Subject: NERC Strategic Plan

Hi Gerry,
I offer the following comments for NERC's consideration:

Mission

To ensure the reliability of the North American bulk power system by implementing the relevant standards, promoting effective collaboration, cooperation, and communication around important risks to reliability, and by using industry expertise to produce outcomes that improve reliability.

Vision

To be the trusted organization under whose leadership it ensures and continuously improves the reliability of the North American bulk power system.

Gerry, You can observe that I have shortened the Vision statement and moved a portion of it to the Mission statement with some minor wording changes. I have done this keeping in mind that the Vision statement is usually a statement about the future state and the Mission statement usually says how the organization is going to get there.

Thank you for your consideration.
Ed
