

Announcement

Lauby Elected to National Academy of Engineering

February 10, 2020

ATLANTA – The [National Academy of Engineering](#) (NAE) announced that it has elected Mark Lauby, NERC’s senior vice president and chief engineer, to its 2020 class for a career of distinguished contributions to his field. NAE cited Lauby’s development and application of techniques for electric grid reliability analysis in its election notice.

“Mark has truly had a distinguished technical career with his work at EPRI and NERC, where he serves as our chief engineer. He is a unique talent and very passionate about his work and the challenges facing the North American power grid,” said Jim Robb, NERC’s president and CEO. “His colleagues at NERC congratulate him on this terrific recognition of his contributions to the reliability of the bulk power system.”

Election to the National Academy of Engineering is among the highest professional distinctions accorded to an engineer — with only 105 new members named this year. Academy membership honors those who have made outstanding contributions to “engineering research, practice or education, including, where appropriate, significant contributions to the engineering literature” and to “the pioneering of new and developing fields of technology, making major advancements in traditional fields of engineering or developing/implementing innovative approaches to engineering education.”

“I am both humbled and honored to be recognized in this way,” Lauby said. “I look forward to contributing to the mission of the National Academy of Engineering.”

Lauby and the other new members will be formally inducted during a ceremony at NAE’s annual meeting in Washington, D.C., on October 4.
