The webinars will provide the details for the 2019 Generator Operator (GOP) Survey. This survey is an industry lead effort to gather information to address reliability issues regarding frequency response, and has been endorsed by the NERC Operating Committee and the North American Generator Forum and a follow up to the 2017 GOP Survey. As this survey is voluntary, it is being requested that every GOP participate to demonstrate, as an industry, that reliability issues can be addressed outside of mandatory requirements. GOPs will be requested to submit their survey forms to their BAs. BAs are asked to support their GOPs in completing the requested information, and consolidating all the survey data, and submitting to NERC on the NERC Balancing Authority Submittal (BAS) site.

The webinar will review the 2017 GOP Survey results, provide details of the 2019 GOP Survey, and review the form to be used; review the selected events for each interconnection and finally address frequently asked questions.
