		<p>right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>We note the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011:</p> <p><i>“IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g., Reliability Coordinator, market operator, etc) the staff at these entities is fulfilling. Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the “direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.”We believe the entity’s comments remain valid and the response provided by the SDT does not address all aspects of the concern.</i></p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>We suggest that the language be changed to “Reliability Directive” consistent with COM-002.</p> <p>R3 - The requirement states the responsible entities shall “inform” its RC when</p>

Organization	Yes or No	Question 6 Comment
		<p>unable to perform as directed but it is unclear when the notification needs to take place. Although the term “as soon as practical” may seem be un-measurable, as written now there is no time deadline to perform the notification - i.e. it could be 4 hours later after recognition.</p> <p>The proposed requirement uses the term “upon recognition.” No change made.</p> <p>M2 - need to add the following words “compliance with, physically, unless” which were included in R2, therefore M2 should read:</p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2, Measure M2.</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator’s direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator’s direction”</i></p> <p>(R2) “Section 1.3, the second bullet; need to add calendar to 12 calendar months.” The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers.”</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: See response above.</p>		
<p>Pacific Northwest Generating Cooperative</p>		<p>The PNGC Comment Group believes COM-002-3, R2, lacks justification for applicability to a Distribution Provider (DP). RCs in the WECC region do not communicate reliability directives to DP only entities. Having this requirement apply to DPs seems to indicate that we will need 24/7 communications capability to record and respond to calls that will never come in order to satisfy the requirement with no improvement to reliability. The SDT’s response from the last round of comments:</p> <p>“It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive.” Nowhere is this expectation provided for in the written standard. If the issuer of a reliability directive has already called the DP, are they going to then re-issue the reliability directive after the DP calls them back?</p>
<p>Response: In COM-002-3, the DP may or may not receive a Reliability Directive from the RC; however, in the case they do, they are required to comply with the requirement. The measures do not require recordings. Evidence may include things like dated operator logs. No change made.</p>		
<p>Northeast Power Coordinating Council</p>		<p>For COM-001:</p> <p>1. R1.2 and R2.2: The phrase “within the same Interconnection” is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to coordinate reliability issues including curtailing interchange transactions crossing an Interconnection boundary). The SDT’s response to industry comments on the previous posting that the phrase was added to address the ERCOT situation (that ERCOT does not need to communicate with other RCs and that such coordination takes place between TOPs) leaves a reliability gap.</p> <p>Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal</p>

Organization	Yes or No	Question 6 Comment
		<p>Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p> <p>2. R3.5 and R4.3: The phrase “synchronously connected within the same Interconnection” is also improper; it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). The reason that was used in response to the above comments (coordination among TOPs for DC tie operation) contradicts with the inclusion of this phrase in R3.5 and R4.3.</p> <p>The RCSDT has made clarifying changes by adding Parts to R3 and R4 to address asynchronous connections between Transmission Operators and have eliminated the phrase “within the same interconnection.”</p> <p>COM-001-2, R3.5 and R4.3: Use of the phrase “within the same interconnection.” The RCSDT recognizes that operating activities occurring inside an interconnection that is not synchronously interconnected with another interconnection cannot cause immediate effects upon that interconnection. Any changes in flow across any asynchronous tie between those interconnections must take place through a coordinated interchange energy scheduling process, except for contingency loss the asynchronous ties. In the case of the latter, there is no other path which can be used to address the loss of the asynchronous tie, nor is any synchronous tie immediately affected. The standard does not require such involved RCs to have Interpersonal Communication capability, but does not preclude it. Any rearrangement of scheduled flows on other asynchronous ties must be done through a pre-existing interchange energy scheduling process. No change made.</p> <p>3. R4 and R6: Not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin</p>

Organization	Yes or No	Question 6 Comment
		<p>with to enable BAs to communicate with these entities (such as operating instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails.</p> <p>The RCSDT refers the Order No. 693 in Paragraph 508 to clarify the reason the DP and GOP are not required to have Alternative Interpersonal Communication and is as follows: “(1) expands the applicability to include Generator Operators and Distribution Providers and includes Requirements for their telecommunications facilities; (2) identifies specific requirements for telecommunications facilities for use in normal and Emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation and (3) includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions.” In addition, R11 requires the DP and GOP to consult with its BA and TOP to determine a mutually agreeable action for restoration. No change made.</p> <p>4. To preclude the possibility of problems arising from having different languages spoken between entities, COM-001-1.1 R4 should remain as it was or those ideas kept in the revised requirement. R4 read:</p> <p><i>“R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.”</i></p> <p>According to the proposed implementation plan for COM-001-2, R4 pertaining to the use of English will remain in effect upon the effective date of COM-001-3. This requirement is being revised and will be included in Standard COM-003-1, Operating Personnel Communications Protocols. COM-001-1.1, R4 will be retired at midnight the day before COM-003-1 becomes effective. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>5. Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make to Measure, M3.</p> <p>For IRO-001:</p> <p>The Data Retention Section does not reflect the revised requirements. As examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1.</p> <p>Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2.</p> <p>And, in the Data Retention Section, R4 and M4 are mentioned. However, there are only three requirements with their corresponding measures in the standard.</p>
<p>Response: The RCSDT thanks you for your comment and has made conforming changes to IRO-001-3.</p>		
MRO NSRF		<p>Has the SDT looked at combining COM-002-3 and IRO-001-3 into a single Standard? It would allow Entities a one stop shopping place to refer to issuing and receiving a Reliability Directive.</p> <p>The RCSDT understands some of the benefits with combining the standards; however, at this juncture, it would further delay the progress of the standards. No change made.</p> <p>The definition of Interpersonal Communication is:</p> <p>“Any medium that allows two or more individuals to interact, consult, or exchange information.” As stated in Question 4, the use of the word “any” will bring in mediums that are outside the scope of this Standard.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying</p>

Organization	Yes or No	Question 6 Comment
		<p>change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The NSRF recommends the following:</p> <p>Interpersonal Communication: The primary (or designated) medium that allows two or more individuals to interact, consult, or exchange information.</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p> <p>In Standard COM-002-3 the MRO NSRF recommends that the Effective Date be the first day of the second calendar quarter after applicable regulatory approval, to be the same as COM-001-2 and IRO-001-3. In that way all 3 standards would be effective at the same time, making implementation much smoother.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to adjust IRO-001 to be the same as COM-001 and COM-002.</p> <p>The below section will lead to entities hold evidence past the 12 month retention period. This ambiguous wording will force entities to hold data past the 12 month period as stated in the following paragraph, after the below sighting. Recommend that the first paragraph within 1.3 be deleted in its entirety.</p> <p>1.3. Data Retention The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: See response above.</p>		
<p>CCG, CPG, CECD</p>		<p>Comments: IRO-001-3 uses the term ‘direct’ in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following: To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. The RCSDT believes by using the word “request” make the requirement conditional and is not consistent with the purpose of the standard. No change made.</p> <p>R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. The RCSDT believes by using the word “request” make the requirement conditional and is not consistent with the purpose of the standard. No change made.</p> <p>R3: Each Transmission Operator, Balancing Authority, Generator Operator, and</p>

Organization	Yes or No	Question 6 Comment
		<p>Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. The RCSDT believes by using the word “request” make the requirement conditional and is not consistent with the purpose of the standard. No change made.</p>
<p>Response: See response above.</p>		
<p>LG&E and KU Services Company</p>		<p>COM-001-2</p> <p>Regarding COM-001-2 and proposed definitions, LG&E and KU Services recommends changing the terms being defined from “Interpersonal Communications” and “Alternative Interpersonal Communication” to “Means for Interpersonal Communication” and “Alternative Means for Interpersonal Communication.” A communication is an exchange of information, not a medium. The medium is simply the means. LG&E and KU Services Company further recommend that each requirement be rewritten with these new defined terms as appropriate and that the word “capabilities” currently following the defined terms be removed from each of the requirements.</p> <p>We suggest the definition for “Means for Interpersonal Communication” be: “A medium utilizing electromagnetic energy that allows two or more individuals to interact, consult or exchange information.”</p> <p>We suggest the definition for “Alternative Means for Interpersonal Communication” be: “Any Means for Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Means for Interpersonal Communications used for day-to-day operation.”</p> <p>The RCSDT thanks you for your comment; however, great lengths were taken in communicating mediums regarding IC and AIC and finds that adding “Means” to the</p>

Organization	Yes or No	Question 6 Comment
		<p>proposed terms being defined diminishes clarity of the definition. No change made.</p> <p>Finally, LG&E and KU Services Company request clarification that the requirements to have in place Interpersonal Communications and Alternative Interpersonal Communications do not establish non-compliance for the unavailability of either medium provided the reporting requirements set forth in the standard are otherwise met.</p> <p>The RCSDT believes a condition of non-compliance will not be created if the entity meets all of the requirements for Interpersonal Communication and Alternative Interpersonal Communication capability. For example, the applicable entity has a failure of the IC and notifies the identified entities and begins using its AIC. No change made.</p> <p>All Proposed Standards LG&E and KU Services Company suggest that the first paragraph in section 1.3 Data Retention be removed from all proposed standards. It states: ...For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit. While LG&E and KU Services Company is confident that the SDT intended to clarify entities' data retention responsibilities, this paragraph could be clarified to indicate that it does not require that any additional evidence be retained and provided beyond that written in the standard's requirements.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>
<p>Response: See response above.</p>		
<p>Bonneville Power Administration</p>		<p>BPA supports COM-001-2, COM-002-3 and IRO-001-3 as written and has no comments or concerns at this time.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: Thank you for your comment.</p>		
<p>SPP Standards Review Group</p>		<p>COM-001-2: Requirement 10 is too open ended as written.</p> <p>The measure, M10, indicates that only impacted entities need to be notified. The requirement should be changed to make it consistent with the measure. The requirement would then read: <i>“Each RC, TOP And BA shall notify impacted entities as identified...”</i></p> <p>Requirements 3 and 5 places the responsibility for establishing Interpersonal Communication capability on the TOP and BA. It is quite conceivable that a TOP or BA may not know all, or newly, registered DPs and GOPs in its respective area.</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>In Requirements 7 and 8, the DP and GOP, respectively, are in turn responsible for establishing Interpersonal Communication capability. The TOPs/BAs and the DPs/GOPs should not be responsible for this. The DPs and GOPs should be held accountable for requesting that capability of their TOP and BA.</p> <p>The standard establishes requirement for communication capability appropriate to ensure reliability. There is no requirement for it to be different from the Interpersonal Communication capability that its Balancing Authority has with it, nor the Interpersonal Communication capability that its Transmission Operator has with it. Cooperation and coordination is always encouraged and is an excellent practice, but is not required by this standard. Thank you for your suggestion. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>Therefore, we suggest adding the following phrase at the end of Requirements 3.3, 3.4, 5.3 and 5.4 - 'that has requested Interpersonal Communications capability.' Then R3.3 would read:</p> <p><i>"Each Distribution Provider within its Transmission Operator Area that has requested Interpersonal Communications capability."</i></p> <p>The SDT does not agree that these changes to R3.3, R3.4, R5.3 and R5.4 are necessary. The current R7 and R8 require the DP and the GOP to have this capability. It is not a request. No change made.</p> <p>COM-002-3:</p> <p>Requirement 2/Measure 2: There is an inconsistency between the requirement and the measure. The requirement allows the recipient to repeat, restate, rephrase or recapitulate the directive. Measure 1 only mentions repeating the directive.</p> <p>The RCSDT agrees that M2 needs to match the phrasing used in R2 and has made clarifying changes.</p>
<p>Response: See response above.</p>		
<p>Dominion</p>		<p>COM-001-2; M9 reads <i>"at least on a monthly basis"</i>, Dominion suggests that this be changed to <i>"at least once per calendar month"</i> as written in R2.</p> <p>The RCSDT agrees and the language in M9 has been changed to agree with the language in COM-001-2, R9.</p> <p>M8 Dominion suggests removing the second <i>"that"</i> in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional <i>"that."</i></p> <p>M10 Dominion suggests this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6),</p>

Organization	Yes or No	Question 6 Comment
		<p>therefore M10 should read:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</i></p> <p>The RCSDT thanks you for your comment and has made conforming changes to make change “impacted” to “identified” entities.</p> <p>M12 needs to be removed.</p> <p>The RCSDT appreciates your comment and has deleted Measure M12 that was left in error.</p> <p>IRO-001-3;</p> <p>R2 - Dominion questions the phrase “physically implemented” and recommends that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions were an entity may not be able to physically implement the direction. For example, an entity that does not have the right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>Dominion notes the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011:”</p> <p><i>IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>“Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g., Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling.</i></p> <p><i>Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the “direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.”Dominion believes the entity’s comments remain valid and the response provided by the SDT does not address all aspects of the concern.</i></p> <p>Dominion suggests that the language be changed to “Reliability Directive” consistent with COM-002.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>M2 - need to add the following words “compliance with, physically, unless” which were included in R2, therefore M2 should read:</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator’s direction. (R2)“</i></p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2 Measure M2.</p> <p>Section 1.3, the second bullet; need to add calendar to 12 calendar months</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>
<p>Response: See response above.</p>		
<p>FirstEnergy</p>		<p>Definition of Interpersonal Communications.</p> <p>We understand that the team does not want to be prescriptive as far as the specific types of communication mediums since we live in an age of many forms of communication. But in this case it may be helpful to give examples in the definition. An auditor may interpret Interpersonal Communication to strictly include voice-related and two-way conversations. Depending on the circumstances, other mediums may be adequate, such as blast calls or instant messaging. This should be clarified in the definition.</p> <p>COM-001-2.</p> <p>In R9, it should be clear that the 2-hour timeframe is for initiation of corrective action because mitigation may take much longer. We suggest the last sentence of R9 state: “If the test is unsuccessful, the responsible entity shall, within 2 hours, initiate action to repair or designate a replacement Alternative Interpersonal Communications capability.</p>

Organization	Yes or No	Question 6 Comment
		<p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>In R10, the phrase “R1 through R6” should state “R1 through R8.”</p> <p>The RCSDT thanks you for your comment; alternatively, the RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>COM-002-3</p> <p>In R2, the use of the term recapitulate may not be appropriate. This term means “to summarize” the directive. Three-part communication during emergency situations should assure that the essential details of the directives are understood and a summary may inadvertently leave out important information.</p> <p>The RCSDT carefully considered the use of the term “recapitulate,” and believes it correctly captures the intent. No change made.</p> <p>The effective date of COM-002-3 should be consistent with COM-001-2 and IRO-001-3 and state “the 1st calendar day of the 2nd calendar quarter.” It currently shows the “1st calendar quarter in the standard and implementation plan.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to adjust IRO-001 to be the same as COM-001 and COM-002.</p> <p>IRO-001-3</p> <p>The third bullet under Data Retention addresses requirement R4 and measure M4</p>

Organization	Yes or No	Question 6 Comment
		<p>neither of which exist in the standard.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>In R1, the word “and” is missing between Generator Operator and Distribution Provider.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to IRO-001, R2.</p> <p>VSL for R2 - “N/A” should be removed from the High VSL - Furthermore, the VSL should include language for instances when the entity cannot meet the RC’s directive as afforded by R2.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to IRO-001, R2 VSL.</p>
<p>Response: See response above.</p>		
<p>MISO Standards Collaborators</p>		<p>The Data Retention Section in IRO-001 does not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>Additional comments associated with COM-002</p> <p>We are concerned with the use of ‘shall’ in the measurement sections. ‘Shall’ statements should only be used in the Requirements, as these are the only enforceable items in the standard. The measures should not limit how we show compliance. If there are specific issues that the drafting team is proposing to be a requirement, they should be added to the requirements section of the standard.</p> <p>The RCSDT has checked the usage of “shall” in other standards and has found it to be</p>

Organization	Yes or No	Question 6 Comment
		<p>consistent with writing measures. The RCSDT notes the measures are examples and the entity is not limited to those examples. No change made.</p> <p>Measurement M1 should also allow entities to develop procedures that are distributed to and trained on in advance with recipients of directives that meet the requirements for the communication of what constitutes a Reliability Directive. The last sentence in the measurement should be revised to read:</p> <p><i>“Such evidence could include, but is not limited to, dated and time-stamped voice recordings, dated and time-stamped transcripts of voice recordings, or dated operator logs to show that it identified the action as a Reliability Directive to the recipient or approved procedures that identify what constitutes a Reliability Directive and when Reliability Directives are issued.”</i></p> <p>The RCSDT believes that M1 does not preclude an entity from developing, having or utilizing procedures as evidence to address Reliability Directives. No change made.</p> <p>(R1) The Data Retention section states; ‘For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.’</p> <p>It is unclear on how an entity would be expected to provide evidence beyond 3 months when requested if the data retention period and established procedures do not require the evidence to be retained.</p> <p>The SDT should provide examples of what other types of evidence could be expected or the phrase should be removed.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 6 Comment
<p>Florida Municipal Power Agency</p>		<p>In the definition of Interpersonal Communication, the use of the word “medium” is ambiguous. Suggestions for alternatives: “system”, “channel.”</p> <p>The RCSDT deliberately stayed away from the use of primary and secondary mediums, and prefers to use communications capabilities. Further, the RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn’t mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. But what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are and a determination of what is amicable to both parties. No change made.</p> <p>COM-001-2, R1 and R3, the phrase:</p> <p>“have Interpersonal Communications capabilities”, what if the communication system fails? Is that an immediate non-compliance (especially R3.3 and R3.4 which do not require a redundant system).</p> <p>Suggest using EOP-008 type of language to allow restoration of failed equipment without non-compliance.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>COM-001-2, R9 - "Each ... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity. In addition, the type of testing is unclear and ambiguous.</p> <p>The RCSDT proposes that R9 correctly identifies and provides clarity for the entities required to have Alternative Interpersonal Communication capability. No change made</p> <p>The is also ambiguity in the terms "direct", "directive", "direction" and "Reliability Directive." The SDT may want to consider using the terms "instruct" and "instruction" in place of "direct", "directive", "direction" to more clearly distinguish from a Reliability Directive.</p> <p>The RCSDT feels the use of "direct" and "directed" is consistent with the purpose and application of those terms in other standards. No change made.</p>
<p>Response: See response above.</p>		
<p>ACES Power Marketing Standards Collaborators</p>		<p>The following comments are regarding IRO-001-3.</p> <p>We disagree with including "authority" in this standard. FERC Order 693a, paragraph 112, made it clear that the authority of a registered entity is established through the approval of the standards by FERC. Thus, a Reliability Coordinator gets its authority to issue Reliability Directives by having a requirement that states it must issue Reliability Directives approved by the Commission. Please change "shall have authority to act" in Requirement R1 back to "shall act."</p> <p>Please also remove all other vestiges of authority from the standards including in the purpose, measures and VSLs.</p> <p>The RCSDT believes that other standards (i.e., IRO-009 - R3 & R4, EOP-002 - R1 & R8) address the action of others and if the term "authority" is omitted, creates a generic requirement such as what has been suggested puts the RC in a double jeopardy</p>

Organization	Yes or No	Question 6 Comment
		<p>situation. No change made.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator “to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.” Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3.</p> <p>The RCSDT views R1 as an authority requirement to direct others, which could include a subset of direction called, Reliability Directive. Requirement R2 is the response requirement for the recipient. The judgment the recipient is under is that the recipient must comply with the direction, unless the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. Requirement R3 is simply requires the recipient to inform the issuer of its inability to perform the direction. No change made.</p> <p>COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause:</p> <p>“When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.”</p> <p>What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact?</p> <p>Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. For clarity and consistency, Requirement R2 and R3 should also be clear that the responsible entities will respond to the Reliability Coordinator’s Reliability Directives.</p>

Organization	Yes or No	Question 6 Comment
		<p>Furthermore, this would make the standard consistent with how Reliability Directives are handled by the Transmission Operator in the draft TOP-001-2 standard proposed by the Real-Time Operations drafting team (Project 2007-03).</p> <p>The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and therefore does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p> <p>The Data Retention section needs to be modified. The first bullet applies to the Electric Reliability Organization and Requirement R1 and Measure M1. The actual requirement and measure apply to the Reliability Coordinator. Furthermore, five calendar years exceeds the audit period of three years for a Reliability Coordinator.</p> <p>The RCSDT thanks you for your comment and has removed this bullet.</p> <p>The second bullet incorrectly applies to the Reliability Coordinator and Requirement R2 and Measure M2. Requirement R2 and Measurement M2 apply to Transmission Operators, Balancing Authorities, Generator Operators and Distribution Providers. The third bullet mentions Requirement R4 and Measurement M4.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>There is no Requirement R4 and Measurement M4 in the standard.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>The VSLs for Requirement R1 are not consistent with the requirement. The VSL states that it is for failure to act while the requirement compels the Reliability Coordinator to have the authority to act. This modifies the requirement which is not allowed under FERC VSL guidelines.</p> <p>The RCSDT thanks you for your comment and will correct the R1 VSL to have the phrase "exercise their authority" inserted between "to" and "take" in the first</p>

Organization	Yes or No	Question 6 Comment
		<p>sentence.</p> <p>The VSLs for Requirement R2 need to include the “unless” clause from the requirement. Otherwise, the VSL implies that the responsible entity violated the requirement for failing to follow the directive even if they could not for one of the reasons listed in the requirement. This again is not consistent with FERC guidelines that state VSLs cannot modify the requirement.</p> <p>The RCSDT did not include the “unless such actions would violate safety, equipment, regulatory or statutory requirements” portion of the requirement in the VSL because if an entity could not perform the directed action, there is no violation. No change made.</p> <p>The following comments pertain to COM-001-2.</p> <p>We recommend striking “capability” from all of the requirements. It is not clear to us how this helps when a definition for Interpersonal Communications is written already and applies to a communication medium. Furthermore, we think it causes confusion and actually contradicts the intent of the standard. Because Requirements R1, R3, R5, R7 and R8 focus on capability, the responsible entity will be in violation anytime its medium that it uses for the primary capability does not function properly. Whereas if the requirement stated that the responsible entity was to designate a primary communications medium, the responsible entity is not in violation if that medium is not functioning properly. It would be clear that Requirement R2, R4 and R6 are intended to be complementary.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>Furthermore, it is not clear why Requirements R1, R3, R5, R7 and R8 state that the</p>

Organization	Yes or No	Question 6 Comment
		<p>responsible entity shall “have” when the companion Requirements R2, R4, and R6 state “designate.”</p> <p>The RCSDT believes the requirements achieve the desired intent of the standard. Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>Since Requirement R10 deals with a failure of its Interpersonal Communications capabilities and not Alternate Interpersonal Communications capability, it should only refer to the entities in Requirements R1, R3, and R5. Currently, it includes R1 through R6.</p> <p>COM-001-2, R10: The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>(COM-001 M1)</p> <p>We suggest changing “physical assets” to “demonstration of physical assets.” Since evidence is provided to the auditor and the auditor takes the evidence with them, providing them evidence that is a “physical asset” would be problematic. We believe that the VSLs could be written to provide more gradations. For example, if a Transmission Operator or Balancing Authority failed to have Interpersonal Communications capability with a Distribution Provider but had Interpersonal Communications capability with all other required entities, it has met the vast majority of the requirement. Since VSLs are a measure of how much the requirement was missed by the responsible entity, jumping to a Severe VSL does not seem to adequately capture that the responsible entity met the vast majority of the requirement. Requirements R4 and R6 even seem to recognize this by not including Distribution Provider in the list of entities to which the Transmission Operator or</p>

Organization	Yes or No	Question 6 Comment
		<p>Balancing Authority are required to designate Alternate Interpersonal Communications capability.</p> <p>The following comments pertain to COM-002-3.</p> <p>The RCSDT believes the Measures address the needed examples of evidence. No change made.</p> <p>While COM-002-3 is well written to explain the three-part communications requirements and makes it perfectly clear when Reliability Directive has been issued, the opening clause leaves the responsible entity open to second guessing on whether they should have issued a Reliability Directive. This problem could be solved by changing the opening clause to:</p> <p>“When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” In the second bullet of Requirement R3, we suggest using “Restate” in place of “Reissue.”</p> <p>The responsible entity is not really reissuing the Reliability Directive. They are still in the act of trying to get the Reliability Directive issued and are simply re-communicating it because it was not understood.</p>
<p>Response: The RCSDT believe the offered suggestion does not improve COM-002-3, R1. No change made.</p>		
<p>Kansas City Power & Light</p>		<p>R9 - considering the reliability of communication systems and System Operator attention may be on more important operational concerns, a 2-hour response to a problem with the alternative means of communication is over sensitive. Allowing for sometime in an operating shift would be more in line, such as 8 hours.</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate</p>

Organization	Yes or No	Question 6 Comment
		<p>another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>Violation Severity Levels for COM-001-2: The VSL’s for requirements R1-R8 and R11 do not recognize the efforts of Entities to meet the requirements. If an Entity failed to establish communications or alternative communications with 1 Entity out of 20 should that be Severe?</p> <p>The RCSDT believes the requirements are essential to reliable operations; however, the requirement is Severe more so because it is a pass-fail requirement, and by definition makes it Severe (binary requirement). No change made.</p> <p>Implementation Plan for COM-001-2: The implementation plan is too aggressive at completing in 6 months after regulatory approvals. Establishing agreements with other RC’s, TOP’s and BA’s for alternative “interpersonal communications” regarding the various types of communications available that meet these requirements will take more than 6 months. Recommend 12 months to allow Entities sufficient time to reach agreements and to establish the communications.</p> <p>The RCSDT believes that six months is adequate considering additional facilities should not have to be built to establish communications with the DP and GOP; similarly, compliance documentation should not impose significant work on the entities’ part. No change made.</p>
<p>Response: See response above.</p>		
Southern Company		<p>We question why the first paragraph of Section 1.3 - Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been</p>

Organization	Yes or No	Question 6 Comment
		<p>updated to be consistent with the Standards Drafting Guidelines.</p> <p>We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or alternate Interpersonal communications (R1 and R2).</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>COM-001-2 Dominion VP:</p> <p>COM-001-2; M9 reads “at least on a monthly basis”, Dominion suggests that this be changed to “at least once per calendar month” as written in R9. This change should also be corrected in the VSLs.</p> <p>The RCSDT agrees and the language in M9 has been changed to agree with the language in R9 and the R9 VSL.</p> <p>M8 - We suggest removing the second “that” in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional “that.”</p> <p>M10 - Dominion suggests this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read:</p>

Organization	Yes or No	Question 6 Comment
		<p>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>M12 needs to be removed.</p> <p>The RCSDT thanks you for your comment and has made the deletion.</p> <p>Southern: Definition of Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communications used for day-to-day operation.</p> <p>Comments:</p> <p>-The proposed definition uses the term “medium.”</p> <p>What is the scope of that?</p> <p>Telephony is a “medium” but there is wired, wireless, satellite, etc. Was “medium” intended to differentiate voice, paper, text, email, teletype, or something else?</p> <p>-Similar to that last question - does the qualifying term “same” when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet</p>

Organization	Yes or No	Question 6 Comment
		<p>Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the “same infrastructure” but a different “medium”</p> <p>R1 Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities: ...”</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>Comments</p> <p>-In later requirements it is proposed that the entity “...shall designate an...” It is suggested that for consistency and auditability, this concept be used for R1, R3, R5, R7 and R8.</p> <p>Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>In addition, the qualifier of “primary” should be used such that the requirements read “... shall have designated, primary Interpersonal Communications capability with the following entities:” Although it is appropriate that “Alternative” be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication”) that bounds acceptable alternative methods , we do not see the need to capital “primary.”</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>R9 Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test its Alternative Interpersonal Communications capability at least once per calendar month.</p> <p>Comments</p> <ul style="list-style-type: none"> -The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the subrequirements of R2, R4, and R6. -There is no expectation of testing the primary Interpersonal Communications is this intentional or an oversight? <p>Although functional testing of this should be done as a normal course of business, should an explicit test be required with each entity in the subrequirements of R1, R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct?</p> <p>The RCSDT intends each Alternative Interpersonal Communication capability to be verified functional by testing. If an entity has only one such capability, then only one test would be required. You further ask whether the absence of required testing of the “primary” (word is not in the requirement) Interpersonal Communication capability is intentional. The RCSDT intentionally left it out because the Communication capability is used routinely and the use is sufficient to demonstrate functionality. With respect to phone numbers, these are procedural matters to be addressed by each individual entity and by including phone numbers it would make the requirement prescriptive. The requirement is to test capability. No change made.</p> <p>R10 Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall notify entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer.</p>

Organization	Yes or No	Question 6 Comment
		<p>Comments</p> <p>-The following scenario seems plausible: The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation?</p> <p>The RCSDT proposes that upon detection of failure that continues at least 30 minutes, starts the 60-minute clock. The 30 minutes allows an entity time to restore or determine if it can restore its Interpersonal Communication capability before the clock starts. No change made.</p> <p>General Question</p> <p>-Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well?</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>COM-002-3 Southern</p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient.</p> <p>Comment</p> <p>It is recommended that the requirement be clarified that the Reliability Directive be identified as such during its delivery. (e.g., "...shall identify the action as a Reliability Directive to the recipient during its delivery.")</p> <p>The RCSDT believes the suggestion is overly prescriptive and limits the ability for an</p>

Organization	Yes or No	Question 6 Comment
		<p>entity to meet the requirement. No change made.</p> <p>R2 Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive.</p> <p>Comment</p> <p>-It is recommended that the requirement be clarified that an entity receiving a Reliability Directive repeat, restate, rephrase or recapitulate it immediately upon receiving it. (e.g., "...shall repeat, restate, rephrase or recapitulate the Reliability Directive immediately upon receiving it."). As written, there is not limit as to when the entity must repeat it (i.e. they could wait 2 hours).</p> <p>The proposed requirement uses the term "upon recognition." No change made.</p> <p>General Question</p> <p>-The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call) . Is, for example, a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3?</p> <p>The question about whether a roll call of receiving entities is expected to be held is asking for prescription of "how" to accomplish what is required. The RCSDT recognizes that there is more than one way to accomplish the confirmation when more than one entity received a Reliability Directive at the same time. What is required is for the recipient to respond in such a way that the issuer may determine whether the message has been properly understood. One way for that to occur would be, as you suggest, for the entities to individually respond. Another way would be for a pre-established protocol or procedure (e.g. roll-call, all-call, etc.) to be in place and used in such cases. The RCSDT has determined that prescribing "how" to ensure that "what" is required has been accomplished is not required and that the individually adopted procedures or protocols could offer many different ways to</p>

Organization	Yes or No	Question 6 Comment
		<p>ensure effectiveness. No change made. The RCSDT concept is that “All Call” compliance is related to having a document that explains how the entity responds. No change made.</p> <p>IRO-001-3 Dominion VP:</p> <p>R2 - Dominion questions the phrase “physically implemented” and recommends that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions where an entity may not be able to physically implement the direction; for example, an entity that does not have the right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>Dominion notes the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011:</p> <p><i>“IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g., Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling.</i></p> <p><i>Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>“direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.”Dominion believes the entity’s comments remain valid and the response provided by the RCSDT does not address all aspects of the concern. Dominion suggests that the language be changed to “Reliability Directive” consistent with COM-002.</i></p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>M2 - need to add the following words “compliance with, physically, unless” which were included in R2, therefore M2 should read:</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator’s direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator’s direction.”</i></p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2 Measure, M2.</p> <p>(R2) “Section 1.3, the second bullet; need to add calendar to 12 calendar months Southern General recommendation</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>

Organization	Yes or No	Question 6 Comment
		<p>-It is recommended that where the verb “direct/directed” or noun “direction” is used in Purpose, R1, R2 and R3, that it be replaced with the verb “instruct/instructed” or noun “instruction”, as appropriate. This would help the industry avoid confusion often referred to as “big D” or “little d” directives. It is noted that the term “Reliability Directive” does that to a great degree but avoiding the verb/noun “direct/direction” would augment the difference.</p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1 Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts.</p> <p>Comment</p> <p>-At what point in time is “identified” referring to in “...to prevent identified events or...” Is it referring to current or future events? One might assume both since the “Time Horizon” is defined as Real-time Operations, Same Day Operations and Operations Planning but the requirement may be enhanced if explicitly stated (“...to prevent events identified in real-time or in the future or to mitigate the magnitude...”).</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. No change made.</p> <p>-For clarity, the scope of the authority should be limited to the Reliability Coordinator Area (“...that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area”). As written, it implies the authority should extend outside its RC Area.</p> <p>The RCSDT believes that limiting the scope to the RC’s area would be too limiting and not account for potential conditions where an adjacent RC may have lost its wide-</p>

Organization	Yes or No	Question 6 Comment
		<p>area view and requests the assistance of another RC or vice-versa. No change made.</p> <p>R2 Editorial comment - The words “compliance with” are in a different font in the posted version.</p> <p>The RCSDT thanks you for your comment and has corrected the font in IRO-001, R2.</p> <p>R3 Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2.</p> <p>Comment</p> <p>The requirement states the responsible entities shall “inform” its RC when unable to perform as directed but it is unclear when the notification needs to take place. Although the term “as soon as practical” may seem to be un-measurable, as written now there is no time deadline to perform the notification - i.e. it could be 4 hours later after recognition.</p> <p>The proposed requirement uses the term “upon recognition.” No change made.</p>
<p>Response: See response above.</p>		
Central Lincoln		<p>As stated in our prior comments, we continue to have problems with COM-002, R2 and R3 as written. The SDT’s answer (“It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive”) addresses our concern perfectly, and we would agree with such an expectation. Unfortunately, the expressed expectation is not in the proposed standard or even in a proposed guideline for the standard.</p>
<p>Response: The RCSDT believes this is a process or procedure question that should be determined by the entity in how it handles communication with the RC. The standard, as written does, not preclude the entity from having a procedure. No change made.</p>		

Organization	Yes or No	Question 6 Comment
<p>Entergy Services, Inc</p>		<p>Entergy does not agree with including the DP and GOP in this standard. However, if they are to be included and are required to have the communications capability indicated, they should be included in R10. Why would it be important for the TOP to notify the DP that their communications method has failed, but it is not important for the DP to notify the TOP when their communications method has failed? The distinction doesn't seem reasonable or meaningful.</p> <p>The RCSDT stresses that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities, which have little or no impact on the reliability of the BES while not requiring them to obtain Alternative Interpersonal Communication capabilities. Making the proposed changes would eliminate this flexibility. Removing R11, takes away the RCSDT's effort to include those provisions in the standard. No change made.</p> <p>Additionally, in the draft of COM-002-3 requirement 2 contains the language that the recipient of the directive shall "repeat, restate, rephrase or recapitulate" the directive. Why are so many synonyms of repeat necessary? Repeat or restate should be sufficient to get the point across.</p> <p>The RCSDT used the additional words to facilitate complete understanding. No change.</p>
<p>Response: See response above.</p>		
<p>Independent Electricity System Operator</p>		<p>(1) The proposed implementation plan conflicts with Ontario regulatory practice respecting the effective date of the standard. It is suggested that this conflict be removed by appending to the implementation plan wording, after "applicable regulatory approval" in the Effective Dates Section A5 on P. 4 of the draft standard COM-001, COM-002 and IRO-001, and on P. 2 of COM-001's Implementation Plan and P. 1 of COM-002's and IRO-001's Implementation Plans, to the following effect:", or as otherwise made effective pursuant to the laws applicable to such ERO</p>

Organization	Yes or No	Question 6 Comment
		<p>governmental authorities.”</p> <p>The RCSDT is uncertain where the conflict exists. The standard IRO-001 uses the term “after applicable” and the others “following applicable.” The RCSDT has updated the standards to use the most current effective date language.</p> <p>(2) COM-001: Measure M9: - “monthly basis.” Suggest changing “monthly basis” to “at least once per calendar month” to be consistent the wording in R9.</p> <p>The RCSDT thanks you for your comment and has made the conforming change in the COM-001, Measure M9.</p> <p>(3) IRO-001: Measures M1, M2, M3 - The types of evidence are listed in paragraph form. This is not consistent with presentation style in COM-001-2 Measures, where evidence is listed in bullet format. Suggest using bullet form for consistency.</p> <p>The RCSDT agrees and has made all the Measures bullet form in COM-001-2, but not in COM-002-3 and IRO-001-3.</p> <p>(4) IRO-001, Data Retention Section:</p> <p>i. The retention requirements do not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4.</p> <p>Data retention related to IRO-001-2, R2/M2 was changed to agree with your suggestion. The changes were more involved – several sections were changed, including removing the reference to R4/M4.</p> <p>ii. Section 1.3, second paragraph: “The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider... shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of</p>

Organization	Yes or No	Question 6 Comment
		<p>time as part of an investigation:</p> <p>"The word "or" between Generator Operator and Distribution Provider should be changed to "and."</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p>
<p>Response: See response above.</p>		
<p>Hydro-Quebec TransEnergie</p>		<p>For COM-001:</p> <p>R1.2 and R2.2: The phrase "within the same Interconnection" is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to coordinate reliability issues including curtailing interchange transactions crossing an Interconnection boundary). The SDT's response to industry comments on the previous posting that the phrase was added to address the ERCOT situation (that ERCOT does not need to communicate with other RCs and that such coordination takes place between TOPs) leaves a reliability gap.</p> <p>Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator's from one interconnection to another. No change made.</p> <p>2. R3.5 and R4.3: The phrase "synchronously connected within the same Interconnection" is also improper; it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). The reason that was used in response to the above comments (coordination among TOPs for DC tie operation) contradicts with the inclusion of this</p>

Organization	Yes or No	Question 6 Comment
		<p>phrase in R3.5 and R4.3.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and have eliminated the phrase “within the same interconnection.”</p> <p>3. R4 and R6: Not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin with to enable BAs to communicate with these entities (such as operating instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails.</p> <p>The RCSDT refers the Order No. 693 in Paragraph 508 to clarify the reason the DP and GOP are not required to have Alternative Interpersonal Communication and is as follows: “(1) expands the applicability to include Generator Operators and Distribution Providers and includes Requirements for their telecommunications facilities; (2) identifies specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation and (3) includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions.” In addition, R11 requires the DP and GOP to consult with its BA and TOP to determine a mutually agreeable action for restoration. No change made.</p> <p>4. To preclude the possibility of problems arising from having different languages spoken between entities, COM-001-1.1 R4 should remain as it was or those ideas kept in the revised requirement. R4 read: “R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.” 5. Measure M3</p>

Organization	Yes or No	Question 6 Comment
		<p>does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>According to the proposed implementation plan for COM-001-2, R4 pertaining to the use of English will remain in effect upon the effective date of COM-001-3. This requirement is being revised and will be included in Standard COM-003-1, Operating Personnel Communications Protocols. COM-001-1.1, R4 will be retired at midnight the day before COM-003-1 becomes effective. No change made.</p> <p>For IRO-001:</p> <p>The Data Retention Section does not reflect the revised requirements. As examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Data Retention section.</p> <p>Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2.</p> <p>The RCSDT has made conforming changes by correcting an error in the data retention section</p> <p>And, in the Data Retention Section, R4 and M4 are mentioned. However, there are only three requirements with their corresponding measures in the standard.</p> <p>The RCSDT has made conforming changes by correcting an error in the data retention section</p>
<p>Response: See response above.</p>		
<p>NIPSCO</p>		<p>In IRO-001 R2 an "and" is missing after Generator Operator, and the comma should be removed.</p> <p>Why are there 3 different Effective Dates for this project, each standard being</p>

Organization	Yes or No	Question 6 Comment
		different? To simplify, can't they all be made identical?
<p>Response: The RCSDT thanks you for your comment and has made conforming changes to IRO-001 R2 and the effective dates to the second quarter after regulatory approval.</p>		
<p>Oncor Electric Delivery Company LLC</p>		<p>For COM-001-2</p> <p>Oncor takes the position that contacting all impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer as prescribed in R1 through R6 is not doable within the ERCOT interconnect for a Transmission Operator.</p> <p>Oncor takes the position that notification only to the RC and BA is sufficient and that those two entities have the operational functionality to contact within the prescribed time all affected Distribution Providers, Generator Operators, and other Transmission Operators.</p> <p>The RCSDT proposes that upon detection of failure that continues at least 30 minutes, starts the 60-minute clock. The 30 minutes allows an entity time to restore or determine if they can restore Interpersonal Communication capability before the clock starts. No change made.</p> <p>R10 - Oncor takes the position that the word “impacted” added to R10 will clarify that notification only needs to be made to the entities that are effected by the failure of a communication path. This will also more align with the language in M10.</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>For COM-002-3</p> <p>Oncor request clarity about what constitutes a “recipient.” For example, if a</p>

Organization	Yes or No	Question 6 Comment
		<p>Transmission Grid Operator performing the functions of a Transmission Operator issues a Reliability Directive to its own field operations personnel to perform an action on behalf of the same entity, does the field operations personnel as the recipient become in affect a “Transmission Operator” subject to R2?</p> <p>The term “recipient” in this case is referring to Functional entity to Functional entity communication. No change made.</p>
<p>Response: See response above.</p>		
<p>Consolidated Edison Co. of NY, Inc.</p>		<p>Regarding COM-002 Requirement R1, we recommend that this requirement be reworded as follows: “When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall require that the Reliability Directive be communicated using three-part communications as described in Requirements R2 and R3 of this standard.”</p> <p>The reason for this recommended rewording are threefold:</p> <ol style="list-style-type: none"> 1. Good operating practice calls for use of three-part communications at all times. The recommended re-write encourages the use of the good operating practice of three-part communications at all times, but does not require it. 2. It is not good operating practice to require that an additional (unnecessary) phrase be used during emergency situations. During emergency situations, it is best to use standard operating protocols so as to limit unnecessary burdens on operating personnel during critical and stressful times. 3. By implementing the proposed new R1 requirement, it would effectively weaken the need for rigorous compliance with any and all directives issued by the RC’s, TO’s or BA’s. <p>The RCSDT respectfully disagrees, the recipient needs clarity when a Reliability Directive is communicated. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>Regarding IRO-001 Requirement R1, we recommend that the current requirement R3 be reinstated as the new requirement R1. That is, the new requirement R1 should read as follows: R1. The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.</p> <p>We do not support any further dilution of Reliability Coordinator authority to enforce Reliability Directives through deletion of the 30-minute maximum response time period. The timely actions in response to any Reliability Coordinator issued Reliability Directives is an essential part of the process.</p> <p>The RCSDT believe these concerns are addressed in other performance-based standards (IRO-008 and IRO-009) that require action and contain timing requirement when addressing IROs. The omission of TSP, LSE, and PSE does not diminish reliability and brings the standard into conformity with COM-001 and COM-002. No change made.</p>
<p>Response: See response above.</p>		
We Energies		<p>COM-001, Although a great improvement over existing COM-001, and eliminates the data component see comments:</p> <ul style="list-style-type: none"> -For R5.1 Can the solutions included to meet R1 be included, same R3.2 and R5.2, same R5.3 and R7.2, same R5.4 and R8.1 -For R5.2 Can the solutions included to meet R2 be included, same R4.2 and R6.2 <p>COM-001-2, R5: In a word: Yes. The requirement is to have capability and that capability does not have to be different than the entity on the other end has. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R9 a 2 hour response for a once a month test seems extreme, as would require a secondary Alternate Interpersonal Communications capability</p> <p>-M9 is reasonable, but should include something about communication actual repair and or time estimates</p> <p>COM-001-2, R9: The requirement is to “initiate action to repair or designate a replacement Alternative Interpersonal Communication capability...” within two hours. The RCSDT recognizes that many different contracts or other arrangements may exist to address repair. However, the RCSDT finds that entities should know what they have and how to initiate repair and those two hours to do so is reasonable. No change made.</p> <p>COM-001-2, M9: The requirement is to have evidence that either repair was initiated or an Alternative Interpersonal Communication capability was designated within two hours. The RCSDT understands that, in extreme cases, the entity may need to make its initial Alternative Interpersonal Communication capability its Interpersonal Communication capability and then designate another Alternative Interpersonal Communication capability if the repair times are so long that to continue in that mode for that long would present a reliability risk. Such arrangements, if they exist at all, are very rare. No change made.</p> <p>-R10 The use of R1 through R6 implies notification of both Interpersonal Communications and Alternate Interpersonal Communications failures. Do you notify if you become aware after the link is back up if it was down for GT 30 minutes, and Doesn't address notifying when restored?</p> <p>COM-001-2, R10: The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>Yes, there is no requirement to notify identified entities the Interpersonal Communication have been restored.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4.</p> <p>COM-001-2, R11: The RCSDT believes you intended to refer to R7 and R8, rather than R8 and R9. The RCSDT does not believe that the language implies that the communications capability required by R7 and R8 are independent, but they may be. If the entity which is registered as a DP is also registered as a GOP (probably unlikely), then the capability could be met by the same medium. Neither does the RCSDT believe that R11 implies that R7 and R8 are redundant to R3.3 and R3.4 or to R5.3 and R5.4. No change made.</p> <p>R11 is not clear on the purpose of the statement “determine a mutually agreeable time for restoration” this could be driven by forces outside the control any of the entities. I think” provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage” would be better.</p> <p>The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable action for restoration of its Interpersonal Communication capability with its TOP or BA. That is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. No change made.</p> <p>Update M9 accordingly</p> <p>See comment above concerning R9.</p> <p>COM-002</p> <p>-Since all the Requirements are related to Reliability Directives, is it implied that all “Emergency Communications” are Reliability Directives even if not designated as such per R1.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT would like to highlight that communications is not a defined term in the NERC Glossary of Terms used in Reliability Standards ,nor is it defined in this standard. Thus, the plain meaning of communications is intended. The RCSDT has not implied a defined term in the wording of the purpose statement of the standard, nor in the Requirements themselves, that any communication is a Reliability Directive unless the issuing functional entity identifies the actions to be taken as a Reliability Directive. Therefore, not all communications during Emergencies will be Reliability Directives. No change made.</p> <p>COM-002, R2: The RCSDT included some examples of how to provide the evidence needed for Measure M2. The examples are not intended to be an all-inclusive list. The RCSDT does point out, though, that dated operator logs could provide such evidence. The RCSDT does not believe that the recipient has the alternative to refuse to perform as required. However, the RCSDT does bring attention to standard IRO-001-3, which requires entities to comply with directions unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. No change made.</p> <p>-The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. A recipient’s phone may not be recorded but an initiator’s always should. If a receiver refused to meet the R2 requirement, an initiator should have an alternative. i.e., repeat the directive and provide potential penalties if recipient refuses to comply. Should the initiator have responsibility for providing the entire 3-way evidence as M3 implies?</p> <p>The RCSDT would like to highlight that communications is not a defined term in the NERC Glossary of Terms used in Reliability Standards nor is it defined in this standard. Thus, the plain meaning of communications is intended. The RCSDT has not implied a defined term in the wording of the purpose statement of the standard, nor in the Requirements themselves, that any communication is a Reliability Directive unless the issuing functional entity identifies the actions to be taken as a Reliability Directive. Therefore, not all communications during Emergencies will be</p>

Organization	Yes or No	Question 6 Comment
		<p>Reliability Directives. No change made.</p> <p>COM-002 M3: The Measure is correct as written. The issuer only needs the evidence that it confirmed the response was accurate or reissued according to the requirement. Evidence does not necessarily mean the entity must have the entire three-way conversation captured (i.e., recording), but evidence the entity confirmed or reissued according to requirement. No change made.</p> <p>IRO-001</p> <p>Although a great improvement over existing IRO-001, see comments:</p> <ul style="list-style-type: none"> -R2 needs to be clear that it is the Reliability Coordinator’s Reliability Directive that must be complied with not just any Reliability Coordinator’s direction as stated. -The M2 measure could be difficult, as the operator would have to have access to documents proving the safety, equipment, regulatory or statutory requirements, which may be the assessment of an individual applying the safety rule. <p>Is the measure requiring a deposition of the individual to be performed for each instance?</p> <p>The RCSDT notes that the intent of the standard is not intended to limit the RC authority to issue Reliability Directives. The Reliability Coordinator issuing the Reliability Directive is the one, which the recipient must comply. It is assumed that a BA or TOP has a relationship with one and only one RC for a given Balancing Area or Transmission Operator Area (some may have multiple, disconnected areas, that are subject to different RCs). Still need a way to communicate to mutually agree. No change made.</p> <p>With an assumed data retention of 90 day (voice) or 12 month document retention the deposition would be unlikely to be acquired prior to the retention period ending.</p> <p>Data retention is a significant issue when the data being recorded is voluminous, supporting a 90-day retention period. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R3 needs to be clear that it is the inability to perform the Reliability Coordinator’s Reliability Directive that must be communicated not just any “Reliability Coordinator’s as directed.”</p> <p>The RCSDT believes there is a misunderstanding about IRO-001, R3. The requirement specifically says “direction” and is in alignment with Requirement R1. Please note a Reliability Directive is a subset of “direction” that the RC may perform in accordance with R1. No change made.</p> <p>-The Data Retention section does not align with the standard:</p> <p>The Reliability Coordinator shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2, Measure M2.</p> <p>The RCSDT thanks you for your comment. The RC has been removed from the measure and replaced with the corresponding R2 responsible entities (BA, DP, GOP, and TOP).</p> <p>R2 and M2 apply to the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider.</p> <p>There is no R4 and M4.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p>
<p>Response: See response above.</p>		
<p>City of Jacksonville Beach dba/ Beaches Energy Services</p>		<p>COM-001-2, R9 - "Each ... shall test its Alternative Interpersonal Communications capability." I would suggest adding the phrase "...to each entity for which Alternative Interpersonal Communications is required." to add clarity.</p>
<p>Response: The RCSDT proposes that R9 correctly identifies and provides clarity for the entities required to have Alternative Interpersonal Communication capability. No change made.</p>		

Organization	Yes or No	Question 6 Comment
<p>Indiana Municipal Power Agency</p>		<p>For R2 in IRO-001-3, the requirement needs to have the entities comply with their Reliability Coordinator’s direction received in R1. Currently, requirement 2 directions are not linked back to R1 which means entities would have to comply with all Reliability Coordinator’s directions regardless if they are associated with R1.</p> <p>The RCSDT agrees with your comment and believes the requirements does not need a linkage. No change made.</p> <p>For R7 in COM-001-2, IMPA does not believe that every Distribution Provider needs to be included in requirement 7. IMPA recommends stating that requirement 7 only applies to Distribution Providers who own an UFLS or UFLS system.</p> <p>The expectation is that a Distribution Provider that is registered with NERC is obligated to comply. No change made.</p>
<p>Response: See response above.</p>		
<p>Luminant Energy Company LLC</p>		<p>IRO-001-3 R1 is not consistent with the direction taken in COM-002-3 which requires the Reliability Coordinator to identify Reliability Directive as such. The same approach should be taken with IRO-001-3 R1 so that the Reliability Coordinator is required to identify directions that are made to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts as such prior to or when issuing the directions. This extra specification is needed to eliminate any possible confusion in areas where the market operator and Reliability Coordinator are the same entity. In these areas, the Reliability Coordinator/market operator routinely gives directions to other entities that are not to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. Without the added clarification the receiving entity may not know the urgency of the situation and may not know to inform the Reliability Coordinator if they are unable to perform as required by R3.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: The RCSDT views R1 as an authority requirement to direct others, which could include a subset of direction called Reliability Directive. Requirement R2 is the response requirement for the recipient. The judgment the recipient is under is that the recipient must comply with the direction, unless the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. Requirement R3 simply requires the recipient to inform the issuer of its inability to perform the direction. No change made.</p>		
<p>NextEra Energy, Inc.</p>		<p>NextEra has the following additional comments.</p> <p>COM-002-3</p> <p>The purpose of COM-002-3 is:</p> <p>“To ensure Emergency communications between operating personnel are effective.”</p> <p>This stated purpose is not the same as the specific requirement that three-way communication is used for a Reliability Directive. Thus, NextEra requests that the purpose be revised to read as follows:</p> <p>“To ensure that when a Reliability Directive is given that the Reliability Directive is explicitly stated and three-way communication is used.”</p> <p>The majority of stakeholders did not raise any issues with the purposed statement, and the RCSDT believes the current purpose statement is adequate. No change made.</p> <p>Consolidation of COM-002-3 and IRO-001-3</p> <p>NextEra notes a continuing area of concern with the somewhat unsynchronized approach taken in the drafting process. Reliability Standards COM-002 and IRO-001 are now on version three, and still there is a somewhat unsynchronized approach being proposed. A clear and consolidated approach seems easily achievable with minimal effort. Thus, as proposed below, NextEra requests that COM-002-3 and IRO-001-3 be combined, which also would appear to allow for the retirement of certain requirements, such as TOP-001-1 R1-4.</p> <p>The standard TOP-001-1, R1 through R4 is under the purview of another team. No</p>

Organization	Yes or No	Question 6 Comment
		<p>change made.</p> <p>NextEra also is concerned that the current approach may have contributed to several significant misstatements in IRO-001-3, R1-3, which use the terms “direct,” “direction” and “directed,” instead of the term Reliability Directive as used in COM-002-3. COM-002-3 and IRO-001-3 indicate that three-way communication only is required when a Reliability Directive is issued.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction,” No change made.</p> <p>This begs the question of what are the potentially other, lower classes of directives in IRO-001-3 R1-3?</p> <p>And why do they need to be followed with or without three-way communication?</p> <p>Reliability Directives are identified as such at the time they are issued so the recipient understands the magnitude of the action being directed. No change made.</p> <p>Thus, at a minimum, NextEra requests that the terms direct, direction and directed be deleted from IRO-001-3 R1-3, respectively, and that Reliability Directive be inserted. This change, and other proposed changes, are reflected in NextEra’s overall proposal to combine COM-002-3 and IRO-001-3 into one COM-002-3 standard: {Note: If the term Adverse Reliability Impact is revised as proposed by NextEra, then the term would not need to be stricken.</p> <p>The RCSDT understands some of the benefits with combining the standards; however, at this point, it would further delay the progress of the standards.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p><i>R1. Each Reliability Coordinator shall have the authority to act and to issue a Reliability Directive to a Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider within its operating region to prevent identified events that may lead to, or to mitigate the magnitude or duration of, an Emergency.</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>accordance with Requirement R6. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>Conclusion</p> <p>Given the importance of having clear and concise Reliability Standards on the issue of directives and three-way communication, until the above concerns raised by NextEra in items 4 through 6 are addressed, NextEra intends to continue to vote “no” on COM-001-2, COM-002-3 and IRO-001-3.</p> <p>The RCSDT thanks you for your comment and believes the revisions made to this set of standards is valuable to the industry and within the scope of the project. No change made.</p>
<p>Response: See response above.</p>		
Manitoba Hydro		<p>COM-001-2-Definition ‘Interpersonal Communication’ - for clarity, the definition should explicitly state that data exchange is not included.</p> <p>The standard COM-001 is for Interpersonal Communication capability, which facilitates the communication (i.e., “... to interact, consult, or exchange information.”) and not the exchange of data which is addressed in IRO-010. No change made.</p> <p>-R9 - for clarity, the wording ‘... within 2 hours’ should be replaced with ‘... within 2 hours of the unsuccessful test’. Conforming change required to M9 as well.</p> <p>The RCSDT proposes that R9 correctly identifies and provides clarity for the entities required to have Alternative Interpersonal Communication capability. No change made.</p> <p>-R10 - for clarity, the wording ‘... as identified in R1 through R6...’ should be replaced with ‘... with which it is required to have Interpersonal Communications capability or Alternative Interpersonal Communication capability...’.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>-M6 - the term ‘Adjacent’ needs to be capitalized in the last sentence of the paragraph as ‘Adjacent Balancing Authority’ is a NERC defined term.</p> <p>The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made conforming measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p> <p>-M7 - ‘that’ in the first line is repeated</p> <p>The RCSDT thanks you for your comment and has made conforming changes to remove the additional word “that.”</p> <p>-M9 - the wording ‘on a monthly basis’ should be replaced with ‘once per calendar month’ to be consistent with the wording of the R9.</p> <p>The RCSDT agrees and the language in M9 has been changed to agree with the language in R9 and the R9 VSL.</p> <p>-M11 - the words ‘that experiences a failure of any of its Interpersonal Communications capabilities’ should be added after Operator to be consistent with the wording of the Requirement</p> <p>The RCSDT thanks you for your comment and has made the conforming changes to Measure M11.</p> <p>-Compliance</p> <p>- 1.3 bulleted sentences - the term ‘historical data’ should be removed. The term ‘evidence’ is sufficiently descriptive and is consistently used in other requirements</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Data Retention section.</p>

Organization	Yes or No	Question 6 Comment
		<p>-Data Retention</p> <p>(1.3) - The data retention requirements are too uncertain for two reasons. First, the requirement to “provide other evidence” if the evidence retention period specified is shorter than the time since the last audit introduces uncertainty because a responsible entity has no means of knowing if or when an audit may occur of the relevant standard.</p> <p>Secondly, it is unclear what ‘other evidence’, besides the specified logs, recordings and emails, an entity may be asked to provide to demonstrate it was compliant for the full time period since their last audit.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p> <p>This comment also applies to COM-002-3 and IRO-001-3.</p> <p>-Data Retention (1.3) - COM-002-3 requires that voice recordings are kept for the most recent 3 calendar months but COM-001-2 requires that they be kept for the most recent 12 calendar months. Manitoba Hydro does not see the reliability benefit of storing voice recordings for longer than 3 months and suggests that voice recordings be removed as evidence for COM-001-2.</p> <p>The RCSDT thanks you for your comment and has provided a retention period of 90 days for voice recordings, if chosen by the entity, as a matter of media storage, and 12 months for all other evidence.</p> <p>Evidence of the availability of Interpersonal Communications and Alternative Interpersonal Communications can be demonstrated using the other forms of evidence listed.</p> <p>The RCSDT thanks you for your comment. The measures provide a significant listing of potential evidence, which allows for compliance flexibility. The measures are examples and the entity is not limited to those examples. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-VSLs (general comment)</p> <p>- for clarity, use for example R1.1 and R1.2 to refer to requirements instead of Part 1.1 and Part 1.2.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Data Retention section.</p> <p>-VSLs R4 - a reference to R4.3 is missing</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the VSL section.</p> <p>COM-002-3-Title</p> <p>- to capture the purpose and intent of the standard, the title should be changed to 'Emergency Communications'.</p> <p>The RCSDT believes the title adequately captures the standard's scope. No change made.</p> <p>-R2 - for clarity, the words 'back to the sender' should be added to the end of the sentence</p> <p>The RCSDT believes the current wording clearly identifies the issuer. No change made.</p> <p>-R3 - for clarity, the words 'to the recipient' should be added to both of the bulleted sentences after 'confirm' and 'reissue'. The words 'evident from the response' should be added to the end of the second bullet.</p> <p>The RCSDT believes the current wording is clear as to who is the recipient. No change made.</p> <p>-A question for the drafting team: has it been discussed whether there should be an additional requirement which indicates that the Reliability Coordinator, Transmission Operator and Balancing Authority shouldn't take any action in a Reliability Directive</p>

Organization	Yes or No	Question 6 Comment
		<p>until such time as it has been confirmed accurate by the sender?</p> <p>If so, does the team feel that it's a worthwhile requirement to consider?</p> <p>RCSDT believes having an additional requirement is unnecessary and would be overly prescriptive. No change made.</p> <p>-M2 - the words 'restated, rephrased or recapitulated' should be added after 'repeated' to be consistent with wording of the requirement.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Measure, M2 in COM-002.</p> <p>-M3 - the words 'to show' should be deleted from the end of this paragraph.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Measure, M3 in COM-002.</p> <p>IRO 001-3-Purpose</p> <p>- the words 'to the Bulk Electric System' already appear in the definitions of Emergency and Adverse Reliability Impact and do not need to be repeated here.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Purpose in IRO-001.</p> <p>-Effective Date</p> <p>- the effective date should be changed to the 2nd calendar quarter following BOT approval in jurisdictions not requiring regulatory approval to be consistent with jurisdictions requiring regulatory approval.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make IRO-001 the same as COM-001 and COM-002.</p> <p>-General comment</p> <p>- There are repeated references to 'identified events'</p>

Organization	Yes or No	Question 6 Comment
		<p>- it is not clear what this is referring to.</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. No change made.</p> <p>M1 - M1 refers to Adverse Reliability Impacts “within its Reliability Coordinator Area.” The requirement does not refer to ‘within its Reliability Coordinator Area’ - the wording in the measure and in the requirement should be consistent.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to IRO-001, M1 to remove the phrase “within its Reliability Coordinator Area.”</p> <p>M2 - missing the word ‘physically’ when describing that a direction could not be implemented, should be consistent with the wording in the requirement.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make IRO-001 measure M2.</p> <p>Compliance</p> <p>- the entire section needs to be updated as it refers to requirements and measures that don’t exist.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make IRO-001 Compliance section 1.3 to remove the invalid references.</p> <p>-VSLs R2 - the reference to ‘fully comply’ is very vague. It is only a violation if the entity does not fall within the exception.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make IRO-001, R2, High VSL to be more consistent with the R2.</p> <p>- R2 VSL - For clarity, change “RC’s directive” to “Reliability Coordinator’s Reliability Directive.”</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make</p>

Organization	Yes or No	Question 6 Comment
		IRO-001, VSL R2, High VSL.
Response: See response above.		
Great River Energy		<p>In IRO-001-3 "authority" should be removed and the verbiage returned to "shall act."</p> <p>The RCSDT believes that other standards (i.e., IRO-009, R3 & R4 and EOP-002, R1 & R8) address the action of others and if the term "authority" is omitted, creates a generic requirement such as what has been suggested puts the RC in a double jeopardy situation. No change made.</p> <p>In COM-002-3 R2 and in Applicability we suggest removing the Distribution Provider as the RC would not likely give a Reliability Directive to a Distribution Provider. The Reliability Directive would more likely come from the Transmission Operator to the Distribution Provider.</p> <p>The RCSDT believes that other standards (i.e., IRO-009 - R3 & R4, EOP-002 - R1 & R8) address the action of others and if the term "authority" is omitted, creates a generic requirement such as what has been suggested puts the RC in a double jeopardy situation. No change made.</p> <p>In COM-002-3 R3 we "replacing "Reissue" with "Restate." You are not technically reissuing the Reliability Directive.</p> <p>COM-002-3, R3: The communications described are not intended to be a once-through process. Effective communications, sometimes referred to as three-part or three-way, often may be effective only after numerous iterations. The RCSDT believes the likely first effort to clarify would be to re-issue the instructions just to determine whether the recipient simply "heard wrong." Using the word re-state seems to imply that the wording is incorrect in some way or for some other reason needs to be said a different way. The RCSDT believes it is more likely that the issuer is attempting to bet the recipient to understand and therefore believes that reissue is more appropriate. No change made.</p>

Organization	Yes or No	Question 6 Comment
<p>Response: See response above.</p>		
<p>Orange and Rockland Utilities, Inc.</p>		<p>Regarding COM-002 Requirement R1, we recommend that this requirement be reworded as follows:</p> <p><i>“When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall require that the Reliability Directive be communicated using three-part communications as described in Requirements R2 and R3 of this standard.”</i></p> <p>The reason for this recommended rewording are threefold:</p> <ol style="list-style-type: none"> <i>1. Good operating practice calls for use of three-part communications at all times. The recommended re-write encourages the use of the good operating practice of three-part communications at all times, but does not require it.</i> <i>2. It is not good operating practice to require that an additional (unnecessary) phrase be used during emergency situations. During emergency situations, it is best to use standard operating protocols so as to limit unnecessary burdens on operating personnel during critical and stressful times.</i> <i>3. By implementing the proposed new R1 requirement, it would effectively weaken the need for rigorous compliance with any and all directives issued by the RC’s, TO’s or BA’s. Regarding IRO-001 Requirement R1, we recommend that the current requirement R3 be reinstated as the new requirement R1.</i> <p>That is, the new requirement R1 should read as follows:</p> <p><i>“R1. The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>without delay, but no longer than 30 minutes.”</i></p> <p>We do not support any further dilution of Reliability Coordinator authority to enforce Reliability Directives through deletion of the 30 minute maximum response time period. The timely actions in response to any Reliability Coordinator issued Reliability Directives is an essential part of the process.</p>
<p>Response: The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and, therefore, does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p>		
<p>Niagara Mohawk (dba National Grid)</p>		<p>COM-001-3</p> <p>- Some requirements are overly prescriptive and not results based.</p> <p>R7 & R8 are not necessary. Every entity at a minimum has a contact with a phone as their "Interpersonal Communications capability." Just need to require that every entity has a plan if they lose their primary communication channel ("Interpersonal Communications capability").</p> <p>The standard establishes requirement for communication capability appropriate to ensure reliability. There is no requirement for it to be different from the Interpersonal Communication capability that its Balancing Authority has with it nor the Interpersonal Communication capability that its Transmission Operator has with it. Cooperation and coordination is always encouraged and is an excellent practice, but is not required by this standard. Thank you for your suggestion. No change made.</p> <p>COM-002-3</p> <p>- Requiring RCs, TOPs and BAs to state an action as a "reliability directive" complicates communications during a time when response time and clarity are important. If those issuing a directive don't get a repeat back they just need to ask for one. The requirement just needs to define "what" is required not "how." This</p>

Organization	Yes or No	Question 6 Comment
		<p>can be handled by procedures and training.</p> <p>The requirement is aimed at being a performance-based requirement and states a description of “what” communication must take place, but does not prescribe “how” the communication is to be made. Adding the suggested phrase “immediately upon receiving it” introduces the ambiguous term “immediately” for which there is neither plain meaning nor simple explanation. What must happen is that the recipient must respond in such a way that the issuer may determine whether the message has been properly understood. The RCSDT concludes that the proposed language gives plain meaning. No change made.</p> <p>- Delete reference to "adverse reliability impact" from the "Directive" definition. The "adverse reliability impact" definition is not clear, is this an actual event or contingency?</p> <p>The words imply it is an actual event which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p>
<p>Response: The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Likewise, the definition of Adverse Reliability Impact clearly identifies as a potential or actual event in the phrase, “an event that results in.” Both conditions are important to the definition. The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term. The term as it appears in the standard is the revised term is the NERC Board of Trustee adopted term: The impact of an event that results in Bulk Electric System instability or Cascading. No change made.</p>		
American Electric Power		<p>COM-001-02</p> <p>R9: A two hour limit to repair or designate a replacement Alternative Interpersonal Communications capability is overly aggressive.</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the</p>

Organization	Yes or No	Question 6 Comment
		<p>entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>COM-002-03</p> <p>R1: Should this requirement also include references to a manual action?</p> <p>The RCSDT believes adding the word “manual” is unnecessary and overly prescriptive. No change made.</p> <p>COM-002-03</p> <p>R3:The text “to resolve any misunderstandings” is unnecessary and should be removed.</p> <p>The RCSDT believes this phrase is essential to the process of communications. No change made.</p> <p>COM-002-3 VSL’s:</p> <p>As we have stated on previous projects, all severity levels need to be commensurate with both:</p> <p>a) the degree by which the requirement was violated, and</p> <p>The RCSDT has followed the VSL Guidelines in properly assigning the VSL as binary. No change made.</p> <p>b) by the impact of the violation to the BES. In this case, a single VSL of “Severe” violates both principles.</p> <p>The RCSDT notes the Violation Risk Factors define the potential impact to the BES; whereas, the VSL is how badly an entity violated the requirement. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>There needs to be more gradients across the severity levels, and the single VSL of “Severe” incorrectly makes the assumption that the impact to the BES was severe.</p> <p>The RCSDT has followed the VSL Guidelines in properly assigning the VSL as binary. No change made.</p> <p>IRO-001-3</p> <p>R1, R2, R3: Having this requirement apply to actions and/or directions (which may be different than Reliability Directives) may put the recipient in a position that they are judged on whether or not they acted on communication that was not a Reliability Directive.</p> <p>The RCSDT views R1 as an authority requirement to direct others, which could include a subset of direction called, Reliability Directive. Requirement R2 is the response requirement for the recipient. The judgment the recipient is under is that the recipient must comply with the direction, unless the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. Requirement R3 is simply requires the recipient to inform the issuer of its inability to perform the direction. No change made.</p> <p>The draft states that the purpose of this standard is “To establish the capability and authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.” The key word used is “direct”, so communications that need to be acted upon should be Reliability Directives only. The addition of any non-defined term is in conflict with the definition and intent of the term Reliability Directive. This could potentially cause confusion, especially at critical times when communication is key.</p>
<p>Response: See response above.</p>		
Georgia Transmission		The following comments are regarding IRO-001-3.

Organization	Yes or No	Question 6 Comment
Corporation		<p>Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator “to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.” Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3.</p> <p>The RCSDT views R1 as an authority requirement to direct others, which could include a subset of direction called, Reliability Directive. Requirement R2 is the response requirement for the recipient. The judgment the recipient is under is that the recipient must comply with the direction, unless the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. Requirement R3 is simply requires the recipient to inform the issuer of its inability to perform the direction. No change made.</p> <p>COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause:</p> <p>“When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact?</p> <p>Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent.</p> <p>The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and, therefore, does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p> <p>It is recommended that the treatment of Reliability Directives shall be consistent</p>

Organization	Yes or No	Question 6 Comment
		<p>with those being developed for TOP-001-2 as proposed by the Real-Time Operations drafting team (Project 2007-03).</p> <p>The RCSDT is using the term in the same context in this standard as it is in TOP-001-2. No change made.</p> <p>As such, consider using the following language for R2: “Each TOP, BA, and GOP shall comply with each identified Reliability Directive issued and identified as such by its RC, unless such actions would violate safety, equipment, regulatory, or statutory requirements.”</p> <p>The RCSDT is addressing a directive (P487, Order 693) to include the DP in COM-001 and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p> <p>Accordingly, please consider using the following language for R3:</p> <p>“Each TOP, BA, and GOP shall inform its RC of its inability to perform an identified Reliability Directive issued by that RC.” Again, we do not believe the DP would receive an identified Reliability Directive directly from the RC and the DP applicability should be removed from this standard. The DP is appropriately captured under COM-002 and TOP-001 with respect to Reliability Directives.</p> <p>Accordingly, NERC’s Reliability Functional Model V5 describes and identifies the DP’s relationships with other functional entities to TOP and BA with respect to Real Time.</p> <p>Real Time⁹</p> <p>7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority.</p>

⁹ NERC Functional Model Version 5, “Functional Entity – Distribution Provider,” pg 47, (http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf)

Organization	Yes or No	Question 6 Comment
		<p>8. Implements system restoration plans as coordinated by the Transmission Operator.</p> <p>9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment.</p> <p>The following comments are regarding COM-001-2.</p> <p>With respect to the Functional Model V5, please see Page 31, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.</p> <p>The SDT should include an additional qualifier to Interpersonal Communications within the context of these requirements, for example (operational or dispatch center communications??). Technically, the air we breathe, as well as other mediums like “any” cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. Assuming at least one employed individual can speak, all entities could demonstrate compliance of this capability at all times, therefore, it is not clear the intent of these requirements are accurately being presented.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>It is recommended to include the use of “signed attestation letters” as examples of evidence under M4 and M11 and other measures as appropriate.</p> <p>The RCSDT proposes that R4 and R11 allow for compliance flexibility. A “signed attestation letter” is one form of evidence. The measures are examples and the entity is not limited to those examples. No change made.</p>

BGE		No comment.
Response: No comment provided.		
Nebraska Public Power District		<p>Comments: COM-001-2:</p> <p>Requirement 10 is too open ended as written. The measure, M10, indicates that only impacted entities need to be notified. The requirement should be changed to make it consistent with the measure. The requirement would then read ‘Each RC, TOP And BA shall notify impacted entities as identified...’Requirements 3 and 5 place the responsibility for establishing Interpersonal Communication capability on the TOP and BA. It is quite conceivable that a TOP or BA may not know all, or newly, registered DPs and GOPs in its respective area.</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>In Requirements 7 and 8, the DP and GOP, respectively, are in turn responsible for establishing Interpersonal Communication capability. The TOPs/BAs and the DPs/GOPs should not be responsible for this. The DPs and GOPs should be held accountable for requesting that capability of their TOP and BA. Therefore, we suggest adding the following phrase at the end of Requirements 3.3, 3.4, 5.3 and 5.4 - ‘that has requested Interpersonal Communications capability.’</p> <p>Then R3.3 would read ‘Each Distribution Provider within its Transmission Operator Area that has requested Interpersonal Communications capability.’</p> <p>The standard establishes requirement for communication capability appropriate to</p>

Organization	Yes or No	Question 6 Comment
		<p>ensure reliability. There is no requirement for it to be different from the Interpersonal Communication capability that its Balancing Authority has with it nor the Interpersonal Communication capability that its Transmission Operator has with it. Cooperation and coordination is always encouraged and is an excellent practice, but is not required by this standard. Thank you for your suggestion. No change made.</p> <p>Requirement 9: could be construed to mean that the repair or replacement due to an unsuccessful test should be completed within 2 hours. In any case a rewording of the second sentence of Requirement 9 would make it clear and we would suggest the following:</p> <p>“ The responsible entity shall, within 2 hours of the unsuccessful test, provide notification to the proper authority in order to initiate repair or designate a replacement Alternative Interpersonal Communications capability. “</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability; and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>COM-002-3:</p> <p>Requirement 2/Measure 2: There is an inconsistency between the requirement and the measure. The requirement allows the recipient to repeat, restate, rephrase or recapitulate the directive. Measure 1 [See M2] only mentions repeating the directive.</p> <p>The RCDST appreciates your observation. The phrases “restate, rephrase or</p>

Organization	Yes or No	Question 6 Comment
		<p>recapitulate,” have been added to Measure, M2.</p> <p>Requirement 3: The second bullet in Requirement 3 appears to require the reissuance of an entire Reliability Directive if only a single point in the directive is not correctly repeated, restated, rephrased or recapitulated. Is this what the SDT intended?</p> <p>Shouldn’t consideration be given for that portion of the directive that was communicated properly? Then only a new, revised directive containing the portion of the original directive that was misunderstood would need to be reissued.</p> <p>The RCSDT’s intention of the requirement is to confirm the communication is confirmed accurate and, if not, any misunderstanding is corrected. The requirement does not limit the entity to reissuing the entire Reliability Directive. So an entity is not precluded from only correcting the portion of the misunderstanding. No change made.</p>
<p>Response: See response above.</p>		
<p>Georgia System Operations</p>		<p>Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator “to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.” Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3.</p> <p>COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: “When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact? Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and</p>

Organization	Yes or No	Question 6 Comment
		<p>COM-002-3 R1 inconsistent.</p> <p>The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and, therefore, does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p> <p>It is recommended that the treatment of Reliability Directives shall be consistent with those being developed for TOP-001-2 as proposed by the Real-Time Operations drafting team (Project 2007-03).</p> <p>The RCSDT is using the term in the same context in this standard as it is in TOP-001-2. No change made.</p> <p>As such, consider using the following language for R2: “Each TOP, BA, and GOP shall comply with each identified Reliability Directive issued and identified as such by its RC, unless such actions would violate safety, equipment, regulatory, or statutory requirements.”</p> <p>Accordingly, please consider using the following language for R3:</p> <p>“Each TOP, BA, and GOP shall inform its RC of its inability to perform an identified Reliability Directive issued by that RC.” Again, we do not believe the DP would receive an identified Reliability Directive directly from the RC and the DP applicability should be removed from this standard. The DP is appropriately captured under COM-002 and TOP-001 with respect to Reliability Directives.</p> <p>The RCSDT believes the latitude afforded in R2 and R3 allows for normal operational dialogue that may not require the use of Reliability Directive. The RC determines when Reliability Directive is applicable. No change made.</p> <p>With respect to the Functional Model V5, please see Page 31, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution</p>

Organization	Yes or No	Question 6 Comment
		<p>Providers, and Interchange Coordinators.” No change made.</p> <p>The RCSDT is addressing a directive (P487, Order 693) to include the DP in COM-001 and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p> <p>Accordingly, NERC’s Reliability Functional Model V5 describes and identifies the DP’s relationships with other functional entities to TOP and BA with respect to Real Time.</p> <p>Real Time¹⁰</p> <p>7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority.</p> <p>8. Implements system restoration plans as coordinated by the Transmission Operator.</p> <p>9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment.</p> <p>The following comments are regarding COM-001-2.</p> <p>With respect to the Functional Model V5, please see Page 31, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.</p> <p>The SDT should include an additional qualifier to Interpersonal Communications within the context of these requirements, for example (operational or dispatch center communications???)?. Technically, the air we breathe, as well as other mediums like “any” cell phone, fax lines, and/or email accounts would qualify under</p>

¹⁰ NERC Functional Model Version 5, “Functional Entity – Distribution Provider,” pg 47, (http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf)

Organization	Yes or No	Question 6 Comment
		<p>this proposed definition of Interpersonal Communication. Assuming at least one employed individual can speak, all entities could demonstrate compliance of this capability at all times, therefore, it is not clear the intent of these requirements are accurately being presented.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The RCSDT agrees with your assessment of “medium” and included the term to allow flexibility for an entity to communicate as they determine and demonstrate compliance. Two or more individuals are required for communication to occur where they interact, consult or exchange information. No change made.</p> <p>The RCSDT proposes that R4 allows for compliance flexibility. “Signed attestation letters” could qualify as “equivalent evidence” as stated in M4 and M11. No change made. It is recommended to include the use of “signed attestation letters” as examples of evidence under M4 and M11 and other measures as appropriate.</p> <p>The RCSDT proposes that R4 and R11 allow for compliance flexibility. A “signed attestation letter” is one form of evidence. The measures are examples and the entity is not limited to those examples. No change made.</p>
<p>Response: See response above.</p>		
<p>Ingleside Cogeneration LP</p>		<p>Ingleside Cogeneration LP is concerned that the entity-to-entity organization of the COM Standards is quickly being outdated by voice and video conferencing or one-to-many broadcasts. In addition, email may be a preferred mode of most communications to and from small Generator Operators.</p> <p>It is not clear that these technologies are precluded from consideration by COM-001 and COM-002 - which means that some auditors may believe that they are. This leads to inconsistent application of the compliance criteria, and may discourage the</p>

Organization	Yes or No	Question 6 Comment
		<p>use of some powerful technologies. It appears to us that some technical guidelines would be appropriate to help entities and auditors decide which are applicable under these Standards.</p>
<p>Response: The RCSDT proposes that COM-001-2 and COM-002-3, as written, allows flexibility for an entity to communicate where two or more individuals are required for communication to occur and they interact, consult or exchange information. Compliance is contained in the measures and an entity must determine if their communication method can demonstrate compliance with the requirements. No change made.</p>		
<p>Duke Energy</p>		<p>- COM-001-2 does not specify how much time an entity is allowed to restore failed Interpersonal Communications capability or failed Alternative Interpersonal Communications capability.</p> <p>R1 through R6 require that the RC, TOP and BA have both. R7 and R8 require that DPs and GOPs have Interpersonal Communications capability. An auditor could find an entity non-compliant with these requirements upon failure of either capability.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>R9, R10 and R11 specify actions to take upon failure, but do not relieve entities of responsibility under R1 through R8.</p> <p>The RCSDT believes non-compliance is not due solely to the failure of any Interpersonal Communication capability, but must be accompanied by a failure to consult with the applicable Transmission Operator or Balancing Authority to establish mutually agreeable action for restoration. No change made.</p> <p>-COM-001-2 R9, M9 and VSLs - M9 and VSLs should be revised to be consistent with wording of R9 phrase “at least once per calendar month.”</p> <p>The RCSDT agrees with your comments and has aligned M9 and the R9 VSL to the R9</p>

Organization	Yes or No	Question 6 Comment
		<p>to use “once each calendar month.”</p> <p>-COM-001-2 R10, M10 and VSLs - Clarity is needed regarding when the 60-minute clock starts. For example, suppose a failure is detected immediately upon occurrence of the failure. Does the 60-minute clock start immediately, or after the failure has lasted 30 minutes? When does the 60-minute clock start if a failure is detected and the entity is unsure when it occurred?</p> <p>The RCSDT proposes that upon detection of failure that continues at least 30 minutes, starts the 60-minute clock. The 30 minutes allows an entity time to restore or determine if it can restore its Interpersonal Communication capability before the clock starts. No change made.</p> <p>-COM-001-2 R10, M10 and VSLs - If the failure only lasts for 35 minutes, it appears that the RC, TOP or BA is still required to notify entities identified in R1 through R6. Is this the drafting team’s intent?</p> <p>Yes. The clock starts upon detection of failure of at least 30 minutes. No change made.</p> <p>-COM-001-2 R10, M10 and VSLs - Should be revised since the RC, TOP and BA are only required to have Alternative Interpersonal Communications capability with other RCs, TOPs and BAs per R2, R4 and R6.</p> <p>For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>Suggested rewording for R10:</p> <p><i>“Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify entities with which it is required to have Alternative Interpersonal Communications capability as identified in R2, R4 and R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer.”</i></p>

Organization	Yes or No	Question 6 Comment
		<p>-COM-001-2 M11 and VSL - Replace the word “their” with the word “its.” The RCSDT agrees and has modified M11 and VSL, as you suggested.</p> <p>-COM-001-2 Data Retention - The way Data Retention is being enforced, this whole section could just be reduced to a blanket statement that an entity must be able to provide evidence that it has been in compliance since its last audit. The RCSDT has provided the Data Retention section consistent with the approved Standard Drafting Team Guidelines. No change made.</p> <p>-COM-002-3 R2, M2 and VSL - Replace “and” with “or.” The RCSDT agrees with your comment and modifies R2, M2, and VSL accordingly. Also, the phrase “repeat, restate, rephrase or recapitulate” seems excessive and may be intended to avoid a violation where an entity fails to repeat the Reliability Directive word for word. Suggested rewording: “Each Balancing Authority, Transmission Operator, Generator Operator or Distribution Provider that is the recipient of a Reliability Directive shall repeat the Reliability Directive back to the issuer with sufficient accuracy so that understanding can be confirmed.” The RCSDT believes the term suggested “sufficient accuracy” is subject to interpretation. The RCSDT proposes the terms to allow a recipient to convey the message back to the issuer without a word-for-word requirement as long as the issuer confirms the accuracy of the response or reissues it to resolve any misunderstanding. No change made.</p> <p>-COM-002-3 R3, M3 - Replace “and” with “or.” The RCSDT agrees with your comment and modifies R3, M3, and VSL accordingly.</p> <p>-IRO-001-3 - We believe that the Purpose and the Requirements of this standard should be focused solely on situations where the Reliability Coordinator issues Reliability Directives to prevent an Emergency or Adverse Reliability Impact.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT development of IRO-001-3 R1 states “...which could include issuing Reliability Directives...” and, therefore, does not preclude its use if it is determined by the RC to use it. There may be instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. No change made.</p> <p>IRO-001-3 - The Purpose should be rewritten as follows: “To establish the authority of Reliability Coordinators to issue Reliability Directives to other entities to prevent an Emergency or the impact of an event that results in Bulk Electric System instability or Cascading.”</p> <p>The RCSDT appreciates the suggested rewording; however, the RCSDT development of the IRO-001-3 Purpose Statement allows for instances where the RC discusses operational issues in normal dialogue with entities that do not require the use of Reliability Directive. The requirements of IRO-001-3 allow the RC to issue a Reliability Directive if they determine one should be issued. No change made.</p> <p>-IRO-001-3 - R1 should be rewritten as follows: “Each Reliability Coordinator shall have authority to act or to issue Reliability Directives to others, including but not limited to the Transmission Operator, Balancing Authority and Generator Operator within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or the impact of an event that results in Bulk Electric System instability or Cascading.”</p> <p>The RCSDT appreciates the suggested rewording; however, the Functional Model V5 addresses the scope of the RC function. No change made.</p> <p>-IRO-001-3 - R2 should be rewritten as follows: <i>“Each Transmission Operator, Balancing Authority, Generator Operator or Distribution Provider shall comply with a Reliability Directive issued by the Reliability Coordinator unless the Reliability Directive cannot be physically implemented or unless such action would violate safety, equipment, regulatory, or statutory requirements.”</i></p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT appreciates the suggested rewording; however, as written R2 allows for normal operational dialogue without having to invoke a Reliability Directive by the RC. No change made.</p> <p>-IRO-001-3 - R3 should be rewritten as follows: “Each Transmission Operator, Balancing Authority, Generator Operator or Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to comply with a Reliability Directive in accordance with Requirement R2.</p> <p>The RCSDT appreciates the suggested rewording; however, as written R2 allows for normal operational dialogue without having to invoke a Reliability Directive by the RC. No change made.</p> <p>-IRO-001-3 Measures and VSLs - Should be revised to conform with the above suggested revisions to requirements.</p>
<p>Response: See response above.</p>		
<p>ISO New England</p>		<p>none</p>
<p>ERCOT ISO</p>		<p>Regarding COM-001-2:</p> <p>We are not clear on the time horizon of requirements for COM-001-2. Based upon the purpose statement, it appears that establishment would be ahead of real time. Wording in the requirements could be construed as maintaining at all times vs. establishing communications.</p> <p>The RCSDT proposes that compliance with requirements of the standard must be demonstrated. The Purpose Statement is not measured. No change made.</p> <p>The timeline for mandatory/effectiveness may not be acceptable to establish communications with DPs if hardware procurement/projects must take place.</p> <p>The RCSDT considered concerns about the implementation of the requirements by DP and GOPs and concluded the requirements are achievable within the</p>

Organization	Yes or No	Question 6 Comment
		<p>implementation period. No change made.</p> <p>Regarding IRO-001-3:</p> <p>We have some concern for the removal of LSE in particular from R2 and R3 from current IRO-001-2 for the ERCOT region. The ERCOT region has QSEs that manage Load Resources. There may be some QSEs that are not registered as a GOP that deploy Load Resources. Per the current LSE JRO, QSEs with Load Resources are registered as LSEs. Not requiring LSEs to deploy Load Resource directives could be perceived as a reliability gap created from the previous version to this version. PSEs could be removed as long as they fall under BA authority.</p> <p>The RCSDT believes the DP is the correct entity because the LSE does not own assets. The definition of LSE is, “The functional entity that secures energy and transmission service (and reliability related services) to serve the electrical demand and energy requirements of its end use customers.” In contrast, the definition of a DP is, “The functional entity that provides facilities that interconnect an End-use Customer load and the electric system for the transfer of electrical energy to the End-use Customer. Additionally, the Functional Model V5 demonstrates this under the Reliability Coordinator, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.</p> <p>The Data Retention section should be corrected to match the new requirements numbers and elimination of the previous version R1 with ERO.</p> <p>The Version History mentions six requirements retired, but only details five.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>
<p>Response: See response above.</p>		

Organization	Yes or No	Question 6 Comment
ReliabilityFirst		<p>Comments on COM-001-2</p> <p>1. Applicability Section</p> <p>a. RFC recommends adding the Generator Owner to the applicably section of the standard along with corresponding Requirements R8 and R11. ReliabilityFirst believes to maintain system reliability and based on certain business practices in effect, Generator Owners need to be required to have associated Interpersonal Communications with its Balancing Authority and Transmission Operator.</p> <p>The RCSDT considered this situation and have concluded Generator Owners do not operate facilities of the BES. Under the Functional Model V5 Generator Owners have these Relationships with Other Functional Entities. The following is an excerpt from the Functional Model V5 concerning the Generator Owner. No change made.</p> <ol style="list-style-type: none"> 1. Provides generator information to the Transmission Operator, Reliability Coordinator, Balancing Authority, Transmission Planner, and Resource Planner. 2. Provides unit maintenance schedules and unit retirement plans to the Transmission Operator, Balancing Authority, Transmission Planner, and Resource Planner. 3. Develops an interconnection agreement with Transmission Owner on a facility basis. 4. Receives approval or denial of transmission service request from Transmission Service Provider. 5. Provides reliability related services to Purchasing-Selling Entity pursuant to agreement. 6. Reports the annual maintenance plan to the Reliability Coordinator, Balancing Authority and Transmission Operator. 7. Revises the generation maintenance plans as requested by the Reliability Coordinator.

Organization	Yes or No	Question 6 Comment
		<p>2. Requirement R7 and R8</p> <p>a. ReliabilityFirst seeks further clarity on why the Distribution Provider and Generator Operator are not required to designate an Alternative Interpersonal Communications capability?</p> <p>Requirements R7 and R8 require the Distribution Providers and Generator Operators to have Interpersonal Communications capability but there is not corresponding requirement to have an Alternative Interpersonal Communications capability.</p> <p>ReliabilityFirst recommends adding two new requirements for the Distribution Provider and Generator Operator to designate an Alternative Interpersonal Communications capability. This will be consistent with how Requirements R1 through R6 are set up.</p> <p>The standard establishes requirement for communication capability appropriate to ensure reliability. In addition, R7 and R8 are responsive to FERC Order No. 693. Entities may use the telephone cited in the example as their Interpersonal Communication capability. Requirement R11, as modified, addresses the loss of Interpersonal Communication capability. No change made.</p> <p>3. Requirement R9</p> <p>a. Assuming new requirements for the Distribution Provider and Generator Operator to designate an Alternative Interpersonal Communications capability (based on previous comment) are added to the standard, the Distribution Provider and Generator Operator will need to be added to Requirement R9 to test its Alternative Interpersonal Communications capability at least once per calendar month.</p> <p>The RCSDT thanks you for your comment and believes the DP and GOP only need Interpersonal Communication capability and it meets the respective FERC directive. No change made.</p> <p>4. Requirement R10</p> <p>a. Based on the ReliabilityFirst comment submitted for Question 4, ReliabilityFirst</p>

Organization	Yes or No	Question 6 Comment
		<p>believes the Distribution Provider and Generator Operator should be included in Requirement R10.</p> <p>The RCSDT proposes that DP and GOP are included in the requirement. "... shall notify entities..." as identified in R1 through R6. No change made.</p> <p>b. Since Interpersonal Communications capabilities is a very important piece of operating the BES in a reliable manner, ReliabilityFirst believes the timeframe in which an entity is required to notify the entities is too long. ReliabilityFirst recommends the following language for Requirement R10:</p> <p>i. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall notify entities as identified in Requirements R1 through R8 of a failure of its Interpersonal Communications capabilities that lasts 15 minutes or longer. The notification shall be made within 30 minutes of the detection of a failure.</p> <p>The RCSDT proposed the time frame to allow sufficient time for an entity to determine if IC could be restored. No change made.</p> <p>5. VSLs for Requirement R1 through R8</p> <p>a. ReliabilityFirst suggest gradating the VSLs for R1 through R8. Listed below is an example of how to gradate the VSL for R1. The same type of approach could be used for R2 through R8 as well.</p> <p>i. High VSL- the Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 or 1.2.</p> <p>ii. Severe VSL - The Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 and 1.2.</p> <p>The RCSDT has applied the VSL to the Severe column because not having Interpersonal Communication capability with any entity is detrimental to reliability.</p>

Organization	Yes or No	Question 6 Comment
		<p>No change made.</p> <p>6. VSL for Requirement R9</p> <p>a. For consistency with the requirement language, ReliabilityFirst recommends adding the words “at least on a monthly basis” to the Lower, Moderate and High VSLs and adding the words “if the test was unsuccessful” to the end of the Lower, Moderate and High VSLs.</p> <p>Listed below is an example of the Lower VSL.</p> <p>i. The responsible entity tested the Alternative Interpersonal Communications capability at least once per calendar month but failed to initiate action to repair or designate a replacement Alternative Interpersonal Communications in more than 2 hours and less than or equal to 4 hours if the test was unsuccessful.</p> <p>The RCSDT notes the requirement requires the entity to perform the test each month. If the test is not performed during each month, there is no other option for gradating the severity of the violation. No change made.</p> <p>7. VSL for Requirement R10</p> <p>a. ReliabilityFirst provided alternate language for R10 in the comments listed above. If the alternated language is not incorporated, ReliabilityFirst recommends the following language for the Lower VSL. Similar language could be used for the Moderate, High and Severe VSLs as well.</p> <p>i. The responsible entity failed to notify entities as identified in Requirements R1 through R6 more than 60 minutes but less than or equal to 70 minutes of the detection of a failure of its Interpersonal Communications capabilities.</p> <p>b. If the alternate language for R10, in the comments listed above, is incorporated, ReliabilityFirst recommends the following language for the Lower VSL. Similar language could be used for the Moderate, High and Severe VSLs as well.</p> <p>i. The responsible entity failed to notify entities as identified in Requirements R1</p>

Organization	Yes or No	Question 6 Comment
		<p>through R6 more than 30 minutes but less than or equal to 740 minutes of the detection of a failure of its Interpersonal Communications capabilities</p> <p>c. For Moderate VSL (the VSL after the OR statement), ReliabilityFirst recommends using a percentage rather than the “least one, but not all” statement. For example, if there is say 100 impacted entities and the applicable entity only notify 1, they would only fall under the Moderate. In another scenario there is say 100 impacted entities and the applicable entity only notified 99, they would also fall under the Moderate as well. The use of percentages will help even this out.</p> <p>The RCSDT made conforming changes to the VSLs to address a number of comments and changes to the requirements.</p> <p>8. VSL for Requirement R11</p> <p>a. For consistency with the requirement language, ReliabilityFirst recommends the following language:</p> <p>i. The responsible entity that experiences a failure of any of its Interpersonal Communication capabilities failed to consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.</p> <p>Comments on COM-002-3</p> <p>The RCSDT has made conforming changes to the VSLs due to comments received about the R11.</p> <p>1. Requirement R1</p> <p>a. Based on ReliabilityFirst suggested change to the definition of “Reliability Directive” as noted in Question 5, ReliabilityFirst recommends deleting Requirement R1. Based on the suggested definition, any communication initiated, where an action by the recipient is required, is considered a “Reliability Directive.” Thus, there would no longer be a need for responsible entity to identify the action as a</p>

Organization	Yes or No	Question 6 Comment
		<p>“Reliability Directive” to the recipient.</p> <p>In coordination with the RTOSDT work on the TOP family of standards, the RCSDT does not propose that the Reliability Directive definition contain a requirement for action to be taken. Therefore, R1 is retained as a requirement for the “action” to be taken. No change made.</p> <p>2. VSL for Requirement R3</p> <p>a. For consistency with the requirement language, ReliabilityFirst recommends the following language:</p> <p>The RCSDT has followed the VSL Guidelines in properly assigning the VSL as binary. No change made.</p> <p><i>i. The responsible entity issued a Reliability Directive, but failed to confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate.</i></p> <p>Comments on IRO-001-3</p> <p>1. Requirement R1</p> <p>a. ReliabilityFirst seeks further clarity on why Requirement R1 only requires the Reliability Coordinator to have the “authority to act” rather than requiring the Reliability Coordinator to actually “take action” to prevent identified events that result in an Emergency or Adverse Reliability Impacts. Having the “authority to act” does not inherently require the Reliability Coordinator to take action, if appropriate.</p> <p>The RCSDT proposes that R1 reflects the Purpose of IRO-001-3. No change made.</p> <p>b. ReliabilityFirst seeks further clarity on the language “to prevent identified events.” If the event was already identified, how can the Reliability Coordinator act to prevent it? ReliabilityFirst recommends adding the word “potential” in between the words “prevent” and “identified.”</p> <p>The context of “identified” is when a set of system conditions is recognized that</p>

Organization	Yes or No	Question 6 Comment
		<p>could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. No change made.</p> <p>2. Requirement R3</p> <p>a. There is no time qualifier specified in Requirement R3 dealing with the timeframe in which the applicable entity has to inform its Reliability Coordinator of its inability to perform as directed in accordance with Requirement R2. Without a time qualifier, Requirement R3 is open ended and could cause issues if the applicable entity does not inform its Reliability Coordinator upon recognition of its inability to perform as directed in a timely manner. ReliabilityFirst recommends the following language for Requirement R3:</p> <p><i>i. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator within 30 minutes upon recognition of its inability to perform as directed in accordance with Requirement R2.</i></p> <p>The RCSDT proposes the term “upon recognition of its inability to perform” does not require a time limit. No change made.</p> <p>The Measure M3, has been updated to include the phrase “upon recognition of its inability” to be consistent with R3.</p> <p>3. VSL for Requirement R1</p> <p>a. Requirement R1 requires the Reliability Coordinator to “...have the authority to act” - and the VSL does not reflect this language. ReliabilityFirst had questioned why Requirement R1, does not specifically require the RC to take action or direct actions in a comment submitted under Requirement R1. If the SDT does not change the language in Requirement R1, ReliabilityFirst recommends the following language:</p> <p><i>i. The Reliability Coordinator failed to have the authority to take action or direct actions, to prevent an identified event that resulted in an Adverse Reliability Impact.</i></p> <p>The RCSDT made conforming changes to the VSL.</p>

Organization	Yes or No	Question 6 Comment
		<p>4. VSL for Requirement R2</p> <p>a. For the High VSL, the words “fully comply” are ambiguous and open to interpretation. ReliabilityFirst recommends only having a Severe VSL.</p> <p>b. The Severe VSL states “directive” while Requirement R2 states “direction.” To be consistent, ReliabilityFirst recommends the following language:</p> <p><i>i. “The Responsible Entity failed to comply with its Reliability Coordinator’s direction”</i></p> <p>The RCSDT thanks you for your comment and has made conforming changes to the VSL.</p>
<p>Response: See response above.</p>		
<p>City of Vero Beach</p>		<p>In the definition of Interpersonal Communication, the use of the word “medium” is ambiguous. Suggestions for alternatives: “system”, “channel.”</p> <p>The RCSDT proposes the term “medium” to allow entities flexibility on how they communicate and meet compliance with the requirements. No change made.</p> <p>COM-001-2, R1 and R3, the phrase: “have Interpersonal Communications capabilities”, what if the communication system fails?</p> <p>The RCSDT proposes that AIC is in force at that time. No change made.</p> <p>Is that an immediate non-compliance (especially R3.3 and R3.4 which do not require a redundant system). Suggest using EOP-008 type of language to allow restoration of failed equipment without non-compliance.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the</p>

Organization	Yes or No	Question 6 Comment
		<p>flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>COM-001-2, R9 - "Each ... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity. In addition, the type of testing is unclear and ambiguous.</p> <p>The RCSDT proposes that R9 correctly identifies and provides clarity for the entities required to have Alternative Interpersonal Communication capability. No change made.</p> <p>The is also ambiguity in the terms "direct", "directive", "direction" and "Reliability Directive." The SDT may want to consider using the terms "instruct" and "instruction" in place of "direct," "directive," or "direction" to more clearly distinguish from a Reliability Directive.</p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards and is consistent with previous postings. No change made.</p>
<p>Response: See response above.</p>		
<p>NV Energy</p>		<p>The meaning of R9 is open to some interpretation. It states that if the monthly test is unsuccessful, the entity shall "initiate action to repair or designate a replacement" AIC within 2 hours. The meaning of this is unclear in several ways:</p> <p>First, does "initiate action" apply to the remainder of the sentence or just to the "repair" option?</p> <p>Second, what constitutes initiation of action?</p> <p>Is it the intent of the SDT that the alternate interpersonal communications be</p>

Organization	Yes or No	Question 6 Comment
		<p>restored within a 2-hour limit?</p> <p>If so, the words do not clearly state that, and it seems an impossible task to ensure no more than 2-hr outage to an alternate communications medium. I am voting affirmative under the interpretation that one must only "initiate" the repair or "initiate" the designation of a replacement option within this tight 2-hour limit.</p>
<p>Response: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability; and then, if it decides to do so, designate another, if you may, "new" Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p>		
<p>Midwest Independent Transmission System Operator</p>		<p>COM-001-2, R2 and R6:</p> <p>MISO requests clarification as to whether the designation of Interpersonal Communications and Alternative Interpersonal Communications methods by Responsible Entities must be formally documented and/or agreed upon with those entities with which communications capability must be established.</p> <p>The RCSDT has provided flexibility to the responsible entity with regard to implementation and compliance. Please note that Interpersonal Communication is a "shall have" and Alternative Interpersonal Communication capability is "designate." Please refer to the Measures for suitable evidence, which may be used to support compliance with the requirement. No change made.</p> <p>COM-001-2, R9:</p> <p>MISO suggests that the designation of Alternative Interpersonal Communications methods should not require formal documentation and may be agreed upon (when necessary) informally with those entities with which communications capability must be established in the event of an unsuccessful test of its Alternative Interpersonal</p>

		<p>Communications capability.</p> <p>The RCSDT has provided flexibility to the responsible entity with regard to implementation and compliance. Please note that Interpersonal Communication is a “shall have” and Alternative Interpersonal Communication capability is “designate.” Please refer to the Measures for suitable evidence, which may be used to support compliance with the requirement. No change made.</p> <p>COM-001-2, Requirement R10:</p> <p>MISO requests clarification as to whether “impacted entities” refers to those entities with which the Responsible Entity must have Interpersonal Communications and Alternative Interpersonal Communications capability.</p> <p>Further, MISO requests clarification as to whether the notification required by R10 must be made using the Alternative Interpersonal Communications method selected by the Responsible Entity.</p> <p>The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p> <p>With respect to the method used by the Responsible Entity, the standard does not provide the “how” or any prescriptive method for accomplishing the requirement. No change made.</p> <p>COM-002-3, R1 - R3:</p> <p>MISO respectfully submits that, while it appreciates the distinction in responsibilities proposed in the new COM-002-3 and acknowledges that such distinction is beneficial, these requirements increase compliance risk and potential penalty liability without attendant benefit to the reliability of the Bulk Electric System. MISO respectfully suggests that Requirements 2 and 3 be converted into sub-requirements</p>

Organization	Yes or No	Question 6 Comment
		<p>as follows:</p> <p><i>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p><i>R1.1. When the Reliability Coordinator, Transmission Operator or Balancing Authority identifies a stated action as a Reliability Directive, the receiving Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider shall repeat, restate, rephrase or recapitulate the Reliability Directive to the issuing Reliability Coordinator, Transmission Operator or Balancing Authority. [Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p><i>R1.2. When the Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive receives a response from the receiving Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider, it shall then either [Violation Risk Factor: High][Time Horizon: Real-Time]:</i></p> <ul style="list-style-type: none"> -Confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate, or -Reissue the Reliability Directive to resolve any misunderstandings. <p>The RCSDT contends the requirements in the proposed standard have been constructed in accordance with standard development guidelines to have only one performance per requirement. The suggested change places three independent actions within one requirement. No change made.</p>
<p>Response: See response above.</p>		
Texas Reliability Entity		<p>(1) There are numerous errors in the Mapping Document in referencing the current version of the standard and requirement. Specifically, referencing IRO-001-2 where it appears that the document should reference standard IRO-001-3. In addition, the</p>

Organization	Yes or No	Question 6 Comment
		<p>notes on page 2 of COM-002-3 are incorrect.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(2) In the VRF/VSL Justification document, there are numerous errors in referring to standard versions and requirements.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(3) In IRO-001-3, R1 - What is an “identified event,” and who “identifies” an event that requires compliance with this requirement R1? An RC may choose not to “identify” an event, such as a limit violation, and run the risk of causing or exacerbating an emergency. If the RC does not “identify” the event, it may become an actual event and then fall within the standard.</p> <p>The context of “identified” is when a set of system conditions are recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. The RC named in R1 is the entity that identifies the even that requires compliance. No change made.</p> <p>(4) In the VSL for IRO-001-3, R1, there should be language in the VSL to capture the term “Emergency,” which was added in the Requirement. The High VSL for R2 needs to be fixed.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections. The “N/A” in R2 of COM-002-3 was removed.</p> <p>(5) In IRO-001-3, R1, remove the “s” in the phrase “Adverse Reliability Impacts.”</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(6) Referring to the Implementation Plan for IRO-001 - There is a different list in the Implementation Plan (R2, R4, R5, R6, R7, R9) than the Revision History of the Standard (R2, R4, R5, R6, R8). Where is the retirement of R1 shown?</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(7) Referring to COM-001-2: Measure 7, the word “that” is inadvertently repeated in</p>

Organization	Yes or No	Question 6 Comment
		<p>the first sentence.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in Measure M8 has been changed to delete the additional “that.”</p> <p>(8) In COM-001-2, Measure 9, is “at least on a monthly basis” to be interpreted differently than “at least once per calendar month” as stated in the requirement?</p> <p>The RCSDT thanks you for your comments and has made conforming corrections to Measure M9 and the R9 VSL.</p> <p>(9) In COM-001-2, there is a “Measure 12” bullet that should be removed.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p> <p>(10) Referring to COM-002-3: Electronic directives (which may be issued over many different types of electronic communication channels) are increasingly necessary to manage the modern, dynamic Bulk Power System (generation and transmission) on a real-time basis. The effective use of electronic directives is undermined by this proposed Standard in its current form. This draft standard, in conjunction with other standards that refer to directives, appears to require that directives (at least Reliability Directives) be given verbally. The failure of the NERC standards to address electronic directives may cause significant manpower issues for BAs with large portfolios of generation to manage.</p> <p>The RCSDT proposes that COM-001-2 and COM-002-3, as written, allows flexibility for an entity to communicate where two or more individuals are required for communication to occur and they interact, consult or exchange information. Compliance is contained in the Measures and an entity must determine if its communication method can demonstrate compliance with the requirements. No change made.</p> <p>(11) In the VSL for COM-001-2 R4, a reference to Part 4.3 should be added.</p> <p>The RCSDT thanks you for your comments and has made conforming corrections.</p>

Organization	Yes or No	Question 6 Comment
		<p>(12) In IRO-001-3, Part 1.3 Data Retention, the reference in the first bullet to “Electric reliability Organization” is incorrect. We think it should say “Reliability Coordinator” instead.</p> <p>The other references to entities and to Requirements in this Part 1.3 also appear to be incorrect and need to be updated and corrected.</p> <p>The RCSDT thanks you for your comment and has made conforming changes.</p> <p>(13) Referring to COM-001-2, the prior version of this standard included Requirement R5: “Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities.” This Requirement has been removed from the present draft of COM-001-2.</p> <p>The RCSDT removed this requirement because it did not have a reliability benefit. No change made.</p> <p>The mapping document seems to suggest that this Requirement was moved to EOP-008, but it is not there. We are concerned that removal of this Requirement will result in a reduction in the level of BES reliability and introduce a potential reliability gap.</p> <p>As stated in the Implementation Plan, the RCSDT proposes retiring COM-001-1, R5 as it is redundant with EOP-008-0, R1 as well as replacement EOP-008-1, R1. No change made.</p>
<p>Response: See response above.</p>		
<p>Hydro One Networks Inc.</p>		<p>(1) The proposed implementation plan conflicts with Ontario regulatory practice respecting the effective date of the standard. It is suggested that this conflict be removed by appending to the implementation plan wording, after “applicable regulatory approval” in the Effective Dates Section A5 on P. 4 of the draft standard</p>

Organization	Yes or No	Question 6 Comment
		<p>COM-001, COM-002 and IRO-001, and on P. 2 of COM-001’s Implementation Plan and P. 1 of COM-002’s and IRO-001’s Implementation Plans, to the following effect:”, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.”</p> <p>The RCSDT is uncertain where the conflict exists. The standard IRO-001 uses the term “after applicable” and the others “following applicable.” The RCSDT has updated the standards to use the most current effective date language.</p> <p>(2) COM-001: Measure M9: - “monthly basis.” Suggest changing “monthly basis” to “at least once per calendar month” to be consistent the wording in R9.</p> <p>The RCSDT thanks you for your comment and has made conforming changes the Measure M9 and the R9 VSL.</p> <p>(3) IRO-001: Measures M1, M2, M3 - The types of evidence are listed in paragraph form. This is not consistent with presentation style in COM-001-2 Measures, where evidence is listed in bullet format. Suggest using bullet form for consistency.</p> <p>The RCSDT appreciates your comments and has made all the Measures bullet form in COM-001-2, but not in COM-002-3 and IRO-001-3.</p> <p>(4) IRO-001, Data Retention Section:</p> <p>i. The retention requirements do not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4.</p> <p>ii. Section 1.3, second paragraph:</p> <p>“The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider... shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to</p>

Organization	Yes or No	Question 6 Comment
		<p>retain specific evidence for a longer period of time as part of an investigation:"</p> <p>The word "or" between Generator Operator and Distribution Provider should be changed to "and."</p> <p>The RCSDT thanks you for your comment and has made conforming changes to the Data Retention section.</p>
<p>Response: See response above.</p>		
<p>New York Independent System Operator</p>		<p>COM-001</p> <p>The drafting team has complicated the requirements by having different requirements between RC/TOP/BA and other entities such as GOP/LSE/DP. The proposal is for redundancy to be required only between RC/TOP/BA. The requirement should be simplified to require all identified entities to have plans for loss of primary communication channels. This could include third parties as a communication channel.</p> <p>The RCSDT refers the Order No. 693 in Paragraph 508 to clarify the reason the DP and GOP are not required to have Alternative Interpersonal Communication and is as follows: "(1) expands the applicability to include Generator Operators and Distribution Providers and includes Requirements for their telecommunications facilities; (2) identifies specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation and (3) includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions." In addition, R11 requires the DP and GOP to consult with its BA and TOP to determine a mutually agreeable action for restoration. No change made.</p> <p>COM-002</p> <p>The drafting team added a requirement to identify a Reliability Directive is being initiated during an emergency to track 3-part communication for compliance</p>

Organization	Yes or No	Question 6 Comment
		<p>purposes. This will change and complicate the communication protocols between normal and emergency operations simply to simplify compliance assessments. The NYISO is asking for clarification that an entity may identify Reliability Directives as a category of communications to be communicated through procedures and training; and will not require a different communication protocol between normal and emergency operations. Affective communications can only be achieved through consistent processes for all conditions. Compliance assessments should be made on when we are in an emergency or not, and not on how the dialogue was initiated.</p> <p>The RCSDT believes the standard allows for this condition, and the method of implementation is up to the entity. No change made.</p>
<p>Response: See response above.</p>		

END OF REPORT

Consideration of Comments

Project 2006-06 Reliability Coordination

The Reliability Coordination Standard Drafting Team (RCSDT) thanks all commenters who submitted comments on the successive posting of the COM-01-2 reliability standard for Project 2006-06—Reliability Coordination. These standards were posted for a 30-day public comment period from June 7, 2012 through July 6, 2012. Stakeholders were asked to provide feedback on the standards and associated documents through a special electronic comment form. There were 41 sets of comments, including comments from approximately 136 different people from approximately 90 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

Summary Consideration

The RCSDT received comments from stakeholders, where a majority of those comments were focused on compliance elements of the standards, various typographical errors, and other minor ambiguities. The RCSDT believes it has been responsive to the many comments and has either provided adequate explanation, where applicable, as well as incorporating the suggested clarifications or corrections. There was one minority issue raised by several commenters which the RCSDT addressed, but did not make a revision to the standard. These commenters suggested adding a time threshold to Requirement R11 that would trigger the Distribution Provider and Generation Operator to consult with its Balancing Authority and Transmission Operator after losing its Interpersonal Communication capability for a defined period. The RCSDT believed this would be unnecessarily prescriptive and notes that each entity along with its affected neighbors, should, by procedures, identify what constitutes the detection of a failure of its capability and the acceptable time threshold for restoration. Revisions made to the standards are summarized in the following sections by standard.

COM-001-2

In the last posting and successive ballot, the standard received approval from 72.16% of the ballot body and fewer overall comments from previous postings. The RCSDT made minor, non-substantive changes to the standard based on these comments. The RCSDT believes it has addressed stakeholder comments and concerns in such a way that the standard is improved and meets the expectations expressed in comments for reliability and industry approval. Now that the standard has achieved industry consensus, this standard will advance to a recirculation ballot.

Purpose: No change.

Effective Date: No change.

Requirements: Changes were minor. The RCSDT for Requirements R1, R3, R5, R7, R8, and R11 changed the term “experiences” in the phrase “experiences a failure” to “detects.” This more appropriately aligns with the performance expectation that an entity must detect a failure first which would start the threshold for performance. The change maintains the intent while adding clarity and measurability.

The RCSDT also notes a minor change in Requirement R5, Part 5.5 and Requirement R6, Part 6.3 concerning “adjacent.” The team, during the revisions of draft 6, inadvertently changed “Adjacent” to a lower case when making revisions to the two parts that began with capitalized term. Commenters regarding draft 5 were concerned that the capitalized term would imply a NERC Glossary term, such as, “Adjacent Reliability Coordinator,” and cause confusion since there was no such term. The RCSDT recognizes that the glossary term should have remained, in the case of Parts 5.5 and 6.3, “Adjacent Balancing Authority.”

One commenter argued that the Violation Risk Factor (VRF) for Requirement R7 should be Medium, not High. The RCSDT considered this argument and concluded the change had merit based on the risk a Distribution Provider has in the scope of communications. Furthermore, the RCSDT also considered the VRF with regard to the Generator Operator in Requirement R8, but concluded the VRF should remain High because the Generator Operator may have a role as a blackstart resource in a Reliability Coordinator’s restoration plan.

Other commenters raised a concern that the relationship in Requirement R10 between the functions and the requirements listed were not clear. The suggested solution was to use the phrase, “as applicable”; however, the RCSDT opted to use the term “respectively” to more appropriately make the distinction between the functions and the listed requirements (i.e., the Reliability Coordinator (R1), Transmission Operator (R3), and Balancing Authority (R5)). This change was also applied to Measure M11.

Measures: One commenter recognized an error in Measure M3. The conjunction between asynchronously and synchronously should have been “or,” not “and” to accurately reflect the situation in Requirement R3, Parts 3.5 and 3.6. The extra word “that” was removed from Measure M7, as it was a typographical error. Measure M10 was updated to include the word “respectively” to coincide with the revision to Requirement R10. The Measure M11 was revised to reflect the changes in Requirement R11 to change the word “experiences” to “detects.” Last, the colon in Measures M9, M10, and M11 was moved to the appropriate location in each sentence.

Compliance, Compliance Enforcement Authority: No change.

Compliance, Data Retention: A commenter raised the question about the Measures allowing voice recordings, but requiring an entity to maintain this evidence for 12 calendar months. Standard drafting guidelines recommend that voice recordings be retained for 90 calendar days. The RCSDT agreed that 90 calendar days is the recommended practice and modified each of the data retention bulleted items to reflect the specific case of voice recordings.

Violation Severity Levels: Several of the Violation Severity Levels (VSL) required updating to account for the term changes in the requirements and the correction of certain typographical errors. For the word change from “experiences” to “detects,” the following VSLs were revised; R1, R3, R5, R7, R8, and R11. The Requirement R3 VSL had the “Reliability Coordinator” listed where it should have been the “Transmission Operator.” Likewise, the same error appeared in the Requirement R5 VSL where “Reliability Coordinator” should have been “Balancing Authority.” A commenter discovered a minor conjunction error in the Requirement R9 VSL in the listing of functional entities. The conjunction was changed from “and” to “or” to accurately reflect the construction of the VSLs. The same issue was revealed in the Requirement R10 VSL and was corrected, as well as removing the additional “identified” that was not needed.

Additional Information

All comments submitted may be reviewed in their original format on the standard’s project page:

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Mark Lauby, at 404-446-2560 or at mark.lauby@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Standard Processes Manual: http://www.nerc.com/files/Appendix_3A_StandardsProcessesManual_20120131.pdf

Index to Questions, Comments, and Responses

1. The RCSDT has revised the parts of Requirements R1, R2, R3, R4, R5, and R6 of COM-001-2 that began only with “Adjacent...” to begin with “Each adjacent...” to avoid the appearance of creating a defined glossary phrase. Do you agree with the changes? If not, please explain in the comment area below.15

2. The RCSDT has revised parts of two requirements (Parts 3.5 and 4.3) in COM-001-2 and added two additional parts (Parts 3.6 and 3.4) to address concerns about the phrase “synchronously connected within the same Interconnection.” Do you agree these changes address concerns where entities might only be adjacent across an Interconnection for where connected by a Direct Current (DC) tie? If not, please explain in the comment area below.20

3. The RCSDT made minor changes and reformatted the evidence examples in the Measures of COM-001-2 for greater clarity. Do you agree with these revisions? If not, please explain in the comment area below.26

4. Do you have any other comments on COM-001-2, not expressed in questions above, for the RCSDT?30

The Industry Segments are:

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities

1. The RCSDT has revised the parts of Requirements R1, R2, R3, R4, R5, and R6 of COM-001-2 that began only with “Adjacent...” to begin with “Each adjacent...” to avoid the appearance of creating a defined glossary phrase. Do you agree with the changes? If not, please explain in the comment area below.

Summary Consideration: Twenty-seven stakeholders completing the comment form support the changes by the RCSDT. Of those, there were two commenters not in support of the RCSDT’s change to the sentence structure from “Adjacent...” to “Each adjacent...” This change was made to eliminate the ambiguity that a glossary term was intended by the drafting team and to achieve greater clarity. Another comment concerned the meaning of “adjacent” in terms of geography. The RCSDT notes that due to asynchronous connection (DC tie), some entities may not be geographically adjacent, but electrically adjacent; therefore, adjacency for synchronously connected entities is applied in the typical manner for entities which are, as a rule, geographically adjacent. Additionally, one commenter questioned the revision in Draft 6, Requirement R5, Part 5.5 and Requirement R6, Part 6.3, when the RCSDT applied “Each” before “adjacent,” and by doing so inadvertently changed the glossary term “Adjacent Balancing Authority” to just “adjacent Balancing Authority” which is not a glossary term. The RCSDT notes that the spirit of the phrase “adjacent Balancing Authority” remains accurate and that this was a clerical error.

A single entity argued the requirements should be certification requirements, and not in a standard. The RCSDT directs the commenter to Section 500 of the NERC Rules of Procedure which address certification. The certification process is a program to identify entities that are applicable to and responsible for the reliability standards.

Organization	Yes or No	Question 1 Comment
Colorado Springs Utilities	No	Adjacent is still an ambiguous term. Does the SDT mean to refer to entities which share an interface/tie-line; entities which have geographically abutting service territories or Areas; entities within the same geographical region but not necessarily “touching”; etc.? Is this the same as or different from “neighboring,” and what is the meaning of that term? Perhaps this term deserves a glossary entry.
Response: The RCSDT believes this standard is not about geographical neighbors, it is about the effect of being electrical neighbors. No change made.		
NV Energy	No	If "Adjacent", a capitalized word, must be in the Definitions section merely

Organization	Yes or No	Question 1 Comment
		because it's capitalized, what about "Each"? Other sentences have capitalized words, such as "If", "Its" and "All". If "Adjacent" is in the Definitions merely because it's capitalized, please also add "If", "Its" and "All".
<p>Response: The RCSDT modified the usage of “Adjacent” in draft 5 of COM-001-2 to eliminate the appearance of a defined term to achieve clarity within the requirements because it started the sentence. No change made.</p>		
MISO	No	While MISO disagrees with the modifications to COM-001-1 proposed in COM-001-2 generally, it does not disagree with the clarity provided in the proposed addition of “Each” in front of “Adjacent”.
<p>Response: The RCSDT thanks you for your support of the modification to “Adjacent.” No change made.</p>		
ISO New England Inc	No	The ISO-NE continues to believe that these a certification types of requirements and that they do not belong in a standard.
<p>Response: NERC maintains an Organization Certification Program, the goal of which is to ensure that organizations who apply to register or are registered to perform certain reliability functions deemed particularly crucial to the reliability of the bulk power system will meet or exceed certain minimum criteria (i.e., Reliability Standards) demonstrating they are capable of performing the tasks (i.e., Requirements) for these functions. The process for certification of organizations is included in the NERC Rules of Procedure, Section 500 and Appendix 5A. For example, the first paragraph of Section 500 – Organization Registration and Certification states: “The purpose of the Organization Registration Program is to clearly identify those entities that are responsible for compliance with the FERC approved reliability standards. Organizations that are registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable reliability standards...” No change made.</p>		
PacifiCorp	No	
Ingleside Cogeneration LP (Occidental Chemical in the ballot	Yes	Ingleside Cogeneration LP agrees that the modification removes all doubt that a glossary definition is inferred. We support all clarifications of this

Organization	Yes or No	Question 1 Comment
body)		kind.
Response: The RCSDT thanks you for your comment.		
Texas Reliability Entity	Yes	“Adjacent Balancing Authority” is a defined term in the NERC Glossary, and use of the non-defined term “adjacent Balancing Authority” in this draft will cause confusion. Exactly what difference is intended by using the lower-case “a” instead of the defined term?
Response: The RCSDT agrees “adjacent Balancing Authority” should be “Adjacent Balancing Authority,” the defined NERC Glossary term. This change was made during the draft 6 process and a typo was made during editing of the other usages of “adjacent.” Error correction made.

2. The RCSDT has revised parts of two requirements (Parts 3.5 and 4.3) in COM-001-2 and added two additional parts (Parts 3.6 and 3.4) to address concerns about the phrase “synchronously connected within the same Interconnection.” Do you agree these changes address concerns where entities might only be adjacent across an Interconnection for where connected by a Direct Current (DC) tie? If not, please explain in the comment area below.

Summary Consideration: Thirty-one stakeholders completing the comment form support the changes by the RCSDT. Of those, seven provided comments. Two comments suggested combining Requirements R3, Parts 3.5 and 3.6 and Requirement R4, Parts 4.3 and 4.4 to have one part each that says “...synchronously or asynchronously connected.” The RCSDT believes this is a semantic change and having each condition in each requirement separates the emphases and provides the desired clarity. One commenter raised the issue of “adjacent” addressed in Question 1 above. A commenter expressed concern about the Reliability Coordinator not being required to have an Interpersonal Communication capability across an interconnection. The RCSDT notes that some Reliability Coordinators communicate with other Reliability Coordinators across interconnections; however, the requirement is to have the Interpersonal Communication capability within the same interconnection. Two commenters questioned why the synchronous and asynchronous conditions were in the requirements. The RCSDT added these to achieve a greater level of clarity that not all Transmission Operators are geographically adjacent. For example, the RCSDT considered phrases like “electrically connected,” but that creates the problem that all Transmission Operators are electrically connected. The use of adjacent and the synchronous and asynchronous conditions in each part achieve the necessary clarity based on transmission operations.

A single entity argued the requirements should be certification requirements and not in a standard. The RCSDT directs the commenter to Section 500 of the NERC Rules of Procedure which address certification. The certification process is a program to identify entities that are applicable to and responsible for the reliability standards.

Organization	Yes or No	Question 2 Comment
Northeast Power Coordinating Council	No	<p>If 3.5 and 4.3 were made to read: “Each connected adjacent Transmission Operator.” Then 3.6 and 4.4 (not 3.4 as indicated in the question) would not be required.</p> <p>If 3.6 and 4.4 are to be kept, then the wording of 3.6 and 4.4 should be made to read: “Each adjacent Transmission Operator asynchronously connected through a DC tie.” Systems cannot be asynchronously connected.</p>

Response: The RCSDT thanks you for your comments. These are semantic changes and the current Requirement R3, Parts 3.5 and 3.6 and Requirement R4, Parts 4.3 and 4.4 provide the clarity requested by industry stakeholders represented by the ballot. No

Organization	Yes or No	Question 2 Comment
change made.		
Colorado Springs Utilities	No	See previous comment on “adjacent”.
Response: Please see the RCSDT’s response above in question 1. No change made.		
PacifiCorp	No	PacifiCorp does not understand the RCSDT’s rationale for creating separate sub-requirements for adjacent Transmission Operators that are synchronously and asynchronously connected, in both R3.5/R3.6 and R4.3/R4.4. PacifiCorp recommends the following singular sub-requirement for both R3 and R4: “Each adjacent Transmission Operator (whether synchronously or asynchronously connected).”
Response: The RCSDT thanks you for your comments. These are semantic changes and the current Requirement R3, Parts 3.5 and 3.6 and Requirement R4, Parts 4.3 and 4.4 provide the clarity requested by industry stakeholders represented by the ballot. No change made.		
Texas Reliability Entity	No	<p>The proposed revision to include Transmission Operators asynchronously connected (Parts 3.5 and 4.4) is an appropriate revision to the Standard.</p> <p>The Reliability Coordinator responsibilities for communications with a Reliability Coordinator across an asynchronous connection do not appear to be addressed in this revision. Did the RCSDT have a particular reason not to address the RC issue?</p> <p>We believe each RC should have Interpersonal Communication capability with all neighboring RCs regardless of Interconnection boundaries, the type of connection, or whether a connection exists.</p>
Response: The RCSDT thanks you for your support of the improvements to Requirements R3 part 3.5 and R4 part 4.4. The RCSDT made additional clarifying changes from draft 5 to draft 6 in Requirements R3 and R4 to address the issue that some Transmission Operators (not Reliability Coordinators) that may not be adjacent for situations other than synchronously connected within the same Interconnection in the traditional understanding. For example, some entities have connections beyond the interconnection and some connections are asynchronous. To address this concern, the RCSDT separated the requirements to identify “synchronously		

Organization	Yes or No	Question 2 Comment
<p>connected” and “asynchronously connected,” and removed the “within the same Interconnection” to achieve this clarity. No change made.</p> <p>Requirements for the Reliability Coordinator are addressed in Requirements R1 and R2, which do not specify the synchronous or asynchronous connection. Additionally, the parts 1.2 and 2.2 only require the Reliability Coordinator to have an Interpersonal Communication and Alternative Interpersonal Communication capability with other Reliability Coordinators within the same Interconnection. For example, the loss of a DC tie does not result in a negative reliability impact and is analogous to a load or generator loss because flows would not redistribute. Each end of the DC tie must adjust generation to account for the loss of the DC tie; therefore, no coordination is required between entities. The standard does not preclude the Reliability Coordinator from having a capability with another Reliability Coordinator in another Interconnection. No change made.</p>		
NV Energy	No	<p>What difference does a synchronous or asynchronous connection make? Do not both have a reliability impact on the two entities on either side? Since there is a reliability impact, regardless of connection type, a separate Requirement is superfluous.</p>
<p>Response: The RCSDT made additional clarifying changes from draft 5 to draft 6 in Requirements R3 and R4 to address the issue that some Transmission Operators may not be adjacent for situations other than synchronously connected within the same Interconnection in the traditional understanding. For example, some entities have connections beyond the interconnection and some connections are asynchronous. To address this concern, the RCSDT separated the requirements to identify “synchronously connected” and “asynchronously connected,” and removed the “within the same Interconnection” to achieve this clarity. For example, the loss of a DC-Tie does not result in a negative reliability impact and is analogous to a load or generator loss because flows would not redistribute. Each end of the DC-Tie must adjust generation to account for the loss of the DC-Tie; therefore, no coordination is required between entities. No change made.</p>		
MISO	No	<p>While MISO disagrees with the modifications to COM-001-1 proposed in COM-001-2 generally, it does not disagree with the proposed removal of “within the same interconnection.”</p>
<p>Response: The RCSDT thanks you for your support in removing “...within the same Interconnection.” No change made.</p>		
ISO New England Inc	No	<p>The ISO-NE continues to believe that these a certification types of requirements and</p>

Organization	Yes or No	Question 2 Comment
		that they do not belong in a standard.
<p>Response: NERC maintains an Organization Certification Program, the goal of which is to ensure that organizations who apply to register or are registered to perform certain reliability functions deemed particularly crucial to the reliability of the bulk power system will meet or exceed certain minimum criteria (i.e., Reliability Standards) demonstrating they are capable of performing the tasks (i.e., Requirements) for these functions. The process for certification of organizations is included in the NERC Rules of Procedure, Section 500 and Appendix 5A. For example, the first paragraph of Section 500 – Organization Registration and Certification states: “The purpose of the Organization Registration Program is to clearly identify those entities that are responsible for compliance with the FERC approved reliability standards. Organizations that are registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable reliability standards...” No change made.</p>		
Tacoma Power	Yes	This seems excessive. It should be sufficient to say “each adjacent TOP” regardless of whether they are connected synchronously or via a DC tie.
<p>Response: The RCS DT thanks you for your comment. The clarifications for asynchronous and synchronous were based on industry stakeholder comment. No change made.</p>

3. The RCSDT made minor changes and reformatted the evidence examples in the Measures of COM-001-2 for greater clarity. Do you agree with these revisions? If not, please explain in the comment area below.

Summary Consideration: Twenty-eight stakeholders completing the comment form question support the changes by the RCSDT. Of those, three offered substantive comments. One commenter noted that having “physical assets” listed as one type of evidence in the Measures M1 through M8 is problematic. The RCSDT believes an entity may utilize any number of options to demonstrate compliance with the requirements. One commenter had concerns about the use of an intermediary for Interpersonal Communication capability. The RCSDT emphasizes that an entity may employ any number of approaches to achieve the requirements. Another commenter suggested inserting “applicable” as a clarification in Measure M10 to more clearly state the relationship between the entities and the associated requirements. In consideration of the suggestion, the RCSDT inserted the word “respectively,” rather than “applicable” to more accurately note the relationship. Additionally, the RCSDT applied the same consideration to Requirement R10 to achieve the same clarity. The RCSDT also removed a typographical error revealed by a commenter.

Organization	Yes or No	Question 3 Comment
Colorado Springs Utilities	No	See the comment on "evidence" included in the comment section of question 4.
Response: Please see the RCSDT’s response in question 4. No change made.		
ACES Power Marketing Standards Collaborators	No	We continue to believe that use of “physical assets” instead of “demonstration of physical assets” is problematic. Auditors must be able to take evidence with them and they could not take the physical assets. They could, however, takes notes they record from demonstration of the physical assets with them. While we understand that the auditors will understand they can’t take the “physical assets”, it does not change the fact that the listing “physical assets” as evidence is technically not correct.
Response: The RCSDT believes that physical assets are demonstration of evidence for Interpersonal Communication capability. The responsible entity may exercise other methods of evidence for the physical assets (e.g., photographs or other documentation). No change made.		
Ingleside Cogeneration LP (Occidental Chemical in the	No	Ingleside Cogeneration LP would like to see the project team include references to intermediaries which act as a single point of contact between GOPs and BAs/TOPs. This is a very common and necessary communications hierarchy - as it is just not possible for the

Organization	Yes or No	Question 3 Comment
ballot body)		BA/TOP to otherwise coordinate the actions of multiple GOPs. We believe that it is appropriate that GOP must retain evidence that Interpersonal Communication capability is maintained up to the intermediary - but the BA or TOP must be responsible for the remainder of the link. This accountability matches the most common contractual arrangements where both the BA/TOP and the GOP have signed agreements with the intermediary.
<p>Response: The RCSDT believes the standard provides the “what” to do, not the “how” to implement the standard. Having an intermediary for communication is one approach in “how” the entity may implement the standard. No change made.</p>		
MISO	No	<p>While MISO appreciates the SDT’s modifications to Measure M10 since the last draft, the Measure remains ambiguous as to which parties should be contacted when an entity experiences a failure of its Interpersonal Communication capability that lasts 30 minutes or longer.</p> <p>MISO respectfully submits the following changes for Measure 10:</p> <p>”Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it notified the entities as identified in Requirements R1, R3, and R5, as applicable, within 60 minutes of the detection of a failure of its Interpersonal Communication capability that lasted 30 minutes or longer. Evidence could include, but is not limited to dated and time-stamped: test records, operator logs, voice recordings, transcripts of voice recordings, or electronic communications. (R10.)”</p>
<p>Response: The RCSDT agrees with the ambiguity in Measure M10 and proposes to clarify Requirement R10, Measure M10, and R10 VSL by inserting the word “respectively,” rather than the suggested “as applicable.” The word “respectively” is used rather than “applicable” because “applicable” is open to interpretation. For example, adding the word “respectively” means that the Reliability Coordinator in R1 is not required to notify the entities identified in Requirement R3 or R5. The RCSDT intended the requirements to map to the entity. Clarifying changes made.</p>		
City of Tallahassee (TAL)	Yes	For Measure 7, the first line duplicates the word "that".
<p>Response: The RCSDT appreciates you bringing awareness to this typo. The additional “that” has been removed from Measure M7 in COM-001-</p>

4. Do you have any other comments on COM-001-2, not expressed in questions above, for the RCSDT?

Summary Consideration: There were several minority comments concerning the proposed standards COM-002-3 and IRO-001-3 that the RCSDT could not respond to because they were approved by industry. Other comments revealed errors in the standard that the RCSDT corrected. Most comments were continuances from previous comment periods, along with various minority comments which the RCSDT provided. Commenters raised the issue that having a communication capability should be a matter of the NERC Certification process, as raised in the above questions. The RCSDT noted that certification was the process to ensure registered entities could perform those tasks associated with the reliability standards and that each entity should address this issue with NERC if further information is needed. Also from previous comment periods, commenters noted this standard should be a Results-Based Standard (RBS). The RCSDT did not disagree that the RBS format would be beneficial, but the current standard, as written, achieves the necessary goals set forth in the Standards Authorization Request (SAR).

Other minority continuances from previous comment periods include the use of “means,” “primary,” and other words or suggestions in the proposed definitions. The RCSDT maintains that these words are problematic and did not alter the definitions. Additionally, the definitions describe the “what” for communications, not the “how.” Some commenters noted that requiring the Generation Operator or Distribution Provider to have an Interpersonal Communication capability is redundant and unnecessary because they would already have a capability by virtue of it being established by the Balancing Authority and Transmission Operator. The RCSDT responded that each entity (i.e., both ends of the communication) is required to have the communication capability which is coordinated with the other entity to establish the capability. Other comments included requests to specifically say that the proposed COM-001-2 is “not for the exchange of data.” The RCSDT did not feel it necessary to insert such a clause, but pointed the commenter to reliability standards IRO-010 and IRO-014 which address data and information.

A commenter questioned having the ability to select other communications as needed; however, the RCSDT notes that an entity cannot randomly choose or designate other communication capabilities without coordinating the capability with other parties. Each applicable entity must know what its Interpersonal Communication capability is with others and, if applicable, its Alternative Interpersonal Communication capability with others. The same commenter questioned how the standard achieves “diversely routed,” as written in the current standard COM-001-1. The RCSDT contends “diversely routed” is achieved through the proposed definitions. The proposed definition of Alternative Interpersonal Communication contains, “...not utilize the same infrastructure (medium) as Interpersonal Communication used for day-to-day operation.”

There were other minority comments about time limits and notifications. One commenter suggested having a defined notification process using a hierarchal format. The RCSDT did not agree with this concept due to the diverse relationships between entities making it impractical. One noted that the 60-minute notification time was insufficient. The RCSDT considered this, as in previous drafts, and contends the period is adequate. Another did not agree with the two-hour limit on initiating action to repair or designating an

Alternative Interpersonal Communication capability. Again, the RCSDT holds that the time elements have been considered and supported by industry.

There were minority comments about the Measures and VSLs. The RCSDT inserted the word “respectively” in Requirement R10 and similarly in Measure M10 to clarify the expected relationship between the listed functional entities and the listed requirements. Some commenters noted that the use of “physical assets” is an inappropriate listing of evidence in the measures. The RCSDT disagreed that having the asset can be one form of demonstrating the necessary evidence. A commenter requested additional granularity in the VSLs in addition to what the RCSDT provided in the draft 6 posting. The RCSDT believes that having two (High and Severe) VSLs is the appropriate VSL granularity given the expected number of entities required to have a communication capability. More importantly, the reliability need is not to miss having a communication capability with any entity necessary for reliability operations. The same commenter requested a lower VSL for Requirements R1, R3 and R5 because, in this case, the Reliability Coordinator, Transmission Operator, and Balancing Authority are all required to have an Alternative Interpersonal Communication capability. The RCSDT contends that a violation should not be contingent on the preponderance of other mitigating requirements. Both VRFs and VSLs are to be evaluated on an individual requirement level without regard to other contributing circumstances. A comment suggested lowering the VRF on Requirement R7 from High to Medium. The RCSDT agreed and made the change since the loss of a communication capability with the Distribution Provider does not present the same level of risk that a Generator Operator would (e.g., during blackstart restoration).

Other minority comments related to the effective date language and data retention. The effective date language governed by NERC staff and the RCSDT only addresses the time elements within the template language. A question was raised about voice recordings generally having only a 90-calendar day retention, but the data retention specified 12 calendar months. The RCSDT recognizes this oversight and added clarifying language to account for voice recordings.

The majority comments in Question 4, also raised in previous comment periods, are related to Requirement R11, which had six distinct reoccurring themes: (1) A threshold for determining when to report a failure of the Generation Operator or Distribution Provider communication capability. (2) The reliability benefit of having to consult with the Balancing Authority or Transmission Operator when neither the Generation Operator nor Distribution Provider are required to have an Alternative Interpersonal Communication capability. (3) Consultation for the purpose of determining a mutually agreeable action for the restoration of its Interpersonal Communication capability. (4) What does “action” constitute? (5) Changing the language to specifically name the entities to be notified in the corresponding Measure M11. (6) The Generation Operator and Distribution Provider should be required to have an Alternative Interpersonal Communication capability. The RCSDT appropriately responded to all six issues as follows:

For item (1) a threshold is not provided to allow flexibility for the Generation Operator or Distribution Provider to determine what constitutes a failure of its Interpersonal Communication capability. The reliability benefit argued in (2) about consulting with the Balancing Authority or Transmission Operator is for the purpose of bringing awareness to these entities that communications are

compromised and to know what is being done to restore the capability. In issue (3) the purpose is to consult, the requirement clarifies the reliability purpose to determine a mutually agreeable action for restoration. The reliability goal is for the Balancing Authority or Transmission Operator to maintain awareness the communication capability has failed and what is being done to restore the capability. The Generation Operator or Distribution Provider is free to employ an Alternative Interpersonal Communication capability, but has no requirement to do so. The RCSDT responded to item (4) regarding what “action” meant. Action can be a number of things which the entity under takes to restore its capability. It could include, but is not limited to: contacting internal staff to initiate a repair, contacting a third party for repair, seeking assistance to troubleshoot the problem, or implementing its procedure(s) regarding the restoration of the capability. There was a suggestion concerning item (5) to explicitly name the entities in Requirement R11. The RCSDT agreed it would improve readability, but it would not be inconsistent with the way the measure is written using the reference to the two requirements. Item (6) was also raised in previous comment periods and the RCSDT noted that only requiring the Generation Operator and Distribution Provider to have an Interpersonal Communication capability is consistent with the direction provided in Order 693.

Organization	Yes or No	Question 4 Comment
City of Austin dba Austin Energy		<p>(1) Both instances of “Reliability Coordinator” in the VSLs for R3 should be “Transmission Operator” to match the language of the standard.</p> <p>Response: The RCSDT appreciates you bringing awareness to this error in Requirement R3 VSL. The reference to “Reliability Coordinator” has been changed to Transmission Operator for Requirement R3 in both the High and Severe VSL. Error correction made.</p> <p>(2) Both instances of “Reliability Coordinator” in the VSLs for R5 should be “Balancing Authority” to match the language of the standard.</p> <p>Response: The RCSDT appreciates you bringing awareness to this error in Requirement R5. The reference to “Reliability Coordinator” has been changed to Balancing Authority for Requirement R5 in both the High and Severe VSL. Error correction made.</p> <p>(3) In the VSLs for R9 and R10 the use of “and” seems incorrect.</p> <p>Austin Energy suggests the following revisions for all VSL levels (only the Lower VSL shown for simplicity and revised words suggested in capital letters):</p>

Organization	Yes or No	Question 4 Comment
		<p>R9, Lower VSL: “The Reliability Coordinator, Transmission Operator, OR Balancing Authority...”</p> <p>Response: RCSDT appreciates you bringing awareness to this error in Requirement R9 VSL. The use of “and” between the responsible entities and the requirement references has been corrected to “or” for proper construction in Requirements R9 and R10 VSLs. Error correction made.</p> <p>R10, Lower VSL: “The Reliability Coordinator, Transmission Operator, OR Balancing Authority failed to notify the entities identified in Requirements R1, R3, OR R5, RESPECTIVELY, upon the detection ...”</p> <p>Response: The RCSDT agrees with the ambiguity in Measure M10 and proposes to clarify Requirement R10, Measure M10, and R10 VSL by inserting the word “respectively.” For example, adding the word “respectively” means that the Reliability Coordinator in R1 is not required to notify the entities identified in Requirement R3 or R5. The RCSDT intended the requirements to map to the entity. Clarifying changes made.</p>
<p>Response: Please see responses above.</p>		
<p>ACES Power Marketing Standards Collaborators</p>		<p>(1) The definition of Alternative Interpersonal Communication needs further refinement. As it is written, the primary Interpersonal Communication that is used to satisfy R1, R3, and R5 is also an Alternative Interpersonal Communication. This primary Interpersonal Communication established in R1, R3, and R5 meet all of the requirements of Alternative Interpersonal Communication. It is an Interpersonal Communication and it is capable of replacing the Interpersonal Communication used as the Alternative Interpersonal Communication (which by definition is an Interpersonal Communication) in R2, R4, and R6. Thus, each Interpersonal Communication used in R1, R3, and R5 really are an Interpersonal Communication and Alternative Interpersonal Communication. One solution may be to add a third definition: Primary Interpersonal Communication. It would essentially be an</p>

Organization	Yes or No	Question 4 Comment
		<p>Interpersonal Communication that is designated as primary or the normal communication system. Then Alternative Interpersonal Communication would be defined based on the ability of the Interpersonal Communication to substitute for the Primary. R1, R3, and R5 would need to be changed to refer to the Primary Interpersonal Communication. Another option might be to simply stick with the two existing definitions and use “primary” in R1, R3, and R5. Regardless of the option selected, “another” needs to be added before the second use of Interpersonal Communication for absolute clarity.</p> <p>Response: The definitions clarify the need to differentiate the communication capabilities. The RCSDT notes that, in this last ballot, industry stakeholder consensus does not support the use of “primary” as a part of Interpersonal Communication. No change made.</p> <p>(2) We appreciate that the drafting team added another VSL for requirements R1 through R8, however, we believe additional levels should be populated. For example, if a Transmission Operator or Balancing Authority failed to have Interpersonal Communications capability with a Distribution Provider but had Interpersonal Communications capability with all other required entities, it has met the vast majority of the requirement. Since VSLs are a measure of how much the requirement was missed by the responsible entity, a Lower VSL seems most appropriate for failing to have Interpersonal Communication capability with a DP.</p> <p>Response: The RCSDT added the High VSL for Requirements R1 through R8 from draft 5 to draft 6 to account for greater granularity in a violation. For each applicable responsible entity named in each of the requirements, the number of entities for which it must have an Interpersonal Communication or Alternative Interpersonal Communication may vary significantly. The RCSDT believed that adding one additional VSL was an appropriate solution to account for variability in the number of entities. No change made.</p> <p>(3) It seems odd to change the effective date language from what NERC has consistently used throughout the standards. “Following” was replaced with “beyond</p>

Organization	Yes or No	Question 4 Comment
		<p>the date this standard is approved”. For consistency with the rest of NERC standards, we recommend changing it back to the original language.</p> <p>Response: The RCSDT appreciates your comment. The language in the Effective Date section is standard language adopted by NERC and used throughout the body of standards currently under development by teams. The RCSDT is not able to alter this language. No change made</p> <p>(4) We appreciate the changes to R1, R3, R5, R7 and R8 that attempt to clarify that a failure of the primary Interpersonal Communication capability is not a violation of these requirements. However, we believe these requirements will never be approved by the Commission. As they are written, they literally say that R1, R3, R5, R7, and R8 apply when the responsible entity has Interpersonal Communication capability and they don’t apply when you don’t have the capability but rather other requirements apply. This means R1, R3, R5, R7 and R8 could never be violated which begs the question why are they even needed. Because Commission approval is unlikely for these requirements, we continue to believe the best solution is to focus the requirements on having a communication medium rather than capability. If “capability” were struck from all of the requirements, the requirements would then focus on a communication medium as defined in Interpersonal Communication and Alternative Interpersonal Communication. This solution would still keep the requirements technology neutral since a medium could be any communication system or device and actually provide more flexibility in the requirements. Because the requirements would focus on having a medium in place rather than a capability, failure of the medium would not automatically translate into a violation which means the problematic “unless [responsible entity] experiences a failure of its Interpersonal Communication capability ...” language could be dropped. Dropping this language would improve the likelihood that the Commission would approve the standard.</p> <p>Response: The RCSDT thoughtfully considered the comments about where an entity might be exempt from the requirement(s). No situation exempts an applicable entity from the requirement(s) of this standard. No change made.</p>

Organization	Yes or No	Question 4 Comment
		<p>(5) The VRF for R7 should be Medium. Failure for the DP to have Interpersonal Communication with its BA or TOP does not meet the basic requirement of a High VRF. A High VRF requires that violation of the requirement would “directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures.” We cannot fathom any situation where failure of a BA and TOP being able to communicate would directly lead to or cause instability, separation, or cascading. It could, however, lead to the inability to know the electrical state of part of the transmission system. This fits the Medium VRF definition. Furthermore, the fact that R4 and R6 do not include DP in the list of functional entities for a TOP and BA to have Alternative Interpersonal Communication further supports a Medium VRF.</p> <p>Response: The RCSDT thanks you for your comments and changed Requirement R7 to Medium VRF. Further consideration has been given to the Requirement R8 VRF; however, the RCSDT concluded the Generator Operator has a higher importance and risk to reliability, particularly blackstart capability. Change made to Requirement R7 VRF. No change made to Requirement R8 VRF.</p> <p>(6) In Measure M11, we believe entity affected should be replaced with its TOP and BA. This makes the measure clearer and easier to read without the need to refer back to the requirement.</p> <p>Response: The RCSDT agrees that naming the specific entities in the measure adds to the readability; however, changing the word “entity” to the named entities in Requirements R7 and R8 would be inconsistent with the way the measure is written using the reference to the two requirements. No change made.</p> <p>(7) We disagree with the data retention period. Because voice recordings are mentioned in the measures as one type of evidence for demonstrating compliance to the requirements, the data retention period should not exceed 90 days. Many companies do not store voice recordings longer than this. To compel a responsible entity to store voice recordings for longer should be justified. We do not see this</p>

Organization	Yes or No	Question 4 Comment
		<p>justification.</p> <p>Response: The RCSDT agrees with the comment about the issue concerning the time period for retaining voice recording. The data retention has been revised to reflect a period of 90 calendar days for all evidence related to the requirements. Clarifying change made.</p> <p>(8) We continue to believe that the DP should not be included in this standard. However, we recognize that the drafting team is attempting to address a FERC directive. An equally efficient and effective alternative would be to leave the responsibility to the BA and TOP. Parts 3.3 and 5.3 require the TOP and BA respectively to have Interpersonal Communication capability with the DP. This will be required whether the standard applies to DP or not based on the Commission directive because the Commission expressed concern about the BA and TOP having communications with the DP during an emergency such as a blackstart event. Because DPs will have to follow directives from the RC, TOP, and BA per IRO-001-3, it is in the best interest of the DP to cooperate with assisting the BA and TOP in establishing this capability. Thus, Parts 3.3 and 5.3 could be relied on exclusively for establishing this Interpersonal Communication Capability without adding unnecessary additional compliance burden on the DP that does not support reliability.</p> <p>Response: The RCSDT thanks you for your comment and agrees that the standard is addressing FERC directives concerning the Distribution Provider. Entities on each end of the communication capability must have a responsibility to have communications. No change made.</p>
<p>Response: Please see responses above.</p>		
MRO NSRF		<p>The NSRF understands the importance of Interpersonal Communications and Alternate Interpersonal Communications and always having the ability to communicate with others. The NSRF questions why per R9 (and similar time requirement per R10) that when testing the Alternate Interpersonal Communications</p>

Organization	Yes or No	Question 4 Comment
		<p>is unsuccessful, why there is a two-hour time limit to initiate an action, repair, or designate a replacement.</p> <p>Response: The RCSDT believes that the Reliability Coordinator, Transmission Operator and Balancing Authority, as reliability entities for Requirement R9, must initiate action to repair or designate an Alternative Interpersonal Communication capability timely so that in the event the Alternative Interpersonal Communication capability is called upon, the capability will be available. Having the measurable time period in the requirement ensures that entities will not delay action in addressing the unsuccessful testing of the capability. No change made.</p> <p>Project 2012-08.1 defines “Reliable Operation” means operating the Elements of the Bulk Power System within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or Cascading failures of such system will not occur as a result of a sudden disturbance, including a Cyber Security Incident, or unanticipated failure of system Elements. The loss of an Alternate Interpersonal Communication will not immediately impact the Reliable Operations of the BPS. Recommend that this not be contained within the Standard as entity’s will view this as a Good Utility Practice.</p> <p>Response: The RCSDT agrees that the loss of an entity’s Alternative Interpersonal Communication capability should not affect “Reliable Operation” of the Bulk Power System; however, the regulatory directive in Order No. 693 addressing the proposed definitions of “Bulk Power System,” “Reliability Standard,” and “Reliable Operations” must be reviewed collectively. The proposed definition for “Reliability Standard” contains the defined term “Reliable Operations,” and is defined as: <i>“A requirement to provide for Reliable Operation of the Bulk Power System, including without limiting the foregoing, requirements for the operation of existing Bulk Power System Facilities, including cyber security protection, and including the design of planned additions or modifications to such Facilities to the extent necessary for Reliable Operation of the Bulk Power System, but the term does not include any requirement to enlarge Bulk Power System Facilities or to construct new transmission capacity or generation</i></p>

Organization	Yes or No	Question 4 Comment
		<p><i>capacity. A Reliability Standard shall not be effective in the United States until approved by the Federal Energy Regulatory Commission and shall not be effective in other jurisdictions until made or allowed to become effective by the Applicable Governmental Authority.” In the current paradigm, having an Alternative Interpersonal Communication capability is: “A requirement to provide for Reliable Operation of the Bulk Power System,” as the proposed definition of “Reliability Standard” defines and is necessary to support communications between and among the applicable entities in the standard. The RCSDT has addressed the scope of the SAR in addressing communication requirements for entities through an open industry consensus process.</i></p> <p>R10 The NSRF recommends that “applicable” be inserted between “...notify entities...” This will assure that RC’s will inform per R1, TOP’s will inform per R3 and BA’s will inform per R5. This will assure that an interpretation is not required as in Interpretation 2010-INT-01, TOP-006.</p> <p>Response: The RCSDT agrees with the ambiguity in Measure M10 and proposes to clarify Requirement R10, Measure M10, and R10 VSL by inserting the word “respectively,” rather than the suggested: “as applicable.” The word “respectively” is used rather than “applicable” because “applicable” is open to interpretation. For example, adding the word “respectively” means that the Reliability Coordinator in R1 is not required to notify the entities identified in Requirement R3 or R5. The RCSDT intended the requirements to map to the entity. Clarifying changes made.</p>
<p>Response: See responses above.</p>		
<p>CenterPoint Energy Houston Electric, LLC</p>		<p>1. For R10, there can be a large number of entities to notify for an Interpersonal Communication failure. During normal operations, 60 minutes can be enough time to make all the notifications. However, during emergency or adverse conditions, 60 minutes may not be sufficient. Thus, at the end of R10, the following should be added: “unless certain adverse conditions (e.g. severe weather, multiple events)</p>

Organization	Yes or No	Question 4 Comment
		<p>prevent the completion of notification within the 60 minutes.”</p> <p>Response: The RCSDT contends that 60 minutes is sufficient for notification because the BA, RC, and TOP are required to have an Alternative Interpersonal Communication capability, and should have the ability to accomplish the required notification. Also, the loss of Interpersonal Communication capability may not always impact the entire capability. This time frame does not apply to the DP and GOP since the Alternative Interpersonal Communication capability is not required for these functional entities. No change made.</p> <p>2. For R11, the change from “mutually agreeable time” to “mutually agreeable action” is not an improvement. It should not be the concern of the other entities how (what action) the capability is restored, only that it is restored and that the entity with the failure can be reached in the interim. Thus, we suggest the following: “to determine a mutually agreeable alternative until Interpersonal Communication capability is restored.”</p> <p>Response: The RCSDT agrees the desired end result is restoring the capability, and appreciates the suggested modification; however, the suggestion presents other issues; such as: What if an alternative is not available? The RCSDT believes the most appropriate and measureable way to address the loss of the Distribution Provider or Generation Operator’s capability is to require the entities to communicate the action taken to restore the capability. No change made.</p>
<p>Response: Please see responses above.</p>		
<p>Independent Electricity System Operator</p>		<p>1. COM-001:</p> <p>We continue to disagree with R1.2, the phrase “within the same Interconnection” is troublesome. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to curtail interchange transactions crossing Interconnection boundary). The SDT’s previous response that the phrase was added to address the ERCOT situation and citing that ERCOT does not need to communicate with other RCs leaves a</p>

Organization	Yes or No	Question 4 Comment
		<p>reliability gap. The SDT’s latest response that R1 as written does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others is inconsistent with the basic principle for having a reliability standard. A standard should stipulate the requirements based on what is needed to ensure reliability, not on what is not precluded. If there is a reliability need for RCs across Interconnection boundary to coordination operations, then Interpersonal Communication shall be provided. If we apply the SDT’s philosophy (that the standard does not preclude...), then one can argue that the standard does not need to stipulate a requirement to have Interpersonal Communication as without such a requirement, the standard does not preclude any operating entities to have it.</p> <p>Finally, we would reiterate the fact that RCs between asynchronously interconnected systems do communicate, e.g. between Quebec and its neighbor RCs. We are also aware that RCs in the Western Interconnection and those in the Eastern Interconnection do communicate as needed to coordinate TLR for transactions crossing Interconnection boundary.</p> <p>Response: From the Functional Model V5, Functional Entity - Reliability Coordinator, the RCS DT notes the following: “Balancing operations. The Reliability Coordinator ensures that the generation-demand balance is maintained within its Reliability Coordinator Area; which, in turn, ensures that the Interconnection frequency remains within acceptable limits. The Balancing Authority has the responsibility for generation-demand-interchange balance in the Balancing Authority Area. The Reliability Coordinator may direct a Balancing Authority within its Reliability Coordinator Area to take whatever action is necessary to ensure that this balance does not adversely impact reliability.” Based on the last sentence, the Reliability Coordinator does not have the responsibility for these transactions. No change made.</p> <p>2. The follow comments address data retention for COM-002-3:</p> <p>a. The first bullet in Section D 1.3 stipulates that “The Reliability Coordinator, Transmission Operator, and Balancing Authority shall retain evidence of Requirement</p>

Organization	Yes or No	Question 4 Comment
		<p>R1 and R3, Measure M1 and M2 for the most recent 3 calendar months.” We believe M2 should be M3.</p> <p>Response: The RCSDT agrees with your assessment that M2 should be M3 and has advised NERC staff of the typo in COM-002-3. Error correction made.</p> <p>b. The second bullet: “The Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider shall retain evidence of Requirement R1, Measure M1 for the most recent 3 calendar months.” We believe R1 and M1 should read R2 and M2 since DP is only responsible for meeting R2.</p> <p>Response: The RCSDT agrees with your assessment that R1 and M1 should be R2 and M2. The RCSDT has advised NERC staff of the typo in COM-002-3. Error correction made.</p> <p>c. Section 2 “Violation Severity Levels”: R# R2 Severe includes the Balancing Authority as one of the listed entities; however, this is inconsistent with R2 / M2 which do not include the Balancing Authority. To be consistent with R2 / M2, the Balancing Authority should be removed from VSL R# R2.</p> <p>Response: The RCSDT agrees with your assessment and has advised NERC staff that the VSL for Requirement R2 should have the entity “Reliability Coordinator” replaced with “Balancing Authority” in COM-002-3 to be consistent with the named entities in Requirement R2. Error correction made.</p> <p>While these can be regarded as typos, and do not contribute to a show-stopper vote for some, we urge the SDT and the Standards Committee to pay closer attention to the accuracy of all elements in the standard.</p> <p>3. IRO-001-3:</p> <p>Section 1.3 Data Retention (second bullet) states:</p> <p>The Operator, Balancing Authority, Generator Operator, or Distribution Provider shall retain for Requirements R2 and R3, Measures M2 and M3 shall retain voice recordings for the most recent 90 calendar days or documentation for the most</p>

Organization	Yes or No	Question 4 Comment
		<p>recent 12 calendar months.</p> <p>- The statement above appears to be missing “Transmission” before the word Operator.</p> <p>Response: The RCSDT agrees with your assessment of IRO-001-3 and has advised NERC staff that in the second bullet of Section D, 1.3 section, the word “Transmission” needs to be inserted in front of “Operator.” Error correction made.</p> <p>- The statement above repeats “shall retain” and the highlighted instance is not required.</p> <p>Response: The RCSDT agrees with your assessment of IRO-001-3 and has advised NERC staff that in the second bullet of Section D, 1.3, the first occurrence of “shall retain” needs to be removed. Error correction made.</p> <p>- The statement above states “or” Distribution provider, implying that one entity needs to retain evidence. Starting the sentence with “Each” rather than “The” and replacing “or” with “and” may provide clarity. The same would apply to the introduction sentence prior to the bullets. COM-002-3 section D. Compliance 1.3 Data Retention provides an example of the suggested format.</p> <p>Response: The RCSDT agrees with your assessment of IRO-001-3 and has advised NERC staff that in the second bullet of Section D, 1.3, the “or” between the responsible entities should be an “and.” Error correction made.</p> <p>Here is an example of the revised sentence: “Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall retain voice recordings for the most recent 90 calendar days or documentation for the most recent 12 calendar months, for Requirements R2 and R3, Measures M2 and M3”.</p>
<p>Response: Please see responses above.</p>		
Bonneville Power		BPA thanks you for the opportunity to comment on Project 2006-06, COM-001-2 and

Organization	Yes or No	Question 4 Comment
Administration		has no comments or concerns at this time.
<p>Response: The RCSDT thanks you for your comment.</p>		
Public Service Enterprise Group		<p>Change R11 and replace “experiences a failure” with “detects a failure” because one may have a failure, but if it’s undetected for some period of time because no communications are taking place, it’s unclear when one actually “experienced a failure.” We note that R10 uses the terminology “detection of a failure.” Using consistent terminology in R10 and R11 would result in less confusion for compliance because there would not be an issue as to whether a difference was intended by the SDT between “experiences” and “detects” in the two requirements.</p>
<p>Response: The RCSDT agrees with your assessment of the differences in terms and has changed “experiences” to “detects” in Requirement R11 to be consistent with Requirement R10. Change made.</p>		
Colorado Springs Utilities		<p>CSU appreciates the work the SDT has put into this standard, along with the others in this project and the opportunity to comment. We agree with the goal to encourage consistent communications and availability of robust & redundant communication paths. CSU appreciates that the SDT appears to have tried to write some flexibility into this standard. As written, however, this draft of COM-001-2 in its entirety seems to us unwieldy and unmanageable.</p> <p>It appears each entity may choose its own ‘primary’ and Alternate “Interpersonal Communication” capabilities. Entity A may select email as its ‘primary’ capability, while Entity B might not select that among either ‘primary’ or “Alternate,” and may not pay any attention on the real-time desk to email (only the designated “Alternate” requires testing).</p> <p>Response: The requirements require the applicable entity to have a communication capability with the defined entities in each requirement. An applicable entity should not be changing its Interpersonal Communication capability independently without coordinating the change with the defined entities in a given requirement. The</p>

Organization	Yes or No	Question 4 Comment
		<p>proposed definition says, "...between two or more individuals..." No change made.</p> <p>Also, DOs & GOs are not expected to maintain a backup ("Alternate") communications capability. It is unclear how those entities can then comply with R11 if their one and only interpersonal communication capability has failed.</p> <p>Response: The RCSDT, from draft 5 to 6 of COM-001-3, added clarifying language in Requirement R7 for the Distribution Provider and in Requirement R8 for the Generator Operator to account for the potential gap of compliance. The language was: "... (unless the <responsible entity> experiences a failure of its Interpersonal Communication capability in which case Requirement R11 shall apply)." The RCSDT also notes this parenthetical was updated to more appropriately address the detection of the failure and now reads: "... (unless the <responsible entity> detects a failure of its Interpersonal Communication capability in which case Requirement R11 shall apply)." No change made.</p> <p>Sufficient evidence includes "physical assets." Does that mean we can point to the phone on the desk and the email program on the desktop PC and we're compliant? Are photographs of physical assets sufficient evidence to submit for the pre-audit questionnaire?</p> <p>Response: The RCSDT believes that physical assets are demonstration of evidence for Interpersonal Communication capability. The responsible entity may exercise other methods of evidence for the physical assets (e.g., photographs or other documentation). No change made.</p> <p>There is no requirement for the communications capabilities to be either diverse or redundant. If both our capabilities, in the end, rely on the POTS/PSTN system, is that acceptable?</p> <p>Response: The RCSDT agrees that the requirements do not specifically address this condition within the requirements themselves; however, the issue of redundancy is addressed within the proposed defined term "Alternative Interpersonal Communication." The definition reads: "Any Interpersonal Communication that is</p>

Organization	Yes or No	Question 4 Comment
		able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.” No change made.
Response: Please see responses above.		
Detroit Edison		<p>Defining Interpersonal Communication as “Any medium that allows two or more individuals to interact, consult, or exchange information” will also include all Alternative Interpersonal Communications since “Any medium” is all inclusive. Consider replacing the definition of Interpersonal Communication with the following:</p> <p>Primary Interpersonal Communication: The normal communication medium that two or more individuals use to interact, consult, or exchange information relating to day-to-day operations.</p> <p>Response: The RCSDT notes that previous drafts received comments recommending the use of terms; such as, “primary,” “secondary,” “device,” “means,” and “medium” with regard to the proposed definitions. The RCSDT thanks you for your suggestion; however, the requirements are for “capability” and adding such proposed terms is not needed to achieve the necessary clarity. No change made.</p> <p>Consider replacing the definition of Alternative Interpersonal Communication with the following:</p> <p>Alternative Interpersonal Communication: Any communication medium that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as the designated Primary Interpersonal Communication.</p> <p>Response: This suggestion has only added the word “Primary” to the definition. The RCSDT contends that the use of terms, such as, “primary,” “secondary,” “device,” “means,” and “medium” with regard to the proposed definitions is not needed to achieve the necessary clarity. No change made.</p> <p>R1, R3, R5, R7, R8 should require entities to designate Primary Interpersonal</p>

Organization	Yes or No	Question 4 Comment
		<p>Communication.</p> <p>Response: This suggestion has only added the word “Primary” to the defined term. The RCSDT contends that the use of terms, such as, “primary,” “secondary,” “device,” “means,” and “medium” with regard to the proposed definitions is not needed to achieve the necessary clarity. No change made.</p> <p>R10 and R11 should address failures to designated Primary and Alternate Interpersonal Communication.</p> <p>Response: This suggestion has only added the word “Primary” to Requirements R10 and R11. The RCSDT contends that the use of terms, such as, “primary,” “secondary,” “device,” “means,” and “medium” with regard to the proposed definitions is not needed to achieve the necessary clarity. No change made.</p> <p>R9 in all VSL levels the phrase "failed to initiate action to repair" or designate a replacement is subject to interpretation. Does "initiate action" include notification to the proper party to investigate and repair or does it require repairs to begin within specified times as listed in severity levels?</p> <p>Response: The RCSDT notes that the requirement is for the entity to “initiate action,” which may include, but is not limited to, notifying or request repair to restore the capability. The available alternative is to designate an Alternative Interpersonal Communication capability. No change made.</p>
<p>Response: Please see response above.</p>		
<p>Duke Energy</p>		<p>Distribution Providers and Generator Operators have significant responsibilities that require reliable means of communications with other entities, such as implementing load shedding and adjusting real and reactive power. The requirements for the Distribution Provider and Generator Operator should therefore be consistent with those for the Reliability Coordinator, Transmission Operator and Balancing Authority, namely, they should be required to designate Alternative Interpersonal Communication capability, to test this capability and to notify appropriate entities</p>

Organization	Yes or No	Question 4 Comment
		<p>when its Interpersonal Communication capability has failed.</p> <p>Response: The RCSDT thanks you for your comment about requiring the Distribution Provider and Generation Operator to have the requirements similar to that of the Reliability Coordinator, Transmission Operator, and Balancing Authority. The standard, as proposed, has included the Distribution Provider and Generation Operator in accordance with the regulatory statements in Order No. 693, Paragraphs 483, 491, 495, 496, and 503 which recognized the need for Distribution Providers and Generation Operators to have flexibility in meeting the communication capability requirements and not to burden smaller entities (i.e., DPs and GOPs) with the additional requirement of adding communication redundancy. No change made.</p> <p>The definition of Interpersonal Communication should also be expanded to clearly include the drafting team’s intent that the capability is NOT for the exchange of data.</p> <p>With respect to the standard being tacit on “not for the exchange of data,” the RCSDT believes this concern is addressed within the earlier IRO-014-1 – Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators standard and now the proposed IRO-014-2 – Coordination Among Reliability Coordinators adopted by the NERC Board of Trustees August 4, 2011. No change made.</p>
<p>Response: Please see the responses above.</p>		
Dominion		<p>Dominion has no additional comments on COM-001-2, but does have the below comments on IRO-001-3:</p> <p>Dominion believes that our previous comment remains valid and the response provided by the SDT does not address all aspects of our concerns. Dominion suggests that the language of ‘direction’ be changed to ‘Reliability Directive’ to remain consistent with COM-002. Another alternative would be as written below;</p> <p>IRO-001-3 uses the term ‘direct’ in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the</p>

Organization	Yes or No	Question 4 Comment
		<p>following: To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.</p> <p>R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts.</p> <p>R2: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Reliability Coordinator’s request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given.</p> <p>R3: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.”</p> <p>Or we could cite Southwest Transmission Cooperative, Inc. comments which read “COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: “When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact?</p> <p>Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. For clarity and consistency, IRO-001-3 Requirement R2 and R3 should also be clear that the responsible entities will respond to the Reliability Coordinator’s Reliability Directives.</p>
<p>Response: The RCSDT thanks you for your support of COM-001-2. The standards COM-002-3 and IRO-001-3 were approved by</p>		

Organization	Yes or No	Question 4 Comment
<p>industry in July 2012; therefore, the RCSDT is not able to respond to Dominion’s comments and consider changes to the standard. No change made.</p>		
<p>FirstEnergy</p>		<p>FE supports COM-001-2 and has no further comments.</p> <p>PLEASE NOTE: THE FOLLOWING COMMENTS RELATE TO COM-002-3 AND IRO-001-3 SINCE WE WERE NOT ABLE TO PROVIDE COMMENTS ON THE RECIRCULATION BALLOT AND WANTED TO EXPLAIN OUR REASONS FOR NOT SUPPORTING THOSE STANDARDS:</p> <p>Although we believe the team made significant improvements to the standard, and would support a 3-part communication standard, we believe the introduction of both COM-002-2 which utilizes Reliability Directives and COM-003-1 which utilizes Operating Communications cause confusion for system operators and may in fact be detrimental to reliability.</p> <p>We do not support two standards on three-part communication. We suggest, as we have in the past, that the subject of three-part communication be addressed in a single standard, and that the requirements be developed for simplicity. The industry is, and has been, using three-part communication for decades and although we agree it should be more consistently practiced and standardized, the required communications protocols should be simple while meeting the goal of BES reliability. Introducing complicated requirements and standards that have different definitions such as Reliability Directive and Operating Communication may cause the operator to hesitate when issuing directives in real-time and every second counts when a potential system emergency must be mitigated.</p> <p>Therefore, FE does not support the creation of both COM-003-1 nor the revisions to COM-002-2 and IRO-001-3 which introduce the “Reliability Directive” term and ask NERC to reevaluate the need to have two separate standards for three-part communication.</p>
<p>Response: The RCSDT thanks you for your support of COM-001-2. The standards COM-002-3 and IRO-001-3 were approved by industry in July 2012; therefore, the RCSDT is not able to respond to FirstEnergy’s comments and consider changes to the standard.</p>		

Organization	Yes or No	Question 4 Comment
No change made.		
Indiana Municipal Power Agency		<p>IMPA does not like the wording in R11 that states "mutually agreeable action for the restoration of its Interpersonal Communication capability." IMPA sees that entities will have to prove that the action taken by entities was "mutually agreeable" to the parties involved which will be very problematic. IMPA believes as long as the entity who owns the equipment is taking steps to get it back into service that is all that should be required by any requirement of this standard.</p>
<p>Response: The RCSDT addressed the concern about “mutually agreeable restoration time” by revising the phrase to “mutually agreeable action,” which allows the applicable entities to reach consensus on the effort needed to restore communications. Additionally, working toward a mutually agreeable action also ensures that both parties understand the magnitude of the loss of their Interpersonal Communication capability and agree to the actions needed to restore and minimize the time the capability is unavailable. From a compliance standpoint, the Distribution Provider and Generation Operator that is working to restore its Interpersonal Communication capability is not out of compliance as far as the entity is meeting the requirement for taking action to restore its capability. It is practical on the part of the Balancing Authority or Transmission Operator to reach a mutual agreement, as it will facilitate restoring the capability. No change made.</p>		
Texas Reliability Entity		<p>In the Measures for R3 and R4 (M3 and M4), should the phrase “each adjacent Transmission Operator asynchronously AND synchronously connected” be changed to “each adjacent Transmission Operator asynchronously OR synchronously connected”?</p> <p>Response: The RCSDT agrees with your assessment in COM-001-2 and has changed the word in Measure M3 from “and” to “or” between the words “asynchronously and synchronously.” Error correction made.</p> <p>In the VSLs for R3 it appears that “Reliability Coordinator” should be “Transmission Operator”.</p> <p>Response: The RCSDT agrees with your assessment and has advised NERC staff that the VSL for Requirement R3 should have the entity “Reliability Coordinator” replaced with “Transmission Operator” in COM-002-3 to be consistent with the named entities</p>

Organization	Yes or No	Question 4 Comment
		<p>in Requirement R3. Error correction made.</p> <p>In the VSLs for R5 it appears that “Reliability Coordinator” should be “Balancing Authority”.</p> <p>Response: The RCSDT appreciates you bringing awareness to this error in Requirement R5 VSL. The reference to “Reliability Coordinator” has been changed to Balancing Authority for Requirement R5 in both the High and Severe VSL. Error correction made.</p> <p>In the Severe VSL for R10 the phrase “failed to notify the identified entities identified” should probably be “failed to notify the entities identified”.</p> <p>Response: The RCSDT appreciates you bringing awareness to this error in Requirement R10 VSL Severe column. The first occurrence of “identified” has been removed. Error correction made.</p>
<p>Response: Please see the above responses.</p>		
<p>Ingleside Cogeneration LP (Occidental Chemical in the ballot body)</p>		<p>Ingleside Cogeneration LP generally agrees with the modifications that the SDT has made to COM-001-2. However, we cannot vote to accept the standard unless requirement R10 is modified to include a minimum communications outage duration before consultation with the BA or TOP is necessary. This is similar to R10, which allows an outage to extend up to 30 minutes - thus avoiding the need for a notification that an insignificant interruption in service took place.</p> <p>The following language could be added to R11 as shown in the brackets below:</p> <p>R11. Each Distribution Provider and Generator Operator that experiences a failure of its Interpersonal Communication capability [that lasts 30 minutes or longer] shall consult each entity affected by the failure, as identified in Requirement R7 for a Distribution Provider or Requirement R8 for a Generator Operator, to determine a mutually agreeable action for the restoration of its Interpersonal Communication capability.</p>

Organization	Yes or No	Question 4 Comment
<p>Response: The RCSDT notes that the requirement allows flexibility for the Distribution Provider and Generator Operator to define what constitutes a failure of its Interpersonal Communication capability. The RCSDT believes it is inappropriate to establish a single defined threshold applicable to the numerous entities applicable to this standard. No change made.</p>		
<p>Essential Power, LLC</p>		<p>It is unclear what we are trying to accomplish in R11. If the intent is to coordinate the restoration of communications, then there should be an additional requirement that the GOP have a Communications Recovery Plan, and R11 should focus on the coordination and implementation of that Plan.</p> <p>If the intent is to maintain continuous communications, then there should be an additional requirement for the GOP to maintain an Alternative Interpersonal Communications capability, and R11 should focus on the coordination and implementation of that capability.</p>
<p>Response: The RCSDT thanks you for your comments. The intent of Requirement R11 is to require the Distribution Provider and Generator Operator to consult with its Balancing Authority or Transmission Operator, as the case may be, to mutually agree on the action needed to restore the Interpersonal Communication capability. Additionally, working toward a mutually agreeable action also ensures that both parties understand the magnitude of the loss of their Interpersonal Communication capability and impact to reliability; therefore, both need to agree on the actions needed to restore and minimize the time the capability is unavailable. It is practical on the part of the Balancing Authority or Transmission Operator to reach a mutual agreement, as it will facilitate restoring the capability. No change made.</p>		
<p>Manitoba Hydro</p>		<p>Manitoba Hydro would like additional clarification added to the definition of interpersonal communication. The definition should explicitly state that interpersonal communication does not data links (e.g. the ICCP data link). Also, does interpersonal communication include emails?</p> <p>Response: With respect to the standard being tacit on “not for the exchange of data,” the RCSDT believes this concern is addressed within the earlier IRO-014-1 – Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators standard and now the proposed IRO-014-2 – Coordination Among Reliability Coordinators adopted by the NERC Board of Trustees August 4, 2011.</p>

Organization	Yes or No	Question 4 Comment
		<p>Additionally, Requirement R3 in IRO-010-1a – Reliability Coordinator Data Specification and Collection states: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. No change made.</p> <p>Under the Effective Date Section, the effective date language has a few issues in its drafting. It would be clearer to use the word ‘following’ as opposed to the word ‘beyond’ (and this would also be more consistent with the drafting of similar sections in other standards). The words ‘the standard becomes effective’ in the third line are not needed. The words ‘made pursuant to the laws applicable to such ERO governmental authorities’ may not be appropriate. It’s not the laws applicable to the governmental authorities that are relevant, but the laws applicable to the entity itself. We would suggest wording like ‘or as otherwise made effective pursuant to the laws applicable to the Balancing Authority’.</p> <p>Response: NERC staff note that the phrase: “... the standard becomes effective” is a clarifying statement that needs to remain. This phrase would become more important if the heading “Effective Date” was not used. The phrase, “made pursuant to the laws applicable to such ERO governmental authorities” is a reference to governmental entities that have authority over BPS reliability within a jurisdictional territory; for example, in the United States, the Federal Energy Regulatory Commission; and in Canada, those parties delegated authority by Canadian provinces. Therefore, the statement is appropriate because the laws that are applicable to “such ERO governmental entities” will determine the effective date under the circumstances, not necessarily the laws that are applicable to functional entities. No change made.</p> <p>Also, ERO is not defined.</p> <p>Response: The RCSDT appreciates your comment. The language in the Effective Date section is standard language adopted by NERC and used throughout the body of</p>

Organization	Yes or No	Question 4 Comment
		<p>standards currently under development by teams. The RCSDT is not able to alter this language. No change made</p> <p>R11 and M11 - would suggest replacing 'action' with 'plan of action' or 'action plan'</p> <p>Response: The RCSDT believes the use of "action" is sufficient for Requirement R11 and Measure M11 and that adding "plan" does not add clarity. The RCSDT understands that whatever actions are mutually agreed upon will constitute a plan which the Distribution Provider or Generation Operator will use in the restoration of its Interpersonal Communication capability. No change made.</p> <p>M3 and M4 - the word 'and' between asynchronously and synchronously should more appropriately be 'or'</p> <p>Response: The RCSDT agrees with your assessment and has changed the word in Measure M3 from "and" to "or" between the words "asynchronously and synchronously". Error correction made.</p> <p>M10 - the semi colon after stamped should be deleted</p> <p>Response: The RCSDT agrees with your assessment and has added a colon at the appropriate location and changed the current colon to a comma for the Measures M9, M10, and M11. Error correction made.</p> <p>Compliance Section - Compliance Enforcement Authority is defined as CEA, but then both the acronym and the entire term is later used in the document. Should either not define, or use acronym consistently.</p> <p>Response: The RCSDT notes that the usage of the acronyms is consistent with the NERC style guide. No change made.</p>
<p>Response: Please see responses above.</p>		
MISO		<p>MISO respectfully submits that the subject matter of COM-001-1 is better addressed through an official NERC certification - that is, by having NERC certify that a registered</p>

Organization	Yes or No	Question 4 Comment
		<p>entity has the appropriate communications facilities - than through a formal Reliability Standard.</p> <p>Response: NERC maintains an Organization Certification Program, the goal of which is to ensure that organizations who apply to register or are registered to perform certain reliability functions deemed particularly crucial to the reliability of the bulk power system will meet or exceed certain minimum criteria (i.e., Reliability Standards) demonstrating they are capable of performing the tasks (i.e., Requirements) for these functions. The process for certification of organizations is included in the NERC Rules of Procedure, Section 500 and Appendix 5A. For example, the first paragraph of Section 500 – Organization Registration and Certification states: “The purpose of the Organization Registration Program is to clearly identify those entities that are responsible for compliance with the FERC approved reliability standards. Organizations that are registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable reliability standards...” The RCSDT has addressed the scope of the SAR in addressing communication requirements for entities through an open industry consensus process.</p> <p>Furthermore, the Reliability Standards surrounding communications should be performance based and specifically targeted toward testing, maintenance, and implementation of corrective actions when an issue arises or is otherwise detected. As a result of narrowing the focus of these standards, enforcement would then be tailored toward a Registered Entity’s failure to take such actions when necessary, a direct benefit and correlation to enhancement of the reliability of the BES.</p> <p>Response: The RCSDT thanks you for your comment. Although this standard is not a Results-Based Standard (RBS), it achieves the need to require both Interpersonal Communication and Alternative Interpersonal Communication capability of the applicable entities to ensure reliable operations of the Bulk Electric System. The RCSDT believes the requirements achieve the needed level of communications to ensure reliable operations. No change made.</p>

Organization	Yes or No	Question 4 Comment
		<p>Under the currently proposed approach, the lack of a communication medium or a finding that a communication medium is “inadequate” or does not otherwise qualify under the standard would result in a non-compliance.</p> <p>Response: The RCSDT is not sure what is meant by a “lack of communication medium.” The applicable entity either has the necessary Interpersonal Communication and Alternative Interpersonal Communication capability or does not. The requirements account for conditions where the capability is unavailable and has provided language to avoid situations of non-compliance due to the strict language construction of the requirements. No change made.</p> <p>Finally, MISO respectfully submits that:</p> <ul style="list-style-type: none"> -Distribution Providers (DPs) and Generator Operators (GOPs) should have alternate communication media as well. <p>Response: The RCSDT thanks you for your comment about requiring the Distribution Provider and Generation Operator to have the requirements similar to that of the Reliability Coordinator, Transmission Operator, and Balancing Authority. The standard, as proposed, has included the Distribution Provider and Generation Operator in accordance with the regulatory statements in Order No. 693, Paragraphs 483, 491, 495, 496, and 503 which recognized the need for Distribution Providers and Generation Operators to have flexibility in meeting the communication capability requirements and not to burden smaller entities (i.e., DPs and GOPs) with the additional requirement of adding communication redundancy. No change made.</p> <ul style="list-style-type: none"> -If an alternate communication tool is tested once a month, there is no need to address deficiencies within two hours; six hours is sufficient in such instances. <p>Response: The RCSDT contends the time frame has been through industry consensus, and two hours has been determined acceptable. No change made.</p> <ul style="list-style-type: none"> -The standard should acknowledge that if more than two independent communication mechanisms are available, the VRF/VSL associated with missing a

Organization	Yes or No	Question 4 Comment
		<p>timing requirement is minimal.</p> <p>Response: The RCSDT agrees that the applicable entities in Requirements R1, R3, and R6 are required to designate an Alternative Interpersonal Communication capability; however, this does not create a rationale for lowering the VRF/VSL. The VRF is a measure of the risk, if violated, and the VSL is a measure of non-compliance with the specific requirement.</p> <p>The RCSDT added the High VSL for Requirements R1 through R8 from draft 5 to draft 6 to account for greater granularity in a violation. For each applicable responsible entity named in each of the requirements, the number of entities for which it must have an Interpersonal Communication or Alternative Interpersonal Communication may vary significantly. The RCSDT believed that adding one additional VSL was an appropriate solution to account for variability in the number of entities. No change made.</p> <p>The SDT should require reporting times of failed mediums for GOP and DP similar to that for RC/BA/TOP.</p> <p>Response: The RCSDT thanks you for your comment about requiring the Distribution Provider and Generation Operator to have the requirements similar to that of the Reliability Coordinator, Transmission Operator, and Balancing Authority. The standard, as proposed, has included the Distribution Provider and Generation Operator in accordance with the regulatory statements in Order No. 693, Paragraphs 483, 491, 495, 496, and 503 which recognized the need for Distribution Providers and Generation Operators to have flexibility in meeting the communication capability requirements and not to burden smaller entities (i.e., DPs and GOPs) with the additional requirement of adding communication redundancy. No change made.</p>
<p>Response: Please see responses above.</p>		
<p>Oncor Electric Delivery Company LLC</p>		<p>Oncor takes the position that the premise of R3 does not provide a reliability enhancement but may in effect; increase the risk to reliability by placing notification</p>

Organization	Yes or No	Question 4 Comment
		<p>requirements on the Transmission Operator that could best be managed by the Reliability Coordinator. In fact,</p> <p>Oncor takes the position that as a Transmission Operator, it is being placed into the position of having to continually validate the registration status of every entity that may be registered as a Distribution Provider, Transmission Operator, and Generator Operator within its Transmission Operator Area. Oncor takes the position that since each of these entities are in the applicability section of the standard, the Distribution Provider, Transmission Operator, and Generator Operator should be responsible for seeking Interpersonal Communication capability with the Transmission Operator and the Transmission Operator should then reciprocate Interpersonal Communication capability in response to their initial request. This eliminates an unnecessary compliance obligation of the Transmission Operator to manage "who is" and "who is not" registered as a Generator Operator, Distribution Provider or Transmission Operator.</p> <p>Response: The RCSDT notes this is not within the scope of the SAR. No change made.</p> <p>Oncor recommends the following change to the standard language:</p> <p>Remove 3.3 & 3.4 because R7 and R8 already cover the GO and DP seeking Interpersonal Communication capability with the Transmission Operator.</p> <p>Response: The RCSDT thanks you for your comment and notes that the standard is addressing FERC directives concerning the Generation Owner and Distribution Provider. Entities on each end of the communication capability must have a responsibility to have communications. No change made.</p> <p>Oncor also takes the position that the Reliability Coordinator (RC) is in the best position and not the Transmission Operator to make extensive notifications on a broad basis in the event of a failure of its Interpersonal Communication. In accordance with that position, the Transmission Operator should make a single notification to the RC, and the RC would then make the notification to all impacted</p>

Organization	Yes or No	Question 4 Comment
		<p>entities in the event of the failure of the Transmission Operator’s Interpersonal Communication.</p> <p>Response: The RCSDT notes this implementation is entity-specific and is not achievable by all entities. Each entity is required to make the notifications as applicable to the requirements. No change made.</p> <p>Oncor proposes the following language for R10</p> <p>“R10. Each Transmission Operator shall notify the Reliability Coordinator and the Balancing Authority within 60 minutes of the detection of a failure of its Interpersonal Communication capability that lasts 30 minutes or longer.</p> <p>After notification by any Transmission Operator, the Reliability Coordinator shall immediately notify entities as identified in Requirements R1, R3, and R5 of any Transmission Operator's detection of a failure of its Interpersonal Communication capability that lasts 30 minutes or longer.</p> <p>Each Reliability Coordinator and Balancing Authority shall notify entities as identified in Requirements R1, R3, and R5 within 60 minutes of the detection of a failure of its own Interpersonal Communication capability that lasts 30 minutes or longer.”</p> <p>Response: The RCSDT disagrees with the method. Each entity is required to make the notifications as applicable to the requirements. No change made.</p>
<p>Response: Please see the above responses.</p>		
Central Lincoln		<p>Prior Central Lincoln Comment</p> <p>1) The new requirement presents us with a paradoxical situation. The communication has failed, so we must consult; yet consultation requires communication. We note that the SDT used the word “any”, implying that multiple communication paths are required. The reality of the situation at Central Lincoln, due to our remote location, is that a single back hoe incident at the right location can take out all of our of our communication capability (including the terrestrial portion of the cellular networks)</p>

Organization	Yes or No	Question 4 Comment
		<p>with our BA/TO; making this requirement impossible to meet for this circumstance using our present capabilities.</p> <p>Prior RCSDT Response</p> <p>1) The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure. Furthermore, R11 addresses the direction given in Order 693 that DP and GOP entities do not necessarily need to have Alternative Interpersonal Communication capability. The requirement allows flexibility in “consult with” by not naming the method. If all communications are out, then the DP or GOP may have to meet the requirement by an in-person consultation.</p> <p>New Central Lincoln Response</p> <p>1) Thank you for the changes made. We realize that in-person consultation is an option, but find it not too hard to imagine the same event that disrupts communications might also block roads. We don’t believe entities should be found non-compliant and sanctioned for events beyond their control.</p> <p>Response: The RCSDT understands the paradoxical situation presented here. The standard addresses the essential communication capability needed to operate the Bulk Electric System reliably. No change made.</p> <p>Prior Central Lincoln Comment</p> <p>2) We also note that no time limit was indicated. Most interruptions are brief, and fixed before consultation could reasonably take place. CEAs will be finding entities non-compliant for quickly fixing problems at their end without first consulting to ensure the restoration time was agreeable. To avoid non-compliance, entities will be forced to delay repairs while they investigate alternative communication paths for consultation purposes. We fail to see how such an outcome improves reliability.</p> <p>Prior RCSDT Response</p>

Organization	Yes or No	Question 4 Comment
		<p>2) The DP and GOP are only required to have Interpersonal Communication capability. If the DP or GOP restores its Interpersonal Communication capability before it could reasonably contact the affected entity by another method, there is no failure to comply. The DP or GOP could then consult with the affected entity to determine a mutually agreeable action. In this case, the RCSDT believes the "action" would then be the entities acknowledging the failure and the repair; therefore, no mutually agreeable action is needed. The RCSDT recognizes there is no way to account for all the various circumstances in a failure. To comply, the DP and GOP are still required to consult the entity which the failure affected regardless of whether the Interpersonal Communication capability was restored or is still failed. No change made.</p> <p>New Central Lincoln Response</p> <p>2) If consultation after restoration is acceptable, we suggest that this be made clear in the requirement. Presently it is not at all clear, and there is no accompanying guidance document to suggest so. We also remain unclear what reliability benefit would result from such a consultation following restoration. While accounting for all the various failures might be impossible, we would like to see a few of the more common ones discussed in a guidance document.</p> <p>Response: The RCSDT notes that the requirement allows flexibility for the Distribution Provider and Generator Operator to define what constitutes a failure of its Interpersonal Communication capability. The RCSDT believes it is inappropriate to establish a single-defined threshold or attempt to make a list of the various failures which may potentially affect the numerous entities applicable to this standard. No change made.</p> <p>Prior Central Lincoln Comment</p> <p>3) The new requirement is one sided, requiring the DP and GOP to consult with no corresponding requirement for the TO or BA to have personnel available for such a consultation. Consultation failure or failure to mutually agree due to actions or</p>

Organization	Yes or No	Question 4 Comment
		<p>inactions on the part of the TO or BA should not result in an enforcement action against the DP or GOP, yet that is how the requirement is written.</p> <p>Prior RCSDT Response</p> <p>3) The RCSDT notes that once the failure has been detected, the responsible entity must make the consultation with the BA or TOP; that relieves the compliance burden. While the RCSDT understands your concern about single points of failure, the question becomes should this relieve the DP or GOP of the requirement for having Interpersonal Communication capabilities. No change made.</p> <p>New Central Lincoln Response</p> <p>3) The requirement remains one-sided. If a consultation effort fails due to actions or inactions taken by the BA/TO, the DP or GOP is the only entity that can be found non-compliant.</p> <p>Response: The RCSDT addressed the concern about “mutually agreeable restoration time” by revising the phrase to “mutually agreeable action,” which allows the applicable entities to reach consensus on the effort needed to restore communications. Additionally, working toward a mutually agreeable action also ensures that both parties understand the magnitude of the loss of their Interpersonal Communication capability and agree to the actions needed to restore and minimize the time the capability is unavailable. From a compliance standpoint, the Distribution Provider and Generation Operator that is working to restore its Interpersonal Communication capability is not out of compliance as far as the entity is meeting the requirement for taking action to restore its capability. It is practical on the part of the Balancing Authority or Transmission Operator to reach a mutual agreement, as it will facilitate restoring the capability. No change made.</p> <p>Prior Central Lincoln Comment</p> <p>4) The new requirement fails to add any “clarity” to the other requirements, and we don’t see that the stakeholders thought there was a problem with DP/GOP obligation clarity. Instead, it adds new obligations with no justification for how they enhance</p>

Organization	Yes or No	Question 4 Comment
		<p>reliability. We suggest removing the requirement.</p> <p>Prior RCSDT Response</p> <p>4) Based on the RCSDT’s understanding of the comments received on the previous posting, the industry desired additional clarity on specifically what communication capabilities the DP and GOP were required to have. There was confusion that the standard did not specifically say that the DP and GOP were required to have Alternative Interpersonal Communication capabilities. R11 clarifies that a DP and GOP are not required to have Alternative Interpersonal Communication capability if the DP or GOP consult with their TOP or BA, whichever is applicable in the given situation, and they mutually agree that the restoration action does not adversely impact the reliability of the BES. No change made.</p> <p>New Central Lincoln Response</p> <p>4) We disagree that R11 clarifies anything regarding Alternative Interpersonal Communication capabilities; the requirement says nothing on the matter. If other requirements remain unclear, we suggest they be clarified within those requirements. We ask that R11 be removed. Alternatively, we suggest that a plan for communication failure be developed by the affected entities prior to a failure, applicable to both the BA/TO and DP/GOP.</p> <p>Response: The RCSDT contends the desired result is restoring the capability and that the most appropriate and measureable way to address the loss of the Distribution Provider or Generation Operator’s capability is to require the entities to communicate the action taken to restore the capability. No change made.</p> <p>Prior Central Lincoln Comment</p> <p>5) As stated in our prior comments, we continue to have problems with COM-002, R2 and R3 as written. The SDT’s answer (“It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive”) addresses our concern perfectly, and we would agree with such an expectation. Unfortunately, the expressed expectation</p>

Organization	Yes or No	Question 4 Comment
		<p>is not in the proposed standard or even in a proposed guideline for the standard.</p> <p>Prior RCSDT Response</p> <p>5) The RCSDT believes this is a process or procedure question that should be determined by the entity in how it handles communication with the RC. The standard, as written does, not preclude the entity from having a procedure. No change made.</p> <p>New Central Lincoln Response</p> <p>5) We agree that this is a procedure issue, but disagree that the procedure lies with the entity receiving the Reliability Directive. The SDT’s words inside the quotation marks above state it is the issuer of the Directive that should request a return call. Procedures like this, in order to ensure the Directive gets to the party who understands it and can take the needed action, are the responsibility of the issuer. If reliability is at risk, it is little to ask that issuers of Reliability Directives be required to attempt to reach the proper party prior to identifying, delivering the directive, and asking for repetition.</p> <p>Response: The standard COM-002-3 was approved by industry in July 2012; therefore, the RCSDT is not able to respond to Central Lincoln’s comments and consider changes to the standard. No change made.</p>
<p>Response: Please see responses above.</p>		
Liberty Electric Power		<p>R11 remains an issue even with the revision. The purpose of R11 should be to inform the BA and TO of a loss of interpersonal communications capability so that the BA or TO can react effectively to grid conditions in an emergency. The methods of repair for generator telephone and data lines are properly the business decisions of the generator, and there is no benefit to the reliability of the BES if a standard requires a generator to attempt to gain consensus from the BA and TO on his repair actions.</p> <p>Taking the time to discuss a "mutually agreed action" will delay the start of repairs,</p>

Organization	Yes or No	Question 4 Comment
		<p>and lengthen the time of a communications outage as generators first must discuss the issue with the BA and TO instead of initiating the action on their own and informing those entities of the failure. Further, failure to follow a mutually agreed action plan could become a topic of exploration for audit staff. As telecommunications repairs are generally not in the scope of expertise of electrical generators, this places the entities at the mercy of contractor repair schedules, making following any mutually agreed action problematic.</p> <p>Response: The RCSDT notes that the purpose of consulting with the appropriate entities ensures those entities are aware of the loss of Interpersonal Communication capabilities and will have the necessary information to adjust reliability operations accordingly. There is nothing in Requirement R11 preventing the Distribution Provider or Generator Operator from taking action beforehand. No change made.</p> <p>Further, there is no duration trigger on R11, as opposed to the RC/TO/BA requirement in R10. This forces the generator to inform the listed entities even of losses of capability which last a handful of seconds. If a small generator has a single line into the control room, and the control room operator is on the phone to the TOP, does he then have to inform the TO and BA at the end of the call that they would have received a busy signal? If the operator knocks the phone from the cradle, is the requirement to inform triggered? In a strict reading of the language, it would be.</p> <p>Suggested rewrite of R11:</p> <p>"Upon discovery of an unresolved loss of interpersonal communications which has the potential to last more than 15 minutes, the GOP shall inform the entities listed in R8 of the status of interpersonal communications. The GOP shall initiate the process to restore the interpersonal communications, and inform the entities listed in R8 of the restoration of communications when repairs are complete."</p> <p>Response: The RCSDT notes that the requirement allows flexibility for the Distribution Provider and Generator Operator to define what constitutes a failure of its Interpersonal Communication capability. The RCSDT believes it is inappropriate to</p>

Organization	Yes or No	Question 4 Comment
		establish a single-defined threshold applicable to the numerous entities applicable to this standard. No change made.
Response: Please see responses above.		
Tacoma Power		<p>R9 - The Standard requires that when there is a failure to a primary or alternate communication system that action is initiated within 2 hours of the communication failure. It is not clear what the term “action” means. Tacoma requests clarification for what “actions” are intended by the standard.</p> <p>Response: The RCSDT notes that the requirement is for the entity to “initiate action,” which may include, but is not limited to, notifying or requesting repair to restore the capability. The option is to designate an Alternative Interpersonal Communication capability. Additionally, there is no time constraint for the Interpersonal Communication capability, only the AIC. No change made.</p> <p>R10 - Interpersonal Communication is defined as “any medium that allows two or more individuals to interact, consult, or exchange information”. As it is written, R10 requires an entity to contact another entity “within 60 minutes of the detection of a failure of its Interpersonal Communication capability that lasts 30 minutes or longer”. This contact may not be possible in a situation where there is “a failure of Interpersonal Communication capability”.</p> <p>Response: The RCSDT notes that the responsible entities named in Requirement R10 are also required to have a designated Alternative Interpersonal Communication capability and should be able to make the necessary notifications. No change made.</p> <p>R11 – The lack of a time line in R11 seems inconsistent with the time line requirements in R9 and R10. If there is a communication failure affecting the GO and DP then the standard only requires that they agree on an action to restore communication but does not assign a timeline.</p> <p>Response: The RCSDT notes that the requirement allows flexibility for the Distribution Provider and Generator Operator to define what constitutes a failure of</p>

Organization	Yes or No	Question 4 Comment
		its Interpersonal Communication capability. The RCSDT believes it is inappropriate to establish a single-defined threshold applicable to the numerous entities applicable to this standard. No change made.
Response: Please see responses above.		
LG&E and KU Services		<p>Regarding COM-001-2 and proposed definitions, LG&E and KU Services recommends changing the terms being defined from “Interpersonal Communications” and “Alternative Interpersonal Communication” to “Means for Interpersonal Communication” and “Alternative Means for Interpersonal Communication.” A communication is an exchange of information, not a medium. The medium is simply the means. LG&E and KU Services Company further recommend that each requirement be rewritten with these new defined terms as appropriate and that the word “capabilities” currently following the defined terms be removed from each of the requirements.</p> <p>Response: The RCSDT notes that commenters recommended using the terms, such as, “primary,” “secondary,” “device,” “means,” and “medium” with regard to the proposed definitions. The RCSDT thanks you for your suggestion; however, the requirements are for “capability” and adding such proposed terms is not needed to achieve the necessary clarity. No change made.</p> <p>We suggest the definition for “Means for Interpersonal Communication” be: “A medium utilizing electromagnetic energy that allows two or more individuals to interact, consult or exchange information.” We suggest the definition for “Alternative Means for Interpersonal Communication” be: “Any Means for Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Means for Interpersonal Communications used for day-to-day operation.” Regarding R1 through R10, it is unclear what “shall have Interpersonal Communications capability” means. That could mean that the responsible entity simply has to have an IC capability that is different from our designated AIC capability (as R1 through R8 suggest). That could also mean,</p>

Organization	Yes or No	Question 4 Comment
		<p>differently, that the responsible entity has to designate an IC capability (as R10 suggests). It is also unclear whether the IC capability can change, e.g. from email to land line. There is nothing in the Standard that makes this clear. Regarding R11, as written it is unclear who would be responsible for non-compliance if the consulting entities did not “determine a mutually agreeable action for the restoration of its Interpersonal Communication capability.”</p> <p>Response: The RCSDT believes the definitions and requirements are clear and does not agree with the proposed definition changes. The requirements and definition allow the entity to determine the medium. No change made.</p>
<p>Response: Please see responses above.</p>		
<p>City of Tallahassee (TAL)</p>		<p>TAL has no comments on COM-001-2.</p> <p>However, for COM-002-3, under Data Retention, the second bullet requires the BA, TOP, GOP, and DP to retain evidence for R1, M1; however, R1 is not applicable to the GOP or DP. This should read R2, M2.</p> <p>Response: The RCSDT agrees with your assessment that R1 and M1 should be R2 and M2. The RCSDT has advised NERC staff of the typo in COM-002-3.</p> <p>Also, there is room for debate on the clarity of the VSLs for R3. Specifically, the use of the word "accurately" could be interpreted to mean "verbatim" in cases where varying verbiage results in the same understanding and action between the parties, and therefore no re-issuance of the directive is required in the eyes of the issuer.</p> <p>Response: The standard COM-002-3 was approved by industry in July 2012; therefore, the RCSDT is not able to respond to the City of Tallahassee’s comment to consider changes to the standard. No change made.</p>
<p>Response: Please see responses above.</p>		
<p>American Electric Power</p>		<p>The definition of Alternative Interpersonal Communication is “Any Interpersonal</p>

Organization	Yes or No	Question 4 Comment
		<p>Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.” Does the Alternative Interpersonal Communication have to be a different technology? For example, if a satellite phone is used, but it calls the same land-line on the other end, does this qualify as Alternative Interpersonal Communication?</p> <p>Response: The proposed definitions only specify that the alternative has to utilize a separate medium. The standard is not technology dependent and allows entities flexibility in selecting the capability appropriate for its need. No change made.</p> <p>How does a TOP notify a DP of a failure in its Interpersonal Communications capability per R10, if it there is no Alternative Interpersonal Communication required? Within Requirement 10, the entities to be notified should not reference R1, R3, and R5 but should instead reference R2, R4, and R6 respectively. This change is necessary because the requirements we are referring to are those that have Alternative Interpersonal Communications. You cannot expect notification to entities where an Alternative Interpersonal Communication does not exist.</p> <p>Response: The RCSDT notes that Requirement R10 applies to the TOP and that the TOP is required to have AIC per Requirement R4. The RCSDT disagrees with the suggested change in the requirement references because the current references are specific to the entities that apply to the Interpersonal Communication capability. No change made.</p> <p>With regard to the requirement references in R10, the RCSDT agrees with the ambiguity in both the Requirement R10 and Measure M10 and proposes to clarify Requirement R10, Measure M10, and R10 VSL by inserting the word “respectively.” For example, adding the word “respectively” means that the Reliability Coordinator in R1 is not required to notify the entities identified in Requirement R3 or R5. The RCSDT intended the requirements to map to the entity. Clarifying changes made.</p>
<p>Response: Please see the responses above.</p>		

Organization	Yes or No	Question 4 Comment
<p>Exelon Corporation and its affiliates</p>		<p>The definition of Interpersonal Communication requires further clarification. The use of the term “Any medium” opens the definition up to broad interpretation. It’s not clear whether the definition means to apply to the point of communication owned, managed, and operated by the entity, or the total communications pathway? For example if entity A’s phone system is working fine, but Entity B is experiencing trouble, does Entity A have a compliance concern if Entity B experiences a communication breakdown on their end of the medium?</p> <p>Please provide greater insight on the intended compliance obligation and consider the following revision to the definition:</p> <p>Interpersonal Communication: Any medium, owned, managed, or operated by the applicable entity, that allows two or more individuals to interact, consult, or exchange information.</p> <p>Response: The RCSDT notes that each requirement does not prescribe the “how,” “why,” “who,” or “where” concerning the failure or loss of its Interpersonal Communication (or Alternative Interpersonal Communication) capability. It is the responsibility of the applicable entity to perform the “what” of each requirement. There is no compliance risk based on the “how,” “why,” “who,” or “where.” No change made.</p> <p>The RCSDT appreciates the suggested changes to the defined term. The suggestion introduces specifics which make the definition less flexible and more prescriptive. Such a change could potentially be invalidated by the way an entity operates in the future. No change made.</p> <p>R9 provides ambiguous instruction for the resolution process surrounding tests and failures of Alternative Interpersonal Communication capability. Please confirm whether the intent of the requirement is to initiate repairs within two hours, or to effect repairs within two hours, with the alternate option being to designate a replacement Alternative Interpersonal Communication if repairs cannot be completed within two hours.</p>

Organization	Yes or No	Question 4 Comment
		<p>Response: The RCSDT notes that the requirement is for the entity to “initiate action,” which may include, but is not limited to, notifying or request repair to restore the capability. The option is to designate an Alternative Interpersonal Communication capability. No change made.</p> <p>R10 has similar ambiguity, referencing a 60 minute notification timeframe requirement upon the detection of a failure lasting 30 minutes or longer. Please confirm the intended start of the requirement notification. Does the clock for notification begins at the point of failure, at the point of discovery, or at the point that the failure is discovered to have been effective for 30 minutes or greater? Thank you for the opportunity to comment.</p> <p>Response: The RCSDT notes the 60-minute clock starts at the point the failure has reached the 30-minute threshold. This is to allow time for intermittent failures to be resolved. No change made.</p>
<p>Response: Please see the responses above.</p>		
<p>ISO/RTO Standards Review Committee</p>		<p>The IRC continues to believe that these a certification types of requirements and that they do not belong in a standard.</p> <p>The SRC believes that the requirement to have a medium to communicate should be required to be certified.</p> <p>Response: NERC maintains an Organization Certification Program, the goal of which is to ensure that organizations who apply to register or are registered to perform certain reliability functions deemed particularly crucial to the reliability of the bulk power system will meet or exceed certain minimum criteria (i.e., Reliability Standards) demonstrating they are capable of performing the tasks (i.e., Requirements) for these functions. The process for certification of organizations is included in the NERC Rules of Procedure, Section 500 and Appendix 5A. For example, the first paragraph of Section 500 – Organization Registration and Certification states: “The purpose of the Organization Registration Program is to clearly identify those</p>

Organization	Yes or No	Question 4 Comment
		<p>entities that are responsible for compliance with the FERC approved reliability standards. Organizations that are registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable reliability standards...” The RCSDT has addressed the scope of the SAR in addressing communication requirements for entities through an open industry consensus process. No change made.</p> <p>When you are operating as a registered entity, the requirements should be performance based such as taking corrective actions and if you fail to communicate for any reason you will be found non-compliance. The lack of a communication medium should not be a defense for non-compliance of the performance based standards.</p> <p>Response: The RCSDT thanks you for your comment. Although this standard is not a Results-Based Standard (RBS), it achieves the need to require both Interpersonal Communication and Alternative Interpersonal Communication capability of the applicable entities to ensure reliable operations of the Bulk Electric System. The RCSDT believes the requirements achieve the needed level of communications to ensure reliable operations. No change made.</p> <p>The SDT should require reporting times of failed mediums for GOP and DP similar to that for RC/BA/TOP.</p> <p>Response: The RCSDT notes that the requirement allows flexibility for the Distribution Provider and Generator Operator to define what constitutes a failure of its Interpersonal Communication capability. The RCSDT believes it is inappropriate to establish a single-defined threshold applicable to the numerous entities applicable to this standard. No change made.</p>
Response:		
ISO New England Inc		The ISO-NE continues to believe that these a certification types of requirements and that they do not belong in a standard.

Organization	Yes or No	Question 4 Comment
		<p>ISO-NE believes that the requirement to have a medium to communicate should be required to be certified.</p> <p>Response: NERC maintains an Organization Certification Program, the goal of which is to ensure that organizations who apply to register or are registered to perform certain reliability functions deemed particularly crucial to the reliability of the bulk power system will meet or exceed certain minimum criteria (i.e., Reliability Standards) demonstrating they are capable of performing the tasks (i.e., Requirements) for these functions. The process for certification of organizations is included in the NERC Rules of Procedure, Section 500 and Appendix 5A. For example, the first paragraph of Section 500 – Organization Registration and Certification states: “The purpose of the Organization Registration Program is to clearly identify those entities that are responsible for compliance with the FERC approved reliability standards. Organizations that are registered are included on the NERC Compliance Registry (NCR) and are responsible for knowing the content of and for complying with all applicable reliability standards...” The RCSDT has addressed the scope of the SAR in addressing communication requirements for entities through an open industry consensus process. No change made.</p> <p>When you are operating as a registered entity, the requirements should be performance based such as taking corrective actions and if you fail to communicate for any reason you will be found non-compliance. The lack of a communication medium should not be a defense for non compliance of the performance based standards.</p> <p>Response: The RCSDT thanks you for your comment. Although this standard is not a Results-Based Standard (RBS), it achieves the need to require both Interpersonal Communication and Alternative Interpersonal Communication capability of the applicable entities to ensure reliable operations of the Bulk Electric System. The RCSDT believes the requirements achieve the needed level of communications to ensure reliable operations. END OF REPORT

Exhibit F

Summary and Record of Development of Proposed Reliability Standards

Exhibit F

Summary of Development Authorization, Posting, and Balloting History

Project 2006-06 was initiated in January of 2007 for the purpose of revising IRO-001-1, IRO-002-2, IRO-005-3a, IRO-014-1, IRO-015-1, and IRO-016-1. The SAR for this project described the purpose of the project: “To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.”⁴¹ Given that the draft COM-001-2 and COM-002-3 standards focused on communication protocols rather than responsibilities for Reliability Coordinator actions to prevent instability, uncontrolled separation, or cascading outages, the COM-001-2 and COM-002-3 standards were complete on a separate track from the proposed IRO Reliability Standards, and will be filed by NERC in a separate petition for approval.

Specifically, the standard drafting team worked with industry stakeholders to review applicable standards as follows:

- For each existing requirement, the drafting team will work with stakeholders and:
 - Eliminate redundancy in the requirements.
 - Identify requirements that should be moved into other SARs
 - Eliminate requirements that do not support bulk power system reliability
 - Transfer requirements that need to be in place before an entity begins operation as an RC to certification.
- Ensure they are enforceable as mandatory Reliability Standards with financial penalties — the applicability to bulk power system owners, operators, and users, and as appropriate particular classes of facilities, is clearly defined; the purpose, requirements, and measures

⁴¹ NERC SAR for Project 2006-06, Reliability Coordination at p. 2, available at: http://www.nerc.com/docs/standards/sar/RC%20_SAR_Draft%202_clean_050107.pdf.

are results-focused and unambiguous; the consequences of violating the requirements are clear.

- Consider comments received during the initial development of the standards and other comments or directives received from ERO regulatory authorities and stakeholders.
- Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure.
- Satisfy the standards procedure requirement for five-year review of the standards.

The first draft of the Reliability Coordination SAR and the proposed standards COM-001-2, COM-002-3, IRO-001-3, IRO-002-3, IRO-005-4, and IRO-014-2 were posted for a 45-day public comment period from August 5–September 16, 2008.⁴² There were 29 sets of comments, including comments from more than 70 different people from more than 50 companies representing 8 of the 10 Industry Segments.

The standard drafting team received very few comments concerning IRO-002-2 and IRO-005-4 and no substantive revisions were made to the Requirements of those standards. Commenters suggested striking the term “as a minimum” in R1 and the standard drafting team modified R1 accordingly. Some commenters did not agree with the language of the two new requirements in IRO-014-2 that were formerly in IRO-016-1. The standard drafting team modified and subdivided the requirements into four requirements (R5 –R8).

Several commenters suggested that the High and Severe VSLs for R2 contradicted the requirement. As a result, the standard drafting team revised the VSLs to better reflect the content of the requirement. Several commenters also suggested revisions for the VSLs for R6, which was imported from IRO-016. VSLs were changed to support the revised requirements.

The second draft of the Reliability Standards was posted for a 30-day public comment period from July 10–August 9, 2009. There were 31 sets of comments, including comments

⁴² The Standards Development Project 2006-06 addresses all of the mentioned Reliability Standards, however, only IRO-001-3, IRO-002-3, IRO-005-4 and IRO-014-02 are being submitted for Commission approval in this filing.

from 87 different people from more than 62 companies representing 8 of the 10 Industry Segments.

The standard drafting team made conforming revisions to IRO-014-2, based on the comments received. Stakeholders suggested revising R8 to include provisions for avoiding implementing actions that would violate safety, equipment or regulatory or statutory requirements. The standard drafting team agreed and added this to the requirement. Other stakeholders suggested adding the following language at the beginning of R1 and R3: “For conditions or activities that impact other Reliability Coordinator Areas...” The standard drafting team agreed with this comment and added the language to the requirements. The Time Horizons for R2 were revised as suggested to “Same Day Operations and Operations Planning.” The Measures M1, M3 and M8 were revised to reflect revisions to their respective Requirements.

The third draft of the Reliability Standards were posted for a 45-day public comment period from January 4–February 18, 2011. There were 42 sets of comments, including comments from more than 150 different people from over 50 companies representing each of the 10 Industry Segments.

Stakeholders identified certain language modifications to provide clarity to the requirements. Each requirement was revised without substantively changing the intent or reliability objective of the requirement.

The proposed set of Reliability Standards, including COM-001-2, COM-002-3, IRO-001-3, IRO-002-3, IRO-005-4, and IRO-014-2, were posted as a single ballot item for the concurrent 45-day pre-ballot review and Initial Ballot from January 18–March 7, 2011, during which time members of the registered ballot body were registered for the ballot pool. The initial ballot was

conducted from February 25–March 7, 2011. The voting statistics are listed below, and the Ballot Results Web page provides a link to the detailed results:⁴³

Quorum: 87.103 percent

Approval: 49.54 percent

Because at least one negative ballot included a comment, these results were not final. As part of the ballot process, the standard drafting team reviewed voter comments and determined that the majority of negative votes were related to the COM-001-2, COM-002-3 and IRO-001-3 Reliability Standards. The standard drafting team requested Standards Committee approval that IRO-001-3, IRO-002-3, IRO-005-4, and IRO-014-2 be allowed to proceed to the recirculation ballot. The standard drafting team developed responses to the negative ballot comments, and the recirculation ballot ensued with only minor clarifying edits to the Reliability Standards. Each Reliability Standard was balloted separately. The recirculation ballots were conducted from July 15-25, 2011. Voting statistics for the recirculation ballot are listed below, and the Ballot Results Web page provides a link to the detailed results:

IRO-002-3: Quorum: 94.13 percent

Approval: 76.99 percent

IRO-005-4: Quorum: 94.13 percent

Approval: 75.17 percent

IRO-014-1⁴⁴: Quorum: 94.13 percent

Approval: 76.27 percent

⁴³ NERC Project 2006-06 Reliability Coordination, available at:
http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

⁴⁴ The ballot for IRO-014-2 included the revision to IRO-001-3 which involved retiring one requirement in IRO-001-3.

The NERC Board of Trustees approved the IRO-001-3, IRO-002-3, IRO-005-4, and IRO-014-2 Reliability Standards on August 4, 2011 and August 16, 2012.

b. Key Issues during Standard Development

Representatives of the standard drafting team met with FERC Staff on several occasions to discuss the merits of the proposed revisions to the set of Reliability Standards under Project 2006-06. FERC Staff also participated in standard drafting team meetings as an observer on a regular basis throughout the development process. There were two main concerns expressed by FERC Staff relating to IRO-002-3 and IRO-005-4 and the proposed retirement of Requirements from the Reliability Standards. The concerns of FERC Staff relate to:

- Retiring Requirements that relate to monitoring.
- Retiring Requirements related to SOLs.

As noted in this petition, real-time monitoring is a supporting activity and is only one of several processes used to support operation within SOLs or IROLs. The reliability objective is to operate within identified parameters, not to monitor.

As drafting teams work to refine the body of Version 0 Reliability Standards, these teams will support the division of responsibilities as specified in the NERC Functional Model. This division of responsibilities assigns the Reliability Coordinator responsibility for identifying and controlling operations associated with IROLs and assigns the Transmission Operator responsibility for identifying and controlling operations associated with SOLs. As demonstrated during the August 2003 blackout, having a clear division of responsibilities is essential in real-time operations.⁴⁵ Although there is a clear division of duties, this does not mean that the Reliability Coordinator and Transmission Operator cannot assist one another. Indeed, the

⁴⁵ See generally, NERC August 14, 2003 Blackout Investigation, available at: <http://www.nerc.com/filez/blackout.html>.

Reliability Coordinator may direct its Transmission Operators to take actions to prevent or mitigate instances of exceeding specific IROLs. Similarly the Transmission Operator may ask the Reliability Coordinator for assistance in preventing or mitigating instances of exceeding specific SOLs.

The proposed TOP Reliability Standards filed concurrently with this petition includes a set of requirements for Transmission Operators that work cooperatively with the requirements for Reliability Coordinators. The set of requirements proposed for the Transmission Operator includes a requirement for the Transmission Operator to identify a subset of SOLs that, based on the results of the Transmission Operator's Operational Planning Analysis, could adversely impact reliability in the Transmission Operator's area. The Transmission Operator is also required to provide its Reliability Coordinator with those SOLs and is required to inform the Reliability Coordinator when it operates outside those SOLs.

**Project 2006-06
Reliability Coordination**

Related Files

Status:

First set of standards:

The industry approved IRO-002, IRO-005, and IRO-014 on July 25, 2011. The BOT approved the standards at their August 4, 2011 meeting. Currently, NERC staff are preparing the filing for these BOT approved standards.

Second set of standards:

The standard COM-001-2 (Communications) comment period ended July 6, 2012 and the second successive ballot ended on July 11, 2012. The standards COM-002-3 (Communication and Coordination) and IRO-001-3 (Reliability Coordination - Responsibilities and Authorities) recirculation ballots ended July 6, 2012.

The team is responding to comments received for COM-001-2 and expects to post the standard for recirculation ballot August 2012. The standard IRO-001-3 will proceed to the Board of Trustees (BOT) for adoption August 2012. The COM-002-3 is expected to proceed to the BOT for adoption upon industry stakeholder approval of COM-001-2.

Purpose/Industry Need:

To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

Standard Authorization Request Form

Title of Proposed Standard	Reliability Coordination (Project 2006-06)
Request Date	December 18, 2006

SAR Requestor Information	SAR Type <i>(Check a box for each one that applies.)</i>
Name Ellis Rankin	<input type="checkbox"/> New Standard
Primary Contact Ellis Rankin	<input checked="" type="checkbox"/> Revision to existing Standards – see list below
Telephone 214-743-6828 Fax 972-263-6710	<input type="checkbox"/> Withdrawal of existing Standard
E-mail erankin@txued.com	<input type="checkbox"/> Urgent Action

Purpose
The purpose of this set of standards is to ensure that the reliability coordinator has processes, procedures, plans, and can use their tools and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

COM-001 — Telecommunications
COM-002 — Communications and Coordination
IRO-001 — Reliability Coordination – Responsibilities and Authorities
IRO-002 — Reliability Coordination – Facilities
IRO-003 — Reliability Coordination – Wide Area View
IRO-004 — Reliability Coordination – Operations Planning
IRO-005 — Reliability Coordination – Current Day Operations
IRO-007 — Monitoring the Wide Area
IRO-008 — Reliability Coordinator Analyses and Assessments
IRO-009 — Reliability Coordinator Actions to Operate Within IROLs
IRO-010 — Reliability Coordinator Data Specification and Collection
IRO-011 — Providing Data to the Reliability Coordinator
IRO-012 — Procedures, Processes or Plans for Preventing and Mitigating IROLs
IRO-013 — Reliability Coordinator Directives Relative to IROLs
IRO-014 — Procedures to Support Coordination between Reliability Coordinators
IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
ORG-020 — Reliability Coordinator Certification - Certification
ORG-021 — Reliability Coordinator Certification - Agreements
ORG-022 — Reliability Coordinator Certification - Personnel
ORG-023 — Reliability Coordinator Certification - Data Acquisition and Monitoring
ORG-024 — Reliability Coordinator Certification – System Analysis
ORG-025 — Reliability Coordinator Certification – Emergency Operations
ORG-026 — Reliability Coordinator Certification – Loss of Control Center Functionality
ORG-027 — Reliability Coordinator Certification – Restoration

Standards Authorization Request Form

PER-004 — Reliability Coordination – Staffing
PRC-001 — System Protection Coordination

Several of the standards in this set are Version 0 standards. As the electric reliability organization begins enforcing compliance with reliability standards under Section 215 of the Federal Power Act in the United States and applicable statutes and regulations in Canada, the industry needs a set of clear, measurable, and enforceable reliability standards. The Version 0 standards, while a good foundation, were translated from historical operating and planning policies and guides that were appropriate in an era of voluntary compliance. The Version 0 standards and recent updates were put in place as a temporary starting point to stand up the electric reliability organization and begin enforcement of mandatory standards. However, it is important to update the standards in a timely manner, incorporating improvements to make the standards more suitable for enforcement and to capture prior recommendations that were deferred during the Version 0 translation.

Industry Need

1. Provide an adequate level of reliability for the North American bulk power systems — the standards are complete and the requirements are set at an appropriate level to ensure reliability.
2. Ensure they are enforceable as mandatory reliability standards with financial penalties — the applicability to bulk power system owners, operators, and users, and as appropriate particular classes of facilities, is clearly defined; the purpose, requirements, and measures are results-focused and unambiguous; the consequences of violating the requirements are clear.
3. Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)
4. Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)
5. Satisfy the standards procedure requirement for five-year review of the standards.

Brief Description

The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.

The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.

The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the “reliability coordinator” and the “transmission operator.”

The drafting team needs to verify that requirements exempt the real time-operator from

Standards Authorization Request Form

liability when making a good faith effort at preserving reliability.

A challenge has been to require that entities have 'facilities' in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the 'certification' standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to 'have and maintain' the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back up power supply for critical operations, and shall maintain and test at least once per year."

The results of the Operating Committee study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.

This project also needs to be coordinated with the project for developing Transmission Operator and Balancing Authority standards (2007-06).

IRO-001 has some 'fill-in-the-blank' components to eliminate.

The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

Reliability Functions

The Standard will Apply to the Following Functions <i>(Check box for each one that applies.)</i>		
<input checked="" type="checkbox"/>	Reliability Coordinator	The entity that is the highest level of authority who is responsible for the reliable operation of the Bulk Electric System, has the Wide Area view of the Bulk Electric System, and has the operating tools, processes and procedures, including the authority to prevent or mitigate emergency operating situations in both next-day analysis and real-time operations. The Reliability Coordinator has the purview that is broad enough to enable the calculation of Interconnection Reliability Operating Limits, which may be based on the operating parameters of transmission systems beyond any Transmission Operator's vision.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within its metered boundary and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Authorizes valid and balanced Interchange Schedules.
<input checked="" type="checkbox"/>	Planning Authority	Plans the Bulk Electric System.
<input checked="" type="checkbox"/>	Resource Planner	Develops a long-term (>one year) plan for the resource adequacy of specific loads within a Planning Authority area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a long-term (>one year) plan for the reliability of transmission systems within its portion of the Planning Authority area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Provides transmission services to qualified market participants under applicable transmission service agreements
<input checked="" type="checkbox"/>	Transmission Owner	Owens transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Operates and maintains the transmission facilities, and executes switching orders.
<input checked="" type="checkbox"/>	Distribution Provider	Provides and operates the "wires" between the transmission system and the customer.
<input checked="" type="checkbox"/>	Generator Owner	Owens and maintains generation unit(s).
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) and performs the functions of supplying energy and Interconnected Operations Services.
<input type="checkbox"/>	Purchasing-Selling Entity	The function of purchasing or selling energy, capacity, and all necessary Interconnected Operations Services as required.

Standards Authorization Request Form

<input type="checkbox"/>	Market Operator	Integrates energy, capacity, balancing, and transmission resources to achieve an economic, reliability-constrained dispatch.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission (and related generation services) to serve the end user.

Reliability and Market Interface Principles

Applicable Reliability Principles <i>(Check box for all that apply.)</i>	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
Does the proposed Standard comply with all of the following Market Interface Principles? <i>(Select 'yes' or 'no' from the drop-down box.)</i>	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

The drafting team will assist stakeholders in considering these comments in determining what changes to make to the standards:

COM-001-0 Telecommunications

FERC NOPR

- Include Measures and Levels of Non-Compliance;
- Include generator operators and distribution provider as applicable entities; and
- Include requirements for communication facilities for use during emergency situations.

FERC Staff Report

- Lacks adequacy, redundancy and routing requirements
- Generation owners missing
- Expect new standard in November

V0 Industry Comments

- Redundant with Policy 5A, R1
- Many players missing
- Apply R1 to all but smallest entities

Violation Risk Factor Drafting Team Comments

- R6 – administrative requirement

COM-002-1 Communications and Coordination

FERC NOPR

- Include Measures and Levels of Non-Compliance;
- Include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities;
- Include distribution providers as applicable entities; and
- Require tightened communications protocols, especially for communications during alerts and emergencies.

FERC Staff Report

- Missing requirement for approval of actions
- Lack of compliance and measures
- Expect November update

V0 Industry Comments

- Voice with generators not required
- R1 – include reliability authority
- R2 – include sabotage and security
- R4 – clarify repeat back requirement with regard to emergency

IRO-001-0 Reliability Coordination – Responsibilities and Authorities

FERC NOPR

- Reflect the process set forth in the NERC Rules of Procedures; and
- Eliminate the regional reliability organization as an applicable entity.

FERC Staff Report

- RC not explicitly mentioned in Purpose

Regional Fill-in-the-Blank Team Comments

- Remove ", sub-region, or interregional coordinating group" from R1

SAR for Project 2006-06 Reliability Coordination – Attachment 1

- Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another." from the Purpose section of the standard.

V0 Industry Comments

- Inability to perform needs to be communicated
- What is meant by 'interest of other entity'?

Violation Risk Factor Drafting Team Comments

- R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk.

IRO-002-0 Reliability Coordination – Facilities

FERC NOPR

- Include Measures and Levels of Non-Compliance and
- Modify Requirement R7 to explicitly require a minimum set of tools for the reliability coordinator.

FERC Staff Report

- Lack of Measures & Compliance
- Expect new standard in November

V0 Industry Comments

- R5 – define synchronized information system
- R7 – define 'adequate' tools and 'wide-area'
- Words such as 'easily understood' and 'particular emphasis' need to be tightened

IRO-005-1 Reliability Coordination – Current Day Operations

FERC NOPR

- Include Measures and Levels of Non-Compliance. We propose that the Measures and Levels of Non-Compliance specific to IROL violations should be commensurate with the magnitude, duration, frequency and causes of the violation.
- Further, as discussed above, we propose that the ERO conduct a survey on IROL practices and experiences.
- The Commission may propose further modifications to IRO-005-1 based on the survey results.

FERC Staff Report

- Concern with timing of critical outage during initial correction period
- Ambiguous with respect to IROL limits
- Lack of Measures & Compliance

Regional Fill-in-the-Blank Team Comments

- R14 has regional reference

V0 Industry Comments

- R10, 11 & 12 – RA not empowered to do this

SAR for Project 2006-06 Reliability Coordination – Attachment 1

IRO-014-1 Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators

FERC NOPR

- o No changes identified.

IRO-015-1 Notifications and Information Exchange Between Reliability Coordinators

FERC NOPR

- o No changes identified.

IRO-016-1 Coordination of Real-Time Activities Between Reliability Coordinators

FERC NOPR

- o No changes identified.

Violation Risk Factors Drafting Team Comments

- o R1.2.1 & R2 – ambiguous

PER-004-0 Reliability Coordination – Staffing

FERC NOPR

- o Include formal training requirements for reliability coordinators similar to those addressed under the personnel training Reliability Standard PER-002-0;
- o Include requirements pertaining to personnel credentials for reliability coordinators similar to those in PER-003-0; and
- o Include Levels of Non-Compliance and Measures that address staffing requirements and the requirement for five days of emergency training.

FERC Staff Report

- o Min. expectations and # of hours per year missing
- o Blackout Report items not addressed
- o Formal program not specified
- o Measures & Compliance missing

V0 Industry Comments

- o Calendar year timing increment
- o Other training needs to be defined

PRC-001-0 System Protection Coordination

FERC NOPR

- o Include Measures and Levels of Non-Compliance;
- o Include a requirement that relevant transmission operators and generator operators must be informed immediately upon the detection of failures in relays or protection system elements on the Bulk-Power System that would threaten reliable operation, so that these entities can carry out the appropriate corrective control actions consistent with those used in mitigating IROL violations; and
- o Clarify that, after being informed of failures in relays or protection system elements on the Bulk-Power System, transmission operators or generator operators shall carry out corrective control actions, i.e., returning the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes.

FERC Staff Report

- o Max. time period for corrective actions missing
- o Expect new standard in November

V0 Industry Comments

SAR for Project 2006-06 Reliability Coordination – Attachment 1

- Effects on reliability may not be known
- Consistent terminology as to neighbor vs. affected
- Not all criteria moved over from policies

The following standards have been proposed for retirement because they will be displaced by IRO-007 and IRO-008 but are included here in the event their retirement is not approved:

IRO-003-1 — Reliability Coordination – Wide-Area View

FERC NOPR

- Include Measures and Levels of Non-Compliance; and
- Include criteria to define the term “critical facilities” in a reliability coordinator’s area and its adjacent systems.

FERC Staff Report

- Need to define critical facilities
- Lack of Measures & Compliance
- Expect new standard in November

IRO-004-1 — Reliability Coordination – Operations Planning

FERC NOPR

- Require the next-day analysis to identify effective control actions that can be implemented within 30 minutes during contingency conditions.

FERC Staff Report

- No system assessment required

VO Industry Comments

- Change ‘particular attention to’ to ‘to monitor’

The following standards are under development and have not yet been approved, so there are no FERC comments or stakeholder comments on a ‘finished’ standard. These standards will be reviewed and may be modified as needed to meet the goals identified in the purpose statement of this SAR:

IRO-007 — Monitoring the Wide Area

IRO-008 — Reliability Coordinator Operational Analyses and Real-Time Assessments

IRO-009 — Reliability Coordinator Actions to Operate Within IROLs

IRO-010 — Reliability Coordinator Data Specification and Collection

IRO-012 — Reliability Coordinator Processes, Procedures, or Plans for Preventing and Mitigating Reliability Operating Limits

ORG-020 — Reliability Coordinator Certification - Certification

ORG-021 — Reliability Coordinator Certification - Agreements

ORG-022 — Reliability Coordinator Certification - Personnel

ORG-023 — Reliability Coordinator Certification - Data Acquisition and Monitoring

ORG-024 — Reliability Coordinator Certification – System Analysis

ORG-025 — Reliability Coordinator Certification – Emergency Operations

ORG-026 — Reliability Coordinator Certification – Loss of Control Center Functionality

ORG-027 — Reliability Coordinator Certification – Restoration

The drafting team will reference these guidelines in determining what changes to make to the standards to bring them into conformance with the *Reliability Standards Development Procedure Manual, Version 6* and the *ERO Rules of Procedure*:

Standard Review Guidelines

Applicability

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

Purpose

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

Performance Requirements

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

Measurability

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

Technical Basis in Engineering and Operations

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

Completeness

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

Consequences for Noncompliance

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

Clear Language

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

Practicality

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

Capability Requirements versus Performance Requirements

In general, requirements for entities to have 'capabilities' (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to 'maintain' their capabilities.

Consistent Terminology

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a 'unique' definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the 'verb list' from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

Violation Risk Factors (Risk Factor)

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

Mitigation Time Horizon

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

Violation Severity Levels

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels may be applied for each requirement or combined to cover multiple requirements, as long as it is clear which requirements are included.

The violation severity levels should be based on the following definitions:

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Compliance Monitor

Replace, 'Regional Reliability Organization' with 'Electric Reliability Organization'

Fill-in-the-blank Requirements

Do not include any 'fill-in-the-blank' requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

Requirements for Regional Reliability Organization

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

Effective Dates

Must be 1st day of 1st quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan.

Associated Documents

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, 'Associated Documents'.

Functional Model Version 3

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

January 15, 2007

TO: REGISTERED BALLOT BODY

Ladies and Gentlemen:

Announcement: Comment Periods Open for SAR to Modify Vegetation Management, SAR for Reliability Coordination and SAR and Standard to Modify Facility Ratings Standards

The Standards Committee (SC) announces the following standards actions:

SAR to Modify the Vegetation Management Standard FAC-003-1 Posted for 30-day Comment Period January 15–February 14, 2007

The SAR for [Project 2007-07](#) proposes modifying the Vegetation Management standard FAC-003-1 to address concerns raised by FERC and stakeholders and to bring the standard into conformance with the ERO Rules of Procedure and the latest version of the *Reliability Standards Development Procedure*. Please use the [comment form](#) to provide comments on this SAR.

SAR to Modify the Reliability Coordinator Standards Posted for 30-day Comment Period January 15–February 14, 2007

The SAR for [Project 2006-06](#) proposes retiring, modifying, or adding to existing requirements for the reliability coordinator to ensure that the complete set of requirements addresses all the processes, procedures, plans, tools, and authorities the reliability coordinator needs to support the reliable operation of the interconnected bulk power systems. This project involves addressing concerns raised by FERC and stakeholders and also involves bringing the set of standards into conformance with the ERO Rules of Procedure and the latest version of the *Reliability Standards Development Procedure*. Please use the [comment form](#) to provide comments on this SAR.

SAR and Standard to Modify the Facility Ratings Standards Posted for 45-day Comment Period January 15–February 28, 2007

The SAR for [Project 2006-09](#) proposes modifying two Facility Ratings standards, FAC-008-1 and FAC-009-1, to address concerns raised by FERC and stakeholders and to bring the standard into conformance with the ERO Rules of Procedure and the latest version of the *Reliability Standards Development Procedure*. Because there were relatively few technical changes recommended for this set of standards, the revised standard, which combines FAC-008-1 and FAC-009-1, is posted for comment along with an implementation plan. Please use the [comment form](#) to provide comments on this SAR, standard and implementation plan.

Standards Development Process

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. If you have any questions, please contact me at 813-468-5998 or maureen.long@nerc.net.

Sincerely,

Maureen E. Long

	<input type="checkbox"/>	10 — Regional Reliability Organizations, Regional Entities

Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

Comment Form — 1st Posting of Reliability Coordination SAR

- The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

Comment Form — 1st Posting of Reliability Coordination SAR

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments: Yes, there is a reliability need to revise the Standards identified in this SAR. Not all of the revisions described, however, are reliability related and in fact should not be included in the standards (e.g., exempting an operator from liability).

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: The Standard Drafting Team should not be given latitude to "include other improvements to the standards deemed appropriate by the drafting team." The purpose of the SAR is to identify the changes contemplated by the need for the Standard Revision. If there are changes that the SAR requestor would like to make to the Standard, they should be spelled out in the SAR. If the SAR requestor does not really know the changes that should be made to the standard, then the SAR should be withdrawn until the need for a SAR can be adequately justified.

The remainder of the SAR is very broad; perhaps too broad. The requestor should consider reducing the scope of the SAR to make specific changes to the standards, rather than try to consolidate all of the Standards in one swift stroke.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: Uncertain to say what they would be at this point.

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments: The IRC agrees with the objective but does not agree with the process.

We agree there is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.

The SRC believes that the wide perspective proposed by this SAR could compromise the internal consistency within individual standards. Subject Matter experts created interrelated requirements in given areas. This SAR proposes to impose a vertically integrated prospective, linking standards in widely dispersed areas of operational expertise. While a review of the vertical integration is useful and in places needed, it is recommended that the results of the review should themselves be sent as recommended SARs for industry consideration by the SMEs for the individual standards, and not as a proposed ad hoc standard. Grouping them as proposed in the SAR may result in unintended disconnects within the other standards, and in the worst case result in an ongoing series of iterative SARs.

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: We do agree the standards should be consolidated and redundancies eliminated where appropriate.

However, it is not appropriate to include standards in this SAR that have not yet been approved. For example, it is not necessary to expand on the requirement to have facilities in place by adding a testing requirement. If an entity is required to have facilities in place and they are not maintained and available, they do not meet the requirement.

The "boiler plate" language that this "development may include other improvements deemed appropriate by the drafting team" is too vague and essentially opens the scope to include anything the drafting team wants to do with the standard. This is not appropriate. The scope should be specific and the drafting team should only focus on those specifics.

The SRC supports the approach of prioritizing and revising individual standards to include FERC's comments as part of the consideration process. Only a few standards should be revised at a time to make the process more manageable.

Comment Form — 1st Posting of Reliability Coordination SAR

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

Comment Form — 1st Posting of Reliability Coordination SAR

- The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

Comment Form — 1st Posting of Reliability Coordination SAR

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments: We agree there is a general need to consolidate where necessary and clean up the standards. However, this SAR covers too large a swath of standards. It very confusing what the overall goal is. Additionally, we are concerned that the range of expertise required by this SAR will result in a drafting team that is too large and will result in little to no progress unless the drafting team is subdivided. If the drafting team is subdivided, then this SAR should be subdivided into other SARs.

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: We do agree the standards should be consolidated and redundancies eliminated where appropriate. However, it is not appropriate to include standards in this SAR that have not yet been approved.

It is not necessary to expand on the requirement to have facilities in place by adding a testing requirement. If an entity is required to have facilities in place and they are not maintained and available, they do not meet he requirement of having facilities in place.

The "boiler plate" language that this "development may include other improvements deemed appropriate by the drafting team is too vague and essentially opens the scope to include anything the drafting team wants to do with the standard. This is not appropriate. The scope should be specific and the drafting team should only focus on those specifics.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: Because of the overbroad nature of this SAR, the answer is likely yes. However, it is nearly impossible to determine all the additional required changes without missing important items. This SAR needs to be broken down to address individual standards.

Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

Comment Form — 1st Posting of Reliability Coordination SAR

- The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

Comment Form — 1st Posting of Reliability Coordination SAR

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments: ISO New England supports the objective but does not agree with the process.

We agree there is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.

We are concerned that the wide perspective proposed by this SAR could compromise the internal consistency within individual standards. Subject Matter Experts created interrelated requirements in given areas. This SAR proposes to impose a vertically integrated prospective, linking standards in widely dispersed areas of operational expertise. While a review of the vertical integration is useful and in places needed, it is recommended that the results of the review should themselves be sent as recommended SARs for industry consideration by the SMEs for the individual standards, and not as a proposed ad hoc standard. Grouping them as proposed in the SAR may result in unintended disconnects within the other standards, and in the worst case result in an ongoing series of iterative SARs.

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: We do agree the standards should be consolidated and redundancies eliminated where appropriate.

However, it is not appropriate to include standards in this SAR that have not yet been approved. For example, it is not necessary to expand on the requirement to have facilities in place by adding a testing requirement. If an entity is required to have facilities in place and they are not maintained and available, they do not meet the requirement.

The "boiler plate" language that this "development may include other improvements deemed appropriate by the drafting team" is too vague and essentially opens the scope to include anything the drafting team wants to do with the standard. This is not appropriate. The scope should be specific and the drafting team should only focus on those specifics.

ISO New England supports the approach of prioritizing and revising individual standards to include FERC's comments as part of the consideration process. We also support the

Comment Form — 1st Posting of Reliability Coordination SAR

consideration of non-FERC industry comments submitted previously in the commenting process where the requirements were not available for commenting.

Only a few standards should be revised at a time to make the process more manageable.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Yes

No

Comments:

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: We believe that the drafting needs to verify that requirements exempt the reliability coordinator real-time supervision, as well as the real-time operator from liability when making a good faith effort at preserving reliability.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

The WECC RCCWG believes that the FERC Staff Report suggestion that COM-001 "generation owners missing" should not translate to addition of generation owners in the applicability. "Generator Operator" is an applicable entity, but not "Generator Owner".

The WECC RCCWG believes the Reliability Coordination SAR should address those VO comments on requirements, when those specific are no longer part of the standard referenced in the VO comments identified in Attachment 1 of the SAR if those comments were not previously addressed. One example: posted "VO Industry Comments" suggest inclusion of sabotage and security in R2 of COM-002. That comment is no longer applicable to COM-002 R2 - the standard requirements have changed. That said, the comment intent should not be lost.

Yes

No

Comments: This project involves the revision of 27 NERC Standards, not a small task by any measure. The extent of the proposed work and the necessary expertise is beyond what can be found in one single SAR team and drafting team.

We respectfully submit that the project be divided into as many SARs and teams as necessary with the work directed and monitored by the Standards Committee.

Also, coordination with the Standards in development IRO-007-1 to IRO-010-1 that are also the object of a separate revision and commentary period should be taken care of.

Comment Form — 1st Posting of Reliability Coordination SAR

Please use this form to submit comments on the Reliability Coordination SAR. Comments must be submitted by **February 14, 2007**. You may submit the completed form by e-mail to sarcomm@nerc.com with the words "Reliability Coordination" in the subject line. If you have questions, please contact Maureen Long at maureen.long@nerc.net or by telephone at 813-468-5998.

Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

Comment Form — 1st Posting of Reliability Coordination SAR

- The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

Comment Form — 1st Posting of Reliability Coordination SAR

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments: The IESO agrees with the objective but does not agree with the process. There is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments:

We agree with the intent to fill in the gaps and eliminate duplications among standards, and applaud the SDT for taking on this huge and challenging task. We are concerned, however, that the scope itself is too wide but yet not wide enough. Some of the listed standards are still being commented on, for example: IROL-007 to IRO-010, while some others had been commented on but are now in a dormant state, for example: the organization certification standards. These standards are not yet approved, and hence are subject to change and become moving targets for this holistic review task. The scope description does not suggest an approach to deal with ongoing changes to the standards identified. We are concerned that the wide scope and the massive task may not ensure that a one time change will cover all affected standards - those approved and those under development.

We suggest the SDT compare this approach to an alternative approach which is to revise a few standards at a time, on a priority basis and considering FERC's views on the status of the standards, thereby limiting the corresponding changes within a more manageable scope. Overtime, when all standards have gone through revisions, all corresponding changes will be duly made.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

Comment Form — 1st Posting of Reliability Coordination SAR

There are likely additional standard revisions beyond those identified, but we find it's almost impossible to pre-determine which other standards will be affected as a result of changes to those identified in this SAR.

For example, changes currently proposed for IRO-007 to IRO-010 will precipitate corresponding changes to other affected standards, e.g. TOP-003, TOP-005, etc. However, we are unable to provide any specific list of standards that will require corresponding changes not knowing what changes will be made to the standards listed in the SAR.

Given the above, it should not be taken for granted that the list is exhaustive in terms of revisions required.

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments:

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: ATC agrees with the spirit of the SAR but believes that more details should be provided.

Identify which of the redundant requirements will be deleted.

Lastly ATC does not understand how a SDT can tackle the ORG -020 – 027 when these standards have not been approved by the board. In other words how can the SDT move forward on the scope when eight of the standards are still in being worked on? To approve the scope of the SAR references to ORG-020 – 027 should be deleted and considered out of bounds for the SDT.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

Consideration of Comments on 1st Posting of Reliability Coordination SAR

The Reliability Coordination SAR Requesters thank all commenters who submitted comments on Draft 1 of the Reliability Coordination SAR. This SAR was posted for a 30- day public comment period from January 15 through February 14, 2007. The requesters asked stakeholders to provide feedback on the standard through a special standard Comment Form. There were 11 sets of comments, including comments from more than 31 different people from more than 15 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

While most stakeholders agreed with the reliability-related need to modify the standards addressed by this SAR, most stakeholders disagreed with the proposed scope of the original SAR and the drafting team made the following revisions to reduce the scope:

- Revised the purpose statement to more narrowly focus on the reliability-related purpose of revising the set of standards addressed by the SAR
- Removed the standards that were listed in the original SAR that are still under development, including the certification standards (ORG-020-1 through ORG-027-1), the Version 1 IROL Standards that are still under development (IRO-007-1 through IRO-013-1) and the standards that are identified in the Version 1 IROL Implementation Plan as proposed for retirement when the Version 1 IROL Standards become effective (IRO-003-1, IRO-004-1).
- Removed the paragraph that referenced facilities.
- Removed the paragraph that would have allowed the standard drafting team to make 'any' additions to requirements as long as those additions met stakeholder approval.
- Added more specificity to the drafting team's approach to modifying the set of standards identified in the SAR.

Based on the comments received, the drafting team is posting the revised SAR for another comment period.

In this "Consideration of Comments" document stakeholder comments have been organized so that it is easier to see the responses associated with each question. All comments received on the standards can be viewed in their original format at:

http://www.nerc.com/~filez/standards/Reliability-Coordination_Project_2006-6.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

- 1. Do you agree that there is a reliability-related need for the proposed revisions to this set of standards? If not, please explain in the comment area. 4
- 2. Do you agree with the scope of the SAR? If not, please explain in the comment area. 6
- 3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?11

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

1. Do you agree that there is a reliability-related need for the proposed revisions to this set of standards? If not, please explain in the comment area.

Summary Consideration: Most commenters indicated that they do believe that there is a reliability-related need for the proposed revisions to the standards.

Question #1			
Commenter	Yes	No	Comment
ISO/RTO Council ISO New England	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>The IRC and ISO-NE agrees with the objective but does not agree with the process.</p> <p>We agree there is a general need to clean up the standards and where appropriate consolidate the standards. However, this SAR covers too large a swath of standards, and as a consequence the resulting standard has the potential of being too large for reasoned comments.</p> <p>The SRC believes that the wide perspective proposed by this SAR could compromise the internal consistency within individual standards. Subject Matter experts created interrelated requirements in given areas. This SAR proposes to impose a vertically integrated prospective, linking standards in widely dispersed areas of operational expertise. While a review of the vertical integration is useful and in places needed, it is recommended that the results of the review should themselves be sent as recommended SARs for industry consideration by the SMEs for the individual standards, and not as a proposed ad hoc standard. Grouping them as proposed in the SAR may result in unintended disconnects within the other standards, and in the worst case result in an ongoing series of iterative SARs.</p>
<p>Response: The intent is not to develop a single standard from the list of standards. The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			
Midwest ISO Stakeholders Standards Collaboration Participants	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree there is a general need to consolidate where necessary and clean up the standards. However, this SAR covers too large a swath of standards. It very confusing what the overall goal is. Additionally, we are concerned that the range of expertise required by this SAR will result in a drafting team that is too large and will result in little to no progress unless the drafting team is subdivided. If the drafting team is subdivided,</p>

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

Question #1			
Commenter	Yes	No	Comment
			then this SAR should be subdivided into other SARs.
<p>Response: The SAR was revised to more clearly define the scope of work. The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p>			
Independent Electricity System Operator	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	The IESO agrees with the objective but does not agree with the process. Consideration of Comments on 1st Draft of the Reliability Coordination SAR

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Summary Consideration: Most commenters disagreed with the scope of the original SAR and the drafting team made major modifications to reduce the scope of the SAR to only include standards that are already approved and to identify more specifically the range of changes contemplated to the standards that remain in the revised SAR.

Question #2			
Commenter	Yes	No	Comment
Hydro One Networks, Inc. Hydro Québec TransÉnergie		<input checked="" type="checkbox"/>	Please see our answer to question No. 3.
Response: Please see the response to question 3.			
ITC		<input checked="" type="checkbox"/>	<p>The Standard Drafting Team should not be given latitude to "include other improvements to the standards deemed appropriate by the drafting team." The purpose of the SAR is to identify the changes contemplated by the need for the Standard Revision. If there are changes that the SAR requestor would like to make to the Standard, they should be spelled out in the SAR. If the SAR requestor does not really know the changes that should be made to the standard, then the SAR should be withdrawn until the need for a SAR can be adequately justified.</p> <p>The remainder of the SAR is very broad; perhaps too broad. The requestor should consider reducing the scope of the SAR to make specific changes to the standards, rather than try to consolidate all of the Standards in one swift stroke.</p>
<p>Response: The intent is not to develop a single standard from the list of standards. The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The intent of the <i>original</i> SAR was to give the Standard Drafting Team enough latitude to address requirements that fall within a list of performance requirements. Looking to the future, the Standard Drafting Team cannot expand on the scope of its SAR but may develop a set of requirements that is smaller than the scope of the SAR. Based on stakeholder comments, the scope has been revised and is more clearly and more narrowly defined.</p>			
ISO/RTO Council ISO New England		<input checked="" type="checkbox"/>	<p>We do agree the standards should be consolidated and redundancies eliminated where appropriate.</p> <p>However, it is not appropriate to include standards in this SAR that have not yet been approved. For example, it is not necessary to expand on the requirement to have facilities in place by adding a testing requirement. If an entity is required to</p>

<p>Response: The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards. The SAR was modified to state that the standard drafting team will work with stakeholders to:</p> <ul style="list-style-type: none"> - Eliminate redundancy in the requirements. - Identify requirements that should be moved into other SARs - Eliminate requirements that do not support bulk power system reliability - Transfer requirements that need to be in place before an entity begins operation as an RC to certification. - Fill identified gaps in the requirements for Reliability Coordination <p>The intent is not to develop a single standard from the list of standards. The SAR DT can recommend that the standards be revised in a specific sequence but the final determination of which standards are revised or developed first is a decision that belongs to the Standards Committee.</p>			

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

Question #2			
Commenter	Yes	No	Comment
<p>The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards.</p>			
WECC Reliability Coordination Comments Work Group	<input checked="" type="checkbox"/>		We believe that the drafting needs to verify that requirements exempt the reliability coordinator real-time supervision, as well as the real-time operator from liability when making a good faith effort at preserving reliability.
<p>Response: The drafting team removed the reference to liability from the SAR.</p>			
Salt River Project	<input checked="" type="checkbox"/>		
PSC of South Carolina	<input checked="" type="checkbox"/>		

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Question #3			
Commenter	Yes	No	Comment
ITC Transmission			Uncertain to say what they would be at this point.
Hydro One Networks, Inc. Hydro Québec TransÉnergie	<input checked="" type="checkbox"/>		<p>This project involves the revision of 27 NERC Standards, not a small task by any measure. The extent of the proposed work and the necessary expertise is beyond what can be found in one single SAR team and drafting team.</p> <p>We respectfully submit that the project be divided into as many SARs and teams as necessary with the work directed and monitored by the Standards Committee.</p>
<p>Response: The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The Standards Committee may assign more than one drafting team to develop the standards and when the SAR drafting team asks the Standards Committee for authorization to move the SAR forward to standard drafting, the drafting team may recommend that more than one SDT be assigned to draft the standards.</p>			
Independent Electricity System Operator	<input checked="" type="checkbox"/>		<p>There are likely additional standard revisions beyond those identified, but we find it's almost impossible to pre-determine which other standards will be affected as a result of changes to those identified in this SAR.</p> <p>For example, changes currently proposed for IRO-007 to IRO-010 will precipitate corresponding changes to other affected standards, e.g. TOP-003, TOP-005, etc. However, we are unable to provide any specific list of standards that will require corresponding changes not knowing what changes will be made to the standards listed in the SAR.</p> <p>Given the above, it should not be taken for granted that the list is exhaustive in terms of revisions required.</p>
<p>Response: The intent of the <i>original</i> SAR was to give the Standard Drafting Team enough latitude to address requirements that fall within a list of performance requirements. Looking to the future, the Standard Drafting Team cannot expand on the scope of its SAR but may develop a set of requirements that is smaller than the scope of the SAR. Based on stakeholder comments, the SAR DT eliminated the paragraph that would have allowed the Standard Drafting Team to expand the scope of activities to address new issues that may come up after the SAR is finalized. If new ideas are identified during standard drafting, the standard drafting team will need to revise its SAR or develop a new SAR to address those additional ideas.</p>			

Consideration of Comments on 1st Draft of the Reliability Coordination SAR

Question #3			
Commenter	Yes	No	Comment
WECC Reliability Coordination Comments Work Group	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>The WECC RCCWG believes that the FERC Staff Report suggestion that COM-001 "generation owners missing" should not translate to addition of generation owners in the applicability. "Generator Operator" is an applicable entity, but not "Generator Owner".</p> <p>The WECC RCCWG believes the Reliability Coordination SAR should address those V0 comments on requirements, when those specific are no longer part of the standard referenced in the V0 comments identified in Attachment 1 of the SAR if those comments were not previously addressed. One example: posted "V0 Industry Comments" suggest inclusion of sabotage and security in R2 of COM-002. That comment is no longer applicable to COM-002 R2 - the standard requirements have changed. That said, the comment intent should not be lost</p>
<p>Response: The FERC comments are 'issues to consider' but are not directives for changes to the standards. The SAR was revised and any outdated V0 comments (or other organization or committee comments) comments have been removed.</p>			
Midwest ISO Stakeholders Standards Collaboration Participants	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>Because of the overbroad nature of this SAR, the answer is likely yes. However, it is nearly impossible to determine all the additional required changes without missing important items. This SAR needs to be broken down to address individual standards.</p>
<p>Response: The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards.</p> <p>The list of standards included in the scope of this SAR has been reduced to eliminate standards that will already be addressed by the IROL SDT and to eliminate the list of proposed certification standards. --

Standards Authorization Request Form

Brief Description

Most of the requirements in this set of standards were translated from Operating Policies as part of the Version 0 process. There have been suggestions for improving these requirements, and the drafting team will consider comments submitted by stakeholders, drafting teams and FERC in determining what changes should be proposed to stakeholders.

The drafting team will review all of the requirements in this set of standards and make a determination, with stakeholders, on whether to:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support bulk power system reliability).

Detailed Description

The drafting team will review all of the requirements in the following set of standards:

- COM-001 — Telecommunications
- COM-002 — Communications and Coordination
- IRO-001 — Reliability Coordination – Responsibilities and Authorities
- IRO-002 — Reliability Coordination – Facilities
- IRO-005 — Reliability Coordination – Current Day Operations
- IRO-014 — Procedures to Support Coordination between Reliability Coordinators
- IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
- PER-004 — Reliability Coordination – Staffing
- PRC-001 — System Protection Coordination

For each existing requirement, the drafting team will work with stakeholders and:

- Eliminate redundancy in the requirements.
- Identify requirements that should be moved into other SARs
- Eliminate requirements that do not support bulk power system reliability
- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.

The standard drafting team will also:

- Coordinate with the drafting teams working on the SAR and standards for Transmission Operator and Balancing Authority standards (Project 2007-06).
- Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)
- Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)

This review of the set of identified standards will satisfy the standards procedure requirement to review each approved standard at least once every five years.

Standards Authorization Request Form

Reliability Functions

The Standard will Apply to the Following Functions <i>(Check box for each one that applies.)</i>		
<input checked="" type="checkbox"/>	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
<input checked="" type="checkbox"/>	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
<input checked="" type="checkbox"/>	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator Area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
<input checked="" type="checkbox"/>	Transmission Owner	Owens and maintains transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
<input checked="" type="checkbox"/>	Distribution Provider	Delivers electrical energy to the End-use customer.
<input checked="" type="checkbox"/>	Generator Owner	Owens and maintains generation facilities.
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) to provide real and reactive power.
<input type="checkbox"/>	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
<input type="checkbox"/>	Market Operator	Interface point for reliability functions with commercial functions.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the end-use customer.

Reliability and Market Interface Principles

Applicable Reliability Principles <i>(Check box for all that apply.)</i>	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
Does the proposed Standard comply with all of the following Market Interface Principles? <i>(Select 'yes' or 'no' from the drop-down box.)</i>	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

The drafting team will assist stakeholders in considering these comments in determining what changes to make to the standards:

COM-001-0 Telecommunications

FERC NOPR

- Include generator operators and distribution provider as applicable entities; and
- Include requirements for communication facilities for use during emergency situations.

V0 Industry Comments

- Many players missing
- Apply R1 to all but smallest entities

Violation Risk Factor Drafting Team Comments

- R6 – administrative requirement

COM-002-1 Communications and Coordination

FERC NOPR

- Include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities;
- Include distribution providers as applicable entities; and
- Require tightened communications protocols, especially for communications during alerts and emergencies.

V0 Industry Comments

- Voice with generators not required
- R1 – include reliability authority
- R2 – include sabotage and security
- R4 – clarify repeat back requirement with regard to emergency

IRO-001-0 Reliability Coordination – Responsibilities and Authorities

FERC NOPR

- Reflect the process set forth in the NERC Rules of Procedures; and
- Eliminate the regional reliability organization as an applicable entity.

Regional Fill-in-the-Blank Team Comments

- Remove ", sub-region, or interregional coordinating group" from R1
- Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another." from the Purpose section of the standard.

V0 Industry Comments

- Inability to perform needs to be communicated
- What is meant by 'interest of other entity'?

Violation Risk Factor Drafting Team Comments

- R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk.

IRO-002-0 Reliability Coordination – Facilities

FERC NOPR

- o Modify Requirement R7 to explicitly require a minimum set of tools for the reliability coordinator.

V0 Industry Comments

- o R5 – define synchronized information system
- o R7 – define ‘adequate’ tools and ‘wide-area’
- o Words such as ‘easily understood’ and ‘particular emphasis’ need to be tightened

IRO-005-1 Reliability Coordination – Current Day Operations

FERC NOPR

- o Propose that the ERO conduct a survey on IROL practices and experiences.
- o The Commission may propose further modifications to IRO-005-1 based on the survey results.

V0 Industry Comments

- o R10, 11 & 12 – RA not empowered to do this

IRO-016-1 Coordination of Real-Time Activities Between Reliability Coordinators

Violation Risk Factors Drafting Team Comments

- o R1.2.1 & R2 – ambiguous

PER-004-0 Reliability Coordination – Staffing

FERC NOPR

- o Include formal training requirements for reliability coordinators similar to those addressed under the personnel training Reliability Standard PER-002-0;
- o Include requirements pertaining to personnel credentials for reliability coordinators similar to those in PER-003-0; and

V0 Industry Comments

- o Calendar year timing increment
- o Other training needs to be defined

PRC-001-0 System Protection Coordination

FERC NOPR

- o Include a requirement that relevant transmission operators and generator operators must be informed immediately upon the detection of failures in relays or protection system elements on the Bulk-Power System that would threaten reliable operation, so that these entities can carry out the appropriate corrective control actions consistent with those used in mitigating IROL violations; and
- o Clarify that, after being informed of failures in relays or protection system elements on the Bulk-Power System, transmission operators or generator operators shall carry out corrective control actions, i.e., returning the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes.

V0 Industry Comments

- o Effects on reliability may not be known
- o Consistent terminology as to neighbor vs. affected
- o Not all criteria moved over from policies

The drafting team will reference these guidelines in determining what changes to make to the standards to bring them into conformance with the *Reliability Standards Development Procedure Manual, Version 6* and the *ERO Rules of Procedure*:

Standard Review Guidelines

Applicability

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

Purpose

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

Performance Requirements

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

Measurability

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

Technical Basis in Engineering and Operations

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

Completeness

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

Consequences for Noncompliance

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

Clear Language

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

Practicality

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

Capability Requirements versus Performance Requirements

In general, requirements for entities to have ‘capabilities’ (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to ‘maintain’ their capabilities.

Consistent Terminology

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a ‘unique’ definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the ‘verb list’ from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

Violation Risk Factors (Risk Factor)

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or

contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

Time Horizon

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

Violation Severity Levels

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels must be applied for each requirement and may be combined to cover multiple requirements, as long as it is clear which requirements are included and that all requirements are included.

The violation severity levels should be based on the following definitions:

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Compliance Monitor

Replace, ‘Regional Reliability Organization’ with ‘Regional Entity’

Fill-in-the-blank Requirements

Do not include any ‘fill-in-the-blank’ requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

Requirements for Regional Reliability Organization

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

Effective Dates

Must be 1st day of 1st quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan.

Associated Documents

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, ‘Associated Documents’.

Functional Model Version 3

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

March 19, 2007

TO: REGISTERED BALLOT BODY

Ladies and Gentlemen:

Announcement: Comment Periods Open for SAR for Reliability Coordination, SAR for Operating Personnel Communications Protocols, and Relay Loadability Standard

The Standards Committee (SC) announces the following standards actions:

SAR to Modify the Reliability Coordinator Standards (March 19–April 17, 2007)

The Reliability Coordination SAR drafting team posted the second draft of its SAR for [Project 2006-06](#) for a 30-day comment period from March 19 through April 17, 2007.

The SAR proposes retiring, modifying or moving to other standards the Reliability Coordinator requirements contained within a set of ten already approved standards. The purpose of making these modifications is to ensure that the remaining requirements are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System. This project also involves addressing concerns raised by FERC and stakeholders and involves bringing the set of standards into conformance with the ERO Rules of Procedure and the latest version of the Reliability Standards Development Procedure. Please use the [comment form](#) to provide comments on this SAR.

SAR for Project 2007-02 Operating Personnel Communications Protocols (March 19–April 17, 2007)

The Operating Personnel Communications Protocols SAR for [Project 2007-02](#) is posted for a 30-day comment period from March 19 through April 17, 2007.

This SAR calls for the development of communications protocols for use by real-time system operators to improve situational awareness and shorten response time. The need for improved real-time communications protocols was identified during the investigation of the August 2003 Blackout. Please use the [comment form](#) to provide comments on this SAR.

Transmission Relay Loadability Standard (March 19–April 17, 2007)

The [Transmission Relay Loadability](#) drafting team posted the third draft of its standard for a 30-day comment period from March 19 through April 17, 2007. The drafting team is seeking comments on a change in the requirements that assigns responsibility for identifying certain critical facilities to the planning coordinator, in support of the latest approved version of the [Functional Model](#).

The standard codifies the relay loadability criteria embodied in the NERC Recommendation 8a, *Improve System Protection to Slow or Limit the Spread of Future Cascading Outages*, and U.S.–Canada Power System Outage Task Force Recommendation 21A, *Make More Effective and*

REGISTERED BALLOT BODY

Wider Use of System Protection Measures. Please use the [comment form](#) to provide comments on this standard.

Standards Development Process

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. If you have any questions, please contact me at 813-468-5998 or maureen.long@nerc.net.

Sincerely,

Maureen E. Long

Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
 - o Modify the requirement to improve its quality
 - o Move the requirement (into another SAR or Standard or to the certification process or standards)
 - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments:

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
 - o Modify the requirement to improve its quality
 - o Move the requirement (into another SAR or Standard or to the certification process or standards)
 - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: However, this is a large scope (a large amount of work) for the standard drafting team. Wherever possible, it is recommended that the drafting team list and explain the criteria it is using so that it may be easier to achieve stakeholder consensus where many related changes are made. With such a large scope the drafting team should consider carefully how the changes are balloted so ballots don't fail because stakeholders object to a minor subset of issues in a particular ballot.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability.

It isn't clear what stakeholders will be involved to improve these standards. Is it the ballot body as a whole or some other forum? Since there is no drafting team roster, we are not sure who is working on this project and who are the stakeholders suggesting the changes to requirements.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: The FERC NOPR should not be used to change the standards. Items in the final order should be given due consideration.

Several of VO comments items are not clear. They are primarily bullet notes with no context. Is there additional information about these comments somewhere?

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

Comments:

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

No additional comments

Comments: We disagree with the assignment of Violation Severity Levels (VSL). The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. Yes/No requirements should not arbitrarily be counted as Severe violations. The proposed VSL breakdown in the SAR is not part of the Sanctions Guidelines and the proposed process has not been vetted in the industry.

 - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments: We agree with excluding standards still under development.

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability. We do not see a listing of the drafting team members and it is unclear what stakeholders will be involved to improve these standards.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: The FERC NOPR should not be used to change the standards. Items in the final order should be considered.

Several of VO comments items are not clear. It would help if these fill comments were posted somewhere for reference.

We disagree with the assignment of Violation Severity Levels (VSL). VSLs should not be skewed to inflate the sanctions associated with a requirement. The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. The proposed breakdown in the SAR is not part of the Sanctions Guidelines and has not been vetted in the industry.

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

<input type="checkbox"/> NA – Not Applicable	<input type="checkbox"/>	9 — Federal, State, Provincial Regulatory or other Government Entities
	<input type="checkbox"/>	10 — Regional Reliability Organizations, Regional Entities

Background Information

The purpose of this SAR is to review the set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements to ensure that there are requirements that address the reliability coordinator's processes, procedures, plans, tools, and authorities to support real-time operating reliability within its own reliability area and between reliability coordinator areas in support of reliability of the interconnected bulk power systems.

The scope of the SAR includes the following:

- The drafting team will review all of the requirements in this set of standards and eliminate all of the requirements that are redundant. There are redundancies between requirements in the IRO-sequence of standards and also redundancies between requirements in the IRO-sequence of standards and the ORG-sequence of standards, and redundancies with PER-004, COM-001, COM-002, and PRC-001. Note that there will be a new standard to address communication protocols (Project 2007-02) and requirements for real-time communication protocols need to be transferred to that new standard.
- The drafting team also needs to review requirements and ensure that the distinctions between the functional entity and the real-time system operator are clear and distinct. The requirements should be written for the functional entity.
- The drafting team also needs to clarify the responsibilities and authorities in the requirements when comparing the "reliability coordinator" and the "transmission operator."
- The drafting team needs to verify that requirements exempt the real time-operator from liability when making a good faith effort at preserving reliability.
- The drafting team needs to address the reliability coordinator's facilities. A challenge has been to require that entities have "facilities" in place and available to the real-time system operators. These facilities are reviewed during certification, and unless there is a specific requirement to review these facilities, they may not be reviewed after the initial certification. To eliminate redundancy between the "certification" standards and the standards that are aimed more at real-time operations, the certification standards could be phrased to clarify that entities are required to "have and maintain" the specified facilities. This would enable the compliance monitor to check facilities on a periodic basis. While checking the facilities that are used on a daily basis may not be necessary, making periodic checks of the facilities that are infrequently would motivate entities to maintain these facilities, e.g., "Shall have a back-up power supply for critical operations, and shall maintain and test at least once per year."
- The results of the Operating Committee's study on operator situational awareness tools should be used to verify that the requirements in the certification standards will meet reliability needs.
- This project also needs to be coordinated with the project for developing transmission operator and balancing authority standards (2007-06).
- IRO-001 has some "fill-in-the-blank" components to eliminate.

Comment Form — 1st Posting of Reliability Coordination SAR

- The development may include other improvements to the standards deemed appropriate by the drafting team, with the consensus of stakeholders, consistent with establishing high quality, enforceable and technically sufficient bulk power system reliability standards.

Comment Form — 1st Posting of Reliability Coordination SAR

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. Do you agree that there is a reliability-related need to for the proposed revisions to this set of standards? If not, please explain in the comment area.

Yes

No

Comments:

2. Do you agree with the scope of the SAR? If not, please explain in the comment area.

Yes

No

Comments: The FERC NOPR and FERC Staff comments under Standard PRC-001-0, System Protection Coordination, do not apply to Reliability Coordination. In fact, the current Standard, PRC-001-1, does not apply to Reliability Coordinators. This Standard should be removed from the scope of this SAR.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

Comment Form — 2nd Posting of Reliability Coordination SAR

Please use this form to submit comments on the second draft of the Reliability Coordination SAR. Comments must be submitted by **April 17, 2007**. You may submit the completed form by e-mail to sarcomm@nerc.net with the words "Reliability Coordination" in the subject line. If you have questions please contact Maureen Long at maureen.long@nerc.net or by telephone at 813-468-5998.

<input type="checkbox"/> WECC	<input type="checkbox"/>	8 — Small Electricity End Users
<input type="checkbox"/> NA – Not Applicable	<input type="checkbox"/>	9 — Federal, State, Provincial Regulatory or other Government Entities
	<input type="checkbox"/>	10 — Regional Reliability Organizations, Regional Entities

Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
 - o Modify the requirement to improve its quality
 - o Move the requirement (into another SAR or Standard or to the certification process or standards)
 - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: The WECC RCCWG agrees with the overall approach. That said, there is currently another SAR in process that addresses communications protocols and paths. The referenced SAR, "Operating Personnel Communications Protocols" is also meant to address FERC comments relative to communications protocols. Having two separate SARs that address the same comment seems redundant.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Comment Form — 2nd Posting of Reliability Coordination SAR

Yes

No

Comments:

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

No additional comments

Comments: The WECC RCCWG believes that revision to each existing Standard, as a result of this SAR, should be individually balloted, instead of grouped together in one ballot on the entire group of changes.

- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability.

It isn't clear what stakeholders will be involved to improve these standards. Is it the ballot body as a whole or some other forum? Since there is no drafting team roster, we are not sure who is working on this project and who are the stakeholders suggesting the changes to requirements.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: The FERC NOPR should not be used to change the standards. Items in the final order should be given due consideration.

Several of VO comments items are not clear. They are primarily bullet notes with no context. Is there additional information about these comments somewhere?

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

Comments:

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

No additional comments

Comments: We disagree with the assignment of Violation Severity Levels (VSL). The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. Yes/No requirements should not arbitrarily be counted as Severe violations. The proposed VSL breakdown in the SAR is not part of the Sanctions Guidelines and the proposed process has not been vetted in the industry.

To the extent that requirements are modified or moved, care should be taken to make sure that the two-way exchange of information between RC and TOP and RC and BA should be preserved.

Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
 - o Modify the requirement to improve its quality
 - o Move the requirement (into another SAR or Standard or to the certification process or standards)
 - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments:

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: The SAR needs to be further refined to identify those specific requirements that will be:

- 1) Reviewed as being duplicative
- 2) Considered being relocated
- 3) Considered being eliminated

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Comment Form — 2nd Posting of Reliability Coordination SAR

Yes

No

Comments: The SAR identified standards IRO-014 and IRO-015 on its first page but does not address these standards in Attachment 1. The SAR needs to be updated to either acknowledge that these two standards will not be changed or identify what needs to be corrected.

Attachment 1:

COM-001-0

NERC has a current effort to address communication facilities in standard EOP-008. This group needs to be aware of that effort and should insure that any change to COM-001 does not counter that effort of EOP-008.

How will this effort differ from the other NERC effort?

COM-002-1

NERC has a current effort to address communication protocol in emergencies with "Operating Personnel Communications Protocols." Similar to our previous comment this group needs to be aware of that effort and should insure that any change to COM-002 does not counter that groups efforts.

How will this effort differ from the other NERC effort?

IRO-001-0

Please provide additional information on the following bullet point:

"Reflect the process set forth in the NERC Rules of Procedures"

What specific sections of NERC Rules of Procedure will be reflected in IRO-001-0?

IRO-005-1

The first bullet point does not seem to fall within the goal of this SAR.

"Propose that the ERO conduct a survey of IROL practices and experiences."

This effort does not need to go through NERC Reliability Standards Development Process to be performed. NERC could take up this effort at any time and it will slow down this process if it is going to be included in this SAR.

PER-004-0

NERC has another group that is looking into to these concerns.

How will this effort differ from that effort?

Yes

No

Comments:

We agree with the reduction of standards to be included in this body of work. However, we suggest PRC-001 should also be eliminated from this SAR.

The title of the SAR is Reliability Coordination, but the purpose is to ensure requirements applicable to the Reliability Coordinator are clear, etc., etc. The second part of the Purpose is to ensure that "this set of requirements" is sufficient... , referring back to the first part of the sentence. PRC-001 does not apply to the Reliability Coordinators and is out of place in this SAR.

PRC-001 should not be included in this SAR nor the resulting standard development work under this SAR. First, PRC-001 does not apply to Reliability Coordinators and there is already a significantly large amount of work related to Reliability Coordinators under this SAR. Second, the SDT's attention should not be redirected to system protection coordination among BAs, TOPs, and GOPs. We disagree if the intent of the Requestor is to make PRC-001 applicable to Reliability Coordinators under this SAR; If that is the intent we suggest it be done in a separate SAR activity.

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments:

Comment Form — 2nd Posting of Reliability Coordination SAR

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

Comments:

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
 - o Modify the requirement to improve its quality
 - o Move the requirement (into another SAR or Standard or to the certification process or standards)
 - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments: While IRO-007-1 through IRO-010-1 are currently open for a 30-day comment period until 4/20/07, this standards work plan effort should leave no stone unturned in developing quality standards. Consequently, IRO-007-1 through IRO-010-1 may contain requirements that are valuable and easily consolidated with the standards under review by this SAR. In addition, they may also contain duplicative requirements that could be consolidated as part of the review process of this SAR.

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments: Rather than using the word quality to describe the outcome, the first bullet point above should say, "Modify the requirement to improve clarity and measureability while removing ambiguity." This way the drafting team could use a check list against each requirement to test whether it is clear, measureable, and unambiguous.

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments: Under the detailed description in the second paragraph, the SAR should be modified to include a line item to include "Improve clarity of, improve measureability of, and remove ambiguity from the requirements."

Comment Form — 2nd Posting of Reliability Coordination SAR

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

Comments: This effort should leave no stone unturned in developing quality standards within the expertise and domain of this effort. Therefore, every effort must be made to ensure this round of work plan related standard revisions is as complete and all encompassing as is humanly possible to ensure to the extent possible that this standards process reaches a point that these standards are complete, accurate and only minor revisions are required to maintain them going forward. Tying the hands of the drafting team as suggested by "Several stakeholders" will only prolong the industry's work to achieve good, high quality requirements and standards. In addition, we should be using our resources as efficiently as possible. Allowing some latitude to the drafting teams to find and fix issues with standards that are related to the standards within their area of expertise and charge is a good thing to do at this point in the standards evolution process and conducive to the efficient use of resources. As a practical matter this process may never end, but it should reach a point that is much more manageable sooner rather than later.

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

Background Information

The purpose of this SAR is to review a set of standards that includes reliability coordinator requirements with the intent of eliminating duplicate requirements and upgrading and reorganizing the requirements.

Based on stakeholder comments, the drafting team made several significant changes to the first draft of the SAR, including the following:

- Reduced the number of standards addressed in this project by eliminating consideration of standards that have not been approved, and standards expected to be retired as part of the IROL Implementation Plan.
- Revised the Descriptions to state more clearly the approach the standard drafting team will take in determining what action to take with each requirement in the set of standards. The drafting team will work with stakeholders to determine whether to:
 - o Modify the requirement to improve its quality
 - o Move the requirement (into another SAR or Standard or to the certification process or standards)
 - o Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).
- Revised the descriptions of the 'Reliability Functions' to reflect the latest version of the Functional Model (V3).

The SAR Drafting Team asks that you review the revised SAR and then answer the questions on the following page.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Yes

No

Comments:

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:

- Modify the requirement to improve its quality
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Yes

No

Comments:

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Yes

No

Comments:

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Yes

No

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

No additional comments

Comments:

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

The SAR to Modify Reliability Coordinator standards requesters thank all commenters who submitted comments on Draft 1 of the SAR. This SAR was posted for a 30-day public comment period from March 19 through April 17, 2007. The requesters asked stakeholders to provide feedback on the SAR through a special SAR Comment Form. There were 19 sets of comments, including comments from 52 different people from more than 40 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

Based on comments received, the drafting team made two changes to the SAR:

- Replaced references to the FERC NOPR with references to the FERC Order 693
- Added a bullet to the detailed description that says, "Improve clarity of, improve measureability of, and remove abiguity from the requirement" and revised the bullets in the brief description to match this language.

The drafting team is recommending that the Standards Committee authorize moving the SAR forward to the standard drafting stage of the standards process.

In this "Consideration of Comments" document stakeholder comments have been organized so that it is easier to see the responses associated with each question. All comments received on the standards can be viewed in their original format at:

http://www.nerc.com/~filez/standards/Reliability-Coordination_Project_2006-6.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

Index to Questions, Comments, and Responses

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.5

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:8

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project? 12

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach? 14

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here. 18

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

1. The drafting team reduced the scope of this SAR to eliminate review of standards that are still under development, including IRO-007-1 through IRO-010-1, and ORG-027-1. Do you agree with this modification? If not, please explain in the comment area.

Summary Consideration: Most stakeholders agreed with the modifications made to reduce the scope of this SAR.

Question #1			
Commenter	Yes	No	Comment
Entergy		<input checked="" type="checkbox"/>	<p>We agree with the reduction of standards to be included in this body of work. However, we suggest PRC-001 should also be eliminated from this SAR.</p> <p>The title of the SAR is Reliability Coordination, but the purpose is to ensure requirements applicable to the Reliability Coordinator are clear, etc., etc. The second part of the Purpose is to ensure that "this set of requirements" is sufficient... , referring back to the first part of the sentence. PRC-001 does not apply to the Reliability Coordinators and is out of place in this SAR.</p> <p>PRC-001 should not be included in this SAR nor the resulting standard development work under this SAR. First, PRC-001 does not apply to Reliability Coordinators and there is already a significantly large amount of work related to Reliability Coordinators under this SAR. Second, the SDT's attention should not be redirected to system protection coordination among BAs, TOPs, and GOPs. We disagree if the intent of the Requestor is to make PRC-001 applicable to Reliability Coordinators under this SAR; If that is the intent we suggest it be done in a separate SAR activity.</p>
<p>Response: Requirement 2.2 in PRC-001 states: If a protective relay or equipment failure reduces system reliability, the Transmission Operator shall notify its Reliability Coordinator and affected Transmission Operators and Balancing Authorities. The Transmission Operator shall take corrective action as soon as possible.</p> <p>This is 'incomplete' because there is no requirement for the RC to use that information. The intent in including PRC-001 in this SAR was to 'complete' this requirement. As envisioned, the new requirement may go in one of the existing RC standards, or may go into a new standard – but because it is something for the RC to do, it seems appropriate to include the consideration of this requirement as part of the RC SAR.</p>			
FirstEnergy		<input checked="" type="checkbox"/>	<p>While IRO-007-1 through IRO-010-1 are currently open for a 30-day comment period until 4/20/07, this standards work plan effort should leave no stone unturned in developing quality standards. Consequently, IRO-007-1 through IRO-010-1 may contain requirements that are valuable and easily consolidated with the standards under review</p>

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #1			
Commenter	Yes	No	Comment
			by this SAR. In addition, they may also contain duplicative requirements that could be consolidated as part of the review process of this SAR.
<p>Response: The Implementation Plan posted with IRO-007 through IRO-010 already calls for modification to some of the standards included in this SAR. However, the changes identified with the implementation plan for IRO-007 through IRO-011 are limited to those changes resulting from adoption of the proposed standards. If changes are needed to IRO-007 through IRO-010, they can be addressed with a new SAR.</p>			
Constellation	<input checked="" type="checkbox"/>		CECD feels that given the number of standards that IRO-007-1 and IRO-010-1 may impact [IRO-002-1 R2, IRO-002-1 R6, IRO-003-2, IRO-004-1 R4 and R5, IRO-005-2 R1, TOP-003-0 R1.2, TOP-005-1 R1] CECD disagrees with removing them from consideration. We do agree with the decision to exclude ORG-027-1.
<p>Response: Please review the Implementation Plan posted with IRO-007 through IRO-010. The proposed changes to the list of standards you identified are limited to those changes resulting from adoption of the proposed standards. . If changes are needed to IRO-007 through IRO-010, they can be addressed with a new SAR.</p>			
MRO	<input checked="" type="checkbox"/>		We agree with excluding standards still under development.
<p>Response: Thank you for your support – most commenters agreed with omitting all standards still under development.</p>

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #1			
Commenter	Yes	No	Comment
SRP	<input checked="" type="checkbox"/>		
WECC RCCWG	<input checked="" type="checkbox"/>		

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

2. The drafting team modified the SAR to be more exacting in describing the scope of changes proposed for the set of standards. The revised SAR clarifies that the Standard Drafting Team will work with stakeholders to determine what to do with each of the existing requirements:
- Modify the requirement to improve its quality
 - Move the requirement (into another SAR or Standard or to the certification process or standards)
 - Eliminate the requirement (either because it is redundant or because it doesn't support Bulk Electric System reliability).

Do you agree with this approach to reviewing the requirements? If not, please explain in the comment area.

Summary Consideration: Most stakeholders agreed with this approach to reviewing the requirements in the standards associated with this SAR.

Question #2			
Commenter	Yes	No	Comment
SRP		<input checked="" type="checkbox"/>	The FERC NOPR and FERC Staff comments under Standard PRC-001-0, System Protection Coordination, do not apply to Reliability Coordination. In fact, the current Standard, PRC-001-1, does not apply to Reliability Coordinators. This Standard should be removed from the scope of this SAR.
<p>Response: The FERC NOPR has now been replaced with FERC Order 693 and includes the following language regarding PRC-001-1:</p> <p>1449. The Commission approves Reliability Standard PRC-001-1 as mandatory and enforceable. In addition, the Commission directs the ERO to develop modifications to PRC-001-1 through the Reliability Standards development process that:</p> <p>(1) correct the references for Requirements and</p> <p>(2) include a requirement that upon the detection of failures in relays or protection system elements on the Bulk-Power System that threaten reliable operation, relevant transmission operators must be informed promptly, but within a specified period of time that is developed in the Reliability Standards development process, whereas generator operators must also promptly inform their transmission operators and</p> <p>(3) clarifies that, after being informed of failures in relays or protection system elements that threaten reliability of the Bulk-Power System, transmission operators must carry out corrective control actions, i.e., return a system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes after they receive notice of the failure.</p> <p>The existing PRC-001-1 Requirement 2.2 states:</p> <p>If a protective relay or equipment failure reduces system reliability, the Transmission Operator shall notify its Reliability Coordinator and affected Transmission Operators and Balancing Authorities. The Transmission Operator shall take corrective action as soon as possible.</p>			

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #2			
Commenter	Yes	No	Comment
<p>This is 'incomplete' because there is no requirement for the RC to use that information. The intent in including PRC-001 in this SAR was to 'complete' this requirement. As envisioned, the new requirement may go in one of the existing RC standards, or may go into a new standard – but because it is something for the RC to do, it seems appropriate to include the consideration of this requirement as part of the RC SAR.</p>			
Ameren Services Midwest SCG	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability.</p> <p>It isn't clear what stakeholders will be involved to improve these standards. Is it the ballot body as a whole or some other forum? Since there is no drafting team roster, we are not sure who is working on this project and who are the stakeholders suggesting the changes to requirements.</p>
<p>Response: The Reliability Standards Development Procedure will be used to collect stakeholder feedback. If the Standards Committee (SC) accepts this SAR, then the SC can either appoint the existing drafting team to work with stakeholders to make revisions to the standards, or the SC can have the standards staff send a notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions to let everyone know that the SC is seeking volunteers to work on a new drafting team. In either case, the drafting team will 'propose' revisions and post those for comment. NERC's standards staff will send an email notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions – the notice will tell people that some proposed revisions have been posted for comment and will seek feedback on the proposed revisions through a comment form – the same process as used to collect feedback on this SAR. The drafting team will use the responses to the questions on the comment form to determine which changes are supported by stakeholders, and will continue to make modifications until the drafting team feels that they have a set of proposed changes that meets the consensus of the stakeholders who participated in the comment periods.</p> <p>The drafting team that is working on the IROL standards submitted this Reliability Coordination SAR – the SC did not assign a separate drafting team to address the SAR comments. The roster for this team is posted on the related files page of the IROL standards. Here is a link to the roster: ftp://www.nerc.com/pub/sys/all_updl/standards/dt/GroupRoster_IROLSDT.pdf</p>			
MRO	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<p>We agree with improving the quality of the requirements, removing redundancies and those things that do not contribute to reliability. We do not see a listing of the drafting team members and it is unclear what stakeholders will be involved to improve these standards.</p>
<p>Response: The Reliability Standards Development Procedure will be used to collect stakeholder feedback. If the Standards Committee (SC) accepts this SAR, then the SC can either appoint the existing drafting team to work with stakeholders to make revisions to the standards, or the SC can have the standards staff send a notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions to let everyone know that the SC is seeking volunteers to work on a new drafting team. In either case, the drafting team will 'propose' revisions and post those</p>			

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #2			
Commenter	Yes	No	Comment
<p>for comment. NERC's standards staff will send an email notice to all members of the RBB as well as all entities who have indicated they want to receive email notices of standards actions – the notice will tell people that some proposed revisions have been posted for comment and will seek feedback on the proposed revisions through a comment form – the same process as used to collect feedback on this SAR. The drafting team will use the responses to the questions on the comment form to determine which changes are supported by stakeholders, and will continue to make modifications until the drafting team feels that they have a set of proposed changes that meets the consensus of the stakeholders who participated in the comment periods.</p> <p>The drafting team that is working on the IROL standards submitted this Reliability Coordination SAR – the SC did not assign a separate drafting team to address the SAR comments. The roster for this team is posted on the related files page of the IROL standards. Here is a link to the roster: ftp://www.nerc.com/pub/sys/all_updl/standards/dt/GroupRoster_IROLSDT.pdf</p>			
FirstEnergy	<input checked="" type="checkbox"/>		Rather than using the word quality to describe the outcome, the first bullet point above should say, "Modify the requirement to improve clarity and measureability while removing ambiguity." This way the drafting team could use a check list against each requirement to test whether it is clear, measureable, and unambiguous.
<p>Response: The drafting team has adopted this suggestion and modified the SAR so that the revised bullet now says: – Modify the requirement to improve its clarity and measureability while removing ambiguity</p>			
Manitoba Hydro	<input checked="" type="checkbox"/>		However, this is a large scope (a large amount of work) for the standard drafting team. Wherever possible, it is recommended that the drafting team list and explain the criteria it is using so that it may be easier to achieve stakeholder consensus where many related changes are made. With such a large scope the drafting team should consider carefully how the changes are balloted so ballots don't fail because stakeholders object to a minor subset of issues in a particular ballot.
<p>Response: Agreed.</p>			
WECC RCCWG	<input checked="" type="checkbox"/>		The WECC RCCWG agrees with the overall approach. That said, there is currently another SAR in process that addresses communications protocols and paths. The referenced SAR, "Operating Personnel Communications Protocols" is also meant to address FERC comments relative to communications protocols. Having two separate SARs that address the same comment seems redundant.
<p>Response: There are a couple of standards that are in more than one 'project' in the Reliability Standards Work Plan 2007-2009. The coordinators working with the drafting teams for these projects are aware of this duplication and will 'hand off' requirements between one another to ensure that each requirement is addressed and that only one drafting team works on modifying each requirement.</p>

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

3. Are there additional revisions, beyond those identified in the SAR that should be addressed within the scope of this project?

Summary Consideration: The drafting team made the following modifications to the SAR based on stakeholder suggestions for additional revisions:

- Replaced references to the FERC NOPR with references to the FERC Order 693
- Added a bullet to the detailed description that says, "Improve clarity of, improve measureability of, and remove abiguity from the requirement"

Question #3			
Commenter	Yes	No	Comment
MRO	<input checked="" type="checkbox"/>		<p>The FERC NOPR should not be used to change the standards. Items in the final order should be considered.</p> <p>Several of V0 comments items are not clear. It would help if these fill comments were posted somewhere for reference.</p> <p>We disagree with the assignment of Violation Severity Levels (VSL). VSLs should not be skewed to inflate the sanctions associated with a requirement. The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. The proposed breakdown in the SAR is not part of the Sanctions Guidelines and has not be vetted in the industry.</p>
<p>Response: Agreed. The drafting team has modified the SAR to replace the references to the NOPR with references to FERC Order 693.</p> <p>The Version 0 comments are posted on the Approved Standards web page – here is the link to that set of comments: ftp://www.nerc.com/pub/sys/all_updl/standards/rs/Standards_V0_Industry_Comments_20060105.pdf</p> <p>The proposed breakdown in VSLs was not included in the Sanctions Guidelines – but it was supported by both the Standards Committee and the Compliance and Certification Committee on December 14, 2006. The Stanards Committee supported having drafting teams use the breakdown that appears in the SAR – and that breakdown was included in the Reliability Standards Development Work Plan 2007-2009.</p>			
Ameren Services Midwest SCG	<input checked="" type="checkbox"/>		<p>The FERC NOPR should not be used to change the standards. Items in the final order should be given due consideration.</p> <p>Several of V0 comments items are not clear. They are primarily bullet notes with no context. Is there additional information about these comments somewhere?</p>
<p>Response: Agreed. The drafting team has modified the SAR to replace the references to the NOPR with references to FERC Order 693.</p>			

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #3			
Commenter	Yes	No	Comment
The Version 0 comments are posted on the Approved Standards web page – here is the link to that set of comments: ftp://www.nerc.com/pub/sys/all_updl/standards/rs/Standards_V0_Industry_Comments_20060105.pdf			
ATC LLC	<input checked="" type="checkbox"/>		The SAR needs to be further refined to identify those specific requirements that will be: 1) Reviewed as being duplicative 2) Considered being relocated 3) Considered being eliminated
Response: As envisioned, the standard drafting team will work with stakeholders (using the comment process) to propose and obtain stakeholder feedback on whether each requirement should be retired, moved, enhanced, etc.			
FirstEnergy	<input checked="" type="checkbox"/>		Under the detailed description in the second paragraph, the SAR should be modified to include a line item to include "Improve clarity of, improve measureability of, and remove ambiguity from the requirements."
Response: The drafting team adopted your suggestion and added the proposed bullet to the detailed description of the SAR.

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

4. Several stakeholders indicated that the drafting team should remove the language in the original SAR that would have allowed the standard drafting team to add requirements to the standards if those additions were supported by stakeholders. The drafting team modified the SAR in support of those comments. The SAR drafting team thinks that additional SARs can be developed in the future to address any gaps in this set of requirements. Any new SARs generated by this effort would follow the normal standards development process. Do you support this approach?

Summary Consideration: Stakeholders who responded to this question overwhelmingly indicated support for having firm boundaries on what could be changed with the associated standards by removing the open-ended language from the original SAR.

Question #4			
Commenter	Yes	No	Comment
BPA		<input checked="" type="checkbox"/>	
FirstEnergy	<input checked="" type="checkbox"/>		This effort should leave no stone unturned in developing quality standards within the expertise and domain of this effort. Therefore, every effort must be made to ensure this round of work plan related standard revisions is as complete and all encompassing as is humanly possible to ensure to the extent possible that this standards process reaches a point that these standards are complete, accurate and only minor revisions are required to maintain them going forward. Tying the hands of the drafting team as suggested by "Several stakeholders" will only prolong the industry's work to achieve good, high quality requirements and standards. In addition, we should be using our resources as efficiently as possible. Allowing some latitude to the drafting teams to find and fix issues with standards that are related to the standards within their area of expertise and charge is a good thing to do at this point in the standards evolution process and conducive to the efficient use of resources. As a practical matter this process may never end, but it should reach a point that is much more manageable sooner rather than later.
Response: Stakeholders overwhelmingly indicated support for having firm boundaries on what could be changed with the associated standards.			
ATC LLC	<input checked="" type="checkbox"/>		The SAR identified standards IRO-014 and IRO-015 on its first page but does not address these standards in Attachment 1. The SAR needs to be updated to either acknowledge that these two standards will not be changed or identify what needs to be corrected. Attachment 1: COM-001-0 NERC has a current effort to address communication facilities in standard EOP-008. This

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #4			
Commenter	Yes	No	Comment
			<p>group needs to be aware of that effort and should insure that any change to COM-001 does not counter that effort of EOP-008.</p> <p>How will this effort differ from the other NERC effort?</p> <p>COM-002-1 NERC has a current effort to address communication protocol in emergencies with "Operating Personnel Communications Protocols." Similar to our previous comment this group needs to be aware of that effort and should insure that any change to COM-002 does not counter that groups efforts. How will this effort differ from the other NERC effort?</p> <p>IRO-001-0 Please provide additional information on the following bullet point: "Reflect the process set forth in the NERC Rules of Procedures" What specific sections of NERC Rules of Procedure will be reflected in IRO-001-0?</p> <p>IRO-005-1 The first bullet point does not seem to fall within the goal of this SAR. "Propose that the ERO conduct a survey of IROL practices and experiences." This effort does not need to go through NERC Reliability Standards Development Process to be performed. NERC could take up this effort at any time and it will slow down this process if it is going to be included in this SAR.</p> <p>PER-004-0 NERC has another group that is looking into to these concerns. How will this effort differ from that effort?</p>
<p>Response: The two coordinate operations standards highlighted (IRO-014 and IRO-015), did not have any suggestions from FERC for improvements, and they were not part of Version 0 so there were no suggestions for improvements to these standards from the Version 0 process.</p> <p>COM-001 and COM-002 both contain requirements that are assigned to several different functions – and both include a mix of 'preparedness' requirements as well as some 'real-time' notification requirements as well as some requirements that may end up being converted into a new standard for 'communications protocols'. The intent in including the standards in multiple projects was to ensure that each requirement was fully addressed and ended up where it belonged. The coordinators</p>			

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

Question #4			
Commenter	Yes	No	Comment
			<p>supporting these projects are aware of this duplication and are working to ensure that there is a 'hand off' of requirements between teams to eliminate gaps and duplication.</p> <p>IRO-001 In Order 693, FERC explains what it meant by the bullet, 'Reflect the process set forth in the NERC Rules of Procedure':</p> <p style="padding-left: 40px;">896. In the NOPR, the Commission proposed to approve the Reliability Standard as mandatory and enforceable. In addition, as a separate action under section 215(d)(5), the NOPR proposed to direct the ERO to develop modifications to Requirement R1 to substitute "Regional Entity" for "regional reliability organization" and reflect NERC's Rules of Procedure for registering, certifying and verifying entities, including reliability coordinators.</p> <p>IRO-005-1 The bullet point you've highlighted may or may not be addressed by the drafting team. As envisioned, the results of a survey may prove useful in determining a need for additional modifications to the standards. Note that FERC Order 693 has replaced the NOPR and the SAR has been updated to reflect this. The survey is still identified in Order 693 – and FERC clarified that the intent of the survey is to determine if additional modifications to IRO-005 are necessary.</p> <p>PER-004 includes a mix of preparation and real-time requirements. The intent in placing the standard in more than one project is to ensure that each requirement is reviewed by an appropriate team, and that all requirements that are needed end up in an appropriate standard.</p>

Consideration of Comments for SAR to Modify Reliability Coordinator Standards

5. If you have any other comments on this SAR that you have not already submitted above, please provide them here.

Summary Consideration: The drafting team did not make any conforming changes to the SAR based on comments provided in response to question 5.

Question #5			
Commenter	Yes	No	Comment
Ameren Services			<p>We disagree with the assignment of Violation Severity Levels (VSL). The drafting team should assess the likely bounds of performance and the VSLs should be divided into four relatively equal portions. Yes/No requirements should not arbitrarily be counted as Severe violations. The proposed VSL breakdown in the SAR is not part of the Sanctions Guidelines and the proposed process has not been vetted in the industry.</p> <p>To the extent that requirements are modified or moved, care should be taken to make sure that the two-way exchange of information between RC and TOP and RC and BA should be preserved.</p>
<p>Response: Violation Severity Levels identify how badly you missed the intent of a requirement – not all requirements lend themselves to 4 different VSLs. The guidelines for determining a VSL are just ‘guidelines’ – however these guidelines were endorsed by the SC and the CCC and the SDT would need a strong reason for not using these guidelines.</p>			
Midwest SCG			<p>We disagree with the assignment of Violation Severity Levels (VSL). Standards Authorization Request Form

Purpose

To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

Brief Description

Most of the requirements in this set of standards were translated from Operating Policies as part of the Version 0 process. There have been suggestions for improving these requirements, and the drafting team will consider comments submitted by stakeholders, drafting teams and FERC in determining what changes should be proposed to stakeholders.

The drafting team will review all of the requirements in this set of standards and make a determination, with stakeholders, on whether to:

- Modify the requirement to improve its clarity and measureability while removing ambiguity
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support bulk power system reliability).

Detailed Description

The drafting team will review all of the requirements in the following set of standards:

COM-001 — Telecommunications
COM-002 — Communications and Coordination
IRO-001 — Reliability Coordination – Responsibilities and Authorities
IRO-002 — Reliability Coordination – Facilities
IRO-005 — Reliability Coordination – Current Day Operations
IRO-014 — Procedures to Support Coordination between Reliability Coordinators
IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
PER-004 — Reliability Coordination – Staffing
PRC-001 — System Protection Coordination

For each existing requirement, the drafting team will work with stakeholders and:

- Eliminate redundancy in the requirements.
- Identify requirements that should be moved into other SARs
- Eliminate requirements that do not support bulk power system reliability
- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.
- Improve clarity of, improve measureability of, and remove ambiguity from the requirement

The standard drafting team will also:

Coordinate with the drafting teams working on the SAR and standards for Transmission Operator and Balancing Authority standards (Project 2007-06).
Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)

Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)

This review of the set of identified standards will satisfy the standards procedure requirement to review each approved standard at least once every five years.

Standards Authorization Request Form

Reliability Functions

The Standard will Apply to the Following Functions <i>(Check box for each one that applies.)</i>		
<input checked="" type="checkbox"/>	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
<input checked="" type="checkbox"/>	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
<input checked="" type="checkbox"/>	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator Area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
<input checked="" type="checkbox"/>	Transmission Owner	Owens and maintains transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
<input checked="" type="checkbox"/>	Distribution Provider	Delivers electrical energy to the End-use customer.
<input checked="" type="checkbox"/>	Generator Owner	Owens and maintains generation facilities.
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) to provide real and reactive power.
<input type="checkbox"/>	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
<input type="checkbox"/>	Market Operator	Interface point for reliability functions with commercial functions.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the end-use customer.

Reliability and Market Interface Principles

Applicable Reliability Principles <i>(Check box for all that apply.)</i>	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
Does the proposed Standard comply with all of the following Market Interface Principles? <i>(Select 'yes' or 'no' from the drop-down box.)</i>	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

The drafting team will assist stakeholders in considering these comments in determining what changes to make to the standards:

COM-001-0 Telecommunications

FERC Order 693

- Include generator operators and distribution provider as applicable entities and include requirements for their telecommunications
- Include requirements for telecommunication facilities for use during normal and emergency conditions that reflect the roles of the applicable entities and their impact on reliable operation
- Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions

V0 Industry Comments

- Many players missing
- Apply R1 to all but smallest entities

Violation Risk Factor Drafting Team Comments

- R6 – administrative requirement

COM-002-1 Communications and Coordination

FERC Order 693

- Include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities;
- Include distribution providers as applicable entities; and
- Require tightened communications protocols, especially for communications during alerts and emergencies.

V0 Industry Comments

- Voice with generators not required
- R1 – include reliability authority
- R2 – include sabotage and security
- R4 – clarify repeat back requirement with regard to emergency

IRO-001-0 Reliability Coordination – Responsibilities and Authorities

FERC Order 693

- Reflect the process set forth in the NERC Rules of Procedures; and
- Eliminate the regional reliability organization as an applicable entity.

Regional Fill-in-the-Blank Team Comments

- Remove ", sub-region, or interregional coordinating group" from R1
- Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another." from the Purpose section of the standard.

V0 Industry Comments

- Inability to perform needs to be communicated
- What is meant by 'interest of other entity'?

Violation Risk Factor Drafting Team Comments

- R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the

SAR for Project 2006-06 Reliability Coordination – Attachment 1

accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk.

IRO-002-0 Reliability Coordination – Facilities

FERC Order 693

- Require a minimum set of tools that should be made available to reliability coordinators.

V0 Industry Comments

- R5 – define synchronized information system
- R7 – define ‘adequate’ tools and ‘wide-area’
- Words such as ‘easily understood’ and ‘particular emphasis’ need to be tightened

IRO-005-1 Reliability Coordination – Current Day Operations

FERC Order 693

- Measures and Levels of Non-Compliance specific to IROL violations must be commensurate with the magnitude, duration, frequency and causes of the violations and whether these occur during normal or contingency conditions.
- Conduct a survey on IROL practices and experiences; the Commission may propose further modifications to IRO-005-1 based on the survey results.

V0 Industry Comments

- R10, 11 & 12 – RA not empowered to do this

IRO-016-1 Coordination of Real-Time Activities Between Reliability Coordinators

Violation Risk Factors Drafting Team Comments

- R1.2.1 & R2 – ambiguous

PER-004-0 Reliability Coordination – Staffing

FERC Order 693

- Include formal training requirements for reliability coordinators similar to those addressed under the personnel training Reliability Standard PER-002-0;
- Include requirements pertaining to personnel credentials for reliability coordinators similar to those in PER-003-0
- Consider the suggestions of FirstEnergy and Xcel:
1413. FirstEnergy seeks revisions to the terms “shall have a comprehensive understanding” and “shall have extensive knowledge.” It states that it will be difficult for entities to demonstrate compliance with these terms. In addition, FirstEnergy suggests that the reliability coordinator staffing requirements should be located in the IRO Reliability Standards.
1414. Xcel states that emergency training requirements should be expressed in hour increments rather than days to allow for flexibility in scheduling training and coordinating with rotating shift schedules.

V0 Industry Comments

- Calendar year timing increment
- Other training needs to be defined

PRC-001-0 System Protection Coordination

FERC Order 693

SAR for Project 2006-06 Reliability Coordination – Attachment 1

- Correct the references for Requirements
- Include a requirement that upon the detection of failures in relays or protection system elements on the Bulk-Power System that threaten reliable operation, relevant transmission operators must be informed promptly, but within a specified period of time whereas generator operators must also promptly inform their transmission operators
- Clarify that, after being informed of failures in relays or protection system elements that threaten reliability of the Bulk-Power System, transmission operators must carry out corrective control actions, i.e., return the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes after they receive notice of the failure

V0 Industry Comments

- Effects on reliability may not be known
- Consistent terminology as to neighbor vs. affected
- Not all criteria moved over from policies

The drafting team will reference these guidelines in determining what changes to make to the standards to bring them into conformance with the *Reliability Standards Development Procedure Manual, Version 6* and the *ERO Rules of Procedure*:

Standard Review Guidelines

Applicability

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

Purpose

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

Performance Requirements

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

Measurability

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

Technical Basis in Engineering and Operations

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

Completeness

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

Consequences for Noncompliance

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

Clear Language

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

Practicality

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

Capability Requirements versus Performance Requirements

In general, requirements for entities to have ‘capabilities’ (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to ‘maintain’ their capabilities.

Consistent Terminology

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a ‘unique’ definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the ‘verb list’ from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

Violation Risk Factors (Risk Factor)

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or

restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

Time Horizon

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

Violation Severity Levels

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels must be applied for each requirement and may be combined to cover multiple requirements, as long as it is clear which requirements are included and that all requirements are included.

The violation severity levels should be based on the following definitions:

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Replace, ‘Regional Reliability Organization’ with ‘Regional Entity’

Fill-in-the-blank Requirements

Do not include any ‘fill-in-the-blank’ requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

Requirements for Regional Reliability Organization

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

Effective Dates

Must be 1st day of 1st quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan. The effective date should be linked to the NERC BOT adoption date.

Associated Documents

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, ‘Associated Documents’.

Functional Model Version 3

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

Standards Authorization Request Form

Purpose

To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

Brief Description

Most of the requirements in this set of standards were translated from Operating Policies as part of the Version 0 process. There have been suggestions for improving these requirements, and the drafting team will consider comments submitted by stakeholders, drafting teams and FERC in determining what changes should be proposed to stakeholders.

The drafting team will review all of the requirements in this set of standards and make a determination, with stakeholders, on whether to:

- Modify the requirement to improve its clarity and measureability while removing ambiguity
Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support bulk power system reliability).

Detailed Description

The drafting team will review all of the requirements in the following set of standards:

COM-001 — Telecommunications
COM-002 — Communications and Coordination
IRO-001 — Reliability Coordination – Responsibilities and Authorities
IRO-002 — Reliability Coordination – Facilities
IRO-005 — Reliability Coordination – Current Day Operations
IRO-014 — Procedures to Support Coordination between Reliability Coordinators
IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
PER-004 — Reliability Coordination – Staffing
PRC-001 — System Protection Coordination

For each existing requirement, the drafting team will work with stakeholders and:

- Eliminate redundancy in the requirements.
- Identify requirements that should be moved into other SARs
- Eliminate requirements that do not support bulk power system reliability
- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.
- Improve clarity of, improve measureability of, and remove ambiguity from the requirement

The standard drafting team will also:

Coordinate with the drafting teams working on the SAR and standards for Transmission Operator and Balancing Authority standards (Project 2007-06).
Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)

Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)

This review of the set of identified standards will satisfy the standards procedure requirement to review each approved standard at least once every five years.

Standards Authorization Request Form

Reliability Functions

The Standard will Apply to the Following Functions <i>(Check box for each one that applies.)</i>		
<input checked="" type="checkbox"/>	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
<input checked="" type="checkbox"/>	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
<input checked="" type="checkbox"/>	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator Area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
<input checked="" type="checkbox"/>	Transmission Owner	Owens and maintains transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
<input checked="" type="checkbox"/>	Distribution Provider	Delivers electrical energy to the End-use customer.
<input checked="" type="checkbox"/>	Generator Owner	Owens and maintains generation facilities.
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) to provide real and reactive power.
<input type="checkbox"/>	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
<input type="checkbox"/>	Market Operator	Interface point for reliability functions with commercial functions.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the end-use customer.

Reliability and Market Interface Principles

Applicable Reliability Principles <i>(Check box for all that apply.)</i>	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
Does the proposed Standard comply with all of the following Market Interface Principles? <i>(Select 'yes' or 'no' from the drop-down box.)</i>	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

The drafting team will assist stakeholders in considering these comments in determining what changes to make to the standards:

COM-001-0 Telecommunications

FERC Order 693

- o Include generator operators and distribution provider as applicable entities and include requirements for their telecommunications
- o Include requirements for telecommunication facilities for use during normal and emergency conditions that reflect the roles of the applicable entities and their impact on reliable operation
- o Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions

V0 Industry Comments

- o Many players missing
- o Apply R1 to all but smallest entities

Violation Risk Factor Drafting Team Comments

- o R6 – administrative requirement

COM-002-1 Communications and Coordination

FERC Order 693

- o Include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities;
- o Include distribution providers as applicable entities; and
- o Require tightened communications protocols, especially for communications during alerts and emergencies.

V0 Industry Comments

- o Voice with generators not required
- o R1 – include reliability authority
- o R2 – include sabotage and security
- o R4 – clarify repeat back requirement with regard to emergency

IRO-001-0 Reliability Coordination – Responsibilities and Authorities

FERC Order 693

- o Reflect the process set forth in the NERC Rules of Procedures; and
- o Eliminate the regional reliability organization as an applicable entity.

Regional Fill-in-the-Blank Team Comments

- o Remove ", sub-region, or interregional coordinating group" from R1
- o Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another." from the Purpose section of the standard.

V0 Industry Comments

- o Inability to perform needs to be communicated
- o What is meant by 'interest of other entity'?

Violation Risk Factor Drafting Team Comments

- o R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the

SAR for Project 2006-06 Reliability Coordination – Attachment 1

accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk.

IRO-002-0 Reliability Coordination – Facilities

FERC Order 693

- Require a minimum set of tools that should be made available to reliability coordinators.

V0 Industry Comments

- R5 – define synchronized information system
- R7 – define ‘adequate’ tools and ‘wide-area’
- Words such as ‘easily understood’ and ‘particular emphasis’ need to be tightened

IRO-005-1 Reliability Coordination – Current Day Operations

FERC Order 693

- Measures and Levels of Non-Compliance specific to IROL violations must be commensurate with the magnitude, duration, frequency and causes of the violations and whether these occur during normal or contingency conditions.
- Conduct a survey on IROL practices and experiences; the Commission may propose further modifications to IRO-005-1 based on the survey results.

V0 Industry Comments

- R10, 11 & 12 – RA not empowered to do this

IRO-016-1 Coordination of Real-Time Activities Between Reliability Coordinators

Violation Risk Factors Drafting Team Comments

- R1.2.1 & R2 – ambiguous

PER-004-0 Reliability Coordination – Staffing

FERC Order 693

- Include formal training requirements for reliability coordinators similar to those addressed under the personnel training Reliability Standard PER-002-0;
- Include requirements pertaining to personnel credentials for reliability coordinators similar to those in PER-003-0
- Consider the suggestions of FirstEnergy and Xcel:
1413. FirstEnergy seeks revisions to the terms “shall have a comprehensive understanding” and “shall have extensive knowledge.” It states that it will be difficult for entities to demonstrate compliance with these terms. In addition, FirstEnergy suggests that the reliability coordinator staffing requirements should be located in the IRO Reliability Standards.
1414. Xcel states that emergency training requirements should be expressed in hour increments rather than days to allow for flexibility in scheduling training and coordinating with rotating shift schedules.

V0 Industry Comments

- Calendar year timing increment
- Other training needs to be defined

PRC-001-0 System Protection Coordination

FERC Order 693

SAR for Project 2006-06 Reliability Coordination – Attachment 1

- Correct the references for Requirements
- Include a requirement that upon the detection of failures in relays or protection system elements on the Bulk-Power System that threaten reliable operation, relevant transmission operators must be informed promptly, but within a specified period of time whereas generator operators must also promptly inform their transmission operators
- Clarify that, after being informed of failures in relays or protection system elements that threaten reliability of the Bulk-Power System, transmission operators must carry out corrective control actions, i.e., return the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes after they receive notice of the failure

V0 Industry Comments

- Effects on reliability may not be known
- Consistent terminology as to neighbor vs. affected
- Not all criteria moved over from policies

The drafting team will reference these guidelines in determining what changes to make to the standards to bring them into conformance with the *Reliability Standards Development Procedure Manual, Version 6* and the *ERO Rules of Procedure*:

Standard Review Guidelines

Applicability

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

Purpose

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

Performance Requirements

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

Measurability

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

Technical Basis in Engineering and Operations

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

Completeness

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

Consequences for Noncompliance

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

Clear Language

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

Practicality

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

Capability Requirements versus Performance Requirements

In general, requirements for entities to have ‘capabilities’ (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to ‘maintain’ their capabilities.

Consistent Terminology

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a ‘unique’ definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the ‘verb list’ from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

Violation Risk Factors (Risk Factor)

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or

restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

Time Horizon

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

Violation Severity Levels

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels must be applied for each requirement and may be combined to cover multiple requirements, as long as it is clear which requirements are included and that all requirements are included.

The violation severity levels should be based on the following definitions:

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Replace, ‘Regional Reliability Organization’ with ‘Regional Entity’

Fill-in-the-blank Requirements

Do not include any ‘fill-in-the-blank’ requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

Requirements for Regional Reliability Organization

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

Effective Dates

Must be 1st day of 1st quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan. The effective date should be linked to the NERC BOT adoption date.

Associated Documents

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, ‘Associated Documents’.

Functional Model Version 3

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

Purpose

To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

Brief Description

Most of the requirements in this set of standards were translated from Operating Policies as part of the Version 0 process. There have been suggestions for improving these requirements, and the drafting team will consider comments submitted by stakeholders, drafting teams and FERC in determining what changes should be proposed to stakeholders.

The drafting team will review all of the requirements in this set of standards and make a determination, with stakeholders, on whether to:

- Modify the requirement to improve its **clarity and measurability while removing ambiguity**
- ~~Move the requirement (into another SAR or Standard or to the certification process or standards)~~
- Eliminate the requirement (either because it is redundant or because it doesn't support bulk power system reliability).

Deleted: quality ¶

Detailed Description

The drafting team will review all of the requirements in the following set of standards:

- COM-001 — Telecommunications
- COM-002 — Communications and Coordination
- IRO-001 — Reliability Coordination – Responsibilities and Authorities
- IRO-002 — Reliability Coordination – Facilities
- IRO-005 — Reliability Coordination – Current Day Operations
- IRO-014 — Procedures to Support Coordination between Reliability Coordinators
- IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
- PER-004 — Reliability Coordination – Staffing
- PRC-001 — System Protection Coordination

For each existing requirement, the drafting team will work with stakeholders and:

- Eliminate redundancy in the requirements.
- Identify requirements that should be moved into other SARs
- Eliminate requirements that do not support bulk power system reliability
- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.
- **Improve clarity of, improve measurability of, and remove ambiguity from the requirement**

The standard drafting team will also:

- Coordinate with the drafting teams working on the SAR and standards for Transmission Operator and Balancing Authority standards (Project 2007-06).
- Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)
- Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)

This review of the set of identified standards will satisfy the standards procedure requirement to review each approved standard at least once every five years.

Formatted: Bullets and Numbering

Reliability Functions

The Standard will Apply to the Following Functions (Check box for each one that applies.)		
<input checked="" type="checkbox"/>	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
<input checked="" type="checkbox"/>	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports system frequency in real time.
<input checked="" type="checkbox"/>	Interchange Authority	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
<input checked="" type="checkbox"/>	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
<input checked="" type="checkbox"/>	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator Area.
<input checked="" type="checkbox"/>	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
<input checked="" type="checkbox"/>	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
<input checked="" type="checkbox"/>	Transmission Owner	Owns and maintains transmission facilities.
<input checked="" type="checkbox"/>	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
<input checked="" type="checkbox"/>	Distribution Provider	Delivers electrical energy to the End-use customer.
<input checked="" type="checkbox"/>	Generator Owner	Owns and maintains generation facilities.
<input checked="" type="checkbox"/>	Generator Operator	Operates generation unit(s) to provide real and reactive power.
<input type="checkbox"/>	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
<input type="checkbox"/>	Market Operator	Interface point for reliability functions with commercial functions.
<input checked="" type="checkbox"/>	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the end-use customer.

Reliability and Market Interface Principles

Applicable Reliability Principles <i>(Check box for all that apply.)</i>	
<input checked="" type="checkbox"/>	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
<input checked="" type="checkbox"/>	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
<input checked="" type="checkbox"/>	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
<input checked="" type="checkbox"/>	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
<input checked="" type="checkbox"/>	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
<input checked="" type="checkbox"/>	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
<input checked="" type="checkbox"/>	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.
Does the proposed Standard comply with all of the following Market Interface Principles? <i>(Select 'yes' or 'no' from the drop-down box.)</i>	
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes	
2. An Organization Standard shall not give any market participant an unfair competitive advantage. Yes	
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes	
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes	
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

Standard Review Guidelines

Applicability

Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

Purpose

Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

Performance Requirements

Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable bulk power system, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

Measurability

Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

Technical Basis in Engineering and Operations

Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

Completeness

Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

Consequences for Noncompliance

In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

Clear Language

Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

Practicality

Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

Capability Requirements versus Performance Requirements

In general, requirements for entities to have ‘capabilities’ (this would include facilities for communication, agreements with other entities, etc.) should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to ‘maintain’ their capabilities.

Consistent Terminology

To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a ‘unique’ definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the ‘verb list’ from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

Violation Risk Factors (Risk Factor)

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or

restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. A requirement that is administrative in nature;

or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

Time Horizon

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

Violation Severity Levels

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. ('Violation severity levels' replace existing 'levels of non-compliance.')

The violation severity levels must be applied for each requirement and may be combined to cover multiple requirements, as long as it is clear which requirements are included and that all requirements are included.

The violation severity levels should be based on the following definitions:

- **Lower: mostly compliant with minor exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — The responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — The responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.
- **Severe: poor performance or results** — The responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Replace, 'Regional Reliability Organization' with 'Regional Entity'

Fill-in-the-blank Requirements

Do not include any 'fill-in-the-blank' requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

Requirements for Regional Reliability Organization

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

Effective Dates

Must be 1st day of 1st quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan. **The effective date should be linked to the NERC BOT adoption date.**

Associated Documents

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, 'Associated Documents'.

Functional Model Version 3

Review the requirements against the latest descriptions of the responsibilities and tasks assigned to functional entities as provided in pages 13 through 53 of the draft Functional Model Version 3.

May 11, 2007

TO: REGISTERED BALLOT BODY

Ladies and Gentlemen:

**Announcement
Nomination Periods Open for Two Drafting Teams**

The Standards Committee (SC) announces the following standards actions:

Nominations for Project 2006-06 Reliability Coordination Standard Drafting Team (May 14–25, 2007)

The Standards Committee authorized moving the [SAR for Reliability Coordination](#) forward to standard drafting and is seeking industry experts to serve on the Reliability Coordination Standard Drafting Team. This drafting team will work on modifications to the following standards:

- COM-001 — Telecommunications
- COM-002 — Communications and Coordination
- IRO-001 — Reliability Coordination – Responsibilities and Authorities
- IRO-002 — Reliability Coordination – Facilities
- IRO-005 — Reliability Coordination – Current Day Operations
- IRO-014 — Procedures to Support Coordination between Reliability Coordinators
- IRO-015 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016 — Coordination of Real-time Activities between Reliability Coordinators
- PER-004 — Reliability Coordination – Staffing
- PRC-001 — System Protection Coordination

If you are interested in serving on this standard drafting team, please complete this [nomination form](#) and return it to sarcomm@nerc.netnet by May 25, 2007 with “RC SDT Nomination” in the subject line.

Nominations for Project 2007-18 Reliability-based Control SAR Drafting Team (May 14–25, 2007)

The Standards Committee authorized posting the [SAR for Reliability-based Control](#) and is seeking industry experts to serve on the Reliability-based Control SAR Drafting Team. This SAR proposes to develop requirements to achieve the following objectives:

- To maintain Interconnection frequency within predefined frequency limits under all conditions (i.e., normal and abnormal), to prevent frequency-related instability; unplanned tripping of load or generation; or uncontrolled separation or Cascading outages that adversely impact the reliability of the Interconnection. (Work brought into this SAR from BAL-007 though BAL-011.)

REGISTERED BALLOT BODY

May 11, 2007

Page Two

- To support elimination of SOL/IROL violations caused by excessive (as determined by this standard) Area Control Error (“ACE”). (Could be a separate and individually balloted Standard.)
- To prevent Interconnection frequency excursions of short-duration attributed to the ramping of on and off-peak Interchange Transactions. (Could be a separate and individually balloted Standard.)
- To support timely transmission congestion relief by requiring corrective load/generation management within a defined timeframe when ACE is impacted by the curtailment of Interchange Transactions under transmission loading relief procedures. (Could be a separate and individually balloted Standard.)
- To address the directives of FERC Order 693.

If you are interested in serving on this SAR drafting team, please complete this [nomination form](#) and return it to sarcomm@nerc.net by May 25, 2007 with “RB Control SARDT Nomination” in the subject line.

Standards Development Process

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. If you have any questions, please contact me at 813-468-5998 or maureen.long@nerc.net.

Sincerely,

Maureen E. Long

¹ These functions are defined in the Functional Model, which is downloadable from the following Web site:
<http://www.nerc.com/~filez/functionalmodel.html>

A. Introduction

1. **Title:** Coordination Among Reliability Coordinators
2. **Number:** IRO-014-2
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** TBD

B. Requirements

- R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]*
 - R1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
 - R1.2. Energy and capacity shortages.
 - R1.3. Planned or unplanned outage information.
 - R1.4. Voltage control, including the coordination of reactive resources for voltage control.
 - R1.5. Coordination of information exchange to support reliability assessments.
 - R1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.
- R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: *[Violation Risk Factor: Lower] [Time Horizon: Real-time Operations and Operations Planning]*
 - R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).
 - R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).
- R3. The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of

reliability-related information. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations and Operations Planning*]

- R4.** The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted Reliability Coordinators. [*Violation Risk Factor: Lower*][*Time Horizon: Real-time Operations*]
 - R4.1.** The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.
- R5.** When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the impacted Reliability Coordinators. In the event that the issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists. [*Violation Risk Factor: Medium*] [*Time Horizon: Operations Planning, Same Day Operations and Real-time Operations*]
- R6.** When an expected or actual reliability issue exists and the impacted Reliability Coordinators cannot agree on a mitigation plan, all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. [*Violation Risk Factor: Medium*] [*Time Horizon: Operations Planning, Same Day Operations and Real-time Operations*]

C. Measures

- M1.** The Reliability Coordinator's System Operators shall have available for Real-time use, the latest approved version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators.
 - M1.1** These Operating Procedures, Processes, or Plans shall address:
 - M1.1.1** Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
 - M1.1.2** Energy and capacity shortages.
 - M1.1.3** Planned or unplanned outage information.
 - M1.1.4** Voltage control, including the coordination of reactive resources for voltage control.
 - M1.1.5** Coordination of information exchange to support reliability assessments.
 - M1.1.6** Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.
- M2.** The Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:

- M2.1** Agreed to by all the Reliability Coordinators required to take the indicated action(s).
- M2.2** Distributed to all Reliability Coordinators that are required to take the indicated action(s).
- M3.** The Reliability Coordinator shall have evidence it made notifications and exchanged reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information.
- M4.** The Reliability Coordinator shall have evidence it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.
- M5.** The Reliability Coordinator shall have evidence that, in cases when an expected or actual reliability issue was detected, it has confirmed the existence of the issue with the impacted Reliability Coordinators.
- M6.** The affected Reliability Coordinators shall have evidence that, in cases when an expected or actual reliability issue existed and the impacted Reliability Coordinators could not agree on a mitigation plan, they implemented the mitigation plan developed by the Reliability Coordinator who has the reliability issue.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring Period and Reset Time Frame

Not Applicable

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Reliability Coordinator shall keep documentation for the prior calendar year and the current calendar year or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one or two of the subrequirements.	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three or four of the subrequirements.	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address five of the subrequirements.	The Reliability Coordinator failed to have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability.
R2	N/A	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications,	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions)	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions)

Standard IRO-014-2 — Coordination Among Reliability Coordinators

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R5	The Reliability Coordinator that detected an expected or actual reliability issue contacted the other Reliability Coordinator(s) to confirm that there was a problem but could not confirm that the problem existed and failed to operate as though the problem existed.	N/A	N/A	The Reliability Coordinator that detected an expected or actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem.
R6	The Reliability Coordinator did not agree on a mitigation plan and implemented a plan other than the one developed by the Reliability Coordinator who had the reliability issue.	N/A	N/A	The Reliability Coordinator did not agree on a mitigation plan and did not implement a mitigation plan.

E. Regional Differences

None identified.

F. Associated Documents

Version History

Version	Date	Action	Change Tracking
1	August 10, 2005	<ol style="list-style-type: none"> 1. Changed incorrect use of certain hyphens (-) to “en dash (–).” 2. Hyphenated “30-day” when used as adjective. 3. Changed standard header to be consistent with standard “Title.” 4. Initial capped heading “Definitions of Terms Used in Standard.” 5. Added “periods” to items where appropriate. 6. Changed “Timeframe” to “Time Frame” in item D, 1.2. 7. Lower cased all words that are not “defined” terms — drafting team, self-certification. 8. Changed apostrophes to “smart” symbols. 9. Added comma in all word strings “Procedures, Processes, or Plans,” etc. 10. Added hyphens to “Reliability Coordinator-to-Reliability Coordinator” where used as adjective. 11. Removed comma in item 2.1.2. 12. Removed extra spaces between words where appropriate. 	January 20, 2006
1	February 7, 2006	Approved by BOT	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
2	TBD	Revised per SAR for Project 2006-6, RCSDT	Revised

A. Introduction

1. **Title:** ~~Procedures, Processes, or Plans to Support~~ Coordination
~~Between~~Among Reliability Coordinators
2. **Number:** IRO-014-~~1~~2
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** ~~November 1, 2006~~TBD

B. Requirements

- ~~R1.~~—The Reliability Coordinator shall have Operating Procedures, Processes, or Plans ~~in place~~ for activities that require notification, exchange of information or coordination of actions with ~~one or more other~~impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall ~~address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators.~~
- ~~R1.~~ ~~These Operating Procedures, Processes, or Plans shall~~ collectively address, as a minimum, the following: [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]
- R1.1.** Communications and notifications, including the mutually agreed to conditions⁺ under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
 - R1.2.** Energy and capacity shortages.
 - R1.3.** Planned or unplanned outage information.
 - R1.4.** Voltage control, including the coordination of reactive resources for voltage control.
 - R1.5.** Coordination of information exchange to support reliability assessments.
 - R1.6.** Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.

⁺ ~~Examples of conditions when one Reliability Coordinator may need to notify another Reliability Coordinator may include (but aren't limited to) sabotage events, Interconnection Reliability Operating Limit violations, voltage reductions, insufficient resources, arming of special protection systems, etc.~~

**Standard IRO-014-1—Procedures, Processes, or Plans to Support2 — Coordination
BetweenAmong Reliability Coordinators**

R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: *[Violation Risk Factor: Lower] [Time Horizon: Real-time Operations and Operations Planning]*

R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).

R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).

~~**R3.A** Reliability Coordinator’s Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan shall include:~~

~~**R3.1.A** reference to the associated Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan.~~

~~**R3.2.**The agreed-upon actions from the associated Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan.~~

~~**R4.**Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:~~

~~**R4.1.**Include version control number or date.~~

~~**R4.2.**Include a distribution list.~~

~~**R4.3.**Be reviewed, at least once every three years, and updated if needed.~~

R3. The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]

R4. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted Reliability Coordinators. [Violation Risk Factor: Lower][Time Horizon: Real-time Operations]

R4.1. The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.

R5. When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the

The RC SDT proposes retiring R3 and R4 and their subrequirements. Requirements R3 and R4 are administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes converting R3 and R4 and their subrequirements into a guideline document for use in developing the operating procedures, processes or plans.

The RC SDT moved R3 and R4 from IRO-015-1 into this standard.

The RC SDT moved R5 and R6 from IRO-016-1 into this standard.

impacted Reliability Coordinators. In the event that the issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

- R6.** When an expected or actual reliability issue exists and the impacted Reliability Coordinators cannot agree on a mitigation plan, all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

When the RC SDT moved IRO-016-1 R1.3 into IRO-014-2 R6, the RC SDT replaced the phrase, "most conservative solution" because it cannot be measured. The RC SDT is proposing to use the mitigation plan of the RC that is experiencing the issue in cases where an agreed to mitigation plan can not be developed.

C. Measures

- M1.** The Reliability Coordinator's System Operators shall have available for Real-time use, the latest approved version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators.
- M1.1** These Operating Procedures, Processes, or Plans shall address:
- M1.1.1** Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
 - M1.1.2** Energy and capacity shortages.
 - M1.1.3** Planned or unplanned outage information.
 - M1.1.4** Voltage control, including the coordination of reactive resources for voltage control.
 - M1.1.5** Coordination of information exchange to support reliability assessments.
 - M1.1.6** Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.
- M2.** The Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:
- M2.1** Agreed to by all the Reliability Coordinators required to take the indicated action(s).

M2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s).

~~**R5.** A Reliability Coordinator's Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan shall include:~~

~~**R5.1.** A reference to the associated Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan.~~

~~**R5.2.** The agreed upon actions from the associated Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan.~~

~~**R6.** Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:~~

~~**R6.1.** Include version control number or date.~~

~~**R6.2.** Include a distribution list.~~

~~**R6.3.** Be reviewed, at least once every three years, and updated if needed.~~

C. Measures

~~**M2.** The Reliability Coordinator's System Operators shall have available for Real-time use, the latest approved version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions between Reliability Coordinators.~~

~~**M2.1** These Operating Procedures, Processes, or Plans shall address:~~

~~**M2.1.1** Communications and notifications, including the conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.~~

~~**M1.1.2** ——— Energy and capacity shortages.~~

~~**M1.1.3** Planned or unplanned outage information.~~

~~**M1.1.4** Voltage control, including the coordination of reactive resources for voltage control.~~

~~**M1.1.5** Coordination of information exchange to support reliability assessments.~~

~~**M1.1.6** Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.~~

~~**M3.** The Reliability Coordinator shall have evidence that these Operating Procedures, Processes, or Plans were:~~

~~**M3.1** Agreed to by all the Reliability Coordinators required to take the indicated action(s).~~

- ~~M3.2~~— Distributed to all Reliability Coordinators that are required to take the indicated action(s).
- ~~M4.~~ The Reliability Coordinator’s Operating Procedures, Processes, or Plans developed (for its System Operators’ internal use) to support a Reliability Coordinator to Reliability Coordinator Operating Procedure, Process, or Plan received from another Reliability Coordinator shall:
- ~~M4.1~~— Be available to the Reliability Coordinator’s System Operators for Real-time use,
- ~~M4.2~~— Include a reference to the associated source document, and
- ~~M4.3~~— Support the agreed-upon actions from the source document.
- ~~M5.~~ The Reliability Coordinator’s Operating Procedures, Processes, or Plans that addresses Reliability Coordinator to Reliability Coordinator coordination shall each include a version control number or date and a distribution list. The Reliability Coordinator shall have evidence that these Operating Procedures, Processes, or Plans were reviewed within the last three years.
- M3. The Reliability Coordinator shall have evidence it made notifications and exchanged reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information.
- M4. The Reliability Coordinator shall have evidence it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.
- M5. The Reliability Coordinator shall have evidence that, in cases when an expected or actual reliability issue was detected, it has confirmed the existence of the issue with the impacted Reliability Coordinators.
- M6. The affected Reliability Coordinators shall have evidence that, in cases when an expected or actual reliability issue existed and the impacted Reliability Coordinators could not agree on a mitigation plan, they implemented the mitigation plan developed by the Reliability Coordinator who has the reliability issue.

D. Compliance

1. Compliance Monitoring Process

~~1.1.~~ **Compliance Monitoring Responsibility**

1.1. Enforcement Authority

Regional ~~Reliability Organization~~Entity

1.2. Compliance Monitoring Period and Reset Time Frame

~~The Performance Reset Period shall be one calendar year.~~

Not Applicable

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Reliability Coordinator shall keep documentation for the prior calendar year and the current calendar year. ~~The Compliance Monitor shall keep or evidence to show compliance data as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a minimum of three years or until the Reliability Coordinator has achieved full compliance, whichever is longer period of time as part of an investigation.~~

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

~~The Reliability Coordinator shall demonstrate compliance through self-certification submitted to its Compliance Monitor annually. The Compliance Monitor shall also use a scheduled on-site review at least once every three years and investigations upon complaint. The Compliance Monitor shall conduct an investigation upon a complaint within 30 days of the alleged infraction's discovery date. The Compliance Monitor shall complete the investigation within 45 days after the start of the investigation. As part of an audit or investigation, the Compliance Monitor shall interview other Reliability Coordinators to identify Operating Procedures, Processes or Plans that were distributed to the Reliability Coordinator being audited to verify that these documents are available for Real-time use by the receiving Reliability Coordinator's System Operators.~~

~~The Reliability Coordinator shall have the following documents available for inspection during an on-site audit or within five business days of a request as part of an investigation upon a complaint:~~

~~1.4.1 The latest version of its Operating Procedures, Processes, or Plans that require notification, exchange of information, or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability.~~

~~1.4.2 Evidence of distribution of Operating Procedures, Processes, or Plans.~~

~~2. Levels of Non-Compliance~~

**Standard IRO-014-1—~~Procedures, Processes, or Plans to Support~~2 — Coordination
BetweenAmong Reliability Coordinators**

~~2.1. Level 1: There shall be a level one non-compliance if either of the following conditions is present:~~

~~2.1.1 The latest versions of Operating Procedures, Processes, or Plans (identified through self-certification) that require notification, exchange of information, or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability do not include a version control number or date, and a distribution list.~~

~~2.1.2 The latest versions of Reliability Coordinator internal documents developed to support action(s) required as a result of other Reliability Coordinators do not include both a reference to the source Operating Procedure, Process, or Plan and the agreed-upon actions from the source Operating Procedure, Process, or Plan.~~

~~2.2. Level 2: There shall be a level two non-compliance if any of the following conditions is present:~~

~~2.2.1 Documents required by this standard were not distributed to all entities on the distribution list.~~

~~2.2.2 Documents required by this standard were not available for System Operators' Real-time use.~~

~~2.2.3 Documents required by this standard do not address all required topics.~~

~~2.3. Level 3: Documents required by this standard do not address any of the six required topics in Reliability Standard IRO-014 R1.~~

~~2.4. Level 4: Not Applicable.~~

E. Regional Differences

~~None Identified.~~

None.

Standard IRO-015-1 — Notifications and Information Exchange Between Reliability Coordinators

		10. Added hyphens to “Reliability Coordinator-to-Reliability Coordinator” where used as adjective. 11. Removed comma in item 2.1.2. 12. Removed extra spaces between words where appropriate.	
1	February 7, 2006	Approved by BOT	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
2	August 16, 2007	Revised per SAR for Project 2006-6	Revised

A. Introduction

1. **Title:** Notifications and Information Exchange Between Reliability Coordinators
2. **Number:** IRO-015-1
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** ~~June 4, 2007~~ To be determined

B. Requirements

~~**R1.**The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. *[Violation Risk Factor: Medium]*~~

~~**R1.1.**The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas. *[Violation Risk Factor: Medium]*~~

~~**R2.**The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. *[Violation Risk Factor: Lower]*~~

~~**R2.1.**The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. *[Violation Risk Factor: Lower]*~~

~~**R3.**The Reliability Coordinator shall provide reliability-related information as requested by other Reliability Coordinators. *[Violation Risk Factor: Medium]*~~

C. Measures

~~**M1.**The Reliability Coordinator shall have evidence (such as operator logs or other data sources) it has followed its Operating Procedures, Processes, or Plans for notifying other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas.~~

The RC SDT recommends retiring Standard IRO-015 as a separate standard and moving all modified requirements to IRO-014-2.

IRO-015 R1 was modified and became IRO-014-2 Requirement R3.

IRO-015 R2 became IRO-014-2 Requirement R4.

IRO-015 R3 is not a "stand alone" activity and was retired. Reliability Coordinators already have several requirements aimed at providing data or information to other Reliability Coordinators in support of Reliability Coordinator responsibilities. For example, Reliability Coordinators provide reliability-related information to other Reliability Coordinators as part of IRO-010-1, R3 – they share information as they try to confirm the existence of operating issues as part of IRO-014-2 R5, etc.

~~M2. The Reliability Coordinator shall have evidence (such as operator logs or other data sources) that it participated in agreed upon (at least weekly) conference calls and other communication forums with adjacent Reliability Coordinators.~~

~~M3. The Reliability Coordinator shall have evidence that it provided requested reliability-related information to other Reliability Coordinators.~~

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

~~Regional Reliability Organization~~

1.2. Compliance Monitoring Period and Reset Time Frame

~~The Performance Reset Period shall be one calendar year.~~

1.3. Data Retention

~~The Reliability Coordinator shall keep auditable documentation for a rolling 12 months. The Compliance Monitor shall keep compliance data for a minimum of three years or until the Reliability Coordinator has achieved full compliance— whichever is longer.~~

1.4. Additional Compliance Information

~~The Reliability Coordinator shall demonstrate compliance through self-certification submitted to its Compliance Monitor annually. The Compliance Monitor shall also use a scheduled on-site review at least once every three years and investigations upon complaint. The Compliance Monitor shall conduct an investigation upon a complaint within 30 days of the alleged infraction's discovery date. The Compliance Monitor shall complete the investigation within 45 days after the start of the investigation. As part of an audit or an investigation, the Compliance Monitor shall interview other Reliability Coordinators within the Interconnection and verify that the Reliability Coordinator being audited or investigated has been making notifications and exchanging reliability-related information according to agreed Operating Procedures, Processes, or Plans.~~

~~The Reliability Coordinator shall have the following available for its Compliance Monitor to inspect during a scheduled, on-site review or within five days of a request as part of an investigation upon complaint:~~

~~1.4.1 Evidence it has participated in agreed upon conference calls or other communications forums.~~

~~1.4.2 Operating logs or other data sources that document notifications made to other Reliability Coordinators.~~

2. Levels of Non-Compliance

~~2.1. Level 1:— Did not participate in agreed upon (at least weekly) conference calls and other communication forums with adjacent Reliability Coordinators.~~

Standard IRO-015-1 — Notifications and Information Exchange Between Reliability Coordinators

- ~~2.2. Level 2: Did not notify other Reliability Coordinators as specified in its Operating Procedures, Processes, or Plans for making notifications but no Adverse Reliability Impacts resulted from the incident.~~
- ~~2.3. Level 3: Did not provide requested reliability related information to other Reliability Coordinators.~~
- ~~2.4. Level 4: Did not notify other Reliability Coordinators as specified in its Operating Procedures, Processes, or Plans for making notifications and Adverse Reliability Impacts resulted from the incident.~~

E. Regional Differences

~~None identified.~~

1	February 7, 2006	Approved by BOT	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
2	April 22, 2008	Revised per SAR for Project 2006-06	Retired

A. Introduction

1. **Title:** Coordination of Real-time Activities between Reliability Coordinators
2. **Number:** IRO-016-1
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** TBD

The RC SDT proposes retiring this as a separate standard.

B. Requirements

~~**R1.**The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. *[Violation Risk Factor: Medium]*~~

The RC SDT proposes moving Requirement R1 and its subrequirements into IRO-014.

~~**R1.1.**If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. *[Violation Risk Factor: Medium]*~~

~~**R1.2.**If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). *[Violation Risk Factor: Medium]*~~

~~**R1.2.1.**If time permits, this re-evaluation shall be done before taking corrective actions. *[Violation Risk Factor: Medium]*~~

~~**R1.2.2.**If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved. *[Violation Risk Factor: Medium]*~~

~~**R1.3.**If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented. *[Violation Risk Factor: Medium]*~~

~~**R2.**The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both. *[Violation Risk Factor: Lower]*~~

The RC SDT proposes retiring Requirement R2 because it is a measure of performance of R1.

C. Measures

~~M1. For each event that requires Reliability Coordinator to Reliability Coordinator coordination, each involved Reliability Coordinator shall have evidence (operator logs or other data sources) of the actions taken for either the event or for the disagreement on the problem or for both.~~

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

~~Regional Reliability Organization~~

1.2. Compliance Monitoring Period and Reset Time Frame

~~The performance reset period shall be one calendar year.~~

1.3. Data Retention

~~The Reliability Coordinator shall keep auditable evidence for a rolling 12 months. In addition, entities found non-compliant shall keep information related to the non-compliance until it has been found compliant. The Compliance Monitor shall keep compliance data for a minimum of three years or until the Reliability Coordinator has achieved full compliance, whichever is longer.~~

1.4. Additional Compliance Information

~~The Reliability Coordinator shall demonstrate compliance through self-certification submitted to its Compliance Monitor annually. The Compliance Monitor shall use a scheduled on-site review at least once every three years. The Compliance Monitor shall conduct an investigation upon a complaint that is received within 30 days of an alleged infraction's discovery date. The Compliance Monitor shall complete the investigation and report back to all involved Reliability Coordinators (the Reliability Coordinator that complained as well as the Reliability Coordinator that was investigated) within 45 days after the start of the investigation. As part of an audit or investigation, the Compliance Monitor shall interview other Reliability Coordinators within the Interconnection and verify that the Reliability Coordinator being audited or investigated has been coordinating actions to prevent or resolve potential, expected, or actual problems that adversely impact the Interconnection.~~

~~The Reliability Coordinator shall have the following available for its Compliance Monitor to inspect during a scheduled, on-site review or within five working days of a request as part of an investigation upon complaint:~~

~~1.4.1 Evidence (operator log or other data source) to show coordination with other Reliability Coordinators.~~

2. Levels of Non-Compliance

~~2.1. Level 1: For potential, actual or expected events which required Reliability Coordinator to Reliability Coordinator coordination, the Reliability Coordinator did coordinate, but did not have evidence that it coordinated with other Reliability Coordinators.~~

The measure M1 will be retired along with the requirement.

Standard IRO-016-1 — Coordination of Real-time Activities between Reliability Coordinators

~~2.2. Level 2: Not applicable.~~

~~2.3. Level 3: Not applicable.~~

~~2.4. Level 4: For potential, actual or expected events which required Reliability Coordinator to Reliability Coordinator coordination, the Reliability Coordinator did not coordinate with other Reliability Coordinators.~~

E. Regional Differences

Implementation Plan for IRO-014-2 Coordination Among Reliability Coordinators

Implementation Plan for IRO-014-2 — Coordination Among Reliability Coordinators

Prerequisite Approvals

- None required

Conforming Changes to Requirements in Already Approved Standards

- IRO-001-2 — Reliability Coordination – Responsibilities and Authorities
- IRO-015-1 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 — Coordination of Real-time Activities between Reliability Coordinators

Revision Summary

- The Reliability Coordination SDT (RC SDT) revised the standard and is proposing retiring two requirements (R3 and R4). New requirements were brought into this standard from IRO-015-1 (R1-R2) and IRO-016-1 (R1 and its sub requirements). Changes were made to eliminate redundancies between standards (existing and proposed), eliminate administrative items, align with NERCs Rules of Procedure and to address issues in FERC Order 693.

Functions that Must Comply with the Requirements in the Standard:

- Reliability Coordinator

Effective Dates

To be determined.

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-2</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.</p>	<p>IRO-014-2</p> <p>R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p> <p>R1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p> <p>R1.2. Energy and capacity shortages.</p> <p>R1.3. Planned or unplanned outage information.</p> <p>R1.4. Voltage control, including the coordination of reactive resources for voltage control.</p> <p>R1.5. Coordination of information exchange to support reliability assessments.</p> <p>R1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.</p>
<p>Notes: The RCSDT proposes retiring R7 as it is redundant with IRO-014, R1.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1 These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: [Violation Risk Factor: Lower]</p> <p>R1.1.1 Communications and notifications, including the conditions¹ under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1.2 Energy and capacity shortages. [Violation Risk Factor: Medium]</p> <p>R1.1.3 Planned or unplanned outage information. [Violation Risk Factor: Medium]</p> <p>R1.1.4 Voltage control, including the coordination of reactive resources for voltage control. [Violation Risk Factor: Medium]</p> <p>R1.1.5 Coordination of information exchange to support reliability assessments. [Violation Risk Factor: Lower]</p> <p>R1.1.6 Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. [Violation Risk Factor: Lower]</p>	<p>IRO-14-2</p> <p>R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in-place for activities that require notification, exchange of information or coordination of actions with impacted with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</p> <p>R1.1 These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: [Violation Risk Factor: Lower]</p> <p>R1.1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1.2 Energy and capacity shortages. [Violation Risk Factor: Medium]</p> <p>R1.1.3 Planned or unplanned outage information. [Violation Risk Factor: Medium]</p> <p>R1.1.4 Voltage control, including the coordination of reactive resources for voltage control. [Violation Risk Factor: Medium]</p> <p>R1.1.5 Coordination of information exchange to support reliability assessments. [Violation Risk Factor: Lower]</p> <p>R1.1.6 Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. [Violation Risk Factor: Lower]</p>
<p>Notes: Revise R1 as shown and delete the footnote.</p>	

¹ Examples of conditions when one Reliability Coordinator may need to notify another Reliability Coordinator may include (but aren't limited to) sabotage events, Interconnection Reliability Operating Limit violations, voltage reductions, insufficient resources, arming of special protection systems, etc.

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be:</p> <p>R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p>	<p>IRO-014-2</p> <p>R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: <i>[Violation Risk Factor: Lower] [Time Horizon: Real-time Operations and Operations Planning]</i></p> <p>R2.1 Agreed to by all the Reliability Coordinators required to take the indicated action(s). <i>[Violation Risk Factor: Lower]</i></p> <p>R2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s). <i>[Violation Risk Factor: Lower]</i></p>
<p>Notes: The RC SDT added a Time Horizon to the requirement and eliminated the VRFs that were applied to the subrequirements.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R3. A Reliability Coordinator's Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan shall include:</p> <p>R3.1. A reference to the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p> <p>R3.2. The agreed-upon actions from the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p>	<p>None – Retire the requirement</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R3 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:</p> <p>R4.1. Include version control number or date.</p> <p>R4.2. Include a distribution list.</p> <p>R4.3. Be reviewed, at least once every three years, and updated if needed</p>	<p>None – retire the requirement.</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R4 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-015-1</p> <p>R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas. <i>[Violation Risk Factor: Medium]</i></p> <p>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R2.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p> <p>R3. The Reliability Coordinator shall provide reliability-related information as requested by other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R5. The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. <i>[Violation Risk Factor: Medium]</i></p> <p>R6. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R6.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p>
<p>The RC SDT recommends retiring Standard IRO-015 and moving Requirements R1 and R2 to IRO-014-2 and revising as shown.</p> <p>The RC SDT proposes retiring R3 (as shown in the left column) as it is redundant with proposed R5 above. Reliability Coordinators already have several requirements aimed at providing data or information to other Reliability Coordinators in support of Reliability Coordinator responsibilities. For example, Reliability Coordinators provide reliability-related information to other Reliability Coordinators as part of IRO-010-1, R3 – they share information as they try to confirm the existence of operating issues as part of IRO-014-2 R5, etc.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1</p> <p>R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2 If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.1 If time permits, this re-evaluation shall be done before taking corrective actions. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.2 If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.3 If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R5. When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the impacted other Reliability Coordinators that are involved. In the event that the issue cannot be confirmed, each RC shall operate as though the problem exists. <i>[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R6. When an expected or actual reliability issue exists and the impacted affected Reliability Coordinators can not agree on a mitigation plan, all impacted affected Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. <i>[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p>
<p>Notes: IRO-014-2 R5 and R6 are revised versions of IRO-016-1, R1 and its subrequirements which were moved to this standard. The RC SDT removed the wording relating to the “most conservative solution” because it can not be measured. We are proposing to use the mitigation plan of the RC who is experiencing the issue in cases where an agreed to mitigation plan can not be developed.</p>	

Implementation Plan for IRO-015 Notifications and Information Exchange Between Reliability Coordinators

Implementation Plan for IRO-015 — Notifications and Information Exchange Between Reliability Coordinators

Prerequisite Approvals

- None required

Conforming Changes to Requirements in Already Approved Standards

- IRO-014-2 — Coordination Among Reliability Coordinators

Revision Summary

The Reliability Coordination SDT (RC SDT) recommends retiring Standard IRO-015-1 as a separate standard. The RC SDT recommends moving IRO-015-1 Requirements R1 and R2 into IRO-014-2 and retiring Requirement R3.

Functions that Must Comply with the Requirements in the Standards

None. The RC SDT proposes retiring this standard.

Effective Dates

To be determined.

**Implementation Plan for IRO-015
 Notifications and Information Exchange Between Reliability Coordinators**

Revisions or Retirements to Already Approved Standards

The following table identifies the sections of the approved standard that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-015-1</p> <p>R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1. The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas. <i>[Violation Risk Factor: Medium]</i></p> <p>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R2.1. The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p> <p>R3. The Reliability Coordinator shall provide reliability-related information as requested by other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R3. The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined shall follow its Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. <i>[Violation Risk Factor: Medium]</i></p> <p>R4. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R4.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p>
<p>Notes: The RC SDT recommends moving IRO-015-1 Requirements R1 and R2 into IRO-014-2 and revising as shown above. The RC SDT proposes retiring IRO-015-1 R3 as it is redundant with other requirements in standards. Reliability Coordinators already have several requirements aimed at providing data or information to other Reliability Coordinators in support of Reliability Coordinator responsibilities. For example, Reliability Coordinators provide reliability-related information to other Reliability Coordinators as part of IRO-010-1, R3 – they share information as they try to confirm the existence of operating issues as part of IRO-014-2 R5, etc.</p>	

Implementation Plan for IRO-016
Coordination of Real-time Activities between Reliability Coordinators

Prerequisite Approvals

- None required

Conforming Changes to Requirements in Already Approved Standards

- IRO-014-2 — Coordination Among Reliability Coordinators

Revision Summary

The Reliability Coordination SDT (RC SDT) recommends retiring this as a separate standard. Requirement R1 and its sub-requirements were incorporated into IRO-014-2 as new requirements. The RC SDT recommends retiring R2 because it is a measure of performance of R1.

Functions that Must Comply with the Requirements in the Standards

None. The RC SDT proposes retiring this standard.

Effective Dates

To be determined.

**Implementation Plan for IRO-016
Coordination of Real-time Activities between Reliability Coordinators**

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1</p> <p>R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2 If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.1 If time permits, this re-evaluation shall be done before taking corrective actions. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.2 If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.3 If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R5. When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the other Reliability Coordinators that are involved. In the event that the issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists. <i>[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R6. When an expected or actual reliability issue exists and the affected Reliability Coordinators can not agree on a mitigation plan, all affected Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p>
<p>Notes: Proposed IRO-014-2 Requirements R5 and R6 are revised versions of IRO-016-1, R1 and its subrequirements which were moved to this standard. The RC SDT removed the wording relating to the “most conservative solution” because it can not be measured. The RC SDT is proposing to use the mitigation plan of the Reliability Coordinator who is experiencing the issue in cases where an agreed to mitigation plan can not be developed.</p>	

Implementation Plan for IRO-016
Coordination of Real-time Activities between Reliability Coordinators

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1</p> <p>R2. The Reliability Coordinator shall document (via operator logs or other data sources) its actions taken for either the event or for the disagreement on the problem(s) or for both. <i>[Violation Risk Factor: Lower]</i></p>	<p>None.</p>
<p>Notes: The RC SDT recommends retiring R2 because it is a measure of performance of R1.</p>	

A. Introduction

1. **Title:** Reliability Coordination — Responsibilities and Authorities
2. **Number:** IRO-001-2
3. **Purpose:** To establish requirements for issuance of and complying with Reliability Coordinator directives or notification within the Reliability Coordinator Areas.
4. **Applicability**
 - 4.1. Reliability Coordinators.
 - 4.2. Transmission Operator.
 - 4.3. Balancing Authorities.
 - 4.4. Generator Operators.
 - 4.5. Transmission Service Providers.
 - 4.6. Load-Serving Entities.
 - 4.7. Distribution Providers.
 - 4.8. Purchasing-Selling Entities.
5. **(Proposed) Effective Date:** To be determined.

B. Requirements

- R1.** The Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R2.** Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall act without intentional delay to comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R3.** The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the Reliability Coordinator upon recognition of the inability to perform the directive. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R4.** Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R5.** Each Reliability Coordinator who identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability

Coordinator Area when the transmission problem has been mitigated. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

C. Measures

- M1.** Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area.
- M2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without delay to comply with the Reliability Coordinator's directives.
- M3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, informed the Reliability Coordinator upon recognition of the inability to comply.
- M4.** Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area.
- M5.** Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when the real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area has been mitigated.

D. Compliance

- 1. Compliance Monitoring Process**
 - 1.1. Compliance Enforcement Authority**

NERC shall be responsible for compliance monitoring of the Regional Entity.

Regional Entities shall be responsible for compliance monitoring of the Reliability Coordinators, Transmission Operators, Generator Operators, Distribution Providers, and Load Serving Entities.
 - 1.2. Compliance Monitoring Period and Reset Time Frame**

Not applicable.
 - 1.3. Compliance Monitoring and Enforcement Processes:**
 - Compliance Audits
 - Self-Certifications
 - Spot Checking
 - Compliance Violation Investigations
 - Self-Reporting
 - Complaints
 - 1.4. Data Retention**

Each applicable entity shall retain data and evidence for a rolling 12 months unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent compliance records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts.	The Reliability Coordinator failed to act and direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts
R2	N/A	The responsible entity followed the Reliability Coordinators directive with a delay not caused by equipment problems.	The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements.	The responsible entity did not follow the Reliability Coordinators directive.
R3	The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator.	N/A	N/A	The responsible entity failed to inform the Reliability Coordinator upon recognition of the inability to perform the directive.
R4	N/A	N/A	N/A	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
				and Balancing Authorities in its Reliability Coordinator Area.
R5	N/A	N/A	N/A	The Reliability Coordinator failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Approved by FERC — Effective Date	New
2	TBD	Revised per SAR for project 2006-6, reliability Coordination; added VRFs and VSLs as approved from VRF and VSL projects	Revised

A. Introduction

1. **Title:** Reliability Coordination ~~—~~ Responsibilities and Authorities
2. **Number:** IRO-001-~~12~~
3. ~~**Purpose:** Reliability Coordinators must have the authority, plans, and agreements in place to immediately direct reliability entities within their Reliability Coordinator Areas to re-dispatch generation, reconfigure transmission, or reduce load to mitigate critical conditions to return the system to a reliable state. If a Reliability Coordinator delegates tasks to others, the Reliability Coordinator retains its responsibilities for complying with NERC and regional standards. Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another.~~
3. **Purpose:** To establish requirements for issuance of and complying with Reliability Coordinator directives or notification within the Reliability Coordinator Areas.
4. **Applicability**
 - 4.1. Reliability Coordinators.
 - 4.2. ~~Regional Reliability Organizations.~~
 - 4.2. Transmission Operator.
 - 4.3. Balancing Authorities.
 - 4.4. Generator Operators.
 - 4.5. Transmission Service Providers.
 - 4.6. Load-Serving Entities.
 - 4.7. Distribution Providers.
 - 4.8. Purchasing-Selling Entities.
5. **(Proposed) Effective Date:** January 1, 2007 To be determined.

B. Requirements

- ~~R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries.~~
- R1. ~~The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee.~~
- R3. ~~The Reliability Coordinator shall have clear decision-making authority to act and to or~~ direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability

The RC SDT proposes retiring R1 as it is redundant with the ERO's existing Organization Registration and Certification Process. See section 503, item 2.2 of the NERC Rules of Procedure.

The RC SDT proposes retiring R2 as the regional reliability plan is a "how" document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.

Coordinator Area to ~~preserve the integrity and reliability~~ prevent or mitigate the magnitude or duration of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.

~~Reliability Coordinator~~ events that result in Adverse Reliability Impacts. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]

The RC SDT proposes retiring R4 as it is redundant with NERC Rules of Procedure, Appendix 5, Section IV – Transitional Certification Procedures, item 16.

~~R4. delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator.~~

The RC SDT proposes retiring R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.

~~R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks.~~

~~R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC certified Reliability Coordinator operating personnel.~~

The RC SDT proposes retiring R6 as it is redundant with PER-003, R1.

~~R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.~~

The RCS DT proposes retiring R7 as it is redundant with IRO-014, R1.

R2. Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall act without intentional delay to comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. ~~Under these circumstances, the~~ [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]

R3. The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the Reliability Coordinator upon recognition of the inability to perform the directive ~~so that the Reliability Coordinator may implement alternate remedial actions.~~ [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]

~~R10. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity.~~

~~R4. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.~~

~~[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]~~

~~R5. Each Reliability Coordinator who identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]~~

The RC SDT proposes retiring R10. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the RC Area and the Interconnection. Section 6 of the NERC Standard Development Procedure states that NERC develops and maintains Reliability Standards. Equity issues are covered under the Reliability Coordinator Standards of Conduct.

C. Measures

~~M1. Each Regional Reliability Organization shall have, and provide upon request, evidence that could include, but is not limited to signed agreements or other equivalent evidence that will be used to confirm that it established one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries as described in Requirement 1.~~

~~M2. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, job descriptions, signed agreements, an authority letter signed by an officer of the company, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to act as described in Requirement 3.~~

~~M3. The Reliability Coordinator shall have and provide upon request current formal operating agreements with entities that have been delegated any Reliability Coordinator tasks (Requirement 4 Part 1).~~

~~M4. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, job descriptions, signed agreements, records of training sessions, monitoring procedures or other equivalent evidence that will be used to confirm that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area (Requirement 4 Part 2 and Requirement 5).~~

~~M5. The Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, records that show each operating person assigned to perform a Reliability Coordinator delegated task has a NERC Reliability Coordinator certification credential, or equivalent evidence confirming that delegated tasks were~~

~~carried out by NERC certified Reliability Coordinator operating personnel, as specified in Requirement 6.~~

- ~~M6. The Reliability Coordinator shall have and provide upon request as evidence, signed agreements with adjacent Reliability Coordinators that will be used to confirm that it will coordinate corrective actions in the event SOL and IROL mitigation actions within neighboring areas must be taken. (Requirement 7)~~
- M1. Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area.
- M2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without delay to comply with the Reliability Coordinator's directives.
- M3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have ~~and provide upon request~~ evidence that ~~could include, but is not limited to~~ it confirmed its ability to, operator logs, voice recordings or transcripts of voice recordings, or other equivalent evidence that will be used to confirm that it did comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, ~~it~~ informed the Reliability Coordinator ~~immediately. (Requirement 8)~~ upon recognition of the inability to comply.
- M4. Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area.
- M5. Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when the real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area has been mitigated.

D. Compliance

1. Compliance Monitoring Process

~~1.1. Compliance Monitoring Responsibility~~

1.1. Compliance Enforcement Authority

NERC shall be responsible for compliance monitoring of the Regional ~~Reliability Organization~~ Entity.

Regional ~~Reliability Organizations~~ Entities shall be responsible for compliance monitoring of the Reliability Coordinators, Transmission Operators, Generator Operators, Distribution Providers, and Load Serving Entities.

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable.

~~One or more of the following methods will be used to assess compliance:~~

- ~~—Self certification (Conducted annually with submission according to schedule.)~~
- ~~—Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)~~
- ~~—Periodic Audit (Conducted once every three years according to schedule.)~~
- ~~—Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)~~

~~The Performance Reset Period shall be 12 months from the last finding of non-compliance.~~

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

~~Each Regional Reliability Organization shall have its current, in-force document for Measure 1.~~

~~Each Reliability Coordinator shall have its current, in-force documents or the latest copy of a record as evidence of compliance to Measures 2 through 6.~~

~~Each Transmission Operator, Generator Operator, Distribution Provider, and Load Serving Entity shall keep 90 days of historical data (evidence) for Measure 7.~~

Each applicable entity shall retain data and evidence for a rolling 12 months unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

~~If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.~~

~~Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,~~

The Compliance ~~Monitor~~ Enforcement Authority shall keep the last ~~periodic~~ audit ~~report~~ records and all requested and submitted subsequent compliance records.

1.5. Additional Compliance Information

None.

2. ~~Levels of Non-Compliance: for a~~ Violation Severity Levels

<u>Requirement</u>	<u>Lower VSL</u>	<u>Moderate VSL</u>	<u>High VSL</u>	<u>Severe VSL</u>
<u>R1</u>	<u>N/A</u>	<u>N/A</u>	<u>The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts.</u>	<u>The Reliability Coordinator failed to act and direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts</u>
<u>R2</u>	<u>N/A</u>	<u>The responsible entity followed the Reliability Coordinators directive with a delay not caused by equipment problems.</u>	<u>The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements.</u>	<u>The responsible entity did not follow the Reliability Coordinators directive.</u>
<u>R3</u>	<u>The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator.</u>	<u>N/A</u>	<u>N/A</u>	<u>The responsible entity failed to inform the Reliability Coordinator upon recognition of the inability to perform the directive.</u>
<u>R4</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>	<u>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.</u>
<u>R5</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>	<u>The Reliability Coordinator failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.</u>

E. Regional Reliability Organization: Variations

~~2.1. Level 1: Not applicable~~

~~2.2. Level 2: Not applicable~~

~~2.3. Level 3: Not applicable~~

~~2.4. Level 4: Does not have evidence it established one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries as described in Requirement 1.~~

~~3. Levels of Non-Compliance for a Reliability Coordinator:~~

~~3.1. Level 1: Not applicable.~~

~~3.2. Level 2: Not applicable.~~

~~3.3. Level 3: Not applicable.~~

~~3.4. Level 4: There shall be a separate Level 4 non-compliance for every one of the following requirements that is in violation:~~

~~3.4.1 Does not have the authority to act as described in R3.~~

~~3.4.2 Does not have formal operating agreements with entities that have been delegated any Reliability Coordinator tasks, as specified in R4, Part 1.~~

~~3.4.3 Did not confirm that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area and that they are being performed in a manner that complies with NERC and regional standards for the delegated tasks as per R4, Part 2.~~

~~3.4.4 Did not verify that delegated tasks are being carried out by NERC Reliability Coordinator certified staff as specified in R6~~

~~3.4.5 Does not have agreements with adjacent Reliability Coordinators that confirm that they will coordinate corrective actions in the event SOL and IROL mitigation actions must be taken (R7).~~

~~4. Levels of Non-Compliance for a Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity:~~

~~4.1. Level 1: Not applicable.~~

~~4.2. Level 2: Not applicable.~~

~~4.3. Level 3: Not applicable.~~

~~4.4. Level 4: There shall be a separate Level 4 non-compliance for every one of the following requirements that is in violation:~~

~~4.4.1 Did not comply with a Reliability Coordinator directive for reasons other than safety, equipment, or regulatory or statutory requirements. (R8)~~

~~4.4.2 — Did not inform the Reliability Coordinator immediately after it was determined that it could not follow a Reliability Coordinator directive. (R8)~~

~~F. Regional Differences~~

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
<u>1</u>	<u>April 4, 2007</u>	<u>Approved by FERC — Effective Date</u>	<u>New</u>
<u>2</u>	<u>TBD</u>	<u>Revised per SAR for project 2006-6, reliability Coordination; added VRFs and VSLs as approved from VRF and VSL projects</u>	<u>Revised</u>

A. Introduction

1. **Title:** Reliability Coordination — Facilities
2. **Number:** IRO 002-2
3. **Purpose:** To establish requirements to ensure that Reliability Coordinators have the information necessary for the performance of their responsibilities and to ensure that they have control of the Reliability Coordinator analysis tools.
4. **Applicability**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** To be determined.

B. Requirements

- R1. Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. [*Violation Risk Factor: Medium*] [*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]
- R2. Each Reliability Coordinator shall have the authority to veto planned outages to analysis tools, including final approvals for planned maintenance. [*Violation Risk Factor: Medium*] [*Time Horizon: Real-time Operations, Same Day Operations and Operations Planning*]

C. Measures

- M1. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a letter to Transmission Operators, Balancing Authorities, Transmission Owners, Generator Owners, Generator Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has requested the data required to support its reliability coordination tasks. (Requirement 1)
- M2. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement 2.

D. Compliance

1. **Compliance Monitoring Process**
 - 1.1. **Compliance Enforcement Authority**
 - Regional Entity
 - 1.2. **Compliance Monitoring and Enforcement Processes:**
 - Compliance Audits
 - Self-Certifications
 - Spot Checking
 - Compliance Violation Investigations
 - Self-Reporting

Complaints

1.3. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator shall have current in-force documents used to show compliance with the Measures.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

Violation Severity Levels	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	<p>The Reliability Coordinator demonstrated that it</p> <p>1) determined its data requirements and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with a material impact on the Bulk Electric System in its Reliability Coordination Area but did not request the data from Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with minimal impact on the Bulk Electric System in its Reliability Coordination Area</p> <p>or</p>	<p>The Reliability Coordinator demonstrated that it determined the majority but not all of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p>	<p>The Reliability Coordinator demonstrated that it determined</p> <p>1) some but less than the majority of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators</p> <p>Or</p> <p>2) all of its data requirements necessary to support its reliability coordination functions but failed to demonstrate that it requested data from two of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, and</p>	<p>The Reliability Coordinator failed to demonstrate that it</p> <p>1) determined its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators</p> <p>Or</p> <p>2) requested the data from three or more of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p>

Violation Severity Levels	Lower VSL	Moderate VSL	High VSL	Severe VSL
	2) determined its data requirements necessary to perform its reliability functions with the exceptions of data that may be needed for administrative purposes such as data reporting.		Load-Serving Entities or Adjacent Reliability Coordinators.	
R2	Reliability Coordinator has approval rights for planned outages of analysis tools but does not have approval rights for maintenance on analysis tools.	N/A	N/A	Reliability Coordinator approval is not required for planned maintenance or planned outages.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
2		Revised per RCSDT SAR, Project 2006-2	Revised

A. Introduction

1. **Title:** Reliability Coordination ~~—~~ Facilities
2. **Number:** IRO 002-~~12~~
3. **Purpose:** To establish requirements to ensure that Reliability Coordinators need have the information, tools and other capabilities to perform necessary for the performance of their responsibilities and to ensure that they have control of the Reliability Coordinator analysis tools.
4. **Applicability**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** ~~January 1, 2007~~ To be determined.

B. Requirements

~~R1. Each Reliability Coordinator shall have adequate communications facilities (voice and data links) to appropriate entities within its Reliability Coordinator Area. These communications facilities shall be staffed and available to act in addressing a real-time emergency condition.~~

The RC SDT proposes retiring R1. The first sentence of this requirement is a basic facility requirement that should be addressed in certification. The second sentence is redundant with PER-004, R1 which requires the RC to be staffed 24x7.

R1. Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

The IROL SDT is addressing R2 (shown here as R1). They plan to retire R2 in IRO-002 as it is duplicated in Requirement R2 in a new standard - IRO-010-1. IRO-002-1 R2 will remain in place until IRO-010-1 is approved.

~~R3. Each Reliability Coordinator — or its Transmission Operators and Balancing Authorities — shall provide, or arrange provisions for, data exchange to other Reliability Coordinators or Transmission Operators and Balancing Authorities via a secure network.~~

The RC SDT proposes retiring R3. The TOP and BA portion of this requirement is redundant with TOP-005, R1. The RC to RC data exchange provisions are covered in IRO-014. The secure network is covered by the NERC Rules of Procedure, Section 1002. This requirement should be retired.

~~R4. Each Reliability Coordinator shall have multi-directional communications capabilities with its Transmission Operators and Balancing Authorities, and with neighboring Reliability Coordinators, for both voice and data exchange as required to meet reliability needs of the Interconnection.~~

The RC SDT proposes retiring R4 as it is a basic facility requirement that should be addressed in certification.

~~R5. Each Reliability Coordinator shall have detailed real-time monitoring capability of~~

The RC SDT proposes retiring R5 as it is a basic facility requirement that should be addressed in certification.

~~its Reliability Coordinator Area and sufficient monitoring capability of its surrounding Reliability Coordinator Areas to ensure that potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations are identified. Each Reliability Coordinator shall have monitoring systems that provide information that can be easily understood and interpreted by the Reliability Coordinator's operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure.~~

~~R6. Each Reliability Coordinator shall monitor Bulk Electric System elements (generators, transmission lines, buses, transformers, breakers, etc.) that could result in SOL or IROL violations within its Reliability Coordinator Area. Each Reliability Coordinator shall monitor both real and reactive power system flows, and operating reserves, and the status of Bulk Electric System elements that are or could be critical to SOLs and IROLs and system restoration requirements within its Reliability Coordinator Area.~~

The RC SDT proposes retiring R6. Real-time monitoring is a supporting activity and is one of several processes used to support operation. It is not practical to measure real-time monitoring nor is this necessary. The real reliability objective is to operate within SOL and IROL, not to monitor.

~~R7. Each Reliability Coordinator shall have adequate analysis tools such as state estimation, pre and post contingency analysis capabilities (thermal, stability, and voltage), and wide area overview displays.~~

The RC SDT proposes retiring R7 as it is a basic facility requirement that should be addressed in certification.

~~R8. Each Reliability Coordinator shall continuously monitor its Reliability Coordinator Area. Each Reliability Coordinator shall have provisions for backup facilities that shall be exercised if the main monitoring system is unavailable. Each Reliability Coordinator shall ensure SOL and IROL monitoring and derivations continue if the main monitoring system is unavailable.~~

The RC SDT proposes retiring R8. Real-time monitoring is a supporting activity and is one of several processes used to support operation. It is not practical to measure real-time monitoring nor is this necessary. The real reliability objective is to operate within SOL and IROL, not to monitor. The second and third sentences are redundant with EOP-008, R1.

~~R3.R2. Each Reliability Coordinator shall control its Reliability Coordinator have the authority to veto planned outages to analysis tools, including final approvals for planned maintenance. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]~~

The RC SDT proposes retiring the second sentence of R9 as it is redundant with EOP-008, R1.

C. Measures

~~M1. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a document that lists its voice communications facilities with Transmission Operators, Balancing Authorities and Generator Operators within its Reliability Coordinator Area and with neighboring Reliability Coordinators, that will be used to confirm that it has communication facilities in accordance with Requirements 1 and 4.~~

- ~~M2. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a data link facility description document, computer print-out, training document, or other equivalent evidence that will be used to confirm that it has data links with entities within its Reliability Coordinator Area and with neighboring Reliability Coordinators, as specified in Requirements 1 and 4.~~
- M1. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a letter to Transmission Operators, Balancing Authorities, Transmission Owners, Generator Owners, Generator Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has requested the data required to support its reliability coordination tasks. (Requirement ~~2~~1)
- ~~M4. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, Energy Management System description documents, computer printouts, SCADA data collection system communications performance or equivalent evidence to demonstrate that it has real-time monitoring capability of its Reliability Coordinator Area and monitoring capability of its surrounding Reliability Coordinator Areas to identify potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations.~~
- ~~M5. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, documentation from suppliers, operating and planning staff training documents, examples of studies, or other equivalent evidence to show that it has analysis tools in accordance with Requirement 7.~~
- ~~M6. Each Reliability Coordinator shall provide evidence such as equipment specifications, operating procedures, staff records of their involvement in training, or other equivalent evidence to show that it has a backup monitoring facility that can be used to identify and monitor SOLs and IROLs. (Requirement 8)~~
- ~~M7. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement ~~9 Part 1.~~~~
- M2. ~~Each Reliability Coordinator shall have and provide upon request its current procedures used to mitigate the effects of analysis tool outages as specified in Requirement 9 Part 2.~~

D. Compliance

1. Compliance Monitoring Process

~~1.1. Compliance Monitoring Responsibility~~

1.1. Compliance Enforcement Authority

~~Regional Reliability Organizations shall be responsible for compliance. Monitoring Entity~~

1.2. Compliance Monitoring and ~~Reset Time Frame~~Enforcement Processes:

~~One or more of the following methods will be used to assess compliance:~~

~~— Self-certification (Conducted annually with submission according to schedule.)~~

~~Spot Check Compliance Audits (Conducted anytime with up to 30 days notice given to prepare.)~~

~~— Periodic Audit (Conducted once every three years according to schedule.)~~

~~Triggered Self-Certifications~~

~~Spot Checking~~

~~Compliance Violation Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)~~

~~The Performance Reset Period shall be 12 months from the last finding of non-compliance. Self-Reporting~~

~~Complaints~~

1.3. Data Retention

~~Each~~The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- ~~•~~ The Reliability Coordinator shall have current in-force documents used to show compliance with the Measures 1 through 8.

~~If an entity a Reliability Coordinator is found non-compliant the entity, it shall keep information related to the non-compliance until found compliant or for two years plus the current year, whichever is longer.~~

- ~~• Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor.~~
- ~~• The Compliance Monitor Enforcement Authority shall keep the last periodic audit report records and all requested and submitted subsequent compliance audit records.~~

1.4. Additional Compliance Information

None.

~~2. Levels of Non-Compliance for a Reliability Coordinator~~

~~2.1. Level 1: Not applicable.~~

~~2.2. Level 2: Did not confirm that the network used for data exchange to other Reliability Coordinators is secure as specified in R3.~~

~~2.3. Level 3: There shall be a separate Level 3 non-compliance, for every one of the following requirements that is in violation:~~

- ~~2.3.1~~ Has not requested the data required to support its reliability coordination tasks. (Requirement 2)
- ~~2.3.2~~ Does not control its Reliability Coordinator analysis tools, including the exercising of final approvals for planned maintenance (R7) or does not have current procedures in place to mitigate the effects of analysis tool outages as specified in R9.
- ~~2.4. Level 4:~~ There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:
 - ~~2.4.1~~ Does not have or could not demonstrate the use of voice communication facilities (or show data links) to one or more Transmission Operators, Generator Operators or Balancing Authorities with authority over Bulk Electrical System equipment or with one or more neighboring Reliability Coordinators. (R1 and R4)
 - ~~2.4.2~~ Does not have real-time monitoring capability of its Reliability Coordinator Area and surrounding Reliability Coordinator Areas as specified in R5.
 - ~~2.4.3~~ Does not have a documented procedure for the use of its backup monitoring facilities. (R8)

0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	August 28, 2006	Added three items that were inadvertently left out to “Applicability” section:	Errata

Standard IRO-005-1 — Reliability Coordination — Current Day Operations

		4.5 Generator Operators. 4.6 Load-Serving Entities. 4.7 Purchasing-Selling Entities.	
1	February 7, 2006	BOT Approval	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New

A. Introduction

1. **Title:** Reliability Coordination — Current Day Operations
2. **Number:** IRO-005-1
3. **Purpose:** The Reliability Coordinator must be continuously aware of conditions within its Reliability Coordinator Area and include this information in its reliability assessments. The Reliability Coordinator must monitor Bulk Electric System parameters that may have significant impacts upon the Reliability Coordinator Area and neighboring Reliability Coordinator Areas.
4. **Applicability:**
 - 4.1. Reliability Coordinators.
 - 4.2. Balancing Authorities.
 - 4.3. Transmission Operators.
 - 4.4. Transmission Service Providers.
 - 4.5. Generator Operators.
 - 4.6. Load-Serving Entities.
 - 4.7. Purchasing-Selling Entities.
5. **Effective Date:** June 4, 2007

The RCSDT is proposing to retire or move all requirements in this standard. This will result in retiring IRO-005-1.

B. Requirements

- ~~R1. Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following: *[Violation Risk Factor: High]*~~
 - ~~R1.1. Current status of Bulk Electric System elements (transmission or generation including critical auxiliaries such as Automatic Voltage Regulators and Special Protection Systems) and system loading. *[Violation Risk Factor: High]*~~
 - ~~R1.2. Current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate System Operating Limits (SOL) or Interconnection Reliability Operating Limits (IROL) violations, including the plan's viability and scope. *[Violation Risk Factor: High]*~~
 - ~~R1.3. Current post-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope. *[Violation Risk Factor: High]*~~
 - ~~R1.4. System real and reactive reserves (actual versus required). *[Violation Risk Factor: High]*~~

The RC SDT proposes retiring Requirement R1 and its subrequirements. Monitoring capability can be objectively measured and is essential to real-time operations – however real-time monitoring is a supporting activity and is only one of several processes used to support operation within defined parameters. Monitoring capability should be assessed during certification and should not be a requirement.

~~R1.5. — Capacity and energy adequacy conditions. [Violation Risk Factor: High]~~

~~R1.6. — Current Area Control Error (ACE) for all its Balancing Authorities. [Violation Risk Factor: High]~~

~~R1.7. — Current local or Transmission Loading Relief procedures in effect. [Violation Risk Factor: High]~~

~~R1.8. — Planned generation dispatches. [Violation Risk Factor: High]~~

~~R1.9. — Planned transmission or generation outages. [Violation Risk Factor: High]~~

~~R1.10. — Contingency events. [Violation Risk Factor: High]~~

~~R2. — Each Reliability Coordinator shall be aware of all Interchange Transactions that wheel through, source, or sink in its Reliability Coordinator Area, and make that Interchange Transaction information available to all Reliability Coordinators in the Interconnection. [Violation Risk Factor: High]~~

This Requirement (R2) is not measurable (aware) and should be retired because it is redundant with INT-005, R1. The Interchange Authority is responsible for making interchange information available to all reliability entities including the Reliability Coordinator.

~~R3. — As portions of the transmission system approach or exceed SOLs or IROLs, the Reliability Coordinator shall work with its Transmission Operators and Balancing Authorities to evaluate and assess any additional Interchange Schedules that would violate those limits. If a potential or actual IROL violation cannot be avoided through proactive intervention, the Reliability Coordinator shall initiate control actions or emergency procedures to relieve the violation without delay, and no longer than 30 minutes. The Reliability Coordinator shall ensure all resources, including load shedding, are available to address a potential or actual IROL violation. [Violation Risk Factor: High]~~

This Requirement (R3) is proposed to be retired based on work by the IROL Standards Drafting Team. The RC SDT concurs.

~~R4. — Each Reliability Coordinator shall monitor its Balancing Authorities' parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard (CPS) and Disturbance Control Standard (DCS) requirements. If necessary, the Reliability Coordinator shall direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. The Reliability Coordinator shall issue Energy Emergency Alerts as needed and at the request of its Balancing Authorities and Load-Serving Entities. [Violation Risk Factor: High]~~

The RC SDT recommends retiring Requirement R4. The BA has its own requirements regarding compliance with CPS and DCS standards as well as requesting emergency assistance. We view these as vestiges of an earlier program that no longer applies given the current mandatory requirements with which the BA must comply.

~~R5. Each Reliability Coordinator shall identify the cause of any potential or actual SOL or IROL violations. The Reliability Coordinator shall initiate the control action or emergency procedure to relieve the potential or actual IROL violation without delay, and no longer than 30 minutes. The Reliability Coordinator shall be able to utilize all resources, including load shedding, to address an IROL violation. [Violation Risk Factor: High]~~

This requirement (R5) is proposed to be retired based on work by the IROL Standards Drafting Team. The RC SDT concurs.

~~R6. Each Reliability Coordinator shall ensure its Transmission Operators and Balancing Authorities are aware of Geo Magnetic Disturbance (GMD) forecast information and assist as needed in the development of any required response plans. [Violation Risk Factor: High]~~

The RC SDT proposes retiring Requirement R6 as it is redundant with proposed IRO-001-2, R11. A GMD is one of the "expected or actual threats with Adverse Reliability Impacts".

~~R7. The Reliability Coordinator shall disseminate information within its Reliability Coordinator Area, as required. [Violation Risk Factor: High]~~

The RC SDT proposes retiring Requirement R7 as it is too vague and can not be measured.

~~R8. Each Reliability Coordinator shall monitor system frequency and its Balancing Authorities' performance and direct any necessary rebalancing to return to CPS and DCS compliance. The Transmission Operators and Balancing Authorities shall utilize all resources, including firm load shedding, as directed by its Reliability Coordinator to relieve the emergent condition. [Violation Risk Factor: High]~~

The RC SDT proposes retiring Requirement R8. The BA has its own requirements regarding compliance with CPS and DCS standards as well as requesting emergency assistance. We view these as vestiges of an earlier program that no longer applies given the current mandatory requirements with which the BA must comply. The second sentence is redundant with EOP-002, R4, R6, R7 and R9. This requirement should be retired.

~~R9. The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS, or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next day reliability analysis time frames. [Violation Risk Factor: High]~~

The RC SDT proposes retiring Requirement R9 as it is redundant with TOP-003 and IRO-004 (all requirements) for next day requirements. The RC has the authority to coordinate pending outages in real-time through IRO-001-2, R1 (proposed). The issue of CPS and DCS is covered in EOP-002-2, R6, R7 and R8.

~~R10. As necessary, the Reliability Coordinator shall assist the Balancing Authorities in its Reliability~~

The RC SDT proposes retiring Requirement R10 as it is redundant with EOP-002, R7.2 and R8.

Coordinator Area in arranging for assistance from neighboring Reliability Coordinator Areas or Balancing Authorities. *[Violation Risk Factor: High]*

~~R11.~~ The Reliability Coordinator shall identify sources of large Area Control Errors that may be contributing to Frequency Error, Time Error, or Inadvertent Interchange and shall discuss corrective actions with the appropriate Balancing Authority. The Reliability Coordinator shall direct its Balancing Authority to comply with CPS and DCS. *[Violation Risk Factor: High]*

The RC SDT proposes retiring Requirement R11 as it is redundant with proposed IRO-001-2 R1 and TOP-006-1, R7.

~~R12.~~ Whenever a Special Protection System that may have an inter Balancing Authority, or inter Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter area flows. The Transmission Operator shall immediately inform the Reliability Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected. *[Violation Risk Factor: High]*

The RC SDT proposes retiring Requirement R12 as it is redundant with proposed IRO-010. Also, the scope of project 2007-3 includes enhancing the SPS provisions of TOP-005. IRO-003, R1 indicates that the RC will monitor all items that will impact reliability and SPS's are a part of that.

~~R13.~~ Each Reliability Coordinator shall ensure that all Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities operate to prevent the likelihood that a disturbance, action, or non-action in its Reliability Coordinator Area will result in a SOL or IROL violation in another area of the Interconnection. In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter. *[Violation Risk Factor: High]*

The IROL SDT has proposed retiring the first sentence of Requirement R13 as it is redundant with the proposed IRO-009-1. The RC SDT recommends retiring the remaining portion of Requirement R13 as it is a facet of the SOL / IROL methodology required in FAC-010-1, FAC-011-1 and FAC-014-1.

~~R14.~~ Each Reliability Coordinator shall make known to Transmission Service Providers within its Reliability Coordinator Area, SOLs or IROLs within its wide area view. The Transmission Service Providers shall respect these SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes. *[Violation Risk Factor: High]*

Per the IROL SDT, Requirement R14 is redundant with FAC-014, R5.1 and should be retired. The RC SDT concurs.

~~**R15.** Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated. *[Violation Risk Factor: High]*~~

Requirement R15 was moved to the proposed IRO-01-2 and revised. It will be retired from IRO-005.

~~**R16.** Each Reliability Coordinator shall confirm reliability assessment results and determine the effects within its own and adjacent Reliability Coordinator Areas. The Reliability Coordinator shall discuss options to mitigate potential or actual SOL or IROL violations and take actions as necessary to always act in the best interests of the Interconnection at all times. *[Violation Risk Factor: High]*~~

Requirement R16 is proposed to be retired based on work by the IROL Standards Drafting Team. The RC SDT concurs.

~~**R17.** When an IROL or SOL is exceeded, the Reliability Coordinator shall evaluate the local and wide area impacts, both real time and post-contingency, and determine if the actions being taken are appropriate and sufficient to return the system to within IROL in thirty minutes. If the actions being taken are not appropriate or sufficient, the Reliability Coordinator shall direct the Transmission Operator, Balancing Authority, Generator Operator, or Load Serving Entity to return the system to within IROL or SOL. *[Violation Risk Factor: High]*~~

Requirement R17 is proposed to be retired based on work by the IROL Standards Drafting Team. The RC SDT concurs.

C. Measures

Not specified.

D. Compliance

None.

E. Regional Differences

None identified.

F. Associated Documents

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata

Standard IRO-005-1 — Reliability Coordination — Current Day Operations

1	August 28, 2006	Added three items that were inadvertently left out to “Applicability” section: 4.5 Generator Operators. 4.6 Load-Serving Entities. 4.7 Purchasing-Selling Entities.	Errata
1	February 7, 2006	BOT Approval	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New

Implementation Plan for IRO-001-2 Reliability Coordination — Responsibilities and Authorities

Revisions to Defined Terms in the NERC Glossary

The RC SDT proposes modifying the following approved definition:

Adverse Reliability Impact – The impact of an event that results in frequency-related instability; ~~unplanned tripping of load or generation;~~ or uncontrolled separation or cascading outages that affects a widespread area of the Interconnection.

Prerequisite Approvals

- None

Conforming Changes to Requirements in Already Approved Standards

- IRO-005, R15 is being incorporated into IRO-001-2.

Revision Summary

- The RC SDT revised the standard and is proposing retiring several requirements (R1, R2, R4, R5, R6, R7 and R10). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERCs Rules of Procedure and to address issues in FERC Order 693.

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p>None – The RC SDT proposes retiring this requirement.</p>
<p>Notes:</p> <p>The RC SDT proposes that original IRO-001-1, R1 should be retired from the standard and addressed in NERC Rules of Procedure, Section 503, item 2.2: “Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p>None – The RC SDT proposes retiring this requirement</p>
<p>Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R1. The Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p>
<p>Notes:</p> <ul style="list-style-type: none"> • The RC SDT is proposing to remove the blue text in the first sentence. • The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROLs are contained in other standards (e.g., TOP-007, R2). ▪ The Distribution Provider was added as an applicable entity per FERC Order 693. 	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire the requirement</p> <p>RC SDT proposes that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, section 500 and should be retired from the standard. Section 501 states:</p> <p>“The purpose of the compliance registry will be to clearly identify those entities that are responsible for compliance with reliability standards. Organizations listed on the registry will be responsible for knowing the content of and for complying with the NERC reliability standards.”</p> <p>Also, section 507, item 2 addresses written agreements; Joint registration pursuant to written agreement.</p> <p>“Where a JRO and any of its members or related entities agree, in writing, upon a division of compliance responsibility among them for one or more reliability standard(s) applicable to a particular function, and/or for one or more requirements within particular reliability standard(s), both the JRO and such member(s) or related entit(ies) shall register as an organization responsible for that function. The JRO and its member(s) or related entit(ies) must have a written agreement that clearly specifies their respective responsibilities, which shall be submitted as part of the joint registration. Neither NERC nor the regional entity shall be parties to any such agreement between a JRO and its member or related entit(ies), nor shall NERC or the regional entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the joint registration.”</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R4.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1 R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire requirement because it is redundant with: PER-003-0 R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions: R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System. R1.2. Positions directly responsible for complying with NERC standards.</p>
<p>Notes: The RC SDT recommends retiring IRO-001-1 R6 as it is redundant with PER-003-0 R1.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated. <i>[Violation Risk Factor: High]</i></p>	<p>None – requirement should be retired because it is redundant with:</p> <p>IRO-014-1</p> <p>R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators.</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R7 as this is redundant with IRO-014-1 R1.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R2. Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Provider, and Purchasing-Selling Entities shall act without intentional delay to comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High]</i> <i>[Time Horizon: Real-time Operations]</i></p> <p>R3. The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the Reliability Coordinator upon recognition of the inability to perform the directive. <i>[Violation Risk Factor: High]</i> <i>[Time Horizon: Real-time Operations]</i></p> <p>R4. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High]</i> <i>[Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT added the Distribution Provider per FERC Order 693 and added the blue text shown in the requirements above. The RC SDT proposes the replacement of IRO-001-1, R8 with three requirements IRO-001-2, R2, R3, and R4. This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in R1, which states that the Reliability Coordination will act or direct actions to mitigate issues</p> <p>Relating to First Energy’s comment in FERC Order 693, the requirements address both personnel safety and equipment. There is no reference to a chain of command in the requirements. The standard is written such that decision-making authority rests with the Reliability Coordinator. No further revisions to the standard are required.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity. <i>[Violation Risk Factor: High]</i></p>	<p>None – retire the requirement as redundant.</p>
<p>Notes: The RC SDT proposes retiring this requirement. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the RC Area and the Interconnection. Section 6 of the NERC Standard Development Procedure states that NERC develops and maintains Reliability Standards. Equity issues are covered under the Reliability Coordinator Standards of Conduct.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2 (this requirement was incorporated from IRO-005-2)</p> <p>R15. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R5. Each Reliability Coordinator who identifies a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p>
<p>Notes: This requirement was moved from IRO-005 into IRO-001-2, R5.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Functions that Must Comply with the Requirements in the Standards

Standard	Functions that Must Comply With the Requirements							
	Reliability Coordinator	Balancing Authority	Distribution Provider	Transmission Operator	Transmission Service Provider	Purchasing Selling Entity	Generator Operator	Load Serving Entity
IRO-001-2	X	X	X	X	X	X	X	X

Effective Dates

To be determined.

Implementation Plan for IRO-002-2 Reliability Coordination – Facilities

Prerequisite Approvals

- Adoption of IRO-001-2, IRO-010-0, COM-001-2

Conforming Changes to Requirements in Already Approved Standards

- None

Coordination with revisions proposed in other standards projects

- The IROL SDT proposes retiring the following requirements when IRO-010 is approved:
 - IRO-002-2 Requirement R2

Revision Summary

The RC SDT revised the standard and is proposing retiring several requirements (R1, R3, R4, R5, R6, R7 and R8). Changes were made to eliminate redundancies between standards (existing and proposed), align with NERCs Rules of Procedure and to address issues in FERC Order 693.

FERC Order 693 directive for IRO-002:

In addition we direct the ERO to develop a modification to IRO-002-1 through the Reliability Standards development process that requires a minimum set of tools that should be made available to reliability coordinators.

RC SDT response: The development of a minimum set of tools should be addressed through the work of the Real-Time Tools Best Practices Task Force. Their charge was to develop a list of tools required to perform real time operations functions and submit SARs based on their work. As requirements for these tools are developed, appropriate standards projects will be initiated to incorporate the tools within the NERC Organization Registration and Certification Process, and the applicable reliability standards. The RC SDT submits that this directive be addressed in that effort. This action is accommodated by the Standards Development Work Plan.

Functions that Must Comply with the Requirements in the Standards

- The requirements in IRO-002-3 are applicable to the Reliability Coordinator.

Effective Dates

To be determined.

**Implementation Plan for IRO-002-2
Reliability Coordination – Facilities**

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-1</p> <p>R1. Each Reliability Coordinator shall have adequate communications facilities (voice and data links) to appropriate entities within its Reliability Coordinator Area. These communications facilities shall be staffed and available to act in addressing a real-time emergency condition. [Violation Risk Factor: High]</p>	<p>None</p> <p>The first sentence of this requirement should be retired because it is a basic facility issue that should be addressed in certification. The second sentence is redundant with PER-004, R1 which requires the RC to be staffed 24x7.</p> <p>PER-004-1</p> <p>R1. Each Reliability Coordinator shall be staffed with adequately trained and NERC-certified Reliability Coordinator operators, 24 hours per day, seven days per week.</p>
<p>Notes: The RC SDT recommends retiring this requirement.</p>	

**Implementation Plan for IRO-002-2
Reliability Coordination – Facilities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-1</p> <p>R2. Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – this requirement should be retired as it is redundant with:</p> <p>IRO-010-1</p> <p>R1. The Reliability Coordinator shall have a documented data specification for data and information to build and maintain models to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments. The specification shall include the following: (Violation Risk Factor: Low) (Time Horizon: Operations Planning)</p>
<p>Notes: The RC SDT recommends retirement of this requirement upon implementation of IRO-010-1, R1.</p>	

**Implementation Plan for IRO-002-2
Reliability Coordination – Facilities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-1</p> <p>R3. Each Reliability Coordinator — or its Transmission Operators and Balancing Authorities — shall provide, or arrange provisions for, data exchange to other Reliability Coordinators or Transmission Operators and Balancing Authorities via a secure network. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]</i></p>	<p>None – retire requirement as it is redundant with: TOP-005-1</p> <p>R1. Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area. (This requirement will be retired upon the implementation of IRO-010-1)</p> <p>IRO-014-1</p> <p>R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators.</p> <p>R1.1. These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following:</p> <p>R1.1.1. Communications and notifications, including the conditions¹ under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p> <p>R1.1.2. Energy and capacity shortages.</p> <p>R1.1.3. Planned or unplanned outage information.</p> <p>R1.1.4. Voltage control, including the coordination of reactive resources for voltage control.</p> <p>R1.1.5. Coordination of information exchange to support reliability assessments.</p> <p>R1.1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.</p>

Implementation Plan for IRO-002-2 Reliability Coordination – Facilities

Notes:

▪ The “secure network” provisions of R3 are covered under the NERC Rules of Procedure, Section 1002 which states: NERC will provide tools and other support services for the benefit of reliability coordinators and other system operators, including the Area Control Error (ACE) and Frequency Monitoring System, NERC Hotline, Real-time Flows, System Data Exchange (SDX), Reliability Coordinator Information System (RCIS), Transmission Services Information Network (TSIN), Interchange Distribution Calculator (IDC), Interregional Security Network (ISN), and Central Repository for Security Events (CRC). To accomplish this goal, NERC will:

1. Maintain the reliability and effectiveness of all mission-critical operating reliability support systems and services;
2. Continue to support maintenance of a transmission provider curtailment report on the CRC site in response to Federal Energy Regulatory Commission Order 605;
3. Investigate and analyze the use of high-speed real-time system measurements, including phasors, in predicting the behavior and performance of the Eastern Interconnection; and
4. Facilitate real-time voice and data exchange services among reliability coordinators (e.g., Hotline, Interregional Security Network, NERCnet, System Data Exchange, etc.).

**Implementation Plan for IRO-002-2
Reliability Coordination – Facilities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-1 R4. Each Reliability Coordinator shall have multi-directional communications capabilities with its Transmission Operators and Balancing Authorities, and with neighboring Reliability Coordinators, for both voice and data exchange as required to meet reliability needs of the Interconnection. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – Retire this requirement. R4 is a basic facility requirement that should be addressed in certification</p>
<p>Notes: The RC SDT recommends retiring IRO-002-1 R4.</p>	

**Implementation Plan for IRO-002-2
Reliability Coordination – Facilities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-1</p> <p>R5. Each Reliability Coordinator shall have detailed real-time monitoring capability of its Reliability Coordinator Area and sufficient monitoring capability of its surrounding Reliability Coordinator Areas to ensure that potential or actual System Operating Limit or Interconnection Reliability Operating Limit violations are identified. Each Reliability Coordinator shall have monitoring systems that provide information that can be easily understood and interpreted by the Reliability Coordinator’s operating personnel, giving particular emphasis to alarm management and awareness systems, automated data transfers, and synchronized information systems, over a redundant and highly reliable infrastructure. <i>[Violation Risk Factor: High]</i></p> <p>R6. Each Reliability Coordinator shall monitor Bulk Electric System elements (generators, transmission lines, buses, transformers, breakers, etc.) that could result in SOL or IROL violations within its Reliability Coordinator Area. Each Reliability Coordinator shall monitor both real and reactive power system flows, and operating reserves, and the status of Bulk Electric System elements that are or could be critical to SOLs and IROLs and system restoration requirements within its Reliability Coordinator Area. <i>[Violation Risk Factor: High]</i></p>	<p>None – Both should be retired based on the notes below.</p>
<p>Notes:</p> <p>R5 is a basic facility requirement that should be addressed in certification.</p> <p>R6: Real-time monitoring is a supporting activity and is only one of several processes used to support operation within SOLs or IROLs. It is not practical to measure real-time monitoring, nor is this necessary. The real reliability objective is to operate within identified parameters, not to monitor.</p>	

**Implementation Plan for IRO-002-2
Reliability Coordination – Facilities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-1</p> <p>R7. Each Reliability Coordinator shall have adequate analysis tools such as state estimation, pre- and post-contingency analysis capabilities (thermal, stability, and voltage), and wide-area overview displays. <i>[Violation Risk Factor: High]</i></p>	<p>None – Retire this requirement.</p>
<p>Notes: The RC SDT recommends retiring IRO-002-1 Requirement R7 as it is a basic facility requirement that should be addressed in certification.</p>	

**Implementation Plan for IRO-002-2
Reliability Coordination – Facilities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-1</p> <p>R8. Each Reliability Coordinator shall continuously monitor its Reliability Coordinator Area. Each Reliability Coordinator shall have provisions for backup facilities that shall be exercised if the main monitoring system is unavailable. Each Reliability Coordinator shall ensure SOL and IROL monitoring and derivations continue if the main monitoring system is unavailable. <i>[Violation Risk Factor: High]</i></p>	<p>None – This requirement should be retired because it is redundant with:</p> <p>EOP-008-0</p> <p>R1. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have a plan to continue reliability operations in the event its control center becomes inoperable. The contingency plan must meet the following requirements: The contingency plan shall not rely on data or voice communication from the primary control facility to be viable.</p> <p>R1.2. The plan shall include procedures and responsibilities for providing basic tie line control and procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.</p> <p>R1.3. The contingency plan must address monitoring and control of critical transmission facilities, generation control, voltage control, time and frequency control, control of critical substation devices, and logging of significant power system events. The plan shall list the critical facilities.</p> <p>R1.4. The plan shall include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.</p> <p>R1.5. The plan shall include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.</p> <p>R1.6. The plan shall include procedures and responsibilities for providing annual training to ensure that operating personnel are able to implement the contingency plans.</p> <p>R1.7. The plan shall be reviewed and updated annually.</p> <p>R1.8. Interim provisions must be included if it is expected to take more than one hour to implement the contingency plan for loss of primary control facility.</p>
<p>Notes:</p> <p>Real-time monitoring is a supporting activity and is only one of several processes used to support operation within SOLs or IROLs. It is not practical to measure real-time monitoring, nor is this necessary. The real reliability objective is to operate within SOLs and IROLs, not to monitor.</p> <p>The proposed revisions to EOP-008 require the RC to have specific backup capabilities sufficient to, among other things, provide visualization capabilities that ensure that operating personnel have situational awareness of the BES.</p>	

**Implementation Plan for IRO-002-2
Reliability Coordination – Facilities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-1</p> <p>R9. Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. <i>Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. [Violation Risk Factor: Medium]</i></p>	<p>IRO-002-2</p> <p>R2. Each Reliability Coordinator shall have a procedure to coordinate maintenance of its Reliability Coordinator analysis tools. <i>Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT proposes retiring the second sentence of R9 as it is redundant with EOP-008, R1 (see above).</p>	

Implementation Plan for IRO-005 Reliability Coordination — Current-Day Operations

Prerequisite Approvals

- IRO-001-2 — Reliability Coordination — Responsibilities and Authorities
- IRO-008-1 — Reliability Coordinator Operational Analyses and Real-time Assessments
- IRO-009-1 — Reliability Coordinator Actions to Operate Within Interconnection Reliability Operating Limits
- IRO-010-1 — Reliability Coordinator Data Specification and Collection

Conforming Changes to Requirements in Already Approved Standards

- IRO-001-2 with respect to R6 and R15

Revision Summary

- Many of the requirements in this standard will be retired under the IROL SDT work plan. The RC SDT proposes retiring other requirements and moving R6 and R15 to IRO-001-2. This will retire or move all requirements in this standard. The RC SDT proposes retiring the standard.

Functions that Must Comply with the Requirements in the Standards

Not applicable – all requirements are recommended for retirement or movement to other standards.

Effective Dates

To be determined.

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R1. Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following: <i>[Violation Risk Factor: High]</i></p> <p>(and all R1 sub-requirements)</p>	<p>Retire R1 and its subrequirements – Monitoring capability can be objectively measured and is essential to real-time operations – however real-time monitoring is a supporting activity and is only one of several processes used to support operation within defined parameters. Monitoring capability should be assessed during certification and not as a requirement.</p>
<p>Notes: The RC SDT recommends retiring IRO-005-2 Requirement R1 and its subrequirements.</p>	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2 R2. Each Reliability Coordinator shall be aware of all Interchange Transactions that wheel through, source, or sink in its Reliability Coordinator Area, and make that Interchange Transaction information available to all Reliability Coordinators in the Interconnection. <i>[Violation Risk Factor: High]</i></p>	<p>None – Requirement should be retired as it is redundant with: INT-005-1 R1. Prior to the expiration of the time period defined in the Timing Table, Column A, the Interchange Authority shall distribute the Arranged Interchange information for reliability assessment to all reliability entities involved in the interchange. R1.1. When a Balancing Authority or Reliability Coordinator initiates a Curtailment to Confirmed or Implemented Interchange for reliability, the Interchange Authority shall distribute the Arranged Interchange information for reliability assessment only to the Source Balancing Authority and the Sink Balancing Authority.</p>
<p>Notes:</p> <ul style="list-style-type: none"> ▪ The requirement is not measurable (shall be aware) and should be retired because it is redundant with INT-005-1, R1. ▪ The IA is responsible for making interchange information available to all reliability entities including the Reliability Coordinator. ▪ When IRO-010-1 becomes effective, IRO-005-2 R2 should be retired. The e-tag system replaced the need for this requirement. In addition, if the Reliability Coordinator needs this information, the Reliability Coordinator can add this item to the list of data and information on its data specification under IRO-010 R1 	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R3. As portions of the transmission system approach or exceed SOLs or IROLs, the Reliability Coordinator shall work with its Transmission Operators and Balancing Authorities to evaluate and assess any additional Interchange Schedules that would violate those limits. If a potential or actual IROL violation cannot be avoided through proactive intervention, the Reliability Coordinator shall initiate control actions or emergency procedures to relieve the violation without delay, and no longer than 30 minutes. The Reliability Coordinator shall ensure all resources, including load shedding, are available to address a potential or actual IROL violation. <i>[Violation Risk Factor: High]</i></p>	<p>None – This requirement is to be retired per the IROL team’s implementation plan.</p>
<p>Notes:</p> <ul style="list-style-type: none"> ▪ The IROL Implementation Plan proposes retiring IRO-005-2 R3 when IRO-009-1 becomes effective. IRO-005 R3 can lead the Reliability Coordinator to believe it has up to 30 minutes to relieve an IROL violation – but some IROLs have a T_v that is much shorter than 30 minutes. 	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R4. Each Reliability Coordinator shall monitor its Balancing Authorities' parameters to ensure that the required amount of operating reserves is provided and available as required to meet the Control Performance Standard (CPS) and Disturbance Control Standard (DCS) requirements. If necessary, the Reliability Coordinator shall direct the Balancing Authorities in the Reliability Coordinator Area to arrange for assistance from neighboring Balancing Authorities. The Reliability Coordinator shall issue Energy Emergency Alerts as needed and at the request of its Balancing Authorities and Load-Serving Entities. <i>[Violation Risk Factor: High]</i></p>	<p>None – The RC SDT proposes that this requirement be retired. The BA has its own requirements regarding compliance with CPS and DCS standards as well as requesting emergency assistance. We view these as vestiges of an earlier program that no longer apply given the current mandatory requirements with which the BA must comply. This requirement should be retired.</p> <p>The requirement is also redundant with existing EOP-002-2.</p>
<p>Note: The RC SDT proposes that IRO-005-2 Requirement R4 be retired.</p>	

Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations

Notes: EOP-002-2

R1. Each Balancing Authority and Reliability Coordinator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its respective area and shall exercise specific authority to alleviate capacity and energy emergencies.

R2. Each Balancing Authority shall implement its capacity and energy emergency plan, when required and as appropriate, to reduce risks to the interconnected system.

R3. A Balancing Authority that is experiencing an operating capacity or energy emergency shall communicate its current and future system conditions to its Reliability Coordinator and neighboring Balancing Authorities.

R4. A Balancing Authority anticipating an operating capacity or energy emergency shall perform all actions necessary including bringing on all available generation, postponing equipment maintenance, scheduling interchange purchases in advance, and being prepared to reduce firm load.

R5. A deficient Balancing Authority shall only use the assistance provided by the Interconnection's frequency bias for the time needed to implement corrective actions. The Balancing Authority shall not unilaterally adjust generation in an attempt to return Interconnection frequency to normal beyond that supplied through frequency bias action and Interchange Schedule changes. Such unilateral adjustment may overload transmission facilities.

R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. These remedies include, but are not limited to:

R6.1. Loading all available generating capacity.

R6.2. Deploying all available operating reserve.

R6.3. Interrupting interruptible load and exports.

R6.4. Requesting emergency assistance from other Balancing Authorities.

R6.5. Declaring an Energy Emergency through its Reliability Coordinator; and

R6.6. Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads.

R7. Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall:

R7.1. Manually shed firm load without delay to return its ACE to zero; and

R7.2. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0 "Energy Emergency Alert Levels."

R8. A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002-0 "Energy Emergency Alert Levels." The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.

Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations

R9. When a Transmission Service Provider expects to elevate the transmission service priority of an Interchange Transaction from Priority 6 (Network Integration Transmission Service from Non-designated Resources) to Priority 7 (Network Integration Transmission Service from designated Network Resources) as permitted in its transmission tariff (See Attachment 1-IRO-006-0 “Transmission Loading Relief Procedure” for explanation of Transmission Service Priorities):

R9.1. The deficient Load-Serving Entity shall request its Reliability Coordinator to initiate an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0.

R9.2. The Reliability Coordinator shall submit the report to NERC for posting on the NERC Website, noting the expected total MW that may have its transmission service priority changed.

R9.3. The Reliability Coordinator shall use EEA 1 to forecast the change of the priority of transmission service of an Interchange Transaction on the system from Priority 6 to Priority 7.

R9.4. The Reliability Coordinator shall use EEA 2 to announce the change of the priority of transmission service of an Interchange Transaction on the system from Priority 6 to Priority 7.

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R5. Each Reliability Coordinator shall identify the cause of any potential or actual SOL or IROL violations. The Reliability Coordinator shall initiate the control action or emergency procedure to relieve the potential or actual IROL violation without delay, and no longer than 30 minutes. The Reliability Coordinator shall be able to utilize all resources, including load shedding, to address an IROL violation. <i>[Violation Risk Factor: High]</i></p>	<p>None – This requirement is to be retired per the IROL team’s implementation plan.</p>
<p>Notes:</p> <ul style="list-style-type: none"> ▪ The IROL Implementation Plan proposes retiring IRO-005-2 R5 when IRO-009-1 becomes effective. IRO-005 R5 can lead the Compliance Enforcement Authority to believe that the Reliability Coordinator has information to see all SOLs, and this is not always true. Every facility in the Transmission Operator’s area has a System Operating Limit, but the Reliability Coordinator isn’t required to see all these limits and may not have information to determine the cause of instances of exceeding these limits. 	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R6. Each Reliability Coordinator shall ensure its Transmission Operators and Balancing Authorities are aware of Geo-Magnetic Disturbance (GMD) forecast information and assist as needed in the development of any required response plans.</p>	<p>The RC SDT proposes retiring this requirement as it is redundant with proposed IRO-001-2, R11. A GMD is one of the “expected or actual threats with Adverse Reliability Impacts”.</p> <p>IRO-002-2 (proposed)</p> <p>R1. Each Reliability Coordinator who identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT proposes retiring IRO-005-2 Requirement R6 as it is redundant with the proposed IRO-002-2 R1.</p>	

Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R7. The Reliability Coordinator shall disseminate information within its Reliability Coordinator Area, as required.</p>	<p>None</p>
<p>Notes:</p> <ul style="list-style-type: none"> The RC SDT proposes that IRO-005-2 Requirement R7 is too vague and ambiguous to measure. We recommend retiring this requirement. This is a supporting activity associated with other higher-level performance requirements such as the requirement in IRO-008 for the RC to share the results of its analyses under specified conditions. 	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R8. Each Reliability Coordinator shall monitor system frequency and its Balancing Authorities' performance and direct any necessary rebalancing to return to CPS and DCS compliance. The Transmission Operators and Balancing Authorities shall utilize all resources, including firm load shedding, as directed by its Reliability Coordinator to relieve the emergent condition.</p>	<p>IRO-005-2</p> <p>The RCSDT recommends retiring this requirement as it is redundant with:</p> <p>TOP-006-1, R7 Each Reliability Coordinator, Transmission Operator and Balancing Authority shall monitor system frequency.</p> <p>EOP-002-2</p> <p>R4. A Balancing Authority anticipating an operating capacity or energy emergency shall perform all actions necessary including bringing on all available generation, postponing equipment maintenance, scheduling interchange purchases in advance, and being prepared to reduce firm load.</p> <p>R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. These remedies include, but are not limited to:</p> <ul style="list-style-type: none"> R6.1. Loading all available generating capacity. R6.2. Deploying all available operating reserve. R6.3. Interrupting interruptible load and exports. R6.4. Requesting emergency assistance from other Balancing Authorities. R6.5. Declaring an Energy Emergency through its Reliability Coordinator; and R6.6. Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads. <p>R7. Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall:</p> <ul style="list-style-type: none"> R7.1. Manually shed firm load without delay to return its ACE to zero; and R7.2. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0 "Energy Emergency Alert Levels."
<p>Notes: The RC SDT recommends retiring IRO-005-2 R8. The BA has its own requirements regarding compliance with CPS and DCS standards as well as requesting emergency assistance. RCSDT views these as vestiges of an earlier program that no longer apply given the current mandatory requirements with which the BA must comply. The second sentence is redundant with EOP-002, R4, R6, R7, and R9. This requirement should be retired.</p>	

Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R9. The Reliability Coordinator shall coordinate with Transmission Operators, Balancing Authorities, and Generator Operators as needed to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS or DCS violations. The Reliability Coordinator shall coordinate pending generation and transmission maintenance outages with Transmission Operators, Balancing Authorities, and Generator Operators as needed in both the real time and next-day reliability analysis timeframes.</p>	<p>The RCSDT proposes to retire this requirement from IRO-005.</p> <p>The RCSDT proposes retiring this requirement as it is redundant with TOP-003 and IRO-004 (all requirements) for next day requirements. The RC has the authority to coordinate pending outages in real-time through IRO-001-2, R1 (proposed). The issue of CPS and DCS is covered in EOP-002-2, R6, R7 and R8 (see above).</p>
<p>Notes: TOP-003-0</p> <p>R1. Generator Operators and Transmission Operators shall provide planned outage information.</p> <p>R1.1. Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements.</p> <p>R1.2. Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements.</p> <p>R1.3. Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.</p> <p>R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators as required.</p> <p>R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.</p> <p>R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.</p>	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

IRO-004-1

R1. Each Reliability Coordinator shall conduct next-day reliability analyses for its Reliability Coordinator Area to ensure that the Bulk Electric System can be operated reliably in anticipated normal and Contingency event conditions. The Reliability Coordinator shall conduct Contingency analysis studies to identify potential interface and other SOL and IROL violations, including overloaded transmission lines and transformers, voltage and stability limits, etc.

R2. Each Reliability Coordinator shall pay particular attention to parallel flows to ensure one Reliability Coordinator Area does not place an unacceptable or undue Burden on an adjacent Reliability Coordinator Area.

R3. Each Reliability Coordinator shall, in conjunction with its Transmission Operators and Balancing Authorities, develop action plans that may be required, including reconfiguration of the transmission system, re-dispatching of generation, reduction or curtailment of Interchange Transactions, or reducing load to return transmission loading to within acceptable SOLs or IROLs.

R4. Each Transmission Operator, Balancing Authority, Transmission Owner, Generator Owner, Generator Operator, and Load-Serving Entity in the Reliability Coordinator Area shall provide information required for system studies, such as critical facility status, Load, generation, operating reserve projections, and known Interchange Transactions. This information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.

R5. Each Reliability Coordinator shall share the results of its system studies, when conditions warrant or upon request, with other Reliability Coordinators and with Transmission Operators, Balancing Authorities, and Transmission Service Providers within its Reliability Coordinator Area. The Reliability Coordinator shall make study results available no later than 1500 Central Standard Time for the Eastern Interconnection and 1500 Pacific Standard Time for the Western Interconnection, unless circumstances warrant otherwise.

R6. If the results of these studies indicate potential SOL or IROL violations, the Reliability Coordinator shall direct its Transmission Operators, Balancing Authorities and Transmission Service Providers to take any necessary action the Reliability Coordinator deems appropriate to address the potential SOL or IROL violation.

R7. Each Transmission Operator, Balancing Authority, and Transmission Service Provider shall comply with the directives of its Reliability Coordinator based on the next day assessments in the same manner in which it would comply during real time operating events.

IRO-001-2, R1 (proposed)

R1. The Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. [Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R10. As necessary, the Reliability Coordinator shall assist the Balancing Authorities in its Reliability Coordinator Area in arranging for assistance from neighboring Reliability Coordinator Areas or Balancing Authorities. <i>[Violation Risk Factor: High]</i></p>	<p>None</p> <p>EOP-002-2</p> <p>R7.2. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0 “Energy Emergency Alert Levels.”</p> <p>R8. A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002-0 “Energy Emergency Alert Levels.” The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.</p>
<p>Notes: The RCSDT proposes to retire this requirement as it is redundant with EOP-002-2</p>	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R11. The Reliability Coordinator shall identify sources of large Area Control Errors that may be contributing to Frequency Error, Time Error, or Inadvertent Interchange and shall discuss corrective actions with the appropriate Balancing Authority. The Reliability Coordinator shall direct its Balancing Authority to comply with CPS and DCS.</p>	<p>None</p> <p>IRO-001-2 (proposed)</p> <p>R1. Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. [Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</p> <p>TOP-006-1, R7 (existing)</p> <p>R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.</p>
<p>Notes: The RCSDT proposes retiring IRO-005-2 as it is redundant with the proposed IRO-001-2 R1 and approved TOP-006-1 R7.</p>	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R12. Whenever a Special Protection System that may have an inter-Balancing Authority, or inter-Transmission Operator impact (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation) is armed, the Reliability Coordinators shall be aware of the impact of the operation of that Special Protection System on inter-area flows. The Transmission Operator shall immediately inform the Reliability Coordinator of the status of the Special Protection System including any degradation or potential failure to operate as expected.</p>	<p>None - The RCS DT recommends retiring this requirement as it is redundant with proposed IRO-010:</p> <p>R1. The Reliability Coordinator shall have a documented data specification for data and information to build and maintain models to support Real-Time monitoring, Operational Planning Analyses, and Real-time Assessments. The specification shall include the following: (<i>Violation Risk Factor: Low</i>) (<i>Time Horizon: Operations Planning</i>)</p> <ul style="list-style-type: none"> R1.1. List of required data and information. R1.2. Mutually agreeable format. R1.3. Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses). R1.4. Process for data provision when automated Real-Time system operating data is unavailable. <p>R2. The Reliability Coordinator shall distribute its data specification to entities that have Facilities monitored by the Reliability Coordinator and to entities that provide Facility status to the Reliability Coordinator. (<i>Violation Risk Factor: Low</i>) (<i>Time Horizon: Operations Planning</i>)</p> <p>R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. The data and information is limited to data needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments. (<i>Violation Risk Factor:Medium</i>) (<i>Time Horizon: Operations Planning; Same-day Operations; Real-time Operations</i>)</p>
<p>Notes: The RC SDT recommends retiring this requirement as it is redundant with proposed IRO-010, R1 and R3. Also, the scope of project 2007-3 includes enhancing the SPS provisions of TOP-005. IRO-003, R1 indicates the RC will monitor all items that will impact reliability, and SPSs are a part of that.</p>	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R13. Each Reliability Coordinator shall ensure that all Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities operate to prevent the likelihood that a disturbance, action, or non-action in its Reliability Coordinator Area will result in a SOL or IROL violation in another area of the Interconnection. In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter.</p>	<p>None</p>
<p>Notes: The IROL SDT has proposed retiring the first sentence of this requirement as it is redundant with the proposed IRO-009-1. The RC SDT recommends retiring the remaining portion of this requirement as it is a facet of the SOL / IROL methodology required in FAC-010-1, FAC-011-1 and FAC-014-1.</p>	

Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R14. Each Reliability Coordinator shall make known to Transmission Service Providers within its Reliability Coordinator Area, SOLs or IROLs within its wide-area view. The Transmission Service Providers shall respect these SOLs or IROLs in accordance with filed tariffs and regional Total Transfer Calculation and Available Transfer Calculation processes.</p>	<p>None</p>
<p>Notes: Per the IROL SDT implementation plan, the first sentence of this requirement should be retired upon the implementation of IRO-009-1.</p> <p>The RC SDT proposes retiring the second sentence of this requirement. The concept of this requirement is more appropriately addressed in the proposed MOD standards under project 2006-7. As written, this requirement is not measureable and unenforceable as a TSP's tariff may supersede the requirement.</p>	
Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R15. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated.</p>	<p>None</p>
<p>Notes: The RC SDT moved this requirement to IRO-001-2.</p>	

**Implementation Plan for IRO-005
Reliability Coordination — Current-Day Operations**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2</p> <p>R16. Each Reliability Coordinator shall confirm reliability assessment results and determine the effects within its own and adjacent Reliability Coordinator Areas. The Reliability Coordinator shall discuss options to mitigate potential or actual SOL or IROL violations and take actions as necessary to always act in the best interests of the Interconnection at all times. <i>[Violation Risk Factor: High]</i></p> <p>R17. When an IROL or SOL is exceeded, the Reliability Coordinator shall evaluate the local and wide-area impacts, both real-time and post-contingency, and determine if the actions being taken are appropriate and sufficient to return the system to within IROL in thirty minutes. If the actions being taken are not appropriate or sufficient, the Reliability Coordinator shall direct the Transmission Operator, Balancing Authority, Generator Operator, or Load-Serving Entity to return the system to within IROL or SOL. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-005-2</p> <p>None – The IROL SDT’s Implementation plan proposes retirement of R16 and R17.</p>
<p>Notes: IRO-005 R16 is a mix of requirements and the Missing Measures and Compliance Elements drafting team determined that, as written, R16 is too vague to be measured. The intent of this requirement is duplicated more clearly in IRO-008 and IRO-009.</p> <ul style="list-style-type: none"> ▪ IRO-005 R17 can lead the Reliability Coordinator to believe it has up to 30 minutes to relieve an IROL violation – but some IROLs have a T_v that is much shorter than 30 minutes. Note that the RC does not see all SOLs. 	

Project 2006-06, Reliability Coordination Scope of Work Assigned to the Reliability Coordination Standard Drafting Team

Purpose

To ensure that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System.

Brief Description

Most of the requirements in this set of standards were translated from Operating Policies as part of the Version 0 process. There have been suggestions for improving these requirements, and the drafting team will consider comments submitted by stakeholders, drafting teams and FERC in determining what changes should be proposed to stakeholders.

The drafting team will review all of the requirements in this set of standards and make a determination, with stakeholders, on whether to:

- Modify the requirement to improve its clarity and measurability while removing ambiguity
- Move the requirement (into another SAR or Standard or to the certification process or standards)
- Eliminate the requirement (either because it is redundant or because it doesn't support bulk power system reliability).
-

Detailed Description

The drafting team will review all of the requirements in the following set of standards:

COM-001 — Telecommunications

COM-002 — Communications and Coordination

IRO-001 — Reliability Coordination – Responsibilities and Authorities

IRO-002 — Reliability Coordination – Facilities

IRO-005 — Reliability Coordination – Current Day Operations

IRO-014 — Procedures to Support Coordination between Reliability Coordinators

IRO-015 — Notifications and Information Exchange Between Reliability Coordinators

IRO-016 — Coordination of Real-time Activities between Reliability Coordinators

PER-004 — Reliability Coordination – Staffing

PRC-001 — System Protection Coordination

For each existing requirement, the drafting team will work with stakeholders and:

- Eliminate redundancy in the requirements.
- Identify requirements that should be moved into other SARs
- Eliminate requirements that do not support bulk power system reliability
- Transfer requirements that need to be in place before an entity begins operation as an RC to certification.
- Improve clarity of, improve measurability of, and remove ambiguity from the requirement

The standard drafting team will also:

- Coordinate with the drafting teams working on the SAR and standards for Transmission Operator and Balancing Authority standards (Project 2007-06).
- Consider comments received during the initial development of this set of standards and other comments received from ERO regulatory authorities and stakeholders (Attachment 1)
- Bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Rules of Procedure. (Attachment 2)

This review of the set of identified standards will satisfy the standards procedure requirement to review each approved standard at least once every five years.

Attachment 1

The drafting team will assist stakeholders in considering these comments in determining what changes to make to the standards:

COM-001-0 Telecommunications

FERC Order 693

- Include generator operators and distribution provider as applicable entities and include requirements for their telecommunications. **GOP and DP were added to Applicability and a new requirement was added to the standard.**
- Include requirements for telecommunication facilities for use during normal and emergency conditions that reflect the roles of the applicable entities and their impact on reliable operation. **The RC SDT contends that telecommunications facility requirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. (please see Implementation Plan for COM-001 for examples).**
- Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions. **The RC SDT contends that telecommunications facility requirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. (please see Implementation Plan for COM-001 for examples).**

V0 Industry Comments

- Many players missing. **The RC SDT has added the GOP and DP to the standard.**
- Apply R1 to all but smallest entities. **The RC SDT proposes retiring R1.**

Violation Risk Factor Drafting Team Comments

- R6 – administrative requirement **The RC SDT proposes retiring this requirement as it is administrative in nature.**

COM-002-1 Communications and Coordination

FERC Order 693

- Include a Requirement for the reliability coordinator to assess and approve actions that have impacts beyond the area views of transmission operators or balancing authorities; **This requirement is covered in proposed IRO-014-2, R1.**
- Include distribution providers as applicable entities; **The proposed revisions do not include the DP entity because they are not applicable.**
- Require tightened communications protocols, especially for communications during alerts and emergencies. **This is to be covered in new COM-003 standard.**

IRO-001-0 Reliability Coordination – Responsibilities and Authorities

FERC Order 693

- o Reflect the process set forth in the NERC Rules of Procedures; and
- o Eliminate the regional reliability organization as an applicable entity. **Done**

Regional Fill-in-the-Blank Team Comments

- o Remove ", sub-region, or interregional coordinating group" from R1. **Proposing to retire the requirement.**
- o Consider removing "Standards of conduct are necessary to ensure the Reliability Coordinator does not act in a manner that favors one market participant over another." from the Purpose section of the standard. **Done**

V0 Industry Comments

- o Inability to perform needs to be communicated **Included in redline R9**
- o What is meant by 'interest of other entity'? **Proposing to retire the requirement.**

Violation Risk Factor Drafting Team Comments

- o R6 - Since the RC must be NERC certified, it stands to reason that anyone performing RC tasks should be certified. However, since the RC still retains the accountability for actions, and requirement 4 handles the agreements, this requirement is a medium risk. **Proposing to retire the requirement.**

IRO-002-0 Reliability Coordination – Facilities

FERC Order 693

- o Require a minimum set of tools that should be made available to reliability coordinators. **The development of a minimum set of tools should be addressed through the work of the Real-Time Tools Best Practices Task Force. Their charge was to develop a list of tools required to perform real time operations functions and submit SARs based on their work. As requirements for these tools are developed, appropriate standards projects will be initiated to incorporate the tools within the NERC Organization Registration and Certification Process, and the applicable reliability standards. The RC SDT submits that this directive be addressed in that effort. This action is accommodated by the Standards Development Work Plan.**

V0 Industry Comments **Proposing to retire these requirements.**

- o R5 – define synchronized information system
- o R7 – define 'adequate' tools and 'wide-area'
- o Words such as 'easily understood' and 'particular emphasis' need to be tightened

IRO-005-1 Reliability Coordination – Current Day Operations

FERC Order 693

- o Measures and Levels of Non-Compliance specific to IROL violations must be commensurate with the magnitude, duration, frequency and causes of the violations and whether these occur during normal or contingency conditions. IROLs are being handled in new IRO standards IOR-008 thru 010.
- o Conduct a survey on IROL practices and experiences; the Commission may propose further modifications to IRO-005-1 based on the survey results. The RC SDT is unaware whether any survey activities are being performed a this time.

VO Industry Comments

- o R10, 11 & 12 – RA not empowered to do this. Proposing to retire these as they are redundant with other requirements (see Implementation plan)

IRO-014-1 and IRO-015-1

There were no directives from FERC Order 693 nor were there any comments from VO.

IRO-016-1 Coordination of Real-Time Activities Between Reliability Coordinators

Violation Risk Factors Drafting Team Comments

- o R1.2.1 & R2 – ambiguous All of R1 has been moved into IRO-014 and rewritten for clarity

PER-004-0 Reliability Coordination – Staffing This standard is being revised in another SAR

FERC Order 693

- o Include formal training requirements for reliability coordinators similar to those addressed under the personnel training Reliability Standard PER-002-0;
- o Include requirements pertaining to personnel credentials for reliability coordinators similar to those in PER-003-0
- o Consider the suggestions of FirstEnergy and Xcel:
1413. FirstEnergy seeks revisions to the terms “shall have a comprehensive understanding” and “shall have extensive knowledge.” It states that it will be difficult for entities to demonstrate compliance with these terms. In addition, FirstEnergy suggests that the reliability coordinator staffing requirements should be located in the IRO Reliability Standards.
1414. Xcel states that emergency training requirements should be expressed in hour increments rather than days to allow for flexibility in scheduling training and coordinating with rotating shift schedules.

V0 Industry Comments

- o Calendar year timing increment
- o Other training needs to be defined

PRC-001-0 System Protection Coordination This standard is being revised in another SAR

FERC Order 693

- o Correct the references for Requirements
- o Include a requirement that upon the detection of failures in relays or protection system elements on the Bulk-Power System that threaten reliable operation, relevant transmission operators must be informed promptly, but within a specified period of time whereas generator operators must also promptly inform their transmission operators
- o Clarify that, after being informed of failures in relays or protection system elements that threaten reliability of the Bulk-Power System, transmission operators must carry out corrective control actions, i.e., return the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes after they receive notice of the failure

V0 Industry Comments

- o Effects on reliability may not be known
- o Consistent terminology as to neighbor vs. affected
- o Not all criteria moved over from policies

Comment Background and Questions for Reliability Coordination — Project 2006-06

Comments must be submitted by **September 16, 2008**. If you have questions please contact Stephen Crutchfield at stephen.crutchfield@nerc.net or by telephone at 609-651-9455.

Background Information:

The Reliability Coordination Standards Drafting Team was tasked with ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; and to ensure that this set of requirements is sufficient to maintain reliability of the Bulk Electric System. The SAR also called for revisions to the group of Standards based on FERC Order 693.

During the course of the project, the NERC Standard Staff revised the Reliability Standards Work Plan and noted several areas of overlapping scope between certain projects. The original SAR for Project 2006-6 called for revisions to PER-004 (Reliability Coordination – Staffing) and PRC-001 (System Protection Coordination). Based on the scope overlap of the teams involved, it was determined that PER-004 would best be served by moving all of the proposed scope to Project 2006-1, System Personnel Training. Similarly, it was determined that PER-004 would best be served by moving all of the proposed scope to Project 2007-6, System Protection.

The RC SDT has Standards that are impacted by the work of the IROL Standards Drafting Team and the standards that they have developed and the modifications they've proposed to some of the IRO standards. The RC SDT is recommending further revisions to the IRO standards and coordinated these changes with the IROL SDT. We have noted revisions made to the standards by the IROL SDT in our documents.

A summary of the proposed revisions to the Standards remaining in Project 2006-06 is:

COM-001-2

The RC SDT revised the standard and is proposing retiring three requirements (R1, R5 and R6). Changes were made to eliminate redundancies between standards (existing and proposed), align with NERC's Rules of Procedure and to address issues in FERC Order 693.

COM-002-3

The RC SDT proposes retiring this standard. The RC SDT contends that COM-002-2, R1 and its subrequirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. The Operations Communications Protocols SDT is addressing R2. They plan to modify the requirement and place the modified requirement in a new standard, COM-003-1. Requirement 2 will remain in place until COM-003-1 is approved.

IRO-001-2

The RC SDT revised the standard and is proposing retiring several requirements (R1, R2, R4, R5, R6, R7 and R10). Changes were made to eliminate redundancies between standards (existing and proposed), align with NERC's Rules of Procedure and to address issues in FERC Order 693.

IRO-002-2

The RC SDT revised the standard and is proposing retiring several requirements (R1, R3, R4, R5, R6, R7 and R8). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERC's Rules of Procedure and to address issues in FERC Order 693.

IRO-005-2

Many of the requirements in this standard will be retired under the IROL SDT work plan. The RC SDT proposes retiring other requirements and moving R6 and R15 to IRO-001-2. This will retire or move all requirements in this standard. The RC SDT proposes retiring the standard.

IRO-014-2

The RC SDT revised the standard and is proposing retiring two requirements (R3 and R4). New requirements were brought into this standard from IRO-015-1 (R1-R3) and IRO-016-1 (R1 and its sub requirements). Changes were made to eliminate redundancies between standards (existing and proposed), eliminate administrative items, align with NERC's Rules of Procedure and to address issues in FERC Order 693.

IRO-015-2

The RC SDT recommends retiring Standard IRO-015 and moving all requirements to IRO-014-2.

IRO-016-2

The RC SDT recommends retiring this Standard. The requirements listed in R1 and its sub-requirements were incorporated into IRO-014-2 as new requirements. The RC SDT recommends retiring R2 because it is a measure of performance of R1.

The Reliability Coordination Drafting Team would like to receive industry comments on the Requirements, Measures and Violation Severity Levels of this group of standards. Accordingly, we request that you submit your comments electronically by **September 16, 2008**.

Comment Form — Reliability Coordination Project 2006-06

1. Do you agree with the revisions to the Requirements in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

While we agree that most of the requirements are redundancies that properly belong elsewhere, we are concerned that Requirement 4 and Requirement 8 are not properly represented elsewhere and should not be retired until they re-surface in another standard explicitly. We believe it is still very important for an RC to monitor their respective BAs reserves and CPS performance. Likewise in R8, while the frequency monitoring is a BA function, we think that it is important enough to also be included as an RC function explicitly.
Yes

Yes
No
M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.
No
(i) R1: Suggest to revise the conditions for all levels to read "...failed to operationally test the alternative communication facilities within the last..... (ii) R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affected entities, then the second condition should be an "OR". (iii) R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time

operations by itself does not constitute a violation of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.
Yes
Yes
Yes
No
(i) R2: the phrase "act without intentional delay" is not necessary since the urgency of taking any actions as directed by the RC's are generally understood to be conveyed in the RC's directives. (ii) R3: Given R2 requires the responsible entities to comply with the RC directives, the part that says "immediately confirm the ability to comply with the directive or" is not needed. R3 should simply require the responsible entities to notify the RC upon recognition of the inability to perform the directive. (iii) The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).
No
Wording in some of the Measures needs to be revised to reflect changes to R2 and/or R3, if our proposed changes are accepted. Also, we suggest the Requirement numbers be referenced in the Measures.
No
(i) R1: There should not be any distinction made between an RC acting and an RC directing others to act. Failure to mitigate adverse reliability impacts a severe violation of the requirement. We therefore suggest to revise the High and Severe levels as: High if the RC did not act or direct actions to prevent an Adverse Reliability Impact; Severe if the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact. (ii) R2: The High VSL seems contradictory to the requirement, which already has provision of not fully complying with the RC directives due to safety, equipment, or regulatory or statutory requirements. (iii) R3: We have proposed some wording change to R3, which if adopted, would precipitate a need to revise the VSLs for R3 accordingly. (iv) R4 and R5: The VSLs for these two requirements could be graded by assessing the number and/or timing of notifying the affected entities.
No
(i) R1: There is a duplicating requirement in TOP-005 R1.1. Suggest to eliminate one of the two. (ii) We do not agree with eliminating all of R5 to R8. There is a fundamental need for RCs to monitor its area, and even some portion of its adjacent areas to be aware of situations that require preventive and mitigating actions. While arguments can be made that requiring RCs to prevent and mitigate adverse reliability impacts would imply monitoring, the latter is a fundamental duty of any RCs to ensure system reliability. If monitoring is not explicitly stated as a requirement, then the same argument may be extended to training and operational facilities. We do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. Measuring can be illustrated, for example, by a compliance audit to review system logs and assess the extent to which an RC follows and assesses system conditions.
No
(i) M1: We suggest to change the word "letter" to "documented request" (ii) If our recommendations to retain some of R5 to R9, some measures will need to be provided.
No
(i) R1: The wording for Low VSL is contradictory (e.g. it determined and requested in the first part but did not request in the second part). Suggest to revise it. (ii) R1: We suggest to grade the VSLs according to the extent to which the percentage of data specification and/or the number of entities not requested. (iii) R2: The RC either has the right or it doesn't, and hence it's a binary requirement. The VSL should be developed accordingly. Further, the wording for the Severe VSL does not correspond to the requirement and measure. The condition should simply be that the Reliability Coordinator failed to demonstrate that it had the authority to veto planned outages to analysis tools, including final approvals for planned maintenance.
No
(i) R1: We do not agree with removing this requirement for the same reason given for the proposal to remove R5 to R8 from IRO-002 (see comments on 10 (ii), above). (ii) R8: We do not agree with completely removing this requirement, especially that part that requires an RC to monitor system frequency. While DCS and CPS are largely a BA's responsibility, the RC is the last line of defence for abnormal system performance and needs to monitor its BAs' performance including their ability to address large frequency deviations, and direct or take corrective actions as needed including requesting emergency assistance on the BAs' behalf and directing load shedding. (iii) R9: The second part of this requirement needs to be retained. IRO-004 covers operational planning, not current day operations. Coordinating pending generator and transmission facility outages is an essential and necessary task by the RC to ensure reliability. (iv) R11: The RC needs to monitor ACE, detect and identify the cause of any abnormal

ACE, and direct its BAs to take necessary actions to return ACE to within a normal range. (v) R13: We do not agree with removing the latter part of R13. The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set exists is a necessary requirement for reliable operation.
No
We suggest to replace the word "impacted" with "other" since there is a preconception that the concerned RC makes an assessment of which other RCs are impacted by the coordinated actions, which may not be the perspective of the other RCs who may in fact be impacted by any coordinated actions among other RCs.
No
Measure 1 actually contains a number of subrequirements that should be stipulated in R1, not M1. If indeed these are required, they should be stipulated in the Requirement section, not the Measures Section.
No
(i) R2: the High and Severe VSLs contradict with the requirement. We believe all of the "nots" should be removed. (ii) R6: The Low VSL should be a High since not agreeing to a plan but implementing one that has not been agreed to is a high violation of the requirement. (iii) The VSLs for R1 may need to be revised if our comments on M1 are adopted.

on Measure 3 need to remove the word "all" in reference to voice logs. Measure needs to include evidence of concurrence for using a language other than English
Yes
No
measures do not align with VSL's (see question 9)
No
R1 talks about "shall act or direct actions to be taken". High VSL - failure to act. Severe VSL - failure to act and direct. Does "act" mean any action taken short of issuing a directive? Change Severe VSL to failure to act or direct and eliminate the High VSL all together. R2 delay in issuing a directive due to equipment problems should be included in the moderate VSL and the body of the requirement and in the measure. The High VSL should be removed because not following the directive for equipment failure is allowed per R2. R5 - Severe VSL should be changed to moderate VSL since the problem has been mitigated and the system is stable and it does not adversely impact reliability. M3 talks about the ability of reliability entities to meet a directive. What constitutes evidence that confirms you are able to immediately comply with the directive? If the entity agrees to the directive and then is unable to comply due to events outside of their control, such as a CT not starting, do they meet the measure? If the entity, based on the circumstances at the time of the directive, agrees to comply in good faith are they compliant? The Lower VSL should be made N/A because it is not practical for an entity to immediately confirm they are able to meet the directive in all cases.
No

for R1, this should be 2 separate requirements and measures. R1 should have a methodology for determining what data is needed and then a R2 should be a requirement to request this data from the reliability entities.

Yes

add measures for R1 & R2 see question 10

R3 should include in the last sentence that the Generator Operator and Distribution Provider may use alternate language for internal operations.

No

M3 should include Generator Operator and Distribution Provider in the applicability.

Yes

Yes and No

Remove Generator Operator from the Purpose Statement. The re-written standard no longer applies to GOP.

Yes

disregard of the requirement. The measure and VSLs do not consider the exceptions for not following the RC objective. The drafting team should consider combining requirements R2 and R3. Thus, one VSL would become failure to notify the RC of the inability to comply. The drafting team could consider applying the numerical category of VSLs for some directives such as an order to redispach. Obviously, it would not work well if the directive was to reconfigure the system. SDT Proposed Lower VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL The responsible entity followed the Reliability Coordinators directive with a delay not caused by equipment problems. CEDRP Proposed VSL The team does not agree that this is a valid VSL. SDT Proposed High VSL The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements. CEDRP Proposed VSL The team does not agree that this is a valid VSL. The word majority implies some ability to numerically measure the response to the directive. Thus, the drafting team should consider applying the numerical category of the VSL guidelines. SDT Proposed Severe VSL The responsible entity did not follow the Reliability Coordinators directive. CEDRP Proposed VSL The responsible entity did not follow the Reliability Coordinators directive, the directive would not have violated safety, equipment, regulatory, or statutory requirements, and responsible entity did not communicate the inability to follow the directive to the Reliability Coordinator. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? No Standard - IRO-001 R3 Requirement (including sub-requirements) The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the Reliability Coordinator upon recognition of the inability to perform the directive. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, informed the Reliability Coordinator upon recognition of the inability to comply. Attributes of the requirement Binary Timing Omission Communication X Quality Other Discussion – The requirement appears to be based on communication and can be problematic by including the requirement to immediately confirm the ability to comply, a directive can be issued to one entity or several entities at one time (e.g. conference call, all call, electronic notification) that may create several issues when attempting to process all confirmations, the requirement language presents a risk of being found out of compliance for following a directive but not providing an "immediate" confirmation to the RC. The CEDRP believes it to be a reasonable expectation that all entities will comply with reliability directives and notification should be made only on exception. The SDT should consider combining this requirement with R2. SDT Proposed Lower VSL The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator. CEDRP Proposed VSL See above discussion note SDT Proposed Moderate VSL N/A CEDRP Proposed VSL No comment SDT Proposed High VSL N/A CEDRP Proposed VSL No comment SDT Proposed Severe VSL The responsible entity failed to inform the Reliability Coordinator upon recognition of the inability to perform the directive. CEDRP Proposed VSL No comment FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? As currently worded the CEDRP believe that the requirement should be changed to eliminate that "immediate confirmation" portion of the requirement 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? No Standard - IRO-001 R4 Requirement (including sub-requirements) Each Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area. Attributes of the requirement Binary Timing X Omission Communication X Quality Other Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. This requirement appears to fit the numerical category of the VSL guidelines best. SDT Proposed Lower VSL N/A CEDRP Proposed VSL The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. SDT Proposed Moderate VSL N/A CEDRP Proposed VSL The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. SDT Proposed High VSL

N/A CEDRP Proposed VSL The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. SDT Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard - IRO-001 R5 Requirement (including sub-requirements) Each Reliability Coordinator who identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when the real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area has been mitigated. Attributes of the requirement Binary Timing X Omission Communication X Quality Other Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. Measure 5 is written implying that there is an Adverse Reliability Impact. The drafting team should consider wording the measurement to consider that there may not be an Adverse Reliability Impact requiring a directive. The Commission in paragraph 27 of the VSL order has stated that multiple VSLs are preferable where possible. Suggest applying the numerical category of the VSL Guidelines based on the number of entities notified.. SDT Proposed Lower VSL: N/A CEDRP Proposed Lower VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. SDT Proposed High VSL: N/A CEDRP Proposed High VSL: The Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. SDT Proposed Severe VSL: The Reliability Coordinator failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated. CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? N/A 4. If yes, is the VSL assignment consistent with other binary requirement assignments? N/A 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – IRO-002-2 R1 Requirement (including sub-requirements) Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a letter to Transmission Operators, Balancing Authorities, Transmission Owners, Generator Owners, Generator Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has requested the data required to support its reliability coordination tasks. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion – The VSLs attempt to measure the quality of the data requirements. They require the compliance auditor to judge if another RC has material impact and what data is administrative and what data is substantial. Given the typical length of a compliance audit, it is doubtful that the compliance auditor can make these types of judgments about the quality of the data and the material impact of another RC. The drafting team should consider applying numerical category of VSLs based on the number of entities the data request is made from. It is

interesting that the measure also does not require any documentation of a data specification. SDT Proposed Lower VSL: The Reliability Coordinator demonstrated that it 1) determined its data requirements and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with a material impact on the Bulk Electric System in its Reliability Coordination Area but did not request the data from Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with minimal impact on the Bulk Electric System in its Reliability Coordination Area or 2) determined its data requirements necessary to perform its reliability functions with the exceptions of data that may be needed for administrative purposes such as data reporting. CEDRP Proposed Lower VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from 25% or less of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. SDT Proposed Moderate VSL: The Reliability Coordinator demonstrated that it determined the majority but not all of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators. CEDRP Proposed Moderate VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 25% but less than or equal to 50% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. SDT Proposed High VSL: The Reliability Coordinator demonstrated that it determined 1) some but less than the majority of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators Or 2) all of its data requirements necessary to support its reliability coordination functions but failed to demonstrate that it requested data from two of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators. CEDRP Proposed High VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 50% but less than or equal to 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. SDT Proposed Severe VSL: The Reliability Coordinator failed to demonstrate that it 1) determined its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators Or 2) requested the data from three or more of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators. CEDRP Proposed Severe VSL: The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, Or, The Reliability Coordinator failed to determine data requirements to support its reliability coordination tasks. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-002-2 R2 Requirement (including sub-requirements) Each Reliability Coordinator shall have the authority to veto planned outages to analysis tools, including final approvals for planned maintenance. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Proposed Measure Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement 2. Attributes of the requirement Binary Timing Omission Communication Quality Other X Is this requirement needed? R1 IRO-001-2 requires the RC to mitigate Adverse Reliability Impacts. R2 IRO-001-2 requires responsible entities to comply with the RC directives. Wouldn't the RC thus have the right to cancel all types of outages (i.e. analysis tools, transmission equipment, etc). FERC has stated in paragraph 112 of Order 693-A that an RC does not derive their authority from agreements but rather from FERC's approval of the standards. Barring the team's decision to remove this requirement, the Severe VSL is confusing. We have suggested different wording. SDT Proposed Lower VSL Reliability Coordinator has approval rights for planned outages of analysis tools but does not have approval rights for maintenance on analysis tools. CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL N/A CEDRP Proposed VSL No Comment SDT Proposed High VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Severe VSL Reliability Coordinator approval is not required for planned maintenance or planned outages. CEDRP Proposed VSL Reliability Coordinator does not approve planned maintenance or planned outages. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated

requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R1 Requirement (including sub-requirements) R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning] R1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. R1.2. Energy and capacity shortages. R1.3. Planned or unplanned outage information. R1.4. Voltage control, including the coordination of reactive resources for voltage control. R1.5. Coordination of information exchange to support reliability assessments. R1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. Proposed Measure M1. The Reliability Coordinator's System Operators shall have available for Real-time use, the latest approved version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators. M1.1 These Operating Procedures, Processes, or Plans shall address: M1.2 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. M1.3 Energy and capacity shortages. M1.4 Planned or unplanned outage information. M1.5 Voltage control, including the coordination of reactive resources for voltage control. M1.6 Coordination of information exchange to support reliability assessments. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. Attributes of the requirement Binary Timing Omission x Communication x Quality Other Discussion – The CEDRP has no recommendations regarding this requirement. SDT Proposed Lower VSL: The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one or two of the subrequirements. CEDRP Proposed Lower VSL: No Comment SDT Proposed Moderate VSL: Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three or four of the subrequirements. CEDRP Proposed High VSL: No Comment SDT Proposed High VSL: The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address five of the subrequirements. CEDRP Proposed High VSL: No Comment SDT Proposed Severe VSL: The Reliability Coordinator failed to have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. CEDRP Proposed Severe VSL: No Comment FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R2 Requirement (including sub-requirements) R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: [Violation Risk Factor: Lower] [Time Horizon: Real-time Operations and Operations Planning] R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s). R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s). Proposed Measure M2. The Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were: M2.1 Agreed to by all the Reliability Coordinators required to take the indicated action(s). M2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s). Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion – The High and Severe VSLs appear to use "not" incorrectly. SDT Proposed Lower VSL N/A CEDRP Proposed VSL No Comment SDT Proposed Moderate VSL: The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action. CEDRP Proposed Moderate VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action. SDT Proposed High VSL: The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action CEDRP Proposed High VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action SDT Proposed Severe VSL: The Reliability Coordinator failed to have evidence that

the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action and were not distributed to all Reliability Coordinators that are required to take action

CEDRP Proposed Severe VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action and were distributed to all Reliability Coordinators that are required to take action

FERC Guidance for VSLs

1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned?
2. Is the VSL assignment a binary requirement?
3. Is it truly a “binary” requirement?
4. If yes, is the VSL assignment consistent with other binary requirement assignments?

6. Does the VSL redefine or undermine the stated requirement?
7. Is the VSL based on a single violation of the requirement (not multiple violations)?

Standard – IRO-014-2 R3 XXX-XXX Requirement (including sub-requirements) R3. The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]

Proposed Measure M3. The Reliability Coordinator shall have evidence it made notifications and exchanged reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion: The VSLs appear to be appropriate. Since the only difference is the use of the “and” and “or”, we suggest emphasizing those words in bold. We read this more than once before we noticed the difference.

SDT Proposed Lower VSL N/A CEDRP Proposed VSL N/A SDT Proposed Moderate VSL N/A CEDRP Proposed VSL N/A SDT Proposed High VSL: The Reliability Coordinator failed to make notifications or exchange reliability-related information with impacted Reliability Coordinators. **CEDRP Proposed High VSL:** The Reliability Coordinator failed to make notifications or exchange reliability-related information with impacted Reliability Coordinators. **SDT Proposed Severe VSL:** The Reliability Coordinator failed to make notifications and exchange reliability-related information with impacted Reliability Coordinators. **CEDRP Proposed Severe VSL:** The Reliability Coordinator failed to make notifications and exchange reliability-related information with impacted Reliability Coordinators. **FERC Guidance for VSLs**

1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned?
2. Is the VSL assignment a binary requirement?
3. Is it truly a “binary” requirement?
4. If yes, is the VSL assignment consistent with other binary requirement assignments?
5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised?
6. Does the VSL redefine or undermine the stated requirement?
7. Is the VSL based on a single violation of the requirement (not multiple violations)?

Standard – IRO-014-2 R4 XXX-XXX Requirement (including sub-requirements) R4. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted Reliability Coordinators. [Violation Risk Factor: Lower][Time Horizon: Real-time Operations] The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.

Proposed Measure M4. The Reliability Coordinator shall have evidence it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators. Attributes of the requirement Binary Timing X Omission X Communication X Quality Other Discussion – This requirement is purely administrative and probably does not rise to a level of a reliability standard requirement. It is in essence redundant, with R1.1 IRO-014-2? It appears R1.1 addresses the same information that would be expected to be discussed in a weekly conference call. Should the drafting team disagree and retain this requirement, please consider applying multiple VSLs based on how often the RC participates in conference calls, how many they missed, or how many impacted RCs they participated in conference calls with.

SDT Proposed Lower VSL: The Reliability Coordinator failed to participate in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators. **CEDRP Proposed Lower VSL:** The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators bi-weekly, Or the Reliability Coordinator failed to participate in one weekly conference call, Or the Reliability Coordinator agreed to participate in conference calls with 25% or less of the impacted Reliability Coordinators. **SDT Proposed Moderate VSL:** N/A **CEDRP Proposed Moderate VSL:** The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators every third week, Or the Reliability Coordinator failed to participate in two weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 25% but less than or equal to 50% of the impacted Reliability Coordinators. **SDT Proposed High VSL:** N/A **CEDRP Proposed High VSL:** The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators fourth week, Or the Reliability Coordinator failed to participate in three weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 50% but less than or equal to 75% of the impacted Reliability Coordinators. **SDT Proposed Severe VSL:** N/A **CEDRP Proposed Severe VSL:** The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators at least every fifth week, Or the Reliability Coordinator failed to participate in four weekly conference calls, Or the Reliability Coordinator failed to agree to participate in any conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 75% but less than 100% of the

impacted Reliability Coordinators. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R5 XXX-XXX Requirement (including sub-requirements) R5. When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the impacted Reliability Coordinators. In the event that the issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] Proposed Measure The Reliability Coordinator shall have evidence that, in cases when an expected or actual reliability issue was detected, it has confirmed the existence of the issue with the impacted Reliability Coordinators. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion – This requirement is confusing in the way it is worded. We think it is trying to say that the RC should operate as though the reliability issue (should this be Adverse Reliability Impact) is detected until the issue is confirmed not to exist. The way it is worded might imply that if one doesn't confirm it to exist, operate as though it does. This leaves open the interpretation that a confirmation that it doesn't exist must still be operated to as though it does exist. The drafting team should consider splitting operating to prevent from operating to mitigate an existing event in the VSLs. SDT Proposed Lower VSL The Reliability Coordinator that detected an expected or actual reliability issue contacted the other Reliability Coordinator(s) to confirm that there was a problem but could not confirm that the problem existed and failed to operate as though the problem existed. CEDRP Proposed VSL N/A SDT Proposed Moderate VSL N/A CEDRP Proposed VSL N/A SDT Proposed High VSL N/A CEDRP Proposed VSL The Reliability Coordinator that detected an expected reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. SDT Proposed Severe VSL The Reliability Coordinator that detected an expected or actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. CEDRP Proposed VSL The Reliability Coordinator that detected an actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Standard – IRO-014-2 R6 XXX-XXX Requirement (including sub-requirements) When an expected or actual reliability issue exists and the impacted Reliability Coordinators cannot agree on a mitigation plan, all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] Proposed Measure The affected Reliability Coordinators shall have evidence that, in cases when an expected or actual reliability issue existed and the impacted Reliability Coordinators could not agree on a mitigation plan, they implemented the mitigation plan developed by the Reliability Coordinator who has the reliability issue. Attributes of the requirement Binary Timing Omission X Communication X Quality Other Discussion: We are concerned the validity of this requirement, it may force an RC to implement a solution that they don't agree with and ultimately result in an Adverse Reliability Impact. The RC may not agree with the solution because it may not be reliable for their footprint. They need to have the ability to veto mitigation plans that cause Adverse Reliability Impacts in their footprint without incurring a compliance violation. SDT Proposed Lower VSL The Reliability Coordinator did not agree on a mitigation plan and implemented a plan other than the one developed by the Reliability Coordinator who had the reliability issue. CEDRP Proposed VSL N/A SDT Proposed Moderate VSL N/A CEDRP Proposed VSL N/A SDT Proposed High VSL N/A CEDRP Proposed VSL N/A SDT Proposed Severe VSL The Reliability Coordinator did not agree on a mitigation plan and did not implement a mitigation plan. CEDRP Proposed VSL What if the RC is correct in disagreeing and the mitigation plan would have caused an Adverse Reliability Impact on their system? FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? 2. Is the VSL assignment a binary requirement? 3. Is it truly a "binary" requirement? 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? 6. Does the VSL redefine or undermine the stated requirement? 7. Is the VSL based on a single violation of the requirement (not multiple violations)?

MRO NERC Standards Review Subcommittee

Terry Bilke

MidwestISO

No

The new R2 requirement is too verbose. We suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted

parties if the alternate communications means are not functional. This clause is similar to the old requirement one that the drafting team appropriately struck. We tend to agree that striking R1 makes sense due to the drafting team's reasoning. However, we are not clear why the new R4 is necessary then. If the drafting team does not believe R1 is necessary shouldn't they respond to the FERC directive with the same reason why R4 is not really necessary? The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF. In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "... is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."

No

M4 does not appear to be worded as a measurement. If R4 is kept, we suggest the following modification: "The Distribution Provider and Generation Operator shall demonstrate the existence of its telecommunication systems identified in R4."

No

The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter." The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2.

Yes

Yes

Yes

No

New requirement R2 should omit act without intentional delay. The desired outcome is for the responsible entity to comply with the RC directive. Adding act without intentional delay only confuses the situation and adds questions. What is an intentional delay? The word act implies that the requirement is met simply if the responsible entity attempted to meet the directive but was unable to do so. That is already considered in with the clause that begins "unless such actions would violate ...". Thus, the word act is not necessary. The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not functional properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violated safety, equipment, statutory, or regulatory requirements. Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverst Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary.

No

Some compliance auditors have been taking the need for evidence to the extreme. We have encountered actual situations where if a measure states evidence shall be provided for requirements that are event based. the

compliance auditor expected evidence even if no event occurred. For example, some RCs rarely issue directives. As M1 is written, some compliance auditors would require the RC to provide evidence that no reliability directives were issued. This is not possible. We suggest modifying the measurement to: Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area if needed. If there were no directives issues (assuming there are no complaints or evidence to the contrary of the need to issue a directive), no evidence is necessary."

No

The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don't believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact. The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements. In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL. In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses "that, as a general rule, graduated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels". Given that it is possible to define graduated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.

No

New Requirement R1 is duplicate to the requirement TOP-005-1 R1.1. If the drafting team can't delete TOP-005-1 R1.1, they should notify other appropriate drafting teams of the need to remove the requirement. We do not agree with eliminating requirements R5, R6, R7, and R8 in their entirety. The requirements as they are written are problematic. However, we do believe that there is a need for a basic requirement to monitor the system. The requirements should be that the RC should compare actual system flows to SOLs and IROLs. While some will argue SOLs are not the responsibility of the RC, failure to monitor SOLs could cause the RC to miss unknown IROLs since an SOL can become an IROL. Several SOL violations in a given area also can be indicative of a broader system problem the RC should be addressing. We also do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. It is very easy to measure. As an example, a compliance auditor could select a day and an SOL or IROL and ask for the system flows from that day or hour etc. This is generally easy for any RC to produce with today's data archiving software. We believe that there should be a requirement that the RC have a state estimator and real-time contingency analysis as well (RTCA). The drafting team needs to be careful in the construction of these requirements to make them practical and measurable. For instance, making the requirement to have a state estimator and RTCA is measurable in that the compliance auditor can verify their existence but this is not stringent enough because they may only run once a week. At the same time, if we create a requirement that SE and RTCA must run every 5 minutes, we could inadvertently create a requirement that any missing 5 minute run of RTCA and SE could be construed as a violation. There also needs to be a requirement that there is a real-time assessment of voltage as well. New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.

No

Measure 1 should not focus on a letter as evidence. A more appropriate measure would be a data specification document and actual verification that data has been received. The letter or equivalent is only needed if data has not been supplied. Demonstration of the actual receipt the data would be easy. Requirement 2 is not needed and thus Measure 2 is not needed per paragraph 112 of Order 693-A. Additional measures are needed to address the proposed requirements in question 10.

No

For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the

administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document. We suggest that the VSLs should be: Severe: The RC did not determine its data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. R2 VSLs are not needed per paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.

No

R1 includes many requirements for monitoring the system that are important, measurable and should be retained. Monitoring is too critical to operating the system to completely eliminate these requirements. R4, R8 and R11 are problematic as currently written. However, there have been actual instances of a large BA intentionally operating short hundreds of MWs of energy. I believe this occurred during the summer of 1999. Thus, the RC should be monitoring the BAs ACE and directing the BA to correct it if it becomes too large. It is not necessary or even useful for the RC to monitor the BA CPS performance.

No

Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A. Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary? Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be addressed per R1.1. R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm. R6 appears to be a rewrite of requirements R1, R2 and their sub-requirements in IRO-016. We agree that those requirements do need to be written more succinctly or removed altogether. However, R6 does not accomplish the goal and only confuses that matter further. The reason the RCs may not be able to agree on a mitigation plan is that RC with the reliability issue may be requesting mitigations that the other RCs believe may cause them reliability issues. This requirement appears to suggest that the solution to a disagreement on the mitigation plan is cut and dried. Generally, the reason the disagreement arises is due to one RC not fully understanding the impact of their actions on another RC. The bottom line is that the RCs may have disagreements and there is no way to require a solution in these types of situations. Please revise R6 to require using the mitigation plan developed by the Reliability Coordinator who has the reliability issue provided that the mitigation plan does not cause a reliability issue in the other region. As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance.

No

Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. There should be the single measurement to verify the Operating Processes, Procedures, and Plans have been developed and address the sub-requirements. This really points out the problem with making the criteria that must be considered in the Operating Processes, Procedures, and Plans sub-requirements in the first place. They aren't requirements of any sort. They represent criteria. The drafting team should consider making them a bulleted list without the Rs, then the drafting team won't feel compelled to write sub-measures that don't measure anything. We do not agree with M6 because we don't agree with R6.

No

For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed. We don't agree with the VSLs in R4 since we believe R4 should be struck. The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.

Yes
Yes
We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-2.
Group
Southern Company Transmission
Jim Busbin
Southern Company Services, Inc.
No
1.1 - In R1, we suggest that "operationally test by way of operator action" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities". 1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. The VSL should be consistent with the language of the requirement. A very short, insignificant telecom outage with no notification could result in a severe violation as the requirement is presently written and VSL's applied. 1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated. 1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.
No
2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards. 2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. 2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements.
Yes
3.1 - The expanded list of entities recommended in comment 1.3 and 1.4 need to be included the VSLs 3.2 - The Severe VSL for R2 should be corrected. Add the word 'to' as follows: "...and failed to verify the ..."
No
4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3: 4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard. 4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2. 4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to measure. We suggest they be replaced with "the RC shall direct". 4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1). 4.6 - Grammatical changes are suggested. The revised requirement reads as follows: "To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications; to ensure that these communication capabilities are staffed and available for addressing a real-time emergency condition; and to ensure effective communications by operating personnel." 4.7 - At the Data Retention section, the reference to 'Requirement 3, Measure 3' should be consistent with the modified standard. The revised standard only has one requirement. 4.8 - The use of calendar days in the Data Retention section is inconsistent with related standards where 'months' are used.
No
5.1 - The measures need to be revised to match the new requirements.
No
6.1 - The severity levels need to be revised to match the new requirements.
No
7.1 - Applicability 4.2 - Transmission Operator should be plural. 7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process. 7.3 - In R2 insert the word "its" before Reliability Coordinator. 7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.

No
8.1 - In M2 and M3, Add Distribution Provider. 8.2 - In M2 add "intentional" between "without" and "delay". 8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator. 8.4 - In M5, change "has" to "had".
No
9.1 - R1 is a binary requirement and should have only a severe VSL. The RC either acts or he doesn't - If he fails to act, he fails to direct and mitigate the problem by default. 9.2 - R2 VSLs need to be rewritten to recognize that some directives may not be followed because of safety, regulatory or statutory requirements. 9.3 - Remove the Lower severity level in R3 to conform to changes in R3 and M3.
No
10.1 - We propose that R1 and R2 should be moved to the RC Certification Procedure and this standard retired. If this standard is not retired then we recommend Comments 10.2 and 10.3. 10.2 - At Requirement R2, the RC is given 'veto' authority. Is a standard an appropriate place to give this type of authority? 10.3 - The revised Purpose basically provides that the RC will have access to information and control of analysis tools. What is the correlation of information/control to veto authority/approval of planned maintenance?
No
11.1 - Moving R1 and R2 to the RC Certification Procedure, will eliminate measurement requirements.
No
12.1 - Moving R1 and R2 to the RC Certification Procedure, will eliminate VSL requirements.
Yes
13.1 - We agree with retiring this standard.
No
14.1 - R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? 14.2 - We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. 14.3 - We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly. 14.4 - R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous" or a similar term. 14.5 - We suggest rewriting R5 to read: In the event that a reliability issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists. 14.6 - At Requirement R1, the use of the phrase "as a minimum" seems to add some flexibility for development of procedures, processes and plans. A negative consequence is that it introduces more ambiguity. The recommendation is to strike the phrase. 14.7 - At Requirement R1.6, consider the following: "Authority to act to prevent and mitigate instances 'that have the potential to cause' Adverse Reliability Impacts to other Reliability Coordinator Areas."
No
15.1 - In M1, delete "for Real-time use". 15.2 - Modify the measures to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
No
16.1 - In R2, severe should be "... and no action was taken by the RC". 16.2 - In R5, severe should also include "... or that the RC failed to operate as though the problem existed." 16.3 - Modify the VSLs to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
Yes
17.1 - We agree with the recommendation to retire IRO-015-2.
Yes
18.1 - We agree with the recommendation to retire IRO-016-2.
19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability.

We beleive the word "threat" shoudl be replaced with "events" in Requirements 4 and 5.
Yes and No
Suggest changing with word "request" to "document" in Requirement 1.
Yes
Yes and No
As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.

The drafting team should consider expanding the second sentence of R3 to apply to internal communications of any affected entity not just BAs and TOPs.
Yes
No
PER-003 R1 does not specifically addresss delegated functions; therefore, this requirement is not redundant with IRO-001 R6 without changes to PER-003 to specifically deal with employees performing delegated functions.
Yes
No

The VSL for R2 does not seem consistent with the language in the requirement. It is not clear why the entity should be subject to a high VSL if the entity did not comply with an RC directive due to safety or regulatory prohibition, and made the RC aware of same.

No

IRO-002-1 R9, the deleted language of the second sentence is not adequately covered by the language in EOP-008-0 R1, unless those outages are tied to the loss of a control center. EOP-008-0 is in the process of being revised and this language could be included in the revision, but it isn't adequately addressed by the version 0 standard.

Directives that are mandatory under R2 of IRO-001-2 should have boundaries consistent with the proper role of an RC. For example, if an RC directs an LSE with a 15% planning reserve margin to execute purchase power agreements until its reserve margin is at least 20% and the LSE refuses, then the LSE may have violated this standard. Other examples of improper RC directives are directives to increase coal inventories, buy firm fuel transportation rights, reconductor transmission lines, purchase spare equipment, etc. Granted entities may be able to conjure up a regulatory or statutory basis for refusing many improper RC directives but in some instances there may be no permissible grounds to refuse. The appropriate solution is to modify the standard to ensure that improper directives are never mandatory in the first place. Specifically, NERC is urged to state that RC directives are mandatory only if they pertain to specific categories such as: switching orders to reconfigure the BES, orders to postpone scheduled outages of BES equipment, orders to change generator output, orders to curtail transactions or orders to curtail load.

No

The M2 measure should not mandate compliance with RC directives that are improper as defined in my response to question 7.

My other concerns are addressed in the comments of the SERC OC Standards Review Group.

M3 should include providing evidence of concurrence to use a language other than English. This will better align the measure with the VSL language.
Yes
No
R1 states the RC must act OR direct. The R1 VSL's attempt to distinguish between act and direct. The requirement allows for either action. I suggest that the High VSL be removed and replaced by an N/A. The Severe VSL should be amended so that the words "act and direct" are replaced by the words "act OR direct" as is consistent with the requirement and the measure. R2:The moderate VSL introduces the phrase "equipment problems" for the first time in the Standard. "Equipment Problems" needs to be included in the Requirement, R2, and defined in the Measure for R2. R5: The Severe VSL needs to be moved to the Moderate category. This condition does not constitute an Adverse Reliability Impact that severely threatens the BES.
Yes
No
R1: The Requirement and VSL's mention that the RC will determine it's data needs. Yet the Measure for R1 does not mention this, it only mentions the RC requesting the data from it's member emities. This Measure needs to include a measure for how the RC determines it's data needs.
Yes
I appreciate the new comment form in Word version. his allows me to comment on each requirement specifically addressing the requirement, measure or the VSL's

Purpose Distribution Providers and Generator Operators were added to the applicability; the Purpose should be revised to reflect that.
Yes
Yes
No
Purpose Since Generator Operators were deleted from the applicability; the Purpose should be revised to reflect that and include Reliability Coordinators. The language is somewhat redundant, recommend it be simplified to "To ensure Balancing Authorities, Reliability Coordinators, and Transmission Operators communicate in an effective manner."
Yes
Yes
No
R4. and R5. Both of these Requirements use the phrase "without intentional delay" to describe the urgency of the notification to impacted entities. In both requirements we recommend the language be changed from "notify, without intentional delay" to "immediately notify".
No
M4. and M5. In both Measures, recommend "without intentional delay" be changed as described above for R4. and R5.
Yes
No

R2. This requirement provides authority to the Reliability Coordinator to veto planned outages and approve planned maintenance to "analysis tools". It is not clear in this standard what these "analysis tools" are. Per FERC Order 693, NERC was to identify a minimum set of analysis tools and the task was assigned to the Real-Time Tools Best Practices Task Force. Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.
No
M2 again "analysis tools" have not been identified.
No
Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.
Yes

Yes
We agree with the revisions, but recommend adding applicability to Distribution Providers and Generator Operators for data retention requirements.
Yes
M4 should be revised to reflect that each Distribution Provider and Generation Operator has evidence demonstrating the functionality of telecommunications facilities with the TOP and BA for the exchange of interconnection and operating information.
No
Recommend the following VSLs for R1: Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion. Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions. Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions. Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions. Recommend the following VSLs for R2: Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion. Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions. Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions. Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions. Recommend the following VSLs for R4: Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority or Transmission Operator for the exchange of Interconnection and operating information. Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority and Transmission Operator for the exchange of Interconnection and operating information.
Yes
We note that this requirement really is "3-part communication" and will be moved to the new communications standard, COM-003-1.

provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Attributes of the requirement Binary Use English for real-time communications unless agreed to otherwise. NOTE: OK with this as is because the requirement and VSLs have been re-written, will be removed from this standard shortly, and included in the new COM-003-1 standard. Timing Omission Communication X Quality Other SDT Proposed Lower VSL: N/A CEDRP Proposed Lower VSL: No change SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: No change SDT Proposed High VSL: N/A CEDRP Proposed High VSL: No change SDT Proposed Severe VSL: The responsible entity failed to provide evidence of concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. CEDRP Proposed Severe VSL: The Responsible Entity failed to provide evidence of the concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? Yes 3. Is it truly a "binary" requirement? Yes 4. If yes, is the VSL assignment consistent with other binary requirement assignments? It's a little inflated as being Severe 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? It's OK for the interim 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard – COM-001-2 Telecommunications Requirement 4: Each Distribution Provider and Generation Operator shall have telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. Proposed Measure: Each Distribution Provider and Generation Operator has telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. Attributes of the requirement Binary "has" telecomm with TOP and BA Timing Omission Communication X Quality Other Discussion – Telecommunication Facilities is ambiguous and is not included in the NERC glossary of terms – the CEDRP recommend deleting the word "facilities" from the requirement and measure and leaving it just as "telecommunications" with its TOP and BA . SDT Proposed Lower VSL: N/A CEDRP Proposed Lower VSL: No change SDT Proposed Moderate VSL: N/A CEDRP Proposed Moderate VSL: No change SDT Proposed High VSL: N/A CEDRP Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority OR Transmission Operator for the exchange of Interconnection and operating information. SDT Proposed Severe VSL: The Distribution Provider or Generation Operator failed to have telecommunications facilities with its Transmission Operator and Balancing Authority CEDRP Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority AND Transmission Operator for the exchange of Interconnection and operating information. FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? Mostly 3. Is it truly a "binary" requirement? Mostly 4. If yes, is the VSL assignment consistent with other binary requirement assignments? Yes 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes, considering the wording of the requirement as written. More specifically, the word "have" as used in the requirement is a bit vague. A better choice could have been, "established and maintains." 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes Standard: COM-002-3 Communications and Coordination Requirement 1: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall issue directives in a clear, concise, and definitive manner; shall ensure the recipient of the directive repeats the information back correctly; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. Proposed Measure: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have evidence such as voice recordings or transcripts of voice recordings to show that it issued directives in a clear, concise, and definitive manner; ensured the recipient of the directive repeated the information back correctly; and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings. Attributes of the requirement: Binary Timing Omission Communication X Quality X Other SDT Proposed Lower VSL: None CEDRP Proposed Lower VSL: No Comment SDT Proposed Moderate VSL: The responsible entity provided a clear directive in a clear, concise and definitive manner and required the recipient to repeat the directive, but did not acknowledge the recipient was correct in the repeated directive. CEDRP Proposed High VSL: No comment SDT Proposed Severe VSL: The responsible entity failed to provide a clear directive in a clear, concise and definitive manner when required. CEDRP Proposed Severe VSL: No comment FERC Guidance for VSLs 1. Will the VSL assignment signal entities that less compliance than has been historically achieved is condoned? No 2. Is the VSL assignment a binary requirement? No 3. Is it truly a "binary" requirement? No 4. If yes, is the VSL assignment consistent with other binary requirement assignments? 5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes 6. Does the VSL redefine or undermine the stated requirement? No 7. Is the VSL based on a single violation of the requirement (not multiple violations)? Yes and No (Severe is for multiple occasions of not issuing directives per the requirement).

placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communications. Lastly, the requirements need to be much more specific concerning the criticality of the facilities to be tested to improve the measurability of the standard. The drafting team dropped the phrase "for the exchange of Interconnection and operating data" from the standard requirement. This deletion appears to open the application of this standard to virtually every communication path used by an RC, BA, TOP whether or not it is used for communicating real-time operating information or not. We do not believe this was the intention of the drafting team and suggest this phrase be reinserted or another one added that limits applicability to only those communication paths that support the real-time reliability of the bulk electric system. R2 - It is not clear who the "impacted entities" would be in this requirement. The SDT should consider specifying these entities. R3 - The last sentence of this requirement should be deleted. It is not a requirement, it does not add clarity, and the first sentence is very specific as to the communications covered by the requirement. R4 - This requirement makes no distinction between data and voice communications facilities and assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communication.

No

The measures should be modified per our suggested modifications in question 1.

No

The VSL should be modified per our suggested modifications in question 1. R1 VSL - The statement in the VSL that the responsible entity did not "operationally test" is too broad. It should be more specific with the language used in the requirement.

No

Purpose - The GOP is still shown in the purpose statement although it was removed from the applicability. Also, it may be better if the purpose was written more generally as "To ensure adequate communications capabilities for addressing real-time emergency conditions and ensure communications by operating personnel are effective to maintain BES reliability". Applicability - In the SDT's document "Scope of Work Assigned to the Reliability Coordination Standard Drafting Team", the team decided to not include the FERC directive to include the DP in the applicability with the following reasoning "The proposed revisions do not include the DP entity because they are not applicable." We would like clarification on this. R1 - It does not appear that the implementation plan addresses the FERC direction to consider comments from Santa Clara, FirstEnergy, and Six Cities per 693 par. 539 regarding staffing requirements. Santa Clara asks that these requirements apply "only to operating staff available on site at all times or includes repair personnel who are available only on an on-call basis". FirstEnergy asks that the "term [staffed] should not require a physical presence at all facilities at all times because some units, such as peaking units, are not staffed 24 hours a day". FirstEnergy also suggest "because nuclear units are already subject to communications requirements in their operating procedures, their compliance with NRC operating procedures should be deemed in compliance with the NERC Reliability Standards". Six Cities "states that, to avoid unnecessary staffing burdens, particularly for smaller entities, the Commission should direct NERC to clarify COM-002-2 by providing that identification of an emergency contact person on call to respond to real-time emergency conditions will constitute adequate compliance". R1 - Just as an FYI, with regard to the proposed replacement requirement statement in the implementation plan: "TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC", per recently stakeholder approved ballots, R1 of TOP-005-1 has been retired and now covered in new standard IRO-010-1. R1.1 - The existing requirement includes "through predetermined communication paths of any condition that could threaten the reliability of its area or when firm load shedding is anticipated". The proposed replacement requirements do not address the need for "predetermined communication paths".

No

The measures should be modified if our comments in question 4 result in changes to the proposed requirements.

No

The VSL should be modified if our comments in question 4 result in changes to the proposed requirements.

No

R3 - should be a sub requirement of R2. These two requirements are sequential in nature and should be measured at the same time. The VRFs and Time Horizons are the same for both requirements lending to their combination into a requirement with a sub requirement. In the VSL for R2, an entity is being penalized with a high severity level for not completely following an RC directive even though it violated safety, equipment, statutory, or regulatory

requirements. Measuring R2 and R3 at the same time allows for the process to complete prior to the measurement taking place. R3 - The "or" between "Distribution Provider" and "Purchasing-Selling Entity" should be replaced with an "and". R4 - Should be revised by adding the phrase "of the expected or actual threat" to the end of the requirement to add clarity. Existing R7 requirement - This requirement is proposed for retirement because it is redundant with IRO-014-1 R1. However, it is not clear how the existing requirement to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated" is covered in IRO-014-1 R1. IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. IRO-014-1 only vaguely covers the existing requirement R7 of IRO-001-1.

No

M2 - The word "intentional" should be added between "without" and "delay".

No

R2 VSL - The Severe VSL should include after the word directive: "that would not violate safety, equipment, statutory or regulatory requirements".

No

R2 - As written, this requirement does not clearly define the scope of the authority of the Reliability Coordinator over analysis tools. Is it the intent of the drafting team to give the RC authority over analysis tools owned and operated by the RC. Is it the intent of the drafting team to give the RC authority over the analysis tools owned and operated by the BA, TOP, GOP, etc.? Are the tools intended to be the real-time (EMS) or the off-line engineering planning analysis tools or any analysis tool used in real-time. Does this include the analysis tools used by field personnel? This requirement should be revised to specify exactly the analysis tools under the authority of the Reliability Coordinator.

No

The measures should be modified per our suggested modifications in question 10.

No

The VSL should be modified per our suggested modifications in question 10.

Yes

No

R1 - Should be revised as follows to improve readability and clarity: R1.3 - Add "Exchanging" before "Planned" R1.4 - Add "Control of voltage" at the beginning of the requirement and delete "for voltage control" at the end of the requirement. Add a new R1.7 as follows: "A process for resolution of the disagreement covered by R6 of this standard."

No

The measures should be modified per our suggested modifications in question 14.

No

The VSL should be modified per our suggested modifications in question 14.

VSL for Requirement R1 - The VSL for R1 seems to imply that an operational test needs to have been performed in the last 90 days – this is read in conjunction with the data retention requirements. Need to clarify in the requirement how “quarter basis” is defined - is it the calendar quarter, or a rolling 90 days? In addition, the VSLs for Requirement R1 appear to violate NERC guidelines, since the Moderate, High and Severe VSLs are based upon cumulative violations of the Lower VSL.
No
Requirement R1 - As defined by Merriam Webster, the use of the word “ensure” implies virtual guarantee <the government has ensured the safety of the refugees>; while the use of the alternative word “assure” implies the removal of doubt and suspense from a person's mind. We suggest that “assure” is more appropriate than “ensure” in this context in the standards. The use of words like “clear, concise, and definitive manner” is subject to interpretation. This same language is used in the VSLs. Depending on the interpretation of this phrase, an entity could be found to be in a “Severe” violation level. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-002-3 requirement concerning repeat-backs. What is a “directive”? The regional compliance processes are having difficulty in auditing this existing standard due to lack of clarity of what constitutes a directive. "Directive" should be defined as being associated with real-time operational emergency conditions, and not ordinary day-to-day communications. Otherwise a VRF of High is not warranted.
No
The use of words like “clear, concise, and definitive manner” is subject to interpretation. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back.
No
The use of words like “clear, concise, and definitive manner” is subject to interpretation. The issuer of the directive should not be subject to non-compliance if the recipient of the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back.
No
Requirement R1 - What happens if the RC failed to recognize that such an event was happening as opposed to failed to take action. Is this intended to cover both scenarios? The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision development of this definition needs to go thru Due Process. The inclusion of TSPs, LSEs, and PSEs here indicates the need to include these functions in the COM-001-2 requirements concerning the use of English as the approved language. In addition, this also indicates the need for all of these listed entities to be included in COM-002-3 requirements concerning repeat-backs. The RC, TOP, and BA should not be placed in a possible non-complaint state because the counter party refuses a repeat-back AND these requirements are not applicable to the counter party. Requirement R2 - The language in the Moderate VSL of R2 recognizes another potential reason for delay in execution of a directive. Requirement 2 of the Standards needs to be modified to also recognize this potential. Requirements R2 and R3 - Clarify that entities are obligated to take action and confirm directives only from their Reliability Coordinators, not from any Reliability Coordinator. Requirements R2, R3, R4, R5 - Inconsistent use of “timing” words in the standards – “without intentional delay” and “immediately”. Suggest deleting these words due to the difficulty of determining compliance. Requirement R4 - The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process. Requirement R5 - The VRF should be “Lower” instead of “High” since the notification is that the threat has been mitigated. Also, the term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.
No
Measures M2, M4 and M5 use the terms "without delay" and "without intentional delay". Suggest deleting these words due to the difficulty of determining compliance. The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.
No
The language in R1 of the VSL is not consistent with the requirements and measures in the standard. The VSL needs to recognize that the RC may EITHER act or give direction to others to act. The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process. The language in R2 of the VSL places an entity in Moderate or High violation level even if failure is “allowed” in the standard; i.e. failure to act is due to violation of safety, regulatory, statutory requirements. The language in R2 of the VSL recognizes another potential reason for delay in execution of a directive. Requirement R2 of the Standard needs to be modified to also recognize this potential.
No

Requirement R1 - This requirement is in the wrong standard – this is a Facilities standard. This requirement belongs in another standard. Question: Is there a requirement in another standard that compels the TOPS, BAs, etc to provide the requested data? Requirement R2 - Need to clarify whose analysis tools (I assume it is the RCs analysis tools, not the analysis tools of another entity) and planned maintenance to what – is it tools, facilities, transmission, generation, etc. Depending on the answer above, this requirement is in the wrong standard – this is a Facilities standard. This requirement belongs in another standard. Question: Where is the Requirement for the RC to have analysis tools? It appears that the Requirement the RC has analysis tools have been removed in the revisions to the standard.

No

See response to Question #12 above. If the requirements are moved to another standard, the measures aren't needed here.

No

R1 VSL - As a general comment, this VSL is unclear and would be difficult to audit. This VSL uses subjective terms like "material impact" and "minimal impact". These terms are not used in the associated requirement or measure and should be removed from the VSL. This VSL uses terms like "majority, but not all"; "some, but less than a majority" which provides an opportunity for a subjective review by Compliance as to what a complete listing of data requirements should be. This term is not used in the Requirements or Measures and should be removed from the VSL. This VSL introduces a concept, data the RC needs for " ... administrative purposes, such as data reporting ...". This concept is not included in the Requirements or Measures portions of the Standard and should be removed from the VSL. This VSL should be written to simply assess whether the RC has made determination of what its data needs are and whether those needs have been communicated to the entities in the footprint. R2 VSL - This VSL clarifies the questions posed above regarding what the RC needs approval rights over. R2 needs to be modified to include this clarity. This VSL needs to clarify that the RC approval rights are for the RC's tools, not tools of other entities. The Severe level of this VSL needs to be re-written along the lines of: The RC does not have approval rights for planned maintenance or outages to its analysis tools.

Yes

No

R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly. R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous". We suggest rewriting R5 to read: In the event that an operating issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.

No

See comment #14 above. Also, Measure M5 is inconsistent with Requirement R5. It should mirror the requirement. Also, need to add the requirement number at the end of each Measure.

No

See comments #14 and #15 above - VSLs need to be revised to correspond to the revised Requirements and Measures.

Yes

No

See comment #14 above regarding re-write needed for Requirement R6 of IRO-014-2.

Individual

Thad Ness

AEP

No

A precise definition of telecommunications facilities needs to be established in this standard. R2 needs to be clarified regarding impacted utilities. FERC Order 693 suggests that this standard should apply Distribution Providers (DP) along with Generation Operators (GOP). AEP acknowledges that there needs to be some level of coordination and communication between DP's and other function model entities; however, the requirements, as applied to the DP, for telecommunications with the TOP and BA might not address the current communication

paths adequately. Today, the DP usually does not communicate with the RTO (performing the BA and/or TOP function), but the DP could either communicate directly or through a joint action agency to the IOU that may serve as the TO (or maybe the TOP). As this draft is written the DP's would be required to have telecommunication facilities with the RTO in this scenario. There will likely be many exceptions to the rule that the requirements and measures create when applied to the DP. We ask that the drafting team consider the applicability, some of the current channels of communications, and options for addressing the FERC comments without creating telecommunication paths that do not make practical sense.

No

M2 needs to be clarified regarding impacted functions.

Yes

Chris de Graffenried

Consolidated Edison Co. of NY, Inc.

Yes and No

Wording in question: R.2/M.2 Each ... Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without intentional delay to comply with the Reliability Coordinator's directives. R.3/M.3 Each ... Load-

M2 should be changed to reflect the comments noted in Question 1 for R2.
Yes
Based upon revisions to Question 1.
Yes
Yes and No
As long as the measurement of compliance does not include proving the negative, that no directives were issued.
No
R1-High VSL-If the directive was followed and there was no threat to the BES, then a lack of repetition of the directive does not constitute a "high" VSL. Suggest that this be a low or moderate VSL.
No
R2 refers to "intentional delay". The determination of intent should be left to the VSL portion of the standard, not the requirement portion.
Yes
If some language is changed, we support the revisions. R2 has language in it that should be added to M4 to be consistent. In M2, we propose adding language "unless such actions would violate safety, statutory or regulatory requirements."
No
VSL's for R2 and R3 are not appropriate. In order to assess a situation we may not be able to immediately inform the RC of our ability to comply with the directive. The high VSL for R2 currently states that if we do not follow the directive because of safety, statutory or regulatory requirements, it is a high VSL. An entity should not be penalized for not breaking the law.
Abstain.
Abstain.
Abstain.
No
The accountability and monitoring addressed in this Standard is still required. The drafting team's intent was that the ability to monitor is part of the certification process. However, certification is to Standards, and if there is not a Standard which addresses this issue, then an entity cannot certify to it.

We suggest that a definition of telecommunications be written by the drafting team because it is not clear what all telecommunications is intended to be included. Does this requirement apply to data, voice, rtus, networks, etc? For requirement R2, e suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional. The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF. In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "... is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."
Yes and No

M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.

No

The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter." The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2. (i) R1: Suggest to revise the conditions for all levels to read "...failed to operationally test the alternative communication facilities within the last..... (ii) R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affected entities, then the second condition should be an "OR". (iii) R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time operations by itself does not constitute a violation of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.

Yes

Yes

Yes

Yes and No

New requirement R2 should omit act without intentional delay. Use of intentional implies willful disregard for compliance for the requirement. Intention should not be addressed as part of the compliance with the requirement but rather through the enforcement process once the compliance auditor has identified a violation. The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not functioning properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violate safety, equipment, statutory, or regulatory requirements. Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary. The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).

No

The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don't believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact. The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a

delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements. In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL. In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses "that, as a general rule, gradated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels". Given that it is possible to define gradated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.

No

New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.

No

Measure 1 should not focus on a letter as evidence. A more appropriate measure would be a data specification document and actual verification that data has been received. The letter or equivalent is only needed if data has not been supplied. Demonstration of the actual receipt the data would be easy.

No

For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document. We suggest that the VSLs should be: Severe: The RC did not determine its data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs. R2 VSLs are not needed per paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.

No

Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A. Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary? Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be addressed per R1.1. R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm. As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.

No

Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. There should be the single measurement to verify the Operating Processes, Procedures, and Plans have been developed and address the sub-requirements. This really points out the problem with making the criteria that must be considered in the Operating Processes, Procedures, and Plans sub-requirements in the first place. They aren't requirements of any sort. They represent criteria. The drafting team should consider making them a bulleted list without the Rs, then the drafting team won't feel compelled to write sub-measures that don't measure anything.

No

For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed. We don't agree with the VSLs in R4 since we believe R4 should be struck. The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.

Yes

Yes

We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-2.

Consideration of Comments on Set of Reliability Coordination Standards (Project 2006-06)

The Reliability Coordination Standards Drafting Team (RC SDT) thanks all commenters who submitted comments on the set of Reliability Coordination Standards. These standards were posted for a 45-day public comment period from August 5, 2008 through September 16, 2008. Stakeholders were asked to provide feedback on the standards through a special electronic standard comment form. There were 29 sets of comments, including comments from more than 70 different people from approximately 50 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

The following standards remain within the scope of this project:

- COM-001-2 — Communications
- COM-002-3 — Communication and Coordination
- IRO-001-2 — Reliability Coordination — Responsibilities and Authorities
- IRO-002-2 — Reliability Coordination — Facilities
- IRO-005-1 — Reliability Coordination — Current Day Operations
- IRO-014-2 — Coordination among Reliability Coordinators
- IRO-015-1 — Notifications and Information Exchange between Reliability Coordinators
- IRO-016-1 — Coordination of Real-time Activities between Reliability Coordinators

The RC SDT has revised some of the requirements, measures, violation risk factors and violation severity levels for COM-001, COM-002, and IRO-001, and IRO-014 based on the comments received. A summary of the drafting team's consideration of comments follows:

Requirements, Measures and VSLs in COM-001-2

Requirements: The RC SDT received several comments regarding the intent of the term "telecommunications facilities". For COM-001-2, the RC SDT envisions telecommunications to be voice or message communication between operating personnel. The standard has been renamed "Communications" and the term "telecommunications facilities" was replaced with "interpersonal communications capabilities" throughout the standard to better reflect the intent of the RC SDT.

We also received comments regarding the applicability of the standard that suggested adding the other entities listed in IRO-001 (Transmission Service Provider, Load-serving Entity and Purchasing-Selling Entity). The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the Reliability Coordinator ...either directly or through other entities (e.g. – a Distribution Provider may receive a directive from the Transmission Operator who received it from the Reliability Coordinator). We have not expanded the applicability as suggested as we feel that this expands the standard beyond the reliability intent. The RC SDT contends that the addition of the Transmission Service Provider, Load-Serving Entity and Purchasing Selling Entity to COM-001 adds no reliability benefit as the interactions with these entities are commercial in nature. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity. The SDT did, however add the Transmission Service Provider, Load-serving Entity and Purchasing-Selling Entity to the list of entities in R3 that must use English Language for inter-entity communications.

| Other commenters had concerns with regard to R2 and the intent with regard to length of outages. The requirement was revised as:

R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its their normal interpersonal communications capabilities-telecommunications facilities, and verify the alternate means of telecommunications are functional.

The informational (last) sentence of R3 was removed per stakeholder suggestions:

R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. ~~Transmission Operators and Balancing Authorities may use an alternate language for internal operations.~~

Measures: Commenters suggested general as well as specific revisions to the measures. One general comment suggested making the language consistent among the measures regarding evidence. M1-M3 were revised to include the phrase “shall have and provide upon request evidence that ...”.

Several commenters suggested revisions to M3. The RC SDT revised M3 based on the comments received suggesting that the applicability be expanded and added the Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-selling Entity, and Load-serving Entity to the measure. Several entities commented that M3 did not match R3 which included an explanatory sentence that allowed an entity to use a language other than English for its internal communications. The informational second sentence was removed from Requirement R3, thus eliminating the “disconnect” between the requirement and the measure. All measures were revised as necessary to reflect revisions to requirements.

VSLs: The RC SDT made revisions to the VSL’s based on the comments received and also to reflect revisions to the associated requirements. The SDT received comments that the VSLs for R1 and R2 were based on multiple violations rather than a single violation and revised the VSLs to reflect a single violation, which is one of FERC’s guidelines for VSLs.

Requirements, Measures and VSLs in COM-002-3

The work of the IROL SDT resulted in the retirement of R1 from the standard. The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall require the recipient of the directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. *[Violation Risk Factor: High][Time Horizon: Real-Time]*

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall repeat the intent of the directive back to the issuer of the directive. *[Violation Risk Factor: High][Time Horizon: Real-Time]*

The purpose statement was also revised to reflect the revisions to the standard: “To ensure communications by operating personnel are effective.”

The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission

Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The measures were revised to:

- M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall have evidence such as voice recordings or transcripts of voice recordings to show that it required the recipient of the directive to repeat the intent of the directive back; and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings.
- M2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall have evidence such as voice recordings or transcripts of voice recordings to show that it repeated the intent of the directive back to the issuer of the directive.

VSLs: The RC SDT received comments recommending revisions to the VSLs based on revisions to the requirements and measures. The RC SDT did this and created new VSLs for new Requirement R2.

Requirements, Measures and VSLs in IRO-001-2

The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring delay time.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This would obviate the need for providing a measure for “intent”, but still maintain the reliability intent of the original requirement.

The VSLs were revised to reflect revisions to the requirements as well as the comments of stakeholders. Several comments suggested that there was no fundamental difference between the RC “acting” or “directing actions”. The RC SDT agreed and removed the High VSL for R1 and revised the Severe VSL accordingly. Other commenters suggested removing the High VSL from R2 as the VSL contradicted the requirement. The RC SDT agreed and removed the VSL.

Requirements, Measures and VSLs in IRO-002-2

Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired IRO-002-2 Requirement R1. The team also received concern about eliminating the requirement to monitor frequency. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability. The team declined to delete R2 (Reliability Coordinator veto over analysis tool outages) as it was a specific recommendation from the 2003 Blackout report. This requirement was revised and moved into IRO-001-2 as R6.

Retirement of IRO-005-1

Several commenters had concerns around removing the requirement to monitor frequency (IRO-005-1 R8). The intent of this monitoring activity was incorporated into IRO-002-2, R1. Other commenters had concerns with the removal of other monitoring requirements in the standard. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity

associated with any attempt to measure “Monitoring.” It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification process requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.

Requirements, Measures and VSLs in IRO-014-2

Several commenters expressed concerns with the term “impacted” and suggested replacing this with “other”. The RC SDT believes “impacted” directly relates to the purpose statement. The original wording of “one or more other” is vague and difficult to measure. Using the word “other” presents a similar situation. The RC SDT chose to use the word “impacted” to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous Reliability Coordinators to have “Reliability Coordinator Agreements”, but to have Procedures, Processes, or Plans with impacted Reliability Coordinators. Other commenters suggested striking the term “as a minimum” in R1 and the RC SDT agrees and has modified R1 accordingly.

Some commenters did not agree with the wording of the two new requirements in IRO-014 that were formerly in IRO-016. The SDT modified and subdivided the requirements into four requirements (R5 – R8) shown below:

- R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
- R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
- R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
- R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

Several commenters suggested that the High and Severe VSLs for R2 contradicted the requirement. The RC SDT agreed and removed the “nots” from the VSLs. Several commenters had suggested revisions for the VSLs for R6, which was imported from IRO-016. VSLs were changed to support the revised requirements.

IRO-015-2

Stakeholders agree with the proposal to move the requirements into IRO-014-2 and retire IRO-015 as a separate standard.

IRO-016-1

Stakeholders agree with the concept of moving the requirements of IRO-016-1 into IRO-014-2. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements are listed above in IRO-014-2 summary.

Implementation Plan - Proposed Effective Dates

The RC SDT received comments that COM-001-2, R5 should have an effective date immediately upon regulatory approval. The RC SDT agrees and will request an effective date that is the first possible effective date – the first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

Index to Questions, Comments, and Responses

1.	Do you agree with the revisions to the Requirements in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.....	11
2.	Do you agree with the revisions to the Measures in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	27
3.	Do you agree with the Violation Severity Levels proposed in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.....	35
4.	Do you agree with the revisions to the Requirements in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.....	42
5.	Do you agree with the revisions to the Measures in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	50
6.	Do you agree with the Violation Severity Levels proposed in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.....	54
7.	Do you agree with the revisions to the Requirements in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	58
8.	Do you agree with the revisions to the Measures in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	69
9.	Do you agree with the Violation Severity Levels proposed in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.....	75
10.	Do you agree with the revisions to the Requirements in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	85
11.	Do you agree with the revisions to the Measures in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	93
12.	Do you agree with the Violation Severity Levels proposed in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.....	97
13.	Do you agree with the revisions to IRO-005-1 as shown in the posted Standard and Implementation Plan? The RC SDT is recommending retiring or moving all of the requirements and retiring this standard. If not, please explain in the comment area.	103
14.	Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	108
15.	Do you agree with the revisions to the Measures in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	119
16.	Do you agree with the Violation Severity Levels proposed in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.....	124
17.	Do you agree with the RC SDT recommendation to retire IRO-015-2 and move the requirements into IRO-014-2? If not, please explain in the comment area.....	129
18.	Do you agree with the revisions to IRO-016-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.	132
19.	If you have any other comments, not expressed in questions above, on this set of revisions, please provide your comments here.....	136

Comments for Set of Reliability Coordination Standards (Project 2006-06)

The Industry Segments are:

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities
- 4 — Transmission-dependent Utilities
- 5 — Electric Generators
- 6 — Electricity Brokers, Aggregators, and Marketers
- 7 — Large Electricity End Users
- 8 — Small Electricity End Users
- 9 — Federal, State, Provincial Regulatory or other Government Entities
- 10 — Regional Reliability Organizations, Regional Entities

1. Do you agree with the revisions to the Requirements in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT received several comments regarding the intent of the term “telecommunications facilities”. For COM-001-2, the RC SDT envisions telecommunications to be voice or message communication between operating personnel. The standard has been renamed “Communications” and the term “telecommunications facilities” was replaced with “interpersonal communications capabilities” throughout the standard to better reflect the intent of the RC SDT. Based on stakeholder comments, R1 was changed as follows:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis ~~at a minimum,~~ alternative [interpersonal telecommunications facilities capabilities used for communicating real-time operating information.](#) ~~to ensure the availability of their use when normal telecommunications facilities fail. If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities.~~

We also received comments regarding the applicability of the standard that suggested adding other entities listed in IRO-001. The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the RC...either directly or through other entities (e.g. – a Distribution Provider may receive the directive from the Transmission Operator who received it from the Reliability Coordinator). We have not expanded the applicability of R1 to include the TSP, LSE and PSE as suggested as we feel that this expands the standard beyond the reliability intent. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity. The TSP, LSE and PSE were, however, added to R3 to add these entities to the list of entities that must use the English language when exchanging inter-entity information.

Other commenters had concerns with regard to R2 and the intent with regard to length of outages. The requirement was revised as follows:

R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities [within 60 minutes of the detection](#) of ~~the a~~ failure [\(30 minutes or longer\)](#) of its normal [interpersonal tele](#)communications [facilities capabilities.](#) ~~, and shall verify that alternate means of telecommunications are functional.~~

The TSP, LSE and PSE were added to the list of responsible entities and the informational (last) sentence of R3 was removed per stakeholder suggestions:

R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, ~~Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity,~~ and Distribution Provider shall use English as the

language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. ~~Transmission Operators and Balancing Authorities may use an alternate language for internal operations.~~

Organization	Question 1:	Question 1 Comments:
AEP	No	<p>A precise definition of telecommunications facilities needs to be established in this standard.</p> <p>R2 needs to be clarified regarding impacted utilities. FERC Order 693 suggests that this standard should apply Distribution Providers (DP) along with Generation Operators (GOP). AEP acknowledges that there needs to be some level of coordination and communication between DPs and other function model entities; however, the requirements, as applied to the DP, for telecommunications with the TOP and BA might not address the current communication paths adequately. Today, the DP usually does not communicate with the RTO (performing the BA and/or TOP function), but the DP could either communicate directly or through a joint action agency to the IOU that may serve as the TO (or maybe the TOP). As this draft is written the DPs would be required to have telecommunication facilities with the RTO in this scenario. There will likely be many exceptions to the rule that the requirements and measures create when applied to the DP. We ask that the drafting team consider the applicability, some of the current channels of communications, and options for addressing the FERC comments without creating telecommunication paths that do not make practical sense.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or text communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" to better reflect the intent.</p> <p>In R2, the phrase, "impacted entities" refers to any entity with whom the TC, TOP or BA has lost interpersonal communications capabilities. The requirements were written to address the differences in any entity's facility needs allowing for adequate flexibility to incorporate cost effective solutions as well as accommodate future technologies (FERC Order 693 directives).</p>		
ElectriCities of North Carolina, Inc.	No	<p>We are a joint action agency registered on behalf of our member municipalities, who are all TDUs, neither own nor operate any Bulk Electric System facilities, and perform no real-time operations or operations planning for the BES. There are currently other standards that already apply to us that require us to have processes and means to communicate with our RC, BA, TOP, etc. The proposed modifications to this standard would now make our members subject to this standard as well, based</p>

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 1:	Question 1 Comments:
		<p>on the DP registration designation. Given that, we believe there needs to be additional clarification of specifically what type of "telecommunications facilities" are required to be considered compliant with this standard. Maybe in the past when this standard applied to TOPs, BAs, and RCs, it was intuitive what type of telecommunications facilities they needed to communicate with each other. However, when you bring in small DPs, it doesn't seem so clear. Obviously we already communicate with our TOP and BA, and have done so for years. As written, the standard is ambiguous in terms of what more, if anything, we would have to put in place to satisfy this standard.</p>
<p>Response: The RC SDT thanks you for your comment. COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or text communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" to better reflect the intent. The purpose statement is revised as:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>The requirement R4 was written to meet a FERC directive with respect to COM-001. The requirement states:</p> <p>Each Distribution Provider and Generation Operator shall demonstrate the existence of its interpersonal communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p> <p>Compliance with NERC requirements can be achieved through agreements with other entities to meet the intent of the requirement. The RC SDT can not address compliance issues, as this is the scope of NERC Compliance.</p>		
US Army Corps of Engineers, Northwestern Division	No	R3 needs to have the last sentence revised to allow the Generator Operator and Distribution Provider to use an alternate language for internal operations.
<p>Response: The RC SDT thanks you for your comment. The requirement and measure were revised to delete the last sentence as it was not a requirement, but only information.</p>		
US Bureau of Reclamation	No	Purpose Distribution Providers and Generator Operators were added to the applicability; the Purpose should be revised to reflect that.
<p>Response: The RC SDT thanks you for your comment. The Purpose Statement was revised to:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p>		

Organization	Question 1:	Question 1 Comments:
CU of Springfield	No	<p>City Utilities of Springfield, Missouri (CU) supports the effort of the drafting team to add Distribution Providers and Generator Operators to the "Applicability" section, the change in language regarding testing of alternate telecommunication facilities and the future effort to move COM-001-2 R3 to the new COM-003-1 standard.</p> <p>However, it is still necessary to define all parties that are responsible for having "adequate and reliable telecommunication facilities" and to require them to have both primary and backup telecommunication facilities. Since this standard is designed to address telecommunication facilities, any redundancy that exists should be removed from other standards instead. The proposal from the drafting team to remove all of the language from COM-001-1 R1 will create a gap in responsibility, since none of the standards mentioned in the Implementation Plan specifically require a RC, BA or TOP to have these facilities. It is the opinion of CU that you have defined the parties that need to communicate "Interconnection and operating information" in IRO-001-2, where a BA, TOP, GOP, TSP, LSE, DP and PSE receive and comply with directives from the RC. Therefore to maintain consistency are not all of these entities expected to have "adequate and reliable" telecommunication facilities?</p> <p>CU suggests that COM-001-2 R4 be moved to R1 and standard language changed to say:</p> <p>Purpose: Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity needs adequate and reliable telecommunications facilities internally and with others in the Reliability Coordinator's area, for the exchange of Interconnection and operating information necessary to maintain reliability.</p> <p>R1. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall have primary and backup telecommunications facilities for the exchange of Interconnection and operating information.</p> <p>R2. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>R3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling</p>

Organization	Question 1:	Question 1 Comments:
		<p>Entity shall notify impacted entities of the failure of its normal telecommunications facilities, and shall verify that alternate means of telecommunications are functional.</p> <p>R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.</p> <p>The end result will be a standard that requires all applicable entities to:</p> <ul style="list-style-type: none"> A. Have primary and backup telecommunication facilities. B. Test the telecommunication facilities. C. Utilize the telecommunication facilities.
<p>Response: The RC SDT thanks you for your comment.</p> <p>Applicability: You are correct with regards to IRO-001 and the entities involved in carrying out directives. The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the RC...either directly or through other entities (e.g. – a Distribution Provider may receive the directive from the Transmission Operator who received it from the Reliability Coordinator). The RC SDT has changed the name of this standard to “Communications and revised the Purpose Statement to:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>We have replaced the term “Telecommunications Facilities” with “interpersonal communications capabilities” to better reflect the intent of the standard. We have not expanded the applicability of R1 or R2 as you suggest as we feel that this expands the standard beyond the reliability intent. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity. The SDT did, however, expand the applicability for the requirement to use English language to include the TSP, LSE and PSE in support of your suggestion.</p>		
Northern California Power Agency	No	R3 should include in the last sentence that the Generator Operator and Distribution Provider may use alternate language for internal operations.
<p>Response: The RC SDT thanks you for your comment. The requirement and measure were revised to delete the last sentence since it was informational only and not a requirement.</p>		

Organization	Question 1:	Question 1 Comments:
<p>MRO NERC SDT Standards Review Subcommittee</p>	<p>No</p>	<p>The new R2 requirement is too verbose. We suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional. This clause is similar to the old requirement one that the drafting team appropriately struck.</p> <p>We tend to agree that striking R1 makes sense due to the drafting team's reasoning. However, we are not clear why the new R4 is necessary then. If the drafting team does not believe R1 is necessary shouldn't they respond to the FERC directive with the same reason why R4 is not really necessary?</p> <p>The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF.</p> <p>In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "... is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."</p>
<p>Response: The RC SDT thanks you for your comments.</p> <p>R2: The RC SDT deleted the final clause as you suggest.</p> <p>R4: This was added because of the FERC directive:</p> <p>Include generator operators and distribution provider as applicable entities and include requirements for their telecommunications.</p> <p>VRF: We concur and have modified the VRF.</p>		

Organization	Question 1:	Question 1 Comments:
<p>Data Retention: We have revised the Data Retention to section to comport with your comment.</p>		
<p>Southern Company Transmission</p>	<p>No</p>	<p>1.1 - In R1, we suggest that "operationally test by way of operator action" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities".</p> <p>1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. The VSL should be consistent with the language of the requirement. A very short, insignificant telecom outage with no notification could result in a severe violation as the requirement is presently written and VSL's applied.</p> <p>1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated.</p> <p>1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>1.1: The RC SDT removed the word "operationally" from the requirement. The requirement was revised to remove the "assurance" part as it does not add to the requirement. We have changed to term "telecommunications facilities" to "interpersonal communication capabilities" to better reflect the intent of the standard.</p> <p>1.2: We have revised the requirement to place time bounds on outages that require notification. The new R2 is: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>1.3: The RC SDT contends that the addition of the TSP, LSE and PSE to R1 and R2 of COM-001 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3.</p> <p>1.4: We have removed the informational (last) sentence as it is not a requirement. Others can use an alternate language, but the entities must agree to do so. This is in the first sentence of the requirement which states "Unless agreed to otherwise..." R3 was revised so that the last</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 1:	Question 1 Comments:
<p>sentence, which was explanatory and did not include any required performance, was deleted.</p>		
<p>Progress Energy Carolinas</p>	<p>No</p>	<p>R1 - The proposed requirement R1 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>R2 - The proposed requirement R2 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>R4 - The proposed requirement R4 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p>
<p>Response: The RC SDT thanks you for your comment. COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or message communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" throughout the standard to better reflect the intent.</p>		
<p>NPCC</p>	<p>No</p>	<p>There is inconsistency between R3 and M3. In R3, there is a provision for agreement between entities (RC, TOP, BA, GOP, DP) to use a language other than English in their communications. In M3, that option is not presented. M3 should reflect what is written in R3.</p>
<p>Response: The RC SDT thanks you for your comment. The provision that you mention was removed from the requirement since it is not a requirement, but an informational statement. The English language Requirement begins with the phrase "Unless agreed to otherwise...". This allows for the use of other languages where agreed to.</p>		
<p>ISO New England Inc.</p>	<p>No</p>	<p>ISO New England does not support the removal of Requirement 1. Also, we believe Requirement 3 is written such that it may pose an unnecessary requirement on the</p>

Organization	Question 1:	Question 1 Comments:
		Hydro Quebec area given the terminology "inter-entity" and support further clarification.
<p>Response: The RC SDT thanks you for your comment. The majority of commenters agreed with the removal of R1. The last sentence of the requirement 3 was deleted as it was an informational statement only. The English language Requirement begins with the phrase "Unless agreed to otherwise..." This allows for the use of other languages where agreed to.</p>		
FirstEnergy	No	<p>Purpose - The purpose does not include the GOP and DP entities. It may be better if the purpose was written more generally as "To ensure adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information necessary to maintain BES reliability".</p> <p>R1 - This requirement makes no distinction between data and voice communications facilities and assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communications. Lastly, the requirements need to be much more specific concerning the criticality of the facilities to be tested to improve the measurability of the standard. The drafting team dropped the phrase "for the exchange of Interconnection and operating data" from the standard requirement. This deletion appears to open the application of this standard to virtually every communication path used by an RC, BA, TOP whether or not it is used for communicating real-time operating information or not. We do not believe this was the intention of the drafting team and suggest this phrase be reinserted or another one added that limits applicability to only those communication paths that support the real-time reliability of the bulk electric system.</p> <p>R2 - It is not clear who the "impacted entities" would be in this requirement. The SDT should consider specifying these entities.</p> <p>R3 - The last sentence of this requirement should be deleted. It is not a requirement, it does not add clarity, and the first sentence is very specific as to the communications covered by the requirement.</p> <p>R4 - This requirement makes no distinction between data and voice communications facilities and</p>

Organization	Question 1:	Question 1 Comments:
		<p>assumes a designated primary and backup facility configuration such that the backup communications systems are not used regularly. This may be an accurate assumption for data communications; however voice communications may be different. Today many organizations use voice communications systems that allow the system to choose the communication path each time a call is placed. This design ensures that all communications paths are tested regularly in day-to-day use. However, the design of these systems makes it difficult, if not impossible, to substantiate that a functional test of the circuitry has been performed. This requirement should be broken into two requirements. The first should cover data circuitry and the second should cover voice circuitry. This will allow the drafting team to address the inherent differences in these two methods of communication.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>Purpose: To better reflect the intent of the standard, we have modified the Purpose Statement to: To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>R1: The standard has been revised to remove the term “telecommunications facilities” and replace it with “interpersonal communications capabilities”. This reflects the intent of the standard, which is to have voice and message communication capabilities. R1 has been revised as: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test, on a quarterly basis, alternative interpersonal communications capabilities used for communicating real-time operating information. If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p> <p>R2: The term “impacted entities” indicates those entities with which you have lost interpersonal communications capabilities. R2 has been revised to: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>R3: We concur and have deleted the sentence.</p> <p>R4: COM-001-2 only covers voice and message communications and R4 has no provision for primary / alternate capabilities.</p>		
Duke Energy	No	<p>Purpose - The purpose statement does not read very well. It either needs another sentence or changes to the current sentence. The purpose of the standard is to assure proper communications, not to suggest entities need proper communications as currently written. Suggest changing to, “To</p>

Organization	Question 1:	Question 1 Comments:
		<p>assure each Reliability Coordinator, Transmission Operator and Balancing Authority develops and maintains”.</p> <p>Requirement R1 - What is the definition of "alternative telecommunications facilities"? Is there another requirement somewhere to have alternative telecommunications facilities — or is this a new requirement being introduced by this standard? What is the relationship, if any, between "alternative telecommunications facilities" and EOP-008-1? What is the requirement for maintaining and testing "alternative telecommunications facilities"; what does “operationally test” mean Just because an alternative facility works when it is tested does not mean it will work during an actual failure of the primary system. Furthermore, what do we do if the “test” fails — are we still compliant? The word “ensure” needs to be changed to “assure”.</p> <p>Requirement R2 - What does "impacted entity" mean?</p> <p>Requirement R3 - Why can't others use alternate language — this limits alternate language to just TOPs and BAs internal operations. TOs, GOPs, and others may want to use alternate language internally. Need to define language to be used with and between other relationships — BA to PSE, as an example. Is this a reliability issue or a certification issue? Simply state that: “Entities may use alternative language for internal operations”. This will allow any entity to use alternative language for internal operations. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-001-2 applicability and requirements concerning the use of English as the approved language.</p> <p>Requirement R4 - Remove R4 and add DP and GO, as well as all of the other entities listed in IRO-001-2, to R1 thru R3.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>Purpose: To better reflect the intent of the standard, we have modified the Purpose Statement to:</p> <p>To ensure that operating entities have adequate interpersonal communication capabilities.</p> <p>R1: “Alternative telecommunications facilities” was used in place of “redundant”. Many entities have multiple “primary facilities” which could be construed as redundant. The use of “alternative” is intended to indicate at least one primary and one other facility.</p> <p>R2: The term “impacted entities” indicates those entities with which you have lost communications capabilities. Based on other’s comments, R2 has been revised to:</p> <p>Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of</p>		

Organization	Question 1:	Question 1 Comments:
		<p>a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>R3: The second sentence was removed as it was a statement and not a requirement. Others can use an alternate language, but the entities must agree to do so. This is in the first sentence of the requirement which states "Unless agreed to otherwise..."</p> <p>R4: The DP and GOP were added to this standard per a FERC directive (paragraph 509 of Order 693). Putting these entities in R1-R3 would add requirements not envisioned by the directive and provide no additional reliability benefit. The RC SDT contends that the addition of the TSP, LSE and PSE (from IRO-001) to COM-001 R1 and R2 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3.</p>
<p>ISO/RTO Council Standards Review Subcommittee</p>	<p>Yes and No</p>	<p>We suggest that a definition of telecommunications be written by the drafting team because it is not clear what all telecommunications is intended to be included. Does this requirement apply to data, voice, rtus, networks, etc?</p> <p>For requirement R2, we suggest that you strike the final clause: "and shall verify that alternate means of telecommunications are functional." It is obviated by the requirement to notify impacted parties. The responsible entity is already implicitly required to verify its alternate means of communication is functional since it is required to notify its impacted parties of the failure of its normal telecommunications. It can't notify its impacted parties if the alternate communications means are not functional.</p> <p>The VRF for new requirement 1 should be lower. It does not fit the definition of a medium VRF. A medium VRF requires that a violation of the requirement directly affect the state or capability or the ability to effectively monitor and control. Failure to test does not result in directly affecting the state or capability or the ability to effectively monitor and control. At a minimum, a failure of the alternative communication systems and primary communication systems must occur first. The failure to perform a single test in a given quarter does not mean that primary and alternative communication systems will fail. Thus, testing is really an administrative issue and should thus be a lower VRF.</p> <p>In the Data Retention section, Distribution Provider and Generation Operators should be added. Currently, there are no data retention requirements listed for them. Suggest modifying the language regarding data retention for compliance violations to: "...is found in violation of a requirement, it shall keep information related to the violation until it the Compliance Enforcement Authority finds it compliant."</p>

Organization	Question 1:	Question 1 Comments:
<p>Response: The RC SDT thanks you for your comment. The intent of this standard is reflected in the revised purpose statement: To ensure that operating entities have adequate interpersonal communication capabilities. COM-001-2 only deals with voice or message communications. We have renamed the standard to “Communications” and replaced the term “telecommunications facilities’ with “interpersonal communications capabilities” throughout the standard. R2: We have revised R2 as you suggest. R2 has been revised to: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i> VRF: We concur and have modified the VRF. Data Retention: We have revised the Data Retention as you suggested.</p>		
<p>SERC OC Standards Review Group</p>	<p>Yes and No</p>	<p>1.1 - In R1, we suggest that "operationally test" should be defined to remove any confusion regarding what the term requires. The word "ensure" needs to be changed to "assure" to more accurately convey the intent of the requirement. We also suggest changing the word "facilities" to "capabilities". 1.2 - R2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation. 1.3 - R1, R2 and R3 should be expanded to include the list of entities the RC needs to talk with as included in the Applicability section of IRO-001-2 (RC, TO, BA, GO, DP, TSP, LSE, PSE). These entities should also be included in the purpose statement and R4 and M4 can then be eliminated. 1.4 - In R3, we suggest that the last sentence of R3 should be changed to "entities may use an alternative language for internal operations" rather than allowing only TOs and BAs to have this option.</p>
<p>Response: The RC SDT thanks you for your comment. 1.1: The RC SDT removed the word “operationally” from the requirement. The requirement was revised remove the “assurance” part as it does not add to the requirement. We have changed to term “facilities” to “capabilities” as you suggest.</p>		

Organization	Question 1:	Question 1 Comments:
		<p>1.2: We have revised the requirement to place time bounds on outages that require notification. The new R2 is: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>1.3: The RC SDT contends that the addition of the TSP, LSE and PSE to COM-001 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3.</p> <p>1.4: We have removed the informational (last) sentence as it is not a requirement. Others can use an alternate language, but the entities must agree to do so. This is in the first sentence of the requirement which states "Unless agreed to otherwise..."</p>
Buckeye Power, Inc.	Yes and No	What constitutes "telecommunications facilities"?
		<p>Response: The RC SDT thanks you for your comment. COM-001-2 deals with voice or message communications only and has been renamed "Communications. We have replaced the phrase "telecommunications facilities" with "interpersonal communications capabilities" throughout the standard to better reflect the intent. The purpose statement has been revised to To ensure that operating entities have adequate interpersonal communication capabilities.</p>
American Transmission Company	Yes and No	<p>If some language is clarified, we support the revisions. R2 states that "Each TO shall notify impacted entities of the failure of its normal telecommunications facilities". If a phone line goes down and an alternate phone line is used, it is an excessive requirement to notify the impacted entities when there is no impact upon communication or the BES. The wording should be clear that notification is only required if an alternate means of communication is necessary. A defined timeframe for notification should be added to the requirement. It is possible that the loss of telecommunication faculties can occur without the loss of a control center. So, the redundancy with EOP-008 to R4 should be clarified.</p>
		<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT believes that entities should contact others when their normal communication capability is lost. For example, the normal phone line could be cut and someone trying to contact that entity may only get a busy signal and have no idea that alternate communications is necessary.</p> <p>We have revised the requirement to place time bounds on outages that require notification as you suggest. The new R2 is: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of</p>

Organization	Question 1:	Question 1 Comments:
<p>a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>Based on these revisions, we do not believe further clarification with regards to EOP-008 is necessary.</p>		
PJM Interconnection	Yes	We agree with the revisions, but recommend adding applicability to Distribution Providers and Generator Operators for data retention requirements.
<p>Response: The RC SDT thanks you for your comment. The data retention requirements have been revised as you suggested.</p>		
Entergy Services, Inc	Yes	The drafting team should consider expanding the second sentence of R3 to apply to internal communications of any affected entity not just BAs and TOPs.
<p>Response: The RC SDT thanks you for your comment. We concur with your sentiment and the second sentence has been removed as it was not a requirement, but an informational statement. Use of an alternate language by any entity is allowed under the requirement which begins with the phrase: "Unless agreed to otherwise..." The requirement has been revised to:</p> <p>R3. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>		
Salt River Project	Yes

Reliability Coordinator	Yes	

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 1:	Question 1 Comments:
Comment Working Group		
PPL Supply Group	Yes	
Bonneville Power Administration	Yes	

2. Do you agree with the revisions to the Measures in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Commenters suggested general as well as specific revisions to the measures. One general comment suggested making the language consistent among the measures regarding evidence. M1-M3 were revised to include the phrase “shall have and provide upon request evidence that ...”.

The revisions to M1 are shown below:

M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request, evidence that could include, but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, it ~~operationally~~ tested, on a quarterly basis ~~at a minimum~~, alternative interpersonal telecommunications facilities capabilities used for communicating real-time operating information. ~~to ensure the availability of their use when normal telecommunications facilities fail~~. If the test was unsuccessful, the entity shall have and provide upon request evidence that it developed a mitigation plan to restore the interpersonal communications capabilities.

Several commenters suggested revisions to M3. The RC SDT revised M3 based on the comments received suggesting that the applicability be expanded to include Generator Operators, Transmission Service Providers, Load-Serving Entities, Purchasing-Selling Entities, and Distribution Providers. Several entities commented that M3 did not match R3 which included an explanatory sentence that allowed an entity to use a language other than English for its internal communications. The informational second sentence was removed from Requirement R3, thus eliminating the “disconnect” between the requirement and the measure.

The revisions to M3 are shown below:

M3. ~~The Each~~ Reliability Coordinator, Transmission Operator or Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language.

M4 was revised based on stakeholder comments as follows:

M4. Each Distribution Provider and Generation Operator shall demonstrate the existence of ~~has its tele~~interpersonal communications ~~facilities~~capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.

All measures were revised as necessary to reflect revisions to requirements.

Organization	Question 2:	Question 2 Comments:
NPCC	No	There is inconsistency between R3 and M3. In R3, there is a provision for agreement between entities (RC, TOP, BA, GOP, DP) to use a language other than English in their communications. In M3, that option is not presented. M3 should reflect what is written in R3.
<p>Response: The RC SDT thanks you for your comment. The informational second sentence was removed from the requirement so there is no longer a disconnect between the requirement and the measure.</p>		
CU of Springfield	No	<p>CU suggests that COM-001-2 M4 be moved to M1 and language in the measures changed to:</p> <p>M1. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall have evidence of primary and backup telecommunication facilities.</p> <p>M2.Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall provide evidence that it operationally tested, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional.</p> <p>M4. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Distribution Provider, Load Serving Entity and Purchasing Selling Entity shall have and provide upon request evidence that could include, but is not limited to operator</p>

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 2:	Question 2 Comments:
		logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES.
<p>Response: The RC SDT thanks you for your comment. We have revised the requirements for COM-001 based on the comments received from all stakeholders. We also revised the measures to reflect the new verbiage of the requirements.</p> <p>We have replaced the term “Telecommunications Facilities” with “interpersonal communications capabilities” to better reflect the intent of the standard.</p> <p>The RC SDT contends that the addition of the TSP, LSE and PSE to COM-001 to R1 and R2 expands the scope beyond the reliability intent, but has added the TSP, LSE and PSE to the list of entities that must use the English language in R3. It is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity.</p>		
Independent Electricity System Operator - Ontario	No	M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.
<p>Response: The RC SDT thanks you for your comment. The informational second sentence was removed from the requirement so there is no longer a requirement for evidence regarding this.</p>		
Reliability Coordinator Comment Working Group	No	On Measure 3 need to remove the word "all" in reference to voice logs. Measure needs to include evidence of concurrence for using a language other than English
<p>Response: The RC SDT thanks you for your comment. The informational second sentence was removed from the requirement so there is no longer a requirement for evidence regarding this.</p>		
Northern California Power Agency	No	M3 should include Generator Operator and Distribution Provider in the applicability.
<p>Response: The RC SDT thanks you for your comment. The measure has been revised to include the Generator Operator and Distribution Provider.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 2:	Question 2 Comments:
ElectriCities of North Carolina, Inc.	No	See comments on Question 1
<p>Response: Please see response to question 1.</p>		
US Army Corps of Engineers, Northwestern Division	No	M3 needs to include the GO and DP in its requirement for inter-utility communications in English.
<p>Response: The RC SDT thanks you for your comment. The measure has been revised to include the Generator Operator and Distribution Provider.</p>		
MRO NERC SDTandards Review Subcommittee	No	M4 does not appear to be worded as a measurement. If R4 is kept, we suggest the following modification: "The Distribution Provider and Generation Operator shall demonstrate the existence of its telecommunication systems identified in R4."
<p>Response: The RC SDT thanks you for your comment. We have revised M4 per your suggestion.</p>		
Southern Company Transmission	No	<p>2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards.</p> <p>2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation.</p> <p>2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>2.1 - The measures for this standard have all been revised per your comment.</p> <p>2.2 – The requirement for this measure has been modified to reflect time frames for notification as well as a length of time applicable to the outage. The measure has been revised accordingly.</p>		

Organization	Question 2:	Question 2 Comments:
<p>2.3 - The Data Retention section for this standard has been revised to comport with NERC Compliance guidelines. DP and GOP have been added to the measure.</p>		
ISO New England Inc.	No	See answer to #1.
<p>Response: Please see response to question 1.</p>		
Salt River Project	No	M3 should include providing evidence of concurrence to use a language other than English. This will better align the measure with the VSL language.
<p>Response: The RC SDT thanks you for your comment. We have revised the measure by adding the following sentence: If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language.</p>		
SERC OC Standards Review Group	Yes and No	<p>2.1 - A general comment regards the production of evidence - such language should be standardized as "have and provide upon request" and the authorized requestors identified. This comment should apply to all standards.</p> <p>2.2 - M2 is overly broad and should include a reasonable time frame for notification. For example, as currently written, a telecom outage of only one minute for which a notification is not made would be a severe violation.</p> <p>2.3 - The Drafting Team should coordinate the data retention time frame with the requirement measures for R1. DPs and GOs should also be included in the measures requirements</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>2.1 - The measures for this standard have all been revised per your comment.</p> <p>2.2 – The requirement for this measure has been modified to reflect time frames for notification as well as a length of time applicable to the outage. The measure has been revised accordingly.</p> <p>2.3 - The Data Retention section for this standard has been revised to comport with NERC Compliance guidelines. DP and GOP have been added to the measure.</p>		

Organization	Question 2:	Question 2 Comments:
Progress Energy Carolinas	No	<p>M1 - The proposed measure M1 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>M2 - The proposed measure M2 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p> <p>M4 - The proposed measure M4 as stated is too broad in reference to "telecommunications facilities". It is unclear as to whether it is intending to specify facilities and equipment which provide VOICE/VERBAL communications, or ELECTRONIC MESSAGING notifications systems, or DATA EXCHANGE links or all of these. Please clarify either within the requirement or within the Glossary of Terms which accompany the full standards set.</p>
<p>Response: The RC SDT thanks you for your comment. COM-001-2 has been renamed "Communications". The RC SDT envisions COM-001-2 as referring to voice or text communications only. We have revised the term "telecommunications facilities" to "interpersonal communications capabilities" to better reflect the intent.</p>		
FirstEnergy	No	The measures should be modified per our suggested modifications in question 1.
<p>Response: The RC SDT thanks you for your comment. The measures were revised based on the revisions to requirements that resulted from stakeholder comments.</p>		
Duke Energy	No	<p>General comments - Not using consistent language regarding "provide evidence" and "shall have and provide upon request evidence". Also need to add corresponding requirement number after each measure.</p> <p>Measure M1 - Just because an alternate facility works when it is tested does not mean it will work during an actual failure of the primary system. - what do we do if the "test" fails — are we complaint? Clarify that the requirement and measure is to "test" not "to test successfully". We may test and find that something does not work as expected.</p>

Organization	Question 2:	Question 2 Comments:
<p>Response: The RC SDT thanks you for your comment. We have modified the “evidence” language for consistency. Each measure corresponds to the measure with the same number. There is a one-to-one relationship between requirements and measures – however the SDT did add the requirement numbers to ensure this is clear to all stakeholders.</p> <p>M1: We have added the following sentence to R1 and M1.</p> <p>R1: If the test is unsuccessful, the entity shall develop a mitigation plan to restore its interpersonal communications capabilities.</p> <p>M1: If the test was unsuccessful, the entity shall have and provide upon request evidence that it developed a mitigation plan to restore the interpersonal communications capabilities.</p>		
AEP	No	M2 needs to be clarified regarding impacted functions.
<p>Response: The RC SDT thanks you for your comment. The requirement, as written, has sufficient clarity regarding the impacted entities.</p>		
American Transmission Company	No	M2 should be changed to reflect the comments noted in Question 1 for R2.
<p>Response: The RC SDT thanks you for your comment. The RC SDT believes that entities should contact others when their normal communication capability is lost. For example, the normal phone line could be cut and someone trying to contact that entity may only get a busy signal and have no idea that alternate communications is necessary. We have revised the requirement to place time bounds on outages that require notification. The new R2 is:</p> <p>Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>The measure reflects the new requirement.</p>		
ISO/RTO Council Standards Review Subcommittee	Yes and No	M3: The evidence to show that concurrence is in place to allow communication using a language other than English is missing. The Measure as written merely asks for evidence that communication in a different language has occurred.
<p>Response: The RC SDT thanks you for your comment. The measure has been revised as:</p> <p>M1: The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include,</p>		

Organization	Question 2:	Question 2 Comments:
<p>but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language.</p>		
PJM Interconnection	Yes	<p>M4 should be revised to reflect that each Distribution Provider and Generation Operator has evidence demonstrating the functionality of telecommunications facilities with the TOP and BA for the exchange of interconnection and operating information.</p>
<p>Response: The RC SDT thanks you for your comment. The measure was modified as: Each Distribution Provider and Generation Operator shall demonstrate the existence of its interpersonal communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p>		
Buckeye Power, Inc.	Yes and No	Abstain
US Bureau of Reclamation	Yes	
Bonneville Power Administration	Yes	
Manitoba Hydro	Yes	
Ameren	Yes	
PPL Supply Group	Yes	
Entergy Services, Inc	Yes	

3. Do you agree with the Violation Severity Levels proposed in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT made revisions to the VSLs based on the comments received and also to reflect revisions to the associated requirements. We received comments that the VSLs for R1 and R2 were based on multiple violations, which do not support FERC’s Guideline 4 for VSLs - Guideline 4 requires that a VSL should be based on a single violation. We agreed and revised the VSLs to reflect a single violation.

Organization	Question 3:	Question 3 Comments:
Independent Electricity System Operator - Ontario	No	<p>R1: Suggest to revise the conditions for all levels to read "failed to operationally test the alternative communication facilities within the last???"</p> <p>R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affect entities, then the second condition should be an "OR".</p> <p>R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time operations by itself does not constitute a violate of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>We have revised the VSLs per your suggestions and comments from other stakeholders, and revisions made to the wording of the associated requirement.</p> <p>We have revised the VSLs per your suggestions and the revisions made to the associated requirement</p> <p>We have revised the VSLs per your suggestions.</p>		
CU of Springfield	No	Revise to reflect proposed changes above
<p>Response: The RC SDT thanks you for your comment. The Requirement, Measures and VSLs have been revised per your and other</p>		

Organization	Question 3:	Question 3 Comments:
stakeholders' comments.		
ElectriCities of North Carolina, Inc.	No	Depends of what is meant by "telecommunications facilities"
<p>Response: The RC SDT thanks you for your comment. We have clarified the requirements and measures to use the term "interpersonal communications capabilities" rather than "telecommunications facilities".</p>		
MRO NERC SDTandards Review Subcommittee	No	<p>The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter."</p> <p>The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: We have revised the VSLs per the guideline and the revised requirement.</p> <p>R2: We have revised the requirement to have time constraints for the length of an outage as well as a timeframe for notification. The VSL has been revised to reflect the revised requirement.</p>		
PJM Interconnection	No	<p>Recommend the following VSLs for R1:</p> <p>Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion.</p>

Organization	Question 3:	Question 3 Comments:
		<p>Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions.</p> <p>Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions.</p> <p>Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions.</p> <p>Recommend the following VSLs for R2:</p> <p>Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on at least one occasion.</p> <p>Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on two separate occasions.</p> <p>Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on three separate occasions.</p> <p>Proposed Severe VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator failed to operationally test alternative telecommunications every three months on more than three separate occasions.</p> <p>Recommend the following VSLs for R4:</p> <p>Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority or Transmission Operator for the exchange of Interconnection and operating information.</p> <p>Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority and Transmission Operator for the exchange of Interconnection and operating information.</p>
<p>Response: The RC SDT thanks you for your comment.</p>		

Organization	Question 3:	Question 3 Comments:
<p>R1: The proposed VSLs reflect multiple violations of the requirement. Each VSL must be written for a single violation (failure to test quarterly). R2: The proposed VSLs reflect multiple violations of the requirement and are a duplication of the VSLs proposed for R1, not for R2. R4: We have revised the VSLs per your suggestion.</p>		
FirstEnergy	No	<p>The VSL should be modified per our suggested modifications in question 1.R1 VSL - The statement in the VSL that the responsible entity did not "operationally test" is too broad. It should be more specific with the language used in the requirement.</p>
<p>Response: The RC SDT thanks you for your comment. The requirement, measure and VSLs have been revised per stakeholder comments and the phrase, "operationally test" is no longer used in the standard.</p>		
Duke Energy	No	<p>VSL for Requirement R1 - The VSL for R1 seems to imply that an operational test needs to have been performed in the last 90 days — this is read in conjunction with the data retention requirements. Need to clarify in the requirement how ?quarter basis? is defined - is it the calendar quarter, or a rolling 90 days? In addition, the VSLs for Requirement R1 appear to violate NERC guidelines, since the Moderate, High and Severe VSLs are based upon cumulative violations of the Lower VSL.</p>
<p>Response: The RC SDT thanks you for your comment. The data retention was changed from three months to three years. The VSLs were revised to reflect the guidelines as you suggested. There are now 2 VSLs.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>The VSLs as defined for Requirement 1 appear to violate Guideline 4 that the Commission established in their "Order on Violation Severity Levels Proposed by the Electric Reliability Organization". Guideline 4 requires that a VSL should be based on a single violation. The VSLs as defined accumulate the number of consecutive quarters. This would imply that a single violation could last more than a year and that the compliance auditor could not determine sanctions until the entity becomes compliant or year has passed. A single violation appears to be the failure to test in a single quarter. This requirement is binary in nature in that it is either met or it isn't. We suggest that only a lower VSL should be defined as: "The RC, TOP, or BA failed to test the backup telecommunication facilities for a single calendar quarter."</p> <p>The Lower VSL for R2 is not possible. The act of notifying all impacted entities of the failure of their primary telecommunication system requires the use of the alternative telecommunications systems which is a form of verifying that the alternative telecommunications facilities are functional. The</p>

Organization	Question 3:	Question 3 Comments:
		<p>drafting team should consider applying the numeric performance category of the VSL Development Guideline Criteria for R2.</p> <p>(i) R1: Suggest to revise the conditions for all levels to read "...failed to operationally test the alternative communication facilities within the last....."</p> <p>(ii) R2: The second part under Severe is not needed since failing to notify any impacted entities would imply no communication to the affected entities anyway. If verification of the functionality of the alternate means of telecommunications is also critical even without communicating to the affect entities, then the second condition should be an "OR".</p> <p>(iii) R3: Failure to having concurrence to use a language other than English for communications between and among operating personnel responsible for real-time operations by itself does not constitute a violate of any requirements; it is the absence of such a concurrence AND having used a language other than English that would constitute a violation. Suggest to revise this condition.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: We have revised the requirement to have a provision to test as well as a provision to develop a mitigation plan when a test fails. The VSLs reflect the revised requirement.</p> <p>R2: (i) We have revised the requirement to have a provision to test as well as a provision to develop a mitigation plan when a test fails. The VSLs reflect the revised requirement.</p> <p style="padding-left: 40px;">The second part of the VSL was removed.</p> <p style="padding-left: 40px;">The VSL was revised to:</p> <p>The responsible entity failed to provide evidence of concurrence to use a language other than English for communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected Bulk Electric System when a language other than English was used.</p>

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 3:	Question 3 Comments:
Coordinator Comment Working Group		
Northern California Power Agency	Yes	
Entergy Services, Inc	Yes	
Salt River Project	Yes	
US Bureau of Reclamation	Yes	

4. Do you agree with the revisions to the Requirements in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The work of the IROL SDT resulted in the retirement of R1 from the standard. The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R2 (now R1) into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall ~~issue directives in a clear, concise, and definitive manner; shall ensure~~require the recipient of the verbal directive to repeats the intent of the directive back ~~information back correctly~~; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings.

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall repeat the intent of the directive back to the issuer of the directive

The purpose statement was also revised to reflect the revisions to the standard:

~~To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications and that these communications capabilities are staffed and available for addressing a real time emergency condition.~~ To ensure emergency communications by between operating personnel are effective.

Organization	Question 4:	Question 4 Comments:
Southern Company Transmission	No	4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3: 4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard. 4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2. 4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to

Organization	Question 4:	Question 4 Comments:
		<p>measure. We suggest they be replaced with "the RC shall direct".</p> <p>4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1).</p> <p>4.6 - Grammatical changes are suggested. The revised requirement reads as follows: " To ensure Balancing Authorities, Transmission Operators, and Generator Operators have adequate communications; to ensure that these communication capabilities are staffed and available for addressing a real-time emergency condition; and to ensure effective communications by operating personnel."</p> <p>4.7 - At the Data Retention section, the reference to 'Requirement 3, Measure 3' should be consistent with the modified standard. The revised standard only has one requirement.</p> <p>4.8 - The use of calendar days in the Data Retention section is inconsistent with related standards where 'months' are used.</p>
<p>Response: The RC SDT thanks you for your comments.</p> <p>4.2 - We have revised the purpose statement to: To ensure emergency communications between operating personnel are effective.</p> <p>4.3 – We have changed the applicability of COM-002 to match that of IRO-001.</p> <p>4.4 and 4.5 - We have separated the requirement into two requirements to ensure that the requirements are measurable and distinct. We concur with your comments and have revised the requirements to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall require the recipient of the verbal directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>4.6 - We have revised the purpose statement to: To ensure emergency communications between operating personnel are effective.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 4:	Question 4 Comments:
4.7 and 4.8 – We have updated the data retention section with the latest compliance template information.		
ISO New England Inc.	No	ISO New England believes it is inefficient to have a (temporary) Standard with only one Requirement and recommend including this Requirement in COM-001, with COM-001 renamed to "Communications."
<p>Response: The RC SDT thanks you for your comments. Based on other stakeholder feedback, we have added applicable entities and another requirement for those entities. This standard will be retired upon adoption of COM-003-1.</p>		
US Bureau of Reclamation	No	Purpose: Since Generator Operators were deleted from the applicability; the Purpose should be revised to reflect that and include Reliability Coordinators. The language is somewhat redundant, recommend it be simplified to "To ensure Balancing Authorities, Reliability Coordinators, and Transmission Operators communicate in an effective manner."
<p>Response The RC SDT thanks you for your comments. Several entities were added to the applicability and the purpose statement was revised to: To ensure emergency communications between operating personnel are effective.</p>		
FirstEnergy	No	<p>Purpose - The GOP is still shown in the purpose statement although it was removed from the applicability. Also, it may be better if the purpose was written more generally as "To ensure adequate communications capabilities for addressing real-time emergency conditions and ensure communications by operating personnel are effective to maintain BES reliability".</p> <p>Applicability - In the SDT's document "Scope of Work Assigned to the Reliability Coordination Standard Drafting Team", the team decided to not include the FERC directive to include the DP in the applicability with the following reasoning "The proposed revisions do not include the DP entity because they are not applicable." We would like clarification on this.</p> <p>R1 - It does not appear that the implementation plan addresses the FERC direction to consider comments from Santa Clara, FirstEnergy, and Six Cities per 693 par. 539 regarding staffing requirements. Santa Clara asks that these requirements apply "only to operating staff available on site at all times or includes repair personnel who are available only on an on-call basis". FirstEnergy asks that the "term [staffed] should not require a physical presence at all facilities at all times because some units, such as peaking units, are not staffed 24 hours a day". FirstEnergy also suggest "because nuclear units are already subject to communications requirements in their operating</p>

Organization	Question 4:	Question 4 Comments:
		<p>procedures, their compliance with NRC operating procedures should be deemed in compliance with the NERC Reliability Standards". Six Cities "states that, to avoid unnecessary staffing burdens, particularly for smaller entities, the Commission should direct NERC to clarify COM-002-2 by providing that identification of an emergency contact person on call to respond to real-time emergency conditions will constitute adequate compliance".</p> <p>R1 - Just as an FYI, with regard to the proposed replacement requirement statement in the implementation plan: "TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC", per recently stakeholder approved ballots, R1 of TOP-005-1 has been retired and now covered in new standard IRO-010-1.R1.1 - The existing requirement includes "through predetermined communication paths of any condition that could threaten the reliability of its area or when firm load shedding is anticipated". The proposed replacement requirements do not address the need for "predetermined communication paths".</p>
<p>Response: The RC SDT thanks you for your comments.</p> <p>Purpose: Several entities were added to the applicability and the purpose statement was revised to: To ensure emergency communications between operating personnel are effective.</p> <p>Applicability: The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity.</p> <p>R1: The RC SDT considered these comments when developing the proposed COM-001-2 specification requirements. We have revised the requirement to indicate that directives being issued relate to real-time operating emergencies. We do not feel that this would place an undue burden on any entity with respect to staffing as the requirement makes no mention of staffing.</p> <p>R1 FYI: Thank you for the FYI.</p>		
Duke Energy	No	<p>Requirement R1 - As defined by Merriam Webster, the use of the word "ensure" implies virtual guarantee <the government has ensured the safety of the refugees>; while the use of the alternative word "assure" implies the removal of doubt and suspense from a person's mind. We suggest that "assure" is more appropriate than "ensure" in this context in the standards. The use of words like "clear, concise, and definitive manner" is subject to interpretation. This same language is used in the VSLs. Depending on the interpretation of this phrase, an entity could be found to be in a "Severe" violation level. The issuer of the directive should not be subject to non-compliance if the recipient of</p>

Organization	Question 4:	Question 4 Comments:
		<p>the directive refuses to repeat back. Need to add a requirement, measure, and VSL that clarifies that the recipient of a directive is obliged to perform their portion of a repeat-back. The inclusion of TSPs, LSEs, and PSEs in IRO-001-2 indicates the need to include these functions in the COM-002-3 requirement concerning repeat-backs. What is a “directive”? The regional compliance processes are having difficulty in auditing this existing standard due to lack of clarity of what constitutes a directive. "Directive" should be defined as being associated with real-time operational emergency conditions, and not ordinary day-to-day communications. Otherwise a VRF of High is not warranted.</p>
<p>Response: The RC SDT thanks you for your comments. We concur with your comments and have revised the requirements to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall require the recipient of the verbal directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
Northern California Power Agency	Yes and No	Remove Generator Operator from the Purpose Statement. The re-written standard no longer applies to GOP
<p>Response: The RC SDT thanks you for your comments. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity.</p> <p>We have revised the purpose statement to: “To ensure emergency communications between operating personnel are effective[ML1].”</p>		
SERC OC Standards Review Group	Yes and No	<p>4.1 - We agree with the recommendation to retire COM-002-3 when COM-003-1 is approved; however we suggest the following changes should be made for the interim applicability of COM-002-3:</p> <p>4.2 - The Purpose statement should be revised to re-align with the revisions in the Standard.</p> <p>4.3 - The applicability of COM-002-3 should be consistent with the applicability of IRO-001-2.</p> <p>4.4 - The words "clear, concise, and definitive manner" in R1 are ambiguous and impossible to</p>

Organization	Question 4:	Question 4 Comments:
		measure. We suggest they be replaced with "the RC shall direct". 4.5 - An additional requirement, R2, should be added that requires the Operator to repeat the information back correctly (i.e., separate this requirement from R1).
<p>Response: The RC SDT thanks you for your comments.</p> <p>4.2 - We have revised the purpose statement to: To ensure emergency communications between operating personnel are effective.</p> <p>4.3 – We have changed the applicability of COM-002 to match that of IRO-001.</p> <p>4.4 and 4.5 - We have separated the requirement into two requirements to ensure that the requirements are measurable and distinct. We concur with your comments and have revised the requirements to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall require the recipient of the verbal directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
Buckeye Power, Inc.	Yes and No	Abstain
PJM Interconnection	Yes	We note that this requirement really is "3-part communication" and will be moved to the new communications standard, COM-003-1.
<p>Response: The RC SDT thanks you for your comments. As envisioned, the 3-part communication requirements in this standard are temporary – they will be retired when COM-003-1 becomes effective.</p>		
CU of Springfield	Yes	CU supports moving R1 to COM-003 and retiring COM-002.
<p>Response: The RC SDT thanks you for your comment. As envisioned, the 3-part communication requirements in this standard are temporary – they will be retired when COM-003-1 becomes effective.</p>

5. Do you agree with the revisions to the Measures in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements and measures were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall ~~issue directives in a clear, concise, and definitive manner; shall ensure~~ require the recipient of the verbal directive to repeat ~~s the information intent of the directive~~ back ~~correctly;~~ and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. *[Violation Risk Factor: High][Time Horizon: Real-Time]*

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1, shall repeat the intent of the directive back to the issuer of the directive. [Violation Risk Factor: High][Time Horizon: Real-Time]

M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a verbal directive associated with real-time operational emergency conditions shall have evidence such as voice recordings or transcripts of voice recordings to show that it ~~required issued directives in a clear, concise, and definitive manner; ensured~~ the recipient of the verbal directive to repeat ~~ed the information intent of the directive~~ back ~~correctly;~~ and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings.

M2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a verbal directive issued per Requirement R1 shall have evidence such as voice recordings or transcripts of voice recordings to show that it repeated the intent of the directive back to the issuer of the directive.

6. Do you agree with the Violation Severity Levels proposed in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT received comments recommending revisions to the VSLs based on revisions to the requirements and measures. The RC SDT did this and created new VSLs for new Requirement R2. The revised VSLs are:

Requirement	Lower	Moderate	High	Severe
R1	N/A	The responsible entity provided a clear issued a verbal directive in a clear, concise and definitive manner associated with real-time operating emergency conditions and required the recipient to repeat the directive intent of the directive, but did not acknowledge the recipient was correct in the repeated directive <u>OR failed to repeat the intent of the original statement to resolve any misunderstandings.</u>	The responsible entity provided a clear issued a verbal directive associated with real-time operating emergency conditions in a clear, concise and definitive manner , but did not require the recipient to repeat the intent of the directive.	<u>The responsible entity issued a verbal directive associated with real-time operating emergency conditions and required the recipient to repeat the intent of the directive, but did not acknowledge the recipient was correct in the repeated directive AND failed to repeat the intent of the original statement to resolve any misunderstandings..</u> The responsible entity failed to provide a clear directive in a clear, concise and definitive manner when required.
<u>R2</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>	<u>The responsible entity that is the recipient of a verbal directive issued per Requirement R1 failed to repeat the intent of the directive back to the issuer of the directive.</u>

Organization	Question 6:	Question 6 Comments:
Southern Company Transmission	No	6.1 - The severity levels need to be revised to match the new requirements.
<p>Response: The RC SDT thanks you for your comment. The VSLs were revised based on revisions to the requirements.</p>		
SERC OC Standards Review Group	No	6.1 - The severity levels need to be revised to match the new requirements
<p>Response: The RC SDT thanks you for your comment. The VSLs were revised based on revisions to the requirements.</p>		
PJM Interconnection	No	<p>The word "clear" is redundantly used in the High and Severe columns.</p> <p>Recommend that "Moderate" should read: "The Responsible Entity provided a directive in a clear, concise and definitive manner, but did not require the recipient to repeat the directive back to the originator."</p> <p>Recommend that "High" should read: "The Responsible Entity failed to issue a directive in a clear, concise and definitive manner while ensuring the recipient of the directive repeated the information back correctly with acknowledgment by the originator that the response was correct."</p> <p>Recommend that "Severe" should read: "The Responsible Entity failed on more than one occasion to issue a directive in a clear, concise and definitive manner while ensuring the recipient of the directive repeated the information back correctly with acknowledgment by the originator that the response was correct."</p>
<p>Response: The RC SDT thanks you for your comment. We have removed the language "clear, concise and definitive manner" from the requirements, measures and VSLs. Based on the requirements, the VSLs were revised as shown above in the Summary Consideration section. We do not agree with your suggestion on the Severe VSL regarding the number of occasions. The requirement is a stand alone which requires the entity to perform it each time.</p>		
FirstEnergy	No	The VSL should be modified if our comments in question 4 result in changes to the proposed requirements.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 6:	Question 6 Comments:
<p>Response: The RC SDT thanks you for your comment. The VSLs were revised based on revisions to the requirements.</p>

7. Do you agree with the revisions to the Requirements in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring time delay.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

R2 was modified as shown below – note that the phrase, “without intentional delay” was removed from all requirements, measures and VSLs:

R2. Each Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall ~~act without intentional delay to~~ comply with its Reliability Coordinator’s directives unless such actions would violate safety, equipment, or regulatory or statutory requirements.

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This revision would obviate the need for providing a measure for “intent”, while still maintaining the reliability intent of the original requirement.

The SDT proposes to re-post the standard to obtain stakeholder feedback on the suggested revisions

Organization	Question 7:	Question 7 Comments:
Manitoba Hydro	No	<p>I do not agree with the way IRO-001-2 R1 is written. In the present form the requirement may infer that directing action is not an action. It may also infer that the RC is only required to do "act "or "direct actions" but not both. The way it is written also leads to problems with the VSLs. Perhaps R1 can be edited along the lines of:</p> <p>R1. The Reliability Coordinator shall act to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. When required, the actions initiated by the Reliability Coordinator will include, but is not limited to, directing the actions to be taken by Transmission</p>

Organization	Question 7:	Question 7 Comments:
		<p>Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area.</p> <p>I agree with the other Requirements in IRO-001-2 with the exception of the "High" Violation Risk Factor assigned to IRO-001-2 requirement R5. This should be a "Medium" VRF at the most. If the emergency has been mitigated, and the entities are not aware, they will still be operating to restrictions, which means the grid is operating well within limits. Not notifying the entities that the problem has been mitigated may have some financial implications but it should not place the grid at risk.</p>
<p>Response: The RC SDT thanks you for your comment. The recommended language change is what the requirement means. The SDT did not modify the original language as they say the same thing.</p> <p>The RC SDT agrees and modified the VRF for R5 to medium.</p>		
Independent Electricity System Operator - Ontario	No	<p>R2: the phrase "act without intentional delay" is not necessary since the urgency of taking any actions as directed by the RC's are generally understood to be conveyed in the RC's directives.</p> <p>R3: Given R2 requires the responsible entities to comply with the RC directives, the part that says "immediately confirm the ability to comply with the directive or" is not needed. R3 should simply require the responsible entities to notify the RC upon recognition of the inability to perform the directive.</p> <p>The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT agrees to remove this phrase. The majority of commenters found this to be unnecessary.</p> <p>Agreed, the RC SDT modified R3 to remove "immediately confirm the ability to comply with the directive or"</p> <p>The RC SDT agrees and modified the VRF for R5 to medium.</p>		
MRO NERC SDTandards Review	No	New requirement R2 should omit act without intentional delay. The desired outcome is for the responsible entity to comply with the RC directive. Adding act without intentional delay only confuses

Organization	Question 7:	Question 7 Comments:
Subcommittee		<p>the situation and adds questions. What is an intentional delay? The word act implies that the requirement is met simply if the responsible entity attempted to meet the directive but was unable to do so. That is already considered in with the clause that begins "unless such actions would violate ...". Thus, the word act is not necessary.</p> <p>The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not function properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violated safety, equipment, statutory, or regulatory requirements.</p> <p>Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees to remove this phrase. The majority of commenters found this to be unnecessary.</p> <p>The RC SDT agrees. We have modified R3 to remove "immediately" and "confirm the ability to comply with the directive or".</p> <p>The RC SDT does not agree with regard to R4 and R5, as some impacted entities may not need to take action or be issued directives but would benefit from the situational awareness associated with knowing the status of operating issues.</p>		
Southern Company	No	7.1 - Applicability 4.2 - Transmission Operator should be plural.

Organization	Question 7:	Question 7 Comments:
Transmission		<p>7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process.</p> <p>7.3 - In R2 insert the word "its" before Reliability Coordinator.</p> <p>7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>7.1 agreed, The RC SDT modified the applicability section.</p> <p>7.2 The revision to the definition will be placed in the correct location on the next posting and will be balloted along with the standard revisions.</p> <p>7.3 The RC SDT agrees and modified R2, the expectation is the entity's RC will issue the directives, not a different RC.</p> <p>7.4 R3 has been modified and changed "the" with "its" before RC. Note that based on comments from other stakeholders, the phrase, "immediately confirm the ability to comply" has been omitted from the revised requirement.</p>		
ISO New England Inc.	Yes and No	We believe the word "threat" should be replaced with "events" in Requirements 4 and 5.
<p>Response: The RC SDT thanks you for your comment. The RC SDT chose the term "threat with Adverse Reliability Impacts" to convey the concept that action may be taken to prevent an event when an RC identified a potential threat. This will help better ensure reliability by mitigating threats rather than waiting for an event to occur.</p>		
Entergy Services, Inc	No	PER-003 R1 does not specifically address delegated functions; therefore, this requirement is not redundant with IRO-001 R6 without changes to PER-003 to specifically deal with employees performing delegated functions.
<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT references the NERC ROP in the Implementation plan which address your delegation concern. -</p> <p>Per NERC ROP appendix 5, Organization Registration and Certification Manual v3.3 Sec IV and V:</p> <p>The applicant retains the responsibility for all delegated tasks. The applicant shall identify to the review team all tasks that have been delegated</p>		

Organization	Question 7:	Question 7 Comments:
<p>to another entity prior to the on-site visit. The review team shall conduct at least one on-site visit to the applicant's facilities. This may also apply to the facilities of entities responsible for delegated tasks. During the visit, the review team will:</p> <ul style="list-style-type: none"> a. Review with the applicant the data collected through the questionnaires; b. Interview the operations and management personnel; c. Inspect the facilities and equipment; d. Request a demonstration of all tools identified in the certification standard; e. Review all necessary documents and data including all agreements, processes, and procedures identified in the certification standard; f. Review certification documents and projected system operator work schedules; and g. Review any additional documentation that is needed to support the completed questionnaire or inquiries arising during the site-visit. 		
MEAG Power	No	<p>Directives that are mandatory under R2 of IRO-001-2 should have boundaries consistent with the proper role of an RC. For example, if an RC directs an LSE with a 15% planning reserve margin to execute purchase power agreements until its reserve margin is at least 20% and the LSE refuses, then the LSE may have violated this standard. Other examples of improper RC directives are directives to increase coal inventories, buy firm fuel transportation rights, reconductor transmission lines, purchase spare equipment, etc. Granted entities may be able to conjure up a regulatory or statutory basis for refusing many improper RC directives but in some instances there may be no permissible grounds to refuse. The appropriate solution is to modify the standard to ensure that improper directives are never mandatory in the first place. Specifically, NERC is urged to state that RC directives are mandatory only if they pertain to specific categories such as: switching orders to reconfigure the BES, orders to postpone scheduled outages of BES equipment, orders to change generator output, orders to curtail transactions or orders to curtail load.</p>
<p>Response: The RC SDT thanks you for your comment. It is envisioned by the RC SDT that such RC directives consist of real-time and same-day operating actions that prevent or mitigate events that may or will cause Adverse Reliability impacts.</p>		
FirstEnergy	No	<p>R3 - should be a sub requirement of R2. These two requirements are sequential in nature and should be measured at the same time. The VRFs and Time Horizons are the same for both requirements lending to their combination into a requirement with a sub requirement. In the VSL for R2, an entity is being penalized with a high severity level for not completely following an RC directive even though it violated safety, equipment, statutory, or regulatory requirements. Measuring R2 and R3 at the same</p>

Organization	Question 7:	Question 7 Comments:
		<p>time allows for the process to complete prior to the measurement taking place.</p> <p>R3 - The "or" between "Distribution Provider" and "Purchasing-Selling Entity" should be replaced with an "and".</p> <p>R4 - Should be revised by adding the phrase "of the expected or actual threat" to the end of the requirement to add clarity.</p> <p>Existing R7 requirement - This requirement is proposed for retirement because it is redundant with IRO-014-1 R1. However, it is not clear how the existing requirement to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated" is covered in IRO-014-1 R1. IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. IRO-014-1 only vaguely covers the existing requirement R7 of IRO-001-1.</p>
<p>Response: The RC SDT thanks you for your comment. The intent of the drafting team is to have distinct requirements that are measured independently. Having one as a subrequirement will not allow that to occur.</p> <p>The RC SDT revised the “or” to an “and”.</p> <p>R4, The recommended language change is what the requirement means. The RC SDT did not modify the original language as they say the same thing.</p> <p>R7, The industry comments do not support being more specific in IRO-014-1 R1 in order to retire IRO-001-1 R7.</p>		
SERC OC Standards Review Group	Yes and No	<p>7.1 - Applicability 4.2 - Transmission Operator should be plural.</p> <p>7.2 - The revised definition of "Adverse Reliability Impacts" (R1) should be included at the top of Standard IRO-001-2, per Glossary of Terms Used in Standards: All defined terms used in reliability standards shall be defined in the glossary. Definitions may be approved as part of a standard action or as a separate action. All definitions must be approved in accordance with the standards process.</p> <p>7.3 - In R2 insert the word "its" before Reliability Coordinator</p> <p>7.4 - In R3, replace "immediately" with "without intentional delay", replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator.</p>

Organization	Question 7:	Question 7 Comments:
<p>Response: The RC SDT thanks you for your comment.</p> <p>7.1 The RC SDT agrees and will modify the applicability section.</p> <p>7.2 The revision to the definition will be placed in the correct location on the next posting and will be balloted along with the standard revisions.</p> <p>7.3 Agreed, The RC SDT modified R2, the expectation is the entities RC will issue the directives, not a different RC.</p> <p>7.4 R3 has been modified and changed “the” with “its” before RC. Note that based on comments from other stakeholders, the phrase, “immediately confirm the ability to comply” has been omitted from the revised requirement.</p>		
US Bureau of Reclamation	No	R4. and R5. Both of these Requirements use the phrase “without intentional delay” to describe the urgency of the notification to impacted entities. In both requirements we recommend the language be changed from “notify, without intentional delay” to “immediately notify”.
<p>Response: The RC SDT thanks you for your comment. We have removed the phrase from the requirements.</p>		
American Transmission Company	No	R2 refers to "intentional delay". The determination of intent should be left to the VSL portion of the standard, not the requirement portion.
<p>Response: The RC SDT thanks you for your comment. The RC SDT has removed “without intentional delay” from the proposed requirement.</p>		
Consolidated Edison Co. of NY, Inc.	Yes and No	<p>Wording in question: R.2/M.2 Each Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without intentional delay to comply with the Reliability Coordinator's directives.R.3/M.3 Each — Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives.</p> <p>[1] Question: Is this wording absolutely necessary? And then, is it sufficient, if needed? Comment: First, we would question whether there is a specific need to include this wording. Is the IRO-001 Reliability Standard sufficient without it?</p> <p>[2] Question: Is this wording unambiguous? Comment: The wording seems somewhat vague and ambiguous. Analysis: The wording appears to establish performance standards ("without intentional delay", "shall immediately confirm") and evidentiary requirements ("evidence that it acted" or "evidence that it confirmed"), but without using pre-existing defined terms, establishing new defined</p>

Organization	Question 7:	Question 7 Comments:
		<p>terms, or defining these terms as used in context.</p> <p>[3] Intentional vs. Unintentional, Valid Intentional vs. Inappropriate Intentional? How does one differentiate between intentional and unintentional delay? When is and how much delay is valid or inappropriate? Isn't some intentional delay necessary to ensure that the other parts of the requirement being are met, e.g., — unless such actions would violate safety, equipment, or regulatory or statutory requirements?? Mightn't some acceptable amount of valid intentional delay be necessary to insure that any such RC directive and entity action would not in fact violate these safety, equipment, or regulatory or statutory requirements?</p> <p>[4] What is the timeliness standard?</p> <p>How are the terms “without delay” and “immediately conform” defined? What standard commercial measures would apply, e.g., “reasonably efforts” vs. “best efforts”? Are these terms measured in units of time (seconds or minutes) or in units of performance quality? Does a poorly considered “immediate” reply meet the standard, while a well considered reply, which is intentionally delayed, yet still appropriate, fail to meet this standard? Is that the best outcome?</p> <p>[5] What is this Evidentiary Standard? Is the sought-after “evidence” sufficiently well defined, e.g., phone logs, computer e-mail, control center computer logs, hand-written operator journals, etc.? What form of evidence is necessary and sufficient to demonstrate that the entity met this evidentiary standard? How is failure to meet this uncertain standard measured, judged and penalized?</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT has removed the phrases “immediately” and “without intentional delay” from the proposed requirements.</p>		
Duke Energy	No	<p>Requirement R1 - What happens if the RC failed to recognize that such an event was happening as opposed to failed to take action? Is this intended to cover both scenarios? The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision development of this definition needs to go thru Due Process. The inclusion of TSPs, LSEs, and PSEs here indicates the need to include these functions in the COM-001-2 requirements concerning the use of English as the approved language. In addition, this also indicates the need for all of these listed entities to be included in COM-002-3 requirements concerning repeat-backs. The RC, TOP, and BA should not be placed in a possible non-complaint state because the counter party refuses a repeat-back AND these requirements are not applicable to the counter party.</p>

Organization	Question 7:	Question 7 Comments:
		<p>Requirement R2 - The language in the Moderate VSL of R2 recognizes another potential reason for delay in execution of a directive. Requirement 2 of the Standards needs to be modified to also recognize this potential.</p> <p>Requirements R2 and R3 - Clarify that entities are obligated to take action and confirm directives only from their Reliability Coordinators, not from any Reliability Coordinator. Requirements R2, R3, R4, R5 - Inconsistent use of “timing” words in the standards — "without intentional delay" and "immediately". Suggest deleting these words due to the difficulty of determining compliance.</p> <p>Requirement R4 - The term “Adverse Reliability Impacts?” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.</p> <p>Requirement R5 - The VRF should be "Lower" instead of "High" since the notification is that the threat has been mitigated. Also, the term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1 Both scenarios are envisioned by the requirement. The proposed revision to the definition will be balloted along with the standard revision. & R4, &R5. The TSPs, LSEs, and PSEs have been added to COM-001 and COM-002 as you suggest.</p> <p>R2, already included in R2 “unless such actions would violate safety, equipment, or regulatory or statutory requirements.”</p> <p>R2, R3, The RC SDT modified R2, R3 to identify “its” RC. The phrases “immediately” and “without intentional delay” have been removed from the standard.</p> <p>R4 The revision to the definition will be placed in the correct location on the next posting and will be balloted along with the standard revisions.</p> <p>R5, The RC SDT modified the VRF for R5 to medium based on other industry comments.</p>		
Buckeye Power, Inc.	Yes and No	abstain
ISO/RTO Council Standards Review Subcommittee	Yes and No	New requirement R2 should omit act without intentional delay. Use of intentional implies willful disregard for compliance for the requirement. Intention should not be addressed as part of the compliance with the requirement but rather through the enforcement process once the compliance auditor has identified a violation.

Organization	Question 7:	Question 7 Comments:
		<p>The word immediately should be removed from the new R3. This attempts to time frame the response of the responsible entity and remove the judgment from the compliance auditor. We agree with the concept of doing this but in reality it only confuses the issue and the compliance auditor will likely apply his judgment regarding what immediate is anyway. Additionally, the requirement attempts to separate the act of confirming that the responsible entity can take the action from notifying the RC that the entity can't take the action. This is not logical. What RC is going to request a responsible entity to take action that would violate safety, equipment, statutory, or regulatory requirements? The RC should already be aware of those requirements and likely won't direct actions that violate them. Thus, the likely scenario is that the responsible entity will attempt to take action and discover that equipment is not functioning properly and thus notify the RC. We suggest striking the "shall immediately confirm the ability to comply with the directive or" from the requirement. This part of the requirement is not needed because the responsible entity is already obligated to follow the RCs directive (see order 693.) Thus, the assumption is that the order will be followed unless it can't be followed because it will violate safety, equipment, statutory, or regulatory requirements.</p> <p>Requirements R4 and R5 are unnecessary. New R1 requires the RC to direct actions to be taken by the TOP, BA, GOP, TSP, LSE, DP and PSE to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. The RC can't direct these actions without notifying all impacted TOPs and BAs. They would also have to notify them when actions are no longer necessary.</p> <p>The VRF for R5 should not be High. Failure to notify others when potential threats to system reliability have been mitigated does not constitute a high risk to the interconnected system. We suggest it be reduced to a Medium (i.e., that it affects control of the BES).</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT has removed the phrases "immediately" and "without intentional delay" from the proposed requirements. The RC SDT modified R3 based on industry comments and the phrase, "shall immediately confirm the ability to comply with the directive or" was removed from the requirement.</p> <p>The RC SDT does not agree with regard to R4 and R5, as some impacted entities may not need to take action or be issued directives but would benefit from the situational awareness associated with knowing the status of operating issues.</p> <p>The RC SDT modified the VRF for R5 to medium based on industry comments.</p>		
CU Springfield	Yes	CU supports the effort to consolidate redundant requirements in the standards.

Organization	Question 7:	Question 7 Comments:

PJM Interconnection	Yes	
Salt River Project	Yes	
NPCC	Yes	
Ameren	Yes	
Reliability Coordinator Comment Working Group	Yes	
Northern California Power Agency	Yes	
Bonneville Power Administration	Yes	
AEP	Yes	

8. Do you agree with the revisions to the Measures in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration:

The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring time delay.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This revision would obviate the need for providing a measure for “intent”, while still maintaining the reliability intent of the original requirement.

The SDT proposes to re-post the standard to obtain stakeholder feedback on the suggested revisions.

Organization	Question 8:	Question 8 Comments:
CU of Springfield	No	M2 and M3 should include Distribution Provider as one of the entities to comply with directives from the Reliability Coordinator.
<p>Response: The RC SDT thanks you for your comment. The SDT will correct the oversight.</p>		
Independent Electricity System Operator - Ontario	No	Wording in some of the Measures needs to be revised to reflect changes to R2 and/or R3, if our proposed changes are accepted. Also, we suggest the Requirement numbers be referenced in the Measures.
<p>Response: The RC SDT thanks you for your comment. The SDT has revised the R2 and R3 and the associated measures per stakeholder comments. We have also added the associated requirement number to each measure.</p>		

Organization	Question 8:	Question 8 Comments:
Reliability Coordinator Comment Working Group	No	Measures do not align with VSLs (see question 9)
<p>Response: The RC SDT thanks you for your comment. We will ensure that the VSLs and measures align.</p>		
MRO NERC SDT Standards Review Subcommittee	No	<p>Some compliance auditors have been taking the need for evidence to the extreme. We have encountered actual situations where if a measure states evidence shall be provided for requirements that are event based, the compliance auditor expected evidence even if no event occurred. For example, some RCs rarely issue directives. As M1 is written, some compliance auditors would require the RC to provide evidence that no reliability directives were issued. This is not possible. We suggest modifying the measurement to: Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area if needed. If there were no directives issues (assuming there are no complaints or evidence to the contrary of the need to issue a directive), no evidence is necessary."</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees with the principle (i.e. should not have to prove a negative to an auditor). This issue should be addressed with NERC or Regional Compliance personnel. The RC SDT has the obligation to draft measures based on the requirements. The measure (M1) for R1 accomplishes that as written.</p>		
Southern Company Transmission	No	<p>8.1 - In M2 and M3, Add Distribution Provider. 8.2 - In M2 add "intentional" between "without" and "delay". 8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator. 8.4 - In M5, change "has" to "had".</p>
<p>Response: The RC SDT thanks you for your comment. We have added DP to the measures M2 and M3. We have removed the phrases "immediately" and "without intentional delay" from the measures. The RC SDT has left the word "inability" in the measure to mirror the requirement. We have made the other revisions that you suggested.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 8:	Question 8 Comments:
MEAG Power	No	The M2 measure should not mandate compliance with RC directives that are improper as defined in my response to question 7.
<p>Response: The RC SDT thanks you for your comment. It is envisioned by the RC SDT that RC directives consist of real-time and same-day operating actions that prevent or mitigate events that may or will cause Adverse Reliability impacts.</p>		
SERC OC Standards Review Group	Yes and No	<p>8.1 - In M2 and M3, Add Distribution Provider.</p> <p>8.2 - In M2 add "intentional" between "without" and "delay".</p> <p>8.3 - In M3 replace "ability" with "intent", replace "or" with "and" and replace "the" with "its" before Reliability Coordinator's and Reliability Coordinator.</p> <p>8.4 - In M5, change "has" to "had".</p>
<p>Response: The RC SDT thanks you for your comment. We have added DP to the measures M2 and M3. We have removed the phrases "immediately" and "without intentional delay" from the measures. The RC SDT has left the word "inability" in the measure to mirror the requirement. We have made the other revisions that you suggested.</p>		
US Bureau of Reclamation	No	M4. and M5. In both Measures, recommend "without intentional delay" be changed as described above for R4. and R5.
<p>Response: The RC SDT thanks you for your comment. Based on stakeholder comments, we have removed "without intentional delay" from the requirement and measure.</p>		
Progress Energy Carolinas		
FirstEnergy	No	M2 - The word "intentional" should be added between "without" and "delay".
<p>Response: The RC SDT thanks you for your comment. Based on stakeholder comments, we have removed the phrase "without intentional delay" from the requirement and measure.</p>		
Duke Energy	No	Measures M2, M4 and M5 use the terms "without delay" and "without intentional delay". Suggest deleting these words due to the difficulty of determining compliance. The term "Adverse Reliability

9. Do you agree with the Violation Severity Levels proposed in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The VSLs were revised to reflect revisions to the requirements as well as the comments of stakeholders. Several comments suggested that there was no fundamental difference between the RC “acting” or “directing actions”. The RC SDT agreed and removed the High VSL for R1 and revised the Severe VSL accordingly. Other commenters suggested removing the High VSL from R2 as the VSL contradicted the requirement. The RC SDT agreed and removed the VSL. All of the revised VSLs are in the table below.

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	The Reliability Coordinator failed to act or direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts
R2	N/A	N/A	N/A	The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements. The responsible entity did not follow the Reliability Coordinators directive per requirement 2.
R3	N/A	N/A	N/A	The responsible entity failed to inform the-its Reliability Coordinator upon recognition of the-its inability to perform the directive.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

R4	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to one, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to two, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to three or more, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
R5	The Reliability Coordinator <u>issued an alert failed to notify entities of a transmission problem but failed</u> to notify one, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator <u>issued an alert to notify entities of a transmission problem but</u> failed to notify two, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator <u>issued an alert to notify entities of a transmission problem but</u> failed to notify three or more, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator <u>issued an alert to notify entities of a transmission problem but</u> failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.
R6	N/A	N/A	N/A	The Reliability Coordinator failed to provide its Operating-operating Personnel-personnel with the authority to veto planned outages of its own analysis tools.

Organization	Question 9:	Question 9 Comments:
Manitoba Hydro	No	<p>IRO-001-2 R1 VSLs: You can not split "shall act" and "or direct actions" into separate VSLs. They are one and same. If the RC directs action then they have acted. If the RC failed to direct action or have failed to other wise act then they have failed to act appropriately. Perhaps the VSLs can be drafted along the lines of the following:</p> <p>IRO-001-2 R1 High VSL... The Reliability Coordinator's action was incomplete in that it failed to demonstrate a specific action to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts.</p> <p>IRO-001-2 R1 Severe VSL... The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of</p>

Organization	Question 9:	Question 9 Comments:
		<p>Adverse Reliability Impacts.</p> <p>IRO-001-2 R2 VSLs: (1) Entities may be justified in an intentional delay in responding to an RC directive. A justified intentional delay may due be equipment problems, a generators ramp rate or system voltage adjustments prior to large system reconfiguration or large transmission loading changes. (2) An entity cannot be faulted for not following an RC directive because to it would violate safety, equipment, regulatory or statutory requirements. Perhaps the VSLs can be drafted along the lines of the following: Moderate VSL... should be deleted. High VSL... The responsible entity followed the Reliability Coordinators directive but with an unjustified delay. Severe VSL... no edits required.</p> <p>IRO-001-2 R5 VSLs: Perhaps the VSLs can be drafted along the lines of the following to reflect to what degree the RC missed the mark: Lower VSL...The Reliability Coordinator failed to notify <25% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated. Moderate VSL... The Reliability Coordinator failed to notify >24% but <50% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated. High VSL...The Reliability Coordinator failed to notify >49% but <75% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated. Severe VSL... The Reliability Coordinator failed to notify >74% of its impacted Transmission Operators and Balancing Authorities when the transmission system problem had been mitigated.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and direct actions. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL.</p> <p>R2: 1. The SDT removed the “intentional delay” wording. 2. We concur with your statement. The RC SDT believes that the revised requirement is a binary and thus only requires one VSL. We have removed the High VSL and revised the severe VSL to:</p> <p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.</p> <p>R5: The RC SDT developed a revised set of VSLs that are graded in a way that gives consideration to the number of impacted entities since some entities will have a very small number of entities to contact, and using percentages may not be effective.</p>		
Independent Electricity System	No	<p>R1: There should not be any distinction made between an RC acting and an RC directing others to act. Failure to mitigate adverse reliability impacts a severe violation of the requirement. We therefore suggest to revise the High and Severe levels as: High if the RC did not act or direct actions to prevent an Adverse Reliability Impact; Severe if the RC did not act or</p>

Organization	Question 9:	Question 9 Comments:
Operator - Ontario		<p>direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact.</p> <p>R2: The High VSL seems contradictory to the requirement, which already has provision of not fully complying with the RC directives due to safety, equipment, or regulatory or statutory requirements.</p> <p>R3: We have proposed some wording change to R3, which if adopted, would precipitate a need to revise the VSLs for R3 accordingly.</p> <p>(iv) R4 and R5: The VSLs for these two requirements could be graded by assessing the number and/or timing of notifying the affected entities.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>The RC SDT agrees with you regarding “act” and “direct actions”. Based on yours and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL.</p> <p>We agree and have removed the High VSL.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p> <p>R4 and R5: We concur and have expanded the VSLs to include notification of a varying number of entities.</p>		
Reliability Coordinator Comment Working Group	No	<p>R1 talks about "shall act or direct actions to be taken".</p> <p>High VSL - failure to act.</p> <p>Severe VSL - failure to act and direct. Does "act" mean any action taken short of issuing a directive? Change Severe VSL to failure to act or direct and eliminate the High VSL all together.</p> <p>R2 delay in issuing a directive due to equipment problems should be included in the moderate VSL and the body of the requirement and in the measure. The High VSL should be removed because not following the directive for equipment failure is allowed per R2.</p> <p>R5 - Severe VSL should be changed to moderate VSL since the problem has been mitigated and the system is stable and it does not adversely impact reliability.</p> <p>M3 talks about the ability of reliability entities to meet a directive. What constitutes evidence that confirms you are able to immediately comply with the directive? If the entity agrees to the directive and then is unable to comply due to events outside of their control, such as a CT not starting, do they meet the measure? If the entity, based on the circumstances at the time of the directive, agrees to comply in good faith are they compliant? The Lower VSL should be made N/A because it is not practical for an entity to immediately confirm they are able to meet the directive in all cases.</p>
<p>Response: The RC SDT thanks you for your comment.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 9:	Question 9 Comments:
<p>R1 - The RC SDT agrees with you regarding “act” and “direct actions” and has removed the High VSL and revised the Severe VSL.</p> <p>R2 - Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL.</p> <p>R5: The VSL relates to how badly an entity missed the requirement, not the threat to reliability (this is the VRF). The requirement is to notify “all”. The RC SDT has developed a revised set of graded VSLs for this requirement.</p> <p>M3. The requirement was revised to remove words such as “immediately” and intentional delay:</p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform a directive.</p> <p>The measure was revised to reflect the new requirement which addresses your concerns. The Lower VSL was revised to N/A.</p>		
<p>MRO NERC SDTandards Review Subcommittee</p>	<p>No</p>	<p>The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don’t believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact.</p> <p>The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? Is this a delay? We suggest striking this Moderate VSL. The High VSL does not agree with the requirement. It considers the inability to fully follow an RC directive due to a violation of the safety, equipment, statutory, or regulatory requirements a violation. This is in direct conflict with the requirement. We suggest that the High VSL should be struck. We suggest the Severe VSL should be that the responsible entity failed to follow the RC directive and it would not have violated the safety, equipment, statutory or regulatory requirements. Currently, the Severe category does not allow that the responsible entity may not be able to carry out the directive due to the violation of safety, equipment, statutory, or regulatory requirements.</p> <p>In question 7, we request that the drafting team strike part of requirement 3. The striking of that portion of requirement 3 obviates the lower VSL.</p> <p>In paragraph 27 of the ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION, the Commission expresses "that, as a general rule, gradated Violation Severity Levels, wherever possible, would be preferable to binary Violation Severity Levels". Given that it is possible to define gradated VSLs for R4 and R5, we suggest that the drafting team should consider applying the numeric performance category of the Violation Severity Levels Development Guidelines Criteria based on the number of impacted TOPs and BAs that were notified.</p>
<p>Response: The RC SDT thanks you for your comment.</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 9:	Question 9 Comments:
<p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to include failure to “act or direct actions”.</p> <p>R2. We have removed the “intentional delay” verbiage and subsequently removed the Moderate VSL. We agree with you regarding the High VSL and have removed it from the table. The Severe VSL was revised per your suggestion.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p> <p>R4 and R5: We concur and have expanded the VSLs to include notification of a varying number of entities.</p>		
Southern Company Transmission	No	<p>9.1 - R1 is a binary requirement and should have only a severe VSL. The RC either acts or he doesn't - If he fails to act, he fails to direct and mitigate the problem by default.</p> <p>9.2 - R2 VSLs need to be rewritten to recognize that some directives may not be followed because of safety, regulatory or statutory requirements.</p> <p>9.3 - Remove the Lower severity level in R3 to conform to changes in R3 and M3.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL. This is now treated as a binary requirement with just one VSL.</p> <p>R2. We agree and have removed the High VSL and revised the severe VSL to:</p> <p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.</p> <p>R3. The requirement was revised and the Lower VSL removed.</p>		
Entergy Services, Inc	No	The VSL for R2 does not seem consistent with the language in the requirement. It is not clear why the entity should be subject to a high VSL if the entity did not comply with an RC directive due to safety or regulatory prohibition, and made the RC aware of same.
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. The High VSL for R2 was removed.</p>		
Salt River Project	No	<p>R1 states the RC must act OR direct. The R1 VSLs attempt to distinguish between act and direct. The requirement allows for either action. I suggest that the High VSL be removed and replaced by an N/A. The Severe VSL should be amended so that the words "act and direct" are replaced by the words "act OR direct" as is consistent with the requirement and the measure.</p> <p>R2: The moderate VSL introduces the phrase "equipment problems" for the first time in the Standard. "Equipment Problems" needs to be included in the Requirement, R2, and defined in the Measure for</p>

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 9:	Question 9 Comments:
		R2.R5: The Severe VSL needs to be moved to the Moderate category. This condition does not constitute an Adverse Reliability Impact that severely threatens the BES.
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to use the phrase, “act or direct.”</p> <p>R2. The moderate VSL was removed.</p> <p>R5: The VSL relates to how badly an entity missed the requirement, not the threat to reliability (this is the VRF). The requirement is to notify “all”. The RC SDT believes it has developed appropriate VSLs for this requirement.</p>		
FirstEnergy	No	R2 VSL - The Severe VSL should include after the word directive: "that would not violate safety, equipment, statutory or regulatory requirements".
<p>Response: The RC SDT thanks you for your comment. We agree with your premise, but the suggested wording of the VSL appears cumbersome. The VSL has been revised to:</p> <p>The responsible entity did not follow the Reliability Coordinator’s directive per Requirement R2.</p>		
Duke Energy	No	<p>The language in R1 of the VSL is not consistent with the requirements and measures in the standard. The VSL needs to recognize that the RC may EITHER act or give direction to others to act.</p> <p>The term “Adverse Reliability Impacts” is being changed and is listed in the associated Implementation Plan. The revision of this definition needs to go through Due Process.</p> <p>The language in R2 of the VSL places an entity in Moderate or High violation level even if failure is “allowed” in the standard; i.e. failure to act is due to violation of safety, regulatory, statutory requirements.</p> <p>The language in R2 of the VSL recognizes another potential reason for delay in execution of a directive. Requirement R2 of the Standard needs to be modified to also recognize this potential.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with you regarding “act” and “direct actions”. Based on your and other stakeholders’ comments, we have removed the High VSL and revised the severe VSL to use the phrase, “act or direct.”</p> <p>The proposed revision to the term, “Adverse Reliability Impact” will be posted for stakeholder comment with the next version of the standard.</p> <p>R2. We agree and have removed the Moderate and High VSLs and revised the Severe VSL to :</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 9:	Question 9 Comments:
<p>The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements. The requirement already addresses equipment.</p>		
<p>American Transmission Company</p>	<p>No</p>	<p>VSLs for R2 and R3 are not appropriate. In order to assess a situation we may not be able to immediately inform the RC of our ability to comply with the directive. The high VSL for R2 currently states that if we do not follow the directive because of safety, statutory or regulatory requirements, it is a high VSL. An entity should not be penalized for not breaking the law.</p>
<p>Response: The RC SDT thanks you for your comment. R2: We agree and have removed the Moderate and high VSLs. R3. The requirement was revised to remove the “immediately” verbiage and the VSLs were revised accordingly – the Lower VSL was removed.</p>		
<p>ISO/RTO Council Standards Review Subcommittee</p>	<p>No</p>	<p>The R1 High and Severe VSL appear to differ only by the inclusion of directing actions in Severe. From a practical perspective, what is the difference between directing actions and acting? We don't believe there is any. The actions are the result of the RC authority whether the RC takes the actions themselves or directs someone else to. We suggest a better alternative for the VSL levels would be for the High level to reflect that the RC did not act or direct actions to prevent an Adverse Reliability Impact and Severe would be that the RC did not act or direct actions to mitigate the magnitude or duration of an existing Adverse Reliability Impact.</p> <p>The moderate VSL for R2 is not practical and too subjective. What constitutes a delay? What if the responsible entity takes five minutes to determine how to carry out the action or if their equipment currently is capable of carrying out the action? CU of Springfield	Yes	
NPCC	Yes	
Ameren	Yes	
US Bureau of Reclamation	Yes	
PJM Interconnection	Yes	
Bonneville Power Administration	Yes	
AEP	Yes	

10. Do you agree with the revisions to the Requirements in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The last proposed version of IRO-002-2 had two requirements – R1 required the Reliability Coordinator to request data from other entities; R2 required the Reliability Coordinator to provide its operating personnel with authority to veto planned outages of analysis tools.

Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees’ approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired IRO-002 Requirement R1 and eliminated the need for the proposed R2.

The team received comments expressing concern about eliminating the requirement to monitor frequency which had been in an earlier approved version of IRO-002. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in Certification Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability. The team retained the remaining requirement (Reliability Coordinator’s authority to veto analysis tool outages) as it was a specific recommendation from the 2003 Blackout report. This requirement was revised and moved into IRO-001-2, R6.

R6. Each Reliability Coordinator shall ~~have~~provide its operating personnel with the authority to veto planned outages to its own analysis tools, ~~including final approvals for planned maintenance.~~ *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

Organization	Question 10:	Question 10 Comments:
Independent Electricity System Operator - Ontario	No	two. R1: There is a duplicating requirement in TOP-005 R1.1. Suggest to eliminate one of the We do not agree with eliminating all of R5 to R8. There is a fundamental need for RCs to

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 10:	Question 10 Comments:
		<p>monitor its area, and even some portion of its adjacent areas to be aware of situations that require preventive and mitigating actions. While arguments can be made that requiring RCs to prevent and mitigate adverse reliability impacts would imply monitoring, the latter is a fundamental duty of any RCs to ensure system reliability. If monitoring is not explicitly stated as a requirement, then the same argument may be extended to training and operational facilities. We do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. Measuring can be illustrated, for example, by a compliance audit to review system logs and assess the extent to which an RC follows and assesses system conditions.</p>
<p>Response: R1: The RC SDT thanks you for your comment. Several NERC drafting teams are working on related standards. The RTO SDT just posted changes to TOP-005 that will retire that standard upon approval. Therefore, there will be no redundancy because TOP-005 R1.1 will be removed.</p> <p>Monitoring: While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure "Monitoring" can provide. It is the SDT's contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in Certification Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p>		
Reliability Coordinator Comment Working Group	No	<p>For R1, this should be 2 separate requirements and measures. R1 should have a methodology for determining what data is needed and then a R2 should be a requirement to request this data from the reliability entities.</p>
<p>Response: The RC SDT appreciates your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1.</p>		
MRO NERC SDT Standards Review Subcommittee	No	<p>New Requirement R1 is duplicate to the requirement TOP-005-1 R1.1. If the drafting team can't delete TOP-005-1 R1.1, they should notify other appropriate drafting teams of the need to remove the requirement.</p> <p>We do not agree with eliminating requirements R5, R6, R7, and R8 in their entirety. The requirements as they are written are problematic. However, we do believe that there is a need for a basic</p>

Organization	Question 10:	Question 10 Comments:
		<p>requirement to monitor the system. The requirements should be that the RC should compare actual system flows to SOLs and IROLs. While some will argue SOLs are not the responsibility of the RC, failure to monitor SOLs could cause the RC to miss unknown IROLs since an SOL can become an IROL. Several SOL violations in a given area also can be indicative of a broader system problem the RC should be addressing. We also do not agree with the drafting team's conclusion that it is not practical to measure real-time monitoring. It is very easy to measure. As an example, a compliance auditor could select a day and an SOL or IROL and ask for the system flows from that day or hour etc. This is generally easy for any RC to produce with today's data archiving software. We believe that there should be a requirement that the RC have a state estimator and real-time contingency analysis as well (RTCA). The drafting team needs to be careful in the construction of these requirements to make them practical and measurable. For instance, making the requirement to have a state estimator and RTCA is measurable in that the compliance auditor can verify their existence but this is not stringent enough because they may only run once a week. At the same time, if we create a requirement that SE and RTCA must run every 5 minutes, we could inadvertently create a requirement that any missing 5 minute run of RTCA and SE could be construed as a violation. There also needs to be a requirement that there is a real-time assessment of voltage as well.</p> <p>New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.</p>
<p>Response: The RC SDT appreciates your comments. The RTO SDT has recently posted the proposed retirement of TOP-005. This eliminates the redundancy with R1.</p> <p>The RC SDT appreciates your comments and recognizes that NERC standards historically have included requirements to ensure that each entity is acting responsibly in the portion of the Interconnect over which it has authority. The IRO-014, as proposed by this team, requires RCs to act in coordinated fashion to protect the Interconnection. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p> <p>The RC must respond to these situations proactively in order to prevent separation or cascading events.</p> <p>The RC SDT agrees philosophically with your comment regarding the redundancy of Requirement R2, however, this issue was enumerated in</p>		

Organization	Question 10:	Question 10 Comments:
<p>the report on the 2003 Blackout as a key improvement. The team believes that, while this is redundant as you stated, it is too soon to remove it from standards. At some point in the future after the industry assimilates the set of changes currently proposed, this requirement could be proposed for deletion.</p>		
<p>Southern Company Transmission</p>	<p>No</p>	<p>10.1 - We propose that R1 and R2 should be moved to the RC Certification Procedure and this standard retired. If this standard is not retired then we recommend Comments</p> <p>10.2 and 10.3.10.2 - At Requirement R2, the RC is given 'veto' authority. Is a standard an appropriate place to give this type of authority?</p> <p>10.3 - The revised Purpose basically provides that the RC will have access to information and control of analysis tools. What is the correlation of information/control to veto authority/approval of planned maintenance?</p>
<p>Response: The RC SDT appreciates your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1.</p> <p>R2. This is a Blackout recommendation and therefore is appropriate within a standard. We revised the wording to indicate that the RC will provide its Operating Personnel the authority. This clarified the intent of the requirement. This requirement will also be moved into IRO-001-2, R6.</p> <p>10.3 This standard will be retired making the purpose statement moot.</p>		
<p>ISO New England Inc.</p>	<p>Yes and No</p>	<p>Suggest changing with word "request" to "document" in Requirement 1.</p>
<p>Response: The RC SDT appreciates your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1.</p>		
<p>Entergy Services, Inc</p>	<p>No</p>	<p>IRO-002-1 R9, the deleted language of the second sentence is not adequately covered by the language in EOP-008-0 R1, unless those outages are tied to the loss of a control center. EOP-008-0 is in the process of being revised and this language could be included in the revision, but it isn't adequately addressed by the version 0 standard.</p>

Organization	Question 10:	Question 10 Comments:
<p>Response: The RC SDT appreciates your comments. The RC SDT took this comment into consideration when making revisions to this requirement as well as to COM-001-2 regarding specifications. The data specification required in IRO-010 should address mitigation plans for analysis tool outages and proposed COM-001 specifications should include mitigation plans for communications outages.</p>		
<p>US Bureau of Reclamation</p>	<p>No</p>	<p>R2. This requirement provides authority to the Reliability Coordinator to veto planned outages and approve planned maintenance to “analysis tools”. It is not clear in this standard what these “analysis tools” are. Per FERC Order 693, NERC was to identify a minimum set of analysis tools and the task was assigned to the Real-Time Tools Best Practices Task Force. Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.</p>
<p>Response: The RC SDT appreciates your comments. The Reliability Coordinator has a set of tools in use to monitor and analyze its area as well as to provide a wide area view. These tools may include a SCADA system, state estimator and contingency analysis programs. It is the responsibility of the Reliability Coordinator to ensure that these tools are operational or that a plan or procedure is in place to mitigate their outages. The Real-time Tools Best Practices Task Force work has resulted in the inception of a new standard development project. It is scheduled to begin in 2009.</p>		
<p>FirstEnergy</p>	<p>No</p>	<p>R2 - As written, this requirement does not clearly define the scope of the authority of the Reliability Coordinator over analysis tools. Is it the intent of the drafting team to give the RC authority over analysis tools owned and operated by the RC. Is it the intent of the drafting team to give the RC authority over the analysis tools owned and operated by the BA, TOP, GOP, etc.? Are the tools intended to be the real-time (EMS) or the off-line engineering planning analysis tools or any analysis tool used in real-time. Does this include the analysis tools used by field personnel? This requirement should be revised to specify exactly the analysis tools under the authority of the Reliability Coordinator.</p>
<p>Response: The RC SDT thanks you for your comment. The intent of the requirement is to have veto authority over its own tools. The requirement is revised to:</p> <p>R2. Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>The intended tools are any tools that the Reliability Coordinator needs to perform its reliability functions.</p>		

Organization	Question 10:	Question 10 Comments:
Duke Energy	No	<p>Requirement R1 - This requirement is in the wrong standard — this is a Facilities standard. This requirement belongs in another standard. Question: Is there a requirement in another standard that compels the TOPS, BAs, etc to provide the requested data? Requirement R2 - Need to clarify whose analysis tools (I assume it is the RCs analysis tools, not the analysis tools of another entity) and planned maintenance to what — is it tools, facilities, transmission, generation, etc. Depending on the answer above, this requirement is in the wrong standard — this is a Facilities standard. This requirement belongs in another standard. Question: Where is the Requirement for the RC to have analysis tools? It appears that the Requirement the RC has analysis tools have been removed in the revisions to the standard.</p>
<p>Response: The RC SDT thanks you for your comment. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1 and does compel entities to provide data to the Reliability Coordinator</p> <p>For R2, the intent of the requirement is to have veto authority over its own tools. The requirement is revised to:</p> <p>R2. Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>The intended tools are any tools that the Reliability Coordinator needs to perform its reliability functions.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>New Requirement R2 is no longer needed as a result of paragraph 112 in Order 693-A. Since the RC's "authority to issue directives arises out of the Commission's approval of Reliability Standards" the RC already has veto authority or will have once R1 IRO-001-2 is approved. This requirement obligates the RC to take actions or direct actions to prevent Adverse Reliability Impacts. Veto outages of equipment and analysis tools would fall into this category even if the RC couldn't say for certain that an Adverse Reliability Impact was going to occur but rather they are concerned one could occur due to heavy loads for example.</p>
<p>Response: The RC SDT agrees philosophically with your comment regarding the redundancy of Requirement R2, however, this issue was enumerated in the report on the 2003 Blackout as a key improvement. The team believes that, while this is redundant as you stated, it is too soon to remove it from standards. At some point in the future after the industry assimilates the set of changes currently proposed, this requirement could be proposed for deletion.</p>		
SERC OC	Yes and No	10.1 - We propose that R1 and R2 should be moved to the RC Certification Procedure and this

11. Do you agree with the revisions to the Measures in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1 and M1.

For R2, the intent of the requirement is to have veto authority over its own tools. The requirement and measure have been revised based on stakeholder comment and moved into IRO-001-2 as Requirement R6. The revisions made are shown below:

R6. Each Reliability Coordinator shall ~~have~~ provide its operating personnel with the authority to veto planned outages to its own analysis tools ~~including final approvals for planned maintenance~~. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]

M6. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its operating personnel with the authority to veto planned outages ~~to of its own~~ analysis tools, ~~including final approvals for planned maintenance as specified in Requirement 2.~~

Organization	Question 11:	Question 11 Comments:
Independent Electricity System Operator - Ontario	No	M1: We suggest to change the word "letter" to "documented request" If our recommendations to retain some of R5 to R9, some measures will need to be provided.
<p>Response: The RC SDT thanks you for your comments. Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1 and M1.</p> <p>As stated in our response to your comments in Question 10, we do not intend to retain R5 through R9.</p>		
MRO NERC SDT Standards Review	No	Measure 1 should not focus on a letter as evidence. A more appropriate measure would be a data specification document and actual verification that data has been received. The letter or equivalent is only needed if data has not been supplied. Demonstration of the actual receipt the data would be

12. Do you agree with the Violation Severity Levels proposed in IRO-002-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired R1 and M1. The RC SDT has revised R2 and M2 and moved them to IRO-001-2, as Requirement R6 and Measure M6. The VSLs have been revised to reflect the modifications made to the requirement and measure and in response to stakeholders who indicated this is a “binary” requirement.

R6	<p>Reliability Coordinator has approval rights for planned outages of analysis tools but does not have approval rights for maintenance on analysis tools.</p>	<p>N/A</p>	<p>N/A</p>	<p>Reliability Coordinator failed to provide its operating personnel with the authority to veto approval is not required for planned maintenance or planned outages of its own analysis tools.</p>
--------------------	--	------------	------------	--

Organization	Question 12:	Question 12 Comments:
<p>Independent Electricity System Operator - Ontario</p>	<p>No</p>	<p>R1: The wording for Low VSL is contradictory (e.g. it determined and requested in the first part but did not request in the second part). Suggest to revise it.</p> <p>R1: We suggest to grade the VSLs according to the extent to which the percentage of data specification and/or the number of entities not requested.</p> <p>R2: The RC either has the right or it doesn't, and hence it's a binary requirement. The VSL should be developed accordingly. Further, the wording for the Severe VSL does not correspond to the requirement and measure. The condition should simply be that the Reliability Coordinator failed to demonstrate that it had the authority to veto planned outages to analysis tools, including final approvals for planned maintenance.</p>
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part</p>		

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 12:	Question 12 Comments:
of the IROL project. The lower VSL was removed as proposed for the second requirement.		
Southern Company Transmission	No	12.1 - Moving R1 and R2 to the RC Certification Procedure will eliminate VSL requirements.
Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. R1 was retired – and R2 was moved into IRO-001 as Requirement R6. The VSLs for R6 are still needed.		
US Bureau of Reclamation	No	Until the tools are identified, it is premature to insert a placeholder in a mandatory standard; this also applies to the violation severity levels table.
Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. As envisioned, the intent is to protect the analysis tools used by real time operating personnel – and not all companies have the same set of tools, so the SDT will not name specific tools in this standard. The intent is to give the real time operating personnel control over the availability of their tools so that the real time operating personnel will always know if their tools are “unavailable” due to maintenance. Names of specific tools are not needed to enforce the intent of this requirement.		
MRO NERC SDT Standards Review Subcommittee	No	For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. This violates Guideline 3 of the FERC ORDER ON VIOLATION SEVERITY LEVELS PROPOSED BY THE ELECTRIC RELIABILITY ORGANIZATION. Practically, it would not be enforceable anyway. It would require the RC to admit that they did not include administrative data in their data requirements. It is doubtful this would happen because the RC likely believes they prepared a complete data requirement document.

Organization	Question 12:	Question 12 Comments:
		<p>We suggest that the VSLs should be:</p> <p>Severe: The RC did not determine it data requirements or the RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 75 to 100% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>High: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 50 and less than or equal to 75% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Medium: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 25% and less than or equal to 50% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>Lower: The RC could not demonstrate it requested the necessary data if actual receipt of the necessary data can't be demonstrated for greater than 0% and less than or equal to 25% of the TOPs, BA, TO, GO, GOPs, LSEs and adjacent RCs.</p> <p>R2 VSLs are not needed or paragraph 112 of Order 693-A. The Severe VSL contradicts the requirement.</p>
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part of the IROL project. For R2, based on your comments and the comments of others, the VSLs were modified – the lower was removed and the requirement was treated as binary with just a Severe VSL rephrased to more closely match the language in the revised requirement.</p>		
FirstEnergy	No	The VSL should be modified per our suggested modifications in question 10.
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above.</p>		
Duke Energy	No	<p>R1 VSL - As a general comment, this VSL is unclear and would be difficult to audit. This VSL uses subjective terms like “material impact” and “minimal impact”. These terms are not used in the associated requirement or measure and should be removed from the VSL. This VSL uses terms like “majority, but not all”; “some, but less than a majority” which provides an opportunity for</p>

Organization	Question 12:	Question 12 Comments:
		<p>a subjective review by Compliance as to what a complete listing of data requirements should be. This term is not used in the Requirements or Measures and should be removed from the VSL. This VSL introduces a concept, data the RC needs for ?? administrative purposes, such as data reporting ??. This concept is not included in the Requirements or Measures portions of the Standard and should be removed from the VSL. This VSL should be written to simply assess whether the RC has made determination of what its data needs are and whether those needs have been communicated to the entities in the footprint.</p> <p>R2 VSL - This VSL clarifies the questions posed above regarding what the RC needs approval rights over. R2 needs to be modified to include this clarity. This VSL needs to clarify that the RC approval rights are for the RC's tools, not tools of other entities. The Severe level of this VSL needs to be re-written along the lines of: The RC does not have approval rights for planned maintenance or outages to its analysis tools.</p>
<p>Response: The RC SDT thanks you for your comment. Please see Summary Consideration above. The first requirement was retired as part of the IROL project. For R2, based on your comments and the comments of others, the requirement, measure and VSLs were all modified – the lower was removed and the requirement was treated as binary with just a Severe VSL rephrased to more closely match the language in the revised requirement.</p>		
<p>ISO/RTO Council Standards Review Subcommittee</p>	<p>No</p>	<p>For R1, the lower VSL contradicts itself. It states that RC demonstrated that it determined its data requirements and requested that data and then follows with that it didn't request that data. The second option in the Lower VSL category is not practical and a compliance auditor would not be in a position to determine this. In fact, if the administrative data is not requested, other administrative requirements for reporting would be violated. Additionally, it does not make sense that an RC would determine its data needs and then omit data for administrative reporting. Further, is it the compliance auditor's job to judge if the data the RC requests is sufficient or is it his job to see that the RC has met the requirement to define the data? The remaining VSLs imply that the RC may define only partial data requirements. This does not seem likely. Why would the RC do this? This VSL appears to add to the requirement by making it appear that the compliance auditor is to judge the completeness of the data requirement. 13. Do you agree with the revisions to IRO-005-1 as shown in the posted Standard and Implementation Plan? The RC SDT is recommending retiring or moving all of the requirements and retiring this standard. If not, please explain in the comment area.

Summary Consideration: Several commenters had concerns around removing the requirement to monitor frequency. Other commenters had concerns with the removal of other monitoring requirements in the standard. While the Standard Drafting Team (SDT) recognizes the concerns raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in assessing and responding to situations or events that could have an adverse impact on reliability.

Organization	Question 13:	Question 13 Comments:
Independent Electricity System Operator - Ontario	No	<p>R1: We not agree with removing this requirement for the same reason given for the proposal to remove R5 to R8 from IRO-002 (see comments on 10 (ii), above).</p> <p>R8: We do not agree with completely removing this requirement, especially that part that requires an RC to monitor system frequency. While DCS and CPS are largely a BA's responsibility, the RC is the last line of defense for abnormal system performance and needs to monitor its BAs' performance including their ability to address large frequency deviations, and direct or take corrective actions as needed including requesting emergency assistance on the BAs' behalf and directing load shedding.</p> <p>R9: The second part of this requirement needs to be retained. IRO-004 covers operational planning, not current day operations. Coordinating pending generator and transmission facility outages is an essential and necessary task by the RC to ensure reliability.</p> <p>R11: The RC needs to monitor ACE, detect and identify the cause of any abnormal ACE, and direct its BAs to take necessary actions to return ACE to within a normal range.</p> <p>R13: We do not agree with removing the latter part of R13. The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set</p>

Organization	Question 13:	Question 13 Comments:
		exists is a necessary requirement for reliable operation.
<p>Response: The RC SDT thanks you for your comment.</p> <p>I While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process Requirements. The RC has the authority to coordinate pending outages in real-time through IRO-001-2, R1 (proposed).</p> <p>Iv The SDT feels that there are better avenues to ensure BAs operate within established and acceptable thresholds as described in the BAL-001 and BAL-002 standards. Current standards projects are addressing revisions to the BAL set of standards.</p> <p>V The SDT believes this requirement is redundant with FAC-014. FAC-014 states the requirement for developing and sharing SOL and IROL between the RC, PA, TP and TOP in both the planning and operating time frames.</p>		
American Transmission Company	No	The accountability and monitoring addressed in this Standard is still required. The drafting team's intent was that the ability to monitor is part of the certification process. However, certification is to Standards, and if there is not a Standard which addresses this issue, then an entity cannot certify to it.
<p>Response: The RC SDT thanks you for your comment. While the Standard Drafting Team (SDT) recognizes the concerns raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT's contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p>		
MRO NERC SDT standards	No	R1 includes many requirements for monitoring the system that are important, measurable and should be retained. Monitoring is too critical to operating the system to completely eliminate these

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 13:	Question 13 Comments:
Review Subcommittee		<p>requirements.</p> <p>R4, R8 and R11 are problematic as currently written. However, there have been actual instances of a large BA intentionally operating short hundreds of MWs of energy. I believe this occurred during the summer of 1999. Thus, the RC should be monitoring the BAs ACE and directing the BA to correct it if it becomes too large. It is not necessary or even useful for the RC to monitor the BA CPS performance.</p>
<p>Response: The RC SDT thanks you for your comment. The SDT feels that there are better avenues to ensure BAs operate within established and acceptable thresholds as described in the BAL-001 and BAL-002 standards. If a BA chooses to operate off schedule then the BAL standards need to be revisited and tightened up. This is being done in the current projects addressing the BAL standards. Monitoring capability can be objectively measured and is essential to real-time operations – however real-time monitoring is a supporting activity and is only one of several processes used to support operation within defined parameters. Monitoring capability should be assessed during the entity registration certification process and should not be a requirement. Note that certification is aimed at verifying that an entity has the “capability” of operating reliably. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in assessing and responding to situations or events that could have an adverse impact on reliability.</p>		
Ameren	Yes and No	<p>While we agree that most of the requirements are redundancies that properly belong elsewhere, we are concerned that Requirement 4 and Requirement 8 are not properly represented elsewhere and should not be retired until they re-surface in another standard explicitly. We believe it is still very important for an RC to monitor their respective BAs reserves and CPS performance. Likewise in R8, while the frequency monitoring is a BA function, we think that it is important enough to also be included as an RC function explicitly.</p>
<p>Response: The RC SDT thanks you for your comment. The SAR for this project included eliminating redundancies within the standards. In the Implementation Plan for this standard, we show the redundancy between this requirement, R4, and EOP-002-2. (please see pages 6-8 of the Implementation Plan). While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in organization certification process Requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.</p>

14. Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Several commenters expressed concerns with the term “impacted” and suggested replacing this with “other”. The RC SDT believes “impacted” directly relates to the purpose statement. The original wording of “one or more other” is vague and difficult to measure. Using the word “other” presents a similar situation. The RC SDT chose to use the word “impacted” to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous reliability coordinators to have “RC agreements”, but to have Procedures, Processes, or Plans with impacted reliability coordinators. Other commenters suggested striking the term “as a minimum” in R1 and the RC SDT agrees and has modified R1 accordingly. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. The requirement that was transferred from IRO-016 has been translated into 4 requirements in IRO-014:

R5. ~~When an expected or actual reliability issue is detected, the~~ Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. ~~confirm the existence of the issue with the impacted Reliability Coordinators.~~

R6. ~~In the event that the issue cannot be confirmed, e~~ Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators.

R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists.

~~R6~~R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when ~~When an expected or actual reliability issue exists and~~ the impacted Reliability Coordinators cannot agree on a mitigation plan, ~~all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue.~~

Organization	Question 14:	Question 14 Comments:
Independent Electricity System	No	We suggest to replace the word "impacted" with "other" since there is a preconception that the concerned RC makes an assessment of which other RCs are impacted by the coordinated actions,

Organization	Question 14:	Question 14 Comments:
Operator - Ontario		which may not be the perspective of the other RCs who may in fact be impacted by any coordinated actions among other RCs.
<p>Response: The RC SDT thanks you for your comment. The RC SDT believes “impacted” directly relates to the purpose statement. The original wording of “one or more other” is vague and difficult to measure. Using the word “other” presents a similar situation. The RCSDT chose to use the word “impacted” to tighten the requirement and remove ambiguity. Additionally, R1.1 reconciles the preconception of the Reliability Coordinator making an assessment:</p> <p>R1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p>		
MRO NERC SDT standards Review Subcommittee	No	<p>Please strike "as a minimum" in R1. By definition, the requirement defines the minimum. Please strike R1.6. RCs already have the authority to act per paragraph 112 of Order 693-A.</p> <p>Since R2 requires the RCs to agree, is the "mutually agreed to" clause in R1.1 necessary?</p> <p>Please strike requirements R4 and R4.1. It is duplicative to R1.1. Conference calls are a form of communication and should be address per R1.1.</p> <p>R5 is confusing. If a reliability issue isn't confirmed, doesn't this mean there is no reliability issue? Isn't this the point of confirming? Additionally, we suggest using validate instead of confirm.</p> <p>R6 appears to be a rewrite of requirements R1, R2 and their sub-requirements in IRO-016. We agree that those requirements do need to be written more succinctly or removed altogether. However, R6 does not accomplish the goal and only confuses that matter further. The reason the RCs may not be able to agree on a mitigation plan is that RC with the reliability issue may be requesting mitigations that the other RCs believe may cause them reliability issues. This requirement appears to suggest that the solution to a disagreement on the mitigation plan is cut and dried. Generally, the reason the disagreement arises is due to one RC not fully understanding the impact of their actions on another RC. The bottom line is that the RCs may have disagreements and there is no way to require a solution in these types of situations. Please revise R6 to require using the mitigation plan developed by the Reliability Coordinator who has the reliability issue provided that the mitigation plan does not cause a reliability issue in the other region.</p> <p>As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The</p>

Organization	Question 14:	Question 14 Comments:
		<p>drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1: The RC SDT agrees with striking “as a minimum” and the requirement is modified accordingly. The RC SDT believes that the term “collectively” addresses the interpretation of R1 (your last comment).</p> <p>R1.6: The RC SDT disagrees with the MRO interpretation of 693-A and believes R1.6 reinforces the Commission’s determination in paragraph 112 of 693-A which clarifies the reliability coordinator’s authority stating “...authority to issue directives arises out of the Commission’s approval of Reliability Standards that mandate compliance with such directives.”</p> <p>R1.1: R1.1 provides the conditions under which the RC’s will communicate or notify each other. R2 deals with actions that are to be taken beyond notifications.</p> <p>R4 and R4.1: The RC SDT disagrees with the duplicity. R1.1 is a sub-requirement of R1 which requires the reliability coordinator “to have” procedures, processes, or plans, and R4 requires “participation.”</p> <p>R5 & R6: Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>		

Organization	Question 14:	Question 14 Comments:
Southern Company Transmission	No	<p>14.1 - R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC?</p> <p>14.2 - We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows: R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken.</p> <p>14.3 - We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly.</p> <p>14.4 - R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous" or a similar term.</p> <p>14.5 - We suggest rewriting R5 to read: In the event that a reliability issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.</p> <p>14.6 - At Requirement R1, the use of the phrase "as a minimum" seems to add some flexibility for development of procedures, processes and plans. A negative consequence is that it introduces more ambiguity. The recommendation is to strike the phrase.</p> <p>14.7 - At Requirement R1.6, consider the following: "Authority to act to prevent and mitigate instances 'that have the potential to cause' Adverse Reliability Impacts to other Reliability Coordinator Areas."</p>
<p>Response: The RC SDT thanks you for your comments.</p> <p>14.1: The RC SDT believes "impacted" directly relates to the purpose statement. The original wording of "one or more other" is vague and difficult to measure. Using the word "other" presents a similar situation. The RCSDT chose to use the word "impacted" to tighten the requirement and remove ambiguity. The RC SDT does not intend for non-contiguous reliability coordinators to have "RC agreements", but to have Procedures, Processes, or Plans with impacted reliability coordinators.</p> <p>14.2: The RC SDT respectfully disagrees with your comment. R6 requires implementation ("shall implement") and R1 is a "shall have" requirement; keeping these separate provides clarity of related measures. The Dispute Resolution process is more administrative in nature regarding compliance, certification, audit processes, or contracts.</p>		

Organization	Question 14:	Question 14 Comments:
		<p>14.3: The RC SDT deleted 4.1 modified R4 to: “The RC shall participate in agreed upon conference calls at least weekly and other communication forums with impacted Reliability Coordinators.”</p> <p>14.4: The RC SDT chose the word “impacted” after much discussion. Impacted has the implication that the RC is immediately impacted or the RC may be impacted by a future situation. We feel that the requirement for weekly calls addresses your concern.</p> <p>14.5: R5 & R6: Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>14.6: The RC SDT agrees with striking “as a minimum” and the requirement is modified accordingly.</p> <p>14.7: The RC SDT believes that if a reliability coordinator acts to prevent or mitigate instances the “potential to cause” already exists.</p>
ISO New England Inc.	Yes and No	As Requirement 1 is currently written, one could interpret the requirement for every Operating Process, Procedure and Plan to address each of the sub-requirements. That is not necessary. The drafting team needs to consider modifying the requirement to make it clear that not every sub-requirement must be addressed in every Operating Process, Procedure, and Plan and to also make it clear that the some sub-requirements may only be appropriately addressed in a Process but not a Plan for instance. Use of the term collectively may resolve this dilemma.
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees that the term “collectively” addresses your interpretation and it is already included in R1.</p>		

Organization	Question 14:	Question 14 Comments:
FirstEnergy	No	<p>R1 - Should be revised as follows to improve readability and clarity:</p> <p>R1.3 - Add "Exchanging" before "Planned"</p> <p>R1.4 - Add "Control of voltage" at the beginning of the requirement and delete "for voltage control" at the end of the requirement.</p> <p>Add a new R1.7 as follows: "A process for resolution of the disagreement covered by R6 of this standard."</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1.3: The RC SDT believes adding the term "Exchanging" before "Planned" is redundant with "... exchange of information" stated in R1.</p> <p>R1.4: The RC SDT modified R1.4 to read as "Control of voltage including the coordination of reactive resources."</p> <p>R1.7: R6: To address the process for resolution of disagreements, the RC SDT proposes the 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p>		
Duke Energy	No	<p>R1 and R2 - The word "impacted" tends to broaden the requirements to have procedures, processes and plans in place with each RC within the RC's Interconnection. We suggest the phrasing should be tightened up to convey the original meaning that the team intended. For example, does the team intend for the FRCC RC to have an agreement with the PJM or MISO RC? We suggest bringing R6 under R1 as subrequirement R1.7 and rewrite it as follows:</p>

Organization	Question 14:	Question 14 Comments:
		<p>R1 - The Dispute Resolution process will be followed when the Reliability Coordinator issuing a mitigation plan and the Reliability Coordinator(s) receiving a mitigation plan disagree on the proper steps to be taken. We suggest deleting R4.1 and adding a second sentence to R4: The frequency of these communications shall be at least weekly.</p> <p>R4: The word "impacted" makes it sound like these calls are only to be made when problems are expected or are occurring. If this requirement is intended more for operational awareness calls (such as the daily SERC RC call), then the word "impacted" needs to be changed to "contiguous". We suggest rewriting R5 to read: In the event that an operating issue cannot be confirmed, each Reliability Coordinator shall operate as though the problem exists.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R1 and R2: The RC SDT believes "impacted" directly relates to the purpose statement. The original wording of "one or more other" is vague and difficult to measure. Using the word "other" presents a similar situation. 15. Do you agree with the revisions to the Measures in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The RC SDT received comments to revise M1 to remove “System operators” as it added to the requirement and to remove “for real-time use”. The RC SDT agrees and has modified the measure as shown below:

M1. The Reliability Coordinator ~~’s System Operators~~ shall have available ~~for Real-time use,~~ the latest approved [documented](#) version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators. [This documentation may include, but is not limited to, dated, current in force documentation with the specified elements.](#)

~~M1.1 These Operating Procedures, Processes, or Plans shall address:~~

- ~~–M1.1.1— Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.~~
- ~~–M1.1.2— Energy and capacity shortages.~~
- ~~–M1.1.3— Planned or unplanned outage information.~~
- ~~–M1.1.4— Voltage control, including the coordination of reactive resources for voltage control.~~
- ~~–M1.1.5— Coordination of information exchange to support reliability assessments.~~
- ~~–M1.1.6— Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.~~

~~Most o~~ [Other The](#) measures were ~~also~~ revised to conform to changes in the requirements [and to provide samples of acceptable evidence.](#)

Organization	Question 15:	Question 15 Comments:
Independent Electricity System Operator -	No	Measure 1 actually contains a number of subrequirements that should be stipulated in R1, not M1. If indeed these are required, they should be stipulated in the Requirement section, not the Measures Section.

Organization	Question 15:	Question 15 Comments:
Ontario		
<p>Response: The RC SDT thanks you for your comment. The RC SDT modified M1 deleting “System Operators” and the submeasures were removed and included only in the requirement.</p>		
ISO/RTO Council Standards Review Subcommittee	No	<p>Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. The measurement should just be to verify that the RC has have Operating Processes, Procedures, and Plans. The sub-measurements are not measurements at all. There should be the single measurement to verify the Operating Processes, Procedures, and Plans have been developed and address the sub-requirements. This really points out the problem with making the criteria that must be considered in the Operating Processes, Procedures, and Plans sub-requirements in the first place. They aren't requirements of any sort. They represent criteria. The drafting team should consider making them a bulleted list without the Rs, then the drafting team won't feel compelled to write sub-measures that don't measure anything.</p>
<p>Response: The RC SDT thanks you for your comment. . The RC SDT modified M1 deleting “System Operators” and the submeasures were removed and included only in the requirement. As the list includes topics for every RC is required to address, these are mandatory and should be numbered rather than bulleted.</p>		
MRO NERC SDTandards Review Subcommittee	No	<p>Measure 1 appears to add to the requirement. Requirement 1 does not mention anything about System Operators yet the measurement does. situations". RC's need to coordinate solutions and the revised wording of the requirements R5-R8 will require that.		
Southern Company Transmission	No	15.1 - In M1, delete "for Real-time use".15.2 - Modify the measures to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
<p>Response: The RC SDT thanks you for your comment. The RC SDT modified M1 and deleted "for Real-time use." The measures were revised based on revisions to the requirements (see response to Q14).</p>		
FirstEnergy	No	The measures should be modified per our suggested modifications in question 14.
<p>Response: The RC SDT thanks you for your comment. The measures were revised based on revisions to the requirements (see response to Q14).</p>		
Duke Energy	No	See comment #14 above. Also, Measure M5 is inconsistent with Requirement R5. It should mirror the requirement. Also, need to add the requirement number at the end of each Measure.
<p>Response: The RC SDT thanks you for your comment. See response to question 14. M5 was modified to reflect the entirety of R5 and new R6/M6, R7/M7 and R8/M8 were written for clarity and completeness.-</p>		
SERC OC Standards Review Group	Yes and No	15.1 - In M1, delete "System Operator" and "for real-time use".15.2 - Modify the measures to be consistent with changes requested in R1, R2, R4, R4.1 and R5.
<p>Response: The RC SDT thanks you for your comment. The RC SDT modified M1 and deleted both, "System Operators" and "for Real-time use." The measures were revised based on revisions to the requirements (see response to Q14).</p>

American Transmission Company		Abstain

16. Do you agree with the Violation Severity Levels proposed in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Several commenters suggested that the High and Severe VSLs for R2 contradicted the requirement. The RC SDT agreed and removed the "nots" from the VSLs to correct this error.

The VSL for R4 was originally proposed as a binary requirement with only a Lower VSL – since that time, a determination was made that noncompliance with any binary requirement must be classified a Severe VSL – thus the VSL for R4 was changed from Lower to Severe.

Several commenters had suggested revisions for the VSLs for R6. This requirement was imported from IRO-016 and several commenters suggested expanding the set of requirements regarding the Implementation Plan. The RC SDT expanded the requirements to 4 separate requirements and developed VSLs for these requirements (R5-R8). This made some of the comments on the VSLs moot.

Organization	Question 16:	Question 16 Comments:
Independent Electricity System Operator - Ontario	No	<p>R2: the High and Severe VSLs contradict with the requirement. We believe all of the "nots" should be removed.</p> <p>R6: The Low VSL should be a High since not agreeing to a plan but implementing one that has not been agreed to is a high violation of the requirement.</p> <p>The VSLs for R1 may need to be revised if our comments on M1 are adopted.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>We have revised the VSL based on your comment.</p> <p>R6 – The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p> <p>The VSL for R1 was unchanged as R1 remained unchanged.</p>		
MRO NERC SDTandards Review	No	For R2, the High and Severe VSLs contradict the requirement. We believe all of the "nots" should be removed. We don't agree with the VSLs in R4 since we believe R4 should be struck.

Comments for Set of Reliability Coordination Standards (Project 2006-06)

Organization	Question 16:	Question 16 Comments:
Subcommittee		The Lower VSL for R6 should not even be a violation unless the impact was negative. If the RC implemented a different mitigation plan and resolved the issue, then the RC was likely correct to disagree.
<p>Response: The RC SDT thanks you for your comment.</p> <p>We have revised the VSL for R2 per your suggestion.</p> <p>R4 – R4 remains in the standard</p> <p>R6 - The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p>		
Southern Company Transmission	No	<p>16.1 - In R2, severe should be "... and no action was taken by the RC".</p> <p>16.2 - In R5, severe should also include "... or that the RC failed to operate as though the problem existed."</p> <p>16.3 - Modify the VSLs to be consistent with changes requested in R1, R2, R4, R4.1 and R5.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>16.1 The requirement is to have agreed to plans and to distribute the plans. Other requirements address the actions to be taken.</p> <p>16.2 The requirements were revised and additional requirements were added for clarity. The VSLs were written based on the revised requirements.</p> <p>16.3 The VSLs were revised based on stakeholder comments and revised requirements.</p>		
FirstEnergy	No	The VSL should be modified per our suggested modifications in question 14.
<p>Response: The RC SDT thanks you for your comment. The VSLs were revised to reflect revisions to the requirements.</p>		
Duke Energy	No	See comments #14 and #15 above - VSLs need to be revised to correspond to the revised Requirements and Measures.
<p>Response: The RC SDT thanks you for your comment. Please see responses to comment 14 and 15 above. VSLs were revised to reflect</p>		

Organization	Question 16:	Question 16 Comments:
revised requirements.		
ISO/RTO Council Standards Review Subcommittee	No	<p>For R2, the High and Severe VSLs contradict the requirement. American Transmission Company		Abstain

18. Do you agree with the revisions to IRO-016-1 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: Stakeholders agree with the concept of moving the requirements of IRO-016-1 into IRO-014-2. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements formed to cover the intent of the requirement transferred from IRO-016:

R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

Organization	Question 18:	Question 18 Comments:
Duke Energy	No	See comment #14 above regarding re-write needed for Requirement R6 of IRO-014-2.
Response: The RC SDT thanks you for your comment. Please see response in #14 above.		
MRO NERC SDT Standards Review Subcommittee	Yes	We do agree with moving the requirement. However, the drafting team needs to revisit the wording of the requirement. The new wording is much more confusing. Until we reviewed IRO-016-2, it was not clear at all that R6 in IRO-014 was attempting to mimic R1 and its sub-requirements in IRO-016-2.

Organization	Question 18:	Question 18 Comments:

19. If you have any other comments, not expressed in questions above, on this set of revisions, please provide your comments here.

Summary Consideration: The RC SDT received comments that COM-001-2, R5 should be retired upon regulatory approval. The RC SDT will propose the earliest possible retirement date – the first day of the first calendar quarter following applicable regulatory approval, or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following BOT adoption.

Organization	Question 19:
Southern Company Transmission	19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability.
Response: The RC SDT thanks you for your comment. We concur and will request an effective date as you suggest.	
SERC OC Standards Review Group	19.1 - We suggest the effective date for the retirement of R5 (NERC Net Security Policy) in the COM-001-2 Standard should be effective immediately upon regulatory approval. As written, the Policy is unenforceable, contains no measures and is not germane to BES Reliability
Response: The RC SDT thanks you for your comment. We concur and will request an effective date as you suggest.	
Entergy Services, Inc	Overall, we think the coordinated set of standards being developed by the RTOSDT and IROLSDT are good for reliability, crisp, and tightens up the reliability concepts.
Response: The RC SDT thanks you for your comment.	
MEAG Power	My other concerns are addressed in the comments of the SERC OC Standards Review Group.
Response: The RC SDT thanks you for your comment.	
Salt River Project	I appreciate the new comment form in Word version. his allows me to comment on each requirement specifically addressing the requirement, measure or the VSL's

Organization	Question 19:
<p>Response: The RC SDT thanks you for your comment.</p>	
<p>#2 Standards Interface Subcommittee/Compliance Elements Development Resource Pool</p>	<p>Standard – COM-001-2 Telecommunications:</p> <p>Requirement 1: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall operationally test, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>Proposed Measure: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide evidence that it operationally tested, on a quarterly basis at a minimum, alternative telecommunications facilities to ensure the availability of their use when normal telecommunications facilities fail.</p> <p>SDT Proposed Lower VSL The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last quarter.</p> <p>CEDRP Proposed Lower VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in one of the previous four quarters.</p> <p>SDT Proposed Moderate VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 2 quarters.</p> <p>CEDRP Proposed Moderate VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in two of the previous four quarters.</p> <p>SDT Proposed High VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 3 quarters.</p> <p>CEDRP Proposed High VSL: The Reliability Coordinator, Balancing Authority or Transmission Operator performed operational testing of alternative telecommunications, but did not perform a test in three of the previous four quarters.</p>

Organization	Question 19:
	<p>SDT Proposed Severe VSL: The Reliability Coordinator, Transmission Operator, or Balancing Authority failed to operationally test within the last 4 quarters.</p> <p>CEDRP Proposed Severe VSL: The Responsible Entity failed to operationally test alternative telecommunications every quarter on more than three separate occasions (i.e. more than any three different quarters).</p> <p>=====</p> <p>Standard – COM-001-2 R2 Telecommunications Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities of the failure of its normal telecommunications facilities, and shall verify that alternate means of telecommunications are functional.</p> <p>Proposed Measure: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide evidence that it notified impacted entities of failure of their normal telecommunications facilities, and verified the alternate means of telecommunications were functional.</p> <p>Discussion - This requirement needs to be re-written to be more clearly define who the entities are that are “impacted.” The key attributes appear to be notification of ALL (communication) impacted entities (possible omission if some, but not all are not notified). The requirement does not give any guidance on the “verification” side – this is a problem, one entity can interpret that to mean “we looked and it was working”, another may be to verify with all impacted entities that alternate communication is working. We suggest this requirement needs a little more clarification.</p> <p>Response: The RC SDT believes that entities should contact others when their normal communication capability is lost. For example, the normal phone line could be cut and someone trying to contact that entity may only get a busy signal and have no idea that alternate communications is necessary.</p> <p>We have revised the requirement to place time bounds on outages that require notification. The requirement was rewritten to:</p> <p>R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>The CEDRP does not feel it can write a valid VSL for this requirement as currently worded.</p> <p>SDT Proposed Lower VSL:</p>

Organization	Question 19:
	<p>The Reliability Coordinator, Transmission Operator or Balancing Authority notified all impacted entities of the failure of their normal telecommunications facilities, but failed to verify the alternate means of telecommunications are functional. CEDRP Proposed Lower VSL: See Discussion</p> <p>SDT Proposed Moderate VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority notified some, but not all, impacted entities of the failure of their normal telecommunications facilities, and failed to verify the alternate means of telecommunications are functional. CEDRP Proposed Moderate VSL: See Discussion:</p> <p>SDT Proposed High VSL: N/A CEDRP Proposed High VSL: See Discussion</p> <p>SDT Proposed Severe VSL: The Reliability Coordinator, Transmission Operator or Balancing Authority failed to notify any impacted entities of the failure of their normal telecommunications facilities, and failed verify the alternate means of telecommunications are functional. CEDRP Proposed Severe VSL: See Discussion</p> <hr/> <p>Standard – COM-001-2 R3 Telecommunications Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. Proposed Measure: The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used</p>

Organization	Question 19:
	<p>to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES.</p> <p>NOTE: OK with this as is because the requirement and VSLs have been re-written, will be removed from this standard shortly, and included in the new COM-003-1 standard.</p> <p>Response: Thank you for your comment.</p> <p>SDT Proposed Severe VSL: The Responsible Entity failed to provide evidence of concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System.</p> <p>CEDRP Proposed Severe VSL: The Responsible Entity failed to provide evidence of the concurrence to use a language other than English for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System.</p> <p>=====</p> <p>Standard – COM-001-2 R4 Telecommunications Each Distribution Provider and Generation Operator shall have telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p> <p>Proposed Measure: Each Distribution Provider and Generation Operator has telecommunications facilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information.</p> <p>“has” telecomm with TOP and BA Discussion – Telecommunication Facilities is ambiguous and is not included in the NERC glossary of terms – the CEDRP recommend deleting the word “facilities” from the requirement and measure and leaving it just as “telecommunications” with its TOP and BA .</p> <p>Response: The term “telecommunications facilities” was replaced with “interpersonal communications</p>

Organization	Question 19:
	<p>capabilities” to clarify the intent of the requirement.</p> <p>SDT Proposed High VSL: N/A</p> <p>CEDRP Proposed High VSL: The Responsible Entity failed to establish telecommunications with either their Balancing Authority OR Transmission Operator for the exchange of Interconnection and operating information.</p> <p>SDT Proposed Severe VSL: The Distribution Provider or Generation Operator failed to have telecommunications facilities with its Transmission Operator and Balancing Authority</p> <p>CEDRP Proposed Severe VSL: The Responsible Entity failed to establish telecommunications with their Balancing Authority AND Transmission Operator for the exchange of Interconnection and operating information.</p> <p>5. Is the VSL language clear & measurable (ambiguity removed)? If no, does the requirement or measure need to be revised? Yes, considering the wording of the requirement as written. More specifically, the word “have” as used in the requirement is a bit vague. A better choice could have been, “established and maintains.”</p> <p>Response: Thank you for your comment.</p> <p>=====</p> <p>Standard: COM-002-3 Communications and Coordination</p>
	<p>Response: The RC SDT thanks you for your comments. Please see responses embedded above.</p> <p>In the future, please do not submit comments in this format. It is extremely burdensome on the drafting team in trying to respond to the comments. Please answer each question individually. If you encounter difficulty, please contact NERC for assistance.</p>
Standards Interface Subcommittee/Compliance Elements Drafting	<p>Standard – IRO-001 R1</p> <p>The Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. [Violation Risk</p>

Organization	Question 19:
	<p>Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Reliability Coordinator shall have evidence that it acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area Discussion –</p> <ol style="list-style-type: none"> 1. As currently worded it can be interpreted that any time an event occurs the RC would be in violation of the standard simply because they had failed “to prevent” an event. 2. This requirement does not have a “timing” element included, although it implies timing based on the “duration of the event”. Including that “duration of the event” is problematic – it appears to imply that human intervention may provide a more timely response than relay operation, we would suggest more clarification about what the “duration” element of the requirement is intended to address (e.g. generation re-dispatch?). 3. There also appears to be a “quality” element included based on the mitigation of magnitude of the event. As a result we believe that timeliness, effectiveness and communication should be the basis of the VSLs. 4. The VSLs as differentiate between directing actions and acting. Practically, there is no difference. The RC is still giving the directive. It is just a matter of who is carrying it out. This is not a valid basis for differentiating between VSLs. We suggest the VSLs be defined based on actual system impact (i.e. Was the RC acting or directing actions to prevent or to mitigate?) and to either modify the requirement to remove timing aspects or to add the timing aspects to the VSLs. <p>Response:</p> <ol style="list-style-type: none"> 1. The RC SDT does not agree that there would be a violation any time an event occurred. The RC should always be looking ahead. Even though events can occur that were not foreseeable or due to catastrophic failures of system equipment. 2. The intent of the phrase of “duration of the event” is to emphasize that there are actions that can be taken to shorten the duration of an event. These include ordering redispatch and system reconfiguration (including load shedding) to mitigate an Adverse Reliability Impact, thus shortening the event and its impact on the interconnection. 3. The VSL has been re-written to include only a Severe VSL. 4. We agree and have revised the VSL to only have a Severe VSL. <p>SDT Proposed High VSL IRO-001 R1</p>

Organization	Question 19:
	<p>The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. CEDRP Proposed VSL The Reliability Coordinator failed to act to prevent the magnitude or duration of Adverse Reliability Impacts.</p> <p>SDT Proposed Severe VSL IRO-001 R1 The Reliability Coordinator failed to act and direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts CEDRP Proposed VSL The Reliability Coordinator failed to act and direct actions to mitigate the magnitude or duration of Adverse Reliability Impacts</p> <p>CAE Resource Pool Comments The Enforcement Authority Statement, “NERC shall be responsible for compliance monitoring of the Regional Entity.” Is not clear, if it is intended to encompass Regional Entities that perform RC functions is should be clearly stated, if not it should not be included in the Enforcement Authority section.</p> <p>=====</p> <p>Standard – IRO-001 R2 Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers, and Purchasing-Selling Entities shall act without intentional delay to comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations] Proposed Measure Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it acted without delay to comply with the Reliability Coordinator’s directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Discussion - The team would suggest “intentional delay” be eliminated from the requirement – e.g. “shall act to...”). To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement.</p>

Organization	Question 19:
	<p>The measure and VSLs do not consider the exceptions for not following the RC objective. The drafting team should consider combining requirements R2 and R3. Thus, one VSL would become failure to notify the RC of the inability to comply. The drafting team could consider applying the numerical category of VSLs for some directives such as an order to redispach. Obviously, it would not work well if the directive was to reconfigure the system.</p> <p>Response:</p> <p>The term “intentional delay” was eliminated from the standard as you suggested. The VSLs were revised to reflect the requirement.</p> <p>SDT Proposed Moderate Moderate High VSL The responsible entity followed the Reliability Coordinators directive unless such actions would violate safety, equipment, or regulatory or statutory requirements with a delay. not caused by equipment problems.</p> <p>CEDRP Proposed VSL IRO-001 R2 The team does not agree that this is a valid VSL.</p> <p>SDT Proposed High VSL The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements.</p> <p>CEDRP Proposed VSL IRO-001 R2 The team does not agree that this is a valid VSL. The word majority implies some ability to numerically measure the response to the directive. Thus, the drafting team should consider applying the numerical category of the VSL guidelines.</p> <p>SDT Proposed Severe VSL The responsible entity did not follow the Reliability Coordinators directive. The responsible entity did not follow the Reliability Coordinators directive, the directive would not have violated safety, equipment, regulatory, or statutory requirements, and responsible entity did not communicate the inability to follow the directive to the Reliability Coordinator.</p> <p>CEDRP Proposed VSL IRO-001 R2 The responsible entity did not follow the Reliability Coordinators directive, the directive would not have violated safety, equipment, regulatory, or statutory requirements, and responsible entity did not communicate the inability to follow the directive to the Reliability Coordinator.</p>

Organization	Question 19:
	<p>=====</p> <p>Standard - IRO-001 R3 The Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the Reliability Coordinator upon recognition of the inability to perform the directive. [Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</p> <p>Proposed Measure</p> <p>Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall have evidence that it confirmed its ability to comply with the Reliability Coordinator's directives, or if for safety, equipment, regulatory or statutory requirements it could not comply, informed the Reliability Coordinator upon recognition of the inability to comply.</p> <p>Discussion – The requirement appears to be based on communication and can be problematic by including the requirement to immediately confirm the ability to comply, a directive can be issued to one entity or several entities at one time (e.g. conference call, all call, electronic notification) that may create several issues when attempting to process all confirmations, the requirement language presents a risk of being found out of compliance for following a directive but not providing an “immediate” confirmation to the RC. The CEDRP believes it to be a reasonable expectation that all entities will comply with reliability directives and notification should be made only on exception. The SDT should consider combining this requirement with R2.</p> <p>Response:</p> <p>The phrase “immediately confirm the ability to comply” was removed from the requirement. The new wording is:</p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, or Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform the directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p>SDT Proposed Lower VSL IRO-001 R3</p> <p>The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator.</p>

Organization	Question 19:
	<p>CEDRP Proposed VSL See above discussion note</p> <p>=====</p> <p>Standard - IRO-001 R4</p> <p>Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure</p> <p>Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area.</p> <p>Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. This requirement appears to fit the numerical category of the VSL guidelines best.</p> <p>Response:</p> <p>The term “intentional delay” was eliminated from the standard as you suggested. The VSLs were revised as you suggested.</p> <p>SDT Proposed Lower VSL IRO-001 R4 N/A CEDRP Proposed VSL</p> <p>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>SDT Proposed Moderate VSL IRO-001 R4 N/A CEDRP Proposed VSL</p>

Organization	Question 19:
	<p>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>SDT Proposed High VSL IRO-001 R4 N/A CEDRP Proposed VSL</p> <p>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>SDT Proposed Severe VSL: IRO-001 R4 The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.</p> <p>CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the Transmission Operators and Balancing Authorities within its Reliability Coordination Area.</p> <p>=====</p> <p>Standard - IRO-001 R5</p> <p>Each Reliability Coordinator who identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure Each Reliability Coordinator shall have evidence that it notified, without intentional delay, all impacted Transmission Operators and balancing Authorities in its Reliability Coordinator Area when the real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area has been mitigated.</p>

Organization	Question 19:
	<p>Discussion – To act with an intentional delay represents a willful act to disregard the requirement. Willful disregard of requirements is one of the factors that the enforcement authority uses to magnify penalties. Requirements should not include attempts to avoid willful disregard of the requirement. Measure 5 is written implying that there is an Adverse Reliability Impact. The drafting team should consider wording the measurement to consider that there may not be an Adverse Reliability Impact requiring a directive. The Commission in paragraph 27 of the VSL order has stated that multiple VSLs are preferable where possible. Suggest applying the numerical category of the VSL Guidelines based on the number of entities notified.</p> <p>Response:</p> <p>The term “intentional delay” was eliminated from the standard as you suggested. The VSLs were revised per your suggestion.</p> <p>SDT Proposed Lower VSL: IRO-001 R5 N/A CEDRP Proposed Lower VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify 25% or less of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>SDT Proposed Moderate VSL: IRO-001 R5 N/A CEDRP Proposed Moderate VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 25% but less than or equal to 50% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>SDT Proposed High VSL: IRO-001 R5 N/A CEDRP Proposed High VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 50% but less than or equal to 75% of the</p>

Organization	Question 19:
	<p>impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>SDT Proposed Severe VSL: IRO-001 R5 The Reliability Coordinator failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.</p> <p>CEDRP Proposed Severe VSL: The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to notify more than 75% of the impacted Transmission Operators and Balancing Authorities within its Reliability Coordination Area that the Adverse Reliability Impact had been mitigated.</p> <p>=====</p> <p>Standard – IRO-002-2 R1 Each Reliability Coordinator shall determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a letter to Transmission Operators, Balancing Authorities, Transmission Owners, Generator Owners, Generator Operators, and Load-Serving Entities, or adjacent Reliability Coordinators, or other equivalent evidence that will be used to confirm that the Reliability Coordinator has requested the data required to support its reliability coordination tasks.</p> <p>Discussion – The VSLs attempt to measure the quality of the data requirements. They require the compliance auditor to judge if another RC has material impact and what data is administrative and what data is substantial. Given the typical length of a compliance audit, it is doubtful that the compliance auditor can make these types of judgments about the quality of the data and the material impact of another RC. The drafting team should consider applying numerical category of VSLs based on the number of entities the data request is made from. It is interesting that the measure also does not require</p>

Organization	Question 19:
	<p>any documentation of a data specification.</p> <p>Response:</p> <p>The requirement was retired by the work of the IROLSDT. It is no longer in the standard.</p> <p>SDT Proposed Lower VSL: The Reliability Coordinator demonstrated that it</p> <ol style="list-style-type: none"> 1) determined its data requirements and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with a material impact on the Bulk Electric System in its Reliability Coordination Area but did not request the data from Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators with minimal impact on the Bulk Electric System in its Reliability Coordination Area or 2) determined its data requirements necessary to perform its reliability functions with the exceptions of data that may be needed for administrative purposes such as data reporting. <p>CEDRP Proposed Lower VSL: IRO-002-2 R1</p> <p>The Reliability Coordinator failed to request data to support its reliability coordination tasks from 25% or less of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.</p> <p>SDT Proposed Moderate VSL: The Reliability Coordinator demonstrated that it determined the majority but not all of its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p> <p>CEDRP Proposed Moderate VSL: IRO-002-2 R1</p> <p>The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 25% but less than or equal to 50% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.</p> <p>SDT Proposed High VSL: The Reliability Coordinator demonstrated that it determined</p> <ol style="list-style-type: none"> 1) some but less than the majority of its data requirements necessary to support its reliability

Organization	Question 19:
	<p>coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators</p> <p>Or</p> <p>2) all of its data requirements necessary to support its reliability coordination functions but failed to demonstrate that it requested data from two of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p> <p>CEDRP Proposed High VSL: IRO-002-2 R1 The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 50% but less than or equal to 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators.</p> <p>SDT Proposed Severe VSL: The Reliability Coordinator failed to demonstrate that it</p> <p>1) determined its data requirements necessary to support its reliability coordination functions and requested that data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators</p> <p>Or</p> <p>2) requested the data from three or more of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities or Adjacent Reliability Coordinators.</p> <p>CEDRP Proposed Severe VSL: IRO-002-2 R1 The Reliability Coordinator failed to request data to support its reliability coordination tasks from more than 75% of its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators,</p>

Organization	Question 19:
	<p>Or,</p> <p>The Reliability Coordinator failed to determine data requirements to support its reliability coordination tasks.</p> <p>Standard – IRO-002-2 R2</p> <p>Each Reliability Coordinator shall have the authority to veto planned outages to analysis tools, including final approvals for planned maintenance. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</p> <p>Proposed Measure</p> <p>Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has the authority to veto planned outages to analysis tools, including final approvals for planned maintenance as specified in Requirement 2.</p> <p>Is this requirement needed? R1 IRO-001-2 requires the RC to mitigate Adverse Reliability Impacts. R2 IRO-001-2 requires responsible entities to comply with the RC directives. Wouldn't the RC thus have the right to cancel all types of outages (i.e. analysis tools, transmission equipment, etc). FERC has stated in paragraph 112 of Order 693-A that an RC does not derive their authority from agreements but rather from FERC's approval of the standards.</p> <p>Barring the team's decision to remove this requirement, the Severe VSL is confusing. We have suggested different wording.</p> <p>Response:</p> <p>While the RC SDT agrees that the other requirements should cover this subject, this is a direct response to the 2003 blackout and is included here. We have revised the Severe VSL to reflect the revised requirement.</p> <p>SDT Proposed Severe VSL IRO-002-2 R2 Reliability Coordinator approval is not required for planned maintenance or planned outages. CEDRP Proposed VSL Reliability Coordinator does not approve planned maintenance or planned outages.</p>

Organization	Question 19:
	<p>=====</p> <p>Standard – IRO-014-2 R1 No comments</p> <p>=====</p> <p>Standard – IRO-014-2 R2</p> <p>R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: [Violation Risk Factor: Lower] [Time Horizon: Real-time Operations and Operations Planning]</p> <p>R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p> <p>Proposed Measure</p> <p>M2. The Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:</p> <p>M2.1 Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>M2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p> <p>Discussion – The High and Severe VSLs appear to use “not” incorrectly.</p> <p>Response:</p> <p>We agree and have revised the VSLs.</p> <p>SDT Proposed Moderate VSL: IRO-014-2 R2</p> <p>The Reliability Coordinator failed to did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action.</p> <p>CEDRP Proposed Moderate VSL: IRO-014-2 R2</p> <p>The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take</p>

Organization	Question 19:
	<p>action.</p> <p>SDT Proposed High VSL: The Reliability Coordinator failed to did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action</p> <p>CEDRP Proposed High VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action</p> <p>SDT Proposed Severe VSL: The Reliability Coordinator failed to did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action and were not distributed to all Reliability Coordinators that are required to take action</p> <p>CEDRP Proposed Severe VSL: The Reliability Coordinator did not have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action and were distributed to all Reliability Coordinators that are required to take action</p> <p>=====</p> <p>Standard – IRO-014-2 R3 [Response: The SDT appreciates the comments. To better emphasize the distinction, the SDT decided to underline the “and” and the “or”.] Requirement (including sub-requirements) R3. The Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. [Violation Risk Factor: Medium][Time</p>

Organization	Question 19:
	<p>Horizon: Real-time Operations and Operations Planning]</p> <p>Proposed Measure M3. The Reliability Coordinator shall have evidence it made notifications and exchanged reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information.</p> <p>Discussion: The VSLs appear to be appropriate. Since the only difference is the use of the “and” and “or”, we suggest emphasizing those words in bold. We read this more than once before we noticed the difference.</p> <p>Response: We revised the VSL to emphasize the “OR” and “AND” parts.</p> <p>SDT Proposed High VSL: The Reliability Coordinator failed to make notifications or exchange reliability-related information with impacted Reliability Coordinators. CEDRP Proposed High VSL: IRO-014-2 R3 The Reliability Coordinator failed to make notifications or exchange reliability-related information with impacted Reliability Coordinators.</p> <p>SDT Proposed Severe VSL: The Reliability Coordinator failed to make notifications and exchange reliability-related information with impacted Reliability Coordinators. CEDRP Proposed Severe VSL: IRO-014-2 R3 The Reliability Coordinator failed to make notifications and exchange reliability-related information with impacted Reliability Coordinators.</p> <p>=====</p> <p>Standard – IRO-014-2 R4 R4. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with impacted Reliability Coordinators. [Violation Risk Factor: Lower][Time</p>

Organization	Question 19:
	<p>Horizon: Real-time Operations]</p> <p>The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.</p> <p>Proposed Measure</p> <p>M4. The Reliability Coordinator shall have evidence it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.</p> <p>Discussion – This requirement is purely administrative and probably does not rise to a level of a reliability standard requirement.</p> <p>It is in essence redundant, with R1.1 IRO-014-2? It appears R1.1 addresses the same information that would be expected to be discussed in a weekly conference call. Should the drafting team disagree and retain this requirement, please consider applying multiple VSLs based on how often the RC participates in conference calls, how many they missed, or how many impacted RCs they participated in conference calls with.</p> <p>Response:</p> <p>R1.1 is a sub-requirement of R1 which requires the reliability coordinator “to have” procedures, processes, or plans, and R4 requires “participation.” R4 requires participation on calls. If the RC fails to participate, that is a violation of the requirement, making it a binary requirement with only one VSL.</p> <p>SDT Proposed Lower VSL: The Reliability Coordinator failed to participate in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.</p> <p>CEDRP Proposed Lower VSL: IRO-014-2 R4 The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators bi-weekly, Or the Reliability Coordinator failed to participate in one weekly conference call, Or the Reliability Coordinator agreed to participate in conference calls with 25% or less of the impacted Reliability Coordinators.</p> <p>SDT Proposed Moderate VSL: N/A</p>

Organization	Question 19:
	<p>CEDRP Proposed Moderate VSL: IRO-014-2 R4 The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators every third week, Or the Reliability Coordinator failed to participate in two weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 25% but less than or equal to 50% of the impacted Reliability Coordinators.</p> <p>SDT Proposed High VSL: N/A CEDRP Proposed High VSL: IRO-014-2 R4 The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators fourth week, Or the Reliability Coordinator failed to participate in three weekly conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 50% but less than or equal to 75% of the impacted Reliability Coordinators.</p> <p>SDT Proposed Severe VSL: N/A CEDRP Proposed Severe VSL: IRO-014-2 R4 The Reliability Coordinator participated in agreed upon conference calls and other communication forums with impacted Reliability Coordinators at least every fifth week, Or the Reliability Coordinator failed to participate in four weekly conference calls, Or the Reliability Coordinator failed to agree to participate in any conference calls, Or the Reliability Coordinator agreed to participate in conference calls with more than 75% but less than 100% of the impacted Reliability Coordinators.</p> <p>=====</p>

Organization	Question 19:
	<p>Standard – IRO-014-2 R5</p> <p>R5. When an expected or actual reliability issue is detected, the Reliability Coordinator shall confirm the existence of the issue with the impacted Reliability Coordinators. Until in the event that the issue cannot be has been proven to not exist, confirmed, each Reliability Coordinator shall operate as though the problem exists. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>Proposed Measure</p> <p>The Reliability Coordinator shall have evidence that, in cases when an expected or actual reliability issue was detected, it has confirmed the existence of the issue with the impacted Reliability Coordinators.</p> <p>Discussion – This requirement is confusing in the way it is worded. We think it is trying to say that the RC should operate as though the reliability issue (should this be Adverse Reliability Impact) is detected until the issue is confirmed not to exist. The way it is worded might imply that if one doesn't confirm it to exist, operate as though it does. This leaves open the interpretation that a confirmation that it doesn't exist must still be operated to as though it does exist.</p> <p>The drafting team should consider splitting operating to prevent from operating to mitigate an existing event in the VSLs.</p> <p>Response:</p> <p>The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk</p>

Organization	Question 19:
	<p>Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan,. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</p> <p>The RC SDT has revised / created VSLs based on the new requirements.</p> <p>SDT Proposed Lower VSL The Reliability Coordinator that detected an expected or actual reliability issue contacted the other Reliability Coordinator(s) to confirm that there was a problem but could not confirm that the problem existed and failed to operate as though the problem existed. CEDRP Proposed VSL IRO-014-2 R5 N/A</p> <p>SDT Proposed High VSL N/A CEDRP Proposed VSL IRO-014-2 R5 The Reliability Coordinator that detected an expected reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem.</p> <p>SDT Proposed Severe VSL The Reliability Coordinator that detected an expected or actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem. CEDRP Proposed VSL IRO-014-2 R5 The Reliability Coordinator that detected an actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem.</p> <p>===== Standard – IRO-014-2 R6 When an expected or actual reliability issue exists and the impacted Reliability Coordinators cannot agree on a mitigation plan, all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] Proposed Measure</p>

Organization	Question 19:
	<p>The affected Reliability Coordinators shall have evidence that, in cases when an expected or actual reliability issue existed and the impacted Reliability Coordinators could not agree on a mitigation plan, they implemented the mitigation plan developed by the Reliability Coordinator who has the reliability issue.</p> <p>Discussion: We are concerned the validity of this requirement, it may force an RC to implement a solution that they don't agree with and ultimately result in an Adverse Reliability Impact. The RC may not agree with the solution because it may not be reliable for their footprint. They need to have the ability to veto mitigation plans that cause Adverse Reliability Impacts in their footprint without incurring a compliance violation.</p> <p>Response:</p> <p>R6 was brought into this standard from IRO-016, R1 and R2. The RC SDT removed the wording relating to the "most conservative solution" because it can not be measured. We are proposing to use the mitigation plan of the RC who is experiencing the issue in cases where an agreed to mitigation plan can not be developed.</p> <p>SDT Proposed Lower VSL The Reliability Coordinator did not agree on a mitigation plan and implemented a plan other than the one developed by the Reliability Coordinator who had the reliability issue. CEDRP Proposed VSL IRO-014-2 R6 N/A</p> <p>SDT Proposed Severe VSL The Reliability Coordinator did not agree on a mitigation plan and did not implement a mitigation plan. CEDRP Proposed VSL IRO-014-2 R6 What if the RC is correct in disagreeing and the mitigation plan would have caused an Adverse Reliability Impact on their system?</p>
<p>Response: The RC SDT thanks you for your comments. Please see responses embedded above.</p> <p>In the future, please do not submit comments in this format. It is extremely burdensome on the drafting team in trying to respond to the comments. Please answer each question individually. If you encounter difficulty, please contact NERC for assistance.</p>	

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008 – May 26, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the first draft. The team is seeking comments on the revised standards.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Second Posting of draft standards,	July-August 2009
2. Respond to comments on second posting	August 2009
3. Post Standards for pre-ballot period.	September 2009
4. Standards posted for initial and recirculation ballots.	October 2009
5. Standards sent to BOT for approval.	December 2009
6. Standards filed with regulatory authorities.	January 2010

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

Adverse Reliability Impact – The impact of an event that results in Bulk Electric System instability, uncontrolled separation, or cascading outages.

A. Introduction

1. **Title:** Reliability Coordination – Responsibilities and Authorities
2. **Number:** IRO-001-2
3. **Purpose:** To establish requirements for issuance of and complying with Reliability Coordinator directives or notification within the Reliability Coordinator Areas.
4. **Applicability**
 - 4.1. Reliability Coordinators.
 - 4.2. Transmission Operators.
 - 4.3. Balancing Authorities.
 - 4.4. Generator Operators.
 - 4.5. Transmission Service Providers.
 - 4.6. Load-Serving Entities.
 - 4.7. Distribution Providers.
 - 4.8. Purchasing-Selling Entities.
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

B. Requirements

- R1. Each Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. *[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]*
- R2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with its Reliability Coordinator's directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform a directive. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R4. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.

[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]

- R5.** Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R6.** Each Reliability Coordinator shall provide its operating personnel with the authority to veto planned outages to its own analysis tools. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

C. Measures

- M1.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it has acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area. (R1)
- M2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider and Purchasing-Selling Entity shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's directives unless such actions would have violated safety, equipment, or regulatory or statutory requirements. (R2)
- M3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider and Purchasing-Selling Entity shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it that it informed the Reliability Coordinator of its inability to comply with its Reliability Coordinator's directives. (R3)
- M4.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area. (R4)
- M5.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when a real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area had been mitigated. (R5)
- M6.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its operating personnel with the authority to veto planned outages of its own analysis tools. (R6)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity and Load Serving Entity shall each keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity and Load Serving Entity shall retain its current, in force document and any documents in force since the last compliance audit for all Requirements and Measures.
- If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

Standard IRO-001-2 Reliability Coordination – Responsibilities and Authorities

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	The Reliability Coordinator failed to act or direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts
R2	N/A	N/A	N/A	The responsible entity failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.
R3	N/A	N/A	N/A	The responsible entity failed to inform its Reliability Coordinator upon recognition of its inability to perform the directive.
R4	The Reliability Coordinator identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area and failed to issue an alert to one, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area and failed to issue an alert to two, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area and failed to issue an alert to three or more, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area and failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.

Standard IRO-001-2 Reliability Coordination – Responsibilities and Authorities

R5	The Reliability Coordinator issued an alert to notify entities of a transmission problem but failed to notify one, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator issued an alert to notify entities of a transmission problem but failed to notify two, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator issued an alert to notify entities of a transmission problem but failed to notify three or more, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator issued an alert to notify entities of a transmission problem but failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.
R6	N/A	N/A	N/A	The Reliability Coordinator failed to provide its operating personnel with the authority to veto planned outages of its own analysis tools.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Approved by FERC — Effective Date	New
2	TBD	Revised per SAR for project 2006-6, reliability Coordination; added VRFs and VSLs as approved from VRF and VSL projects	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008 – May 26, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the first draft. The team is seeking comments on the revised standards.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Second Posting of draft standards,	July-August 2009
2. Respond to comments on second posting	August 2009
3. Post Standards for pre-ballot period.	September 2009
4. Standards posted for initial and recirculation ballots.	October 2009
5. Standards sent to BOT for approval.	December 2009
6. Standards filed with regulatory authorities.	January 2010

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

Adverse Reliability Impact – The impact of an event that results in Bulk Electric System ~~frequency-related~~ instability; ~~unplanned tripping of load or generation; or~~ uncontrolled separation or cascading outages ~~that affects a widespread area of the Interconnection.~~

A. Introduction

1. **Title:** Reliability Coordination – Responsibilities and Authorities
2. **Number:** IRO-001-2
3. **Purpose:** To establish requirements for issuance of and complying with Reliability Coordinator directives or notification within the Reliability Coordinator Areas.
4. **Applicability**
 - 4.1. Reliability Coordinators.
 - 4.2. Transmission Operators.
 - 4.3. Balancing Authorities.
 - 4.4. Generator Operators.
 - 4.5. Transmission Service Providers.
 - 4.6. Load-Serving Entities.
 - 4.7. Distribution Providers.
 - 4.8. Purchasing-Selling Entities.
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

B. Requirements

- R1. ~~The Each~~ Reliability Coordinator shall act or direct -actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. *[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]*
- R2. ~~Each~~ Transmission Operators, Balancing ~~Authorities~~Authority, Generator Operators, Transmission Service Providers, Load-Serving ~~Entities~~Entity, Distribution Provider, and Purchasing-Selling ~~Entities~~Entity shall ~~act without intentional delay to~~ comply with ~~its~~ Reliability Coordinator's directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R3. ~~The Each~~ Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, ~~and/or~~ Purchasing-Selling Entity shall ~~immediately confirm the ability to comply with the directive or~~ inform ~~the~~ ~~its~~ Reliability Coordinator upon recognition of ~~its~~ ~~he~~ inability to perform ~~the~~ directive. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R4. Each Reliability Coordinator ~~who~~ ~~that~~ identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, ~~without intentional delay~~; all impacted Transmission Operators and Balancing Authorities in its Reliability

Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

- R5. Each Reliability Coordinator ~~who~~ that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, ~~without intentional delay~~; all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. *[Violation Risk Factor: Medium~~High~~] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R6. Each Reliability Coordinator shall provide its ~~O~~perating ~~P~~ersonnel with the authority to veto planned outages to its own analysis tools. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

C. Measures

- M1. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that ~~they~~ it ~~has~~ have acted, or issued directives, to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area. (R1)
- M2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider ~~or~~ and Purchasing-Selling Entity shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it ~~acted without delay to comply~~ with ~~the~~ its Reliability Coordinator's directives unless such actions would have violated safety, equipment, or regulatory or statutory requirements. (R2)
- M3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider ~~or~~ and Purchasing-Selling Entity shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that ~~it~~ that it informed the Reliability Coordinator of its inability to comply with ~~the~~ its Reliability Coordinator's directives. (R3)
- M4. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified; ~~without intentional delay~~; all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area. (R4)
- M5. Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified; ~~without intentional delay~~; all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when ~~the~~ a real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area had ~~s~~ been mitigated. (R5)
- M6. Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to

confirm that the Reliability Coordinator has provided its Operating Personnel with the authority to veto planned outages of its own analysis tools. (R6)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

~~NERC shall be responsible for compliance monitoring of the Regional Entity.~~

~~Regional Entities shall be responsible for compliance monitoring of the Reliability Coordinators, Transmission Operators, Generator Operators, Distribution Providers, and Load Serving Entities.~~

1.2. Compliance Monitoring Period and Reset Time Frame

Not applicable

~~1.3. One or more of the following methods will be used to assess compliance:~~

~~— Self-certification (Conducted annually with submission according to schedule.)~~

~~— Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)~~

~~— Periodic Audit (Conducted once every three years according to schedule.)~~

~~— Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)~~

~~The Performance Reset Period shall be 12 months from the last finding of non-compliance.~~

1.2.1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.3.1.4. Data Retention

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity and Load Serving Entity shall each keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity and Load Serving Entity shall retain its current, in force document and any documents in force since the last compliance audit for all Requirements and Measures.
- If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4.1.5. Additional Compliance Information

None.

2. Violation Severity Levels

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. <u>N/A</u>	The Reliability Coordinator failed to act or <u>and</u> direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts
R2	N/A	The responsible entity followed the Reliability Coordinators directive with a delay not caused by equipment problems. <u>N/A</u>	The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements. <u>N/A</u>	The responsible entity <u>failed to follow the Reliability Coordinator directive and it would not have violated the safety, equipment, statutory or regulatory requirements.</u> did not follow the Reliability Coordinators directive.
R3	The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator. <u>N/A</u>	N/A	N/A	The responsible entity failed to inform the <u>its</u> Reliability Coordinator upon recognition of the <u>its</u> inability to perform the directive.
R4	<u>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area and failed to issue an alert to one, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.</u> <u>N/A</u>	<u>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area and failed to issue an alert to two, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.</u> <u>N/A</u>	<u>The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area and failed to issue an alert to three or more, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.</u> <u>N/A</u>	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area <u>and</u> failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.

R5	<u>The Reliability Coordinator issued an alert to notify entities of a transmission problem but failed to notify one, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.</u>	<u>The Reliability Coordinator issued an alert to notify entities of a transmission problem but failed to notify two, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.</u> N/A	<u>The Reliability Coordinator issued an alert to notify entities of a transmission problem but failed to notify three or more, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.</u> N/A	The Reliability Coordinator issued an alert to notify entities of a transmission problem but failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.
<u>R6</u>	<u>N/A</u>	<u>N/A</u>	<u>N/A</u>	<u>The Reliability Coordinator failed to provide its operating personnel with the authority to veto planned outages of its own analysis tools.</u>

Standard IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	The Reliability Coordinator failed to act to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts.	The Reliability Coordinator failed to act and direct actions to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts
R2	N/A	The responsible entity followed the Reliability Coordinators directive with a delay not caused by equipment problems.	The responsible entity followed the majority of the Reliability Coordinators directive but did not fully follow the directive because it would violate safety, equipment, statutory or regulatory requirements.	The responsible entity did not follow the Reliability Coordinators directive.
R3	The responsible entity failed to immediately confirm the ability to comply with the directive issued by the Reliability Coordinator.	N/A	N/A	The responsible entity failed to inform the Reliability Coordinator upon recognition of the inability to perform the directive.
R4	N/A	N/A	N/A	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
R5	N/A	N/A	N/A	The Reliability Coordinator failed to notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.

3. Post Standards for pre-ballot period.	September 2009
4. Standards posted for initial and recirculation ballots.	October 2009
5. Standards sent to BOT for approval.	December 2009
6. Standards filed with regulatory authorities.	January 2010

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

Adverse Reliability Impact – The impact of an event that results in Bulk Electric System instability; uncontrolled separation or cascading outages.

A. Introduction

1. **Title:** Coordination Among Reliability Coordinators
2. **Number:** IRO-014-2
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective one year after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective one year after Board of Trustees approval.

B. Requirements

- R1. Each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]*
 - 1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
 - 1.2. Energy and capacity shortages.
 - 1.3. Planned or unplanned outage information.
 - 1.4. Control of voltage, including the coordination of reactive resources.
 - 1.5. Coordination of information exchange to support reliability assessments.
 - 1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.
- R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: *[Violation Risk Factor: Lower] [Time Horizon: Operations Planning and Long-term Planning]*
 - 2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).
 - 2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).

- R3.** Each Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]*
- R4.** Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly, and other communication forums with impacted Reliability Coordinators. *[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]*
- R5.** Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R6.** Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R7.** The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R8.** Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan. *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

C. Measures

- M1.** Each Reliability Coordinator shall have available the latest approved documented version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators. This documentation may include, but is not limited to, dated, current in force documentation with the specified elements.
- M2.** Each Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:
 - 2.1** Agreed to by all the Reliability Coordinators required to take the indicated action(s).
 - 2.2** Distributed to all Reliability Coordinators that are required to take the indicated action(s).

This evidence may include, but is not limited to dated document with confirmation of receipt or dated electronic communications with confirmation of receipt.

- M3.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it made notifications and exchanged reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information.
- M4.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.
- M5.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it, upon identification of an Adverse Reliability Impact, notified impacted Reliability Coordinators.
- M6.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it operated as though the problem exists when the identified Adverse Reliability Impact was not agreed to by the impacted Reliability Coordinators.
- M7.** Each Reliability Coordinator with the identified Adverse Reliability Impact shall have evidence and provide evidence that it developed a mitigation plan when the impacted Reliability Coordinators could not agree that the problem exists. This evidence may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation.
- M8.** Each impacted Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it implemented the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan,.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring Period and Reset Time Frame

Not Applicable

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator shall retain its current, in force document and any documents in force since the last compliance audit for all Requirements R1, R2, and Measures M1, M2.
- Each Reliability Coordinator shall retain its most recent 12 months of evidence for Requirement R3, R4 and Measure M3, M4.
- Each Reliability Coordinator shall retain 3 calendar years plus current calendar year of evidence for Requirements R5 through R8 and Measures M5 through M8.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one or two of the subrequirements.	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three or four of the subrequirements.	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address five of the subrequirements.	The Reliability Coordinator failed to have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability.
R2	N/A	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action.	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action.	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action and were distributed to all Reliability Coordinators that are required to take action.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008 – May 26, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the first draft. The team is seeking comments on the revised standards.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Second Posting of draft standards,	June-July 2009
2. Respond to comments on second posting	August 2009
3. Post Standards for pre-ballot period.	September 2009
4. Standards posted for initial and recirculation ballots.	October 2009
5. Standards sent to BOT for approval.	December 2009
6. Standards filed with regulatory authorities.	January 2010

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

Adverse Reliability Impact – The impact of an event that results in **Bulk Electric System frequency-related** instability; ~~unplanned tripping of load or generation; or~~ uncontrolled separation or cascading outages ~~that affects a widespread area of the Interconnection.~~

A. Introduction

1. **Title:** Coordination Among Reliability Coordinators
2. **Number:** IRO-014-2
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective one year after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective one year after Board of Trustees approval.

B. Requirements

- R1. ~~Each~~ The Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address, ~~as a minimum,~~ the following: [*Violation Risk Factor: Medium*] [*Time Horizon: Same Day Operations and Operations Planning*]
 - R1.1.1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
 - R1.2.1.2. Energy and capacity shortages.
 - R1.3.1.3. Planned or unplanned outage information.
 - R1.4.1.4. ~~Voltage~~ Control of voltage, including the coordination of reactive resources ~~for voltage control.~~
 - R1.5.1.5. Coordination of information exchange to support reliability assessments.
 - R1.6.1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.
- R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: [*Violation Risk Factor: Lower*] [*Time Horizon: ~~Real-time Operations and~~ Operations Planning and Long-term Planning*]
 - R2.1.2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).

~~R2.2.2.2.~~ Distributed to all Reliability Coordinators that are required to take the indicated action(s).

- R3. ~~The~~ Each Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined ~~shall follow its~~ Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]*
- R4. ~~The~~ Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly, and other communication forums with impacted Reliability Coordinators. *[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]*
- ~~4.1. The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.~~
- R5. ~~When an expected or actual reliability issue is detected, t~~ Each ~~he~~ Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall ~~notify~~ confirm impacted Reliability Coordinators. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]* ~~the existence of the issue with the impacted Reliability Coordinators.~~
- ~~R6. In the event that the issue cannot be confirmed, Each impacted~~ each Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- ~~R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when~~ When an expected or actual reliability issue exists and the ~~the~~ impacted Reliability Coordinators can not agree on a mitigation plan, ~~all impacted Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue.~~ *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

C. Measures

- M1. ~~The~~ Each Reliability Coordinator's ~~System Operators~~ shall have available ~~for Real-time use,~~ the latest approved documented version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators. This documentation may include, but is not limited to, dated, current in force documentation with the specified elements.

~~1.1 These Operating Procedures, Processes, or Plans shall address:~~

~~1.1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.~~

~~1.1.2 Energy and capacity shortages.~~

~~1.1.3 Planned or unplanned outage information.~~

~~1.1.4 Control of Voltage control, including the coordination of reactive resources for voltage control.~~

~~1.1.5 Coordination of information exchange to support reliability assessments.~~

~~1.1.6 Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.~~

M2. ~~The~~ Each Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:

~~M2.12.1~~ Agreed to by all the Reliability Coordinators required to take the indicated action(s).

~~M2.22.2~~ Distributed to all Reliability Coordinators that are required to take the indicated action(s).

This evidence may include, but is not limited to dated document with confirmation of receipt or dated electronic communications with confirmation of receipt.

M3. ~~The~~ Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it made notifications and exchanged reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information.

M4. ~~The~~ Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.

M5. ~~The~~ Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it ~~that, upon identification of an Adverse Reliability Impact, notified in cases when an expected or actual reliability issue was detected, it has confirmed the existence of the issue with the~~ impacted Reliability Coordinators.

- M6. ~~The~~Each Reliability Coordinator ~~In the event that the issue was not confirmed, each Reliability Coordinator~~ shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it operated as though the problem exists when the identified Adverse Reliability Impact was not agreed to by the impacted Reliability Coordinators.
- M7. The Reliability Coordinator with the identified Adverse Reliability Impact shall have evidence and provide evidence that it developed a mitigation plan when the impacted Reliability Coordinators could not agree that the problem exists. This evidence may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation.
- M8. Each impacted Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it implemented the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan. ~~The affected Reliability Coordinators shall have evidence that, in cases when an expected or actual reliability issue existed and the impacted Reliability Coordinators could not agree on a mitigation plan, they implemented the mitigation plan developed by the Reliability Coordinator who has the reliability issue.~~

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring Period and Reset Time Frame

Not Applicable

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

Each Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator shall retain its current, in force document and any documents in force since the last compliance audit for Requirements R1, R2, and Measures M1, M2.
- Each Reliability Coordinator shall retain its most recent 12 months of evidence for Requirement R3, R4 and Measures M3, M4.
- Each Reliability Coordinator shall retain 3 calendar years plus current calendar year of evidence for Requirements R5 through R8 and Measures M5 through M8.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one or two of the subrequirements.	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three or four of the subrequirements.	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address five of the subrequirements.	The Reliability Coordinator failed to have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability.
R2	N/A	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action.	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action.	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were not agreed to by all Reliability Coordinators that are required to take action and were not distributed to all Reliability Coordinators that are required to take action.

Standard IRO-014-2 — Coordination Among Reliability Coordinators

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R3	N/A	N/A	The Reliability Coordinator failed to make notifications <u>OR</u> exchange reliability-related information with impacted Reliability Coordinators.	The Reliability Coordinator failed to make notifications <u>AND</u> exchange reliability-related information with impacted Reliability Coordinators.
R4	N/A The Reliability Coordinator failed to participate in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators.	N/A	N/A	<u>The Reliability Coordinator failed to participate in an agreed upon (at least weekly) conference call or other communication forum with impacted Reliability Coordinators.</u> N/A
<u>R5</u>	<u>N/A</u>	<u>The Reliability Coordinator failed to notify one, but not all, of the impacted Reliability Coordinators upon identification of an Adverse Reliability Impact.</u>	<u>N/A</u>	<u>The Reliability Coordinator failed to notify any impacted Reliability Coordinators upon identification of an Adverse Reliability Impact.</u>
R6 <u>5</u>	The Reliability Coordinator that detected an expected or actual reliability issue contacted the other Reliability Coordinator(s) to confirm that there was a problem but could not confirm that the problem existed and failed to operate as though the problem existed. N/A	N/A	N/A	<u>The Reliability Coordinator f failed to operate as though the problem existed when the identified Adverse Reliability Impact was not agreed to by the impacted Reliability Coordinators.</u> that detected an expected or actual reliability issue failed to contact the other Reliability Coordinator(s) to confirm that there was a problem.

Standard IRO-014-2 — Coordination Among Reliability Coordinators

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R76	<p>The Reliability Coordinator did not agree on a mitigation plan and implemented a plan other than the one developed by the Reliability Coordinator who had the reliability issue. N/A</p>	N/A	N/A	<p>The Reliability Coordinator with the identified Adverse Reliability Impact failed to develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. The Reliability Coordinator did not agree on a mitigation plan and did not implement a mitigation plan.</p>
R8	N/A	N/A	N/A	<p>The impacted Reliability Coordinator failed to implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators could not agree on a mitigation plan.</p>

UNOFFICIAL Comment Form for Reliability Coordination — Project 2006-06

Please DO NOT use this form. Please use the electronic comment form located at the link below to submit comments on the proposed revisions to the standards for Project 2006-06: Reliability Coordination. Comments must be submitted by **August 9, 2009**. If you have questions please contact Stephen Crutchfield at stephen.crutchfield@nerc.net or by telephone at 609-651-9455.

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

Background Information:

The Reliability Coordination Standards Drafting Team (RC SDT) was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable, 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System, and 3) revising the group of standards based on FERC Order 693.

During the course of the project, the NERC standards staff revised the Reliability Standards Development Plan and noted several areas of overlapping scope between certain projects. The original SAR for Project 2006-06 called for revisions to PER-004 — Reliability Coordination — Staffing and PRC-001 — System Protection Coordination. Based on scope overlap, it was determined that PER-004 and PRC-001 would best be served by moving the proposed work to Project 2006-01: System Personnel Training and Project 2007-06: System Protection, respectively.

The RC SDT proposed revisions to the set of standards under the project in August and September 2008. The RC SDT made revisions to the set of standards based on stakeholder feedback and the results of the IROL Standards Drafting Team work. Since the inception of this project, the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for three new Standards which included revisions to other IRO standards. With the approval of the IROL set of standards, certain requirements were retired from other IRO standards (see below summaries for specific examples under the RC SDT project).

Requirements, Measures and Violation Severity Levels in COM-001-2

Requirements: The RC SDT received several comments regarding the intent of the term “telecommunications facilities”. For COM-001-2, the RC SDT envisions telecommunications to be voice or message communication between operating personnel. The standard has been renamed “Communications” and the term “telecommunications facilities” was replaced with “interpersonal communications capabilities” throughout the standards to better reflect the intent of the RC SDT.

We also received comments regarding the applicability of the standard that suggested adding other entities listed in IRO-001 (LSE, PSE, and TSP). The RC SDT contends that, in order to receive and carry out directives, an entity must be able to communicate with the RC...either directly or through other entities (e.g. – a DP may receive the directive from the TOP who received it from the RC). We have not expanded the applicability of Requirements R1 and R2 as suggested as we feel that this expands the standard beyond the reliability - it is not necessary nor is it practical, for reliability purposes, for every entity to have normal and back-up interpersonal communications capabilities with every other entity.

Other commenters had concerns with regard to R2 and the intent with regard to length of outages. The requirement was revised as:

R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of its normal interpersonal communications capabilities. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations*]

R3 was expanded to include the Transmission Service Provider, Load-Serving Entity, and Purchasing-Selling Entity – to ensure that they use the English language for inter-entity communications. The informational (last) sentence of R3 was removed per stakeholder suggestions.

Measures: Commenters suggested general as well as specific revisions to the measures. One general comment suggested making the language consistent among the measures regarding evidence. M1-M3 were revised to include the phrase “shall have and provide upon request evidence that ...”.

Several commenters suggested revisions to M3. The RC SDT revised M3 based on the comments received suggesting that the applicability be expanded to include Generator Operators, Distribution Providers, Transmission Service Providers, Purchasing-selling Entities and Load-Serving Entities. Several entities commented that M3 did not match R3 which included an explanatory sentence that allowed an entity to use a language other than English for its internal communications. The informational second sentence was removed from Requirement R3, thus eliminating the “disconnect” between the requirement and the measure. All measures were revised as necessary to reflect revisions to requirements.

VSLs: The RC SDT made revisions to the VSLs based on the comments received and also to reflect revisions to the associated requirements. We received comments that the VSLs for R1 and R2 were based on multiple violations. We agreed and revised the VSLs to reflect a single violation.

Requirements, Measures and Violation Severity Levels in COM-002-3

The work of the IROL SDT resulted in the retirement of R1 from the standard. The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The requirements were revised to:

R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall require the recipient of the directive to repeat the intent of the directive back; and shall acknowledge the response as correct or repeat the original statement to resolve any misunderstandings. [*Violation Risk Factor: High*][*Time Horizon: Real-Time*]

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall repeat the intent of the directive back to the issuer of the directive. [*Violation Risk Factor: High*][*Time Horizon: Real-Time*]

The purpose statement was also revised to reflect the revisions to the standard:

To ensure communications by operating personnel are effective.

The RC SDT received comments recommending expanding the applicability of the standard and separating Requirement R1 into two distinct requirements. The applicability was expanded to include Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity. The measures were revised to:

M1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a directive associated with real-time operational emergency conditions shall have evidence such as voice recordings or transcripts of voice recordings to show that it required the recipient of the directive to repeat the intent of the directive back; and acknowledged the response as correct or repeated the original statement to resolve any misunderstandings.

M2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a directive issued per Requirement R1 shall have evidence such as voice recordings or transcripts of voice recordings to show that it repeated the intent of the directive back to the issuer of the directive.

The RC SDT received comments recommending revisions to the VSLs based on revisions to the requirements and measures. The RC SDT did this and created new VSLs for new Requirement R2.

Requirements, Measures and Violation Severity Levels in IRO-001-2

The RC SDT has received a notable number of comments suggesting edits to the proposed requirements and measures for the draft standard, particularly regarding the phrase “without intentional delay.” The comments do not oppose the objective of the phrase, but often point out the issues of measuring intent and measuring delay time.

To maintain the intent while improving the measurability of the requirement, the SDT proposes to modify the standard as follows: delete the phrase ‘without intentional delay’ and leave the obligation of response and timing an unstated requirement of R1 “The RC shall act or direct actions...”

An RC that requires a given action in a given time will be expected to inform the impacted entities of those actions and time requirements. This would obviate the need for providing a measure for “intent”, but still maintain the reliability intent of the original requirement.

The VSLs were revised to reflect revisions to the requirements as well as the comments of stakeholders. Several comments suggested that there was no fundamental difference between the RC “acting” or “directing actions”. The RC SDT agreed and removed the High VSL for R1 and revised the Severe VSL accordingly. Other commenters suggested removing the High VSL from R2 as the VSL contradicted the requirement. The RC SDT agreed and removed the VSL.

Requirements, Measures and Violation Severity Levels in IRO-002-2

Since the inception of this project (2006-06), the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for a new Standard IRO-010-1: Reliability Coordinator Data Specification and Collection. The work of the IROL SDT retired IRO-002-2 Requirement R1. The team received comments expressing concern about eliminating the requirement in IRO-002 to monitor frequency. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity that any attempt to measure “Monitoring” can provide. It is the SDT’s

contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability. The team declined to delete R2 (Reliability Coordinator veto over analysis tool outages) as it was a specific recommendation from the 2003 Blackout report. This requirement was revised and moved into IRO-001-2 as R6.

Stakeholders indicated that R6 (previously IRO-002 R2) is a “binary” requirement and the Lower VSL was deleted and the Severe VSL was revised based on those comments.

Retirement of IRO-005-1

Several commenters had concerns around removing the requirement to monitor frequency (IRO-005-1 R8). The intent of this monitoring activity was incorporated into IRO-002-2, R1. Other commenters had concerns with the removal of other monitoring requirements in the standard. While the Standard Drafting Team (SDT) recognizes the concern raised, the SDT is even more concerned with the subjectivity associated with any attempt to measure “Monitoring.” It is the SDT’s contention that adherence to reliability standards that require the said monitoring cannot be demonstrated unless the entity is closely monitoring the system parameters. Furthermore, the SDT contends that any requirements that describe the monitoring facilities needed to fulfill fundamental duties should be embedded in entity certification process requirements. With IRO-014 and IRO-001 R1 in place, the actual act of monitoring is a secondary task that is inherent in responding to situations or events that could have an adverse impact on reliability.

Requirements, Measures and Violation Severity Levels in IRO-014-2

Several commenters expressed concerns with the term “impacted” and suggested replacing this with “other”. The RC SDT believes “impacted” directly relates to the purpose statement. Additionally, replacing “one or more other” with “impacted” does tighten the requirement and removes ambiguity. The RC SDT does not intend for non-contiguous Reliability Coordinators to have “Reliability Coordinator Agreements”, but to have Procedures, Processes, or Plans with impacted reliability coordinators. Other commenters suggested striking the term “as a minimum” in R1 and the RC SDT agrees and has modified R1 accordingly. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016. The RC SDT reviewed the Implementation Plan for IRO-016 and its requirements and made some revisions to the requirements listed in IRO-014-2. There are now 4 requirements:

R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator that has the identified Adverse Reliability Impact when the

impacted Reliability Coordinators can not agree on a mitigation plan, [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

Several commenters suggested that the High and Severe VSLs for R2 contradicted the requirement. The RC SDT agreed and removed the “nots” from the VSLs. Several commenters had suggested revisions for the VSLs for R6. This requirement was imported from IRO-016 and several commenters suggested expanding the set of requirements regarding the mitigation plan. New VSLs were developed for these requirements.

Retirement of IRO-015-2

Stakeholders agreed with the proposed revisions and this is not being re-posted for comment.

Requirements of IRO-016-1

Stakeholders agreed with the concept of moving the requirements of IRO-016-1 into IRO-014-2. Some commenters did not agree with the wording of the new requirements in IRO-014 that were formerly in IRO-016 and the RC SDT revised these requirements in support of stakeholder comments. There are now 4 requirements, rather than 2, that address Reliability Coordinator actions when a Reliability Coordinator identifies an Adverse Reliability Impact. New measures and VSLs were developed to support these revised requirements.

Proposed Effective Dates

The RC SDT received comments that COM-001-2, R5 should have an effective date immediately upon regulatory approval. The RC SDT agrees and will request an effective date that is the first possible effective date – the first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

The Reliability Coordination Drafting Team would like to receive industry comments on these changes. The RC SDT asks that you review the revised standards and answer the following questions by August 9, 2009.

1. Do you agree with the revisions made to the Requirements in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

2. Do you agree with the revisions made to the Measures in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

3. Do you agree with the revisions made to the Violation Severity Levels in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

4. Do you agree with the revisions made to the Requirements in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

5. Do you agree with the revisions made to the Measures in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

6. Do you agree with the revisions made to the Violation Severity Levels in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

7. Do you agree with the revisions to the definition of Adverse Reliability Impacts (IRO-001-2)? If not, please explain in the comment area.

Yes

No

Comments:

8. Do you agree with the revisions to the Requirements in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

9. Do you agree with the revisions to the Measures in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

10. Do you agree with the revisions to the Violation Severity Levels in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

11. Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

12. Do you agree with the revisions to the Measures in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

13. Do you agree with the revisions to the Violation Severity Levels in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.

Yes

No

Comments:

14. If you have any other comments, not expressed in questions above, for the RC SDT on any of the other changes made to this set of standards and their associated implementation plans, please provide them here.

Comments:

Revisions to Defined Terms in the NERC Glossary

The RC SDT proposes modifying the following approved definition:

Adverse Reliability Impact — The impact of an event that results in Bulk Electric System instability, uncontrolled separation, or cascading outages.

Prerequisite Approvals

- None

Conforming Changes to Requirements in Already Approved Standards

- IRO-005, R15 is being incorporated into IRO-001-2.

Revision Summary

- The RC SDT revised the standard and is proposing retiring several requirements (R1, R2, R4, R5, R6, R7 and R10). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERCs Rules of Procedure and to address issues in FERC Order 693.

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p>None – The RC SDT proposes retiring this requirement.</p>
<p>Notes:</p> <p>The RC SDT proposes that original IRO-001-1, R1 should be retired from the standard and addressed in NERC Rules of Procedure, Section 503, item 2.2: “Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p>None – The RC SDT proposes retiring this requirement</p>
<p>Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R1. Each Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p>
<p>Notes:</p> <ul style="list-style-type: none"> • The RC SDT is proposing to remove the blue text in the first sentence. • The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROLs are contained in other standards (e.g., TOP-007, R2). ▪ The Distribution Provider was added as an applicable entity per FERC Order 693. 	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire the requirement</p> <p>RC SDT proposes that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, section 500 and should be retired from the standard. Section 501 states:</p> <p>“The purpose of the compliance registry will be to clearly identify those entities that are responsible for compliance with reliability standards. Organizations listed on the registry will be responsible for knowing the content of and for complying with the NERC reliability standards.”</p> <p>Also, section 507, item 2 addresses written agreements; Joint registration pursuant to written agreement.</p> <p>“Where a JRO and any of its members or related entities agree, in writing, upon a division of compliance responsibility among them for one or more reliability standard(s) applicable to a particular function, and/or for one or more requirements within particular reliability standard(s), both the JRO and such member(s) or related entit(ies) shall register as an organization responsible for that function. The JRO and its member(s) or related entit(ies) must have a written agreement that clearly specifies their respective responsibilities, which shall be submitted as part of the joint registration. Neither NERC nor the regional entity shall be parties to any such agreement between a JRO and its member or related entit(ies), nor shall NERC or the regional entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the joint registration.”</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R4.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1 R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire requirement because it is redundant with: PER-003-0 R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions: R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System. R1.2. Positions directly responsible for complying with NERC standards.</p>
<p>Notes: The RC SDT recommends retiring IRO-001-1 R6 as it is redundant with PER-003-0 R1.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated. <i>[Violation Risk Factor: High]</i></p>	<p>None – requirement should be retired because it is redundant with:</p> <p>IRO-014-1</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: .</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R7 as this is redundant with IRO-014-1 R1.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with its Reliability Coordinator’s directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform a directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R4. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT added the Distribution Provider per FERC Order 693 and added the blue text shown in the requirements above. The RC SDT proposes the replacement of IRO-001-1, R8 with three requirements IRO-001-2, R2, R3, and R4. This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in R1, which states that the Reliability Coordination will act or direct actions to mitigate issues. Stakeholders indicated issues with the ability to measure compliance with the phrase, “without intentional delay” and this was removed.</p> <p>Relating to First Energy’s comment in FERC Order 693, the requirements address both personnel safety and equipment. There is no reference to a chain of command in the requirements. The standard is written such that decision-making authority rests with the Reliability Coordinator. No further revisions to the standard are required.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity. <i>[Violation Risk Factor: High]</i></p>	<p>None – retire the requirement as redundant.</p>
<p>Notes: The RC SDT proposes retiring this requirement. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the RC Area and the Interconnection. Section 6 of the NERC Standard Development Procedure states that NERC develops and maintains Reliability Standards. Equity issues are covered under the Reliability Coordinator Standards of Conduct.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2 (this requirement was incorporated from IRO-005-2)</p> <p>R15. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R4. Each Reliability Coordinator that identifies a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R5. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: This requirement was moved from IRO-005 into IRO-001-2, R4 and R5.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Functions that Must Comply with the Requirements in the Standards

Standard	Functions that Must Comply With the Requirements							
	Reliability Coordinator	Balancing Authority	Distribution Provider	Transmission Operator	Transmission Service Provider	Purchasing Selling Entity	Generator Operator	Load Serving Entity
IRO-001-2	X	X	X	X	X	X	X	X

Effective Dates

In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

Revisions to Defined Terms in the NERC Glossary

The RC SDT proposes modifying the following approved definition:

Adverse Reliability Impact — The impact of an event that results in [Bulk Electric System frequency-related instability](#); ~~unplanned tripping of load or generation~~; ~~or~~ uncontrolled separation, or cascading outages. ~~that affects a widespread area of the Interconnection.~~

Prerequisite Approvals

- None

Conforming Changes to Requirements in Already Approved Standards

- IRO-005, R15 is being incorporated into IRO-001-2.

Revision Summary

- The RC SDT revised the standard and is proposing retiring several requirements (R1, R2, R4, R5, R6, R7 and R10). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERC's Rules of Procedure and to address issues in FERC Order 693.

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p>None – The RC SDT proposes retiring this requirement.</p>
<p>Notes:</p> <p>The RC SDT proposes that original IRO-001-1, R1 should be retired from the standard and addressed in NERC Rules of Procedure, Section 503, item 2.2: “Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p>None – The RC SDT proposes retiring this requirement</p>
<p>Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R1. TheEach Reliability Coordinator shall act or direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p>
<p>Notes:</p> <ul style="list-style-type: none"> • The RC SDT is proposing to remove the blue text in the first sentence. • The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROLs are contained in other standards (e.g., TOP-007, R2). ▪ The Distribution Provider was added as an applicable entity per FERC Order 693. 	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire the requirement</p> <p>RC SDT proposes that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, section 500 and should be retired from the standard. Section 501 states:</p> <p>“The purpose of the compliance registry will be to clearly identify those entities that are responsible for compliance with reliability standards. Organizations listed on the registry will be responsible for knowing the content of and for complying with the NERC reliability standards.”</p> <p>Also, section 507, item 2 addresses written agreements; Joint registration pursuant to written agreement.</p> <p>“Where a JRO and any of its members or related entities agree, in writing, upon a division of compliance responsibility among them for one or more reliability standard(s) applicable to a particular function, and/or for one or more requirements within particular reliability standard(s), both the JRO and such member(s) or related entit(ies) shall register as an organization responsible for that function. The JRO and its member(s) or related entit(ies) must have a written agreement that clearly specifies their respective responsibilities, which shall be submitted as part of the joint registration. Neither NERC nor the regional entity shall be parties to any such agreement between a JRO and its member or related entit(ies), nor shall NERC or the regional entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the joint registration.”</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R4.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire requirement because it is redundant with:</p> <p>PER-003-0</p> <p>R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions:</p> <p>R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System.</p> <p>R1.2. Positions directly responsible for complying with NERC standards.</p>
<p>Notes: The RC SDT recommends retiring IRO-001-1 R6 as it is redundant with PER-003-0 R1.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated. <i>[Violation Risk Factor: High]</i></p>	<p>None – requirement should be retired because it is redundant with:</p> <p>IRO-014-1</p> <p>R1. The Each Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall <u>collectively address the following:</u> address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators.</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R7 as this is redundant with IRO-014-1 R1.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R2. Each Transmission Operators, Balancing AuthoritiesAuthority, Generator Operators, Transmission Service Providers, Load-Serving EntitiesEntity, Distribution Provider, and Purchasing-Selling EntitiesEntity shall act without intentional delay to comply with its Reliability Coordinator's directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R3. TheEach Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or and Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform itsthe Reliability Coordinator upon recognition of the its inability to perform the a directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R4. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT added the Distribution Provider per FERC Order 693 and added the blue text shown in the requirements above. The RC SDT proposes the replacement of IRO-001-1, R8 with three requirements IRO-001-2, R2, R3, and R4. This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in R1, which states that the Reliability Coordination will act or direct actions to mitigate issues. <u>Stakeholders indicated issues with the ability to measure compliance with the phrase, "without intentional delay" and this was removed.</u></p> <p>Relating to First Energy's comment in FERC Order 693, the requirements address both personnel safety and equipment. There is no reference to a chain of command in the requirements. The standard is written such that decision-making authority rests with the Reliability Coordinator. No further revisions to the standard are required.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity. <i>[Violation Risk Factor: High]</i></p>	<p>None – retire the requirement as redundant.</p>
<p>Notes: The RC SDT proposes retiring this requirement. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the RC Area and the Interconnection. Section 6 of the NERC Standard Development Procedure states that NERC develops and maintains Reliability Standards. Equity issues are covered under the Reliability Coordinator Standards of Conduct.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2 (this requirement was incorporated from IRO-005-2)</p> <p>R15. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R5R4. Each Reliability Coordinator who <u>that</u> identifies a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R5. <u>Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</u></p>
<p>Notes: This requirement was moved from IRO-005 into IRO-001-2, R5R4 and R5.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Functions that Must Comply with the Requirements in the Standards

Standard	Functions that Must Comply With the Requirements							
	Reliability Coordinator	Balancing Authority	Distribution Provider	Transmission Operator	Transmission Service Provider	Purchasing Selling Entity	Generator Operator	Load Serving Entity
IRO-001-2	X	X	X	X	X	X	X	X

Effective Dates

~~To be determined.~~ In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

Implementation Plan for IRO-014-2 — Coordination Among Reliability Coordinators

Prerequisite Approvals

- None required

Conforming Changes to Requirements in Already Approved Standards

- IRO-001-2 — Reliability Coordination – Responsibilities and Authorities
- IRO-015-1 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 — Coordination of Real-time Activities between Reliability Coordinators

Revision Summary

- The Reliability Coordination SDT (RC SDT) revised the standard and is proposing retiring two requirements (R3 and R4). New requirements were brought into this standard from IRO-015-1 (R1-R2) and IRO-016-1 (R1 and its sub requirements). Changes were made to eliminate redundancies between standards (existing and proposed), eliminate administrative items, align with NERCs Rules of Procedure and to address issues in FERC Order 693.

Functions that Must Comply with the Requirements in the Standard:

- Reliability Coordinator

Effective Dates:

In those jurisdictions where regulatory approval is required, this standard shall become effective one year after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective one year after Board of Trustees approval.

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-2</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.</p>	<p>IRO-014-2</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p> <p>1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p> <p>1.2. Energy and capacity shortages.</p> <p>1.3. Planned or unplanned outage information.</p> <p>1.4. Control of voltage, including the coordination of reactive resources for voltage control.</p> <p>1.5. Coordination of information exchange to support reliability assessments.</p> <p>1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.</p>
<p>Notes: The RC SDT proposes retiring R7 as it is redundant with IRO-014, R1.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1 These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: [Violation Risk Factor: Lower]</p> <p>R1.1.1 Communications and notifications, including the conditions¹ under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1.2 Energy and capacity shortages. [Violation Risk Factor: Medium]</p> <p>R1.1.3 Planned or unplanned outage information. [Violation Risk Factor: Medium]</p> <p>R1.1.4 Voltage control, including the coordination of reactive resources for voltage control. [Violation Risk Factor: Medium]</p> <p>R1.1.5 Coordination of information exchange to support reliability assessments. [Violation Risk Factor: Lower]</p> <p>R1.1.6 Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. [Violation Risk Factor: Lower]</p>	<p>IRO-14-2</p> <p>R1. Each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</p> <p>1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators</p> <p>1.2 Energy and capacity shortages.</p> <p>1.3 Planned or unplanned outage information.</p> <p>1.4 Control of voltage, including the coordination of reactive resources for voltage control.</p> <p>1.5 Coordination of information exchange to support reliability assessments.</p> <p>1.6 Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.</p>
<p>Notes: Revise R1 as shown and delete the footnote.</p>	

¹ Examples of conditions when one Reliability Coordinator may need to notify another Reliability Coordinator may include (but aren't limited to) sabotage events, Interconnection Reliability Operating Limit violations, voltage reductions, insufficient resources, arming of special protection systems, etc.

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be:</p> <p>R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p>	<p>IRO-014-2</p> <p>R2. Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: <i>[Violation Risk Factor: Lower] [Time Horizon: Operations Planning and Long-term Planning]</i></p> <p>2.1 Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p>
<p>Notes: The RC SDT added a Time Horizon to the requirement and eliminated the VRFs that were applied to the subrequirements.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R3. A Reliability Coordinator's Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan shall include:</p> <p>R3.1. A reference to the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p> <p>R3.2. The agreed-upon actions from the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p>	<p>None – Retire the requirement</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R3 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:</p> <p>R4.1. Include version control number or date.</p> <p>R4.2. Include a distribution list.</p> <p>R4.3. Be reviewed, at least once every three years, and updated if needed</p>	<p>None – retire the requirement.</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R4 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-015-1</p> <p>R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas. <i>[Violation Risk Factor: Medium]</i></p> <p>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R2.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p> <p>R3. The Reliability Coordinator shall provide reliability-related information as requested by other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R3. Each Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. <i>[Violation Risk Factor: Medium]</i></p> <p>R4. Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly, and other communication forums with impacted Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p>
<p>The RC SDT recommends retiring Standard IRO-015 and moving Requirements R1 and R2 to IRO-014-2 and revising as shown.</p> <p>The RC SDT proposes retiring R3 (as shown in the left column) as it is redundant with proposed R5 above. Reliability Coordinators already have several requirements aimed at providing data or information to other Reliability Coordinators in support of Reliability Coordinator responsibilities. For example, Reliability Coordinators provide reliability-related information to other Reliability Coordinators as part of IRO-010-1, R3 – they share information as they try to confirm the existence of operating issues as part of IRO-014-2 R5, etc.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1</p> <p>R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2 If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.1 If time permits, this re-evaluation shall be done before taking corrective actions. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.2 If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.3 If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R5. Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify impacted Reliability Coordinators. <i>[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R6. Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators <i>[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R7. The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan. <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p>
<p>Notes: IRO-014-2 R5 and R6 are revised versions of IRO-016-1, R1 and its subrequirements which were moved to this standard. The RC SDT removed the wording relating to the “most conservative solution” because it can not be measured. We are proposing to use the mitigation plan of the RC who is experiencing the issue in cases where an agreed to mitigation plan can not be developed. Note that stakeholders proposed revisions to these requirements, and the RC SDT subdivided the requirements to add more clarity.</p>	

Implementation Plan for IRO-014-2 — Coordination Among Reliability Coordinators

Prerequisite Approvals

- None required

Conforming Changes to Requirements in Already Approved Standards

- IRO-001-2 — Reliability Coordination – Responsibilities and Authorities
- IRO-015-1 — Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 — Coordination of Real-time Activities between Reliability Coordinators

Revision Summary

- The Reliability Coordination SDT (RC SDT) revised the standard and is proposing retiring two requirements (R3 and R4). New requirements were brought into this standard from IRO-015-1 (R1-R2) and IRO-016-1 (R1 and its sub requirements). Changes were made to eliminate redundancies between standards (existing and proposed), eliminate administrative items, align with NERCs Rules of Procedure and to address issues in FERC Order 693.

Functions that Must Comply with the Requirements in the Standard:

- Reliability Coordinator

Effective Dates

~~To be determined.~~

In those jurisdictions where regulatory approval is required, this standard shall become effective one year after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective one year after Board of Trustees approval.

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-2</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit or Interconnection Reliability Operating Limit violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated.</p>	<p>IRO-014-2</p> <p>R1. The<u>Each</u> Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address as a minimum, the following: <i>[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</i></p> <p>R1.1.1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.</p> <p>R1.2.1.2. Energy and capacity shortages.</p> <p>R1.3.1.3. Planned or unplanned outage information.</p> <p>R1.4.1.4. <u>Control of</u> Vvoltage control, including the coordination of reactive resources for voltage control.</p> <p>R1.5.1.5. Coordination of information exchange to support reliability assessments.</p> <p>R1.6.1.6. Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas.</p>
<p>Notes: The RC_SDT proposes retiring R7 as it is redundant with IRO-014, R1.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R1. The Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1 These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: [Violation Risk Factor: Lower]</p> <p>R1.1.1 Communications and notifications, including the conditions¹ under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1.2 Energy and capacity shortages. [Violation Risk Factor: Medium]</p> <p>R1.1.3 Planned or unplanned outage information. [Violation Risk Factor: Medium]</p> <p>R1.1.4 Voltage control, including the coordination of reactive resources for voltage control. [Violation Risk Factor: Medium]</p> <p>R1.1.5 Coordination of information exchange to support reliability assessments. [Violation Risk Factor: Lower]</p> <p>R1.1.6 Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. [Violation Risk Factor: Lower]</p>	<p>IRO-14-2</p> <p>R1. The Each Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted with one or more other Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators. <u>These Operating Procedures, Processes, or Plans shall collectively address the following:</u> [Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]</p> <p>R1.1 These Operating Procedures, Processes, or Plans shall collectively address, as a minimum, the following: [Violation Risk Factor: Lower]</p> <p>R1.1.1 Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators. [Violation Risk Factor: Medium]</p> <p>R1.1.2 Energy and capacity shortages. [Violation Risk Factor: Medium]</p> <p>R1.1.3 Planned or unplanned outage information. [Violation Risk Factor: Medium]</p> <p>R1.1.4 <u>Control of V</u>voltage control, including the coordination of reactive resources for voltage control. [Violation Risk Factor: Medium]</p> <p>R1.1.5 Coordination of information exchange to support reliability assessments. [Violation Risk Factor: Lower]</p> <p>R1.1.6 Authority to act to prevent and mitigate instances of causing Adverse Reliability Impacts to other Reliability Coordinator Areas. [Violation Risk Factor: Lower]</p>
<p>Notes: Revise R1 as shown and delete the footnote.</p>	

¹ Examples of conditions when one Reliability Coordinator may need to notify another Reliability Coordinator may include (but aren't limited to) sabotage events, Interconnection Reliability Operating Limit violations, voltage reductions, insufficient resources, arming of special protection systems, etc.

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be:</p> <p>R2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).</p> <p>R2.2. Distributed to all Reliability Coordinators that are required to take the indicated action(s).</p>	<p>IRO-014-2</p> <p>R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: [Violation Risk Factor: Lower] [Time Horizon: Real-time Operations Planning and Operations Long-term Planning]</p> <p>R2.1 Agreed to by all the Reliability Coordinators required to take the indicated action(s). [Violation Risk Factor: Lower]</p> <p>R2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s). [Violation Risk Factor: Lower]</p>
<p>Notes: The RC SDT added a Time Horizon to the requirement and eliminated the VRFs that were applied to the subrequirements.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R3. A Reliability Coordinator's Operating Procedures, Processes, or Plans developed to support a Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan shall include:</p> <p>R3.1. A reference to the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p> <p>R3.2. The agreed-upon actions from the associated Reliability Coordinator-to-Reliability Coordinator Operating Procedure, Process, or Plan.</p>	<p>None – Retire the requirement</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R3 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-014-1</p> <p>R4. Each of the Operating Procedures, Processes, and Plans addressed in Reliability Standard IRO-014 Requirement 1 and Requirement 3 shall:</p> <p>R4.1. Include version control number or date.</p> <p>R4.2. Include a distribution list.</p> <p>R4.3. Be reviewed, at least once every three years, and updated if needed</p>	<p>None – retire the requirement.</p>
<p>Notes: This requirement is administrative in nature describing the contents of the plans and should not be in a standard. The RC SDT proposes retiring R4 and its subrequirements and recommends converting these good utility practices into a guideline document for use in developing the operating procedures, processes or plans.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-015-1</p> <p>R1. The Reliability Coordinator shall follow its Operating Procedures, Processes, or Plans for making notifications and exchanging reliability-related information with other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 The Reliability Coordinator shall make notifications to other Reliability Coordinators of conditions in its Reliability Coordinator Area that may impact other Reliability Coordinator Areas. <i>[Violation Risk Factor: Medium]</i></p> <p>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R2.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p> <p>R3. The Reliability Coordinator shall provide reliability-related information as requested by other Reliability Coordinators. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R5R3. The Each Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. <i>[Violation Risk Factor: Medium]</i></p> <p>R6R4. The Each Reliability Coordinator shall participate in agreed upon conference calls, <u>at least weekly</u>, and other communication forums with impacted adjacent Reliability Coordinators. <i>[Violation Risk Factor: Lower]</i></p> <p>R6.1 The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly. <i>[Violation Risk Factor: Lower]</i></p>
<p>The RC SDT recommends retiring Standard IRO-015 and moving Requirements R1 and R2 to IRO-014-2 and revising as shown.</p> <p>The RC SDT proposes retiring R3 (as shown in the left column) as it is redundant with proposed R5 above. Reliability Coordinators already have several requirements aimed at providing data or information to other Reliability Coordinators in support of Reliability Coordinator responsibilities. For example, Reliability Coordinators provide reliability-related information to other Reliability Coordinators as part of IRO-010-1, R3 – they share information as they try to confirm the existence of operating issues as part of IRO-014-2 R5, etc.</p>	

**Implementation Plan for IRO-014-2
Coordination Among Reliability Coordinators**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-016-1</p> <p>R1. The Reliability Coordinator that identifies a potential, expected, or actual problem that requires the actions of one or more other Reliability Coordinators shall contact the other Reliability Coordinator(s) to confirm that there is a problem and then discuss options and decide upon a solution to prevent or resolve the identified problem. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.1 If the involved Reliability Coordinators agree on the problem and the actions to take to prevent or mitigate the system condition, each involved Reliability Coordinator shall implement the agreed-upon solution, and notify the involved Reliability Coordinators of the action(s) taken. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2 If the involved Reliability Coordinators cannot agree on the problem(s) each Reliability Coordinator shall re-evaluate the causes of the disagreement (bad data, status, study results, tools, etc.). <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.1 If time permits, this re-evaluation shall be done before taking corrective actions. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.2.2 If time does not permit, then each Reliability Coordinator shall operate as though the problem(s) exist(s) until the conflicting system status is resolved. <i>[Violation Risk Factor: Medium]</i></p> <p>R1.3 If the involved Reliability Coordinators cannot agree on the solution, the more conservative solution shall be implemented. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-014-2</p> <p>R5. When an expected or actual reliability issue is detected, the <u>Each</u> Reliability Coordinator, <u>upon identification of an Adverse Reliability Impact,</u> shall confirm the existence of the issue with the <u>notify</u> impacted other Reliability Coordinators that are involved. In the event that the issue cannot be confirmed, each RC shall operate as though the problem exists. <i>[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R6. When an expected or actual reliability issue exists and the <u>Each</u> impacted affected Reliability Coordinators <u>shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators.</u> can not agree on a mitigation plan, all impacted affected Reliability Coordinators shall implement the mitigation plan developed by the Reliability Coordinator who has the reliability issue. <i>[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R7. <u>The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists.</u> <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>R8. <u>Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan.</u> <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p>

Implementation Plan for IRO-014-2 Coordination Among Reliability Coordinators

Notes: IRO-014-2 R5 and R6 are revised versions of IRO-016-1, R1 and its subrequirements which were moved to this standard. The RC SDT removed the wording relating to the “most conservative solution” because it can not be measured. We are proposing to use the mitigation plan of the RC who is experiencing the issue in cases where an agreed to mitigation plan can not be developed. [Note that stakeholders proposed revisions to these requirements, and the RC SDT subdivided the requirements to add more clarity.](#)

Standards Announcement

Comment Period Open

July 10–August 9, 2009

Now available at:

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

Project Name

Project 2006-06 — Reliability Coordination

Due Date and Submittal Information

The comment period is open **until 8 p.m. EDT on August 9, 2009**. Please use this [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, please contact Lauren Koller at Lauren.Koller@nerc.net. An off-line, unofficial copy of the comment form is posted on the project page: http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

Content for Comment Period

The Reliability Coordination Standards Drafting Team is seeking comments on its second drafts of the following proposed standards:

- COM-001-2 — Communications
- COM-002-3 — Communications and Coordination
- IRO-001-2 — Reliability Coordination – Responsibilities and Authorities
- IRO-014-2 — Coordination Among Reliability Coordinators

The drafting team revised the proposed standards based on stakeholder feedback and the results of the IROL Standards Drafting Team work.

Other Materials Posted

- Revised implementation plans
- The drafting team's consideration of industry comments received during the first comment period

Project Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable, 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System, and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team, and two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. Detailed information on these changes can be found in the comment form for this posting.

Applicability of Standards in Project

Reliability Coordinator
Balancing Authority
Transmission Service Provider
Transmission Operator
Distribution Provider
Generator Operator
Purchasing Selling Entity
Load Serving Entity

Standards Development Process

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate

Comments: The inclusion of load serving entities and distribution providers does not address any present reliability gap. R4 is extremely vague, and is not likely to be interpreted consistently. What form of evidence will be acceptable? Photos of telephones?
No
Comments: M4 is of little help regarding R4. How does an entity perform this demonstration, especially in the case of an off-site audit? If left to the regions, there will be no consistency.
No
The severity levels have little or no relationship to reliability. Failure to provide a evidence of an agreement per R3, for example, has no impact on reliability by itself; yet it carries the maximum VSL. In reality, the impact would only be severe if the use of an alternate language resulted in a miscommunication.
No
The inclusion of load serving entities and distribution providers does not address any present BES reliability gap.
No
M2 goes beyond R2 in requiring recordings. This will be cost prohibitive for small entities that have little impact on the BES. Telephone recording equipment will be needed on company phones. and some way to handle the recording of

directives and responses that occur after hours on home or cell phones must be handled. Drafters seem to have missed the fact that not all the applicable entities have 24/7 dispatch centers.

Individual

Virginia Cook

JEA

R2 I would suggest that R2 be clarified so that it is understood that the 60 minutes starts at the beginning of the outage (or the end of the 30 minute period, if that was instead the intent) so that there can be no confusion about when the clock starts for notification periods. Otherwise, the wording of these standards is clearer than the current version. R4 I am concerned that with the word "capabilities" that the DP/GO's will be expected by the auditors to demonstrate that its "capability" was working every single second of every day since their last audit, especially since you have not included a data retention period(especially since this is rated a "high" VRF).

Yes

M1 - very nice, probably we will also be held responsible for completing the mitigation plans, so perhaps you should go ahead and add that so no one gets caught without sufficient evidence in that regard M2 - fine M3 - this measure would indicate that operators have the authority to agree among themselves to speak other languages, rather than a more formal agreement between entities, which is how I read the language of the requirement. If that is not what is meant, then I would suggest the examples include Memorandums of Agreement or Understanding, Contracts or other more formal mechanisms. M4 - fine

Yes

No

R1: just to avoid possible auditor misunderstandings the SDT might consider replacing the words "or repeat the original statement" to "reissue the directive" so that the RC does not get into trouble if the second statement is not verbatim of the first. This also helps clarify that another statement is required from the recipient along with a final acknowledgement from the RC that the intent is correct.

No

Not all entities have recorded lines. The standard does not directly require the to record their lines, but the measure implies it. It seems that a written log should be sufficient. Since both sides of the conversation gets audited, the auditors will have ample opportunity to check up on both sides.

The proposed standard does not require the RC, TO, or BA to declare an emergency to the GO when issuing a directive. There has been confusion at times in the past as to whether the entity is issuing a directive based on economics or due to an emergency. The standard should be amended to require the RC/TO/BA to state the directive is due to a declared emergency. The GO is required to repeat back the intent of an emergency directive, but is not required to repeat back the intent of economic directive. This can lead to a finding of a severe VSL non-compliance on the part of the GO due to a failure of the RC/TO/BA to clearly state the nature of the directive.
Yes
Yes
Yes
No
Similar objection to COM-002-3: There should be a requirement to the RC to declare the nature of the directive, emergency or economic.
Yes
No
The VSL's have a "Severe" VSL attached to a GO who fails to inform the RC when the Go becomes aware it is are unable to fully comply with a directive. However, the RC failing to inform two TO's - who potentially could have many GOs supplying power to their systems - of an emergency is only a "Moderate" VSL.

Russell A. Noble
Cowlitz County PUD
No
The RC STD has done a commendable effort. However, it is questionable how expanding the applicability to include LSEs, DPs, & PSEs that are non-scheduling/tagging entities will increase reliability of the BES. In fact, we believe that increasing the applicability could do just the opposite. Many of these entities that are only registered as a LSE, DP, and/or PSE do not have a 24/7 desk/dispatch facility to receive RC/BA/TOP reliability directives, and are too small (10s of MW) to effectively assist during a reliability crisis. In addition, the Regional Entities (WECC in this case) are overwhelmed as it is, asking them to take on even more audit responsibilities is unrealistic, and not worth the effort. In addition, for the small Registered Entity, what would constitute compliance with R3 & R4 if no TOP/BA real-time directives were received? Everyone employed speaks English and there is at least one phone on the premises? Will the small DP and/or LSE be required to monitor its communication system 24/7 with competent personnel for an unlikely TOP/BA directive?
No
To demonstrate compliance the small Registered Entities will be in the position of proving a negative: i.e., there is no real-time BES operational communication from or to any other entity. Currently, for the smaller entities, communication with the Transmission Operator or Balancing Authority is strictly for operational safety and local reliability of service, not operational reliability for the BES as defined by NERC. It is not clear how the small entity will show compliance. If R4 requires the small load-only DP and/or LSE to have 24/7 monitoring of its phone, and contracted answering service is unable to contact anyone, will this be a violation?
No
With the vague verbiage of R4 coupled with the High and Severe VSL, it is important to clarify R4 with the small DP in mind, and possibly include Lower and Moderate VSLs for smaller load-only DP violations.
No
It would be advantageous to exempt certain smaller Registered Entities (LSE, DP, & PSE) that are non-scheduling/tagging entities. In addition to not having a scheduling/tagging desk, many of these entities do not have a 24/7 desk to receive RC/BA/TOP reliability directives/calls. and are too small (10s of MW) to even be substantially

significant in a reliability crisis. Instead of making this Standard applicable to all DPs, LSEs, and PSEs, we suggest that the RC, BAs, and TOPs to yearly publish those LSEs, DPs, and PSEs responsible for responding to emergency reliability directives. Also, it would be advisable for the RC, BA, and TOP giving a reliability directive to clearly preface the instruction with "The following is an emergency reliability directive" to differentiate from normal operations communications. Many smaller entities do not have the resources to install reliable voice recording equipment, but having access to such recordings would be beneficial towards compliance documentation; thus, it would be helpful to require the directive issuing RC, BA, or TOP to provide a digital copy of the voice recording, or transcript if available on request to the recipient of the directive. Short of a recording or transcript of the recording, it will be difficult to determine how a small entity without recorded line would show compliance other than writing down the directive as it is given and reading it back to the issuer. If the directive is lengthy, this will slow down the process and probably defeat the purpose and value of quick action. Further, there is no guarantee that the receiver will accurately retain a complicated directive if not immediately documented in some way to allow review. Last of all, what is meant by the word "intent?" Must the recipient understand and demonstrate the "why" the directive is given and the intended "outcome," or merely paraphrase the directive to demonstrate understanding? If the recipient repeats word for word the directive back to the issuer without any other indication that the directive is understood, is this a violation??

No

Only in making the Measures agree with the suggested changes to the requirements above.

No

Only in making the Measures agree with the suggested changes to the requirements above.

Yes

No

To reduce the compliance burden on smaller entities that would never receive a Reliability Coordinator directive and reduce needless Regional Entity auditing, it would be most helpful to require the RC to publish its list of entities responsible for receiving reliability directives. Also, any Registered Entity should be able to request copies of digital audio recordings or transcripts of the audio recordings if available from the RC.

voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement shall be provided to explain the use of the alternate language. (R3.) M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?
No
see M3 comment for question 2
No
Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer R2 – leave as is A new R3 – If not repeated, then issuer shall request the receiving Entity to repeat the communication directive A new R4 – The issuer will acknowledge the correctness of the repetition of the communications directive
No
Addressed the new proposed Requirements above in Question 4.
No
Address the new proposed Requirements.
No
Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
No
Add “an issued” to the wording as shown following: The Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and/or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the its Reliability Coordinator upon recognition of itshe inability to perform thean issued directive.
Yes
No
(i) R4: Since failing to issue an alert to 3 entities already attracts a “High” VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a “Severe” VSL. We suggest to change the High VSL to: “...failed to issue an alert to three, but not all, impacted...” and the Severe VSL to: “...failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a “Severe” violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a “High” violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a “Severe” violation. (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.
No
The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.
No
The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
No
(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT’s response to our comments under Q11.
NPCC appreciates the work of the Drafting Team. No additional comments.

R4 should say "Generator Operator" rather than "Generation Operator"
Yes
M4 should say "Generator Operator" rather than "Generation Operator"
Yes
Yes
This is a very good improvement. Some Regional Entities were interpreting every communication from a control room as a 'directive' and stating that 'directives' were equal to any 'normal instruction' that related to operations of the power system. Making it clear that the directives are associated with emergency conditions is a big improvement. The drafting team may wish to consider additional clarification, such as, "The entity that issues a verbal directive shall make it known during the communication that, 'This is a directive...' ". All parties to the communication would be clear that the real-time situation was an emergency condition, and that the requirements for repeating the intent were in effect.

IRO-001-1 Requirement 3 states that, "The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing- Selling Entities within its Reliability Coordinator Area to preserve the integrity and and reliability of the Bulk Electric System." This does not give one RC the authority to direct another RC. Requirement 7 and 8 would allow one RC to give a directive to another RC if they disagree. This would allow an RC with bad information to require another RC to carry out a mitigation plan that could degrade system reliability. For example, RC1 identifies a possible SOL violation in RC2's reliability area due to RC1's generation pattern. RC1 and RC2 can't agree that there is a problem. In order to mitigate the SOL a mitigation plan is developed by RC1 that requires RC2 to redispatch generation and reconfigure transmission in RC2's area so that the generation and transmission in RC1's area won't have to be redispatched or reconfigured. Suggested rewording of R7 and R8 R7. When Reliability Coordinators can not agree that a problem exists a mitigation plan will be developed by each Reliability Coordinator that will restore system reliability in their respective reliability areas. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations] R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed to relieve the identified Adverse Reliability Impact in their reliability area when the impacted Reliability Coordinators can not agree that a problem exists. [Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]
Yes
No
Reliability problems identified in other reliability areas are based on modeling information obtained from another reliability region. The fact that one RC will not agree that the model of an adjacent RC's reliability area may be more accurate than their model of the adjacent reliability area is no reason to impose a severe violation on the RC with the more accurate model of their own reliability region. Example: RC1 identifies a contingency overload of a transformer bank in an adjacent reliability area. The transformer bank was replaced the week before with a larger bank. When RC1 contacts RC2, RC2 explains that the bank overload is not valid because of the replacement. RC2 does not identify a problem due to the fact that the model RC2 is using has been updated with the new transformer bank. RC1 will not agree and requires RC2 to open a tie line with another reliability area to relieve the contingency overload. If RC2 does not follow the instructions of RC1, making the interconnection weaker to relieve a problem that does not exists, RC2 is out of compliance and a severe violation will be imposed.

Issue #1: Measure M3 The measure states that entities “shall have and provide” evidence that “personnel used English as the language for all” communications. This infers that all communications must be documented in some form or fashion and that any outage of the normal communication system must be met with alternative processes which will meet this measure, even if the alternative is the preparation of handwritten notes of each person’s conversations, noting that the communications occurred in English. Unfortunately, there have been times where our Dictaphone stopped recording phone calls, and nobody knew it for days! This measure sets us up for a violation! It’s just a matter of time.
Yes
Yes
Yes
No
Comments: Issue #1: Violation Severity Level The Moderate and Severe VSLs for Requirement R1 can lead to confusion. For instance, the Moderate VSL states that the responsible entity ‘did not acknowledge the recipient was correct in the repeated directive OR (emphasis theirs) failed to repeat the intent of the original statement to resolve any misunderstandings.’ What is it saying here? Is it dinging the responsible entity for making no response at all to the recipient after they repeated the intent of the message? Or is that what the Severe VSL is dinging for when it includes an AND rather than an OR in the statement? I can’t tell what the drafting team was intending with their statements, but one of the statements seem to infer that the responsible entity can actually be dinged for not doing both, acknowledging the recipient as being correct in their response and at the very same time repeating the intent of the original statement to resolve any misunderstandings because the recipient was incorrect in their response. This then argues that the recipient can be both correct and incorrect at the same time. I didn’t think that was possible...similar to binary code...either you get a one or a zero, but not both and never neither! I would argue that the drafting team should rewrite their VSLs to succinctly state that the responsible entity failed to respond after the recipient repeated the intent of the message. With that in mind, either the Moderate or the Severe VSL will be rewritten in an understandable way and the other VSL will disappear in the realms of impossible things.
Yes
Issue #2: Data Retention Why would the Distribution Provider and Generator Operator be required to store historical data (three years in the case of Requirement R1 and Measure M1; twelve months in the case of Requirement R2 and Measure M2) to show that these requirements and measures have been successfully implemented when these two entities (Distribution Provider and Generator Operator) aren’t even included either in Requirements R1 and R2 or in Measure M1 and M2? It would appear that they should only have to provide historical data for three months as required by the data retention time for Requirement 3 and Measure 3. Issue #1: Data Retention The first bullet in this section states that all entities are responsible for retaining documents associated with all Requirements and Measures associated with this standard. In reality, Requirements R1, R4, R5 and R6 and the corresponding Measures are the responsibility of the Reliability Coordinator. Requirements R2 and R3 and their corresponding Measures are implemented by the Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity and the Load Serving Entity. The Data Retention section should be rewritten to reflect this so that entities are not required to maintain documents that they aren’t suppose to even possess in some cases.

Brent ingebriktson
E.ON U.S.

No
E.ON U.S. suggests deleting "interpersonal" from the term "interpersonal communications capabilities". The need for and meaning of the term "interpersonal" isn't clear. Does it infer communications must be to/from a specific individual rather than to/from another reliability entity? Verbal vs electronic communications? All non-data communications? E.ON U.S. believes that the term "interpersonal" must be clarified if it is to remain in the standard. In the proposed R1 – how extensive must the quarterly testing be – establish contact or verify all functions? Does the term "alternative" include the "normal" communication medium or only the "backup" mediums? Does the alternative imply ALL possible communication alternatives? E.ON U.S. suggests replacing the term "alternative" with "planned backup" or similar. Quarterly testing needs to be limited to only established/planned backup communication methods not any potential "alternative" communication method.
No
E.ON U.S. believes that the M1 must be clarified to address whether the testing entity is responsible to develop and implement a mitigation plan when a test is unsuccessful due to an issue at the other end (i.e. non-testing entity).
No
E.ON U.S. suggests that R1 be modified to include the language that when an RC, BA and/or TOP issue a directive it must state: "This is a directive" and the entity receiving the directive must state: "I understand this is a directive". E.ON U.S. also requests that language be added to the requirement that states that this communication protocol is only for reliability related directives and not for other operational directives.
No
E.ON U.S. suggests that the VSL for R4 should be binary with the Severe VSL for failing to notify all entities as per R4. Partially meeting R4 is not consistent with the language in R4. E.ON U.S. also suggests that the VSL for R5 should be binary with the Severe VSL for failing to notify all entities as per R5. Partially meeting R5 is not consistent with the language in R5 but the reliability impact of partially meeting R5 is low.
COM-001-2 R1 and R2 and the associated M1 and M2 are only applicable to the RC, TOP and BA but the "Data Retention" for R1/R2 and M1/M2 require the DP and GOP to retain data for the Requirements and Measures. E.ON U.S. suggests that the requirement for data retention of the DP and GOP be eliminated from the standard.
Individual
Kasia Mihalchuk
Manitoba Hydro
No
do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary as it would delay repairing the interpersonal communication capability. R2 assumed that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes." R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.
No
Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
No
Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. In addition, since R2 has a time component in the requirement four VSLs could be written based on the timeliness of the notification.
Yes
For the most part agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. The SDT could further support

resolution to this directive issue by developing a definition for directive. In requirement 1, I would use another word than "require". Consider using "request". An RC, BA, and TOP can't force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.

Yes

For the most part agree with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.

No

If the suggestion regarding "require" in Q4 is accepted, conforming changes to the VSL need to made. Additionally, believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.

Yes

No

R5 does not make sense as it doesn't create an adverse reliability impact should the RC fail to notify impacted entities.

No

Measure for R5 would need to be struck should R5 be struck as per question 8.

No

Believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause "but not all". It is not necessary.

No

Requirements R2 and R8 need additional work. R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable. Further, the drafting team needs to clarify that R2 also applies to the mitigation plan in R7. Because R7 requires the RC experiencing the Adverse Reliability Impact to develop the mitigation plan, the mitigation plan may not be agreed to by the impacted RC. The impacted RC may have a perfectly valid reliability, statutory, legal, or regulatory reason for not agreeing to the mitigation plan. R8 still obligates the RC to implement the mitigation plan developed in R7 though it may be contrary to reliability. R8 needs to allow the RC to refuse to implement the mitigation plan if the impacted RC has a reliability, statutory, legal or regulatory reason. Further the drafting team should consider if the impacted RC could refuse because the RC experiencing the Adverse Reliability Impact has not implemented comparable measures in their own area. R8 as written could allow an RC to simply pass cost on to the neighboring RC in the name of reliability. For example, the RC may not want to order a unit to be committed to avoid certain startup costs but they ask the neighboring RC to start up a unit in their footprint.

No

Conforming changes to the Measurements will be required for accepted changes from question 11.

No

Believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any.

Georgia Transmission Corporation

No

Per the NERC Reliability Standards Development Procedure, under the definition of a Reliability Standard; "The obligations or requirements must be material to reliability and measurable." With regards to R3. - It goes without saying that inter-entity BES reliability communications must be in a common language between the entities for understanding operation instructions. From an audit/measurability standpoint, the evidence to the requirement would not converge to a finite amount of material. The amount of evidence required to demonstrate compliance of this requirement would be a huge administrative burden. It seems this concept (for use of the English language) could be captured under the "Entity Tasks and Interrelationships" section of the NERC Reliability Functional Model which defines the set of functions that must be performed to ensure the reliability of the bulk electric system. It also explains the relationship between and among the entities responsible for performing the tasks within each function. Additionally, this concept (for use of the English language) could further be explained under each applicable registration type (BA, GOP, TSP, LSE, PSE, and DP) in the NERC Reliability Functional Model. The Second option for R3 is to remove the Requirement from the continent wide Standards and have the effected entities/regions create a "Regional Standard" where entities involved in inter-entity BES reliability communications have a history of language barrier concerns. As a separate issue to R3, it also seems conflicting that a written requirement would provide the option of "Unless agreed to otherwise". This option described in the language of the requirement implies that it is not a requirement but an option which further supports the suggestions above.

No

See comments to Question 1 in regards to measurability.

The IMEA supports comments submitted by the MISO Standards Collaboration Group indicating R3 is not necessary. Similarly, IMEA questions the necessity of R4. Therefore, we question the need to expand the applicability of COM-001 to DP, LSE, and PSE since R3 and R4 are the only two Requirements applicable to those functions.

No

Conforming changes are required to the Measures based on the suggested modifications to the requirements in Question 1.

No

Conforming changes are required to the VSLs based on the suggested modifications to the requirements in Question 1.

No

IMEA questions the necessity of expanding the applicability of COM-002 as proposed in R2, particularly to the DP, LSE, and PSE functions. IMEA recommends accomplishing the intent of COM-002-3 R2 by simply referring to COM-002-3 R1 in IRO-001-2 R2 which requires those entities to comply with the RC directive. Thus it would be understood that the functional entity had repeated the directive in order to comply with it; thereby avoiding the necessity of expanding applicability to another reliability standard.

Conforming changes are required to the Measures based on the suggested modifications to the requirements in

interpersonal communications capabilities that lasts 30 minutes or longer."
Yes
However, it is not clear whether to show compliance the voice recordings and associated transcripts are of the test done or of the conversations across those facilities.
Yes
Yes
1. We agree with the clarification in R1 that a directive per COM-002-3 is a "verbal directive associated with real-time operational emergency conditions". We understand this to be a "Reliability" directive used during times of emergency or in situations where reliability may be an issue. Also, with this clarification, it confirms that the term "directive", as used in this standard, does not include "Operational" directives issued by System Operators during normal system conditions to change the status of an element such as a circuit breaker. 2. The industry does not appear to have a clear, consistent definition of what constitutes a directive. We suggest the standard require the person issuing a directive to use the phrase "I am directing you to ...", "I am ordering you to ..." or something similar to invoke the three part communication requirement. 3. Since this standard deals with communications and coordination during emergency conditions, it may be helpful to change the title of the standard to "Communications and Coordination – Emergency Conditions". 4. The phrase "the intent of the directive" could be difficult to comply with and measure. The words "the intent of" should be removed from Requirements R1 and R2.
Yes
Yes
Yes
If the term "cascading" used in the definition is referring to the NERC-defined term, it should be capitalized.
No
Regarding the retirement of IRO-001-1 R7 – We are not convinced that this requirement is redundant with IRO-014-1 R1. The existing requirement requires the RC to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated". IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. For IRO-001-1 R7 to be properly retired, the "mitigation of SOL and IROL violations" should be explicitly stated in IRO-014-2 R1 as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.
Yes
Yes
No
See our comments from Questions 8. If IRO-001 R7 is retired and deemed covered by IRO-014 R1, then IRO-014 R1 should include the "mitigation of SOL and IROL violations" as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.

Hydro-Québec TransÉnergie (HQT)
No
Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication. Having alternative interpersonal communications should be specified as a requirement since there is actually no requirement to have that alternative way of communication in the first place. Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and is in fact already, in English. Accordingly, R3 should be modify as the proposition below: R3. Unless determined by law or otherwise agreed to, ...
No
Comments: See our comment for R3 in Q1. Accordingly, M3 should be modify to read as the proposition below: M3. ... that will be used to determine that personnel used English «or another language determine otherwise» as the language

for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, upon request, evidence shall be provided to explain the use of the alternate language. (R3.) M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?
No
see M3 comment for question 2
No
Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer R2 – leave as is A new R3 – If not repeated, then issuer shall request the receiving Entity to repeat the communication directive A new R4 – The issuer will acknowledge the correctness of the repetition of the communications directive
No
Address the new proposed Requirements above in Question 4.
No
address the new proposed Requirements.
No
Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
No
Add “an issued” to the wording as shown following: Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform «an issued» directive.
Yes
No
(i) R4: Since failing to issue an alert to 3 entities already attracts a “High” VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a “Severe” VSL. We suggest to change the High VSL to: “...failed to issue an alert to three, but not all, impacted...” and the Severe VSL to: “...failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a “Severe” violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a “High” violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a “Severe” violation. (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.
No
The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.
No
The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
No
(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT’s response to our comments under Q11.
Individual

Indiana Municipal Power Agency
No
The requirements do not consider a pre-recorded communication that might be sent out from the Transmission Operator to Generator Operators or any other entity. If this communication is a directive associated with a real-time operational emergency condition (depending on the judgement used by an entity or auditor), it does not make sense to repeat back a pre-recorded message on the phone. It might be good to clearly state in the standard that pre-recorded messages do not need to be repeated back.

Individual
Greg Rowland
Duke Energy
No
R1 requires an entity to “develop a mitigation plan” if a test of alternative communications capabilities is unsuccessful. We believe that this phrase should be changed to “take action”, reflecting that an entity’s response to an unsuccessful test may be to simply call or email a repair order. The phrase “develop a mitigation plan” implies that an entity must establish a backup to the alternative communications capabilities rather than just restore the alternative communications capabilities.
No
Replace the phrase “develop a mitigation plan” with the phrase “take action” per our comment on Requirement R1 above. Also, the DP and GOP should be deleted from the Data Retention section requirements for R1/M1 and R2/M2. Need to add a Data Retention requirement for R4/M4 for the DP and GOP.
No
Replace the phrase “develop a mitigation plan” with the phrase “take action to restore the capabilities” per our comment on Requirement R1 above.
No
We agree with adding the clarification that these requirements refer to “emergency” communications, but we think the word “Emergency” should be capitalized to further clarify that it is a defined term in the NERC Glossary. Also, the phrase “require the recipient of the verbal directive to repeat the intent of the directive back” should be changed to “have the recipient of the verbal directive repeat the intent of the directive back”. This avoids making the issuer of the directive make a statement requiring a repeat back unless the recipient actually fails to repeat back as normally expected.
No
Change “emergency” to “Emergency” per comment on R1 above. Also change the phrase “required the recipient of the verbal directive to repeat” to “had the recipient of the verbal directive repeat” per our comment on R1 above.
No
Change “emergency” to “Emergency” in the VSLs per our comment on R1 above. Also, we don’t see a tangible difference between the Moderate and Severe VSLs, and the High VSL should really be the Severe VSL. We suggest having just a High and a Severe VSL as follows: • High VSL: “The responsible entity issued a verbal directive associated with real-time operating Emergency conditions and had the recipient repeat back the intent of the directive, but did not either acknowledge the recipient was correct in the repeated directive or failed to repeat the intent of the original statement to resolve any misunderstandings.” • Severe VSL: “The responsible entity issued a verbal directive associated with real-time operating Emergency conditions, but did not have the recipient repeat back the intent of the directive.”
Yes
No
• R1 introduces the concept of “impacted Reliability Coordinators” which is unclear. Revise R1 as follows: R1. For conditions or activities that may impact other Reliability Coordinator Areas, each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for notification, exchange of information or coordination of actions with

those impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: • R2 Time Horizon should not include Long-term Planning. • R3 is unclear. Revise R3 as follows: R3. For conditions or activities that may impact other Reliability Coordinator Areas, each Reliability Coordinator shall make notifications and exchange reliability-related information with those impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans, or other available means to accomplish the notifications and exchange of reliability-related information. • R4 could be interpreted to require a weekly conference call even if there is no need for a call. Revise R4 as follows: R4. When there are conditions or activities that may impact other Reliability Coordinator areas, each Reliability coordinator shall participate in agreed upon conference calls, at least weekly, and other communication forums with those impacted Reliability Coordinators. • R5 – Insert the word “all” before impacted Reliability Coordinators for clarity. • R6, R7 and R8 are interrelated and unclear. Combine these three requirements into one clear requirement as follows: R6. When the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, the Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan and each impacted Reliability Coordinator shall implement the plan.

No

Need to revise the Measures to coincide with the recommended changes to the requirements in #11 above. Also under Data Retention, 12 months of evidence is needed for R3, R4 and M3, M4. However 3 years plus the current year is required for R5 through R8 and M5 through M8. We see no reason the data requirements to be different and believe 12 months is the proper amount of data retention.

No

Need to revise the VSLs to coincide with recommended changes to the requirements in #11 above.

No

COM-002 R2 specifies the Generator Operator that receives a directive from the Transmission Operator, Reliability Coordinator or Balancing Authority must repeat the intent of the directive back to the Transmission Operator. COM-002 M2 specifies that evidence must be retained in the form of either voice recordings or transcripts by the generator operator. Since the Transmission Operator, Reliability Coordinator and Balancing Authority already have voice recording capability (centrally located), it is not necessary for the Generator to also install voice recording capability at each generating station. We suggest the wording of COM-002 be changed such that only the Transmission Operator, Reliability Coordinator and Balancing Authority be required to keep voice recordings or transcripts.

No

(1) We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. If repairing the system would be a lengthy process, then a mitigation plan may be developed to document that the entity is in process to fix the system. There is no associated requirement to have an alternate interpersonal communication capability along with R1 to test it. Thus, if a responsible entity did not have an alternate interpersonal communication capability. R1. in essence. does not apply. We suggest adding a requirement to have an alternate

interpersonal communication capability to address this gap. Alternatively, the requirement to have an alternate interpersonal communication capability along with requirements to test and fix it could be stipulated in the Organization Certification Requirements. (2) In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes." (3) R3 is not necessary. This requirement results in the waste of compliance resources managing and auditing documentation associated with it with no measurable improvement to reliability.

No

Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.

No

(1) Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. (2) FERC expressed its desire in the June 2008 order on VSLs to have as many VSLs as possible. We suggest since R2 also has a time component in the requirement four VSLs could be written based on the timeliness of the notification as well as the number of impacted entities that were not notified. The VSLs should reflect both components.

Yes

(1) We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as Reliability Directives. This makes it clear that only Reliability Directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this Reliability Directive issue by developing a definition for Reliability Directive. We propose the following definition: Reliability Directive – A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact. Please note that AESO already has this term defined. The above suggested definition may be different from the AESO's definition. (2) In requirement 1, we do believe that another word than "require" should be used. Consider using "request". An RC, BA, and TOP can't force the recipient of the Reliability Directive to repeat it back. They can ask or request it be repeated back though.

Yes

We largely agree with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.

No

If the suggestion regarding "require" in Q4 is accepted, conforming changes to the VSL need to made. Additionally, we believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the Reliability Directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the Reliability Directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal Reliability Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Reliability Directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal Reliability Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Reliability Directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.

Yes

The drafting team should consider that NERC is moving away from using the term "cascading outages". FERC has directed NERC to rescind this definition, and use the defined term "cascading" instead.

Yes

No

(1) R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, placing the burden on the same RC to obtain the agreement of impacted RCs may not be appropriate since the RC experiencing the Adverse Reliability Impact may not be able to force impacted RC to concur. We suggest the SDT to consider: a. Remove the bullet to require agreement from the impacted RC; b. Add a new requirement that the impacted RC shall acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given. (2) We realize that R7 implies that the RC experiencing the Adverse Reliability Impact has come up with an alternative plan when its initial plan was not agreed to, but the alternative may still be disagreed by the impacted RC. Simply implementing the alternative plan, as stipulated in R8, could expose the

impacted RC to operate in an unreliable or unsafe domain. We therefore request the SDT to assess if any requirements need to be introduced to resolve this difference with due regard to reliability concerns in both RC areas when agreement cannot be reached even on the alternative plan.

No

Conforming changes to the Measurements will be required if changes as suggested in Question 11 are introduced.

No

(1) In the Commission's June 2008 order on VSLs, they expressed their preference for having as many VSLs as possible. We believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. We also believe this would be consistent with the Commission's guideline 4 because the requirement is written in the plural, that is conference calls, so all conference calls must be considered in aggregate. Thus, failure to participate in more than one conference call does not represent distinct violations but a single violation. (2) Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any. Note: CAISO abstains from these comments.

AESO abstains from commenting on VSLs. VSLs for Alberta will be developed by provincial authorities.

It is understood that the use of the term "interpersonal communications" and "interpersonal communications capabilities" were selected by the RC SDT to better reflect the intent of the Standard. However, NU reviewers are concerned over the new terminology and believe that it is unclear and not universally accepted to mean the same thing to all parties. NU's belief is that the original use of the terms "telecommunications" and "telecommunications facilities" are clearer and universally understood. NU recommends that the original terms be re-instated or the term "interpersonal communications" be replaced to reflect the intent of the Standard is to ensure "voice and text equipment" is adequate for communicating real-time operating information. R1 – the requirement has evolved to test alternative equipment, versus a requirement to have primary and alternative equipment. Standard should require entities to have the equipment such as in the -1 version. R2 is to notify impacted entities in the event of a loss of normal communications. With backup communications operating correctly do we assume there is no impact and therefore notification is not required? This is unclear from a compliance perspective and unnecessary if backup communications are available. Alternative communications often go several layers deep including cell phones, satellite phones, radio, etc.

Yes

Yes

Yes

No

NU agrees with expanding the applicability of the Standard beyond the Reliability Coordinators, Balancing Authorities and Transmission Operators to ensure that the recipient of a verbal directive repeats back the directive to the issuer (R2). Despite NU's agreement with R2, NU believes that M2 is duplicative to the intent of M1 and unnecessarily requires the installation of voice recording capabilities at the entities other than a RC, BA or TOP. It is our belief that the voice recordings of the RC, BA and TOP (M1) provide the evidentiary support required by all applicable entities.

Yes

No

Remove the word "outages" that appears after "cascading" as per NERC Glossary and FERC Directive issued Dec. 27, 2007.

No

The intent of R3 is not clear - i.e., "... shall inform its Reliability Coordinator upon recognition of its inability to perform a directive". Does this requirement pre-suppose a directive has been given? Suggest adding clarifying language that indicates that the requirement is applicable subsequent to a directive being received. It is our belief that the wording of Measure M3 supports the suggested changes to R3.

Yes

No

(i) R4: Since failing to issue an alert to 3 entities already attracts a "High" VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a "Severe" VSL. We suggest to change the High VSL to:

<p>"...failed to issue an alert to three, but not all, impacted..." and the Severe VSL to: "...failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a "Severe" violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a "High" violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a "Severe" violation. (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.</p>
No
The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.
No
The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.

We suggest the SDT review the applicability to Transmission Service Providers, Load-Serving Entities and Purchasing Entities from a real time operating perspective. We do not believe they are active participants in real time operation for which they require to have the same communication capability as the RCs, TOPs, BAs and DPs. Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication. Having alternative interpersonal communications should also be specified as a requirement. Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and already is, in English. Accordingly, R3 should be modified as proposed below: R3. Unless dictated by law or otherwise agreed to, ... R4: We believe "Interconnection" should be replaced by "interconnection" since the former is not a defined term.
No
M3 and M4 may need to be revised depending on the response to our comments under Q1, above.
No
The VSLs for R3 may have to be changed based on the outcome of our comments in Q2 regarding the language of communication.
No
(i) We suggest the word "emergency" be capitalized since it is a defined term which generally covers the conditions under which directives are issued. (ii) We further suggest that to avoid confusion between operating instructions and directives, the term directive should be defined as suggested below: Directive or Reliability Directive – A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires complying action by the recipient to prevent or mitigate an Adverse Reliability Impact. (iii) Since R1 contains two requirements, there may be some benefit in separating these since that would make the VSLs clearer, i.e. separate the requirements placed on the issuer of the directive to (a) request the recipient to repeat the intent of the directive and (b) to acknowledge the response of the recipient as correct.
No
Comments: Some changes may be necessary based on the SDT's response to our suggestion in Q4.
No
The sequence of communication required under R1 is intended to ensure that directives from the issuing entities are clearly understood. The earlier this sequence is broken, the greater the uncertainty that this goal is achieved and the greater should be the severity level. Thus, failure to request that the recipient entity repeat the intent of the directive – the earliest step in the sequence - should attract the "Severe" VSL. Also, failing to repeat the original directive when there is any misunderstanding, again, in our view, leaves the intent of the directive equally unclear and should also attract a "Severe" VSL. Failing to acknowledge the recipient was correct in the repeating the intent of the directive – the last step in the sequence – is already assigned a "Moderate" VSL and this should not be repeated in the "Severe" VSL. We therefore suggest that the two conditions under "High" and "Severe" in R1 be combined as one under "Severe" as follows: The responsible entity issued a verbal directive associated with real-time operating emergency conditions but did not require the recipient to repeat the intent of the directive; OR The responsible entity issued a verbal directive associated with real-time operating emergency conditions and required the recipient to repeat the intent of the directive, but failed to repeat the intent of the original statement to resolve any misunderstandings.
No

Comments: Remove the word "outages" that appears after "cascading" as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
No
Comments: Change "...inability to perform a directive." to "...inability to perform an issued directive."
Yes
No
(i) R1: For clarity, we suggest changing "it" to "that". R4: Since failing to issue an alert to 3 entities already attracts a "High" VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a "Severe" VSL. We suggest to change the High VSL to: "...failed to issue an alert to three, but not all, impacted...." and the Severe VSL to: "...failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a "Severe" violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a "High" violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a "Severe" violation. (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.
No
(i) Definition of Adverse Reliability Impact is duplicated as it is already defined in IRO-001-2. (ii) We do not see the need for R7 and R8 since R6 already stipulates the necessary actions to be taken, it is not necessary for the Reliability Coordinator with the identified Adverse Reliability Impact to develop (re-develop?) a mitigation plan when the impacted Reliability Coordinators did not agree that the problem exists. What may be needed is the insertion of "shall develop a mitigation plan" before "notify impacted Reliability Coordinators" in R5. We suggest removing these requirements (R7 and R8).
No
Depending on the response of the SDT, changes to M5 to M8 may be required.
No
(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe if the VSLs are graded according to then number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT's response to our comments under Q11.
In our comments on the previous posting, we expressed a disagreement with a proposed to remove IRO-005, in particular the latter part of R13, which stipulated that: In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter. Our rationale was that The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities may come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set exists is a necessary requirement for reliable operation. The SDT responded by suggesting that this requirement is redundant with FAC-014 which -014 states the requirement for developing and sharing SOL and IROL between the RC, PA, TP and TOP in both the planning and operating time frames. However, this response fails to address the situation where during operation, the situation of disagreeing SOLs or IROLs does arise. FAC-014 or any other standards do not currently have a requirement to ensure that all entities operate to the lower limit before the difference is resolved. This leaves room for unreliable operation. We suggest the SDT to consider restating this requirement somewhere. Note that this requirement is similar to R6 of IRO-014 that when in doubt, the more conservative approach should be taken. If it is necessary to have an R6 to deal with an uncertain identification/notification of an Adverse Reliability Impact, we don't see why it is not necessary to operate to a lower SOL or IROL when there is an unresolved difference.

We believe that the team needs to define the term "interpersonal communications capabilities". It's our understanding that the term refers to how entities will communicate (i.e. phone, cell phone, video conferencing, email or satellite phone) with each other, but that is not being clearly communicated by the requirement. A clear definition of the term "interpersonal communication capabilities" will likely provide needed clarity to the requirement. Requirement 1 seems to imply that an entity will be judge based on a single test of its alternative communication system within any given quarter, and if that test fails they must develop a mitigation plan. Our concern is that the requirement should allow for multiple testing and only if all or a reoccurring issue is found should you document and fix the issue. (Example: An entity performs weekly tests of its alternative communication system. One of the test's fails. All other tests, following the failed test, are successful. Would the entity have to develop a mitigation plan based on the one failure, or are the other successful tests sufficient to show compliance?) In R2, we assume that the 30 minutes or longer in parenthesis is

intended to describe the length of the outage. To clarify, we suggest that the language be changed to: "Each RC, TOP and BA shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communication systems lasting longer than 30 minutes."
No
See our comment to question 1
No
are supportive of the language regarding "directives" which clarifies that directives are those which involve operating emergencies. However, in R1, we believe that the word "requires" should be changed to "request". An entity can request that another entity repeat back a directive but we cannot "require" it.

No
We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes." R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.
No
Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
No
Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. In addition, we suggest since R2 has a time component in the requirement, four VSLs could be written based on the timeliness of the notification. This would be consistent with the FERC's expressed desire in the June 2008 order on VSLs in which they stated that as many VSLs should be developed as possible.
Yes
We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this directive issue by developing a definition for directive. We propose the following definition: Directive or Reliability Directive – A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact. In requirement 1, we do believe that another word than "require" should be used. Consider using "request". An RC, BA, and TOP can't force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.
Yes
We largely agree with the measures with the exception that a conforming change needs to be made to M1 if the

suggestion regarding "require" in Q4 is accepted.
No
If the suggestion regarding "require" in Q4 is accepted, conforming changes to the VSL need to be made. Additionally, we believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.
Yes
No
We agree with many of the changes. However, we believe R5 is not necessary for reliability. We agree the RC should notify impacted entities when the transmission problem has been mitigated; however, if the RC fails to notify the impacted entities, it will not result in an Adverse Reliability Impact. Thus, it is not necessary as a sanctionable requirement.
No
Measurement 5 needs to be struck if R5 is struck per question 8.
No
The Commission stated in their order on VSLs in June of 2008 their preference for as many VSLs as possible. We believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause "but not all". It is not necessary.
No
Requirements R2 and R8 need additional work. R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable. Further, the drafting team needs to clarify that R2 also applies to the mitigation plan in R7. Because R7 requires the RC experiencing the Adverse Reliability Impact to develop the mitigation plan, the mitigation plan may not be agreed to by the impacted RC. The impacted RC may have a perfectly valid reliability, statutory, legal, or regulatory reason for not agreeing to the mitigation plan. R8 still obligates the RC to implement the mitigation plan developed in R7 though it may be contrary to reliability. R8 needs to allow the RC to refuse to implement the mitigation plan if the impacted RC has a reliability, statutory, legal or regulatory reason. Further the drafting team should consider if the impacted RC could refuse because the RC experiencing the Adverse Reliability Impact has not implemented comparable measures in their own area. R8 as written could allow an RC to simply pass cost on to the neighboring RC in the name of reliability. For example, the RC may not want to order a unit to be committed to avoid certain startup costs but they ask the neighboring RC to start up a unit in their footprint.
No
Conforming changes to the Measurements will be required for accepted changes from question 11.
No
In the Commission's June 2008 order on VSLs, they expressed their preference for having as many VSLs as possible. We believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. We also believe this would be consistent with the Commission's guideline 4 because the requirement is written in the plural, that is conference calls, so all conference calls must be considered in aggregate. Thus, failure to participate in more than one conference call does not represent distinct violations but a single violation. Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any.

Consideration of Comments on Reliability Coordination — Project 2006-06

The Reliability Coordination Standard Drafting Team (RC SDT) thanks all commenters who submitted comments proposed revisions to the standards for Project 2006-06: Reliability Coordination. These standards were posted for a 30-day public comment period from July 10, 2009 through August 9, 2009. The stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 31 sets of comments, including comments from more than 87 different people from over 62 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

All comments received have been reformatted so that all comments received in response to the first question appear following the first question, etc. All comments have been posted at the following site:

http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html

Changes to Requirements, Measures and Violation Severity Levels in COM-001-2: Stakeholders suggested that there is a need to define Interpersonal Communications for this standard. The RC SDT is proposing the following definitions:

Interpersonal Communication: Any method that allows two or more individuals to interact, consult, or exchange information.

Alternative Interpersonal Communication: Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

Other stakeholders suggested edits to the requirements. The RC SDT revised the wording of R2 to add clarity and revised R3 to include the phrase “unless dictated by law...” to address legal requirements in some areas.

Several stakeholders suggested removing the mitigation plan from R1 and M1. The RC SDT agreed and made revisions to other measures to reflect changes to the requirements.

Stakeholders suggested adding more VSLs for R2. The RC SDT agreed and drafted additional VSLs reflecting timing and the number of entities notified. Other changes to the VSLs were made based on revisions to the requirements.

Stakeholders suggested removing the Distribution Provider and Generator Operator from the Data Retention section for R1 of COM-001. Since these are not applicable entities in R1, they were removed from Data Retention for the requirement.

The standard and the proposed definitions will be posted for an additional comment period.

Changes to Requirements, Measures and Violation Severity Levels in COM-002-3 Stakeholder consensus has been achieved with respect to the retirement of R1 and M1 from the last approved version of the standard. In response to the majority of the comments, the drafting team has modified and rearranged the order of the remaining requirements, and coined a definition for “Reliability Directive”. The drafting team is also coordinating with the RTO SDT (Project 2007-03) and the OPCP SDT (Project 2007-02) on the definition and usage of the term “Reliability Directive”.

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

As a reference, we have included the existing definition of Emergency:

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

In accord with the majority of commenters, the drafting team made changes to the Measures to bring them into conformance with the adopted suggestions from question 4 for improving the Requirements.

Changes to Requirements, Measures and Violation Severity Levels in IRO-001-2

Stakeholders generally agreed with the revisions to the requirements. Several stakeholders suggested adding the words “an issued” before “directive” in R3. The RC SDT agreed and made the change. No further revisions were made to the requirements. The proposed revisions to the definition of Adverse Reliability Impacts is being posted for comment.

Stakeholders agreed with the measures for IRO-001-2. The measure M3 was revised to reflect the revision to R3. No other revisions were suggested for the measures.

The VLS for R3 was revised to add the word “issued” before directive to match the revised requirement. Stakeholders suggested minor revisions to the VSLs for R4 and R5. The RC SDT agreed and made the revisions.

The RC SDT believes that stakeholder consensus has been achieved on IRO-001-2. The definition of Adverse Reliability Impacts is included in this posting for comment.

Changes to Requirements, Measures and Violation Severity Levels in IRO-014-2

Stakeholders suggested revising R8 to include provisions for avoiding implementing actions that would violate safety, equipment or regulatory or statutory requirements. The RC SDT agreed and added this to the requirement. Other stakeholders suggested adding “For conditions or activities that impact other Reliability Coordinator Areas,...” at the beginning of R1 and R3. The RC SDT agreed and added this to the requirements. The Time Horizons for R2 were revised as suggested to “Same Day Operations and Operations Planning”. Several stakeholders expressed concerns regarding having R6-R8 as separate requirements. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT contends the requirements should be separate requirements as they identify distinctly different actions and are adequate as written.

Stakeholders agreed with the Measures, except to make conforming changes for revisions to the requirements. The RC SDT has revised the measures based on the new requirements. One stakeholder suggested revision to the Data Retention for R5-R8. Data Retention was revised for R5 to 12 months, however the RC SDT believes that three years is the correct period for R6-R8.

Several stakeholders suggested developing four VSLs for R5. Typically, in the course of BES operations, the number of impacted Reliability Coordinators will be a small number. The SDT effort in this regard was to write the VSLs to represent both the large and small

scenarios containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios. Other stakeholders suggested four VSLs for R4. The essence of R4 is written to require impacted RC's to talk at least weekly and is singular in nature. VSL's can not be written for conference calls that exceed the singular requirement.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.¹

¹ The appeals process is in the Reliability Standards Development Procedures:
<http://www.nerc.com/standards/newstandardsprocess.html>.

1. Do you agree with the revisions made to the Requirements in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Most stakeholders agreed with the requirements in COM-001. Stakeholders suggested that there is a need to define Interpersonal Communications for this standard. The RC SDT is proposing the following definitions:

Interpersonal Communication: Any method that allows two or more individuals to interact, consult, or exchange information.

Alternative Interpersonal Communication: Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

Other stakeholders suggested edits to the requirements. The RC SDT revised the wording of R2 to add clarity, revised R3 to include the phrase "unless dictated by law..." to address legal requirements in some areas, and removed references to the mitigation plan in R1.

Organization	Yes or No	Question 1 Comment
Central Lincoln		<p>Comments: The inclusion of load serving entities and distribution providers does not address any present reliability gap. R4 is extremely vague, and is not likely to be interpreted consistently. What form of evidence will be acceptable? Photos of telephones?</p>
<p>Response: The RC SDT thanks you for your comment. The LSE and DP were added as applicable entities to R3 as a result of stakeholder comments during the previous posting. The DP and GOP were added as applicable entities in R4 per FERC Order 693 directives. The Measure M4 for Requirement R4 was revised to:</p> <p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)</p>		
JEA		<p>R2 I would suggest that R2 be clarified so that it is understood that the 60 minutes starts at the beginning of the outage (or the end of the 30 minute period, if that was instead the intent) so that there can be no confusion about when the clock starts for notification periods. Otherwise, the wording of these standards is clearer than the current version.</p> <p>R4 I am concerned that with the word "capabilities" that the DP/GO's will be expected by the auditors to demonstrate that its "capability" was working every single second of every day since their last audit, especially since you have not included a data retention period (especially since this is rated a "high" VRF).</p>

Organization	Yes or No	Question 1 Comment
<p>Response: The RC SDT thanks you for your comment.</p> <p>R2: We have revised the wording to clarify the intent:</p> <p>Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal Interpersonal Communications capabilities that lasts 30 minutes or longer. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>R4: The Measure 4 for Requirement R4 was revised to:</p> <p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)</p> <p>Data retention for R4, M4 was added to the revised standard.</p>		
Northwest LSE Group	No	<p>The RC STD has done a commendable effort. However, it is questionable how expanding the applicability to include LSEs, DPs, & PSEs that are non-scheduling/tagging entities will increase reliability of the BES. In fact, we believe that increasing the applicability could do just the opposite. Many of these entities that are only registered as a LSE, DP, and/or PSE do not have a 24/7 desk/dispatch facility to receive RC/BA/TOP reliability directives, and are too small (10s of MW) to effectively assist during a reliability crisis. In addition, the Regional Entities (WECC in this case) are overwhelmed as it is, asking them to take on even more audit responsibilities is unrealistic, and not worth the effort.</p> <p>In addition, for the small Registered Entity, what would constitute compliance with R3 & R4 if no TOP/BA real-time directives were received? Everyone employed speaks English and there is at least one phone on the premises? Will the small DP and/or LSE be required to monitor its communication system 24/7 with competent personnel for an unlikely TOP/BA directive?</p>
<p>Response: The RC SDT thanks you for your comment. The LSE, DP and PSE were added as applicable entities to R3 as suggested by other stakeholders in the last posting. The Distribution Provider and Generator Operator are in R4 per FERC Order 693 directives.</p> <p>The measures for the requirements specify what would constitute evidence needed to demonstrate compliance. Note that R3 and R4 are not focused solely on communication related to “directives.” Requirement R3 is focused on all “. . . inter-entity Bulk Electric System (BES) reliability communications . . . “ The drafting team feels that R4 as written allows flexibility to the entities in meeting the performance requirement. Note that R4 only applies to Distribution Providers and Generator Operators, not to LSEs.</p>		
American Transmission Company	No	<p>We believe that the team needs to define the term “interpersonal communications capabilities”. It’s our understanding that the term refers to how entities will communicate (i.e. phone, cell phone, video conferencing, email or satellite phone) with each other, but that is not being clearly communicated by the requirement. A clear definition of the term “interpersonal communication capabilities” will likely provide needed clarity to the requirement.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
		<p>Requirement 1 seems to imply that an entity will be judge based on a single test of its alternative communication system within any given quarter, and if that test fails they must develop a mitigation plan. Our concern is that the requirement should allow for multiple testing and only if all or a reoccurring issue is found should you document and fix the issue. (Example: An entity performs weekly tests of its alternative communication system. One of the test’s fails. All other tests, following the failed test, are successful. Would the entity have to develop a mitigation plan based on the one failure, or are the other successful tests sufficient to show compliance?)</p> <p>In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. To clarify, we suggest that the language be changed to: Each RC, TOP and BA shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communication systems lasting longer than 30 minutes.</p>
<p>Response: The RC SDT thanks you for your comment. Several stakeholders have expressed a concern with the definition of interpersonal communications capabilities. The RC SDT concurs and has drafted a definition that will be posted for comment.</p> <p>R1: Other stakeholders also expressed concern with developing a mitigation plan in this requirement. The RC SDT has revised the requirement to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>The RC SDT feels that this will address your comment.</p> <p>R2: We concur and have revised the requirement as you suggest.</p>		
Northeast Power Coordinating Council	No	<p>Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication.</p> <p>Having alternative interpersonal communications should be specified as a requirement.</p> <p>Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and in fact is already, in English. Accordingly, R3 should be modified as the proposition below: R3. Unless dictated by law or otherwise agreed to,</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>The RC SDT agrees with your comment regarding the alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal</p>

Organization	Yes or No	Question 1 Comment
<p>Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>We concur with your suggestion regarding R3 and have made the suggested revision.</p>		
SERC OC Standards Review Group	No	The STD should clarify what types of communications are considered in the standard is it voice or data communications or both?
<p>Response: The RC SDT thanks you for your comment. Interpersonal communication does not include data (see IRO-010-1) and includes more than voice, such as instant messaging, text messaging and email. The RC SDT has developed a draft definition of interpersonal communications capabilities that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p>		
IRC Standards Review Committee	No	<p>(1) We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. If repairing the system would be a lengthy process, then a mitigation plan may be developed to document that the entity is in process to fix the system. There is no associated requirement to have an alternate interpersonal communication capability along with R1 to test it. Thus, if a responsible entity did not have an alternate interpersonal communication capability, R1, in essence, does not apply. We suggest adding a requirement to have an alternate interpersonal communication capability to address this gap. Alternatively, the requirement to have an alternate interpersonal communication capability along with requirements to test and fix it could be stipulated in the Organization Certification Requirements.</p> <p>(2) In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes."</p> <p>(3) R3 is not necessary. This requirement results in the waste of compliance resources managing and auditing documentation associated with it with no measurable improvement to reliability.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement for alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to</p>

Organization	Yes or No	Question 1 Comment
		<p>restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>2) We concur with your comment and have revised the requirement accordingly.</p> <p>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</p>
Midwest ISO Standards Collaborators	No	<p>We do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system.</p> <p>In R2, we assume that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes."</p> <p>R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.</p>
		<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement for alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>2) We concur with your comment and have revised the requirement accordingly.</p> <p>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</p>
ReliabilityFirst Corporation	No	FERC 693 excludes distribution providers if they are not a user, owner or operator of BES. This should be reflected in R4 of the standard
		<p>Response: The RC SDT thanks you for your comment. FERC Order 693 endorses the NERC Statement of Compliance Registry criteria (paragraph 512) and also adopted the proposal to require the ERO to modify COM-001 to apply to distribution providers and generator operators (paragraph 493).</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
E.ON U.S.	No	<p>E.ON U.S. suggests deleting “interpersonal” from the term “interpersonal communications capabilities”. The need for and meaning of the term “interpersonal” isn’t clear. Does it infer communications must be to/from a specific individual rather than to/from another reliability entity? Verbal vs electronic communications? All non-data communications? E.ON U.S. believes that the term “interpersonal” must be clarified if it is to remain in the standard.</p> <p>In the proposed R1 “how extensive must the quarterly testing be “ establish contact or verify all functions? Does the term “alternative” include the "normal" communication medium or only the “backup” mediums? Does the alternative imply ALL possible communication alternatives? E.ON U.S. suggests replacing the term “alternative” with “planned backup” or similar. Quarterly testing needs to be limited to only established/planned backup communication methods not any potential "alternative" communication method.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees with several stakeholders that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>The testing requirement is to ensure that the alternative (not “normal”) interpersonal communications capability works as a minimum. Entities may go above and beyond the requirement if they desire. The requirement was edited to identify the alternative and test it.</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its alternative Interpersonal Communication capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p>		
Manitoba Hydro	No	<p>do not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary as it would delay repairing the interpersonal communication capability.</p> <p>R2 assumed that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. We think this would be clearer if the requirement were revised to: Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes?</p> <p>R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
<p>for alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>2) We concur with your comment and have revised the requirement accordingly.</p> <p>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</p>		
Georgia Transmission Corporation	No	<p>Per the NERC Reliability Standards Development Procedure, under the definition of a Reliability Standard? The obligations or requirements must be material to reliability and measurable? With regards to R3. - It goes without saying that inter-entity BES reliability communications must be in a common language between the entities for understanding operation instructions. From an audit/measurability standpoint, the evidence to the requirement would not converge to a finite amount of material. The amount of evidence required to demonstrate compliance of this requirement would be a huge administrative burden. It seems this concept (for use of the English language) could be captured under the "Entity Tasks and Interrelationships" section of the NERC Reliability Functional Model which defines the set of functions that must be performed to ensure the reliability of the bulk electric system. It also explains the relationship between and among the entities responsible for performing the tasks within each function. Additionally, this concept (for use of the English language) could further be explained under each applicable registration type (BA, GOP, TSP, LSE, PSE, and DP) in the NERC Reliability Functional Model. The Second option for R3 is to remove the Requirement from the continent wide Standards and have the effected entities/regions create a "Regional Standard" where entities involved in inter-entity BES reliability communications have a history of language barrier concerns.</p> <p>As a separate issue to R3, it also seems conflicting that a written requirement would provide the option of "Unless agreed to otherwise". This option described in the language of the requirement implies that it is not a requirement but an option which further supports the suggestions above.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement. The Reliability Functional Model is not an enforceable standard.</p>		
Illinois Municipal Electric Agency	No	<p>The IMEA supports comments submitted by the MISO Standards Collaboration Group indicating R3 is not necessary. Similarly, IMEA questions the necessity of R4. Therefore, we question the need to expand the applicability of COM-001 to DP, LSE, and PSE since R3 and R4 are the only two Requirements applicable to those functions.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement. R4 is included per FERC Order 693 directive.</p>		
Exelon	No	<p>Agree with the revisions with the following exception/recommendation: COM-001: purpose is to address communication facilities / capabilities (technical/hardware). COM-002: purpose is to address effectiveness (protocols).COM-001: R.1-3 address telecommunication facility requirements. R4 requires English use. Recommend the drafting team move COM-001 R4 (use English) to COM-002 where effectiveness of communications (protocols) between entities is addressed.</p>
<p>Response: The RC SDT thanks you for your comment. COM-001 Requirement R3 (English use) is being incorporated into COM-003-1 by the Operations Personnel Communications Protocols SDT (Project 2007-02). It will be retired from this standard upon approval of COM-003-1. We see no benefit to moving it to COM-002 at this time.</p>		
Hydro-Québec TransEnergie (HQT)	No	<p>Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication.</p> <p>Having alternative interpersonal communications should be specified as a requirement since there is actually no requirement to have that alternative way of communication in the first place.</p> <p>Work communication within Québec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and is in fact already, in English. Accordingly, R3 should be modified as the proposition below: R3. Unless determined by law or otherwise agreed to,</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>The RC SDT agrees with your comment regarding the alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>We concur with your suggestion regarding R3 and have made the suggested revision.</p>		
Duke Energy	No	<p>R1 requires an entity to “develop a mitigation plan” if a test of alternative communications capabilities is unsuccessful. We believe that this phrase should be changed to “take action”, reflecting that an entity’s response to an unsuccessful test may</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
		<p>be to simply call or email a repair order. The phrase “develop a mitigation plan” implies that an entity must establish a backup to the alternative communications capabilities rather than just restore the alternative communications capabilities.</p>
<p>Response: The RC SDT thanks you for your comment. We concur with your comment regarding the mitigation plan and have revised the requirement to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its alternative Interpersonal Communication capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]</i></p>		
Northeast Utilities	No	<p>It is understood that the use of the term "interpersonal communications" and "interpersonal communications capabilities" were selected by the RC SDT to better reflect the intent of the Standard. However, NU reviewers are concerned over the new terminology and believe that it is unclear and not universally accepted to mean the same thing to all parties. NU's belief is that the original use of the terms "telecommunications" and "telecommunications facilities" are clearer and universally understood. NU recommends that the original terms be re-instated or the term "interpersonal communications" be replaced to reflect the intent of the Standard is to ensure "voice and text equipment" is adequate for communicating real-time operating information.</p> <p>R1 ? the requirement has evolved to test alternative equipment, versus a requirement to have primary and alternative equipment. Standard should require entities to have the equipment such as in the -1 version.R2 is to notify impacted entities in the event of a loss of normal communications. With backup communications operating correctly do we assume there is no impact and therefore notification is not required? This is unclear from a compliance perspective and unnecessary if backup communications are available. Alternative communications often go several layers deep including cell phones, satellite phones, radio, etc.</p>
<p>Response: The RC SDT thanks you for your comment. Several stakeholders have expressed a concern about the definition of interpersonal communications. The RC SDT is proposing a definition that will be posted for comment to address those concerns as well as your comment.</p> <p>R1: The intent of the requirement is as you suggest. This requirement has been revised to:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>Notification of a failure of the normal interpersonal communications is still required by R2. The testing requirement is for one designated alternative. No notification is required for the failure of a non-designated alternative.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
Independent Electricity System Operator	No	<p>We suggest the SDT review the applicability to Transmission Service Providers, Load-Serving Entities and Purchasing Entities from a real time operating perspective. We do not believe they are active participants in real time operation for which they require to have the same communication capability as the RCs, TOPs, BAs and DPs.</p> <p>Interpersonal communication includes more than voice, such as instant messaging, text messaging and email. This Standard needs a definition of interpersonal communication.</p> <p>Having alternative interpersonal communications should also be specified as a requirement.</p> <p>Work communication within Quebec must be in French according to the law. It is understood and agreed that communication outside Québec with adjacent entities would be, and already is, in English. Accordingly, R3 should be modified as proposed below: R3. Unless dictated by law or otherwise agreed to,</p> <p>R4: We believe “Interconnection” should be replaced by “interconnection” since the former is not a defined term.</p>
<p>Response: The RC SDT thanks you for your comment. TSP, LSE and PSE are not required to have the same Interpersonal communication as RC, TOP or BA. The only requirement applicable to TSP, LSE and PSE is R3 (English language).</p> <p>The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>The RC SDT agrees with your comment regarding the alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>We concur with your suggestion regarding R3 and have made the suggested revision.</p> <p>R4: Interconnection is a defined term in the NERC Glossary of Terms (Updated on April 20, 2009).</p>		
MRO NSRS	No	<p>(1) The MRO NSRS does not believe a mitigation plan is necessary in R1. If the interpersonal communication capability fails during the quarterly test, the entity simply needs to fix it, document the fix and re-test. A mitigation plan is unnecessary and will only delay repairing the interpersonal communication capability as it would have to be completed first before fixing the system. Please create a definition for the interpersonal communication capability (or systems) term used in the response to comments to draft 1 in the summary of consideration for question 1.</p> <p>(2) In R2, MRO NSRS assumes that the 30 minutes or longer in parenthesis is intended to describe the length of the outage. MRO NSRS thinks this would be clearer if the requirement were revised to: “Each Reliability Coordinator,</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
		<p>Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal interpersonal communications capabilities lasting longer than 30 minutes.”</p> <p>(3) R3 is not necessary as it would be impossible to meet many other requirements if a common language such as English was not used. This requirement results in the waste of compliance resources managing and auditing documentation associated with it.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees with your comment regarding the mitigation plan and the requirement for alternate interpersonal communications capability and has revised the requirement to read:</p> <p>R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p>The team has drafted a definition for both the term “Interpersonal Communication” and the term, “Alternative Interpersonal Communication.”</p> <p>2) We concur with your comment and have revised the requirement accordingly.</p> <p>3) The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives. There are several areas of the continent where this could be a reliability gap if there is no requirement.</p>		
Xcel Energy	No	<p>(1) While an improvement from the terminology used in version 1, the term "interpersonal communications" is still vague. We feel the intent of the drafting team was to include non-verbal communication as well, like email. However, as drafted, this point is not clear. We feel a definition is needed in order avoid disparity in its interpretation.</p> <p>(2) It appears that the requirement for RCs, TOPs and BAs to have communication capabilities (whether primary or backup/alternative) was removed from the standard. Yet, R1 requires the RC, TOP and BA to test alternative communications capabilities. Requirements to have primary and backup/alternative communication capabilities should be explicitly stated.</p> <p>(3) Additionally, we feel that the DP and GOP should have testing requirements for their communication capabilities with their TOP and BA.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p> <p>2) The RC SDT does not agree with your assertion regarding R1. The requirement for alternate interpersonal communications capability implies that primary interpersonal communications are in place.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
<p>3) The DP and GOP were added as applicable entities in R4 per FERC Order 693 directives. The RC SDT does not agree with your assertion regarding the need for testing requirements. However, your concerns may be addressed in the Measure 4 revision:</p>		
<p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)</p>		
Western Area Power Administration	Yes	R4 should say "Generator Operator" rather than "Generation Operator"
<p>Response: The RC SDT thanks you for your comment. We have made this revision.</p>		
American Electric Power	Yes	AEP does generally agree with the revisions, but the use of the term "interpersonal communication capabilities" needs a NERC-approved definition. Otherwise, what is in scope? Are e-mail or text messages acceptable, and, if so, what type of guaranteed delivery is necessary?
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees that there is a need for a definition of Interpersonal Communications Capability. We have developed a draft definition that will be posted for comment which meets the FERC Order 693 directive to:</p> <p>Includes adequate flexibility for compliance with the reliability standard, adoption of new technologies and cost-effective solutions.</p>		
FirstEnergy	Yes	We agree with many of the changes made to the standard including the change of title to reflect communications (voice and text messages). The parenthesis around 30 minutes or longer should be removed as parenthesis by definition mean a word, phrase, or sentence inserted in a passage to explain or modify the thought. This phrase is more than an explanation of the term failure. It sets forth a time requirement that is an integral part of R1. We suggest rewording the requirement as "Each RC, TOP, and BA shall notify impacted entities within 60 minutes of a failure of its normal interpersonal communications capabilities that lasts 30 minutes or longer."
<p>Response: The RC SDT thanks you for your comment. We concur with your comment and have revised the requirement accordingly.</p>		
Bonneville Power Administration	Yes	
PacifiCorp	Yes	
Southern Company	Yes	

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 1 Comment
Calpine Corporation	Yes	

2. Do you agree with the revisions made to the Measures in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Most commenters agreed with the measures for COM-001. The measures were revised based on revisions to the requirements as well as comments received below. Several stakeholders suggested removing the mitigation plan from R1 and M1. The RC SDT agreed and made the revision. M3 and M4 were revised as:

M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that its personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language. (R3.)

M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information (R4).

Organization	Yes or No	Question 2 Comment
Northwest LSE Group	No	To demonstrate compliance the small Registered Entities will be in the position of proving a negative: i.e., there is no real-time BES operational communication from or to any other entity. Currently, for the smaller entities, communication with the Transmission Operator or Balancing Authority is strictly for operational safety and local reliability of service, not operational reliability for the BES as defined by NERC. It is not clear how the small entity will show compliance. If R4 requires the small load-only DP and/or LSE to have 24/7 monitoring of its phone, and contracted answering service is unable to contact anyone, will this be a violation?
<p>Response: The RC SDT thanks you for your comment. R4 is applicable only to registered Distribution Providers and Generator Operators. The RC SDT has revised the measure to prevent having to prove a negative:</p> <p>M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 2 Comment
<p>There is no 24/7 monitoring requirement in R4.</p>		
<p>Northeast Power Coordinating Council</p>	<p>No</p>	<p>See our comment for R3 in Q1. Accordingly, M3 should be modified as the proposition below: M3. “ that will be used to determine that personnel used English “or another language” as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, both parties shall have and provide upon request, evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement shall be provided to explain the use of the alternate language. (R3.) M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT has revised the measure to conform to revisions in the requirement:</p> <p>M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language.</p> <p>The RC SDT feels that agreement is not required prior to the call, but only prior to the conversation using the alternate language.</p>		
<p>Bonneville Power Administration</p>	<p>No</p>	<p>Issue #1: Measure M3 The measure states that entities “shall have and provide” evidence that “personnel used English as the language for all” communications. This infers that all communications must be documented in some form or fashion and that any outage of the normal communication system must be met with alternative processes which will meet this measure, even if the alternative is the preparation of handwritten notes of each person’s conversations, noting that the communications occurred in English. Unfortunately, there have been times where our Dictaphone stopped recording phone calls, and nobody knew it for days! This measure sets us up for a violation! It’s just a matter of time.</p>
<p>Response: The RC SDT thanks you for your comment. The measure as written is consistent with the requirement. The RC SDT did not receive any other comments to modify this measure.</p>		
<p>IRC Standards Review Committee</p>	<p>No</p>	<p>Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.</p>
<p>Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 2 Comment
Midwest ISO Standards Collaborators	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.		
Central Lincoln	No	Comments: M4 is of little help regarding R4. How does an entity perform this demonstration, especially in the case of an off-site audit? If left to the regions, there will be no consistency.
Response: The RC SDT thanks you for your comment. Based on comments received on R4 and M4, the RC SDT has revised M4 to: M4. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)		
ReliabilityFirst Corporation	No	No measures are posted for R4 of the revised standard
Response: The RC SDT thanks you for your comment. A measure M4 is in both the redline and clean version of the posted standard.		
E.ON U.S.	No	E.ON U.S. believes that he M1 must be clarified to address whether the testing entity is responsible to develop and implement a mitigation plan when a test is unsuccessful due to an issue at the other end (i.e. non-testing entity).
Response: The RC SDT thanks you for your comment. We have removed the mitigation plan from the requirement and measure.		
Manitoba Hydro	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.		
Georgia Transmission Corporation	No	See comments to Question 1 in regards to measurability.
Response: The RC SDT thanks you for your comment. Please see response to question 1.		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 2 Comment
Illinois Municipal Electric Agency	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in Question 1.
Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.		
Exelon	No	See answer to #1
Response: The RC SDT thanks you for your comment. See response to question 1.		
Hydro-Québec TransEnergie (HQT)	No	Comments: See our comment for R3 in Q1. Accordingly, M3 should be modify to read as the proposition below: M3. “ that will be used to determine that personnel used English “or another language determine otherwise” as the language for all inter-entity Bulk Electric System reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. If a language other than English is used, upon request, evidence shall be provided to explain the use of the alternate language. (R3.)M3 allows a language other than English. Must the agreement for non-English be in place in advance of the call?
<p>Response: The RC SDT thanks you for your comment. The RC SDT has revised the measure to conform to revisions in the requirement:</p> <p>M3. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that its personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES. If a language other than English is used, both parties shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language.</p> <p>The RC SDT feels that agreement is not required prior to the call, but only prior to the conversation using the alternate language.</p>		
Duke Energy	No	Replace the phrase “develop a mitigation plan” with the phrase “take action” per our comment on Requirement R1 above. Also, the DP and GOP should be deleted from the Data Retention section requirements for R1/M1 and R2/M2. Need to add a Data Retention requirement for R4/M4 for the DP and GOP.
Response: The RC SDT thanks you for your comment. The measure M1 was revised to conform to suggested revisions to R1. We have also revised the Data Retention section.		
Independent Electricity System	No	M3 and M4 may need to be revised depending on the response to our comments under Q1, above.

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 2 Comment
Operator		
Response: The RC SDT thanks you for your comment. Conforming revisions were made to the measures based on revisions to the requirements.		
MRO NSRS	No	Conforming changes are required to the Measures based on the suggested modifications to the requirements in question 1.
Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.		
Xcel Energy	No	Measures should be modified to reflect changes to requirements suggested in question 1.
Response: The RC SDT thanks you for your comment. Changes were made to the Measures to conform to revisions of the requirements.		
American Transmission Company	No	See our comment to question 1
Response: The RC SDT thanks you for your comment. See response to question 1.		
JEA	Yes	<p>M1 - very nice, probably we will also be held responsible for completing the mitigation plans, so perhaps you should go ahead and add that so no one gets caught without sufficient evidence in that regard</p> <p>M2 – fine</p> <p>M3 - this measure would indicate that operators have the authority to agree among themselves to speak other languages, rather than a more formal agreement between entities, which is how I read the language of the requirement. If that is not what is meant, then I would suggest the examples include Memorandums of Agreement or Understanding, Contracts or other more formal mechanisms.</p> <p>M4 - fine</p>
Response: The RC SDT thanks you for your comment. M1: We removed the mitigation plan from R1 and M1. M3: The requirement does not preclude individuals from using an alternate language as long as they agree to do so prior to the conversation.		
FirstEnergy	Yes	However, it is not clear whether to show compliance the voice recordings and associated transcripts are of the test done or of the conversations across those facilities.
Response: The RC SDT thanks you for your comment. Since the requirement is to test, the evidence provided should be sufficient to show that the test

3. Do you agree with the revisions made to the Violation Severity Levels in COM-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholders suggested adding more VSLs for R2. The RC SDT agreed and drafted additional VSLs reflecting time and the number of entities notified. Other changes to the VSLs were made based on revisions to the requirements.

Organization	Yes or No	Question 3 Comment
Northwest LSE Group	No	With the vague verbiage of R4 coupled with the High and Severe VSL, it is important to clarify R4 with the small DP in mind, and possibly include Lower and Moderate VSLs for smaller load-only DP violations.
<p>Response: The RC SDT thanks you for your comment. Based on the requirement, the RC SDT does not feel that additional VSLs can be written for R4. The intent of the requirement is missed if the responsible entity does not have Interpersonal Communication Capabilities with both its TOP or its BA.</p>		
Northeast Power Coordinating Council	No	see M3 comment for question 2
<p>Response: The RC SDT thanks you for your comment. See response to question 2.</p>		
IRC Standards Review Committee	No	<p>(1) Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1.</p> <p>(2) FERC expressed its desire in the June 2008 order on VSLs to have as many VSLs as possible. We suggest since R2 also has a time component in the requirement four VSLs could be written based on the timeliness of the notification as well as the number of impacted entities that were not notified. The VSLs should reflect both components.</p>
<p>Response: The RC SDT thanks you for your comment. 1) Conforming changes were made to the VSLs based on the modifications to the requirements. 2) We have added VSLs based on the time requirements.</p>		
Midwest ISO Standards Collaborators	No	<p>Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1.</p> <p>In addition, we suggest since R2 has a time component in the requirement, four VSLs could be written based on the timeliness of the notification. This would be consistent with the FERC's expressed desire in the June 2008 order on VSLs in which they stated that as many VSLs should be developed as possible.</p>
<p>Response: The RC SDT thanks you for your comment. Conforming changes were made to the VSLs based on the modifications to the requirements.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 3 Comment
<p>We have added VSLs based on the time requirements.</p>		
Central Lincoln	No	<p>The severity levels have little or no relationship to reliability. Failure to provide a evidence of an agreement per R3, for example, has no impact on reliability by itself; yet it carries the maximum VSL. In reality, the impact would only be severe if the use of an alternate language resulted in a miscommunication.</p>
<p>Response: The RC SDT thanks you for your comment. The VSLs are a metric applied after a requirement has been violated. The intent is to provide a relative measure of how far the action or inaction was from the threshold set in the requirement. Some requirements lend themselves to a relative measure of meeting the threshold (i.e. “almost met”, 12 minutes when the requirement was 10 minutes, etc), and some do not. Those that do not are often termed “binary” requirements (either you meet the threshold or you do not). The relative risk to the bulk electric system of not meeting a requirement is specifically reflected in the requirement’s VRF. The relative size of a registered entity is beyond the scope of the standard drafting team and is addressed through the NERC Statement of Compliance Registry Criteria or taken into account as a mitigating factor through the Regional compliance enforcement programs.</p>		
E.ON U.S.	No	<p>E.ON U.S. suggests that R1 be modified to include the language that when an RC, BA and/or TOP issue a directive it must state: “This is a directive” and the entity receiving the directive must state: "I understand this is a directive". E.ON U.S. also requests that language be added to the requirement that states that this communication protocol is only for reliability related directives and not for other operational directives.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R1. The purpose of R1 is to ensure that operating entities have adequate Interpersonal Communications capabilities.</p>		
Manitoba Hydro	No	<p>Conforming changes are required to the VSLs based on the suggested modifications to the requirements in question 1. In addition, since R2 has a time component in the requirement four VSLs could be written based on the timeliness of the notification.</p>
<p>Response: The RC SDT thanks you for your comment. Conforming changes were made to the VSLs based on the modifications to the requirements. We have also added VSLs based on the time requirements.</p>		
Georgia Transmission Corporation	No	<p>Again, Requirement 3 seems to be an option.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not agree with your assertion regarding R3. There is a reliability need to speak a common language, especially in issuing and receiving directives.</p>

4. Do you agree with the revisions made to the Requirements in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholder consensus has been achieved with respect to the retirement of R1 (the requirement for the TOP and BA to each have data and voice communication with RCs, BAs and TOPs). In response to the majority of the comments, the drafting team has added a new R1 to require that “Reliability Directives” be identified as such, revised and rearranged the two requirements from the last posting so that the new R2 focuses on repeating the intent of a reliability directive and the new R3 focuses on responding to that repeated directive. The drafting team is also coordinating with the RTO SDT and the OPCP SDT (Project 2007-02) on the definition and usage of the term “Reliability Directive”.

The new R1 through R3 are:

R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]

R2. Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat the intent of the Reliability Directive back to the issuer of the Reliability Directive. [Violation Risk Factor: High][Time Horizon: Real-Time]

R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that identifies an action as a Reliability Directive shall acknowledge the response from the recipient of the Reliability Directive in R2 as correct or reissue the Reliability Directive to resolve any misunderstandings. [Violation Risk Factor: High][Time Horizon: Real-Time]

The proposed definition for Reliability Directive is:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

Organization	Yes or No	Question 4 Comment
Northwest LSE Group	No	<p>It would be advantageous to exempt certain smaller Registered Entities (LSE, DP, & PSE) that are non-scheduling/tagging entities. In addition to not having a scheduling/tagging desk, many of these entities do not have a 24/7 desk to receive RC/BA/TOP reliability directives/calls, and are too small (10s of MW) to even be substantially significant in a reliability crisis. Instead of making this Standard applicable to all DPs, LSEs, and PSEs, we suggest that the RC, BAs, and TOPs to yearly publish those LSEs, DPs, and PSEs responsible for responding to emergency reliability directives.</p> <p>Also, it would be advisable for the RC, BA, and TOP giving a reliability directive to clearly preface the instruction with “The following is an emergency reliability directive” to differentiate from normal operations communications. Many smaller entities</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
		<p>do not have the resources to install reliable voice recording equipment, but having access to such recordings would be beneficial towards compliance documentation; thus, it would be helpful to require the directive issuing RC, BA, or TOP to provide a digital copy of the voice recording, or transcript if available on request to the recipient of the directive. Short of a recording or transcript of the recording, it will be difficult to determine how a small entity without recorded line would show compliance other than writing down the directive as it is given and reading it back to the issuer. If the directive is lengthy, this will slow down the process and probably defeat the purpose and value of quick action. Further, there is no guarantee that the receiver will accurately retain a complicated directive if not immediately documented in some way to allow review.</p> <p>Last of all, what is meant by the word “intent”? Must the recipient understand and demonstrate the “why” the directive is given and the intended “outcome,” or merely paraphrase the directive to demonstrate understanding? If the recipient repeats word for word the directive back to the issuer without any other indication that the directive is understood, is this a violation??</p>
<p>Response: The RC SDT thanks you for your comment. The requirements of COM-002 for LSE, DP and PSE simply state that the entity has to repeat the intent of the directive back. The issue you raise concerning smaller entities is valid, but this standard is not the venue at which to make this argument. Registration criteria are outside the scope of this project.</p> <p>We have included a new requirement R1:</p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>The word “intent” was chosen so that the recipient did not have to repeat the directive verbatim and to also indicate an understanding of the directive. If a recipient repeats the directive verbatim, it is not a violation of the requirement, as it would also capture the intent.</p>		
Northeast Power Coordinating Council	No	<p>Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements: A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer. R2 leave as is. A new R3 If not repeated, then issuer shall request the receiving Entity to repeat the communication directive. A new R4 The issuer will acknowledge the correctness of the repetition of the communications directive.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not see a reliability benefit to having an Operational Procedure requirement, as</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
<p>it would be redundant since the standard COM-002 would be mandatory and enforceable and requires the actions in the Operational Procedure that you suggest. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement.</p>		
<p>SERC OC Standards Review Group</p>	<p>No</p>	<p>The term “emergency” has a broad definition and other standards use “adverse conditions” or “adverse reliability impact”. There should be a consistency of terms when describing a system condition. The STD should include a definition of “directive” that includes more than “Emergency” operational conditions. Should this requirement be modified to include the term “Directive” and the definition of this term added to the NERC Glossary?</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. The RC SDT appreciates the baggage that comes with the defined term “Emergency”. However, it is the best fit with the normal messaging that has historically occurred in the bulk electric reliability community. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p>		
<p>Midwest ISO Standards Collaborators</p>	<p>Yes</p>	<p>We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this directive issue by developing a definition for directive. We propose the following definition: Directive or Directive A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact.</p> <p>In requirement 1, we do believe that another word than “require” should be used. Consider using “request”. An RC, BA, and TOP can’t force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>2) The RC SDT has revised the requirement to remove that part since original R2 required the recipient to repeat the intent of the directive.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
Central Lincoln	No	The inclusion of load serving entities and distribution providers does not address any present BES reliability gap.
<p>Response: The RC SDT thanks you for your comment. Loads are under the direct control of Load Serving Entities while underfrequency relays are often under the direct control of distribution providers. Current NERC standards do not address the possibility that a Reliability Directive may be issued to either of these entities. The requirements of COM-002 for LSE and DP simply state that the entity has to repeat the intent of the directive back since these entities may receive reliability directives.</p>		
JEA	No	R1: just to avoid possible auditor misunderstandings the SDT might consider replacing the words "or repeat the original statement" to "reissue the directive" so that the RC does not get into trouble if the second statement is not verbatim of the first. This also helps clarify that another statement is required from the recipient along with a final acknowledgement from the RC that the intent is correct.
<p>Response: The RC SDT appreciates your comment. You have identified a potential problem; the RC SDT agrees with your comment and has replaced the words "repeat the original statement" with "reissue the Reliability Directive".</p>		
Liberty Electric Power LLC	No	The proposed standard does not require the RC, TO, or BA to declare an emergency to the GO when issuing a directive. There has been confusion at times in the past as to whether the entity is issuing a directive based on economics or due to an emergency. The standard should be amended to require the RC/TO/BA to state the directive is due to a declared emergency. The GO is required to repeat back the intent of an emergency directive, but is not required to repeat back the intent of economic directive. This can lead to a finding of a severe VSL non-compliance on the part of the GO due to a failure of the RC/TO/BA to clearly state the nature of the directive.
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTOSDT (Project 2007-03) is also working on a similar path and the RC SDT are coordinating with that team. A new R1 has been developed that states:</p> <p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
ReliabilityFirst	No	FERC 693 excludes distribution providers if they are not a user, owner or operator of BES. This should be reflected in R2 of

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
Corporation		the standard
<p>Response: The RC SDT thanks you for your comment. Any distribution provider excluded by FERC Order 693 would not be held to the standard since standards only apply to registered entities. FERC Order 693 endorses the NERC Statement of Compliance Registry criteria (paragraph 512) and also adopted their proposal to require the ERO to modify COM-002 to apply to distribution providers and generator operators (paragraph 512). The Functional Model describes the real-time relationships between entities. Among those relationships, the DP:</p> <ul style="list-style-type: none"> • Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority <p>Such directives fall under COM-002 requirements.</p>		
Illinois Municipal Electric Agency	No	<p>IMEA questions the necessity of expanding the applicability of COM-002 as proposed in R2, particularly to the DP, LSE, and PSE functions. IMEA recommends accomplishing the intent of COM-002-3 R2 by simply referring to COM-002-3 R1 in IRO-001-2 R2 which requires those entities to comply with the RC directive. Thus it would be understood that the functional entity had repeated the directive in order to comply with it; thereby avoiding the necessity of expanding applicability to another reliability standard.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT feels that there is a difference between complying with a directive and communicating the directive effectively. The requirements of COM-002 for LSE, PSE and DP simply state that the entity has to repeat the intent of the directive back since these entities may receive reliability directives. The drafting team feels that the current draft adds clarity to the requirements.</p>		
Exelon	No	See answer # 1
<p>Response: The RC SDT thanks you for your comment. See response to answer #1.</p>		
Hydro-Québec TransEnergie (HQT)	No	<p>Support the intent but not the existing language. Do not support Requirements that include some examples since the examples can be confused with the Requirement. Do not support one written Requirement that has two requirements. Recommend the following Requirements A new R1 - Each Entity shall have Operational Procedure requiring that communications directives be repeated back to the issuer R2 leave as is. A new R3 If not repeated, then issuer shall request the receiving Entity to repeat the communication directive. A new R4 The issuer will acknowledge the correctness of the repetition of the communications directive</p>
<p>Response: The RC SDT thanks you for your comment. There are no examples in any of the requirements of COM-002-3 as posted. There are no compound requirements remaining in COM-002-3 as posted. The RC SDT does not see a reliability benefit to having an Operational Procedure requirement, as it would be redundant since the standard COM-002 would be mandatory and enforceable and requires the actions in the Operational Procedure that you suggest. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement that is internally consistent.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
Indiana Municipal Power Agency	No	<p>The requirements do not consider a pre-recorded communication that might be sent out from the Transmission Operator to Generator Operators or any other entity. If this communication is a directive associated with a real-time operational emergency condition (depending on the judgment used by an entity or auditor), it does not make sense to repeat back a pre-recorded message on the phone. It might be good to clearly state in the standard that pre-recorded messages do not need to be repeated back.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RC SDT can not envision a situation, regardless of the technology, where a Reliability Directive would be issued without confirmation from the recipient and acknowledgement of accuracy. However, even if there were an occasion as suggested by your comment, the bulk electric system can only remain reliable by coordinating actions between reliability entities. A pre-recorded communication is a broadcast, not a coordinating activity. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT are coordinating with that team.</p>		
Duke Energy	No	<p>We agree with adding the clarification that these requirements refer to “emergency” communications, but we think the word “Emergency” should be capitalized to further clarify that it is a defined term in the NERC Glossary.</p> <p>Also, the phrase “require the recipient of the verbal directive to repeat the intent of the directive back” should be changed to “have the recipient of the verbal directive repeat the intent of the directive back”. This avoids making the issuer of the directive make a statement requiring a repeat back unless the recipient actually fails to repeat back as normally expected.</p>
<p>Response: The RC SDT thanks you for your comment. We have removed the word “emergency” and are proposing a definition of Reliability Directive which includes the defined term “Emergency” and which is being posted for comment.</p> <p>The RC SDT agrees with the intent of your comment. The phrase you mention has been removed from R1 as it is required by R2. We have made other edits to tighten the requirements as well.</p>		
Consumers Energy Company	No	<p>COM-002 R2 specifies the Generator Operator that receives a directive from the Transmission Operator, Reliability Coordinator or Balancing Authority must repeat the intent of the directive back to the Transmission Operator. COM-002 M2 specifies that evidence must be retained in the form of either voice recordings or transcripts by the generator operator. Since the Transmission Operator, Reliability Coordinator and Balancing Authority already have voice recording capability (centrally located), it is not necessary for the Generator to also install voice recording capability at each generating station. We suggest the wording of COM-002 be changed such that only the Transmission Operator, Reliability Coordinator and Balancing</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
		Authority be required to keep voice recordings or transcripts.
<p>Response: The RC SDT thanks you for your comment. While recordings may be available from other entities, a Generator Operator has mandatory requirements with which it must comply. Generator Operators must have evidence that they complied with the requirement. The evidence mentioned in the measures is a suggestion of possible methods of evidence. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</p>		
Independent Electricity System Operator	No	<p>(i) We suggest the word "emergency" be capitalized since it is a defined term which generally covers the conditions under which directives are issued.</p> <p>(ii) We further suggest that to avoid confusion between operating instructions and directives, the term directive should be defined as suggested below: Directive or Directive A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires complying action by the recipient to prevent or mitigate an Adverse Reliability Impact.</p> <p>(iii) Since R1 contains two requirements, there may be some benefit in separating these since that would make the VSLs clearer, i.e. separate the requirements placed on the issuer of the directive to (a) request the recipient to repeat the intent of the directive and (b) to acknowledge the response of the recipient as correct.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>i) We have removed the word "emergency" and are proposing a definition of Reliability Directive which includes the defined term "Emergency" and which is being posted for comment.</p> <p>ii) The RC SDT is proposing a definition of Reliability Directive that will be posted for comment. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>iii) The RC SDT agrees and has modified R1. Since R2 requires the recipient to repeat the intent of the directive, we have removed the part of R1 that states the issues shall require the recipient to repeat the directive. This removed the compound requirement.</p>		
MRO NSRS	No	<p>The MRO NSRS largely agrees with the changes to the requirements and believes it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. MRO NSRS believes that the SDT could further support resolution to this directive issue by developing a definition for directive. MRO NSRS proposes the following definition:</p> <p>Directive or Directive – A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
		<p>that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact.</p> <p>In requirement 1, MRO NSRS does believe that another word than “require” should be used. Consider using “request”. An RC, BA, and TOP can’t force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTOSDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive.</p>		
American Transmission Company	No	<p>are supportive of the language regarding “directives” which clarifies that directives are those which involve operating emergencies. However, in R1, we believe that the word “requires” should be changed to “request”. An entity can request that another entity repeat back a directive but we cannot “require” it.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a definition of Reliability Directive that will be posted for comment. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive.</p>		
IRC Standards Review Committee	Yes	<p>(1) We largely agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as Directives. This makes it clear that only Directives that are required for operating emergencies require three way communication. We believe that the SDT could further support resolution to this Directive issue by developing a definition for Directive. We propose the following definition: Directive A verbal communication by a Reliability Coordinator, Transmission Operator, or Balancing Authority that requires action by the recipient to prevent or mitigate an Adverse Reliability Impact. Please note that AESO already has this term defined. The above suggested definition may be different from the AESO’s definition.</p> <p>(2) In requirement 1, we do believe that another word than “require” should be used. Consider using “request”. An RC, BA,</p>

		and TOP can't force the recipient of the Directive to repeat it back. They can ask or request it be repeated back though.
<p>Response: The RC SDT thanks you for your comment.</p> <p>1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>2) The RC SDT has revised the requirement to remove that part since original R2 required the recipient to repeat the intent of the directive.</p>		
Calpine Corporation	Yes	Calpine supports three part communications when verbal directives are issued during real-time operational emergency conditions. Calpine believes all issued directives should be explicitly identified as such.
<p>Response: The RC SDT thanks you for your comment. A new R1 has been developed that states:</p> <p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
Western Area Power Administration	Yes	This is a very good improvement. Some Regional Entities were interpreting every communication from a control room as a "directive" and stating that "directives" were equal to any "normal instruction" that related to operations of the power system. Making it clear that the directives are associated with emergency conditions is a big improvement. The drafting team may wish to consider additional clarification, such as, "The entity that issues a verbal directive shall make it known during the communication that, "This is a directive"? . All parties to the communication would be clear that the real-time situation was an emergency condition, and that the requirements for repeating the intent were in effect.
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team. A new R1 has been developed that states:</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
<p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p>		
American Electric Power	Yes	<p>AEP does generally agree with the revisions, but we have concerns with the much wider scope of three part communications that expand the required voice or transcript evidence. There is no rationale provided for changing the text in R1 and M1, and adding a new R2 and M2. We would recommend that these items remain as stated in Version 2.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT's intent was to create a consistent set of noncompound requirements and to provide clarity according to the scope of the drafting team.</p>		
Manitoba Hydro	Yes	<p>For the most part agree with the changes to the requirements and believe it goes a long way towards resolving the issue NERC has created recently with interpreting operating instructions as directives. This makes it clear that only directives that are required for operating emergencies require three way communication. The SDT could further support resolution to this directive issue by developing a definition for directive.</p> <p>In requirement 1, I would use another word than "require". Consider using "request". An RC, BA, and TOP can't force the recipient of the directive to repeat it back. They can ask or request it be repeated back though.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTOSDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team. 2) The RC SDT has revised the requirement to remove that part since original R2 required the recipient to repeat the intent of the directive.</p>		
FirstEnergy	Yes	<p>1. We agree with the clarification in R1 that a directive per COM-002-3 is a "verbal directive associated with real-time operational emergency conditions". We understand this to be a "Reliability" directive used during times of emergency or in situations where reliability may be an issue. Also, with this clarification, it confirms that the term "directive", as used in this standard, does not include "Operational" directives issued by System Operators during normal system conditions to change the status of an element such as a circuit breaker.</p> <p>2. The industry does not appear to have a clear, consistent definition of what constitutes a directive. We suggest the standard require the person issuing a directive to use the phrase "I am directing you to ?", "I am ordering you to ?" or something similar</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 4 Comment
		<p>to invoke the three part communication requirement.</p> <p>3. Since this standard deals with communications and coordination during emergency conditions, it may be helpful to change the title of the standard to "Communications and Coordination Emergency Conditions".</p> <p>4. The phrase "the intent of the directive" could be difficult to comply with and measure. The words "the intent of" should be removed from Requirements R1 and R2.</p>
<p>Response: The RC SDT thanks you for your comment. 1) The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>This term has been included in the requirements of COM-002. The RTO SDT (Project 2007-03) is also working on a similar path and the RC SDT is coordinating with that team.</p> <p>2) We agree and have included a new R1 that states:</p> <p>When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>3) The RC SDT disagrees. This standard covers all interpersonal communications, not just emergency communications. The title stays as is.</p> <p>4) The phrase was included so that the recipient did not have to repeat the directive verbatim and to also indicate an understanding of the directive. If a recipient repeats the directive verbatim, it is not a violation of the requirement, as it would also capture the intent. The goal of the RC SDT is to assure continued reliability without creating a trap by requiring word-for-word repetition.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

5. Do you agree with the revisions made to the Measures in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholder consensus has been achieved with respect to the retirement of R1 and M1 from the last approved version of this standard. In accord with the majority of commenters, the drafting team made changes to the Measures to bring them into conformance with the adopted suggestions from question 4 for improving the Requirements. Specifically, a new R1 was added to require that reliability directives be identified as such – and the two requirements from the last posting were rephrased and rearranged for clarity. The Measures were changed to match the revised requirements.

Organization	Yes or No	Question 5 Comment
Illinois Municipal Electric Agency		Conforming changes are required to the Measures based on the suggested modifications to the requirements in Question 4.
Response: The RC SDT thanks you for your comment. The measures were revised to reflect changes to the requirements.		
Hydro-Québec TransEnergie (HQT)	No	Address the new proposed Requirements above in Question 4.
Northeast Power Coordinating Council	No	Addressed the new proposed Requirements above in Question 4.
Response: The RC SDT thanks you for your comment. The measures were revised to reflect changes to the requirements.		
Duke Energy	No	Change “emergency” to “Emergency” per comment on R1 above. Also change the phrase “required the recipient of the verbal directive to repeat” to “had the recipient of the verbal directive repeat” per our comment on R1 above.
Response: The RC SDT thanks you for your comment. We have removed the word “emergency” and are proposing a definition of Reliability Directive which includes the defined term “Emergency” and which is being posted for comment.		
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
Response: The RC SDT thanks you for your comment. See response to Question 4. The measures have been revised to reflect changes to the requirements.		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 5 Comment
Central Lincoln	No	M2 goes beyond R2 in requiring recordings. This will be cost prohibitive for small entities that have little impact on the BES. Telephone recording equipment will be needed on company phones, and some way to handle the recording of directives and responses that occur after hours on home or cell phones must be handled. Drafters seem to have missed the fact that not all the applicable entities have 24/7 dispatch centers.
<p>Response: The RC SDT thanks you for your comment. The measure lists possible examples of evidence to prove compliance with the requirement. It does not impose any additional requirements or the purchase of recording systems. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</p>		
JEA	No	Not all entities have recorded lines. The standard does not directly require the to record their lines, but the measure implies it. It seems that a written log should be sufficient. Since both sides of the conversation gets audited, the auditors will have ample opportunity to check up on both sides.
<p>Response: The RC SDT thanks you for your comment. The measure lists possible examples of evidence to prove compliance with the requirement. It does not impose any additional requirements or the purchase of recording systems. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</p>		
Northeast Utilities	No	NU agrees with expanding the applicability of the Standard beyond the Reliability Coordinators, Balancing Authorities and Transmission Operators to ensure that the recipient of a verbal directive repeats back the directive to the issuer (R2). Despite NU's agreement with R2, NU believes that M2 is duplicative to the intent of M1 and unnecessarily requires the installation of voice recording capabilities at the entities other than a RC, BA or TOP. It is our belief that the voice recordings of the RC, BA and TOP (M1) provide the evidentiary support required by all applicable entities.
<p>Response: The RC SDT thanks you for your comment. The measure lists possible examples of evidence to prove compliance with the requirement. It does not impose any additional requirements or the purchase of recording systems. We have revised the measure to include "...which could include, but is not limited to, voice recordings, transcripts of voice recordings or operator logs..."</p>		
Independent Electricity System Operator	No	Comments: Some changes may be necessary based on the SDT's response to our suggestion in Q4.
<p>Response: The RC SDT thanks you for your comment. See response to your comments on question 4.</p>		
MRO NSRS	No	MRO NSRS largely agrees with the measures with the exception that a conforming change needs to be made to M1 if the suggestion regarding "require" in Q4 is accepted.

6. Do you agree with the revisions made to the Violation Severity Levels in COM-002-3 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Several stakeholders suggested revisions to the VSLs based on suggested revisions to the requirements. The RC SDT made changes to the VSLs to conform to revisions to the requirements.

Organization	Yes or No	Question 6 Comment
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
Response: The RC SDT thanks you for your comment. The Measures have been revised to reflect changes to the requirements.		
Northeast Power Coordinating Council	No	Address the new proposed Requirements.
Response: The RC SDT thanks you for your comment. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement. The new proposed Requirements have been addressed.		
Bonneville Power Administration	No	<p>Comments: Issue #1: Violation Severity Level. The Moderate and Severe VSLs for Requirement R1 can lead to confusion. For instance, the Moderate VSL states that the responsible entity “did not acknowledge the recipient was correct in the repeated directive OR (emphasis theirs) failed to repeat the intent of the original statement to resolve any misunderstandings. ”What is it saying here? Is it dinging the responsible entity for making no response at all to the recipient after they repeated the intent of the message? Or is that what the Severe VSL is dinging for when it includes an AND rather than an OR in the statement? I can’t tell what the drafting team was intending with their statements, but one of the statements seem to infer that the responsible entity can actually be dinged for not doing both, acknowledging the recipient as being correct in their response and at the very same time repeating the intent of the original statement to resolve any misunderstandings because the recipient was incorrect in their response. This then argues that the recipient can be both correct and incorrect at the same time. I didn’t think that was possible “similar to binary code” either you get a one or a zero, but not both and never neither!</p> <p>I would argue that the drafting team should rewrite their VSLs to succinctly state that the responsible entity failed to respond after the recipient repeated the intent of the message. With that in mind, either the Moderate or the Severe VSL will be rewritten in an understandable way and the other VSL will disappear in the realms of impossible things.</p>
Response: The RC SDT thanks you for your comment. We have eliminated the Moderate VSL and only have the Severe.		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 6 Comment
IRC Standards Review Committee	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Additionally, we believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the Directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the Directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal Directive associated with real-time operating emergency conditions and the recipient repeated the intent of the Directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p>Response: The RC SDT thanks you for your comment. We have modified all the requirements in a way that addresses your comments. Conforming changes to the VSLs have been made.</p>		
Midwest ISO Standards Collaborators	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Additionally, we believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient was correct. <p>Response: The RC SDT thanks you for your comment. We have modified all the requirements in a way that addresses your comments. Conforming changes to the VSLs have been made.</p>		
American Electric Power	No	<p>AEP is concerned that the severe VSL assigned to Requirement 2 is excessive and should be reconsidered.</p>
<p>Response: The RC SDT thanks you for your comment. We believe that R2 is a binary requirement which results in a Severe VSL. The entity either performed the requirement or did not.</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 6 Comment
Manitoba Hydro	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to be made. Additionally, believe the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, we believe the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. We agree that these distinctions make sense but offer the following changes to clarify the intent. Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient was correct. Severe VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p>Response: The RC SDT thanks you for your comment. We have modified all the requirements in a way that addresses your comments. Conforming changes to the VSLs have been made.</p>		
Illinois Municipal Electric Agency	No	<p>Conforming changes are required to the VSLs based on the suggested modifications to the requirements in Question 4.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT feels that there is a difference between complying with a Reliability Directive and communicating the Reliability Directive effectively. The requirements of COM-002 for LSE, PSE and DP simply state that the entity has to repeat the intent of the directive back since these entities may receive Reliability Directives. The drafting team feels that the current draft adds clarity to the requirements. The VSLs were revised to match the revised requirements.</p>		
Hydro-Québec TransEnergie (HQT)	No	<p>address the new proposed Requirements.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT does not see a reliability benefit to having an Operational Procedure requirement, as it would be redundant since the Standard COM-002 would be mandatory and enforceable and requires the actions in the Operational Procedure that you suggest. The RC SDT feels that we have the same requirements that you suggest but in a different arrangement.</p>		
Duke Energy	No	<p>Change “emergency” to “Emergency” in the VSLs per our comment on R1 above. Also, we don’t see a tangible difference between the Moderate and Severe VSLs, and the High VSL should really be the Severe VSL. We suggest having just a High and a Severe VSL as follows:” High VSL: “The responsible entity issued a verbal directive associated with real-time operating Emergency conditions and had the recipient repeat back the intent of the directive, but did not either acknowledge the recipient was correct in the repeated directive or failed to repeat the intent of the original statement to resolve any misunderstandings.” Severe VSL: “The responsible entity issued a verbal directive associated with real-time operating</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 6 Comment
		Emergency conditions, but did not have the recipient repeat back the intent of the directive.”
<p>Response: The RC SDT thanks you for your comment. We have removed the word “emergency” and are proposing a definition of Reliability Directive which will be posted for comment. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive. Conforming changes to the VSLs have been modified.</p>		
Independent Electricity System Operator	No	<p>The sequence of communication required under R1 is intended to ensure that directives from the issuing entities are clearly understood. The earlier this sequence is broken, the greater the uncertainty that this goal is achieved and the greater should be the severity level. Thus, failure to request that the recipient entity repeat the intent of the directive “ the earliest step in the sequence - should attract the “Severe” VSL.Also, failing to repeat the original directive when there is any misunderstanding, again, in our view, leaves the intent of the directive equally unclear and should also attract a “Severe” VSL.Failing to acknowledge the recipient was correct in the repeating the intent of the directive “ the last step in the sequence “ is already assigned a “Moderate” VSL and this should not be repeated in the “Severe” VSL.We therefore suggest that the two conditions under “High” and “Severe” in R1 be combined as one under “Severe” as follows: The responsible entity issued a verbal directive associated with real-time operating emergency conditions but did not require the recipient to repeat the intent of the directive;ORThe responsible entity issued a verbal directive associated with real-time operating emergency conditions and required the recipient to repeat the intent of the directive, but failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p>Response: The RC SDT thanks you for your comment. In the revised standard, R2 requires the recipient to repeat the intent of the directive. We have removed the part of R1, (now R3), that states the issuer shall “require” the recipient to repeat the directive. We have made revisions to the VSLs to match the requirements.</p>		
MRO NSRS	No	<p>If the suggestion regarding “require” in Q4 is accepted, conforming changes to the VSL need to made. Additionally, MRO NSRS believes the Moderate and Severe VSLs are confusing based on repeating the language exactly in the requirement. In most cases, repeating the language of the requirement is best but we believe a deviation is warranted here. The intent of Moderate appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct and the repeat was correct. In the Severe, MRO NSRS believes the intent appears to be that the RC, TOP or BA did not acknowledge the repeat of the directive was correct but the repeat was incorrect. MRO NSRS agrees that these distinctions make sense but offer the following changes to clarify the intent.</p> <p>Moderate VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive correctly, but the responsible entity did not acknowledge the recipient</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 6 Comment
		<p>was correct.</p> <p>Severe VSL: The responsible entity issued a verbal directive associated with real-time operating emergency conditions and the recipient repeated the intent of the directive incorrectly, but the responsible entity failed to repeat the intent of the original statement to resolve any misunderstandings.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a definition of Reliability Directive that will be posted for comment. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>We have removed the “require” part of R1 since R2 is an enforceable requirement for repeating the directive. Conforming changes to the VSLs have been modified.</p>		
SERC OC Standards Review Group	Yes	If R1 changes as suggested in Question 4, the VSLs will need to be changed also.
<p>Response: The RC SDT thanks you for your comment. The RC SDT is proposing a new definition for Reliability Directive to differentiate it from normal operations communications. Our proposed definition is:</p> <p>A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p> <p>The VSLs have been revised to reflect the proposal.</p>		
FirstEnergy	Yes	
JEA	Yes	
Liberty Electric Power LLC	Yes	
WECC Reliability Coordinator	Yes	

Consideration of Comments on Project 2006-06 Reliability Coordination

Calpine Corporation	Yes	
Western Area Power Administration	Yes	
Southern Company	Yes	
ReliabilityFirst Corporation	Yes	
Georgia Transmission Corporation	Yes	
Northeast Utilities	Yes	

7. Do you agree with the revisions to the definition of Adverse Reliability Impacts (IRO-001-2)? If not, please explain in the comment area.

Summary Consideration: Stakeholders suggested removing the word “outages” after “cascading” as per the NERC Glossary of Terms and a FERC Directive issued December 27, 2007. The RC SDT made the revision. There were no other suggested revisions to the definition.

Organization	Yes or No	Question 7 Comment
Northeast Power Coordinating Council	No	Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
Hydro-Québec TransEnergie (HQT)	No	Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
Northeast Utilities	No	Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
Independent Electricity System Operator	No	Comments: Remove the word “outages” that appears after “cascading” as per NERC Glossary and FERC Directive issued Dec. 27, 2007.
Response: The RC SDT thanks you for your comment. The RC SDT agrees and has removed “outages”. We have also capitalized “Cascading”		
FirstEnergy	Yes	If the term "cascading" used in the definition is referring to the NERC-defined term, it should be capitalized.
Response: The RC SDT thanks you for your comment. The RC SDT agrees and has capitalized “Cascading”		
IRC Standards Review Committee	Yes	The drafting team should consider that NERC is moving away from using the term "cascading outages". FERC has directed NERC to rescind this definition, and use the defined term "cascading" instead.
Response: The RC SDT thanks you for your comment. The RC SDT agrees and has removed “outages”. We have also capitalized “Cascading”		
SERC OC Standards Review Group	No	What is the difference between “Adverse Reliability Impacts” and the definition of an IROL? Is this going to replace an IROL?

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 7 Comment
<p>Response: The RC SDT thanks you for your comment. Adverse Reliability Impacts is already a defined term that the RC SDT is proposing to revise. IROL is a limit, while ARI is the impact of events. ARI will not replace IROL.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

8. Do you agree with the revisions to the Requirements in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholders generally agreed with the revisions to the requirements. Several stakeholders suggested adding the words “an issued” before “directive in R3. The RC SDT agreed and made the change. No further revisions were made to the requirements.

Organization	Yes or No	Question 8 Comment
Northwest LSE Group	No	<p>To reduce the compliance burden on smaller entities that would never receive a Reliability Coordinator directive and reduce needless Regional Entity auditing, it would be most helpful to require the RC to publish its list of entities responsible for receiving reliability directives.</p> <p>Also, any Registered Entity should be able to request copies of digital audio recordings or transcripts of the audio recordings if available from the RC.</p>
<p>Response: The RC SDT thanks you for your comment. An RC may issue a directive to any registered entity within its footprint. The burden of compliance is assigned by the NERC registration process and is outside of the scope of this drafting team.</p> <p>The requirements of IRO-001 do not preclude an entity from requesting copies of digital audio recordings or transcripts from the RC.</p>		
Northeast Power Coordinating Council	No	<p>Add “an issued” to the wording as shown following: The Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and/or Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform the its Reliability Coordinator upon recognition of its inability to perform the issued directive.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees and has added “an issued” before directive. We have also changed directive to Reliability Directive and included the definition at the beginning of IRO-001 and COM-002</p> <p>Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p>		
SERC OC Standards Review Group	No	<p>If R2 of IRO-001-1 is retired, what process is in place to ensure that reliability plans are kept up to date and are reviewed to approve footprint changes?</p>
<p>Response: The RC SDT thanks you for your comment. As stated in the posted implementation of IRO-001, this is covered in NERC Rules of Procedure, Section 503, item 2.2:</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 8 Comment
<p>“Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”. The RC SDT proposed retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.</p>		
FirstEnergy	No	<p>Regarding the retirement of IRO-001-1 R7 We are not convinced that this requirement is redundant with IRO-014-1 R1. The existing requirement requires the RC to "have clear, comprehensive coordination agreements with adjacent RCs to ensure that SOL or IROL violation mitigation requiring actions in adjacent RC areas are coordinated". IRO-014-1 R1 requires agreements for coordination of actions between RCs to support Interconnection reliability, but it does not specifically require "clear" and "comprehensive" agreements to mitigate SOL or IROL violations. For IRO-001-1 R7 to be properly retired, the "mitigation of SOL and IROL violations" should be explicitly stated in IRO-014-2 R1 as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT believes that R1.6 of IRO-014-2 addresses your concern as the procedures, processes or plans include:</p> <p style="padding-left: 40px;">Authority to act to prevent and mitigate conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.</p> <p>The definitions of each are:</p> <p>IROL: A System Operating Limit that, if violated, could lead to instability, uncontrolled separation, or Cascading Outages that adversely impact the reliability of the Bulk Electric System.</p> <p>Adverse Reliability Impacts: The impact of an event that results in Bulk Electric System instability; uncontrolled separation or Cascading.</p>		
Midwest ISO Standards Collaborators	No	<p>We agree with many of the changes. However, we believe R5 is not necessary for reliability. We agree the RC should notify impacted entities when the transmission problem has been mitigated; however, if the RC fails to notify the impacted entities, it will not result in an Adverse Reliability Impact. Thus, it is not necessary as a sanctionable requirement.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 notifies entities when the system is in a stable state and facilitates Interpersonal Communication between entities.</p>		
Liberty Electric Power LLC	No	<p>Similar objection to COM-002-3: There should be a requirement to the RC to declare the nature of the directive, emergency or economic.</p>
<p>Response: The RC SDT thanks you for your comment. The reliability standards do not address economic issues. The RC SDT has developed a</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 8 Comment
<p>proposed definition of Reliability Directive that should address your concern.</p> <p>Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p>		
Manitoba Hydro	No	R5 does not make sense as it doesn't create an adverse reliability impact should the RC fail to notify impacted entities.
<p>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 let's entities know when the system is in a stable state and facilitates Interpersonal Communication between entities.</p>		
Illinois Municipal Electric Agency	No	<p>IMEA supports the comments submitted by the MISO Standards Collaboration Group.</p> <p>In addition, while we agree with the proposed revisions to IRO-001-2 R2, IMEA recommends (as indicated in our comments to Question 4) that a reference be made to COM-002-3 R1 in IRO-001-2 R2. By including this reference, it is understood the applicable entities successfully repeated the directive in order to comply with the directive.</p>
<p>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 notifies entities when the system is in a stable state and facilitates Interpersonal Communication between entities.</p> <p>We have included our proposed definition of Reliability Directive in both COM-002 and IRO-001 and used the term in the appropriate requirements. This will provide the linkage you suggest.</p>		
Hydro-Québec TransEnergie (HQT)	No	Add "an issued" to the wording as shown following: Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform "an issued" directive.
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees and has added "an issued" before directive. We have also changed directive to Reliability Directive and included the definition at the beginning of IRO-001 and COM-002.</p> <p>Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.</p>		
Northeast Utilities	No	The intent of R3 is not clear - i.e., " shall inform its Reliability Coordinator upon recognition of its inability to perform a directive". Does this requirement pre-suppose a directive has been given? Suggest adding clarifying language that

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 8 Comment
		indicates that the requirement is applicable subsequent to a directive being received. It is our belief that the wording of Measure M3 supports the suggested changes to R3.
<p>Response: The RC SDT thanks you for your comment. R3 has been revised to add clarity per your comment:</p>		
<p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform an issued Reliability Directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p>		
Independent Electricity System Operator	No	Comments: Change “inability to perform a directive.” to “inability to perform an issued directive.”
<p>Response: The RC SDT thanks you for your comment. The RC SDT agrees and has added “an issued” before directive. We have also changed directive to Reliability Directive and included the definition at the beginning of IRO-001 and COM-002.</p>		
<p>Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency</p>		
MRO NSRS	No	MRO NSRS agrees with many of the changes. However, we believe R5 is not necessary for reliability. MRO NSRS agrees the RC should notify impacted entities when the transmission problem has been mitigated; however, if the RC fails to notify the impacted entities, it will not result in an Adverse Reliability Impact. Thus, it is not necessary as a sanctionable requirement.
<p>Response: The RC SDT thanks you for your comment. The RC SDT concurs that Adverse Reliability Impacts will not result from an RC not notifying impacted entities when a problem has been mitigated. However, impacted entities may have taken actions when the problem arose. These entities need to be informed that the problem has been mitigated so that they can return to normal operations. R5 notifies entities when the system is in a stable state and facilitates Interpersonal Communication between entities.</p>		
Xcel Energy	No	R6 – while this requirement has merits, it does not appear to fall under the stated purpose of the standard “To establish requirements for issuance of and complying with Reliability Coordinator directives or notification within the Reliability Coordinator Areas.”. Either the purpose should be modified or this requirement should be placed in a more appropriate location, e.g. IRO-002-2 (along with R8).
<p>Response: The RC SDT thanks you for your comment. The RC SDT moved this requirement into IRO-001 from IRO-002 rather than have a single requirement standard.</p>

10. Do you agree with the revisions to the Violation Severity Levels in IRO-001-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Several stakeholders suggested revisions to the VSLs for R4 and R5. The RC SDT concurs that improvements are warranted for the VSLs for R4 and R5. The VSLs have been changed accordingly. The VSL for R3 was revised to add the word “issued” before Reliability Directive to match the revised requirement. The VSLs for R4 and R5 were modified to clarify that if the responsible entity did not notify any others, then this is a Severe VSL.

Organization	Yes or No	Question 10 Comment
Northwest LSE Group	No	Only in making the Measures agree with the suggested changes to the requirements above.
Response: The RC SDT thanks you for your comment. The measures were revised to reflect changes to the requirements as necessary.		
Northeast Power Coordinating Council	No	<p>(i) R4: Since failing to issue an alert to 3 entities already attracts a “High” VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a “Severe” VSL. We suggest to change the High VSL to: “failed to issue an alert to three, but not all, impacted”. and the Severe VSL to: “failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a “Severe” violation. If there were 6 BAs, TOPs etc. and 3 were not alerted, this would be a “High” violation. In this last case, if 4 BAs, TOPs etc. were not alerted, this would be a “Severe” violation.</p> <p>(ii) (ii) R5: Similar changes as in R4 should also apply to High and Severe in R5.</p>
Response: The RC SDT thanks you for your comment. We concur that improvements are warranted for the VSLs for R4 and R5. The VSLs have been revised per your suggestion accordingly.		
Midwest ISO Standards Collaborators	No	The Commission stated in their order on VSLs in June of 2008 their preference for as many VSLs as possible. We believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause “but not all”. It is not necessary.
Response: The RC SDT thanks you for your comment. The VSL for R1 was revised as recommended. There is not a Moderate VSL for R2.		
Liberty Electric Power LLC	No	The VSL's have a "Severe" VSL attached to a GO who fails to inform the RC when the Go becomes aware it is are unable to fully comply with a directive. However, the RC failing to inform two TO's - who potentially could have many

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 10 Comment
		GOs supplying power to their systems - of an emergency is only a "Moderate" VSL.
Response: The RC SDT thanks you for your comment. The VSLs for R4 and R5 have been revised to more closely fit the intent of the requirements.		
E.ON U.S.	No	E.ON U.S. suggests that the VSL for R4 should be binary with the Severe VSL for failing to notify all entities as per R4. Partially meeting R4 is not consistent with the language in R4. E.ON U.S. also suggests that the VSL for R5 should be binary with the Severe VSL for failing to notify all entities as per R5. Partially meeting R5 is not consistent with the language in R5 but the reliability impact of partially meeting R5 is low.
Response: The RC SDT thanks you for your comment. The requirements R4 and R5 are not binary in nature and therefore do not meet the VSL guideline for binary. We have revised the High and Severe VSLs for R4 and R5 (see comment of NPCC above).		
Manitoba Hydro	No	Believe two VSLs are possible for R1 based on whether the RC is acting or directing actions to prevent versus mitigate. Failure to mitigate should be Severe. Failure to prevent should be High because if the RC fails to act or direct action to prevent, the Adverse Reliability Impact may still not happen if system conditions change. For the Moderate VSL of R2, please remove the clause "but not all". It is not necessary.
Response: The RC SDT thanks you for your comment. We concur with your suggestion to split the single VSL into two separate VSLs, one addressing prevention and one mitigation. The VSLs for R1 have been changed accordingly.		
Illinois Municipal Electric Agency	No	IMEA supports the comments submitted by the MISO Standards Collaboration Group.
Response: The RC SDT thanks you for your comment. Please review the response to MISO SCG comments.		
Hydro-Québec TransEnergie (HQT)	No	<p>(i) R4: Since failing to issue an alert to 3 entities already attracts a "High" VSL, not doing so for ANY (i.e. failing to issue an alert to all entities) or more than three should attract a "Severe" VSL. We suggest to change the High VSL to: "failed to issue an alert to three, but not all, impacted". and the Severe VSL to: "failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. Some examples may help to make our intent clearer: If there were 3 BAs, TOPs etc. and none were alerted, this would be a "Severe" violation. Duke Energy	Yes	

11. Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholders suggested revising R8 to include provisions for avoiding implementing actions that would violate safety, equipment or regulatory or statutory requirements. The RC SDT agreed and added this to the requirement. Other stakeholders suggested adding "For conditions or activities that impact other Reliability Coordinator Areas,..." at the beginning of R1 and R3. The RC SDT agreed and added this to the requirements. The Time Horizons for R2 were revised as suggested to "Same Day Operations and Operations Planning". Several stakeholders expressed concerns regarding having R6-R8 as separate requirements. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT contends the requirements are adequate as written.

Organization	Yes or No	Question 11 Comment
Northwest LSE Group		Abstain
Northeast Power Coordinating Council	No	The intents of Requirements R7 and R8 are addressed in R6, and do not add anything. Suggest removing R7 and R8.
<p>Response: The RC SDT thanks you for your comment. The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. This was done to eliminate a compound requirement (a requirement that contained multiple separate requirements). Each requirement is different and requires different specific actions. Please see the posted implementation plan for IRO-014 for details.</p> <p>http://www.nerc.com/docs/standards/sar/IRO-014-2_Implementation_Plan_Clean_2009July9.pdf</p>		
SERC OC Standards Review Group	No	Does the STD intend to give a Reliability Coordinator the authority to direct reliability outside their reliability area? This appears to be in conflict with IRO-001.
<p>Response: The RC SDT thanks you for your comment. IRO-014 deals with coordinating plans, processes and procedures ahead of time. The requirements state that RCs will follow these agreed to plans, processes or procedures.</p>		
FirstEnergy	No	See our comments from Questions 8. If IRO-001 R7 is retired and deemed covered by IRO-014 R1, then IRO-014 R1 should include the "mitigation of SOL and IROL violations" as one of the items to be addressed in the RC's Operating Procedure, Process, or Plan.

Organization	Yes or No	Question 11 Comment
<p>Response: The RC SDT thanks you for your comment. Please see response to question 8. The RC SDT did not make any revisions as this issue is covered by R1.6 relating to Adverse Reliability Impacts.</p>		
<p>IRC Standards Review Committee</p>	<p>No</p>	<p>(1) R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, placing the burden on the same RC to obtain the agreement of impacted RCs may not be appropriate since the RC experiencing the Adverse Reliability Impact may not be able to force impacted RC to concur. We suggest the SDT to consider: a. Remove the bullet to require agreement from the impacted RC; b. Add a new requirement that the impacted RC shall acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given.</p> <p>(2) We realize that R7 implies that the RC experiencing the Adverse Reliability Impact has come up with an alternative plan when its initial plan was not agreed to, but the alternative may still be disagreed by the impacted RC. Simply implementing the alternative plan, as stipulated in R8, could expose the impacted RC to operate in an unreliable or unsafe domain. We therefore request the SDT to assess if any requirements need to be introduced to resolve this difference with due regard to reliability concerns in both RC areas when agreement cannot be reached even on the alternative plan.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>1) R2 deals with procedures, processes and plans identified and developed ahead of time. If the plan of one RC requires action from another RC, the RC SDT feels it is necessary to get agreement from the second RC to take action, otherwise the plan is not a plan that will maintain reliability. The intent of R6, 7, and 8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT believes the requirements are adequate as written.</p> <p>2) We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement.</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations</i></p>		
<p>Midwest ISO Standards Collaborators</p>	<p>No</p>	<p>Requirements R2 and R8 need additional work. R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 11 Comment
		<p>Further, the drafting team needs to clarify that R2 also applies to the mitigation plan in R7. Because R7 requires the RC experiencing the Adverse Reliability Impact to develop the mitigation plan, the mitigation plan may not be agreed to by the impacted RC. The impacted RC may have a perfectly valid reliability, statutory, legal, or regulatory reason for not agreeing to the mitigation plan. R8 still obligates the RC to implement the mitigation plan developed in R7 though it may be contrary to reliability. R8 needs to allow the RC to refuse to implement the mitigation plan if the impacted RC has a reliability, statutory, legal or regulatory reason. Further the drafting team should consider if the impacted RC could refuse because the RC experiencing the Adverse Reliability Impact has not implemented comparable measures in their own area. R8 as written could allow an RC to simply pass cost on to the neighboring RC in the name of reliability. For example, the RC may not want to order a unit to be committed to avoid certain startup costs but they ask the neighboring RC to start up a unit in their footprint.</p>
<p>Response: The RC SDT thanks you for your comment.</p> <p>R2 deals with procedures, processes and plans identified and developed ahead of time. If the plan of one RC requires action from another RC, the RC SDT feels it is necessary to get agreement from the second RC to take action, otherwise the plan is not a plan that will maintain reliability. The intent of R6, R7, and R8 is to handle those things that arise that may not have had a plan identified in advance. The RC SDT believes the requirements are adequate as written.</p> <p>R7/R8: We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement.</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]</i></p> <p>The second comment deals with economic issues and not with reliability. We cannot address economic issues, but it would be reasonable to expect that plans developed in advance could include equity considerations. Also, it is possible to postulate a scenario where the RC experiencing the Adverse Reliability Impact may not have actions to take that are effective and the other impacted RC could have very effective actions to take and should take them regardless of whether the RC developing the mitigation plan has taken comparable measures in its own area.</p>		
Southern Company	No	<p>IRO-001-1 Requirement 3 states that, “The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing- Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System.” This does not give one RC the authority to direct another RC. Requirement 7 and 8 would allow one RC to give a directive to another RC if they disagree. This would allow an RC with bad information to require another RC to carry out a mitigation plan that could degrade system reliability. For example, RC1 identifies a possible SOL violation in RC2s reliability area due to RC1s generation pattern. RC1 and RC2 can’t agree that there is a problem. In order to mitigate the SOL a mitigation plan is developed by RC1 that requires RC2 to redispatch generation and reconfigure transmission in RC2’s area so that the generation and transmission in RC1’s area won’t have</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 11 Comment
Independent Electricity System Operator	No	<p>(i) Definition of Adverse Reliability Impact is duplicated as it is already defined in IRO-001-2</p> <p>(ii) We do not see the need for R7 and R8 since R6 already stipulates the necessary actions to be taken, it is not necessary for the Reliability Coordinator with the identified Adverse Reliability Impact to develop (re-develop?) a mitigation plan when the impacted Reliability Coordinators did not agree that the problem exists. What may be needed is the insertion of “shall develop a mitigation plan” before “notify impacted Reliability Coordinators” in R5. We suggest removing these requirements (R7 and R8).</p>
<p>Response: The RC SDT thanks you for your comment. i)...The SDT acknowledges that the definition of Adverse Reliability Impact is duplicated in IRO-001-2 and in IRO-014-2. The SDT repeated it in the two standards to facilitate review and consistency. When the standards are approved, the definition will be moved into the NERC Glossary of Terms...only once.</p> <p>ii) The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. This was done to eliminate a compound requirement (it contained multiple requirements for different actions in a single requirement. Each requirement is different and requires different specific actions. Please see the posted implementation plan for IRO-014 for details.</p> <p>http://www.nerc.com/docs/standards/sar/IRO-014-2_Implementation_Plan_Clean_2009July9.pdf</p>		
MRO NSRS	No	<p>In bullet 2.1 of Requirement R2, what does the requirement that all RCs that are required to take action must agree to it really mean? Does this mean that if the RCs don't agree that in reality an Operating Procedure, Process or Plan doesn't really exist and thus is not subject to R2? Further, how can one RC require another RC to agree with an Operating Procedure, Process or Plan? Either they agree or they don't. Isn't what is really needed is a requirement for the impacted RC to review and acknowledge the plan? That is give it a thumbs up or a thumbs down?</p> <p>In requirement R4, the clause “at least weekly” should be struck. If the RCs agree that a bi-weekly call is sufficient unless conditions change significantly why must they be held to a weekly standard. Our experience has been that most RCs participate in daily calls anyway based on an agreed need.</p> <p>Please strike IRO-014-2 R7 as it is redundant with IRO-001-2 R1. IRO-001-2 R1 already requires that RC with the identified Adverse Reliability Impact to act or direct actions to prevent or mitigate the magnitude or duration of the event.</p> <p>MRO NSRS does not believe IRO-014-2 R8, yet properly considers why the RCs may not agree on a mitigation plan. If RC A develops a mitigation plan for an identified Adverse Reliability Impact on their system and RC B does not agree with RC A's mitigation plan, RC B will be in violation of R8 if they do not follow the mitigation plan. What if the mitigation plan has an Adverse Reliability Impact on RC B's footprint? They should not have to follow the mitigation plan.</p>
<p>Response: The RC SDT thanks you for your comment. Requirement R2 addresses processes, procedures, and plans developed in advance. Such plans reasonably can be expected to contain agreement. The goal is to ensure reliability; refusal to agree based upon equity issues is unacceptable. If inability to agree is based upon differing opinions as to whether the problem exists, then the coordination requirements are out of</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 11 Comment
<p>compliance. Technical assessments reasonably can be expected to predict the same effects upon the system.</p> <p>The collective experience of the RC SDT members indicates a clear need to have at least weekly conference calls.</p> <p>IRO-014-2 R7 applies to scenarios and coordination between RCs. IRO-001-2 R1 applies to scenarios and coordination between an RC and TOPs, BAs, GOPs, TSPs, LSEs, DPs, and PSEs within its RC Area. The SDT believes it is appropriate to leave both requirements in place.</p> <p>R8: We have modified R8 to allow RCs to avoid implementing actions that violate safety, equipment or regulatory or statutory requirement.</p> <p>R8. Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. . <i>[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations</i></p>

Georgia Transmission Corporation		N/A
Response: The RC SDT thanks you for your comment.		

12. Do you agree with the revisions to the Measures in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Stakeholders agreed with the Measures, except to make conforming changes for revisions to the requirements (M1, M3 and M8). The RC SDT has revised the measures based on the new requirements. One stakeholder suggested revision to the Data Retention for R5-R8. Data Retention was revised for R5 to 12 months, however the RC SDT believes that three years is the correct period for R6-8.

Organization	Yes or No	Question 12 Comment
Northwest LSE Group		Abstain
Northeast Power Coordinating Council	No	The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
Response: The RC SDT thanks you for your comment. R7 and R8 were not removed, therefore the measures will remain in place.		
IRC Standards Review Committee	No	Conforming changes to the Measurements will be required if changes as suggested in Question 11 are introduced.
Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements.		
Midwest ISO Standards Collaborators	No	Conforming changes to the Measurements will be required for accepted changes from question 11.
Manitoba Hydro	No	Conforming changes to the Measurements will be required for accepted changes from question 11.
Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements.		
Hydro-Québec TransEnergie (HQT)	No	The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 12 Comment
Response: The RC SDT thanks you for your comment. R7 and R8 were not removed, therefore the measures will remain in place		
Duke Energy	No	Need to revise the Measures to coincide with the recommended changes to the requirements in #11 above. Also under Data Retention, 12 months of evidence is needed for R3, R4 and M3, M4. However 3 years plus the current year is required for R5 through R8 and M5 through M8. We see no reason the data requirements to be different and believe 12 months is the proper amount of data retention.
Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements. The RC SDT concurs with the suggested revision to Data Retention for R5. The infrequency of occurrences of R6-8 clearly support a 3 year retention period.		
Northeast Utilities	No	The intents of Measures M7 and M8 are addressed in M6, and do not add anything. Suggest removing M7 and M8.
Response: The RC SDT thanks you for your comment. R7 and R8 were not removed, therefore the measures will remain in place		
Independent Electricity System Operator	No	Depending on the response of the SDT, changes to M5 to M8 may be required.
Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements		
MRO NSRS	No	Conforming changes to the Measurements will be required for accepted changes from question 11.
Response: The RC SDT thanks you for your comment. The measures were revised to conform to the revised requirements

13. Do you agree with the revisions to the Violation Severity Levels in IRO-014-2 as shown in the posted Standard? If not, please explain in the comment area.

Summary Consideration: Several stakeholders suggested developing four VSLs for R5. Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSLs to represent both the large and small scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios. Other stakeholders suggested four VSLs for R4. The essence of R4 is written to require impacted RC's to talk at least weekly and is singular in nature. VSL's can not be written for conference calls that exceed the singular requirement.

Organization	Yes or No	Question 13 Comment
Northwest LSE Group		Abstain
Northeast Power Coordinating Council	No	(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more. (ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT's response to our comments under Q11.
<p>Response: The RC SDT thanks you for your comment. Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSLs to represent both the large and small scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. Southern Company	No	<p>Reliability problems identified in other reliability areas are based on modeling information obtained from another reliability region. The fact that one RC will not agree that the model of an adjacent RC’s reliability area may be more accurate than their model of the adjacent reliability area is no reason to impose a severe violation on the RC with the more accurate</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 13 Comment
		<p>model of their own reliability region.</p> <p>Example: RC1 identifies a contingency overload of a transformer bank in an adjacent reliability area. The transformer bank was replaced the week before with a larger bank. When RC1 contacts RC2, RC2 explains that the bank overload is not valid because of the replacement. RC2 does not identify a problem due to the fact that the model RC2 is using has been updated with the new transformer bank. RC1 will not agree and requires RC2 to open a tie line with another reliability area to relieve the contingency overload. If RC2 does not follow the instructions of RC1, making the interconnection weaker to relieve a problem that does not exist, RC2 is out of compliance and a severe violation will be imposed.</p>
<p>Response: The RC SDT thanks you for your comment. The scenario you describe is essentially a modeling problem, as such the discrepancy would be vetted and corrected during the discovery phase. Further, an RC1 cannot tell RC2 how to rate facilities owned by entities within the RC2 area. The SDT believes that your scenario would play out like this: RC1 calls RC2 and says, “we show an overload on transformer bank X.” RC2 says, “we do not, what rating are you using?” RC1 replies with the old rating, RC2 states that it is wrong, and here is the correct rating, which RC1 implements, problem solved. RC1 cannot come back and say the rating that you have for transformer bank X is incorrect. Each entity within the RC Area (TO or GO) is responsible for the rating of the facilities it owns. (Taking the scenario even farther, if RC1 believes that the TO or GO has an incorrect rating, then RC1 can challenge the rating methodology of that TO or GO under the FAC standards.)</p>		
Manitoba Hydro	No	<p>Believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any.</p>
<p>Response: The RC SDT thanks you for your comment. In regards to R4: The essence of R4 is that it is written to require impacted RC’s to talk at least weekly and is singular in nature. VSL’s can not be written for conference calls that exceed the singular requirement.</p> <p>In regards to R5: Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSL to represent a typical scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC’s. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC’s.</p>		
Hydro-Québec TransÉnergie (HQT)	No	<p>(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more.</p> <p>(ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT’s response to our comments under Q11.</p>

Organization	Yes or No	Question 13 Comment
<p>small number. The SDT effort in this regard, was to write the VSL to represent both the large and small scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios.</p> <p>The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. This was done to eliminate a compound requirement (a single requirement that contained multiple requirements). Each requirement is different and requires different specific actions. Please see the posted implementation plan for IRO-014 for details; as such, the VSL's remain.</p>		
Duke Energy	No	Need to revise the VSLs to coincide with recommended changes to the requirements in #11 above.
<p>Response: The RC SDT thanks you for your comment. The VSLs were modified to align with changes made to the requirements. Please see the response to #11. The SDT adopted several, but not all of your suggestions.</p>		
Northeast Utilities	No	<p>(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more.(ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT's response to our comments under Q11.</p>

Please see the posted implementation plan for IRO-014 for details; as such, the VSL's remain.</p>		
MRO NSRS	No	<p>In the Commission's June 2008 order on VSLs, they expressed their preference for having as many VSLs as possible. The MRO NSRS believes that four VSLs could be written for R4 based on the number of conference calls that are participated in. We also believe this would be consistent with the Commission's guideline 4 because the requirement is written in the plural, that is conference calls, so all conference calls must be considered in aggregate. Thus, failure to participate in more than one conference call does not represent distinct violations but a single violation.</p> <p>Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any.</p>
<p>Response: The RC SDT thanks you for your comment. The Commission's June 2008 stated a preference for as many as possible, however the SDT believes the essence of this statement was to write multiple VSLs only where appropriate, not to do so simply because it is possible. Further, the essence of R4 is written to require impacted RC's to talk at least weekly and is singular in nature. VSL's can not be written for conference calls that exceed the singular requirement.</p> <p>Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSLs to represent both the large and small scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios.</p>

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 13 Comment
Liberty Electric Power LLC	Yes	
WECC Reliability Coordinator	Yes	
PacifiCorp	Yes	
Calpine Corporation	Yes	
Western Area Power Administration	Yes	
ReliabilityFirst Corporation	Yes	
American Electric Power		Not applicable.
Georgia Transmission Corporation		N/A

14.If you have any other comments, not expressed in questions above, for the RC SDT on any of the other changes made to this set of standards and their associated implementation plans, please provide them here.

Summary Consideration: Stakeholders suggested removing the Distribution provider and Generator Operator from the Data Retention section for R1 of COM-001. Since these are not applicable entities in R1, they were removed from Data Retention for the requirement.

Organization	Question 14 Comment
Northeast Power Coordinating Council	NPCC appreciates the work of the Drafting Team. No additional comments.
Response: The RC SDT thanks you for your comment.	
SERC OC Standards Review Group	"The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers."
Response: The RC SDT thanks you for your comment.	
Bonneville Power Administration	<p>Issue #2: Data Retention Why would the Distribution Provider and Generator Operator be required to store historical data (three years in the case of Requirement R1 and Measure M1; twelve months in the case of Requirement R2 and Measure M2) to show that these requirements and measures have been successfully implemented when these two entities (Distribution Provider and Generator Operator) aren't even included either in Requirements R1 and R2 or in Measure M1 and M2?It would appear that they should only have to provide historical data for three months as required by the data retention time for Requirement 3 and Measure 3.</p> <p>Issue #1: Data Retention: The first bullet in this section states that all entities are responsible for retaining documents associated with all Requirements and Measures associated with this standard. In reality, Requirements R1, R4, R5 and R6 and the corresponding Measures are the responsibility of the Reliability Coordinator. Requirements R2 and R3 and their corresponding Measures are implemented by the Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity and the Load Serving Entity. The Data Retention section should be rewritten to reflect this so that entities are not required to maintain documents that they aren't suppose to even possess in some cases.</p>
Response: The RC SDT thanks you for your comment. COM-001 removed DP and GOP from the data retention section regarding R1 and R2. IRO-001-2 changed "all" to "applicable."	

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Question 14 Comment
IRC Standards Review Committee	AESO abstains from commenting on VSLs. VSLs for Alberta will be developed by provincial authorities.
Response: The RC SDT thanks you for your comment.	
E.ON U.S.	COM-001-2 R1 and R2 and the associated M1 and M2 are only applicable to the RC, TOP and BA but the “Data Retention” for R1/R2 and M1/M2 require the DP and GOP to retain data for the Requirements and Measures. E.ON U.S. suggests that the requirement for data retention of the DP and GOP be eliminated from the standard.
Response: The RC SDT thanks you for your comment. COM-001 removed DP and GOP from the data retention section regarding R1 and R2.	
Illinois Municipal Electric Agency	In order to minimize the number of reliability standards and the details covered in requirements - particularly those dealing with communications - it is recommended that an up-front provision/requirement be included as part of the compliance registration process that certain functional entities (e.g., DP, LSE, PSE, etc.) shall be responsible for providing the necessary information to transact services and for complying with the directives/requests of certain functional authorities (e.g., BA, PC, RC, etc.) in order to maintain/enhance reliability of the BES.
Response: The RC SDT thanks you for your comment. The registration process is not in the scope of this SDT project	
Northeast Utilities	Northeast Utilities appreciates the work of the Drafting Team. No additional comments.
Response: The RC SDT thanks you for your comment.	
Independent Electricity System Operator	In our comments on the previous posting, we expressed a disagreement with a proposed to remove IRO-005, in particular the latter part of R13, which stipulated that: In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter. Our rationale was that The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities may come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set exists is a necessary requirement for reliable operation. The SDT responded by suggesting that this requirement is redundant with FAC-014 which -014 states the requirement for developing and sharing SOL and IROL between the RC, PA, TP and TOP in both the planning and operating time frames. However, this response fails to address the situation where during operation, the situation of disagreeing SOLs or IROLs does arise. FAC-014 or any other standards do not currently have a requirement to ensure that all entities operate to the lower limit before the difference is resolved. This leaves room for unreliable operation. We suggest the SDT to consider restating this requirement somewhere. Note that this requirement is similar to R6 of IRO-014

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Question 14 Comment
	that when in doubt, the more conservative approach should be taken. If it is necessary to have an R6 to deal with an uncertain identification/notification of an Adverse Reliability Impact, we don't see why it is not necessary to operate to a lower SOL or IROL when there is an unresolved difference.
Response: The RC SDT thanks you for your comment. The SDT team still feels this is covered in FAC-010, 011, and 14. For real-time operations, as you mention, this is covered with IRO-014, R6	

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RCSDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the second draft. The team is seeking comments on the revised standards.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Respond to comments on third posting	March 2010
2. Post Standards for pre-ballot period.	April 2010
3. Standards posted for initial and recirculation ballots.	May 2010
4. Standards sent to BOT for approval.	July 2010
5. Standards filed with regulatory authorities.	September 2010

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

The RC SDT proposes modifying the following approved definition:

Adverse Reliability Impact : The impact of an event that results in Bulk Electric System instability; uncontrolled separation or Cascading.

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

This defined term is contained in draft COM-002-2 and IRO-001-2.

As a reference, we have included the existing definition of Emergency:

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

A. Introduction

1. **Title:** Reliability Coordination – Responsibilities and Authorities
2. **Number:** IRO-001-2
3. **Purpose:** To establish requirements for issuance of and compliance with Reliability Coordinator Reliability Directives or notification within the Reliability Coordinator Areas.
4. **Applicability**
 - 4.1. Reliability Coordinators.
 - 4.2. Transmission Operators.
 - 4.3. Balancing Authorities.
 - 4.4. Generator Operators.
 - 4.5. Transmission Service Providers.
 - 4.6. Load-Serving Entities.
 - 4.7. Distribution Providers.
 - 4.8. Purchasing-Selling Entities.
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

B. Requirements

- R1.** Each Reliability Coordinator shall act or issue Reliability Directives for actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. *[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]*
- R2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with its Reliability Coordinator's Reliability Directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform an issued Reliability Directive. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R4.** Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

- R5.** Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R6.** Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

C. Measures

- M1.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it has acted, or issued Reliability Directive(s), to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area. (R1)
- M2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider and Purchasing-Selling Entity shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's Reliability Directive(s) unless such actions would have violated safety, equipment, or regulatory or statutory requirements. (R2)
- M3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it that it informed the Reliability Coordinator of its inability to comply with its Reliability Coordinator's issued Reliability Directive(s). (R3)
- M4.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area. (R4)
- M5.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when a real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area had been mitigated. (R5)
- M6.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its Operating Personnel with the authority to veto planned outages of its own analysis tools. (R6)

D. Compliance

- 1.** Compliance Monitoring Process
 - 1.1.** Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.3. Data Retention

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity shall retain its current, in force document and any documents in force since the last compliance audit for applicable Requirements and Measures.
- If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

Standard IRO-001-2 Reliability Coordination — Responsibilities and Authorities

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	The Reliability Coordinator failed to act or issue Reliability Directive(s) for actions to be taken to prevent Adverse Reliability Impacts.	The Reliability Coordinator failed to act or issue Reliability Directive(s) for actions to be taken to mitigate the magnitude or duration of Adverse Reliability Impacts.
R2	N/A	N/A	N/A	The responsible entity did not follow the Reliability Coordinator's Reliability Directive.
R3	N/A	N/A	N/A	The responsible entity failed to inform its Reliability Coordinator upon recognition of the inability to perform the issued Reliability Directive.
R4	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to one, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to two, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to three, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to any or more than three impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
R5	The Reliability Coordinator failed to notify one, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator failed to notify two, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator failed to notify three, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator failed to notify any or more than three impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.

4. Standards sent to BOT for approval.	July 2010
5. Standards filed with regulatory authorities.	September 2010

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

The RC SDT proposes modifying the following approved definition:

Adverse Reliability Impact – The impact of an event that results in Bulk Electric System frequency-related instability; ~~unplanned tripping of load or generation; or uncontrolled separation or Cascading outages that affects a widespread area of the Interconnection.~~

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

This defined term is contained in draft COM-002-2 and IRO-001-2.

As a reference, we have included the existing definition of Emergency:

Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

A. Introduction

1. **Title:** Reliability Coordination – Responsibilities and Authorities
2. **Number:** IRO-001-2
3. **Purpose:** To establish requirements for issuance of and compliance with Reliability Coordinator ~~Reliability D~~irectives or notification within the Reliability Coordinator Areas.
4. **Applicability**
 - 4.1. Reliability Coordinators.
 - 4.2. Transmission Operators.
 - 4.3. Balancing Authorities.
 - 4.4. Generator Operators.
 - 4.5. Transmission Service Providers.
 - 4.6. Load-Serving Entities.
 - 4.7. Distribution Providers.
 - 4.8. Purchasing-Selling Entities.
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

B. Requirements

- R1. Each Reliability Coordinator shall act or issue Reliability Directives for ~~direct~~ actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. *[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]*
- R2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with its Reliability Coordinator's Reliability Directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform an issued Reliability Directive. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]*
- R4. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

- R5.** Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*
- R6.** Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

C. Measures

- M1.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it has acted, or issued [Reliability Directive\(s\)](#), to prevent or mitigate the magnitude or duration of Adverse Reliability Impacts within its Reliability Coordinator Area. (R1)
- M2.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider and Purchasing-Selling Entity shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's [Reliability Directive\(s\)](#) unless such actions would have violated safety, equipment, or regulatory or statutory requirements. (R2)
- M3.** Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or Purchasing-Selling Entity shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it that it informed the Reliability Coordinator of its inability to comply with its Reliability Coordinator's [issued Reliability Directive\(s\)](#). (R3)
- M4.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when it identified a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area. (R4)
- M5.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it notified all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when a real or potential threat with Adverse Reliability Impacts within its Reliability Coordinator Area had been mitigated. (R5)
- M6.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to, a documented procedure or equivalent evidence that will be used to confirm that the Reliability Coordinator has provided its Operating Personnel with the authority to veto planned outages of its own analysis tools. (R6)

D. Compliance

- 1.** Compliance Monitoring Process
- 1.1.** Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.3. Data Retention

The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity shall retain its current, in force document and any documents in force since the last compliance audit for [applicable](#) Requirements and Measures.
- If a Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	<u>The Reliability Coordinator failed to act or issue Reliability Directive(s) for actions to be taken to prevent Adverse Reliability Impacts.</u> N/A	The Reliability Coordinator failed to act or <u>issue Reliability Directive(s) for actions to be taken to prevent</u> or mitigate the magnitude or duration of Adverse Reliability Impacts.
R2	N/A	N/A	N/A	The responsible entity did not follow the Reliability Coordinator's <u>Reliability Directive</u> . per requirement 2.
R3	N/A	N/A	N/A	The responsible entity failed to inform the its Reliability Coordinator upon recognition of the inability to perform the <u>issued Reliability Directive</u> .
R4	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to one, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to two, but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to three or more , but not all, impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.	The Reliability Coordinator who identified an expected or actual threat with Adverse Reliability Impacts within its Reliability Coordinator Area failed to issue an alert to <u>any or more than three</u> all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.

Standard IRO-001-2 Reliability Coordination – Responsibilities and Authorities

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R5	The Reliability Coordinator failed to notify one, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator failed to notify two, but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator failed to notify three or more , but not all, impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.	The Reliability Coordinator failed to notify <u>any or more than three</u> at impacted Transmission Operators, Balancing Authorities, when the transmission problem had been mitigated.
R6	N/A	N/A	N/A	The Reliability Coordinator failed to provide its Operating Personnel with the authority to veto planned outages of its own analysis tools.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Approved by FERC — Effective Date	New
2	TBD	Revised per SAR for project 2006-6, reliability Coordination; added VRFs and VSLs as approved from VRF and VSL projects	Revised

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Revisions to Defined Terms in the NERC Glossary:

The Reliability Coordination Standard Drafting Team proposes modifying the following approved definition:

Adverse Reliability Impact — The impact of an event that results in Bulk Electric System instability uncontrolled separation, or Cascading.

The RC SDT proposes the following new definition:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

Prerequisite Approvals

- None

Conforming Changes to Requirements in Already Approved Standards

- IRO-005, R15 is being incorporated into IRO-001-2.
- IRO-002, R9 is being incorporated into IRO-001-2 and revised.

Revision Summary

The RC SDT revised the standard and is proposing retiring several requirements (R1, R2, R4, R5, R6, R7 and R10). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERCs Rules of Procedure and to address issues in FERC Order 693.

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p>None – The RC SDT proposes retiring this requirement.</p>
<p>Notes:</p> <p>The RC SDT proposes that original IRO-001-1, R1 should be retired from the standard and addressed in NERC Rules of Procedure, Section 503, item 2.2: “Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”.</p>	

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p>None – The RC SDT proposes retiring these requirements.</p>
<p>Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.</p>	

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R1. Each Reliability Coordinator shall act or issue Reliability Directives for actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p>
<p>Notes:</p> <ul style="list-style-type: none"> • The RC SDT is proposing to remove the blue text in the first sentence. • The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROLs are contained in other standards (e.g., TOP-007, R2). ▪ The Distribution Provider was added as an applicable entity per FERC Order 693. 	

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire the requirement</p> <p>RC SDT proposes that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, section 500 and should be retired from the standard. Section 501 states:</p> <p>“The purpose of the compliance registry will be to clearly identify those entities that are responsible for compliance with reliability standards. Organizations listed on the registry will be responsible for knowing the content of and for complying with the NERC reliability standards.”</p> <p>Also, section 507, item 2 addresses written agreements; Joint registration pursuant to written agreement.</p> <p>“Where a JRO and any of its members or related entities agree, in writing, upon a division of compliance responsibility among them for one or more reliability standard(s) applicable to a particular function, and/or for one or more requirements within particular reliability standard(s), both the JRO and such member(s) or related entit(ies) shall register as an organization responsible for that function. The JRO and its member(s) or related entit(ies) must have a written agreement that clearly specifies their respective responsibilities, which shall be submitted as part of the joint registration. Neither NERC nor the regional entity shall be parties to any such agreement between a JRO and its member or related entit(ies), nor shall NERC or the regional entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the joint registration.”</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R4.</p>	

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire requirement because it is redundant with:</p> <p>PER-003-0</p> <p>R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions:</p> <p>R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System.</p> <p>R1.2. Positions directly responsible for complying with NERC standards.</p>
<p>Notes: The RC SDT recommends retiring IRO-001-1 R6 as it is redundant with PER-003-0 R1.</p>	

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated. <i>[Violation Risk Factor: High]</i></p>	<p>None – requirement should be retired because it is redundant with:</p> <p>IRO-014-1</p> <p>R1. For conditions or activities that impact other Reliability Coordinator Areas, each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: .</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R7 as this is redundant with IRO-014-1 R1.</p>	

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R2. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with its Reliability Coordinator’s Reliability Directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R3. Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform an issued Reliability Directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R4. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT added the Distribution Provider per FERC Order 693 and added the blue text shown in the requirements above. The RC SDT proposes the replacement of IRO-001-1, R8 with three requirements IRO-001-2, R2, R3, and R4. This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in R1, which states that the Reliability Coordination will act or direct actions to mitigate issues. Stakeholders indicated issues with the ability to measure compliance with the phrase, “without intentional delay” and this was removed.</p> <p>Relating to First Energy’s comment in FERC Order 693, the requirements address both personnel safety and equipment. There is no reference to a chain of command in the requirements. The standard is written such that decision-making authority rests with the Reliability Coordinator. No further revisions to the standard are required.</p>	

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity. <i>[Violation Risk Factor: High]</i></p>	<p>None – retire the requirement as redundant.</p>
<p>Notes: The RC SDT proposes retiring this requirement. All Reliability Coordinator Standard Requirements are developed so that the Reliability Coordinator shall act in the interest of reliability for the RC Area and the Interconnection. Section 6 of the NERC Standard Development Procedure states that NERC develops and maintains Reliability Standards. Equity issues are covered under the Reliability Coordinator Standards of Conduct.</p>	

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-002-1</p> <p>R9. Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. <i>[Violation Risk Factor: Medium]</i></p>	<p>IRO-001-2</p> <p>R6. Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: This requirement was moved from IRO-002 into IRO-001-2, R6.</p>	

Implementation Plan for IRO-001-2 — Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2 (this requirement was incorporated from IRO-005-2)</p> <p>R15. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R4. Each Reliability Coordinator that identifies a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R5. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: This requirement was moved from IRO-005 into IRO-001-2, R4 and R5.</p>	

Functions that Must Comply with the Requirements in the Standards:

Standard	Functions that Must Comply With the Requirements							
	Reliability Coordinator	Balancing Authority	Distribution Provider	Transmission Operator	Transmission Service Provider	Purchasing Selling Entity	Generator Operator	Load Serving Entity
IRO-001-2	X	X	X	X	X	X	X	X

Effective Dates:

In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

[Implementation Plan for IRO-001-2 - Reliability Coordination — Responsibilities and Authorities](#)

Revisions to Defined Terms in the NERC Glossary

The RC SDT proposes modifying the following approved definition:

Adverse Reliability Impact ~~—~~ The impact of an event that results in Bulk Electric System frequency-related instability; ~~unplanned tripping of load or generation; or uncontrolled separation, or Cascading outages, that affects a widespread area of the Interconnection.~~

The RC SDT proposes the following new definition:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

Prerequisite Approvals

- None

Conforming Changes to Requirements in Already Approved Standards

- IRO-005, R15 is being incorporated into IRO-001-2.
- [IRO-002, R9 is being incorporated into IRO-001-2 and revised.](#)

Revision Summary

- The RC SDT revised the standard and is proposing retiring several requirements (R1, R2, R4, R5, R6, R7 and R10). Changes were made to eliminate redundancies between standards (existing and proposed), to align with NERCs Rules of Procedure and to address issues in FERC Order 693.

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R1. Each Regional Reliability Organization, subregion, or interregional coordinating group shall establish one or more Reliability Coordinators to continuously assess transmission reliability and coordinate emergency operations among the operating entities within the region and across the regional boundaries. <i>[Violation Risk Factor: High]</i></p>	<p>None – The RC SDT proposes retiring this requirement.</p>
<p>Notes:</p> <p>The RC SDT proposes that original IRO-001-1, R1 should be retired from the standard and addressed in NERC Rules of Procedure, Section 503, item 2.2: “Regional entities shall verify that all balancing authorities and transmission operators are under the responsibility of a reliability coordinator”.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R2. The Reliability Coordinator shall comply with a regional reliability plan approved by the NERC Operating Committee. <i>[Violation Risk Factor: High]</i></p> <p>R5. The Reliability Coordinator shall list within its reliability plan all entities to which the Reliability Coordinator has delegated required tasks. <i>[Violation Risk Factor: Lower]</i></p>	<p>None – The RC SDT proposes retiring these requirements.</p>
<p>Notes: The RC SDT proposes retiring R2 and R5 as the regional reliability plan is a “how” document that shows how an RC will comply with all other NERC Standards, making this requirement redundant.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R3. The Reliability Coordinator shall have clear decision-making authority to act and direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R1. The Each Reliability Coordinator shall act or issue Reliability Directives for direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p>
<p>Notes:</p> <ul style="list-style-type: none"> • The RC SDT is proposing to remove the blue text in the first sentence. • The RC SDT is proposing that the last sentence of R3 be retired. The timing of RC response to events varies based on system conditions. The specific timing criteria for responses to IROLs are contained in other standards (e.g., TOP-007, R2). ▪ The Distribution Provider was added as an applicable entity per FERC Order 693. 	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R4. Reliability Coordinators that delegate tasks to other entities shall have formal operating agreements with each entity to which tasks are delegated. The Reliability Coordinator shall verify that all delegated tasks are understood, communicated, and addressed within its Reliability Coordinator Area. All responsibilities for complying with NERC and regional standards applicable to Reliability Coordinators shall remain with the Reliability Coordinator. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire the requirement</p> <p>RC SDT proposes that original IRO-001-1, R4 is redundant with NERC Rules of Procedure, section 500 and should be retired from the standard. Section 501 states:</p> <p>“The purpose of the compliance registry will be to clearly identify those entities that are responsible for compliance with reliability standards. Organizations listed on the registry will be responsible for knowing the content of and for complying with the NERC reliability standards.”</p> <p>Also, section 507, item 2 addresses written agreements; Joint registration pursuant to written agreement.</p> <p>“Where a JRO and any of its members or related entities agree, in writing, upon a division of compliance responsibility among them for one or more reliability standard(s) applicable to a particular function, and/or for one or more requirements within particular reliability standard(s), both the JRO and such member(s) or related entit(ies) shall register as an organization responsible for that function. The JRO and its member(s) or related entit(ies) must have a written agreement that clearly specifies their respective responsibilities, which shall be submitted as part of the joint registration. Neither NERC nor the regional entity shall be parties to any such agreement between a JRO and its member or related entit(ies), nor shall NERC or the regional entity have responsibility for reviewing or approving any such agreement, other than to verify that the agreement provides for an allocation or assignment of responsibilities consistent with the joint registration.”</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R4.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R6. The Reliability Coordinator shall verify that all delegated tasks are carried out by NERC-certified Reliability Coordinator operating personnel. <i>[Violation Risk Factor: Medium]</i></p>	<p>None – retire requirement because it is redundant with:</p> <p>PER-003-0</p> <p>R1. Each Transmission Operator, Balancing Authority, and Reliability Coordinator shall staff all operating positions that meet both of the following criteria with personnel that are NERC certified for the applicable functions:</p> <p>R1.1. Positions that have the primary responsibility, either directly or through communications with others, for the real-time operation of the interconnected Bulk Electric System.</p> <p>R1.2. Positions directly responsible for complying with NERC standards.</p>
<p>Notes: The RC SDT recommends retiring IRO-001-1 R6 as it is redundant with PER-003-0 R1.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R7. The Reliability Coordinator shall have clear, comprehensive coordination agreements with adjacent Reliability Coordinators to ensure that System Operating Limit (SOL) or Interconnection Reliability Operating Limit (IROL) violation mitigation requiring actions in adjacent Reliability Coordinator Areas are coordinated. <i>[Violation Risk Factor: High]</i></p>	<p>None – requirement should be retired because it is redundant with:</p> <p>IRO-014-1</p> <p>R1. <u>For conditions or activities that impact other Reliability Coordinator Areas, e</u>The Each Reliability Coordinator shall have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with one or more other impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall <u>collectively address the following:</u> address Scenarios that affect other Reliability Coordinator Areas as well as those developed in coordination with other Reliability Coordinators.</p>
<p>Notes: The RC SDT recommends the retirement of IRO-001-1 R7 as this is redundant with IRO-014-1 R1.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R8: Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall comply with Reliability Coordinator directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, or Purchasing-Selling Entity shall immediately inform the Reliability Coordinator of the inability to perform the directive so that the Reliability Coordinator may implement alternate remedial actions. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R2. Each Transmission Operators, Balancing AuthoritiesAuthority, Generator Operators, Transmission Service Providers, Load-Serving EntitiesEntity, Distribution Provider, and Purchasing-Selling EntitiesEntity shall act without intentional delay to comply with its Reliability Coordinator's Reliability Directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R3. TheEach Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider or and Purchasing-Selling Entity shall immediately confirm the ability to comply with the directive or inform itsthe Reliability Coordinator upon recognition of the its inability to perform the an issued Reliability Directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R4. Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify, without intentional delay, all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p>
<p>Notes: The RC SDT added the Distribution Provider per FERC Order 693 and added the blue text shown in the requirements above. The RC SDT proposes the replacement of IRO-001-1, R8 with three requirements IRO-001-2, R2, R3, and R4. This will add clarity and measurability to the standard. The last part of the second sentence should be removed as it is implicit in R1, which states that the Reliability Coordination will act or direct actions to mitigate issues. Stakeholders indicated issues with the ability to measure compliance with the phrase, “without intentional delay” and this was removed.</p> <p>Relating to First Energy’s comment in FERC Order 693, the requirements address both personnel safety and equipment. There is no reference to a chain of command in the requirements. The standard is written such that decision-making authority rests with the Reliability Coordinator. No further revisions to the standard are required.</p>	

Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-001-1</p> <p>R9. The Reliability Coordinator shall act in the interests of reliability for the overall Reliability Coordinator Area and the Interconnection before the interests of any other entity. <i>[Violation Risk Factor: High]</i></p>	<p>None – retire the requirement as redundant.</p>
<p>Notes: The RC SDT proposes retiring this requirement. <u>Already Approved Standard</u>	<u>Proposed Replacement Requirement(s)</u>
<p><u>IRO-002-1</u></p> <p><u>R9. Each Reliability Coordinator shall control its Reliability Coordinator analysis tools, including approvals for planned maintenance. Each Reliability Coordinator shall have procedures in place to mitigate the effects of analysis tool outages. [Violation Risk Factor: Medium]</u></p>	<p><u>IRO-001-2</u></p> <p><u>R6. Each Reliability Coordinator shall provide its Operating Personnel with the authority to veto planned outages to its own analysis tools. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</u></p>
<p><u>Notes: This requirement was moved from IRO-002 into IRO-001-2, R6.</u></p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Already Approved Standard	Proposed Replacement Requirement(s)
<p>IRO-005-2 (this requirement was incorporated from IRO-005-2)</p> <p>R15. Each Reliability Coordinator who foresees a transmission problem (such as an SOL or IROL violation, loss of reactive reserves, etc.) within its Reliability Coordinator Area shall issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area without delay. The receiving Reliability Coordinator shall disseminate this information to its impacted Transmission Operators and Balancing Authorities. The Reliability Coordinator shall notify all impacted Transmission Operators, Balancing Authorities, when the transmission problem has been mitigated. <i>[Violation Risk Factor: High]</i></p>	<p>IRO-001-2</p> <p>R5R4. Each Reliability Coordinator who <u>that</u> identifies a real or potential threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations]</i></p> <p>R5. <u>Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the transmission problem has been mitigated. [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</u></p>
<p>Notes: This requirement was moved from IRO-005 into IRO-001-2, R5R4 and R5.</p>	

**Implementation Plan for IRO-001-2
Reliability Coordination — Responsibilities and Authorities**

Functions that Must Comply with the Requirements in the Standards

Standard	Functions that Must Comply With the Requirements							
	Reliability Coordinator	Balancing Authority	Distribution Provider	Transmission Operator	Transmission Service Provider	Purchasing Selling Entity	Generator Operator	Load Serving Entity
IRO-001-2	X	X	X	X	X	X	X	X

Effective Dates

~~To be determined.~~ In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter after Board of Trustees approval.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the second draft. The team is seeking comments on the revised standards.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Respond to comments on third posting	March 2010
2. Post Standards for pre-ballot period.	April 2010
3. Standards posted for initial and recirculation ballots.	May 2010
4. Standards sent to BOT for approval.	July 2010
5. Standards filed with regulatory authorities.	September 2010

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

None

A. Introduction

1. **Title:** Coordination Among Reliability Coordinators
2. **Number:** IRO-014-2
3. **Purpose:** To ensure that each Reliability Coordinator's operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas and to preserve the reliability benefits of interconnected operations.
4. **Applicability:**
 - 4.1. Reliability Coordinators.
5. **Effective Date:** In those jurisdictions where regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after applicable regulatory approval. In those jurisdictions where no regulatory approval is required, this standard shall become effective on the first day of the first calendar quarter that is 12 months after Board of Trustees approval.

B. Requirements

- R1. For conditions or activities that impact other Reliability Coordinator Areas, each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following: *[Violation Risk Factor: Medium] [Time Horizon: Same Day Operations and Operations Planning]*
 - 1.1. Communications and notifications, including the mutually agreed to conditions under which one Reliability Coordinator notifies other Reliability Coordinators; the process to follow in making those notifications; and the data and information to be exchanged with other Reliability Coordinators.
 - 1.2. Energy and capacity shortages.
 - 1.3. Planned or unplanned outage information.
 - 1.4. Control of voltage, including the coordination of reactive resources.
 - 1.5. Coordination of information exchange to support reliability assessments.
 - 1.6. Authority to act to prevent and mitigate conditions which could cause Adverse Reliability Impacts to other Reliability Coordinator Areas.
- R2. Each Reliability Coordinator's Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) shall be: *[Violation Risk Factor: Lower] [Time Horizon: Same Day Operations and Operations Planning]*
 - 2.1. Agreed to by all the Reliability Coordinators required to take the indicated action(s).

- 2.2.** Distributed to all Reliability Coordinators that are required to take the indicated action(s).
- R3.** For conditions or activities that impact other Reliability Coordinator Areas, each Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations and Operations Planning]*
- R4.** Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly, and other communication forums with impacted Reliability Coordinators. *[Violation Risk Factor: Lower][Time Horizon: Real-time Operations]*
- R5.** Each Reliability Coordinator, upon identification of an Adverse Reliability Impact, shall notify all impacted Reliability Coordinators. *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R6.** Each impacted Reliability Coordinator shall operate as though the problem exists when the identified Adverse Reliability Impact cannot be agreed to by the impacted Reliability Coordinators, *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R7.** The Reliability Coordinator with the identified Adverse Reliability Impact shall develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists. *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*
- R8.** Each impacted Reliability Coordinator shall implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would violate safety, equipment, or regulatory or statutory requirements. *[Violation Risk Factor: Medium][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]*

C. Measures

- M1.** Each Reliability Coordinator shall have available the latest approved documented version of Operating Procedures, Processes, or Plans that require notifications, information exchange or the coordination of actions among impacted Reliability Coordinators for conditions or activities that impact other Reliability Coordinator Areas. This documentation may include, but is not limited to, dated, current in force documentation with the specified elements. (R1)
- M2.** Each Reliability Coordinator shall have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were:
- 2.1** Agreed to by all the Reliability Coordinators required to take the indicated action(s).

2.2 Distributed to all Reliability Coordinators that are required to take the indicated action(s).

This evidence may include, but is not limited to dated document with confirmation of receipt or dated electronic communications with confirmation of receipt. (R2)

- M3.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it made notifications and exchanged reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions or activities that impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information. (R3)
- M4.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it participated in agreed upon (at least weekly) conference calls and other communication forums with impacted Reliability Coordinators. (R4)
- M5.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it, upon identification of an Adverse Reliability Impact, notified impacted Reliability Coordinators. (R5)
- M6.** Each Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it operated as though the problem exists when the identified Adverse Reliability Impact was not agreed to by the impacted Reliability Coordinators. (R6)
- M7.** Each Reliability Coordinator with the identified Adverse Reliability Impact shall have evidence and provide evidence that it developed a mitigation plan when the impacted Reliability Coordinators could not agree that the problem exists. This evidence may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation. (R7)
- M8.** Each impacted Reliability Coordinator shall have and provide evidence which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it implemented the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators can not agree on a mitigation plan unless such actions would have violated safety, equipment, or regulatory or statutory requirements. (R8)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring Period and Reset Time Frame

Not Applicable

1.3. Compliance Monitoring and Enforcement Processes:

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Reliability Coordinator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator shall retain its current, in force document and any documents in force since the last compliance audit for all Requirements R1, R2, and Measures M1, M2.
- Each Reliability Coordinator shall retain its most recent 12 months of evidence for Requirement R3, R4, R5 and Measure M3, M4, M5.
- Each Reliability Coordinator shall retain 3 calendar years plus current calendar year of evidence for Requirements R6 through R8 and Measures M6 through M8.
- If a Reliability Coordinator is found non-compliant, it shall keep information related to the non-compliance until found compliant.
- The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address one or two of the parts.	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address three or four of the parts.	The Reliability Coordinator has Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability but failed to address five of the parts.	The Reliability Coordinator failed to have Operating Procedures, Processes, or Plans in place for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability.
R2	N/A	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were distributed to all Reliability Coordinators that are required to take action.	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action.	The Reliability Coordinator failed to have evidence that the Operating Procedures, Processes, or Plans that require one or more other Reliability Coordinators to take action (e.g., make notifications, exchange information, or coordinate actions) were agreed to by all Reliability Coordinators that are required to take action and were distributed to all Reliability Coordinators that are required to take action.
R3	N/A	N/A	The Reliability Coordinator failed to make notifications OR exchange reliability-related information with impacted Reliability Coordinators.	The Reliability Coordinator failed to make notifications AND exchange reliability-related information with impacted Reliability Coordinators.

Standard IRO-014-2 — Coordination Among Reliability Coordinators

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4	N/A	N/A	N/A	The Reliability Coordinator failed to participate in an agreed upon (at least weekly) conference call or other communication forum with impacted Reliability Coordinators.
R5	N/A	The Reliability Coordinator failed to notify one, but not all, of the impacted Reliability Coordinators upon identification of an Adverse Reliability Impact.	N/A	The Reliability Coordinator failed to notify any impacted Reliability Coordinators upon identification of an Adverse Reliability Impact.
R6	N/A	N/A	N/A	The Reliability Coordinator failed to operate as though the problem existed when the identified Adverse Reliability Impact was not agreed to by the impacted Reliability Coordinators.
R7	N/A	N/A	N/A	The Reliability Coordinator with the identified Adverse Reliability Impact failed to develop a mitigation plan when the impacted Reliability Coordinators can not agree that the problem exists.
R8	N/A	N/A	N/A	The impacted Reliability Coordinator failed to implement the mitigation plan developed by the Reliability Coordinator who has the identified Adverse Reliability Impact when the impacted Reliability Coordinators could not agree on a mitigation plan.

E. Regional Differences

None identified.

F. Associated Documents

Version History

Version	Date	Action	Change Tracking
1	August 10, 2005	<ol style="list-style-type: none"> 1. Changed incorrect use of certain hyphens (-) to “en dash (-).” 2. Hyphenated “30-day” when used as adjective. 3. Changed standard header to be consistent with standard “Title.” 4. Initial capped heading “Definitions of Terms Used in Standard.” 5. Added “periods” to items where appropriate. 6. Changed “Timeframe” to “Time Frame” in item D, 1.2. 7. Lower cased all words that are not “defined” terms — drafting team, self-certification. 8. Changed apostrophes to “smart” symbols. 9. Added comma in all word strings “Procedures, Processes, or Plans,” etc. 10. Added hyphens to “Reliability Coordinator-to-Reliability Coordinator” where used as adjective. 11. Removed comma in item 2.1.2. 12. Removed extra spaces between words where appropriate. 	January 20, 2006
1	February 7, 2006	Approved by BOT	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
2	TBD	Revised per SAR for Project 2006-6, RC SDT	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008 – May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC_SDT coordinated with OPCP_SDT and RTO_SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9 – November 20, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the ~~first~~second draft. The team is seeking comments on the revised standards.

Future Development Plan:

Anticipated Actions	Anticipated Date
