Project 2006-04: Backup Facilities

The recirculation ballot for EOP-008-1 — Loss of Control Center Functionality ended July 26, 2010.

Ballot Results

Voting statistics are listed below, and the [Ballot Results](#) Web page provides a link to the detailed results:

Quorum: 93.43%

Approval: 85.22%

The ballot pool approved the standard. Ballot criteria details are listed at the end of the announcement.

Next Steps

The standard will be submitted to the NERC Board of Trustees for approval.

Project Background

The purpose of the standard is to ensure continued reliable operations of the Bulk Electric System in the event that a control center becomes inoperable. The standard has been modified significantly from the “Version 0” standard to add more specificity to the requirements and to address issues raised by FERC in Order 693. The standard incorporates a number of changes based on input received from the industry during the drafting and comment process.

Standards Development Process

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

Ballot Criteria

Approval requires both a (1) quorum, which is established by at least 75% of the members of the ballot pool for submitting either an affirmative vote, a negative vote, or an abstention, and (2) A two-thirds majority of the weighted segment votes cast must be affirmative; the number of votes cast is the sum of affirmative and negative votes, excluding abstentions and nonresponses. If there are no negative votes with reasons from the first ballot, the results of the first ballot shall stand. If, however, one or more members submit negative votes with reasons, a second ballot shall be conducted.
