitations around the receiving entities and work around them. The financial burden on these small entities and their customers to go to 24/7 dispatch will not have a corresponding reliability benefit. And while the two COM standards do not explicitly state that entities must maintain 24/7 dispatch, when all the requirements and definitions and time horizons are taken together 24/7 continuous competent communication is implied. During the last comment period, the SDT suggested this was a registration issue beyond their control. We submit instead that this is a standard applicability question that the SDT does have control over, since it is right there in Section A.4 of the two COM standards. While we appreciate that the SDT is responding to FERC order 693 to include DPs, we note that FERC also stated: Paragraph 487: "We expect the telecommunication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process." Paragraph 6: "A Reliability Standard may take into account the size of the entity that must comply and the costs of implementation" Paragraph 141: "...the Commission clarifies that it did not intend to ... impose new organizational structures..." Paragraph 31: "We emphasize that we are not, at this time, mandating a particular outcome by way of these directives, but we do expect the ERO to respond with an equivalent alternative and adequate support that fully explains how the alternative produces a result that is as effective as or more effective than the Commission's example or directive. We ask the SDT to exclude DPs, LSEs, and PSEs that do not have 24/7 dispatch centers from the applicability of these two standards in order to meet FERC order 693.</p>
<p>Response: The RCSDT thanks you for your comments. There is no requirement for 24/7 support - the requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is "To ensure emergency communications between operating personnel are <u>effective</u>." It is not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication, in many cases this may be via a receptionist, or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>		

Organization	Yes or No	Question 6 Comment
Lakeland Electric		COM-002-3 R2. Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message can be confirmed by the originator. (Replace 'has been' with 'can be' and add 'by the originator' to better fit into the sequence with R3.)
<p>Response: The RCSDT thanks you for your comments. The RCSDT agrees with the intent of your comment and has modified R2 as:</p> <p>R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive issued in accordance with Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message is confirmed.</p>		
Manitoba Hydro		-The current data retention requirement of 90 days is more than adequate. Increasing this period to 12 months would result in a significant amount of work with no benefit to reliability. -Clarification required on the VSL for R9 - there appears to be no
<p>Response: The RCSDT thanks you for your comment. The data retention periods for the set of standards proposed is consistent with the guidelines provided in the NERC Drafting team Guidelines. Your second comment is incomplete and does not reference specific standard(s) or requirement(s).</p>		
NextEra Energy, Inc.		At this stage in evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. COM-002, IRO-001, IRO-002 and IRO-014 do not meet this threshold. Thus, NextEra has numerous recommended corrections to provide clarity and completeness to these Reliability Standards.COM-002 R1The addition of defined terms for Reliability Directive and Emergency is a very good approach that helps provides clarity. Hence, it is also be appropriate to make the language in the requirement as clear as possible, and not add other implied or unexplained notions. Also, at times, in those regions with markets, it is not always clear whether a requirement to curtail for reliability reasons is being issued pursuant to market rules or from the Reliability Coordinator or Transmission Operator under the Reliability Standards. Therefore, it is also appropriate that the Reliability Coordinator, Transmission Operator, Balancing Authority be required to identify themselves;, and if they fail to identify themselves or fail to use the term Reliability Directive, the registered entity receiving the flawed issuance should not be consider in violation of a Reliability Standard for failing to act. Accordingly, R1 would be clearer and have the same intent, if it stated as follows:"A Reliability Coordinator, Transmission Operator or Balancing Authority have the authority to issue an oral or written Reliability Directive as authorized in [list the specific Reliability Standard requirements such as IRO-001 R8 and TOP-001 R3]. The issuance of an oral of written Reliability Directive,

Organization	Yes or No	Question 6 Comment
		<p>by a Reliability Coordinator, Transmission Operator or Balancing Authority shall: (1) use the term ‘Reliability Directive;’ and (2) identify the issuer of the Reliability Directive as a Reliability Coordinator, Transmission Operator or Balancing Authority. If a Reliability Coordinator, Transmission Operator or Balancing Authority issues an oral or written directive without using the term “Reliability Directive” or failing to identify itself as a Reliability Coordinator, Transmission Operator or Balancing Authority, the registered entity receiving the directive cannot be considered in violation for its failure to act.”</p> <p>Response: Only reliability entities can issue Reliability Directives and only reliability entities are held compliant to NERC reliability standards. COM-002, R1 requires the issuer of a Reliability Directive to identify the action as a “Reliability Directive”, it is incumbent on the issuer or receiver to identify themselves in order establish authority, the RCSDT disagrees that identification should be part of the COM-002 standard, however, the RCSDT will pass this concern to Project 2007-02, Operating Personnel Communications Protocols SDT. Furthermore, your suggested revision is a compound requirement, making the requirement indistinct and difficult to measure and in contradiction with SAR. The RCSDT agrees that if an action is not identified as a “Reliability Directive” then the receiving entity cannot be held in violation of failing to follow a Reliability Directive.</p> <p>IRO-001The definition of Adverse Reliability Impacts uses the term “instability.” It is important that this term be technically defined in the same way “Cascading” is defined, otherwise the new requirement is not adding clarity; rather, it is maintaining the ambiguous term “instability” that will likely lead to confusion and debate.</p> <p>Response: The RCSDT disagrees that the term “instability” is ambiguous, and further believes the term is understood in the industry. The majority of stakeholder comments do not indicate that the definition is confusing.</p> <p>R1 Similar to the comments set forth with respect to COM-001 (question #1), the term “at least” should be deleted from R1 - it serves no useful purpose from a technical or compliance perspective; instead, it will add unnecessary ambiguity to the requirement.</p> <p>Response: The RCSDT agrees and has removed “at least” for IRO-001, R1.</p> <p>R2, as drafted, states:”Each Reliability Coordinator shall take actions or direct actions, which could include issuing oral or written Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse</p>

Organization	Yes or No	Question 6 Comment
		<p>Reliability Impacts. “This long sentence has several significant grammatical errors that result in the reader not being able to discern the meaning of the requirement. It also unnecessarily adds verbiage that detracts from its primary focus. It is, therefore, recommended that R2 be revised as follows:</p> <p>“Each Reliability Coordinator shall take all necessary actions to prevent identified Emergencies or Adverse Reliability Impacts. These Reliability Coordinator actions shall include, to the extent necessary, the issuing of oral or written Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers located within its Reliability Coordinator Area.</p> <p>Response: The RCSDT disagrees that the suggested revisions adds clarity, and in fact removes directing actions “to mitigate the magnitude or duration of actual events” which weakens the requirement. Phrases such as “to the extent necessary” and “necessary actions” are not measurable and lead to a more confusing requirement. Stakeholders generally agree with the proposed verbiage of the proposed requirement.</p> <p>“R3, as drafted, is confusing and inconsistent with R2, and, thus, R3 should be revised to read as follows:</p> <p>”Upon receipt of a Reliability Directive issued pursuant to R2, a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with the Reliability Directive, unless compliance would violate safety, equipment, regulatory or statutory requirements. In the event that a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider determines that compliance with a Reliability Directive would violate safety, equipment, regulatory or statutory requirements, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall, within 10 minutes after the determination, inform the Reliability Coordinator of its inability to comply.”</p> <p>Response: The RCSDT disagrees with the suggested revision to R3. The revision creates a compound requirement with a specific time requirement. Upon recognition of the inability to perform a directed action, the receiver should immediately inform the Reliability Coordinator. Typically this would be during the original communication of the directive. The suggested 10 minute time is not technically justified and provides no reliability benefit beyond the currently worded requirement and only serves to extend the time before an RC is notified.</p> <p>IRO-002R1 and R2, as written, are confusing. It is recommended that R1 and R2 be combined to read as follows: “Pursuant to a written procedure to mitigate the impact of a Reliability Coordinator’s analysis tool outage, a Reliability Coordinator’s System Operator shall also have the authority to approve, deny or cancel a</p>

Organization	Yes or No	Question 6 Comment
		<p>planned outage for its analysis tool.”</p> <p>Response: The suggested revision to IRO-002-2 creates a compound requirement, which is indistinct and difficult to measure and in contradiction with SAR. The SAR for this project directs the team to “Improve clarity of, improve measurability of, and remove ambiguity from the requirement”.</p> <p>IRO-014It is unclear why the terms Operating Procedure, Operating Process or Operating Plan needs to be plural, as currently written in the Standard. Hence, it is recommended that these terms be made singular, otherwise a violation may be inferred for not having more than one Procedure, Process or Plan.</p> <p>Response: IRO-014, R1, The RCSDT disagrees with making Procedures, Processes, or Plans non-plural; this could lead to entities being audited on a procedure by procedure basis. In other words, it is meant that the weekly conference calls create an opportunity to discuss all of the Procedures, Processes, or Plans, and to not require a call for each.</p> <p>1.1 Insert the word “applicable” before “Reliability Coordinator.”</p> <p>Response: The RCSDT disagrees with the use of applicable, as the 1.1 is subordinate to R1, which notes impacted Reliability Coordinators.</p> <p>2.1, as written, is confusing. Recommend that 2.1 read as follows:</p> <p style="padding-left: 40px;">”Review and update, if an update is necessary, on an annual basis. Annual basis means the review shall be within one month plus or minus that date of the last review.”</p> <p>Response: The RCSDT disagrees, and believes the suggested revision is unclear. In its current draft form, the plan or procedure is required to be reviewed every 15 months, if the review indicates that there are no changes required, and then the update would simply be to change the revision date on the published procedure.</p> <p>R3 This requirement uses a very vague term “reliability-related information,” which, also, does not track the language used in R1 -- “information.” It is recommended that R1 and R3 use the same terms and read “. . . information, as defined by the Reliability Coordinator, . . . “</p> <p>Response: The RCSDT believes the reference to R1 within R3 clearly is representative of exchange of information related to R1.</p> <p>R4 As stated above, “at least” does not add value, and, therefore, should be deleted.</p>

Organization	Yes or No	Question 6 Comment
		<p>Response: The RCSDT disagrees. The inclusion of “at least” allows the calls take place every day or multiple times within a week if desired, and adds flexibility. e.g. if there was scheduled weekly call, however due to system conditions an interim call was held, during this interim call all of the necessary information for the week was exchanged, thus removing the need to the scheduled call, the use of “at least” allows for this kind of flexibility. R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently R1.7, it is unlikely that Reliability Coordinators whom are geographically and electrically distant will have <i>mutually agreed upon</i> operating procedures (per R1), and as such they are not applicable to R4.</p> <p>R5, as written, is confusing. The recommended fix is to delete “all other” and replace with “impacted”.</p> <p>Response: This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
United Illuminating Company		<p>Comments: 1. COM-002 R2 seems awkwardly worded.</p> <p>R2. Each [Entity] that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message has been confirmed. " R2 as it is written says the repeat is confirming the accuracy of the message itself. I think it is agreed that the repeat back in R2 is to allow the issuer of the Directive to confirm that the message was received accurately understood by the recipient. I suggest:R2. Each [Entity] that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to allow the Issuer to confirm that the directive recipient accurately understands the Directive"</p> <p>Response: The RCSDT agrees with the intent of your comment and has modified COM-002-3, R2 as:</p> <p style="padding-left: 40px;">R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive issued in accordance with Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.</p> <p>2. The VSL for R2 is severe and states "The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message was confirmed." The purpose of the R2 repeat-back is to allow the Issuer verify the message</p>

Organization	Yes or No	Question 6 Comment
		<p>was accurately received. This VSL penalizes the responsible entity for not accurately receiving the message. The VSL should penalize the refusal of the registered entity to repeat back the message not for receiving the message incorrectly. Suggested rewording: "The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message can be evaluated by the entity issuing the Reliability Directive"3. United Illuminating does agree with the definition of Reliability Directive and Emergency.</p> <p>Response: The RCSDT agrees and has revised the VSL to:</p> <p>The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive. with enough details that the accuracy of the message was confirmed.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
<p>Shell Energy North America (US), L.P.</p>		<p>The introduction of the definition of "Reliability Directive" and its connection to the definition of "Emergency" within this Project brings much needed clarity for the sector and will promote consistency between Regional Entities and within the audits of Registered Entities. Shell Energy supports the removal of Purchasing Selling Entities as a function to which IRO-001 applies. This removal recognizes that PSEs do not play a role in reliability coordination under this standard since they have no authorities and no abilities to assume or perform responsibilities associated with reliability coordination. This conclusion is reinforced by the adoption of the defined term "Reliability Directive". Where a RC, TOP, or BA needs to address an Emergency they do not contact, consult, or direct a PSE to take action that would address the Emergency. Rather, where the PSE is a user of the grid to perform or execute transactions, it is subject to the actions of these other entities that have the authority to stop, curtail, or alter the submitted transactions of the PSE in a way that aids in resolving the problem. With the fitting adoption of "Reliability Directive" into COM-002 as well, Shell Energy does not believe it is necessary or appropriate for the applicability of this standard to include Purchasing Selling Entities, as is contained in the current draft proposal. This standard does not apply to PSEs today, however, during the progression of Project 2006-06 this applicability was added to an early draft version that preceded the discussions and clarification that comes from the definition of a Reliability Directive in the standard. Shell Energy does not support the inclusion of PSEs in the current draft version of COM-002, and feels that it should be removed. The purpose of this standard is, "To ensure Emergency communications between operating personnel are effective" and relates directly to the capabilities and authorities established for the RC, TOP, or BA that requires actions to be taken by a recipient of a Reliability Directive. As noted previously, PSEs are acted upon by the entities with the necessary authority, and are not in a role that would initiate or fulfill the required actions. As additional matters related to the clarification and cleanup of the standards in this project, the implementation plans for both IRO-001 and COM-001 erroneously contain references to PSEs in the sections "Functions that Must Comply with the Requirements". These references</p>

Organization	Yes or No	Question 6 Comment
		need to be removed.
<p>Response: The RCSDT thanks you for your comments. The applicability of COM-001 and COM-002 were revised to be consistent and only include the RC, TOP, BA, DP and GOP.</p>		
American Electric Power		<p>The language used in COM-002-3 R2 including “with enough details that the accuracy of the message has been confirmed” is subjective and ambiguous.</p> <p>Response: The RCSDT agrees with the intent of your comment and has modified COM-002-3, R2 as:</p> <p style="padding-left: 40px;">R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive issued in accordance with Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.</p> <p>IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (eg Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling.</p> <p>Response: IRO-001 is written so that typical daily operating orders or directives could be used, and also to cover emergency scenarios, but stating the use of Reliability Directives is included. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives, “. This is the “direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
American Transmission Company		None

Organization	Yes or No	Question 6 Comment
ISO New England		<p>The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company. We believe that, in place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations of three-part to their sub-operating entities. Therefore, we suggest modifying R1 to be “When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]” Also, we believe that the definition of Emergency, as currently cited in these draft Standards and included in the existing NERC Glossary should be modified to include the NERC Glossary term Adverse Reliability Impact to make the Standards more crisp, clear and enforceable. Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team. There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box. IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update. In the definition of Reliability Directive, we suggest changing “to address an Emergency” to “to address a reliability constraint or a declared Emergency”. Further, Requirement R2 in IRO-001 contains the words “which could include issuing Reliability Directives” but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest that these words be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a</p>

Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest that these words be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.</p>
<p>Response: The RCSDT thanks you for your comments. See response to MRO above.</p>		
WECC		<p>Suggested minor revision to the definition of Reliability Directive as follows (change in caps)A communication, IDENTIFIED AS A RELIABILITY DIRECTIVE, initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency. Clearly identifying a communication as a Reliability Directive provides immediate information to the recipient as to the nature of the communications.</p>
<p>Response: The RCSDT thanks you for your comments. The RCSDT believes embedding the term in “Reliability Directive” in the definition is a not proper method for defining a term.</p>		
BGE		<p>BGE has no additional comments.</p>
Duke Energy		<p>o COM-002-3 contains the proposed definition “Reliability Directive”. We continue to believe Requirement R1 should be deleted and that this definition should contain the phrase “identified as a Reliability Directive to the recipient”. Otherwise, compliance controversies will arise when auditors second-guess the RC, TOP or BA’s judgment regarding whether or not an abnormal system condition met the definition of “Emergency”, and warranted a “Reliability Directive” with 3-part communication. A conforming change will need to be made to R2, since it refers to R1. This change in the definition of “Reliability Directive” is also needed because this term is used in other standards such as IRO-001-2, and without repeating a similar requirement to COM-002-3 requirement R1 in IRO-001-2, there is potential for confusion.</p> <p>Response: The RCSDT disagrees as the suggestion embeds a requirement in a definition. The SDT believes the requirements of COM-002 are clear as written.</p> <p>o We disagree with the VSL for COM-002-3. This is clearly a requirement with two possible compliance failures: Failure to acknowledge a correct repeat-back, and failure to resolve an incorrect repeat-back. These failures have dramatically different consequences, which the drafting team should recognize via a graduated VSL. We think that the failure to acknowledge should either be “Lower” or “Medium”.</p> <p>Response: The RCSDT contends that missing the requirement is a binary violation that results in a severe</p>

Organization	Yes or No	Question 6 Comment
		<p>VSL. You are including risk to the BES in your proposal for the VSL. Risk to the BES is captured in VRFs, while VSLs consider the degree to which the entity failed to meet the Requirement.</p> <p>O Requirement R2 of IRO-001-2 is unclear and should be reworded as follows:</p> <p>“Each Reliability Coordinator shall take actions or direct actions (which could include issuing Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area) to either prevent identified events that could result in an Adverse Reliability Impact, or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.”</p> <p>Response: The RCSDT believes that the suggested revision does not add further clarity to the requirement.</p> <p>o Various changes have been made to the defined term “Adverse Reliability Impact” as this project has progressed. We believe the latest change should not be made, and the Phrase “uncontrolled separation” should be reinserted in the definition, because that phrase is part of the EAct 2005 legislation definition of “reliable operation”. Here is the text from the legislation: “The term ‘reliable operation’ means operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance, including a cyber security incident, or unanticipated failure of system elements.”</p> <p>Response: During the last posting of the proposed definition, the RCSDT received the following comment and revised the definition appropriately: “This change is problematic in that any automatic protective element operation that trips a BES element could be construed to be an Adverse Reliability Impact.”. The modification eliminated the phrase “that affects a widespread area of the Interconnection” which clarified the scope of the definition. “Uncontrolled separation” has been deleted from the definition, as it is included in the definition of Cascading.</p>
<p>Response: The RCSDT thanks you for your comments. Please see responses above.</p>		
CECD		<p>1. COM-002 R2 states that "the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message has been confirmed." Recommend a change to "the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the desired outcome of the message is clear".</p> <p>Response: The RCSDT agrees with the intent of your comment and has modified COM-002-3, R2 as:</p> <p>R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive issued in accordance with Requirement R1, shall repeat, restate,</p>

Organization	Yes or No	Question 6 Comment
		<p>rephrase or recapitulate the Reliability Directive.</p> <p>2. IRO-001 R2 states "Each Reliability Coordinator shall take actions or direct actions which could include issuing Reliability Directives of Transmission Operators," Recommend a change to "Each Reliability Coordinator shall take actions or direct actions which could include issuing Reliability Directives [See COM-002] to Transmission Operators, ..."</p> <p>Response: Based on feedback from other stakeholders, the RCSDT believes that the existing verbiage is clear and does not require further revision.</p> <p>3. IRO-001 R4 states entities "shall inform its Reliability Coordinator upon recognition of its inability to perform as directed per Requirement R3." Recommend a change to, entities "shall inform its Reliability Coordinator upon recognition of its inability to perform as directed."</p> <p>Response: Based on feedback from other stakeholders, the RCSDT believes that the existing verbiage is clear and does not require further revision.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
Indeck Energy Services		
City of Springfield, IL - City Water Light and Power (CWLP)		<p>CWLP generally concurs with and supports comments previously submitted by the SERC Operating Committee where those comments are not in conflict with the specific comments above.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
South Carolina Electric and Gas		<p>1. Reliability Directives may be issued by blast calls from Reliability Coordinators. It is inefficient and may be a hindrance to reliability to require 3-part communications in these instances.</p> <p>Response: The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation.</p> <p>2. There are several organizations registered as BAs, RCs and TOPs. It is not uncommon for those entities to be distributed across multiple desks in the same control room without regard to how an entity is registered. Thus, a single System Operator may perform functions that are categorized under two or more of those functional entities. The drafting team should clarify that under no circumstances should that System Operator be required to issue a Reliability Directive to himself. This is a corporate governance</p>

Organization	Yes or No	Question 6 Comment
		<p>issue.</p> <p>Response: The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities</p> <p>3. In IRO-014, R1, delete sub-requirement 1.7. The requirement for weekly conference calls related to operating procedures is duplicative to R4 and could be burdensome while adding very little value under certain circumstances.</p> <p>Response: R1, Part 1.7 requires an entity to address how and when they will hold conference calls in their Operating Plans, Processes or Procedures. R4 requires the participation in those calls.</p> <p>4. In IRO-014, R4, delete the phrase “(per Requirement 1, Part 1.7)” as a conforming change.</p> <p>Response: R1, Part 1.7 requires an entity to address how and when they will hold conference calls in their Operating Plans, Processes or Procedures. R4 requires the participation in those calls.</p> <p>5. In IRO-014, Requirements R6-R8 allow at least the theoretical possibility that an RC may determine an Adverse Reliability Impact in another RC’s area that the other RC neither can see nor believes that any action should be taken. R7 puts the burden on the first RC to develop a plan that it cannot implement because it has no agreement with the BAs and TOPs in the other RC area. As such, this requirement is unenforceable.</p> <p>Response: You are correct. Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone’s model or processes or procedures. The RC’s are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p>Revised R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p>

Organization	Yes or No	Question 6 Comment
		<p>6. Please review all the implementation plans to be sure the applicable entities match those in the standards.</p> <p>Response: We have revised the implementation plans to reflect the appropriate applicability.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		
<p>Independent Electricity System Operator</p>		<p>1. IRO-001: Reliability Directive: We do not agree with the proposed definition since it addresses Emergencies only. There are situations where a Reliability Directive is issued such that the directed action must be taken by the receiving entity to address a reliability constraint or any condition on the BES which if left unattended could, in the judgment of the issuing entity, lead to an Emergency. These conditions themselves do not constitute an Emergency which is defined as “Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.” There could be no abnormal condition but the actions must nevertheless be taken promptly to prevent the bulk electric system from entering into an abnormal condition. We therefore suggest the term Reliability Directive be revised to: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address a reliability constraint or an Emergency.</p> <p>Response: The RCSDT believes that your comment concerns “directives” or “instructions” for normal operational activities rather than a Reliability Directive. There is no requirement preventing an entity from issuing either directives or instructions for the situations you mention. The intent of creating a Reliability Directive definition is to ensure that communications is tightened during Emergencies (per blackout report). When an RC issues a Reliability Directive, the RC has made a deliberate decision to formally end collaboration and require specific action(s).</p> <p>2. IRO-001, Requirement R2: This requirement contains the words “which could include issuing Reliability Directives” which is not referenced anywhere else in the standard. We do not think this inclusion is necessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest to remove these words. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary. We suggest replacing “identified events” with “anticipated events”. This requirement also lists Interchange Coordinators as one of the recipients of Reliability Directives which is not consistent with the</p>

Organization	Yes or No	Question 6 Comment
		<p>implementation plan.</p> <p>Response: R2 requires the Reliability Coordinator to act. These actions could include Reliability Directives in the case of an Emergency. However, issuing Reliability Directives might not always be necessary, as the Reliability Coordinator may be acting proactively well in advance of an emergency. R2 promotes this proactive approach, but reserves the use of Reliability Directives for circumstances that require its use. Your suggested edits are not supported by the majority of stakeholder comments. The Interchange Coordinator has been removed from the standard.</p> <p>3. IRO-014: R4 as written creates unnecessary requirements for an RC to participate in conference calls for issues that may not affect the RC itself. We suggest to reinstate the original word “impacted” as opposed to “other”, and remove the words “within the same Interconnection” since such calls and coordination may be required for RCs on both side of the Interconnection boundary. Same change suggested for R5, i.e. replace “other” with “impacted”.</p> <p>Response: The requirement for weekly conference calls exists in IRO-015-1. The RCSDT has revised the requirement and incorporated it into proposed IRO-014-2. IRO-14-2, R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently R1.7, it is unlikely that Reliability Coordinators that are geographically and electrically distant will have mutually agreed upon operating procedures (per R1), and as such they are not applicable to R4. If RCs in different interconnections have operating procedures (per R1) with each other, then these operating procedures may include specifications for conference calls at least weekly.</p> <p>4. If an entity provides Interpersonal Communication for day-to-day communication using two different media, e.g. radio and telephone, the proposed definition of Alternative Interpersonal Communication suggests that it would not be possible for one medium to be used as the Alternative Interpersonal Communication for the other since the two media are both used every day.</p> <p>Response: The intent of AIC is to make sure there is an alternative in case the IC fails. If you have two, you may designate one as the AIC regardless of how often you use it.</p> <p>5. COM-001-2 R10 suggests that the responsible entity must wait for at least 30 minutes before notifying other entities of the failure of its Interpersonal Communication capability. We recommend changing “that lasts 30 minutes” to “that lasts or is expected to last 30 minutes”. This allows responsible entities to start notifying other entities earlier.</p>

Organization	Yes or No	Question 6 Comment
		<p>Response: The requirement is written such that an outer bound is set for notifications. An entity does not have to wait and can begin notifications immediately if it knows that an outage will last more than 30 minutes.</p> <p>6. In IRO-005-4 R1: Delete “notify”.</p> <p>Response: The phrase “issue an alert” was removed in the redline version but was not removed from the clean version. This was corrected.</p>
<p>Response: The RCSDT thanks you for your comments.</p>		

Consideration of Comments on Initial Ballot — Reliability Coordination (Project 2006-06)
Date of Initial Ballot: February 25 – March 7, 2011

If you feel that the drafting team overlooked your comments, please let us know immediately. Our goal is to give every comment serious consideration in this process. If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Herb Schrayshuen, at 609-452-8060 or at herb.schrayshuen@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

Summary Consideration:

The RCSDT thanks all stakeholders for their comments. Many stakeholders provided comments suggesting revisions to the standards. Many of these suggestions were incorporated into the standards. As a result of the revisions, the RCSDT is moving COM-001-2, COM-002-3 and IRO-001-2 to a successive ballot. The RCSDT made a few clarifying edits to the remaining standards based on stakeholder comments. Therefore, IRO-002-3, IRO-005-4 and IRO-014-2 are being moved to recirculation ballot. Because of this approach, the SDT will be proposing an interim change to IRO-001: the elimination of Requirement R7, as it is duplicative of one of the requirements in IRO-014-2.

For the COM-001 standard, several commenters had suggestions for improvements to the requirement language and applicability. The RCSDT believes the standard correctly and adequately requires each applicable entity that would have capability to receive Interconnection and operating information to have Interpersonal Communications and Alternative Interpersonal Communications to be used when the Interpersonal Communication is not available. The RCSDT has addressed the applicability of the standards and implementation plans by aligning COM-001-2, and COM-002-3 to include the same entities and by removing LSE, PSE and TSP from the COM standards.

Many comments were concerned about both the medium (e.g. cellular, satellite, etc.) and media (e.g. voice, email, etc.) used for Interpersonal Communications. The current language avoids being prescriptive and allows each entity to determine what is suitable. Interpersonal Communication and Alternative Interpersonal Communication is between the applicable entities which may include multiple locations (e.g. a primary and back-up control center).

The RCSDT added the following Requirement Parts at the suggestion of stakeholders:

- 3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection
- 4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection
- 5.6 Adjacent Balancing Authorities
- 6.3 Adjacent Balancing Authorities

The RCSDT agrees with the many industry comments and removed the phrase "to exchange Interconnection and operating information" in requirements R1 through R8. This removal clarifies that the intent of this capability is NOT for the exchange of data.

A few commenters also expressed concerns about the frequency of testing Alternative Interpersonal Communications capability. The RCSDT believes that the proposed testing frequency is supported by the majority of stakeholders and is not overly burdensome.

¹ The appeals process is in the Reliability Standards Development Procedure: http://www.nerc.com/files/RSDP_V6_1_12Mar07.pdf.

Several commenters suggested that VSLs should be written based on the percent of entities rather than by an occurrence of a violation. VSLs must be written on a violation occurrence basis in accordance with FERC guidelines. The requirements specify which entities must be included in communications capabilities. If a single entity is missing, this is a violation of the requirement. According to VSL guidelines, if missing any part of the requirement could have the same reliability outcome as missing the entire requirement, the requirement is binary and the VSL must be severe.

A new requirement was added to COM-001 for clarity regarding responsibilities of the Distribution Provider and the Generator Operator when either entity experiences a failure of its Interpersonal Communication capability:

R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with its Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]

This requirement requires collaboration between entities to restore a failed communications capability.

The RCSDT asked stakeholders if they believed that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel's comment as directed in FERC Order 693. The original justification that the RCSDT posited for not adding a requirement to directly address Xcel Energy's comments in paragraph 516 and FERC's related recommendation in paragraph 523 was that TOP-001-1 R3 was considered to address this concern. Since that time, the RTO SDT has proposed to retire TOP-001-1 R3. However, NERC has since retired IRO-004-1 R3 and R5 along with IRO-005-3 R5. Because these are retired, there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency. Therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirements," the TOP may respond to the RC that it cannot comply.

Stakeholders were asked if they agree with the revision to IRO-001, R1 for certifying Reliability Coordinators. Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.

A significant revision to IRO-001-2 was made by removing the Interchange Coordinator from the standard. The RCSDT made this revision because the Balancing Function is responsible for implementing interchange (see NERC Reliability Functional Model, version 5, page 32, item 7) and to operate the Balancing Authority Area to maintain load-interchange-generation balance (item 3). The RCSDT asked stakeholders if they agree with moving two requirements from IRO-001 back to IRO-002 relating to Analysis Tool outages. All stakeholders that responded agreed and there were no comments received.

The RCSDT asked stakeholders if they agree with moving two requirements from IRO-001 back to IRO-005 relating to Reliability Coordinator notifications. Several commenters noted a typographical error in R1 which was corrected to read:

When the results of an Operational Planning Analysis or Real-time Assessment indicate an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify ~~issue an alert to~~ all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]"

One commenter also asked that an errant yellow text box be removed from Page 1, which was also done.

The RCSDT received a number of comments regarding the applicability of COM-001, and COM-002. The RCSDT agrees with these comments and has removed PSE and LSE from the COM-001-2 implementation plan. The RCSDT also addressed minor issues involving typos, formatting and style.

The RCSDT received comments suggesting clarification of COM-002-3. The RCSDT intends the communication of Reliability Directives to be person-to-person and in such a manner that the Reliability Directive is understood and not necessarily repeated verbatim. COM-002-3 is not intended to be prescriptive on how the Reliability Directive is issued. Spoken or written communications are valid methods (i.e. using the telephone, radio, electronic texting, email, etc.). The purpose of COM-002-3 is to ensure emergency communications between operating personnel are effective. There is no proxy requirement for 24/7 operating personnel regarding small entities. Only “capability” as provided for in COM-001-2 is applicable. The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols would be addressed in the COM-003 standard being developed in Project 2007-02.

Some commenters suggested revisions to IRO-014, requirement R8 to conform to similar requirements R6 and R7. The RCSDT made the suggested revision by re-ordering R8:

R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

IRO-014-2, requirement R4 is applicable to those Reliability Coordinators engaged in activities related to requirement R1 and part 1.7. It is unlikely that Reliability Coordinators geographically and electrically distant from one another will have mutually agreed upon operating procedures (per requirement R1), and therefore requirement R4 would not be applicable. The RCSDT believes IRO-014-2, requirement R4 (which requires weekly communication) provides reasonable contact and flexibility – and this requirement is in effect today.

The RCSDT coordinated the use of the NERC Glossary term “Adverse Reliability Impact” with the Real-Time Operations team and continues the practice of informing all RCs of Adverse Reliability Impacts in requirement R5.

The RCSDT has revised IRO-014-2, requirements R6-R8 to clarify that when one RC identified a problem and presents an action plan for another RC, the second RC is obligated to implement the action plan. The RCSDT will forward the concern about RC's identifying themselves and the receiver to establish authority to the Project 2007-02, Operating Personnel Communications Protocols SDT. The Project 2007-02 team is developing a standard that includes requirements for use of specific communications protocols.

Edward P. Cox	AEP Marketing	6	Negative	<p>1) The applicability of COM-001 and COM-002 appear to be at odds with each other. The requirements may need to be re-written so that they are in sync.</p> <p>Response: The RCSDT has revised the applicability of COM-001 and COM-002 such that they contain the same functional entities. These are: RC, TOP, BA, GOP, and DP.</p> <p>2) The revision to IRO-001, R1 is out of scope with the standard, as it is currently addressed through the NERC certification process that the NERC reliability coordinators are subject to.</p>

Voter	Entity	Segment	Vote	Comment
				<p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>3) The language used in COM-002-3 R2 including “with enough details that the accuracy of the message has been confirmed” is subjective and ambiguous.</p> <p>Response: The RCSDT agrees with the intent of your comment and has modified COM-002-3, R2 as:</p> <p style="padding-left: 40px;">R2. Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.</p> <p>4) IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (eg Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling.</p> <p>Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives, “. This is the “direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.</p>

Richard J. Mandes	Alabama Power Company	3	Affirmative	Please see comments
<p>Response: The RCSDT thanks you for your comment. Please see response to posting comments for the SERC OC Standards Review Group; the RCSDT did not specifically find comments from Alabama Power Company and believes comments were included within this group.</p>				
Kenneth Goldsmith	Alliant Energy Corp. Services, Inc.	4	Negative	<p>While most of the changes recommended in the standards are acceptable to us, we do not believe multiple standards should be included in one ballot. You might ask for comments as a group, but each standard should be balloted separately.</p> <p>Response: The SDT has discussed this recommendation and has changed the way that these standards are being posting for ballot. Thank you for your suggestion.</p> <p>COM-001 R10 needs to be clarified that the "impacted entities" are within the same interconnection/area. It is not necessary to contact all entities as could be interpreted by the standard as currently written. We believe there may be differing levels of communication requirements, especially as it relates to smaller entities registered as DP's or LSE's that are not staffed 24 hours per day. We agree there is some responsibility of everyone to have some level of communications, the question is to what level.</p> <p>Response: R10 specifies only “impacted entities.” That phrase is used to limit the scope of the requirement. If an entity has a failure of its Interpersonal Communications capability with only one entity, then <i>that</i> entity is the “impacted entity” and they should be notified of the failure.</p>

Joseph S. Stonecipher	Beaches Energy Services	1	Negative	<p>From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. "Accuracy" is not the correct term here. "Understanding" is a better term. It would seem that "accuracy" is a term to be used in R3, the third part of the 3-part communication so that the issuer of the directive ensures the accuracy of the recipients understanding.</p> <p>I suggest changing COM-002-3 R2 to read:</p> <p>Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to clearly communicate the recipient's understanding of the Reliability Directive.</p> <p>The term "accuracy" can be interpreted as requiring the recipient to second-guess the Reliability Directive of the RC to ensure the accuracy of the RC's directive in the first place. Under tight time constraints of Emergencies, this is not practical. We are sure that was not the intent of the drafting team.</p> <p>Response: The SDT, in drafting the proposed language, did indeed discuss using the word "understanding" rather than accuracy. However, the SDT was not able to identify a feasible measure for "understanding". A recipient can judge whether the response is accurate when compared with the communications issued, but cannot judge the understanding of anyone, even though the responder may have accurately responded.</p> <p>For IRO-001-2, I don't see a need for R1. Doesn't the ERO already have that authority to establish RC's through the registration process, and to certify system operators through the PER standards?</p> <p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>IRO-014-2 R5, "impacted" was replaced with "other". Wouldn't it be better to at</p>

Voter	Entity	Segment	Vote	Comment
				<p>least limit the notification to within the same interconnection? Or is R5 truly to identify all NERC registered RC's?</p> <p>Response: This requirement continues the current practice of informing all RCs of Adverse Reliability Impacts (ARIs). Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RCs. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>More minor comments / suggestions for improvement: IRO-002 R2 can be improved by replacing "prevent identified events" with "prevent anticipated events". "Anticipated" aligns better with contingency analysis than "identified"</p> <p>Response: The SDT believes the commenter intended to be commenting upon IRO-001-2 R2 rather than IRO-002-2 R2. The SDT did indeed consider using the word "anticipated" rather than identified. However, the SDT believes that a decision cannot be made regarding whether to anticipate an event unless it is first identified through some method of assessment. Contingency analysis certainly can be one valid form useful in assessment. Since anything identified by such an assessment must be considered, the SDT believes the requirement should apply to what is identified, rather than the subjective decision of whether to expect or anticipate that which has been identified</p> <p>IRO-005-4 R1 and R2 can be improved by replacing "expected" with "anticipated". Contingencies are not necessarily "expected"; however, we do "anticipate" them.</p> <p>Response: The SDT agrees, and has revised the requirements per your suggestion.</p>
<p>Response: The RCSDT thanks you for your comment.</p>				
Bud Tracy	Blachly-Lane Electric Co-op	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a</p>

Voter	Entity	Segment	Vote	Comment
				<p>small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window."</p> <p>Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>

Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are effective." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this

return call would not be timely enough, then the issuer would determine a different mitigation plan.				
Gregory Van Pelt	California ISO	2	Abstain	The California ISO will be submitting comments Jointly as part of the ISO/RTO Council Standards Review Committee
Response: Thank you; please see responses to the comments submitted on the posting by the ISO/RTO Council Standards Review Committee.				
Dave Markham	Central Electric Cooperative, Inc. (Redmond, Oregon)	3	Negative	Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities

Voter	Entity	Segment	Vote	Comment
				<p>that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
<p>Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				
Steve Alexanderson	Central Lincoln PUD	3	Negative	<p>The stated purpose of COM-002 is: "To ensure emergency communications between operating personnel are effective." As written, the standard fails to meet this purpose because the three requirements only deal with communications at the entity level. There is no requirement for the directing entity to even try to reach operating personnel at the receiving entity. The directing entity may follow all the requirements of this standard by following R1 and R3 with the receiving entity's receptionist, answering service, janitor, night watchman, etc. The receiving entity only needs to meet R2, parroting the directive. Again this could be accomplished by anyone with no assurance the directive reaches the operating personnel who can implement it. When we stated a similar objection during the last comment period, The SDT's answer suggested this was a PER staffing issue, but none of the PER requirements even apply to DP/LSE directive recipients. We suggest the entity issuing the directive should be required to make an attempt to get it to those who are competent to understand and implement the directive. This is not a staffing, training, or credentials issue; it is a performance issue that falls squarely within the stated purpose of this standard. COM-001 R10 presents a paradoxical situation to an entity attempting to comply. Consider an interpersonal communication capability</p>

Voter	Entity	Segment	Vote	Comment
				<p>failure that lasts longer than 60 minutes past initial detection. At or before 60 minutes, the affected entity is expected to notify impacted entities. If it has no interpersonal communication capability, how shall it make this notification? And if the entity does manage to make such a notification, it has thereby proven that it does have interpersonal communication capability making such notification unnecessary. We again ask the SDT to consider that not all the entities in the applicability sections of COM-001 and 002 have 24/7 dispatch centers. These are typically smaller entities that were required to register because they exceed 25 MW or were asked in the past to voluntarily provide UFLS. They do not and do not need to continuously communicate with TOPs, BAs, RCs, etc; and a “reliability directive” is a theoretical thing that has never happened during the memories of thirty year employees. The directive issuing entities simply realize the limitations around the receiving entities and work around them. The financial burden on these small entities and their customers to go to 24/7 dispatch will not have a corresponding reliability benefit. And while the two COM standards do not explicitly state that entities must maintain 24/7 dispatch, when all the requirements and definitions and time horizons are taken together 24/7 continuous competent communication is implied. During the last comment period, the SDT suggested this was a registration issue beyond their control. We submit instead that this is a standard applicability question that the SDT does have control over, since it is right there in Section A.4 of the two COM standards. While we appreciate that the SDT is responding to FERC order 693 to include DPs, we note that FERC also stated: Paragraph 487: “We expect the telecommunication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process.” Paragraph 6: “A Reliability Standard may take into account the size of the entity that must comply and the costs of implementation” Paragraph 141: “...the Commission clarifies that it did not intend to ... impose new organizational structures...” Paragraph 31: “We emphasize that we are not, at this time, mandating a particular outcome by way of these directives, but we do expect the ERO to respond with an equivalent alternative and adequate support that fully explains how the alternative produces a result that is as effective as or more effective that the Commission’s example or directive. We ask the SDT to exclude DPs, LSEs, and PSEs that do not have 24/7 dispatch centers from the applicability of these two standards in order to meet FERC order 693.</p>

Gregg R Griffin	City of Green Cove Springs	3	Negative	<p>From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. "Accuracy" is not the correct term here. "Understanding" is a better term. It would seem that "accuracy" is a term to be used in R3, the third part of the 3-part communication so that the issuer of the directive ensures the accuracy of the recipients understanding. FMPA suggests changing COM-002-3 R2 to read: Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to clearly communicate the recipient's understanding of the Reliability Directive.. The term "accuracy" can be interpreted as requiring the recipient to second-guess</p>

Voter	Entity	Segment	Vote	Comment
				<p>the Reliability Directive of the RC to enure the accuracy of the RC's directive in the first place. Under tight time constraints of Emergencies, this is not practical. We are sure that was not the intent of the drafting team.</p> <p>Response: The SDT, in drafting the proposed language, did indeed discuss using the word "understanding" rather than accuracy. However, the SDT was not able to identify a feasible measure for "understanding". A recipient can judge whether the response is accurate when compared with the communications issued, but cannot judge the understanding of anyone, even though the responder may have accurately responded.</p> <p>For IRO-001-2, FMPA does not see a need for R1. Doesn't the ERO already have that authority to establish RC's through the registration process, and to certify system operators through the PER standards?</p> <p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>IRO-014-2 R5, "impacted" was replaced with "other". Wouldn't it be better to at least limit the notification to within the same interconnection? Or is R5 truly to identify all NERC registered RC's?</p> <p>Response: This requirement continues the current practice of informing all RCs of Adverse Reliability Impacts (ARIs). Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC's. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>More minor comments / suggestions for improvement: IRO-002 R2 can be improved by replacing "prevent identified events" with "prevent anticipated events". "Anticipated" aligns better with contingency analysis than "identified"</p> <p>Response: The SDT believes the commenter intended to be commenting upon IRO-001-2 R2 rather than IRO-002-2 R2. The SDT did indeed consider using the word "anticipated" rather than identified. However, the SDT believes that a decision cannot be made regarding whether to anticipate an event unless it is first identified through some method of assessment. Contingency analysis certainly can be one valid form useful in assessment. Since anything identified by such an assessment must be considered, the SDT believes the requirement should apply to what is</p>

Voter	Entity	Segment	Vote	Comment
				<p>identified, rather than the subjective decision of whether to expect or anticipate that which has been identified.</p> <p>IRO-005-4 R1 and R2 can be improved by replacing "expected" with "anticipated". Contingencies are not necessarily "expected"; however, we do "anticipate" them.</p> <p>Response: The SDT agrees and have revised the requirements per your suggestion.</p>
<p>Response: The RCSDT thanks you for your comment.</p>				

Randall McCamish	City of Vero Beach	1	Negative	<p>From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. John Allen	City Utilities of Springfield, Missouri	4	Negative	See comments from the SPP Standards Development group.
<p>Response: The RCSDT thanks you for your comment. Please see response to those comments.</p>				
Shaun Anders	City Water, Light & Power of Springfield	1	Negative	The definition of "Interpersonal Communications" is overly broad and does not address the functional needs of reliability coordination. The definition should be limited to systems utilized for essential reliability functions. While the Purpose statement in the standard does address this intent, the explicit inclusion in the definition removes all ambiguity. Further, the definition of "Alternative Interpersonal Communications" without corresponding explicit definition of Primary Interpersonal Communications may lead to confusion and unnecessary duplication of efforts in

				testing and maintenance.
<p>Response: The RCSDT thanks you for your comment. The certification of an entity as a functional entity by the ERO through its certification process will not take place unless the entity has the needed communications capabilities. If the entity cannot perform, it will not be registered. Once an entity is certified as a functional entity, then that entity must comply with all requirements applicable to that functional entity. These standard revisions establish clear requirements for alternative interpersonal communications capability which may or may not be part of the entity certification process. Taken together, the certification process and the Reliability Standards clearly establish the requirements for both normal interpersonal communications capability and alternative interpersonal communications capability.</p> <p>The RCSDT has revised the applicability of COM-001, and COM-002 such that they contain the same functional entities. These are: RC, TOP, BA, GOP, and DP.</p>				
Dave Hagen	Clearwater Power Co.	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. <p>Response: The RCSDT thanks you for your comment. Please see the response to those comments.</p>				
Christopher L de Graffenried	Consolidated Edison Co. of New York	1	Abstain	<p>o COM-002 assumes, but does not require, voice logs. This needs to be fixed. Otherwise the documentation could just be a paper log 'check box' entry which says "Yes, we used 3-part." This is not adequate, verifiable documentation for entity audits.</p> <p>Response: The standards establish "what" is required, not "how" to do it. The Measures identify methods which are examples of evidence that may be provided to demonstrate compliance, but requirements cannot be established in the measures. Further, valid requirements should not be established that preclude improvements that may arise through technological innovations or other equally effective alternatives. The state of the art at present would seem to indicate that the most prevalent evidence would likely come from a form of voice recordings or transcripts.</p>

				<p>o COM-002 only requires the entity maintain this documentation 3 months. This short retention time period expires long before most auditors check on the entity. So, why bother? This also needs to be fixed or clarified.</p> <p>Response: The retention time was established using the NERC Data Retention Guidelines and to recognize that vast amount of data which would have to be retained to present evidence. In addition, any event under investigation has likely been accompanied by a requirement to “freeze” data retention and keep all relevant information and date for a specified timeframe surrounding the event.</p>
<p>Response: The RCSDT thanks you for your comment.</p>

We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers</p>

				<p>with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
<p>Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				
Russell A Noble	Cowlitz County PUD	3	Negative	<p>COM-001 presents problems for smaller entities that do not have any other option for communications other than the failed communication line. The SDT should consider exempting such entities, requiring them to contact others to inform of their failed one and only communication option is a catch-22.</p> <p>COM-002 does not adequately provide for effective communication with smaller entities that do not have 24-7 control/dispatch functions. The directing entity issuing Reliability Directives must contact competent personnel. The SDT's reference to</p>

				<p>the PER requirements falls very short in addressing this problem as the DPs and LSEs are not even applicable to the suggested standards. Again, the SDT should consider certain exemptions for such entities. Please note that FERC itself noted that “a Reliability Standard may take into account the size of the entity that must comply and the costs of implementation...”...the Commission clarifies that it did not intend to ... impose new organizational structures...” and also “[w]e expect the communication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process.” Although the STD did not include all applicable entities to have backup communications, it failed to see the limitations of such entities without backup communications impeding their ability to comply with other requirements.</p>

Dave Sabala	Douglas Electric Cooperative	3	Negative	Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability
-------------	------------------------------	---	----------	---

				<p>directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.

Henry Ernst-Jr	Duke Energy Carolina	3	Negative	<p>o We question how far the definition of Alternative Interpersonal Communication goes in requiring separate infrastructure from Interpersonal Communication. For example, wireless communications sometime utilize fiber optic networks.</p> <p>Response: The definition requires the use of different infrastructure (medium) than the Interpersonal Communication used for day to day operations. The RCSDT does not believe it is appropriate to be prescriptive with respect to the specific medium employed. This is intended to apply to assets and access to media that is under your control. For example, the way cell phone signals are routed are not under your control.</p> <p>o We question why the requirements state that entities must “have” Interpersonal Communications capability, but must “designate” Alternative Interpersonal Communications capability?</p> <p>Response: Many entities have multiple Alternative Interpersonal Communication capabilities. Large entities may have a second land line, cell phone, satellite phone, etc. The purpose of “designating” the Alternative is so that other entities know which one is in use and is a reliable means of communications. Allowing them to designate which one they want to employ allows for flexibility in which one they use for AIC.</p> <p>o R1.2 and R2.2 - Why is this limited to the same interconnection?</p> <p>Response: The phrase “within the same interconnection” is added for the case of ERCOT which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>o R3 - need to add neighboring TOPs.</p> <p>Response: Agreed. The standard has been modified as suggested.</p> <p>o R5 - need to add adjacent BAs.</p> <p>Response: Agreed. The standard has been modified as suggested.</p> <p>o Interchange Coordinator - Add IC to the Applicability Section, and add a requirement that the IC have Interpersonal Communication capability with its BA and adjacent BAs.</p> <p>Response: We eliminated the Interchange Coordinator from COM-001-2 based</p>
----------------	----------------------	---	----------	---

				<p>on stakeholder feedback.</p> <p>o Requirements to “designate” Alternative Interpersonal Communication should carry a “Medium” VRF instead of “High”, because they are a backup capability. The word “designate” carries the connotation that these are documentation requirements.</p> <p>Response: While the requirement is phrased to focus on the documentation, the reliability objective is that the entity has an alternative communication capability with those functional entities most critical to its real-time operations.</p> <p>o R9 requires a monthly test of Alternative Interpersonal Communications capability. This was quarterly in the last draft. We question how these requirements for “Alternative Interpersonal Communications” capability are related to requirements for “backup functionality” in EOP-008-1, which requires an annual test of backup functionality. Clarity on the relationship between “Interpersonal Communications”, “Alternative Interpersonal Communications”, “primary control center functionality” and “backup control center functionality” would be appreciated.</p> <p>Response: Interpersonal Communication and Alternative Interpersonal Communication are not related to EOP-008. The provision to test may be performed through day to day use of the capability.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>				
George S. Carruba	East Kentucky Power Coop.	1	Negative	As currently written, IRO-014 could be interpreted that if a RC identifies an adverse reliability impact in another RC and the other RC does not agree with the findings, the RC who identified the adverse reliability impact would be responsible for creating a mitigation plan to address the issue. This may not be possible if the identifying RC does not have agreements in place with the TOPs/BAs in the other RC area.
<p>Response: The RCSDT thanks you for your comment. IRO-014-2 requirement R6, requires all RCs to operate as if the problem exists even when they disagree with the RC that identified the problem. Even if there is a disagreement between RCs, R8 still requires that all RCs comply with the action plan developed by the RC that identified the adverse reliability impact unless compliance with the action plan would violate safety, equipment, regulatory or statutory requirements. As envisioned, the TOPs and BAs would receive operating instructions from their own RC, not from the RC in another Reliability Coordinator Area.</p>				
Sally Witt	East Kentucky Power Coop.	3	Negative	As currently written it could be interpreted that if an RC identifies an Adverse reliability Impact in another RC Area and they do not agree with the findings, the

				RC who identified the adverse reliability Impact would be responsible for creating a mitigation plan to address the issue. This may not be feasible if the identifying RC does not have agreements in place with TOPs/BAs in the other RC Area.
<p>Response: The RCSDT thanks you for your comment. IRO-014-2 requirement R6, requires all RCs to operate as if the problem exists even when they disagree with the RC that identified the problem. Even if there is a disagreement between RCs, R8 still requires that all RCs comply with the action plan developed by the RC that identified the adverse reliability impact unless compliance with the action plan would violate safety, equipment, regulatory or statutory requirements. As envisioned, the TOPs and BAs would receive operating instructions from their own RC, not from the RC in another Reliability Coordinator Area.</p>				
John R Cashin	Electric Power Supply Association	5	Affirmative	I will be submitting comments in the regular form tomorrow.
<p>Response: The RCSDT thanks you for your comment. Please see response to those comments.</p>				
Chuck B Manning	Electric Reliability Council of Texas, Inc.	2	Negative	We agree with the comments submitted by the IRC SRC and we have submitted those same comments.
<p>Response: The RCSDT thanks you for your comment. Please see response to those comments.</p>				
Martin Kaufman	ExxonMobil Research and Engineering	5	Negative	The Measurement 2 of COM-002-3 has the potential to create numerous violations without any reliability impact to the Bulk Electric System. Specifically, for those facilities without voice recording equipment, the requirement to record in an operator log that the BA/GOP/TOP/TSP repeated the intent of a directive back to the RC provides no benefit to the reliability of the BES and adds a situation where an entity can be found non-compliant by an RE with zero impact to the reliability of the BES. In response to a directive from an RC, it's important for the reliability of the BES for a facility to identify an instruction as a directive, resolve whether the facility can comply with the directive, and inform the RC when it could not comply with the directive. Documentation requirements should reflect these three items.
<p>Response: The RCSDT thanks you for your comment. Based on comments from other stakeholders, the SDT has removed the TSP, LSE and PSE from responsibility for any of the requirements in COM-002. As envisioned, in an emergency the RC would issue most Reliability Directives to its BAs and TOPs, and there may be times when the RC bypasses its TOPs and BAs and issues a Reliability Directive to its DPs</p>				

and GOPS. The RC would not, however, issue a Reliability Directive to TSPs, LSEs, or PSEs.

Note that M2 only requires that the recipient document that it repeated the reliability directive. Collectively, the three measures do what you have proposed – they require that the applicable entities document that the three parts of the communication took place – original issuance; accurate repeat; confirmation. Operating logs are offered as one form of acceptable evidence – but other types of evidence could also be used to demonstrate compliance.

Bryan Case	Fall River Rural Electric Cooperative	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. Frank Gaffney	Florida Municipal	4	Negative	From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part

	Power Agency		<p>communication. "Accuracy" is not the correct term here. "Understanding" is a better term. It would seem that "accuracy" is a term to be used in R3, the third part of the 3-part communication so that the issuer of the directive ensures the accuracy of the recipients understanding. FMPA suggests changing COM-002-3 R2 to read: Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to clearly communicate the recipient's understanding of the Reliability Directive. The term "accuracy" can be interpreted as requiring the recipient to second-guess the Reliability Directive of the RC to ensure the accuracy of the RC's directive in the first place. Under tight time constraints of Emergencies, this is not practical. We assume that was not the intent of the drafting team.</p> <p>Response: The SDT, in drafting the proposed language, did indeed discuss using the word "understanding" rather than accuracy. However, the SDT was not able to identify a feasible measure for "understanding". A recipient can judge whether the response is accurate when compared with the communications issued, but cannot judge the understanding of anyone, even though the responder may have accurately responded.</p> <p>For IRO-001-2, FMPA does not see a need for R1. Doesn't the ERO already have that authority to establish RC's through the registration process, and to certify system operators through the PER standards?</p> <p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>IRO-014-2 R5, "impacted" was replaced with "other". Wouldn't it be better to at least limit the notification to within the same interconnection? Or is R5 truly to identify all NERC registered RC's?</p> <p>Response: This requirement continues the current practice of informing all RCs of Adverse Reliability Impacts (ARIs). Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC's. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>More minor comments / suggestions for improvement: IRO-002 R2 can be</p>
--	--------------	--	--

				<p>improved by replacing "prevent identified events" with "prevent anticipated events". "Anticipated" aligns better with contingency analysis than "identified"</p> <p>Response: The SDT believes the commenter intended to be commenting upon IRO-001-2 R2 rather than IRO-002-2 R2. The SDT did indeed consider using the word "anticipated" rather than identified. However, the SDT believes that a decision cannot be made regarding whether to anticipate an event unless it is first identified through some method of assessment. Contingency analysis certainly can be one valid form useful in assessment. Since anything identified by such an assessment must be considered, the SDT believes the requirement should apply to what is identified, rather than the subjective decision of whether to expect or anticipate that which has been identified.</p> <p>IRO-005-4 R1 and R2 can be improved by replacing "expected" with "anticipated". Contingencies are not necessarily "expected"; however, we do "anticipate" them.</p> <p>Response: The SDT agrees and have revised the requirements per your suggestion.</p>
<p>Response: The RCSDT thanks you for your comment.</p>

Silvia P. Mitchell	Florida Power & Light Co.	6	Negative	<p>8) Question 1</p> <p>1. Do you agree with COM-001 requirements for Interpersonal Communications capability and Alternative Interpersonal Communications capability (R1-R8)? If not, please explain in the comment area below. No</p> <p>9) Question 1 Comments: As drafted, COM-001 is not clear or complete. At this stage in the evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. Thus, NextEra Energy Inc. (NextEra) has numerous recommended corrections to provide clarity and completeness to COM-001. For example, the requirement to designate an Alternative Interpersonal Communication capability is not clear. Does the designator solely designate for the designator's knowledge or does the designator need to inform the entity on the other end of the connection.</p> <p>In R2, for instance, the Reliability Coordinator must designate, but it is also not clear whether the Reliability Coordinator must inform the Balancing Authorities or Transmission Operators. It is further unclear whether the designation must be documented, or if any informing of the Balancing Authorities or Transmission Operators must be documented. Thus, it is recommended that the drafters decide what was intended regarding the designation and clearly state the requirements.</p> <p>In R9 it states that “. . . on at least a monthly basis.” There are two issues to consider here. If the sentence stays, grammatically it should read “. . . on, at least, a monthly basis. . .” However, from a compliance and technical perspective, the term “at least” has no significance and should be deleted. The requirement is to test on a monthly basis - the phrase “at least” only introduces ambiguity and implies that the party should consider every two or three weeks. If the drafting team believes a best practice is less than a month, there are other NERC educational tools to explain a best practice.</p> <p>In R10, it states “. . . shall notify the impacted entity . . .” It would be clearer to state: “. . . shall notify the impacted Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator . . .” Page 6</p>

			<p>Response: The Requirement R2 is for the RC to designate an AIC and inform the other entity (BA, TOP, etc.) as to what that AIC is. The Measure M2 provides examples of the types of evidence which may be used to prove compliance with the requirement.</p> <p>The RCSDT believes that stakeholders are satisfied with the wording of the requirements of this standard. The phrase “at least” was included to relay the intent – that the monthly requirement is a minimum, and some entities may wish to perform this more frequently. It does not add any compliance obligation to perform this activity more frequently than specified.</p> <p>For R10, the RCSDT believes that the existing language is sufficiently clear.</p> <p>10) Question 2 2. The RCSDT believes that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel’s comment. Do you agree? If not, please explain in the comment area below. No</p> <p>11) Question 2 Comments: As stated in response to number 1, Reliability Standards are to be clear and complete. If a Transmission Operator is not responsible for a delay caused by a Reliability Coordinator, the Standard should specifically state that the Transmission Operator does not need to wait for an assessment or approval of a Reliability Coordinator to take actions pursuant to TOP-001-1 R3. Since the Reliability Coordinator is atop the reliability higherachy, such a statement provides clarity and completeness to understanding a Transmission Operators rights. Thus, TOP-001-1 R3 should be revised to lead with: “Without any obligation to first seek and obtain an assessment or approval from its Reliability Coordinator, each Transmission Operator” Page 10</p> <p>Response: The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirements”, the TOP may respond to the RC that it cannot comply.</p> <p>12) Question 6 Comments: At this stage in evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. COM-002, IRO-001, IRO-002 and IRO-014 do not meet this threshold. Thus, NextEra has numerous recommended corrections to provide clarity and completeness to these Reliability</p>
--	--	--	--

			<p>Standards. COM-002 R1 The addition of defined terms for Reliability Directive and Emergency is a very good approach that helps provides clarity. Hence, it is also be appropriate to make the language in the requirement as clear as possible, and not add other implied or unexplained notions. Also, at times, in those regions with markets, it is not always clear whether a requirement to curtail for reliability reasons is being issued pursuant to market rules or from the Reliability Coordinator or Transmission Operator under the Reliability Standards. Therefore, it is also appropriate that the Reliability Coordinator, Transmission Operator, Balancing Authority be required to identify themselves;, and if they fail to identify themselves or fail to use the term Reliability Directive, the registered entity receiving the flawed issuance should not be consider in violation of a Reliability Standard for failing to act. Accordingly, R1 would be clearer and have the same intent, if it stated as follows: “A Reliability Coordinator, Transmission Operator or Balancing Authority have the authority to issue an oral or written Reliability Directive as authorized in [list the specific Reliability Standard requirements such as IRO-001 R8 and TOP-001 R3]. The issuance of an oral of written Reliability Directive, by a Reliability Coordinator, Transmission Operator or Balancing Authority shall: (1) use the term ‘Reliability Directive;’ and (2) identify the issuer of the Reliability Directive as a Reliability Coordinator, Transmission Operator or Balancing Authority. If a Reliability Coordinator, Transmission Operator or Balancing Authority issues an oral or writtern directive without using the term “Reliability Directive” or failing to indentify itself as a Reliability Coordinator, Transmission Operator or Balancing Authority, the registered entity receiving the directive cannot be considered in violation for its failure to act.”</p> <p>Response: There is a new standard under development (COM-003) that is addressing a broader range of communications protocols, and has proposed a requirement for the Reliability Coordinator to announce his/her title when issuing alerts and other types of announcements.</p> <p>IRO-001 The definition of Adverse Reliability Impacts uses the term “instability.” It is important that this term be technically defined in the same way “Cascading” is defined, otherwise the new requirement is not adding clarity; rather, it is maintaining the ambiguous term “instability” that will likely lead to confusion and debate.</p> <p>Response: The term, ‘instability’ is already used in many reliability standards.</p> <p>R1 Similar to the comments set forth with respect to COM-001 (question #1), the term “at least” should be deleted from R1 - it serves no useful purpose from a technical or compliance perspective; instead, it will add unnecessary ambiguity to the requirement.</p> <p>Response: The phrase, “at least” was included to relay the intent – that the monthly requirement is a minimum, and some entities may wish to perform this</p>
--	--	--	--

				<p>more frequently. It does not add any compliance obligation to perform this activity more frequently than specified.</p> <p>R2, as drafted, states: “Each Reliability Coordinator shall take actions or direct actions, which could include issuing oral or written Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. “ This long sentence has several significant grammatical errors that result in the reader not being able to discern the meaning of the requirement. It also unnecessarily adds verbiage that detracts from its primary focus. It is, therefore, recommended that R2 be revised as follows: “Each Reliability Coordinator shall take all necessary actions to prevent identified Emergencies or Adverse Reliability Impacts. These Reliability Coordinator actions shall include, to the extent necessary, the issuing of oral or written Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers located within its Reliability Coordinator Area. “</p> <p>Response: The SDT has considered the alternative language proposed and finds that the— the phrase, ‘all necessary action’ is ambiguous. Who would decide that ‘all necessary action’ had been taken?</p> <p>R3, as drafted, is confusing and inconsistent with R2, and, thus, R3 should be revised to read as follows: “Upon receipt of a Reliability Directive issued pursuant to R2, a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with the Reliability Directive, unless compliance would violate safety, equipment, regulatory or statutory requirements. In the event that a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider determines that compliance with a Reliability Directive would violate safety, equipment, regulatory or statutory requirements, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall, within 10 minutes after the determination, inform the Reliability Coordinator of its inability to comply.”</p> <p>Response: The team adopted the intent of part of this suggestion by replacing the word, ‘per’ with, ‘in accordance with’. The team elected not to add a time constraint because the proposed time constraint implies that it would be acceptable to delay up to 10 minutes before notifying the RC – and in some instances this time delay</p>
--	--	--	--	---

				<p>could result in and adverse impact to reliability.</p> <p>IRO-002R1 and R2, as written, are confusing. It is recommended that R1 and R2 be combined to read as follows: “Pursuant to a written procedure to mitigate the impact of a Reliability Coordinator’s analysis tool outage, a Reliability Coordinator’s System Operator shall also have the authority to approve, deny or cancel a planned outage for its analysis tool.”</p> <p>Response: The drafting team believes that the language in the proposed standard is clear as written. No reason has been provided for merging the two requirements, and the benefit of merging the requirements is not clear.</p> <p>IRO-014 It is unclear why the terms Operating Procedure, Operating Process or Operating Plan needs to be plural, as currently written in the Standard. Hence, it is recommended that these terms be made singular, otherwise a violation may be inferred for not having more than one Procedure, Process or Plan.</p> <p>Response: The range of activities that must be addressed by the documents is expected to require more than one document, thus the use of the plural versions of these terms.</p> <p>Insert the word “applicable” before “Reliability Coordinator.”</p> <p>Response: The benefit of adding the word ‘applicable’ is not clear.</p> <p>2.1, as written, is confusing. Recommend that 2.1 read as follows:”Review and update, if an update is necessary, on an annual basis. Annual basis means the review shall be within one month plus or minus that date of the last review.”</p> <p>Response: The 15 month interval was recommended by the compliance program as the outer bound to recommend in standards that use the term, “annual” or “annually.”</p> <p>There is a compliance bulletin on this issue.</p> <p>R3 This requirement uses a very vague term “reliability-related information,” which, also, does not track the language used in R1 -- “information.” It is recommended that R1 and R3 use the same terms and read “ . . . information, as defined by the Reliability Coordinator, . . . “</p> <p>Response: Requirement R1 is not open-ended – it identifies information needed for Interconnection reliability. R3 points to the information identified by complying with R1. The intent was to limit the scope to areas needed for reliability. RCs may want other information for reasons not related to reliability, and that information is outside the scope of this standard.</p> <p>R4 As stated above, “at least” does not add value, and, therefore, should be</p>
--	--	--	--	---

				<p>deleted.</p> <p>Response: The phrase, “at least” was included to relay the intent – that the monthly requirement is a minimum, and some entities may wish to perform this more frequently. It does not add any compliance obligation to perform this activity more frequently than specified.</p> <p>R5, as written, is confusing. The recommended fix is to delete “all other” and replace with “impacted”.</p> <p>Response: The SDT did intend that all other RCs be notified. This requirement continues the current practice of informing all RCs of Adverse Reliability Impacts (ARIs). Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>				
Thomas W. Richards	Fort Pierce Utilities Authority	4	Negative	<p>From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. "Accuracy" is not the correct term here. "Understanding" is a better term. It would seem that "accuracy" is a term to be used in R3, the third part of the 3-part communication so that the issuer of the directive ensures the accuracy of the recipients understanding. FPUA suggests changing COM-002-3 R2 to read: Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to clearly communicate the recipient's understanding of the Reliability Directive.. The term "accuracy" can be interpreted as requiring the recipient to second-guess the Reliability Directive of the RC to enure the accuracy of the RC's directive in the first place. Under tight time constraints of Emergencies, this is not practical. We are sure that was not the intent of the drafting team.</p> <p>Response: The RCSDT revised the requirement as follows to remove the “accuracy’ language:</p> <p>R2. Each Balancing Authority, Transmission Operator, Generator</p>

				<p>Operator, and Distribution Provider that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.</p> <p>For IRO-001-2, FPUA does not see a need for R1. Doesn't the ERO already have that authority to establish RC's through the registration process, and to certify system operators through the PER standards?</p> <p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>IRO-014-2 R5, "impacted" was replaced with "other". Wouldn't it be better to at least limit the notification to within the same interconnection? Or is R5 truly to identify all NERC registered RC's?</p> <p>Response: This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC's. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>More minor comments / suggestions for improvement: IRO-002 R2 can be improved by replacing "prevent identified events" with "prevent anticipated events". "Anticipated" aligns better with contingency analysis than "identified"</p> <p>IRO-005-4 R1 and R2 can be improved by replacing "expected" with "anticipated". Contingencies are not necessarily "expected"; however, we do "anticipate" them.</p> <p>Response: The SDT believes the commenter intended to be commenting upon IRO-001-2 R2 rather than IRO-002-2 R2. The SDT has revised the requirements per your suggestion.</p>
<p>Response: Thank you for your comments. Please see responses above.</p>				
Anthony L Wilson	Georgia Power Company	3	Affirmative	Please see comments
<p>Response: The RCSDT thanks you for your comment. Please see response to posting comments for the SERC OC Standards Review Group; the RCSDT did not specifically find comments from Georgia Power Company and believes comments were included within this group.</p>				

Gordon Pietsch	Great River Energy	1	Negative	<p>Reliability Directive: It is our opinion the definition as currently written is too subjective and may cause a compliance auditor to question the grounds under which one of applicable entities declared the directive. We believe that revising the definition to state “to address a declared emergency...” will remove the subjectivity.</p> <p>Requirements for using three-part communication: It is our opinion that the standard needs language that clearly states that during a Blast Call three-part communication is not required. Blast Calls are used when information needs to be disseminated quickly to a large number of entities. Strictly enforcing the use of three-part communication under these circumstances has the potential to be more harmful to reliability than helpful.</p>
<p>Response: The RCSDT thanks you for your comment.</p> <p>Reliability Directive: The RCSDT believes the proposed standard requirement addresses your requested revision. “R1...shall identify the action as a Reliability Directive...” is addressing a declared emergency.</p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient.</p> <p>As a reference, we have included the existing definition of Emergency:</p> <p>Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.</p> <p>The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols would be addressed in the COM-003 standard being developed in Project 2007-02.</p>				
Shaun Jensen	Idaho Power Company	3	Negative	<p>It appears there is much concern with the wording, particularly in R2, as well as parties having issues with intermingled definitions. It is recommended to reword this, and ensure the VSL accurately reflects a direct definition that all entities all clear and certain on.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT is not sure of which standard requirement is being referenced.</p>				
Bob C. Thomas	Illinois Municipal Electric Agency	4	Negative	<p>IMEA appreciates the SDT's efforts to date. We are basing our negative vote on ballot pool communications that have addressed points that need further refinement before the proposed revisions to these reliability standards are affirmed. IMEA supports, in particular, comments submitted by the Midwest ISO and the SERC OC</p>

				Standards Review Group.
<p>Response: The RCSDT thanks you for your comments. Please see responses to Midwest ISO and SERC OC Standards Review Group.</p>				
Kim Warren	Independent Electricity System Operator	2	Negative	<p>While we support the general direction of these standards development actions, we do have a number of concerns which cumulatively lead us to advocate a NEGATIVE vote. These include:</p> <p>(1) The phrase “within the same Interconnection” in COM-001-2 R1, limits the coordination activities to RCs, TOPs and BAs that can be detrimental to reliability. We recommend removing this phrase.</p> <p>Response: The RCSDT does not agree that the phrase “within the same interconnection” limits coordination between entities. The purpose of the phrase is to place a bound on which adjacent entity an RC must have Interpersonal Communication (e.g., an EI RC does not need communication with WI RCs). The phrase “within the same interconnection” is added for the case of ERCOT which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>(2) We believe the Interchange Coordinator and Purchasing-Selling Entity also need to have adequate communication capabilities with other entities but they are not included in the applicability section of COM-001-2.</p> <p>Response: We disagree that the IC and PSE need to be an applicable entity. To maintain reliability does not require communication with these entities. The applicability of COM-001, COM-002 and IRO-001 were revised to include the same reliability entities: RC, TOP, BA, DP and GOP. LSE, PSE and TSP were removed from the applicability of these standards per stakeholder suggestion.</p> <p>(3) The proposed definition of Reliability Directive addresses Emergency condition only. There are situations where a Reliability Directive is issued such that the directed action must be taken by the receiving entity to address a reliability constraint, which by itself does not constitute an Emergency. We suggest the term Reliability Directive be revised to: “A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address a reliability constraint or an Emergency.”</p> <p>Response: The RCSDT believes that your comment concerns “directives” or “instructions” for normal operational activities rather than a Reliability Directive. There is no requirement preventing an entity from issuing either directives or</p>

				<p>instructions for the situations you mention. The intent of creating a Reliability Directive definition is to ensure that communications is tightened during Emergencies (per blackout report). When an RC issues a Reliability Directive, the RC has made a deliberate decision to formally end collaboration and require specific action(s). In addition, the Operating Personnel Communication Protocols SDT is addressing your concern about instances that are not considered an emergency. As envisioned, communications protocols requiring additional applications for use of three-part communications would be addressed in the COM-003 standard being developed in Project 2007-02.</p> <p>(4) Requirement R9 of COM-001-2 needs to be clarified. As written the requirement seems open ended once action to repair of a failed Alternative Interpersonal Communication is initiated within 2 hours but not completed within that time. It is not clear whether there is an expectation on the responsible entity to designate a replacement Alternative Interpersonal Communication if repairs cannot be completed within that period.</p> <p>Response: The requirement is saying that if the test fails you must initiate action for repair or designate a replacement alternative within two hours. There is no requirement for a tertiary capability nor is there a requirement for a repair deadline.</p> <p>We have also submitted additional comments in response to the request for comments.</p> <p>Response: Please see responses to other comments</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>				
Michael Moltane	International Transmission Company Holdings Corp	1	Negative	<p>ITC votes negative for the reasons detailed in the MISO-submitted comment form related to this Project (ITC signed onto the MISO comments). While this standard revision moves in the right direction, we believe at least one additional iteration will be needed to correct the concerns indicated in the comment form.</p>
<p>Response: The RCSDT thanks you for your comments. Please see responses to Midwest ISO.</p>				
Kathleen Goodman	ISO New England, Inc.	2	Negative	<p>Although ISO-NE believes these Standard represent a great improvement, we are voting against because we believe they would be improved by the comments that we have offered. We would gladly modify our vote in the Affirmative if our comments are considered in the next ballot.</p>

Response: The RCSDT thanks you for your comment. Please see response to those comments.				
Charles Locke	Kansas City Power & Light Co.	3	Negative	These requirements impose alternative means of communication on TOP's, BA's and GOP's regardless of the impact the entity may have on maintaining interconnection reliability. In addition, there are many IRO requirements that are proposed to be eliminated that do not appear to be considered in other places.
Response: The RCSDT thanks you for your comments. We cannot delineate entity impact on reliability and respond only regarding entity registration with NERC.				
Scott Heidtbrink	Kansas City Power & Light Co.	5	Negative	These requirements impose alternative means of communication on TOP's, BA's and GOP's regardless of the impact the entity may have on maintaining interconnection reliability. In addition, there are many IRO requirements that are proposed to be eliminated that do not appear to be considered in other places.
Response: The RCSDT thanks you for your comments. We cannot delineate entity impact on reliability and respond only regarding entity registration with NERC.				
Jessica L Klinghoffer	Kansas City Power & Light Co.	6	Negative	These requirements impose alternative means of communication on TOP's, BA's and GOP's regardless of the impact the entity may have on maintaining interconnection reliability. In addition, there are many IRO requirements that are proposed to be eliminated that do not appear to be considered in other places.
Response: The RCSDT thanks you for your comments. We cannot delineate entity impact on reliability and respond only regarding entity registration with NERC.				
Jim M Howard	Lakeland Electric	5	Negative	<p>From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. Why was this added? - "Accuracy" is not the correct term here. Suggest changing COM-002-3 R2 to read: Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to clearly communicate the recipient's understanding of the Reliability Directive.</p> <p>Response: The SDT, in drafting the proposed language, did indeed discuss using the word "understanding" rather than accuracy. However, the SDT was not able to</p>

				<p>identify a feasible measure for “understanding”. A recipient can judge whether the response is accurate when compared with the communications issued, but cannot judge the understanding of anyone, even though the responder may have accurately responded.</p> <p>The term "accuracy" can be interpreted as requiring the recipient to second-guess the Reliability Directive of the RC to ensure the accuracy of the RC's directive in the first place. Under tight time constraints of Emergencies, this is not practical. We are sure that was not the intent of the drafting team.</p> <p>Response: Several commenters expressed concern about the use of the word, ‘accuracy’ and the team revised the requirement to remove this word.</p>
<p>Response: The RCSDT thanks you for your comment.</p>				
Paul Shipps	Lakeland Electric	6	Negative	<p>The phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. "Accuracy" is not the correct term here. "Understanding" is a better term. The term "accuracy" is a term to be used in R3, the third part of the 3-part communication, so that the issuer of the directive ensures the accuracy of the recipients understanding.</p>
<p>Response: The RCSDT thanks you for your comment. The RCSDT has removed that phrase from the requirement as it was difficult to measure and many stakeholders had concerns with the language.</p>				
Rick Crinklaw	Lane Electric Cooperative, Inc.	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the</p>

				<p>language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
<p>Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				
Michael Henry	Lincoln Electric Cooperative, Inc.	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. --	--	--	--	---

Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are effective." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this

return call would not be timely enough, then the issuer would determine a different mitigation plan.				
Bruce Merrill	Lincoln Electric System	3	Negative	For NERC Reliability Standard COM-001-2, LES believes that interpersonal communication is the act of communicating and that the requirements specify normal and redundant facilities for Interpersonal Communication. As such, LES recommends the definition for “Interpersonal Communication” be changed to “Any act where two or more individuals communicate, interact, consult or exchange information, including listening or reading”. Additionally, for NERC Reliability Standard IRO-001-2, LES recommends replacing the word “certify” in R1 and M1 with “assign”. As currently written it is unclear what the certification of the Reliability Coordinator will entail and how it will be established by the ERO.
<p>Response: The RCSdT thanks you for your comment. We specifically included “medium” to distinguish a source or vehicle of communication instead of a “personal” reference.</p> <p>NERC has an established certification procedure for all registered entities and “certify” is in line with NERC’s process.</p>				
Dennis Florum	Lincoln Electric System	5	Negative	For NERC Reliability Standard COM-001-2, LES believes that interpersonal communication is the act of communicating and that the requirements specify normal and redundant facilities for Interpersonal Communication. As such, LES recommends the definition for “Interpersonal Communication” be changed to “Any act where two or more individuals communicate, interact, consult or exchange information, including listening or reading”. Additionally, for NERC Reliability Standard IRO-001-2, LES recommends replacing the word “certify” in R1 and M1 with “assign”. As currently written it is unclear what the certification of the Reliability Coordinator will entail and how it will be established by the ERO.
<p>Response: The RCSdT thanks you for your comment. We specifically included “medium” to distinguish a source or vehicle of communication instead of a “personal” reference.</p> <p>NERC has an established certification procedure for all registered entities and “certify” is in line with NERC’s process.</p>				
Richard Reynolds	Lost River Electric Cooperative	3	Negative	Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the

				<p>event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
--	--	--	--	--

Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are effective." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.

Charles A. Freibert	Louisville Gas and Electric Co.	3	Negative	Refer to the comment form.
<p>Response: The RCSDT thanks you for your comment. Please see response to posting comments for LGE/KE; the RCSDT did not specifically find comments from Louisville Gas and Electric Co.</p>				
Joseph G. DePoorter	Madison Gas and Electric Co.	4	Negative	MGE is voting negative for several reasons. Please see the MRO NSRS comments for a full description. Plus, whenever there are multiple Standards within a Project, registered entities will be forced to vote negative when there is at least one negative aspect.
<p>Response: The RCSDT thanks you for your comment. Please see response to MRO NSRS comments. The NERC SC approved the SAR and the RCSDT only drafts requirements within the scope of the SAR. The RCSDT will move to a successive ballot with each standard balloted separately.</p>				
Joe D Petaski	Manitoba Hydro	1	Negative	The current data retention requirement of 90 days is more than adequate. Increasing this period to 12 months would result in a significant amount of work with no benefit to reliability. For additional comments, please see Manitoba Hydro's comments provided during formal comment period.
<p>Response: The RCSDT thanks you for your comment. However, the comment submitted is incomplete and does not reference specific standard(s) or requirement(s). The data retention periods for the set of standards proposed is consistent with the guidelines provided in the NERC Drafting team Guidelines. Note that with recent changes to the Rules of Procedure, entities must be prepared to demonstrate that they were compliant for the full time period since the last audit.</p>				
Greg C. Parent	Manitoba Hydro	3	Negative	The current data retention requirement of 90 days is more than adequate. Increasing this period to 12 months would result in a significant amount of work with no benefit to reliability. For additional comments, please see Manitoba Hydro's comments provided during formal comment period.

Jason L Marshall	Midwest ISO, Inc.	2	Negative	<p>We thank the drafting team for their efforts on this project to improve the reliability coordination standards. The quality of the standards continues to improve over previous postings. While the drafting team is definitely moving the standards in the right direction, we believe we have not reached the point of diminishing returns and that there are several issues that the drafting team still needs to address.</p> <p>1 This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities.</p> <p>Response: The sub-requirements are an old format. The standard was updated to the new template, and sub-requirements are now Parts.</p> <p>2 In general, we are not opposed to the concept of the ERO certifying the Reliability Coordinators; however, there are some issues with how the requirement IRO-001-2 R1 is written. The requirement places emphasis on regions and regional boundaries when no emphasis should be placed there. There are multiple Reliability Coordinators that span multiple regions. The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect on what the standards are enforceable. The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES are covered under a Reliability Coordinator Area.</p>

				<p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>3 The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company.</p> <p>Response: COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p>“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is applicable to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability</p>
--	--	--	--	--

				<p>Directive was correctly received.</p> <p>4 We also are concerned about the need to conduct three-part communications for a Reliability Directive issued through a blast call. Under these circumstances, the need for immediate action of multiple parties may require a blast call and there may not be time for all parties to complete three-part communications before initiating actions. Thus, we believe blast calls should be treated separately and that should be made clear.</p> <p>Response: The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. However the essence of accurately implementing Reliability Directives is accomplished by use of 3-part communications. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols requiring for issuing alerts will be addressed in the COM-003 standard being developed in Project 2007-02.</p> <p>5 COM-002-3 R2 needs to be rewritten as it is too verbose. The point is for the recipient of the original message to get the issuer to confirm that the message was understood. We suggest rewording R2 to “Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.” Once the receiver has completed this requirement, the ball is in the issuer’s court per Requirement R3. No additional words are necessary in the requirement.</p> <p>Response: The RCSDT agrees and has revised the requirement as you suggest.</p> <p>6 Please strike part IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p>Response: The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators. These activities are listed as Parts. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes. The relation of IRO-14-2 PART 1.7 to R4 is that PART 1.7 requires</p>
--	--	--	--	--

			<p>having a conference call, R4 requires participation by all impacted Reliability Coordinators. As such, neither replaces the other.</p> <p>7 IRO-014-2 R4 is overly broad and would require Reliability Coordinators that will not impact one another to participate on conference calls with one another without any reliability benefit. The issue is created by the addition of the clause “within the same Interconnection” to the requirement. ISO-NE, FRCC, Midwest ISO, and SPP are all in the same Interconnection. It is hard to fathom there being reliability benefit to SPP and ISO-NE conversing weekly or Midwest ISO and FRCC conversing weekly. We suggest limiting the requirement to adjacent Reliability Coordinators.</p> <p>Response: IRO-14-2 R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently PART 1.7. It is unlikely that Reliability Coordinators whom are geographically and electrically distant will have mutually agreed upon operating procedures; therefore requirement R4 would not apply.</p> <p>8 For IRO-014-2 R5, we suggest replacing “other” with “impacted” to limit the notification of Adverse Reliability Impacts to only those Reliability Coordinators that need to know. Because the definition of Adverse Reliability Impact includes “Bulk Electric System instability or Cascading”, it is possible that the cascading of 138 kV lines serving a load pocket or generator outlet stability issues could require a Reliability Coordinator to notify all other Reliability Coordinators regardless of impact. This would include Reliability Coordinators outside of the Interconnection with the problem. It would also include Reliability Coordinators that are not impacted. For instance, an issue in New England that would not pose a threat outside the northeast would require ISO-NE to notify SPP and FRCC and Reliability Coordinators in the Western Interconnection. There is no reliability benefit to this notification.</p> <p>Response: This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>9 IRO-014-2 R6-R8 are problematic and need to be refined to make clear that the Reliability Coordinators shall operate to the most conservative limit. It should not require a Reliability Coordinator that disagrees with an action plan to implement the action plan. The Reliability Coordinator will be disagreeing with the action plan for reliability reasons. Assuming they are correct, the requirement to implement said action plan will actually put the Interconnection at greater risk. These requirements inappropriately attempt to codify the debate and analysis that occurs between and within Reliability Coordinators when there are differing results in reliability analysis. This is part of the problem with having a Wide Area view that results in Reliability Coordinators having a view into other Reliability Coordinator Areas. Their results</p>
--	--	--	---

			<p>and conclusions may be different. There should be a hierarchical structure for whose results should be used. It should be the Reliability Coordinator with primary responsibility unless the other Reliability Coordinator has evidence to demonstrate that the Reliability Coordinator with primary responsibility is incorrect. What this should do is to trigger both to review their models and data to assess the problem. None of this needs to be codified in the standards though.</p> <p>Response: Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone's model or processes or procedures. The RC's are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p style="padding-left: 40px;">IRO-014-2, Revised R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p> <p>10 In the definition of Reliability Directive, we suggest changing "to address an Emergency" to "to address a declared Emergency". This would help limit second guessing for a situation where a System Operator took action because he truly believed he was in an Emergency but after the fact analysis demonstrates there really was not an Emergency.</p> <p>Response: The RCS DT believes that modifying Reliability Directive by including "declared Emergency" would add an unnecessary step in mitigation of the Emergency.</p> <p>11 We disagree with deleting IRO-002-1 R5 and R7 which establish tools and monitoring capabilities. There should be basic tools requirements established for Reliability Coordinators. Project 2009-02 Real-time Reliability Monitoring and Analysis Capabilities will be addressing these issues in more detail. Thus, it does not make sense to delete these requirements until that dra</p> <p>Response: Each RC has been certified to continue operations as an RC or been certified prior to beginning operations as an RC. The minimum set of tools and capabilities for an RC are "checked off" during the certification process. The</p>
--	--	--	---

				reliability objective of R5 and R7 is to perform analyses to ensure reliability of the BES by specifying capability rather than mandating specific tools. The analysis provisions of R5 and R7 are covered under IRO-008-1, Requirements R1 (perform Operational Planning Analysis) and R2 (perform Real-time Analysis). It is anticipated that Project 2009-02 team will address this issue more fully.

Tony Eddleman	Nebraska Public Power District	3	Negative	<p>COM-001-2:</p> <p>A) We would need clarification as to what the process would be for Interpersonal communication and alternate Interpersonal communications and voice recording if the (1) TO and the BA are the same person, (2) if the TO and the BA are sitting across the desk from each other, or (3) if the TO, BA, and Distribution provider are all in the same company or same room.</p> <p>B) In the definition of Interpersonal Communications if data is included (?), what</p>

			<p>evidence of compliance is expected?</p> <p>C) R 1.2 and R2.2 Reliability Coordinators communication shouldn't be limited to the same interconnection. They need communications concerned with schedules across DC ties.</p> <p>D) For R3, neighboring Transmission Operators should be included.</p> <p>E) For R5, neighboring Balancing Authorities should be included.</p> <p>Response: A) The IC and AIC requirements apply to the functional entity. If a company has all of the functions performed in the same room, they would verbally communicate with each other in person (with sound waves being the medium).</p> <p>B) Data is not included in the definition of Interpersonal Communications but is covered in approved IRO-010-1 and proposed TOP-003-2.</p> <p>C) BAs handle Interchange Schedules. The RC has Interpersonal Communications with its BAs. DC ties usually have contractually designated operators who handle operating concerns.</p> <p>D) The SDT agrees, and has revised the requirement to include 'adjacent' TOPs synchronously connected within the same Interconnection.</p> <p>E) The SDT agrees and has revised the requirement to include 'adjacent' BAs</p> <p>COM-002-3 (R1):</p> <p>A) Since an entity can be registered for multiple functions (functions noted in R1), this could lead to the requirement for entities to issue directives to themselves or co-workers in the same room.</p> <p>B) How would a 3-part communication work when a "blast" call is used to provide directives to several entities?</p> <p>Response: A) COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate.</p>
--	--	--	--

				<p>The RCSDT believes the following response to draft 3 comments still holds true:</p> <p>“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>B) The RCSDT agrees that the use of Blast Call’s to issue Reliability Directives, in mass, is efficient and effective. However the essence of accurately implementing Reliability Directives is accomplished by use of 3-part communications. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols requiring for issuing alerts will be addressed in the COM-003 standard being developed in Project 2007-02.</p>
<p>Response: The RCSDT thanks you for your comment.</p>				
Don Schmit	Nebraska Public Power District	5	Negative	<p>COM-001-2:</p> <p>A) We would need clarification as to what the process would be for Interpersonal communication and alternate Interpersonal communications and voice recording if the TO and the BA are the same person, if the TO and the BA are sitting across the desk from each other, or if the TO, BA, and Distribution provider are all in the same company or same room.</p> <p>B) If the Interpersonal Communication definition includes data (?) then what evidence needs to provided?</p> <p>C) R1.2 and R2.2, Reliability Coordinators communication shouldn’t be limited to the same interconnection. They also need communications concerned with schedules across DC ties.</p> <p>D) For R3, neighboring Transmission Operators should be included.</p> <p>E)For R5, neighboring Balancing Authorities should be included.</p> <p>Response: A) The IC and AIC requirements apply to the functional entity. If a</p>

			<p>company has all of the functions performed by the same person or people in the same room, they would verbally communicate with each other in person. (sound waves – medium)</p> <p>B) Data is not included in the definition of Interpersonal Communications but is covered in approved IRO-010-1 and proposed TOP-003-2.</p> <p>C) BAs handle Interchange Schedules. <p>Response: The RCSDT thanks you for your comment.</p>				
Gregory Campoli	New York Independent System Operator	2	Abstain	<p>The NYISO agrees that these revised standards are an improvement from the current version. However we believe that the comments submitted by the IRC and NPCC are required to make them acceptable as the new set of standards. We will have an opportunity to revise our vote on the second ballot based on the consideration given to the comments submitted.</p>
<p>Response: The RCSDT thanks you for your comment. See IRC and NPCC comments.</p>				
Michael Schiavone	Niagara Mohawk (National Grid Company)	3	Affirmative	<p>IRO-001 R1 The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be.</p> <p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>IRO-001 R2 Should “of” be “to”? Reliability Directives are issued to TOPs, BA, etc.</p> <p>Response: The requirement was rewritten for clarity as follows:</p> <p>R2. Each Reliability Coordinator shall take actions or direct actions (which could include issuing Reliability Directives) by Transmission Operators, Balancing Authorities, Generator Operators, and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p>IRO-001 R2 Contains the words “which could include issuing Reliability Directives”, but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the</p>

				<p>magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. These words should be removed. Note that COM-002 will stipulate the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.</p> <p>Response: R2 requires the Reliability Coordinator to act. These actions could include Reliability Directives in the case of an Emergency. However, issuing Reliability Directives might not always be necessary, as the Reliability Coordinator may be acting proactively well in advance of an emergency. R2 promotes this proactive approach, but reserves the use of Reliability Directives for circumstances that require its use. During the vetting of the prior version of this requirement, some stakeholders expressed concern that the word, “action,” if not clarified, could lead some people to believe that the Reliability Coordinator must be the entity to perform the actual operation.</p> <p>COM-002 In place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations of three-part to their sub-operating entities. Modify R1 to be “When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]”</p> <p>Response: Your proposed edit does not meet the reliability intent of the requirement. The RCSDT believes that it is important to state that the Reliability Directive is being issued to convey that action by the recipient is required. An RC could issue a Reliability Directive to implement an agreed upon procedure whereby the three part communication would not list each step of the procedure individually, but would include implementation of the entire procedure. As envisioned, communications protocols such as the procedure you’ve proposed will be addressed in the COM-003 standard being developed in Project 2007-02.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>				
Jon Shelby	Northern Lights Inc.	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability</p>

				<p>directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
--	--	--	--	--

Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are effective." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical

that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.

Douglas Hohlbaugh	Ohio Edison Company	4	Affirmative	FirstEnergy supports the proposed standards and would appreciate consideration of our comments submitted through the formal comment period.
-------------------	---------------------	---	-------------	---

Response: The RCSDT thanks you for your comment. Your comments have been considered, Please see the Consideration of Comments document for FirstEnergy.

Brenda L Truhe	PPL Electric Utilities Corp.	1	Negative	Comments were submitted as part of a group via the comment form. Thank you for your work on the standard.
<p>Response: The RCSDT thanks you for your comment. Your other comments have been considered. Please see the Consideration of Comments document.</p>				
Mark A Heimbach	PPL EnergyPlus LLC	6	Negative	<p>Comments: We thank the Standards Drafting Team for the improvements made in the revisions to COM-001 and COM-002. The revision appropriately clarifies the standard. We are providing the following comments for the Standards Drafting Team to consider.</p> <p>1) Consider changing R1 to 'Each RC shall have the capability for Interpersonal Communications with the following entities to exchange Interconnection and</p>

				<p>operating information...' for clarity as Interpersonal Communications and capability are both nouns.</p> <p>Response: Thank you for your suggestion to modify the sentence structure into a noun phrase. However the RCSDT believes the current form is unambiguous.</p> <p>2) We feel changing the applicability of the standard is important to the accuracy of the standard. The purpose of COM-002 is 'To ensure emergency communications between operating personnel are effective'. Since operating personnel are covered by the applicability of RC, BA, TOP and GOP, we suggest the applicability to TSP, LSE, and PSE be removed from COM-002-3.</p> <p>Response: The SDT agrees. The applicability of COM-002 has been revised. COM-001, and COM-002 are now applicable to the RC, TOP, BA, GOP and DP only.</p> <p>3) Additionally, we would like to bring to the attention of the Standards Drafting Team, that the implementation plan for COM-001-2 and IRO-001-2 still includes TSP, LSE, and PSE although the revised standard does not include these entities in the Applicability Section. For COM-001-2 refer to the implementation plan, page 11. For IRO-001-2 refer to the implementation plan for new R2, new R3, new R4 and the chart on the last page. Thank you for your consideration in addressing these comments.</p> <p>Response: The RCSDT has revised the implementation plans appropriately to address your comment.</p>
<p>Response: The RCSDT thanks you for your comments. .</p>

<p>Response: The RCSDT thanks you for your comments.</p>				
John T Sturgeon	Progress Energy	6	Negative	<p>COM-001-2 R10 states that "Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that last 30 minutes or longer". The standard states that the RC, TOP, BA shall designate an Alternative Interpersonal Communication capability but does not require the same of the DP and GOP. Compliance by the DP and GOP with R10 would be jeopardized while still being compliant with the rest of the standard by having only the Interpersonal Communications capability.</p> <p>Response: The DP or GOP has access to additional Interpersonal Communications, in all likelihood, to make notifications for failure. There is not a requirement for an alternative, but it is likely that someone could use a cell phone to make the notification. The RCSDT is proposing to add Part 7.3 and 8.3 to the requirements as follows:</p> <p>7.3 Each Distribution Provider that experiences a failure of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority to determine a mutually agreeable time to restore its Interpersonal Communication capability.</p> <p>8.3 Each Generator Operator that experiences a failure of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority to determine a mutually</p>

				<p>agreeable time to restore its Interpersonal Communication capability.</p> <p>The phrase “within” used in R3-R6 does not take into account that there are electrically adjacent BAs/TOPs who are not “within” each other’s area.</p> <p>Response: The requirements are dealing with entities within the Area or entities that operate Facilities located within the Area. We have also added the following to R3:</p> <p style="padding-left: 40px;">Adjacent Transmission Operators synchronously connected within the same Interconnection.</p> <p>The SDT also added, ‘adjacent Balancing Authorities’ to Requirements R4, R5 and R6.</p>
<p>Response: The RCSDT thanks you for your comment.</p>				
Peter Dolan	PSEG Energy Resources & Trade LLC	6	Negative	<p>Com-001-2 implementation plan lists that this is applicable to PSE’s and LSE’s however, PSE’s and LSE’s were removed from the actual standard. The implementation plan should be revised. Com-002-3 standard continues to include PSE. PSE’s do not play an active role in operating the BES and have no authority or ability to perform reliability coordination related tasks as may be directed by a RC. PSE’s should be removed from the standard.</p> <p>IRO-001-2 references PSE’s in the implementation for R2, R3, R4 and “Functions that must comply with the requirements in this standard” table. The RCSDT has revised the implementation plans appropriately to address your comment.

Steven Grega	Public Utility District No. 1 of Lewis County	5	Negative	These changes do not recognize that many small utilities do not have 24-hour dispatch, do not have SCADA systems or do not man generation plants 24-hours a day. Specific exception should be written into the standards to provide relief for small GO, GOP, LSE and DP. The standard changes need to address notifications if personnel are only available on a on-call basis.
--------------	---	---	----------	--

Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are effective." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.

Heber Carpenter	Raft River Rural Electric Cooperative	3	Negative	Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due
-----------------	---------------------------------------	---	----------	--

				<p>to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
<p>Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				
Anthony E Jablonski	ReliabilityFirst Corporation	10	Negative	<p>1. General comments a. The standards should be balloted individually rather than balloted as a group. Response: The SDT agrees, and will be balloting the standards individually.</p> <p>2. COM-001-2 a. The "R" should be removed from all sub requirements (they should be referenced as parts) A Response: The SDT agrees. This has been corrected.</p> <p>3. IRO-005-4 a. Fix typo in R1. Insert the word "and" between the words "notify issue" b. Response: This typo has been addressed through other edits</p> <p>4. IRO-001-2 a. The Electric Reliability Organization (ERO) listed in the Applicability</p>

				<p>section and R1 is neither a user, owner nor operator of the BES and such should not be subject to Reliability Standards.</p> <p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>				
Ken Dizes	Salmon River Electric Cooperative	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. Carter B. Edge	SERC Reliability Corporation	10	Negative	<p>If the following issues are addressed in the standards revisions I should be able to cast an affirmative vote:</p> <p>COM-001-2</p> <ul style="list-style-type: none"> o Each sub-requirement should not have an “R” in front of the number in order to be consistent with NERC’s August 10, 2009 filing at FERC on this subject. Response: The SDT agrees. This has been corrected. o Requirement R3 and R4 should include adjacent TOPs as a sub-requirement. Response: The SDT agrees. The SDT modified R3 and R4 to add adjacent TOPs o Requirements R5 and R6 should include adjacent BAs as a sub-requirement. Response: The SDT added adjacent Balancing Authorities to Requirements R4, R5 and R6. o “to exchange Interconnection and operating information” should be deleted from requirements R1 through R8 as it is redundant with the definition of Interpersonal Communications Response: The SDT agrees. The SDT adopted this suggestion and deleted this phrase. o The last page of the Implementation Plan includes LSEs, PSE, and TSPs as being responsible entities under this standard, yet the standard does not include them. Please correct the implementation plan. Response: The implementation plan was corrected as proposed. <p>TOP-001-1,</p> <ul style="list-style-type: none"> o Requirement R3, which is what the SDT appears to be using as its justification for not adding a requirement here is proposed to be deleted by the RTO-SDT on Project 2007-03. IRO-001-2 R2-R4 deal with complying with directives or instruction and is the justification for retiring TOP-001, R3. <p>IRO-001-2</p> <ul style="list-style-type: none"> o I’m unclear on the language of R1. I think you are attempting to create a
----------------	------------------------------	----	----------	---

			<p>requirement similar to BAL-005, R1 where all generation, transmission, and load operating within an Interconnection must be included within the metered boundaries of a Balancing Authority Area. If that is the case, suggested language could be "All Balancing Areas and Transmission Operators must be under the authority of a Reliability Coordinator certified by the ERO to continuously assess transmission reliability and coordinate emergency operations within each region and across the regional boundaries"</p> <p>Response: Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>o Please remove the yellow box on page 1 indicating this standard will be retired.</p> <p>Response: The SDT agrees, and has made the change.</p> <p>Additional comments:</p> <p>o Reliability Directives may be issued by blast calls from Reliability Coordinators. It is inefficient and may be a hindrance to reliability to require 3-part communications in these instances.</p> <p>Response: The RCSDT agrees that the use of Blast Call's to issue Reliability Directives, in mass, is efficient and effective. However the essence of accurately implementing Reliability Directives is accomplished by use of 3-part communications. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols such as the procedure you've proposed will be addressed in the COM-003 standard being developed in Project 2007-02.</p> <p>o There are several organizations registered as BAs, RCs and TOPs. It is not uncommon for those entities to be distributed across multiple desks in the same control room without regard to how an entity is registered. Thus, a single System Operator may perform functions that are categorized under two or more of those functional entities. The drafting team should clarify that under no circumstances should that System Operator be required to issue a Reliability Directive to himself. This is a corporate governance issue.</p> <p>Response: COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue</p>
--	--	--	---

			<p>Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p style="padding-left: 40px;">“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance.”</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>o In IRO-014, R1, delete sub-requirement 1.7. The requirement for weekly conference calls related to operating procedures is duplicative to R4 and could be burdensome while adding very little value under certain circumstances.</p> <p>R1, Part 1.7 indicates that the Operating Plan, process or Procedure is to include how the entity will accomplish these calls. R4 requires the entity to actually perform them.</p> <p>Response: The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators. These activities are listed as Parts. Part 1.7 is requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>o In IRO-014, R4, delete the phrase “(per Requirement 1, Part 1.7)” as a conforming change.</p> <p>Response: The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators, these activities are listed as sub requirements. Part 1.7 is requires you to have a procedure relating to weekly</p>
--	--	--	--

				<p>conference calls while R4 requires participation in weekly calls. Further the RCSdT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>o I believe that the intent of IRO-014, Requirements R6-R8 is to require conservative operation by all affected Reliability Coordinators if any Reliability Coordinator detects an Adverse Reliability Impact. It could be read to allow at least the theoretical possibility that an RC may determine an Adverse Reliability Impact in another RC's area that the other RC neither can see nor believes that any action should be taken. R7 puts the burden on the first RC to develop a plan that it cannot implement because it has no agreement with the BAs and TOPs in the other RC area and thus could be ineffective. Alternately, it could be read that the identifying RC must take action in its own area to mitigate the Adverse Reliability Impact identified in another area much like the "general prudential rule" in the Coast Guard's Rules of the Road where regardless of what the rules state if action can be taken to avoid a collision at sea, that action must be taken. Please clarify.</p> <p>Response: Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone's model or processes or procedures. The RC's are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p>IRO-014-2, Revised R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact , each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p> <p>o Please review all the implementation plans to be sure the applicable entities match those in the standards.</p> <p>Response: The Implementation Plans have been modified to address this concern.</p>
--	--	--	--	---

Response: The RCSDT thanks you for your comment. Please see responses above.

Paul Benjamin Kerr	Shell Energy North America (US), L.P.	6	Affirmative	<p>The introduction of the definition of “Reliability Directive” and its connection to the definition of “Emergency” within this Project brings much needed clarity for the sector and will promote consistency between Regional Entities and within the audits of Registered Entities. Shell Energy supports the removal of Purchasing Selling Entities as a function to which IRO-001 applies. This removal recognizes that PSEs do not play a role in reliability coordination under this standard since they have no authorities and no abilities to assume or perform responsibilities associated with reliability coordination. This conclusion is reinforced by the adoption of the defined term “Reliability Directive”. Where a RC, TOP, or BA needs to address an Emergency they do not contact, consult, or direct a PSE to take action that would address the Emergency. Rather, where the PSE is a user of the grid to perform or execute transactions, it is subject to the actions of these other entities that have the authority to stop, curtail, or alter the submitted transactions of the PSE in a way that aids in resolving the problem. With the fitting adoption of “Reliability Directive” into COM-002 as well, Shell Energy does not believe it is necessary or appropriate for the applicability of this standard to include Purchasing Selling Entities, as is contained in the current draft proposal. This standard does not apply to PSEs today, however, during the progression of Project 2006-06 this applicability was added to an early draft version that preceded the discussions and clarification that comes from the definition of a Reliability Directive in the standard. Shell Energy does not support the inclusion of PSEs in the current draft version of COM-002, and feels that it should be removed. The purpose of this standard is, “To ensure Emergency communications between operating personnel are effective” and relates directly to the capabilities and authorities established for the RC, TOP, or BA that requires actions to be taken by a recipient of a Reliability Directive. As noted previously, PSEs are acted upon by the entities with the necessary authority, and are not in a role that would initiate or fulfil the required actions. As additional matters related to the clarification and cleanup of the standards in this project, the implementation plans for both IRO-001 and COM-001 erroneously contain references to PSEs in the sections “Functions that Must Comply with the Requirements”. These references need to be removed.</p>
--------------------	---------------------------------------	---	-------------	---

Response: The RCSDT thanks you for your comment. The applicability of COM-001, and COM-002 were revised to be consistent and only include the RC, TOP, BA, DP and GOP. The Implementation Plans have been corrected.

Robert A Schaffeld	Southern Company	1	Affirmative	Please see comments

	Services, Inc.			
<p>Response: The RCSDT thanks you for your comment. Please see response to those comments.</p>				
Ronald L Donahey	Tampa Electric Co.	3	Negative	Our only disagreement is with the use of the term "Reliability" in defining a directive.
<p>Response: The RCSDT thanks you for your comment. The term "Reliability Directive" was chosen to specifically delineate between other types of directives, such as market directives. It is imperative that reliability standards relate to reliability concerns.</p>				
Steve Eldrige	Umatilla Electric Cooperative	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities</p>

				that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.
<p>Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				
Jonathan Appelbaum	United Illuminating Co.	1	Negative	<p>See UI Comment form, In General:</p> <p>1. COM-001-2 does not specify the amount of time a DP has to reestablish the Interpersonal Communication Capability after the capability fails before it is assessed non-compliance for not having the communication.</p> <p>Response: The DP or GOP has access to additional Interpersonal Communications, in all likelihood, to make notifications for failure. There is not a requirement for an alternative, but it is highly unlikely that someone couldn't use their cell phone to make the notification. The RCSDT is proposing to add Part 7.3 and 8.3 to the requirements as follows:</p> <p>7.3 Each Distribution Provider that experiences a failure of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority to determine a mutually agreeable time to restore its Interpersonal Communication capability.</p> <p>8.3 Each Generator Operator that experiences a failure of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority to determine a mutually agreeable time to restore its Interpersonal Communication capability.</p>

				<p>2. VSL for R7 should have a time component</p> <p>Response: The VSL represents a single violation of the requirement. For this requirement, the DP must have Interpersonal Communication with its TOP and BA. The VSL was revised to remove “or more” to conform to the requirement. Because the Requirement does not have a time component, the SDT cannot add a time component to the VSL – this would violate one of the FERC Guidelines for setting VSLs.</p> <p>3. R7 should address the instance if the DP is not required to have communication with the BA, because the BA communicates thru the TOP.</p> <p>Response: The RCSDT believes that Interpersonal Communication between the DP and its BA and the TOP is required for reliability.</p> <p>4. COM-002 R2 seems awkwardly worded. R2 as it is written says the repeat is confirming the accuracy of the message itself. I think it is agreed that the repeat back in R2 is to allow the issuer of the Directive to confirm that the message was received accurately understood by the recipient.</p> <p>Response: The RCSDT has revised the requirement and has removed “with enough details that the accuracy of the message was confirmed” from the requirement.</p> <p>5. The VSL for Com-002 R2 is severe and states "The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message was confirmed." The purpose of the R2 repeat-back is to allow the Issuer verify the message was accurately received. This VSL penalizes the responsible entity for not accurately receiving the message. The VSL should penalize the refusal of the registered entity to repeat back the message not for receiving the message incorrectly.</p> <p>Response: The RCSDT agrees and has removed “with enough details that the accuracy of the message was confirmed” from the VSL.</p>
<p>Response: The RCSDT thanks you for your comment. Please see responses above.</p>				
Allen Klassen	Westar Energy	1	Negative	The new definition of Alternative Interpersonal Communication in COM-001 appears to rule out the use of redundant systems that happen to be used daily, which might be done to ensure that they function when needed.

Response: The RCSDT thanks you for your comment. The intent of Alternative Interpersonal Communication (AIC) is to make sure there is an alternative in case the Interpersonal Communication fails. If you have two, you may designate one as the AIC regardless of how often you use it.

Forrest Brock	Western Farmers Electric Coop.	1	Negative	<p>COM-001 - Definition of Interpersonal Communication needs more clarification. For example, would this include data exchanged via ICCP? Examples of what constitutes "Interconnection and operating information" would help as much "information" can be interpreted as fitting into this - or not.</p> <p>Response: Interpersonal Communication does not include data exchange.</p> <p>Severe VSL for R9 - second part after the "OR" is a virtual repetition of the wording in the Lower VSL for R9.</p> <p>Response: The Severe VSL was revised to remove "within 2 hours". It now reads:</p> <p style="padding-left: 40px;">"The responsible entity tested the Alternative Interpersonal Communications capability and identified a problem but didn't initiate action to repair or designate a replacement Alternative Interpersonal Communications."</p> <p>COM-003 - R3 contains a typographical or grammar error. "...Reliability Directive as per Requirement R2 IS correct..." not AS correct...</p> <p>Response: Assuming you meant COM-002-3, the SDT agrees and has made the correction.</p>
---------------	--------------------------------	---	----------	--

Response: The RCSDT thanks you for your comment. Please see responses above.

Anthony Jankowski	Wisconsin Energy Corp.	4	Affirmative	Please correct the clean version of IRO-005 R1 to match the red-line.
-------------------	------------------------	---	-------------	---

Response: The RCSDT thanks you for your comment. We have made the corrections.

Michael Ibold	Xcel Energy, Inc.	3	Affirmative	While we appreciate the drafting team's efforts to clarify the multiple effective dates, we feel it is still daunting and complex, which leaves too much room for miscalculation. We recommend that NERC and/or the drafting team publish what the actual effective dates are, as soon as FERC (and again when the other regulatory authorities) have approved it. This could either be done in the effective
---------------	-------------------	---	-------------	---

				date section of the standard itself, or as a stand-alone reference document posted along with the standard on NERC's website.
Response: The RCSDT thanks you for your comment. We will pass your comment on the NERC Standards Process Manager for consideration.				
James A Maenner		8	Negative	In comments (Reliability Coordination - Project 2006-06) Midwest ISO raised a number of issues that need to be addressed prior to passage of these standards.
Response: The RCSDT thanks you for your comment. Please see responses to comments made by MISO on the initial ballot as well as the regular comment form.				

END OF REPORT

Consideration of Comments

Reliability Coordination – Project 2006-06

The Reliability Coordination Drafting Team thanks all commenters who submitted comments on the fifth formal posting for Project 2006-06—Reliability Coordination. These standards were posted for a 30-day public comment period from January 9, 2012 through February 8, 2012. Stakeholders were asked to provide feedback on the standards and associated documents through a special electronic comment form. There were 62 sets of comments, including comments from approximately 170 different people from approximately 106 companies representing 9 of the 10 Industry Segments, as shown in the table on the following pages.

Summary Consideration

The RCSDT received comments from stakeholders, where a majority of those comments were focused on compliance elements of the standards, various errors, and other ambiguities. The RCSDT believes it has been responsive to the many comments and has either provided adequate explanation, where applicable, as well as incorporating the needed clarifications or corrections. There were no strong minority issues revealed in the comments which the RCSDT could not address. Revisions made to the standards are summarized in the following sections by standard.

COM-001-2

In the last posting and successive ballot, the standard received approval from about half of the ballot body with numerous comments. The RCSDT made substantive changes to the standard based on comments. The changes to COM-001-2, R3 and R4 require the standard to undergo a second successive ballot. The RCSDT believes it has addressed stakeholder comments and concerns in such a way that the standard is improved and meets the expectation expressed in comments for reliability and industry approval. Upon achieving industry consensus, this standard will advance to a recirculation ballot.

Purpose: Removed the text “for the exchange of Interconnection and operating information” based on comments received and due to the fact that the standard is for capability, which enables information exchange under other standards.

Effective Date: The language in the effective date was made consistent with current Standard Drafting Guidelines.

Requirements: Most changes were minor. In places where the capitalized word “Adjacent” began the requirement Parts, the RCSDT added the word “Each” and made “Adjacent” lowercase to avoid the perception of a defined glossary term. This change occurred in Parts 1.2, 2.2, 3.5, 4.3, 5.5, and 6.3. A significant change occurred in requirements R3 and R4. The RCSDT addressed stakeholders concerns

about the use of “synchronously connected within the same Interconnection.” This was addressed by removing the phrase “within the same Interconnection;” however, other comments were concerned that synchronously did not address DC ties. The RCSDT addressed this by adding a Part, which reads, “Each Transmission Operator asynchronously connected” to Requirements R3 and R4. Requirement R10 was updated to more accurately reflect the reference to other requirements. It should not have referenced R1 through R6; but, rather, R1, R3, and R5. Requirement R11 was updated to address stakeholder concerns about reaching a “mutually agreeable time,” so was changed to “mutually agreeable action.” Other minor changes included making plural terms singular and replacing “per” for “each” for readability and understanding.

Some commenters had concerns about conditions of non-compliance if the entity’s Interpersonal Communication capability failed. To address this concern, the RCSDT added conforming language to Requirements R1, R3, R5, R7 and R8 that bridges the potential gap in non-compliance for a failed Interpersonal Communication capability.

Measures: Most changes to the measures were non-substantive and provided better formatting for readability. Measures M3 and M4 were updated to align with the changes to the parts of Requirements R3 and R4 regarding synchronous and asynchronous. Several measures had inconsistent example evidence for the performance of the requirement. For example, time (hour/minute) based elements are introduced in R9 and R10; however, the measures did not note using dated and “time-stamped” evidence. Likewise, previous requirements did make use of “time-stamped” where there was no time based (hour/minute) performance. The RCSDT found this an unnecessary compliance burden. Other minor changes included making plural terms singular and replacing “per” for “each,” for readability and understanding.

Compliance, Compliance Enforcement Authority: The language in the CEA section was made consistent with current Standard Drafting Guidelines.

Compliance, Data Retention: The language in the data retention section was made consistent with current Standard Drafting Guidelines. The bulleted items were reformatted for consistency and readability.

Violation Severity Levels: Clarifying changes were made to the VSLs. Terms were made singular, the word “Requirement” added to appropriately designate the applicable requirement, and added the two newly-created parts from Requirements R3 and R4. The RCSDT added High VSLs for Requirements R1 through R8 to conform with VSL Guidelines. Requirements R1 through R8 are not binary only.

COM-002-3

The changes to COM-002-3 are considered non-substantive; therefore, the standard will advance to a recirculation ballot. The RCSDT believes it addressed stakeholder comments and concerns in such a

way that the updated sections of the standard is improved and overall meets industry's expectation for approval. Following approval, this standard will be submitted for adoption by the NERC Board of Trustees

Effective Date: The language in the effective date was made consistent with current Standard Drafting Guidelines.

Requirements: For the named functional entities in Requirements R2 and R4, the conjunction "and" previously used has been changed to "or," based on comments received from stakeholders.

Measures: Corresponding changes to Measures M2 and M3 were made in regards to Requirement R2 and R3. Measure M2 received an addition to include the phrasing, "restated, rephrased, or recapitulated" for consistency with Requirement R2.

Compliance, Compliance Enforcement Authority: The language in the CEA section was made consistent with current Standard Drafting Guidelines.

Compliance, Data Retention: The language in the data retention section was made consistent with current Standard Drafting Guidelines. Some bulleted items were corrected to accurately align them with the respective requirements.

Violation Severity Levels: One clarifying change was made to the R3 VSL. The RCSDT added a High VSL to accurately capture the condition where the entity failed to confirm the response of the recipient and removed the first part of the Severe VSL.

IRO-001-3

The changes to IRO-001-3 are considered nonsubstantive; therefore, the standard will advance to a recirculation ballot. The RCSDT believes it addressed stakeholder comments and concerns in such a way that the updated sections of the standard are improved and overall meets industry's expectation for approval. Following approval, this standard will be submitted for adoption by the NERC Board of Trustees

Effective Date: The language in the effective date was made consistent with current Standard Drafting Guidelines.

Requirements: In requirement R1, the last word (glossary term) was made singular for clarity and consistency with the definition. Requirement R2 was missing a conjunction in the functional entities, and this has been added.

Measures: Measure M1 was updated to use past tense language, consistent with drafting guidelines. Also, the parenthetical on “Reliability Directive(s)” was removed and the glossary term made singular for consistency with R1. Measure M2 addressed stakeholder comments by adding the word “physically,” phrase now reads, “physically implemented” to be consistent with Requirement R2, as well as making the term “direction” singular.

Compliance, Compliance Enforcement Authority: The language in the CEA section was made consistent with current Standard Drafting Guidelines.

Compliance, Data Retention: The language in the data retention section was made consistent with current Standard Drafting Guidelines. Some bulleted items were corrected to accurately align them with the respective requirements and remove inaccurate bullets from previous postings.

Violation Severity Levels: Clarifying changes were made to the R1 VSL. The phrase, “exercise its authority” was added, based on stakeholder comment, to more accurately reflect Requirement R1. The RCSDT removed the High VSL from R2, and more accurately incorporated it into the Sever VSL.

Additional Information

All comments submitted may be reviewed in their original format on the standard’s project page:

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President of Standards and Training, Herb Schrayshuen, at 404-446-2560, or at herb.schrayshuen@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Standard Processes Manual: http://www.nerc.com/files/Appendix_3A_StandardsProcessesManual_20120131.pdf

Index to Questions, Comments, and Responses

1. The RCSDT has revised the applicability of the standards and implementation plans by aligning COM-001-2, COM-002-3, and IRO-001-2 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards. Do you agree with this change in applicability to the three standards? If not, please explain in the comment area below. ... 14
2. Do you agree with the addition of “Adjacent” entities in COM-001-2, Parts 3.5, 4.3, 5.5 and 6.3 of COM-001-2? If not, please explain in the comment area below. 28
3. The RCSDT removed the phrase "to exchange Interconnection and operating information" in COM-001-2, Requirements R1 through R8 based on stakeholder comments. Do you agree with the revision? If not, please explain in the comment area below. 39
4. A new requirement was added for clarity regarding what is required of Distribution Providers and the Generator Operators: R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations] This requirement requires collaboration between entities to restore a failed communications capability. Do you agree with the new requirement? If not, please explain in the comment area below..... 47
5. The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact. Do you agree with the proposed definition? If not, please explain in the comment area below. 76
6. Do you have any other comment, not expressed in questions above, for the RC SDT?..... 96

The Industry Segments are:

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities
- 4 — Transmission-dependent Utilities
- 5 — Electric Generators
- 6 — Electricity Brokers, Aggregators, and Marketers
- 7 — Large Electricity End Users
- 8 — Small Electricity End Users
- 9 — Federal, State, Provincial Regulatory or other Government Entities
- 10 — Regional Reliability Organizations, Regional Entities

1. The RCSDT has revised the applicability of the standards and implementation plans by aligning COM-001-2, COM-002-3 and IRO-001-3 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards. Do you agree with this change in applicability to the three standards? If not, please explain in the comment area below.

Summary Consideration: Most commenters agreed with removing the LSE, PSE, and TSP from the three standards. Some did not agree with keeping the Distribution Provider (DP) within the standards. The RCSDT in being responsive to the FERC directive in Order No. 693, Paragraph 487, considered the DP entity; however, concluded having the DP is appropriate in responding to the directive to allow for reliable operations in normal and emergency situations. In reference to the implementation for DPs and GOPs, the RCSDT believes there is not a significant burden for most DP and GOP entities to implement an Interpersonal Communication capability. Some comments referenced the NERC Functional Model V5 concerning DP and GOP entities; however, the model is clear on the basic activities and supports the DP and GOP being applicable to the standards. The model also supports the removal of LSEs, for example. The RCSDT did not modify the applicability of the standards with regard to functional entities.

Organization	Yes or No	Question 1 Comment
ACES Power Marketing Standards Collaborators	No	While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.
<p>Response: The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP in COM-001, and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p>		
Entergy Services, Inc	No	R3 adds additional responsibilities for the TOP to have Interpersonal Communications capability with EACH DP and GOP in its footprint. Similarly, R4 gives the TOP responsibility to have alternative

Organization	Yes or No	Question 1 Comment
		<p>communications capability with each of these entities. This is a significant additional responsibility for the TOP to document and perhaps arrange for additional means of communication with these entities.</p> <p>The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP and GOP. The intent is to have Interpersonal Communication capability with the DP and GOP, and not to build additional communication facilities, but to be able “to interact, consult, or exchange information.” In contrast to R3, R4 does not include the DP or GOP. No change made.</p> <p>The short time frame provided for implementation of these requirements is not consistent with the additional effort and compliance documentation that is necessary to implement these requirements. Entergy recommends that the implementation time frame for these new requirements that apply to new entities, or expand the application of COM-001 for existing entities have an effective date 12 months beyond the applicable regulatory approval.</p> <p>Additionally, the implementation of the requirements that apply to the DP and GOP will represent an increase in the amount of documentation that must be retain to demonstrate compliance, and in some cases may also result in their having to purchase equipment or install new alternate means of communication.</p> <p>The RCSDT believes that six months is adequate, considering additional facilities should not have to be built to establish communications with the DP and GOP; similarly, compliance documentation should not impose significant work on the entities part. No change made.</p> <p>What is the improvement in reliability expected as a result of these new requirements?</p> <p>The expected reliability result is addressed in the FERC directive (P487, Order 693), “...ensure there is no reliability gap during normal and</p>

Organization	Yes or No	Question 1 Comment
		<p>emergency operations. For example, during a blackstart when normal communications may be disrupted, it is essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators.” No change made.</p>
<p>Response: See response above.</p>		
<p>Independent Electricity System Operator</p>	<p>No</p>	<p>In COM-001, we commented earlier that the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. The SDT’s response indicates that the suggested change is not needed since additionally requiring DP and GOP entities to have Alternative Interpersonal Communication capability would impose more cost on smaller DP and GOP entities that have little or no risk impact to the bulk electric system.</p> <p>We disagree with this assessment since the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability. If Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, then it is deemed necessary that such communication be provided at all times, which indicates the need for an alternative capability.</p> <p>We once again urge the SDT to make the list of entities in R5 and R6 to be the same.</p>
<p>Response: The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Additionally, requiring DP and GOP entities to have Alternative Interpersonal Communication capability only imposes more cost on smaller DP and GOP entities that have little or no risk impact to the Bulk Electric System. No change made.</p>		

Organization	Yes or No	Question 1 Comment
Georgia System Operations	No	<p>While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.</p> <p>The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP in COM-001, and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p> <p>Accordingly, NERC’s Reliability Functional Model V5² describes and identifies the DP’s relationships with other Functional Entities to the TOP and BA with respect to Real Time.</p> <p>Real Time³</p> <p>7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority.</p> <p>8. Implements system restoration plans as coordinated by the Transmission Operator.</p> <p>9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment.</p> <p>With respect to the Functional Model V5, please see Page 31, “18. Issues</p>

		corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.
Response: See response above.		
ERCOT ISO	No	Some concern for removal of LSE in particular from R2 and R3 from current IRO-001-2 R7 for the ERCOT region. ERCOT Region has QSE’s ⁴ that manage Load Resources. There may be some QSEs that are not registered as a GOP that deploy Load Resources. Per the current LSE JRO, QSEs with Load Resources are registered as LSEs. Not requiring them to deploy Load Resource directives could be perceived as a reliability gap created from previous version to this version. PSEs could be removed as long as they fall under BA authority.
Response: The RCSDT believes the DP is the correct entity because the LSE does not own assets. The definition of LSE is, “The functional entity that secures energy and transmission service (and reliability related services) to serve the electrical demand and energy requirements of its end use customers.” In contrast, the definition of a DP is, “The functional entity that provides facilities that interconnect an End-use Customer load and the electric system for the transfer of electrical energy to the End-use Customer.” Additionally, the Functional Model V5 demonstrates this under the Reliability Coordinator, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.		
City of Green Cove Springs	Affirmative	COM-001-2: In R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, I'm thinking LSE is the right functional entity. For Florida,

⁴ Qualifying Scheduling Entities, (<http://www.ercot.com/services/rq/qse/>)

Organization	Yes or No	Question 1 Comment
		<p>it doesn't really matter. If the LSE is the "correct" entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added.</p> <p>The RCSDT believes the DP should be included and that the LSE should not because the Functional Model V5 addresses this case. See Page 47, "Distribution Provider," of the Functional Model V5, Item 9. "Directs Load-Serving Entities to communicate requests for voluntary load curtailment." The DP is the asset owner and would direct the LSE to perform actions. No change made.</p> <p>COM-001-2, R9 – "Each ... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity.</p> <p>The RCSDT believes the additional phrasing has little value to the overall requirement. The requirement specifically applies to those responsible entities listed, and it further aligns with R2, R4 and R6. No change made.</p>
<p>Response: See response above.</p>		
<p>Beaches Energy Services</p>	<p>Affirmative</p>	<p>COM-001-2: In R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply/demand balance is not local and in markets that allow retail competition, I'm thinking LSE is the right functional entity. For Florida, it doesn't really matter. If the LSE is the "correct" entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added.</p>
<p>Response: The RCSDT believes the DP should be included and not the LSE because the Functional Model V5 addresses this case. See Page 47, "Distribution Provider," of the Functional Model V5, Item 9. "Directs Load-Serving Entities to communicate requests for voluntary load curtailment." With regard to R7, the DP is the asset owner and would direct the LSE to perform actions. No</p>		

Organization	Yes or No	Question 1 Comment
change made.		
MISO Standards Collaborators	Yes	<p>(1) In COM-001, the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. Although the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability, the proposed standard does not require the capability in all cases. At the same time, this standard does not preclude such capability. Even though Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, there are other communications paths which can be used in the case of the loss of that capability.</p> <p>Since TOPs are also required to have the capability, the BA can call the TOP and ask the TOP to contact the DP/GOP for them until they can implement capability. In addition, it is difficult to visualize entities which would not have the public telephone system or even cell phones available for use in the event of the loss of the capability.</p>
<p>Response: The RCSDT stresses the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Additionally, requiring DP and GOP entities to have Alternative Interpersonal Communication capability only imposes more cost on smaller DP and GOP entities that have little or no risk impact to the Bulk Electric System. No change made.</p>		
Florida Municipal Power Agency	Yes	<p>In COM-001-2 R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, it may be that the LSE is the more appropriate functional entity. For instance, the Functional Model when discussing LSE on page 55</p>

Organization	Yes or No	Question 1 Comment
		<p>states that one of the LSE’s real time duties is: “12. Receives requests from the Balancing Authority and Distribution Provider for voluntary load curtailment.”⁵</p> <p>The RCSDT believes the DP should be included and not the LSE because the Functional Model V5 addresses this case. See Page 47, “Distribution Provider,” of the Functional Model V5, Item 9. “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.” In this case (COM-001), the load curtailment is voluntary and would generally be for economics, the exchange of operating information and not reliability actions. No change made.</p> <p>If the LSE is the more appropriate entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added.</p> <p>For Florida, which does not have retail competition, it doesn’t matter whether the DP or the LSE is more appropriate; hence, the “yes” answer.</p> <p>With regard to R7, the DP is the asset owner and would direct the LSE to perform actions. No change made.</p>
<p>Response: See response above.</p>		
<p>Georgia Transmission Corporation</p>	<p>Yes</p>	<p>While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. Indiana Municipal Power Agency		No comment.

2. Do you agree with the addition of “Adjacent” entities in COM-001-2, Parts 3.5, 4.3, 5.5 and 6.3 of COM-001-2? If not, please explain in the comment area below.

Summary Consideration: The majority of comments were regarding COM-001-2, R3 and R4. Concerns included issues with the use of “Adjacent Transmission Operators” and “synchronously connected within the same Interconnection.” The capitalized word “Adjacent,” beginning the requirement gives the appearance of an undefined glossary term. Therefore, the RCSDT addressed this by starting the applicable Parts of those requirements with “Each” to form “Each adjacent Transmission Operator...” and avoiding the need for another glossary term for something that is widely understood within the industry. The RCSDT made an additional clarifying change to address the issue that some Transmission Operators may not be adjacent for situations other than synchronously connected within the same Interconnection in the traditional understanding. For example, some entities have connections beyond the interconnection and some connections are asynchronous. To address this concern, the RCSDT separated the requirements to identify “synchronously connected” and “asynchronously connected,” and removed the “within the same Interconnection” criteria. Other minor formatting and reference errors were noted and corrected.

Organization	Yes or No	Question 2 Comment
SERC OC Standards Review Group	No	<p>We are concerned regarding communications between Transmission Operators on opposite ends of DC ties, which may or may not be in the same interconnection.</p> <p>Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous.</p> <p>The measures should also be verified to ensure that they align properly with the final requirements.</p>
<p>Response: The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators, and has eliminated the phrase “within the same interconnection.” See change in COM-001-2, R3 and R4. Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p>		

Organization	Yes or No	Question 2 Comment
Northeast Power Coordinating Council	No	<p>NERC uses the terms “adjacent” and “neighboring” in various standards. It is generally believed that those terms have the same meanings, but there are those who believe those terms, as used, are intended to have different meanings. To ensure a consistent usage and understanding, the definition of the term adjacent must be made known before its addition to the standard. Consideration should be given to using only one term in all standards if adjacent and neighboring are intended to mean the same thing. Both terms are used in NERC Standards, sometimes both in the same standard. For example, EOP-001-2b uses “neighboring” in R5, and “adjacent” in R3.3.</p>
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarify changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
MRO NSRF	No	<p>NERC has formally defined “Adjacent Balancing Authority” in the NERC Glossary of Terms, but not “Adjacent Transmission Operator.” The MRO NSRF recommends that “Adjacent Transmission Operator” be defined similar to the “Adjacent Balancing Authority” definition in the NERC Glossary of Terms.</p>
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarify changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
Kansas City Power & Light	No	<p>Requirements R4.3 and R6.3 require TOP’s and BA’s to establish alternative means of “interpersonal communications” with other TOP’s and BA’s without regard to the reliability impact each TOP or BA has on the interconnection. Why would it be necessary for a TOP with one 161kv transmission line or a BA with 100 MW of total load, or one GOP with a 30MW unit to realize additional costs when the facilities they operate have little reliability impact?</p> <p>Rationale criteria should be included here to identify the TOP’s and BA’s where</p>

Organization	Yes or No	Question 2 Comment
		<p>alternative means of “interpersonal communications” should be implemented.</p> <p>Furthermore, these requirements do not recognize the condition when another party refuses to install alternative communication equipment. TOP’s and BA’s have no authority over other TOP’s and BA’s to establish alternative means of communication. Requirements that are dependent on the actions of other parties over which you have no control or authority are poor requirements.</p> <p>In addition, most RC’s have established satellite telephone systems as back-up communication with TOP’s and BA’s. Some RC’s may have to establish additional communication systems with some BA’s as these requirements impose to avoid Standards of Conduct issues.</p>
<p>Response: The RCSDT has not placed any limiting applicability on entities in being responsive to the FERC directive (P487, Order 693), “...ensure there is no reliability gap during normal and emergency operations. For example, during a blackstart when normal communications may be disrupted, it is essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators.” The RCSDT does not prescribe the criteria for alternative means of Interpersonal Communication capability, so each entity may determine its own needs to meet the requirement. With regard to requiring other BAs or TOPs to install Alternative Interpersonal Communication capability as registered entities, other BAs or TOPs have the same responsibility to comply with the requirement. Having a satellite backup is an acceptable form of communication; however, the RCSDT does not understand the comment about the Standards of Conduct issues. No change made.</p>		
Southern Company	No	<p>We are concerned regarding communications between Transmission Operators on opposite ends of DC ties, which may or may not be in the same interconnection.</p> <p>Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous.</p> <p>The measures should also be verified to ensure that they align properly with the final requirements.</p>
<p>Response: The RCSDT has made clarifying changes by adding Parts to R3 and R4 to address asynchronous connections between</p>		

Organization	Yes or No	Question 2 Comment
<p>Transmission Operators and have eliminated the phrase “within the same interconnection.” See change in COM-001-2, R3 and R4. Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinators from one Interconnection to another. No change made.</p>		
Xcel Energy	No	<p>In COM-001-2, R4.3. Adjacent Transmission Operators synchronously connected within the same Interconnection. This new requirement has a term that is not defined Adjacent Transmission Operators.</p>
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarifying changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
Independent Electricity System Operator	No	<p>(1) We agree with the addition of “Adjacent” entities in the quoted parts except the qualifier “synchronously connected within the same Interconnection” need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same interconnection.” See change in COM-001-2, R3 and R4.</p> <p>(2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for catching this oversight. The corresponding TOP entity in R3.5 has been added to the Measure M3.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 2 Comment
Exelon	No	May have an unintended effect on registrations as some GOPs use an intermediately dispatch organization that perform actions on behalf of the generating units.
<p>Response: Having an intermediary dispatching actions for generation units is okay; however, the responsible GOP should have adequate agreements to perform these activities; for example, a Joint Registration Organization (Type 1) or Coordinated Functional Registration (Formerly Type 2). No change made.</p>		
ISO New England	No	<p>ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).</p>
<p>Response: Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. No change made.</p>		
Texas Reliability Entity	No	<p>(1) Requirements R1, R2, R3 and R4 should apply to all adjacent Reliability Coordinators and Transmission Operators, regardless of whether they are in the same Interconnection.</p> <p>The ERCOT Interconnection is asynchronously connected to adjacent Interconnections, and it is imperative that Functional Entities within Texas RE's purview be able to exchange operating information with Transmission Operators and Reliability Coordinators in those adjacent areas, even if they are in a different Interconnection.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase "within the same Interconnection." See change in COM-001-2, R3 and R4.</p> <p>(2) Requirement parts R5.5 and R6.3 refer to "Adjacent Balancing Authorities."</p>

Organization	Yes or No	Question 2 Comment
		<p>Measures M5 and M6 refer to “adjacent Balancing Authority” - note the small “a” on adjacent. “Adjacent Balancing Authority” is a defined term in the NERC Glossary, which has a more specific meaning than “adjacent Balancing Authority.” Which term is intended in R5.5 and R6.3? If you don’t intend to use the defined term, perhaps use a word like “contiguous” or “neighboring” rather than “adjacent.”</p> <p>The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarifying changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>
<p>Response: See response above.</p>		
<p>Hydro One Networks Inc.</p>	<p>No</p>	<p>(1) We agree with the addition of “Adjacent” entities in the quoted parts except the qualifier “synchronously connected within the same Interconnection” need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p> <p>(2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for catching this oversight. The corresponding TOP entity in R3.5 has been added to the Measure M3.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 2 Comment
SPP Standards Review Group	Yes	We concur with the addition of “Adjacent” but ask that the SDT give some consideration to allowing an exemption in R6.3 for relatively small loads, less than 20 MW, that are pseudo tied into a Balancing Authority. Loss of these facilities would not place a burden on the BES and should not require Alternative Interpersonal Communications capabilities.
<p>Response: The RCSDT has not placed any limiting applicability on entities in being responsive to the FERC directive (P487, Order 693), “...ensure there is no reliability gap during normal and emergency operations. For example, during a blackstart when normal communications may be disrupted, it is essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators.” The RCSDT does not prescribe the criteria for alternative means of Interpersonal Communication capability so each entity may determine its own needs to meet the requirement. With regard to requiring other BAs or TOPs to install Alternative Interpersonal Communication capability as registered entities, other BAs or TOPs have the same responsibility to comply with the requirement. Having a satellite backup is an acceptable form of communication. No change made.</p>		
MISO Standards Collaborators	Yes	<p>(1) We agree with the addition of “Adjacent” entities in the quoted parts. However, there are some entities which may need the capability even though they are not “synchronously connected within the same Interconnection.” This standard does not require them to have the capability, but it does not preclude such capability. In these cases, those entities should evaluate whether the need for the capability is a reliability need or market coordination. If the entities were connected synchronously, actions taken by an entity could have immediate effect upon other entities. However, if not synchronously connected, changes in flows across the asynchronous ties would have to follow the interchange scheduling process with approval by all involved entities before changes could be enacted. Some TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors).</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the</p>

Organization	Yes or No	Question 2 Comment
		<p>phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p> <p>(2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for catching this oversight. The corresponding TOP entity in R3.5 has been added to the Measure M3.</p>
<p>Response: See response above.</p>		
<p>Entergy Services, Inc</p>	<p>Yes</p>	<p>Entergy agrees with the inclusion of the term “Adjacent” in these requirements to limit the entities that the BA or TOP must have communications capability with to those that they border.</p>
<p>Response: Thank you for your comment.</p>		
<p>Duke Energy</p>	<p>Yes</p>	<p>However, we believe that the phrase “synchronously connected within the same Interconnection” should be struck, because TOPs are controlling DC ties and should be required to have communications with each other.</p>
<p>Response: The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p>		
<p>ERCOT ISO</p>	<p>Yes</p>	<p>These changes will clarify intentions regarding the undefined term "adjacent."</p>
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made conforming measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
<p>ReliabilityFirst</p>	<p>Yes</p>	<p>ReliabilityFirst agrees with adding the term adjacent but is unclear what the term adjacent is referring to. Does it mean directly connected or is it more than one layer out.</p>

Organization	Yes or No	Question 2 Comment
<p>Response: The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. 3. The RCSDT removed the phrase "to exchange Interconnection and operating information" in COM-001-2, Requirements R1 through R8 based on stakeholder comments. Do you agree with the revision? If not, please explain in the comment area below.

Summary Consideration: Several commenters noted the phrase “to exchange Interconnection and operating information” should also be removed from the Purpose statement. The RCSDT agrees and removed this phrase from the Purpose statement. Some concerns also noted COM-001-2 should also add additional language to clarify the standard is not for the exchange of data. Since the standard focuses on having communication capability, the additional clarity is not needed; therefore, the RCSDT made no change. Some commenters noted items which have been addressed in the questions above.

Organization	Yes or No	Question 3 Comment
Global Engineering and Energy Solutions	No	
Independent Electricity System Operator	No	<p>In the last posting, we suggest removing the phrase “within the same Interconnection” from R1 (now R2.2) since there are RCs between two Interconnections that need to communicate with each other for reliability coordination (e.g. between Quebec and the RCs in the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT’s response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.</p>
<p>Response: The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p>		

Organization	Yes or No	Question 3 Comment
Great River Energy	No	<p>"to exchange interconnection and operation information" was removed from the requirements in COM-001-2 but remains in the purpose. For consistency, it needs to be removed. It could read,</p> <p><i>"To establish Interpersonal Communication capabilities for the exchange of information necessary to maintain reliability."</i></p>
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001. See revised Purpose statement.</p>		
Ingleside Cogeneration LP	No	<p>In the background section of this ballot, the project team indicates that the removal of the phrase is intended to signal that these requirements do NOT apply to the exchange of data. Although Ingleside Cogeneration LP agrees that the phrase is not a helpful description of the need for inter-entity communications - and should be removed - we do not see how the remaining language achieves the project team's purpose.</p> <p>It seems the confusion stems from the multitude of data communication types. Email messages between operating entities may be a valid communications path under COM-001-2, while telemetry/control is covered under other Standards. We believe that a technical guideline may be an appropriate vehicle to distinguish what types of communications are subject to these requirements, and which are not.</p>
<p>Response: The RCSDT has drafted performance requirements that are intended to be flexible enough to accommodate different technologies and innovation by industry. It is not the intent of the drafting team to establish all the possible methods of communicating. Drafting teams generally do not create guidelines. No change made.</p>		
ISO New England	No	<p>ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to</p>

Organization	Yes or No	Question 3 Comment
		have communications facilities (electronic or voice).
<p>Response: Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. No change made.</p>		
Hydro One Networks Inc.	No	<p>(1) In the last posting, there were suggestions of removing the phrase “within the same Interconnection” from R1 (now R2.2) since there are RCs between two Interconnections that need to communication with each other for reliability coordination (e.g. between Quebec and the RCs the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT’s response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.</p>
<p>Response: Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinators from one Interconnection to another. No change made.</p>		
SERC OC Standards Review Group	Yes	We suggest that this phrase should also be removed from the “Purpose” statement.
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
MISO Standards Collaborators	Yes	We urge the SDT to remove the phrase. If necessary, regional situations can be addressed by a regional variance.
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		

Organization	Yes or No	Question 3 Comment
ACES Power Marketing Standards Collaborators	Yes	<p>We thank the drafting team for making this change and for the clear communication that the intent of this standard is not for data exchange in the response to comments. However, we do believe one additional change is necessary to make the intent absolutely clear.</p> <p>The purpose of statement of COM-001-2 still includes the phrase “to exchange Interconnection and operating information.” Since a standard must stand on its own, we believe it is necessary to remove that phrase from the purpose statement to avoid misinterpretations in the future. Auditors and enforcement personnel are not required to understand the development history when enforcing the standard. Furthermore, the purpose is really to enable communications between these functional entities.</p>
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
Southern Company	Yes	We suggest that this phrase should also be removed from the “Purpose” statement.
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
Entergy Services, Inc	Yes	Yes, the requirements of this standard pertain to having communications capability. The specific content of that communication should not be the subject of the standard.
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
We Energies	Yes	Please add "does not include telemetered or derived data"
<p>Response: The standard COM-001 is for Interpersonal Communication capability, which facilitates the communication (i.e., “... to interact, consult, or exchange information.”) and not the exchange of data which is addressed in IRO-010. No change made.</p>		
Duke Energy	Yes	However, the definition of Interpersonal Communication should also be expanded to clearly include the drafting team’s intent that the capability is NOT for the exchange

Organization	Yes or No	Question 3 Comment
		<p>of data.</p> <p>The phrase “for the exchange of Interconnection and operating information” should also be struck from the Purpose statement.</p>
<p>Response: The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p> <p>The standard COM-001 is for Interpersonal Communication capability, which facilitates the communication (i.e., “... to interact, consult, or exchange information.”) and not the exchange of data which is addressed in IRO-010. 4. **A new requirement was added for clarity regarding what is required of Distribution Providers and the Generator Operators: R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations] This requirement requires collaboration between entities to restore a failed communications capability. Do you agree with the new requirement? If not, please explain in the comment area below.**

Summary Consideration: Most of the comments pertain to compliance and clarity concerns; for example, the use of “any of” in the requirement. The phrase “any of” has been eliminated to resolve this concern. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure. Other comments recommended using the terms, such as, “primary,” “secondary,” “device,” “means,” and “medium” with regard to the proposed definitions. The RCSDT emphasizes the requirements are for “capability” and adding such proposed terms is not needed to achieve the necessary clarity. Some commenters raised concerns about being able to reach “mutually agreeable time” for restoration. The RCSDT addressed these concerns by revising the phrase to “mutually agreeable action,” which allows the applicable entities to reach consensus on the effort needed to restore communications. This change also provides flexibility to the entities in addressing the steps to restore communications rather than focusing on the time for restoration. The requirement does not limit the sources of information. Allowing the DP and GOP to reach a mutually agreeable action, eliminates the need for Alternative Interpersonal Communication capability considering the limited impact a failure might have on DPs and GOPs overall. From a compliance standpoint, the DP or GOP that is working to restore its Interpersonal Communication capability is not out of compliance as far as the entity is meeting the requirement for taking action to restore its capability. Other similar concerns pertained to having 24/7 dispatch, which is an operational function. The requirements are constructed around having communication capability. The RCSDT understands there may be entities that have certain operations where there is not 24/7 staffing and these cases should be addressed by their operation with other entities through agreements, procedures or other means as needed for reliable operations. Other minor corrections and formatting issues noted were reviewed and corrected accordingly.

Some commenters were concerned that large entities would not be capable of meeting the 60-minute notification upon the loss of their Interpersonal Communication capability. The RCSDT notes this pertains to the BA, RC, and TOP, which are required to have an Alternative Interpersonal Communication capability, and should have the ability to accomplish the required notification. Also, the loss of Interpersonal Communication capability may not always impact the entire capability. This time frame does not apply to the DP and GOP since the Alternative Interpersonal Communication capability is not required for these functional entities. Other minor formatting and corrections to references were made, such as, focusing on using the singular form of words rather than the plural to avoid confusion.

Organization	Yes or No	Question 4 Comment
Alliant Energy Corp. Services, Inc.	Negative	COM-001-2: Alliant Energy is opposed to the use of the word "any" as it is too broad. It should be revised to the primary Interpersonal Communication capabilities with the Transmission Operator or Balancing Authority.
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>		
Wisconsin Electric Power Marketing; Wisconsin Electric Power Co.	Negative	R11 is not clear on the purpose of the statement “determine a mutually agreeable time for restoration” this could be driven by forces outside the control any of the entities. I think, “provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage” would be better.
<p>Response: The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>		
Lakeland Electric	Negative	Use of the term "any" in the new R11 and immediate non-compliance if there is a failure in a communication system.
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
SERC OC Standards Review Group	No	We suggest Requirement 11 should be deleted as the generic nature of the term “...any of its Interpersonal Communications capabilities...” could be interpreted to include communications capabilities used for internal DP/GO purposes. Such DP/GO internal communications capability would not be critical to BES reliability. Also, no BES reliability benefit is realized by the parties simply agreeing to a time for the

Organization	Yes or No	Question 4 Comment
		restoration of the failed Interpersonal Communication capability.
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
Pacific Northwest Generating Cooperative	No	<p>As per COM-001-2, R7, “Each Distribution Provider shall have Interpersonal Communications capability with the following entities...” R11 states that the DP or GOP that experiences a failure of its Interpersonal Communications ability shall consult with TOPs and BAs and agree on how to restore Interpersonal Communications. We believe better language might be, “Restore Interpersonal Communications with your TOP/BA as soon as operationally feasible.”</p>
<p>Response: The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable restoration time for its Interpersonal Communication capability with its TOP or BA. That is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>		
MRO NSRF	No	<p>Please note that the use of the word “any” as in “Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities...” will be viewed as meaning every Interpersonal Communication medium that an Entity has or uses. The NSRF recommends that the word “any” be removed from this Requirement.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The NSRF recommends that R11 be revised to read:</p>

Organization	Yes or No	Question 4 Comment
		<p><i>“Each Distribution Provider and Generator Operator that experiences a failure of any of its primary (or defined) Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...”</i></p> <p>In that way it focuses it down to the communications issues with the TOP or BA. In lieu of “primary” the SDT could state “defined” as long as it is not meant to be “any.”</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p> <p>The latter part of R11 states; “...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.” This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. The NSRF recommends this be rewritten as:</p> <p><i>“...shall consult with inform their Transmission Operator or Balancing Authority as applicable as to the status of the Interpersonal Communication capability.”</i></p> <p>So the new R11 would read:</p> <p><i>“Each Distribution Provider and Generator Operator that experiences a failure of its primary (or designated) Interpersonal Communication with their Transmission Operator or Balancing Authority shall inform them, as applicable, as to the status of the Interpersonal Communication capability.”</i></p> <p>The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 4 Comment
<p>LG&E and KU Services Company</p>	<p>No</p>	<p>Regarding R11, as written it is unclear when the DP and GOP are required to consult with their TOP or BA. “[A] failure of any of its Interpersonal Communication capabilities” could be construed to mean any internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP’s or GOP’s ability to communicate with the TOP or BA.</p> <p>If the DP or GOP loses its Interpersonal Communication with an entity it is required to have the capability with, then the entity must consult with that entity to determine a mutually agreeable action (was time) to restore. A failure of the entity’s capability means the entity is no longer able to communicate with its BA or TOP, then it must consult with the affected entity.</p> <p>It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional.</p> <p>Furthermore, what exactly is required in “consultation” and who would be responsible if the “consulting” entities did not come to a “mutually agreeable time” are questions that are left unanswered.</p> <p>LG&E and KU Services Company suggest the following language:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of more than one of its Means for Interpersonal Communications or failure of its Alternative Means for Interpersonal Communication with their Transmission Operator or Balancing Authority shall notify their Transmission Operator or Balancing Authority regarding the time to restore the impacted Means for Interpersonal Communication or Alternative Means for Interpersonal Communication.</i></p> <p>The RCSDT thanks you for your comment; however, great lengths were taken in communicating mediums regarding IC and AIC and finds that adding “Means” to the proposed terms being defined diminishes clarity of the definition. No change made.</p>

Organization	Yes or No	Question 4 Comment
<p>Response: See response above.</p>		
<p>PPL Electric Utilities and PPL Supply NERC Registered Organizations</p>	<p>No</p>	<p>PPL has concerns with the use of the word “any” in this requirement. PPL recommends striking the words “any of” and instead using “its primary” as follows:</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p><i>Each Distribution Provider and Generator Operator that experiences a failure of its primary Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...</i> In the current version, it is unclear when the DP and GOP are required to consult with their TOP or BA.</p> <p>The RCSDT notes that the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p> <p>“[A] failure of any of its Interpersonal Communication capabilities” could be construed to mean an internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP’s or the GOP’s ability to communicate with the TOP or BA.</p> <p>It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional.</p> <p>The RCSDT believes an entity meets the intent of the requirement when it has Interpersonal Communication capability, whether through a single capability or multiple capabilities. A single failure of an entity’s capability would not require any consultation if the entity continues to have the capability. The drafting team has removed the phrase “any of” as a clarifying change. Additionally, the RCSDT made a</p>

Organization	Yes or No	Question 4 Comment
		clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.
Response: See response above.		
SPP Standards Review Group	No	<p>We would suggest deleting the phrase ‘any of’ in the Requirement. It would then read:</p> <p><i>‘Each DP and GOP that experiences a failure of its Interpersonal Communication...’</i></p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Also, how does the DP or GOP consult with its TOP or BA when it loses its Interpersonal Communications capability?</p> <p>To do this wouldn’t they have to have an Alternative Interpersonal Communications capability?</p> <p>The RCSDT believes each entity must determine how to accomplish this (R11) and having another requirement or change would be overly prescriptive. No change made.</p>
Response: See response above.		
Western Electricity Coordinating Council	No	<p>We have two concerns with R11 as worded.</p> <p>First, the term "as applicable" is undefined. Who decides what is applicable. We suggest that words clarifying which entity, TOP or BA, the DP and GO experiencing a failure of any of its Interpersonal Communication capabilities must consult with.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “as applicable” in COM-001, R11.</p>

Organization	Yes or No	Question 4 Comment
		<p>Second, the inclusion of the "mutually agreeable" time to restore the Interpersonal Communication capability is problematic. Although unlikely, two entities could "mutually agree" to an exceptionally long time frame for restoration (two years) and that unreasonable timeframe would meet the requirement as long as they both agreed. Suggest some finite time limit be included.</p> <p>The RCSDT has made clarifying changes to R11 to reference "mutually agreeable action," rather than "time" for restoration. The use of "action" eliminates the need for a timeframe. New information regarding the restoration parameters may change under a mutually agreeable action.</p>
<p>Response: See response above.</p>		
FirstEnergy	No	<p>Although we agree with the intent of the requirement, we are concerned with the use of "any of its Interpersonal Communication." The word "any" is very inclusive and the team should consider narrowing it down to those capabilities that may adversely impact reliability.</p>
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase "any of" in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
Florida Municipal Power Agency	No	<p>By use of the term "any" in the phrase "a failure of any of its Interpersonal Communication" the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase "any of" in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which</p>

Organization	Yes or No	Question 4 Comment
		<p>does not require DPs or GOPs to have Alternative Interpersonal Communications capability.</p> <p>A possible solution is through use of the terms “Primary” for R3 and “Alternate” for R4 and then make R11 applicable to Primary only.</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard except that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p>
<p>Response: See response above.</p>		
<p>Global Engineering and Energy Solutions</p>	<p>No</p>	<p>We are pleased that the drafting team addition provides addition description on the process for communicating failed Interpersonal Communication. However additional clarity should be made regarding if there is an expectation that the Interpersonal Communication should be available 24x7. There are many Distribution Providers that do not have a 24x7 managed facility that can view and respond to a communication received in real time on the Interpersonal Communication device. These DPs rely on on-call personnel for off-hour emergencies such as an outage on the distribution system. The on-call personnel may use a cell phone, pager, etc. In other cases, the Transmission Operator or Balancing Authority may communicate by email and response is provided during business hours. In these cases, if the Transmission Operator or Balancing Authority had a system emergency they have the ability to isolate the distribution system from the grid and therefore do not require a 24x7 manned distribution.</p> <p>If the intent of the Standard is for ensuring real-time communication than the</p>

Organization	Yes or No	Question 4 Comment
		<p>applicability should be limited to those Distribution Providers who have been required by the Transmission Operator or Balancing Authority to have a manned 24x7 manned facility. Many of the DPs referred to here have not received a real-time call in the last 20 years. Requiring them to staff 24x7 for a condition likely not to occur is cost prohibited and does not improve reliability.</p>
<p>Response: The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The Purpose of COM-001-2 is, “To establish Interpersonal Communication capabilities necessary to maintain reliability. No change made.</p>		
<p>ACES Power Marketing Standards Collaborators</p>	<p>No</p>	<p>Requirement R11 does not fully address the issue of what is required by Distribution Providers and Generator Operators and introduces new issues.</p> <p>The RCSDT notes that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability requires restoration. This would provide allowances for those entities, which have little or no impact on the reliability of the BES. No change made.</p> <p>First, while the standard is intended to clarify that the Distribution Provider and Generator Operator do not need backup communications capability, it simply does not. Distribution Providers and Generator Operators are required to have an Interpersonal Communications capability in Requirement R7 and R8 respectively. Unfortunately, the effectiveness of these requirements persists even when the Distribution Provider or Generator Operator experiences a failure of its Interpersonal Communications capability. When Requirement R11 applies, the Distribution Provider or Generator Operator will still be obligated to comply with Requirements R7 and R8 respectively and will, in fact, be in violation of these requirements because the Distribution Provider or Generator Operator no longer has the capability.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The</p>

Organization	Yes or No	Question 4 Comment
		<p>intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>Second, capability is used inconsistently between Requirement R7 and R11, which leads to confusion. In Requirement R7, it is singular while in Requirement R11 is plural. It needs to be clear that only the failure of the capability identified in R7 and R8 needs to be reported by the Distribution Provider and Generator Operator respectively.</p> <p>The RCSDT thanks you for your observation and has modified COM-001-2 R11 to be singular and to more clearly address the entities being consulted with upon a failure.</p> <p>Third, if the requirements focused on communications devices rather than capabilities, they would come closer to communicating the intent. Requirement R11 would better complement Requirement R7 and R8 if the focus was on having a communication medium or device.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity. In regards to a device not functioning properly is contrary to R10, notification of Interpersonal Communication capability failure. Please refer to the definition of Interpersonal Communication and Alternative Interpersonal Communication. No change made.</p> <p>A Generator Operator with an installed communications device or medium still has that device or medium even when it is not functioning properly and could still meet Requirements R7 and R8. However, they don't have the Interpersonal Communications capability if the device is not functioning properly.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p>

Organization	Yes or No	Question 4 Comment
<p>Response: See response above.</p>		
<p>Kansas City Power & Light</p>	<p>No</p>	<p>How does a DP or GOP experiencing a failure of its “interpersonal communications” consult with its TOP or BA to determine a mutually agreeable time for restoration of “interpersonal communications”? There are no requirements that require alternative “interpersonal communications” for the DP and GOP. This requirement cannot be fulfilled and should be removed.</p>
<p>Response: The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable restoration time for its Interpersonal Communication capability with its TOP or BA; that is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. The RCSDT has made clarifying changes to R11 to use mutually agreeable action, rather than time for restoration.</p>		
<p>Southern Company</p>	<p>No</p>	<p>We suggest the following changes:</p> <ol style="list-style-type: none"> Requirement 10 should include Distribution Providers and Generator Operators, The RCSDT stresses that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities, which have little or no impact on the reliability of the BES, while not requiring them to obtain Alternative Interpersonal Communication capabilities. Making the proposed changes would eliminate this flexibility. Removing R11 takes away the RCSDT’s effort to include those provisions in the standard. No change made. Entities to be notified should be “as identified in requirements R1 through R8”, The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.

Organization	Yes or No	Question 4 Comment
		<p>3. Requirement 11 should be deleted, and, The RCSDT thanks you for your comment. COM-001-2 R11 requires the entity to consult with its BA or TOP when it experiences a failure of its Interpersonal Communication capability. The BA or TOP need to know communication is compromised between the DP or GOP.</p> <p>4. Measures (M10) and VSLs should be adjusted accordingly. The RCSDT did not elect to include the DP and GOP in R10; therefore, Measure, M10 and the corresponding VSLs were not adjusted. No change made.</p>
<p>Response: See response above.</p>		
Central Lincoln	No	<p>The new requirement presents us with a paradoxical situation. The communication has failed, so we must consult; yet consultation requires communication. We note that the SDT used the word “any”, implying that multiple communication paths are required. The reality of the situation at Central Lincoln, due to our remote location, is that a single back hoe incident at the right location can take out all of our of our communication capability (including the terrestrial portion of the cellular networks) with our BA/TO; making this requirement impossible to meet for this circumstance using our present capabilities.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Furthermore, R11 addresses the direction given in Order 693 that DP and GOP entities do not necessarily need to have Alternative Interpersonal Communication capability. The requirement allows flexibility in “consult with” by not naming the method. If all communications are out, then the DP or GOP may have to meet the requirement by an in-person consultation.</p>

Organization	Yes or No	Question 4 Comment
		<p>We also note that no time limit was indicated. Most interruptions are brief, and fixed before consultation could reasonably take place. CEAs will be finding entities non-compliant for quickly fixing problems at their end without first consulting to ensure the restoration time was agreeable. To avoid non-compliance, entities will be forced delay repairs while they investigate alternative communication paths for consultation purposes. We fail to see how such an outcome improves reliability.</p> <p>The DP and GOP are only required to have Interpersonal Communication capability. If the DP or GOP restores its Interpersonal Communication capability before it could reasonably contact the affected entity by another method, there is no failure to comply. The DP or GOP could then consult with the affected entity to determine a mutually agreeable action. In this case, the RCSDT believes the "action" would then be the entities acknowledging the failure and the repair; therefore, no mutually agreeable action is needed. The RCSDT recognizes there is no way to account for all the various circumstances in a failure. To comply, the DP and GOP are still required to consult the entity which the failure affected regardless of whether the Interpersonal Communication capability was restored or is still failed. No change made.</p> <p>The new requirement is one sided, requiring the DP and GOP to consult with no corresponding requirement for the TO or BA to have personnel available for such a consultation. Consultation failure or failure to mutually agree due to actions or inactions on the part of the TO or BA should not result in an enforcement action against the DP or GOP, yet that is how the requirement is written.</p> <p>The RCSDT notes that once the failure has been detected, the responsible entity must make the consultation with the BA or TOP; that relieves the compliance burden. While the RCSDT understands your concern about single points of failure, the question becomes should this relieve the DP or GOP of the requirement for having Interpersonal Communication capabilities. No change made.</p> <p>The new requirement fails to add any "clarity" to the other requirements, and we don't see that the stakeholders thought there was a problem with DP/GOP obligation</p>

Organization	Yes or No	Question 4 Comment
		<p>clarity. Instead, it adds new obligations with no justification for how they enhance reliability. We suggest removing the requirement.</p> <p>Based on the RCSDT’s understanding of the comments received on the previous posting, the industry desired additional clarity on specifically what communication capabilities the DP and GOP were required to have. There was confusion that the standard did not specifically say that the DP and GOP were required to have Alternative Interpersonal Communication capabilities. R11 clarifies that a DP and GOP are not required to have Alternative Interpersonal Communication capability if the DP or GOP consult with their TOP or BA, whichever is applicable in the given situation, and they mutually agree that the restoration action does not adversely impact the reliability of the BES. No change made.</p>
<p>Response: See response above.</p>		
<p>Entergy Services, Inc</p>	<p>No</p>	<p>The DP or GOP should have to notify the TOP and BA of its communications failure, similar to the requirement in R10 for TOP and BA. The DP or GOP should restore the communications capability as soon as possible. Entergy does not agree that the TOP or BA should have to negotiate the restoration time with the DP or GOP. This is an unreasonable burden on the BA and TOP.</p>
<p>Response: The RCSDT notes that R11 does not exempt the DP or GOP from notifying its TOP or BA when they experience a communication failure. There is nothing in R11 that says a DP or GOP does not have to restore its communications capability. What is in R11 is flexibility. The RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. While one could consider this a negotiation, the notification is required so some sort of communication must be made. All that is being asked of the BA and TOP is to give some consideration for the entities involved and the overall situation. The SDT modified the requirement so mutual agreement must be reached on an “action” for restoration rather than a “time” for restoration.</p>		
<p>Liberty Electric Power LLC</p>	<p>No</p>	<p>The phrase "mutually agreeable time" needs to be replaced in order to make this standard acceptable. This phrasing creates a potential violation if equipment functionality cannot be restored in the time frame preferred by another entity, even</p>

Organization	Yes or No	Question 4 Comment
		<p>if the time of repair is beyond the control of the RE. This phrase should be replaced with "inform their TO or BA as applicable of the failure, and provide estimates as to the time the Interpersonal Communication capabilities will be restored."</p>
<p>Response: The RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn't mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. However, what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are and a determination of what is amicable to both parties. The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>		
We Energies	No	<p>R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4.</p> <p>R11 is not clear on the purpose of the statement "determine a mutually agreeable time for restoration" this could be driven by forces outside the control any of the entities. I think" provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage" would be better.</p> <p>Update M9 accordingly.</p>
<p>Response: The RCSDT has made clarifying changes to R11 to use mutually agreeable action, rather than time for restoration.</p>		
Indiana Municipal Power Agency	No	<p>IMPA does not believe that this requirement is necessary in order to ensure communication lines are restored by Distribution Providers and Generator Operators. If this requirement is kept, IMPA does not think the use of the words "a failure of any of its Interpersonal Communication capabilities" is acceptable.</p> <p>The RCSDT notes the intent of this requirement is not to ensure that DP and GOP communication lines are restored. The intent of this requirement is to provide some flexibility for the DP or GOP that does not have an impact on the reliability of the BES. Depending on the impact of the given entity, the TOP or BA can be flexible in specifying when the Interpersonal Communication capability must be restored,</p>

Organization	Yes or No	Question 4 Comment
		<p>rather than requiring the availability and use of an Alternative Interpersonal Communication capability. No change made.</p> <p>The wording is too inclusive and should apply to only primary Interpersonal Communication capabilities. IMPA is also concerned about how entities are supposed to know when the telephone companies may have equipment repaired in order to determine a mutually agreeable time to restore Interpersonal Communication capability. The entity may have no control over the restoration and hence would not be able to set a time other than whenever the capabilities are restored by for instance the telephone company.</p> <p>The RCSDT deliberately avoided the use of primary and secondary mediums and elected to use communications capabilities. As such, R11 applies to Interpersonal Communication capabilities of the DP and GOP. The RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. No change made.</p> <p>It does not mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. However, what transpires in the consultation is a realization of the situation, what the impacts to reliability are and a determination of what is amicable to both parties. No change made. The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p> <p>In addition, entities will have to keep evidence to show that a “mutually” agreeable time was reached by two or more entities. The most workable solution would be to require notification if primary Interpersonal Communication is lost and a follow-up notification when that capability is restored.</p> <p>The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable restoration action for its Interpersonal Communication capability with its TOP or BA; that is precisely why R11 is written in</p>

Organization	Yes or No	Question 4 Comment
		<p>this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. No change made.</p>
<p>Response: See response above.</p>		
<p>NextEra Energy, Inc.</p>	<p>No</p>	<p>NextEra Energy, Inc. (NextEra), which includes Florida Power & Light Company, believes that Requirement 11 of COM-001-2, as drafted, is too vague to be adopted as a mandatory Reliability Standard.</p> <p>For example, it is unclear what is meant by “shall consult.” The North American Electric Reliability Corporation’s (NERC) Rules of Procedure state that a foundation of any Reliability Standard is that: “. . . [the] reliability standard shall be stated using clear and unambiguous language. Responsible entities, using reasonable judgment and in keeping with good utility practices, are able to arrive at a consistent interpretation of the required performance.” The term “shall consult” is not a term generally understood or used in the electric utility industry, and, therefore, does not enable a consistent interpretation of the performance required. Accordingly, NextEra requests that Requirement 11 either:</p> <ul style="list-style-type: none"> (i) be deleted; or (ii) be redrafted to read more like Requirement 10.
<p>Response: The RCSDT believes the term, “consult,” is well understood. Basically, entities must have a conversation. No change made.</p>		
<p>Manitoba Hydro</p>	<p>No</p>	<p>COM-001-2 R11 does not specify a timeline in which entities have to come up with a ‘mutually agreeable’ time to restore Interpersonal Communication capability. Manitoba Hydro believes this omission creates a reliability gap and suggests that wording be revised as follows: ‘... shall consult with their Transmission Operator or</p>

Organization	Yes or No	Question 4 Comment
		Balancing Authority as applicable and determine a mutually agreeable time to restore the Interpersonal Communication capability within 24 hours of experiencing the failure.'
<p>Response: The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration. The RCSDT believes R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities, which have little or no impact on the reliability of the BES while not requiring them to obtain Alternative Interpersonal Communication capabilities. No change made.</p>		
Great River Energy	No	Capability is not used consistently in R7 and R11. It changes from singular to plural.
<p>Response: The RCSDT thanks you for your observation. Generally, the singular implies the plural or vice-versa. The RCSDT has corrected R10 and R11 to be consistent with the singular application.</p>		
American Electric Power	No	Regarding COM-001-02 R10 and R11, some of the entity pairs (for example, BA to a GO) are not required to have alternative inter-personnel communication. How can the notification occur with 60 minutes for example, when primary communication is not available for a role that doesn't require an alternate means of communication? In addition, requiring notification within 60 minutes in Requirement 10 would not be feasible for larger entities that might have hundreds of contacts to make.
<p>Response: The RCSDT thanks you for your comment. The notification within 60 minutes found in R10 pertains to the BA, RC and TOP; therefore, these entities are required to have designated Alternative Interpersonal Communication capability with other entities and more specifically other BA, TOP and RC entities. It is understood by virtue of R11 that the DP and GOP may not have Alternative Interpersonal Communication capability and may not be notified within 60 minutes. No change made.</p>		
Georgia Transmission Corporation	No	The intent of this requirement is not yet clear. Technically, the air we breathe, as well as other mediums like "any" cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. The burden for compliance evidence to demonstrate failure of "any of its Interpersonal Communication capability" would seem unobtainable and could prove to be a daily

Organization	Yes or No	Question 4 Comment
		<p>occurrence (dropped phone calls, etc.). The following is suggested to utilize the singular form of capability rather than plural form of capabilities:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of its Interpersonal Communication capability shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.</i></p>
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
Nebraska Public Power District	No	<p>We would suggest deleting the phrase ‘any of’ in the Requirement. It would then read:</p> <p><i>‘Each DP and GOP that experiences a failure of its Interpersonal Communication...’</i></p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Also, how does the DP or GOP consult with its TOP or BA when it loses its Interpersonal Communications capability?</p> <p>To do this wouldn’t they have to have an Alternative Interpersonal Communications capability?</p> <p>The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing mutually agreeable action for restoration for its Interpersonal Communication capability with its TOP or BA; that is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be</p>

		allowed without requiring the acquisition of Alternative Interpersonal Communication capability. No change made.
Response: See response above.		
Georgia System Operations	No	<p>The intent of this requirement is not yet clear. Technically, the air we breathe, as well as other mediums like “any” cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. The burden for compliance evidence to demonstrate failure of “any of its Interpersonal Communication capability” would seem unobtainable and could prove to be a daily occurrence (dropped phone calls, etc.). The following is suggested:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capability shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.</i></p>
Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.		
Ingleside Cogeneration LP	No	<p>Most of Ingleside Cogeneration’s communications capabilities rely on carriers who will immediately deploy technicians to repair land-based or wireless systems when they break. Although we may contact the carrier to inform them that the systems are not available – or to determine their progress – we do not want them waiting for our go-ahead before proceeding. If the intent of this requirement is to validate the operation of the repaired connection, or to establish interim means of communications with other operating entities, then Ingleside Cogeneration believes a re-write is in order. There is no reliability purpose being served otherwise that we can tell.</p>
Response: The RCSDT believes there is nothing in R11 that says repairs by communication technicians should wait on anyone for a		

Organization	Yes or No	Question 4 Comment
		<p>go-ahead. The RCSDT sees it working this way: When a communication link goes down, a communication technician is dispatched as soon as the failure is noted and according to the agreements regarding repair between the provider and the user. When the user contacts the provider, an estimate of the anticipated repair time should be provided. One would expect this type of arrangement in service agreements. The user, DP or GOP, then takes that time to the consultation with the TOP or BA. Based on this anticipated restoration time and the impact the DP or GOP has on the reliability of the BES, a mutually agreed to restoration action is established. No change made.</p>
<p>Duke Energy</p>	<p>No</p>	<p>The phrase “consult with... to determine a mutually agreeable time” makes this requirement too open-ended to be auditable and enforceable.</p> <p>The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p> <p>We question why R11 does not establish a timeframe for notification similar to R10, which requires the RC, TOP or BA to make notification within 60 minutes of failure detection.</p> <p>The RCSDT thanks you for your comment. The notification within 60 minutes found in R10 pertains to the BA, RC and TOP; therefore, these entities are required to have designated Alternative Interpersonal Communication capability with other entities and more specifically other BA, TOP and RC entities. It is understood by virtue of R11 that the DP and GOP would not have Alternative Interpersonal Communication capability and would not be notified within 60 minutes. No change made.</p> <p>We also question why DPs and GOPs are not required to have Alternative Interpersonal Communications capability in order to be able to make such notifications.</p> <p>The RCSDT believes that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities which have little or no impact on the reliability of the BES while not requiring them to obtain Alternative Interpersonal Communication capabilities. The requirement allows flexibility in “consult with” by not naming the method. If all communications are out,</p>

Organization	Yes or No	Question 4 Comment
		<p>then the DP or GOP may have to meet the requirement by an in-person consultation. No change made.</p>
<p>Response: See response above.</p>		
ISO New England	No	<p>ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such “requirements” (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).</p>
<p>Response: Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. No change made.</p>		
ReliabilityFirst	No	<p>ReliabilityFirst believes Distribution Provider and Generator Operator should be added to Requirement R10 and Requirement R11 should be removed. Finite time frames should be prescribed for each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities. ReliabilityFirst believes that the failure of Interpersonal Communication between Distribution Providers/Generator Operators and Transmission Operators/Balancing Authorities could have the same negative effects similar to the failure of Interpersonal Communication by the Reliability Coordinator, Transmission Operator, and Balancing Authority.</p>
<p>Response: If the RCSDT made the changes proposed, the standards loses the flexibility of the TOP and BA to work with DPs and GOPs which have little or no adverse reliability impact on the BES. The RCSDT feels we need to maintain this flexibility. In fact, FERC directed NERC to do so in Order 693. No change made.</p>		
City of Vero Beach	No	<p>By use of the term “any” in the phrase “a failure of any of its Interpersonal</p>

Organization	Yes or No	Question 4 Comment
		<p>Communication” the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which does not require DPs or GOPs to have Alternative Interpersonal Communications capability. A possible solution is through use of the terms “Primary” for R3 and “Alternate” for R4 and then make R11 applicable to Primary only.</p> <p>The RCSDT deliberately stayed away from the use of primary and secondary mediums and prefers to use communications capabilities. Further, the RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn’t mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. But what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are and a determination of what is amicable to both parties. No change made.</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>
<p>Response: See response above.</p>		
Midwest Independent	No	MISO requests clarification regarding

Organization	Yes or No	Question 4 Comment
Transmission System Operator		<p>(1) when Distribution Providers/Generator Operators have an obligation to collaborate with Transmission Operators versus Balancing Authorities; and</p> <p>(2) the obligation of Transmission Operators to inform Balancing Authorities (and vice versa) of an agreed upon time for restoration of Interpersonal Communication capability when collaboration occurs only between Transmission Operators and Distribution Providers/Generator Operators or, conversely, Balancing Authorities and Distribution Providers/Generator Operators.</p>
<p>Response: The RCSDT believes, (1) As specified in R11, the DP and GOP have an obligation to consult with their TOP and/or BA with who they are experiencing an Interpersonal Communication capability failure. If the DP or GOP experiences a failure with the TOP, then they consult with the TOP. If that failure is with the BA, they consult with the BA. If the failure is with both the TOP and BA, they consult with both. (2) There is no such obligation. Both the TOP and BA are required to have Alternative Interpersonal Communication capability, which would be used as a substitute for the Interpersonal Communication capability. No change made.</p>		
Texas Reliability Entity	No	<p>(1) Why does R10 refer to “failure of its Interpersonal Communications capabilities” while R11 refers to “failure of **any of** its Interpersonal Communications capabilities”?</p> <p>What is the distinction that is intended by addition of the words “any of”?</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>(2) As a Compliance Enforcement Authority, we have several fundamental questions regarding what is intended in this standard. It appears the drafting team is using the defined term “Interpersonal Communications” to refer to a designated primary communication medium, and the term “Alternative Interpersonal Communications” to refer to one or more designated backup communication mediums.</p> <p>Is that correct?</p>

Organization	Yes or No	Question 4 Comment
		<p>This should be clarified in the Standard.</p> <p>(2) The RCSDT deliberately stayed away from the use of primary and secondary mediums and prefers to use communications capabilities. However, you are correct in considering the Alternative Interpersonal Communication capability as a substitute for the Interpersonal Communication capability, as specified in their respective definitions. No change made.</p> <p>(3) There is ambiguity in the current draft because the defined term “Interpersonal Communications” appears to include primary, back-up and all other mediums that may be available (which may include landline phone, cell phone, satellite phone, instant messaging, email, and data links, all in one facility), including any “Alternative Interpersonal Communications.”</p> <p>(3) Interpersonal Communication capability could use any of the mediums mentioned in your comment. Likewise, the Alternative Interpersonal Communication capability could be any of those mediums, as well, provided that it did not use the same infrastructure as the Interpersonal Communication capability. No change made.</p> <p>Do R10 and R11 apply to ALL available mediums, or just to the designated primary and back-up mediums?</p> <p>Does R9 apply to ALL available back-up mediums, or just to a specifically designated back-up medium?</p> <p>The RCSDT deliberately stayed away from the use of primary and secondary mediums and prefers to use communications capabilities. Further, the RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn’t mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. But what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are</p>

Organization	Yes or No	Question 4 Comment
		and a determination of what is amicable to both parties. No change made.
Response: See response above.		
Dominion	Yes	Dominion agrees with the intent of R11; however, suggest language changes for consistency with R10 as follows: <i>R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i>
Response: The RCSDT has made clarifying changes to R11 to use mutually agreeable action, rather than time for restoration.		
NV Energy	Yes	Agree, however, the ability for a DP or GOP to have such consultation with its TOP or BA would likely be hampered by the failure of the Interpersonal Communications itself. DP and GOP are only required to have a single source for this Interpersonal Communications.
Response: RCSDT did not want to burden the DP and GOP with having Alternative Interpersonal Communication capability based on Paragraph 508 of Order No. 693. There are multiple avenues of communication technology available to comply with R11. No change made.		
NIPSCO		If the Interpersonal Communication is down, and no backup is required for the DP and GOP, how are they to consult and collaborate?
Response: RCSDT did not want to burden the DP and GOP with having Alternative Interpersonal Communication capability based on Paragraph 508 of Order No. 693. There are multiple avenues of communication technology available to comply with R11. No change made.

5. The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact. Do you agree with the proposed definition? If not, please explain in the comment area below.

Summary Consideration: There were a significant number of comments about the definition of Reliability Directive with accompanying suggested language; for example, having the definition to prescribe a level of performance. The practice of writing a level of performance within a definition is discouraged and generally prevents future use of the term. Several comments pertained to compliance with the requirements; for example, would an entity be required to use three-part communication for a voltage schedule? The requirements do not preclude an entity from doing so; however, the requirements focus on the situation of addressing an Emergency or Adverse Reliability Impact. Other concerns were raised that the terms “Emergency” and “Adverse Reliability Impact” are the same. The RCSDT believes these terms capture independent conditions. The term “Emergency” implies situations where the event is anticipated or currently happening. Likewise, Adverse Reliability Impact clearly identifies a potential or actual event in the phrase, “an event that results in.” The RCSDT notes the definition of Adverse Reliability Impact is the revised term, which is NERC Board of Trustees adopted and is pending regulatory filing in IRO-014-2. Additionally, using the currently adopted version does not capture the full spectrum of the proposed definition by the RCSDT.

The development of the term Reliability Directive concept places a heightened awareness on actions that are required to avoid an Adverse Reliability Impact. Additionally, the use of “direct” is consistent with the uses of “direct” in other standards. A commenter had a concern about the removal of “issued in a clear, concise, and definitive manner” would lead to repeating the process. The RCSDT believes it to be in the interest of the issuer to do this without the burden of a requirement. Additionally, this type of requirement would be difficult to measure and by virtue of the issuer having to confirm the Reliability Directive; it is to the issuer’s advantage to be clear for efficient communications. Other minor formatting and corrections to references were made to align requirements, measures, and compliance components. Several other comments were made that are addressed in the questions above.

Organization	Yes or No	Question 5 Comment
Constellation Power Source Generation, Inc.	Negative	As we commented on Project 2007-03 TOP-001-2, the definition of Reliability Directive is an improvement but the definition must capture the identification concept that is reflected in the Requirement (R1). As a result, when Reliability

Organization	Yes or No	Question 5 Comment
		<p>Directive is used elsewhere, it would be clear that the communication must be identified as a Reliability Directive.</p> <p>We suggest the following revision to the definition and it should follow through to Project 2006-06 IRO-001-3 and Project 2007-03 TOP-001-2, eventually being added to the Reliability Standards Glossary of Terms.</p> <p><i>A communication identified as a Reliability Directive by a Reliability Coordinator, Transmission Operator, or Balancing Authority to initiate action by the recipient to address an Emergency or Adverse Reliability Impact.</i></p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p> <p>IRO-001-3 uses the term ‘direct’ in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following:</p> <p>To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.</p> <p><i>R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or</i></p>

Organization	Yes or No	Question 5 Comment
		<p><i>Adverse Reliability Impacts.</i></p> <p><i>R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given.</i></p> <p><i>R3: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.</i></p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. The RCSDT believes using the word “request” makes the requirement conditional and is not consistent with the purpose of the standard. No change made.</p>
<p>Response: See response above.</p>		
<p>MidAmerican Energy Co.</p>	<p>Negative</p>	<p>Do not nest definitions.</p> <p>The use of the word “any” in the COM-002-3 and IRO-001-3 definition of “Emergency” is too broad and should be deleted. The use of “any” in regulatory standards almost always causes unintended consequences.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The definition should be shortened to read:</p> <p><i>“Abnormal system condition that requires automatic or immediate manual actions to prevent or limit Bulk Electric System transmission facility or generation failures that</i></p>

Organization	Yes or No	Question 5 Comment
		<p><i>could result in instability, uncontrolled separation, or cascading.”</i></p> <p>The RCSDT appreciates the suggested rewording of the definition. The suggestion creates a disconnect with the already approved NERC glossary term. Additionally, the proposed definition adds new words which were not included originally. The RCSDT does not propose a new definition of Emergency. No change made.</p>
<p>Response: See response above.</p>		
<p>Tennessee Valley Authority</p>	<p>Negative</p>	<p>We suggest adding the words “and identified as a reliability directive to the recipient” at the end of the definition of Reliability Directive.</p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p> <p>For R2, we question the phrase “physically implemented” and recommend that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions where an entity may not be able to physically implement the direction; for example, an entity that does not have the right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 5 Comment
SERC OC Standards Review Group	No	<p>We suggest adding the words “and identified as a reliability directive to the recipient” at the end of the definition of Reliability Directive. As written, this definition could lead to a dispute of what communications are Reliability Directives; leading to further dispute as to what Requirements are applicable. By adding this clarity in the definition of this term, clarity will not be needed in the application of this definition as is proposed in COM-002-3, Req 1.</p> <p>This would allow the removal of R1 from COM-002-3</p>
<p>Response: The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. <p>Response: The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-</p>		

Organization	Yes or No	Question 5 Comment
<p>002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p>		
<p>Arizona Public Service Company</p>	<p>No</p>	<p>There is a risk of not properly identifying an abnormal condition (Emergency or Adverse Reliability Impact) in time to require specific use of the statement ‘this is a Reliability Directive’ when issuing switching on the system in the event of an emergency.</p> <p>The RCSDT believes that it is the responsibility of each entity to identify abnormal conditions when it requires an action to be executed as a Reliability Directive. If conditions are not identified as having Emergency or Adverse Reliability Impact, then the requirement is not applicable. No change made.</p> <p>This is a deviation from consistently using 3-way communication when an emergency occurs. It may not be apparent that an emergency exists and breaking from consistent use of expected 3-way communication could cause confusion.</p> <p>The RCSDT believes this does not preclude an entity from utilizing 3-part communications for activities other than Reliability Directives. No change made.</p>
<p>Response: See response above.</p>		
<p>Southern Company</p>	<p>No</p>	<p>This definition would encompass more communication than is now included. The definition now requires that a directive be declared as a part of the three part communication. For example, sending out the voltage schedule each morning would be included as a directive using the new definition.</p> <p>The RCSDT thanks you for your comment; however, we believe the definition of Reliability Directive is specific in the nature of the communication while providing</p>

Organization	Yes or No	Question 5 Comment
		<p>adequate flexibility for the responsible entity to define those conditions that would rise to the level of a Reliability Directive. No change made.</p> <p>We suggest adding the words “and identified as a reliability directive to the recipient” at the end of the definition of Reliability Directive. This would allow the removal of R1 from COM-002-3</p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p>
<p>Response: See response above.</p>		
Entergy Services, Inc	No	<p>An Adverse Reliability Impact is a type of Emergency. Including a new term for Adverse Reliability Impact and including both terms in the definition for Reliability Directive doesn’t add clarity. I suggest changing the definition for Reliability Directive to remove phrase “or Adverse Reliability Impact.”</p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Likewise, the definition of Adverse Reliability Impact clearly identifies as a potential or actual event in the phrase, “an event that results in.” Both conditions are important to the definition. The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk</p>		

Organization	Yes or No	Question 5 Comment
Electric System instability or Cascading.” No change made.		
NextEra Energy, Inc.	No	<p>NextEra objects to the use of “Adverse Reliability Impact” in Reliability Standards COM-002-3 and IRO-001-3. NextEra requests that the use of Adverse Reliability Impact be revised as suggested below or it be deleted from the definition of Reliability Directive. NextEra does not agree with the use of Adverse Reliability Impact in the definition of “Reliability Directive” for the following reasons:</p> <ol style="list-style-type: none"> 1. This term Adverse Reliability Impact is ambiguous. In part, the term is ambiguous because it includes in its definition the term “instability,” which has lead to considerable misunderstanding and confusion in the industry. There are also differing views on what is (and is not) Cascading, because the definition is not sufficiently clear. For example, some believe instability and Cascading occur when an event affects multiple substations of one Transmission Operator, while others believe instability or Cascading only occur when the event affects more than one Transmission Operator’s system. As mentioned in response to item 4, above, Reliability Standards must be clear and consistently interpreted. It is not appropriate to issue a Standard that perpetuates the use of terms that lack consistent interpretation. 2. While not perfect, the term Emergency is better understood in the industry, and it may include many or all of the instances of instability or Cascading intended to be captured by Adverse Reliability Impact. Consequently, it is not advisable to introduce Adverse Reliability Impact as a new term, when it is not clearly distinguishable from Emergency. NextEra is concerned that an unclear and imprecise term, such as Adverse Reliability Impact, does not promote reliability, and, such a term is particularly troublesome in the context of real time system operations. Therefore, for the reasons stated above, NextEra believes that the term Adverse Reliability Impact should be deleted from the definition of Reliability Directive. In the alternative, if Adverse Reliability Impact is not deleted from the definition of Reliability Directive in Reliability Standards COM-002-3 and IRO-001-3, NextEra

Organization	Yes or No	Question 5 Comment
		<p>requests that Adverse Reliability Impact be revised to read:</p> <p><i>“an event or condition on the Bulk Electric System that may, or is leading to, Cascading over more than one Bulk Electric System transmission system.”</i></p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Likewise, the definition of Adverse Reliability Impact clearly identifies as a potential or actual event in the phrase, “an event that results in.” Both conditions are important to the definition. The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” No change made.</p>		
<p>Niagara Mohawk (dba National Grid)</p>	<p>No</p>	<p>The "adverse reliability impact" definition is not clear, is this an actual event or contingency? The words imply it is an actual event, which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p>
<p>Response: The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
<p>BGE</p>	<p>No</p>	<p>BGE would prefer that the definition of Reliability Directive include the requirement to identify the fact that a Reliability Directive is being issued. See the following proposed definition:</p> <p><i>Reliability Directive: A communication initiated and identified as a Reliability Directive, by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse</i></p>

Organization	Yes or No	Question 5 Comment
		<i>Reliability Impact.</i>
<p>Response: The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p>		
Duke Energy	No	<p>-Since FERC has not yet approved the new definition of Adverse Reliability Impact, we believe the term “Adverse Reliability Impact” should be replaced by the words of the BOT-approved definition: “the impact of an event that results in Bulk Electric System instability or Cascading.”</p> <p>The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The RCSDT thanks you for your comment; however, by inserting the text of the currently adopted version of the Adverse Reliability Impact definition would create a loss of continuity in the intent of the pending definition. No change made.</p> <p>-Also, add the phrase “and the communication is identified as a reliability directive to the recipient” to the end of the definition of Reliability Directive. This will eliminate potential confusion regarding when a communication is a Reliability Directive, and when a communication is a routine instruction. Revising the definition in this manner may also eliminate the need Requirement R1 of COM-002-3.</p> <p>If R1 is retained, we suggest rewording as follows:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, or Balancing Authority shall identify a Reliability Directive to the recipient when it issues a Reliability Directive</i></p>

Organization	Yes or No	Question 5 Comment
		<p><i>that requires an action or actions to be executed.”</i></p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p>

Organization	Yes or No	Question 5 Comment
<p>Response: See response above.</p>		
<p>ReliabilityFirst</p>	<p>No</p>	<p>ReliabilityFirst believes the definition of “Reliability Directive” should be all inclusive and include “all” actions initiated by the Reliability Coordinator, Transmission Operator or Balancing Authority (not just Emergency or Adverse Reliability Impacts). Even though Emergency or Adverse Reliability Impacts are defined, during operations, it may become a gray area to whether or not it falls under the intent of a “Reliability Directive.”</p> <p>The RCSDT appreciates your comment about including all actions initiated by the BA, RC and TOP; however, the RCSDT has determined that the development of the Reliability Directive concept improves reliability by placing a heightened awareness on actions that are required to avoid an Adverse Reliability Impact. Additionally, the industry does not support the proposed suggestion above based on previous postings and comments. No change made.</p> <p>Furthermore, if the system falls under a condition that results in an Adverse Reliability Impact, it may be too late for a Reliability Coordinator, Transmission Operator or Balancing Authority to issue a Reliability Directive. ReliabilityFirst recommends the following for revision to the term “Reliability Directive”:</p> <p><i>Reliability Directive - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where an action by the recipient is required.</i></p> <p>The RCSDT has determined that the development of the Reliability Directive concept as currently drafted, improves reliability by placing a heightened awareness on actions that are required to avoid an Adverse Reliability Impact. Additionally, the industry does not support the proposed suggestion above based on previous postings and comments. No change made.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 5 Comment
Midwest Independent Transmission System Operator	No	<p>The proposed definition of Reliability Directive is unacceptable because the use of the defined terms “Emergency” and “Adverse Reliability Impact” results in an undefined, broadened scope of responsibility for Reliability Coordinators when coupled with the definition of the Bulk Electric System. This may lead to confusion/ambiguity for Reliability Coordinators that must be clarified to ensure compliance. Further, this broadened scope may mis-direct Reliability Coordinator’s attention and mitigation efforts to small-scale, localized issues that represent no true threat to the operation of the Interconnection.</p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition actually narrows the responsibility by framing the condition(s) within which it is appropriate for anticipated actions necessary to address an Emergency or Adverse Reliability Impact. The IRO standards require the Reliability Coordinator to respond to issues regardless of the scale of issues. No change made.</p>		
Texas Reliability Entity	No	<p>We oppose the definition of Reliability Directive as it is currently being proposed in this standard because three-part communication should not be required only after an Emergency or Adverse Reliability Impact actually occurs.</p> <p>In particular, we object to the removal of the word “expected” (or “anticipated”) from the definition, because Reliability Directives may be required before a situation escalates to an Emergency, in order to prevent the Emergency from occurring. This proposed change potentially undermines efforts required to avoid emergencies and events.</p> <p>We note that there are instances in other Reliability Standards where “anticipated” conditions require actions to be taken (e.g. TOP-001-1 R5 and EOP-002 R4), when clear, concise, and definitive communication, verbal or electronic, is required to avoid or mitigate an impending emergency.</p>
<p>Response: The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the</p>		

Organization	Yes or No	Question 5 Comment
<p>application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
<p>New York Independent System Operator</p>	<p>No</p>	<p>It is not clear the distinction between an Emergency and ARI. We would like to confirm that Since ARI is the impact of an event that results in instability or cascading, that an ARI is a subset of an emergency?</p> <p>Or said differently is an ARI simply instability or cascading? Ultimately, if ARI is a subset of Emergency, then why do we need both in the requirement?</p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Additionally, the term “Adverse Reliability Impact” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential impacts of events and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
<p>Oncor Electric Delivery</p>	<p>Affirmative</p>	<p>"Oncor requests clarity about what constitutes a “recipient.”</p> <p>For example, if a Transmission Grid Operator performing the functions of a Transmission Operator issues a Reliability Directive to its own field operations personnel to perform an action on behalf of the same entity, does the field operations personnel as the recipient become in affect a “Transmission Operator” subject to R2?"</p>
<p>Response: The term “recipient” in this case is referring to entity-to-entity communication and is inferred by Requirement R2 naming the entities. No change made.</p>		
<p>Constellation Energy</p>	<p>Affirmative</p>	<p>As we commented on Project 2007-03 TOP-001-2, the definition of Reliability</p>

<p>014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
Wisconsin Public Service Corp.	Affirmative	<p>The Standards Drafting Team has provided a great deal of clarity regarding Reliability Directives, however we believe BES reliability would be further enhanced if Reliability Directives were still required to be issued in a clear, concise, and definitive manner. Under Emergency conditions, we feel this would enhance communications effectiveness and expedite parties taking necessary actions quickly.</p>
<p>Response: The RCSDT believes the current form of the requirements accomplish this objective. If the issuer is not clear, concise and definitive, it would lead to the issuer having to repeat the process. It is incumbent and beneficial to the issuer to meet this performance without a specific requirement to instruct. Additionally, measuring clear, concise and definitive manner poses significant issues. No change made.</p>		
We Energies	Yes	<p>The definition is acceptable, but as used may imply that all Emergency communications must be Reliability Directives.</p>
<p>Response: The RCSDT thanks you for your comment; however, definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p>		
Ingleside Cogeneration LP	Yes	<p>Ingleside Cogeneration agrees that it is important to clearly denote when a directive must be issued. In previous definitions, we believed that imprecise language made it difficult for the BA, RC, or TOP to determine if a gray area situation required a directive or not. With a more precise definition, it will eliminate second guessing by auditors that a directive was necessary because an outcome turned out poorly - even if an Emergency was not declared or an Adverse Reliability Impact did not occur.</p>
<p>Response: Thank you for your comment.</p>		

Organization	Yes or No	Question 5 Comment
ERCOT ISO	Yes	The definition of Reliability Directive appropriately clarifies the importance of knowing the level of importance of any instructions being issued. If there is no room for variance from the specific action required, or if there is no time to further negotiate or discuss the action required, it is important that the instruction be identified as a Reliability Directive and for such instructions to be followed in a timely fashion. Normal operating instructions typically do not rise to this level of urgency and some variation from the words will not result in unmanageable reliability impacts. Also, there typically may be time for addressing the instructions in more than one way.
Response: Thank you for your comment.		
NIPSCO		The question of whether one is in a state of Emergency or Instability, or in an Abnormal Condition can be still be subjective; it may be difficult to provide evidence for an audit.
Response: The responsible entity determines “state of Emergency or instability” and acts accordingly. No change made.

6. Do you have any other comment, not expressed in questions above, for the RC SDT?

Summary Consideration: This question yielded the most comments overall and many are duplicative of previous comments. For those duplicative comments, the RCSDT respectfully directs summary consideration of those comments to the above questions. Several commenters noted these standards are not “results-based” and this is mainly due to the project’s ongoing work. The standard(s), in a way, appear more results-based by not being prescriptive; however, the specific standards do not implement the results-based formatting. There were many comments about aligning the three standards to have the same implementation plan. The RCSDT agrees and aligned all three with the same implementation. Some comments questioned the need to have an authority requirement for the Reliability Coordinator in IRO-001-3, R1 because it appears to be granted under the ERO registration criteria. The ERO criteria does not provide for this authority. Additionally, IRO-001-3 does not limit the Reliability Coordinator’s authority to issuing only Reliability Directives. The Reliability Coordinator has the authority to direct, which could include Reliability Directives (a subset of direction or directing) is the theme carried out in each requirement. Some comments asked about direct, direction, and when an Emergency or Adverse Reliability Impact would be identified. The terms “direct” and “direction” are consistent with the intent of the standard in its authority and “identify” is upon recognition, which is a condition when the Reliability Coordinator would be acting or directing others to act. The requirements do not preclude the Reliability Coordinator from taking action for other situations, even if it is aware of situations beyond its area. A few comments concerned adding a time element to the requirements, such as, preventing events in Real-time; however, the assigned Time Horizons provide for this under Real-time Operations and Same Day Operations.

Comments noted a difference in “shall have” and “shall designate” within the requirements of COM-001-2. The intent of allowing an entity to “designate” allows the entity to designate the Alternative Interpersonal Communication capability providing greater flexibility in meeting the requirement. Additionally, there were comments about testing the Interpersonal Communication capability in addition to the Alternative Interpersonal Communication capability. The RCSDT intentionally omitted testing the Interpersonal Communication capability because routine use is sufficient to demonstrate functionality. The standard COM-001-2 measures have been updated to appropriately reflect the specific requirements and make the evidence examples clearer. There were several concerns about the designating a replacement Alternative Interpersonal Communication capability within two hours. The RCSDT notes the performance is to designate a replacement, not to accomplish the repairs. The reliability need is to designate what the Alternative Interpersonal Communication capability will be, should it be called upon. Commenters raised concerns about most of the VSLs in COM-001-2 being Severe. These VSLs are Severe because there are essential to reliability. By the construction of the requirement, VSLs are binary, which requires the VSLs to be Severe according to NERC VSL Guidelines. Some comments questioned the removal of requirement, R4. This requirement remains enforce until the approval of COM-003-1 under Project 2007-02.

Several commenters noted that COM-002-3 seems to be requiring the “how” to accomplish the communication coordination. The RCSDT emphasizes the requirements state the “what,” rather than “how.” In a basic sense, the “what” is highlighted by R1 by

identifying the communication as a Reliability Directive, next in R2 the recipient responds accordingly, and R3 the issuer confirms the communication. How the process is accomplished is up to the entity.

Some commenters were concerned about the measures and evidence. The measures are examples, and the entity is not limited to the examples provided; including letters of attestation, where appropriate. The RCSDT addressed other document errors, formatting issues, referencing, and mismatch issues raised in the comments. The Effective Date, Compliance, and Data Retention sections have been updated to the most current language used in standards through the standard review process.

Organization	Yes or No	Question 6 Comment
Alberta Electric System Operator	Abstain	IRO-001-3: The Alberta version of IRO-001 will outline limitations to the authority of the RC, that are required by Alberta legislation.
<p>Response: The standard drafting team (SDT) has drafted requirements to address the purpose of the standard, repeated here: To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System. The requirements have been drafted within the context established by the NERC Functional Model V5, and describes interrelationships of the functional entities in accordance with the Functional Model V5. Please address any variations from this structure, which may be required by Alberta legislation, with NERC as the ERO. No change made.</p>		
City Utilities of Springfield, Missouri	Affirmative	City Utilities of Springfield, Missouri supports comments submitted by SPP.
<p>Response: Thank you for your comment.</p>		
United Illuminating Co.	Affirmative	COM-001-2: UI votes Affirmative with the comment that R1 through R9 are requirements in the Planning Horizon not the Real Time Operations horizon. These requirements are scoped to the establishment of communication processes with other entities not with actions taken by operations.
<p>Response: The RCSDT recognizes that, in most instances, the establishment of communications capability and the designation of Alternative Interpersonal Communications capability will have taken place at some time in the past (which could be the operations planning horizon for the present Real-time instance). However, the full reason for such action is to be sure that the communications capability is in place and functional during the Real-time Operations horizon for use in Real-time operating actions. Therefore, the</p>		

Organization	Yes or No	Question 6 Comment
<p>RCSDT has established the applicable time horizon to be the Real-Time Operations horizon. No change made.</p>		
<p>SERC Reliability Corporation</p>	<p>Affirmative</p>	<p>COM-002-3 Comments</p> <p>R2: We recommend that the following phrase (in quotes) be added to R2: Each Balancing Authority, Transmission Operator and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive "immediately upon receiving it."</p> <p>As written, there is no limit as to when the entity must repeat it (i.e. they could wait 2 hours) The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call).</p> <p>For example, is a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3?</p>
<p>Response: The requirement aims at being a performance-based requirement, and states a description of “what” communication must take place, but does not prescribe “how” the communication is to be made. Adding the suggested phrase “immediately upon receiving it” introduces the ambiguous term “immediately,” for which there is neither plain meaning nor simple explanation. What must happen is that the recipient must respond in such a way that the issuer may determine whether the message has been properly understood. The RCSDT concludes that the proposed language gives plain meaning. No change made.</p> <p>The question about whether a roll call of receiving entities is expected to be held is asking for prescription of “how” to accomplish what is required. The RCSDT recognizes that there is more than one way to accomplish the confirmation when more than one entity received a Reliability Directive at the same time. What is required is for the recipient to respond in such a way that the issuer may determine whether the message has been properly understood. One way for that to occur would be, as you suggest, for the entities to individually respond. Another way would be for a pre-established protocol or procedure (e.g., roll-call, all-call, etc.) to be in place and used in such cases. The RCSDT has determined that prescribing “how” to ensure that “what” is required has been accomplished is not required and that the individually adopted procedures or protocols could offer many different ways to ensure effectiveness. No change made. The RCSDT concept is that “All Call” compliance is related to having a document that explains how the entity responds. No change made.</p>		

Organization	Yes or No	Question 6 Comment
Alliant Energy Corp. Services, Inc.	Affirmative	COM-002-3: Alliant Energy recommends that the Effective Date be the first day of the second calendar quarter after applicable regulatory approval, to be the same as COM-001-2 and IRO-001-3. In that way all 3 standards would be effective at the same time, making implementation much smoother.
<p>Response: Thank you for your comment. The RCSDT will adjust the standards to have the same implementation date.</p>		
Wisconsin Electric Power Co.	Affirmative	<p>COM-002-3: Since all the Requirements are related to Reliability Directives, is it implied that all “Emergency Communications” are Reliability Directives even if not designated as such per R1?</p> <p>-The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. A recipient’s phone may not be recorded but an initiator’s always should. If a receiver refused to meet the R2 requirement, an initiator should have an alternative (i.e., repeat the directive and provide potential penalties if recipient refuses to comply).</p> <p>Should the initiator have responsibility for providing the entire 3-way evidence as M3 implies?</p>
<p>Response: The RCSDT would like to highlight that communications is not a defined term in the NERC Glossary of Terms used in Reliability Standards, nor is it defined in this standard. Thus, the plain meaning of communications is intended. The RCSDT has not implied a defined term in the wording of the purpose statement of the standard, nor in the requirements themselves, that any communication is a Reliability Directive unless the issuing functional entity identifies the actions to be taken as a Reliability Directive. Therefore, not all communications during Emergencies will be Reliability Directives. No change made.</p> <p>COM-002, R2: The RCSDT included some examples of how to provide the evidence needed for Measure M2. The examples are not intended to be an all-inclusive list. The RCSDT does point out, though, that dated operator logs could provide such evidence. The RCSDT does not believe that the recipient has the alternative to refuse to perform, as required. However, the RCSDT does bring attention to standard IRO-001-3, which requires entities to comply with directions unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. No change made.</p>		

Organization	Yes or No	Question 6 Comment
<p>COM-002 M3: The Measure is correct as written. The issuer only needs the evidence that it confirmed the response was accurate or reissued according to the requirement. Evidence does not necessarily mean the entity must have the entire three-way conversation captured (i.e., recording), but evidence the entity confirmed or reissued according to requirement. No change made.</p>		
<p>Wisconsin Electric Power Marketing</p>	<p>Affirmative</p>	<p>COM-002-3: Since all the Requirements are related to Reliability Directives, is it implied that all “Emergency Communications” are Reliability Directives even if not designated as such per R1.</p> <p>The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. No change made.</p>		
<p>Southwest Transmission Cooperative, Inc.</p>	<p>Affirmative</p>	<p>COM-002-3: While COM-002-3 is well written to explain the three-part communications requirements and makes it perfectly clear when a Reliability Directive has been issued, the opening clause leaves the responsible entity open to second guessing on whether they should have issued a Reliability Directive. This</p>

Organization	Yes or No	Question 6 Comment
		<p>problem could be solved by changing the opening clause to “When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.”</p> <p>In the second bullet of Requirement R3, we suggest using “Restate” in place of “Reissue.” The responsible entity is not really reissuing the Reliability Directive. They are still in the act of trying to get the Reliability Directive issued and are simply re-communicating it because it was not understood.</p>
<p>Response: The RCSDT believes the offered suggestion does not improve COM-002-3, R1. No change made.</p> <p>COM-002-3, R3: The communications described are not intended to be a once-through process. Effective communications, sometimes referred to as three-part or three-way, often may be effective only after numerous iterations. The RCSDT believes the likely first effort to clarify would be to re-issue the instructions just to determine whether the recipient simply “heard wrong.” Using the word re-state seems to imply that the wording is incorrect in some way or for some other reason needs to be said a different way. The RCSDT believes it is more likely that the issuer is attempting to bet the recipient to understand and therefore believes that reissue is more appropriate. No change made.</p>		
Public Utility District No. 1 of Okanogan County	Affirmative	IRO-001-3: Need to correct language in Data Retention section 1.3. references R3 R4 and M3 and M4. There is no R4 and M4.
<p>Response: The RCSDT agrees and thanks you for your comment. The language has been changed to eliminate R4 and M4 references.</p>		
Sierra Pacific Power Co.	Affirmative	<p>IRO-001-3: R1 appears to be unnecessary due to the authority that is already inherent through the functional model.⁸</p> <p>Further, the measure for R1 does not properly cover the requirement that the RC "have authority"; rather, it measures whether the RC exercised that authority.</p>

⁸ NERC Functional Model Version 5, (http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf)

Organization	Yes or No	Question 6 Comment
<p>Response: The RCSDT agrees that the standard requirements language is consistent with the authority that is inherent in the Functional Model V5. However, the Functional Model V5 does not constitute enforceable requirements for entities to follow. Such requirements are established within the Reliability Standards. The Functional Model V5 provides good guidance for a consistent structure throughout the Reliability Standards. In addition, the Reliability Coordinator’s reliability certification is established through Regional Entities and the authority to act is measured. No change made.</p>		
<p>Platte River Power Authority; Portland General Electric Co.;; U.S. Army Corps of Engineers</p>	<p>Affirmative</p>	<p>IRO-001-3: Requirement R1 of IRO-001-3, requiring the Reliability Coordinator to have the authority to act or direct actions, appears to be unnecessary because it seems that this authority is granted when the entity is certified as the Reliability Coordinator.</p> <p>Additionally, the associated Measure M1, as worded, does not provide evidence that the Reliability Coordinator has the authority to act or direct other to act, but rather provides evidence that the Reliability Coordinator acted or took action to direct others.</p>
<p>Response: IRO-001-3, R1: The RCSDT agrees that the requirement is consistent with intended functions of a Reliability Coordinator when the entity is recognized as a Reliability Coordinator. The RCSDT has been informed by the ERO that registration criteria do not provide for certification of this authority In addition, the Reliability Coordinator’s reliability certification is established through Regional Entities and the authority to act is measured. No change made.</p>		
<p>National Grid</p>	<p>Negative</p>	<p>- Requiring RCs, TOPs and BAs to state an action as a "reliability directive" complicates communications during a time when response time and clarity are important. If those issuing a directive don't get a repeat back they just need to ask for one. The requirement just needs to define "what" is required not "how." This can be handled by procedures and training.</p> <p>COM-002-3, R1: The requirement states “what” must be done: the action(s) are to be identified as a Reliability Directive. The requirement does not establish “how” the action is to be done. The RCSDT agrees that, under conditions such as you describe, time may be of the essence. Much as in military operations, discussion time is over and action is required when the recipient understands an order has been given.</p>

Organization	Yes or No	Question 6 Comment
		<p>Discussion of disagreement or alternatives may occur later, if and as needed, but no more time can be consumed discussing the directions given. The RCSDT has not prescribed “how” these things must be done, and the RCSDT recognizes there is more than one way. The RCSDT has determined it is appropriate to place the responsibility on the recipient to give a response. The RCSDT agrees that the issuer may ask for a response if one has not been given, but the responsible entity to perform the action is the recipient. The RCSDT agrees that procedures and training are good practices appropriate for this process, but the standard requirements establish what must be done, not how personnel are prepared to do it. No change made.</p> <p>- Delete reference to "adverse reliability impact" from the "Directive" definition. The "adverse reliability impact" definition is not clear, is this an actual event or contingency?</p> <p>The words imply it is an actual event which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p> <p>The RCSDT notes that the term, “Adverse Reliability Impact” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>
<p>Response: See response above.</p>		
SERC Reliability Corporation	Negative	COM-001-2 Comments Definition of Alternative Interpersonal Communication: The proposed definition uses the term "medium."

Organization	Yes or No	Question 6 Comment
		<p>What is the scope of that? Telephony is a "medium", but there is wired, wireless, satellite, etc.</p> <p>Was "medium", intended to differentiate voice, paper, text, email, teletype, or something else? Does the qualifying term "same", when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the "same infrastructure" but a different "medium."</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity. Please refer to the definition of Interpersonal Communication and Alternative Interpersonal Communication. Medium: the plain meaning of the word medium in noun form is a vehicle for ideas, a means of conveying ideas or information. The RCSDT recognizes there are many differing technologies for accomplishing communications and it is not necessary to prescribe which to use. A common medium is telephony, and the commenter is correct that there are different technological forms of telephony. What is required is that there be a medium in place so that Interpersonal Communication capability exists. No change made.</p> <p>R1 and R2 - We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or Alternate Interpersonal Communications.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>R1 - In later requirements it is proposed that the entity "shall designate an." It is</p>

Organization	Yes or No	Question 6 Comment
		<p>suggested that for consistency and audit ability, this concept be used for R1, R3, R5, R7 and R8.</p> <p>The RCSDT believes the requirements achieve the desired intent of the standard. Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>In addition, the qualifier of "primary" should be used such that the requirements read:</p> <p><i>"shall have designated, primary Interpersonal Communications capability with the following entities:"</i></p> <p>Although it is appropriate that "Alternative" be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication) that bounds acceptable alternative methods , we do not see the need to capital "primary."</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p> <p>R9 - The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the sub-requirements of R2, R4, and R6. There is no expectation of testing the primary Interpersonal Communications - is this intentional or an oversight?</p> <p>Although functional testing of this should be done as a normal course of business,</p>

Organization	Yes or No	Question 6 Comment
		<p>should an explicit test be required with each entity in the sub-requirements of R1, R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct?</p> <p>The RCSDT intends each Alternative Interpersonal Communication capability to be verified functional by testing. If an entity has only one such capability, then only one test would be required. You further ask whether the absence of required testing of the “primary” (word is not in the requirement) Interpersonal Communication capability is intentional. The RCSDT intentionally left it out because the communications capability is used routinely and the use is sufficient to demonstrate functionality. With respect to phone numbers, these are procedural matters to be addressed by each individual entity and by including phone numbers it would make the requirement prescriptive. The requirement is to test capability. No change made.</p> <p>R10 - The following scenario seems plausible: The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation?</p> <p>Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well?</p> <p>Yes, the entity experiencing the failure is required by R10 to notify the entities as identified within the 60-minute time frame. The RCSDT believes these situations would be few in numbers and not overly burdensome to perform. No change made.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>M9 reads “at least on a monthly basis.” We suggest that this be changed to “at least once per calendar month” as written in R9. This change should also be corrected in the VSLs.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT agrees and has changed the language in COM-001-2, M9 to agree with the language in R9.</p> <p>M8 - We suggest removing the second “that” in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional “that”.</p> <p>M10 - We suggest this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</i></p> <p>The RCSDT agrees and has changed the language in COM-001-2, M10 to include language consistent with the language in R10.</p> <p>M12 needs to be removed.</p> <p>COM-001-2, M12: The RCSDT agrees that the heading “M12” has no corresponding requirement and was overlooked in format clean-up. The “M12” heading has been removed.</p> <p>We question why the first paragraph of Section 1.3” Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>

Organization	Yes or No	Question 6 Comment
Response: See response above.		
Independent Electricity System Operator	Negative	<p>COM-001-2:</p> <p>1. R1.2 and R2.2: The phrase “within the same Interconnection” is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to curtail interchange transactions crossing Interconnection boundary). The SDT’s response that the phrase was added to address the ERCOT situation and citing that ERCOT does not need to communicate with other RCs leaves a reliability gap.</p> <p>Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p> <p>2. R3.5 and R4.3: The phrase “synchronously connected within the same Interconnection” is also improper; it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors).</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and have eliminated the phrase “within the same interconnection.”</p> <p>3. R4 and R6: not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin with to enable BAs to communicate with these entities (such as operating</p>

Organization	Yes or No	Question 6 Comment
		<p>instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails.</p> <p>The RCSDT refers the Order No. 693 in Paragraph 508 to clarify the reason the DP and GOP are not required to have Alternative Interpersonal Communication and is as follows: “(1) expands the applicability to include Generator Operators and Distribution Providers and includes Requirements for their telecommunications facilities; (2) identifies specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation and (3) includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions.” In addition, R11 requires the DP and GOP to consult with its BA and TOP to determine a mutually agreeable action for restoration. No change made.</p> <p>4. Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make to COM-001-2, M3.</p>
<p>Response: See response above.</p>		
<p>Wisconsin Electric Power Marketing; Wisconsin Electric Power Co.</p>	<p>Negative</p>	<p>COM-001-2: Although a great improvement over existing COM-001, and eliminates the data component see comments:</p> <ul style="list-style-type: none"> -For R5.1 Can the solutions included to meet R1 be included, same R3.2 and R5.2, same R5.3 and R7.2, same R5.4 and R8.1. -For R5.2 Can the solutions included to meet R2 be included, same R4.2 and R6.2. <p>COM-001-2, R5: In a word: Yes. The requirement is to have capability, and that capability does not have to be different from what the entity on the other end has. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R9 a 2 hour response for a once a month test seems extreme, as would require a secondary Alternate Interpersonal Communications capability.</p> <p>-M9 is reasonable, but should include something about communication actual repair and or time estimates.</p> <p>COM-001-2, R9: The requirement is to “initiate action to repair or designate a replacement Alternative Interpersonal Communication capability...” within two hours. The RCSDT recognizes that many different contracts or other arrangements may exist to address repair. However, the RCSDT finds that entities should know what they have and how to initiate repair and those two hours to do so is reasonable. No change made.</p> <p>COM-001-2, M9: The requirement is to have evidence that either repair was initiated or an Alternative Interpersonal Communication capability was designated within two hours. The RCSDT understands that, in extreme cases, the entity may need to make its initial Alternative Interpersonal Communication capability its Interpersonal Communication capability and then designate another Alternative Interpersonal Communication capability, if the repair times are so long that to continue in that mode for that long would present a reliability risk. Such arrangements, if they exist at all, are very rare. No change made.</p> <p>-R10 The use of R1 through R6 implies notification of both Interpersonal Communications and Alternate Interpersonal Communications failures. Do you notify if you become aware after the link is back up if it was down for GT 30 minutes, and doesn’t address notifying when restored?</p> <p>COM-001-2, R10: The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>Yes, there is no requirement to notify identified entities the Interpersonal Communication have been restored. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4.</p> <p>Update M9 accordingly.</p> <p>COM-001-2, R11: The RCSDT believes you intended to refer to R7 and R8, rather than R8 and R9. The RCSDT does not believe that the language implies that the communications capability required by R7 and R8 are independent, but they may be. If the entity which is registered as a DP is also registered as a GOP, although unlikely, then the capability could be met by the same medium. Neither does the RCSDT believe that R11 implies that R7 and R8 are redundant to R3.3 and R3.4 or to R5.3 and R5.4. No change made.</p>
<p>Response: See response above.</p>		
Tampa Electric Co.	Negative	<p>COM-001-2:</p> <p>By use of the term “any” in the phrase “a failure of any of its Interpersonal Communication” the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk. It needs to be limited to primary Interpersonal Communications with its TOP and/or BA.</p>
<p>Response: The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p>		
Cogentrix Energy, Inc.	Negative	<p>COM-001-2:</p>

Organization	Yes or No	Question 6 Comment
		<p>Definition of Alternative Interpersonal Communication: The proposed definition uses the term “medium.”</p> <p>What is the scope of that? Telephony is a “medium” but there is wired, wireless, satellite, etc. Was “medium” intended to differentiate voice, paper, text, email, teletype, or something else?</p> <p>Does the qualifying term “same” when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system.</p> <p>That is the “same infrastructure” but a different “medium” R8 Revision:</p> <p>GOP cannot dictate to the BA or TOP what types of Interpersonal Communication will be used, but they can work with them to establish a common tool.</p> <p>COM-001-2, “Medium”: the plain meaning of the word medium in noun form is a vehicle for ideas, a means of conveying ideas or information. The RCSDT recognizes there are many differing technologies for accomplishing communications, and it is not necessary to prescribe which to use. A common medium is telephony, and the commenter is correct that there are different technological forms of telephony. What is required is that there be a medium in place so that Interpersonal Communication capability exists. Your comment poses compliance questions but does not suggest changes. No change made.</p> <p>COM-001-2, Definition of Alternative Interpersonal Communication: You ask whether the use of the word “same” as a modifier of infrastructure mean something like voice versus written? It could, but is not required to. The RCSDT intends the language to indicate that whatever causes the loss of the Interpersonal Communication capability should not be a common cause of failure of the Alternative Interpersonal Communication capability. Thus, one telephone number could serve as the Interpersonal Communication capability and another telephone</p>

Organization	Yes or No	Question 6 Comment
		<p>number could serve as the Alternative Interpersonal Communication capability, as long as whatever causes the failure of the Interpersonal Communication capability does not automatically cause the failure of the Alternative Interpersonal Communication capability. No change made.</p> <p>R8 Balloting:</p> <p>R8. Each Generator Operator shall have Interpersonal Communications capability with the following entities:</p> <p>R8.1 Balancing Authority</p> <p>R8.2 Transmission Operator</p> <p>R8 Suggestion:</p> <p><i>R8. Each Generator Operator shall coordinate with the BA and TOP to establish Interpersonal Communications capability as requested by the BA and TOP.</i></p> <p>The standard establishes requirement for communication capability appropriate to ensure reliability. There is no requirement for it to be different from the Interpersonal Communication capability that its Balancing Authority has with it, nor the Interpersonal Communication capability that its Transmission Operator has with it. Cooperation and coordination is always encouraged and is an excellent practice, but is not required by this standard. Thank you for your suggestion. No change made.</p>
<p>Response: See response above.</p>		
Oncor Electric Delivery	Negative	<p>COM-001-2:</p> <p>Oncor takes the position that contacting all impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer as prescribed in R1 through R6 is not doable within the ERCOT interconnect for a Transmission Operator.</p>

Organization	Yes or No	Question 6 Comment
		<p>The standard establishes requirement for Interpersonal Communication capability between entities for reliability purposes. The RCSDT recognizes that there are many different organizational arrangements and structures within the North American continent. The standard establishes “what” is required, but does not prescribe “how” it must be done. No change made.</p> <p>Oncor takes the position that notification to the RC and BA only is sufficient and that those two entities have the operational functionality to contact within the prescribed time all affected Distribution Providers, Generator Operators, and other Transmission Operators.</p> <p>Oncor also takes the position adding the word “impacted” to R10 will clarify that notification needs to be made only to the entities that are affected by the failure of a communication path.</p> <p>This will also more align with the language in M10."</p> <p>Thank you for your suggestion. The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p>
<p>Response: See response above.</p>		
National Grid	Negative	<p>COM-001-2:</p> <p>Overly prescriptive, not results-based. R7 & R8 are not necessary. Every entity at a minimum has a contact with a phone as their "Interpersonal Communications capability." Just need to require that every entity has a plan if they lose their primary communication channel ("Interpersonal Communications capability").</p>
<p>Response: The standard establishes requirement for communication capability appropriate to ensure reliability. In addition, R7 and R8 are responsive to FERC Order No. 693. Entities may use the telephone cited in the example as their Interpersonal Communication</p>		

Organization	Yes or No	Question 6 Comment
<p>capability. Requirement R11 as modified addresses the loss of Interpersonal Communication capability. No change made.</p>		
<p>Lincoln Electric System</p>	<p>Negative</p>	<p>COM-001-2: Please clarify whether R10 is intended to address both Interpersonal and Alternative Interpersonal Communications or only Interpersonal Communication.</p> <p>Although R10 identifies only Interpersonal Communication within the requirement, the reference to Requirements R1-R6 appears to include Alternative Interpersonal Communication as well. LES is concerned that if an entity's Interpersonal Communication is fully functional but discovers a failure in its Alternative Interpersonal Communication, the entity would still be required to notify entities per R10.</p>
<p>Response: The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than "R1 through R6," since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p>		
<p>ISO New England, Inc.</p>	<p>Negative</p>	<p>COM-001-2: Please see comments submitted with the project... ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).</p>
<p>Response: Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. The RCSDT will forward your comment to NERC staff for consideration.</p>		
<p>Commonwealth of Massachusetts Department of Public Utilities</p>	<p>Negative</p>	<p>COM-001-2: Primary concern here is with the phrase "within the same interconnection" which appears in R1.2 and R2.2. This removes any standard requirement for adjacent RCs that may not be in the same interconnection from communicating with each other. This constitutes a "gap" in reliability and is a</p>

Organization	Yes or No	Question 6 Comment
		concern.
<p>Response: Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p>		
Detroit Edison Company	Negative	<p>COM-001-2:</p> <p>R9. I believe 2 hours is too short, suggest "within 24 hours."</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>R11. "mutually agreeable time" creates issues. What if TO and BA have differing time frames?</p> <p>Which entity bears the violation if agreement cannot be reached?</p> <p>Alexander Eizans</p> <p>COM-001-2, R11, For, “mutually agreeable time,” the “what” is required is to consult and determine a mutually agreeable time and the “How” that is to be done is too prescriptive to be included within a standard because of the great number of possible scenarios, organizational arrangement, and sizes of entities involved. No change made.</p> <p>I am concerned with the evidence listed under the measures (see M6, M7 and M8).</p>

Organization	Yes or No	Question 6 Comment
		<p>Dated equipment specifications and installation documentation is to much. I know this is listed as "could include" but at one point could become "must include."</p> <p>Jeffrey DePriest</p> <p>COM-001-2, M6, M7, and M8, "could include" may some day become "must include": "What" is required is to provide evidence. A list, which could include but is not limited to various forms of evidence is presented for consideration, but the entity may, and is encouraged to do so when it is appropriate, provide other forms of equally appropriate evidence. No change made.</p> <p>R9 define "unsuccessful test."</p> <p>Is it a mechanical failure of equipment or failure of one or more entities to respond to the test?</p> <p>If mechanical failure, does the 2 hour window to initiate repairs mean notification to proper business unit or do repairs have to actually begin (crew investigating). If crews need to be on site 2 hours is too limiting.</p> <p>COM-001-2, R9, define "unsuccessful test": The RCSDT notes that your words are a paraphrase of the actual standard requirement language. In its simple form, a test is unsuccessful when the capability fails to perform as expected. The entity may have an elaborate contract in place with very specific technical specifications within which the capability is to perform. The test may be unsuccessful if it does not meet those technical specifications, although the intent of the standard is for the entities to be able to communicate, usually verbally, with one another so as to operate reliably. The standard does not prescribe the performance expectations for the capability apart from the expectation that communication capability is to exist. The RCSDT recognizes that there may be many variations of service, maintenance, and repair agreement implemented for these communication capabilities. Whatever the agreement provides for initiation of the response and repair is what is required. This standard cannot prescribe all the possible combinations or scenarios. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>- R11. Mutual Agreeable time is vague.</p> <p>Barbara Holland</p> <p>COM-001-2, R11, “mutual agreeable time” is too vague: “What” is required is to consult and determine a mutually agreeable time. “How” that is to be done is too prescriptive to be included within a standard because of the great number of possible scenarios, organizational arrangement, and sizes of entities involved. No change made.</p>
<p>Response: See response above.</p>		
<p>Madison Gas and Electric Co.</p>	<p>Negative</p>	<p>COM-001-2:</p> <p>The definition of Interpersonal Communication is: “Any medium that allows two or more individuals to interact, consult, or exchange information.” Recommend that the word "any" be removed from Interpersonal Communication and recommend the new definition be "The primary (or designated) medium that allows two or more individuals to interact, consult, or exchange information."</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>R11, Please note that the use of the word “any” as in “Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities...” will be viewed as meaning every Interpersonal Communication medium that an Entity has or uses.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Recommend R11 be updated to read:</p> <p><i>“Each Distribution Provider and Generator Operator that experiences a failure of any of its primary (or defined) Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...”</i></p> <p>In that way it focuses it down to the communications issues with the TOP or BA.</p> <p>In lieu of “primary” the SDT could state “defined” as long as it is not meant to be “any.” The latter part of R11 states; “...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.” This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. Recommend this to be “...shall consult with inform their Transmission Operator or Balancing Authority as applicable as to determine a mutually agreeable time to restore the status of the Interpersonal Communication capability.”</p> <p>Thus R11 is recommended to read as:</p> <p><i>“Each Distribution Provider and Generator Operator that experiences a failure of its primary (or designated) Interpersonal Communication with their Transmission Operator or Balancing Authority shall inform them, as applicable, as to the status of the Interpersonal Communication capability.”</i></p>

Organization	Yes or No	Question 6 Comment
		<p>This allows for situational awareness and supports the reliability of each system. Additionally, the RCSDT notes that the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>
<p>Response: See response above.</p>		
<p>New York Independent System Operator</p>	<p>Negative</p>	<p>COM-001-2: The drafting team has complicated the requirements by having different requirements between RC/TOP/BA and other entities such as GOP/LSE/DP. The proposal is for redundancy to be required only between RC/TOP/BA. The requirement should be simplified to require all entities to have plans for loss of primary communication channels. This can include third parties as a communication channel.</p>
<p>Response: The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. The DP and GOP are not required to have Alternative Interpersonal Communication; however, R11 addresses the loss of communication capability (plan). No change made.</p>		
<p>Public Utility District No. 1 of Lewis County</p>	<p>Negative</p>	<p>COM-001-2: This standard should be combined with COM-002.</p>
<p>Response: The standard COM-001-2 is capability based (equipment) and COM-002-3 is communication and coordination based. Each fulfills independent concepts. No change made.</p>		
<p>Southwest Transmission</p>	<p>Negative</p>	<p>COM-001-2:</p>

Organization	Yes or No	Question 6 Comment
Cooperative, Inc.		<p>We believe that the VSLs could be written to provide more gradations. For example, if a Transmission Operator or Balancing Authority failed to have Interpersonal Communications capability with a Distribution Provider but had Interpersonal Communications capability with all other required entities, it has met the vast majority of the requirement. Since VSLs are a measure of how much the requirement was missed by the responsible entity, jumping to a Severe VSL does not seem to adequately capture that the responsible entity met the vast majority of the requirement. Requirements R4 and R6 even seem to recognize this by not including Distribution Provider in the list of entities to which the Transmission Operator or Balancing Authority are required to designate Alternate Interpersonal Communications capability.</p>
<p>Response: The RCSDT has applied the VSL to the Severe column because not having Interpersonal Communication capability with any entity is detrimental to reliability. No change made.</p>		
Tennessee Valley Authority	Negative	<p>COM-001-2: We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or Alternate Interpersonal Communications (R1 and R2).</p>
<p>Response: The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p>		
Southwest Transmission Cooperative, Inc.	Negative	<p>COM-001-2: We thank the drafting team for its efforts but believe there are still issues that need to be addressed. We thank the drafting team for clarifying that the intent of this</p>

Organization	Yes or No	Question 6 Comment
		<p>standard is not for data exchange in the response to comments.</p> <p>However, we do believe one additional change is necessary to make the intent absolutely clear. The purpose of statement of COM-001-2 still includes the phrase “to exchange Interconnection and operating information.” Since a standard must stand on its own, we believe it is necessary to remove that phrase from the purpose statement to avoid misinterpretations in the future. Auditors and enforcement personnel are not required to understand the development history when enforcing the standard. Furthermore, the purpose is really to enable communications between these functional entities.</p> <p>The SDT agrees and has made a conforming change to the purpose of COM-001.</p> <p>Requirement R11 does not fully address the issue of what is required by Distribution Providers and Generator Operators and introduces new issues.</p> <p>For, “mutually agreeable,” the “what” is required is to consult and determine a mutually agreeable time and the “how” that is to be done is too prescriptive to be included within a standard because of the great number of possible scenarios, organizational arrangement, and sizes of entities involved. No change made.</p> <p>First, while the standard is intended to clarify that the Distribution Provider and Generator Operator do not need backup communications capability, it simply does not. Distribution Providers and Generator Operators are required to have an Interpersonal Communications capability in Requirement R7 and R8 respectively. Unfortunately, the effectiveness of these requirements persists even when the Distribution Provider or Generator Operator experiences a failure of its Interpersonal Communications capability. When Requirement R11 applies, the Distribution Provider or Generator Operator will still be obligated to comply with Requirements R7 and R8 respectively and will, in fact, be in violation of these requirements because the Distribution Provider or Generator Operator no longer has the capability.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The</p>

Organization	Yes or No	Question 6 Comment
		<p>intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>Second, capability is used inconsistently between Requirement R7 and R11 which leads to confusion. In Requirement R7, it is singular while in Requirement R11 is plural. It needs to be clear that only the failure of the capability identified in R7 and R8 needs to be reported by the Distribution Provider and Generator Operator respectively.</p> <p>The RCSDT thanks you for your observation. Generally, the singular implies the plural or vice-versa. The RCSDT has corrected R10 and R11 to be consistent with the singular application.</p> <p>Third, if the requirements focused on communications devices rather than capabilities, they would come closer to communicating the intent. Requirement R11 would better complement Requirement R7 and R8 if the focus was on having a communication medium or device. A Generator Operator with an installed communications device or medium still has that device or medium even when it is not functioning properly and could still meet Requirements R7 and R8. However, they don't have the Interpersonal Communications capability if the device is not functioning properly.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>We recommend striking "capability" from all of the requirements. It is not clear to us how this helps when a definition for Interpersonal Communications is written already and applies to a communication medium. Furthermore, we think it causes confusion and actually contradicts the intent of the standard. Because Requirements R1, R3, R5, R7 and R8 focus on capability, the responsible entity will be in violation anytime its medium that it uses for the primary capability does not function</p>

Organization	Yes or No	Question 6 Comment
		<p>properly. Whereas if the requirement stated that the responsible entity was to designate a primary communications medium, the responsible entity is not in violation if that medium is not functioning properly. It would be clear that Requirement R2, R4 and R6 are intended to be complementary.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>Furthermore, it is not clear why Requirements R1, R3, R5, R7 and R8 state that the responsible entity shall “have” when the companion Requirements R2, R4, and R6 state “designate.”</p> <p>Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>Since Requirement R10 deals with a failure of its Interpersonal Communications capabilities and not Alternate Interpersonal Communications capability, it should only refer to the entities in Requirements R1, R3, and R5. Currently, it includes R1 through R6.</p> <p>The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p>
<p>Response: See response above.</p>		
New York Independent	Negative	COM-002-3: The drafting team added a requirement to identify a Reliability Directive is being initiated during an emergency to track 3-part communication for compliance

Organization	Yes or No	Question 6 Comment
System Operator		<p>purposes. This will change and complicate the communication protocols between normal and emergency operations simply to simplify compliance assessments. The NYISO is asking for clarification that an entity may identify Reliability Directives as a category of communications to be communicated through procedures and training; and will not require a different communication protocol between normal and emergency operations. Affective communications can only be achieved through consistent processes for all conditions. Compliance assessments should be made on when we are in an emergency or not, and not on how the dialogue was initiated.</p>
<p>Response: The RCSdT believes the standard allows for this condition, and the method of implementation is up to the entity. No change made.</p>		
Illinois Municipal Electric Agency	Negative	<p>Illinois Municipal Electric Agency supports and encourages SDT consideration of comments submitted by the SERC OC Standards Review Group.</p>
<p>Response: Thank you for your comment. See response to SERC comments.</p>		
Wisconsin Public Service Corp.	Negative	<p>In COM-002-3, the Standards Drafting Team provided great clarity to the industry and also reduced risk to the BES, by clearly defining Reliability Directives and how the RC, TOP, and BA must utilize them. Unfortunately, they failed to maintain this level of clarity in IRO-001-3, where they state:</p> <p><i>R2. Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p><i>R3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. [Violation Risk</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>The use of “direction” and “directed” essentially makes any request equivalent to a Reliability Directive. In addition, IRO-001-3 as written is largely redundant of COM-002-3. Given this, we recommend that the Standards Drafting Team consider granting the RC authority to issue Reliability Directives by adding this requirement to COM-002-3 and then eliminate IRO-001-3.</p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. No change made.</p>
<p>Response: See response above.</p>		
<p>Wisconsin Electric Power Marketing; Wisconsin Electric Power Co.</p>	<p>Negative</p>	<p>IRO-001-03: Although a great improvement over existing IRO-001, see comments:</p> <ul style="list-style-type: none"> -R2 needs to be clear that it is the Reliability Coordinator’s Reliability Directive that must be complied with not just any Reliability Coordinator’s direction as stated. <p>The RCSDT notes that the intent of the standard is not intended to limit the RC authority to Reliability Directives. The Reliability Coordinator issuing the Reliability Directive is the one, which the recipient must comply. It is assumed that a BA or TOP has a relationship with one, and only one, RC for a given Balancing Area or Transmission Operator Area (some may have multiple, disconnected areas, that are subject to different RCs). No change made.</p> <ul style="list-style-type: none"> -The M2 measure could be difficult, as the operator would have to have access to documents proving the safety, equipment, regulatory or statutory requirements, which may be the assessment of an individual applying the safety rule. Is the measure requiring a deposition of the individual to be performed for each instance? <p>In the RCSDT’s opinion, the Measure M2 does not contemplate depositions. If an entity cannot comply with a Reliability Directive for one of the stated reasons, it should have documentation, such as an attestation, to support that stated reason</p>

Organization	Yes or No	Question 6 Comment
		<p>available during an audit. No change made.</p> <p>With an assumed data retention of 90 day (voice) or 12 month document retention, the deposition would be unlikely to be acquired prior to the retention period ending.</p> <p>Data retention is a significant issue when the data being recorded is voluminous, supporting a 90-day retention period. No change made.</p> <p>-R3 needs to be clear that it is the inability to perform the Reliability Coordinator’s Reliability Directive that must be communicated not just any “Reliability Coordinator’s as directed.”</p> <p>The RCSDT believes R3 contains the full communication set of “action or direction” and the subset, Reliability Directive, is included; therefore, the respective entity is still required to inform the RC. The RCSDT believes the requirement is clear in regards to Reliability Directives. No change made.</p> <p>-The Data Retention section does not align with the standard: The Reliability Coordinator shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2, Measure M2.</p> <p>R2 and M2 apply to the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider.</p> <p>There is no R4 and M4.</p> <p>Data retention related to IRO-001-2, R2/M2 was changed to agree with your suggestion. The changes were more involved – several sections were changed, including removing the reference to R4/M4.</p>
<p>Response: See response above.</p>		
<p>SERC Reliability Corporation</p>	<p>Negative</p>	<p>IRO-001-3 Comments</p> <p>We recommend that where the verb "direct/directed" or noun "direction" is used in Purpose, R1, R2 and R3, that it be replaced with the verb "instruct/instructed" or</p>

Organization	Yes or No	Question 6 Comment
		<p>noun "instruction", as appropriate. This would help the industry avoid confusion often referred to as "big D" or "little d" directives. It is noted that the term "Reliability Directive" does that to a great degree but avoiding the verb/noun "direct/direction" would augment the difference.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1 - At what point in time is "identified" referring to in "to prevent identified events or"? Is it referring to current or future events?</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See Standards IRO-008 and IRO-009. No change made.</p> <p>One might assume both since the "Time Horizon" is defined as Real-time Operations, Same Day Operations and Operations Planning, but the requirement may be enhanced if explicitly stated ("to prevent events identified in real-time or in the future or to mitigate the magnitude"). For clarity, the scope of the authority should be limited to the Reliability Coordinator Area (that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area). As written, it implies the authority should extend outside its RC Area.</p> <p>R2 - We question the phrase, “physically implemented,” and recommend that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions were an entity might not be able to physically implement the direction. For example, entities that do not have the right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>We note the following comment and response posted under Consideration of Comments on Initial Ballot , ” Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25, ” March 7, 2011:</p>

Organization	Yes or No	Question 6 Comment
		<p><i>“IRO-001 R2, R3, and R4 have replaced “Directives with the word direction in lower case (while it appears that “Directives is a subset of “directions). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g. Reliability Coordinator, market operator, etc) the staff at these entities is fulfilling.</i></p> <p><i>Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the “direction in accordance with Requirement R2 stated in R3 and the “direction in accordance with Requirement R3 stated in R4. We believe the entity comments remain valid and the response provided by the SDT does not address all aspects of the concern.</i></p> <p>We suggest that the language be changed to “Reliability Directive consistent with COM-002.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>R3 - The requirement states the responsible entities shall “inform its RC when unable to perform as directed but it is unclear when the notification needs to take place. Although the term “as soon as practical may seem be un-measurable, as written now there is no time deadline to perform the notification” i.e. it could be 4 hours later after recognition.</p> <p>M2,” need to add the following words “compliance with, physically, unless which</p>

Organization	Yes or No	Question 6 Comment
		<p>were included in R2, therefore M2 should read,</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator’s direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator direction. (R2)”</i></p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2 Measure M2.</p> <p>Section 1.3, the second bullet; need to add calendar to 12 calendar months</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>
<p>Response: See response above.</p>		
<p>Dominion Virginia Power; Dominion Resources, Inc.</p>	<p>Negative</p>	<p>IRO-001-3: Dominion does not support the use of “Reliability Coordinator’s direction” in IRO-001-3 and would prefer that the language be changed to “Reliability Directive” consistent with the use in COM-002-3.</p>
<p>Response: The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. No</p>		

Organization	Yes or No	Question 6 Comment
change made.		
Constellation Energy Commodities Group	Negative	<p>IRO-001-3:</p> <p>IRO-001-3 uses the term ‘direct’ in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following: To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.</p> <p><i>R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts.</i></p> <p><i>R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given.</i></p> <p><i>R3: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.</i></p>
<p>Response: This standard provides for the authority of the RC to act or direct actions, and not request. The RCS DT believes by using the word “request” make the requirement conditional and is not consistent with the purpose of the standard. No change made.</p>		
Tampa Electric Co.	Negative	<p>IRO-001-3:</p> <p>R1 VSL should have the phrase "exercise their authority" inserted between "to" and "take" in the first sentence. Otherwise it could be read that the RC would be in violation of the standard requirement for any event that resulted in an Adverse</p>

Organization	Yes or No	Question 6 Comment
		Reliability Impact whether he issued a Reliability Directive or not.
<p>Response: Thank you for your comment. The RCSDT has added the additional clarifying language.</p>		
Independent Electricity System Operator	Negative	<p>IRO-001-3: The IESO is unable to support this standard as written since Data Retention Section does not reflect the revised requirements. For examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4.</p>
<p>Response: The RCSDT agrees and has made conforming changes in Data Retention.</p>		
Southwest Transmission Cooperative, Inc.	Negative	<p>IRO-001-3: We thank the drafting team for their efforts but believe this standard needs additional work. We disagree with including “authority” in this standard. FERC Order 693a, paragraph 112, made it clear that the authority of a registered entity is established through the approval of the standards by FERC. Thus, a Reliability Coordinator gets its authority to issue Reliability Directives by having a requirement that states it must issue Reliability Directives approved by the Commission. Please change “shall have authority to act” in Requirement R1 back to “shall act.” Please also remove all other vestiges of authority from the standards including in the purpose, measures and VSLs. Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator “to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.” Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and</p>

Organization	Yes or No	Question 6 Comment
		<p>trigger the use of three-part communications identified in COM-002-3.</p> <p>The RCSDT believes that other standards (i.e., IRO-009 - R3 & R4, EOP-002 - R1 and R8) address the action of others; and if the term “authority” is omitted, creates a generic requirement. Such as what has been suggested puts the RC in a double jeopardy situation. No change made.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: “When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact?</p> <p>Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. For clarity and consistency, Requirement R2 and R3 should also be clear that the responsible entities will respond to the Reliability Coordinator’s Reliability Directives.</p> <p>The RCSDT notes that IRO-001-3 addresses direction, which may include a Reliability Directive. The responsible entity receiving the direction, at a minimum, must comply with the RC’s direction, unless the receiver cannot physically implement or unless such actions would violate safety, equipment, regulatory, or statutory requirements. The standard IRO-001-3 is not limited to only actions that are Reliability Directives. On the other hand, the standard COM-002-3 requires the BA, RC, and TOP to identify the communication as a Reliability Directive and to use three-part communication when actions are required to be executed as a Reliability Directive. No change made.</p> <p>Furthermore, this would make the standard consistent with how Reliability Directives are handled by the Transmission Operator in the draft TOP-001-2 standard proposed by the Real-Time Operations drafting team (Project 2007-03). We do not agree with</p>

Organization	Yes or No	Question 6 Comment
		<p>the need to include Distribution Provider in IRO-001-3. The Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.</p> <p>The RCSDT notes that IRO-001-3 is an authority standard, the DP may not likely receive a Reliability Directive from the RC; however, in the case they do, they are required to comply with the requirement. No change made.</p>
<p>Response: See response above.</p>		
Northeast Utilities	Negative	NU contributed in and joins on the comments submitted by NPCC.
<p>Response: Thank you for your comment.</p>		
MidAmerican Energy Co.	Negative	<p>COM-001-2:</p> <p>The definition of Interpersonal Communication is too broad and should be revised to read,</p> <p><i>"the primary defined communication system used to communicate between NERC defined reliability entities when operating the Bulk Electric System."</i></p> <p>Examples may include a telephone system as a primary system and an email system as an alternative system.</p> <p>R11 is too broad and should either be deleted or revised to read:</p> <p><i>"Each Distribution Provider and Generator Operator that experiences a failure of its defined primary Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority..."</i></p> <p>The RCSDT deliberately avoided the use of primary and secondary mediums and elected to use communications capabilities. As such, R11 applies to Interpersonal Communication capabilities of the DP and GOP. The RCSDT has gone to great lengths</p>

Organization	Yes or No	Question 6 Comment
		<p>to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn't mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. No change made.</p> <p>The use of the word "any" could end up applying to an intercom and not to a primary mode of communication such as telephone system or email system.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase "any of" in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The latter part of R11 states; "...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability." This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. This statement should be deleted or revised to read:</p> <p><i>"Each Distribution Provider and Generator Operator that experiences a failure of its defined primary Interpersonal Communication with their Transmission Operator or Balancing Authority shall notify the applicable TOP or BA as to the status of the Interpersonal Communication capability."</i></p> <p>The RCSDT believes non-compliance is not due solely to the failure of any Interpersonal Communication capability, but must be accompanied by a failure to consult with the applicable Transmission Operator or Balancing Authority to establish mutually agreeable action for restoration. No change made.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 6 Comment
<p>SERC OC Standards Review Group</p>		<p>COM-001-2 Comments</p> <p>Definition of Alternative Interpersonal Communication:</p> <p>The proposed definition uses the term “medium.”</p> <p>What is the scope of that?</p> <p>Telephony is a “medium” but there is wired, wireless, satellite, etc. Was “medium” intended to differentiate voice, paper, text, email, teletype, or something else?</p> <p>Does the qualifying term “same” when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the “same infrastructure” but a different “medium” R1 and R2 –</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or alternate Interpersonal communications.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity;</p>

Organization	Yes or No	Question 6 Comment
		<p>therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>R1 - In later requirements it is proposed that the entity “...shall designate an...” It is suggested that for consistency and audit ability, this concept be used for R1, R3, R5, R7 and R8.</p> <p>In addition, the qualifier of “primary” should be used such that the requirements read:</p> <p><i>“... shall have designated, primary Interpersonal Communications capability with the following entities:”</i></p> <p>Although it is appropriate that “Alternative” be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication”) that bounds acceptable alternative methods , we do not see the need to capital “primary.”</p> <p>Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>R9 - The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the sub-requirements of R2, R4, and R6.</p> <p>There is no expectation of testing the primary Interpersonal Communications - is this intentional or an oversight?</p> <p>Although functional testing of this should be done as a normal course of business, should an explicit test be required with each entity in the sub-requirements of R1,</p>

Organization	Yes or No	Question 6 Comment
		<p>R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct?</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is not to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>R10 - The following scenario seems plausible:</p> <p>The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation?</p> <p>The RCSDT proposes that upon detection of failure that continues at least 30 minutes, starts the 60-minute clock. The 30 minutes allows an entity time to restore or determine if they can restore its Interpersonal Communication capability before the clock starts. No change made.</p> <p>Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well?</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the</p>

Organization	Yes or No	Question 6 Comment
		<p>flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>M9 reads <i>“at least on a monthly basis.”</i> We suggest that this be changed to <i>“at least once per calendar month”</i> as written in R9. This change should also be corrected in the VSLs.</p> <p>The RCSDT agrees and the language in M9 has been changed to agree with the language in R9 and the VSL.</p> <p>M8 - We suggest removing the second <i>“that”</i> in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional <i>“that.”</i></p> <p>M10 - We suggest this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</i></p> <p>The word <i>“impacted”</i> was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word <i>“impacted”</i> to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, <i>“R1 through R6”</i> to <i>“R1, R3, and R5,”</i> to clarify that it applies to the capabilities with the RC, the TOP and the BA.</p> <p>M12 needs to be removed.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT appreciates your comment and has deleted Measure M12 that was left in error.</p> <p>We question why the first paragraph of Section 1.3 - Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p> <p>COM-002-3 Comments</p> <p>R2 - We recommend that the following phrase (in quotes) be added to R2:</p> <p>Each Balancing Authority, Transmission Operator and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive “immediately upon receiving it.” As written, there is no limit as to when the entity must repeat it (i.e. they could wait 2 hours)The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call). For example, is a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3?</p> <p>The requirement is aimed at being a performance-based requirement and states a description of “what” communication must take place, but does not prescribe “how” the communication is to be made. Adding the suggested phrase “immediately upon receiving it” introduces the ambiguous term “immediately,” for which there is neither plain meaning nor simple explanation. What must happen is that the recipient must respond in such a way that the issuer may determine whether the message has been properly understood. The RCSDT concludes that the proposed language gives plain meaning. No change made.</p> <p>IRO-001-3 Comments</p>

Organization	Yes or No	Question 6 Comment
		<p>We recommend that where the verb “direct/directed” or noun “direction” is used in Purpose, R1, R2 and R3, that it be replaced with the verb “instruct/instructed” or noun “instruction”, as appropriate. This would help the industry avoid confusion often referred to as “big D” or “little d” directives. It is noted that the term “Reliability Directive” does that to a great degree but avoiding the verb/noun “direct/direction” would augment the difference.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1 - At what point in time is “identified” referring to in “...to prevent identified events or...?” Is it referring to current or future events? One might assume both since the “Time Horizon” is defined as Real-time Operations, Same Day Operations and Operations Planning, but the requirement may be enhanced if explicitly stated (“...to prevent events identified in real-time or in the future or to mitigate the magnitude...”).</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action.
