1. **The SDT made changes to TOP-001-2 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made? If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.**

Summary Consideration: Comments were made on all Requirements within TOP-001-2. Most of these comments indicated individually preferred language that the SDT did not feel improved clarity, and were therefore not adopted.

In response to a large group of comments, Requirement R8 was modified to replace the phrase "its internal area reliability" with "reliability internal to its Transmission Operator Area".

The SDT clarified in its response that the term 'continuous duration' has its common meaning.

In response to comments, minor changes were made to Requirements R1, R6, and R10 to improve clarity.

The Time Horizon for Requirement R8 was changed to Operations Planning only.

Conforming changes were made to the respective Measures, VSLs, and VRFs.

R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each ~~identified~~ Reliability Directive issued and identified as such by its Transmission Operator(s), unless ~~-~~such actions would violate safety, equipment, regulatory, or statutory requirements.

R6. Each Balancing Authority and Transmission Operator shall notify ~~the~~its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.

R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.

R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or ~~each~~an SOL identified in Requirement R8, has been exceeded.

Organization	Yes or No	Question 1 Comment

Organization	Yes or No	Question 1 Comment
California ISO	Negative	R6 requires Balancing Authorities and Transmission Operators to notify “negatively impacted interconnected NERC registered entities” of planned outages. This term is not specific enough to narrow down who must be notified. For instance, with this open-ended wording it could be construed that BAs would have to notify LSEs and DPs in their areas which would be an onerous task. We would recommend staying with “negatively-affected BAs and TOPs.” The wording in R9 is confusing and is not specific enough to ensure compliance. In particular the requirement prohibits operation outside any SOL “for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.” However, by NERC definition an SOL is based upon Facility Rating and Stability Criteria, so operating outside the SOL is always going to violate the Facility Rating. In addition, under R9 and M9, how will the word “continuous” be defined or measured? This is extremely important to understand because the VSL table states the following as Severe for R9: “The Transmission Operator exceeded a System Operating Limit (SOL) as identified in Requirement R8 for a continuous duration greater than 30 minutes that would cause a violation of the Facility Rating or Stability criteria.” It seems that the effective date should be set much sooner than 24 months following approval since there are basically no new requirements associated with this standard. Most all of the changes are primarily clarification or consolidation. This comment applies to TOP-002-3 and TOP-003-2 as well.
Response: Regarding Requirement R6, since telemetry has definite parties at each end, the Balancing Authority or Transmission Operator with the telemetry issue is in the best position to know which other parties are affected by its telemetry outages. No change made. Regarding Requirement R9, ratings include the element of time. In view of the current NERC definitions of IROLs and SOLs, the language is correct as is written. The definition of IROLs describes the negative results that could occur when an IROL is exceeded		

Organization	Yes or No	Question 1 Comment
for a time greater than its T_v. The definition for SOL does not have this language, so no "... instability, uncontrolled separation(s) or cascading outages...." happens upon the exceedance of an SOL that is not an IROL. No change made. In Requirement R9 and Measure M9, 'continuous duration' has its common meaning. No change made. Regarding the effective dates, the SDT agrees, and has shortened the effective date to 12 months for all requirements except the proposed TOP-003-2, Requirements R1 and R2 which will be 10 months.		
Colorado Springs Utilities	Negative	Colorado Springs Utilities (CSU) appreciates the work of the SDT to reconcile the various requirements into TOP-001, -002, & -003; and this opportunity to comment. The language of this group of standards has improved much with each draft. However, CSU continues to be concerned with the creation of an apparently "special" class of SOL in TOP-001-3 R8, R9 & R11 - creating what seems to be a middle category between "run of the mill" SOLs and IROLs; with no guidance, whatsoever, on how SOLs should qualify for or be excluded from this intermediate treatment. FAC-011 & FAC-014 already adequately cover identification and communication of SOLs and IROLs, and CSU believes that, if any additional SOL categories need be created, they should be more appropriately addressed in those standards. Additionally, there is no definition and a lack clarity for the concept of "supporting internal area reliability". In previous Considerations, the SDT has stated, "Requirements R8 and R10 were added due to comments from a significant portion of the industry during the extensive posting process of these standards." But, as the SDT has acknowledged, "There is still some debate as to what is meant by internal area reliability." The SDT continued, "The SDT continues to believe, as stated in previous responses, that the Transmission Operator is best suited to determine what affects its internal area and the resolution of those issues are best left to the Transmission Operator." If best left to the Transmission Operator, then one wonders why this "special" SOL should be added to the Standard? This concept is obviously causing much consternation amongst responding entities and has

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td></td><td></td><td>the makings of, at best, a moot requirement (if no-one identifies any special SOLs) or, at worst, a compliance minefield - considering the questions that will come to an auditor’s mind when trying to assess compliance with these requirements as written.

CSU also continues to feel strongly, despite protestations of the SDT to the contrary, that R7/R9 and R11 create a double jeopardy waiting to happen, and would best be appropriately combined.</td></tr>
<tr><td colspan="3">Response: The class of SOL included in Requirements R8, R9, and R11 was created in response to industry comments that there were SOLs that deserved increased attention. These requirements embed that concept in the standard. No change made.

The SDT has replaced 'internal area reliability' with 'reliability within its Transmission Operator Area'. It is possible that a Transmission Operator Area has no SOLs that fit this requirement. However, extensive comments received throughout the life of this project indicate the need for such an inclusion. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.

R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL<s>s</s>, <s>have</s>has been identified by the Transmission Operator as supporting <s>its internal area</s> reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.

These requirements are the core Transmission Operator requirements that assure continued reliable operation of the BES. If the Transmission Operator acts or directs others to act to mitigate, as in Requirement R11, but is unable to return the facility within its IROL with a time T_v or its SOL within its time criteria, then the Transmission Operator is compliant with Requirement R11 and noncompliant with either Requirement R7 or Requirement R9, as dictated by the exact circumstances. If the Transmission Operator fails to act or fails to direct others to act, as in Requirement R11, then it is noncompliant with both Requirement R11 and either Requirement R7 or Requirement R9, as dictated by the exact circumstances. This is not double jeopardy. No change made.</td></tr>
<tr><td>MidAmerican Energy Co.</td><td>Negative</td><td>MidAmerican has concerns about TOP-001 R8 and R9. It appears the drafting team has unintentionally created an undefined subset or class of SOLs that are roughly equivalent to IROLs. More clarification is needed to clearly state that the new class of SOLs is a subset of all SOLs and not all</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
		SOLs. MidAmerican recommends that R8 be modified to strike “each SOL” and replaced with “subset of Reliability Coordinator defined SOLs”. Otherwise auditors could argue that the NERC definition of a SOL includes all NERC BES devices since they all have thermal and voltage limits and therefore all NERC BES facilities apply to R8 and R9.
Response: The SDT believes that the language in Requirement R8 is clear. This requirement only applies to that subset of SOLs that are deemed to be more significant to the Transmission Operator than the typical SOL. This subset was intentionally created by the SDT in response to industry comments. The Transmission Operator must define its SOLs consistent with the Reliability Coordinator’s SOL methodology per FAC-014-2, Requirement R2. Thus, each SOL is defined per the Reliability Coordinator’s methodology. No change made.		
Muscatine Power & Water	Negative	Please clarify on the issue of SOLs. IROLs have a time limit but SOLs do not. Is the Standards Drafting Team requiring no SOL limit(s) are to be violated? What is the criteria and basis to R8 and R9? Note that the SOL definition has a thermal rating component in it and we are not sure how you can’t draw SOLs into the same category as IROLs unless you clearly indicate these standards only apply to a subset.
Response: Typically, ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. For SOLs, the time limit varies according to the facility ratings used in the development of the SOL. No change made.		
Northeast Utilities	Negative	TOP-001-2 is referencing a NERC definition for “Reliability Directive” which is not in effect today and is listed on the Definitions of Terms Used in Standard, page 2. It is stated that the definition of “Reliability Directive” would be written by the Reliability Coordinator Standards Drafting Team (Project 2006-06), and post it for vetting by the industry sometime in the future. If this standard is approved now and the definition for “Reliability Directive” changes because of the Project 2006-06 work, the TOP standards will have to be revisited. The Project 2006-06 Drafting Team should be coordinating its work with this project to develop an “across the board”

Organization	Yes or No	Question 1 Comment
		usable definition.
Roger C. Zaklukiewicz	Negative	There currently is a definitionn for "Relibility Directive" which is listed in the Definition of Terms used in Standards. It is my understanding that the definition of the term "Relibility Directive" is being reviewed and probably will be rewritten/modified by the Relibility Coordinator Standards Drafting Team (Project 2006-06). Associated with this effort, is clarification of the term "Adverse Relibility Impact" which may have a significant impact on how TOP-001-2 is interpreted and administered throughout the industry. I believe the work of the Project 2006-06 Team should be coordinated with this initiative so that we have a greater level of certainty upon which we are casting a vote.
Response: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. Implementation will be coordinated with that team as well.		
Oncor Electric Delivery	Negative	For R6- Oncor Electric Delivery respectfully submits this response as it does not believe that the proposed language will provide a coordinated communication effort in the event of a planned outages of telemetry, control equipment and associated communication channels. In addition, the term “negatively impacted interconnected registered entities” is too subjective. Oncor believes that the Reliability Coordinator is in the best position to determine who is negatively impacted and that they should be the entity that makes further notification after receiving the initial planned outage request from the originating entity.
Response: The SDT is unsure of the intent of this comment, since no suggested alternative language was proposed. The SDT continues to believe that the Transmission Operator is in the best position to know which other parties are affected by its telemetry outages and it is not necessary to include the Reliability Coordinator into this item. Owner/operators of affected telemetry equipment have traditionally coordinated these outages. No change made.		

Organization	Yes or No	Question 1 Comment
Southwest Power Pool, Inc.	Negative	R4 in TOP-004-1 provided a 30-minute transition from an unknown operating state to a known operating situation. Although the SDT has indicated they included provision for that transition in R7 and R9 of TOP-001-2 some flexibility is still lost. For example, if you are operating with no N-1 contingency violations and a contingency occurs, the next contingency (N-2 from the original state) could cause a violation of a Facility Rating. If this contingency actually occurs, then loading immediately exceeds the Facility Rating and you are in violation of R9. Previously, we would have had 30 minutes to work with this condition before being in violation. Additionally, R9 only applies if the SOL is identified in R8. What if it isn't identified in R8? This brings us to the issue of R8. R8 is unclear. What is meant by 'internal area reliability'? How does it differ from reliability of a TOP Area as included in R5? With the inclusion of internal area reliability in R8 and R9, aren't these requirements now in conflict with the purpose of the standard which is directed toward impacts on the reliability of the interconnection? Including IROLs in R10 and R11 introduces confusion regarding who's responsible for mitigating IROLs - the RCs or the TOPs. Therefore the SDT should give consideration to removing the references to IROLs in these requirements and defer to IRO-001-2, R7. We would suggest using 'its' RC in R6 rather than 'the' RC. Finally, why is the effective date set at 24 months following approval since there are basically no new requirements associated with this standard? Most all of the changes are primarily clarification or consolidation. This comment applies to TOP-002-3 and TOP-003-2 as well.
Response: The SDT made a conscious decision to raise the bar on IROLs to incorporate the T_v limit. SOLs are tied to the facility ratings which contain a time element which may or may not be 30 minutes. No change made.		

Organization	Yes or No	Question 1 Comment
Requirement R9 does not apply to SOLs which are not identified in Requirement R8. No change made. The SDT replaced 'internal area reliability' with 'reliability internal to its Transmission Operator Area'. It is possible that a Transmission Operator Area has no SOLs that fit this requirement. However, extensive comments received throughout the life of this project indicate the need for such an inclusion. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations. **R8**. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. The SDT agrees. Conforming change made. Regarding the effective dates, the SDT agrees, and has shortened the effective date to 12 months except for the proposed TOP-003-2, Requirements R1 and R2 which will be 10 months.		
Tampa Electric Co.	Negative	Definitions for Reliabilty Directive should be with this ballot since it is the first to be balloted Is R4 to be interpreted that I must drop Firm load if the requesting TOP is droping Firm load. The words would imply that so I can't vote in the affirmative.
Response: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. Implementation will be coordinated with that team also. No change made. Shedding firm load is one of the tools for maintaining the reliability of the BES. However, this does not mean that if the initiating Transmission Operator drops load, that the cooperating Transmission Operator must necessarily drop load. It is possible, however, that two or more Transmission Operators may need to shed load to resolve an operating issue. This requirement is intended to assure that the initiating Transmission Operator cannot demand that a cooperating Transmission Operator execute emergency actions that the initiating Transmission Operator has not been willing or able to implement. No change made.		
Northeast Power Coordinating	No	Requirements R1 and R2 should not be separate. Having them broken out

Organization	Yes or No	Question 1 Comment
Council		in this manner could potentially put entities in double jeopardy when non-compliance occurs. The original language provided for a very narrow limitation on the reasoning and the contact; and they were tied together. This language somewhat allows for the potentially different reasoning being allowed for one's inability to provide notice. If each function needs to be separate, then Requirement R4 should be broken down into two requirements. Requirement R4 states that information is being requested, AND is available. TOP-001-2 R2 states: Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform an identified Reliability Directive issued by that Transmission Operator. [Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations] ☐ seems problematic and further work needs to be done on this requirement to ensure that the proper intent is codified. The intent we believe to be ..immediately upon recognition of the inability to perform a Reliability Directive within the stipulated or understood timeframe would result in informing the TO. The concern exists that an entity might be able to perform the directive but may not within the proper timeframe of the TOPs need. In TOP-001-2 R3 the phrase "known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis" is confusing. The Glossary defines Emergency as any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System. The Glossary defines Operation Planning Analysis as "An analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much

Organization	Yes or No	Question 1 Comment
		as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.)." What is the difference between TOPs KNOWN to be effected by an anticipated Emergency from those EXPECTED to be effected by an anticipated Emergency? The Requirement should state TOP's expected to affected by an anticipated Emergency. Those TOP's known to be affected are part of the group expected to be affected. Operations Planning occurs in the Day ahead. An actual Emergency does not occur in the Day Ahead. The word actual should be removed. The SDT should scope R3 to the concept of Operational Planning as defined in the Glossary. The Time Horizon in the Requirement is Operations Planning.Suggest rewording Requirement R3 to:R3. Each Transmission Operator shall inform its Reliability Coordinator and those Transmission Operators that are expected to be affected by an anticipated Emergency based on its assessment of its Operational Planning Analysis. Without an expressed time period for the notification in R6, doesn't this create an opportunity for broad interpretations of what is permissible and what's not? It also allows for inconsistent treatment. An auditor's view might be very different from an entity's view. Also, regarding TOP-001-2 R6, which states "Each Balancing Authority and Transmission Operator shall notify the Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities." This is a big concern. If there is coordination and notification between Reliability Coordinators, but no notification by one of the Reliability Coordinator's to the entities within the affected other Reliability Coordinator's footprint, would that be non-compliant? To ensure proper communications, notifications, and awareness

Organization	Yes or No	Question 1 Comment
		there should only be one Reliability Coordinator communicating to its entities. It is impractical for Balancing Authorities and Transmission Operators to “drill down” and have to notify entities outside of their footprints of the aforementioned planned outages. Regarding TOP-001, Requirement R8: The drafting team needs to define the term “internal area reliability” in order to improve the clarity of the standard. Double jeopardy is introduced with TOP-001 R8 and FAC-014 R5.2. Fac-014 R5.2 states “The Transmission Operator shall provide any SOLs it developed to its Reliability Coordinator and to the Transmission Service Providers that share its portion of the Reliability Coordinator Area”; while TOP-001 R8 states “Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not IROLs, have been identified by the Transmission Operator as supporting its internal area reliability based on its assessment of its Operational Planning Analysis.”

Response: There is no double jeopardy with separate requirements. If an entity receives a Reliability Directive and for the reasons stated in Requirement R1 can't comply with it, it is compliant with Requirement R1. If the entity fails to inform the issuer of the Reliability Directive, it is non-compliant with Requirement R2. Requirement R1 does not require the entity to inform. No change made.

As 'requested and available' is a descriptor and not separate functions. No change made.

Unless stated otherwise, a Reliability Directive should be assumed to require immediate or as soon as practicable response. The terms “immediate” and “as soon as practicable” have been debated without resolution in other projects and have been determined to be unmeasureable. The SDT sees no way to place a measurable timeframe on responding to a Reliability Directive. No change made.

The SDT sees no additional clarity from the suggested change “known or expected to be affected”. This language was chosen to cover all situations, including an ongoing event. No change made. The suggested change to remove “actual” is not adopted for the same reason: An entity could be in the midst of an on-going emergency that will continue to be present in the next-day, so the wording is correct. No change made.

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td colspan="3">
R4: The SDT sees no additional clarity from the suggested change. No change made.

This SDT and others have worked with various phrases to indicate a timeframe, however, after extensive investigation, it has been determined that no phrase is both consistent with reliable operations while also crisp enough to provide reassurance to the regulated entity that it may avoid noncompliance. The requirement is to inform. It implies that the information must be communicated to the other entities within a timeframe that enables them to respond (if possible). No change made.

The intent of the requirement is to notify those entities that are directly affected by the telemetry outage. If a data point provided by a Balancing Authority to its Reliability Coordinator is missing due to a telemetry outage between the Balancing Authority and Reliability Coordinator, the Balancing Authority must notify the Reliability Coordinator. However, other entities that subsequently receive that point from the Reliability Coordinator as part of a larger data stream are not involved in the telemetry outage and would not be notified by the Balancing Authority. No change made.

The phrase 'internal area reliability' was replaced in Requirement R8 and a conforming change was made in Measure M8. The subset of SOLs in this requirement requires special handling, thus, this requirement does not introduce double jeopardy.

R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.
</td></tr>
<tr><td>Orange and Rockland Utilities, Inc.</td><td>No</td><td>

		Operators that are expected to be affected by an anticipated Emergency based on its assessment of its Operational Planning Analysis. Without an expressed time period for the notification in R6, doesn't this create an opportunity for broad interpretations of what is permissible and what's not? It also allows for inconsistent treatment. An auditor's view might be very different from an entity's view. Also, regarding TOP-001-2 R6, which states "Each Balancing Authority and Transmission Operator shall notify the Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities." This is a big concern. If there is coordination and notification between Reliability Coordinators, but no notification by one of the Reliability Coordinator's to the entities within the affected other Reliability Coordinator's footprint, would that be non-compliant? To ensure proper communications, notifications, and awareness there should only be one Reliability Coordinator communicating to its entities. It is impractical for Balancing Authorities and Transmission Operators to "drill down" and have to notify entities outside of their footprints of the aforementioned planned outages. Regarding TOP-001, Requirement R8: The drafting team needs to define the term "internal area reliability" in order to improve the clarity of the standard.
Response: There is no double jeopardy with separate requirements. If an entity receives a Reliability Directive and for the reasons stated in Requirement R1 can't comply with it, it is compliant with Requirement R1. If the entity fails to inform the issuer of the Reliability Directive, it is non-compliant with Requirement R2. Requirement R1 does not require the entity to inform. No change made. As 'requested and available' is a descriptor and not separate functions. No change made. The SDT sees no additional clarity from the suggested change "known or expected to be affected". This language was chosen to		

Organization	Yes or No	Question 1 Comment
cover all situations, including an ongoing event. No change made. The suggested change to remove "actual" is not adopted for the same reason: An entity could be in the midst of an on-going emergency that will continue to be present in the next-day, so the wording is correct. No change made. The SDT sees no additional clarity from the suggested change. No change made. This SDT and others have worked with various phrases to indicate a timeframe, however, after extensive investigation, it has been determined that no phrase is both consistent with reliable operations while also crisp enough to provide reassurance to the regulated entity that it may avoid a noncompliance. The requirement is to inform. It implies that the information must be communicated to the other entities within a timeframe that enables them to respond (if possible). No change made. The intent of the requirement is to notify those entities that are directly affected by the telemetry outage. If a data point provided by a Balancing Authority to its Reliability Coordinator is missing due to a telemetry outage between the Balancing Authority and Reliability Coordinator, the Balancing Authority must notify the Reliability Coordinator. However, other entities that subsequently receive that point from the Reliability Coordinator as part of a larger data stream are not involved in the telemetry outage and would not be notified by the Balancing Authority. No change made. The phrase 'internal area reliability' was replaced in Requirement R8 and a conforming change was made in Measure M8. **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.		
Southwest Power Pool Regional Entity	No	Action is only required by the proposed standards if a real time violation of a previously identified SOL occurs. No action is required in a preventative manner and no action is required as a result of a real time problem that was not identified by the Operational Planning Assessment. R5 should include notifying the RC of anticipated SOL violations. Addition in quotes. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact "or SOL violation" on those respective Transmission Operator Areas unless conditions do not permit such communications. Such operations may include relay or equipment failures

Organization	Yes or No	Question 1 Comment
		and changes in generation, Transmission, or Load.
Response: The 'anticipated' language addresses preventative. An assessment can happen at any time. It is not necessary to take action on an SOL. The definition of IROL describes the negative results that could occur when an IROL is exceeded for a time greater than its T_V. The definition for SOL does not have this language, so no "... instability, uncontrolled separation(s) or cascading outages...." happen upon the exceedance of an SOL that is not an IROL. No change made. The SDT does not agree. Adverse Reliability Impact captures the intent of the communications required in Requirement R5. No change made.		
US Army Corps of Engineers	Negative	Issue: Upon review of the NERC Glossary of Terms, please drop the from or Adverse Reliability Impacts within the definition of a Reliability Directive. Issue: M1; It is not necessary to repeat the Requirement within the Measure. Recommend unless such actions would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1, be removed from this Measure. Issue: M4; It is not necessary to repeat the Requirement within the Measure. Recommend unless such actions would violate safety, equipment, regulatory, or statutory requirements, be removed from the Measure. Issue: Upon review, it is noted that ˜Coordination of has been struck from Purpose, however not removed from the Title of the Standard. Recommend changing ˜interconnection in the Purpose to ˜Bulk Electric System (BES) Issue: R3: The statement Transmission Operators that are known or expected to be affected the use of known or expected is redundant. Recommend removing ˜known or expected and have the requirement rewritten as follows: Issue: R3: Each Transmission Operator shall inform its Reliability Coordinator

Organization	Yes or No	Question 1 Comment
		and Transmission Operators to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. Issue: R8: The statement its internal area reliability should be clarified to state: R8: Each Transmission Operator shall inform its Reliability Coordinator of each of its SOLs which, while not IROLs, have been identified by the Transmission Operator as supporting its Transmission Operators area based on its assessment of its Operational Planning Analysis. Issue: M8: statement its internal area reliability should be clarified to state: has been identified by the Transmission Operator as supporting its Transmission Operators area, identified as a result of the Operational Planning Analysis Issue: Please clarify on the issue of SOLs. IROLs have a time limit but SOLs do not. Is the SDT requiring no SOL limit(s) are to be violated? What is the criteria and basis to R8 and R9. Note that the SOL definition has a thermal rating component in it and we are not sure how you cant draw SOLs into the same category as IROLs unless you clearly indicate these standards only apply to a subset.
Response: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. This comment will be passed to that team for consideration. No change made. M1 and M4: Requirement language is usually repeated in Measures. No change made. Title has been corrected. Interconnection is the correct term in the Purpose, as Transmission Operators in different interconnections are not required to coordinate actions. The SDT sees no additional clarity from the suggested change. No change made.		

Organization	Yes or No	Question 1 Comment
The phrase 'internal area reliability' was replaced in Requirement R8 and a conforming change was made in Measure M8. **R8**. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. Ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. No change made.		
Bonneville Power Administration	No	Comments: Given the potential uncertainty regarding the 30 Minute Rule, BPA suggests adding more clarity to the standard TOP-001-2 as the new draft could be interpreted to mean that one would need to get the flows below the SOL immediately. BPA believes this is not practical because it takes a definite amount of time to change schedules, move generation, or perform other actions in order to reduce loadings on facilities. BPA believes the new draft should include guidance as to how much time the BA or Transmission Operator would be allowed in order to reduce flows when there is an SOL violation. BPA suggests that more clarity be provided and/or the 30 minute rule be added back to the standard.
Response: Ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. No change made. Additionally, the SDT believes including the "a violation of the Facility Rating or Stability criteria upon which it is based" is superior to how the standard is written today. The currently in force TOP-004-2, Requirement R2 is written without time limits or criteria and could be interpreted as requiring flows to be mitigated immediately for an IROL and SOL as well.		
ISO/RTO Standards Review Committee	No	Instead of using 'its' TOP in R1 we suggest using 'a' TOP since it is possible for the listed entities to have multiple TOPs. R4 in TOP-004-1 provided a 30-minute transition from an unknown operating state to a known operating situation. Although the SDT has indicated they included provision for that transition in R7 and R9 of TOP-001-2 some flexibility is still lost. For example, if you are operating with no N-1 contingency violations and a contingency occurs, the next contingency (N-2 from the original state) could cause a violation of a Facility Rating. If

Organization	Yes or No	Question 1 Comment
		this contingency actually occurs, then loading immediately exceeds the Facility Rating and you are in violation of R9. Previously, we would have had 30 minutes to work with this condition before being in violation. Additionally, R9 only applies if the SOL is identified in R8. What if it isn't identified in R8? This brings us to the issue of R8. R8 is unclear. What is meant by 'internal area reliability'? How does it differ from reliability of a TOP Area as included in R5? With the inclusion of internal area reliability in R8 and R9, aren't these requirements now in conflict with the purpose of the standard which is directed toward impacts on the reliability of the interconnection? Including IROLs in R10 and R11 introduces confusion regarding who's responsible for mitigating IROLs - the RCs or the TOPs. Therefore the SDT should give consideration to removing the references to IROLs in these requirements and defer to IRO-001-2, R7. We would suggest using 'its' RC in R6 rather than 'the' RC. Finally, why is the effective date set at 24 months following approval since there are basically no new requirements associated with this standard? Most all of the changes are primarily clarification or consolidation. This comment applies to TOP-002-3 and TOP-003-2 as well.
Southwest Power Pool Reliability Standards Development Team	No	Instead of using 'its' TOP in R1 we suggest using 'a' TOP since it is possible for the listed entities to have multiple TOPs. Organization	Yes or No	Question 1 Comment
		Finally, why is the effective date set at 24 months following approval since there are basically no new requirements associated with this standard? Most all of the changes are primarily clarification or consolidation. This comment applies to TOP-002-3 and TOP-003-2 as well.

Response: R1: The SDT agrees and has adjusted the language to allow for multiple TOPs.

> **R1**. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each ~~identified~~ Reliability Directive issued and identified as such by its Transmission Operator(s), unless ~~-~~such actions would violate safety, equipment, regulatory, or statutory requirements.

R3: The SDT does not see that the suggested change improves clarity. No change made.

R9: SOLs are tied to the facility ratings which contain a time element which may or may not be 30 minutes. Additionally, if the SOL was not identified in Requirement R8, then Requirement R9 does not apply to it. No change made.

R8 and R9: The phrase 'internal area reliability' was replaced in Requirement R8 and a conforming change was made in Measure M8. The subset of SOLs in this requirement was created in response to industry comments that SOLs should not be completely removed from the standard.

> **R8**. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.

R10 and R11: Normally the Reliability Coordinator would have developed a plan per approved IRO-009-1, Requirement R3 to handle these situations but the case in place here is for those immediate situations where the Transmission Operator must start to act while waiting for the Reliability Coordinator to act per approved IRO-009-1, Requirement R4. The Reliability Coordinator is always the responsible entity for IROLs and this requirement does not change that fact. No change made.

R6: The SDT agrees. Conforming change made.

> **R6**. Each Balancing Authority and Transmission Operator shall notify ~~the~~its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.

Regarding the effective dates, the SDT agrees, and has shortened the effective date to 12 months except for the proposed TOP-

Organization	Yes or No	Question 1 Comment
003-2, Requirements R1 and R2 which will be 10 months.		
Imperial Irrigation District (IID)	No	R2 - This requirement requires the BA, GOP, and LSE to notify the TOP if it cannot comply with the Reliability Directive. (Comment) - Should include the language that the entity is not able to comply with the Reliability Directive due to violation of safety, equipment regulatory or statutory requirements. R7 - This requirement requires that the TOP not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL (Comment) - Should the language in the requirement also include the reference to SOLs since WECC does not have IROLs? R8 - This requirement requires the TOP to inform its Reliability Coordinator of each SOL which, while not IROLs, have been identified by the Transmission Operator as supporting its internal area reliability based on its assessment of its Operational Planning Analysis (Comment) - Remove “which, while not IROL” from the requirement language and add “that” before “have been identified”. This would make the statement more clear. R9 - This requirement requires that the TOP not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. (Comment) - Define Continuous. What would constitute a violation? 5 minutes, 10 minutes? In some cases corrective action requires participation and/or direction from the Reliability Coordinator and this could take up to 30 minutes. Recommend leaving the 30 minute duration in place. (Comment) - Recommend referencing R7 if the SOLs are included in the requirement. R10 - This requirement requires the TOP to inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or each

Organization	Yes or No	Question 1 Comment
		SOL identified in Requirement R8, has been exceeded. (Comment) - the language should include the reference to R7 if the SOL is included in the requirement. (Comment) - Recommend including ~~time frame~~timeframe for notification to the Reliability Coordinator to include "30 minutes or less" R11 - This requirement requires the TOP to act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's Measures or of an SOL identified in Requirement R8. (Comment) - Since only the Reliability Coordinator has the authority to direct others to take action; should the language be revised in the following manner; "The TOP shall take action to mitigate both the magnitude and duration of exceeding an IROL or an SOL as identified in R7 and R8 that occur within its TOPs area. The TOP shall appeal to the Reliability Coordinator to direct other TOPs in mitigating both magnitude and duration on interconnected facilities on the Bulk electric System".

Response: Requirement R2 covers all situations where the Reliability Directive can't be carried out. This requirement is simply to 'inform' and at the time in question the reason is not critical. The reason can be sorted out later. No change made.

In view of the current NERC definitions of IROLs and SOLs, the language is correct as is. The definition of IROLs describes the negative results that could occur when an IROL is exceeded for a time greater than its T_V. The definition for SOL does not have this language, so no "... instability, uncontrolled separation(s) or cascading outages...." happens upon the exceedance of an SOL that is not an IROL. No change made.

The SDT disagrees and believes the requirement needs to be clear that it applies to non-IROL SOLs since IROLs by definition are a subset of SOLs. However, the language in Requirement R8 was modified for improved clarity due to other comments.

> **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.

Ratings include the element of time. 'Continuous duration' has its common meaning. The SOLs in question are in reference to Requirement R8, not Requirement R7. The SDT received a substantial amount of comments during the last posting to remove the

Organization	Yes or No	Question 1 Comment
30 minute timeframe on SOLs. No change made. The SOLs in question are in Requirement R8 which is referenced in Requirement R10. No change made. Requirement R10 notification is after the fact and no timeframe is necessary. No change made. One Transmission Operator can reach out to another Transmission Operator in Requirement R11 and it would be expected that the other Transmission Operator would respond per Requirement R4. The Reliability Coordinator always maintains ultimate responsibility for multi- Transmission Operator areas as per the IRO standards and would be expected to step in as needed. This set of requirements is not a procedure. No change made.		
Kansas City Power & Light	No	Requirements R3 & R5 requires TOP's to notify all other "affected" TOP's in instances of emergency or Adverse Reliability Impact. The term "affected" is a debatable condition and subject to interpretation. As proposed, this requirement will be difficult to audit and will cause uncertainty in the industry. Recommend the requirement be modified to alert other TOP's whenever a TOP in an emergency or Adverse Reliability Impact operating condition becomes aware of operating conditions that would result in exceeding an SOL or IROL operating limits under N-1 contingency conditions for other TOP facilities. Modifications for these two requirements will result in subsequent changes to the Measures and VSL's for requirements R3 & R5. In requirements R9 and R11 the 30-minute transition from an unknown operating state to a known state is lost for operating from an n-1 state to a n-2 state therefore leading to an immediate violation of R9 if the facility rating is exceeded. Also, the inclusion of IROL's in R10 and R11 makes these requirements confusing as to who is responsible for mitigation, IROL's should be removed from here as they are considered in the IRO requirements, these requirements should only address SOL's. Requirement R8 uses the term "continuous duration". The term "continuous duration" will be subject to interpretation as to its meaning and intent. As proposed, this requirement will be difficult to audit and will cause

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td></td><td></td><td>uncertainty in the industry.

Also, a draft Reliability Directive definition is included in this standard but needs approval in the COM-002 standard, what if COM-002 does not get approved?</td></tr>
<tr><td colspan="3">Response: The SDT believes the use of the defined terms in the requirements covers the situation appropriately. No change made.

By definition an IROL violation occurs when the IROL limit is exceeded for duration greater than T_v. Thus, it must be the time duration. SOLs are tied to the facility ratings which contain a time element which may or may not be 30 minutes. No change made.

Normally the Reliability Coordinator would have developed a plan per approved IRO-009-1, Requirement R3 to handle these situations but the case in place here is for those immediate situations where the Transmission Operator must start to act while waiting for the Reliability Coordinator to act per approved IRO-009-1, Requirement R4. The Reliability Coordinator is always the responsible entity for IROLs and this requirement does not change that fact. No change made.

This is actually referring to Requirement R9, not Requirement R8. 'Continuous duration' has its common meaning. No change made.

Reliability Directive: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. Implementation will also be coordinated with that team.</td></tr>
<tr><td>SERC OC Standards Review Group</td><td>No</td><td>We suggest that the definition of Reliability Directive should be modified as follows: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or “an event that results in Bulk Electric System instability or Cascading”. We also recommend that the Standard Drafting Team coordinate with the COM-002-3 Standard Drafting Team to ensure consistency in the Reliability Directive definition.

We suggest the Standard Drafting Team further clarify or define the term “supporting internal area reliability” as an aid in demonstrating compliance and how this requirement enhances reliability.</td></tr>
</table>

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td></td><td></td><td>We suggest including “Real-time Assessments” in this standard to clarify Operations Planning and same day operations time horizons (Requirement 8).

We request that the drafting team review and explain the differences in the time horizons for Requirements 3, 5 and 8.</td></tr>
<tr><td colspan="3">Response: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. This comment will be passed to that team for consideration. No change made.

The SDT replaced 'internal area reliability' with 'reliability internal to its Transmission Operator Area'. It is possible that a Transmission Operator Area has no SOLs that fit this requirement. However, extensive comments received throughout the life of this project indicate the need for such an inclusion. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.

R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.

A Transmission Operator cannot operate with its IROLs (Requirement R7) and SOLs (Requirement R9) without performing Real-time assessments. As a result, the SDT does believe that Real-time assessments are included. No change made.

Requirement R3 is day ahead so the horizon is operation planning. Requirement R5 is in real-time so the horizons represent those time horizons. Requirement R8 should be Operations Planning only and the SDT has made this change.</td></tr>
<tr><td>MRO-NSRF</td><td>No</td><td>Issue: Upon review of the NERC Glossary of Terms, please drop the “s” from “...or Adverse Reliability Impacts” within the definition of a Reliability Directive.

Issue: M1; It is not necessary to repeat the Requirement within the Measure. Recommend “unless such actions would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1”, be removed from this Measure.</td></tr>

		the same category as IROLs unless you clearly indicate these standards only apply to a subset.
Response: "Reliability Directive" is under the auspices of the RC SDT (Project 2006-06). This comment has been passed on to that team. Plural versions of the NERC definitions are regularly used throughout the standards. M1: Requirement language is usually repeated in Measures. No change made. M4: Requirement language is usually repeated in Measures. No change made. R3: The SDT sees no additional clarity from the suggested change. No change made. R8: The phrase 'internal area reliability' was replaced in Requirement R8 and a conforming change was made in Measure M8. **R8**. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. SOLs: Ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. No change made.		
Constellation Energy	No	The definition of Reliability Directive is an improvement but the definition must capture the identification concept that is reflected in the Requirement (R1). As a result, when Reliability Directive is used elsewhere, it would be clear that the communication must be identified as a Reliability Directive. We suggest the following revision to the definition and it should follow through to Project 2006-06 (COM-002-3 and IRO-001-3), eventually being added to the Reliability Standards Glossary of Terms. A communication identified as a Reliability Directive by a Reliability Coordinator, Transmission Operator, or Balancing Authority to initiate action by the recipient to address an Emergency or Adverse Reliability Impact. The revised definition should stay with each of the 3 standards until it is in the Glossary of Terms. CCG, CECD and CPG agree with ISO/RTO Standards Review Committee Position: Instead of using 'its' TOP in R1 we suggest using 'a' TOP since it is

Organization	Yes or No	Question 1 Comment
		possible for the listed entities to have multiple TOPs. R4 in TOP-004-1 provided a 30-minute transition from an unknown operating state to a known operating situation. Although the SDT has indicated they included provision for that transition in R7 and R9 of TOP-001-2 some flexibility is still lost. For example, if you are operating with no N-1 contingency violations and a contingency occurs, the next contingency (N-2 from the original state) could cause a violation of a Facility Rating. If this contingency actually occurs, then loading immediately exceeds the Facility Rating and you are in violation of R9. Previously, we would have had 30 minutes to work with this condition before being in violation. Additionally, R9 only applies if the SOL is identified in R8. What if it isn't identified in R8? This brings us to the issue of R8. R8 is unclear. What is meant by 'internal area reliability'? How does it differ from reliability of a TOP Area as included in R5? With the inclusion of internal area reliability in R8 and R9, aren't these requirements now in conflict with the purpose of the standard which is directed toward impacts on the reliability of the interconnection? Including IROLs in R10 and R11 introduces confusion regarding who's responsible for mitigating IROLs - the RCs or the TOPs. Therefore the SDT should give consideration to removing the references to IROLs in these requirements and defer to IRO-001-2, R7. We would suggest using 'its' RC in R6 rather than 'the' RC. Finally, why is the effective date set at 24 months following approval since there are basically no new requirements associated with this standard? Most all of the changes are primarily clarification or consolidation. This comment applies to TOP-002-3 and TOP-003-2 as well

Organization	Yes or No	Question 1 Comment

Response: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. This comment will be passed to that team for consideration.

The SDT agrees and has adjusted the language to allow for multiple Transmission Operators.

> **R1**. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each ~~identified~~ Reliability Directive issued and identified as such by its Transmission Operator(s), unless ~~-~~such actions would violate safety, equipment, regulatory, or statutory requirements.

By definition an IROL violation occurs when the IROL limit is exceeded for a duration greater than T_v. Thus, it must be the time duration. SOLs are tied to the facility ratings which contain a time element which may or may not be 30 minutes. No change made.

Requirement R9 does not apply to SOLs which are not identified in Requirement R8. No change made.

The SDT replaced 'internal area reliability' with 'reliability internal to its Transmission Operator Area'. It is possible that a Transmission Operator Area has no SOLs that fit this requirement. However, extensive comments received throughout the life of this project indicate the need for such an inclusion. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.

> **R8**. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.

The subset of SOLs in this requirement was created in response to industry comments. No change made.

Normally the Reliability Coordinator would have developed a plan per approved IRO-009-1, Requirement R3 to handle these situations but the case in place here is for those immediate situations where the Transmission Operator must start to act while waiting for the Reliability Coordinator to act per approved IRO-009-1, Requirement R4. The Reliability Coordinator is always the responsible entity for IROLs and this requirement does not change that fact. No change made.

The SDT agrees.

> **R6**. Each Balancing Authority and Transmission Operator shall notify ~~the~~its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated

Organization	Yes or No	Question 1 Comment
communication channels between the affected entities. Regarding the effective dates, the SDT agrees, and has shortened the effective date to 12 months except for the proposed TOP-003-2, Requirements R1 and R2 which will be 10 months.		
Detroit Edison	Negative	The requirement to notify all negatively impacted interconnected NERC registered entities of planned telemetry outages is overly burdensome. Many small generators could technically be impacted, yet not very meaningful impact on a cumulative basis.
Response: The intent of the requirement is to notify those entities that are directly affected by the telemetry outage. If a data point provided by a Balancing Authority to its Reliability Coordinator is missing due to a telemetry outage between the Balancing Authority and Reliability Coordinator, the Balancing Authority must notify the Reliability Coordinator. However, other entities that subsequently receive that point from the Reliability Coordinator as part of a larger data stream are not involved in the telemetry outage and would not be notified by the Balancing Authority. No change made.		
ACES Power Marketing Member Standards Collaborators	No	We largely agree with the changes but have identified the following specific issues. We disagree with removing Bulk Electric System (BES) from the purpose of the standard. NERC compliance staff has interpreted standards as applying to the Bulk Power System (BPS) if they are not specifically limited to the BES. More specifically in response to comments that CAN-0016 impermissibly extended the standard to the BPS, NERC responded that Section 39 of the EPAct of 2005 requires standards to apply to the BPS unless the standard restricts itself. Because the BPS can be interpreted to be broader than the BES and there is no need for the standard to apply broader than the BES, we would like to see BES inserted back into the purpose statement. Substituting BES for “interconnection” in the purpose statement may solve this issue. While the title contained in the header was changed to “Transmission Operations” the actual title was not changed. They should match. For simplicity, we recommend striking “known or expected to be” from

Organization	Yes or No	Question 1 Comment
		Requirement R3. As it is written now, it is more confusing. First, the TOP, can only notify other TOPs that it knows are affected. Second, the use of "expected" implies that something different is meant than known. If so, what is the intention of the meaning and whose expectation is it: the responsible TOP, the other TOP, the auditor or some other entity? There is a similar issue regarding "known or expected to result in an Adverse Reliability Impact" in Requirement R5. We recommend striking "or expected" for simplicity and to avoid the confusion of whose expectation it is. In Requirement R8, "while not IROLs" should be "while not an IROL". We agree with removing the 30 minute limit in Requirements R9 and R11 and basing the time limit upon the Facility Rating or Stability criteria. In Requirement R10, striking "each" before SOL would improve the clarity of the requirement. In Measurement M1, "nless" should be unless. This may already be correct. The red-lines show "nless" and the clean document shows "unless". What is the intended difference between Transmission Operator Area in Requirement R5 and internal area in Requirement R8? Should they be the same and if not why not?
Southwest Transmission Cooperative, Inc.	Affirmative	We disagree with removing Bulk Electric System (BES) from the purpose of the standard. NERC compliance staff has interpreted standards as applying to the Bulk Power System (BPS) if they are not specifically limited to the BES. More specifically in response to comments that CAN-0016 impermissibly extended the standard to the BPS, NERC responded that Section 39 of the EPAct of 2005 requires standards to apply to the BPS unless the standard restricts itself. The red-lines show "nless" and the clean document shows "unless". What is the intended difference between Transmission Operator Area in Requirement R5 and internal area in Requirement R8? Should they be the same and if not why not?

Response: BES: The purpose of the standard is to address reliability needs. Any concerns about BES vs. BPS in standards are

Organization	Yes or No	Question 1 Comment
better directed toward the Standards Committee. No change made. Title: Conforming change has been made. R3: The SDT sees no additional clarity from the suggested change. No change made. R5: The SDT sees no additional clarity with the suggested change "known or expected to be affected". This language was chosen to cover all situations, including an ongoing event. No change made. R8: The SDT agrees. **R8**. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. The SDT thanks you for your support on removal of the 30 minute limit. R10: The SDT agrees and made the conforming change. **R10**. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or ~~each~~an SOL identified in Requirement R8, has been exceeded. M1: This has been corrected. In response to this and other comments, Requirement R8 has been edited to match the language in Requirement R5.		
Lincoln Electric System (LES)	No	R4 in TOP-004-1 provided a 30-minute transition from an unknown operating state to a known operating situation. Although the SDT has indicated they included a provision for that transition in R7 and R9 of TOP-001-2 some flexibility is still lost. For example, if you are operating with no N-1 contingency violations and a contingency occurs, the next contingency (N-2 from the original state) could cause a violation of a Facility Rating. If this contingency actually occurs, then loading immediately exceeds the Facility Rating and you are in violation of R9. Previously, we would have had 30 minutes to work with this condition before being in violation. Additionally, R9 only applies if the SOL is identified in R8. What if it isn't

Organization	Yes or No	Question 1 Comment
		identified in R8? R8 is unclear as currently drafted. What is meant by 'internal area reliability'? How does it differ from reliability of a TOP Area as included in R5? With the inclusion of internal area reliability in R8 and R9, aren't these requirements now in conflict with the purpose of the standard which is directed toward impacts on the reliability of the interconnection? Including IROLs in R10 and R11 introduces confusion regarding who's responsible for mitigating IROLs - the RCs or the TOPs. Therefore the SDT should give consideration to removing the references to IROLs in these requirements and defer to IRO-001-2, R7. We would suggest using 'its' RC in R6 rather than 'the' RC. Finally, why is the effective date set at 24 months following approval since there are basically no new requirements associated with this standard? Most all of the changes are primarily clarification or consolidation.

Response: R7 and R9: By definition an IROL violation occurs when the IROL limit is exceeded for a duration greater than T_v. Thus, it must be the time duration. SOLs are tied to the facility ratings which contain a time element which may or may not be 30 minutes. No change made.

Requirement R9 does not apply to SOLs which are not identified in Requirement R8. No change made.

R8: The phrase 'internal area reliability' was replaced in Requirement R8 and a conforming change was made in Measure M8.

> **R8**. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.

R8 and R9: The subset of SOLs in this requirement was created in response to industry comments, resulting in no conflict with the purpose of the standard. No change made.

R10 and R11: Normally the Reliability Coordinator would have developed a plan per approved IRO-009-1, Requirement R3 to

Organization	Yes or No	Question 1 Comment
handle these situations but the case in place here is for those immediate situations where the Transmission Operator must start to act while waiting for the Reliability Coordinator to act per approved IRO-009-1, Requirement R4. The Reliability Coordinator is always the responsible entity for IROLs and this requirement does not change that fact. No change made. R6: The SDT agrees. **R6**. Each Balancing Authority and Transmission Operator shall notify ~~the~~its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities. Regarding the effective dates, the SDT agrees, and has shortened the effective date to 12 months except for the proposed TOP-003-2, Requirements R1 and R2 which will be 10 months.		
Progress Energy	No	Progress, while supporting what we believe is the overall intent of this Standard revision, cannot support an affirmative vote on TOP-001-2. Progress appreciates the efforts of the SDT and offers the following suggestions: In R8 it remains unclear what is meant by the phrase “supporting its internal area reliability.” Clarity and unambiguous language is needed here so that entities can clearly understand and comply with the requirement. Progress understands from reading the most current “Consideration of Comments” that the Standard Drafting Team left this phrase intentionally undefined; however, the inclusion of this phrase means that in an audit scenario there could be a disagreement about what “supporting its internal area reliability” means. This has the potential to negatively impact the compliance position of the Transmission Operator. In R9 it is unclear what is meant by a “continuous duration that would cause a violation...” Some entities may have facility ratings that are time based, while other entities take the position that the exceedance of a facility rating for any amount of time means an SOL violation. A suggested change in wording would be to simplify the requirement to read “Each Transmission Operator shall not operate outside any SOL indentified in Requirement R8 that would cause a violation of the Facility Rating or Stability criteria upon

Organization	Yes or No	Question 1 Comment
		which it is based." Progress suggests changing R10 to read "Each Transmission Operator shall inform its Reliability Coordinator of the mitigation actions it has taken or directed to return the system to within limits when an IROL, or each SOL identified in Requirement R8, has been exceeded." The current draft language implies that the TOP must only inform the RC of "...its actions..." Progress suggests switching the order of the current R10 and R11; from reading the most current "Consideration of Comments" it seems that the actions required in R8-R11 are intended to be sequential. Progress suggests that switching the order of the current R10 and R11 would make it easier for a reader to understand that these are intended to be sequential actions.
Response: The phrase 'internal area reliability' was replaced in Requirement R8 and a conforming change was made in Measure M8. **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. Ratings include the element of time. Continuous duration' has its common meaning. The phrase "for a continuous duration" was added in response to industry comments. No change made. The SDT believes the requirement mandates that the Transmission Operator inform of any actions which would include directions to others and sees no additional clarity with the suggested change. No change made. This is not a procedure and the order of the requirements doesn't matter. There is no additional clarity provided by the suggested change. No change made.		
LG&E and KU Serivces	No	LG&E and KU Services believe that any definition of a Reliability Directive should require that within the communication it should be stated that "This

Organization	Yes or No	Question 1 Comment
		is a Reliability Directive." to avoid any possibility of confusion.
Response: The definition does not include the regulated action. Requirement R1 states that it must be identified. The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. This comment will be passed to that team for consideration.		
City Water Light and Power (CWLP) - Springfeild – IL	No	R8 requirement to identify "...SOLs which...have been identified by the Transmission Operator as supporting its internal area reliability based on its assessment of its Operational Planning Analysis" is vague and difficult to measure. "Internal area reliability" could conceivable include all SOLs CWLP echoes SERC Operating Committee comments submitted separately:" We suggest that the definition of Reliability Directive should be modified as follows: "A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or "an event that results in Bulk Electric System instability or Cascading". We also recommend that the Standard Drafting Team coordinate with the COM-002-3 Standard Drafting Team to ensure consistency in the Reliability Directive definition."
Response: The phrase 'internal area reliability' was replaced in Requirement R8 and a conforming change was made in Measure M8. If the Transmission Operator believes it needs to include all of its SOLs, the requirements do not preclude them from doing so. **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. This comment will be passed to that team for consideration.		
United Illuminating Company	No	R3 phrase "known or expected to be affected by each actual and anticipated

Organization	Yes or No	Question 1 Comment
		Emergency based on its assessment of its Operational Planning Analysis" is confusing. Glossary defines emergency as Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System. Glossary defines Operation Planning analysis as An analysis of the expected system conditions for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints(transmission facility outages, generator outages, equipment limitations, etc.).I do not see the difference between TOPs KNOWN to be effected by an anticipated Emergency from those EXPECTED to be effected by an anticipated Emergency. The Requirement should state TOP's expected to effected by an anticipated Emergency. Those TOP's known to be effected are part of the group expected to be effected. Operations Planning occurs in the Day ahead. An actual Emergency cannot occur in the Day Ahead. The word actual should be removed. The SDT should scope R3 to the concept of Operational Planning as defined in the Glossary. Along the thought the Time Horizon in the Requirement is Operations Planning. I suggest rephrasing this requirement as:R3. Each Transmission Operator shall inform its Reliability Coordinator and those Transmission Operators that are expected to be affected by an anticipated Emergency based on its assessment of its Operational Planning Analysis. Comment for R8. It seems that double jeopardy is introduced with TOP-001 R8 and FAC-011 R5.2. Fac-011 R 5.2 states The Transmission Operator shall provide any SOLs it developed to its Reliability Coordinator and to the Transmission Service Providers that share its portion of the Reliability Coordinator Area; while TOP-001 R8 states R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not IROLs, have been identified by the Transmission Operator as supporting its internal

Organization	Yes or No	Question 1 Comment
		area reliability based on its assessment of its Operational Planning Analysis.
Response: The SDT sees no additional clarity with the suggested change. No change made. The subset of SOLs in this requirement requires special handling (an incremental requirement to FAC-014-2, Requirement R5.2), thus, this requirement does not introduce double jeopardy. While FAC-014-2, Requirement R5.2 requires the Transmission Operator to provide all of the SOLs it developed to the Reliability Coordinator, proposed TOP-001-2, Requirement R8 requires the Transmission Operator to further sub-divide those SOLs into those that require special handling in this standard. No change made.		
California Independent System Operator	No	R6 requires Balancing Authorities and Transmission Operators to notify "negatively impacted interconnected NERC registered entities" of planned outages. This term is not specific enough to narrow down who must be notified. For instance, with this open-ended wording it could be construed that BAs would have to notify LSEs and DPs in their areas which would be an onerous task. We would recommend staying with "negatively-affected BAs and TOPs." The wording in R9 is confusing and is not specific enough to ensure compliance. In particular the requirement prohibits operation outside any SOL "for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based." However, by NERC definition an SOL is based upon Facility Rating and Stability Criteria, so operating outside the SOL is always going to violate the Facility Rating. In addition, under R9 and M9, how will the word "continuous" be defined or measured? This is extremely important to understand because the VSL table states the following as Severe for R9: "The Transmission Operator exceeded a System Operating Limit (SOL) as identified in Requirement R8 for a continuous duration greater than 30 minutes that would cause a violation of the Facility Rating or Stability criteria." It seems that the effective date should be set much sooner than 24 months following approval since there are basically no new requirements associated

Organization	Yes or No	Question 1 Comment
		with this standard. Most all of the changes are primarily clarification or consolidation. This comment applies to TOP-002-3 and TOP-003-2 as well.
Response: R6: The intent of the requirement is to notify those entities that are directly affected by the telemetry outage. If a data point provided by a Balancing Authority to its Reliability Coordinator is missing due to a telemetry outage between the Balancing Authority and Reliability Coordinator, the Balancing Authority must notify the Reliability Coordinator. However, other entities that subsequently receive that point from the Reliability Coordinator as part of a larger data stream are not involved in the telemetry outage and would not be notified by the Balancing Authority. No change made. R9: Ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. No change made. R9: 'Continuous duration' has its common meaning. No change made. Regarding the effective dates, the SDT agrees, and has shortened the effective date to 12 months except for the proposed TOP-003-2, Requirements R1 and R2 which will be 10 months.		
We Energies	No	R3's wording is incomplete. It requires informing and states who must be informed but does not state what must be told. The bulk of the requirement is a description of which RCs and TOPs must be informed, but lacks informing the TOP's BA(s) of an Emergency. Should also include the BA informing its RC and TOP(s) R4 It is not clear what emergency assistance a TOP can provide? Most actions would involve moving a generator or shedding load, the few items a TOP can do independently like returning a line from outage, or switching reactive devices should be done as a matter of course. R5 The bulk of the requirement is a description of which RCs and TOPs must be informed, but lacks informing the TOP's BA(s) of an operation resulting in an Adverse Reliability Impact. Should also include the BA informing it's RC and TOP(s) R6 is overly broad. Every entity in an interconnect can be negatively impacted somehow. The requirement should be focused on the operational

Organization	Yes or No	Question 1 Comment
		entities of the TOP, BA and RC. These are the entities that specify the data that must be made available see IRO-010, proposed TOP-003 from others. Individual asset owners provide data to the operators and when the operators plan an outage they should let the other affected TOP, BA and RC know its to happen. R8: change “have” to “has”. The associated measures should be updated to reflect the above. Data Retention: The second paragraph states that Measures must be complied with. Compliance with measures cannot be required.

Response: R3: The SDT does not see that the suggested change improves clarity. The requirement indicates that the recipients must be told about the effect on them of an actual or anticipated emergency. No change made.

R4: The Transmission Operator has actions that it may take or direct such as switching, bringing on capacitor banks, delaying maintenance, etc. All of these are possible emergency assistance actions.

R5: Requirement R5 is for transmission so the Balancing Authority can't be included (Balancing Authority’s have no transmission information). No change made. Approved EOP-002-3, Requirement R3 covers the situation for a Balancing Authority needing to inform others of impacts. No change made.

R6: The intent of the requirement is to notify those entities that are directly affected by the telemetry outage. If a data point provided by a Balancing Authority to its Reliability Coordinator is missing due to a telemetry outage between the Balancing Authority and Reliability Coordinator, the Balancing Authority must notify the Reliability Coordinator. However, other entities that subsequently receive that point from the Reliability Coordinator as part of a larger data stream are not involved in the telemetry outage and would not be notified by the Balancing Authority. No change made.

R8: The SDT agrees.

> **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.

Measures: Conforming changes were made to measures.

Organization	Yes or No	Question 1 Comment
Data Retention: The SDT agrees and has deleted the compliance phrasing.		
American Transmission Company, LLC	No	o If the definition of "Reliability Directive" remains, the Definitions of Terms Used in the Standard should note that there is in fact a new or revised definition. ATC agrees with the definition. o Requirement 4 - This should have a control by the Reliability Coordinator to ensure that a Transmission Operator in distress has, in fact, implemented their "comparable emergency procedures". o Requirement 5 - ATC does not agree with removing the BA from this requirement since they make note that it will be addressed in another, "proposed" requirement as stated in the mapping document. o Requirement 7 - Real-Time EMS representation of IROL Tv, will require an unidentifiable amount of resources. o Requirement 9 - SOL's should have a time requirement. Also, they should not be raised to the level of IROL's as may be insinuated by this requirement if they are discretionary, as noted in Requirement 8. o Requirement 11 - If this requirement entails the issuing of a "Reliability Directive", it should be stated as such.
Response: Reliability Directive: This standard does identify this definition as a new definition that is being developed by Project 2006-06. It also mentions that the RTO SDT is coordinating with that project. R4: In the context of mandatory standards, no Reliability Coordinator control is needed. No change made. R5: The Balancing Authority did not appear in Requirement R5 so the SDT does not understand the comment. No change made. R7: It is common practice in the industry to have ratings with both magnitude and duration. The SDT understands that there are relatively few IROLs, and does not expect a significant burden on the Transmission Operator to be able to comply with this requirement. Also, the requirement does not dictate the technological tools used in assuring compliance. No change made. R9: Ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. Some SOLs are based		

Organization	Yes or No	Question 1 Comment
off of Facility Ratings and, thus, include the time dimension. It is to the Transmission Operator's discretion to select the appropriate SOLs in Requirement R8 that it feels need to be treated like this. No change made. R11: This requirement does not have to specify how an instruction is issued. No change made.		
Omaha Public Power District	No	OPPD is concerned with Requirements (R8 and R9) related to System Operating Limits (SOLs). We would like to ask the SDT to clarify what the word "continuous duration" means in terms of timing. We understand the "continuous duration" is based on Facility Rating or Stability criteria, however, without any defined time frame, the term "duration" would be subject to variety of interpretations. OPPD supports a time window to allow TOP to return from SOL similar to IROL Tv.
Response: SOLs are tied to the facility ratings which contain a time element which may or may not be 30 minutes. 'Continuous duration' has its common meaning. It is to the Transmission Operator's discretion to select the appropriate SOLs in Requirement R8 that it feels need to be treated like this. No change made.		
Manitoba Hydro	No	R1 - Manitoba Hydro suggests that the first instance of 'identified' in R1 be removed as it is redundant given that R1 already specifies that the Reliability Directive is 'identified as such'. As drafted, the standard suggests that there is a difference between an 'identified Reliability Directive' and a 'Reliability Directive'. Data Retention (1.3) – The data retention requirements are too uncertain for two reasons. First, the requirement to "provide other evidence" if the evidence retention period specified is shorter than the time since the last audit introduces uncertainty because a responsible entity has no means of knowing if or when an audit may occur of the relevant standard. Secondly, it is unclear what 'other evidence', besides the specified logs, recordings and emails, an entity may be asked to provide to demonstrate it was compliant for the full time period since their last audit. This comment applies to TOP-001-2, TOP-002-3, and TOP-003-1.

Organization	Yes or No	Question 1 Comment
Response: The SDT agrees and has deleted the first instance of 'identified'. **R1**. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each ~~identified~~ Reliability Directive issued and identified as such by its Transmission Operator(s), unless -such actions would violate safety, equipment, regulatory, or statutory requirements. Data Retention: The language in the 1st paragraph is boilerplate that is inserted in all standards. Compliance language is not under control of SDT. No change made.		
Texas Reliability Entity	No	In R1, the phrase “and identified as such” is redundant and unnecessary in that “identified” already exists within the sentence. Furthermore, the addition of the word “identified” or phrase “identified as such” inserts undue ambiguity and complication, and we are concerned that the “identified” concept will actually provide more opportunities for miscommunications during tense situations. In R1, we are concerned that “Directive” is being proposed with descriptive terms (e.g., “reliability”), and if the descriptive terms are not used explicitly an entity may not be compelled to act accordingly (also may provide leverage for a perceived loophole in compliance activities that could be exploited-“I was unaware it was a {insert descriptive term} Directive”). There should be a time frame associated with requirement R2. Perhaps add “within the timeframe determined for the Directive being issued” to end of sentence. Also, we suggest removing “identified” from requirement R2 (see comments on R1). oThere should be a time frame associated with the communication required by Requirement R5. oR5 should explicitly include IROL, SOL, and Stability Limit violations in the examples since the proposed definition of Adverse Reliability Impact implies

Organization	Yes or No	Question 1 Comment
		instability and Cascading outages. oWe suggest rewriting R5 as follows: "Each Transmission Operator shall inform its Reliability Coordinator and other affected Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas within a timeframe that is sufficient for the RC and affected TOP's to respond to the system condition, unless conditions do not permit such communications. Such operations may include, but are not limited to, Interconnection Reliability Operating Limit (IROL) violations greater than Tv, System Operating Limit (SOL) violations, Stability Limit violations, relay or equipment failures, and changes in generation, Transmission, or Load." In R9, the use of "continuous duration" in the revised language is confusing and should be removed. It would be better to clearly rely on the other standards that relate to identifying IROLs and SOLs (including duration limits), which may have multiple time limits associated with various operating conditions. We note that an SOL may not be based on a single Facility Rating but may actually be a group of Facilities aggregated into a single limit. We suggest saying: "for a continuous duration that would cause a violation of the Facility Rating or Stability criteria, including duration, upon which it is based".

Response: The SDT agrees and has deleted the first instance of 'identified'.

> **R1**. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each ~~identified~~ Reliability Directive issued and identified as such by its Transmission Operator(s), unless ~~-~~such actions would violate safety, equipment, regulatory, or statutory requirements.

Some instructions are more important than others. In order to separate these more important instructions from those for routine actions, the descriptive 'adjective' is required so that the receiving entity understands the importance of the instructions. Reliability Directives are of such importance that the actions taken must conform exactly to the instructions as opposed to routine operating instructions which may allow for some discretion. If this isn't made clear during the event, then it is not a Reliability

Organization	Yes or No	Question 1 Comment
Directive. This is not a loophole and is consistent with the recent Board of Trustees adopted interpretation of COM-002-2 that makes clear that directives are intended for emergencies only. No change made. The Reliability Directive in question will include the timeframe for the response if one is needed. No change made. The term 'identified' was included in Requirement R2 in response to industry comments that all Reliability Directives must be identified as such. No change made. This SDT and others have worked with various phrases to indicate a timeframe, however, after extensive investigation, it has been determined that no phrase is both consistent with reliable operations while also crisp enough to provide reassurance to the regulated entity that it may avoid noncompliance. The requirement is to inform. It implies that the information must be communicated to the other entities within a timeframe that enables them to respond (if possible). No change made. R5: The examples are not types of violations but types of operations. No change made. R9: 'Continuous duration' has its common meaning. No change made.		
New York Independent System Operator	No	Communications must be a well defined, consistent and established process to promote clear and accurate communications between operators for both normal and emergency conditions. This standard could be interpreted as to require an extra phrase during emergencies that would unnecessarily complicate communications. The requirement is reasonable if the identification of a 'Reliability Directive' may be done in a policy or procedure that is communicated to the BA, GOP, DP or LSE as a communication protocol that addresses normal and emergency communications. Otherwise requiring different verbal communication protocols for normal or emergency conditions will add a level of risk currently not observed.
Response: The SDT disagrees that including a simple statement that this is a Reliability Directive complicates communications. In fact, the SDT thinks it improves communications because the recipient understands it must follow the Reliability Directive explicitly. There is nothing in this standard that prevents an entity from adopting formal communication protocols to always identify directives as such to ensure consistent and uniform communications. No change made.		

Organization	Yes or No	Question 1 Comment
Xcel Energy	No	R1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with each identified Reliability Directive issued by its Transmission Operator, unless the respective entity informs its Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. We would like to see additional clarification to clarify “equipment”, suggest using “equipment limitation” or “equipment rating” R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. This requirement should be modified so as not to place the burden on the assisting entity to demonstrate that the requesting entity has implemented “comparable emergency procedures”. Suggest the following language: “Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, unless such actions would violate safety, equipment ratings, regulatory, or statutory requirements. R5. Each Transmission Operator shall inform other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. This requirement appears to duplicate PRC-001-1 R2 and R5. It is assumed, but cannot be verified that those requirements will be eliminated in a future approved version of that standard. R9 - We appreciate the drafting team’s efforts. However, we are still concerned that R9 will not allow the Transmission Operator the flexibility to identify the best SOL recovery approach, without incurring a violation of the

Organization	Yes or No	Question 1 Comment
		requirement. Instead, the TOP may be forced to shed load in order to avoid violating the requirement. This is not ideal, especially when the situation could be mitigated successfully with alternative measures. It is not clear if an entity is allowed to use an RC-approved contingency plan to mitigate a situation that would cause a Facility Rating violation (i.e. the Facility Rating is the SOL), without also incurring a violation of R9. To further explain, if an entity foresees exceeding an SOL in its OPA, and obtains approval from the RC on their proposed contingency plan (which includes a Facility Rating violation), will that entity be considered in violation of R9 once the exceedance occurs and the contingency plan is implemented? R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or each SOL identified in Requirement R8, has been exceeded. This requirement should specify a sustained period which establishes when it is considered that the entity has returned below the limit (or some other value so as to not misconstrue momentary recoveries as meeting this requirement).

Response: R1: All terms are descriptors of the word 'requirements' so the SDT believes that your concerns have been met with the existing language. No change made.

R4: Industry comments caused the SDT to insert the 'comparable' language. No change made.

R5: The SDT is proposing to retire PRC-001-1 Requirements R2, R5, and R6. A redline of PRC-001-1 will be posted with these comments.

R9: Ratings include the element of time, that is, ratings are two dimensional, with a magnitude limit and time (duration) limit. 'Continuous duration' has its common meaning. The flexibility remains within these requirements to have a mitigation plan in place. However, the mitigation plan must avoid causing a ratings violation (avoid exceeding the magnitude limit for greater than T_v), else, it would be a violation of this requirement. No change made.

R10: Requirement R10 is about actions taken by the Transmission Operator and not about relief attained. That is covered in the IRO standards. Therefore, no change is necessary.

Organization	Yes or No	Question 1 Comment
ReliabilityFirst	No	ReliabilityFirst has the following comments for consideration: 1. Definition of Reliability Directive - ReliabilityFirst believes there could be a possible issue with the definition of "Reliability Directive" being developed and approved via another drafting effort (i.e. Project 2006-06). In the hypothetical situation where the TOP-001-2 standard is approved and the definition of "Reliability Directive" is drastically changed through the Project 2006-06 effort, there could possibly be a disconnect between the TOP-001-2 requirements and the "Reliability Directive" definition. Also, ReliabilityFirst recommends adding a parenthetical "(e.g. IROL or SOL violations)" to the end of the definition for further clarity. 2. R2 - There is no time qualifier specified in R2 dealing with the timeframe in which the applicable entity has to inform its Transmission Operator of its inability to perform an identified Reliability Directive. ReliabilityFirst recommends the SDT consider adding language to include a timeframe for the entity to inform the Transmission Operator (such as one hour). Absent any specified timeframe, an applicable entity could hypothetically inform its Transmission Operator of its inability to perform an identified Reliability Directive 30 days after the Reliability Directive was issued, and still be compliant based on the current words of the requirement. 3. R4 - The term "emergency" is used within this requirement and ReliabilityFirst seeks clarification on whether this is referring to the NERC definition of "Emergency" (as defined in the NERC Glossary of terms)? If so, this term should be capitalized. 4. R5 - The last sentence in R5 is not really a requirement, but rather a measure on how to comply with the requirement. ReliabilityFirst recommends deleting the last sentence of R5 and incorporating it into the corresponding Measure. 5. R6 - ReliabilityFirst recommends removing the term "negatively impacted

Organization	Yes or No	Question 1 Comment
		interconnected NERC registered entities" and replace it with the associated functional entities (e.g. Balancing Authority, Generator Operator, etc.). 6. R8 - ReliabilityFirst recommends removing the term "while not IROL's" from R8. SOL is a NERC defined term and the extra qualifier is not needed. 7. R10 and R11 - ReliabilityFirst recommends swapping the order of R10 and R11. From a chronological standpoint, the Transmission Operator will "act or direct others to act, to mitigate..." (R11) prior to "informing its Reliability Coordinator of its actions" (R10). 8. Data retention - ReliabilityFirst believes the first paragraph of the Data Retention section is in conflict with the additional paragraphs of the Data Retention section. For example, the last sentence states "the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit" as a catch all. Regardless of the other shorter data retention periods located in the subsequent paragraphs, the entity still needs to retain the evidence for the full time period since the last audit. ReliabilityFirst recommends only keeping the first paragraph and deleting the subsequent paragraphs in the Data Retention section.

Response: Reliability Directive: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. Implementation will be coordinated with that team also. This comment will be passed to that team for consideration.

The Reliability Directive in question will include the timeframe for the response if one is needed. No change made.

The NERC defined term "Emergency" was not the intent of this requirement. In this requirement, 'emergency' means actions taken quickly in response to an immediate need. No change made.

The last sentence in Requirement R5 is intended to provide guidance on the kinds of operations that should be communicated and is better kept in the requirement. No change made.

If the entities were listed, the list would include every NERC functional entity that has telemetry. This change would not improve

Organization	Yes or No	Question 1 Comment
reliability. No change made. IROLs are a subset of SOLs as defined by NERC. The requirement concerns a different subset of SOLs. No change made. This is not a procedure and the order of the requirements doesn't matter. There is no additional clarity provided by the suggested change. No change made. Data Retention: The language in the 1st paragraph is boilerplate that is inserted in all standards. The compliance language is not under control of SDT. No change made.		
Illinois Municipal Electric Agency	No	Illinois Municipal Electric Agecy supports comments submitted by the SERC OC Standards Review Group and the ISO/RTO Standards Review Committee concerning the need to address the “Reliability Directive” definition in concert with COM-002-3.
Response: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. This comment will be passed to that team for consideration.		
Duke Energy	No	While the drafting team has made several improvements to this standard, we believe these additional changes are needed: o The definition of Reliability Directive includes the defined term “Adverse Reliability Impact”, which should be replaced by the actual wording of latest BOT-approved definition of “Adverse Reliability Impact”, since it has not yet been approved by FERC. If the SDT decides not to replace Adverse Reliability Impacts with the actual wording of the latest BOT-approved definition, then the SDT should delete the “s” from “Impacts”. o R8 - We believe that the phrase “supporting its internal area reliability” should be further clarified in some way. The inclusion of the undefined concept of “supporting internal area reliability” creates undue compliance risk, since auditors could potentially find an entity non-compliant if no SOLs have been identified as “supporting its internal area reliability”. The drafting team could examine the disturbance reporting criteria in EOP-004-1

Organization	Yes or No	Question 1 Comment
		Attachment 1 to help develop a reasonable threshold for reporting SOLs to the Reliability Coordinator. o R8 - Consistent with R3, the Time horizon for R8 should only be Operations Planning. o R9 - The change that has been made to R9 could be interpreted to result in a violation if a facility rating is exceeded for any amount of time at all. Similar to an IROL's Tv, SOLs identified under R8 should have an identified time period (such as 30 minutes) for mitigation without a violation. A change to R9 should be coupled with development of a reporting threshold for R8 as discussed above. o M1 - typo, left the "u" off the word "unless". o Measures for R8 and R9 should be changed consistent with our suggested revisions to the requirements.

Response: "Reliability Directive" is under the auspices of the RC SDT (Project 2006-06). This has been passed on to that team.

R8: The SDT replaced 'internal area reliability' with 'reliability internal to its Transmission Operator Area'. It is possible that a Transmission Operator Area has no SOLs that fit this requirement. However, extensive comments received throughout the life of this project indicate the need for such an inclusion. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.

> **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.

R8: The SDT agrees and has changed the Time Horizon to Operations Planning.

R9: Ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. No change made.

M1: This has been corrected.

Organization	Yes or No	Question 1 Comment
M8 and M9: Conforming changes were made to Measure M8. No changes were made to Requirement R9.		
South Carolina Electric and Gas	No	Please provide clarity on the phrase "support its internal area reliability" in R8.
Response: The SDT replaced 'internal area reliability' with 'reliability internal to its Transmission Operator Area'. It is possible that a Transmission Operator Area has no SOLs that fit this requirement. However, extensive comments received throughout the life of this project indicate the need for such an inclusion. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations. **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.		
Oklahoma Gas and Electric	No	A. In the draft TOP-001-2 standard, R1 and R2 both address complying with Reliability Directives. OG+E suggests these two requirements be combined into one requirement using similar language found in other standards that contain the same Reliablity Directive requirement, such as IRO-001-1.1 R8 and the previous version of this standard for consistency purposes. B. Mitigation of IROLs is ultimately the responsibility of the RC. TOPs act under the direction of the RC when mitigating IROLs. TOP-001-2 R11 should clarify by adding the following to the beginning of the requirement. "Under the direction of the RC, each TOP shall act or direct others to act...". C. Please clarify the meaning of "internal area realiability" in R8. D. In R9, "continuous duration" warrants additional clarification. Is this 5, 10, 30, 60 minutes of operating outside the SOL? Or only continuous operation outside of SOL that results in ultimately exceeding the Facility Rating?

Organization	Yes or No	Question 1 Comment
Response: R1 and R2: The SDT sees no additional clarity with the suggested change. No change made. R11: Normally the Reliability Coordinator would have developed a plan per approved IRO-009-1, Requirement R3 to handle these situations but the case in place here is for those immediate situations where the Transmission Operator must start to act while waiting for the Reliability Coordinator to act per approved IRO-009-1, Requirement R4. The Reliability Coordinator is always the responsible entity for IROLs and this requirement does not change that fact. No change made. R8: The SDT replaced 'internal area reliability' with 'reliability internal to its Transmission Operator Area'. It is possible that a Transmission Operator Area has no SOLs that fit this requirement. However, extensive comments received throughout the life of this project indicate the need for such an inclusion. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations. **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. R9: Ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. 'Continuous duration' has its common meaning. No change made.		
American Electric Power	No	R7, R9, R10, & R11 - It needs to be clarified whether these requirements are in regards to pre-contingency monitoring or instead based on real-time flow. AEP assumes this is based on Real Time Flow, however we encourage the drafting team to provide clarifying language to make it more clear to the reader. Taken together, the combination of R7 and R9 appears redundant with R11, as meeting the objective of R7 and R9 would imply taking the proper mitigating measures. AEP suggests either eliminating both R7 and R9 or eliminating only R11. If r7 and R9 were to be eliminated, the references to magnitude and duration should be removed from R11, as the associated measure is binary

Organization	Yes or No	Question 1 Comment
		in respect to the limit, i.e., either the limit has been exceeded or it has not. It would be premature for AEP to support the associated VSLs and VRFs given the objections stated above.
Response: R7, R9, R10, and R11: The SDT agrees for SOLs, however, it must be noted that IROLs have been defined as both pre-contingent and post-contingent. The exact definition of the IROL must be honored. No change made. R7, R9 and R11: These requirements are the core Transmission Operator requirements that assure continued reliable operation of the BES. If the Transmission Operator acts or directs others to act to mitigate, as in Requirement R11, but the facility remains in violation of Requirements R7 or R9, then the Transmission Operator is compliant with Requirement R11 and noncompliant with either Requirements R7 or R9, as dictated by the exact circumstances. If the Transmission Operator fails to act or fails to direct others to act, as in Requirement R11, then it is noncompliant with both Requirement R11 and either Requirement R7 or R9, as dictated by the exact circumstances. This is not double jeopardy. No change made.		
PPL Electric Utilities	No	We believe that any definition of a Reliability Directive should require that within the communication it should be stated that "This is a Reliability Directive." to avoid any possibility of confusion.
PPL EnergyPlus LLC	Affirmative	We believe that any definition of a Reliability Directive should require that within the communication it should be stated that "This is a Reliability Directive." to avoid any possibility of confusion.
Response: The definition does not include the regulated action. Requirement R1 handles the action. Compliance is measured against requirements, not definitions. The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. This comment will be passed to that team for consideration. No change made.		
Ameren	No	R2. When is “shall inform” to occur; timely, promptly, ... It would be injurious to BES reliability for the TOP to get such information, say 15 minutes or half-hour later as many other things are likely to be put in place on the assumption the directive is “ok”. R3. The wording is incorrect it implies the TOP will notify the RC and its

Organization	Yes or No	Question 1 Comment
		TOP's. The word other may be missing. But even with other the question it begs which other TOP's? It could be argued that the RC only needs to know Emergencies that are both actual and anticipated. They would want to know about them whether they are actual or anticipated. This direction here is not clear; it may be helpful to use two sentences to address and clarify the issues of this requirement. R4. What is meant by emergency assistance is not clear; clarify and provide examples. Is it emergency energy? Is it emergency food? Is it emergency crews? This ambiguity is a compliance nightmare as you have to prove you have everything covered that could loosely be interpreted as emergency assistance. If the SDT has an idea what they are expecting, it should be listed. If they don't have an idea of what constitutes emergency assistance, then we recommend removing it from the Requirement. R5. The Requirement should be re-written to say "Each TOP shall inform only if it adversely affects others its RC and other TOP's (Which other TOP's? This direction here is not clear; clarify) of its operations known or expected to result in an Adverse Reliability Impact ..." R6. What is meant by negatively impacting is not clear; clarify and provide examples. For example, using the words as listed, economic impact might be a consideration. The Standard should not be setting up a condition where TOPs tell GO/GOPs that they might suffer economic harm as a result of one of the communication channels being down. As currently worded this might lead to a civil issue instead of a BES reliability issue. R8. There are SOLs that are developed in real-time (as evidenced by the multi-time-horizon assigned). It might be possible for such an SOL to develop and have to be resolved for local area reliability only, before the RC could be notified. This Requirement should insert the word planned before SOL. Alternatively, insert where time permits in place of real-time.

Organization	Yes or No	Question 1 Comment
		R9. What is meant by continuous duration is not clear; clarify. Is it 5 minutes, 15 minutes, an hour, a day? Anything more than 5 minutes is likely to be in the thermal time-constant period where rating could be affected. We feel that the real intent of this requirement is that TOPs resolve SOLs. It is not so much how long, as it is that they are not purposely delaying the resolution. The Requirement should be re-written to say "The TOP's will resolve as soon as possible anys SOL...... with no intentional time delay..." R10. The Requirement as written should be prefaced with "when time permits, each Transmission Operator....." The idea of time permitting is alluded to in R5, "unless conditions do not permit such communications".

Response: R2: The Reliability Directive in question will include the timeframe for the response if one is needed. No change made.

R3: The word 'other' is not required. The language following Transmission Operator confines the set of which Transmission Operators. No change made.

R4: The NERC defined term "Emergency" was not the intent of this requirement. In this requirement, 'emergency' means actions taken quickly in response to an immediate need. No change made.

R5: The requirement has the Transmission Operator with the issue limited to notifying those "other Transmission Operators" whose Transmission Operator Areas are expected to have an Adverse Reliability Impact. No change made.

R6: NERC requirements are concerned only with reliability of the BES, not economic harm. The intent of the requirement is to notify those entities that are directly affected by the telemetry outage. If a data point provided by a Balancing Authority to its Reliability Coordinator is missing due to a telemetry outage between the Balancing Authority and Reliability Coordinator, the Balancing Authority must notify the Reliability Coordinator. However, other entities that subsequently receive that point from the Reliability Coordinator as part of a larger data stream are not involved in the telemetry outage and would not be notified by the Balancing Authority. No change made.

R8: The key phrase in this requirement is 'based on its assessment'. No change made.

R9: Ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. 'Continuous duration' has its common meaning. No change made.

Organization	Yes or No	Question 1 Comment
R10: Requirement R5 allows for the possibility of a suddenly developing condition. Requirement R10 is concerned with the reporting of actions after they occur. No change made.		
Tacoma Public Utilities	Affirmative	We would like to request that specific definitions are included for the individual time horizons. We suggest the following potential definitions: 1. Same Day Operations - Routine actions required within the time frame of a day, but not real-time. 2. Real-time Operations - Actions required within one hour or less to preserve the reliability of the bulk electric system. 3. Operations Assessment - Follow-up evaluations and reporting of real-time operations.
Response: These are defined in the NERC SDT Guidelines. No change made.		
NIPSCO	Yes	In R8 consider changing "internal area" to "Transmission Operator Area" In R9 consider clarifying "continuous duration", what is that?
Response: The SDT replaced 'internal area reliability' with 'reliability internal to its Transmission Operator Area'. It is possible that a Transmission Operator Area has no SOLs that fit this requirement. However, extensive comments received throughout the life of this project indicate the need for such an inclusion. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations. **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. Ratings include the element of time, that is, ratings are two dimensional, magnitude and time exceeded. 'Continuous duration' has its common meaning. No change made.		
Georgia System Operations	Yes	GSOC agrees in general but feels that some clarity should be provided. The purpose of the language "each SOL which, while not IROLs, have been identified by the Transmission Operator as supporting its internal area

Organization	Yes or No	Question 1 Comment
		reliability based on its assessment of its Operational Planning Analysis" (OPA) is not clear. Is the intent to clarify the meaning of SOL? If so the definition in the glossary should be updated to clarify the meaning and the clarification should be removed whenever used in TOP-001, 002, or 003. Is the intent to limit which SOLs are being referred to? Not each SOL but each SOL which have been identified as supporting the internal area reliability based on the assessment of its OPA. Could this language be deleted and still convey what is required?
Response: The SDT disagrees that the phrase is not clear. It is identifying SOLs that the Transmission Operator feels are important enough to request that they be monitored similar to an IROL. This could occur for any number of reasons. No change made.		
Associated Electric Cooperative, Inc.	Yes	R3 Guidance Add: A Guidance Section for Requirement R3 clarifying “anticipated Emergency” - AECI believes the SDT should draft guidelines as to what “anticipated Emergency” means within this requirement. That guidance should also caution against dumping information (data-overload) upon neighboring parties, for trivial impacts to their system. Rationale: In earnest to avoid non-compliance with R3, entities could blast their neighbors with all changes, regardless of impact, and then the purpose of this requirement will be lost.) R6 Requirement wording Change: “negatively impacted” To: “known negatively impacted” Rationale: While 1st hand affected parties are likely known, secondarily affected parties might pose a compliance problem. R8 Guidance Add: An R8 Guidance section Rationale: AECI’s understanding is that our providing our RC with AECI’s most-limited-element equipment seasonal operating limits and short-term limits, where applicable, meets this requirement. If we are wrong, then additional guidance is definitely necessary.
Response: The requirement is limited by the fact that actions are based on your assessment of the Operational Planning		

Organization	Yes or No	Question 1 Comment
Assessment. No change made. The intent of the requirement is to notify those entities that are directly affected by the telemetry outage. If a data point provided by a Balancing Authority to its Reliability Coordinator is missing due to a telemetry outage between the Balancing Authority and Reliability Coordinator, the Balancing Authority must notify the Reliability Coordinator. However, other entities that subsequently receive that point from the Reliability Coordinator as part of a larger data stream are not involved in the telemetry outage and would not be notified by the Balancing Authority. No change made. The Transmission Operator must comply with FAC standards for proper definition of SOLs. An SDT cannot give compliance advice.		
Dairyland Power Cooperative	Yes	Concern re R5. The determination of when an operating condition could be "expected to result in an Adverse Reliability Impact" would be difficult and ambiguous.
Response: The Transmission Operator is in the best position to know if other areas may suffer an Adverse Reliability Impact. The examples cited in the requirement: "Such operations may include relay or equipment failures and changes in generation, Transmission, or Load" are intended to give guidance. No change made.		
NV Energy	Yes	Yes, however, there are a few points to note: Part A, Section 1 continues to title this standard as "Coordination of Transmission Operations, while the header of the Standard was changed to simply "Transmission Operations". The requirements R6 and R8 appear to be outside the realm of real-time operations, R6 dealing with planned outages of telemetry, comm, and control equip, and R8 dealing with communication of SOL's or other limits. It is confusing to mix in Operations Planning type requirements in a standard that otherwise deals with real-time grid operations. Suggest relocating these two to the Operations Planning Standard, TOP-002-3.
Response: Title: Conforming change has been made. R6 and R8: Telemetry outages may be planned for the same day or in the next hour. SOLs may be affected in similar timeframes (new topology forcing a readjustment of the system, for instance). No change made.		

Organization	Yes or No	Question 1 Comment
Ingleside Cogeneration LP - Occidental Chemical Corporation	Yes	From the GO/GOP perspective, Ingleside Cogeneration LP believes that the SDT has captured the appropriate circumstances for when a Reliability Directive is issued and identified - and the circumstances under which it may be not be possible to accommodate one.
US Bureau of Reclamation	Yes	
Westar Energy	Yes	
FirstEnergy	Yes	
Dominion	Yes	
PacifiCorp	Yes	
Western Area Power Administration	Yes	
FMPP	Yes	
Luminant Energy Company, LLC	Yes	
Independent Electricity System Operator	Yes	
Response: Thank you for your support.		

2. **The SDT made changes to TOP-002-3 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made? If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.**

Summary Consideration: There were four common concerns expressed in the comments.

First, the "rationale box" for Requirement R1 was eliminated. The SDT agreed that the rationale offered was inappropriately addressing more of a compliance issue than explaining the background reasoning.

Second, commenters questioned the use of Facility Ratings and Stability Limits in Requirement R1 rather than the use of the terms Interconnection Reliability Operating Limit and System Operating Limit. The SDT prepared responses to clarify the reasoning for the use of Facility Ratings and Stability Limits, but did not change the wording of the requirement.

Third, the commenters questioned the use of the phrase "internal area reliability" in Requirement R2. The SDT revised Requirement R2 to change the phrase from "internal area reliability" to "reliability internal to its Transmission Operator Area" to clarify that the requirement is related to a Transmission Operator Area, which is a defined term, and that it is a reliability concern within that area, not one that concerns other areas nor does it rise to the level of adversely affecting the reliability of a wider area ~~or~~ of the Bulk Electric System.

Fourth, some commenters expressed concern about Requirement R3 and the notifications of entities which are identified as having roles in operating plans developed by the Transmission Operator in Requirement R2. The concern was related to whether the notifications may conflict with confidentiality requirements. The SDT explained that the notifications are simply to alert the entities that they have been identified as having roles in the operating plans to address reliability issues, but that such notifications do not have to include specifics about what the plan is to address. The entity may know that it may be called upon to perform its role of switching, changing of generator output, or other similar actions, but no specific information would be issued that may result in the unintended consequence of giving any entity "market power" or other competitive advantage.

The SDT has made no substantive changes to the requirements of TOP-002-3. However, Requirement R2 was clarified as follows:

R2. Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.

Organization	Yes or No	Question 2 Comment
Muscatine Power & Water	Negative	First and foremost is the Requirement in TOP-002-3 for having a process for performing an "Operational Planning Analysis." That term, "Operational Planning Analysis," does not have a FERC-approved definition. The definition floating around at NERC implies some sort of simulation (with or without a tool) being perform next-day to determine exceedence of facility ratings or stability limits.
Response: The definition of Operational Planning Analysis was approved by FERC in March 2011.		
New Brunswick Power Transmission Corporation	Negative	R3: The TOP may not have authority over external registered entities. The TOP should only have to notify and coordinate with those external entities that have the necessary authority.
Response: Requirement R3 deals with operations planning, thus the notification would be to convey information—not an instruction to implement. The hierarchy of authority is known by the Transmission Operator and other registered entities. This is known even if they are members of differing market structures, contract arrangements, or other organizational arrangements; thus the Transmission Operator will know the effective path of communications to use. No change made.		
ISO/RTO Standards Review Committee	No	Even though the SDT directs us to the SOL methodology in the FAC standards which specify N-1 contingencies, R1 is not as clear in specifying N-1 contingencies as the old R6 was. We would prefer to maintain that clarity. Requiring the TOP to develop a plan to operate within each IROL in R1 is too broad. To narrow the scope of this requirement we suggest inserting the phrase ‘within its TOP Area or for which it has been notified by another TOP under R3’ in R1 immediately following (IROL).
Pepco Holdings Inc	No	PHI supports the comments provided by the ISO/RTO Standards Review Committee.
ISO New England Inc.	No	Even though the SDT directs us to the SOL methodology in the FAC standards which specify N-1 contingencies, R1 is not as clear in specifying N-1 contingencies as the old R6 was. We would prefer to maintain that clarity.

Organization	Yes or No	Question 2 Comment
		Requiring the TOP to develop a plan to operate within each IROL in R1 is too broad. To narrow the scope of this requirement we suggest inserting the phrase 'within its TOP Area or for which it has been notified by another TOP under R3' in R1 immediately following (IROL).
Constellation Energy	No	CCG, CECD and CPG concur with ISO/RTO Standards Review Committee Position: Even though the SDT directs us to the SOL methodology in the FAC standards which specify N-1 contingencies, R1 is not as clear in specifying N-1 contingencies as the old R6 was. We would prefer to maintain that clarity. Requiring the TOP to develop a plan to operate within each IROL in R1 is too broad. To narrow the scope of this requirement we suggest inserting the phrase 'within its TOP Area or for which it has been notified by another TOP under R3' in R1 immediately following (IROL).
BGE	No	BGE concurs with ISO/RTO Standards Review Committee Position: Even though the SDT directs us to the SOL methodology in the FAC standards which specify N-1 contingencies, R1 is not as clear in specifying N-1 contingencies as the old R6 was. We would prefer to maintain that clarity. Requiring the TOP to develop a plan to operate within each IROL in R1 is too broad. To narrow the scope of this requirement we suggest inserting the phrase 'within its TOP Area or for which it has been notified by another TOP under R3' in R1 immediately following (IROL).
Southwest Power Pool Reliability Standards Development Team	No	Even though the SDT directs us to the SOL methodology in the FAC standards which specify N-1 contingencies, R1 is not as clear in specifying N-1 contingencies as the old R6 was. We would prefer to maintain that clarity. Requiring the TOP to develop a plan to operate within each IROL in R1 is too broad. Organization	Yes or No	Question 2 Comment
		immediately following (IROL).
Southwest Power Pool, Inc.	Negative	Even though the SDT directs us to the SOL methodology in the FAC standards which specify N-1 contingencies, R1 is not as clear in specifying N-1 contingencies as the old R6 was. We would prefer to maintain that clarity. Requiring the TOP to develop a plan to operate within each IROL in R1 is too broad. To narrow the scope of this requirement we suggest inserting the phrase ‘within its TOP Area or for which it has been notified by another TOP under R3’ in R1 immediately following (IROL).
Nebraska Public Power District	No	Even though the SDT directs us to the SOL methodology in the FAC standards which specify N-1 contingencies, R1 is not as clear in specifying N-1 contingencies as the old R6 was. We would prefer to maintain that clarity. We suggest the following language for R1: “Each Transmission Operator shall have an Operational Planning Analysis assessing whether the planned Transmission Operator Area operations for the next day will exceed the area Facility Ratings or Stability Limits during anticipated normal and Contingency (at a minimum N-1 Contingency planning) event conditions.” Requiring the TOP to develop a plan to operate within each IROL in R2 is too broad. To narrow the scope of this requirement we suggest inserting the phrase ‘within its Transmission Operator Area or for which it has been notified by another TOP under R3’ in R1 immediately following (IROL).
Response: The SDT points the commenter to the Glossary definitions of Facility Rating, Stability Limit, Operational Planning Analysis (OPA), Transmission Operator Area, Interconnection Reliability Operating Limit (IROL), and System Operating Limit (SOL) for reference (not included here for brevity). The SDT chose this language for proposed TOP-002-3, Requirement R1 because the OPA encompasses many reliability concepts. The OPA presents a predicted system status for the system conditions that are represented within and by the OPA, including things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.). Some commenters suggested that the SDT should use IROLs and SOLs in the requirement rather than Facility Ratings and Stability Limits. The SDT chose not to do so because the IROLs and SOLs represent only part of what the OPA is to include. The OPA is to		

Organization	Yes or No	Question 2 Comment
analyze all expected system conditions against all operating criteria. The SDT finds that is accomplished within a Transmission Operator Area by having an OPA that is assessed not to exceed any of its Facility Ratings or Stability Limits. While IROLs and SOLs represent many of these, they may not be granular enough to represent all of them. FAC-008 and -009 require facility owners to have a methodology for determining Facility Ratings for their facilities and to communicate those ratings to operating entities that have a need for those ratings. FAC-011 requires Reliability Coordinators to have a methodology for determining SOLs (and the subset of SOLs which rise to the level of IROLs) for the operations horizon and those methodologies are to respect the Facility Ratings they have been given by the facility owners. Further, FAC-014 requires the Reliability Coordinator, Planning Coordinator, Transmission Planner, and Transmission Operator to communicate those limits to the operating entities which need them in system operations activities. FAC-011, for the operations horizon, requires that the SOLs represent the following: "R2.2 Following the single Contingencies1identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur. R2.2.1. Single line to ground or three-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device. R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault. R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system." TOP-002-3, as proposed, relates to the Operations Planning time horizon. When the Facility Ratings and Stability Limits are in place as required by the FAC standards, TOP-002-3, Requirement R1 requires the Transmission Operator (TOP) to have an OPA that will allow the TOP to assess whether any Facility Ratings or Stability Limits have been exceeded for the expected system conditions represented by the OPA. The SDT chose not to repeat the requirements of the FAC standards in the drafting of the TOP standards. No change made. Requirement R2 is the correct reference for the second group of comments, not Requirement R1. The SDT believes it is important for the Transmission Operator to develop a plan to operate within each IROL. Further the Reliability Coordinator must inform the Transmission Operator of all IROLs that impact its Transmission Operator Area or that its area can impact in other areas; and other Transmission Operators must inform them of SOLs that either impact its area or that its area may impact. Similar to the often-discussed "loop flow" concern, each entity must recognize that operations within its area may impact SOLs in another area and vice		

Organization	Yes or No	Question 2 Comment
versa.		
United Illuminating Company	No	The phrasing of the Requirement R1 does not match the rationale box. Based on the Rationale R1, UI suggests the requirement should either state the requirement for a process to conduct an Operational planning Analysis for the next day, or shall conduct an Operational Planning Analysis for the next day. It seems the team could phrase this as a Risk Based Requirement.R1. The Transmission operator shall CONDUCT an Operational Planning Analysis for the next day's planned operations within its Transmission Operator Area to identify where Facility Ratings or Stability Limits will be exceeded during anticipated normal and Contingency event conditions. R2: uses a phrase each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 that implies an SOL exists in the TOP area that was not identified pursuant to FAC-011 R2 and communicated per FAC-011 R5. SOL's that affect a TOP internal area would also affect the RC area.
Northeast Power Coordinating Council	No	The phrasing of the Requirement R1 does not match the rationale box. Based on the Rationale R1, suggest that the requirement should either state the requirement for a process to conduct an Operational Planning Analysis for the next day, or shall conduct an Operational Planning Analysis for the next day. It seems the team could phrase this as a Risk Based Requirement.R1. The Transmission Operator shall CONDUCT an Operational Planning Analysis for the next day's planned operations within its Transmission Operator Area to identify where Facility Ratings or Stability Limits will be exceeded during anticipated normal and Contingency event conditions. Requirement R2 uses a phrase each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 that implies an SOL exists in the TOP area that was not identified pursuant to FAC-011 R2 and communicated per FAC-014 R5. SOL's that affect a TOP

Organization	Yes or No	Question 2 Comment
		internal area would also affect the RC area. The Drafting Team needs to define the term "internal area reliability" in order to improve the clarity of the standard (see Question 1 comments regarding TOP-001 Requirement R8). Regarding Requirement R3, would notifying GO's of "their roles" in the IROL/SOL mitigation plan provide them market power or represent a violation of Order 888 Firewall?
Response: R1 rationale box: The SDT agrees and has eliminated the rationale box. Requirement R1 requires the Transmission Operator to assess its Operational Planning Analysis each day for the next day to determine whether the analysis is still appropriate and, thus, still applies. R2: The SDT has revised the language. **R2.** Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. R3: When providing the notification, no confidential information must be provided, only that the entity has a role to play in an operating plan that the Transmission Operator has developed to address system constraints. No other regulations may be violated in the issuance of the notifications, but the Generator Owner, Generator Operator, or Balancing Authority would know that they would be asked to change something in their generation operations as a part of their role(s).		
Southwest Power Pool Regional Entity	No	See item number 5 for comments.
Response: See the response to Q5.		
Bonneville Power Administration	No	Given the potential uncertainty regarding how many day ahead studies may be required, BPA suggests adding more clarity to the standard TOP-002-3. BPA recognizes that various regions experience peak operations at different times of the day, anticipated generation patterns shift over the course of the day, and

Organization	Yes or No	Question 2 Comment
		transmission facilities come in and out of service for planned work at various times throughout the day. Hence, due to these multiple shifts in forecast system conditions, it is unclear whether more than one study is required to meet the requirements of this standard.
Response: The requirement states "what" must be done, not "how" it is to be done. There are many tools (please note that use of tools is not required) and the various processes and/or tools may differ with a resulting different number of "studies" required. The Operational Planning Analysis is to address "expected system conditions", such as load forecasts, generator outputs, and system constraints. For those larger, more complex systems, the SDT expects the process may be complex. However, for smaller entities which may have a very constant load characteristic and a very robust transmission system, one analysis may suffice for a very broad range of different "expected system conditions". No change made.		
Imperial Irrigation District (IID)	No	R1 - This requirement requires the Transmission Operator to have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions (Comment) - Recommendation that the requirement language be changed to "Each TOP shall perform the required Operational Planning Analysis for Next-Day Operations to assess if the Next-Day Operations Plan will exceed any of its Facility and/or stability limits under normal or emergency conditions". R2 - This requirement requires the Transmission Operator to develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 (Comment) Recommend that the language be revised for clarity to state the following; "The TOP shall develop a plan to operate within established IROL and SOLs according to the Operation Planning Analysis performed for its Next-Day Operation in Requirement 1. R3 - This requirement requires the TOP to notify all NERC registered entities

Organization	Yes or No	Question 2 Comment
		identified in the plan(s) cited in Requirement R2 as to their role in those plan(s) (Comment) - Recommend revising the language in the requirement to state the following; "The TOP shall notify all affected NERC Registered entities of possible impacts identified in its Operational Planning Analysis for its Next-Day Operations in Requirement 1. M2 - The measurement requires the TOP to have evidence that it has developed a plan to operate within each IROL and each SOL which, while not an IROL has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 in accordance with Requirement (Comment) - Revise the Measurement to state the following; "The TOP shall have evidence that it developed a plan to operate within established IROL or SOLs supporting its internal reliability area as a result of its Operational Planning Analysis performed". M3 - Each Transmission Operator shall have evidence that it notified all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records. (Comment) - Revise the measurement to sate the following; "The TOP shall provide evidence that it notified affected NERC Registered Entities as being impacted in the Operational Planning Analysis related to its Next-Day plan. Such evidence shall include but not be limited to dated E-Mails, Operator Logs, or Voice Recordings. Data Retention - Each Transmission Operator shall keep data or evidence to show compliance for each Requirement and Measure for a rolling six month period for analyses, the most recent three months for voice recordings, and 12 months for operating logs and e-mail records unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation. If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer. The Compliance Enforcement Authority shall

Organization	Yes or No	Question 2 Comment
		keep the last audit records and all requested and submitted subsequent audit records. (Comment): The time frames appear to be pretty specific for the data retention. However when will the entity know that it has to save the evidence farther back than the set time frame. Would it not be better to have the Data Retention language require the entity to save all evidence back 12 months and to save any evidence related to a system disturbance/event?
Response: R1: The requirement is to assess the Operational Planning Analysis (OPA). An entity may do this by performing a new OPA each day, or even more often, but it is not required to do so. The SDT can postulate that the varying results of the assessment(s) may indicate the need for a new analysis, or may indicate that the existing analysis is still appropriate. No change made. R2: See above response for R1. No change made. R3: The SDT requirement to notify entities of their role(s) in the operating plans goes beyond just informing them of system impacts. The role(s) will notify the entity that they will have actions to take when the Transmission Operator must implement an operating plan to address system constraint(s). No change made. The SDT made no changes to Measures M2 and M3 because the requirements were not changed. Data Retention: The language indicates that the entity will be asked by its Compliance Enforcement Authority (or directed) to save the evidence father back than the set timeframe. No change made.		
Kansas City Power & Light	No	The words "develop a plan" in R2 are too broad. Recommend the requirement be modified to include, "within its TOP area" as in R1. Also the use of "Contingency event conditions" is not clear in requirement R1. Recommend specifying n-1 as the contingency scope.
Response: The SDT believes it is important for the Transmission Operator to develop a plan to operate within each IROL. Further the Reliability Coordinator must inform the Transmission Operator of all IROLs that impact its Transmission Operator Area or that its area can impact in other areas; and other Transmission Operators must inform them of SOLs that either impact its area or that its area may impact. Similar to the often-discussed "loop flow" concern, each entity must recognize that operations within its area may impact SOLs in another area and vice versa. No change made.		

Organization	Yes or No	Question 2 Comment
The SDT points the commenter to the Glossary definitions of Facility Rating, Stability Limit, Operational Planning Analysis (OPA), Transmission Operator Area, Interconnection Reliability Operating Limit (IROL), and System Operating Limit (SOL) for reference (not included here for brevity). The SDT chose this language for proposed TOP-002-3, Requirement R1 because the OPA encompasses many reliability concepts. The OPA presents a predicted system status for the system conditions that are represented within and by the OPA, including things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.). Some commenters suggested that the SDT should use IROLs and SOLs in the requirement rather than Facility Ratings and Stability Limits. The SDT chose not to do so because the IROLs and SOLs represent only part of what the OPA is to include. The OPA is to analyze all expected system conditions against all operating criteria. The SDT finds that is accomplished within a Transmission Operator Area by having an OPA that is assessed not to exceed any of its Facility Ratings or Stability Limits. While IROLs and SOLs represent many of these, they may not be granular enough to represent all of them. FAC-008 and -009 require facility owners to have a methodology for determining Facility Ratings for their facilities and to communicate those ratings to operating entities that have a need for those ratings. FAC-011 requires Reliability Coordinators to have a methodology for determining SOLs (and the subset of SOLs which rise to the level of IROLs) for the operations horizon and those methodologies are to respect the Facility Ratings they have been given by the facility owners. Further, FAC-014 requires the Reliability Coordinator, Planning Coordinator, Transmission Planner, and Transmission Operator to communicate those limits to the operating entities which need them in system operations activities. FAC-011, for the operations horizon, requires that the SOLs represent the following: "R2.2 Following the single Contingencies identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur. R2.2.1. Single line to ground or three-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device. R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault. R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system." TOP-002-3, as proposed, relates to the Operations Planning time horizon. When the Facility Ratings and Stability Limits are in place as required by the FAC standards, TOP-002-3, Requirement R1 requires the Transmission Operator (TOP) to have an OPA that will		

Organization	Yes or No	Question 2 Comment
allow the TOP to assess whether any Facility Ratings or Stability Limits have been exceeded for the expected system conditions represented by the OPA. The SDT chose not to repeat the requirements of the FAC standards in the drafting of the TOP standards. No change made.		
SERC OC Standards Review Group	No	Why did the Drafting Team use the terms “Facility Ratings” and “Stability Limits” in Requirement 1 rather than SOLs and IROLs as used in subsequent Requirements? We suggest the Drafting Team further clarify or define the term “supporting internal area reliability” as an aid in demonstrating compliance and how this requirement (R2) enhances reliability.
Response: The SDT points the commenter to the Glossary definitions of Facility Rating, Stability Limit, Operational Planning Analysis (OPA), Transmission Operator Area, Interconnection Reliability Operating Limit (IROL), and System Operating Limit (SOL) for reference (not included here for brevity). The SDT chose this language for proposed TOP-002-3, Requirement R1 because the OPA encompasses many reliability concepts. The OPA presents a predicted system status for the system conditions that are represented within and by the OPA, including things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.). Some commenters suggested that the SDT should use IROLs and SOLs in the requirement rather than Facility Ratings and Stability Limits. The SDT chose not to do so because the IROLs and SOLs represent only part of what the OPA is to include. The OPA is to analyze all expected system conditions against all operating criteria. The SDT finds that is accomplished within a Transmission Operator Area by having an OPA that is assessed not to exceed any of its Facility Ratings or Stability Limits. While IROLs and SOLs represent many of these, they may not be granular enough to represent all of them. FAC-008 and -009 require facility owners to have a methodology for determining Facility Ratings for their facilities and to communicate those ratings to operating entities that have a need for those ratings. FAC-011 requires Reliability Coordinators to have a methodology for determining SOLs (and the subset of SOLs which rise to the level of IROLs) for the operations horizon and those methodologies are to respect the Facility Ratings they have been given by the facility owners. Further, FAC-014 requires the Reliability Coordinator, Planning Coordinator, Transmission Planner, and Transmission Operator to communicate those limits to the operating entities which need them in system operations activities. FAC-011, for the operations horizon, requires that the SOLs represent the following: “R2.2 Following the single Contingencies identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate		

Organization	Yes or No	Question 2 Comment
transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur. R2.2.1. Single line to ground or three-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device. R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault. R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system." TOP-002-3, as proposed, relates to the Operations Planning time horizon. When the Facility Ratings and Stability Limits are in place as required by the FAC standards, TOP-002-3, Requirement R1 requires the Transmission Operator (TOP) to have an OPA that will allow the TOP to assess whether any Facility Ratings or Stability Limits have been exceeded for the expected system conditions represented by the OPA. The SDT chose not to repeat the requirements of the FAC standards in the drafting of the TOP standards. No change made. R2: The SDT has revised the language. This requirement enhances reliability by clarifying that a Transmission Operator may identify certain SOLs as important, although they don't rise to the level of an IROL, but support reliability internal to the Transmission Operator Area. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations. **R2.** Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.		
US Army Corps of Engineers	No	Issue: The SDT uses a non FERC approved term of Operational Planning Analysis, This term is in the NERC Glossary of terms. Recommend that this statement be forwarded with this Standard to FERC for approval. Issue: R2: statement its internal area reliability Should be clarified to state: R2: Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting its

		Transmission Operators area, identified as a result of the Operational Planning Analysis performed in Requirement R1. M2: statement its internal area reliability could be clarified to state: has been identified by the Transmission Operator as supporting its Transmission Operators area, identified as a result of the Operational Planning Analysis
MRO-NSRF	No	Issue: The SDT uses a non FERC approved term of "Operational Planning Analysis", This term is in the NERC Glossary of terms. Recommend that this statement be forwarded with this Standard to FERC for approval. Issue: R2: statement "...its internal area reliability..." Should be clarified to state: R2: Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting its Transmission Operators area, identified as a result of the Operational Planning Analysis performed in Requirement R1. M2: statement "...its internal area reliability..." could be clarified to state:"...has been identified by the Transmission Operator as supporting its Transmission Operators area, identified as a result of the Operational Planning Analysis..."
Response: The definition of Operational Planning Analysis was approved by FERC in March 2011. R2: The SDT has revised the language to change "internal area reliability". **R2.** Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. M2: The SDT revised Measure M2 to correspond to the changes in Requirement R2.		
ACES Power Marketing	No	We largely agree with the changes but have identified the following specific

Organization	Yes or No	Question 2 Comment
Member Standards Collaborators		issues.We believe that purpose statement should clearly state that the standard is limited to the Bulk Electric System (BES). NERC compliance staff has interpreted standards as applying to the Bulk Power System (BPS) if they are not specifically limited to the BES. More specifically in response to comments that CAN-0016 impermissibly extended the standard to the BPS, NERC responded that Section 39 of the EPAct of 2005 requires standards to apply to the BPS unless the standard restricts itself. Because the BPS can be interpreted to be broader than the BES and there is no need for the standard to apply broader than the BES, we would like to see BES inserted into the purpose statement. For Requirement R1, it is not clear why focus is on Facility Ratings and Stability Limits rather than SOLs. We suggest using the term SOL instead.
Southwest Transmission Cooperative, Inc.	Affirmative	We believe that purpose statement should clearly state that the standard is limited to the Bulk Electric System (BES). NERC compliance staff has interpreted standards as applying to the Bulk Power System (BPS) if they are not specifically limited to the BES. More specifically in response to comments that CAN-0016 impermissibly extended the standard to the BPS, NERC responded that Section 39 of the EPAct of 2005 requires standards to apply to the BPS unless the standard restricts itself. Because the BPS can be interpreted to be broader than the BES and there is no need for the standard to apply broader than the BES, we would like to see BES inserted into the purpose statement. For Requirement R1, it is not clear why focus is on Facility Ratings and Stability Limits rather than SOLs. We suggest using the term SOL instead.

Response: The SDT has been given SDT Guidelines that state that all requirements are written for the BES. No change made.

R1: The SDT points the commenter to the Glossary definitions of Facility Rating, Stability Limit, Operational Planning Analysis (OPA), Transmission Operator Area, Interconnection Reliability Operating Limit (IROL), and System Operating Limit (SOL) for reference (not included here for brevity). The SDT chose this language for proposed TOP-002-3, Requirement R1 because the OPA encompasses many reliability concepts. The OPA presents a predicted system status for the system conditions that are represented within and by

Organization	Yes or No	Question 2 Comment
the OPA, including things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.). Some commenters suggested that the SDT should use IROLs and SOLs in the requirement rather than Facility Ratings and Stability Limits. The SDT chose not to do so because the IROLs and SOLs represent only part of what the OPA is to include. The OPA is to analyze all expected system conditions against all operating criteria. The SDT finds that is accomplished within a Transmission Operator Area by having an OPA that is assessed not to exceed any of its Facility Ratings or Stability Limits. While IROLs and SOLs represent many of these, they may not be granular enough to represent all of them. FAC-008 and -009 require facility owners to have a methodology for determining Facility Ratings for their facilities and to communicate those ratings to operating entities that have a need for those ratings. FAC-011 requires Reliability Coordinators to have a methodology for determining SOLs (and the subset of SOLs which rise to the level of IROLs) for the operations horizon and those methodologies are to respect the Facility Ratings they have been given by the facility owners. Further, FAC-014 requires the Reliability Coordinator, Planning Coordinator, Transmission Planner, and Transmission Operator to communicate those limits to the operating entities which need them in system operations activities. FAC-011, for the operations horizon, requires that the SOLs represent the following: "R2.2 Following the single Contingencies1identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur. R2.2.1. Single line to ground or three-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device. R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault. R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system." TOP-002-3, as proposed, relates to the Operations Planning time horizon. When the Facility Ratings and Stability Limits are in place as required by the FAC standards, TOP-002-3, Requirement R1 requires the Transmission Operator (TOP) to have an OPA that will allow the TOP to assess whether any Facility Ratings or Stability Limits have been exceeded for the expected system conditions represented by the OPA. The SDT chose not to repeat the requirements of the FAC standards in the drafting of the TOP standards. No change made.		

Organization	Yes or No	Question 2 Comment
Georgia System Operations	No	GSOC feels that some clarity should be provided. In R1, the rationale confuses things. It states things that are not in the requirement and goes beyond the requirement. If something is intended by the language of R1 other what is stated, then that intent should be clearer in the requirement. For example if a process is required, then state so in the requiremnt. It should not be in a rationale. Also, the comment in the rationale about being able to complete the analysis even if tools are not available is inappropriate in this standard since the situation is covered in EOP-008-1. Remove the rationale and if needed clarify the requirement. R1 states that the TOP should be allowed to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. It does not state that an assessment of this must be done, only that it be allowed.R2 states that the TOP shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which has been identified by the TOP as supporting its internal area reliability, identified as a result of the OPA performed in Requirement R1. R1 does not require that IROLs and SOLs be identified. What if the TOP does not identify if there are any SOLs as a result of the OPA? There are other examples in these standards in which something in the OPA is referred to but is not required to be in the analysis. Better clarity is needed regarding just what the end results of the analysis must be. R3 requires that entities identified in the plan be notified as to their role. Would this be initially and whenever their role changes thereafter? Or just once? Data Retention: It states that if a TOP is found non-compliant, it shall keep information related to the non-compliance until found compliant. It is inappropriate to use the phrase "found compliant." NERC and the REs do not find entities compliant.
Response: R1 rationale box: The SDT agrees and has eliminated the rationale box. Requirement R1 requires the Transmission Operator to assess its Operational Planning Analysis each day for the next day to determine whether the analysis is still appropriate		

Organization	Yes or No	Question 2 Comment
and, thus, still applies. No change made. R1: The requirement is for the Transmission Operator to have an Operational Planning Analysis (timeframe of an OPA is built into the definition). If the Transmission Operator chooses to use an existing OPA, then it cannot be confirmed to be appropriate for the next day without performing an assessment of the OPA. If the Transmission Operator chooses to build a new OPA (each day or at a differing recurrent schedule), then the assessment is part of building the OPA in order to make it appropriate to the "expected system conditions". No change made. Identification of SOLs: There is no need to state in these requirements that the IROLs and SOLs be identified, because the Transmission Operator is required to do that by the FAC standards. The end result of an OPA is an evaluation of the "expected system conditions" and the development of operating plans that may be needed to address any identified system constraints. No change made. R3: Entities are to be notified as to their role every time it performs the assessment. Data Retention: The language you question has been provided to the SDT by the NERC Compliance group and is "boiler plate" language that the SDTs are instructed to use. No change made.		
City Water Light and Power (CWLP) - Springfeild - IL	No	R1 should utilize SOL and IROL criteria as opposed to Facility Ratings and Stability Limits criteria for consistency and clarity R1 Rationale language lacks clarity. Poor definition of "process", "tools", and "procedures" could be construed to indicate that a TO must be able to perform analysis internally even when basic non-automated "tools" such as offline power flow software are not available. The intent of "tool" is unclear in general for this instance. If the intent is to capture the use of online automated tools such a Real-Time Contingency Analysis and ensure that offline analysis capabilities are retained, the language should explicitly include "online automated tools" or "real-time automated tools"
Response: The SDT points the commenter to the Glossary definitions of Facility Rating, Stability Limit, Operational Planning Analysis (OPA), Transmission Operator Area, Interconnection Reliability Operating Limit (IROL), and System Operating Limit (SOL) for reference (not included here for brevity). The SDT chose this language for proposed TOP-002-3, Requirement R1 because the OPA encompasses many reliability concepts. The OPA presents a predicted system status for the system conditions that are represented		

Organization	Yes or No	Question 2 Comment
within and by the OPA, including things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.). Some commenters suggested that the SDT should use IROLs and SOLs in the requirement rather than Facility Ratings and Stability Limits. The SDT chose not to do so because the IROLs and SOLs represent only part of what the OPA is to include. The OPA is to analyze all expected system conditions against all operating criteria. The SDT finds that is accomplished within a Transmission Operator Area by having an OPA that is assessed not to exceed any of its Facility Ratings or Stability Limits. While IROLs and SOLs represent many of these, they may not be granular enough to represent all of them. FAC-008 and -009 require facility owners to have a methodology for determining Facility Ratings for their facilities and to communicate those ratings to operating entities that have a need for those ratings. FAC-011 requires Reliability Coordinators to have a methodology for determining SOLs (and the subset of SOLs which rise to the level of IROLs) for the operations horizon and those methodologies are to respect the Facility Ratings they have been given by the facility owners. Further, FAC-014 requires the Reliability Coordinator, Planning Coordinator, Transmission Planner, and Transmission Operator to communicate those limits to the operating entities which need them in system operations activities. FAC-011, for the operations horizon, requires that the SOLs represent the following: "R2.2 Following the single Contingencies identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur. R2.2.1. Single line to ground or three-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device. R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault. R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system." TOP-002-3, as proposed, relates to the Operations Planning time horizon. When the Facility Ratings and Stability Limits are in place as required by the FAC standards, TOP-002-3, Requirement R1 requires the Transmission Operator (TOP) to have an OPA that will allow the TOP to assess whether any Facility Ratings or Stability Limits have been exceeded for the expected system conditions represented by the OPA. The SDT chose not to repeat the requirements of the FAC standards in the drafting of the TOP standards. No change made. R1 rationale box: The SDT agrees and has eliminated the rationale box. Requirement R1 requires the Transmission Operator to		

Organization	Yes or No	Question 2 Comment
assess its Operational Planning Analysis each day for the next day to determine whether the analysis is still appropriate and, thus, still applies. No change made.		
We Energies	No	How current should the Operational Planning Analysis be? By definition it can be 12 months ahead. Data Retention: The second paragraph states that Measures must be complied with. Compliance with measures cannot be required.
Response: The Transmission Operator must have an OPA (the timeframe is contained within the definition). Data Retention: You are correct. The SDT has made a conforming change to the language to eliminate the phrase.		
American Transmission Company, LLC	No	Requirement 1 - Granted, if the rationale does not mandate "how" an analysis is completed, a better requirement of the "what" should be stated. If this analysis base-case, N-1, is unilateral by the TOP, without iteration with the BA, then should the process be documented?
Response: R1 rationale box: The SDT agrees and has eliminated the rationale box. Requirement R1 requires the Transmission Operator to assess its Operational Planning Analysis each day for the next day to determine whether the analysis is still appropriate and, thus, still applies. No change made. In the development of the planned operations for the next day, the Balancing Authority would supply expected generator outputs to the Transmission Operator. The Transmission Operator would determine whether there are any system constraints that would require changes by the Balancing Authority, such as a re-dispatch or other action that may require alterations to the expected generator outputs to be performed by the Balancing Authority. If such things are identified, the Transmission Operator will notify the entities of their role(s) in the operating plans.		
Consolidated Edison Co. of NY, Inc.	No	Comments: In Requirement R2 the Drafting Team needs to define the term "internal area reliability" in order to improve the clarity of the standard. Regarding Requirement R3: Would notifying GO's of "their roles" in the IROL/SOL mitigation plan provide them market power or represent a violation of Order 888

Organization	Yes or No	Question 2 Comment
		Firewall? Requirement 3 should be deleted. Market rules may prohibit the TOP from notifying all identified registered entities of their involvement in a given Operational Planning Analysis. This notification function may need to be performed by the RC.
Orange and Rockland Utilities, Inc.	No	Regarding Requirement R3: Would notifying GO's of "their roles" in the IROL/SOL mitigation plan provide them market power or represent a violation of Order 888 Firewall? Requirement 3 should be deleted. Market rules may prohibit the TOP from notifying all identified registered entities of their involvement in a given Operational Planning Analysis. This notification function may need to be performed by the RC.
Response: R2: The SDT has revised the language. **R2.** Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. R3: When providing the notification, no confidential information must be provided, only that the entity has a role to play in an operating plan that the Transmission Operator has developed to address system constraints. No other regulations may be violated in the issuance of the notifications, but the Generator Operator, Generator Operator, or Balancing Authority would know that they would be asked to change something in their generation operations as a part of their role(s). The Transmission Operator may direct Balancing Authorities for reliability reasons. Yes, the Reliability Coordinator may also direct the Balancing Authorities, but the Transmission Operator is not precluded from doing so. No change made.		
Manitoba Hydro	No	R1 - Given that an Operational Planning Analysis is itself an assessment of planned operations (i.e. the definition of Operational Planning Analysis is 'An analysis of the expected system conditions for the next day's operation…') it is unnecessary to state that the Operational Planning Analysis must allow an assessment of planned operations. Accordingly, Manitoba Hydro suggests that the phrase that will allow it

Organization	Yes or No	Question 2 Comment
		to assess…' be replaced with "assessing".
Response: The SDT believes your comments represent a question of semantics. The SDT differentiates between an "analysis" and an "assessment". The difference is that the entity assesses the analysis it has performed to determine that the OPA is still representative of "expected system conditions". That is "what" must be done. The "how" is left up to the entity. The SDT can postulate that the entity may perform a new OPA and, in the process, assess that it is representative of "expected system conditions", or that it may take an existing OPA and assess it to determine that it still is representative. No change made.		
ReliabilityFirst	No	ReliabilityFirst has the following comments for consideration:1. R1 - ReliabilityFirst recommends removing the rationale box from the standard. ReliabilityFirst believes this is not really the rationale for the requirement but rather explains how to measure (show evidence) for the requirement.2. R2 - ReliabilityFirst recommends deleting the following words from the requirement, "which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1". ReliabilityFirst believes this language does not add anything to the requirement. 3. R2 and R3 - R3 requires the Transmission Operator to notify all NERC registered entities identified in the plan(s) but there is no corresponding requirement for the Transmission Operator to identify NERC registered entities in their plans. ReliabilityFirst recommends incorporating this concept into R2. 4. Data retention - ReliabilityFirst believes the first paragraph of the Data Retention section is in conflict with the additional paragraphs of the Data Retention section. For example, the last sentence states "the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit" as a catch all. Regardless of the other shorter data retention periods located in the subsequent paragraphs, the entity still needs to retain the evidence for the full time period since the last audit. ReliabilityFirst recommends only keeping the first paragraph and deleting the subsequent

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 2 Comment</th></tr>
<tr><td></td><td></td><td>paragraphs in the Data Retention section.</td></tr>
<tr><td colspan="3">Response: R1 rationale box: The SDT agrees and has eliminated the rationale box.

R2: A Transmission Operator may identify certain SOLs as important, although they don’t rise to the level of an IROL, but support reliability internal to the Transmission Operator Area. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations. However, the SDT has clarified the wording in Requirement R2 due to comments received.

R2. Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.

The SDT believes that to notify the entities, the Transmission Operator must somehow know who the entities are and that stating a requirement to identify them before notifying them would be redundant and would not add to reliability. No change made.

Data Retention: The entity is to do all the shorter retention requirements first and go to the longer retention only if the CEA asks them to do so. No change made.</td></tr>
<tr><td>Duke Energy</td><td>No</td><td>o R2 - Consistent with our comment above on TOP-001-2 Requirement R8, the phrase “supporting its internal area reliability” should be further clarified in some way.

o M2 typo - the word “plan” has an extra “n”.</td></tr>
<tr><td colspan="3">Response: R2: The SDT has revised the language.

R2. Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.

M2: The typo has been corrected. Please note that the typo is not seen in the “clean” copy.</td></tr>
</table>

Organization	Yes or No	Question 2 Comment
South Carolina Electric and Gas	No	Please provide clarity on the phrase "support its internal area reliability" in R2.
Response: R2: The SDT has revised the language. **R2.** Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.		
Oklahoma Gas and Electric	No	Regarding R2, please consider additional clarifying language that each TOP need only develop a plan to operate within IROL and SOL that is applicable to them. Also, clarify what "internal area realibility" means - is this the same as Transmission Operator Area discussed in R1?
Response: The SDT believes it is important for the Transmission Operator to develop a plan to operate within each IROL. Further the Reliability Coordinator must inform the Transmission Operator of all IROLs that impact its Transmission Operator Area or that its area can impact in other areas; and other Transmission Operators must inform them of SOLs that either impact its area or that its area may impact. Similar to the often-discussed “loop flow” concern, each entity must recognize that operations within its area may impact SOLs in another area and vice versa. No change made. R2: The SDT has revised the language. **R2.** Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.		
Westar Energy	No	The stated rationale for R1 raises more concerns than the actual language in R1. How can an entity complete an analysis by procedure? The rationale seems to indicate that an Operational Planning Analysis is possible

Organization	Yes or No	Question 2 Comment
		without tools, please explain. Are anticipated contingency event conditions intended to be N-1 from the planned system configuration?

Response: R1 rationale box: The SDT agrees and has eliminated the rationale box.

The requirement states "what" must be done, not "how" it is to be done. There are many tools (please note that use of tools is not required) and the various processes and/or tools may differ with a resulting different number of "studies" required. The Operational Planning Analysis is to address "expected system conditions", such as load forecasts, generator outputs, and system constraints. For those larger, more complex systems, the SDT expects the process may be complex. However, for smaller entities which may have a very constant load characteristic and a very robust transmission system, one analysis may suffice for a very broad range of different "expected system conditions".

The SDT points the commenter to the Glossary definitions of Facility Rating, Stability Limit, Operational Planning Analysis (OPA), Transmission Operator Area, Interconnection Reliability Operating Limit (IROL), and System Operating Limit (SOL) for reference (not included here for brevity). The SDT chose this language for proposed TOP-002-3, Requirement R1 because the OPA encompasses many reliability concepts. The OPA presents a predicted system status for the system conditions that are represented within and by the OPA, including things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generator outages, equipment limitations, etc.).

Some commenters suggested that the SDT should use IROLs and SOLs in the requirement rather than Facility Ratings and Stability Limits. The SDT chose not to do so because the IROLs and SOLs represent only part of what the OPA is to include. The OPA is to analyze all expected system conditions against all operating criteria. The SDT finds that is accomplished within a Transmission Operator Area by having an OPA that is assessed not to exceed any of its Facility Ratings or Stability Limits. While IROLs and SOLs represent many of these, they may not be granular enough to represent all of them.

FAC-008 and -009 require facility owners to have a methodology for determining Facility Ratings for their facilities and to communicate those ratings to operating entities that have a need for those ratings. FAC-011 requires Reliability Coordinators to have a methodology for determining SOLs (and the subset of SOLs which rise to the level of IROLs) for the operations horizon and those methodologies are to respect the Facility Ratings they have been given by the facility owners. Further, FAC-014 requires the Reliability Coordinator, Planning Coordinator, Transmission Planner, and Transmission Operator to communicate those limits to the operating entities which need them in system operations activities.

Organization	Yes or No	Question 2 Comment
FAC-011, for the operations horizon, requires that the SOLs represent the following: "R2.2 Following the single Contingencies1identified in Requirement 2.2.1 through Requirement 2.2.3, the system shall demonstrate transient, dynamic and voltage stability; all Facilities shall be operating within their Facility Ratings and within their thermal, voltage and stability limits; and Cascading or uncontrolled separation shall not occur. R2.2.1. Single line to ground or three-phase Fault (whichever is more severe), with Normal Clearing, on any Faulted generator, line, transformer, or shunt device. R2.2.2. Loss of any generator, line, transformer, or shunt device without a Fault. R2.2.3. Single pole block, with Normal Clearing, in a monopolar or bipolar high voltage direct current system." TOP-002-3, as proposed, relates to the Operations Planning time horizon. When the Facility Ratings and Stability Limits are in place as required by the FAC standards, TOP-002-3, Requirement R1 requires the Transmission Operator (TOP) to have an OPA that will allow the TOP to assess whether any Facility Ratings or Stability Limits have been exceeded for the expected system conditions represented by the OPA. The SDT chose not to repeat the requirements of the FAC standards in the drafting of the TOP standards. No change made.		
Ameren	No	R1. The current language invites a retrospective assessment and a potential compliance issue that if a bad event occurs that was not in the forecast, it may call into question whether the TOP adequately "allowed it to assess" whether operations where within limits. We recommend SDT re-write the requirement: "Each TOP shall have an Operational Planning Analysis that represents projected System conditions for the next day, within its Transmission Operator Area, to identify any projected exceedance of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions." R2. Although the time-horizon assignment provides some cover for real-time SOLs, it would be preferable to add direct clarification to the Requirement as follows. "Each TOP shall develop a next day plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) ..." R3. Taken literally, this Requirement could require TOP notification to a GOP/PSE/LSE that they will be dispatched down in real-time for a projected congestion issue (SOL).

Organization	Yes or No	Question 2 Comment
		This does not make sense and certainly not in organized LMP markets where they would have advance knowledge of market conditions AND FOR THINGS THAT ARE ROUTINE. This is the nexus of the problem for us with this Requirement. The need to notify others of their roles should be restricted to unusual actions in the case of SOL resolution. Arguably this could be true for IROLs too but given the impact perhaps it could remain. We suggest that the Requirement say, "Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s) when those actions are unusual or abnormal actions." OR"Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s) for the resolution of IROLs or when those actions are unusual or abnormal actions for the resolution of SOLs."
Response: The SDT believes the existing language of draft Requirement R1 says what you are requesting. No change made. R2: The FAC standards provide clarity as to the development of Facility Ratings and SOLs. IROLs are a sub-set of SOLs. To provide differing language here would be to provide potential conflict and confusion. No change made. R3: Requirement R3 deals with operations planning; thus the notification would be to convey information—not an instruction to implement. The hierarchy of authority is known by the Transmission Operator and other registered entities. This is known even if they are members of differing market structures, contract arrangements, or other organizational arrangements; thus the Transmission Operator will know the effective path of communications to use.		
Roger C Zaklukiewicz		Requirement R1 needs to be modified as the following terms in 1.1 are problematic to compliance and enforcement. Remove the term "but not limited to". Why must the data to be exchanged include that on all facilities that operate at levels lower than the Bulk Electric System to ensure the reliability of the interconnected BES - especially if the BES is to be recognized as the "bright line" transmission system that operates at 100 kV or above.
Response: The SDT believes you intended these comments for TOP-003, Requirement R1. Please see the responses to TOP-003 comments.		

Organization	Yes or No	Question 2 Comment
California ISO	Affirmative	The ISO supports the changes made in TOP-002-3 but notes that the "Seasonal Assessment" previously required by TOP-002-2 is no longer addressed in the TOP-002-3 wording. Is this an oversight or is this seasonal assessment going to be contained elsewhere?
Response: The SDT places reliability emphasis upon a daily assessment for the next day (hence the Operational Planning Analysis). The entity could have a library of various OPAs from which to select an appropriate one for assessment, or could develop an OPA each day (or even more often), but is not required to do so.		
City of Tacoma, Department of Public Utilities, Light Division, dba Tacoma Power	Affirmative	The term "anticipated ... Contingency event conditions" in R1 is not a NERC defined term and could be interpreted as requiring analysis of all contingencies including extreme events. The requirement should clarify if it only applies to certain types such as category P1 or whether each TO can independently select which types of contingencies they anticipate. One suggested form or rewording the requirement could be: R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal conditions and TPL-001-2 category P1 Single contingencies.
Response: The Operational Planning Analysis (OPA) is a defined term and includes "expected system conditions" for the next day. The Contingencies which would apply are presented in the TPL standards. The Transmission Operator must address, at a minimum, the Contingencies presented, but may address more than what is required. Further, Facility Ratings and Stability Limits are defined terms and the FAC standards present the level of Contingencies that must be addressed in the Facility Ratings and SOLs methodologies. To specify only the proposed P1 single Contingencies may be too limiting. No change made.		
Tennessee Valley Authority	Affirmative	Further clarification is needed on the phrase - "internal area reliability".
Progress Energy	Yes	A definition of "internal area reliability" is needed

Organization	Yes or No	Question 2 Comment
Response: The SDT has revised the language. **R2.** Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.		
Associated Electric Cooperative, Inc.	Yes	R1 Rationale Change: Rework or remove entirely Rationale: The R1 Rationale section does not match the R1 requirement as currently worded, and frankly is impossible, within the timing constraints of next-day analysis. (Example: PSS/E is technically a tool for steady-state network analysis. Without that tool, or a similar network-analysis tool being available, such analysis would be impossible by hand.) R3 Requirement wording Change: "in the plan(s)" To: "in the N-1 contingency-related plan(s)"Then Append: ", N-2 related contingency-plan(s) should be omitted unless highly plausible." Rationale: This recommended change seeks to avoid information overload on neighbors, while still encouraging more in-depth near-term contingency planning.
Response: R1 rationale box: The SDT has eliminated the rationale box. Requirement R3 deals with operations planning; thus the notification would be to convey information—not an instruction to implement. The hierarchy of authority is known by the Transmission Operator and other registered entities. This is known even if they are members of differing market structures, contract arrangements, or other organizational arrangements; thus the Transmission Operator will know the effective path of communications to use. The plans are limited to those developed in Requirement R2. No change made.		
Independent Electricity System Operator	Yes	We assess that the industry's comment on R3 regarding the need to inform all NERC registered entities identified in the plan(s) was due to the absence of a requirement to identify these entities. We therefore suggest to revise Requirement R2 to drive home the need to identify registered entities that are included in the plan(s) to operate to within IROL and SOL, and set the stage for R3:Each Transmission Operator

Organization	Yes or No	Question 2 Comment
		shall develop a plan, and identify the entities that will be required to implement actions, to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1.
Response: The SDT believes the current wording of Requirement R3 is sufficient. No change made.		
American Electric Power	Yes	R2: Once again, it needs to be clarified whether this requirement is in regards to pre-contingency monitoring or instead based on real-time flow. AEP assumes this is based on Real Time Flow, however we encourage the drafting team to provide clarifying language to make it more clear to the reader.
Response: TOP-002-3 is about Operations Planning, thus it cannot be addressing actual Real-time flow. It addresses those flows contained in the Operational Planning Analysis (OPA) and the assessment thereof. Based upon that assessment and the OPA, the Transmission Operator will develop a plan to operate. No change made.

Response: Thank you for your support.		

3. **The SDT made changes to TOP-003-1 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made? If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.**

Summary Consideration: There were a number of requests for clarification which the SDT have addressed either through changes to the language of the requirements or through specific responses to those comments. There was one substantive change to the standard – the addition of the Distribution Provider to the list of applicable entities in general and to Requirement R5 specifically.

The SDT changed the effective date for all requirements in proposed TOP-001-2, TOP-002-3, and TOP-003-2 to 12 months in response to comments except for proposed TOP-003-2, Requirements R1 and R2 which will be 10 months.

The following changes have been made due to industry comments:

R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. The specification shall include:

R3. Each Transmission Operator shall distribute its data specification as developed in Requirement R1to ~~those~~ entities that have data required by the Transmission Operator's ~~operating analysis assessment processes~~ Operational Planning Analysis and ~~reliability~~ Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements.

R4. Each Balancing Authority shall distribute its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and ~~reliability~~Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements.

R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, ~~and~~ Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

M3. Each Transmission Operator shall make available evidence that it has distributed its data specification as developed in Requirement R1to entities that have data required by the Transmission Operator's ~~operating analysis assessment processes~~ Operational Planning Analysis and ~~reliability~~Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R2. Such evidence could include but is not limited to web postings ~~with acknowledgement~~ with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M4. Each Balancing Authority shall make available evidence that it has distributed its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and ~~reliability~~Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R3. Such evidence could include but is not limited to web postings ~~with acknowledgement~~ with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, ~~and~~ Transmission Owner, and Distribution Provider receiving a data specification in Requirement R~~2~~3 or R~~3~~4 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R~~4~~5. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.

Data Retention 4. Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that have data required by the Balancing Authority's analysis functions and ~~reliability~~Real-time monitoring ~~and operating analysis assessment processes and tools~~process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R4 and Measurement M4.

Organization	Yes or No	Question 3 Comment
Luminant Energy	Abstain	TOP-003-2 as currently written does not provide any recourse for the entity receiving a data request if that entity feels the data request is unreasonable either in content or timing or if the entity does not have the data available to submit. As such I would recommend modify R5 as follows: R5. Each......shall satisfy the obligations of the documented specification for data. R5.1. If the entity receiving the data request cannot provide the requested data either in content or timing then the entity receiving the data request shall notify the requesting entity and provide a reason for not providing the data.
Kansas City Power & Light	No	These requirements do not recognize the limitations of data exchange capability with an entity and the sources of data an entity has. Recommend these requirements be modified to include "within the data exchange capabilities and data available of the recipient of the data specification".
City Water Light and Power (CWLP) - Springfeild - IL	No	R1 and R2 require specifications for data exchange which do not account for the ability of the respondent to meet the specification. As written, the requirement could force a respondent to continue to provide data with such a format, periodicity,

Organization	Yes or No	Question 3 Comment
		or deadline that would be an undue burden to the respondent. All requirements should explicitly stress a mutually agreed plan and R1.1/R2.1 should refer to classes or types of as a qualifier. Likewise, R5 should explicitly state that respondents shall satisfy the obligations within the context of a mutually agreed specification.
Dairyland Power Cooperative	No	R1 and R2 refer to "A periodicity for providing data" and "The deadline by which the respondent is to provide the indicated data". What if this specification is unreasonable? To address this concern, DPC suggests adding the words "mutually agreeable" as was used in reference to the format specification.
Response: Requirement R1 should prevent a Transmission Operator from requesting data that another entity can't provide. There are arbitration processes available to straighten these matters out if all else fails. No change made.		
Muscatine Power & Water, MidAmerican Energy Co.	Negative	There is a great possibility of double jeopardy when R3 and R4 have in part the statement of "...in meeting its NERC-mandatory reliability requirements." So, an Entity could be found non-compliant with R1 or R2 and also not fulfill R3 or R4. Or if an entity was found non compliant with any of the unknown "...in meeting its NERC-mandatory reliability requirements," then they would be found non-compliant with this Standard. It is not clear why this Standard is being written with the statement of "...in meeting its NERC-mandatory reliability requirements."
US Army Corp of Engineers	No	Issue: There is a great possibility of double jeopardy when R3 and R4 have in part the statement of in meeting its NERC-mandatory reliability requirements. So, an Entity could be found non compliant with R1 or R2 and also not fulfill R3 or R4. Or if an entity was found non compliant with any of the unknown in meeting its NERC-mandatory reliability requirements then they would be found non compliant with this Standard. It is not clear why this Standard is being written with the statement of: in meeting its NERC-mandatory reliability requirements. As stated in the NERC Standard Process Manual, under Background, NERC works with all stakeholder segments of the electric industry, including electricity users, to develop standards for the reliability planning and

Organization	Yes or No	Question 3 Comment
		reliable operation of the bulk power systems. Recommend that in meeting its NERC-mandatory reliability requirements, be deleted and replaced with reliable operation as defined as operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance. Or, please review IRO-010-1a, requirement 1 and use like terminology for this Standard.
Lincoln Electric System (LES)	No	Please refer to comments submitted by MRO's NERC Standards Review Forum for LES' concerns related to TOP-003.
MRO-NSRF	No	Issue: There is a great possibility of "double jeopardy" when R3 and R4 have in part the statement of "...in meeting its NERC-mandatory reliability requirements." So, an Entity could be found non compliant with R1 or R2 and also not fulfill R3 or R4. Or if an entity was found non compliant with any of the unknown "...in meeting its NERC-mandatory reliability requirements" then they would be found non compliant with this Standard. It is not clear why this Standard is being written with the statement of: "...in meeting its NERC-mandatory reliability requirements". As stated in the NERC Standard Process Manual, under Background, "NERC works with all stakeholder segments of the electric industry, including electricity users, to develop standards for the reliability planning and reliable operation of the bulk power systems. Recommend that "...in meeting its NERC-mandatory reliability requirements", be deleted and replaced with "reliable operation" as defined as "...operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance...". Or, please review IRO-010-1a, requirement 1 and use like terminology for this Standard.
Response: The SDT views the requirements as two separate and distinct actions. In Requirements R1 and R2, the entity is developing the specification and in Requirements R3 and R4 the entity is distributing the specification. Therefore, there is no double jeopardy.		

Organization	Yes or No	Question 3 Comment
No change made. This standard exactly matches IRO-010-1a in content and intent. No change made.		
Volkmann Consulting, Inc.	Negative	TOP-003-2 R5 does not adequately replace PRC-001 R2. TOP-003-2 R5 does not require notifying the RC and drops the requirement of GOP to analyze equipment and relay failures, TOP-003-2 R5 states GOP obligations as specified in R3 and R4, however R3 and R4 are not applicable to GOP.
Response: There is nothing in PRC-001-1, Requirement R2 about analysis. The SDT believes you are thinking of PRC-004-2a, Requirement R2 which is not part of this project and is not intended to be replaced by the revised standards. No change made.		
Northeast Power Coordinating Council	No	TOP-003 R1 and R2 require data specifications for real-time monitoring. R5 obligates the TO, LSE, and Generator Owners to provide this real-time data. These entities provide a wealth of SCADA data that is utilized in real-time monitoring by TOPs and BAs. It is not clear that a communication error or data quality error for several contiguous time periods or intermittent quality issues would not trigger a violation. This could become an overwhelming compliance issue.TOP-003 R5 has only a severe VSL. Data providers can provide hundreds if not thousands of points to TOPs. If one RTU goes down is the data provider going to be assessed a severe VSL? TOP-003-2 R1.1 states: R1. Each Transmission Operator and Balancing Authority shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. The specification shall include: [Violation Risk Factor: Low] [Time Horizon: Operations Planning] 1.1. A list of required data to be exchanged including, but not limited to: Long term outages of Bulk Electric System (BES) Facilities. Operating parameters for BES Facilities and Facilities at voltage levels lower than the BES NPCC believes language such as but not limited to and levels lower than the BES to be problematic and beyond the scope of what is needed in the standard and also creates potential for compliance issues.
United Illuminating Company	No	TOP-003 R1 and R2 require data specifications for real-time monitoring. R5 obligates TO, LSE, and Generator Owners to provide this real-time data. These entities provide a multitude of SCADA data that is utilized in real-time monitoring by TOPs and BAs. It

Organization	Yes or No	Question 3 Comment
		is not clear to UI that a communication error or data quality error for several contiguous time periods or intermittent quality issues would not trigger a violation. This could become an overwhelming compliance issue.
Response: It is not the intent of the SDT that TOP-003-2 penalizes entities for communication errors. The intent is to have the data communications established. Communication errors are handled in the COM standards. No change made.		
Dominion	No	If this question was meant to refer to TOP-003-2, then Dominion offers the following comments: M5 reads "Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R4. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities." Since R2 was added, Dominion suggest M5 should read as "receiving a data specification in Requirement R3 or R4 shall make available evidence that is has satisfied the obligations of the documented specifications for data in accordance with Requirement R5....".
Response: The SDT agrees and has changed measure M5 accordingly. **M5.** Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, ~~and~~ Transmission Owner, and Distribution Provider receiving a data specification in Requirement R~~2~~3 or R~~3~~4 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R~~4~~5. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.		
SERC OC Standards Review Group	No	There appears to be ambiguity for R1 and R2 - is the VSL applicable to the TOP/BA requesting the data or is it applicable to the TOP/BA providing the data? If it applies to the TOP/BA requesting the data we would suggest that the SDT be consistent with

Organization	Yes or No	Question 3 Comment
		the VSLs in IRO-10-1a.
Response: The SDT does not see the confusion pertaining to Balancing Authority/Transmission Operator that the VSLs in Requirements R1 and R2 apply. The requirement is for the Transmission Operator/Balancing Authority to document a specification, it would have to be the Transmission Operator/Balancing Authority writing the specification and ultimately requesting the data through Requirements R3 and R4. No change made.		
Constellation Energy	No	The Drafting Team may want to consider addressing a time period for responding to a data request to ensure parties are given time to respond. For example, a BAs data request may be driven by the TOP's data request. If a BA receives a data request for information from the TOP that sources from a GOP, the BA will need to establish a data request from the GOP that has the same deadline. If the GOP is unable to supply the data they may be non-compliant if they do not meet the deadline.
Response: Parts 1.4 and 2.4 discusses a deadline for responding to the data request. No change made.		
ACES Power Marketing Member Standards Collaborators	No	We largely agree with the changes but have identified the following specific issues.We believe that purpose statement should clearly state that the standard is limited to the Bulk Electric System (BES). NERC compliance staff has interpreted standards as applying to the Bulk Power System (BPS) if they are not specifically limited to the BES. More specifically in response to comments that CAN-0016 impermissibly extended the standard to the BPS, NERC responded that Section 39 of the EPAct of 2005 requires standards to apply to the BPS unless the standard restricts itself. Because the BPS can be interpreted to be broader than the BES and there is no need for the standard to apply broader than the BES, we would like to see BES inserted back into the purpose statement. Because of the difficulties experienced by some entities in receiving the RC data specification in IRO-010-1a, we recommend that the implementation of TOP-003-2 Requirement R5 occur a couple of months after the implementation in TOP-003-2 Requirements R1-R4. IRO-010-1a is a parallel standard to TOP-003-2 and the effective date of the distribution of the RC data specification was simultaneous to

Organization	Yes or No	Question 3 Comment
		the effective date of the requirement for the recipients to comply with the data specification. This meant that the RC could provide the data specification on the same date that the recipients had to meet the data specification. Unfortunately, there were some entities expecting to receive the data specification that did not and were concerned about a potential non-compliance. What if an auditor determined the RC should have provided the data specification? Would the entity that expected to receive the data specification be held responsible? By staggering the effective date of Requirement R5, this confusion can be avoided.
Southwest Transmission Cooperative, Inc.	Affirmative	We believe that purpose statement should clearly state that the standard is limited to the Bulk Electric System (BES). NERC compliance staff has interpreted standards as applying to the Bulk Power System (BPS) if they are not specifically limited to the BES. More specifically in response to comments that CAN-0016 impermissibly extended the standard to the BPS, NERC responded that Section 39 of the EPAct of 2005 requires standards to apply to the BPS unless the standard restricts itself. Because the BPS can be interpreted to be broader than the BES and there is no need for the standard to apply broader than the BES, we would like to see BES inserted back into the purpose statement. Because of the difficulties experienced by some entities in receiving the RC data specification in IRO-010-1a, we recommend that the implementation of TOP-003-2 Requirement R5 occur a couple of months after the implementation in TOP-003-2 Requirements R1-R4. IRO-010-1a is a parallel standard to TOP-003-2 and the effective date of the distribution of the RC data specification was simultaneous to the effective date of the requirement for the recipients to comply with the data specification. This meant that the RC could provide the data specification on the same date that the recipients had to meet the data specification. Unfortunately, there were some entities expecting to receive the data specification that did not and were concerned about a potential non-compliance. What if an auditor determined the RC should have provided the data specification? Would the entity that expected to receive the data specification be held responsible? By staggering the effective

Organization	Yes or No	Question 3 Comment
		date of Requirement R5, this confusion can be avoided.
Response: The purpose of the standard is to address reliability needs. Any concerns about BES vs. BPS in standards are better directed toward the NERC Standards Committee. No change made. The SDT has changed the effective date for the implementation of this project to 12 months except for proposed TOP-003-2, Requirements R1 and R2 which will be in 10 months.		
LG&E and KU Serivces	No	LG&E and KU Services do not believe that data/evidence retention requirements should be modified by the Compliance Enforcement Authority. This potentially will result in different data retention requirements across regions. A Compliance Enforcement Authority should enforce only what is written within the standard and not have the option of expanding the requirement. 4. The VRF, VSL, and Time Horizons are part of a non-binding poll. If you do not support these assignments or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.
Response: The SDT is using standard boilerplate language in the Data Retention section. It is not within the scope of the SDT to alter such language. Questions about such situations should be taken to the NERC Standards Committee. No change made.		
Georgia System Operations	No	R5 is too unilateral. A TOP could send a spec to an entity for some data that the entity is not able to provide and per this requirement the entity will still be required to provide it. There must be some mutual agreement to more than just the format. There must be agreement to what can be provided and that the data is needed by the TOP's operating analysis assessment processes and reliability monitoring tools used in meeting its NERC-mandated reliability requirements. Also some provision must be allowed to cover when data or the transfer method is unavailable (e.g., when an RTU goes down). A similar situation applies to BAs sending a spec to an entity.
Response: Requirement R1 should prevent a Transmission Operator from requesting data that another entity can't provide. If all else		

Organization	Yes or No	Question 3 Comment
fails, there are arbitration processes to clear up such matters. No change made.		
Western Area Power Administration	No	Data an entity specifies in requirement documents need to have some kind of reasonability limit or explanation as to what the data will be used for. As written a TOP or BA can request anything they want and other entities will be required to provide that data, even if the requested data is not available as requested. An entity can also request data not pertinent to the reliability of their system and other entities will still be required to provide it. An entity required to provide the data should have an opportunity to challenge the need for data requested. At least one BA in WECC is running a market and data provided will be used in their market, not for reliability.
Response: Requirement R1 clearly states that the data requested must be for use in an entities Real-time monitoring function or for its Operational Planning Analysis. This restricts the data to reliability oriented data. No change made.		
We Energies	No	R1.4 and R2.4: The deadline must allow time to gather and send the data. If the TOP said immediately, you would be immediately non-compliant. In addition, R2 should include data necessary to perform at least Next Day analysis, even Operational planning Analysis. R5 needs to include the DP. Data Retention: Each bullet states that monitoring is required in accordance with Measures. Measures cannot be requirements.
Response: The SDT has crafted this standard with the belief that two reasonable parties will be dealing with each other in the overall best interest of reliability. There are arbitration processes available if all else fails. No change made. Balancing Authorities do not perform Operational Planning Analyses as this is a transmission-oriented task. However, the SDT has inserted a phrase to cover analyses. **R2**. Each Balancing Authority shall create a documented specification for the data necessary for it to perform analysis functions and its required Real-time monitoring. The specification shall include:		

Organization	Yes or No	Question 3 Comment
The SDT agrees. **R5**. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, ~~and~~ Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. The inclusion of requirements and measures in data retention is standard language and simply ties the data retention language to the requirements and measures together. It does not imply that the measures are requirements. No change made.		
American Transmission Company, LLC	No	In the introduction to this question, the Standard number should be corrected to TOP-003-2. Requirement 1- A data specification must have bounds. There is nothing that would preclude a request for data that is not achievable yet is mandated to be satisfied by Requirement 5. Requirement 1, sub-Requirement 1.2 may never be arrived at given the former.
Response: The SDT has crafted this standard with the belief that two reasonable parties will be dealing with each other in the overall best interest of reliability. There are arbitration processes available to straighten these matters out if all else fails. No change made.		
Omaha Publc Power District	No	OPPD is requesting clarification on operational data requirements (R1 and R3) related to "documented specification for the data necessary for it to perform..." What the document should include that is specifying operational data request from or to other Transmission Operators. Additionally, how often operational data specification document should be provided/updated to or from other Transmission Operators.
Response: The SDT believes it is clear as to what is required – the data needed to perform the entities Real-time monitoring and Operational Planning Analyses. No change made. Requirement R1, Part 1.3 covers the periodicity issue. No change made.		
Manitoba Hydro	No	M1 – This measure goes beyond the requirements of the standard, as there is no

Organization	Yes or No	Question 3 Comment
		requirement for a specification document to be dated. Manitoba Hydro suggests either striking 'dated' from M1 or adding the requirement to have a 'dated documented specification' to R1. M2 – Same comment as M1. Manitoba Hydro suggests either striking 'dated' from M2 or adding the requirement to have a 'dated documented specification' to R2. A R3 - For consistency with R1 and overall clarity, Manitoba Hydro suggests changing the wording of R3 to 'Each Transmission Operator shall distribute its documented specification developed in accordance with R1 to those entities that have data required by the Transmission Operator to support its Operational Planning Analysis and Real-time monitoring '. The VSL for R3 should be changed accordingly as well. R4 - For consistency with R2 and overall clarity, Manitoba Hydro suggests changing the wording of R4 to 'Each Balancing Authority shall distribute its documented specification developed in accordance with R2 to those entities that have data required by the Balancing Authority to perform its Real-time monitoring'. The VSL for R4 should be changed accordingly as well.
Response: M1/M2: The requirements refer to deadlines which imply a timing element so it is permissible to add 'dated' to the measures as adherence to a deadline doesn't make much sense otherwise. No change made. R3/4: The SDT does not feel the suggested change adds further clarification. No change made.		
E.ON Climate & Renewables	No	ECRNA appreciates the efforts of the drafting team in eliminating duplicative requirements and efforts, as this is an important part of developing clear and concise standards. However, we are concerned about the end result of an unbounded data specification. Although requirements R1 through R4 are directed toward the Balancing Authority and Transmission Operator, these requirements have a direct impact on the other applicable entities. The lack of guidance to and expectations of the data and format could and most likely will lead to a wide range of data specifications from the multitude of Balancing Authorities and Transmission

Organization	Yes or No	Question 3 Comment
		Operators in North America. Entities that own or operate facilities in multiple regions and work with many BAs and TOPs may have difficulty responding to each individual specification's needs, including timeframe, and format. Also considering the unknowns in the data specifications, the high severity factor on R5 seems unreasonable. In addition, the sub-requirements to R1 and R2 could be written more clearly to identify who the TOPs and BAs are expected to mutually agree with and request information from. One can assume the applicable entities listed in the standard, but explicitly stating this within the standard is a better method and ensures entities are provided an opportunity to provide input in the data specification format.
Response: The data specification concept provides entities with flexibility in crafting the specifications to the exact data that it needs to perform its tasks. Data specifications may be different for the same type of entity within a Transmission Operator Area let alone in different regions of the country. Guidance is provided within the requirement on format, etc. No change made. The severity factor on Requirement R5 is based on its level of importance and its relationship to a similar requirement in IRO-010-1a which has been approved by FERC. No change made. The SDT sees no reliability value in duplicating a list within the bounds of the requirement itself. No change made.		
Texas Reliability Entity	No	Regarding R1, we are concerned that the proposed requirement gives each TOP too much latitude to determine what data it considers necessary. This may cause confusion due to significant differences in data specified by different TOPs and the ability of TOPs to unilaterally change their data specifications. We would prefer that the standard include a basic list of data to be included in the specification. The reference to "mutually agreeable format" in R1 part 1.2 is problematic because it allows the respondents to interfere in the TOP's data collection process. The TOP should be allowed to dictate a reasonable format for data submission. In R2, we are opposed the removal of "Operational Planning Analyses" (OPA) for a Balancing Authority in this requirement, because the BA is "the responsible entity that

Organization	Yes or No	Question 3 Comment
		integrates resource plans ahead of time, maintains load-interchange-generation balance within a Balancing Authority Area, and supports Interconnection frequency in real-time." A BA should create a documented specification for the data necessary for it to perform an OPA just as a TOP does. The reference to "mutually agreeable format" in R2 part 2.2 is problematic because it allows the respondents to interfere in the BA's data collection process. The BA should be allowed to dictate a reasonable format for data submission. In R3 we suggest changing "operating analysis" to "Operational Planning Analysis," which is a more precise term for what appears to be intended. The same change should be made in Measure M3. In R4 we suggest adding "Operational Planning Analysis," to be consistent with our comment that R2 should require "Operational Planning Analysis" data in the BA's data specification. In the Measures, please check and correct the references to Requirement numbers - some references are to the wrong requirements. Under Data Retention, in the 4th bullet starting with "Each Balancing Authority...", the phrase "and operating analysis assessment processes and" should be struck because it does not align with requirement R4 as currently written. However, we support adding "Operating Planning Analysis" in R4, and this data retention reference should be consistent with the requirement.
Response: The requirement is designed to give the Transmission Operator the flexibility it needs to get the data it requires. It is bound by the provision for data needed to support its Real-time monitoring and Operational Planning Analyses. It is absolutely true that different Transmission Operators may be specifying different data due to their differing operational requirements. Supplying a basic list of data does not provide this flexibility and does not ensure that all data needed would be in the list. No change made. It is unreasonable to allow a Transmission Operator or any other entity to arbitrarily introduce a format that other entities can't support. There has to be some degree of mutual agreement to decisions of this type in order to be fair to all parties involved. The SDT has crafted this standard with the belief that two reasonable parties will be dealing with each other in the overall best interest of		

Organization	Yes or No	Question 3 Comment
reliability. There are arbitration processes available to straighten these matters out if all else fails. No change made. A Balancing Authority can't perform an Operational Planning Analysis by definition since this defined term only applies to transmission-oriented analysis. However, the SDT has added wording to cover analyses. **R2**. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. The specification shall include: R3 – The SDT agrees and has made the language consistent. R3. Each Transmission Operator shall distribute its data specification as developed in Requirement R1to ~~those~~ entities that have data required by the Transmission Operator's ~~operating analysis assessment processes~~ Operational Planning Analysis and ~~reliability~~ Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements. The SDT has changed Requirement R4 to be consistent with the revised Requirement R2. **R4**. Each Balancing Authority shall distribute its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and ~~reliability~~Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements. The references in the Measures have been corrected. The SDT agrees and has made the suggested change consistent with the responses concerning requirement R2 above. **Data Retention 4**. Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that have data required by the Balancing Authority's analysis functions and ~~reliability~~Real-time monitoring ~~and operating analysis assessment processes and tools~~process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R4 and Measurement M4.		
Indiana Municipal Power Agency	No	IMPA believes that the entities (Transmission Operator and Balancing Authority) should be required to create a documented specification that lists exactly what the entities (in R5) need to provide to them to meet the requirement and not be allowed to say that "it is in our manuals and/or agreements." When the Transmission Operator and/or Balancing Authority only references their manuals, it is up to the entity (in R5) to read the manuals that are referenced and then try to come up with a documented specification listing on their own which may or may not include

Organization	Yes or No	Question 3 Comment
		everything that is required by the TO or BA which makes the current draft standard's language very ambiguous. IMPA is not objecting to these entities using manuals as long as a specific documented specification is created and distributed that does more than just list the name of manuals. The documented specifications need to be detailed in what is required from entities to aid in preventing possible non-compliance issues due to an entity missing an item in a manual or including unnecessary items due to being left to their own interpretations.
Illinois Municipal Electric Agency	No	Illinois Municipal Electric Agency supports comments submitted by Indiana Municipal Power Agency concerning the need for clearer communication of data specifications in R3 and R4 in order to facilitate compliance with R5.
Response: The intent of Requirements R1 and R2 is for the entity's to do exactly what is cited in your comment. The entity must spell out each piece of data it requires and specify it to the affected entity who will be supplying the data. No change made.		
US Bureau of Reclamation	No	The language change in R1 has not been incorporated into the sub requirements. The requirement R1 was modified to eliminate the second party. A mutual agreement is required in R 1.2 but only party is listed in R1. The language should specify that the TOP is to coordinate its data requests with the appropriate entities and seek mutal agreement on the format.
Response: The SDT believes it is clear who must agree to the format and sees no additional clarity being provided by listing the entities in the text of the requirement. No change made.		
Xcel Energy	No	Applicability - why are Distribution Providers not subject to this standard? Is it possible that a TOP or BA may need information form a DP to perform an "OPA"? "Mutually agreeable" in 1.2 should be removed. The TOP and BA should work with the subject entities, however stating that something must be mutually agreed upon could create delivery and acceptance of data in a less than desired form solely to meet the words of the requirement.

Organization	Yes or No	Question 3 Comment
Response: The SDT agrees and has added the Distribution Provider to the applicable entities and to Requirement R5. **R5**. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, ~~and~~ Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. The SDT has crafted this standard with the belief that two reasonable parties will be dealing with each other in the overall best interest of reliability. There are arbitration processes available to straighten these matters out if all else fails. No change made.		
ReliabilityFirst	No	ReliabilityFirst has the following comments for consideration:1. R1 and R2 - ReliabilityFirst recommends changing the phrase “shall create...” to “shall have...” in R1 and R2. 2. R1 and R2 - ReliabilityFirst recommends changing Part 1.2 and Part 2.2 to state “A format”. ReliabilityFirst believes it may be difficult to audit and enforce the phrase “mutually agreeable”. 3. R3 - ReliabilityFirst seeks clarification on the term “operating analysis assessment” used in R3. Is this language referring to the Transmission Operators Operational Planning Analyses as required in R1? If not, can the SDT clarify what the phase “operating analysis assessment” is referring to? 4. R3 and R4 - ReliabilityFirst seeks clarity on what the phrase “NERC-mandated reliability requirements” is referring to? Is it referring to FERC approved NERC standard requirements or does it encompass NERC Directives, CANs, NERC bulletins, etc. as well? 5. R3 and R4 - R3 references “those entities” and R4 just references “entities”. ReliabilityFirst recommends modifying either R3 or R4 to use consistent language. 6. Data retention - ReliabilityFirst believes the first paragraph of the Data Retention section is in conflict with the additional paragraphs of the Data Retention section. For example the last sentence states “the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full

Organization	Yes or No	Question 3 Comment
		time period since the last audit" as a catch all. Regardless of the other shorter data retention periods located in the subsequent paragraphs, the entity still needs to retain the evidence for the full time period since the last audit. ReliabilityFirst recommends only keeping the first paragraph and deleting the subsequent paragraphs in the Data Retention section.
Response: The SDT does not believe that the suggested change provides any additional clarity. No change made. The SDT has crafted this standard with the belief that two reasonable parties will be dealing with each other in the overall best interest of reliability. The suggested change does not clarify the situation further than what is already written. There are arbitration processes available to straighten these matters out if all else fails. No change made. The SDT has changed requirement R3 for clarity. R3. Each Transmission Operator shall distribute its data specification as developed in Requirement R1to ~~those~~ entities that have data required by the Transmission Operator's ~~operating analysis assessment processes~~ Operational Planning Analysis and ~~reliability~~ Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements. The phrase is in reference to approved Reliability Standards. The SDT agrees and has changed Requirement R3 accordingly. The SDT is utilizing NERC supplied boilerplate language in the Data Retention section. It is out of the scope of this project to make changes to that language. No change made.		
Nebraska Public Power District	No	Comments: Requirements R1 & R2 do not put any meaningful bounds on the data that a TOP or BA may request in the name of monitoring real-time operations. There is no check or balance on spcifying timeframes when the data is required either. Attachment 1 TOP-005-1 contained the type of data that may be required and as such provided a fremework for what type of data was required for real-time monitoring of the Bulk Electric System. As written, it would be possible for a BA or TOP to request data that a registered entity does not have available and require it in an unrealistic timeframe. This puts those entities in a position where they cannot comply with the standard, even though the data requested may not be important in

Organization	Yes or No	Question 3 Comment
		the monitoring of the Bulk Electric System. There need to be reasonable limits on the information requested and how quickly new information may be required from other registered entities.
Response: Requirements R1 and R2 are bound by the language restricting the specifications to Real-time monitoring or Operational Planning Analysis. This restricts the data requested to be only for reliability-related purposes. No change made.		
Ameren	No	R1. Each TOP shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. The specification shall include: 1.2. What is meant by mutually agreeable is not clear it implies more than one party, yet this Requirement only applies to one party the TOP. This is illogical and needs to be clarified or removed. 1.4. Strike the deadline and consider using time frame or duration by which the respondent is to provide the indicated data. R2. Each BA shall create a documented specification for the data necessary for it to perform its required Real-time monitoring. The specification shall include: 2.2. What is meant by mutually agreeable is not clear it implies more than one party, yet this Requirement only applies to one party the BA. This is illogical and needs to be clarified or removed. 2.4. Strike the deadline and consider using time frame or duration by which the respondent is to provide the indicated data. R3. After the first instance of specification; state from which requirement; if you were intending R1, then for clarity insert “from R1” There is potentially another compliance issue present; what is meant by NERC-mandated reliability requirements is not clear nor does not match the wording in R1. If the meaning/intent is that NERC-mandated reliability requirements is in fact Operational Planning Analysis and Real-time monitoring, then use those words. If the SDT has other things that the data specification is to be distributed for, then they

Organization	Yes or No	Question 3 Comment
		should be spelled out explicitly here and likely in R1 as well. R4. After the first instance of specification; state from which requirement; if you were intending R1, then for clarity insert "from R1" There is potentially another compliance issue present; what is meant by NERC-mandated reliability requirements is not clear nor does not match the wording in R1. If the meaning/intent is that NERC-mandated reliability requirements is in fact Operational Planning Analysis and Real-time monitoring, then use those words. If the SDT has other things that the data specification is to be distributed for, then they should be spelled out explicitly here and likely in R1 as well. R5. We recommend re-writing: "Each TOP, BA, GO, GOP, IA, LSE, and TO receiving a data specification in Requirement R3 or R4 shall provide the data associated with said data specification. "

Response: R1.2/R2.2**:** The SDT believes that the context is clear and that duplicating a list of entities in the language of the requirement does not provide any additional clarity. No change made.

R1.4/R2.4:The SDT believes that there is no additional clarity provided in the suggested language. No change made.

R3/R4: The SDT does not see any additional clarity provided by the suggestion. No change made.

R3/R4: The term refers to the approved reliability standards. No change made. The SDT has changed the requirements for consistency of wording.

> **R3**. Each Transmission Operator shall distribute its data specification as developed in Requirement R1to ~~those~~ entities that have data required by the Transmission Operator's ~~operating analysis assessment processes~~ Operational Planning Analysis and ~~reliability~~ Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements.
>
> **R4**. Each Balancing Authority shall distribute its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and ~~reliability~~Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements.

R5: The SDT sees no additional clarity being provided by the suggested change. No change made.

Organization	Yes or No	Question 3 Comment
GTC	No	M4 is misreferencing R2 and R4 and should be corrected as follows: ....”receiving a data specification in Requirement R3 or R4 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R5.”
Response: The SDT believes that you meant Measure M5. The references have been corrected. **M5**. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, ~~and~~ Transmission Owner, and Distribution Provider receiving a data specification in Requirement R~~2~~3 or R~~3~~4 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R~~4~~5. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.		
Intellibind	No	There is no assurance that in R1 and R2 that the format designated by the BA or TOP is Mutually Agreed by the parties. It will be essentially impossible for auditors to destinguish what is directed vs. what has been negotiated.
Response: There is no need to distinguish between the two cases. The only one that is pertinent is what the two parties have agreed upon. No change made.		
Progress Energy	Yes	Please include "operational Planning Analyses" in R2 as you have in R1.
California ISO	Affirmative	The words “and Operational Planning Analyses” should be added to the end of the first sentence in R2 (the Operational Planning Analysis is included in R1). A similar addition should be made to R4.
Response: By definition, the Balancing Authority can’t perform an Operational Planning Analysis as it is a transmission-oriented task. However, the SDT has added wording to cover analyses. **R2**. Each Balancing Authority shall create a documented specification for the data necessary for it to perform analysis functions and its required Real-time monitoring. The specification shall include:		

Organization	Yes or No	Question 3 Comment
City of Tacoma, Department of Public Utilities, Light Division, dba Tacoma Power	Affirmative	If a Transmission Operator or a Balancing Authority is requesting data from another entity, they must demonstrate a reliability impact validating the need for the requested data.
Response: Demonstrating the need would be an onerous task with no reliability benefit. The Transmission Operator and Balancing Authority are constrained as to what they can request by the language in the requirements. They can only ask for what is needed to support their assigned tasks. No change made.		
City of Tallahassee	Affirmative	While it specifies that the examples are only possibilities for evidence, the inclusion of “with acknowledgement” to “web postings” in M2 & M3 for TOP-003-2 will become onerous. It requires another entity to respond in order to have evidence we were compliant.
Response: The SDT believes you meant Measures M3 and M4 but agrees and has changed the measures accordingly. **M3**. Each Transmission Operator shall make available evidence that it has distributed its data specification as developed in Requirement R1to entities that have data required by the Transmission Operator’s ~~operating analysis assessment processes~~ Operational Planning Analysis and ~~reliability~~Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R2. Such evidence could include but is not limited to web postings ~~with acknowledgement~~ with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records. **M4**. Each Balancing Authority shall make available evidence that it has distributed its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority’s analysis functions and ~~reliability~~Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R3. Such evidence could include but is not limited to web postings ~~with acknowledgement~~ with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.		
NIPSCO	Yes	In R3 & R4 the phrase "in meeting its NERC-mandated reliability requirements" is too open-ended and may be difficult to comply with. This should be more specific; what requirements are these.

Organization	Yes or No	Question 3 Comment
Response: The phrase encompasses the approved reliability standards. No change made.		
Associated Electric Cooperative, Inc.	Yes	TOP-003-1 R1, R2, and R3 Guidelines Add: Guidelines Section - These requirements are all written as highly TOP-centric and BA-centric, without regard to the confusion and work-load a single published plan could cause small entities. If hundreds or perhaps thousands of data-points are cited within a uniformly circulated plan, yet some entities provide only one or two obscure points within that plan, then the TOP or BA is being unnecessarily inconsiderate, and should have appropriately filtered that request for their audience. Rationale: Very large TOPs or BAs would benefit from being reminded that they need to consider their audience when sending out plans as data-requests to small entities. There is no need to overwhelm smaller entities with a lot of unrelated data, or data that does not seem to match their own identifiers. We can do better.
Response: The SDT understands the smaller entities perspective. Each entity will be provided a data specification that is unique to them with only the data that they can provide included. No change made.		
Independent Electricity System Operator	Yes	We agree with the addition of R2, but have a concern over Measure M2, which says:M2: Each Balancing Authority shall make available its dated, current, in force documented specification for data in accordance with Requirement R2.The wording “dated, current, in force” does not reflect what’s in the requirement R2, and is not necessary. This wording pertains to the data retention requirement, which is already included in the second bullet in Section D, 1.3 - Data Retention:”Each Balancing Authority shall retain their dated, current, in force, documented specification for the data necessary for them to perform their required Real-time monitoring in accordance with Requirement R2 and Measurement M2 as well as any documents in force since the last compliance audit.”We suggest to remove this wording from M2.
Response: The requirement refers to deadlines which imply a timing element so it is permissible to add ‘dated’ to the measures as adherence to a deadline doesn’t make much sense otherwise. No change made.		

Organization	Yes or No	Question 3 Comment
Ingleside Cogeneration LP - Occidental Chemical Corporation	Yes	Although we would prefer to see a consolidated RC-BA-TOP data specification, Ingleside Cogeneration LP agrees that TOP-003-1 is a good first step in that direction. Any help the SDT can provide to reduce overlap in data requests and to drive to a common format is appreciated.
Response: The requirement is designed to give the Transmission Operator/Balancing Authority the flexibility it needs to get the data it requires. It is bound by the provision for data needed to support its Real-time monitoring and Operational Planning Analyses. It is absolutely true that different Transmission Operators/Balancing Authorities may be specifying different data in different formats due to their differing operational requirements.		
Duke Energy	Yes	o R1.1 - Consistent with our Question #1 comment above on using the actual wording of the BOT-approved definition of “Adverse Reliability Impact” since it has not yet been approved by FERC, “Operational Planning Analysis” has likewise not yet been approved by FERC as of the latest version of the Glossary posted on the NERC website, December 13th, 2011. Suggest using the wording of the defined term. If the SDT decides to instead keep the defined term, “Analyses” should be “Analysis”. o R3 - Current wording is awkward. Suggest rewording as follows: “Each Transmission Operator shall distribute its data specification to entities that have data required for operating analysis assessment processes and reliability monitoring tools used by the Transmission Operator in meeting its NERC-mandated reliability requirements.” o R4 - Current wording is awkward. Suggest rewording as follows: “Each Balancing Authority shall distribute its data specification to entities that have data required for reliability monitoring tools used by the Balancing Authority in meeting its NERC-mandated reliability requirements.” o Measures and Data Retention - change to align with suggested R3 and R4 rewording above.
Response: Adverse Reliability Impact and Operational Planning Analysis are FERC approved terms. Adverse Reliability Impact was		

Organization	Yes or No	Question 3 Comment
approved on March 16, 2007 and Operational Planning Analysis was approved on March 17, 2011. The Transmission Operator could be running more than one Operational Planning Analysis thus the use of the plural term. No change made. The SDT does not see any additional clarity from the suggested change. However, the SDT has changed Requirements R3 and R4 due to other comments. Measures and Data Retention have been updated accordingly. **R3**. Each Transmission Operator shall distribute its data specification as developed in Requirement R1to ~~those~~ entities that have data required by the Transmission Operator's ~~operating analysis assessment processes~~ Operational Planning Analysis and ~~reliability~~ Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements. **R4**. Each Balancing Authority shall distribute its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and ~~reliability~~Real-time monitoring ~~tools~~process used in meeting its NERC-mandated reliability requirements.		
American Electric Power	Yes	R5: It should be noted that some of the information that could potentially be requested may already be available, for example on reliability coordinator systems. AEP suggests that the requirement be modified so that it does not unintentionally create an edict to provide "any data" to parties simply because R5 could be interpreted as allowing requests of any kind. The possibility of a dispute resolution process managed by the reliability coordinator(s) might also address these possible scenarios. Such a process should address, at a minimum, specifics such as timing, format and general logistics concerning the requested data. AEP does not currently have any text to suggest in this regard, but asks the SDT to consider such a change.
Response: Requirement R5 is bound by the constraints of Requirements R1 and R2 so that not just any information can be requested. There are arbitration processes available to resolve disputes. No change made.		
Bonneville Power Administration	Yes	BPA is in support of standard TOP-003-1, due to the importance of being able to receive data.

Response: Thank you for your support.		

4. The VRF, VSL, and Time Horizons are part of a non-binding poll. If you do not support these assignments or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

Summary Consideration: Several comments state that the VSLs for TOP-003-2, Requirement R5 were more stringent or severe than the VSLs for the TOP-003-2, Requirements R1-R4. The SDT views Requirements R1-R4 as enabling requirements for making clear what data is required for the responsible entities in Requirement R5 and believe the VSLs align with the stated purpose of the standard to ensure the Transmission Operator and Balancing Authority have the necessary data "to fulfill their operational planning and Real-Time monitoring responsibilities". Several other comments shared the view that the VRFs and VSL for Requirements R1-R4 were not consistent with Requirement R5. The SDT views Requirements R1 – R4 as enabling requirements leading to Requirement R5. The purpose of TOP-003-2 is to make sure the Transmission Operator and Balancing Authority have the data necessary for fulfilling their functional obligations. Thus, the real crux of the standard is to supply data. No changes were made due to these comments.

Changes made due to comments are:

TOP-001-2, Data Retention: Changed retention requirement for voice recordings to 90 calendar days from three calendar months.

TOP-001-2, Requirement R1 VSL: The Severe VSL was reworded for clarity.

TOP-001-2, Requirement R3 Moderate VSL modified by inserting "affected" for consistency with the requirement and other VSLs.

TOP-001-2, Requirement R5 VSLs: A note prior to the VSLs was removed. The note was a vestige from a previous posting explaining how to use the VSLs when both percentages and integers are used in the VSL. Percentages were removed during that past posting and the note should have been removed as well.

TOP-001-2, Requirement R10 VSLs: Changed "has been" to "had been".

TOP-002-3, Requirement R3 Lower and Severe VSLs were modified based on comments and to make them consistent with Moderate and High VSLs. More specifically, the "whichever is less" language was added to the Lower VSL.

TOP-003-2, Requirements R1 and R2 VSLs: Replaced elements with ~~Parts~~ parts to clarify that it is the ~~Parts~~ parts of the requirements that are missed.

TOP-003-2, Requirements R1 and R2, Severe VSL: Changed “four or more” to “four” since there are only four parts.

TOP-003-2, Requirements R3 and R4 VSLs: Added “boiler plate” explanation for how to select if the integer or percentage value is used in selecting the VSL.

No changes were made for the following comments:

TOP-001-2, Requirements R3, R5, and R6 VSLs: A few comments suggested adding percentages to the integer VSLs. The SDT did not believe that probable sample sizes warranted use of percentages.

TOP-001-2, Requirement R5 VSL – Several comments indicated the VSL should be binary and Severe. The SDT disagrees that the VSL ought to be binary. Failure to notify one Transmission Operator of an Adverse Reliability Impact is not as Severe as failing to notify the Reliability Coordinator. Failure to notify the Reliability Coordinator is a Severe VSL. If the Reliability Coordinator knows, then the Reliability Coordinator will ensure the Adverse Reliability Impact is addressed.

TOP-003-2, Requirement R5 VSLs: Several comments indicated concern that the requirement could not be partially satisfied. The SDT intended for the requirement to represent the give and take that will occur from the Transmission Operator or Balancing Authority to the Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and other Balancing Authorities and Transmission Operators until the data specification is satisfied and violation will likely only occur for non-responsiveness or refusal to provide data. The VSL is intended to represent the satisfaction of the data specification in aggregate. It is not intended to represent failure of small sets of data due to RTU outages, transducer issues, etc.

Changes made are reflected below:

TOP-001-2, R1	N/A	N/A	N/A	The responsible entity did not comply with an identified Reliability Directive issued by the Transmission Operator, ~~unless~~and such action would have violated safety,

				equipment, regulatory, or statutory requirements.

TOP-001-2, R3	The Transmission Operator did not inform one other Transmission Operator that is known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform two other Transmission Operators that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform three other Transmission Operators that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or an anticipated Emergency condition based on its assessment of its Operational Planning Analysis. OR The Transmission Operator did not inform four or more other Transmission Operators that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis

TOP-001-2, R10	N/A	N/A	N/A	The Transmission Operator did not inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, ha~~s~~d been exceeded.

TOP-002-3, R3	The Transmission Operator did not notify one NERC registered entity or 5% or less of the NERC registered entities whichever is less identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify two NERC registered entities or more than 5% and less than or equal to 10% of the NERC registered entities whichever is less, identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify three NERC registered entities or more than 10% and less than or equal to 15% of the NERC registered entities whichever is less, identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify four or more NERC registered entities or more than15% of the NERC registered entities identified in the plan(s) as to their role in the plan(s).

TOP-003-2, R1	The Transmission Operator did not include one of the required ~~elements~~ parts (Part 1.1 through Part 1.4) of the documented	The Transmission Operator did not include two of the required ~~elements~~ parts (Part 1.1 through Part 1.4)-of the documented	The Transmission Operator did not include three of the required ~~elements~~ parts (Part 1.1 through Part 1.4) of the documented	The Transmission Operator did not include four ~~or more~~ of the required ~~elements~~ parts (Part 1.1 through Part 1.4)

	specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring.	specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring.	specification for the data necessary for them to perform their required Operational Planning Analyses and Real-time monitoring.	of the documented specification for the data necessary for them to perform their required Operational Planning Analyses and Real-time monitoring. OR, The Transmission Operator did not include a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring.

TOP-003-2, R2	The Balancing Authority did not include one of the required ~~elements~~ parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its required analysis functions and Real-time monitoring.	The Balancing Authority did not include two of the required ~~elements~~ parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its required analysis functions and Real-time monitoring.	The Balancing Authority did not include three of the required ~~elements~~ parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their required analysis functions and Real-time monitoring.	The Balancing Authority did not include four ~~or more~~ of the required ~~elements~~ parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their required analysis functions and Real-time monitoring.

				OR, The Balancing Authority did not include a documented specification for the data necessary for it to perform its required analysis functions and Real-time monitoring.

Organization	Yes or No	Question 4 Comment
Luminant Energy	Abstain	The comments below are in reference to the VSL for TOP-003-2 R5: The VSL for TOP-003-2 R5 places a more stringent severity level on the entities receiving the data requests than it places on the entities that are responsible for creating the data requests. As such, I would suggest changing the VSL for TOP-003-2 R5 to the following: Lower: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy one of the obligations of the documented specification for data. Moderate: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy two of the obligations of the documented specification for data. High: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy three of the obligations of the documented specification for data. Severe: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy four or more of the obligations of the documented specifications for data.
Response: The SDT intended for the requirement to represent the give and take that will occur from the Transmission Operator or Balancing Authority to the Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and other Balancing Authorities and Transmission Operators until the data specification is satisfied and violation should only occur		

Organization	Yes or No	Question 4 Comment
for non-responsiveness or refusal to provide data. The VSL is intended to represent the satisfaction of the data specification in aggregate. It is not intended to represent failure of small sets of data due to RTU outages, transducer issues, etc. Thus, the SDT believes a single Severe VSL is appropriate. No change made.		
Lincoln Electric System (LES)	No	The word "affected" should be added to the Moderate VSL for TOP-001-2 R3 following "...known or expected to be affected by an actual...".
Response: The SDT agrees and has modified the Moderate VSL. See the redlined VSL in the Summary Consideration for this question to view the changes.		
Duke Energy	No	o TOP-001-2, R8 - Consistent with R3, the Time horizon for R8 should only be Operations Planning. o TOP-001-2 VSLs for R8 and R9 should be changed consistent with our suggested revisions to the requirements. Also see comment below regarding use of percentage ranges. o TOP-002-3 VSLs for R3 - the addition of the percentage range on the Lower VSL makes no sense. The "whichever is less" phrase on the other VSLs could push a violation into a higher VSL because of the percentage range. For example, if the TOP had 10 entities to notify and failed to notify one, then it would be a Moderate violation (10%) instead of Lower. If the TOP had 100 entities to notify and failed to notify four (less than 5%), then it would still be a Severe violation. o TOP-003-2 VSLs for R1 - "Analyses" should be "Analysis", since "Operational Planning Analysis" is a defined term. o TOP-003-2 VSLs for R2 - Severe VSL should just say "four" instead of "four or more" because there are only four required elements. o TOP-003-2 VSLs for R3 and R4 - the addition of the percentage range on the Lower VSL makes no sense. See comment on TOP-002-3 VSLs for R3 above.
Response: TOP-001-2, R8 – The SDT agrees and has modified the Time Horizon for R8 to only cover Operations Planning.		

Organization	Yes or No	Question 4 Comment
TOP-001-2, R8 and R9 – Please see our response to your comments in Q1. TOP-002-3, R3 – The utilization of the "whichever is less" language has been vetted by NERC and is used in other standards. There is an explanatory statement prior to the VSLs for Requirement R3 that details how the VSLs are determined in the examples provided. The SDT did add "whichever is less" in the Lower VSL and "than" in the Severe VSL. See the redlined VSL in the Summary Consideration for this question to view the changes. TOP-003-2, R1 – The SDT disagrees. "Analyses" is the plural form of "analysis" and its use is consistent with the requirement. The SDT intended for the data specification to apply to all the analyses that the Transmission Operator must perform and not a single analysis. Otherwise, one could interpret the requirement to require a separate data specification for every analysis performed by the Transmission Operator. Definitions in the NERC Glossary are regularly used in singular or plural form in other standards. No change made. TOP-003-2 R2 – The SDT agrees and has modified the Severe VSL for R2 and R1 as well. See the redlined VSL in the Summary Consideration for this question to view the changes. TOP-003-2 VSLs R3 and R4: The utilization of the "whichever is less" language has been vetted by NERC and is used in other standards. The SDT has added an explanatory statement prior to the VSLs for R3 and R4 that explains how the VSL is determined in the examples provided.		
Texas Reliability Entity	No	Regarding the VSL for TOP-001-2 R5, we suggest that it be based on a percent of applicable TOPs rather than number of TOPs, which would accommodate various sized entities. Regarding the VSLs for TOP-001-2 R9 and R11, we recommending adding a time duration reference relating to SOL violations, even if it is not a definite number of minutes. Referring to the VSLs for TOP-003-2 R1, there are only four elements listed, so the reference to "four or more" is nonsensical. Also, there is no difference between omitting four elements and not providing a documented specification at all. Finally, the four listed elements do not appear to have equal importance - perhaps the VSL levels should be assigned based on which elements are missing.
Response: TOP-001-2 R5 – Because VSLs using percentages must use the 5, 10, 15%, etc., scale, the SDT believes using percentages will actually escalate the VSLs for all entities more rapidly and result in a situation where the some levels are never used. In the vast		

Organization	Yes or No	Question 4 Comment
majority of situations, a Transmission Operator will have to notify, at most, its immediate neighboring Transmission Operator-s. A Transmission Operator would have to have more than 26 neighboring Transmission Operator-s before each VSL could be used. The SDT does not believe there will be any Transmission Operator with that many neighboring Transmission Operator-s. No change made. TOP-001-2 R9 & R11 – The timing requirement is implicitly contained within Facility Rating or Stability criteria. No change made. TOP-003-2 R1 – The SDT has changed "four or more" to "four". The SDT understands that failing to meet all four parts may be viewed by some as not providing any data specification. Others may not share that view and may believe that some document could be provided that does not meet any of the requirement parts. Either way the violation will be assessed at a Severe VSL. Additionally, the SDT does not believe missing any one of the four parts will contribute to a greater violation of the requirement than the other parts. See the redlined VSL in the Summary Consideration for this question to view the changes.		
E.ON Climate & Renewables	No	Considering the unknowns in the data specifications, the high severity factor on R5 seems unreasonable.
Kansas City Power & Light	No	The VSL for TOP-003-2, R5 does not recognize partially satisfying a request for data. Recommend the SDT consider a graduated set of severity levels similar to the other requirements in TOP-003-2.
Kansas City Power & Light	Negative	The VSL for TOP-003-2, R5 does not recognize partially satisfying a request for data. Recommend the SDT consider a graduated set of severity levels similar to the other requirements in TOP-003-2.
Response: The SDT intended for the requirement to represent the give and take that will occur from the Transmission Operator or Balancing Authority to the Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner and other Balancing Authorities and Transmission Operators until the data specification is satisfied and violation should only occur for non-responsiveness or refusal to provide data. The VSL is intended to represent the satisfaction of the data specification in aggregate. It is not intended to represent failure of small sets of data due to RTU outages, transducer issues, etc. Thus, the SDT believes a single Severe VSL is appropriate. No change made.		
ReliabilityFirst	No	For the TOP-001-2 standard, ReliabilityFirst disagrees with the VSLs for the following

Organization	Yes or No	Question 4 Comment
		reasons:1. VSLs for R3, R5 and R6 - ReliabilityFirst recommends adding the gradated language of “or X% or less of the entities whichever is less” to the VSLs (this is consistent with the language stated in the TOP-002-3 and TOP-003-2 VSLs). This is needed for smaller Transmission Operators which may have less than four other TOPs to inform. 2. Note in front of VSL 5 - ReliabilityFirst recommends removing the note in front of VSL5 since the note is contrary and is in conflict on how the VSL is set up.
Response: TOP-001-2 R3, R5, and R6: Because VSLs using percentages must use the 5, 10, 15%, etc., scale, the SDT believes using percentages will actually escalate the VSLs for all entities more rapidly and result in a situation where the some levels are never used. In the vast majority of situations, a Transmission Operator will have to notify, at most, its immediate neighboring Transmission Operators and maybe a few additional registered entities. A Transmission Operator would have to notify more than 26 entities before each VSL could be used. The SDT does not believe there will be any Transmission Operator with that many entities to notify. In this case, the SDT believes use of one, two, three, and four represents the best balance between large and small entities. No change made. TOP-001-2 R5 – The SDT has removed the note.		
American Electric Power	No	In general, the VRFs and VSLs are too severe and punitive. Because of this, as well as our objections with the redundancy of requirements in TOP-001-2, AEP cannot support the proposed VRFs and VSLs.
Response: The SDT has not made any changes because of the lack of specificity with the comments.		
Ameren	No	See comments in question 5 regarding VRF.
Response: See response to Q5.		
ACES Power Marketing Member Standards Collaborators	No	The VSLS for TOP-002-3 Requirements R1 and R2 could have more levels based on the number of days for which there is not a plan or Operational Planning Analysis.

Organization	Yes or No	Question 4 Comment
Response: The requirement was written in singular form because the SDT believes it is very important to not miss a single day. Since the requirement is for a single day, FERC VSL criteria will not allow a VSL to accumulate the number of days. No change made.		
ISO/RTO Standards Review Committee	No	TOP-001-2, R3 Moderate VSL - the word “affected’ has been omitted and needs to be inserted. TOP-003-2, R1 & R2 - The use of the term ‘element’ in the VSLs for these requirements is confusing. What is an element? Is it restricted to the four items listed under R1 and R2 or could it be multiple items from R1.1 and R2.1 or some combination there of? TOP-003-2, R5 - The single VSL for this requirement is all or none. If a single data point is missing, the violation is Severe. Couldn’t this requirement have feathered VSLs such that the more data points missing the more severe the violation would become?
Illinois Municipal Electric Agency	No	Illinois Municipal Electric Agency supports comments submitted by the ISO/RTO Standards Review Committee concerning the need to build some flexibility into the VSL for TOP-003-2 R5.
Pepco Holdings Inc	No	PHI supports the comments provided by the ISO/RTO Standards Review Committee.
Southwest Power Pool Reliability Standards Development Team	No	TOP-001-2, R3 Moderate VSL - the word “affected’ has been omitted and needs to be inserted. TOP-003-2, R1 & R2 - The use of the term ‘element’ in the VSLs for these requirements is confusing. What is an element? Is it restricted to the four items listed under R1 and R2 or could it be multiple items from R1.1 and R2.1 or some combination there of? TOP-003-2, R5 - The single VSL for this requirement is all or none. If a single data point is missing, the violation is Severe. Couldn’t this requirement have feathered VSLs such that the more data points missing the more severe the violation would

Organization	Yes or No	Question 4 Comment
		become?
Nebraska Public Power District	No	TOP-001-2, R3 Moderate VSL - the word “affected’ has been omitted and needs to be inserted. TOP-003-2, R1 & R2 - The use of the term ‘element’ in the VSLs for these requirements is confusing. What is an element? Is it restricted to the four items listed under R1 and R2 or could it be multiple items from R1.1 and R2.1 or some combination there of? TOP-003-2, R5 - The single VSL for this requirement is all or none. If a single data point is missing, the violation is Severe. Couldn’t this requirement have feathered VSLs such that the more data points missing the more severe the violation would become?
Response: TOP-001-2 R3 – The SDT agrees and has modified the Moderate VSL. See the redlined VSL in the Summary Consideration for this question to view the changes. TOP-003-2 R1 and R2 – The SDT agrees this could cause confusion and has modified the VSLs to use parts in place of elements. This is consistent with the terminology NERC filed with FERC when they eliminated sub-requirements. Thus, the VSLs apply to Parts 1.1 through 1.4 and 2.1 through 2.4. See the redlined VSL in the Summary Consideration for this question to view the changes. TOP-003-2, R5 - The SDT intended for the requirement to represent the give and take that will occur from the Transmission Operator or Balancing Authority to the Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner and other Balancing Authorities and Transmission Operators until the data specification is satisfied and violation will likely only occur for non-responsiveness or refusal to provide data. The VSL is intended to represent the satisfaction of the data specification in aggregate. It is not intended to represent failure of small sets of data due to RTU outages, transducer issues, etc. Thus, the SDT believes a single Severe VSL is appropriate. No change made.		
Associated Electric Cooperative, Inc.	No	TOP-001-2-R1 VSL Change: “unless such action would violate”To: “and such action would have violated” Rationale: State the issue rather than recite the requirement. TOP-001-2-R8 VSL Change: “whichever is less” To: “whichever is greater” Rationale:

Organization	Yes or No	Question 4 Comment
		Intent TOP-001-2-R10 VSL Change: “has been” To: “had been” Rationale: grammatical TOP-002-3-R1 Lower VSL: Duplicate Severe VSL wording then append “, on one day within a calendar year.” TOP-002-3-R1 Moderate VSL: Duplicate Severe VSL wording then append “, on two non-consecutive days within a calendar year.” TOP-002-3-R1 High VSL: Duplicate Severe VSL wording then append “, on three non-consecutive days or two consecutive days within a calendar year” TOP-002-3-R1 Severe VSL: Append: “, on four or more days, or three consecutive days within a calendar year.” TOP-002-3-R1 VSL changes Rationale: Eliminate zero-defect expectation TOP-002-3-R3 VSL Change: “of the NERC” To: “, whichever is greater, of the NERC” Rationale: precision and alignment with wording in TOP-01-2 R8 VSLs.

Response: TOP-001-2, R1 – The SDT agrees and has modified the VSL similar to your request. See the redlined VSL in the Summary Consideration for this question to view the changes.

TOP-001-2, R8 - The utilization of the “whichever is less” language has been vetted by NERC and is used in other standards. The SDT has added an explanatory statement prior to the VSLs for R8 that explains how the VSL is determined. No change made.

TOP-001-2, R10 – The SDT agrees and has corrected the VSL. See the redlined VSL in the Summary Consideration for this question to view the changes.

TOP-002-3, R1 – The SDT disagrees with gradating the VSLs on this requirement. The SDT believes that the requirement is of such importance that it wrote the requirement in singular form. Thus, each failure to have an OPA is a separate violation. This is also consistent with FERC VSL Guidelines. No change made.

TOP-002-3, R3 – The SDT added the missing “whichever is less” language to the Lower VSL. The utilization of the “whichever is less” language has been vetted by NERC and is used in other standards. The SDT has added an explanatory statement prior to the VSLs in R3 that explains how the VSL is determined. See the redlined version in the Summary Consideration for this question to see the

Organization	Yes or No	Question 4 Comment
changes.		
Manitoba Hydro	No	TOP-002-3 R3 VSL - The wording of the VSL is unclear. Manitoba Hydro suggests changing the wording of the VSL as follows (the severe VSL of TOP-002-3, R3 is provided as an example): 'The Transmission Operator did not notify either four or more NERC registered entities, or more than 15% of the NERC registered entities identified in the plan(s) as to their role in the plan(s).
Response: The SDT added the missing "whichever is less" language to the Lower VSL. The utilization of the "whichever is less" language has been vetted by NERC and is used in other standards. There is an explanatory statement prior to the VSLs in R3 that explains how the appropriate VSL is determined. See the redlined version in the Summary Consideration for this question to see the changes.		
United Illuminating Company	No	TOP-003 R5 has only a severe VSL. This seems unequitable to the data providors who are responsible for tens of thousands of data points, some redundant. Especially since State Estimators are designed to estimate for bad or missing data. UI disagrees with vsl for R5 which is severe only. UI is concerned that failing to provide a single data point for a partial period would result in a severe violation reagardless of all the other data being transmitted. UI notes that with in TOP-001 (R6 and R8) and TOP-02 R3 the SDT managed to create VSL's that allowed for percentage measure or quantity measure. A similar approch should be done with TOP-003 R5. Failure to transmit a single point of data will not result in a cascade or directly affect the electrical stae of the BES.
Response: The SDT intended for the requirement to represent the give and take that will occur from the Transmission Operator or Balancing Authority to the Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and other Balancing Authorities and Transmission Operators until the data specification is satisfied and violation will likely only occur for non-responsiveness or refusal to provide data. The VSL is intended to represent the satisfaction of the data specification in aggregate. It is not intended to represent failure of small sets of data due to RTU outages, transducer issues, etc. Thus, the SDT		

Organization	Yes or No	Question 4 Comment
believes a single Severe VSL is appropriate. Writing VSLs based on the number of data points provided would further complicate compliance enforcement actions for the responsible entity by requiring them to provide evidence of the number of data points they are required to provide to demonstrate sample size is not practical. No change made.		
South Carolina Electric and Gas	No	
Response: Without a specific comment, the SDT is unable to respond.		
Beaches Energy Services	Negative	It would seem that the VSL for TOP-001 R5 ought to be binary, not informing any TOP of a potential Adverse Reliability Impact seems a Severe violation. It does pose the question, which TOPs? All of them in the interconnect? Only neighboring TOPs? Only TOP's in the RC area? TOP-003 VRFs - there should not be an inconsistency between R1, R2 and R3 for creation and distribution of data specifications being Low VRF, but supplying the data required is a Medium. They should be the same, e.g., if a RC, BA or TOP doesn't tell the other entities what data is required, how can that entity know what to supply? VSLs for R1 and R2, "required element" as used in the VSLs should be replaced with "specifications" to coincide with the term used in the requirement. VSL for R5 should not be binary. It is inconsistent with other requirements. E.g., If in R4, a BA or TOP did not distribute to 3 entities, and therefore did not receive any data from those 3 entities, then, that is a low VRF and High VSL to the BA for missing all of the data from 3 entities. However, in R5 if an entity misses one piece of data from that entity it is a Medium VRF and a Severe VSL. This is inconsistent.
Response: TOP-001, R5 – The SDT disagrees that the VSL ought to be binary. Failure to notify one Transmission Operator of an Adverse Reliability Impact is not as Severe as failing to notify the Reliability Coordinator. Failure to notify the Reliability Coordinator is a Severe VSL. If the Reliability Coordinator knows, then the Reliability Coordinator will ensure the Adverse Reliability Impact is addressed. The answer to the question of which Transmission Operators is found within the requirement. It is the Transmission Operators that are "known or expected" to be affected by the Adverse Reliability Impact. That could be immediate neighbors or		

Organization	Yes or No	Question 4 Comment
broader if the Transmission Operator's operations are "known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas". No change made. TOP-003 – The SDT views development and communication of a data specification as an enabling requirement for ensuring the Transmission Operator and Balancing Authority have the necessary data. Actual supply of the data is what is most important in this requirement. The VRFs reflect this relative importance. No change made. The SDT agrees that "elements" in the VSLs for Requirements R1 and R2 is not the correct word and has modified the VSLs to use parts in place of elements. This is consistent with the terminology NERC filed with FERC when they eliminated sub-requirements. See the redlined version in the Summary Consideration for this question to see the changes. The SDT intended for the requirement to represent the give and take that will occur from the Transmission Operator or Balancing Authority to the Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and other Balancing Authorities and Transmission Operators until the data specification is satisfied and violation will likely only occur for non-responsiveness or refusal to provide data. The VSL is intended to represent the satisfaction of the data specification in aggregate. It is not intended to represent failure of small sets of data due to RTU outages, transducer issues, etc. Thus, the SDT believes a single Severe VSL is appropriate. Writing VSLs based on the number of data points provided would further complicate compliance enforcement actions for the responsible entity by requiring them to provide evidence of the number of data points they are required to provide to demonstrate sample size and is not practical. No change made.		
California ISO	Negative	The VSL table states the following as Severe for TOP-001 R9: The Transmission Operator exceeded a System Operating Limit (SOL) as identified in Requirement R8 for a continuous duration greater than 30 minutes that would cause a violation of the Facility Rating or Stability criteria. We cannot agree with this wording until the meaning of "continuous" is better defined.
Response: The language quoted in the comment is not from the most recent VSL in TOP-001-2, Requirement R9. For example, the VSL mentions nothing about 30 minutes. The SDT intended the literal meaning of continuous. Thus, the duration would start over if the Transmission Operator managed to temporarily bring the operation of the SOL back within the limit. No change made.		
Florida Municipal Power Agency	Negative	TOP-001-2 R5 and R9 VRFs should be High, especially R9 It would seem that the VSL for R5 ought to be binary, not informing any TOP of a potential Adverse Reliability Impact seems a Severe violation. It does pose the question,

Organization	Yes or No	Question 4 Comment
		which TOPs? All of them in the interconnect? Only neighboring TOPs? Only TOP's in the RC area? The VSL for R8 for Lower, Moderate and High ought to be reworded to avoid the ambiguous reference and make sure that IROLs are always Severe, e.g., (one, two, or three) SOLs that are not IROLS or more than (X% to Y%) .... TOP-002-3 VRF's and VSL's look good TOP-003-2 VRFs - there should not be an inconsistency between R1, R2 and R3 for creation and distribution of data specifications being Low VRF, but supplying the data required is a Medium. They should be the same, e.g., if a RC, BA or TOP doesn't tell the other entities what data is required, how can that entity know what to supply? VSLs for R1 and R2, "required element" as used in the VSLs should be replaced with "specifications" to coincide with the term used in the requirement VSL for R5 should not be binary. It is inconsistent with other requirements. E.g., If in R4, a BA or TOP did not distribute to 3 entities, and therefore did not receive any data from those 3 entities, then, that is a low VRF and High VSL to the BA for missing all of the data from 3 entities. However, in R5 if an entity misses one piece of data fro that entity it is a Medium VRF and a Severe VSL. This is inconsistent.
City of Vero Beach	Negative	TOP-001 R5 and R9 VRFs should be High, especially R9 It would seem that the VSL for R5 ought to be binary, not informing any TOP of a potential Adverse Reliability Impact seems a Severe violation. It does pose the question, which TOPs? All of them in the interconnect? Only neighboring TOPs? Only TOP's in the RC area?

Organization	Yes or No	Question 4 Comment
		The VSL for R8 for Lower, Moderate and High ought to be reworded to avoid the ambiguous reference and make sure that IROLs are always Severe, e.g., (one, two, or three) SOLs that are not IROLS or more than (X% to Y%) .... TOP-003 VRFs - there should not be an inconsistency between R1, R2 and R3 for creation and distribution of data specifications being Low VRF, but supplying the data required is a Medium. They should be the same, e.g., if a RC, BA or TOP doesn't tell the other entities what data is required, how can that entity know what to supply? VSLs for R1 and R2, "required element" as used in the VSLs should be replaced with "specifications" to coincide with the term used in the requirement VSL for R5 should not be binary. It is inconsistent with other requirements. E.g., If in R4, a BA or TOP did not distribute to 3 entities, and therefore did not receive any data from those 3 entities, then, that is a low VRF and High VSL to the BA for missing all of the data from 3 entities. However, in R5 if an entity misses one piece of data from that entity it is a Medium VRF and a Severe VSL. This is inconsistent.

Response: TOP-001, R5 VRF – The SDT disagrees. There is a similar requirement (Requirement R5) in proposed IRO-014-2 that is assigned a Medium VRF. The requirements are viewed as similar since they both refer to the coordination of activities with other reliability entities: TOP-001-2 for Transmission Operators and IRO-014-2 for Reliability Coordinators. The assignment of the Medium VRF was made based on the premise that failure to coordinate activities, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. For a requirement to be assigned a "High" VRF there should be the expectation that failure to meet the required performance "will" result in instability, separation, or cascading failures. This is not the case when an applicable entity fails to coordinate activities. While the SDT agrees that, under some circumstances, it is possible that a failure to coordinate activities may put the applicable entity in a position where it is not as prepared as it should be to address the potential situation, the failure to coordinate would not, by itself, result in instability, separation, or cascading failures. If the applicable entity failed to coordinate activities, it would still be expected to handle the situation if it occurred.

TOP-001-R9, VRF – The SDT disagrees that the VRF should be High for an SOL. SOLs do not have the same level of importance as an IROL. No change made.

Organization	Yes or No	Question 4 Comment
TOP-001, R5 VSL – The SDT disagrees that the VSL ought to be binary. Failure to notify one Transmission Operator of an Adverse Reliability Impact is not as Severe as failing to notify the Reliability Coordinator. Failure to notify the Reliability Coordinator is a Severe VSL. If the Reliability Coordinator knows, then the Reliability Coordinator will ensure the Adverse Reliability Impact is addressed. The answer to the question of which Transmission Operators is found within the requirement. It is the Transmission Operators that are “known or expected” to be affected by the Adverse Reliability Impact. That could be immediate neighbors or broader if the Transmission Operator’s operations are “known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas”. No change made. TOP-001-2, R8 – IROLs are not considered in this requirement. It only pertains to selected, identified SOLs which are not IROLs. No change made. To further clarify the VSLs, a “boiler plate” explanation for how to select the VSL has been added above the VSLs. TOP-003 – The SDT views development and communication of a data specification as an enabling requirement for ensuring the Transmission Operator and Balancing Authority have the necessary data. Actual supply of the data is what is most important in this requirement. The VRFs reflect this relative importance. No change made. TOP-003, R1 and R2 - The SDT agrees that “elements” in the VSLs for Requirements R1 and R2 is not the correct word and has modified the VSLs to use parts in place of elements. This is consistent with the terminology NERC filed with FERC when they eliminated sub-requirements. See the redlined versions in the Summary Consideration for this question to view the changes. The SDT intended for the requirement to represent the give and take that will occur from the Transmission Operator or Balancing Authority to the Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and other Balancing Authorities and Transmission Operators until the data specification is satisfied and violation will likely only occur for non-responsiveness or refusal to provide data. The VSL is intended to represent the satisfaction of the data specification in aggregate. It is not intended to represent failure of small sets of data due to RTU outages, transducer issues, etc. Thus, the SDT believes a single Severe VSL is appropriate. Writing VSLs based on the number of data points provided would further compliance enforcement actions for the responsible entity by requiring them to provide evidence of the number of data points they are required to provide to demonstrate sample size and is not practical. No change made.		
CPS Energy	Negative	Quality Review of VRF's needed.
Response: A quality review of all VRF’s is part of the standard review cycle for all projects.		

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 4 Comment</th></tr>
<tr><td>Intellibind</td><td>Negative</td><td>Data retention requirements are not consistent with other standards that only require maintaining logs and voice recordings for 90 days. This adds confusion to compliance recordkeeping where some records are purged every 90 days, but that records of certain topic must be maintainted for longer periods. Retention of data should be done on an identified amount of days (eg. 30, 60, 90) as apposed to "consecutive months" since computer systems primarily use a count of days, and do not necessarily distiguish a calandar month for purging records. As stated the retention period will add addtional adminsitratve overhead and expense to ensuring compliance to these requirements.</td></tr>
<tr><td colspan="3">Response: The general language of the data section is provided by NERC staff. The SDT found only one instance of calendar month in the standards. It stated that voice recordings shall be retained for three calendar months. The SDT changed that reference to 90 calendar days.</td></tr>
<tr><td>Liberty Electric Power</td><td>Negative</td><td>I do not understand why a TO or BA who fails to send a data request to a generator would receive a "Low" VSL while that same generator would receive a "severe" VSL for not satisfying all the requirements of the data request.</td></tr>
<tr><td colspan="3">Response: The SDT views Requirements R1 – R4 as enabling requirements. The purpose of TOP-003-2 is to make sure the Transmission Operator and Balancing Authority have the data necessary for fulfilling their functional obligations. Thus, the real crux of the standard is to supply data. Everything else is simply administrative to enable the sharing of that data. If the generator owner or generator operator does not receive a data specification, they have no obligation under the standards to supply data and cannot be held in violation of the Requirement R5. Thus, no situation could ever exist where a Balancing Authority or Transmission Operator is held in violation of Requirements R3 or R4 for failing to send the data specification to a generator owner or generator operator and then that same generation owner or generation operator is held in violation of Requirement R5. No change made.</td></tr>
<tr><td>Bonneville Power Administration</td><td>Negative</td><td>BPA is voting "No" for VSLs/VRFs for R8 of TOP-001-2, R3 of TOP-002-3, and R3/R4 of TOP-003-2 because they are written in a confusing manner. BPA recommends using 1, 2, 3, or 4 SOLs instead of trying to including things like "more than 10%, but less than 15%", particularly since the requirement is to take the lesser or that or the 1, 2, 3, or 4 SOLs.</td></tr>
<tr><td colspan="3">Response: The utilization of the “whichever is less” language has been vetted by NERC and is used in other standards. There was an explanatory statement prior to the VSLs in some of these requirements that explains how the appropriate VSL is determined. It was</td></tr>

SERC Reliability Corporation	Affirmative	Don't forget to synch the definition of Directive with COM-002.
Response: The SDT is in contact with, and coordinating as necessary, with the SDT that is working on COM-002.		
Florida Municipal Power Pool	Affirmative	Implementation Comments submitted. Added here incase they did not go through. Comments for Project 2007-03 Real-Time Transmission Operations The changes to the TOP Standards are a great improvement over the existing Standards; however, I think because they are so much better than the existing Standards that they should be implemented as soon as possible. I think one year is enough time to make the necessary changes to processes, procedures and documentation. Even more important than the implementation of the new Standards is the deletion of the existing Standards as soon as possible. Some of the existing Requirements are worthless and unenforceable. The SDT has determined that some of the existing

Organization	Yes or No	Question 5 Comment
		Requirements are replaced by new requirements and they will need to be enforceable until the new Requirements are enforceable. However, the SDT has identified some Requirements that are either no longer necessary or covered by existing Requirements or the Functional Model (see mapping document excerpts below): o PER-001-0 R1 o TOP-001-1 R1 o TOP-002-2 R2 o TOP-002-2 R7 o TOP-002-2 R8 o TOP-002-2 R18 o TOP-002-2 R19 Deleting these Requirements does not need to have an implementation period. They can be deleted as soon as approved by FERC with no waiting. TOP-002-2 R8 is the most important Requirement to be deleted as soon as approved because it never should have been a requirement of the Balancing Authority. To make matters worse this Requirement is in the tier 2 Requirements for actively monitored Requirements for 2012! Also the SDT has identified some Requirements that apply to the Balancing Authority that are either no longer necessary (or even NEVER should have been applicable) or covered by existing Requirements or the Functional Model (see mapping document excerpts below): o TOP-002-2 R1 o TOP-002-2 R5 o TOP-002-2 R6 o TOP-002-2 R10 The SDT states for TOP-002-2 R10: “The Balancing Authority is only responsible to respond to Reliability Directives as per the definition of Balancing Authority in the NERC Glossary and, thus, this requirement should never have been applicable to the Balancing Authority.” Obvious wrong Requirements like TOP-002-2 R10 should be deleted ASAP. They are a compliance conundrum, and open to compliance fines! From the Mapping Document: PER-001-0 R1 is deleted because “In FERC Order 693a, paragraph 112, the Commission clarifies that a Reliability Coordinator’s authority to issue directives arises out of the Commission’s approval of Reliability Standards that mandate compliance with such directives. The SDT reasonably applied this same logic to Transmission Operators and Balancing Authorities and that makes this requirement superfluous and thus it can be deleted.” TOP-001-1 R1 is deleted because “This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. Deletion of this requirement doesn’t alleviate responsibility for actions as each individual requirement in the Reliability Standards now specifies an action and a responsible

Organization	Yes or No	Question 5 Comment
		entity. These needed actions required for reliability of the bulk power system have been more clearly laid out in revised standards. (See FERC Order 693a, paragraph 112.) The requirement is also non-specific, ambiguous, and not performance oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. All of this makes this requirement redundant. The overall reliability of the bulk power system is not adversely affected by the deletion of this requirement." TOP-002-2 R1 is deleted for the Balancing Authority because "The Balancing Authority is required to balance by approved BAL-001-0.1a and approved BAL-002-1 and must take action per approved EOP-002-2.1, Requirement R6 and thus the Balancing Authority part of this sentence can be deleted. Second sentence - Deleted as superfluous. Use of appropriate personnel and equipment is incumbent to responsible entities as per their certification as NERC registered entities. " TOP-002-2 R2 is deleted because "The SDT reviewed the purpose of the Reliability Standard and believes that this requirement referred to operations planning. Given the current definition of Transmission Operator in the Glossary and Functional Model v5, operations planning is part of what the Transmission Operator is required to do and as such this requirement is no longer needed and can be deleted. " TOP-002-2 R5 is deleted for the Balancing Authority because "The part of the requirement dealing with the Balancing Authority is replaced by approved BAL-001-0.1a. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in to the Functional Model." TOP-002-2 R6 is deleted for the Balancing Authority because "The part of this requirement dealing with the Balancing Authority is replaced by approved BAL-002- 0 and proposed BAL-002-1, Requirements R2 through R4 and approved EOP-002-2.1 and the proposed EOP-002-3, Requirement R6. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of

Organization	Yes or No	Question 5 Comment
		operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in to the Functional Model. " TOP-002-2 R7 is deleted because "The Balancing Authority is required to always plan to meet and recover from Contingency events as stated in approved BAL-002-1, Requirement R2 and therefore this requirement is redundant and can be deleted as all elements of the requirement are now covered in other standards. Deliverability is not in the control of the Balancing Authority!" TOP-002-2 R8 is deleted because "The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power (see proposed TOP-001-2, Requirement R1) and, thus, this requirement can be deleted as all elements of the requirement are now covered in other standards. Voltage and reactive power balance are the responsibility of the Transmission Operator (not the Balancing Authority) and are replaced by approved VAR-001-1, Requirement R1. Deliverability is not in the control of the Balancing Authority!!" TOP-002-2 R8 is the most important Requirement to be deleted as soon as approved because it should never have been a requirement of the Balancing Authority. To make matters worse this Requirement is in the tier 2 Requirements for actively monitored Requirements for 2012! TOP-002-2 R10 is deleted for the Balancing Authority because "The Balancing Authority is only responsible to respond to Reliability Directives as per the definition of Balancing Authority in the NERC Glossary and, thus, this requirement should never have been applicable to the Balancing Authority." TOP-002-2 R18 is deleted because "This requirement adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a system reliability issue. " To make matters worse this Requirement is the tier 1 Requirements for actively monitored Requirements for 2012! Which means NERC views this as an important Requirement to reliability. But I agree with the SDT that this Requirement adds NO reliability benefit. TOP-002-2 R19 is deleted because "This is part of an entity's certification and is no longer required in standards. "

Organization	Yes or No	Question 5 Comment
Response: The SDT appreciates your concerns. However, no change is being made due to the following reasons: 1. The requirements being cited are in service today and are being 'followed' by registered entities with minimal problems. The main difference in this project from today is the formalization of some of the requirements particularly the data specification. 2. This is the only comment received on this issue. Other entities are apparently okay with the status quo. **3.** Setting up an implementation plan with the suggestions above would make for a logistical nightmare with no reliability benefit. **4.** The SDT has shortened the effective date to 12 months for all requirements except the proposed TOP-003-2, Requirements R1 and R2 which will be 10 months.		
MEAG Power	Affirmative	MEAG Power supports the comments of Austin Energy.
Response: Austin Energy did not supply any comments to this posting.		
Portland General Electric Co.	Affirmative	PGE agrees with the WECC Position paper on Real-Time Operations.
Response: Without specific comments to this posting the SDT is unable to respond.		
Illinois Municipal Electric Agency		Illinois Municipal Electric Agency appreciates SDT efforts to develop a sixth draft for this proposed Reliability Standards development. While we realize the SDT will never be able to resolve all concerns, it appears from our own review and our review of other entity comments that additional revisions are needed to achieve a level of quality that will minimize difficulties complying with these Reliability Standards.
Baltimore Gas & Electric Company, Constellation Energy Commodities Group	Affirmative	We are voting affirmatively because we support the improvements achieved by the drafting team work so far. However, we raised remaining concerns with the standard proposal on the comment form submitted on behalf of CCG, CECD and CPG. We expect the drafting team to continue to make clarifying changes until the end of this stakeholder process. The greater the clarity in the final product, the less risk of contradictory perspectives on compliance.

Organization	Yes or No	Question 5 Comment
Response: The SDT will continue to work to refine the standards until the end of the stakeholder process.		
Santee Cooper	Negative	"Internal area reliability" needs to be clarified.
Response: Requirement R8 was modified to replace the phrase "its internal area reliability" with "reliability internal to its Transmission Operator Area". **R8.** Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL~~s~~, ~~have~~has been identified by the Transmission Operator as supporting ~~its internal area~~ reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis.		
Fort Pierce Utilities Authority	Negative	Please see the joint comments submitted by Florida Municipal Power Agency (FMPA) filed through the formal comment process.
Response: See response to FMPA comments in Q1 – Q4.		
Consolidated Edison Co. of NY, Inc.		Comments: TOP-001-2 is referencing a NERC definition for "Reliability Directive" which is not in effect today and is listed on the Definitions of Terms Used in Standard, page 2. It is stated that the definition of "Reliability Directive" would be written by the Reliability Coordinator Standards Drafting Team (Project 2006-06), and post it for vetting by the industry sometime in the future. If this standard is approved now and the definition for "Reliability Directive" changes because of the Project 2006-06 work, the TOP standards will have to be revisited. The Project 2006-06 Drafting Team should be coordinating its work with this project to develop an "across the board" usable definition. This Comment Form states under Background Information: o The definition of Reliability Directive has been modified by Project 2006-06 to read as follows: "A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts." It is not apparent where the 2006-06 team added "Adverse Reliability Impacts" to the definition. This change also impacts

Organization	Yes or No	Question 5 Comment
		compliance to COM-002.
Orange and Rockland Utilities, Inc.		Comments: TOP-001-2 is referencing a NERC definition for “Reliability Directive” which is not in effect today and is listed on the Definitions of Terms Used in Standard, page 2. It is stated that the definition of “Reliability Directive” would be written by the Reliability Coordinator Standards Drafting Team (Project 2006-06), and post it for vetting by the industry sometime in the future. If this standard is approved now and the definition for “Reliability Directive” changes because of the Project 2006-06 work, the TOP standards will have to be revisited. The Project 2006-06 Drafting Team should be coordinating its work with this project to develop an “across the board” usable definition. This Comment Form states under Background Information: o The definition of Reliability Directive has been modified by Project 2006-06 to read as follows: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.” It is not apparent where the 2006-06 team added "Adverse Reliability Impacts" to the definition. This change also impacts compliance to COM-002.
Response: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. Implementation will be coordinated with that team as well.		
Georgia System Operations		GSOC believes that all 3 standards should be voted on together in one vote. They are too inter-related. One or two of these should not be approved if one of them is not approved.
Response: The purpose of separating the votes at this stage was to provide additional feedback to the SDT. The three standards will be filed together once all 3 have been approved by the industry.		
Texas Reliability Entity		Referring to the posted “Issues Database,” under Order 693 Â¶ 1604/1608, the red-lined language is not actually in the referenced requirement. Does the drafting team

Organization	Yes or No	Question 5 Comment
		contend that the proposed requirements satisfy this FERC directive? Referring to the posted “Issues Database,” under Order 693 Â¶ 1636 (TOP-004), this document suggests that a 30-minute limit is contained in the requirements, but that limit is not in the language that is now posted. Does the drafting team contend that the proposed requirements satisfy this FERC directive? In general, NERC needs to make sure the Issues Database is consistent with the latest draft of the requirements. The VRF/VSL Assignment Document needs to be cleaned up. There are numerous references to incorrect requirement numbers. On page 3, TOP-001-2 Requirement R3 is struck from the list of “High” VRFs, but it is assigned a high VRF in the posted standard. Also, the title of TOP-001-2 is stated incorrectly in this document (at the beginning).
Response: 1604 - The SDT agrees that the posted language was not updated in the issues database to reflect the latest version of the standard. However, the context hasn’t changed and the SDT does believe that the suggested requirement addresses the directive. The issues database language has been cleaned up appropriately. No other change made. 1636 – The issues database language was not properly updated when the requirement was changed from a 30 minute perspective to a limits perspective. However, the context hasn’t changed and the SDT does believe that the suggested requirement addresses the directive. The issues database language has been cleaned up appropriately. No other change made. The SDT has reviewed the VRF/VSL document and made changes as appropriate. The SDT does not understand the comment. The posted requirement is assigned a high VRF. The VRF/VSL document states that Requirement R3 has been assigned a high VRF. There does not appear to be a discrepancy. No change made. The title has been corrected in the VRF/VSL document.		
American Transmission Company, LLC		ATC feels this project has diminished a good base of existing standards, and introduced ambiguity, and vagueness. Additionally, we feel certain key aspects of the current standards were removed for example, “Clear, decision making authority” from System Operators, and the need for “Uniform Line Identifiers”, which is not in

Organization	Yes or No	Question 5 Comment
		the interest of Reliability.
Response: The SDT has provided reasons for deleting the two phrases referenced above in the mapping document accompanying this posting. To date, the SDT has seen no justifications for restoring the cited phrases. No change made.		
SERC OC Standards Review Group		Data retention requirements for TOP-001-2. TOP-002-3 and TOP-0003-2 need to align with the expectations of the compliance entity."The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers."
Owensboro Municipal Utilities	Negative	Please refer to SERC Operating Committee Comments.
Entergy, Entergy Services, Inc.	Negative	o Comments submitted - see SERC OC Standards Review Group comments.
Response: The data retention requirements for all 3 standards follow the established guidelines and were reviewed as part of the quality review process prior to posting. No change made.		
GTC		Demonstrating providing all data specifications for real time operations horizon is very prescriptive in nature and could have unanticipated "compliance documentation" consequences when data or the transfer method is unavailable (e.g., when an RTU goes down).
Response: Demonstrating the need would be an onerous task with no reliability benefit. The Transmission Operator and Balancing Authority are constrained as to what they can request by the language in the requirements. They can only ask for what is needed to support their assigned tasks. No change made.		
FirstEnergy		FE has the following comments and suggestions:1. In the mapping document, it shows that PRC-001-1 R2 will be replaced by the new TOP-003-2 R5. However, we do not see a new version of PRC-001-2 posted. Also, the implementation plan makes no reference to PRC-001.

Organization	Yes or No	Question 5 Comment
		2. The mapping document does not seem to be referencing the correct version of TOP-005 (should be Version 2a). Also, the mapping document is not referencing the correct requirement for TOP-006-1 R4 (the RC should not be shown as applicable).
Response: The PRC standard was inadvertently left out of this posting but has been provided as part of the next posting. The Implementation Plan has been updated as well. The correct reference should be TOP-005-2a and the mapping document has been changed as necessary to reflect this. Requirement R4 has been corrected.		
NV Energy		In the re-draft of these three standards, TOP-001, -002, and -003, we seem to have lost the concept of Planned Outage Coordination for BES facilities (a whole Standard was devoted to the process). In viewing the mapping document, it is stated that the requirements for such outage coordination that used to reside in TOP-003-1 are now replaced by R1 and R2 of TOP-003-2. If this is the case, then all of the activities of outage coordination are to be encapsulated in the clause "documented specification for the data necessary for it to perform its required Operational Planning Analyses..." While it may be covered in this extremely broad clause, the SDT nevertheless gave prominence to the coordination of telemetry outages within a specific requirement R6 of TOP-001-2. If telemetry outages have a separate requirement, then shouldn't planned outage coordination of BES facilities rise to the level of importance that would merit its own requirement?
Response: Since telemetry outages might take out the very mechanism relied upon for the transfer of data in TOP-003-2, the SDT believed that a separate requirement was necessary for such outages. Also, telemetry is part of infrastructure and not a type of data so it is handled separately. No change made.		
PacifiCorp		PacifiCorp would like to express their appreciation to the SDT for their efforts. This consolidation effort has resulted in a more streamlined approach to this set of interrelated NERC Reliability Standards. PacifiCorp would recommend that NERC

Organization	Yes or No	Question 5 Comment
		consider other sets of standards for which such a consolidation effort would be mutually beneficial to NERC and stakeholders, from both a compliance and administrative standpoint.
Response: Thank you for your support.		
Dominion		Page 1 and Page 15 of the Violation Risk Factor and Violation Severity Level Assignments document, titles reads; Justification for Assignment of Violation Severity Levels for TOP-001-2, TOP-002-2, TOP-003-2:, Dominion suggests changing TOP-002-2 to TOP-002-3.
Response: The suggested correction has been made.		
Pepco Holdings Inc		PHI supports the comments provided by the ISO/RTO Standards Review Committee.
ISO/RTO Standards Review Committee		The definition of Reliability Directive is contained in COM-002-3 and that standard hasn't been posted for comment/ballot at this time. What happens if the TOP standards are approved and the COM-002-3 standard is subsequently not approved?
Midwest ISO, Inc.	Affirmative	Please See SRC Comments Submitted
New Brunswick System Operator	Negative	Please see comments submitted by the NPCC Reliability Standards Committee and IRC/SRC
Southwest Power Pool Reliability Standards Development Team		The definition of Reliability Directive is contained in COM-002-3 and that standard hasn't been posted for comment/ballot at this time. What happens if the TOP standards are approved and the COM-002-3 standard is subsequently not approved?
City Utilities of Springfield, Missouri	Negative	City Utilities of Springfield, Missouri supports the comments of SPP.

Organization	Yes or No	Question 5 Comment
Empire District Electric Co.	Negative	EDE agrees with the comments provided by SPP RTO
ISO New England Inc.		The definition of Reliability Directive is contained in COM-002-3 and that standard hasn't been posted for comment/ballot at this time. What happens if the TOP standards are approved and the COM-002-3 standard is subsequently not approved?
Nebraska Public Power District		The definition of Reliability Directive is contained in COM-002-3 and that standard hasn't been posted for comment/ballot at this time. What happens if the TOP standards are approved and the COM-002-3 standard is subsequently not approved?
Constellation Energy		The definition of Reliability Directive is contained in COM-002-3 which has not been approved at this time. What happens if the TOP standards are approved and the COM-002-3 standard is subsequently not approved or change? Since the two projects appear to be on similar timelines for stakeholder approval, we suggest that the two drafting teams (Projects 2007-03 and 2006-06) coordinate presentation of the standard revisions for NERC Board approval to occur at the same time. Likewise, NERC should file both for FERC approval concurrently.
Northeast Power Coordinating Council		TOP-001-2 is referencing a NERC definition for "Reliability Directive" which is not in effect today and is listed on the Definitions of Terms Used in Standard Section on page 2. It is stated that the definition of "Reliability Directive" would be written by the Reliability Coordinator Standards Drafting Team (Project 2006-06), and post it for vetting by the industry sometime in the future. If this standard is approved now and the definition for "Reliability Directive" changes because of the Project 2006-06 work, the TOP standards will have to be revisited. The Project 2006-06 Drafting Team should be coordinating its work with this project to develop an "across the board" usable definition. This Comment Form states under Background Information: o The definition of Reliability Directive has been modified by Project 2006-06 to read as follows: "A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is

Organization	Yes or No	Question 5 Comment
		necessary to address an Emergency or Adverse Reliability Impacts." It is not apparent where the 2006-06 team added "Adverse Reliability Impacts" to the definition. This change also impacts compliance to COM-002.
Response: The SDT is coordinating with Project 2006-06 (RC SDT) which is being balloted at this time. Implementation will be coordinated with that team as well.		
Southwest Power Pool Regional Entity		The standards being proposed are not sufficient to replace the requirements of the 9 standards being retired by this project. The requirements listed below are not covered by the new standards. TOP-001-1 R5. New requirement (TOP-001-2 R11) does not cover "take actions to avoid when possible or mitigate the emergency." Pre-emptive action is an important part of preventing cascading outages. The proposed TOP-001-2 R11 only deals with real time violations. The SDT is relying upon IRO-001-3 being approved in order to retire some of these requirements; however, this has not yet been passed by industry. TOP-002-2R1. If conditions change on the current day, where in the proposed standards is a new operating plan required to prepare for the next contingency or identify new SOLs? R6. Which of the proposed standards obligate the TOP to continuously plan for the next N-1 event? R13. MOD-024 and MOD-025 (which would replace this requirement) were not approved by FERC in the initial set of standards. A replacement standard MOD-025-2 has been posted for comment, but has not had an initial ballot. TOP-004-2R1. The proposed TOP-001-2, R7 and R9, only requires IROLs and certain SOLs be respected. The requirement being retired applied to all SOLs. This reduces BES reliability. R4. This covers cases where no Operational Planning Assessment is available to

Organization	Yes or No	Question 5 Comment
		ensure the system is in a safe state. The proposed TOP-002-3 does not include any requirement about when a new study is needed. TOP-006-2R5., R6., R7. The SDT is relying on the certification process to justify the retirement of these requirements. However, the Certification Process only looks at approved applicable Reliability Standards. If these are retired, these will no longer be reviewed by the Certification Team. TOP-008-1R2. The current language in TOP-008-1, R2 of "shall operate to prevent the likelihood that a disturbance will result in an IROL violation" is different than the proposed language of TOP-001-2, R7 and R9 "shall not operate outside the IROL (or SOL)". We recommend incorporating the "shall operate to prevent the likelihood that a disturbance will result in an IROL violation" into TOP-001-2 R7. PER-001-0R1. The existing requirement specifically places the responsibility on the personnel on shift not on the senior management. This does not appear to be covered by any other requirement. PRC-001-1 R2. The obligation to take corrective actions for protection relay or equipment failures is not covered by the proposed TOP-003-2 standard.

Response: TOP-001-1, R5: For anticipated conditions, the proposed TOP-002-3, Requirements R2 and R3 require the TOP to "develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1." The proposed TOP-001-2, Requirement R11 requires each Transmission Operator to "act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's Tv, or of an SOL identified in Requirement R8." When the exceedance anticipated in the assessment of the Operational Planning Analysis in proposed TOP-002-3, Requirement R1 becomes an actual exceedance in Real-time operations, the plan that the Transmission Operator developed per proposed TOP-002-3, Requirements R2 and R3 is to be implemented. Thus, the possible appropriate action to take, according to proposed TOP-001-2, Requirement R11 is to "act or direct others to act" in accordance with the plan that addresses the exceedance. Of course, this is all accomplished in accordance with the Reliability Coordinator as per approved IRO-008-1. No change made.

IRO-001-3: The SDT understands the timing and coordination issues involved with IRO-001-3 and is working closely with Project 2006-

Organization	Yes or No	Question 5 Comment
06 in this regard. TOP-002-2, R1: TOP-002-3 uses Operational Planning Analysis which includes contingency planning. The SDT believes that this will incorporate most of the situations that will occur in real-time. If something comes along that wasn't in the plan the language doesn't preclude an entity running a new analysis. No change made. TOP-002-2, R6: Requirement R6 does not mandate continuous planning. The mapping document shows how the SDT is proposing replacing this requirement. No change made. TOP-002-2, R13: The SDT is aware of the coordination issues involved and will take appropriate actions when, and if, required to make certain that there is no reliability gap created. TOP-004-2, R1: The SDT has provided the reasoning for the handling of SOLs repeatedly over the life of the project. The majority of the industry is on board with these changes as seen in provided comments. The SDT believes that the suggested changes do not adversely affect reliability. No change made. TOP-004-2, R4: The old Requirement R4 does not say anything about a new study. The SDT believes that the mapping shown for this requirement clearly covers the situation. No change made. TOP-006-2, R5: The certification process is not necessarily restricted to existing requirements. In deleting requirements based on certification, the SDT is responding to guidance received from NERC staff which has instructed SDTs to delete requirements that can and will be shown as initial capabilities during certification. In addition, where such requirements have been deleted in this project, the mapping document always shows where other remaining requirements would be violated if the core certification requirements aren't met and maintained. Therefore, no reliability gap is created. No change made. TOP-008-1, R2: Any pre-emptive actions for IROLs are the responsibility of the Reliability Coordinator as per the approved IRO standards. No change made. PER-001-0, R1: The SDT proposed in the first posting of this project that such a requirement is no longer needed in standards as cited in the posted mapping document. No change made. PRC-001-1, R2: There is no wording here for corrective actions. That is covered in PRC-004-2a, Requirement R2. No change made.		
South Carolina Electric and Gas		There is a mistake in the mapping document for TOP-001-2 R11 as the language doesn't match the language in the Standard. There is additional language in the mapping document that states "within 30 minutes," which the standard does not,

Organization	Yes or No	Question 5 Comment
		and should not say. This occurs on page 36 for the mapping of current TOP-007 R2 to proposed TOP-001-2 R11. Additonally, SCE&G believes that it would be erroneous to remove TOP-004 R5 on the basis of the functional model. The functional model for the TOP stipulates that the TOP "is responsible for the real-time operating reliability of the transmission assets under its purview, which is referred to as the Transmission Operator Area. The Transmission Operator has the authority to take certain actions to ensure that its Transmission Operator Area operates reliably." If a situation were to arise where there was not sufficient time to contact the RC or if the RC was taking action that would put the TOP in jeopardy, SCE&G believes that the TOP has the right to separate from the Interconnection to protect the reliability of its system as is spelled out in current standard TOP-005 R5.
Response: The mapping document language was not properly updated when the requirement was changed from a 30 minute perspective to a limits perspective. However, the context hasn't changed and the SDT does believe that the suggested requirement addresses the issue. The mapping document has been cleaned up appropriately. No other change made. The SDT is not basing the deletion of this requirement solely on the Functional Model. Good operating practice would dictate such a deletion as well. The SDT believes that separation must be under the control of the Reliability Coordinator. No change made.		
Xcel Energy		There is reference in each draft standard to deleting some requirements from PRC-001 but those proposed changes are not show in any proposed drafts or implementation plans (only 1 PRC-001 requirement is listed in the implementation plan).
Response: The PRC standard was inadvertently left out of this posting but has been provided as part of the next posting. The Implementation Plan has been updated as well.		
Western Area Power Administration		TOP 1 and 2 as written are generally acceptable. TOP 3 opens doors for manipulation.

Organization	Yes or No	Question 5 Comment
Response: Without specific comments, the SDT is unable to respond.		
The Valley Group, a Nexans Company		TOP-004-2 R4:If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits, as determined by System Operating Limits or real-time measurements, have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits (SOLs or Real-Time Limits) within 30 minutes. TOP-006-2 R1.2Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources, as determined with SOLs or Real-Time Calculated limits, available for use. TOP-006-2 R2:Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real time operating capacity, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources. TOP-008-1 R2:Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall operate the Bulk Electric System to the actual real-time limits (if available) or the most limiting derived parameter. TOP-008-1 R3:The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. The Transmission Operator shall review the real time status and capacity of transmission facility prior to disconnecting, if applicable. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.

Organization	Yes or No	Question 5 Comment
		TOP-008-1 R4:The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation. If applicable, and prior to immediate mitigation, the Transmission Operator shall review real time status and capacity of the equipment, and based on those, made necessary adjustments.
Response: The SDT does not understand the comment which appears to be a cut and paste of some existing requirements with no suggestions. No change made.		
Ameren		We highly recommend that you do not lump requirements that include SOL with IROL. IROLs by definition should have VRFs higher than SOL. So it is not possible to properly assign the VRF consistent with the NERC VRF/VSL Guideline documents. We would suggest that the SDT could review what the FAC-003 SDT has done and then provide separate Requirements when there are known and expected VRF differences for different elements covered by a combined Requirement.
Response: In this case, the SOLs being referenced are specifically, and explicitly, identified as important to a local area. This does not equate an SOL to an IROL but does imply common handling of the VRF. No change made.		
BGE		We realize that SDT for Project 2006-06 is responsible for defining Reliability Directive; however, we would like to reiterate our position that the definition must capture the identification concept that is reflected in Requirement (R1). As a result, when Reliability Directive is used elsewhere, it would be clear that the communication must be identified as a Reliability Directive. Additionally, the currently proposed definition of Reliability Directive is also contained in COM-002-3 and IRO-001-3 which have not been approved at this time. What happens if the TOP standards are approved and the COM and IRO standards are subsequently not approved or change? The revised definition should stay with each of the 3 standards until it is in the Glossary of Terms. Since the two projects

Organization	Yes or No	Question 5 Comment
		appear to be on similar timelines for stakeholder approval, we suggest that the two drafting teams (Projects 2007-03 and 2006-06) coordinate presentation of the standard revisions for NERC Board approval to occur at the same time. Likewise, NERC should file both for FERC approval concurrently. We are voting affirmatively because we support the improvements achieved by the drafting team work so far. However, we raised remaining concerns with the standard proposal on the comment form submitted on behalf of BGE. We expect the drafting team to continue to make clarifying changes until the end of this stakeholder process. The greater the clarity in the final product, the less risk of contradictory perspectives on compliance.
Response: Your suggestion has been forwarded to Project 2006-06. The SDT is coordinating activities with Project 2006-06 in this regard. The SDT will continue to work to refine the standards until the end of the stakeholder process.		

END OF REPORT

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.
12. Seventh posting of revised standard on March 22, 2012.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that 3 requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated on a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.

Reliability Directive — A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

A. Introduction

1. **Title:** **Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:** To prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences.

4. **Applicability**

   4.1. Balancing Authority

   4.2. Transmission Operator

   4.3. Generator Operator

   4.4. Distribution Provider

   4.5. Load-Serving Entity

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities..

B. Requirements

R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R2. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations]*

R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. *[Violation Risk Factor: High] [Time Horizon: Operations Planning,]*

R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations are relay or equipment failures, and changes in generation, Transmission, or Load. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.** *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

Rationale: The class of SOL included in Requirements R8, R9, and R11 was created in response to industry comments that there were SOLs that deserved increased attention. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.

R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

C. Measures

M1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence that it complied with each Reliability Directive issued and identified as such by the Transmission Operator(s) unless such action would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M2. Each Balancing Authority, Generation Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence which may include, but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Transmission Operator of its inability to comply with identified, Reliability Directive(s) issued in accordance with Requirement R2. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M3. Each Transmission Operator shall make available, upon request, evidence that it has informed its Reliability Coordinator and Transmission Operators that it knew or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis in accordance with Requirement R3. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M4. Each Transmission Operator shall make available, upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R4, unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M5. Each Transmission Operator shall make available, upon request, evidence that it informed its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas in accordance with Requirement R5, unless conditions did not permit such communications. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M6. Each Balancing Authority and Transmission Operator shall make available, upon request, evidence that it notified its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment, and associated communication channels in accordance with Requirement R6. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Balancing Authority or Transmission Operator may provide an attestation that an event has not occurred.

M7. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v as specified in Requirement R7. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M8. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis in accordance with Requirement R8. Such evidence could include, but is not limited to, an electronic or hard copy of information from the Operational Planning Analysis used in its assessment, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M9. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an SOL for a continuous duration that would cause a violation of the Facility

Rating or Stability criteria upon which it is based, as specified in Requirement R8 and in Requirement R9. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M10. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded in accordance with Requirement R10. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M11. Each Transmission Operator shall make available evidence of when it acted or directed others to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8, in accordance with Requirement R11. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

Exception Reporting

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall each keep data or evidence for each applicable Requirement R1 through R6, R8, and R10 through R11 and Measure M1 through M6, M8, and M10 through M11 for the current calendar year and one previous calendar year,

with the exception of voice recordings which shall be retained for a minimum of 90 calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has exceeded an identified IROL and its associated IROL T_v or SOL identified in Requirement R8 as specified in Requirements R7 and R9 and Measurements M7 and M9.

If a Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, or Load-Serving Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity did not comply with an identified Reliability Directive issued by the Transmission Operator, and such action would not have violated safety, equipment, regulatory, or statutory requirements.
R2	N/A	N/A	N/A	The responsible entity did not inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator.
For the Requirement R3, R5, R6, and R8 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.				
R3	The Transmission Operator did not inform one other Transmission Operator, or 5% or less of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform two other Transmission Operators, or more than 5% and less than or equal to 10% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform three other Transmission Operators, or more than 10% and less than or equal to 15% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or an anticipated Emergency condition based on its assessment of its Operational Planning Analysis. OR The Transmission Operator did not inform four or more other Transmission Operators, or more than 15% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.
R4	N/A	N/A	N/A	The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, when the requesting

	Lower	Moderate	High	Severe
				entity had implemented its comparable emergency procedures, and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R5	The Transmission Operator did not inform one other Transmission Operator, or 5% or less of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform two other Transmission Operators, or more than 5% and less than or equal to 10% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform three other Transmission Operators, or more than 10% and less than or equal to 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform its Reliability Coordinator of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications. OR The Transmission Operator did not inform four or more other Transmission Operators, or more than 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications.
R6	The responsible entity did not notify one negatively-impacted interconnected NERC-registered entity, or 5% or less of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify two negatively-impacted interconnected NERC-registered entities, or more than 5% and less than or equal to 10% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify three negatively-impacted interconnected NERC-registered entities, or more than 10% and less than or equal to 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment and associated communication channels between the affected entities.	The responsible entity did not notify its Reliability Coordinator of a planned outage of telemetering equipment, control equipment, and associated communication channels. OR, The responsible entity did not notify four or more negatively-impacted interconnected NERC-registered entities, or more than 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering and

	Lower	Moderate	High	Severe
				control equipment and associated communication channels between the affected entities.
R7	N/A	N/A	N/A	The Transmission Operator exceeded an identified Interconnection Reliability Operating Limit (IROL) for a continuous duration greater than its associated IROL T_v.
R8	The Transmission Operator did not inform its Reliability Coordinator of one SOL, or 5% or less of the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs, or more than 5% and less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs, or more than 10% and less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs, or more than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**
R9	N/A	N/A	N/A	The Transmission Operator exceeded a System Operating Limit (SOL), as identified in Requirement R8, for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R10	N/A	N/A	N/A	The Transmission Operator did not inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, had been exceeded.
R11	N/A	N/A	N/A	The Transmission Operator did not act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's

	Lower	Moderate	High	Severe
				$T_{v,}$ or of an SOL identified in Requirement R8.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2	TBD	Revisions pursuant to Project 2007-03	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.
12. Seventh posting of revised standard on March 22, 2012.

Proposed Action Plan and Description of Current Draft:
The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that 3 requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	~~3~~2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated on a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.

Reliability Directive — A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

A. Introduction

1. **Title:** **Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:** To prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences.

4. **Applicability**

   4.1. Balancing Authority

   4.2. Transmission Operator

   4.3. Generator Operator

   4.4. Distribution Provider

   4.5. Load-Serving Entity

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities..

B. Requirements

R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: ~~Operations Planning,~~ Same-day Operations, Real-Time Operations]*

R2. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations]*

R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. *[Violation Risk Factor: High] [Time Horizon: Operations Planning,]*

R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations are relay or equipment failures, and changes in generation, Transmission, or Load. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.** *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

Rationale: The class of SOL included in Requirements R8, R9, and R11 was created in response to industry comments that there were SOLs that deserved increased attention. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.

R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

C. Measures

M1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence that it complied with each Reliability Directive issued and identified as such by the Transmission Operator(s) unless such action would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M2. Each Balancing Authority, Generation Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence which may include, but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Transmission Operator of its inability to comply with identified, Reliability Directive(s) issued in accordance with Requirement R2. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M3. Each Transmission Operator shall make available, upon request, evidence that it has informed its Reliability Coordinator and Transmission Operators that it knew or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis in accordance with Requirement R3. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M4. Each Transmission Operator shall make available, upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R4, unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M5. Each Transmission Operator shall make available, upon request, evidence that it informed its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas in accordance with Requirement R5, unless conditions did not permit such communications. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M6. Each Balancing Authority and Transmission Operator shall make available, upon request, evidence that it notified its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment, and associated communication channels in accordance with Requirement R6. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Balancing Authority or Transmission Operator may provide an attestation that an event has not occurred.

M7. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v as specified in Requirement R7. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M8. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis in accordance with Requirement R8. Such evidence could include, but is not limited to, an electronic or hard copy of information from the Operational Planning Analysis used in its assessment, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M9. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an SOL for a continuous duration that would cause a violation of the Facility

Rating or Stability criteria upon which it is based, as specified in Requirement R8 and in Requirement R9. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M10. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded in accordance with Requirement R10. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M11. Each Transmission Operator shall make available evidence of when it acted or directed others to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8, in accordance with Requirement R11. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

Exception Reporting

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall each keep data or evidence for each applicable Requirement R1 through R6, R8, and R10 through R11 and Measure M1 through M6, M8, and M10 through M11 for the current calendar year and one previous calendar year,

with the exception of voice recordings which shall be retained for a minimum of ~~ninety~~ 90 calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has exceeded an identified IROL and its associated IROL T_v or SOL identified in Requirement R8 as specified in Requirements R7 and R9 and Measurements M7 and M9.

If a Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, or Load-Serving Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

	Lower	Moderate	High	Severe
				entity had implemented its comparable emergency procedures, and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R5	The Transmission Operator did not inform one other Transmission Operator, or 5% or less of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform two other Transmission Operators, or more than 5% ~~or~~and less than or equal to 10% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform three other Transmission Operators, or more than 10% ~~or~~and less than or equal to 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform its Reliability Coordinator of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications. OR The Transmission Operator did not inform four or more other Transmission Operators, or more than 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications.
R6	The responsible entity did not notify one negatively-impacted interconnected NERC-registered entity, or 5% or less of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify two negatively-impacted interconnected NERC-registered entities, or more than 5% ~~or~~and less than or equal to 10% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify three negatively-impacted interconnected NERC-registered entities, or more than 10% ~~or~~and less than or equal to 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment and associated communication channels between the affected entities.	The responsible entity did not notify its Reliability Coordinator of a planned outage of telemetering equipment, control equipment, and associated communication channels. OR, The responsible entity did not notify four or more negatively-impacted interconnected NERC-registered entities, or more than 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering and

	Lower	Moderate	High	Severe
				control equipment and associated communication channels between the affected entities.
R7	N/A	N/A	N/A	The Transmission Operator exceeded an identified Interconnection Reliability Operating Limit (IROL) for a continuous duration greater than its associated IROL T_v.
~~For the Requirement R8 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.~~				
R8	The Transmission Operator did not inform its Reliability Coordinator of one SOL, or 5% or less of the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs, or more than 5% ~~or~~and less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs, or more than 10% ~~or~~and less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs, or more than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**
R9	N/A	N/A	N/A	The Transmission Operator exceeded a System Operating Limit (SOL), as identified in Requirement R8, for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R10	N/A	N/A	N/A	The Transmission Operator did not inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, had been exceeded.

	Lower	Moderate	High	Severe
R11	N/A	N/A	N/A	The Transmission Operator did not act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's $T_{v,}$ or of an SOL identified in Requirement R8.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.
12. Seventh posting of revised standard on March 22, 2012.

Proposed Action Plan and Description of Current Draft:
The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that three requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements and will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that Transmission Operators have plans for operating within specified limits.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have evidence of a completed Operational Planning Analysis in accordance with Requirement R1. Such evidence could include, but is not limited to, dated power flow study results.

M2. Each Transmission Operator shall have evidence that it has developed a plan to operate within each IROL and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 in accordance with Requirement R2. Such evidence could include, but it is not limited to, plans for precluding operating in excess of each IROL and each SOL which, while not an IROL, was identified as a result of the Operational Planning Analysis.

M3. Each Transmission Operator shall have evidence that it notified all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Investigations

Self-Reporting

Complaints

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Transmission Operator shall keep data or evidence to show compliance for each Requirement for a rolling six-month period for analyses, the most recent 90 calendar days for voice recordings, and 12 months for operating logs and e-mail records, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not have an Operational Planning Analysis that represented projected System conditions allowing it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not develop a plan to operate within those IROLs and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1.
For the Requirement R3 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that Transmission Operators have plans for operating within specified limits.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have evidence of a completed Operational Planning Analysis in accordance with Requirement R1. Such evidence could include, but is not limited to, dated power flow study results.

M2. Each Transmission Operator shall have evidence that it has developed a plan to operate within each IROL and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 in accordance with Requirement R2. Such evidence could include, but it is not limited to, plans for precluding operating in excess of each IROL and each SOL which, while not an IROL, was identified as a result of the Operational Planning Analysis.

M3. Each Transmission Operator shall have evidence that it notified all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Investigations

Self-Reporting

Complaints

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Transmission Operator shall keep data or evidence to show compliance for each Requirement for a rolling six~~-~~month period for analyses, the most recent ~~three months~~90 calendar days for voice recordings, and 12 months for operating logs and e-mail records, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not have an Operational Planning Analysis that represented projected System conditions allowing it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**

2. **Number:** TOP-003-2

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their operational planning and Real-time monitoring responsibilities.

4. **Applicability**

   4.1. Transmission Operator.

   4.2. Balancing Authority.

   4.3. Generator Owner.

   4.4. Generator Operator.

   4.5. Interchange Authority.

   4.6. Load-Serving Entity.

   4.7. Transmission Owner.

   4.8. Distribution Provider.

5. **Effective Date:** All requirements, except Requirement R5, will become effective the first day of the first calendar quarter ten months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all the requirements, except Requirement R5, become effective the first day of the first calendar quarter ten months following Board of Trustees' adoption. Requirement R5 will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, Requirement R5 becomes effective the first day of the first calendar quarter twelve months following Board of Trustees' adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

B. Requirements

R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

1.1. A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses and Real-time monitoring.

1.2. A mutually-agreeable format.

1.3. A periodicity for providing data.

1.4. The deadline by which the respondent is to provide the indicated data.

R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

2.1. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring.

2.2. A mutually-agreeable format.

2.3. A periodicity for providing data.

2.4. The deadline by which the respondent is to provide the indicated data.

R3. Each Transmission Operator shall distribute its data specification, as developed in Requirement R1,to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority shall distribute its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall make available its dated, current, in-force documented specification for data in accordance with Requirement R1.

M2. Each Balancing Authority shall make available its dated, current, in-force documented specification for data in accordance with Requirement R2.

M3. Each Transmission Operator shall make available evidence that it has distributed its data specification, as developed in Requirement R1,to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R3. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M4. Each Balancing Authority shall make available evidence that it has distributed its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall make available evidence that it has satisfied the obligations of the documented specifications for data, in accordance with Requirement R5. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each responsible entity shall keep data or evidence to show compliance, as identified below, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator shall retain its dated, current, in-force, documented specification for the data necessary for it to perform their Operational Planning Analyses and Real-time monitoring, in accordance with Requirement R1 and Measurement M1, as well as any documents in force since the last compliance audit.
- Each Balancing Authority shall retain its dated, current, in-force, documented specification for the data necessary for it to perform their analysis functions and Real-time monitoring, in accordance with Requirement R2 and Measurement M2, as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R1 to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4 and Measurement M4.

- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall retain evidence for the most recent 90 calendar days that it has satisfied the obligations of the documented specifications for data, in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The Transmission Operator did not include one of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include two of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include three of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include four of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring. OR, The Transmission Operator did not include a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.
R2	The Balancing Authority did not include one of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include two of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include three of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their analysis functions and Real-time monitoring.	The Balancing Authority did not include four of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their analysis functions and Real-time monitoring. OR, The Balancing Authority did not include a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.
For the Requirement R3 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.				
R3	The Transmission Operator did not distribute its data specification, as developed in Requirement R1 to one entity, or 5% or less of the entities, whichever is less, that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring	The Transmission Operator did not distribute its data specification, as developed in requirement R1 to two entities, or more than 5% and less than or equal to10% of the reliability entities, whichever is less, that have data required by the Transmission Operator's Operational Planning	The Transmission Operator did not distribute its data specification, as developed in Requirement R1 to three entities, or more than 10% and less than or equal to 15% of the reliability entities, whichever is less, that have data required by the	The Transmission Operator did not distribute its data specification, as developed in Requirement R1 to four or more entities, or more than 15% of the entities, whichever is less, that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring

	process used in meeting its NERC-mandated reliability requirements.	Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements.	Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements.	process used in meeting its NERC-mandated reliability requirements.
For the Requirement R4 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.				
R4	The Balancing Authority did not distribute its data specification, as developed in Requirement R2 to one entity, or 5% or less of the entities, whichever is less, that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements.	The Balancing Authority did not distribute its data specification, as developed in Requirement R2 to two entities, or more than 5% and less than or equal to 10% of the entities, whichever is less, that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements.	The Balancing Authority did not distribute its data specification, as developed in Requirement R2 to three entities, or more than 10% and less than or equal to 15% of the entities, whichever is less, that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements .	The Balancing Authority did not distribute its data specification, as developed in Requirement R2 to four or more entities, or more than 15% of the entities, whichever is less,that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements.
R5	N/A	N/A	N/A	The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy the obligations of the documented specifications for data.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	TBD	Changes pursuant to Project 2007-03	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.
~~11.~~12. Seventh posting of revised standard on March 22, 2012.

Proposed Action Plan and Description of Current Draft:
The SDT began meeting in January 2008, following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. -As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that ~~3~~ three requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements and will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	~~3~~2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**

2. **Number:** TOP-003-2

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their operational planning and Real-time monitoring responsibilities.

4. **Applicability**

   4.1. Transmission Operator.

   4.2. Balancing Authority.

   4.3. Generator Owner.

   4.4. Generator Operator.

   4.5. Interchange Authority.

   4.6. Load-Serving Entity.

   4.7. Transmission Owner.

   4.8. Distribution Provider

5. **Effective Date:** All requirements, except Requirement R5, will become effective the first day of the first calendar quarter ten months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all the requirements, except Requirement R5, become effective the first day of the first calendar quarter ten months following Board of Trustees' adoption. -Requirement R5 will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, Requirement R5 becomes effective the first day of the first calendar quarter twelve months following Board of Trustees' adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

B. Requirements

R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

1.1. A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses and Real-time monitoring.

1.2. A mutually ~~-~~agreeable format.

1.3. A periodicity for providing data.

1.4. The deadline by which the respondent is to provide the indicated data.

R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

2.1. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring.

2.2. A mutually ~~-~~agreeable format.

2.3. A periodicity for providing data.

2.4. The deadline by which the respondent is to provide the indicated data.

R3. Each Transmission Operator shall distribute its data specification, as developed in Requirement R1, to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority shall distribute its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall make available its dated, current, in-~~-~~force documented specification for data in accordance with Requirement R1.

M2. Each Balancing Authority shall make available its dated, current, in-~~-~~force documented specification for data in accordance with Requirement R2.

M3. Each Transmission Operator shall make available evidence that it has distributed its data specification, as developed in Requirement R1, to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R3. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M4. Each Balancing Authority shall make available evidence that it has distributed its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall make available evidence that it has satisfied the obligations of the documented specifications for data, in accordance with Requirement R5. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each responsible entity shall keep data or evidence to show compliance, as identified below, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator shall retain its dated, current, in-~~-~~force, documented specification for the data necessary for it to perform their Operational Planning Analyses and Real-time monitoring, in accordance with Requirement R1 and Measurement M1, as well as any documents in force since the last compliance audit.
- Each Balancing Authority shall retain its dated, current, in-~~-~~force, documented specification for the data necessary for it to perform their analysis functions and Real-time monitoring, in accordance with Requirement R2 and Measurement M2, as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R1 to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4 and Measurement M4.

- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall retain evidence for the most recent 90 calendar days that it has satisfied the obligations of the documented specifications for data~~,~~ in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The Transmission Operator did not include one of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include two of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include three of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include four of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring. OR, The Transmission Operator did not include a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.
R2	The Balancing Authority did not include one of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include two of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include three of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their analysis functions and Real-time monitoring.	The Balancing Authority did not include four of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their analysis functions and Real-time monitoring. OR, The Balancing Authority did not include a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.
For the Requirement R3 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.				
R3	The Transmission Operator did not distribute its data specification, as developed in Requirement R1 to one entity, or 5% or less of the entities, whichever is less, that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring	The Transmission Operator did not distribute its data specification, as developed in requirement R1 to two entities, or more than 5% and less than or equal to10% of the reliability entities, whichever is less, that have data required by the Transmission Operator's Operational Planning	The Transmission Operator did not distribute its data specification, as developed in Requirement R1 to three entities, or more than 10% and less than or equal to 15% of the reliability entities, whichever is less, that have data required by the	The Transmission Operator did not distribute its data specification, as developed in Requirement R1 to four or more entities, or more than 15% of the entities, whichever is less, that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring

R5	N/A	N/A	N/A	The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy the obligations of the documented specifications for data.

E. **Regional Variances**

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	TBD	Changes pursuant to Project 2007-03	Revised

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Implementation Plan

Project 2007-03 Real-time Operations

Prerequisite Approvals

Some changes made in this project are dependent on corresponding changes being approved in:

- Project 2006-06, Reliability Coordination:
  - IRO-001-3 - Reliability Coordination – Responsibilities and Authorities
  - IRO-005-4 - Reliability Coordination – Current Day Operations
- Project 2007-09, Generator Verification:
  - MOD-025-2 - Verification and Data Reporting of Generator Real and Reactive Power Capability

TOP-001-2: Transmission Operations, TOP-002-3: Operations Planning and TOP-003-1: Operational Reliability Data cannot be implemented until all three of the above standards have been implemented.

Revision to Sections of Approved Standards and Definitions

There are no new definitions in the proposed set of standards.

Two drafting teams (Project 2006-06 and Project 2007-03) have coordinated on a common definition of Reliability Directive and agreed that the Reliability Coordination Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference.

> **Reliability Directive** - A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

Compliance with Standard

There are three standards associated with this project for which industry approval will be requested: TOP-001-2: Transmission Operations, TOP-002-3: Operations Planning, and TOP-003-1: Operational Reliability Data.

Standard	Functions that must Comply with the Associated Requirements							
	TOP	BA	GO	GOP	IA	LSE	DP	TO
PER-001-0: Operating Personnel Responsibility and Authority	Retired							

TOP-001-2: Transmission Operations	X	X		X		X	X	
TOP-002-3: Operations Planning	X							
TOP-003-1: Operational Reliability Data	X	X	X	X	X	X	X	X
TOP-004-2: Real-Time Transmission Operations	Retired							
TOP-005-2: Operational Reliability Data	Retired							
TOP-006-1: Monitoring System Conditions	Retired							
TOP-007-0: Reporting System Operating Limits (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	Retired							
TOP-008-1: Response to Transmission Limit Violations	Retired							
PRC-001-2	Retired Requirements R2, R5, and R6.							

The effective date is the date entities are expected to meet the performance identified in these standards. Note that entities have been given several months beyond the regulatory approval date (preparation time) to fully comply with new requirements.

Effective Date of Revised Standards

All requirements except TOP-003-2, Requirements R1 and R2 will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all the requirements except TOP-003-2, Requirements R1 and R2 become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

Requirements R1 and R2 of TOP-003-2 will become effective the first day of the first calendar quarter ten months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, Requirements R1 and R2 of TOP-003-2 become effective the first day of the first calendar quarter ten months following Board of Trustees approval.

The twelve month period is to allow for entities to update processes and train operators on the revised requirements. The two month differential for TOP-003-2, Requirements R1 and R2 is to provide time for recipients of a data specification to respond to the request for data.

Retirement Date for Existing Standards

The existing Standards shall be retired at midnight of the day immediately prior to the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements will be retired at midnight of the day immediately prior to the first day of the first calendar quarter twelve months following Board of Trustees adoption.

Implementation Plan

Project 2007-03 Real-time Operations

Prerequisite Approvals

Some changes made in this project are dependent on corresponding changes being approved in:

- Project 2006-06, Reliability Coordination:
  - IRO-001-3~~:~~ - Reliability Coordination – Responsibilities and Authorities
  - IRO-005-4~~:~~ - Reliability Coordination – Current Day Operations
- Project 2007-09, Generator Verification:
  - MOD-025-2 - Verification and Data Reporting of Generator Real and Reactive Power Capability

TOP-001-2: Transmission Operations, TOP-002-3: Operations Planning and TOP-003-1: Operational Reliability Data cannot be implemented until all three of the above standards have been implemented.

Revision to Sections of Approved Standards and Definitions

There are no new definitions in the proposed set of standards.

Two drafting teams (Project 2006-06 and Project 2007-03) have coordinated on a common definition of Reliability Directive and agreed that the Reliability Coordination Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference.

> **Reliability Directive** - A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

Compliance with Standard

There are three standards associated with this project for which industry approval will be requested: TOP-001-2: Transmission Operations, TOP-002-3: Operations Planning, and TOP-003-1: Operational Reliability Data.

Standard	Functions that must Comply with the Associated Requirements							
	TOP	BA	GO	GOP	IA	LSE	DP	TO
PER-001-0: Operating Personnel Responsibility and Authority	Retired							

TOP-001-2: Transmission Operations	X	X		X		X	X	
TOP-002-3: Operations Planning	X							
TOP-003-1: Operational Reliability Data	X	X	X	X	X	X	X	X
TOP-004-2: Real-Time Transmission Operations	Retired							
TOP-005-2: Operational Reliability Data	Retired							
TOP-006-1: Monitoring System Conditions	Retired							
TOP-007-0: Reporting System Operating Limits (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	Retired							
TOP-008-1: Response to Transmission Limit Violations	Retired							
PRC-001-2	Retired Requirements R2, R5, and R6.							

The effective date is the date entities are expected to meet the performance identified in these standards. Note that entities have been given several months beyond the regulatory approval date (preparation time) to fully comply with new requirements.

Effective Date of Revised Standards

All requirements except TOP-003-2, Requirements R1 and R2 will become effective the first day of the first calendar quarter ~~twenty-four~~twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all the requirements except TOP-003-2, Requirements R1 and R2 become effective the first day of the first calendar quarter ~~twenty-four~~twelve months following Board of Trustees adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

Requirements R1 and R2 of TOP-003-2 will become effective the first day of the first calendar quarter ten months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, Requirements R1 and R2 of TOP-003-2 become effective the first day of the first calendar quarter ten months following Board of Trustees approval.

The ~~twenty-four~~twelve month period is to allow for entities to update processes~~, develop data specifications,~~ and train operators on the revised requirements. The two month differential for TOP-

003-2, Requirements R1 and R2 is to provide time for recipients of a data specification to respond to the request for data.

Retirement Date for Existing Standards

The existing Standards shall be retired at midnight of the day immediately prior to the first day of the first calendar quarter ~~twenty-four~~twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements will be retired at midnight of the day immediately prior to the first day of the first calendar quarter ~~twenty-four~~twelve months following Board of Trustees adoption.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Note: The Project 2007-03 SDT is recommending retirement of three requirements in PRC-001-1 because those requirements address data and data requirements, which is covered in TOP-003-2. This redline shows the retired requirements, and a mapping document showing the approved requirements in PRC-001 and the proposed disposition of those requirements is posted on the Project 2007-03 page. The ballot of the conforming changes to PRC-001 is associated with the approval of TOP-003-2 and the implementation plan for this project.

More complete revisions to PRC-001 are addressed in the scope of Project 2007-06 SDT.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that 3 requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	3Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **System Protection Coordination**

2. **Number:** PRC-001-2

3. **Purpose:**

   To ensure system protection is coordinated among operating entities.

4. **Applicability**

   4.1. Balancing Authorities

   4.2. Transmission Operators

   4.3. Generator Operators

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator, Balancing Authority, and Generator Operator shall be familiar with the purpose and limitations of protection system schemes applied in its area. *[Violation Risk factor: High][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

R2. A Generator Operator or Transmission Operator shall coordinate new protective systems and changes as follows.

R2.1. Each Generator Operator shall coordinate all new protective systems and all protective system changes with its Transmission Operator and Host Balancing Authority. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

R2.2. Each Transmission Operator shall coordinate all new protective systems and all protective system changes with neighboring Transmission Operators and Balancing Authorities. *[Violation Risk Factor: High]][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

R3. Each Transmission Operator shall coordinate protection systems on major transmission lines and interconnections with neighboring Generator Operators, Transmission Operators, and Balancing Authorities. *[Violation Risk Factor: High]][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

C. Measures

M1. Each Generator Operator and Transmission Operator shall have and provide upon request evidence that could include but is not limited to, revised fault analysis study, letters of agreement on settings, notifications of changes, or other equivalent evidence that will be used to confirm that there was coordination of new protective systems or changes as noted in Requirements 2, 2.1, and 2.2.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Generator Operator and Transmission Operator shall have current, in-force documents available as evidence of compliance for Measure 1.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

1.4. Compliance Monitoring and Assessment Processes

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)

- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

Reqmt. #	VRF	Time Horizon	Lower	Moderate	High	Severe
R1	High	Operations Planning, Same-day Operations, Real-time Operations	N/A	N/A	The responsible entity failed to be familiar with the limitations of protection system schemes applied in its area.	The responsible entity failed to be familiar with the purpose of protection system schemes applied in its area.
R2	N/A	N/A	N/A	N/A	N/A	N/A
R2.1	High	Operations Planning, Same-day Operations, Real-time Operations	The Generator Operator failed to coordinate one new protective system or protective system change with either its Transmission Operator or its Host Balancing Authority or both.	The Generator Operator failed to coordinate two new protective systems or protective system changes with either its Transmission Operator or its Host Balancing Authority, or both.	The Generator Operator failed to coordinate three new protective systems or protective system changes with either its Transmission Operator or its Host Balancing Authority, or both.	The Generator Operator failed to coordinate more than three new protective systems or protective system changes with its Transmission Operator or its Host Balancing Authority, or both.
R2.2	High	Operations Planning, Same-day Operations, Real-time Operations	The Transmission Operator failed to coordinate one new protective system or protective system change with neighboring Transmission Operators or Balancing Authorities or both.	The Transmission Operator failed to coordinate two new protective systems or protective system changes with neighboring Transmission Operators or Balancing Authorities or both.	The Transmission Operator failed to coordinate three new protective systems or protective system changes with neighboring Transmission Operators or Balancing Authorities or both.	The Transmission Operator failed to coordinate more than three new protective systems or protective system changes with neighboring Transmission Operators or Balancing Authorities or both.
R3	High	Operations Planning,	The Transmission	The Transmission	The Transmission	The Transmission

		Same-day Operations, Real-time Operations	Operator failed to coordinate protection systems on major transmission lines and interconnections with one of its neighboring Generator Operators, Transmission Operators, or Balancing Authorities.	Operator failed to coordinate protection systems on major transmission lines and interconnections with two of its neighboring Generator Operators, Transmission Operators, or Balancing Authorities.	Operator failed to coordinate protection systems on major transmission lines and interconnections with three of its neighboring Generator Operators, Transmission Operators, or Balancing Authorities.	Operator failed to coordinate protection systems on major transmission lines and interconnections with three or more of its neighboring Generator Operators, Transmission Operators, and Balancing Authorities.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
0	August 25, 2005	Fixed Standard number in Introduction from PRC-001-1 to PRC-001-0	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2	TBD	Delete data requirements as they are now handled in TOP-003-2.	Deleted Requirements 2, 5, and 6.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Note: The Project 2007-03 SDT is recommending retirement of three requirements in PRC-001-1 because those requirements address data and data requirements, which is covered in TOP-003-2. This redline shows the retired requirements, and a mapping document showing the approved requirements in PRC-001 and the proposed disposition of those requirements is posted on the Project 2007-03 page. The ballot of the conforming changes to PRC-001 is associated with the approval of TOP-003-2 and the implementation plan for this project.

More complete revisions to PRC-001 are addressed in the scope- of Project 2007-06 SDT.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that 3 requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	3Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **System Protection Coordination**
2. **Number:** PRC-001-~~1~~2
3. **Purpose:**

   To ensure system protection is coordinated among operating entities.

4. **Applicability**

   4.1. Balancing Authorities

   4.2. Transmission Operators

   4.3. Generator Operators

5. **Effective Date:** ~~January 1, 2007~~ All requirements become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator, Balancing Authority, and Generator Operator shall be familiar with the purpose and limitations of protection system schemes applied in its area. *[Violation Risk factor: High]* *[Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

~~**R2.** Each Generator Operator and Transmission Operator shall notify reliability entities of relay or equipment failures as follows:~~

~~**R2.1.** If a protective relay or equipment failure reduces system reliability, the Generator Operator shall notify its Transmission Operator and Host Balancing Authority. The Generator Operator shall take corrective action as soon as possible.~~

~~**R2.2.** If a protective relay or equipment failure reduces system reliability, the Transmission Operator shall notify its Reliability Coordinator and affected Transmission Operators and Balancing Authorities. The Transmission Operator shall take corrective action as soon as possible.~~

~~**R3.**~~**R2.** A Generator Operator or Transmission Operator shall coordinate new protective systems and changes as follows.

~~**R3.1.**~~**R2.1.** Each Generator Operator shall coordinate all new protective systems and all protective system changes with its Transmission Operator and Host Balancing Authority. *[Violation Risk Factor: High]* *[Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

~~**R3.2.**~~**R2.2.** Each Transmission Operator shall coordinate all new protective systems and all protective system changes with neighboring Transmission Operators and Balancing Authorities. *[Violation Risk Factor: High]* *][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

~~R4.~~R3. Each Transmission Operator shall coordinate protection systems on major transmission lines and interconnections with neighboring Generator Operators, Transmission Operators, and Balancing Authorities. *[Violation Risk Factor: High]][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

~~**R5.** A Generator Operator or Transmission Operator shall coordinate changes in generation, transmission, load or operating conditions that could require changes in the protection systems of others:~~

~~**R5.1.** Each Generator Operator shall notify its Transmission Operator in advance of changes in generation or operating conditions that could require changes in the Transmission Operator's protection systems.~~

~~**R5.2.** Each Transmission Operator shall notify neighboring Transmission Operators in advance of changes in generation, transmission, load, or operating conditions that could require changes in the other Transmission Operators' protection systems.~~

~~**R6.** Each Transmission Operator and Balancing Authority shall monitor the status of each Special Protection System in their area, and shall notify affected Transmission Operators and Balancing Authorities of each change in status.~~

C. Measures

M1. Each Generator Operator and Transmission Operator shall have and provide upon request evidence that could include but is not limited to, revised fault analysis study, letters of agreement on settings, notifications of changes, or other equivalent evidence that will be used to confirm that there was coordination of new protective systems or changes as noted in Requirements ~~3~~2, ~~3~~2.1, and ~~3~~2.2.

M2. ~~Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, documentation, electronic logs, computer printouts, or computer demonstration or other equivalent evidence that will be used to confirm that it monitors the Special Protection Systems in its area. (Requirement 6 Part 1)~~

M3. ~~Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, operator logs, phone records, electronic-notifications or other equivalent evidence that will be used to confirm that it notified affected Transmission Operator and Balancing Authorities of changes in status of one of its Special Protection Systems. (Requirement 6 Part 2)~~

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance ~~Monitoring Responsibility~~Enforcement Authority

The Regional ~~Reliability Organizations~~ Entity shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Generator Operator and Transmission Operator shall have current, in-force documents available as evidence of compliance for Measure 1.

~~Each Transmission Operator and Balancing Authority shall keep 90 days of historical data (evidence) for Measures 2 and 3.~~

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

1.4. Compliance Monitoring and Assessment Processes

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the

preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

~~1.4.~~1.5. Additional Compliance Information

None.

2. ~~Levels of Non-Compliance for Generator Operators:~~Violation Severity Levels

~~**2.1. Level 1:** Not applicable.~~

~~**2.2. Level 2**: Not applicable.~~

~~**2.3. Level 3:** Not applicable.~~

~~**2.4. Level 4:** Failed to provide evidence of coordination when installing new protective systems and all protective system changes with its Transmission Operator and Host Balancing Authority as specified in R3.1.~~

~~3. Levels of Non-Compliance for Transmission Operators:~~

~~**3.1. Level 1:** Not applicable.~~

~~**3.2. Level 2**: Not applicable.~~

~~**3.3. Level 3:** Not applicable.~~

~~**3.4. Level 4:** There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~**3.4.1** Failed to provide evidence of coordination when installing new protective systems and all protective system changes with neighboring Transmission Operators and Balancing Authorities as specified in R3.2.~~

~~**3.4.2** Did not monitor the status of each Special Protection System, or did not notify affected Transmission Operators, Balancing Authorities of changes in special protection status as specified in R6.~~

~~4. Levels of Non-Compliance for Balancing Authorities:~~

~~**4.1. Level 1:** Not applicable.~~

~~**4.2. Level 2**: Not applicable.~~

~~**4.3. Level 3:** Not applicable.~~

~~**Level 4:** Did not monitor the status of each Special Protection System, or did not notify affected Transmission Operators, Balancing Authorities of changes in special protection status as specified in R6.~~

Comment Form for 7th Draft of Standards

Project 2007-03 Real-time Operations

Please **DO NOT** use this form for submitting comments. Please use the electronic form to submit comments on the 7th draft and successive ballot of the standards for Real-time Operations (Project 2007-03) must be submitted by **April 20, 2012**. If you have questions please contact Ed Dobrowolski at ed.dobrowolski@nerc.net or by telephone at (609) 947-3673.

Background Information:

This posting represents a successive ballot for TOP-001-2, TOP-002-3, and TOP-003-2.

In the 7th posting for Project 2007-03, the Real-time Operations Standard Drafting Team (RTOSDT) has attempted to clarify the proposed changes to the TOP family of standards based on industry comments received for the 6th posting and suggestions made during the Quality Review. Changes made were:

TOP-001-2:

- Requirement R1 – Allowed for plural Transmission Operators and deleted second instance of 'identified'
- Requirement R6 – changed 'the' to 'its' Reliability Coordinator
- Requirement R8 – changed 'internal area ' to 'internal to its Transmission Operator Area'; changed the Time Horizon to only Operations Planning
- Requirement R10 – changed 'each' SOL to 'an' SOL
- Data Retention – Changed voice recordings to 90 calendar days from three calendar months
- Revised VSLs for Requirements R1, R3, R5, and R10

TOP-002-3:

- Requirement R2 - changed 'internal area ' to 'internal to its Transmission Operator Area'

TOP-003-1:

- Applicability – added Distribution Provider
- Requirement R2 – added analysis functions for the Balancing Authority
- Requirement R3 – Cited the tie to Requirement R1 and made the language in Requirement R3 consistent with that in Requirement R1
- Requirement R4 - Cited the tie to Requirement R2 and made the language in Requirement R4 consistent with that in Requirement R2
- Requirement R5 – added Distribution Provider
- Measures M3 and M4 – clarified the web posting item of evidence

- Revised VSLs for Requirements R1, R2, R3,and R4

The Implementation Plan and effective dates for all three standards now show a twelve month compliance period for all requirements except Requirements R1, R2, R3, and R4 of TOP-003-2 which will become effective ten months from the approval date.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The SDT made changes to TOP-001-2 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☐ No

   Comments:

2. The SDT made changes to TOP-002-3 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☐ No

   Comments:

3. The SDT made changes to TOP-003-2 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☐ No

   Comments:

4. The SDT is suggesting the retirement of three requirements in PRC-001 since those requirements deal with data handling and can now be incorporated in the data specification concept suggested for TOP-003-2. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

☐ No

Comments:

5. The VRF, VSL, and Time Horizons are part of a non-binding poll. Please indicate whether you agree or disagree with the VRF, VSL, and Time Horizon assignments. If you do not support these assignments or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☐ No

   Comments:

6. If you have any other comments on these standards that you have not already provided in response to the prior questions, please provide them here.

   Comments:

Resolution of Issues Assigned to Project 2007-03 Real-time Operations Standard Drafting Team

Standard	Source	Language	Resolution
TOP-001			
TOP-001-1	FERC Order 693	1580 - Consider adding other measures and levels of non-compliance.	Measures and VSLs have been assigned to all requirements.
TOP-001-1	FERC Order 693	1585 - Clarify the definition of "emergency" and define the criteria for entering into the various states. Also define the authority for declaring these states.	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03 which has not yet started. The TOP standards have been re-written to specifically address what a Transmission Operator is responsible for. The proposed TOP requirements are no longer restricted to the undefined term 'operating emergency' and are now more inclusive and stringent than the previous requirement. Indeed, the undefined term 'operating emergency' is no longer utilized in the proposed revisions. Therefore, any delay in defining operating states in the EOP Project has no effect on the TOP standards.
TOP-001-1	FERC Order 693	1588 - Consider Santa Clara's comments to provide that the transmission operator may	This is covered in proposed TOP-001-2, Requirement R5.

Standard	Source	Language	Resolution
		notify the reliability coordinator or the balancing authority that it is removing facilities from service as part of the standards development process.	
TOP-001-1	Version 0 Team	What is 'clear decision making authority'?	Requirement using this term was deleted as not needed in a reliability standard. The standards already require the necessary actions.
TOP-001-1	Version 0 Team	Need to define single, central communications point during emergencies	This is an issue for COM standards.
TOP-001-1	Version 0 Team	Some emergencies will require follow up notification as opposed to immediate	Requirements have been re-written to eliminate confusion.
TOP-001-1	Version 0 Team	Define emergency	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03 which has not yet started.
TOP-001-1	Version 0 Team	Need to expand included entities	Applicability has been reviewed by the SDT and changed as required.
TOP-002			
TOP-002-2	FERC Order 693	1600 - Address critical energy infrastructure confidentiality as part of the routine standard development process.	Restrictions due to confidentiality have been eliminated by re-writing the data specification requirements in proposed TOP-003-2.

Standard	Source	Language	Resolution
TOP-00-2	FERC Order 693	1601 – Require next day analysis for all IROLs to identify and communicate control actions to system operators	See proposed TOP-002-3, Requirements R1, R2, and R3.
TOP-002-2	FERC Order 693	1603 - Requires next-day analysis of minimum voltages at nuclear power plants auxiliary power buses.	Next day analysis is required in proposed TOP-002-3, R1. A specified minimum voltage limit is by definition an SOL which must be studied in proposed TOP-002-3, Requirement R1. Additionally, approved NUC-001-2, Requirements R3 & R4.1 require the transmission entity to incorporate NPIRs in their planning and operating analyses. Approved FAC-011-2 and approved FAC-014-2, Requirement R2 require the Transmission Operator to incorporate SOLs into their analyses. All data required for Operational Planning Analyses is stipulated in proposed TOP-003-2. Approved NUC-001-2, Requirements R3 & R8 covers the information flowing back to the nuclear plant operator.
TOP-002-2	FERC Order 693	1604/1608 - Requires simulation contingencies to match what will actually happen in the field.	This is covered in proposed TOP-002-3, Requirement R1 by the phrase "and shall represent projected System conditions".
TOP-002-2	FERC Order 693	1606 - Commenters did not take issue with the proposed interpretation of the term "deliverability" as "the ability to deliver the output from generation resources to firm load without any reliability criteria violations for plausible generation dispatches."[1] The Commission adopts this proposed	Deliverability and limits are included in Operational Planning Analysis in TOP-002-3, Requirement R1. Operational Planning Analysis contains deliverability and much more and is thus more stringent than the Order. Limit violations in the Operational Planning Analysis will show any deliverability problems regardless of type and proposed requirements mandate

[1] Id. at P 974.

Standard	Source	Language	Resolution
		interpretation. In order to ensure the necessary clarity, the term as used in Requirement R7 of TOP-002-2 should be understood in this manner.	that these issues be resolved. In addition, the proposed requirements clearly state that an individual entity, the Transmission Operator, is wholly responsible for these concerns which is an improvement over the previous vaguely worded requirement that placed this responsibility with the Balancing Authority which has no control over the issues involved.
TOP-002-1	Fill in the Blank Team	Remove "in accordance with NERC, Regional Reliability Organization, sub-regional, and local reliability requirements" from R6 and "in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes" from R12 .	Requirement R6 has been deleted. For the Balancing Authority – deleted as not applicable as the Balancing Authority needs only respond to CPS and DCS. For the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. Requirement R12 has been deleted as duplicative of MOD-030-2 (not yet approved).
TOP-002-2: R19	NERC Audit Observation Team	How do you address the term - verify “Accurate”	Requirement R19 was eliminated as unmeasurable.
TOP-002-2	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R5 of PRC-001-1 in TOP-002 R1, R3, R4, or R5 or TOP-003 R1, R3, R4	See proposed TOP-003-2, Requirement R1.
TOP-002-1	Version 0 Team	Define N-1	Requirement R6 has been deleted.

Standard	Source	Language	Resolution
			For the Balancing Authority – deleted as not applicable as the Balancing Authority needs only respond to CPS and DCS. For the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. This term is no longer in use for this standard.
TOP-002-1	Version 0 Team	Define 'without intentional delay'	This term was considered unmeasurable and has been deleted from this standard.
TOP-002-1	Version 0 Team	Reliability should 'trump' confidentiality	The SDT has removed all references to confidentiality by re-writing the data specification requirements.
TOP-002-1	Version 0 Team	Coordination of planning required	The SDT has re-written and tightened up the requirements for distributing data and information.
TOP-002-1	Version 0 Team	Limit of 2 tests per year	This requirement has been deleted by the SDT as verification testing is not needed in this standard.
TOP-002-1	VRF Team	R9 – related to INT-003	Requirement R9 has been deleted as it is duplicative of approved INT-003-2
TOP-002-1	VRF Team	R14 & 14.1 – ambiguous	Deleted – duplicative of proposed TOP-003-2.
TOP-002-1	VRF Team	R2 – administrative in nature, not a real requirement	The SDT agreed and deleted this requirement.
TOP-003			
TOP-003-0	FERC Order 693	1620 & 1621 - Incorporate an appropriate lead time for planned outages using suggestions from the various commenters. We direct the ERO to modify the Reliability	The SDT posed a question on this issue as a fact finding exercise in the second posting of this project in order to assist them in making a decision on how to respond to the FERC directive as requested in Order 693 – "The ERO should utilize the information filed by

Standard	Source	Language	Resolution
		Standard to incorporate an appropriate lead time for planned outages.	commenters in the Reliability Standards development process." The majority of respondents indicated that they do not feel that there is a reliability based need for such a North American requirement. Several respondents pointed out that such a requirement (if needed at all for reliability) would be better suited to a regional standard and several others stated that such requirements already exist in their particular regions. There are several regions that have existing rules for lead times but they are all different and are based on the requirements of their regional markets. Any attempt to impose a North American standard runs the risk of interfering with those FERC approved markets. While NERC Reliability Standards are intended to promote reliability, they must at the same time accommodate competitive electricity markets. After reviewing the industry comments, the SDT concluded that proposed TOP-001-2, Requirements R5 & R6 adequately cover this issue. The SDT bases this position on the requirement which includes the Operations Planning Time Horizon that covers the period from one day to one year. The requirement mandates that actions are coordinated. The SDT interprets this to include planned outages when they are known. Therefore, the SDT has not included a standard lead time in the revised requirements.
TOP-003-0	FERC Order 693	1622 - Consider TVA's suggestion for including breaker outages within the	New data specifications in proposed TOP-003-2 handle this concern.

Standard	Source	Language	Resolution
		meaning of facilities that are subject to advance notice for planned outages.	
TOP-003-0	FERC Order 693	1624 - Require any facility, that in the opinion of the reliability coordinator, balancing authority, or transmission operator, will have a direct impact on the reliability of the bulk power system be subject to the requirement R1 for planned outage coordination.	New data specifications in proposed TOP-003-2, Requirement R1 (and bullets) handle this concern.
TOP-003-0	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R5 of PRC-001-1 in TOP-002 R1, R3, R4, or R5 or TOP-003 R1, R3, R4	See proposed TOP-003-2, Requirement R1
TOP-003-0	Version 0 Team	Outage information needed sooner than 1 day prior	New data specifications in proposed TOP-003-2 handle this concern.
TOP-003-0	Version 0 Team	RA can't request outage cancellation	Deleted – now covered in Project 2006-06.
TOP-003-0	Version 0 Team	Submit outage data ASAP but no later than noon day ahead	New data specifications in proposed TOP-003-2 handle this concern.
TOP-003-0	VRF Team	R4 – poorly written	Deleted – now covered in Project 2006-06.
TOP-003-1	FMPA – Frank Gaffney	With respect to requirement R1.2, why is the TOP responsible for providing generator outage information? Isn't that the BA's or GOP's responsibility and isn't this redundant with IRO-010-1?	Requirement deleted as duplicative of proposed TOP-003-2, R1.

Standard	Source	Language	Resolution
TOP-004			
TOP-004-1	FERC Order 693	1636 - Modify requirement R4 to state that the system should be restored to respect proven limits as soon as possible taking no more than 30 minutes.	Replaced by proposed TOP-001-2, R7 through R11. T_v is more stringent than the existing 30 minute requirement for IROLs and 30 minutes is retained for selected SOLs. Unknown states, in this context, cannot exist because valid operating limits have been determined for all Facilities in a TOP's footprint. The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to Emergencies.
TOP-004-1	FERC Order 693	1637 - Reliability coordinators should report any IROL violations to NERC on a monthly basis for one year beginning August 2, 2007.	Not within the scope of the SDT.
TOP-004-1	FERC Order 693	1638 - Defines high risk conditions under which the system must be operated to respect multiple outages in requirement R3. We direct the ERO to develop a modification to the Reliability Standard that explicitly incorporates this interpretation with the details identified in the Reliability Standards development process (. . .the Commission proposed to interpret "multiple outages" in the context of Requirement R3 to include multiple element outages resulting from high risk conditions such as hurricanes, wild fires, ice storms or	The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to the cited situations. The method chosen to respond to a given catastrophic challenge to a localized portion of the bulk power system cannot be predetermined by science; rather, it is an art. Reliability entities develop their response mechanisms based on experience in their local areas to achieve the maximum societal benefit during these periods. In addition, FAC-011-2 and FAC-014-2 deal with specific requirements for dealing with multiple contingencies.

Standard	Source	Language	Resolution
		periods of high solar magnetic disturbances during which the probability of multiple outages approaches that of a single element outage. This is not an exhaustive list but is meant to contain illustrative examples, and the Reliability Standards development process should develop a procedure to identify applicable high risk conditions. Under . . . high-risk conditions, the Commission understands that systems are normally operated in a more secure manner so that the Bulk-Power System can withstand multiple outages. These multiple outages exceed the normal N-1 criterion because the probability of multiple outages during high risk conditions approaches that of a single outage during normal conditions.)	
TOP-004-1	FERC Order 693	1639 - Consider Santa Clara's comments regarding changes to requirement R2 in the standards development process. (Santa Clara states that Requirement R2 of the Reliability Standard should be revised to include frequency monitoring in addition to the monitoring of voltage, real and reactive power flows.)	This is covered as part of the new data specification requirements in proposed TOP-003-2 for the Transmission Operator & Balancing Authority. The Reliability Coordinator is covered by proposed IRO-010-1, Requirement R3.
TOP-004-1	FERC Order 693	1641 - NERC should report the results of the survey to the Commission within 18 months	Not within the scope of the SDT.

Standard	Source	Language	Resolution
		of the effective date of this rule.	
TOP-004-1	Fill in the Blank Team	No action required	No action required.
TOP-004-1	Version 0 Team	Operations should conform to planning standards	Operations and planning are different timeframes with different problems and solutions
TOP-004-1	Version 0 Team	Vagueness in application of IROL limits	Requirement moved to proposed TOP-001-2, Requirement R5 and clarified.
TOP-004-1	Version 0 Team	Define SOL & IROL	These are defined terms in the NERC Glossary.
TOP-004-1	Version 0 Team	Clarify roles	Applicability has been reviewed and updated as necessary.
TOP-004-1	Version 0 Team	Define (or remove) practical	The term has been removed.
TOP-004-1	Version 0 Team	Specify disconnection as acceptable in R5	The requirement has been deleted. Relationships between the Reliability Coordinator and Transmission Operator as described in the revised standards cover these actions.
TOP-005			
TOP-005-1	FERC Order 693	1648 - Include information about the operational status of special protection systems and power system stabilizers in Attachment 1.	Attachment 1 has been deleted and replaced by the new data specification requirement in proposed TOP-003-2.
TOP-005-1	FERC Order 693	1649 - Delete references to confidentiality agreements but ensure critical energy infrastructure confidentiality is addressed in the standards development process.	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	FERC Order 693	1650 - Consider FirstEnergy’s modifications to Attachment 1 and ISO-NE’s recommended revision to requirement R4 in the standards	Attachment 1 has been deleted and replaced by the new data specification requirement in proposed TOP-003-2.

Standard	Source	Language	Resolution
		development process. ISO-NE recommends that the reference to "purchasing-selling entity" in Requirement R4 should be replaced with "generator owner, transmission owner, and LSE.	Requirement R4 has been superseded by proposed TOP-003-2 which does include the indicated entities.
TOP-005-1	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R2 of PRC-001-1 in TOP-005. Note: These requirements are being removed from PRC.	See proposed TOP-003-2, Requirement R1
TOP-005-1	Version 0 Team	Need to include GO & LSE	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	Version 0 Team	Data update is too slow	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	Version 0 Team	Generator data should include voltage control & stabilizers	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	Version 0 Team	GO needs to supply data to BA & TO	New data specifications in proposed TOP-003-2 handle this concern
TOP-005-1	Received for the November 4, 2009 Technical Conference on Interpretations of Standards	NERC staff believes that the interpretation does not support the stated purpose of IRO-005-1: "The Reliability Coordinator must be continuously aware of conditions within its Reliability Coordinator Area and include this information in its reliability assessments. The	While this issue was entered against the Transmission Operator as the interpretation request was primarily for TOP-005-1, the emphasis on such informative actions has shifted in current revision projects. The proposed IRO-010-1, Requirement R1 gives the Reliability Coordinator the right to ask for any reliability related data that they need to perform their Reliability Coordinator task.

Standard	Source	Language	Resolution
	from Manitoba Hydro	Reliability Coordinator must monitor BES parameters that may have significant impacts upon the Reliability Coordinator Area and neighboring Reliability Coordinator Areas." Given that Requirement R12 pre-supposes that the SPS is armed to address inter-Balancing Authority or inter-Transmission Operator impacts (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation), the argument not discussed in the interpretation is that the SPS itself with one communication channel in service can be viewed for advance planning or reliability assessment purposes as a single contingency (loss of the communication channel). The question asked by the requestor indicates that the operation of the SPS on a single channel is known ahead of the timeframe for which the SPS may be armed and that the condition was not first identified when the SPS was called to operate. In this regard, the Reliability Coordinator must be aware of the less dependable state of the SPS in order to properly assess the impact and plan for the next single contingency that it conceivably could	And it also mandates the Transmission Operator to provide said data in Requirement R3. (Note – This standard has been approved by the BOT but has not yet been approved by FERC.)

Standard	Source	Language	Resolution
		experience. In this case, the Reliability Coordinator may wish to consider the loss of an armed SPS when performing its reliability assessments. While the Reliability Coordinator may not elect to proactively position the system to withstand the loss of the SPS that is operating on a single communication channel, the Reliability Coordinator may elect to develop a contingency plan in the event the SPS does fail to operate as designed or if the remaining communication channel is lost. The importance of the SPS relative to current or anticipated system conditions would be considerations for the Reliability Coordinator. This consideration only becomes possible if the Transmission Operator notifies the Reliability Coordinator that the SPS is operating on a single communication channel. Therefore, Transmission Operator notification to the Reliability Coordinator of this condition raises the Reliability Coordinator's situational awareness that may influence current or future operating conditions or decisions in a preventive rather than reactive manner. NERC staff does agree that the SPS	

Standard	Source	Language	Resolution
		is still mission capable with only one communication channel in service, but degraded in terms of its dependability due to the unavailability of redundant communications channels. The fact that a second communications channel was part of the original design of the SPS suggests that both channels were important to the dependability of the system, and that the unavailability of either channel causes some degradation in the overall dependability of the SPS. Additionally, the team equated “any degradation” with “potential failure to operate as expected” in IRO-005. The use of the term “or” connecting these two phrases in the standard indicates these were not intended to be equivalent. Therefore, NERC staff believes the conclusion reached by the team that the two terms are synonymous is incorrect. Further, the specific circumstances contemplated in the interpretation request are not likely to occur often and the additional burden to Transmission Operators to notify the Reliability Coordinator is de minimis when compared to the improved situational awareness that would result. On	

Standard	Source	Language	Resolution
		this basis, NERC staff believes the interpretation is not serving the best interests of reliability and should be remanded to the team for further consideration of the NERC staff opinion.	
TOP-006			
TOP-006-1	FERC Order 693	1660 & 1661 - Add requirement related to the provision of minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the bulk power system.	Minimum capabilities for Transmission Operators are being handled in project 2009-02, Real-time Monitoring and Analysis Capabilities. Requirement for phase angle information is covered by proposed TOP-003-2.
TOP-006-1	FERC Order 693	1663 - Clarify the meaning of “appropriate technical information” concerning protective relays. To provide more clarity, criteria that define what “appropriate technical information” is necessary should be specified so that operators can make better informed decisions.	This term is no longer used. Requirement R3 deleted as duplicative of proposed PER-005-1 (training) and TOP-003-2 (data).
TOP-006-1	FERC Order 693	1664 - Consider APPA’s comments regarding missing measures in the standards development process.	Measures have been assigned to all requirements.
TOP-006-1	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards.	See proposed TOP-003-2, Requirement R1

Standard	Source	Language	Resolution
		Consider putting R6 of PRC-001-1 in TOP-003 R5 or TOP-006. Note: These requirements are being retired in PRC-001-1.	
TOP-006-1	Version 0 Team	Need to match roles with FM	Applicability has been reviewed by the SDT and changed as required in accordance with the FM and the Compliance Registry.
TOP-006-1	Version 0 Team	Monitor frequency at multiple points	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	Version 0 Team	Load forecasting data required	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	Version 0 Team	GO needs to provide normal & emergency data	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	VRFs Team	R1, 1.1, 1.2 – 'available in emergency situation' may be needed	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	VRFs Team	R3 – define appropriate	This requirement was deleted as duplicative of approved PRC-001-1, Requirement R1.
TOP-006-1	VRFs Team	R4 – What information is required and what is a load pattern?	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-2	FMPA – Frank Gaffney	With respect to requirements R1 and R1.2, why are BAs responsible for information regarding transmission resources available for use? Isn't that the role of the TOP?	Deleted – covered as part of the new data specification requirements in proposed TOP-003-2.
TOP-006-2	FMPA – Frank Gaffney	With respect to requirement R2, why is the BA responsible for monitoring transmission line status, voltage, load tap changer settings, and reactive power in general?	Deleted – SDT agrees.

Standard	Source	Language	Resolution
		Monitoring and managing reactive resources, voltage and tap settings is clearly made the responsibility of the TOP in VAR-001-1a.	
TOP-006-2	FMPA – Frank Gaffney	With respect to requirement R3 why does the BA need to understand protective relaying? Isn't that the role of the TOP and GOP?	Requirement R3 deleted as duplicative of proposed PER-005-1 (training) and proposed TOP-003-2 (data).
TOP-007			
TOP-007-0	FERC Order 693	1673 - Consider the NRC's comments on voltage requirements as part of the standards development process.	Next day analysis is required in proposed TOP-002-3, R1. A specified minimum voltage limit is by definition an SOL which must be studied in proposed TOP-002-3, Requirement R1. Additionally, approved NUC-001-2, Requirements R3 & R4.1 require the transmission entity to incorporate NPIRs in their planning and operating analyses. Approved FAC-011-2 and approved FAC-014-2, Requirement R2 require the Transmission Operator to incorporate SOLs into their analyses. All data required for Operational Planning Analyses is stipulated in proposed TOP-003-2. Approved NUC-001-2, Requirements R3 & R8 covers the information flowing back to the nuclear plant operator.
TOP-007-0	Version 0 Team	Need to define evidence of evaluation	This term isn't used in the requirements – no action required.
TOP-007-0	Version 0 Team	Need to tighten the non-compliance terms	Measures and VSL have been assigned to all requirements.
TOP-007-0	Version 0 Team	Not enforceable with current criteria	Not enough information provided to address concern.
TOP-007-0	Version 0 Team	RA should be included	Reliability Coordinator is now covered in Project 2006-06.

Standard	Source	Language	Resolution
TOP-007-0	Version 0 Team	More of a compliance issue than a true standard	Not enough information provided to address concern.
		TOP-008	
TOP-008-1	FERC Order 693	1681 - Consider APPA's comments regarding missing measures in the standards development process.	Measures have been assigned to all requirements.
		PER-001	
PER-001-0	Version 0 Team	Data retention should be 1 year	This standard will be retired.
		Transferred from Project	
PRC-001	Project 2007-06	1441- S- Ref 10339 - Clarify the term corrective action. 1440. We believe that [t]he transmission operator shall take corrective action as soon as possible refers to transmission operators taking operator control actions. It does not refer to troubleshooting, repairing or replacing failed relays or equipment, etc., since these time-consuming corrective actions would prolong the risk of cascading failures to the Bulk-Power System. 1441. We direct the ERO to clarify the term corrective action consistent with this discussion when it modifies PRC-001-1 in the Reliability Standards development process.	Addressed in Requirement R5 in proposed TOP-001-2 where the Transmission Operator coordinates its operations.
PRC-001	Project 2007-06	1444 - S- Ref 10340 - Consider First Energy and the California PUCs comments about the	Addressed in Requirement R5 in proposed TOP-001-2 where the Transmission Operator coordinates its operations. The

Standard	Source	Language	Resolution
		maximum time for corrective actions in the standards development process. 1428. California PUC contends that imposing a time restriction for returning a system to a stable state may cause more harm than good since additional information and options may be available as time elapses. It repeats its suggestion from its earlier comments on the Staff Preliminary Assessment and proposes the following alternative language: Transmission or generation operators shall carry out corrective control actions, i.e., returning the system to a stable state that respects system requirements as soon as possible, and no longer than 30 minutes, except where a longer response time is feasible, or where a longer response is demonstrated to produce a better ultimate solution without unacceptable interim risk. 1431. FirstEnergy contends that Requirement R2.1 essentially requires generator operators to report all protective relay or equipment failures, since generator operators may not be able to tell which failures will reduce system reliability. FirstEnergy suggests that R2.1 should be	Transmission Operator is the true functional entity responsible here. Covered as part of the new data specification requirements in proposed TOP-003-2.

Standard	Source	Language	Resolution
		revised to require generator operators to report all equipment failures or outages. FirstEnergy further suggests that PRC-001-1 be revised to provide that if a company performs reasonable testing procedures, undiscoverable equipment failures will not be violations of R2.1	
PRC-001	Project 2007-06	1449 - S- Ref 10341 - Upon detection of failures in relays or protection system elements on the bulk power system that threaten reliability, relevant transmission operators must be informed promptly, but within a specified period of time. -- (2) a requirement that transmission and generator operators be informed immediately upon the detection of failures in relays or protection system elements on the Bulk-Power System that would threaten reliable operation, so that these entities could carry out appropriate corrective control actions consistent with those used in mitigating IROL violations.	Covered as part of the new data specification requirements in proposed TOP-003-2.
PRC-001	Project 2007-06	1449 - S- Ref 10343 - Para 1420. Once informed, transmission operators must carry out corrective control actions that return the system to a stable state that respects system requirements as soon as possible and no	Covered in TOP-001-2, Requirement R11.

		longer than 30 minutes. 1440. [t]he transmission operator shall take corrective action as soon as possible refers to transmission operators taking operator control actions. It does not refer to troubleshooting, repairing or replacing failed relays or equipment, etc., since these time-consuming corrective actions would prolong the risk of cascading failures to the Bulk-Power System.	

Resolution of Issues Assigned to Project 2007-03 Real-time Operations ~~SDT (Project 2007-03)~~Standard Drafting Team

Standard	Source	Language	Resolution
TOP-001			
TOP-001-1	FERC Order 693	1580 - Consider adding other measures and levels of non-compliance.	Measures and VSLs have been assigned to all requirements.
TOP-001-1	FERC Order 693	1585 - Clarify the definition of "emergency" and define the criteria for entering into the various states. Also define the authority for declaring these states.	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03 which has not yet started. The TOP standards have been re-written to specifically address what a Transmission Operator is responsible for. The proposed TOP requirements are no longer restricted to the undefined term 'operating emergency' and are now more inclusive and stringent than the previous requirement. Indeed, the undefined term 'operating emergency' is no longer utilized in the proposed revisions. Therefore, any delay in defining operating states in the EOP Project has no effect on the TOP standards.
TOP-001-1	FERC Order 693	1588 - Consider Santa Clara's comments to provide that the transmission operator may	This is covered in proposed TOP-001-2, Requirement R5.

Standard	Source	Language	Resolution
		notify the reliability coordinator or the balancing authority that it is removing facilities from service as part of the standards development process.	
TOP-001-1	Version 0 Team	What is 'clear decision making authority'?	Requirement using this term was deleted as not needed in a reliability standard. The standards already require the necessary actions.
TOP-001-1	Version 0 Team	Need to define single, central communications point during emergencies	This is an issue for COM standards.
TOP-001-1	Version 0 Team	Some emergencies will require follow up notification as opposed to immediate	Requirements have been re-written to eliminate confusion.
TOP-001-1	Version 0 Team	Define emergency	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03 which has not yet started.
TOP-001-1	Version 0 Team	Need to expand included entities	Applicability has been reviewed by the SDT and changed as required.
TOP-002			
TOP-002-2	FERC Order 693	1600 - Address critical energy infrastructure confidentiality as part of the routine standard development process.	Restrictions due to confidentiality have been eliminated by re-writing the data specification requirements in proposed TOP-003-2.

Standard	Source	Language	Resolution
TOP-00-2	FERC Order 693	1601 – Require next day analysis for all IROLs to identify and communicate control actions to system operators	See proposed TOP-002-3, Requirements R1, R2, and R3.
TOP-002-2	FERC Order 693	1603 - Requires next-day analysis of minimum voltages at nuclear power plants auxiliary power buses.	Next day analysis is required in proposed TOP-002-3, R1. A specified minimum voltage limit is by definition an SOL which must be studied in proposed TOP-002-3, Requirement R1. Additionally, approved NUC-001-2, Requirements R3 & R4.1 require the transmission entity to incorporate NPIRs in their planning and operating analyses. Approved FAC-011-2 and approved FAC-014-2, Requirement R2 require the Transmission Operator to incorporate SOLs into their analyses. All data required for Operational Planning Analyses is stipulated in proposed TOP-003-2. Approved NUC-001-2, Requirements R3 & R8 covers the information flowing back to the nuclear plant operator.
TOP-002-2	FERC Order 693	1604/1608 - Requires simulation contingencies to match what will actually happen in the field.	This is covered in proposed TOP-002-3, Requirement R1 by the phrase ~~“…~~“and shall represent projected System conditions”.
TOP-002-2	FERC Order 693	1606 - Commenters did not take issue with the proposed interpretation of the term “deliverability” as “the ability to deliver the output from generation resources to firm load without any reliability criteria violations for plausible generation dispatches.”[1] The Commission adopts this proposed	Deliverability and limits are included in Operational Planning Analysis in TOP-002-3, Requirement R1. Operational Planning Analysis contains deliverability and much more and is thus more stringent than the Order. Limit violations in the Operational Planning Analysis will show any deliverability problems regardless of type and proposed requirements mandate

[1] Id. at P 974.

Standard	Source	Language	Resolution
		interpretation. In order to ensure the necessary clarity, the term as used in Requirement R7 of TOP-002-2 should be understood in this manner.	that these issues be resolved. In addition, the proposed requirements clearly state that an individual entity, the Transmission Operator, is wholly responsible for these concerns which is an improvement over the previous vaguely worded requirement that placed this responsibility with the Balancing Authority which has no control over the issues involved.
TOP-002-1	Fill in the Blank Team	Remove "in accordance with NERC, Regional Reliability Organization, sub-regional, and local reliability requirements" from R6 and "in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes" from R12 .	Requirement R6 has been deleted. For the Balancing Authority – deleted as not applicable as the Balancing Authority needs only respond to CPS and DCS. For the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. Requirement R12 has been deleted as duplicative of MOD-030-2 (not yet approved).
TOP-002-2: R19	NERC Audit Observation Team	How do you address the term - verify "Accurate"	Requirement R19 was eliminated as unmeasurable.
TOP-002-2	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R5 of PRC-001-1 in TOP-002 R1, R3, R4, or R5 or TOP-003 R1, R3, R4	See proposed TOP-003-2, Requirement R1.
TOP-002-1	Version 0 Team	Define N-1	Requirement R6 has been deleted.

Standard	Source	Language	Resolution
			For the Balancing Authority – deleted as not applicable as the Balancing Authority needs only respond to CPS and DCS. For the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. This term is no longer in use for this standard.
TOP-002-1	Version 0 Team	Define 'without intentional delay'	This term was considered unmeasurable and has been deleted from this standard.
TOP-002-1	Version 0 Team	Reliability should 'trump' confidentiality	The SDT has removed all references to confidentiality by re-writing the data specification requirements.
TOP-002-1	Version 0 Team	Coordination of planning required	The SDT has re-written and tightened up the requirements for distributing data and information.
TOP-002-1	Version 0 Team	Limit of 2 tests per year	This requirement has been deleted by the SDT as verification testing is not needed in this standard.
TOP-002-1	VRF Team	R9 – related to INT-003	Requirement R9 has been deleted as it is duplicative of approved INT-003-2
TOP-002-1	VRF Team	R14 & 14.1 – ambiguous	Deleted – duplicative of proposed TOP-003-2.
TOP-002-1	VRF Team	R2 – administrative in nature, not a real requirement	The SDT agreed and deleted this requirement.
TOP-003			
TOP-003-0	FERC Order 693	1620 & 1621 - Incorporate an appropriate lead time for planned outages using suggestions from the various commenters. We direct the ERO to modify the Reliability	The SDT posed a question on this issue as a fact finding exercise in the second posting of this project in order to assist them in making a decision on how to respond to the FERC directive as requested in Order 693 – "The ERO should utilize the information filed by

Standard	Source	Language	Resolution
		Standard to incorporate an appropriate lead time for planned outages.	commenters in the Reliability Standards development process." The majority of respondents indicated that they do not feel that there is a reliability based need for such a North American requirement. Several respondents pointed out that such a requirement (if needed at all for reliability) would be better suited to a regional standard and several others stated that such requirements already exist in their particular regions. There are several regions that have existing rules for lead times but they are all different and are based on the requirements of their regional markets. Any attempt to impose a North American standard runs the risk of interfering with those FERC approved markets. While NERC Reliability Standards are intended to promote reliability, they must at the same time accommodate competitive electricity markets. After reviewing the industry comments, the SDT concluded that proposed TOP-001-2, Requirements R5 & R6 adequately cover this issue. The SDT bases this position on the requirement which includes the Operations Planning Time Horizon that covers the period from one day to one year. The requirement mandates that actions are coordinated. The SDT interprets this to include planned outages when they are known. Therefore, the SDT has not included a standard lead time in the revised requirements.
TOP-003-0	FERC Order 693	1622 - Consider TVA's suggestion for including breaker outages within the	New data specifications in proposed TOP-003-2 handle this concern.

Standard	Source	Language	Resolution
		meaning of facilities that are subject to advance notice for planned outages.	
TOP-003-0	FERC Order 693	1624 - Require any facility, that in the opinion of the reliability coordinator, balancing authority, or transmission operator, will have a direct impact on the reliability of the bulk power system be subject to the requirement R1 for planned outage coordination.	New data specifications in proposed TOP-003-2, Requirement R1 (and bullets) handle this concern.
TOP-003-0	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R5 of PRC-001-1 in TOP-002 R1, R3, R4, or R5 or TOP-003 R1, R3, R4	See proposed TOP-003-2, Requirement R1
TOP-003-0	Version 0 Team	Outage information needed sooner than 1 day prior	New data specifications in proposed TOP-003-2 handle this concern.
TOP-003-0	Version 0 Team	RA can’t request outage cancellation	Deleted – now covered in Project 2006-06.
TOP-003-0	Version 0 Team	Submit outage data ASAP but no later than noon day ahead	New data specifications in proposed TOP-003-2 handle this concern.
TOP-003-0	VRF Team	R4 – poorly written	Deleted – now covered in Project 2006-06.
TOP-003-1	FMPA – Frank Gaffney	With respect to requirement R1.2, why is the TOP responsible for providing generator outage information? Isn't that the BA's or GOP's responsibility and isn't this redundant with IRO-010-1?	Requirement deleted as duplicative of proposed TOP-003-2, R1.

Standard	Source	Language	Resolution
TOP-004			
TOP-004-1	FERC Order 693	1636 - Modify requirement R4 to state that the system should be restored to respect proven limits as soon as possible taking no more than 30 minutes.	Replaced by proposed TOP-001-2, R7 through R11. T_v is more stringent than the existing 30 minute requirement for IROLs and 30 minutes is retained for selected SOLs. Unknown states, in this context, cannot exist because valid operating limits have been determined for all Facilities in a TOP's footprint. The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to Emergencies.
TOP-004-1	FERC Order 693	1637 - Reliability coordinators should report any IROL violations to NERC on a monthly basis for one year beginning August 2, 2007.	Not within the scope of the SDT.
TOP-004-1	FERC Order 693	1638 - Defines high risk conditions under which the system must be operated to respect multiple outages in requirement R3. We direct the ERO to develop a modification to the Reliability Standard that explicitly incorporates this interpretation with the details identified in the Reliability Standards development process (. . .the Commission proposed to interpret "multiple outages" in the context of Requirement R3 to include multiple element outages resulting from high risk conditions such as hurricanes, wild fires, ice storms or	The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to the cited situations. The method chosen to respond to a given catastrophic challenge to a localized portion of the bulk power system cannot be predetermined by science; rather, it is an art. Reliability entities develop their response mechanisms based on experience in their local areas to achieve the maximum societal benefit during these periods. In addition, FAC-011-2 and FAC-014-2 deal with specific requirements for dealing with multiple contingencies.

Standard	Source	Language	Resolution
		periods of high solar magnetic disturbances during which the probability of multiple outages approaches that of a single element outage. This is not an exhaustive list but is meant to contain illustrative examples, and the Reliability Standards development process should develop a procedure to identify applicable high risk conditions. Under . . . high-risk conditions, the Commission understands that systems are normally operated in a more secure manner so that the Bulk-Power System can withstand multiple outages. These multiple outages exceed the normal N-1 criterion because the probability of multiple outages during high risk conditions approaches that of a single outage during normal conditions.)	
TOP-004-1	FERC Order 693	1639 - Consider Santa Clara's comments regarding changes to requirement R2 in the standards development process. (Santa Clara states that Requirement R2 of the Reliability Standard should be revised to include frequency monitoring in addition to the monitoring of voltage, real and reactive power flows.)	This is covered as part of the new data specification requirements in proposed TOP-003-2 for the Transmission Operator & Balancing Authority. The Reliability Coordinator is covered by proposed IRO-010-1, Requirement R3.
TOP-004-1	FERC Order 693	1641 - NERC should report the results of the survey to the Commission within 18 months	Not within the scope of the SDT.

Standard	Source	Language	Resolution
		of the effective date of this rule.	
TOP-004-1	Fill in the Blank Team	No action required	No action required.
TOP-004-1	Version 0 Team	Operations should conform to planning standards	Operations and planning are different timeframes with different problems and solutions
TOP-004-1	Version 0 Team	Vagueness in application of IROL limits	Requirement moved to proposed TOP-001-2, Requirement R5 and clarified.
TOP-004-1	Version 0 Team	Define SOL & IROL	These are defined terms in the NERC Glossary.
TOP-004-1	Version 0 Team	Clarify roles	Applicability has been reviewed and updated as necessary.
TOP-004-1	Version 0 Team	Define (or remove) practical	The term has been removed.
TOP-004-1	Version 0 Team	Specify disconnection as acceptable in R5	The requirement has been deleted. Relationships between the Reliability Coordinator and Transmission Operator as described in the revised standards cover these actions.
TOP-005			
TOP-005-1	FERC Order 693	1648 - Include information about the operational status of special protection systems and power system stabilizers in Attachment 1.	Attachment 1 has been deleted and replaced by the new data specification requirement in proposed TOP-003-2.
TOP-005-1	FERC Order 693	1649 - Delete references to confidentiality agreements but ensure critical energy infrastructure confidentiality is addressed in the standards development process.	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	FERC Order 693	1650 - Consider FirstEnergy's modifications to Attachment 1 and ISO-NE's recommended revision to requirement R4 in the standards	Attachment 1 has been deleted and replaced by the new data specification requirement in proposed TOP-003-2.

Standard	Source	Language	Resolution
		development process. ISO-NE recommends that the reference to "purchasing-selling entity" in Requirement R4 should be replaced with "generator owner, transmission owner, and LSE.	Requirement R4 has been superseded by proposed TOP-003-2 which does include the indicated entities.
TOP-005-1	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R2 of PRC-001-1 in TOP-005. Note: These requirements are being removed from PRC.	See proposed TOP-003-2, Requirement R1
TOP-005-1	Version 0 Team	Need to include GO & LSE	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	Version 0 Team	Data update is too slow	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	Version 0 Team	Generator data should include voltage control & stabilizers	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	Version 0 Team	GO needs to supply data to BA & TO	New data specifications in proposed TOP-003-2 handle this concern
TOP-005-1	Received for the November 4, 2009 Technical Conference on Interpretations of Standards	NERC staff believes that the interpretation does not support the stated purpose of IRO-005-1: "The Reliability Coordinator must be continuously aware of conditions within its Reliability Coordinator Area and include this information in its reliability assessments. The	While this issue was entered against the Transmission Operator as the interpretation request was primarily for TOP-005-1, the emphasis on such informative actions has shifted in current revision projects. The proposed IRO-010-1, Requirement R1 gives the Reliability Coordinator the right to ask for any reliability related data that they need to perform their Reliability Coordinator task.

Standard	Source	Language	Resolution
	from Manitoba Hydro	Reliability Coordinator must monitor BES parameters that may have significant impacts upon the Reliability Coordinator Area and neighboring Reliability Coordinator Areas." Given that Requirement R12 pre-supposes that the SPS is armed to address inter-Balancing Authority or inter-Transmission Operator impacts (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation), the argument not discussed in the interpretation is that the SPS itself with one communication channel in service can be viewed for advance planning or reliability assessment purposes as a single contingency (loss of the communication channel). The question asked by the requestor indicates that the operation of the SPS on a single channel is known ahead of the timeframe for which the SPS may be armed and that the condition was not first identified when the SPS was called to operate. In this regard, the Reliability Coordinator must be aware of the less dependable state of the SPS in order to properly assess the impact and plan for the next single contingency that it conceivably could	And it also mandates the Transmission Operator to provide said data in Requirement R3. (Note – This standard has been approved by the BOT but has not yet been approved by FERC.)

Standard	Source	Language	Resolution
		experience. In this case, the Reliability Coordinator may wish to consider the loss of an armed SPS when performing its reliability assessments. While the Reliability Coordinator may not elect to proactively position the system to withstand the loss of the SPS that is operating on a single communication channel, the Reliability Coordinator may elect to develop a contingency plan in the event the SPS does fail to operate as designed or if the remaining communication channel is lost. The importance of the SPS relative to current or anticipated system conditions would be considerations for the Reliability Coordinator. This consideration only becomes possible if the Transmission Operator notifies the Reliability Coordinator that the SPS is operating on a single communication channel. Therefore, Transmission Operator notification to the Reliability Coordinator of this condition raises the Reliability Coordinator's situational awareness that may influence current or future operating conditions or decisions in a preventive rather than reactive manner. NERC staff does agree that the SPS	

Standard	Source	Language	Resolution
		is still mission capable with only one communication channel in service, but degraded in terms of its dependability due to the unavailability of redundant communications channels. The fact that a second communications channel was part of the original design of the SPS suggests that both channels were important to the dependability of the system, and that the unavailability of either channel causes some degradation in the overall dependability of the SPS. Additionally, the team equated "any degradation" with "potential failure to operate as expected" in IRO-005. The use of the term "or" connecting these two phrases in the standard indicates these were not intended to be equivalent. Therefore, NERC staff believes the conclusion reached by the team that the two terms are synonymous is incorrect. Further, the specific circumstances contemplated in the interpretation request are not likely to occur often and the additional burden to Transmission Operators to notify the Reliability Coordinator is de minimis when compared to the improved situational awareness that would result. On	

Standard	Source	Language	Resolution
		this basis, NERC staff believes the interpretation is not serving the best interests of reliability and should be remanded to the team for further consideration of the NERC staff opinion.	
TOP-006			
TOP-006-1	FERC Order 693	1660 & 1661 - Add requirement related to the provision of minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the bulk power system.	Minimum capabilities for Transmission Operators are being handled in project 2009-02, Real-time Monitoring and Analysis Capabilities. Requirement for phase angle information is covered by proposed TOP-003-2.
TOP-006-1	FERC Order 693	1663 - Clarify the meaning of "appropriate technical information" concerning protective relays. To provide more clarity, criteria that define what "appropriate technical information" is necessary should be specified so that operators can make better informed decisions.	This term is no longer used. Requirement R3 deleted as duplicative of proposed PER-005-1 (training) and TOP-003-2 (data).
TOP-006-1	FERC Order 693	1664 - Consider APPA's comments regarding missing measures in the standards development process.	Measures have been assigned to all requirements.
TOP-006-1	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards.	See proposed TOP-003-2, Requirement R1

Standard	Source	Language	Resolution
		Consider putting R6 of PRC-001-1 in TOP-003 R5 or TOP-006. Note: These requirements are being retired in PRC-001-1.	
TOP-006-1	Version 0 Team	Need to match roles with FM	Applicability has been reviewed by the SDT and changed as required in accordance with the FM and the Compliance Registry.
TOP-006-1	Version 0 Team	Monitor frequency at multiple points	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	Version 0 Team	Load forecasting data required	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	Version 0 Team	GO needs to provide normal & emergency data	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	VRFs Team	R1, 1.1, 1.2 – 'available in emergency situation' may be needed	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	VRFs Team	R3 – define appropriate	This requirement was deleted as duplicative of approved PRC-001-1, Requirement R1.
TOP-006-1	VRFs Team	R4 – What information is required and what is a load pattern?	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-2	FMPA – Frank Gaffney	With respect to requirements R1 and R1.2, why are BAs responsible for information regarding transmission resources available for use? Isn't that the role of the TOP?	Deleted – covered as part of the new data specification requirements in proposed TOP-003-2.
TOP-006-2	FMPA – Frank Gaffney	With respect to requirement R2, why is the BA responsible for monitoring transmission line status, voltage, load tap changer settings, and reactive power in general?	Deleted – SDT agrees.

Standard	Source	Language	Resolution
		Monitoring and managing reactive resources, voltage and tap settings is clearly made the responsibility of the TOP in VAR-001-1a.	
TOP-006-2	FMPA – Frank Gaffney	With respect to requirement R3 why does the BA need to understand protective relaying? Isn't that the role of the TOP and GOP?	Requirement R3 deleted as duplicative of proposed PER-005-1 (training) and proposed TOP-003-2 (data).
TOP-007			
TOP-007-0	FERC Order 693	1673 - Consider the NRC's comments on voltage requirements as part of the standards development process.	Next day analysis is required in proposed TOP-002-3, R1. A specified minimum voltage limit is by definition an SOL which must be studied in proposed TOP-002-3, Requirement R1. Additionally, approved NUC-001-2, Requirements R3 & R4.1 require the transmission entity to incorporate NPIRs in their planning and operating analyses. Approved FAC-011-2 and approved FAC-014-2, Requirement R2 require the Transmission Operator to incorporate SOLs into their analyses. All data required for Operational Planning Analyses is stipulated in proposed TOP-003-2. Approved NUC-001-2, Requirements R3 & R8 covers the information flowing back to the nuclear plant operator.
TOP-007-0	Version 0 Team	Need to define evidence of evaluation	This term isn't used in the requirements – no action required.
TOP-007-0	Version 0 Team	Need to tighten the non-compliance terms	Measures and VSL have been assigned to all requirements.
TOP-007-0	Version 0 Team	Not enforceable with current criteria	Not enough information provided to address concern.
TOP-007-0	Version 0 Team	RA should be included	Reliability Coordinator is now covered in Project 2006-06.

Violation Risk Factor and Violation Severity Level Assignments

Project 2007-03 Real-time Operations

Violation Risk Factor and Violation Severity Level Assignments

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in TOP-001-2 – Transmission Operations, TOP-002-3 – Operations Planning, and TOP-003-2 – Operational Reliability Data.

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

Justification for Assignment of Violation Risk Factors in TOP-001-2, TOP-002-3, TOP-003-2:

The SDT applied the following NERC criteria when proposing VRFs for the requirements in TOP-001-2:

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a Cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or Cascading failures; or, a requirement in a planning time frame that, if violated, could, under Emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a Cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or Cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or Cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under Emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or Cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement
A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the Eemergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. A planning requirement that is administrative in nature.

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:[1]

Guideline (1) — Consistency with the Conclusions of the Final Blackout Report
The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the bulk power system.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the bulk power system:[2]

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief

Guideline (2) — Consistency within a Reliability Standard
The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

Guideline (3) — Consistency among Reliability Standards

[1] North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").
[2] Id. at footnote 15.

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) — Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC's definition of that risk level.

Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC's VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC's Reliability Standards and implies that these requirements should be assigned a "High" VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are eleven requirements in TOP-001-2. None of the eleven requirements were assigned a "Lower" VRF. Requirements R1, R2, R4, R7, and R11 were assigned a "High" VRF while all of the other requirements were given a "Medium" VRF.

VRF for TOP-001-2, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements so only one VRF was assigned. Therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved IRO-001-1.1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to complying with a directive: IRO-001-1.1 for a directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with a Reliability Directive issued by a Transmission Operator could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or Cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R1 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved TOP-001-1.1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to the inability of complying with a directive: IRO-001-1.1 for a directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Not informing a Transmission Operator of the inability to perform a Reliability Directive could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or Cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R2 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R5) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to informing other reliability entities of known or expected conditions.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify other reliability entities of known or expected Emergency conditions could lead to bulk power system instability, separation or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R3 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R4 is a new requirement, so there are no comparable requirements in other standards with which to compare VRFs.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to render Emergency assistance could lead to bulk power system instability, separation or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R4 has only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R5) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to the coordination of activities with other reliability entities.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate activities could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or Cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate activities will not, by itself, lead to instability, separation, or Cascading failures.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R5 contains only one objective. Therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R6 has been assigned a Medium VRF and is the replacement for proposed TOP-003-1, Requirement R3 which was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate outages could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or Cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system, regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate outages will not, by itself, lead to instability, separation, or Cascading failures

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R6 contains only one objective. Therefore only one VRF was assigned to the requirement.

VRF for TOP-001-2, Requirement R7:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-004-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to operating within the IROL.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R7 mandates that entities operate within each identified IROL and its associated IROL T_v. By definition, if an entity fails to do so, bulk power system instability, separation, or Cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R7 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R8:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R8 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R8 is a notification requirement. If the Transmission Operator failed to notify the Reliability Coordinator of a specific System Operating Limit (SOL) that supports local area reliability, the Transmission Operator is still obligated to operate to alleviate the SOL through the proposed TOP-001-2, Requirement R9. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or Cascading failures.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R8 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R9:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R9 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R9 mandates that entities operate within each identified local SOL. Since local SOLs in Requirement R9, by definition, can't cause bulk power system instability, separation, or Cascading this requirement was assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R9 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R10:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R10 is a new requirement that was assigned a Medium VRF. When evaluating the VRF to be assigned to this requirement, the SDT took into account that this requirement is an informational item, not the actual action to alleviate the problem. The action is covered in proposed TOP-001-2, Requirements R7 and R9. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or Cascading failures. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R10 mandates that entities notify their Reliability Coordinator of actions taken to alleviate a problem. The action has already been taken as per proposed TOP-001-2, Requirements R7, R9, and R11 and this requirement is a simple notification requirement for informational purposes only. Therefore, bulk power system instability, separation, or Cascading failures are not likely to occur due to a failure to notify the Reliability Coordinator. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 5 - Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R10 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R11:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R11 is a new requirement, so there are no comparable requirements with which to compare VRFs. However, it is similar to approved TOP-008-1, Requirement R1 which has a High VRF. It is also

similar to proposed TOP-001-2, Requirement R7 which has been assigned a High VRF. Therefore, there is consistency among Reliability Standards.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R11 mandates that entities act or direct others to act to mitigate the magnitude and duration of exceeding an IROL and its associated IROL T_v or SOL identified in Requirement R8. By definition, if an entity fails to do so, bulk power system instability, separation, or Cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R11 addresses a single objective and has a single VRF.

Justification for Assignment of Violation Severity Levels for TOP-001-2, TOP-002-3, TOP-003-2:

In developing the VSLs for the TOP standard, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:

Lower	Moderate	High	Severe
Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full intent of the requirement.	Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.	Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.	Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.

FERC's VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in TOP-xxx-x meet the FERC Guidelines for assessing VSLs:

Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VSLs for TOP-001-2 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines – Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved IRO-001-1.1, Requirement R8. That VSL has a Moderate violation for not complying with the Reliability Coordinator's directive for a valid reason but not informing the Reliability Coordinator of this fact. It then goes on to establish a Severe VSL for not complying with the directive. The SDT found little reason to separate out a Moderate VSL for not informing	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		the Transmission Operator. Whether it was for a valid reason or not, the consequences of the Transmission Operator not being aware of the fact that the directive was not being followed are potentially catastrophic. Therefore, the SDT has proposed only a Severe VSL and this VSL I more stringent than the VSL cited. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved TOP-001-1.1a, Requirement R3. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines – There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSL for a similar requirement is for the approved TOP-001-1a, Requirement R5. Those VSLs are also based on failure to notify reliability entities with no Lower or Higher VSL and a Moderate VSL for failure to inform while taking action and the Severe VSL for failure to inform and also not taking action. The SDT has split out the action part of the original requirement (see proposed TOP-001-2, Requirement R11) and this	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		requirement is now simply about failure to inform. The SDT gradated the VSLs at that point but the new VSLs and the old are equivalent at the Moderate level since the original VSL would have required failure to inform two entities – the Reliability Coordinator and at least one Transmission Operator. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are for the approved TOP-001-1a, Requirement R5. Those VSLs are also based on failure to notify reliability entities with no Lower or Higher VSL and a Moderate VSL for failure to inform while taking action and the Severe VSL for failure to inform and also not taking action. The SDT has split out the action part of the original requirement (see proposed TOP-001-2, Requirement R11) and this	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		requirement is now simply about failure to inform. The SDT gradated the VSLs at that point but the new VSLs and the old are equivalent at the Moderate level since the original VSL would have required failure to inform two entities – the Reliability Coordinator and at least one Transmission Operator. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R6.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to proposed TOP-003-1, Requirement R3. The VSL for that requirement is binary. When assigning the VSL for the new requirement, the SDT felt that it was possible to provide a gradual increasing scale for the VSL and assigned the VSLs appropriately.	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R7.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved TOP-004-2, Requirement R1. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R8:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R8.	Meets NERC's VSL guidelines. There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R9:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R9.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R10:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R10.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R11:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R11.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs but it is similar to approved TOP-008-1, Requirement R1. That VSL is binary as is the one proposed for this new requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

		Therefore, it decided that the VSL for this requirement should be binary. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

Violation Risk Factor and Violation Severity Level Assignments

Project 2007-03 Real-time Operations

Violation Risk Factor and Violation Severity Level Assignments
This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in TOP-001-2 – Transmission Operations, TOP-002-3 – Operations Planning, and TOP-003-2 – Operational Reliability Data.

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

Justification for Assignment of Violation Risk Factors in TOP-001-2, TOP-002-3, TOP-003-2:
The SDT applied the following NERC criteria when proposing VRFs for the requirements in TOP-001-2:

High Risk Requirement
A requirement that, if violated, could directly cause or contribute to ~~bulk~~ Bulk ~~electric~~ Electric ~~system~~ System instability, separation, or a ~~cascading~~ Cascading sequence of failures, or could place the ~~bulk electric system~~Bulk Electric System at an unacceptable risk of instability, separation, or ~~cascading~~ Cascading failures; or, a requirement in a planning time frame that, if violated, could, under ~~emergency~~Emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to ~~bulk electric system~~Bulk Electric System instability, separation, or a ~~cascading~~ Cascading sequence of failures, or could place the ~~bulk electric system~~Bulk Electric System at an unacceptable risk of instability, separation, or ~~cascading~~ Cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement
A requirement that, if violated, could directly affect the electrical state or the capability of the ~~bulk electric system~~Bulk Electric System, or the ability to effectively monitor and control the ~~bulk electric system~~Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to ~~bulk electric system~~Bulk Electric System instability, separation, or ~~cascading~~ Cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the ~~bulk electric system~~Bulk Electric System, or the ability to effectively monitor, control, or restore the ~~bulk electric system~~Bulk Electric System. However, violation of a medium risk requirement is unlikely, under ~~emergency~~Emergency, abnormal, or restoration conditions anticipated

by the preparations, to lead to ~~bulk electric system~~Bulk Electric System instability, separation, or ~~cascading~~ Cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the ~~bulk electric system~~Bulk Electric System, or the ability to effectively monitor and control the ~~bulk electric system~~Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the Eemergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the ~~bulk electric system~~Bulk Electric System, or the ability to effectively monitor, control, or restore the ~~bulk electric system~~Bulk Electric System. A planning requirement that is administrative in nature.

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:[1]

Guideline (1) — Consistency with the Conclusions of the Final Blackout Report

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the ~~Bulk-Power System~~bulk power system.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the ~~Bulk-Power System~~bulk power system:[2]

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief

Guideline (2) — Consistency within a Reliability Standard

---

[1] North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").

[2] Id. at footnote 15.

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

Guideline (3) — Consistency among Reliability Standards

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) — Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC's definition of that risk level.

Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC's VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC's Reliability Standards and implies that these requirements should be assigned a "High" VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are eleven requirements in TOP-001-2. None of the eleven requirements were assigned a "Lower" VRF. Requirements R1, R2, R4, R7, and R11 were assigned a "High" VRF while all of the other requirements were given a "Medium" VRF.

VRF for TOP-001-2, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements so only one VRF was assigned. Therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved IRO-001-1.1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to complying with a directive: IRO-001-1.1 for a directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with a Reliability Directive issued by a Transmission Operator could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. Therefore, this requirement is assigned a High VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R1 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved TOP-001-1.1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to the inability of complying with a directive: IRO-001-1.1 for a directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Not informing~~-~~ a Transmission Operator of the inability to perform ~~A~~a Reliability Directive could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R2 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R5) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to informing other reliability entities of known or expected conditions.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify other reliability entities of known or expected Emergency conditions could lead to bulk power system instability, separation or ~~cascading~~ Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R3 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R4 is a new requirement, so there are no comparable requirements in other standards with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to render ~~emergency~~ Emergency assistance could lead to bulk power system instability, separation or ~~cascading~~ Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R4 has only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R5) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to the coordination of activities with other reliability entities.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate activities could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate activities will not, by itself, lead to instability, separation, or ~~cascading~~ Cascading failures.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R5 contains only one objective. Therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R6 has been assigned a Medium VRF and is the replacement~~-~~ for proposed TOP-003-1, Requirement R3 which was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate outages could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. The applicable entities are always responsible for maintaining the

reliability of the bulk power system, regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate outages will not, by itself, lead to instability, separation, or ~~cascading~~ Cascading failures

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R6 contains only one objective. Therefore only one VRF was assigned to the requirement.

VRF for TOP-001-2, Requirement R7:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-004-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to operating within the IROL.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R7 mandates that entities operate within each identified IROL and its associated IROL T_V. By definition, if an entity fails to do so, bulk power system instability, separation, or ~~cascading~~ Cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R7 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R8:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- ~~Bulk power system instability, separation, or cascading failures. Therefore, this requirement was assigned a Medium VRF.~~ FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R8 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R8 is a notification requirement. If the Transmission Operator failed to notify the Reliability Coordinator of a specific System Operating Limit (SOL) that supports local area reliability, the Transmission Operator is still obligated to operate to alleviate the SOL through the proposed TOP-001-2, Requirement R9. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R8 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R9:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R9 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R9 mandates that entities operate within each identified local SOL. Since local SOLs in Requirement R9, by definition, can't cause bulk power system instability, separation, or ~~cascading~~ Cascading this requirement was assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R9 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R10:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R10 is a new requirement that was assigned a Medium VRF. When evaluating the VRF to be assigned to this requirement, the SDT took into account that this requirement is an informational item, not the actual action to alleviate the problem. The action is covered in proposed TOP-001-2, Requirements R7 and R9~~ which have High VRFs~~. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R10 mandates that entities notify their Reliability Coordinator of actions taken to alleviate a problem. The action has already been taken as per proposed TOP-001-2, Requirements R7, R9, and R11 and this requirement is a simple notification requirement for informational purposes only. Therefore, bulk power system instability, separation, or ~~cascading~~ Cascading failures are not likely to occur due to a failure to notify the Reliability Coordinator. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 5 - Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R10 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R11:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R11 is a new requirement, so there are no comparable requirements with which to compare VRFs. However, it is similar to approved TOP-008-1, Requirement R1 which has a High VRF. It is also similar to proposed TOP-001-2, Requirement R7 which has been assigned a High VRF. Therefore, there is consistency among Reliability Standards.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R11 mandates that entities act or direct others to act to mitigate the magnitude and duration of exceeding an IROL and its associated IROL T_v or SOL identified in Requirement R8. By definition, if an entity fails to do so, bulk power system instability, separation, or ~~cascading~~ Cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R11 addresses a single objective and has a single VRF.

Justification for Assignment of Violation Severity Levels for TOP-001-2, TOP-002-3, TOP-003-2:

In developing the VSLs for the TOP standard, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:

Lower	Moderate	High	Severe
Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full intent of the requirement.	Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.	Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.	Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.

FERC's VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in TOP-xxx-x meet the FERC Guidelines for assessing VSLs:

Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VSLs for TOP-001-2 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines – Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved IRO-001-1.1, Requirement R8. That VSL has a Moderate violation for not complying with the Reliability Coordinator's directive for a valid reason but not informing the Reliability Coordinator of this fact. It then goes on to establish a Severe VSL for not complying with the directive. The SDT found little reason to separate out a Moderate VSL for not informing	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		the Transmission Operator. Whether it was for a valid reason or not, the consequences of the Transmission Operator not being aware of the fact that the directive was not being followed are potentially catastrophic. Therefore, the SDT has proposed only a Severe VSL and this VSL I ~~s~~ more stringent than the VSL cited. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved TOP-001-1.1a, Requirement R3. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines – There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSL for a similar requirement is for the approved TOP-001-1a, Requirement R5. Those VSLs are also based on failure to notify reliability entities with no Lower or Higher VSL and a Moderate VSL for failure to inform while taking action and the Severe VSL for failure to inform and also not taking action. The SDT has split out the action part of the original requirement (see proposed TOP-001-2, Requirement R11) and this	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		requirement is now simply about failure to inform. The SDT gradated the VSLs at that point but the new VSLs and the old are equivalent at the Moderate level since the original VSL would have required failure to inform two entities – the Reliability Coordinator and at least one Transmission Operator. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are for the approved TOP-001-1a, Requirement R5. Those VSLs are also based on failure to notify reliability entities with no Lower or Higher VSL and a Moderate VSL for failure to inform while taking action and the Severe VSL for failure to inform and also not taking action. The SDT has split out the action part of the original requirement (see proposed TOP-001-2, Requirement R11) and this	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		requirement is now simply about failure to inform. The SDT gradated the VSLs at that point but the new VSLs and the old are equivalent at the Moderate level since the original VSL would have required failure to inform two entities – the Reliability Coordinator and at least one Transmission Operator. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R6.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to proposed TOP-003-1, Requirement R3. The VSL for that requirement is binary. When assigning the VSL for the new requirement, the SDT felt that it was possible to provide a gradual increasing scale for the VSL and assigned the VSLs appropriately.	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R7.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved TOP-004-2, Requirement R1. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R8:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R8.	Meets NERC's VSL guidelines. There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R9:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R9.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R10:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R10.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R11:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R11.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs but it is similar to approved TOP-008-1, Requirement R1. That VSL is binary as is the one proposed for this new requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

		Therefore, it decided that the VSL for this requirement should be binary. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

A. Introduction

1. **Title:** **Operating Personnel Responsibility and Authority**

2. **Number:** PER-001-0.1

3. **Purpose:** Transmission Operator and Balancing Authority operating personnel must have the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System.

4. **Applicability**

   4.1. Transmission Operators.

   4.2. Balancing Authorities.

5. **Effective Date:** December 10, 2009

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System.

C. Measures

M1. The Transmission Operator and Balancing Authority provide documentation that operating personnel have the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System. These responsibilities and authorities are understood by the operating personnel. Documentation shall include:

M1.1 A written current job description that states in clear and unambiguous language the responsibilities and authorities of each operating position of a Transmission Operator and Balancing Authority. The job description identifies personnel subject to the authority of the Transmission Operator and Balancing Authority.

M1.2 The current job description is readily accessible in the control room environment to all operating personnel.

M1.3 A written current job description that states operating personnel are responsible for complying with the NERC reliability standards.

M1.4 Written operating procedures that state that, during normal and emergency conditions, operating personnel have the authority to take or direct timely and appropriate real-time actions. Such actions shall include shedding of firm load to prevent or alleviate System Operating Limit Interconnection or Reliability Operating Limit violations. These actions are performed without obtaining approval from higher-level personnel within the Transmission Operator or Balancing Authority.

D. Compliance

1. **Compliance Monitoring Process**

Periodic Review: An on-site review including interviews with Transmission Operator and Balancing Authority operating personnel and document verification will be conducted every three years. The job description identifying operating personnel authorities and responsibilities will be reviewed, as will the written operating procedures or other documents delineating the authority of the operating personnel to take actions necessary to maintain the reliability of the Bulk Electric System during normal and emergency conditions.

1.1. Compliance Monitoring Responsibility

Self-certification: The Transmission Operator and Balancing Authority shall annually complete a self-certification form developed by the Regional Reliability Organization based on measures M1.1 to M1.4.

1.2. Compliance Monitoring Period and Reset Timeframe

One calendar year.

1.3. Data Retention

Permanent.

1.4. Additional Compliance Information

2. Levels of Non-Compliance

2.1. Level 1: The Transmission Operator or Balancing Authority has written documentation that includes three of the four items in M1.

2.2. Level 2: The Transmission Operator or Balancing Authority has written documentation that includes two of the four items in M1.

2.3. Level 3: The Transmission Operator or Balancing Authority has written documentation that includes one of the four items in M1.

2.4. Level 4: The Transmission Operator or Balancing Authority has written documentation that includes none of the items in M1, or the personnel interviews indicate Transmission Operator or Balancing Authority do not have the required authority.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
0.1	April 15, 2009	Replaced “position” with “job” on M1.1	Errata
0.1	December 10, 2009	Approved by FERC — added effective date	Update

A. Introduction

1. **Title:** **Reliability Responsibilities and Authorities**

2. **Number:** TOP-001-1

Purpose: To ensure reliability entities have clear decision-making authority and capabilities to take appropriate actions or direct the actions of others to return the transmission system to normal conditions during an emergency.

3. **Applicability**

3.1. Balancing Authorities

3.2. Transmission Operators

3.3. Generator Operators

3.4. Distribution Providers

3.5. Load Serving Entities

4. **Effective Date:** January 1, 2007

B. Requirements

R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.

R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.

R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.

R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.

R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate the emergency.

R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.

R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless:

R7.1. For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility.

R7.2. For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility.

R7.3. When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.

R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance it shall request emergency assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.

C. Measures

M1. Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, signed agreements, an authority letter signed by an officer of the company, or other equivalent evidence that will be used to confirm that it has the authority, and has exercised the authority, to alleviate operating emergencies as described in Requirement 1.

M2. If an operating emergency occurs the Transmission Operator that experienced the emergency shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it took immediate actions to alleviate the operating emergency including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc. (Requirement 2)

M3. Each Transmission Operator, Balancing Authority, and Generator Operator shall have and provide upon request evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it complied with its Reliability Coordinator's reliability directives. If the Transmission Operator, Balancing Authority or Generator Operator did not comply with the directive because it would violate safety, equipment, regulatory or statutory requirements, it shall provide evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that it immediately informed the Reliability Coordinator of its inability to perform the directive. (Requirement 3)

M4. Each Balancing Authority, Generator Operator, Distribution Provider and Load Serving Entity shall have and provide upon request evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it complied with its Transmission Operator's reliability directives. If the Balancing Authority, Generator Operator, Distribution Provider and Load Serving Entity did not comply with the directive because it would violate safety, equipment, regulatory or

statutory requirements, it shall provide evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that it immediately informed the Transmission Operator of its inability to perform the directive. (Requirements 3 and 4)

M5. The Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it informed its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and took actions to avoid, when possible, or to mitigate an emergency. (Requirement 5)

M6. The Transmission Operator, Balancing Authority, and Generator Operator shall each have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it rendered assistance to others as requested, provided that the requesting entity had implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements. (Requirement 6)

M7. The Transmission Operator and Generator Operator shall each have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it notified either their Transmission Operator in the case of the Generator Operator, or other Transmission Operators, and the Reliability Coordinator when it removed Bulk Electric System facilities from service if removing those facilities would burden neighboring systems. (Requirement 7)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Transmission Operator shall have the current in-force document to show that it has the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area. (Measure 1)

Each Transmission Operator shall keep 90 days of historical data (evidence) for Measures 1 through 7, including evidence of directives issued for Measures 3 and 4.

Each Balancing Authority shall keep 90 days of historical data (evidence) for Measures 3, 4 and 6 including evidence of directives issued for Measures 3 and 4.

Each Generator Operator shall keep 90 days of historical data (evidence) for Measures 3, 4, 6 and 7 including evidence of directives issued for Measures 3 and 4.

Each Distribution Provider and Load-serving Entity shall keep 90 days of historical data (evidence) for Measure 4.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

1.4. Additional Compliance Information

None.

2. Levels of Non-Compliance for a Balancing Authority:

2.1. Level 1: Not applicable.

2.2. Level 2: Not applicable.

2.3. Level 3: Not applicable.

2.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

2.4.1 Did not comply with a Reliability Coordinator's or Transmission Operator's reliability directive or did not immediately inform the Reliability Coordinator or Transmission Operator of its inability to perform that directive (R3)

2.4.2 Did not render emergency assistance to others as requested, in accordance with R6.

3. Levels of Non-Compliance for a Transmission Operator

3.1. Level 1: Not applicable.

3.2. Level 2: Not applicable.

3.3. Level 3: Not applicable.

3.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

3.4.1 Does not have the documented authority to act as specified in R1.

3.4.2 Does not have evidence it acted with the authority specified in R1.

3.4.3 Did not take immediate actions to alleviate operating emergencies as specified in R2.

3.4.4 Did not comply with its Reliability Coordinator's reliability directive or did not immediately inform the Reliability Coordinator of its inability to perform that directive, as specified in R3.

3.4.5 Did not inform its Reliability Coordinator and other potentially affected Transmission Operators of real time or anticipated emergency conditions as specified in R5.

3.4.6 Did not take actions to avoid, when possible, or to mitigate an emergency as specified in R5.

3.4.7 Did not render emergency assistance to others as requested, as specified in R6.

3.4.8 Removed Bulk Electric System facilities from service under conditions other than those specified in R7.1, 7.2, and 7.3, and removing those facilities burdened a neighbor system.

4. Levels of Non-Compliance for a Generator Operator:

4.1. Level 1: Not applicable.

4.2. Level 2: Not applicable.

4.3. Level 3: Not applicable.

4.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

4.4.1 Did not comply with a Reliability Coordinator or Transmission Operator's reliability directive or did not immediately inform the Reliability Coordinator or Transmission Operator of its inability to perform that directive, as specified in R3.

4.4.2 Did not render all available emergency assistance to others as requested, unless such actions would violate safety, equipment, or regulatory or statutory requirements as specified in R6.

4.4.3 Removed Bulk Electric System facilities from service under conditions other than those specified in R7.1, 7.2, and 7.3, and burdened a neighbor system.

5. Levels of Non-Compliance for a Distribution Provider or Load Serving Entity

5.1. Level 1: Not applicable.

5.2. Level 2: Not applicable.

5.3. Level 3: Not applicable

5.4. Level 4: Did not comply with a Transmission Operator's reliability directive or immediately inform the Transmission Operator of its inability to perform that directive, as specified in R4.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised

A. Introduction

1. **Title:** **Normal Operations Planning**
2. **Number:** TOP-002-2a
3. **Purpose:** Current operations plans and procedures are essential to being prepared for reliable operations, including response for unplanned events.
4. **Applicability**
   - **4.1.** Balancing Authority.
   - **4.2.** Transmission Operator.
   - **4.3.** Generator Operator.
   - **4.4.** Load Serving Entity.
   - **4.5.** Transmission Service Provider.
5. **Effective Date:** Immediately after approval of applicable regulatory authorities. FERC Approved 12/2/09

B. Requirements

R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.

R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.

R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.

R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator, so that normal Interconnection operation will proceed in an orderly and consistent manner.

R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.

R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in system configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.

R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.

R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.

R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.

R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).

R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject to confidentiality requirements), and to its Reliability Coordinator.

R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes.

R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.

R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

R14.1. Changes in real and reactive output capabilities. (Retired August 1, 2007)

R14.1. Changes in real output capabilities. (Effective August 1, 2007)

R14.2. Automatic Voltage Regulator status and mode setting. (Retired August 1, 2007)

R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to:

R16.1. Changes in transmission facility status.

R16.2. Changes in transmission facility rating.

R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.

R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.

R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.

C. Measures

M1. Each Balancing Authority and Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, documented planning procedures, copies of current day plans, copies of seasonal operations plans, or other equivalent evidence that will be used to confirm that it maintained a set of current plans. (Requirement 1 Part 1).

M2. Each Balancing Authority and Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, copies of current day plans or other equivalent evidence that will be used to confirm that its plans address Requirements 5, 6, and 10.

M3. Each Balancing Authority shall have and provide upon request evidence that could include, but is not limited to, copies of current day plans or other equivalent evidence that will be used to confirm that its plans address Requirements 7, 8, and 9.

M4. Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, its next-day, and current-day Bulk Electric System studies used to determine SOLs or other equivalent evidence that will be used to confirm that its studies reflect current system conditions. (Requirement 11 Part 1)

M5. Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that the results of Bulk Electric System studies were made available to the Transmission Operators, Balancing Authorities (subject to confidentiality requirements), and to its Reliability Coordinator. (Requirement 11 Part 2)

M6. Each Generator Operator shall have and provide upon request evidence that, when requested by either a Transmission Operator or Balancing Authority, it performed a generating real and reactive capability verification and provided the results to the requesting entity in accordance with Requirement 13.

M7. Each Generator Operator shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that without any intentional time delay, it notified its Balancing Authority and Transmission Operator of changes in real and reactive capabilities and AVR status. (Requirement 14)

M8. Each Generator Operator shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that, on request, it provided a forecast of expected real power output to assist in operations planning. (Requirement 15)

M9. Each Transmission Operators shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that, without any intentional time delay, it notified its Balancing Authority and Reliability Coordinator of changes in capabilities and characteristics. (Requirement16)

M10. Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider and Load Serving Entity shall have and provide upon request evidence that could include, but is not limited to, a list of interconnected transmission facilities and their line identifiers at each end or other equivalent evidence that will be used to confirm that it used uniform line identifiers when referring to transmission facilities of an interconnected network. (Requirement 18)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 calendar days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

For Measures 1 and 2, each Transmission Operator shall have its current plans and a rolling 6 months of historical records (evidence).

For Measures 1, 2, and 3 each Balancing Authority shall have its current plans and a rolling 6 months of historical records (evidence).

For Measure 4, each Transmission Operator shall keep its current plans (evidence).

For Measures 5 and 9, each Transmission Operator shall keep 90 days of historical data (evidence).

For Measures 6, 7 and 8, each Generator Operator shall keep 90 days of historical data (evidence).

For Measure 10, each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, and Load-serving Entity shall have its current list interconnected transmission facilities and their line identifiers at each end or other equivalent evidence as evidence.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

1.4. Additional Compliance Information

None.

2. **Levels of Non-Compliance for Balancing Authorities:**

   2.1. **Level 1:** Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

   2.2. **Level 2:** Not applicable.

   2.3. **Level 3:** Not applicable.

   2.4. **Level 4**: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

      2.4.1 Did not maintain an updated set of current-day plans as specified in R1.

      2.4.2 Plans did not meet one or more of the requirements specified in R5 through R10.

3. **Levels of Non-Compliance for Transmission Operators**

   3.1. **Level 1:** Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

   3.2. **Level 2:** Not applicable.

   3.3. **Level 3:** One or more of Bulk Electric System studies were not made available as specified in R11.

   3.4. **Level 4:** There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

      3.4.1 Did not maintain an updated set of current-day plans as specified in R1.

      3.4.2 Plans did not meet one or more of the requirements in R5, R6, and R10.

      3.4.3 Studies not updated to reflect current system conditions as specified in R11.

      3.4.4 Did not notify its Balancing Authority and Reliability Coordinator of changes in capabilities and characteristics as specified in R16.

4. **Levels of Non-Compliance for Generator Operators:**

   4.1. **Level 1:** Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

   4.2. **Level 2:** Not applicable.

   4.3. **Level 3:** Not applicable.

   4.4. **Level 4:** There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

      4.4.1 Did not verify and provide a generating real and reactive capability verification and provide the results to the requesting entity as specified in R13.

      4.4.2 Did not notify its Balancing Authority and Transmission Operator of changes in capabilities and characteristics as specified in R14.

      4.4.3 Did not provide a forecast of expected real power output to assist in operations planning as specified in R15.

5. **Levels of Non-Compliance for Transmission Service Providers and Load-serving Entities:**

   5.1. **Level 1:** Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

5.2. Level 2: Not applicable.

5.3. Level 3: Not applicable.

5.4. Level 4: Not applicable.

E. Regional Differences

None identified.

Appendix 1

Interpretation of Requirement R11

Requirement Number and Text of Requirement

Requirement R11: The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject to confidentiality requirements), and to its Reliability Coordinator.

Question #1
Is the Transmission Operator required to conduct a "unique" study for each operating day, even when the actual or expected system conditions are identical to other days already studied? In other words, can a study be used for more than one day?

Response to Question #1
Requirement R11 mandates that each Transmission Operator review (i.e., study) the state of its Transmission Operator area both in advance of each day and during each day. Each day must have "a" study that can be applied to it, but it is not necessary to generate a "unique" study for each day. Therefore, it is acceptable for a Transmission Operator to use a particular study for more than one day.

Question #2
Are there specific actions required to implement a "study"? In other words, what constitutes a study?

Response to Question #2
The requirement does not mandate a particular type of review or study. The review or study may be based on complex computer studies or a manual reasonability review of previously existing study results. The requirement is designed to ensure the Transmission Operator maintains sensitivity to what is happening or what is about to happen.

Question #3
Does the term, "to determine SOLs" as used in the first sentence of Requirement R11 mean the "determination of system operating limits" or does it mean the "identification of potential SOL violations?"

Response to Question #3
TOP-002-2 covers real-time and near-real-time studies. Requirement R11 is meant to include both determining new limits and identifying potential "exceedances" of pre-defined SOLs. If system conditions indicate to the Transmission Operator that prior studies and SOLs may be outdated, TOP-002-2 mandates the Transmission Operator to conduct a study to identify SOLs for the new conditions. If the Transmission Operator determines that system conditions do not warrant a new study, the primary purpose of the review is to check that the previously defined (i.e., defined from the current SOLs in use, or the set defined by the planners) SOLs are not expected to be exceeded. As written, the standard provides the Transmission Operator discretion regarding when to look for new SOLs and when to rely on its current set of SOLs.

A. Introduction

1. **Title:** **Planned Outage Coordination**

2. **Number:** TOP-003-1

3. **Purpose:** Scheduled generator and transmission outages that may affect the reliability of interconnected operations must be planned and coordinated among Balancing Authorities, Transmission Operators, and Reliability Coordinators.

4. **Applicability**

   4.1. Generator Operators.

   4.2. Transmission Operators.

   4.3. Balancing Authorities.

   4.4. Reliability Coordinators.

5. **Proposed Effective Date:**

   In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

   In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

B. Requirements

R1. Generator Operators and Transmission Operators shall provide planned outage information.

R1.1. Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements.

R1.2. Each Transmission Operator shall provide outage information daily to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation.

R1.3. Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.

R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators as required.

R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.

R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.

C. Measures

M1. Evidence that the Generator Operator, Transmission Operator, and Balancing Authority reported and coordinated scheduled outage information as indicated in the requirements above.

D. Compliance

1. Compliance Monitoring Process

Each Regional Reliability Organization shall conduct a review every three years to ensure that each responsible entity has a process in place to provide planned generator and/or bulk transmission outage information to their Reliability Coordinator, and with neighboring Transmission Operators and Balancing Authorities.

Investigation: At the discretion of the Regional Reliability Organization or NERC, an investigation may be initiated to review the planned outage process of a monitored entity due to a complaint of non-compliance by another entity. Notification of an investigation must be made by the Regional Reliability Organization to the entity being investigated as soon as possible, but no later than 60 days after the event. The form and manner of the investigation will be set by NERC and/or the Regional Reliability Organization.

1.1. Compliance Monitoring Responsibility

A Reliability Coordinator makes a request for an outage to "not be taken" because of a reliability impact on the grid and the outage is still taken. The Reliability Coordinator must provide all its documentation within three business days to the Regional Reliability Organization. Each Regional Reliability Organization shall report compliance and violations to NERC via the NERC Compliance Reporting process.

1.2. Compliance Monitoring Period and Reset Timeframe

One calendar year without a violation from the time of the violation.

1.3. Data Retention

One calendar year.

1.4. Additional Compliance Information

Not specified.

2. Violation Severity Levels:

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Generator Operator failed to provide outage information, in accordance with its Transmission Operators established outage reporting requirements, to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW).
R1.1	N/A	N/A	N/A	The Transmission Operator failed to provide outage information, in accordance with its Reliability Coordinators established outage reporting requirement, to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation.
R1.2	The responsible entity failed to provide the information by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	N/A	N/A	N/A

R#	Lower	Moderate	High	Severe
R1.3	N/A	N/A	N/A	The responsible entity failed to plan or coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators when required.
R2	The responsible entity planned and coordinated scheduled outages of telemetering and control equipment and associated communication channels with its Reliability Coordinator, but failed to coordinate with affected neighboring Transmission Operators, Balancing Authorities, and Generator Operators.	N/A	N/A	The responsible entity failed to plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.
R3	N/A	N/A	N/A	The Reliability Coordinator failed to resolve any scheduling of potential reliability conflicts.
R4	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 30 minutes but less than or equal to 35 minutes.	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 35 minutes but less than or equal to 40 minutes.	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 40 minutes but less than or equal to 45 minutes.	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 45 minutes.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1		Modified R1.2 Modified M1 Replaced Levels of Non-compliance with the Feb 28, BOT approved Violation Severity Levels (VSLs)	Revised
1	October 17, 2008	Adopted by NERC Board of Trustees	
1	March 23, 2011	Order issued by FERC approving TOP-003-1 (approval effective 5/23/11)	

A. Introduction

1. **Title:** **Transmission Operations**

2. **Number:** TOP-004-2

3. **Purpose:** To ensure that the transmission system is operated so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single Contingency and specified multiple Contingencies.

4. **Applicability:**

   4.1. Transmission Operators

5. **Proposed Effective Date:** Twelve months after BOT adoption of FAC-014.

B. Requirements

R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.

R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.

R4. If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.

R5. Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected, it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.

R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including:

R6.1. Monitoring and controlling voltage levels and real and reactive power flows.

R6.2. Switching transmission elements.

R6.3. Planned outages of transmission elements.

R6.4. Responding to IROL and SOL violations.

C. Measures

M1. Each Transmission Operator that enters an unknown operating state for which valid limits have not been determined, shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, alarm program printouts, or other equivalent evidence that will be used to determine if it restored operations to respect proven reliable power system limits within 30 minutes as specified in Requirement 4.

M2. Each Transmission Operator shall have and provide upon request current policies and procedures that address the execution and coordination of activities that impact inter- and intra-Regional reliability for each of the topics listed in Requirements 6.1 through 6.6.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Transmission Operator shall keep 90 days of historical data for Measure 1.

Each Transmission Operator shall have current, in-force policies and procedures, as evidence of compliance to Measure 2.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

1.4. Additional Compliance Information

None.

2. Levels of Non-Compliance:

2.1. Level 1: Not applicable.

2.2. Level 2: Did not have formal policies and procedures to address one of the topics listed in R6.1 through R6.4.

2.3. .**Level 3:** Did not have formal policies and procedures to address two of the topics listed in R6.1 through R6.4.

2.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

2.4.1 Did not restore operations to respect proven reliable power system limits within 30 minutes as specified in R4.

2.4.2 Did not have formal policies and procedures to address three or all of the topics listed in R6.1 through R6.4.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Added language from Missing Measures and Compliance Elements adopted by Board of Trustees on November 1, 2006	Revised
2	December 19, 2007	Revised to reflect merging of both sets of changes approved by BOT on November 1, 2006 (Addition of measures and compliance elements and revisions to R3 and R6 with conforming changes made as errata to Levels of Non-compliance)	Revised Errata

A. Introduction

1. **Title:** **Operational Reliability Information**

2. **Number:** TOP-005-2

3. **Purpose:** To ensure reliability entities have the operating data needed to monitor system conditions within their areas.

4. **Applicability**

   4.1. Transmission Operators.

   4.2. Balancing Authorities.

   4.3. Purchasing Selling Entities.

5. **Proposed Effective Date:** In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

   In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

B. Requirements

R1. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."

R2. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005 "Electric System Reliability Data," unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.

R3. Each Purchasing-Selling Entity shall provide information as requested by its Host Balancing Authorities and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.

C. Measures

M1. Evidence that the Balancing Authority, Transmission Operator, and Purchasing-Selling Entity is providing the information required, within the time intervals specified, and in a format agreed upon by the requesting entities.

D. Compliance

1. **Compliance Monitoring Process**

   1.1. Compliance Monitoring Responsibility

   Self-Certification: Entities shall annually self-certify compliance to the measures as required by its Regional Reliability Organization.

   Exception Reporting: Each Region shall report compliance and violations to NERC via the NERC compliance reporting process.

1.2. Compliance Monitoring Period and Reset Time Frame

Periodic Review: Entities will be selected for operational reviews at least every three years. One calendar year without a violation from the time of the violation.

1.3. Data Retention

Not specified.

1.4. Additional Compliance Information

Not specified.

2. Violation Severity Levels:

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The ISN data recipient failed to sign the NERC Confidentiality Agreement for "Electric System Reliability Data".
R2	The responsible entity failed to provide any of the data requested by other Balancing Authorities or Transmission Operators.	N/A	N/A	The responsible entity failed to provide all of the data requested by its host Balancing Authority or Transmission Operator.
R3	The responsible entity failed to provide any of the data requested by other Balancing Authorities or Transmission Operators.	N/A	N/A	The responsible entity failed to provide all of the data requested by its host Balancing Authority or Transmission Operator.

E. Regional Variances

None identified.

Attachment 1-TOP-005

Electric System Reliability Data

This Attachment lists the types of data that Balancing Authorities, and Transmission Operators are expected to share with other Balancing Authorities and Transmission Operators.

1. The following information shall be updated at least every ten minutes:

1.1. Transmission data. Transmission data for all Interconnections plus all other facilities considered key, from a reliability standpoint:

1.1.1 Status.

1.1.2 MW or ampere loadings.

1.1.3 MVA capability.

1.1.4 Transformer tap and phase angle settings.

1.1.5 Key voltages.

1.2. Generator data.

1.2.1 Status.

1.2.2 MW and MVAR capability.

1.2.3 MW and MVAR net output.

1.2.4 Status of automatic voltage control facilities.

1.3. Operating reserve.

1.3.1 MW reserve available within ten minutes.

1.4. Balancing Authority demand.

1.4.1 Instantaneous.

1.5. Interchange.

1.5.1 Instantaneous actual interchange with each Balancing Authority.

1.5.2 Current Interchange Schedules with each Balancing Authority by individual Interchange Transaction, including Interchange identifiers, and reserve responsibilities.

1.5.3 Interchange Schedules for the next 24 hours.

1.6. Area Control Error and frequency.

1.6.1 Instantaneous area control error.

1.6.2 Clock hour area control error.

1.6.3 System frequency at one or more locations in the Balancing Authority.

2. Other operating information updated as soon as available.

2.1. Interconnection Reliability Operating Limits and System Operating Limits in effect.

2.2. Forecast of operating reserve at peak, and time of peak for current day and next day.

2.3. Forecast peak demand for current day and next day.

2.4. Forecast changes in equipment status.

2.5. New facilities in place.

2.6. New or degraded special protection systems.

2.7. Emergency operating procedures in effect.

2.8. Severe weather, fire, or earthquake.

2.9. Multi-site sabotage.

A. Introduction

1. **Title:** **Monitoring System Conditions**

2. **Number:** TOP-006-2

3. **Purpose:** To ensure critical reliability parameters are monitored in real-time.

4. **Applicability**

    4.1. Transmission Operators.

    4.2. Balancing Authorities.

    4.3. Generator Operators.

    4.4. Reliability Coordinators.

5. **Proposed Effective Date:** In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

    In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use.

R1.1. Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use.

R1.2. Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.

R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.

R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel.

R4. Each Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.

R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to indicate, if appropriate, the need for corrective action.

R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.

R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.

C. Measures

M1. The Generator Operator shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Host Balancing Authority and Transmission Operator of all generation resources available for use. (Requirement 1.1)

M2. Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use. (Requirement 1.2)

M3. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, computer printouts or other equivalent evidence that will be used to confirm that it monitored each of the applicable items listed in Requirement 2.

M4. Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, printouts, training documents, description documents or other equivalent evidence that will be used to confirm that it has weather forecasts and past load patterns, available to predict the system's near-term load pattern. (Requirement 4)

M5. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a description of its EMS alarm capability, training documents, or other equivalent evidence that will be used to confirm that important deviations in operating conditions and the need for corrective actions will be brought to the attention of its operators. (Requirement 5)

M6. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a list of the frequency monitoring points available to the shift-operators or other equivalent evidence that will be used to confirm that it monitors system frequency. (Requirement 7)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Generator Operator shall keep 90 days of historical data (evidence) for Measure 1.

Each Transmission Operator and Balancing Authority shall keep 90 days of historical data (evidence) for Measure 2.

Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have current documents as evidence for Measure 3, 5 and 6.

Each Transmission Operator and Balancing Authority shall have current documents as evidence of compliance to Measure 4.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

1.4. Additional Compliance Information

None.

2. Violation Severity Levels:

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity failed to know the status of all generation and transmission resources available for use, even though said information was reported by the Generator Operator, Transmission Operator, or Balancing Authority.
R1.1	N/A	N/A	N/A	The Generator Operator failed to inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use.
R1.2	N/A	N/A	N/A	The responsible entity failed to inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.
R2	N/A	The responsible entity monitors the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, but is not aware of the status of rotating and static reactive resources.	The responsible entity fails to monitor all of the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of all rotating and static reactive resources.	The responsible entity fails to monitor any of the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.
R3	The responsible entity failed to provide any of the appropriate technical information concerning protective relays to their operating personnel.	N/A	N/A	The responsible entity failed to provide all of the appropriate technical information concerning protective relays to their operating personnel.

R#	Lower	Moderate	High	Severe
R4	N/A	N/A	The responsible entity has either weather forecasts or past load patterns, available to predict the system's near-term load pattern, but not both.	The responsible entity failed to have both weather forecasts and past load patterns, available to predict the system's near-term load pattern.
R5	N/A	N/A	The responsible entity used monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions, but does not have indication of the need for corrective action.	The responsible entity failed to use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions.
R6	N/A	N/A	N/A	The responsible entity failed to use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.
R7	N/A	N/A	N/A	The responsible entity failed to monitor system frequency.

E. Regional Variances

None identified.

A. Introduction

1. **Title:** Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations

2. **Number:** TOP-007-0

3. **Purpose:**

   This standard ensures SOL and IROL violations are being reported to the Reliability Coordinator so that the Reliability Coordinator may evaluate actions being taken and direct additional corrective actions as needed.

4. **Applicability:**

   4.1. Transmission Operators.

   4.2. Reliability Coordinators.

5. **Effective Date:** April 1, 2005

B. Requirements

R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded and the actions being taken to return the system to within limits.

R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.

R3. A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2.

R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.

C. Measures

M1. Evidence that the Transmission Operator informed the Reliability Coordinator when an IROL or SOL was exceeded and the actions taken to return the system to within limits.

M2. Evidence that the Transmission Operator returned the system to within IROL within 30 minutes for each incident that an IROL, or SOL that became an IROL due to changed system conditions, was exceeded.

M3. Evidence that the Reliability Coordinator evaluated actions and provided direction required to return the system to within limits.

D. Compliance

1. **Compliance Monitoring Process**

   1.1. Compliance Monitoring Responsibility

   The Reliability Coordinator shall report any IROL violation exceeding 30 minutes to the Regional Reliability Organization and NERC within 72 hours. Each Regional Reliability Organization shall report any such violations to NERC via the NERC compliance reporting process. The Reliability Coordinator shall report any SOL violation that has become an IROL violation because of changed system conditions; i.e. exceeding the limit will require action to prevent:

1.1.1. System instability.

1.1.2. Unacceptable system dynamic response or equipment tripping.

1.1.3. Voltage levels in violation of applicable emergency limits.

1.1.4. Loadings on transmission facilities in violation of applicable emergency limits.

1.1.5. Unacceptable loss of load based on regional and/or NERC criteria.

1.2. Compliance Monitoring Period and Reset Timeframe

The reset period is monthly.

1.3. Data Retention

The data retention period is three months.

2. Levels of Non-Compliance

2.1. The Transmission Operator did not inform the Reliability Coordinator of an IROL or an SOL that has become an IROL because of changed system conditions, and the actions they are taking to return the system to within limits, or

2.2. The Transmission Operator did not take corrective actions as directed by the Reliability Coordinator to return the system to within the IROL within 30 minutes. (See Table 1-TOP-007-0 below.)

2.3. The limit violation was reported to the Reliability Coordinator, who did not provide appropriate direction to the Transmission Operator, resulting in an IROL violation in excess of 30 minutes duration.

Table 1-TOP-007-0 IROL and SOL Reporting Levels of Non-Compliance

Percentage by which IROL or SOL that has become an IROL is exceeded*	Limit exceeded for more than 30 minutes, up to 35 minutes.	Limit exceeded for more than 35 minutes, up to 40 minutes.	Limit exceeded for more than 40 minutes, up to 45 minutes.	Limit exceeded for more than 45 minutes.
Greater than 0%, up to and including 5%	Level 1	Level 2	Level 2	Level 3
Greater than 5%, up to and including 10%	Level 2	Level 2	Level 3	Level 3
Greater than 10%, up to and including 15%	Level 2	Level 3	Level 3	Level 4
Greater than 15%, up to and including 20%	Level 3	Level 3	Level 4	Level 4
Greater than 20%, up to and including 25%	Level 3	Level 4	Level 4	Level 4
Greater than 25%	Level 4	Level 4	Level 4	Level 4

*Percentage used in the left column is the flow measured at the end of the time period (30, 35, 40, or 45 minutes).

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata

A. Introduction

1. **Title:** **Response to Transmission Limit Violations**

2. **Number:** TOP-008-1

3. **Purpose:** To ensure Transmission Operators take actions to mitigate SOL and IROL violations.

4. **Applicability**

    4.1. Transmission Operators.

5. **Effective Date:** January 1, 2007

B. Requirements

R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.

R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.

R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.

R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.

C. Measures

M1. The Transmission Operator involved in an SOL or IROL violation shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications, alarm program printouts, or other equivalent evidence that will be used to determine if it took immediate steps to relieve the condition. (Requirement 1)

M2. The Transmission Operator that disconnects an overloaded facility shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications, alarm program print outs, or other equivalent evidence that will be used to determine if it disconnected an overloaded facility in accordance with Requirement 3 Part 1

M3. The Transmission Operator that disconnects an overloaded facility shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it notified its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permitted, otherwise, immediately thereafter. (Requirement 3 Part 2)

M4. The Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, computer facilities documents, computer printouts, training documents,

copies of analysis program results, operator logs or other equivalent evidence that will be used to confirm that it has sufficient information and analysis tools to determine the cause(s) of SOL violations. (Requirement 4 Part 1)

M5. The Transmission Operator that violates an SOL shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it used the results of these analyses to immediately mitigate the SOL violation. (Requirement 4 Part 3)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Transmission Operator shall keep 90 days of historical data (evidence) for Measure 1, 2 and 3.

Each Transmission Operator shall have current documents as evidence of compliance to Measures 4 and 5.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance data

1.4. Additional Compliance Information

None.

2. Levels of Non-Compliance for Transmission Operator

2.1. **Level 1:** Not applicable.

2.2. **Level 2:** Disconnected an overloaded facility as specified in R3 but did not notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, or immediately thereafter.

2.3. **Level 3:** Not applicable.

2.4. **Level 4:** There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

2.4.1 Did not take immediate steps to relieve an IROL or SOL violation in accordance with R1.

2.4.2 Did not disconnect an overloaded facility as specified in R3.

2.4.3 Does not have sufficient information and analysis tools to determine the cause(s) of SOL violations. (R4 Part 1)

2.4.4 Did not use the results of analyses to immediately mitigate an SOL violation. (R4 Part 3)

E. Regional Differences

None identified.

Mapping Document

Project 2007-03 Real-time Operations

Mapping document showing the translation of TOP-001-1 — Reliability Responsibilities and Authorities; TOP-002-2a — Normal Operations Planning; TOP-003-1 — Planned Outage Coordination; TOP-004-2 — Transmission Operations; TOP-005-2 — Operational Reliability Information; TOP-006-2 – Monitoring System Conditions; TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations; TOP-008-1 - Response to Transmission Limit Violations; PRC-001-1 – System Protection Coordination; and PER-001-0 - Operating Personnel Responsibility and Authority.

Standard TOP-001-1 — Reliability Responsibilities and Authorities		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.	Deleted	This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. Deletion of this requirement doesn't alleviate responsibility for actions, as each individual requirement in the Reliability Standards now specifies an action and a responsible entity. These needed actions required for reliability of the bulk power System have been more clearly laid out in revised standards. (See FERC Order 693a, Paragraph 112.) The requirement is also non-specific, ambiguous, and not performance-oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. All of this makes this requirement redundant. The overall reliability of the bulk power System is not adversely affected by the deletion of this requirement. In FERC Order 693a, Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities, which makes this requirement superfluous; and, thus, it can be deleted.

		FERC Order 693a, Paragraph 112: "In response to Avista, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of reliability standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize Reliability Coordinators to issue directives. Under the voluntary reliability scheme in place prior to Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a Reliability Coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies, including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.	Proposed TOP-001-2, Requirement R11	Replaced by proposed TOP-001-2, R11: The undefined term 'operating emergencies' is no longer utilized, and the requirement has been made more stringent by not restricting Transmission Operator actions to that undefined condition. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant time frame. TOP-001-2, R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued	Proposed IRO-001-3, Requirements R2, R3 & R4.	Replaced by: IRO-001-3, R2. Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent

by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.		identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-001-3, R3. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with its Reliability Coordinator's direction per Requirement R2, unless the direction per Requirement R2 cannot be implemented or such actions would violate safety, equipment, regulatory or statutory requirements. IRO-001-3, R4. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform, as directed per Requirement R3.
R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load-Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.	Proposed TOP-001-2, Requirements R1 & R2	Replaced by proposed: TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each reliability directive issued and identified as such by its Transmission Operator(s), unless such actions would violate safety, equipment, regulatory, or statutory requirements. TOP-001-2, R2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform an identified reliability directive issued by that Transmission Operator.
R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate	Proposed TOP-001-2, Requirement R3 Proposed TOP-001-2, Requirement R11.	Replaced by proposed: TOP-001-2, R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operators that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis.

the emergency.		TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant time frame.
R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.	Proposed TOP-001-2, Requirement R4 for the Transmission Operator. Approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 for the Balancing Authority	Replaced by proposed TOP-001-2, R4. TOP-001-2, R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The Generator Operator was deleted from this requirement since it can't be contacted directly by others and will only respond to such requests if they were in the form of a reliability directive from its Transmission Operator, which is covered in proposed TOP-001-2, Requirement R1. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 covers the Balancing Authority. So to eliminate a redundancy, the Balancing Authority has been removed from this requirement. In addition, the Balancing Authority must still respond to any Reliability Directive from the Transmission Operator, as stated in proposed TOP-001-2, Requirement R1. EOP-001-2b, R1. Balancing Authorities shall have

		operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities.
R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless: R7.1 - For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.2 - For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.3 - When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R5	R7: Replaced by proposed TOP-001-2, R5 for the Transmission Operator. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. R7 – The Generator Operator can't know if their actions will burden neighboring Systems, since they do not have reliability data. The Transmission Operator will know if the Generator Operator actions will burden neighboring Systems and is required to act on this information, as per proposed TOP-001-2, R5. R7.1 – Replaced by proposed TOP-001-2, R5 for both the Transmission Operator and the Generator Operator. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. R7.2 - Replaced by proposed TOP-001-2, R5 for the Transmission Operator. After-the-fact notifications have been replaced by the proposed TOP-003-2, R1 and approved IRO-010-1a, since those actions will now be seen through telemetry.

notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.		TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading Outages.
R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance, it shall request emergency assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.	Approved EOP-002-3, Requirement R6. Approved VAR-001-1, Requirement R8. Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirements R1, R8, and R12. Approved IRO-009-1, Requirements R1 and R2. Approved EOP-003-1, Requirement R1.	Real Power Balance and Reactive Power Balance are not defined terms. First sentence – Real Power: For the Balancing Authority part of the requirement, replaced by approved EOP-002-2.1, Requirement R6. The Transmission Operator does not balance Real Power so that part of the sentence can be deleted per the NERC Functional Model V5. First sentence – Reactive Power: Replaced by Approved VAR-001-1, Requirement R8 for the Transmission Operator, which covers Reactive Power requirements and the meaning of balancing Reactive Power for the Transmission Operator. The Balancing Authority must be told by the Transmission Operator to take actions regarding Reactive Power per the NERC Functional Model V5 (see proposed TOP-001-2, Requirement R1) and, therefore, the Balancing Authority can be deleted from this part of the requirement. Second sentence – The Balancing Authority must be told by the Transmission Operator to take actions regarding

		Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, the Balancing Authority is not necessary. Replaced by approved VAR-001-1, Requirements R1, R8, and R12 for the Transmission Operator. Third sentence – Replaced by approved IRO-009-1, Requirements R1 and R2 for the Reliability Coordinator. Replaced by approved EOP-003-1, Requirement R1 for the Transmission Operator and Balancing Authority. EOP-002-3, R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. VAR-001-1 R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. VAR-001-1, R8. Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – including reactive generation scheduling; transmission line and reactive resource switching; and, if necessary, Load shedding – to maintain System and Interconnection voltages within established limits. VAR-001-1, R12. The Transmission Operator shall direct corrective action, including Load reduction necessary to prevent voltage collapse when reactive resources are insufficient. TOP-001-2, R1. Each Balancing Authority, Generator

		Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. IRO-009-1, R1. For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more operating processes, procedures, or plans that identify actions it shall take, or actions it shall direct others to take (up to and including Load shedding) that can be implemented in time to prevent exceeding those IROLs. IRO-009-1, R2.For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more operating processes, procedures, or plans that identify actions it shall take, or actions it shall direct others to take (up to and including Load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's Tv. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load rather than risk an uncontrolled failure of components or Cascading Outages of the Interconnection.
Standard TOP-002-2a — Normal Operations Planning		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for	Approved BAL-001-0.1a. Approved BAL-002-1.	First sentence – Deleted for Balancing Authority, retained for Transmission Operator. The Balancing Authority is required to balance by approved BAL-001-0.1a and approved BAL-002-1 and

reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.	Approved EOP-002-2.1, Requirement R6. Proposed TOP-002-3, Requirements R1 through R3.	must take action, per approved EOP-002-2.1, Requirement R6 and, thus, the Balancing Authority part of this sentence can be deleted. Retained for Transmission Operator and moved to proposed TOP-002-3, Requirements R1 through R3. This is patterned after the approved IRO-008-1, Requirement R1 for the Reliability Coordinator. Second sentence – Deleted as superfluous. Use of appropriate personnel and equipment is incumbent to responsible entities, as per their certification as NERC registered entities. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing Real Power demand and supply in Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of Load, and because Contingency Reserve activation does not typically apply to the loss of Load, the application of DCS is limited to the loss of supply, and does not apply to the loss of Load. EOP-002-2.1, R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. TOP-002-3, R1: Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.

		TOP-002-3, R2: Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. TOP-002-3, R3: Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.	Deleted	The SDT reviewed the purpose of the Reliability Standard and believes that this requirement referred to operations planning. Given the current definition of Transmission Operator in the Glossary and Functional Model v5, operations planning is part of what the Transmission Operator is required to do and, as such, this requirement is no longer needed and can be deleted. Functional Model V5: Transmission Operator: The entity responsible for the reliability of its "local" transmission System, and that operates or directs the operations of the transmission Facilities.
R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.	Proposed TOP-003-2. Approved MOD-001-1a, Requirements R1 & R2. Approved MOD-030-2, Requirement R3.	For all but the Transmission Service Provider, moved to proposed TOP-003-2 requires the transfer of any and all required data, regardless of time frame involved. The Transmission Service Provider provisions are already covered in: • Approved MOD-001-1a, Requirement R1: Transmission Operators select transfer capability methodology from approved MOD-028, -029, or -030. • Approved MOD-030-2, Requirement R3: Transmission Operator gives transmission model updated at least once per day to Transmission Service Provider.

		• Approved MOD-001-1a, Requirement R2: Transmission Service Providers use the methodology designated in approved MOD-001-1a, Requirement R1 by the Transmission Operator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. MOD-001-1a, R1. Each Transmission Operator shall select one of the methodologies listed below for calculating Available Transfer Capability (ATC) or Available Flowgate Capability (AFC) for each ATC Path per time period identified in R2 for those Facilities within its Transmission operating area. MOD-030-2, R3. The Transmission Operator shall make available to the Transmission Service Provider a Transmission model to determine Available Flowgate Capability (AFC) that meets the following criteria: [LA1]MOD-001-1a, R2. Each Transmission Service Provider shall calculate ATC or AFC values, as listed below, using[LA2] the methodology or methodologies selected by its Transmission Operator(s).
R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator so that normal Interconnection operation will proceed in an orderly and consistent manner.	Proposed TOP-003-2, Requirement R5. Approved IRO-010-1a, Requirement R3.	Proposed TOP-003-2 requires the transfer of any and all required data between and amongst Balancing Authorities and Transmission Operators, regardless of the time frame involved. Data requirements for Reliability Coordinators are covered in approved IRO-010-1a, Requirement R3 making this requirement redundant for Reliability Coordinators, so the Reliability Coordinator has been removed here. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

		specifications for data. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.	Approved BAL-001-0.1a. Proposed TOP-003-2, Requirement R4. Proposed TOP-002-3, Requirement R1.	The part of the requirement dealing with the Balancing Authority is replaced by approved BAL-001-0.1a. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built into the Functional Model. Therefore, the Transmission Operator should be developing the plan and passing it down to the Balancing Authority. The Balancing Authority provides any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R5. The part of the requirement dealing with the Transmission Operator has been moved to proposed TOP-002-3, Requirement R1. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing Real Power demand and supply in Real-time. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

		specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in System configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.	Approved BAL-002-1, Requirements R2 – R4. Proposed TOP-003-2, Requirement R5. Proposed TOP-002-3, Requirement R1	The part of this requirement dealing with the Balancing Authority is replaced by approved BAL-002-1, Requirements R2 through R4 and approved EOP-002-2.1 and the proposed EOP-002-3, Requirement R6. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in to the Functional Model. Therefore, the Transmission Operator should be doing the plan and passing it down to the Balancing Authority. The Balancing Authority gets any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R4. The part of the requirement dealing with the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. The n-1 contingency planning is 'built in' to the Operational Planning Analysis since SOLs are derived according to FAC-010-2.1, FAC-011-2, and FAC-014-2 which includes contingency planning. The SDT does not believe that there is a need for the last part of the sentence 'in accordance with…' with the advent of the ERO and enforceable reliability standards.

		As stated in the NERC Functional Model V5: " the Balancing Authority's mission is to maintain the balance between Loads and resources in Real-time within its Balancing Authority Area by keeping its actual Interchange equal to its scheduled Interchange and meeting its frequency bias obligation." To this end and in accordance with approved NERC Reliability Standards BAL-001-0.1a and approved BAL-002-1), Balancing Authorities are required to meet all control performance and disturbance recovery criteria for any System condition. Balancing Authorities are not responsible for the operation of the transmission System. The Transmission Operator is responsible for the Real-time operating reliability of the transmission assets under its purview and, as such, has the authority to issue reliability-related directives to entities within its Transmission Operator Area. Balancing Authorities are required to implement directives received from the Transmission Operator or the Reliability Coordinator regarding Load, generation and Interchange for transmission concerns both predicted (e.g., through Unit Commitment) and actual (e.g., through re-dispatch, Interchange modifications or Load shedding). If the Balancing Authorities' actions do not resolve the transmission issues, it is the Transmission Operators' or Reliability Coordinators' responsibility to direct alternative actions. BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: BAL-002-1, R3. Each Balancing Authority or Reserve Sharing Group shall activate sufficient Contingency Reserve to comply with the DCS. BAL-002-1, R4. Balancing Authority or Reserve Sharing Group shall meet the Disturbance Recovery Criterion within the Disturbance Recovery Period for 100% of Reportable Disturbances. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator,

		Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. FAC-010-2.1, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable planning of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-011-2, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-014-2, Purpose. To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing Real Power demand and supply in Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of Load and because Contingency

		Reserve activation does not typically apply to the loss of Load, the application of DCS is limited to the loss of supply and does not apply to the loss of Load.
R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.	Approved BAL-002-1, Requirement R2. Proposed TOP-002-3, Requirement R1.	The Balancing Authority is required to always plan to meet and recover from Contingency events, as stated in approved BAL-002-1, Requirement R2 and, therefore, this requirement is redundant and can be deleted, as all elements of the requirement are now covered in other standards. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and are replaced by proposed TOP-002-3, Requirement R1. Operational Planning Analysis includes deliverability considerations, since any deliverability problems will appear as limit violations in the analysis. BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.	Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirement R1. Proposed TOP-002-3, Requirement R1	The Balancing Authority must be told by the Transmission Operator to take actions regarding Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, this requirement can be deleted, as all elements of the requirement are now covered in other standards. Voltage and Reactive Power balance are the responsibility of the Transmission Operator and are replaced by approved VAR-001-1, Requirement R1. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and is replaced by proposed TOP-002-3, Requirement

		R1 since any deliverability problems will appear as limit violations in the analysis. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.	Approved INT-003-2, Requirement R1.	Replaced by approved INT-003-2, R1. INT-003-2, R1. Each Receiving Balancing Authority shall confirm Interchange Schedules with the Sending Balancing Authority prior to implementation in the Balancing Authority's ACE equation.
R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).	Deleted for Balancing Authority. Proposed TOP-002-3, Requirements R1 & R2.	Balancing Authority - The Balancing Authority is only responsible to respond to Reliability Directives as per the definition of Balancing Authority in the NERC Glossary, and, thus, this requirement should never have been applicable to the Balancing Authority. SOLs and IROLs are limits for which the Balancing Authority may not have (and is not required to have) the ability to monitor or control. The Transmission Operator, who is required to monitor SOLs, instructs the Balancing Authority as to what to do in these situations.

		As stated in the NERC Functional Model V5, "the Balancing Authority's mission is to maintain the balance between Loads and resources in Real-time within its Balancing Authority Area by keeping its actual Interchange equal to its scheduled Interchange and meeting its frequency bias obligation". The Balancing Authority does not possess the bulk power System information necessary to manage Transmission flows. Therefore, the Balancing Authority can only plan to meet SOLs and IROLs by responding to directions from the Transmission Operator, including scheduling and operating resources within the limits prescribed by the Transmission Operator. Transmission Operator – replaced by proposed TOP-002-3, Requirement R1 (analysis of SOLs) & Requirement R2 (avoid IROLs). TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. TOP-002-3, R2. Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability in its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.
R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall	Approved FAC-011-2. Approved FAC-014-2.	First sentence – Replaced by FAC-011-2 and FAC-014-2 where SOLs are determined. FAC-011-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.

update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.	Proposed TOP-002-3, Requirements R1 & R3.	FAC-014-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. Second sentence – Replaced by approved FAC-014-2, R2 & R5.1. FAC-014-2, R2. The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2, R5.1. The Reliability Coordinator shall provide its SOLs (including the subset of SOLs that are IROLs) to adjacent Reliability Coordinators and Reliability Coordinators who indicate a reliability-related need for those limits, and to the Transmission Operators, Transmission Planners, Transmission Service Providers and Planning Authorities within its Reliability Coordinator Area. Third sentence – Replaced by proposed TOP-002-3. 'update… as necessary' is ambiguous and the SDT believes that proposed TOP-002-3 is a better solution. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-002-3, R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total	Approved MOD-028-1, Requirement R6.1. Approved MOD-029-1a, Requirement R3. Approved MOD-	Replaced by approved MOD-028-1, Requirement R6.1, MOD-029-1a, Requirement R3, and MOD-030-2, Requirement R2.4. Because IROLs by definition are a subset of SOLs, IROLs are included.

Transfer Capability and Available Transfer Capability calculation processes.	30-2 Requirement R2.4.	MOD-028-1, R6.1,Determine the incremental Transfer Capability for each ATC Path by increasing generation and/or decreasing Load within the source Balancing Authority area and decreasing generation and/or increasing Load within the sink Balancing Authority area until either: A System Operating Limit is reached on the Transmission Service Provider's System, or A SOL is reached on any other adjacent System in the Transmission model that is not on the study path and the distribution factor is 5% or greater. MOD-029-1a, R3, Each Transmission Operator shall establish the TTC at the lesser of the value calculated in R2 or any System Operating Limit (SOL) for that ATC Path. MOD-030-2, R2.4, Establish the TFC of each of the defined Flowgates as equal to: For thermal limits, the System Operating Limit (SOL) of the Flowgate. For voltage or stability limits, the flow that will respect the SOL of the Flowgate.
R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.	Proposed MOD-25-2, Requirement R1 Proposed TOP-003-2, Requirement R5	Replaced by proposed MOD-025-2, R1. MOD-025-2, R1: Each Generator Owner shall: 1.1. Verify the Real and Reactive Power capability of its generating units and shall verify the Reactive Power capability of its synchronous condenser units in accordance with Attachment 1. 1.2. Record the information on Attachment 2 (or on the Generator Owner's form that contains the same information as Attachment 2); 1.3. Submit within 90 calendar days of the date the

		data is recorded to its Transmission Planner. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics; including but not limited to: 14.1 - Changes in real and reactive output capabilities. (Retired August 1, 2007) 14.2 - Changes in real output capabilities. (Effective August 1, 2007) 14.3 - Automatic Voltage Regulator status and mode setting. (Retired August 1, 2007)	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to: 16.1	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.

- Changes in transmission facility status. 16.2 - Changes in transmission facility rating		
R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.	Deleted	This requirement adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a System reliability issue. This is an administrative item, as seen in the measure, which simply requires a list of line identifiers. The true reliability issue is not the name of a line but what is happening to it, pointing out the difficulty in assigning compliance responsibility for such a requirement, as well as the near impossibility of coming up with truly unique identifiers on a nation-wide basis. The bottom line is that this situation is handled by the operators as part of their normal responsibilities, and no one is aware of a switching error caused by confusion over line identifiers.
R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.	Deleted	This is part of an entity's certification and is no longer required in standards. Furthermore, accuracy is a relative term that would be difficult to measure and assess compliance with. What is accurate? All calculated line flows are within 5% of actual flows? What if 14,999 lines out of 15,000 had calculated line flows within 5% and the 15,000th had a 6% error? Do we now call the model inaccurate and not rely on the results? How do you define actual flows when meters have accuracy errors, as well (i.e., no perfect meter exists)?
Standard TOP-003-1 — Planned Outage Coordination		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment

R1. Generator Operators and Transmission Operators shall provide planned outage information. 1.1 - Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements. 1.2 - Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements. 1.3 - Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	Proposed TOP-003-2, Requirements R1 & R2	Replaced by proposed TOP-003-2, Requirements R1 & R2. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring.
R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R1 Proposed TOP-003-	Replaced by: proposed TOP-001-2, Requirement R5 which requires the Transmission Operator to coordinate actions while proposed TOP-003-2, Requirement R1 requires the Transmission Operator to identify the data it needs from the Balancing Authority to coordinate outages of voltage regulation equipment. Further, proposed TOP-003-2,

generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators, as required.	2, Requirement R5	Requirement R5 requires the Balancing Authority to provide the data to the Transmission Operator that the Transmission Operator identified it needs. TOP-001-2, R5: Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations, known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. TOP-003-2, R1: Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R5: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.	Proposed TOP-001-2, Requirement R6	Moved to proposed TOP-001-2, Requirement R6 TOP-001-2, R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC-registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.
R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.	Proposed IRO-001-3, R2 Proposed IRO-005-4, R1	Moved to the proposed IRO-001-3, Requirements R3 and proposed IRO-005-4, Requirement R1 which gives the Reliability Coordinator the authority to resolve the conflict. IRO-001-3, R2: Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability

		Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-005-4, R1: When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
Standard TOP-004-2 — Transmission Operations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.	Proposed TOP-001-2, Requirements R7and R9	Moved to proposed TOP-001-2, Requirements R7and R9. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL)

		identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. These requirements are not limited by single or multiple Contingencies, but are based solely on identified IROLs (and selected SOLs), regardless of how they were identified or whether they were identified by the Transmission Operator or Reliability Coordinator. FAC-011-02 and FAC-014-2 work collectively to establish how multiple Contingencies are considered in IROLs and SOLs. FAC-014-2, R6 requires the Planning Coordinator to identify the subset of multiple Contingencies from TPL-003 which result in stability limits and to provide this list to the Reliability Coordinators. FAC-011-2, R3.3 requires the Reliability Coordinator to include in their SOL methodology a process for determining which of the stability limits associated with multiple Contingencies are used to establish SOLs. FAC-014-2, R1 requires the Reliability Coordinator to determine which subset of SOLs qualify as IROLS. FAC-014-2, R1 requires the Reliability Coordinator to ensure SOLs, including IROLs, are established for its Reliability Coordinator Area, while FAC-014-2, R2 also requires the TOP to establish SOLs for its area. Thus, IROLs and SOLs that consider multiple outages will be developed appropriately and the Transmission Operator will operate to them. FAC-011-2, R1, The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall: R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs.

		FAC-011-2, R3, The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each: R3.3. A process for determining which of the stability limits associated with the list of multiple Contingencies (provided by the Planning Authority in accordance with FAC-014 Requirement 6) are applicable for use in the operating horizon, given the actual or expected System conditions. R3.3.1. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple Contingencies. FAC-014-2, R1, The Reliability Coordinator shall ensure that SOLs, including Interconnection Reliability Operating Limits (IROLs), for its Reliability Coordinator Area are established and that the SOLs (including Interconnection Reliability Operating Limits) are consistent with its SOL Methodology. FAC-014-2, R2, The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2 R6, The Planning Authority shall identify the subset of multiple Contingencies (if any), from Reliability Standard TPL-003 which result in stability limits. R6.1. The Planning Authority shall provide this list of multiple Contingencies and the associated stability limits to the Reliability Coordinators that monitor the Facilities associated with these Contingencies and limits. R6.2. If the Planning Authority does not identify any stability-related multiple Contingencies, the

		Planning Authority shall so notify the Reliability Coordinator. TOP-001-2, R7: Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9: Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R4. If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.	Proposed TOP-001-2, Requirements R7 and R9 Approved EOP-006-2	The SDT has determined a better way to handle such a situation is to treat it like an IROL or restoration scenario, and to take the same type of actions that you would apply for alleviating those situations. Therefore, it is replaced by proposed TOP-001-2, Requirements R7 and R9 and the approved EOP-006-2. This allows the operator sufficient flexibility within a structured environment to take the necessary actions for the reliability of the bulk power System. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. EOP-006-2, Purpose: Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
R5. Each Transmission Operator shall make every effort to remain connected to the	Deleted	Normally, the Transmission Operator does not have the right to unilaterally separate – that can only be done through the authorization of the Reliability

Interconnection. If the Transmission Operator determines that by remaining interconnected it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.		Coordinator, unless failure to act immediately would violate safety, equipment, or regulatory or statutory requirements, thus this requirement is a moot point under the Functional Model definitions and can be deleted.
R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including: 6.1 - Monitoring and controlling voltage levels and real and reactive power flows. 6.2 - Switching transmission elements. 6.3 - Planned outages of transmission elements. 6.4 - Responding to IROL and SOL violations.	Proposed TOP-001-2 Approved VAR-001-1, Requirement R1 Proposed TOP-001-2, Requirements R7 and R9 ProposedTOP-001-2, Requirement R5 Proposed TOP-001-2, Requirement R11	The first sentence has been superseded by the NERC Reliability Standards, taken as a whole. Examples of such would be the proposed TOP-001-2. The second sentence was replaced as follows: R6.1 is duplicative of approved VAR-001-1, Requirement R1 for Reactive. Real Power flows are covered in proposed TOP-001-2, Requirements R7 and R9. R6.2 is covered in proposed TOP-001-2, Requirement R5. R6.3 – moved to proposedTOP-001-2, Requirement R5. R6.4 – moved to proposed TOP-001-2, Requirement R11. TOP-001-2, Purpose: To prevent instability, uncontrolled separation, or Cascading Outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators.

		TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard TOP-005-2 — Operational Reliability Information		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area. 1.1 - Each Reliability Coordinator shall identify the data requirements from the list in Attachment 1-TOP-005-0 "Electric System Reliability Data" and any	Approved IRO-010-1a, Requirement R3	Moved to approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.

additional operating information requirements relating to operation of the bulk power system within the Reliability Coordinator Area.		
R2. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."	Deleted	Confidentiality is not a reliability issue, but a market or business issue. Since this is not a reliability issue, it does not belong in the Reliability Standards and can be deleted.
R3. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-0 "Electric System Reliability Data," unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R4. Each Purchasing-Selling Entity shall provide information, as requested by its Host Balancing Authorities and Transmission Operators, to enable them to conduct operational reliability assessments and coordinate reliable operations.	Deleted	Deleted as redundant to NAESB standard –All operating data that a Purchasing Selling Entity has, that a Transmission Operator or Balancing Authority needs is part of eTag and is acquired through that system.

Standard TOP-006-2 – Monitoring System Conditions		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use. 1.1 - Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use. 1.2 - Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	R1 & R1.1 are replaced by proposed TOP-003-2, Requirement R1. R1.2 – replaced by approved IRO-010-1a, Requirement R3. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3. Approved BAL-005-0.1b. Proposed TOP-001-2, Requirement R10. Approved IRO-008-1, Requirement R2.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-

		time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading outages. The act of monitoring is un-measureable. Entities will be in violation of other standards if they don't perform adequate monitoring. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs, and approved IRO-008-1, Requirement R2 for Real-time assessments every 30 minutes for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring.

		TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading outages.
R4. Each Transmission Operator and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading outages.
R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to	Deleted	Deleted as this is covered in the certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs; approved IRO-008-1, Requirement R2

indicate, if appropriate, the need for corrective action.		for Real-time assessments every 30 minutes for Reliability Coordinators BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R7 for Transmission Operator avoiding IROLs. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.

R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); approved EOP-003-1, Requirement R2 for Transmission Operator avoiding underfrequency; approved EOP-006-2, Requirement R8 for resynchronization for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. EOP-003-1, R2. Each Transmission Operator and Balancing Authority shall establish plans for automatic Load shedding for underfrequency or undervoltage conditions. EOP-006-2, R8. The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization.
Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded, and the actions being taken to return the system to within limits.	Proposed TOP-001-2, Requirement R10	Moved to proposed TOP-001-2, Requirement R10. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded.

R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.	Proposed TOP-001-2, Requirement R11	Moved to proposed TOP-001-2, Requirement R11. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R3. A Transmission Operator shall take all appropriate actions, up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2.	Approved EOP-003-1, Requirements R1 and in proposed EOP-003-2, Requirement R1	Replaced by approved EOP-003-1, Requirements R1. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load rather than risk an uncontrolled failure of components or Cascading outages of the Interconnection.
R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.	Approved IRO-008-1, Requirement R3	Replaced by approved IRO-008-1, Requirement R3. IRO-008-1, R3. When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.
Standard TOP-008-1 - Response to Transmission Limit Violations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.	Approved EOP-003-1, Requirements R1 and in proposed EOP-003-2, Requirement R1 Proposed TOP-001-2, Requirement R11	Replaced by approved EOP-003-1, Requirements R1 and proposed TOP-001-2, Requirement R11. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load, rather than risk an uncontrolled failure of components or Cascading Outages of the Interconnection. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement

		R8.
R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.	Proposed TOP-001-2, Requirements R7 and R9 Approved IRO-009-1, Requirement R5	First sentence – Replaced by proposed TOP-001-2, Requirements R7 and R9. Second sentence – Replaced by approved IRO-009-1, Requirement R5 for the Reliability Coordinator who is now responsible for such matters. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. IRO-009-1, R5. If unanimity cannot be reached on the value for an IROL or its Tv, each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration.
R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.	Deleted	Placing this procedure in a requirement when it is only one of the possible options for alleviating the condition is bad practice and should not be mandated in standards. A standard should not be mandating disconnection. This is in conflict with other reliability standards where disconnection is dependent on System conditions and coordination with other functional entities. Such actions, taken unilaterally, could make conditions worse.
R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted	Proposed TOP-003-2, Requirement R1 Proposed TOP-002-3, Requirement R1	Data piece is replaced by proposed TOP-003-2, Requirement R1. Analysis tools are covered in the certification process for core capabilities and, therefore, are not needed

in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.	Proposed TOP-001-2, Requirement R7 Proposed TOP-001-2, Requirement R11	here. The Transmission Operator will be in violation of other standards if they don't maintain their initial certification. For example, they can't develop their limits without maintaining their tools. Replaced by proposed TOP-002-3, Requirement R1 for analysis. Replaced by proposed TOP-001-2, Requirement R7 for real-time analysis required for IROL mitigation. Proposed TOP-001-2, Requirement R11 covers mitigation of limit violations. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard PER-001-0 - Operating Personnel Responsibility and Authority		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable	Deleted	In FERC Order 693a, Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of reliability standards that mandate compliance with such directives. The SDT reasonably applied this same logic to Transmission Operators and

operation of the Bulk Electric System.		Balancing Authorities and that makes this requirement superfluous and, thus, it can be deleted. FERC Order 693a, Paragraph 112: In response to Avista, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of reliability standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a Reliability Coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, these are vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
Standard PRC-001-1 – System Protection Coordination		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Proposed Language in New Standard or Comment**
R2. Each Generator Operator and Transmission Operator shall notify reliability entities of relay or equipment failures as follows:	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R5. A Generator Operator or Transmission Operator shall coordinate changes in generation, transmission, load or operating conditions that could require changes in the protection systems of others: R5.1. Each Generator Operator	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

shall notify its Transmission Operator in advance of changes in generation or operating conditions that could require changes in the Transmission Operator's protection systems. R5.2. Each Transmission Operator shall notify neighboring Transmission Operators in advance of changes in generation, transmission, load, or operating conditions that could require changes in the other Transmission Operators' protection systems.		specifications for data.
R6. Each Transmission Operator and Balancing Authority shall monitor the status of each Special Protection System in their area, and shall notify affected Transmission Operators and Balancing Authorities of each change in status.	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

Mapping Document

Project 2007-03 Real-time Operations

Mapping document showing the translation of TOP-001-1 — Reliability Responsibilities and Authorities; TOP-002-2a — Normal Operations Planning; TOP-003-1 — Planned Outage Coordination; TOP-004-2 — Transmission Operations; TOP-005-2 — Operational Reliability Information; TOP-006-2 – Monitoring System Conditions; TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations; TOP-008-1 - Response to Transmission Limit Violations; PRC-001-1 – System Protection Coordination; and PER-001-0 - Operating Personnel Responsibility and Authority.

Standard TOP-001-1 — Reliability Responsibilities and Authorities		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.	Deleted	This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. Deletion of this requirement doesn't alleviate responsibility for actions, as each individual requirement in the Reliability Standards now specifies an action and a responsible entity. These needed actions required for reliability of the bulk power ~~system~~System have been more clearly laid out in revised standards. (See FERC Order 693a, ~~paragraph~~ Paragraph 112.) The requirement is also non-specific, ambiguous, and not performance~~-~~oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. All of this makes this requirement redundant. The overall reliability of the bulk power ~~system~~System is not adversely affected by the deletion of this requirement. In FERC Order 693a, ~~paragraph~~ Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities~~, –~~, which makes this requirement superfluous~~,~~; and, thus, it can be

		deleted. FERC Order 693a, ~~paragraph~~Paragraph 112: "In response to Avista, the Commission clarifies that a ~~reliability~~ Reliability ~~coordinator's~~ Coordinator's authority to issue directives arises out of the Commission's approval of ~~Reliability~~ reliability ~~Standards~~ standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize ~~reliability~~ Reliability ~~coordinators~~ Coordinators to issue directives. Under the voluntary reliability scheme in place prior to ~~section~~ Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a ~~reliability~~ Reliability ~~coordinator's~~ Coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies, including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.	Proposed TOP-001-2, Requirement R11	Replaced by proposed TOP-001-2, R11: The undefined term 'operating emergencies' is no longer utilized, and the requirement has been made more stringent by not restricting Transmission Operator actions to that undefined condition. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant time frame. TOP-001-2, R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator,	Proposed IRO-001-3, Requirements R2, R3 & R4.	Replaced by: IRO-001-3, R2. Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators,

and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.		Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-001-3, R3. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with its Reliability Coordinator's direction per Requirement R2, unless the direction per Requirement R2 cannot be implemented or such actions would violate safety, equipment, regulatory or statutory requirements. IRO-001-3, R4. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall inform its Reliability Coordinator~~-~~ upon recognition of its inability to perform, as directed per Requirement R3.
R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load-Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.	Proposed TOP-001-2, Requirements R1 & R2	Replaced by proposed: TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each ~~Reliability~~ reliability ~~Directive~~ directive issued and identified as such by its Transmission Operator(s), unless such actions would violate safety, equipment, regulatory, or statutory requirements. TOP-001-2, R2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform an identified ~~Reliability~~ reliability ~~Directive~~ directive issued by that Transmission Operator.
R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or	Proposed TOP-001-2, Requirement R3 Proposed TOP-001-2, Requirement	Replaced by proposed: TOP-001-2, R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operators that are known or expected to be affected

anticipated emergency conditions, and take actions to avoid, when possible, or mitigate the emergency.	R11.	by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant ~~timeframe~~time frame.
R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.	Proposed TOP-001-2, Requirement R4 for the Transmission Operator. Approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 for the Balancing Authority	Replaced by proposed TOP-001-2, R4. TOP-001-2, R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The Generator Operator was deleted from this requirement since it can't be contacted directly by others and will only respond to such requests if they were in the form of a ~~Reliability~~ reliability ~~Directive~~ directive from its Transmission Operator, which is covered in proposed TOP-001-2, Requirement R1. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 covers the Balancing Authority. ~~s~~So to eliminate a redundancy, the Balancing Authority has been removed from this requirement. In addition, the Balancing Authority must still respond to any Reliability Directive from the Transmission

		Operator, as stated in proposed TOP-001-2, Requirement R1. EOP-001-2b, R1. Balancing Authorities shall have operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities.
R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless: R7.1 - For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.2 - For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.3 - When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R5	R7: Replaced by proposed TOP-001-2, R5 for the Transmission Operator. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. R7 – The Generator Operator can't know if their actions will burden neighboring ~~system~~Systems, since they do not have reliability data. The Transmission Operator will know if the Generator Operator actions will burden neighboring ~~system~~Systems and is required to act on this information, as per proposed TOP-001-2, R5. R7.1 – Replaced by proposed TOP-001-2, R5 for both the Transmission Operator and the Generator Operator. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. R7.2 - Replaced by proposed TOP-001-2, R5 for the Transmission Operator.

damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.		After-~~-~~the-~~-~~fact notifications have been replaced by the proposed TOP-003-2, R1 and approved IRO-010-1a, since those actions will now be seen through telemetry. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and ~~cascading~~ Cascading ~~outages~~Outages.
R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance, it shall request emergency assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.	Approved EOP-002-3, Requirement R6. Approved VAR-001-1, Requirement R8. Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirements R1, R8, and R12. Approved IRO-009-1, Requirements R1 and R2. Approved EOP-003-1, Requirement R1.	Real Power Balance and Reactive Power Balance are not defined terms. First sentence – ~~real power~~Real Power: For the Balancing Authority part of the requirement, replaced by approved EOP-002-2.1, Requirement R6. The Transmission Operator does not balance ~~real~~ Real ~~power~~ Power so that part of the sentence can be deleted per the NERC Functional Model V5. First sentence – ~~reactive~~ Reactive ~~power~~Power: Replaced by Approved VAR-001-1, Requirement R8 for the Transmission Operator, which covers ~~reactive power~~Reactive Power requirements and the meaning of balancing ~~reactive power~~Reactive Power for the Transmission Operator. The Balancing Authority must be told by the Transmission Operator to take actions regarding ~~reactive power~~Reactive Power per the NERC Functional Model V5 (see proposed TOP-001-2, Requirement R1) and, therefore, the Balancing

		Authority can be deleted from this part of the requirement. Second sentence – The Balancing Authority must be told by the Transmission Operator to take actions regarding ~~reactive power~~Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, the Balancing Authority is not necessary. Replaced by approved VAR-001-1, Requirements R1, R8, and R12 for the Transmission Operator. Third sentence – Replaced by approved IRO-009-1, Requirements R1 and R2 for the Reliability Coordinator. Replaced by approved EOP-003-1, Requirement R1 for the Transmission Operator and Balancing Authority. EOP-002-3, R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. VAR-001-1 R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. VAR-001-1, R8. Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – including reactive generation scheduling; transmission line and reactive resource switching; and, if necessary, ~~load~~Load shedding – to maintain ~~system~~System and Interconnection voltages within established limits.

		VAR-001-1, R12. The Transmission Operator shall direct corrective action, including ~~load~~Load reduction ~~,~~ ~~necessary to~~necessary to prevent voltage collapse when reactive resources are insufficient. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. IRO-009-1, R1. For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more ~~Operating~~ operating ~~Processes~~processes, ~~Procedures~~procedures, or ~~Plans~~ plans that identify actions it shall take, or actions it shall direct others to take (up to and including ~~load~~Load shedding) that can be implemented in time to prevent exceeding those IROLs. IRO-009-1, R2.For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more ~~Operating~~ operating ~~Processes~~processes, ~~Procedures~~procedures, or ~~Plans~~ plans that identify actions it shall take, or actions it shall direct others to take (up to and including ~~load~~Load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's Tv. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer ~~load~~Load rather than risk an uncontrolled failure of components or ~~cascading~~ Cascading ~~outages~~ Outages of the Interconnection.

Standard TOP-002-2a — Normal Operations Planning		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.	Approved BAL-001-0.1a. Approved BAL-002-1. Approved EOP-002-2.1, Requirement R6. Proposed TOP-002-3, Requirements R1 through R3.	First sentence – Deleted for Balancing Authority, retained for Transmission Operator. The Balancing Authority is required to balance by approved BAL-001-0.1a and approved BAL-002-1 and must take action, per approved EOP-002-2.1, Requirement R6 and, thus, the Balancing Authority part of this sentence can be deleted. Retained for Transmission Operator and moved to proposed TOP-002-3, Requirements R1 through R3. This is patterned after the approved IRO-008-1, Requirement R1 for the Reliability Coordinator. Second sentence – Deleted as superfluous. Use of appropriate personnel and equipment is incumbent to responsible entities, as per their certification as NERC registered entities. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing ~~real power~~Real Power demand and supply in ~~real~~Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of ~~load~~Load, and because Contingency Reserve activation does not typically apply to the loss of ~~load~~Load, the application of DCS is limited to the loss of supply, and does not apply to the loss of ~~load~~Load. EOP-002-2.1, R6. If the Balancing Authority cannot comply with the Control Performance and

		Disturbance Control Standards, then it shall immediately implement remedies to do so. TOP-002-3, R1: Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. TOP-002-3, R2: Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. TOP-002-3, R3: Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.	Deleted	The SDT reviewed the purpose of the Reliability Standard and believes that this requirement referred to operations planning. Given the current definition of Transmission Operator in the Glossary and Functional Model v5, operations planning is part of what the Transmission Operator is required to do and, as such, this requirement is no longer needed and can be deleted. Functional Model V5: Transmission Operator: The entity responsible for the reliability of its "local" transmission ~~system~~System, and that operates or directs the operations of the transmission ~~facilities~~Facilities.
R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-	Proposed TOP-003-2. Approved MOD-	For all but the Transmission Service Provider, moved to proposed TOP-003-2 requires the transfer of any and all required data, regardless of ~~timeframe~~time frame involved.

day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.	001-1a, Requirements R1 & R2. Approved MOD-030-2, Requirement R3.	The Transmission Service Provider provisions are already covered in: • Approved MOD-001-1a, Requirement R1: Transmission Operators select transfer capability methodology from approved MOD-028, -029, or -030. • Approved MOD-030-2, Requirement R3: Transmission Operator gives transmission model updated at least once per day to Transmission Service Provider. • Approved MOD-001-1a, Requirement R2: Transmission Service Providers use the methodology designated in approved MOD-001-1a, Requirement R1 by the Transmission Operator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. MOD-001-1a, R1. Each Transmission Operator shall select one of the methodologies~~1~~ listed below for calculating Available Transfer Capability (ATC) or Available Flowgate Capability (AFC) for each ATC Path per time period identified in R2 for those Facilities within its Transmission operating area. MOD-030-2, R3. The Transmission Operator shall make available to the Transmission Service Provider a Transmission model to determine Available Flowgate Capability (AFC) that meets the following criteria: [LA1]MOD-001-1a, R2. Each Transmission Service Provider shall calculate ATC or AFC values, as listed below, using[LA2] the methodology or methodologies selected by its Transmission Operator(s).
R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-	Proposed TOP-003-2, Requirement R5. Approved IRO-010-	Proposed TOP-003-2 requires the transfer of any and all required data between and amongst Balancing Authorities and Transmission Operators, regardless of the ~~timeframe~~time frame involved.

day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator~~,~~ so that normal Interconnection operation will proceed in an orderly and consistent manner.	1a, Requirement R3.	Data requirements for Reliability Coordinators are covered in approved IRO-010-1a, Requirement R3 making this requirement redundant for Reliability Coordinators, so the Reliability Coordinator has been removed here. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.	Approved BAL-001-0.1a. Proposed TOP-003-2, Requirement R4. Proposed TOP-002-3, Requirement R1.	The part of the requirement dealing with the Balancing Authority is replaced by approved BAL-001-0.1a. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in~~-~~to the Functional Model. Therefore, the Transmission Operator should be developing the plan and passing it down to the Balancing Authority. The Balancing Authority provides any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R5. The part of the requirement dealing with the Transmission Operator has been moved to proposed

		TOP-002-3, Requirement R1. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing ~~real power~~Real Power demand and supply in ~~real~~Real-time. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in System configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.	Approved BAL-002-1, Requirements R2 – R4. Proposed TOP-003-2, Requirement R5. Proposed TOP-002-3, Requirement R1	The part of this requirement dealing with the Balancing Authority is replaced by approved ~~BAL-002-0 and proposed~~ BAL-002-1, Requirements R2 through R4 and approved EOP-002-2.1 and the proposed EOP-002-3, Requirement R6. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in to the Functional Model. Therefore, the Transmission Operator should be doing the plan and passing it down to the Balancing Authority. The Balancing Authority gets any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R4.

		The part of the requirement dealing with the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. The n-1 contingency planning is 'built in' to the Operational Planning Analysis since SOLs are derived according to FAC-010-2.1, FAC-011-2, and FAC-014-2 which includes contingency planning. The SDT does not believe that there is a need for the last part of the sentence 'in accordance with…' with the advent of the ERO and enforceable reliability standards. As stated in the NERC Functional Model V5: " the Balancing Authority's mission is to maintain the balance between ~~load~~Loads and resources in ~~real time~~Real-time within its Balancing Authority Area by keeping its actual ~~interchange~~Interchange equal to its scheduled ~~interchange~~Interchange and meeting its frequency bias obligation." To this end and in accordance with approved NERC Reliability Standards BAL-001-0.1a and ~~BAL-002-0 (and the proposed~~ approved BAL-002-1), Balancing Authorities are required to meet all control performance and disturbance recovery criteria for any ~~system~~System condition. Balancing Authorities are not responsible for the operation of the transmission ~~system~~System. The Transmission Operator is responsible for the ~~real~~Real-time operating reliability of the transmission assets under its purview~~,~~ and, as such, has the authority to issue reliability-related directives to entities within its Transmission Operator Area. Balancing Authorities are required to implement directives received from the Transmission Operator or the Reliability Coordinator regarding ~~load~~Load, generation and ~~interchange~~Interchange for transmission concerns both predicted (e.g., through Unit Commitment) and actual (e.g., through re-dispatch, Interchange modifications or ~~load~~Load shedding). If the Balancing Authorities' actions do not resolve the transmission issues, it is the Transmission Operators' or Reliability Coordinators' responsibility to direct alternative actions.

		BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: BAL-002-1, R3. Each Balancing Authority or Reserve Sharing Group shall activate sufficient Contingency Reserve to comply with the DCS. BAL-002-1, R4. Balancing Authority or Reserve Sharing Group shall meet the Disturbance Recovery Criterion within the Disturbance Recovery Period for 100% of Reportable Disturbances. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. FAC-010-2.1, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable planning of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-011-2, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-014-2, Purpose. To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are

		determined based on an established methodology or methodologies. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing ~~real power~~Real Power demand and supply in ~~real~~Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of ~~load~~Load and because Contingency Reserve activation does not typically apply to the loss of ~~load~~Load, the application of DCS is limited to the loss of supply and does not apply to the loss of ~~load~~Load.
R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.	Approved BAL-002-1, Requirement R2. Proposed TOP-002-3, Requirement R1.	The Balancing Authority is required to always plan to meet and recover from Contingency events, as stated in approved BAL-002-1, Requirement R2 and, therefore, this requirement is redundant and can be deleted, as all elements of the requirement are now covered in other standards. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and are replaced by proposed TOP-002-3, Requirement R1. Operational Planning Analysis includes deliverability considerations, since any deliverability problems will appear as limit violations in the analysis. BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next

		day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.	Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirement R1. Proposed TOP-002-3, Requirement R1	The Balancing Authority must be told by the Transmission Operator to take actions regarding ~~reactive power~~Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, this requirement can be deleted, as all elements of the requirement are now covered in other standards. Voltage and ~~reactive power~~Reactive Power balance are the responsibility of the Transmission Operator and are replaced by approved VAR-001-1, Requirement R1. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and is replaced by proposed TOP-002-3, Requirement R1 since any deliverability problems will appear as limit violations in the analysis. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during

		anticipated normal and Contingency event conditions.
R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.	Approved INT-003-2, Requirement R1.	Replaced by approved INT-003-2, R1. INT-003-2, R1. Each Receiving Balancing Authority shall confirm Interchange Schedules with the Sending Balancing Authority prior to implementation in the Balancing Authority's ACE equation.
R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).	Deleted for Balancing Authority. Proposed TOP-002-3, Requirements R1 & R2.	Balancing Authority - The Balancing Authority is only responsible to respond to Reliability Directives as per the definition of Balancing Authority in the NERC Glossary, and, thus, this requirement should never have been applicable to the Balancing Authority. SOLs and IROLs are limits for which the Balancing Authority may not have (and is not required to have) the ability to monitor or control. The Transmission Operator, who is required to monitor SOLs, instructs the Balancing Authority as to what to do in these situations. As stated in the NERC Functional Model V5, "the Balancing Authority's mission is to maintain the balance between ~~load~~Loads and resources in ~~real time~~Real-time within its Balancing Authority Area by keeping its actual ~~interchange~~Interchange equal to its scheduled ~~interchange~~Interchange and meeting its frequency bias obligation". The Balancing Authority does not possess the bulk power ~~system~~System information necessary to manage Transmission flows. Therefore, the Balancing Authority can only plan to meet SOLs and IROLs by responding to directions from the Transmission Operator, including scheduling and operating resources within the limits prescribed by the Transmission Operator. Transmission Operator – replaced by proposed TOP-002-3, Requirement R1 (analysis of SOLs) & Requirement R2 (avoid IROLs). TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during

		anticipated normal and Contingency event conditions. TOP-002-3, R2. Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability in its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.
R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.	Approved FAC-011-2. Approved FAC-014-2. Proposed TOP-002-3, Requirements R1 & R3.	First sentence – Replaced by FAC-011-2 and FAC-014-2 where SOLs are determined. FAC-011-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-014-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. Second sentence – Replaced by approved FAC-014-2, R2 & R5.1. FAC-014-2, R2. The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2, R5.1. The Reliability Coordinator shall provide its SOLs (including the subset of SOLs that are IROLs) to adjacent Reliability Coordinators and Reliability Coordinators who indicate a reliability-related need for those limits, and to the Transmission Operators, Transmission Planners, Transmission Service Providers and Planning Authorities within its Reliability Coordinator Area. Third sentence – Replaced by proposed TOP-002-3.

		'update… as necessary' is ambiguous and the SDT believes that proposed TOP-002-3 is a better solution. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-002-3, R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes.	Approved MOD-028-1, Requirement R6.1. Approved MOD-029-1a, Requirement R3. Approved MOD-30-2 Requirement R2.4.	Replaced by approved MOD-028-1, Requirement R6.1, MOD-029-1a, Requirement R3, and MOD-030-2, Requirement R2.4. Because IROLs by definition are a subset of SOLs, IROLs are included. MOD-028-1, R6.1,Determine the incremental Transfer Capability for each ATC Path by increasing generation and/or decreasing ~~load~~Load within the source Balancing Authority area and decreasing generation and/or increasing ~~load~~Load within the sink Balancing Authority area until either: A System Operating Limit is reached on the Transmission Service Provider's ~~system~~System, or A SOL is reached on any other adjacent ~~system~~System in the Transmission model that is not on the study path and the distribution factor is 5% or greater. MOD-029-1a, R3, Each Transmission Operator shall establish the TTC at the lesser of the value calculated in R2 or any System Operating Limit (SOL) for that ATC Path. MOD-030-2, R2.4, Establish the TFC of each of the defined Flowgates as equal to:

		For thermal limits, the System Operating Limit (SOL) of the Flowgate. For voltage or stability limits, the flow that will respect the SOL of the Flowgate.
R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.	Proposed MOD-25-2, Requirement R1 Proposed TOP-003-2, Requirement R5	Replaced by proposed MOD-025-2, R1. MOD-025-2, R1: Each Generator Owner shall: 1.1. Verify the Real and Reactive Power capability of its generating units and shall verify the Reactive Power capability of its synchronous condenser units in accordance with Attachment 1. 1.2. Record the information on Attachment 2 (or on the Generator Owner's form that contains the same information as Attachment 2); 1.3. Submit within 90 calendar days of the date the data is recorded to its Transmission Planner. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, ~~Interchange~~Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics; including but not limited to: 14.1 - Changes in real and reactive output capabilities. (Retired August 1, 2007) 14.2 - Changes in real output capabilities. (Effective August 1, 2007) 14.3 - Automatic Voltage Regulator status and mode setting. (Retired August 1,	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

NERC

2007)		
R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to: 16.1 - Changes in transmission facility status. 16.2 - Changes in transmission facility rating	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.	Deleted	This requirement adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a ~~system~~System reliability issue. This is an administrative item, as seen in the measure, which simply requires a list of line identifiers. The true reliability issue is not the name of a line but what is happening to it, pointing out the difficulty in assigning compliance responsibility for such a requirement, as well as the near impossibility of coming up with truly unique identifiers on a nation-wide basis. The bottom line is that this situation is handled by the operators

		as part of their normal responsibilities, and no one is aware of a switching error caused by confusion over line identifiers.
R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.	Deleted	This is part of an entity's certification and is no longer required in standards. Furthermore, accuracy is a relative term that would be difficult to measure and assess compliance with. What is accurate? All calculated line flows are within 5% of actual flows? What if 14,999 lines out of 15,000 had calculated line flows within 5% and the 15,000th had a 6% error? Do we now call the model inaccurate and not rely on the results? How do you ~~even~~ define actual flows when meters have accuracy errors, as well (i.e., no perfect meter exists)?
Standard TOP-003-1 — Planned Outage Coordination		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Generator Operators and Transmission Operators shall provide planned outage information. 1.1 - Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements. 1.2 - Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50	Proposed TOP-003-2, Requirements R1 & R2	Replaced by proposed TOP-003-2, Requirements R1 & R2. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring.

MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements. 1.3 - Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.		
R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators, as required.	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R1 Proposed TOP-003-2, Requirement R5	Replaced by: proposed TOP-001-2, Requirement R5 which requires the Transmission Operator to coordinate actions while proposed TOP-003-2, Requirement R1 requires the Transmission Operator to identify the data it needs from the Balancing Authority to coordinate outages of voltage regulation equipment. Further, proposed TOP-003-2, Requirement R5 requires the Balancing Authority to provide the data to the Transmission Operator that the Transmission Operator identified it needs. TOP-001-2, R5: Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations, known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. TOP-003-2, R1: Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R5: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data

		specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.	Proposed TOP-001-2, Requirement R6	Moved to proposed TOP-001-2, Requirement R6 TOP-001-2, R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC--registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.
R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.	Proposed IRO-001-3, R2 Proposed IRO-005-4, R1	Moved to the proposed IRO-001-3, Requirements R3 and proposed IRO-005-4, Requirement R1 which gives the Reliability Coordinator the authority to resolve the conflict. IRO-001-3, R2: Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-005-4, R1: When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
Standard TOP-004-2 — Transmission Operations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. TOP-001-2, R7. Each Transmission Operator shall not

System Operating Limits (SOLs).		operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.	Proposed TOP-001-2, Requirements R7and R9	Moved to proposed TOP-001-2, Requirements R7and R9. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. These requirements are not limited by single or multiple Contingencies, but are based solely on identified IROLs (and selected SOLs), regardless of how they were identified or whether they were identified by the Transmission Operator or Reliability Coordinator. FAC-011-02 and FAC-014-2 work collectively to establish how multiple ~~contingencies~~ Contingencies are considered in IROLs and SOLs. FAC-014-2, R6 requires the Planning Coordinator to identify the subset of multiple ~~contingencies~~ Contingencies from TPL-003 which result in stability limits and to provide this list to the Reliability Coordinators. FAC-011-2, R3.3 requires the Reliability Coordinator to include in their SOL methodology a process for determining which of the stability limits associated with multiple ~~contingencies~~ Contingencies are used to

		establish SOLs. FAC-014-2, R1 requires the Reliability Coordinator to determine which subset of SOLs qualify as IROLS. FAC-014-2, R1 requires the Reliability Coordinator to ensure SOLs, including IROLs, are established for its Reliability Coordinator Area, while FAC-014-2, R2 also requires the TOP to establish SOLs for its area. Thus, IROLs and SOLs that consider multiple outages will be developed appropriately and the Transmission Operator will operate to them. FAC-011-2, R1, The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall: R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs. FAC-011-2, R3, The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each: R3.3. A process for determining which of the stability limits associated with the list of multiple ~~contingencies~~ Contingencies (provided by the Planning Authority in accordance with FAC-014 Requirement 6) are applicable for use in the operating horizon, given the actual or expected ~~system~~System conditions. R3.3.1. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple ~~contingencies~~Contingencies. FAC-014-2, R1, The Reliability Coordinator shall ensure that SOLs, including Interconnection Reliability Operating Limits (IROLs), for its Reliability Coordinator Area are established and that the SOLs (including Interconnection Reliability Operating Limits) are consistent with its SOL Methodology.

		FAC-014-2, R2, The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2 R6, The Planning Authority shall identify the subset of multiple ~~contingencies~~ Contingencies (if any), from Reliability Standard TPL-003 which result in stability limits. R6.1. The Planning Authority shall provide this list of multiple ~~contingencies~~ Contingencies and the associated stability limits to the Reliability Coordinators that monitor the ~~facilities~~Facilities associated with these ~~contingencies~~ Contingencies and limits. R6.2. If the Planning Authority does not identify any stability-related multiple ~~contingencies~~Contingencies, the Planning Authority shall so notify the Reliability Coordinator. TOP-001-2, R7: Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9: Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R4. If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be	Proposed TOP-001-2, Requirements R7 and R9 Approved EOP-	The SDT has determined a better way to handle such a situation is to treat it like an IROL or restoration scenario, and to take the same type of actions that you would apply for alleviating those situations. Therefore, it is replaced by proposed TOP-001-2,

considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.	006-2	Requirements R7 and R9 and the approved EOP-006-2. This allows the operator sufficient flexibility within a structured environment to take the necessary actions for the reliability of the bulk power ~~system~~System. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. EOP-006-2, Purpose: Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
R5. Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected~~,~~ it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.	Deleted	Normally, ~~T~~the Transmission Operator does not have the right to unilaterally separate – that can only be done through the authorization of the Reliability Coordinator, unless failure to act immediately would violate safety, equipment, or regulatory or statutory requirements, thus this requirement is a moot point under the Functional Model definitions and can be deleted.
R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that	Proposed TOP-001-2 Approved VAR-001-1, Requirement R1 Proposed TOP-001-2, Requirements R7 and R9	The first sentence has been superseded by the NERC Reliability Standards, taken as a whole. Examples of such would be the proposed TOP-001-2. The second sentence was replaced as follows: R6.1 is duplicative of approved VAR-001-1, Requirement R1 for ~~reactive~~Reactive. ~~Real power~~Real Power flows are covered in proposed TOP-001-2, Requirements R7 and R9.

impact inter- and intra-Regional reliability, including: 6.1 - Monitoring and controlling voltage levels and real and reactive power flows. 6.2 - Switching transmission elements. 6.3 - Planned outages of transmission elements. 6.4 - Responding to IROL and SOL violations.	ProposedTOP-001-2, Requirement R5 Proposed TOP-001-2, Requirement R11	R6.2 is covered in proposed TOP-001-2, Requirement R5. R6.3 – moved to proposedTOP-001-2, Requirement R5. R6.4 – moved to proposed TOP-001-2, Requirement R11. TOP-001-2, Purpose: To prevent instability, uncontrolled separation, or ~~cascading outages~~Cascading Outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load.

		TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard TOP-005-2 — Operational Reliability Information		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area. 1.1 - Each Reliability Coordinator shall identify the data requirements from the list in Attachment 1-TOP-005-0 "Electric System Reliability Data" and any additional operating information requirements relating to operation of the bulk power system within the Reliability Coordinator Area.	Approved IRO-010-1a, Requirement R3	Moved to approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R2. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."	Deleted	Confidentiality is not a reliability issue, but a market or business issue. Since this is not a reliability issue, it does not belong in the Reliability Standards and can be deleted.
R3. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-0 "Electric System Reliability Data," unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.		specifications for data.
R4. Each Purchasing-Selling Entity shall provide information, as requested by its Host Balancing Authorities and Transmission Operators, to enable them to conduct operational reliability assessments and coordinate reliable operations.	Deleted	Deleted as redundant to NAESB standard –All operating data that a Purchasing Selling Entity has, that a Transmission Operator or Balancing Authority needs is part of eTag and is acquired through that system.
Standard TOP-006-2 – Monitoring System Conditions		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use. 1.1 - Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use. 1.2 - Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	R1 & R1.1 are replaced by proposed TOP-003-2, Requirement R1. R1.2 – replaced by approved IRO-010-1a, Requirement R3. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator,

Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.		Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3. Approved BAL-005-0.1b. Proposed TOP-001-2, Requirement R10. Approved IRO-008-1, Requirement R2.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and ~~cascading~~ Cascading outages. The act of monitoring is un-measureable. Entities will be in violation of other standards if they don't perform adequate monitoring. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs, and approved IRO-008-1, Requirement R2 for Real-time assessments every 30 minutes for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that

		all ~~facilities~~Facilities and ~~load~~Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the ~~system~~System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and ~~c~~Cascading outages.
R4. Each Transmission Operator~~,~~ and Balancing Authority shall have information, including weather forecasts and past load	Proposed TOP-003-2, Requirements R1 & R2	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority.

patterns, available to predict the system's near-term load pattern.	Approved IRO-010-1a, Requirement R3.	Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and ~~cascading~~ Cascading outages.
R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to indicate, if appropriate, the need for corrective action.	Deleted	Deleted as this is covered in the certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs; approved IRO-008-1, Requirement R2 for ~~real~~Real-time assessments every 30 minutes for Reliability Coordinators BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all ~~facilities~~Facilities and ~~load~~Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the ~~system~~System to within limits when an

		IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R7 for Transmission Operator avoiding IROLs. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all ~~facilities~~Facilities and ~~load~~Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.
R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); approved EOP-003-1, Requirement R2 for Transmission Operator avoiding underfrequency; approved EOP-006-2, Requirement R8 for resynchronization for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the

		Regulating Reserve. The standard also ensures that all ~~facilities~~Facilities and ~~load~~Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. EOP-003-1, R2. Each Transmission Operator and Balancing Authority shall establish plans for automatic ~~load~~Load shedding for underfrequency or undervoltage conditions. EOP-006-2, R8. The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization.
Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded, and the actions being taken to return the system to within limits.	Proposed TOP-001-2, Requirement R10	Moved to proposed TOP-001-2, Requirement R10. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the ~~system~~System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded.
R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.	Proposed TOP-001-2, Requirement R11	Moved to proposed TOP-001-2, Requirement R11. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R3. A Transmission Operator shall take all appropriate actions, up to and including shedding firm load,	Approved EOP-003-1, Requirements R1	Replaced by approved EOP-003-1, Requirements R1. EOP-003-1, R1. After taking all other remedial steps, a

or directing the shedding of firm load, in order to comply with Requirement R2.	and in proposed EOP-003-2, Requirement R1	Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer ~~load~~Load rather than risk an uncontrolled failure of components or ~~cascading~~ Cascading outages of the Interconnection.
R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.	Approved IRO-008-1, Requirement R3	Replaced by approved IRO-008-1, Requirement R3. IRO-008-1, R3. When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.

Standard TOP-008-1 - Response to Transmission Limit Violations

Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.	Approved EOP-003-1, Requirements R1 and in proposed EOP-003-2, Requirement R1 Proposed TOP-001-2, Requirement R11	Replaced by approved EOP-003-1, Requirements R1 and proposed TOP-001-2, Requirement R11. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer ~~load~~Load, rather than risk an uncontrolled failure of components or ~~cascading outages~~Cascading Outages of the Interconnection. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the	Proposed TOP-001-2, Requirements R7 and R9 Approved IRO-009-1, Requirement R5	First sentence – Replaced by proposed TOP-001-2, Requirements R7 and R9. Second sentence – Replaced by approved IRO-009-1, Requirement R5 for the Reliability Coordinator who is now responsible for such matters. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection

Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.		Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. IRO-009-1, R5. If unanimity cannot be reached on the value for an IROL or its Tv, each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration.
R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.	Deleted	Placing this procedure in a requirement when it is only one of the possible options for alleviating the condition is bad practice and should not be mandated in standards. A standard should not be mandating disconnection. This is in conflict with other ~~Reliability~~ reliability ~~Standards~~ standards where disconnection is dependent on System conditions and coordination with other functional entities. Such actions, taken unilaterally, could make conditions worse.
R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.	Proposed TOP-003-2, Requirement R1 Proposed TOP-002-3, Requirement R1 Proposed TOP-001-2, Requirement R7 Proposed TOP-001-2, Requirement R11	Data piece is replaced by proposed TOP-003-2, Requirement R1. Analysis tools are covered in the certification process for core capabilities and, therefore, are not needed here. The Transmission Operator will be in violation of other standards if they don't maintain their initial certification. For example, they can't develop their limits without maintaining their tools. Replaced by proposed TOP-002-3, Requirement R1 for analysis. Replaced by proposed TOP-001-2, Requirement R7 for real-time analysis required for IROL mitigation.

		Proposed TOP-001-2, Requirement R11 covers mitigation of limit violations. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard PER-001-0 - Operating Personnel Responsibility and Authority		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System.	Deleted	In FERC Order 693a, ~~paragraph~~Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of ~~Reliability~~ reliability ~~Standards~~ standards that mandate compliance with such directives. The SDT reasonably applied this same logic to Transmission Operators and Balancing Authorities and that makes this requirement superfluous and, thus, it can be deleted. FERC Order 693a, ~~paragraph~~Paragraph 112: In response to Avista, the Commission clarifies that a ~~reliability~~ Reliability ~~coordinator's~~ Coordinator's authority to issue directives arises out of the Commission's approval of ~~Reliability~~ reliability ~~Standards~~ standards that mandate compliance with

		such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to ~~section~~ Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a ~~reliability~~ Reliability ~~coordinator's~~ Coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, ~~we view~~ these are~~as~~ vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
Standard PRC-001-1 – System Protection Coordination		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R2. Each Generator Operator and Transmission Operator shall notify reliability entities of relay or equipment failures as follows:	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R5. A Generator Operator or Transmission Operator shall coordinate changes in generation, transmission, load or operating conditions that could require changes in the protection systems of others: R5.1. Each Generator Operator shall notify its Transmission Operator in advance of changes in generation or operating conditions that could require changes in the Transmission Operator's protection systems.	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

R5.2. Each Transmission Operator shall notify neighboring Transmission Operators in advance of changes in generation, transmission, load, or operating conditions that could require changes in the other Transmission Operators' protection systems.		
R6. Each Transmission Operator and Balancing Authority shall monitor the status of each Special Protection System in their area, and shall notify affected Transmission Operators and Balancing Authorities of each change in status.	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

Standards Announcement

Project 2007-03 Real-Time Transmission Operations

Three Successive Ballots and Two Non-binding Polls Windows Now Open Through 8 p.m. Eastern on Friday, April 20, 2012

Now Available

Three successive ballots of the following standards and two non-binding polls of the associated VRFs and VSLs, are **open through 8 p.m. Eastern on Friday, April 20, 2012:**

- TOP-001-2 Transmission Operations (significant changes made to last posted version)
- TOP-002-3 Operations Planning (no significant changes made to last posted version)
- TOP-003-2 Operational Reliability Data (significant changes made to last posted version)

Clean and redline versions of these standards and the associated implementation plan and VRFs and VSLs, are posted on the project webpage. The implementation plan addresses all three proposed TOP standards and associated retirements and is not easily associated with a single proposed TOP standard. Since the most significant modifications to the implementation plan are associated with TOP-003-2, the comment form and ballot for TOP-003-2 will include the implementation plan.

The SDT is recommending that three requirements in PRC-001-1 be retired because those requirements deal with data requirements covered in the proposed TOP-003-2. The mapping document for the project shows each of the requirements in the approved standard(s) and the disposition of the requirement in the new standards. Clean and redline versions of PRC-001-2, showing the retired requirements, have been posted on the project page. The ballot of the conforming changes to PRC-001 is associated with the approval of TOP-003-2 and the implementation plan for this project.

Note that TOP-001-2, TOP-002-3, and TOP-003-2 reflect the merging of the following standards into a single standard, making it impractical to post a “redline” of the three proposed standards that shows the changes to the last balloted versions of these standards. The last approved versions of the standards listed below, as well as a redline showing the proposed modifications to PRC-001-1, have been posted on the project’s webpage for easy reference.

- PER-001-0.1 Operating Personnel Responsibility and Authority
- PRC-001-2 System Protection Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2a Normal Operations Planning

- TOP-003-1 Planned Outage Coordination
- TOP-004-2 Transmission Operations
- TOP-005-2 Operational Reliability Information
- TOP-006-2 Monitoring System Conditions
- TOP-007-0 Reporting SOL and IROL Violations
- TOP-008-1 Response to Transmission Limit Violations

Instructions for Balloting

Members of the ballot pools associated with this project may log in and submit their votes for the standards and opinions for the non-binding polls by clicking here.

Please note that comments submitted during the formal comment period, the ballots and the non-binding polls use the same electronic form. Therefore, it is NOT necessary for ballot pool members to submit more than one set of comments. Companies or entities with representatives in multiple segments of the ballot pool may submit a single set of comments by identifying themselves as a "group" on the comment form. Likewise, it is **preferable** for a group of separate entities that develop comments jointly to submit the comments as a "group." **The drafting team requests that all stakeholders (ballot pool members as well as other stakeholders) submit all comments through the electronic comment form, and that companies in multiple segments as well as individual entities that develop joint comments with other entities submit their comments as a "group," with the list of group members and their associated Industry Segments.**

Next Steps

The drafting team will consider all comments submitted during this formal comment and ballot period to determine whether to make additional revisions to the standards.

Background

The Project 2007-03 drafting team has attempted to eliminate redundancy in the Transmission Operations (TOP) family of standards. As part of this process, the drafting team has made an effort to reorganize the standards and requirements in a more logical manner. The team has also made revisions to address outstanding Order 693 directives.

Standards Development Process

The Standard Processes Manual contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. For more information or assistance, please contact Monica Benson at monica.benson@nerc.net.

For more information or assistance, please contact Monica Benson,

Standards Announcement

Project 2007-03 Real-Time Transmission Operations
Formal Comment Period Open: March 22, 2012 – April 20, 2012
Ballot Windows Open – Three Successive Ballots, and Two Non-binding Polls: April 11–20, 2012

Now Available

The Real-time Operations Standards Drafting Team has made revisions to three standards and the associated VRFs, VSLs, and implementation plan in response to stakeholder comments from the last posting and quality review of each standard:

- TOP-001-2 Transmission Operations (significant changes made to last posted version
- TOP-002-3 Operations Planning (no significant changes made to last posted version)
- TOP-003-2 Operational Reliability Data (significant changes made to last posted version)

The drafting team did make significant changes to all three standards following the comment and ballot period that ended on January 12, 2012 and the team has posted the revised standards and implementation plan for a successive comment/ballot period.

The implementation plan addresses all three proposed TOP standards and associated retirements and is not easily associated with a single proposed TOP standard. Since the most significant modifications to the implementation plan are associated with TOP-003-2, the comment form and ballot for TOP-003-2 will include the implementation plan.

Clean and redline versions of TOP-001-2, TOP-002-3, and TOP-003-2, the associated implementation plan, and the VRFs and VSLs are posted for a formal 30-day comment period through 8 p.m. Eastern on Friday, April 20, 2012. Successive ballots of the three standards, and non-binding polls of the VRFs and VSLs associated with TOP-001-2 and TOP-003-2, will begin on Wednesday, April 11 and end on Friday, April 20, 2012. (There were no changes to the Requirements or associated VRFs and VSLs for TOP-002-3 thus there is no need to conduct another non-binding poll of these VRFs and VSLs.)

Note: The SDT is recommending that three requirements in PRC-001-1 be retired because those requirements deal with data requirements covered in the proposed TOP-003-2. The mapping document for the project shows each of the requirements in the approved standard(s) and the disposition of the requirement in the new standards. Clean and redline versions of PRC-001-2, showing the retired requirements, have been posted on the project page. The ballot of the conforming changes to PRC-001 is associated with the approval of TOP-003-2 and the implementation plan for this project.

Note that TOP-001-2, TOP-002-3, and TOP-003-2 reflect the merging of the following standards into a single standard, making it impractical to post a "redline" of the three proposed standards that shows the changes to the last balloted versions of these standards. The last approved versions of the standards listed below, as well as a redline showing the proposed modifications to PRC-001-1 have been posted on the project's web page for easy reference.

- PER-001-0 Operating Personnel Responsibility and Authority
- PRC-001-1 System Protection Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2a Normal Operations Planning
- TOP-003-1 Planned Outage Coordination
- TOP-004-2 Transmission Operations
- TOP-005-2 Operational Reliability Information
- TOP-006-2 Monitoring System Conditions
- TOP-007-0 Reporting SOL and IROL Violations
- TOP-008-1 Response to Transmission Limit Violations

Instructions for Submitting Comments

Please use this electronic form to submit comments. If you experience any difficulties in using the electronic form, please contact Monica Benson at monica.benson@nerc.net. An off-line, unofficial copy of the comment form is posted on the project page.

Please note that comments submitted during the formal comment period, the ballot and the non-binding polls use the same electronic form. Therefore, it is NOT necessary for ballot pool members to submit more than one set of comments. Companies or entities with representatives in multiple segments of the ballot pool may submit a single set of comments by identifying themselves as a "group" on the comment form. Likewise, it is **preferable** for a group of separate entities that develop comments jointly to submit the comments as a "group." **The drafting team requests that all stakeholders (ballot pool members as well as other stakeholders) submit all comments through the electronic comment form, and that companies in multiple segments as well as individual entities that develop joint comments with other entities submit their comments as a "group," with the list of group members and their associated Industry Segments.**

Next Steps

Three individual successive ballots (one for each standard) and two non-binding polls will be conducted beginning on Wednesday, April 11, 2012 and ending at 8 p.m. ET on Friday, April 20, 2012.

The standards are being balloted individually to provide stakeholders an opportunity to cast separate ballots for each standard. The individual ballots will provide the drafting team better feedback on which standards require additional development to achieve stakeholder consensus. Stakeholders are encouraged to consider each standard on its own merits and cast individual ballots, rather than casting the same ballot for both standards, in order to assist the drafting team with evaluating which standards require additional development to achieve consensus.

Background

The Project 2007-03 drafting team has attempted to eliminate redundancy in the Transmission Operations (TOP) family of standards. As part of this process, the drafting team has made an effort to reorganize the standards and requirements in a more logical manner. The team has also made revisions to address outstanding Order 693 directives.

Standards Announcement

Project 2007-03 – Real-time Operations

Successive Ballot and Non-binding Poll Results

Now Available

Successive ballots of three Real-time Operations standards concluded Friday, April 20 and non-binding polls of the associated VRFs and VSLs concluded Monday, April 23, 2012:

- TOP-001-2 Transmission Operations
- TOP-002-3 Operations Planning
- TOP-003-2 Operational Reliability Data

Voting statistics for each ballot are listed below, and the Ballots Results page provides a link to the detailed results.

Standard	Quorum	Non-binding Poll Results
TOP-001-2 Transmission Operations	Quorum: 78.28% Approval: 75.65%	Quorum: 77.21% Supportive Opinions: 69.84%
TOP-002-3 Operations Planning	Quorum: 78.02% Approval: 87.22%	
TOP-003-2 Operational Reliability	Quorum: 78.28% Approval: 80.11%	Quorum: 77.48% Supportive Opinions: 67.64%

Next Steps

The drafting team will consider all comments submitted, and based on the comments will determine whether to make additional changes. If the drafting team determines that no substantive changes are required to address the comments, a recirculation ballot will be conducted. If the drafting team decides to make substantive revisions, the drafting team will submit the revised standard and consideration of comments received for a quality review prior to posting for a parallel formal 30-day comment period and successive ballot.

TOP-001-2 Grammatical: R8 and its supporting rationale refers to a term SOL. The term is 'defined' later in R9. The 'definition' should probably be defined at the time of its first usage. R11 The TO directs someone to do something. However, who is directed is not defined. Is it directed to the RC?
Group
Northeast Power Coordinating Council
Guy Zito
No
It is written in FAC-014-2 R5.2: R5.2. The Transmission Operator shall provide any SOLs it developed to its Reliability Coordinator and to the Transmission Service Providers that share its portion of the Reliability Coordinator Area. This already mandates that the Transmission Operator provide its Reliability Coordinator SOLs. This requirement and TOP-001 R8 must be made to agree. As explained in the redline version of TOP-001: “Rationale: The class of SOL included in Requirements R8, R9, and R11 was created in response to industry comments that there were SOLs that deserved increased attention. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.” It is understood that the impacts of some SOLs may attract increased attention because of the operational implications of them being exceeded. It must also be realized that every SOL has a reliability impact. The added wording adds unneeded complication to the Requirement. Will the proposed requirement create a new class of SOLs that might include any that might be “intermittent” in nature, such as those occurring during televised events, etc.? This becomes a moving target, and it may become problematic for keeping track of those SOLs to which these requirements apply, i.e., those that require notification to the Reliability Coordinator, versus those which don’t. Regardless, operator responses to any SOL’s on their systems should be the same in terms of swiftness and a sense of urgency. The phrase “supporting reliability internal” is used in R8. What constitutes “supporting reliability internal”? This may present compliance issues. Experience has shown that the use of the terms internal, external, local, wide area have presented auditing difficulties that generated documentation issues.

TOP-001 uses the term “Reliability Directive” which is dependent on a definition developed in Project 2006-06 Reliability Coordination. Because of the development of this definition in both Projects, NERC should post these projects simultaneously to gain industry support to move these projects forward.

PNGC Group Comments
Ron Sporseen
No
Comments: The PNGC comment group believes there should be a distinction in the “Applicability” section of the standard distinguishing between “Scheduling DP/LSE” and “Non-scheduling DP/LSE”. PNGC members are small rural cooperatives that are “Full service BPA customers.” This means is that BPA is our power supplier and scheduling agent and therefore handles all scheduling, tagging, dispatching of resources and curtailments of load from breakers on BPA’s system for PNGC members. According to a letter from the WECC Reliability Coordinator (VRCC and LRCC) none of PNGC’s members will ever receive a “Reliability Directive”. Such a Directive would be sent to either a Balancing Authority (BA), or a Transmission Operator (TOP). In fact, the Bonneville Power Administration (BPA) is the BA and TOP for many of our members so R1 and R2 are nothing more than a clerical exercise for many DP/LSE entities. We estimate there are over 100 entities that are BPA Full Service customers that are in a similar position and making this standard applicable to them does nothing to enhance reliability. A simple declarative statement in the Applicability section of the standard could focus the intent of the SDT on those entities that need it while lessening the compliance risk and clerical burden for other entities that the standard should not apply to. We suggest: 4. Applicability 4.1 Balancing Authority 4.2 Transmission Operator 4.3 Generator Operator 4.4 Distribution Provider: With Real-time Operations desk 4.5 Load-Serving Entity: With Real-time Operations desk
No
Comments: In addition to the same Applicability argument we made in Question 1 for TOP-001-2, the PNGC comment group has a couple of minor issues with TOP-003-2: 1. We question the Violation Risk Factor (VRF) of “Medium” for R5. R1-4 have VRFs of “Low” so the “Medium” designation for R5 seems unwarranted. If the SDT views the failure of TOPs and BAs to distribute data requests to other entities in an agreeable format as a “Low” risk, then the failure of those other entities to respond to issued data requests should also be a “Low” risk. We believe R1-5 should all have a “Low” VRF. 2. R1 and R2 require the BA and TOP create a documented specification for data needed to perform analysis functions and Real-time monitoring. We question R1.2 and R2.2: “A mutually agreeable format.” There absolutely should be a mutually agreeable format for the data but the standard doesn’t define how that is to be accomplished. It seems to us that the TOP and BA will just issue the directive without consultation and that violation of R1.2 and R2.2 by the TOP or BA is unenforceable. We suggest expanding M1 and M2 to include acknowledgement by entities that are the subject of requests. The acknowledgment should include that the request was received and the data format is agreed to.
This question is a duplicate of Question 2. If question 2 refers to TOP-002-3 then our comments from Question 2 should be in this spot. We have no comments for TOP-002-3.

In the Violation Severity Levels section of the standards, items that contain “whichever is less” following the “or” statement, may be difficult to interpret. As a suggestion, this could be addressed by improving the wording, providing examples or categorizing non-compliance as a percentage only (rather than a number “or” percentage, whichever is less)
The proposed effective dates for the TOP-002-3, TOP-003-2 and PRC-001-2 standards conflict with Ontario regulatory practice respecting the effective date of implementing approved standards. It is suggested that this conflict be removed by appending to each of the sentences in Section A5 of both standards, after “following applicable regulatory approval”, to the following effect: “, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.” The places for the insertion are: TOP-002-3, Section A5, end of second sentence TOP-003-2, Section A5, end of second sentence. PRC-001-2, Section A5, end of second sentence.

TOP-002-3 M2 should be updated to reflect the changes made in R2 (as suggested below). M2. Each Transmission Operator shall have evidence that it has developed a plan to operate within each IROL

and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans for precluding operating in excess of each IROL and each SOL which, while not an IROL, was identified as a result of the Operational Planning Analysis. VSLs R2 (page 5 redline version) Severe Column should be updated to reflect the changes made in R2 (as suggested below). The Transmission Operator did not develop a plan to operate within those IROLs and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.
Yes
Agree with changes made.

Yes
Yes
TOP-002-3, R1 TOP-002-3, R1 states “Each Transmission Operator shall have an Operational Planning Analysis …” and the mapping document says that this requirement “is patterned after the approved IRO-008-1, Requirement R1 for the Reliability Coordinator.” As such, Austin Energy suggests that the language in TOP-002-3, R1 be changed from “… shall have an Operational Planning Analysis …” to “… shall perform an Operational Planning Analysis ….” This language matches IRO-008-1, R1 and better aligns with Measure 1 for TOP-002-3.
Yes
We agree.
Yes
The VSL for TOP-001-2, R8 includes instruction to “start with the Severe VSL first and then to work your way to the left until you find the situation that fits.” It explains that the goal is to assign a Severe VSL to a small entity who has just one affected reliability entity to inform and fails to do so. This structure usually makes sense; however, it is not applicable to R8. R8 requires the TOP to inform its RC of SOLs that have been identified as supporting reliability. The variability in the requirement is in the number of SOLs identified not in the number of registered entities to inform. The intent of being non-discriminatory by size of entity is already covered with regards to the number of SOLs identified because the VSL uses the “# SOLs or % of SOLs, whichever is less” approach, and the instruction becomes unnecessary. Austin Energy recommends that the SDT remove the instruction statement above R8.

Multiple entities commented in the prior round that the standard would expose RE's to violation space in the event of a communications failure. Although the SDT stated in the consideration of comments that "It is not the intent of the SDT that TOP-003-2 penalizes entities for communication errors. The intent is to have the data communications established.", the plain language of the standard is in conflict with this position. The standard as written states a RE "shall satisfy the obligations of the documented specifications for data." Among the specifications of real time data requests are the periodicity of the submission. For example, PJM in Manual 14D, Generator Operational Requirements, states "All data items, regardless of type, are collected and disseminated at the same 2-second rate. Instantaneous MW and MVAR information is collected on the same data scan as Integrated MWh and MVARh." If a RE has a loss of their RTU, they will have failed to "satisfy the obligations of the documented specifications for data", and be exposed to a potential violation. If the intent of the SDT is as stated in the previous consideration of comments, there must be some language to that effect added to the standard. In R1, adding a bullet 1.21 "an alternative format for use in the event of interruption of the mutually agreed format" would close the hole in the language as written and satisfy the stated objections.
Yes. Thank you to the SDT for removing these requirements.
No
As written data transmission failures subject REs to a severe violation in R5, see Q3 response.

Michelle D'Antuono
Ingleside Cogeneration LP
Yes
As a GO/GOP, Ingleside Cogeneration LP is subject only to TOP-001-2 R1 and R2, related to compliance with a Reliability Directive. We believe that the SDT has captured the appropriate circumstances for when a Reliability Directive is issued and identified – and the circumstances under which it may be not be possible to accommodate one. Furthermore, we agree with the language added to the corresponding Measures (M1 and M2) specifically allowing an attestation to be supplied to a CEA if a Reliability Directive was not received during the compliance time frame.
Yes
Yes
We are encouraged that the SDT has added a statement in M3 and M4 calling for those TOPs and BAs who post their data specifications to also electronically notify the downstream data suppliers. This is a good first step in the use of a web-based data collection process – which we hope will replace the spreadsheet-based process mostly in place today. A goal of such a system must be to consolidate all operational data requirements into a single template, so that data suppliers are not subject to redundant criteria.
Ingleside Cogeneration LP agrees that relay and equipment status can be included in a telemetry specification as part of TOP-003-2 – which is redundant with PRC-001-1 R2 and R6. Similarly, the coordination of changes in generation operating conditions such as de-ratings that could require changes in the TOP's Protection System (R5) can be captured in existing data submission vehicles that TOP-003-2 will also cover.
Yes
Individual
Rich Salgo
NV Energy

Yes

Yes
We see no problem with what was changed in this posting; however, please note issues raised related to TOP-003-2 in the comment submitted on Question 6.
No, we believe there may be reliability gaps introduced with the specific deletion of old R2 from PRC-001. We are concerned that the open-ended specification of required data per proposed TOP-003 R1 may not adequately cover the notification of status and conditions for certain protection systems and SPS. With the requirement R2 in place, there is no doubt about the need to make notification of these sorts of losses or status changes. Absent the requirement, it is likely that inconsistent specifications for such information by TOP's or BA's will result.
No
PRC-001 R1: Though this requirement does not appear to be within the scope of the SDT's efforts in this project, we note that for R1 (familiarity of purpose and limitations of protection systems), there is no Measure in the Standard, and the VSL's appear to be quite subjective. I would like to make a specific suggestion, but cannot do so without knowing what sort of Measures are intended for this requirement. Perhaps, change the VSL language to state "Entity does not possess documentation describing purpose/limitations of its protection systems for its Operator personnel."
TOP-003-2 R1-5 1)We appreciate the work of the SDT to allow discretion in the creation of data and information specifications to provide for reliable operation; however, we believe that the open-ended requirements do not provide sufficient clarity about what is expected. This entity is a BA/TOP as well as a GOP, GO, TO, etc. As such, is it the intent of these requirements that we would have to issue a specification to ourselves for the data and information that we are to provide to ourselves? If so, how is this expected to take form? We could envision a document that lists the SCADA RTU points required from every BES station in the footprint, which calls into question what happens when an inevitable SCADA interruption occurs. Is the entity in violation of R5 because for a short period of time it did not satisfy its obligations to provide data under the specification? 2) Or, is it the intent of the SDT that such specifications are issued to "external" entities, such as interconnecting Generators, TOP's within the BA footprint, etc.? 3) On the surface, the open-ended fill-in-the-blank specification requirement seems like a good idea; however, at closer evaluation, we believe it will lead to great inconsistencies without some additional guidance on what needs to be included in the specifications and to whom the specifications should apply.
Group
Progress Energy
Jim Eckelkamp
Yes
: Progress Energy requests the removal of the word “identified” in association with Reliability Directive in all Requirements and Measures. Communications between Transmission Operators and other functional entities already require 3-part communications; having to state ‘This is a Reliability Directive’ to each entity and receive confirmation of that back from each entity, especially across a fleet of Generator Operators and LSEs, could add unnecessary time before action is taken. Entities should always assume that each directive being given to them is a Reliability Directive and respond accordingly. R1 would read “and Load-Serving Entity shall comply with each Reliability Directive issued by its Transmission Operator…”.
Yes
Please change the R2 VSL from “supporting its internal area reliability” to “supporting reliability internal to its Transmission Operator Area…”.
Yes
Individual
Joe Petaski
Manitoba Hydro
No

Manitoba Hydro is voting negative on TOP-001-2 for the following reason: R8 and R9 - In the absence of the rationale box in the final approved version of the standard, R8 is extremely unclear. All SOL's support reliability based on an assessment of operational planning. The requirement (R9) prohibits operation outside any SOL "for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based." However, by NERC definition an SOL is based upon Facility Rating and Stability Criteria, so operating outside the SOL is always going to violate the Facility Rating. The term continuous duration is undefined and as such makes the standard subject to interpretation. It would appear that the standard expects the system operator to do something more than would be done for an IROL.
Yes
Section 1.3 Data Retention - For consistency with TOP-001-2, the retention period for voice recordings in TOP-002-3 should be changed from 3 months to 'ninety calendar days'.
Yes
R2.1 - For consistency with R2 and completeness, 'analysis functions' should be added to R2.1. Suggested wording: 'A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring'.
Section 1.4 Compliance Monitoring and Assessment Processes - Section 1.4 should be removed as it is identical to Section 1.2 'Compliance Monitoring and Reset Time Frame'.
Yes
No additional comments.
Individual
Andrew Z. Pusztai

Yes
No
Requirement R3 and R4 should specify which entities are required to respond to data requests. For example, a TOP in Indiana who sends a request to a TOP in Wisconsin; should the TOP in Wisconsin be required to respond. ATC recommends that the term "contiguous entity" be referenced and added to the requirements.+
ATC agrees with removing R6 from PRC-001, however ATC does not believe it is appropriately addressed in TOP-003-2. If the intent is to have SPS data as a part of a data specification, it should be stated in the requirements of TOP-003-2.
Group
MRO NSRF
WILL SMITH
No
For R9, the drafting team did not address "continuous duration". Many entities had commented that the term is vague. Is continuous duration, 8 hours or 15 minutes? For IROL limit violations or Unknown State conditions, the entity has 30 minutes to mitigate the situation.
Yes
No
Requirement R3, and R4 must specify which entities are required to respond to data requests. For example should a TOP in Indiana send a request to a TOP in Wisconsin, must it be complied with. Suggest a, "contiguous entity" reference. Requirements R1 and R3 are very vague and need to add more specificity similar to that from existing standard TOP-005 which includes specific guidelines.

The NSRF agrees with removing R6 from PRC-001, however we do not feel it is appropriately addressed in TOP-003-2. If the intent is to have SPS data as a part of a data specification, it should be stated in the requirements of TOP-003-2.
No
TOP-001-2 The adding the language of “or 5% or less of the affected Transmission Operators, whichever is less”, “or more than 5% or less than or equal to 10% of the affected Transmission Operators, whichever is less”, “or more then 10% or less than or equal to 15% of the affected Transmission Operators, whichever is less”, “ or more than 15% of the affected Transmission Operators, whichever is less” to R3, R5, and R6 is confusing and not necessary. For example: 10 affected TOs. The lower VSL states: The TO did not inform one other TO or 5% or less of the affected TOs, whichever is less. 5% of 10 is .5 TOs which is less than 1. The percentage language should be removed. TOP-003-2 – Same issue with VSLs as with TOP-001-2. The percentage language should be removed from R3 and R4. PRC-001-2 – R1 VSL for High and Severe seem arbritary. Not knowing limitations are not as bad as not knowing purpose? Suggest either breakdown by number of systems. Ie: did not know purpose and limitations of 1 protection scheme, etc. Or Binary. Severe – did not know purpose and limitation of protections systems in its area.

Greg Rowland
Duke Energy
No
While the drafting team has made several improvements to this standard, we believe these additional changes are needed: • The definition of Reliability Directive includes the defined term “Adverse Reliability Impact”, which should be replaced by the actual wording of latest (8/4/2011) BOT-approved definition of “Adverse Reliability Impact”, since it has NOT yet been approved by FERC. • R3 places the responsibility on a Transmission Operator to possess tools it does not currently utilize. Most companies will study their own area and possibly one or two busses out. In order to be compliant to this standard, it would appear a Transmission Operator would need to possess study tools which are currently utilized by the Reliability Coordinator. Suggest considering adopting language where the Transmission Operator requests assistance in identifying impacts outside their direct interconnects. Suggested rewording: “Each Transmission Operator shall work in conjunction with its respective Reliability Coordinator to inform other Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. [Violation Risk Factor: High] [Time Horizon: Operations Planning,]”. • R4, as written, does not consider an entity that might be under the control of an RTO. A Transmission Operator, as a member of an RTO, cannot take actions without the permission unless during an emergency where cascading outages, loss of equipment etc. is involved. If the event described in R4 as currently written is not an immediate emergency, the Transmission Operator would need to gain permission of the RTO to comply. Suggest wording changes to take into consideration entities whose facilities are under RTO control. Suggested rewording: “Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that appropriate agreements are in place, and the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. In the event the Transmission Operator is under the purview of a Regional Transmission Organization (RTO), the Reliability Coordinator of the RTO shall work with its Transmission Operators in requesting available emergency assistance. [Violation Risk Factor: High] [Time Horizon: Real-Time Operations]”. • R5 – Similar comment to R3. This requirement places the responsibility on a Transmission Operator to possess tools it does not currently utilize. Most companies will study their own area and possibly one or two busses out. In order to be compliant to this standard, it would appear a Transmission Operator would need to possess study tools which are currently utilized by the Reliability Coordinator. Suggest considering adopting language where the Transmission Operator requests assistance in identifying impacts outside their direct interconnects. Suggested rewording: “Each Transmission Operator shall inform its Reliability Coordinator, who shall assist in identifying other Transmission Operators of its operations that are known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations include but are not

limited to relay or equipment failures, and changes in generation, Transmission, or Load. [Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]”. • R6 – Strike the word “negatively”, since no one will be “positively” impacted. • R6 needs to be clarified as to the intent. Does registered entity mean the corporation, or does registered entity mean a TO, BA etc. Suggestion would be to remove NERC registered from the language. • R8 – The SDT has included a Rationale for SOLs that deserve increased attention. Several examples cited in the Rationale are for service to local load, and while the local loads may be important loads, the associated SOLs would have no impact on BES reliability. R8 requires the TOP to inform the RC of such SOLs, and we question why the RC needs to be informed of SOLs that only impact service to local loads. We believe that the phrase “supporting its internal area reliability” should be further clarified in some way. The inclusion of the undefined concept of “supporting internal area reliability” creates undue compliance risk, since auditors could potentially find an entity non-compliant if no SOLs have been identified as “supporting its internal area reliability”. With no clarification, it is conceivable that every SOL on a TOP’s system could be considered to support its “internal area reliability”. Communicating all SOLs would inundate the RC with unneeded information, which we believe would be detrimental to reliability. If this requirement stays in the standard, it needs to be reworded to indicate that any SOLs identified are identified at the sole discretion of the TOP. • R8 - Change the phrase “as supporting” to “in support of”. • R9 – Strike the word “would” and add an “s” to “cause”.
No
• R2 – Consistent with our comment above on TOP-001-2 Requirement R8, the phrase “supporting its internal area reliability” should be further clarified in some way. Also, change the phrase “as supporting” to “in support of”.
Yes
Yes
No
• TOP-001-2 VSLs should be revised consistent with our comments on the requirements. • TOP-003-2 VSLs have explanatory language on how the SDT intends the VSLs to be used. This language needs to be incorporated into the VSLs more directly, because compliance personnel will not be bound by the SDT’s intent.

R8 – Please clarify the difference between R8 of TOP-001-2, and R2 & R5 of FAC-014-2. We would expect in some regions, depending on the RC’s SOL methodology, that this would be the same information. For example, in SPP, all Facility Ratings are considered SOLs. Compliance with R9 of TOP-001-2 will prove quite difficult in regions like this. Please clarify the what the drafting team envisions being the difference between these two standards, and what is expected to be given to the

RC under each. R9 - We appreciate the drafting team's efforts. However, we are still concerned that R9 will not allow the Transmission Operator the flexibility to identify the best SOL recovery approach, without incurring a violation of the requirement. Instead, the TOP may be forced to shed load in order to avoid violating the requirement. This is not ideal, especially when the situation could be mitigated successfully with alternative measures. It is not clear if an entity is allowed to use an RC-approved contingency plan to mitigate a situation that would cause a Facility Rating violation (i.e. the Facility Rating is the SOL), without also incurring a violation of R9. To further explain, if an entity foresees exceeding an SOL in its OPA, and obtains approval from the RC on their proposed contingency plan (which includes a Facility Rating violation), will that entity be considered in violation of R9 once the exceedance occurs and the contingency plan is implemented?

Southern Company
Antonio Grayson`
Yes
R3. The requirement is worded such that it implies that the Transmission Operator has a Transmission Operator. We suggest adding the word "other" so that it reads "shall inform its Reliability Coordinator and other Transmission Operator(s)…." R5. We recommend the following word changes: Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations that are known or expected to result in an Adverse Reliability Impact on those their respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations may include are relay or equipment failures, and changes in generation, Transmission, or Load.
No
R3- Southern understands the intent of this requirement is to notify all registered entities that may be affected by a mitigation plan for the next day so they can be prepared to respond. However, in some cases like the one shown in the example below, it is unreasonable to expect the TOP to notify every GOP that could be re-dispatched. Requiring this would actually put the system at risk as the TOP would be focused on notifying GOPs inside its TOP area and potentially outside its TOP area and not focused on operating the system. Southern suggests that the requirement be changed to state that the TOP will notify "other TOP's and associated RC(s) associated with actions in the plan(s)" in a similar manner that other TOPs and RCs are notified in the proposed TOP-001-2, R3 and R5. If that is unacceptable to the SDT then it is suggested at a minimium that "all NERC registered entities" be clarified with the addition of the word "explicitly" just prior to" identified in the plan(s)". Example: An SOL is identified in the Operational Analysis for the next day from R2. The plan to mitigate this SOL is to call an IDC-TLR. The level of the TLR may or may not reach level 5. If the TLR reaches level 5 many generators will be required to be re-dispatched inside and outside of the TOPs area. This requirement will require the Transmission Operator to notify every Generator Operator that could possibly be re-dispatched for a TLR-5. Another concern with having the TOP notify all entities (which would include those outside their area) is the added FERC Standards of Conduct risk that the NERC standard is forcing the TOP to assume. For example, notification may go to a GOP which also performs market functions about which the TOP is unaware. In communicating the plan to the GOP, the TOP may inadvertently communicate non-public transmission information in violation of the Standards of Conduct. If communications is limited to external entities that are TOP and RC, this risk is eliminated and the communication to the GOP will take place by its native TOP - which should be familiar with any Standards of Conduct restrictions on communication to the GOP.

NERC standards cannot be vague and undefined or NERC interprets the standard and creates new requirements through the Compliance Application Notice process. The rational specified for R8 shows that R8 deals with a Transmission Operator defined special subset of SOLs. However, the current wording in R8 does not use the wording “special subset of SOLs as defined by the TOP”. The standard uses “as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis”. This is not clear enough for a black and white compliance audit and therefore is inadequate. Further in R9 continous duration remains undefined. Therefore, specific wording needs to be added to show that R9 applies to the “special subset of SOLs with there corresponding continous duration timeframes as defined by the TOP” Last, the the same wording and definition must be applied to FAC-011-2 R2 to remain consistent and clear.
No
TOP-002 R2 uses the same vague language as TOP-001 R8. The wording “special subset of SOLs as defined by the TOP” needs to be added. Otherwise NERC and regional auditors will apply the wording broadly when the intent was for a specific subset of SOLs defined by the TOP. Also see the NSRF comments

I don’t think that this requirement should be retained. With e-tag requirements, mid-hour scheduling and the ability to process an emergency tag at any time it seems like an interchange. What is emergency assistance?
Yes

I agree with the direction of the project. Consolidating all the TOP standards and eliminating the redundancy will make it much easier.
No
TOP-003 will require that we create a list of data necessary to complete our operational planning analysis. Currently I don't think we have a good process for doing analysis so defining the data required may be difficult.

Brenda Hampton
Yes
Yes
No
TOP-003-2 as currently written does not provide any recourse for the entity receiving a data request if that entity feels the data request is unreasonable either in content or timing or if the entity does not have the data available to submit. As such I would recommend modify R5 as follows: R5. Each......shall satisfy the obligations of the documented specification for data. R5.1. If the entity receiving the data request cannot provide the requested data either in content or timing then the entity receiving the data request shall notify the requesting entity and provide a reason for not providing the data.
No
The VSL for TOP-003-2 R5 places a more stringent severity level on the entities receiving the data requests than it places on the entities that are responsible for creating the data requests. As such, I would suggest changing the VSL for TOP-003-2 R5 to the following: Lower: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy one of the obligations of the documented specification for data Moderate: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy two of the obligations of the documented specification for data High: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy three of the obligations of the documented specification for data Severe: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy four or more of the obligations of the documented specifications for data.
Individual
Texas Reliability Entity
Texas Reliability Entity
No
1) Definitions: Texas RE does not agree with the proposed definition of “Reliability Directive” and encourages the SDT to look past a compliance based outlook regarding the word “directive”. If there is no Reliability Standard support for use of directives to AVOID emergencies, emergencies will continue to occur. Consider using the broader defined term “Operating Communication” from COM-003 rather than “Reliability Directive” in this standard. 2) R1: This requirement, as written, states that the BA, GOP, DP, and LSE must comply with Reliability Directives, which, by definition, are only issued in Emergencies or to prevent instability or Cascading. There is not a requirement in the TOP or IRO standards that obligates a Registered Entity to comply with other directives issued by the TOP or RC used in operating the grid in a reliable manner. For example, some generator operators exceed the operating basepoint that is communicated to the unit by the ISO, which creates congestion and overloads the transmission system. Under the proposed R1 language, there is no requirement for an entity to comply with this type of directive, since it is not a “Reliability Directive” until an Emergency

occurs. 3) R3: Requirement R3 seems to be missing some words. It doesn't say WHAT the TOP should inform other entities about. Also, it is not clear if this requirement is supposed to be about planning ("expected to be affected by anticipated Emergencies") or real-time operations ("known to be affected by actual Emergencies") or both. If the latter is intended, the Time Horizon should include Real-Time Operations and Same Day Operations. We suggest changing the language to "Each Transmission Operator shall inform its Reliability Coordinator and other affected Transmission Operator(s) about each actual or anticipated Emergency , which may be determined in Real-time or based on its assessment of its Operational Planning Analysis" 4) R4: Reinsert Generator Operator applicability from old R6. The stated reason for removal of Generator Operator is incorrect and violates the Functional Model which states that a Balancing Authority may direct "resources (Generator Operators and Load-Serving Entities) to take action to ensure balance in real time" and "direct "Generator Operators to implement redispatch for congestion management". Both of those type actions may include rendering emergency assistance. 5) R5: The requirement implies, but does not specifically state a time frame for informing the RC. The RC must be informed in sufficient time in order to respond to the system condition. The phrase "unless conditions do not permit" is ambiguous and should be made more definite. We suggest rewriting R5 as follows: "Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas within a timeframe that is sufficient for the RC and affected Transmission Operators to respond to the system condition, unless communication capabilities have failed." The Time Horizon should also include Operations Planning since the Requirement language includes "known or expected." 6) R6: There is a need to include Generator Operator in this requirement. There is no clarification in the mapping document regarding the loss of the applicability to the Generator Operator (previously in TOP-001-1 R3). 7) R8: This requirement, as written, states that the TOP must inform the RC of SOLs based on its assessment of its Operational Planning Analysis, which, by definition, is an analysis for the next day's operation that may occur either a day ahead or as much as 12 months ahead. SOL violations can occur in Real-Time (e.g., transmission thermal limit violations, voltage violations, etc.) due to forced outages from storms or equipment failures that may not have been studied under the Next-Day analysis and various other real time conditions. We suggest rewording the requirement to read "Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based ON ANTICIPATED OR ACTUAL EMERGENCIES OCCURRING IN REAL-TIME OR BASED on its assessment of its Operational Planning Analysis." It is important to recognize the Real-Time issues because several of the Requirements following Requirement 8 refer to SOLs "identified in Requirement R8." Additionally, since the definition of SOL includes post-contingency criteria, contingencies are not limited to Operational Planning Analysis timeframes. The VSL language also needs to accommodate Real-Time considerations. 8) R9: See our comment regarding R8 – there is a reliability gap because SOLs identified in Real-Time (as opposed to those identified in the Operational Planning Analysis timeframe) are not included. 9) R10: See our comment regarding R8 – there is a reliability gap in the actions needed to return the system to within limits for SOLs identified in Real-Time as opposed to those identified in the Operational Planning Analysis timeframe. 10) R11: See our comment regarding R8 – there is a reliability gap for SOLs identified in Real-Time as opposed to those identified in the Operational Planning Analysis timeframe. 11) What is the intended difference between "TOP shall not operate outside any SOL" in R9 and "TOP shall act or direct others to act to mitigate both the magnitude and the duration of exceeding . . . an SOL" in R11? The same action or inaction would likely result in violations of both requirements, resulting in a "double-jeopardy" situation.
Yes
No
1) Overall, this change to TOP-003-2 will cause differences in what each TOP/BA thinks it needs in terms of data, which will be difficult to audit. There should be a minimum set of data that the TOP/BA should address (especially when removing more specific Requirements such as those that are deleted from PRC-001-1.) For example, if a TOP or BA decides not to monitor its SPSs, which is currently required by PRC-001-1, there will be no repercussions from a compliance standpoint, but an impact to monitoring the state of reliability will occur. 2) R1: We suggest adding "analysis functions" after Operational Planning Analysis to fully capture performance requirements for a TOP during Real-Time. 3) R2: We suggest adding "Operational Planning Analyses" in front of "analysis functions". The

Operational Planning Analysis, by definition, includes “Expected system conditions such as load forecast(s), generation output levels . . .,” which relate to the Real Power balance requirement that the BA must comply with. A BA should also create a documented specification for the data necessary for it to perform an Operational Planning Analysis, which may include development of integrated operational plans, acquiring reliability-related services from Generator Operators, providing generation dispatch to the Reliability Coordinator, and other responsibilities as dictated by the Functional Model. 4) R3 We suggest adding “analysis functions” after Operational Planning Analysis to fully capture performance requirements for a TOP during Real-Time. 5) R4: We suggest “Operational Planning Analyses” in front of “analysis functions” to be consistent with our comment that R2 should require “Operational Planning Analysis” data in the BA’s data specification. 6) R3 and R4: What is the required time frame required for the TOP and BA to distribute changes to its data specification? We suggest adding a sentence that the TOP or BA must distribute its data specification within 30 calendar days of creation or revision. 7) R5: What is the required time frame for an Entity to satisfy the obligations of the data specification? None is specified. We suggest a time frame of 30 calendar days from the date of receipt to comply with changes to data specifications. 8) The VRF and VSL justification document was inconsistent and unconvincing in several respects related to TOP-003-2 R2. That should be revisited after the requirements are firmed up.
No. 1) Requirements R2, R5 and R6 of PRC-001-1, which are proposed to be deleted, are not actually replaced by any new or revised requirements in other standards, resulting in reliability gaps. The PRC-001-1 requirements relate to Same-day and Real-time Operations, whereas the TOP-003-2 requirements relate only to the Operations Planning time horizon. The real-time elements of the PRC-001-1 requirements are lost. 2) R2- Removal of R2 assumes that the requirement intent will be included in TOP-003-2 R1 or R2 specification, but there is no new requirement to replace R2 of PRC-001. 3) R2 – The requirements to “take corrective action as soon as possible” are extremely important to the reliability of the system and deleting them introduces a reliability gap. In the Issues Database document there is indication that R5 of TOP-001-2 satisfies the need for corrective action as soon as possible with the following phrase “Addressed in Requirement R5 in proposed TOP-001-2 where the Transmission Operator coordinates its operations.” However, the text of TOP-001-2 R5 does not actually support this approach and therefore leaves a reliability gap in the Standards. 4) Texas RE disagrees with several of the PRC-001 issues listed as complete in the Issues Database. The referenced TOP Standards are extremely limited in scope and lacking in details (especially in light of ignoring Real-Time issues) and are not considered interchangeable with the deleted PRC-001 Requirements as suggested. 5) R5- Removal of R5 assumes that the requirement intent will be included in TOP-003-2, but there is no new requirement to replace R5 of PRC-001.. R5 is related to the coordination of changes affecting protection systems of others. R5 should not be removed because it deals with coordination issues and not merely specification and provision of data. 6) R6—We object to the proposed removal of R6 because this Real-time requirement is not picked up anywhere else, and elimination of the requirement to monitor and communicate the status of Special Protection Systems will cause a reliability gap. 7) There are no Measures for Requirements R1 and R3.
No
1) VSL for TOP-001-2 R3: Operational Planning Analysis, by definition, excludes Real-Time issues such as “actual Emergencies.” We suggest improving the requirement as discussed above and then making conforming revisions to this VSL. 2) VSL for TOP-001-2 R5: “When conditions permit” is subjective and ambiguous therefore consistency in auditing will not occur. Are you sure that “whichever is less” is what you mean to say here? (also applies to VSLs for R3, R6 and R8) 3) TOP-001-2 R7: VRF justification statement is incomplete (“The requirements are viewed as similar since they both refer to <missing text>”) 4) TOP-001-2 R8: In the VRF justification, the text in the second and third bullets appears to be garbled. 5) TOP-001-2 R9: We recommend this requirement be assigned a “High” VRF. Uncorrected SOL violations could cause bulk power system instability, separation, and or cascading if exacerbated in Real-Time by other SOL violations, contingencies, faults, or misoperations (and may be dependent on the SOL Methodology timing in FAC-011 and not be captured in TOP-001-2 R7). Note that the VRF justification for R10 correctly refers to a High VRF for R9. Additionally, remove the word “local” in all places used in the R9 VRF justification.
In the Implementation Plan: 1. The Prerequisite Approvals must include COM-002-3 Communication and Coordination, as that is the source of the proposed definition for “Reliability Directive.” 2. The “Effective Date of Revised Standards” does not match the “Effective Date” within TOP-003-2. 3. The difference between “10 months” and “12 months” will either be (a) no difference or (b) a 3-month

difference, since the effective date of each requirement will fall on the first day of the following calendar quarter. Additionally, since there are no time limits included in the TOP-003 requirements, the reason for the intended timeline differential (2 months) is not supported and arbitrary. We suggest having one effective date for all requirements, and providing clear time requirements for issuing data specifications and submitting responses.

Oncor Electric Delivery
No
“Oncor respectfully takes the position that the proposed language in R6 will not provide a coordinated communication effort in the event of a planned outage of telemetry, control equipment and associated communication channels. The term “negatively impacted interconnected registered entities” is too broad and too subjective. Oncor believes that the Reliability Coordinator is in the best position to determine who is negatively impacted and that they should be the entity that makes further notification after receiving the initial planned outage request from the originating entity."
No
Oncor respectfully takes the position that the language as proposed in R3 places the Transmission Operator in a position of having to determine who or who is not NERC Registered. Oncor agrees that the Operational Analysis Plan should be properly communicated, but that it should not be the role of the Transmission Operator to determine who is or who is not NERC Registered.
Yes
Agree with changes
No
For TPL-001 “Oncor respectfully takes the position that the proposed language in R6 will not provide a coordinated communication effort in the event of a planned outage of telemetry, control equipment and associated communication channels. The term “negatively impacted interconnected registered entities” is too broad and too subjective. Oncor believes that the Reliability Coordinator is in the best position to determine who is negatively impacted and that they should be the entity that makes further notification after receiving the initial planned outage request from the originating entity."

The Reliability Directive definition is not strong enough and leaves too much to interpretation. We feel that the other requirements and items in the standard are acceptable and we could support this version if the definition had more clarity.
No
This standard gives the TOP more direct authority than is in the MISO process today. The market has means to accommodate this operation. In R3, this may conflict with the present logic our TOP follows concerning their operation in the area of communicating conditions to Generation Operators and other Market Participants. We do not support this standard as written.
No
The standard as written is more vague than the current TOP-003. It follows the logic of IRO-010 and talks about specification documents instead of actions that need to be taken. We do not support this standard as written.
The standards that are in place and active clearly define what needs to be done for the reliability of the system. These new standards are designed to make auditing easier. This should not be the goal of these documents. The current active documents do not need to be changed.

Yes
No (The Yes/No boxes weren't on the screen. All I got was the comment box.) Deleting the requirements from PRC-001 and including them in R1 and R2 of TOP-003-2 raises the question of what other types of data or information need to be included in the specification that do not normally come to mind when considering this type of information. To be sure that all the bases are covered, we would suggest that the SDT provide a guideline which incorporates the types of data and information they envisioned when drafting these requirements. Additionally, incorporating protective relay information in the data specifications of R1 and R2 raises the potential for auditors to question the contents of an entity's specification. Again, guidance is needed on the part of the TOP and BA in developing the specification initially. Could the SDT provide this initial guidance, or list of examples, in the form of a guideline? Also, measures for R1 and R3 are missing.
Yes
TOP-001 – While we agree with what we believe to be the intent of R9, using the word 'continuous' without sufficient context remains ambiguous so as to prevent clear interpretation by all parties. We would suggest replacing the word 'continuous' in R9 with 'applicable'. The timing criterion associated with an SOL should be associated with the timing criterion of the Facility Rating or Stability criteria. The revised requirement would read: Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for the applicable duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. TOP-003 – We have concerns with R1 and R2 being as open-ended as they are, especially since they are followed by the obligation to provide that data contained in R5. For example, how do you resolve issues when a mutual agreement cannot be reached? If an entity feels that the requestor is asking for data that goes beyond what they would reasonably need to perform their analysis, what process is used to resolve the stand-off?

Yes
I support the language of the VSLs for the proposed standards. I also understand the logic behind the statement included above the VSLs for R8 of TOP-001 and R3 and R4 of TOP-003. However, I question whether or not it is appropriate for this type of language to appear in the VSLs. It seems that this should be handled by the Regional Enforcement departments.

No
The existing TOP-001-1 R7 essentially requires communication to the RC and neighboring TOPs any time a Facility is to be switched. The new TOP-001-2 R5 will only require such communication when such switching would result in an "Adverse Reliability Impact" defined as: "The impact of an event that results in frequency-related instability; unplanned tripping of load or generation; or uncontrolled

separation or cascading outages that affects a widespread area of the Interconnection." This significantly reduces the requirements for communication / notification for switching Facilities. It is worthwhile to communicate switching of some Facilities whether or not they would result in an "Adverse Reliability Impact". Suggest rephrasing to something like any unplanned switching of Facilities not "noticed" through data provision of TOP-003-2. With the number of human error events that have occurred, we should not be reducing the communication / notification requirements. R8 is not needed since it is already covered in FAC-014-2 R5.2. As a result, R9, R10 and R11 ought to be modified to refer to FAC-014-2 rather than R8.
No
The existing TOP-002-2 requires that both the BA and TOP perform current day, next day and seasonal plans. In the new TOP-002-3, the BA is eliminated from the applicability. Nowhere else in the standards is there a requirement for the BA to perform current-day, next-day and seasonal planning. The mapping document points to BAL-002 and the requirement for a BA to have enough Contingency Reserves (and confuses the references saying the R2 of BAL-002-1 requires a "plan", which it does not say). However, this is a real-time requirement of a BA and is not an operations planning analysis and is not a day-ahead plan. There ought to be a day-ahead plan to start enough generation to enable the load plus operating reserves to be met, which the existing TOP-02-2 standard essentially assigns to the BA. The mapping document also points to BAL-001, but, a 12-month rolling average of ACE has very little to do with day-ahead planning. And finally, the mapping document points to coordination needed in the Functional Model. The Functional Model is not mandatory and should not be depended upon in this manner. The mapping document says that the TOP develops the plan and passes it to the BA. This is not the case for unit commitment. For unit commitment, it is usually the other way around. TOPs develop constraints (e.g., SOLs) that the market participants use to transact; hence, the market participants (which involve the BAs) develop the transactions (which include unit commitment) often in parallel with the TOPs plans. TOPs do not plan or direct unit commitment except in cases where a unit needs to be "reliability must-run". FMPA is aware that there may be efforts to insert next-day planning into new BAL standards under development; however, it will be some time before those new standards are approved. IN the meantime, the new TOP standards should include operational planning analyses for the BA on an interim basis until those new BA standard(s) are approved and mandatory so that we do not create a gap in the interim. In addition, the standard has eliminated the current-day day and seasonal assessments and focuses only on next-day. FMPA believes that both current-day and seasonal remain important, to cover changes from yesterday’s plan (e.g., unplanned outages that have occurred since yesterday’s plan), and to coordinate planned outages seasonally. R1 - The SDT introduces a new term "Stability Limit" which seems duplicative of an SOL and adds a layer of ambiguity. What Stability Limits exist that would not be an SOL or IROL? Also, R1 and R2 become inconsistent with R1 referring to "Facility Ratings" and "Stability Limits" whereas R2 refers to "SOLs" and "IROLs". It would seem the two requirements should consistently use "SOLs" and "IROLs" consistently with FAC-014-2.
No
Related to the BA performing a day-ahead plan discussed in FMPA’s response to question 2, TOP-003-2 R2 only requires a BA to develop data specifications for reporting in real-time (i.e., bullet 2.1). There should be requirements for day-ahead as well. There are a number of data requirements that are proposed to be deleted and replaced with an ambiguous reference to a "specification for the data necessary", or a data specification, without any minimal requirements for what should be in that data specification. This approach will likely not go over well with the regulators. The SDT should be able to define a minimal list of data required, e.g, "such data specification will at minimum include: next-day load forecasts, next-day planned outages, generator capacity changes, protection system failures, special protection system status, real-time monitoring of generation and transmission, transmission Facility status, etc., etc.” (note that these are all examples of specific requirements within the existing standards that the SDT is proposing to delete), possibly as an attachment to the standard.
Please see response to Question 6
While FMPA agrees with a results-based approach to standards, it seems to us that there have been a number of human-error based problems that justify agreed upon protocols and procedures being covered by the standards. Hence, TOP-004 R6, which requires development of formal policies and procedures among neighboring TOPs should not be eliminated from the standards. On the Mapping Document, TOP-004-2 R5, on the discussion that the requirement be deleted, the document says that

the TOP does not have the authority to unilaterally separate without the approval of the RC. FMPA believes that they do if there is an imminent threat (e.g., the exceptions to IRO-001-2 of “unless such actions would violate safety, equipment, or regulatory or statutory requirements”). So, while FMPA agrees that the requirement can be deleted, the reason for the deletion does not seem accurate.

In addition, the standard has eliminated the current-day day and seasonal

assessments and focuses only on next-day. We believe that both current-day and seasonal remain important, to cover changes from yesterday's plan (e.g., unplanned outages that have occurred since yesterday's plan), and to coordinate planned outages seasonally. R1 - The SDT introduces a new term "Stability Limit" which seems duplicative of an SOL and adds a layer of ambiguity. What Stability Limits exist that would not be an SOL or IROL? Also, R1 and R2 become inconsistent with R1 referring to "Facility Ratings" and "Stability Limits" whereas R2 refers to "SOLs" and "IROLs". It would seem the two requirements should consistently use "SOLs" and "IROLs" consistently with FAC-014-2.
No
Related to the BA performing a day-ahead plan discussed in FMPA's response to question 2, TOP-003-2 R2 only requires a BA to develop data specifications for reporting in real-time (i.e., bullet 2.1). There should be requirements for day-ahead as well. There are a number of data requirements that are proposed to be deleted and replaced with an ambiguous reference to a "specification for the data necessary", or a data specification, without any minimal requirements for what should be in that data specification. This approach will likely not go over well with the regulators. The SDT should be able to define a minimal list of data required, e.g, "such data specification will at minimum include: next-day load forecasts, next-day planned outages, generator capacity changes, protection system failures, special protection system status, real-time monitoring of generation and transmission, transmission Facility status, etc., etc." (note that these are all examples of specific requirements within the existing standards that the SDT is proposing to delete), possibly as an attachment to the standard.
Please see response to Question 6
While we agree with a results-based approach to standards, it seems to us that there have been a number of human-error based problems that justify agreed upon protocols and procedures being covered by the standards. Hence, TOP-004 R6, which requires development of formal policies and procedures among neighboring TOPs should not be eliminated from the standards. On the Mapping Document, TOP-004-2 R5, on the discussion that the requirement be deleted, the document says that the TOP does not have the authority to unilaterally separate without the approval of the RC. We believe that they do if there is an imminent threat (e.g., the exceptions to IRO-001-2 of "unless such actions would violate safety, equipment, or regulatory or statutory requirements"). So, while we agree that the requirement can be deleted, the reason for the deletion does not seem accurate.

The SDT did not provide reasonable assurance that documented determination of 'Reliability Directive' identification was sufficient to meet R1, in the absents of explicit identificaation during every verbal communication. We believe it is not clear to an auditor that written procedures would be an adequate level of 'identification. A possible solution would be to add R1.1 and spell out that identification of Reliability Directive shall be communicated through approved procedures or verbal identification. In addition, Requirement 11 gives the TOP the authority to "...act or direct others to act..." to mitigate IROL and certain SOL exceedances. Is it the intent of the SDT that the TOP can direct any of the entities to which this standard is applicable? Also SDT should consider a change to say "... act or issue a Reliability Directive to ....' This ties the requirement back to R1 with an obligation to complete the directive. The NYISO is also concern with the use of the definition of 'Reliability Directive' that has not been approved. We recommend balloting TOP-001 simultaneously with the RC Project that includes the definition. As it stands we support the proposed definition. The NYISO suggest

No
The SDT's response for previous comments on R6 is that "The intent of the requirement is to notify those entities that are directly affected by the telemetry outage. " If that is the intent of the requirement then the requirement should state that. Also, "negatively impacted" needs to have some sort of bounds. Loss of $1 in revenue is a negative impact.

Yes
NextEra believes additional editing is needed to provide the step-by-step clarity the proposed Reliability Standard seeks to implement. To provide more clarity, NextEra suggests that in R3, R4 and R5 be rewritten as follows: “R3. Consistent with the requirements of R1, each Transmission Operator shall distribute its request for data to each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider that has data required to be used in the Transmission Operator’s Operational Planning Analysis and Real-time monitoring process. “ “R.4 Consistent with the requirements of R2, each Balancing Authority shall distribute its data request to each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider that has data required to be used in the Balancing Authority’s analysis functions and Real-time monitoring process.” “R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider that receives a data request pursuant to Requirement R3 or R4 shall provide the requested data.”

Yes
Yes
This Standard is not applicable to Cowlitz PUD and the District will abstain in the ballot. However, this commenter sees no problems with the changes.
No
After reviewing the industry comments submitted, Cowlitz is respectfully perplexed why comments were not addressed related to lack of recourse the receiving entity of a data specification has if the data specification is unreasonable. The data specification receiving entity must have some recourse to appeal unreasonable obligation requirements short of appealing a violation finding through the RE/NERC/FERC or ultimately a court of law. Due to the undefined nature of what constitutes a reasonable data specification document other than a “mutually agreeable format,” the risk of capricious dictatorial demands having no reliability return is high. The usage of “format” can only encompass the organization, plan, and style of the data to be submitted; this can’t be used to limit data submittal to that which is available at a rate of transmittal which is possible. Cowlitz can’t find a remedy for requirement R5 without allowing for some risk of entity intransigent behavior leading to RE or ERO intervention. However, there are current standards that allow, but limit, this risk by defining allowable exceptions. Examples which include such exceptions to requirements are “unless such actions would violate safety…,” contained in several standards; and “unless it provides a reliability reason to the requestor…,” contained in Standard IRO-006-5. Cowlitz suggests the following exemptions: Unless data or information is not available without installation of additional equipment, or can’t be reasonably available due to existing equipment limitations, available personnel limitations, or unexpected equipment failure.
Cowlitz supports the retirement.
No
After reviewing the industry comments submitted, Cowlitz is respectfully perplexed why comments were not addressed related to the VSL binary treatment of R5. A data specification document may be very complex, and the Standard does not define non-compliance other than obligations were not satisfied. One data variable missing (either accidental omission or inability to provide) can incur an immediate violation if the data specification document does not include any leniency in this regard. Further, the proposed VLS for R5 does not allow for any credit of the entity’s effort in fulfilling the

obligations set forth in a data specification document.
It may be best to treat the data specification documentation as an agreement between entities where authorizing signatures from both entities are required to make the agreement effective.

No
BPA does not believe that the drafting teams' consideration of our previously submitted comments during the last round was adequate. The response appeared to be based on the assumption that the SOL or IROL was based on a thermal limit, not a stability limit. Since a system can go unstable in less than 1 second, the drafting team's response that, "ratings include the qualifiers of time..." did not make sense to us in the context of a "stability limit". As stated in BPA's previous comments, it takes a definite amount of time to readjust the system (change schedules, move generation, or perform other actions) in order to get actual flows down to reliable operating limits when flows have exceeded limits. The standards need to clearly articulate how much time the responsible entities have to accomplish this. The current standard TOP-004-2, R4 clearly articulates a 30 minute rule for this. TOP-001 needs to do the same, especially if TOP-001 will replace TOP-004-2. Previous Comments: Given the potential uncertainty regarding the 30 Minute Rule, BPA suggests adding more clarity to the standard TOP-001-2 as the new draft could be interpreted to mean that one would need to get the flows below the SOL immediately. BPA believes this is not practical because it takes a definite amount of time to change schedules, move generation, or perform other actions in order to reduce loadings on facilities. BPA believes the new draft should include guidance as to how much time the BA or Transmission Operator would be allowed in order to reduce flows when there is an SOL violation. BPA suggests that more clarity be provided and/or the 30 minute rule be added back to the standard. Additional New Comments: TOP-001 introduces a new term and definition, Reliability Directive. This term is used in R1 of the standard in conjunction with two other defined terms, 'Emergency' and 'Adverse Reliability Impacts'. The time horizon described for R1 is 'Operations-Planning'. The timeframes for which this standard applies are 'Operations-Planning', 'Same-Day Operations' and 'Real-Time'. However, if we review the definitions associated with 'Emergency' and 'Adverse Reliability Impacts', it is clear that these terms are used for events that occur only during real time operations. BPA recommends that R1 be re-worded so that the Time Horizons are consistent with the terms used in the standard; that the Reliability Directive definition be clarified so that the timing of the directive is identified; and that use of the terms 'Emergency' and 'Adverse Reliability Impact' be consistent with their definitions, and the 30 minute rule for getting actual flows back within a reliable limit be inserted. BPA recommends that the applicability of R6 be expanded to also include Generation Operators. The intent of this requirement is for those entities with "telemetering equipment, control equipment and associated communications channels" to coordinate outage of such equipment with its Reliability Coordinator and negatively impacted interconnected NERC registered entities. Though Generation Operators have such equipment, as written, this requirement does not require that the coordinate such outages in the same manner as Balancing Authorities and Transmission Operators are required to under this requirement.
No
BPA appreciates the drafting team's response to our previous comments and recommends additional clarification: Previous Comments: Given the potential uncertainty regarding how many day ahead studies may be required, BPA suggests adding more clarity to the standard TOP-002-3 to address. BPA recognizes that various regions experience peak operations at different times of the day, anticipated generation patterns shift over the course of the day; and transmission facilities of service start and stop times associated with planned maintenance and construction work at various times throughout the day. Hence, due to these multiple shifts in forecast system conditions, it is unclear whether more than one study is required to meet the requirements of this standard. Additional New Comments: Many entities tend to perform system studies more than one day ahead. Please specify the threshold at which a prior study would have to be updated to meet the next day study requirement. BPA suggests alternate language for the requirement ...something along the lines of ... An entity or TOP may perform a study more than one day in advance; they shall update the study if system conditions (such as line outages, etc.) changed such that there was more than a 5% change in the system operating limit, thereby requiring the need to rerun the study.

Yes
BPA is in support of this standard due to the importance of being able to receive data.
Yes, BPA is in support of the retirement of the three requirements in PRC-001 as the SDT is suggesting.
TOP-001-2 VRFs/VSLs – NO - BPA recommends a sliding scale based on duration and percentage of the SOL violation. Example: If an entity is high by 2% of the SOL for 1 minute, their VSL should be substantially lower than if they were 25% off for more than 30 minutes. Sliding scale should start at the bottom … couple of MW for a minute … as an example. TOP-002-3: VRFs/VSLs – NO – BPA recommends a sliding scale based on how far off the original study was from the after the fact analysis. Example: If an entity did not have a study, the penalty should be severe. If an entity did have a study, but it was only 5% off, the penalty should be less severe. TOP-003-2 VRFs/VSLs – YES - BPA is in support.

No
Continuous duration" in R9 is not a defined term and will cause uncertainty and debate under audit as to what time frame this represents. Recommend R9 be modified to reflect the time basis established through the methodology to develop the SOL for the applicable facilities. Suggested modification for R9: Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that exceeds the Facility Rating or Stability criteria upon which the SOL is based.
Yes
There is no reliability purpose served by an Entity developing and posting specifications of data needed to perform its Operational Planning Analysis and Real-time monitoring. The only reliability action that matters is the request for data specific to other Entities in order to perform analysis and monitor operating conditions. These requirements would be more effective if they targeted the following principles: 1. Identify the data needed to perform analysis and effectively monitor operating conditions, 2. Identify the Entities that may have data useful to support analysis and monitoring operating conditions and, 3. Seek to obtain the data from other Entities by engaging the other Entities and coming to a mutual agreement regarding data exchange with the Entity Requirement R5 does not allow for "mutual agreement" as the SDT has suggested in their response to comments from the last draft. As written, this requirement will cause an Entity that is a recipient of a request for data to fail the requirement if a mutual agreement cannot be made. The SDT further states in their response to comments that requirements R1 and R2 ensure disparity between Entities cannot occur. On the contrary, the specifications that are developed as required by these requirements lock an Entity into that specification. If another Entity cannot meet any part of the specification in a data exchange request, there is no recourse in these requirements to relax the specification. The SDT has good intentions, however, these requirements as written do not allow for the flexibility needed in the exchange of data with other parties.
No other comments.
No
In addition, the VSL for R5 in TOP-003 does not reflect partial efforts to exchange data by Entities.
No other comments.

Comment Form for 7th Draft of Standards

Project 2007-03 Real-time Operations

Please **DO NOT** use this form for submitting comments. Please use the electronic form to submit comments on the 7th draft and successive ballot of the standards for Real-time Operations (Project 2007-03) must be submitted by **April 20, 2012**. If you have questions please contact Ed Dobrowolski at ed.dobrowolski@nerc.net or by telephone at (609) 947-3673.

Background Information:

This posting represents a successive ballot for TOP-001-2, TOP-002-3, and TOP-003-2.

In the 7th posting for Project 2007-03, the Real-time Operations Standard Drafting Team (RTOSDT) has attempted to clarify the proposed changes to the TOP family of standards based on industry comments received for the 6th posting and suggestions made during the Quality Review. Changes made were:

TOP-001-2:

- Requirement R1 – Allowed for plural Transmission Operators and deleted second instance of 'identified'
- Requirement R6 – changed 'the' to 'its' Reliability Coordinator
- Requirement R8 – changed 'internal area ' to 'internal to its Transmission Operator Area'; changed the Time Horizon to only Operations Planning
- Requirement R10 – changed 'each' SOL to 'an' SOL
- Data Retention – Changed voice recordings to 90 calendar days from three calendar months
- Revised VSLs for Requirements R1, R3, R5, and R10

TOP-002-3:

- Requirement R2 - changed 'internal area ' to 'internal to its Transmission Operator Area'

TOP-003-1:

- Applicability – added Distribution Provider
- Requirement R2 – added analysis functions for the Balancing Authority
- Requirement R3 – Cited the tie to Requirement R1 and made the language in Requirement R3 consistent with that in Requirement R1
- Requirement R4 - Cited the tie to Requirement R2 and made the language in Requirement R4 consistent with that in Requirement R2
- Requirement R5 – added Distribution Provider
- Measures M3 and M4 – clarified the web posting item of evidence

- Revised VSLs for Requirements R1, R2, R3,and R4

The Implementation Plan and effective dates for all three standards now show a twelve month compliance period for all requirements except Requirements R1, R2, R3, and R4 of TOP-003-2 which will become effective ten months from the approval date.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The SDT made changes to TOP-001-2 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☒ No

   Comments:

In the previous comment period, AEP requested clarification on whether these requirements are in regards to pre-contingency monitoring or instead based on real-time flow. AEP assumed this was based on Real Time Flow, but we encouraged the drafting team to provide clarifying language to make it more clear to the reader. The drafting team responded by noting that IROLs have been defined as both pre-contingent and post-contingent, and that the exact definition of the IROL must be honored. However, no such clarifying language was added to the standard. Time and time again, industry has provided comments to standard drafting teams in an effort to help avoid CANs, Interpretation Requests, and to increase the consistency of interpretation by both CEA's and industry. In this case, while the team provided insight in their comments, the resulting lack of changes to the standard still leave unnecessary ambiguity that could be easily addressed. Ambiguity of any kind deters from, rather than promotes, the reliability of the BES. Until such clarification is added to the standard itself, AEP cannot support the drafting team's efforts in revising TOP-001-2.

R1: The timeframe should be identified.

2. The SDT made changes to TOP-002-3 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☒ No

   Comments:

In the previous comment period, AEP requested clarification on whether these requirements are in regards to pre-contingency monitoring or instead based on real-time flow. AEP assumed this was based on Real Time Flow, but we encouraged the drafting team to provide clarifying language to make it more clear to the reader. The drafting team responded by noting that "TOP-002-3 is about Operations Planning, thus it cannot be addressing actual Real-time flow" and "It addresses those flows contained in the Operational Planning Analysis (OPA) and the assessment thereof." However, no such clarifying language was added to the standard. As stated in our response to Question #1, industry has provided comments to standard drafting teams in an effort to help avoid CANs, Interpretation Requests, and to increase the consistency of interpretation by both CEA's and industry. And once again, while the team provided insight in their comments, the resulting lack of changes to the standard still leave unnecessary ambiguity that could be easily addressed. Ambiguity of any kind deters from, rather than promotes, the reliability of the BES. Until such clarification is added to the standard itself, AEP cannot support the drafting team's efforts in revising TOP-002-3.

Rather than using terms such as "real-time flow", we recommend using "projected post-contingency" and "projected pre-contingency".

3. The SDT made changes to TOP-003-2 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☒ No

   Comments:

In the previous comment period, AEP suggested that R5 be modified so that it does not unintentionally create an edict to provide "any data" to parties simply because R5 could be interpreted as allowing requests of any kind. The SDT responded by stating that "Requirement R5 is bound by the constraints of Requirements R1 and R2 so that not just any information can be requested." AEP does not see any explicit constraints specified in R1 or R2, and even if constraints were noted there, see nothing that would indicate those constraints would also apply to R5. At the most, the only possible constraint could be the "mutually agreeable format", however that would seem to provide no bounds or constraints on the kind or amount of data being requested. We suggest providing further clarification that what has been mutually agreed to by the parties involved, goes beyond simply the format of the data. In addition, it needs to be made clear that those constraints also apply to R5. Until such clarification is added to the standard itself, AEP cannot support the drafting team's efforts in revising TOP-003-2.

4. The SDT is suggesting the retirement of three requirements in PRC-001 since those requirements deal with data handling and can now be incorporated in the data specification concept suggested for TOP-003-2. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☒ Yes

   ☐ No

   Comments: While AEP supports, in general, the removal of redundant requirements across standards, we do not yet agree with the proposed changes to TOP-003-2 (for the reasons provided in our response to Question #3). As such, AEP will reserve comment on any future changes that might be made to PRC-001 until further progress is made on TOP-003-2.

5. The VRF, VSL, and Time Horizons are part of a non-binding poll. Please indicate whether you agree or disagree with the VRF, VSL, and Time Horizon assignments. If you do not support these assignments or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☒ No

   Comments:

   In general, the VRFs and VSLs are too severe and punitive. Those stated for R1, R2, and R5 of TOP-001-2 are especially so, given what we see as open-endedness to what might be requested. As a result, AEP cannot support the proposed VRFs and VSLs.

6. If you have any other comments on these standards that you have not already provided in response to the prior questions, please provide them here.

   Comments:

Comment Form for 7th Draft of Standards

Project 2007-03 Real-time Operations

Please **DO NOT** use this form for submitting comments. Please use the electronic form to submit comments on the 7th draft and successive ballot of the standards for Real-time Operations (Project 2007-03) must be submitted by **April 20, 2012**. If you have questions please contact Ed Dobrowolski at ed.dobrowolski@nerc.net or by telephone at (609) 947-3673.

Background Information:

This posting represents a successive ballot for TOP-001-2, TOP-002-3, and TOP-003-2.

In the 7th posting for Project 2007-03, the Real-time Operations Standard Drafting Team (RTOSDT) has attempted to clarify the proposed changes to the TOP family of standards based on industry comments received for the 6th posting and suggestions made during the Quality Review. Changes made were:

TOP-001-2:

- Requirement R1 – Allowed for plural Transmission Operators and deleted second instance of ‘identified’
- Requirement R6 – changed ‘the’ to ‘its’ Reliability Coordinator
- Requirement R8 – changed ‘internal area ’ to ‘internal to its Transmission Operator Area’; changed the Time Horizon to only Operations Planning
- Requirement R10 – changed ‘each’ SOL to ‘an’ SOL
- Data Retention – Changed voice recordings to 90 calendar days from three calendar months
- Revised VSLs for Requirements R1, R3, R5, and R10

TOP-002-3:

- Requirement R2 - changed ‘internal area ’ to ‘internal to its Transmission Operator Area’

TOP-003-1:

- Applicability – added Distribution Provider
- Requirement R2 – added analysis functions for the Balancing Authority
- Requirement R3 – Cited the tie to Requirement R1 and made the language in Requirement R3 consistent with that in Requirement R1
- Requirement R4 - Cited the tie to Requirement R2 and made the language in Requirement R4 consistent with that in Requirement R2
- Requirement R5 – added Distribution Provider
- Measures M3 and M4 – clarified the web posting item of evidence

- Revised VSLs for Requirements R1, R2, R3,and R4

The Implementation Plan and effective dates for all three standards now show a twelve month compliance period for all requirements except Requirements R1, R2, R3, and R4 of TOP-003-2 which will become effective ten months from the approval date.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a "check" mark in the appropriate boxes by double-clicking the gray areas.

1. The SDT made changes to TOP-001-2 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☒ No

   Comments: We generally agree with TOP-001 and the changes since the last posting. However, we continue to believe that use of the language "know or expected to be" in Requirement R3 is confusing and that this is a case where brevity is more effective in communicating the requirement. We believe striking this clause will improve the clarity of the requirement. As the clause is written now, it is not clear to whom it applies? We assume the SDT intended for the notification to be based on the expectation or knowledge of the TOP to whom the requirement applies. However, the clause is not clear on this but is rather a statement that appears to be some general knowledge or expectation. This opens the possibility of an auditor substituting their expectation or knowledge over the applicable TOP. Requirement R5 has a similar issue.

   We are concerned that the examples listed in Requirement R5 may be too simplistic and could be interpreted too literally. A change in load is one example. Thus, a simple reading of the requirement would imply that a Transmission Operator that has a 1 MW change in a 10,000 MW would be required to notify the Reliability Coordinator. Clearly, that is not what is intended. To resolve this issue, two solutions could be applied. One solution would be to state that changes must be significant. A second solution would be to strike the examples altogether.

   Requirements R10 and R11 are inconsistent. Requirement R10 states the Transmission Operator must inform the RC of "its actions" to mitigate an IROL or SOL that has been exceeded while Requirement R11 compels the Transmission Operator "to act or direct others to act" to mitigate an IROL or SOL that has been exceeded. While we consider that a Transmission Operator directing others to act is the same as taking action itself, it would appear Requirement R11 does not consider directed actions as the actions of the Transmission Operator. This would imply that Requirement R10 does not include communication of the directed actions since it applies to Transmission Operator actions. However, we do not believe exclusion of Transmission Operator actions was intended in Requirement R10. The simplest solution to align these two requirements more closely would be to change "its" in Requirement R10 to "the". In this way, Requirement R10 is not limited to only the actions taken directly by the Transmission Operator.

   The language in the Data Retention section regarding Requirements R7 and R9 needs to be made more consistent with the requirement. We are concerned that language could be interpreted as compelling the Transmission Operator to retain data for any IROL that is temporarily exceeded for a duration less than T_v or an SOL that is exceeded for a time that does not violate the criteria upon which it is based. Neither of these instances would represent a violation of either Requirement R7 or R9. Thus, the data is not necessary to be retained.

Under the Compliance Enforcement Authority section, we suggest “entities” in the first bullet and “functional entities” in the second bullet should be changed to “registered entities”. This will make them consistent with one another and the function model. The “Reliability Functional Model Technical Document” describes a functional entity not as a specific company but rather a specific part of the functional model such as a Balancing Authority. Registered entities are specific companies. For example, SPP is a registered entity that works for their Regional Entity as the Reliability Coordinator functional entity.

2. The SDT made changes to TOP-002-3 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☒ No

   Comments: We generally agree with the changes to the standard. However, we have identified the following concerns.

   TOP-001-2 R8 implies the Transmission Operator must look for SOLs that are not IROLs in its Operational Planning Analysis that must be completed per TOP-002-3 R1. There is no such requirement in TOP-002-3 R1 or any other requirement that compels a Transmission Operator to look for these SOLs that are not IROLs. Thus, the SDT needs to clarify if a Transmission Operator is required to look for these SOLs that are not IROLs in the Operational Planning Analyses and why they are not referenced in TOP-003-2 R1. If the SDT did not intend for a Transmission Operator to be required to look for these SOLs that are not IROLs, then it needs to refine TOP-001-2 R8 to be clear that the Transmission Operator may not have a need for these SOLs that are not IROLs. TOP-002-3 R2 further confuses the situation by referring to the SOLs that are not IROLs that are identified in TOP-002-3 R1 rather than TOP-001-2 R8.

   Under the Compliance Enforcement Authority section, we suggest “entities” in the first bullet and “functional entities” in the second bullet should be changed to “registered entities”. This will make them consistent with one another and the function model. The “Reliability Functional Model Technical Document” describes a functional entity not as a specific company but rather a specific part of the functional model such as a Balancing Authority. Registered entities are specific companies. For example, SPP is a registered entity that works for their Regional Entity as the Reliability Coordinator functional entity.

We disagree with the inclusion of voice recordings as an example of the type of evidence that might be retained for TOP-002-3. Operational Planning Analyses are typically conducted in a back office where communications would not be recorded. This might create the impression that there is now a requirement to record such conversations. Recording of these conversations could mute much of the discussion that occurs among personnel performing these studies and working to resolve issues identified in them. Also, the three months retention period is not consistent with the change made to the retention period in TOP-001-2. It was changed to 90 days for voice recordings.

3. The SDT made changes to TOP-003-2 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☒ Yes

   ☐ No

   Comments: Generally, we agree with the standard. However, we have one concern regarding the Data Retention section. The third bullet compels the Transmission Operator to retain evidence for three calendar years that it distributed its data specification. Because the data needs do not change frequently, it is possible that the Transmission Operator will have periods greater than three years in which the data specification was not updated and, thus, not communicated. What data and information would the Transmission Operator use to demonstrate compliance in this situation? Would an attestation be appropriate? If so, the measure should be updated to reflect this.

   All of the responses to comments regarding concerns of Requirement R5 indicate that the SDT intended for Requirement R5 to apply to the general satisfaction of the data specification and not any specific data points. However, the Data Retention section does not support this view point. It requires retention of 90 days worth of data. Normally, short periods of data are retained when they are expected to be voluminous. Thus, we assume the Data Retention section was anticipating that the actual data supplied would be retained. This seems inconsistent with the concept of generally satisfying the data specification. It would make more sense to have a statement from the

Transmission Operator indicating the data specification has been satisfied or documentation of the enabling of data links to demonstrate general satisfaction of the data requirements.

Under the Compliance Enforcement Authority section, we suggest “entities” in the first bullet and “functional entities” in the second bullet should be changed to “registered entities”. This will make them consistent with one another and the function model. The “Reliability Functional Model Technical Document” describes a functional entity not as a specific company but rather a specific part of the functional model such as a Balancing Authority. Registered entities are specific companies. For example, SPP is a registered entity that works for their Regional Entity as the Reliability Coordinator functional entity.

4. The SDT is suggesting the retirement of three requirements in PRC-001 since those requirements deal with data handling and can now be incorporated in the data specification concept suggested for TOP-003-2. Do you agree with the changes the drafting team has made?

   If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☒ No

   Comments: While we are supportive of the changes, they do not appear to be coordinated with the Project 2007-06 System Protection Coordination that was started recently. It appears to retain the retired requirements.

5. The VRF, VSL, and Time Horizons are part of a non-binding poll. Please indicate whether you agree or disagree with the VRF, VSL, and Time Horizon assignments. If you do not support these assignments or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

   ☐ Yes

   ☒ No

   Comments: The Moderate and High VSLs for TOP-001-2 R3, R5, R6, and R8 incorrectly use an “or” condition when “and” is necessary to establish the range of percentages of performance. As written now, any percentage from 0 to 100% qualifies for both VSLs.

   The following boiler plate language that is written before the VSLs for TOP-001-2 R8 needs to be included before all sets of VSLS that give an option to use integers or percentages. Otherwise, the VSLs will overlap. It should be included before TOP-001-2 R3, R5, and R6.

"For the Requirement X VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation."

For the Severe VSL of TOP-002-3 R3, an extra space is needed before "15%".

6. If you have any other comments on these standards that you have not already provided in response to the prior questions, please provide them here.

Real-time Transmission Operations – Project 2007-03

The Real-time Transmission Operations Drafting Team thanks all commenters who submitted comments on the 7th draft and successive ballot of the standards for Real-time Operations (Project 2007-03). These standards were posted for a 30-day public comment period from March 22, 2012 through April 20, 2012. Stakeholders were asked to provide feedback on the standards and associated documents through a special electronic comment form. There were 41 sets of comments, including comments from approximately 143 different people from approximately 111 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

The SDT made several clarifying changes to the project standards as a result of industry comments:

- TOP-001-2: deleted Operations Planning from the Time Horizons for Requirement R1
- TOP-002-3: changed to ninety calendar days in Data Retention
- TOP-003-2: added a reference to analysis functions to Requirement R2, Part 2.1 for consistency with the main requirement
- VSLs for TOP-001-2: added clarifying language to Requirements R3, R5, and R6 for consistency with Requirement R8

The changes made are clarifying in nature and do not change the content or intent of the requirements. Therefore, the SDT is requesting that the project be moved to a recirculation ballot.

No new minority opinions arose in this round of comments.

All comments submitted may be reviewed in their original format on the standard's project page:

http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President of Standards and Training, Herb Schrayshuen, at 404-446-2560 or at herb.schrayshuen@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.[1]

[1] The appeals process is in the Standard Processes Manual:
http://www.nerc.com/files/Appendix_3A_Standard_Processes_Manual_Rev%201_20110825.pdf.

1. **The SDT made changes to TOP-001-2 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made? If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.**

Summary Consideration: The majority of the comments received requested clarification or explanation of why the SDT did what it did. Only one change, to the Time Horizon for Requirement R1, was made due to comments.

Several commenters remarked that there was a potential problem with relying on a definition being developed in another project that wasn't approved as yet. As has been explained previously, the SDT is working closely with the Reliability Coordination Standard Drafting Team (RC SDT) that is responsible for defining the term 'Reliability Directive'. The use of that term within this standard is somewhat generic in nature. The SDT believes that the progress in developing the definition is sufficient to warrant continued progress of Project 2007-03 without significant concerns of wasted effort or time. And, as shown in the Implementation Plan, the two projects will be filed at FERC together in one package.

R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements. [Violation Risk Factor: High] [Time Horizon: ~~Operations Planning,~~ Same-day Operations, Real-Time Operations]

Organization	Yes or No	Question 1 Comment
Kansas City Power & Light Co.	Negative	Comments and concerns with the proposed standards have been expressed within the NERC comment form
American Electric Power	Negative	Comments are being submitted via electronic form by Thad Ness on behalf of American Electric Power.
Florida Municipal Power Agency	Negative	Please see FMPA comments submitted separately.
Xcel Energy, Inc.	Negative	Please refer to Xcel Energy's filed comments related to this project.

Organization	Yes or No	Question 1 Comment
Manitoba Hydro	Negative	Please see comments submitted by Joe Petaski (Manitoba Hydro)

Xcel Energy, Inc.	Negative	Xcel Energy submitted comments in Standard Comment Form.
FirstEnergy Energy Delivery, FirstEnergy Solutions	Affirmative	FE appreciates the hard work of the standards drafting team. Please see additional comments and suggestions submitted through the formal comment period.
Ohio Edison Company	Affirmative	FE appreciates the hard work of the standards drafting team. Please see additional comments and suggestions submitted through the formal comment period.
Response: Thank you for submitting comments. Responses to your comments are addressed below.		
ReliabilityFirst Corporation	Abstain	ReliabilityFirst abstains and offers the same comments as submitted via the previous comment posting period.
Response: The SDT points RFC to the responses posted for the previous posting. Without any further specific comments, the SDT has no further responses to offer.		
Brazos Electric Power Cooperative, Inc.	Negative	Additional clarification is necessary that warrants our negative vote. See the issues raised in the comments by ACES Power Marketing.
ACES Power Marketing	No	We generally agree with TOP-001 and the changes since the last posting. However, we continue to believe that use of the language “know or expected to be” in Requirement R3 is confusing and that this is a case where brevity is more effective in communicating the requirement. We believe striking this clause will improve the clarity of the requirement. As

Organization	Yes or No	Question 1 Comment
		the clause is written now, it is not clear to whom it applies? We assume the SDT intended for the notification to be based on the expectation or knowledge of the TOP to whom the requirement applies. However, the clause is not clear on this but is rather a statement that appears to be some general knowledge or expectation. This opens the possibility of an auditor substituting their expectation or knowledge over the applicable TOP. Requirement R5 has a similar issue. We are concerned that the examples listed in Requirement R5 may be too simplistic and could be interpreted too literally. A change in load is one example. Thus, a simple reading of the requirement would imply that a Transmission Operator that has a 1 MW change in a 10,000 MW would be required to notify the Reliability Coordinator. Clearly, that is not what is intended. To resolve this issue, two solutions could be applied. One solution would be to state that changes must be significant. A second solution would be to strike the examples altogether. Requirements R10 and R11 are inconsistent. Requirement R10 states the Transmission Operator must inform the RC of "its actions" to mitigate an IROL or SOL that has been exceeded while Requirement R11 compels the Transmission Operator "to act or direct others to act" to mitigate an IROL or SOL that has been exceeded. While we consider that a Transmission Operator directing others to act is the same as taking action itself, it would appear Requirement R11 does not consider directed actions as the actions of the Transmission Operator. This would imply that Requirement R10 does not include communication of the directed actions since it applies to Transmission Operator actions. However, we do not believe exclusion of Transmission Operator actions was intended in Requirement R10. The simplest solution to align these two requirements more closely would be to

Organization	Yes or No	Question 1 Comment
		change "its" in Requirement R10 to "the". In this way, Requirement R10 is not limited to only the actions taken directly by the Transmission Operator. The language in the Data Retention section regarding Requirements R7 and R9 needs to be made more consistent with the requirement. We are concerned that language could be interpreted as compelling the Transmission Operator to retain data for any IROL that is temporarily exceeded for a duration less than T_v or an SOL that is exceeded for a time that does not violate the criteria upon which it is based. Neither of these instances would represent a violation of either Requirement R7 or R9. Thus, the data is not necessary to be retained. Under the Compliance Enforcement Authority section, we suggest "entities" in the first bullet and "functional entities" in the second bullet should be changed to "registered entities". This will make them consistent with one another and the function model. The "Reliability Functional Model Technical Document" describes a functional entity not as a specific company but rather a specific part of the functional model such as a Balancing Authority. Registered entities are specific companies. For example, SPP is a registered entity that works for their Regional Entity as the Reliability Coordinator functional entity.

Response: R3 & R5: The SDT disagrees. By utilizing the results of the required Operational Planning Analysis, the Transmission Operator will know what other entities are known or expected to be affected. Striking the clause will not provide clarity but open up other questions. No change made.

R5: The use of the term 'significant' would not provide any additional clarity as it is still a subjective term open to interpretation. Merely striking the examples does not provide additional clarity either as it leaves the situation completely open to interpretation. The SDT believes that including the examples provides sufficient clarity. Any auditor trying to use a 1 MW change on a 10,000 MW system will be hard-pressed to justify their actions. No change made.

R10: The SDT disagrees. If the commenter accepts that directing others to act is the same as taking action itself, then the SDT

Organization	Yes or No	Question 1 Comment
asserts that Requirement R10 is aligned with Requirement R11. No change made. Data retention: The SDT believes that by incorporating a reference to the requirements in question within the data retention language that the concern expressed by the commenter is not an issue. No change made. CEA: The SDT is using language here that has been utilized in multiple standards projects to date and was supplied by staff as accepted language. Furthermore, the SDT does not agree that the suggested changes will provided any additional clarity. No change made.		
Lakeland Electric	Negative	Please refer to comments submitted by FMPA.
Florida Municipal Power Pool	Affirmative	See FMPA Comments
Florida Municipal Power Agency; City of Vero; Beaches Energy Services of the City of Jacksonville Beach, FL	No	The existing TOP-001-1 R7 essentially requires communication to the RC and neighboring TOPs any time a Facility is to be switched. The new TOP-001-2 R5 will only require such communication when such switching would result in an "Adverse Reliability Impact" defined as: "The impact of an event that results in frequency-related instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that affects a widespread area of the Interconnection." This significantly reduces the requirements for communication / notification for switching Facilities. It is worthwhile to communicate switching of some Facilities whether or not they would result in an "Adverse Reliability Impact". Suggest rephrasing to something like any unplanned switching of Facilities not "noticed" through data provision of TOP-003-2. With the number of human error events that have occurred, we should not be reducing the communication / notification requirements. R8 is not needed since it is already covered in FAC-014-2 R5.2. As a result, R9, R10 and R11 ought to be modified to refer to FAC-014-2 rather than R8.
Response: R7: The SDT believes that notification for any switching event is contrary to good operating practice as it would load up the message queue with unnecessary information and could lead to an operator missing an important message within a large		

Organization	Yes or No	Question 1 Comment
group of unneeded messages. TOP-003-2 allows for an entity to request reliability-based information from another entity so they may include status on any piece of equipment that may possibly effect its operations. Therefore, the SDT does not agree that a reliability gap has been created. No change made. R8: The SDT notes that there are subtle differences in TOP-001-2 and FAC-014-2. FAC-014-2 provides a simple list of SOLs while TOP-001-2 is looking at particular SOLs that need special treatment. Therefore, there is no redundancy. No change made.		
Xcel Energy, Inc.	Negative	Drafting Team didn't address the Regional differences on the treatment of SOLs. R8 – Please clarify the difference between R8 of TOP-001-2, and R2 & R5 of FAC-014-2. We would expect in some regions, depending on the RC's SOL methodology, that this would be the same information. For example, in SPP, all Facility Ratings are considered SOLs. Compliance with R9 of TOP-001-2 will prove quite difficult in regions like this. Please clarify what the drafting team envisions being the difference between these two standards, and what is expected to be given to the RC under each. R9 - We appreciate the drafting team's efforts. However, we are still concerned that R9 will not allow the Transmission Operator the flexibility to identify the best SOL recovery approach, without incurring a violation of the requirement. Instead, the TOP may be forced to shed load in order to avoid violating the requirement. This is not ideal, especially when the situation could be mitigated successfully with alternative measures. It is not clear if an entity is allowed to use an RC-approved contingency plan to mitigate a situation that would cause a Facility Rating violation (i.e. the Facility Rating is the SOL), without also incurring a violation of R9. To further explain, if an entity foresees exceeding an SOL in its OPA, and obtains approval from the RC on their proposed contingency plan (which includes a Facility Rating violation), will that entity be considered in violation of R9 once the exceedance occurs and the contingency plan is implemented?
Response: The SDT does not agree that it is necessary to spell out any regional differences in the treatment of SOLs. The		

Organization	Yes or No	Question 1 Comment
requirements are generic in that respect as they should be. No change made. R8: The SDT believes that there are subtle differences in TOP-001-2 and FAC-014-2 that the commenter is missing. FAC-014-2 provides a simple list of SOLs while TOP-001-2 is looking at particular SOLs that need special treatment. Therefore, there is no redundancy. No change made. R9: There is nothing in this standard that ties the Transmission Operator to any particular plan or action so the SDT believes that the commenter's fears are ungrounded. No change made.		
National Association of Regulatory Utility Commissioners	Negative	Given the term Reliability Directive is being used as a defined term but does not yet exist as a defined term in the NERC Glossary and is not proposed to be a defined term in the Glossary with this proposal, it is premature to approve this revised standard.
Hydro One Networks, Inc.	Negative	The standard uses the term "Reliability Directive" which is currently and formally under development as part of another project. The posting states that this definition was agreed to by all affected project teams using it. However if the other project team formally charged with this definition's development, changes it, then this standard and perhaps others, will have to be revisited.
Utility Services, Inc.	Negative	There is use of the term "Reliability Directive" in the standard which is currently and formally under development as part of another project. The posting states that this definition was agreed to by all affected project teams using it, however if the other project team formally charged with this definition's development, changes it, then this standard and perhaps others, will have to be revisited. Bringing these standards forward seems inefficient and problematic.
Response: The SDT appreciates your concerns, but has always intended to deal with the coordination issue involved here in a decisive manner. As has been explained previously, the SDT is working closely with the RC SDT that is responsible for defining the term 'Reliability Directive'. The use of that term within this standard is somewhat generic in nature. The SDT believes that the		

Organization	Yes or No	Question 1 Comment
progress in developing the definition is sufficient to warrant continued progress of Project 2007-03 without significant concerns of wasted effort or time. The RTO SDT (Project 2007-03) and the RC SDT's project (Project 2006-06) will be filed together at FERC. No change made.		
Santee Cooper	Negative	In R8, SOLs are identified according to each entity's SOL methodology. This requirement seems to assume a certain methodology for identifying SOLs. Local area issues such as the examples cited in the rationale may not be of consequence to the BES and not considered an SOL. Also, over-communication of local area issues to the RC will inundate them and could become a detriment to the reliability of the BES. We believe that entities should be allowed to report SOLs according to their required methodology they have established. What was the rationale of reducing the implementation time from twenty-four months to twelve months?
Response: R8: SOLs are developed through a required methodology in FAC-014-2. Nothing in TOP-001-2 changes that fact. Requirement R8 is intended solely for those SOLs, that while not IROLs, are more important to the Transmission Operator Area than a typical SOL would be. No change made. IP: The effective date was changed following numerous comments to the sixth posting that asserted the implementation plan would take excessive time and needed to be shortened. It was also based on the fact that the proposed requirements represent what is already being done in the field in many areas.		
INTELLIBIND	Negative	Inclusion of "examples" is not appropriat and leads to a compliance conflict on whether these examples must be addressed or not. R8, 9 and 11 place unneeded additional burden on entities to prove they are properly complying.
Response: The SDT believes that the language of the requirement (and examples) is such that that the commenter's fears are unwarranted and will not lead to conflict. No change made.		

Organization	Yes or No	Question 1 Comment
The commenter has not supplied any information on the details of why there is an unneeded burden. Therefore, the SDT is unable to reply. Proof of compliance with a requirement is part of a mandatory compliance mechanism. In recognition of this compliance burden, the requirements mentioned were carefully crafted with the end in view that a registered entity should be able to affirmatively prove compliance. No change made.		
MidAmerican Energy Co.	Negative	NERC standards cannot be vague and undefined or NERC interprets the standard and creates new requirements through the Compliance Application Notice process. The rational specified for R8 shows that R8 deals with a Transmission Operator defined special subset of SOLs. However, the current wording in R8 does not use the wording "special subset of SOLs as defined by the TOP". The standard uses "as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis". This is not clear enough for a black and white compliance audit and therefore is inadequate. Further in R9 continous duration remains undefined. Therefore, specific wording needs to be added to show that R9 applies to the "special subset of SOLs with there corresponding continous duration timeframes as defined by the TOP". Last, the the same wording and definition must be applied to FAC-011-2 R2 to remain consistent and clear.
Response: The rationale is simply an explanation of Requirement R8 and is intended to ensure that the responsible entity and auditor understand the requirement – it is the language in the requirement, not the language in the text box, that is enforceable. Therefore, there is no inconsistency in the wording. No change made. Continuous duration is a common term and the Webster's dictionary meanings can and should be applied. The reference in Requirement R9 to Requirement R8 makes it clear as to what is being referenced. No change made. The SDT has reviewed FAC-011-2, Requirement R2 and does not believe that any changes are required in order to maintain consistency as the methodology hasn't been changed. No change made.		

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td>Detroit Edison Company</td><td>Negative</td><td>R3- The sentence should read “… inform its Reliability Coordinator and other Transmission Operator(s), …” The word other is missing in the current draft.

R6- The statement “… negatively impacted interconnected NERC registered entities…” is to vague. This could be an easy trip up during an audit.

M6- same as R6- The statement “… negatively impacted interconnected NERC registered entities…” is to vague.

VSLs- R6- The statement “… negatively impacted interconnected NERC registered entities…” is to vague.</td></tr>
<tr><td colspan="3">Response: R3: The SDT asserts that ‘other’ is understood and no additional clarity would be provided by adding it. No change made.

R6, M6, & VSL: The SDT believes that a ‘negatively impacted’ entity is clear and not vague. No change made.</td></tr>
<tr><td>Westar Energy</td><td>Negative</td><td>SDT has not adequately addressed previous comments.</td></tr>
<tr><td colspan="3">Response: Without specifics, the SDT is unable to respond.</td></tr>
<tr><td>Wisconsin Electric Power Marketing; Wisconsi Energy Corp.</td><td>Negative</td><td>The SDT’s response for previous comments on R6 is that “The intent of the requirement is to notify those entities that are directly affected by the telemetry outage. “ If that is the intent of the requirement then the requirement should state that.

Also, “negatively impacted” needs to have some sort of bounds. Loss of $1 in revenue is a negative impact.</td></tr>
<tr><td colspan="3">Response: The SDT believes that the intent is clear and that no further explanation is required. No change made.

As the requirement is dealing with telemetry outages, the impact is in loss of data and information as it relates to reliability. Revenue is not within the scope of reliability standards. No change made.</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
Commonwealth of Massachusetts Department of Public Utilities	Negative	There is use of the term "Reliability Directive" in the standard which is currently and formally under development as part of another project. The posting states that this definition was agreed to by all affected project teams using it, however if the other project team formally charged with this definition's development, changes it, then this standard and perhaps others, will have to be revisited. Bringing these standards forward seems inefficient and problematic for many. Also in Requirement 8 there was an issue expressed by one RSC member that System Operating Limits are local limits and should not be subject of part of the NERC standards and the requirement as written creates a "subset" of SOLs that affect reliability. This could create an overly complicated standard and could lead to compliance difficulties.
Response: As has been explained previously, the SDT is working closely with the RC SDT that is responsible for defining the term 'Reliability Directive'. The use of that term within this standard is somewhat generic in nature. The SDT believes that the progress in developing the definition is sufficient to warrant continued progress of Project 2007-03 without significant concerns of wasted effort or time. The RTO SDT (Project 2007-03) and the RC SDT project (Project 2006-06) will be filed together at FERC. No change made. The SDT does not believe that Requirement R8 creates an overly complicated standard or creates compliance difficulties. This requirement was added quite some time ago at the behest of industry as shown in earlier posted comments. There is nothing complicated about it and it is in the control of the Transmission Operator as to how to proceed. No change made.		
Texas Reliability Entity	No	1) Definitions: Texas RE does not agree with the proposed definition of "Reliability Directive" and encourages the SDT to look past a compliance based outlook regarding the word "directive". If there is no Reliability Standard support for use of directives to AVOID emergencies, emergencies will continue to occur. Consider using the broader defined term "Operating Communication" from COM-003 rather than "Reliability Directive" in this standard.

Organization	Yes or No	Question 1 Comment
		2) R1: This requirement, as written, states that the BA, GOP, DP, and LSE must comply with Reliability Directives, which, by definition, are only issued in Emergencies or to prevent instability or Cascading. There is not a requirement in the TOP or IRO standards that obligates a Registered Entity to comply with other directives issued by the TOP or RC used in operating the grid in a reliable manner. For example, some generator operators exceed the operating basepoint that is communicated to the unit by the ISO, which creates congestion and overloads the transmission system. Under the proposed R1 language, there is no requirement for an entity to comply with this type of directive, since it is not a "Reliability Directive" until an Emergency occurs. 3) R3: Requirement R3 seems to be missing some words. It doesn't say WHAT the TOP should inform other entities about. Also, it is not clear if this requirement is supposed to be about planning ("expected to be affected by anticipated Emergencies") or real-time operations ("known to be affected by actual Emergencies") or both. If the latter is intended, the Time Horizon should include Real-Time Operations and Same Day Operations. We suggest changing the language to "Each Transmission Operator shall inform its Reliability Coordinator and other affected Transmission Operator(s) about each actual or anticipated Emergency , which may be determined in Real-time or based on its assessment of its Operational Planning Analysis" 4) R4: Reinsert Generator Operator applicability from old R6. The stated reason for removal of Generator Operator is incorrect and violates the Functional Model which states that a Balancing Authority may direct "resources (Generator Operators and Load-Serving Entities) to take action to ensure balance in real time" and "direct "Generator Operators to implement redispatch for congestion management". Both of those type actions may include rendering emergency assistance. 5) R5: The requirement implies, but does not specifically state a time frame

Organization	Yes or No	Question 1 Comment
		for informing the RC. The RC must be informed in sufficient time in order to respond to the system condition. The phrase "unless conditions do not permit" is ambiguous and should be made more definite. We suggest rewriting R5 as follows: "Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas within a timeframe that is sufficient for the RC and affected Transmission Operators to respond to the system condition, unless communication capabilities have failed." The Time Horizon should also include Operations Planning since the Requirement language includes "known or expected." 6) R6: There is a need to include Generator Operator in this requirement. There is no clarification in the mapping document regarding the loss of the applicability to the Generator Operator (previously in TOP-001-1 R3). 7) R8: This requirement, as written, states that the TOP must inform the RC of SOLs based on its assessment of its Operational Planning Analysis, which, by definition, is an analysis for the next day's operation that may occur either a day ahead or as much as 12 months ahead. SOL violations can occur in Real-Time (e.g., transmission thermal limit violations, voltage violations, etc.) due to forced outages from storms or equipment failures that may not have been studied under the Next-Day analysis and various other real time conditions. We suggest rewording the requirement to read "Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based ON ANTICIPATED OR ACTUAL EMERGENCIES OCCURRING IN REAL-TIME OR BASED on its assessment of its Operational Planning Analysis." It is important to recognize the Real-Time issues because several of the Requirements following Requirement 8 refer to SOLs "identified in Requirement R8." Additionally, since the definition of SOL includes post-

Organization	Yes or No	Question 1 Comment
		contingency criteria, contingencies are not limited to Operational Planning Analysis timeframes. The VSL language also needs to accommodate Real-Time considerations. 8) R9: See our comment regarding R8 - there is a reliability gap because SOLs identified in Real-Time (as opposed to those identified in the Operational Planning Analysis timeframe) are not included. 9) R10: See our comment regarding R8 - there is a reliability gap in the actions needed to return the system to within limits for SOLs identified in Real-Time as opposed to those identified in the Operational Planning Analysis timeframe. 10) R11: See our comment regarding R8 - there is a reliability gap for SOLs identified in Real-Time as opposed to those identified in the Operational Planning Analysis timeframe.11) What is the intended difference between "TOP shall not operate outside any SOL" in R9 and "TOP shall act or direct others to act to mitigate both the magnitude and the duration of exceeding . . . an SOL" in R11? The same action or inaction would likely result in violations of both requirements, resulting in a "double-jeopardy" situation.
Response: 1. The SDT is aware of the work being done with COM-003 as it has maintained close coordination with that SDT. In this case, the SDT believes that the requirements in TOP-001-2 best align with the use of Reliability Directive. Any problems with the proposed definition should be taken up with the RC SDT in Project 2006-06. No change made. 2. The SDT believes that other market protocols, standards and operating protocols and mechanisms are in place today to take care of the type of situations that the commenter has noted. No change made. 3. The SDT does not believe the suggested change adds any clarity. The SDT believes that it is clear as to what needs to be communicated. Since Operational Planning Analysis is generally analyzed at least a day ahead, the SDT, in response to numerous comments in the last posting, changed the Time Horizon to just Operations Planning. No change made. 4. The SDT stands by its reasoning for deletion of the Generator Operator as consistent with the Functional Model v5. No change made.		

Organization	Yes or No	Question 1 Comment
5. The SDT does not believe that the suggested language provides any additional clarity. Requirement R5 is more pertinent to Real-time than Operations Planning which is covered in Requirement R3. No change made. 6. There is no relevance between TOP-001-1, Requirement R3 which concerns reliability directives and this requirement which deals with telemetry outages. If a Generator Operator has telemetry outages it will be noted to the Transmission Operator or Balancing Authority and would be reported as part of their information. No Change made. 7, 8, 9, & 10. The SDT believes that Operational Planning Analysis includes the study of Contingencies and as such will include scenarios that include such conditions as the commenter has pointed out. The SDT reminds the commenter that TOP-002-3 requires the study of all SOLs and that nothing has changed with regard to an entity's responsibilities to operate a reliable system. TOP-001-2 is simply elevating a subset of SOLs to receive special attention. No change made.		
Oncor Electric Delivery	No	Oncor believes that the Reliability Coordinator is in the best position to determine who the negatively impacted interconnected registered entities are and to effectively coordinate communication efforts after receiving the initial planned outage request from the originating entity. In addition, the term "negatively impacted interconnected registered entities" is too broad and too subjective. As a result, we recommend R6 be revised to: Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.
Response: The SDT believes that the Transmission Operator can, and does, know who will be impacted by outages of telemetry equipment. Placing this responsibility at the Reliability Coordinator level would place an unnecessary burden on those entities and deflect them from their reliability responsibilities. No change made.		
Bonneville Power Administration	No	BPA does not believe that the drafting teams' consideration of our previously submitted comments during the last round was adequate. The response appeared to be based on the assumption that the SOL or IROL was based on a thermal limit, not a stability limit. Since a system can go unstable in less than 1 second, the drafting team's response that, "ratings

Organization	Yes or No	Question 1 Comment
		include the qualifiers of time...” did not make sense to us in the context of a “stability limit”. As stated in BPA’s previous comments, it takes a definite amount of time to readjust the system (change schedules, move generation, or perform other actions) in order to get actual flows down to reliable operating limits when flows have exceeded limits. The standards need to clearly articulate how much time the responsible entities have to accomplish this. The current standard TOP-004-2, R4 clearly articulates a 30 minute rule for this. TOP-001 needs to do the same, especially if TOP-001 will replace TOP-004-2. Previous Comments: Given the potential uncertainty regarding the 30 Minute Rule, BPA suggests adding more clarity to the standard TOP-001-2 as the new draft could be interpreted to mean that one would need to get the flows below the SOL immediately. BPA believes this is not practical because it takes a definite amount of time to change schedules, move generation, or perform other actions in order to reduce loadings on facilities. BPA believes the new draft should include guidance as to how much time the BA or Transmission Operator would be allowed in order to reduce flows when there is an SOL violation. BPA suggests that more clarity be provided and/or the 30 minute rule be added back to the standard. Additional New Comments:TOP-001 introduces a new term and definition, Reliability Directive. This term is used in R1 of the standard in conjunction with two other defined terms, 'Emergency' and 'Adverse Reliability Impacts'. The time horizon described for R1 is ‘Operations-Planning’. The timeframes for which this standard applies are 'Operations-Planning', 'Same-Day Operations' and 'Real-Time'. However, if we review the definitions associated with 'Emergency' and 'Adverse Reliability Impacts', it is clear that these terms are used for events that occur only during real time operations. BPA recommends that R1 be re-worded so that the Time Horizons are consistent with the terms used in the standard; that the Reliability Directive definition be clarified so that the timing of the

Organization	Yes or No	Question 1 Comment
		directive is identified; and that use of the terms 'Emergency' and 'Adverse Reliability Impact' be consistent with their definitions, and the 30 minute rule for getting actual flows back within a reliable limit be inserted. BPA recommends that the applicability of R6 be expanded to also include Generation Operators. The intent of this requirement is for those entities with "telemetering equipment, control equipment and associated communications channels" to coordinate outage of such equipment with its Reliability Coordinator and negatively impacted interconnected NERC registered entities. Though Generation Operators have such equipment, as written, this requirement does not require that the coordinate such outages in the same manner as Balancing Authorities and Transmission Operators are required to under this requirement.

Response: SOLs, by definition, include Stability ratings and those ratings, like all ratings, have a time element associated with them. Therefore, by using ratings and the time elements associated with them, the SDT has provided a definitive timeframe that will provide greater protection to system elements than what was previously stated as 30 minutes may be too long in certain situations. If a stability rating with a T_v of 1 second is the basis for an SOL, then no time in exceedance of the magnitude limit is allowable, and a Transmission Operator facing that issue would have plans in place to avoid exceedance of that limit. No change made.

The SDT is in agreement with the commenter and has deleted Operations Planning from the Time Horizons. From the latest approved version of the Standards Process manual: "Time Horizon: The time period an entity has to mitigate an instance of violating the associated requirement."

R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements. [Violation Risk Factor: High] [Time Horizon: ~~Operations Planning,~~ Same-day Operations, Real-Time Operations]

Organization	Yes or No	Question 1 Comment
The SDT asserts that if a timing element is required for a Reliability Directive that the Reliability Directive will include such a timing element. No change made. With the change in the Time Horizons cited above, the terms are now consistent. No further change made. SOLs, by definition, include Stability ratings and those ratings, like all ratings, have a time element associated with them. Therefore, by using ratings and the time elements associated with them, the SDT has provided a definitive timeframe that will provide greater protection to system elements than what was previously stated as 30 minutes may be too long in certain situations. No change made. The SDT stands by its reasoning for deletion of the Generator Operator as consistent with the Functional Model v5. No change made.		
PNGC Group Comments	No	Comments: The PNGC comment group believes there should be a distinction in the “Applicability” section of the standard distinguishing between “Scheduling DP/LSE” and “Non-scheduling DP/LSE”. PNGC members are small rural cooperatives that are “Full service BPA customers.” This means is that BPA is our power supplier and scheduling agent and therefore handles all scheduling, tagging, dispatching of resources and curtailments of load from breakers on BPA’s system for PNGC members. According to a letter from the WECC Reliability Coordinator (VRCC and LRCC) none of PNGC’s members will ever receive a “Reliability Directive”. Such a Directive would be sent to either a Balancing Authority (BA), or a Transmission Operator (TOP). In fact, the Bonneville Power Administration (BPA) is the BA and TOP for many of our members so R1 and R2 are nothing more than a clerical exercise for many DP/LSE entities. We estimate there are over 100 entities that are BPA Full Service customers that are in a similar position and making this standard applicable to them does nothing to enhance reliability. A simple declarative statement in the Applicability section of the standard could focus the intent of the SDT on those entities that need it while lessening the compliance risk and clerical burden for other entities that the standard should not apply to. We suggest:4.

Organization	Yes or No	Question 1 Comment
		Applicability4.1 Balancing Authority4.2 Transmission Operator4.3 Generator Operator4.4 Distribution Provider: With Real-time Operations desk4.5 Load-Serving Entity: With Real-time Operations desk
Response: The SDT believes that the current wording is appropriate for a continent-wide standard. If an entity never receives a Reliability Directive then there is nothing for them to do. No change made.		
Kansas City Power & Light	No	Continuous duration" in R9 is not a defined term and will cause uncertainty and debate under audit as to what time frame this represents. Recommend R9 be modified to reflect the time basis established through the methodology to develop the SOL for the applicable facilities. Suggested modification for R9:Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that exceeds the Facility Rating or Stability criteria upon which the SOL is based.
Response: The SDT sees no additional clarity in the suggested wording change. Continuous duration is a common term and the Webster's dictionary meanings can and should be applied. No change made.		
MRO NSRF	No	For R9, the drafting team did not address "continuous duration". Many entities had commented that the term is vague. Is continuous duration, 8 hours or 15 minutes? For IROL limit violations or Unknown State conditions, the entity has 30 minutes to mitigate the situation.
Great River Energy	Affirmative	Great River Energy agrees with the comments of the MRO NSRF
Response: Continuous duration is a common term and the Webster's dictionary meanings can and should be applied. No change made.		
Idaho Power Company	No	I don't think that this requirement should be retained. With e-tag requirements, mid-hour scheduling and the ability to process an emergency

Organization	Yes or No	Question 1 Comment
		tag at any time it seems like an interchange. What is emergency assistance?
Response: Emergency assistance can mean many things such as a change in dispatch or load shed, etc., that do not result in a energy transaction or e-Tag. e-Tag is not a reliability-based tool and shouldn't be relied on to cover operating situations in Real-time. No change made.		
Consolidated Edison Co. of New York	Affirmative	See NPCC group comments
Northeast Power Coordinating Council	No	It is written in FAC-014-2 R5.2: R5.2. The Transmission Operator shall provide any SOLs it developed to its ReliabilityCoordinator and to the Transmission Service Providers that share its portion of theReliability Coordinator Area.This already mandates that the Transmission Operator provide its Reliability Coordinator SOLs. This requirement and TOP-001 R8 must be made to agree.As explained in the redline version of TOP-001: "Rationale: The class of SOL included in Requirements R8, R9, and R11 was created in response to industry comments that there were SOLs that deserved increased attention. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations."It is understood that the impacts of some SOLs may attract increased attention because of the operational implications of them being exceeded. It must also be realized that every SOL has a reliability impact. The added wording adds unneeded complication to the Requirement. Will the proposed requirement create a new class of SOLs that might include any that might be "intermittent" in nature, such as those occurring during televised events, etc.? This becomes a moving target, and it may become problematic for keeping track of those SOLs to which these requirements apply, i.e., those that require notification to the Reliability Coordinator, versus those which don't. Regardless, operator responses to any SOL's on their systems should

Organization	Yes or No	Question 1 Comment
		be the same in terms of swiftness and a sense of urgency. The phrase "supporting reliability internal" is used in R8. What constitutes "supporting reliability internal"? This may present compliance issues. Experience has shown that the use of the terms internal, external, local, wide area have presented auditing difficulties that generated documentation issues.
Response: The SDT asserts that there are subtle differences in TOP-001-2 and FAC-014-2. FAC-014-2 provides a simple list of SOLs while TOP-001-2 is looking at particular SOLs that need special treatment. Therefore, there is no conflict. No change made. The commenter is leaving out part of the phrase thus creating a problem in their mind where there is none if everything is taken in context. The whole phrase is "…supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis." When shown in this complete version, the SDT asserts that it is clear as to what is meant and what needs to be done. No change made.		
Manitoba Hydro	No	Manitoba Hydro is voting negative on TOP-001-2 for the following reason:R8 and R9 - In the absence of the rationale box in the final approved version of the standard, R8 is extremely unclear. All SOL's support reliability based on an assessment of operational planning. The requirement (R9) prohibits operation outside any SOL "for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based." However, by NERC definition an SOL is based upon Facility Rating and Stability Criteria, so operating outside the SOL is always going to violate the Facility Rating. The term continuous duration is undefined and as such makes the standard subject to interpretation. It would appear that the standard expects the system operator to do something more than would be done for an IROL.
Response: The SDT fails to see where the absence of a rationale box will make Requirement R8 unclear and the commenter provides no specifics for the SDT to respond to. The SDT believes that Requirement R8 is clear. No change made.		

Organization	Yes or No	Question 1 Comment
The time element for mitigation of the problem is the key to Requirement R9 and the reason for the proposed wording. No change made. Continuous duration is a common term and the Webster's dictionary meanings can and should be applied.		
Consumers Energy	No	The Reliability Directive definition is not strong enough and leaves too much to interpretation. We feel that the other requirements and items in the standard are acceptable and we could support this version if the definition had more clarity.
Response: Reliability Directive is being developed and defined by Project 2006-06 and the term is simply being utilized in this standard. The commenter should provide specific comments to Project 2006-06 during their next posting. No change made.		
AEP	No	In the previous comment period, AEP requested clarification on whether these requirements are in regards to pre-contingency monitoring or instead based on real-time flow. AEP assumed this was based on Real Time Flow, but we encouraged the drafting team to provide clarifying language to make it more clear to the reader. The drafting team responded by noting that IROLs have been defined as both pre-contingent and post-contingent, and that the exact definition of the IROL must be honored. However, no such clarifying language was added to the standard. Time and time again, industry has provided comments to standard drafting teams in an effort to help avoid CANs, Interpretation Requests, and to increase the consistency of interpretation by both CEA's and industry. In this case, while the team provided insight in their comments, the resulting lack of changes to the standard still leave unnecessary ambiguity that could be easily addressed. Ambiguity of any kind deters from, rather than promotes, the reliability of the BES. Until such clarification is added to the standard itself, AEP cannot support the drafting team's efforts in revising TOP-001-2. R1: The timeframe should be identified.

Organization	Yes or No	Question 1 Comment
Response: The SDT believes that the definition of IROL speaks for itself and therefore that no further explanation is required within the standard. No change made. The SDT believes that if a timing element is required for a Reliability Directive that the Reliability Directive will include such a timing element. No change made.		
New York Independent System Operator	No	The SDT did not provide reasonable assurance that documented determination of 'Reliability Directive' identification was sufficient to meet R1, in the absents of explicit identificaation during every verbal communication. We believe it is not clear to an auditor that written procedures would be an adequate level of 'identification. A possible solution would be to add R1.1 and spell out that identification of Reliability Directive shall be communicated through approved procedures or verbal identification. In addition, Requirement 11 gives the TOP the authority to "...act or direct others to act..." to mitigate IROL and certain SOL exceedances. Is it the intent of the SDT that the TOP can direct any of the entities to which this standard is applicable? Also SDT should consider a change to say "... act or issue a Reliability Directive to ....' This ties the requirement back to R1 with an obligation to complete the directive. The NYISO is also concern with the use of the definition of 'Reliability Directive' that has not been approved. We recommend balloting TOP-001 simultaneously with the RC Project that includes the definition. As it stands we support the proposed definition.
Response: Communication of Reliability Directives is governed by the COM standards. Comments on same should be directed to Project 2006-06 the next time that project posts for comment. TOP-001-2 uses the term and says nothing about how it is implemented. No change made.		

Organization	Yes or No	Question 1 Comment
It is the intent of the SDT that the Transmission Operator can direct any entity shown in applicability. The SDT sees no additional clarity being provided with the suggested change. No change made. The TOP standards will be filed at FERC jointly with the Project 2006-06.		
SSOE Group	No	TOP-001-2Grammatical: R8 and its supporting rationale refers to a term SOL. The term is 'defined' later in R9. The 'definition' should probably be defined at the time of its first usage. R11 The TO directs someone to do something. However, who is directed is not defined. Is it directed to the RC?
Response: Agree – the SDT moved the definition of the acronym from Requirement R9 to Requirement R8. It is directed to the entity that the Transmission Operator believes can correct or help to correct the problem. Since that entity can't be identified ahead of time in a standard, the SDT believes it is best left as is. No change made.		
Duke Energy	No	While the drafting team has made several improvements to this standard, we believe these additional changes are needed: o The definition of Reliability Directive includes the defined term "Adverse Reliability Impact", which should be replaced by the actual wording of latest (8/4/2011) BOT-approved definition of "Adverse Reliability Impact", since it has NOT yet been approved by FERC. o R3 places the responsibility on a Transmission Operator to possess tools it does not currently utilize. Most companies will study their own area and possibly one or two busses out. In order to be compliant to this standard, it would appear a Transmission Operator would need to possess study tools which are currently utilized by the Reliability Coordinator. Suggest considering adopting language where the Transmission Operator requests assistance in identifying impacts outside their direct interconnects. Suggested rewording: "Each Transmission Operator shall work in

Organization	Yes or No	Question 1 Comment
		conjunction with its respective Reliability Coordinator to inform other Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. [Violation Risk Factor: High] [Time Horizon: Operations Planning,]". o R4, as written, does not consider an entity that might be under the control of an RTO. A Transmission Operator, as a member of an RTO, cannot take actions without the permission unless during an emergency where cascading outages, loss of equipment etc. is involved. If the event described in R4 as currently written is not an immediate emergency, the Transmission Operator would need to gain permission of the RTO to comply. Suggest wording changes to take into consideration entities whose facilities are under RTO control. Suggested rewording: "Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that appropriate agreements are in place, and the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. In the event the Transmission Operator is under the purview of a Regional Transmission Organization (RTO), the Reliability Coordinator of the RTO shall work with its Transmission Operators in requesting available emergency assistance. [Violation Risk Factor: High] [Time Horizon: Real-Time Operations]". o R5 - Similar comment to R3. This requirement places the responsibility on a Transmission Operator to possess tools it does not currently utilize. Most companies will study their own area and possibly one or two busses out. In order to be compliant to this standard, it would appear a Transmission Operator would need to possess study tools which are currently utilized by the Reliability Coordinator. Suggest considering adopting language where the Transmission Operator requests assistance in identifying impacts outside their direct interconnects. Suggested rewording: "Each

Organization	Yes or No	Question 1 Comment
		Transmission Operator shall inform its Reliability Coordinator, who shall assist in identifying other Transmission Operators of its operations that are known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations include but are not limited to relay or equipment failures, and changes in generation, Transmission, or Load. [Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]". o R6 - Strike the word "negatively", since no one will be "positively" impacted. o R6 needs to be clarified as to the intent. Does registered entity mean the corporation, or does registered entity mean a TO, BA etc. Suggestion would be to remove NERC registered from the language. o R8 - The SDT has included a Rationale for SOLs that deserve increased attention. Several examples cited in the Rationale are for service to local load, and while the local loads may be important loads, the associated SOLs would have no impact on BES reliability. R8 requires the TOP to inform the RC of such SOLs, and we question why the RC needs to be informed of SOLs that only impact service to local loads. We believe that the phrase "supporting its internal area reliability" should be further clarified in some way. The inclusion of the undefined concept of "supporting internal area reliability" creates undue compliance risk, since auditors could potentially find an entity non-compliant if no SOLs have been identified as "supporting its internal area reliability". With no clarification, it is conceivable that every SOL on a TOP's system could be considered to support its "internal area reliability". Communicating all SOLs would inundate the RC with unneeded information, which we believe would be detrimental to reliability. If this requirement stays in the standard, it needs to be reworded to indicate that any SOLs identified are identified at the sole discretion of the TOP.

Organization	Yes or No	Question 1 Comment
		o R8 - Change the phrase “as supporting” to “in support of”. o R9 - Strike the word “would” and add an “s” to “cause”.
Response: R1: Comments on the definition should be sent to Project 2006-06 the next time it posts. This project utilizes the proposed definition in a generic manner. No change made. R3 & R5: No tool other is specified in this standard and the modeling requirements for a Transmission Operator have not been changed by this standard. The Transmission Operator will be judged on the merits of its model elsewhere and would simply be applying that model here. No change made. R4: There is nothing in this standard that precludes a Transmission Operator from obtaining approval to take action if such approval is necessary. No change made. R6: While no one may be positively impacted there are any number of entities that won’t be impacted at all. ‘Negatively’ was added at the request of previous commenters and seems appropriate to the SDT. No change made. R6: NERC registered entity was added to the requirement due to comments in previous postings where commenters were concerned about limiting the reach of the requirement to non-NERC entities. The SDT believes that it is clear that messages are to be sent to appropriately identified entities. R8: The reason for the notification is that the specified SOLs are to be treated differently than other SOLs. The SDT believes that the Transmission Operator is uniquely qualified to determine such SOLs. No change made. R8 & R9: The SDT sees no additional clarity being provided by the suggested wording changes. No change made.		
ReliabilityFirst Corporation	Abstain	ReliabilityFirst abstains and offers the same comments as submitted via the previous comment posting period.
Response: The SDT points RFC to the responses posted for the previous posting. Without any further specific comments, the SDT has no further responses to offer.		
Seattle City Light	Affirmative	The SDT made changes to TOP-001-2 in response to industry comments and the Quality Review. This includes all aspects of this standard - requirements, measures, and data retention. Do you agree with the changes the drafting

Organization	Yes or No	Question 1 Comment
		team has made? If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments. 1 Yes Comments: R4. calls for rendering emergency assistance as requested and available to other TOPs, provided that the requesting entity has implemented its "comparable" emergency procedures. The word "comparable" is not very well defined so for example, if the requesting entity implemented load shedding to reduce line loading below SOL, would this requirement obligate the entity asked for assistance to shed its load as well because the load shedding option is almost always available? Please state the requirement more clearly. R11. calls for each Transmission Operator to act or direct OTHERS to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's Tv, or of an SOL identified in Requirement R8, yet there are no requirements directing OTHERS to COMPLY with these directives. R.1 requires BA, GOP, DP and LSE to comply with the reliability directives issues by ITS Transmission Operator, but not by OTHER Transmission Operators. There could also be potential for confusion and double jeopardy if there are competing transmission paths or facilities supporting reliability internal to the Transmission Operators. It should be the Reliability Coordinator task to direct OTHERS to act to mitigate SOL violations.
Response: Comparable is a well defined term and the Webster's use is in play here. Comparable does not mean exactly and leaves the entity some flexibility in how to react. No change made. Requirement R1 does require compliance. The use of the term 'its' is appropriate as a transmission Operator can't issue orders to a Balancing Authority that is outside of its area. If such an order was deemed necessary, it would have to be relayed by that Balancing Authority's Transmission Operator thus 'its' is the appropriate term. No change made.		
ISO New England, Inc.	Affirmative	TOP-001 Standard uses an undefined term "Reliability Directive" which is

Organization	Yes or No	Question 1 Comment
		being proposed in the Reliability Coordinator Standards project. We believe that NERC should post these inter-related projects simultaneous in order to achieve industry support to move these important projects forward. If the RTO Project is approved, it should only be presented to the BOT simultaneously with an approved RC Standards project. Additionally, if the definition of "Reliability Directive" is modified in any way in the Reliability Coordinator Standards project, this would be a material change to this standard and could result in company's filing comments in opposition to FERC.
Response: As has been explained previously, the SDT is working closely with the RC SDT that is responsible for defining the term 'Reliability Directive'. The use of that term within this standard is somewhat generic in nature. The SDT believes that the progress in developing the definition is sufficient to warrant continued progress of Project 2007-03 without significant concerns of wasted effort or time. No change made.		
City Utilities of Springfield, Missouric	Negative	City Utilities of Springfield, MO supports the comments from SPP.
Southwest Power Pool, Inc.	Affirmative	We continue to disagree with the successive ballot process that forces entities to decide on a voting position concurrent with the submittal of comments on the same. NERC needs to explore other ways to expedite the voting/comment process without forcing industry to have faith that changes will be made after approval. Although SPP votes in favor of this standard, we have outstanding comments that should be addressed. We have submittted them in the standards processs and reiterate some of them here. The Purpose Statement is too general and does not provide any direction of how the proposed standard will meet its stated intent. As written the Purpose Statement is applicable to any NERC standard that exists or can be imagined. We suggest additional wording of how this particular standard intends to do what it intends to is needed. For example, "...by requiring

Organization	Yes or No	Question 1 Comment
		applicable entities to have the data necessary to perform reliability analyses and real-time monitoring." While we agree with what we believe to be the intent of R9, using the word "continuous" without sufficient context remains ambiguous so as to prevent clear interpretation by all parties. We would suggest replacing the word "continuous" in R9 with "applicable". The timing criterion associated with an SOL should be associated with the timing criterion of the Facility Rating or Stability criteria. The revised requirement would read: Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for the applicable duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
Response: The SDT is a process user and does not determine the elements of the process. If the commenter has problems with the successive ballot concept, it should be directed to the NERC Standards Committee. The stated changes to the Purpose Statement have no relevance to TOP-001-2. No change made. The SDT does not see where any additional clarity has been added by the suggested change. No change made.		
Southwest Transmission Cooperative, Inc.	Affirmative	We generally agree with TOP-001 and the changes since the last posting. However, we continue to believe that use of the language “know or expected to be” in Requirement R3 is confusing and that this is a case where brevity is more effective in communicating the requirement. We believe striking this clause will improve the clarity of the requirement. As the clause is written now, it is not clear to whom it applies? We assume the SDT intended for the notification to be based on the expectation or knowledge of the TOP to whom the requirement applies. However, the clause is not clear on this but is rather a statement that appears to be some general knowledge or expectation. This opens the possibility of an auditor substituting their expectation or knowledge over the applicable TOP. Requirement R5 has a similar issue.

Organization	Yes or No	Question 1 Comment
		We are concerned that the examples listed in Requirement R5 may be too simplistic and could be interpreted too literally. A change in load is one example. Thus, a simple reading of the requirement would imply that a Transmission Operator that has a 1 MW change in a 10,000 MW would be required to notify the Reliability Coordinator. Clearly, that is not what is intended. To resolve this issue, two solutions could be applied. One solution would be to state that changes must be significant. A second solution would be to strike the examples altogether. Requirements R10 and R11 are inconsistent. Requirement R10 states the Transmission Operator must inform the RC of “its actions” to mitigate an IROL or SOL that has been exceeded while Requirement R11 compels the Transmission Operator “to act or direct others to act” to mitigate an IROL or SOL that has been exceeded. While we consider that a Transmission Operator directing others to act is the same as taking action itself, it would appear Requirement R11 does not consider directed actions as the actions of the Transmission Operator. This would imply that Requirement R10 does not include communication of the directed actions since it applies to Transmission Operator actions. However, we do not believe exclusion of Transmission Operator actions was intended in Requirement R10. The simplest solution to align these two requirements more closely would be to change “its” in Requirement R10 to “the”. In this way, Requirement R10 is not limited to only the actions taken directly by the Transmission Operator. The language in the Data Retention section regarding Requirements R7 and R9 needs to be made more consistent with the requirement. We are concerned that language could be interpreted as compelling the Transmission Operator to retain data for any IROL that is temporarily exceeded for a duration less than Tv or an SOL that is exceeded for a time that does not violate the criteria upon which it is based. Neither of these instances would represent a violation of either Requirement R7 or R9. Thus,

Organization	Yes or No	Question 1 Comment
		the data is not necessary to be retained. Under the Compliance Enforcement Authority section, we suggest “entities” in the first bullet and “functional entities” in the second bullet should be changed to “registered entities”. This will make them consistent with one another and the function model. The “Reliability Functional Model Technical Document” describes a functional entity not as a specific company but rather a specific part of the functional model such as a Balancing Authority. Registered entities are specific companies. For example, SPP is a registered entity that works for their Regional Entity as the Reliability Coordinator functional entity.
Response: R3 & R5: The SDT disagrees. By utilizing the results of the required Operational Planning Analysis, the Transmission Operator will know what other entities are known or expected to be affected. Striking the clause will not provide clarity but open up other questions. No change made. R5: The use of the term ‘significant’ would not provide any additional clarity as it is still an objective term open to interpretation. Merely striking the examples does not provide additional clarity either as it leaves the situation completely open to interpretation. The SDT believes that including the examples is the best way to go. Any auditor trying to use a 1 MW change on a 10,000 MW system will be hard-pressed to justify their actions. No change made. R10: The SDT disagrees. If the commenter accepts that directing others to act is the same as taking action itself, then the SDT asserts that Requirement R10 is perfectly in line with Requirement R11. No change made. Data retention: The SDT believes that by incorporating a reference to the requirements in question within the data retention language that the concern expressed by the commenter is not an issue. No change made. CEA: The SDT is using language here that has been utilized in multiple standards projects to date and was supplied by staff as accepted language. Furthermore, the SDT does not believe that the suggested changes will provided any additional clarity. No change made.		
Progress Energy	Yes	: Progress Energy requests the removal of the word “identified” in association with Reliability Directive in all Requirements and Measures. Communications between Transmission Operators and other functional

Organization	Yes or No	Question 1 Comment
		entities already require 3-part communications; having to state 'This is a Reliability Directive' to each entity and receive confirmation of that back from each entity, especially across a fleet of Generator Operators and LSEs, could add unnecessary time before action is taken. Entities should always assume that each directive being given to them is a Reliability Directive and respond accordingly. R1 would read "and Load-Serving Entity shall comply with each Reliability Directive issued by its Transmission Operator...".
Response: The SDT believes that it is imperative that each Reliability Directive be identified as such. The SDT refers the commenter to proposed COM-002-3 where it is clearly stated that each Reliability Directive must be identified as such. The SDT does not believe that such communication will delay a response. No change made.

Lakeland Electric	Negative	"Please see FMPA comments submitted separately"
Response: Thank you for submitting comments. Your comments are addressed below.		
MidAmerican Energy Co.	Negative	TOP-002 R2 uses the same vague language as TOP-001 R8. The wording "special subset of SOLs as defined by the TOP" needs to be added. Otherwise NERC and regional auditors will apply the wording broadly when the intent was for a specific subset of SOLs defined by the TOP. Also see the NSRF comments

Organization	Yes or No	Question 2 Comment
Response: The wording of TOP-002-3, Requirement R2 is intentionally identical with that in TOP-001-2 to ensure consistency on terminology across the standards. The SDT does not believe these words are vague but believes they provide a specific reference for Transmission Operators to work with while allowing those Transmission Operators flexibility in operations. No change made.		
Seattle City Light	Negative	2. The SDT made changes to TOP-002-3 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made? If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments. 1 No Comments: R2, calls for TOP to have a plan to prevent exceeding SOLs of facilities identified in TOP-001-2 as “supporting reliability internal to its Transmission Operator Area.” This could cause TOPs to be in conflict with no remedy when there are competing transmission paths or facilities supporting internal reliability. R3 just requires TOP to notify all registered entities identified in R2, but again there is no requirement for those entities to comply with the plan. Is that all that is intended? This Standard could also be very difficult to comply with due to the data retention policy which requires maintaining six months worth of data for system analysis. The system studies requires huge amount of data and to maintain that amount of data for 6 months could be very expensive and complicated. Please reconsider cost vs. benefit of the data retention requirement. 6. If you have any other comments on these standards that you have not already provided in response to the prior questions, please provide them here. Comments: Seattle City Light supports the efforts of the Real Time Operations Standards Drafting Team and approves of the direction proposed in these new TOP Standards. TOP-001 in particular clarifies the definition of Reliability Directive and provides straightforward requirements for reporting outages of relay and communication equipment. We are prepared to vote “affirmative” for all of the new TOP Standards

Organization	Yes or No	Question 2 Comment
		of Project 2007-03 once details as discussed above are addressed and resolved.
Response: R2: The SDT fails to see how the phrase in question will cause conflicts for the Transmission Operator. If there are competing solutions it is the obligation of the Transmission Operator to find the best solution for the reliability of the system. That is true today and it will not change in the future due to this phrasing. All this phrasing does is give the Transmission Operator another tool, namely elevating the status of certain SOLs, to come up with the best solution for reliability. No change made. R3: The SDT believes that Requirement R3 is informational in nature as it is in the planning horizon. Actual 'orders' to implement the plan will be issued at a later time by the Transmission Operator and are covered in other standards such as the proposed TOP-001-2. The SDT believes that the notification in this requirement will provide an opportunity for entities to comment on the plan and thus for the Transmission Operator to fine tune its plan. No change made. Data retention: In this day of cheap storage capability, the SDT does not believe that it will be an onerous burden to retain 6 months of analysis. This amount of storage is also consistent with guidelines provided by NERC staff. No change made.		
Westar Energy	Negative	SDT has not adequately addressed previous comments.
Response: The SDT points Westar to the responses posted for the previous posting. Without any further specific comments, the SDT has no further responses to offer.		
Florida Municipal Power Pool	Affirmative	See FMPA comments
Florida Municipal Power Agency	No	The existing TOP-002-2 requires that both the BA and TOP perform current day, next day and seasonal plans. In the new TOP-002-3, the BA is eliminated from the applicability. Nowhere else in the standards is there a requirement for the BA to perform current-day, next-day and seasonal planning. The mapping document points to BAL-002 and the requirement for a BA to have enough Contingency Reserves (and confuses the references saying the R2 of BAL-002-1 requires a "plan", which it does not say). However, this is a real-time requirement of a BA and is not an operations planning analysis and is not a day-ahead plan. There ought to be a day-ahead plan to start enough generation to enable the load plus operating reserves to be met, which the existing TOP-02-2 standard essentially assigns to the BA. The mapping document

Organization	Yes or No	Question 2 Comment
		also points to BAL-001, but, a 12-month rolling average of ACE has very little to do with day-ahead planning. And finally, the mapping document points to coordination needed in the Functional Model. The Functional Model is not mandatory and should not be depended upon in this manner. The mapping document says that the TOP develops the plan and passes it to the BA. This is not the case for unit commitment. For unit commitment, it is usually the other way around. TOPs develop constraints (e.g., SOLs) that the market participants use to transact; hence, the market participants (which involve the BAs) develop the transactions (which include unit commitment) often in parallel with the TOPs plans. TOPs do not plan or direct unit commitment except in cases where a unit needs to be "reliability must-run". FMPA is aware that there may be efforts to insert next-day planning into new BAL standards under development; however, it will be some time before those new standards are approved. IN the meantime, the new TOP standards should include operational planning analyses for the BA on an interim basis until those new BA standard(s) are approved and mandatory so that we do not create a gap in the interim. In addition, the standard has eliminated the current-day day and seasonal assessments and focuses only on next-day. FMPA believes that both current-day and seasonal remain important, to cover changes from yesterday's plan (e.g., unplanned outages that have occurred since yesterday's plan), and to coordinate planned outages seasonally. R1 - The SDT introduces a new term "Stability Limit" which seems duplicative of an SOL and adds a layer of ambiguity. What Stability Limits exist that would not be an SOL or IROL? Also, R1 and R2 become inconsistent with R1 referring to "Facility Ratings" and "Stability Limits" whereas R2 refers to "SOLs" and "IROLs". It would seem the two requirements should consistently use "SOLs" and "IROLs" consistently with FAC-014-2.
City of Vero	No	The existing TOP-002-2 requires that both the BA and TOP perform current day, next

Organization	Yes or No	Question 2 Comment
		day and seasonal plans. In the new TOP-002-3, the BA is eliminated from the applicability. Nowhere else in the standards is there a requirement for the BA to perform current-day, next-day and seasonal planning. The mapping document points to BAL-002 and the requirement for a BA to have enough Contingency Reserves (and confuses the references saying the R2 of BAL-002-1 requires a "plan", which it does not say). TOPs develop constraints (e.g., SOLs) that the market participants use to transact; hence, the market participants (which involve the BAs) develop the transactions (which include unit commitment) often in parallel with the TOPs plans. TOPs do not plan or direct unit commitment except in cases where a unit needs to be "reliability must-run". We are aware that there may be efforts to insert next-day planning into new BAL standards under development; however, it will be some time before those new standards are approved. In the meantime, the new TOP standards should include operational

Organization	Yes or No	Question 2 Comment
		planning analyses for the BA on an interim basis until those new BA standard(s) are approved and mandatory so that we do not create a gap in the interim. In addition, the standard has eliminated the current-day day and seasonal assessments and focuses only on next-day. We believe that both current-day and seasonal remain important, to cover changes from yesterday's plan (e.g., unplanned outages that have occurred since yesterday's plan), and to coordinate planned outages seasonally. R1 - The SDT introduces a new term "Stability Limit" which seems duplicative of an SOL and adds a layer of ambiguity. What Stability Limits exist that would not be an SOL or IROL? Also, R1 and R2 become inconsistent with R1 referring to "Facility Ratings" and "Stability Limits" whereas R2 refers to "SOLs" and "IROLs". It would seem the two requirements should consistently use "SOLs" and "IROLs" consistently with FAC-014-2.
Response: The Balancing Authority has one role: To balance Load and resources. A key component of this role is to be able to recover from events that cause imbalance. The commenter intermingles the obligation of the Load-Serving Entity with that of the Balancing Authority. The SDT believes that in order for a Balancing Authority to comply with CPS and DCS and the requirements for emergency plans in EOP that they must plan and therefore a separate requirement is not needed and would actually represent double jeopardy. BAL-001-0.1a, BAL-002-1, EOP-001-0b, EOP-002-3, and EOP-003-1 cover these issues for the Balancing Authority. The standard has not eliminated other planning periods as Operational Planning Analysis covers all of the periods cited. What it does do is mandate a next-day analysis. Current day will be handled in Real-time operations and thus isn't needed in this planning environment. The SDT believes that longer term studies will be run by entities on an as needed basis but that requirements are only necessary for next-day. No change made. Stability Limit is a defined term in the NERC Glossary. IROLs and SOLs represent only part of what the Operational Planning Analysis (OPA) is to include. The OPA is to analyze all expected system conditions against all operating criteria. The SDT finds that is accomplished within a Transmission Operator Area by having an OPA that is assessed not to exceed any of its Facility Ratings or Stability Limits. While IROLs and SOLs represent many of these, they may not be granular enough to represent all of them. No change made.		

Organization	Yes or No	Question 2 Comment
Bonneville Power Administration	No	BPA appreciates the drafting team's response to our previous comments and recommends additional clarification: Previous Comments: Given the potential uncertainty regarding how many day ahead studies may be required, BPA suggests adding more clarity to the standard TOP-002-3 to address. BPA recognizes that various regions experience peak operations at different times of the day, anticipated generation patterns shift over the course of the day; and transmission facilities of service start and stop times associated with planned maintenance and construction work at various times throughout the day. Hence, due to these multiple shifts in forecast system conditions, it is unclear whether more than one study is required to meet the requirements of this standard. Additional New Comments:Many entities tend to perform system studies more than one day ahead. Please specify the threshold at which a prior study would have to be updated to meet the next day study requirement. BPA suggests alternate language for the requirement ...something along the lines of ... An entity or TOP may perform a study more than one day in advance; they shall update the study if system conditions (such as line outages, etc.) changed such that there was more than a 5% change in the system operating limit, thereby requiring the need to rerun the study.
Response: There is no mandate in the standard regarding how many studies need to be performed. The requirement is for a valid analysis. If one study can get that done, then one study is sufficient. If conditions change, the SDT expects that the Transmission Operator will conduct another study to analyze the new conditions as the 'old' analysis would no longer be valid. The SDT believes that there is no single value applicable on a continent-wide basis that could be placed in a requirement and that the Transmission Operator is best suited to determine when a new analysis needs to be performed. No change made.		
Consumers Energy	No	This standard gives the TOP more direct authority than is in the MISO process today. The market has means to accommodate this operation. In R3, this may conflict with the present logic our TOP follows concerning their operation in the area of communicating conditions to Generation Operators and other Market Participants. We do not support this standard as written.

Organization	Yes or No	Question 2 Comment
Response: The commenter has failed to provide details on how Requirement R3 conflicts with policy so the SDT is unable to comment in that regard. However, the SDT wishes to point out that Requirement R3 does not require that the entire plan be sent to all entities – just that entity's role in the plan. No change made.		
Southwest Transmission Cooperative, Inc.	Affirmative	We generally agree with the changes to the standard. However, we have identified the following concerns. TOP-001-2 R8 implies the Transmission Operator must look for SOLs that are not IROLs in its Operational Planning Analysis that must be completed per TOP-002-3 R1. There is no such requirement in TOP-002-3 R1 or any other requirement that compels a Transmission Operator to look for these SOLs that are not IROLs. Thus, the SDT needs to clarify if a Transmission Operator is required to look for these SOLs that are not IROLs in the Operational Planning Analyses and why they are not referenced in TOP-003-2 R1. If the SDT did not intend for a Transmission Operator to be required to look for these SOLs that are not IROLs, then it needs to refine TOP-001-2 R8 to be clear that the Transmission Operator may not have a need for these SOLs that are not IROLs. TOP- 002-3 R2 further confuses the situation by referring to the SOLs that are not IROLs that are identified in TOP-002-3 R1 rather than TOP-001-2 R8. Under the Compliance Enforcement Authority section, we suggest "entities" in the first bullet and "functional entities" in the second bullet should be changed to "registered entities". This will make them consistent with one another and the function model. The "Reliability Functional Model Technical Document" describes a functional entity not as a specific company but rather a specific part of the functional model such as a Balancing Authority. Registered entities are specific companies. For example, SPP is a registered entity that works for their Regional Entity as the Reliability Coordinator functional entity. We disagree with the inclusion of voice recordings as an example of the type of evidence that might be retained for TOP-002-3. Operational Planning Analyses are typically conducted in a back office where communications would not be recorded. This might create the impression that there is now a requirement to record such

Organization	Yes or No	Question 2 Comment
		conversations. Recording of these conversations could mute much of the discussion that occurs among personnel performing these studies and working to resolve issues identified in them. Also, the three months retention period is not consistent with the change made to the retention period in TOP-001-2. It was changed to 90 days for voice recordings.
ACES Power Marketing	No	We generally agree with the changes to the standard. However, we have identified the following concerns. TOP-001-2 R8 implies the Transmission Operator must look for SOLs that are not IROLs in its Operational Planning Analysis that must be completed per TOP-002-3 R1. There is no such requirement in TOP-002-3 R1 or any other requirement that compels a Transmission Operator to look for these SOLs that are not IROLs. Thus, the SDT needs to clarify if a Transmission Operator is required to look for these SOLs that are not IROLs in the Operational Planning Analyses and why they are not referenced in TOP-003-2 R1. If the SDT did not intend for a Transmission Operator to be required to look for these SOLs that are not IROLs, then it needs to refine TOP-001-2 R8 to be clear that the Transmission Operator may not have a need for these SOLs that are not IROLs. TOP-002-3 R2 further confuses the situation by referring to the SOLs that are not IROLs that are identified in TOP-002-3 R1 rather than TOP-001-2 R8. Under the Compliance Enforcement Authority section, we suggest “entities” in the first bullet and “functional entities” in the second bullet should be changed to “registered entities”. This will make them consistent with one another and the function model. The “Reliability Functional Model Technical Document” describes a functional entity not as a specific company but rather a specific part of the functional model such as a Balancing Authority. Registered entities are specific companies. For example, SPP is a registered entity that works for their Regional Entity as the Reliability Coordinator functional entity. We disagree with the inclusion of voice recordings as an example of the type of evidence that might be retained for TOP-002-3. Operational Planning Analyses are typically conducted in a back office where communications would not be recorded.

Organization	Yes or No	Question 2 Comment
		This might create the impression that there is now a requirement to record such conversations. Recording of these conversations could mute much of the discussion that occurs among personnel performing these studies and working to resolve issues identified in them. Also, the three months retention period is not consistent with the change made to the retention period in TOP-001-2. It was changed to 90 days for voice recordings.
Brazos Electric Power Cooperative, Inc.	Negative	Additional clarification is necessary that warrants our negative vote. See the issues raised in the comments by ACES Power Marketing.
Response: The SDT expects the SOLs in question to come out of the analysis performed in Requirement R1 but does not believe that the requirement needs to explicitly tell the Transmission Operator that. It is part and parcel of the analysis function. No change made. CEA: The SDT is using language here that has been utilized in multiple standards projects to date and was supplied by NERC staff as accepted language. Furthermore, the SDT does not believe that the suggested changes will provided any additional clarity. No change made. Since this is a notification requirement, voice recordings are an appropriate type of evidence.		
AEP	No	In the previous comment period, AEP requested clarification on whether these requirements are in regards to pre-contingency monitoring or instead based on real-time flow. AEP assumed this was based on Real Time Flow, but we encouraged the drafting team to provide clarifying language to make it more clear to the reader. The drafting team responded by noting that “TOP-002-3 is about Operations Planning, thus it cannot be addressing actual Real-time flow” and “It addresses those flows contained in the Operational Planning Analysis (OPA) and the assessment thereof.” However, no such clarifying language was added to the standard. As stated in our response to Question #1, industry has provided comments to standard drafting teams in an effort to help avoid CANs, Interpretation Requests, and to increase the consistency of interpretation by both CEA’s and industry. And once again, while the team provided insight in their comments, the resulting lack of changes to the standard

Organization	Yes or No	Question 2 Comment
		still leave unnecessary ambiguity that could be easily addressed. Ambiguity of any kind deters from, rather than promotes, the reliability of the BES. Until such clarification is added to the standard itself, AEP cannot support the drafting team's efforts in revising TOP-002-3. Rather than using terms such as "real-time flow", we recommend using "projected post-contingency" and "projected pre-contingency".
Response: The SDT believes that the definition of IROL speaks for itself and therefore that no further explanation is required within the standard. No change made. The SDT sees no additional clarity from the suggested change. No change made.		
Duke Energy	No	o R2 - Consistent with our comment above on TOP-001-2 Requirement R8, the phrase "supporting its internal area reliability" should be further clarified in some way. Also, change the phrase "as supporting" to "in support of".
Response: The SDT believes that the Transmission Operator is uniquely qualified to determine such SOLs and that no further clarification is necessary. No change made. The SDT sees no additional clarity being provided by the suggested wording changes. No change made.		
Oncor Electric Delivery	No	Oncor agrees that the Operational Analysis Plan should be properly communicated, but that it should not be the role of the Transmission Operator to determine who is or who is not NERC Registered.
Response: NERC registered entities can easily be looked up and the SDT does not believe this is an onerous burden. This requirement as worded currently relieves the Transmission Operator of the obligation to notify entities that are not registered with NERC. No change made.		
Southern Company	No	R3- Southern understands the intent of this requirement is to notify all registered

Organization	Yes or No	Question 2 Comment
		entities that may be affected by a mitigation plan for the next day so they can be prepared to respond. However, in some cases like the one shown in the example below, it is unreasonable to expect the TOP to notify every GOP that could be re-dispatched. Requiring this would actually put the system at risk as the TOP would be focused on notifying GOPs inside its TOP area and potentially outside its TOP area and not focused on operating the system.Southern suggests that the requirement be changed to state that the TOP will notify “other TOP’s and associated RC(s) associated with actions in the plan(s)” in a similar manner that other TOPs and RCs are notified in the proposed TOP-001-2, R3 and R5. If that is unacceptable to the SDT then it is suggested at a minimum that “all NERC registered entities” be clarified with the addition of the word “explicitly” just prior to” identified in the plan(s)”.Example: An SOL is identified in the Operational Analysis for the next day from R2. The plan to mitigate this SOL is to call an IDC-TLR. The level of the TLR may or may not reach level 5. If the TLR reaches level 5 many generators will be required to be re-dispatched inside and outside of the TOPs area. This requirement will require the Transmission Operator to notify every Generator Operator that could possibly be re-dispatched for a TLR-5.Another concern with having the TOP notify all entities (which would include those outside their area) is the added FERC Standards of Conduct risk that the NERC standard is forcing the TOP to assume. For example, notification may go to a GOP which also performs market functions about which the TOP is unaware. In communicating the plan to the GOP, the TOP may inadvertently communicate non-public transmission information in violation of the Standards of Conduct. If communications is limited to external entities that are TOP and RC, this risk is eliminated and the communication to the GOP will take place by its native TOP - which should be familiar with any Standards of Conduct restrictions on communication to the GOP.

Response: The SDT believes that all entities that have a role in the plan need to be notified or the eventual implementation of the plan could be compromised. The requirement only stipulates that an entity receive notice of their role in the plan so there should be no fear of inadvertently providing sensitive information to an entity that shouldn’t have such information. No change made.

Response: Thank you for submitting comments. Your comments are addressed below.		
City of Tacoma, Department of Public Utilities, Light Division, dba Tacoma Power; Tacoma Public Utilities	Affirmative	The term “anticipated … Contingency event conditions” in R1. is not a NERC defined term and could be interpreted as requiring analysis of all contingencies including extreme events. The requirement should clarify if it only applies to certain types such as category P1 or whether each TO can independently select which types of contingencies they anticipate. One suggested form or rewording the requirement could be: R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal conditions and TPL-001-2 category P1 Single contingencies.
Response: The SDT believes that more than just single Contingencies need to be studied in order to have a viable plan. Extreme events are a separate item in the planning standards and would not be included here. No change made.		
Sacramento Municipal Utility District	Affirmative	Per discussion held at the NERC Standards Committee meeting in April, NERC Staff indicated changes would be made to the reference of "bulk power system" to "Bulk Electric System" would be changed on certain pertinent standards. This appears to be such a case.
Response: Neither of those terms is used within this standard. No change made.		
City of Austin dba Austin Energy	Yes	TOP-002-3, R1TOP-002-3, R1 states “Each Transmission Operator shall have an Operational Planning Analysis ...” and the mapping document says that this requirement “is patterned after the approved IRO-008-1, Requirement R1 for the Reliability Coordinator.” As such, Austin Energy suggests that the language in TOP-002-3, R1 be changed from “... shall have an Operational Planning Analysis ...” to “... shall perform an Operational Planning Analysis ....” This language matches IRO-008-1, R1 and better aligns with Measure 1 for TOP-002-3.

Organization	Yes or No	Question 2 Comment
Response: The language in Requirement R1 is intentional to allow for the use of a previously completed Operational Planning Analysis if it is still viable. No change made.		
Dominion	Yes	TOP-002-3 M2 should be updated to reflect the changes made in R2 (as suggested below).M2. Each Transmission Operator shall have evidence that it has developed a plan to operate within each IROL and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans for precluding operating in excess of each IROL and each SOL which, while not an IROL, was identified as a result of the Operational Planning Analysis. VSLs R2 (page 5 redline version) Severe Column should be updated to reflect the changes made in R2 (as suggested below).The Transmission Operator did not develop a plan to operate within those IROLs and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.
Response: The SDT sees no additional clarity being provided with the suggested change. No change made.		
Manitoba Hydro	Yes	Section 1.3 Data Retention - For consistency with TOP-001-2, the retention period for voice recordings in TOP-002-3 should be changed from 3 months to ‘ninety calendar days’.
Response: Your suggested change has been made.		
Progress Energy	Yes	Please change the R2 VSL from “supporting its internal area reliability” to “supporting reliability internal to its Transmission Operator Area...”.

Organization	Yes or No	Question 2 Comment
Response: The SDT sees no additional clarity being provided with the suggested change. No change made.		
Idaho Power Company	Yes	I agree with the direction of the project. Consolidating all the TOP standards and eliminating the redundancy will make it much easier.
Cowlitz County PUD	Yes	This Standard is not applicable to Cowlitz PUD and the District will abstain in the ballot. However, this commenter sees no problems with the changes.

3. The SDT made changes to TOP-003-2 in response to industry comments and the Quality Review. This includes all aspects of this standard – requirements, measures, and data retention. Do you agree with the changes the drafting team has made? If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

Summary Consideration: The comments received requested clarification or suggested semantic changes. The SDT has provided clarifications where requested. The semantic changes were not seen as providing any additional clarity to the requirements and have not been accepted. One change was made to Requirement R2, Part 2.1 to improve consistency between the requirement and the part in response to industry comments.

Part 2.1. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring.

Organization	Yes or No	Question 3 Comment

Lakeland Electric	Negative	"Please see FMPA comments submitted separately"
Omaha Public Power District	Negative	OPPD supports MRO and SPP RTO comments. Please see comments from Doug Peterchuck.
Response: Thank you for submitting comments. Your comments are addressed below.		
City of Garland	Negative	The requirements should be written such that they will support VSL levels of Lower,

Organization	Yes or No	Question 3 Comment
		Moderate, and High - not Severe only for R5. It should take minimal requirement sentence strucuring to allow for all VSL levels to be assigned
Response: The SDT believes that the severity of not fulfilling an entity's obligations for this requirement warrant a single severe VSL. No change made.		
East Kentucky Power Coop.	Negative	The standard as proposed does not appear to comply with the stated intent of Project 2007-03, that being: "The industry needs clearer, unambiguous and enforceable standards in order to effectively operate the Bulk Electric System." Not only are the changes to TOP-003 as vague—or ambiguous--if not more so than the previous TOP-003-1 standard, the requirements do not provide for any consistency between companies. For example, who between two parties determines, or in the case of an inability to reach agreement, who is responsible for arbitrating an agreement when two neighboring entities are attempting to establish a "mutually agreeable format". Resolution could be problematic when required changes to a format between entities A and B would require format changes between entities A and C, A and D, and A and E, and would potentially require entity A to maintain several different format standards to meet the requirements for coordination between entities B, C, D, and E. Many items previously in TOP-003-1 appear to have been completely abandoned in lieu of much less prescriptive specifications in TOP-003-2. For example, clear provisions regarding timing of data availability listed in TOP-003-1 are not specified in any form in TOP-003-2 other than to require that entities needing to share data essentially "work it out amongst themselves". The standard needs to better guide entities in regard to the type of data—at a minimum—they SHOULD be requesting and obtaining. Alternately, such format specifications should be left to the authority of the RC to coordinate among TO/BA entities for which they are responsible.

Organization	Yes or No	Question 3 Comment
Response: The SDT asserts that existing arbitration procedures can, and will be, used to resolve conflicts. No change made. Format agreements between A and B will not affect formats between A and C and vice versa. It is true that a Transmission Operator or Balancing Authority may need to support multiple formats but that is no different than it is today. No change made. The SDT believes that the requirements are sufficiently prescriptive without inhibiting needed flexibility in devising solutions. Mutual agreement amongst affected entities is a better solution in the long run than trying to force a one-size-fits-all approach to the problem. No change made. The concept of the data specification is that the Transmission Operator and Balancing Authority are in the best position to determine what data they need to perform their duties. This is in alignment with the approved IRO standards for the Reliability Coordinator. No change made. The Reliability Coordinator will be the final arbitrator on disputes but the SDT believes that it would be detrimental to the work of the Reliability Coordinator for them to be involved in each and every agreement if it isn't necessary. No change made.		
INTELLIBIND	Negative	The Requirements are confusing and refer to other requiremtns. The original concept was that requirments shall stand alone, and not be dependent on other requirments or standards. Violation of R1 or R2 will cascade to addtional violations based on the structure of the Standard. These issues should be repaired as a part of this revision.
Response: The requirements do stand alone and are not dependent on other requirements. There are simple references to other requirements in Requirement R5 but no dependence. Each requirement stands alone and the VSLs follow suit so there are no cascading violations. No change made.		
Seattle City Light	Negative	While the idea of making each BA and TOP formally outline a data specification for all the information it needs to perform its Operational Planning Analysis is a worthy concept, the requirements in this Standard for evidence and data retention are onerous. Specifically the requirement to retain all electronic or hard copies of data transmittals or retain attestations from all receiving entities would require a tremendous amount of resources to be compliant. It may also be technically impossible to comply with these requirements because the data specifications developed individually by each entity may not be compatible with each other. The

Organization	Yes or No	Question 3 Comment
		formats and periodicity of data collected by each entity may not be compatible with the specifications and it could be impossible to comply with these requests without major changes to the infrastructure. As an alternative, most of the NERC registered entities are currently required to provide that data to their Reliability Coordinators (RC) using the specifications already developed by the RCs and that data could be used by the TOPs and BAs to perform their functions. Seattle City Light supports the efforts of the Real Time Operations Standards Drafting Team and approves of the direction proposed in these new TOP Standards. We are prepared to vote “affirmative” once details as discussed above are addressed and resolved.
Response: The SDT believes that it is counter-productive to involve the Reliability Coordinator in data transfers that are simply pass-through transfers and also believes that not all of the data required by a Transmission Operator or Balancing Authority will be available from the Reliability Coordinator in every instance. There is nothing in the standard that requires the retention of every data transmittal. Once an entity has provided evidence that they are supplying the data, the measure has been fulfilled. This should not be an onerous task. No change made.		
Westar Energy	Negative	SDT has not adequately addressed previous comments.
Response: The SDT points Westar to the responses posted for the previous posting. Without any further specific comments, the SDT has no further responses to offer.		
AEP	No	In the previous comment period, AEP suggested that R5 be modified so that it does not unintentionally create an edict to provide “any data” to parties simply because R5 could be interpreted as allowing requests of any kind. The SDT responded by stating that “Requirement R5 is bound by the constraints of Requirements R1 and R2 so that not just any information can be requested.” AEP does not see any explicit constraints specified in R1 or R2, and even if constraints were noted there, see nothing that would indicate those constraints would also apply to R5. At the most, the only possible constraint could be the “mutually agreeable format”, however that would seem to provide no bounds or constraints on the kind or amount of data being requested. We suggest providing further clarification that what has been mutually

Organization	Yes or No	Question 3 Comment
		agreed to by the parties involved, goes beyond simply the format of the data. In addition, it needs to be made clear that those constraints also apply to R5. Until such clarification is added to the standard itself, AEP cannot support the drafting team's efforts in revising TOP-003-2.
Response: Requirement R1 clearly limits the data to that needed to support Operational Planning Analysis and Real-time monitoring. The SDT believes that this sufficiently limits the type and amount of data that can be requested. Requirement R5 is tied to the data specifications delivered in Requirements R3 and R4 so the limitations carry through. No change made.		
Florida Municipal Power Pool	Affirmative	See FMPA comments
Beaches Energy Services of theCity of Jacksonville Beach, Florida	No	Related to the BA performing a day-ahead plan discussed in FMPA's response to question 2, TOP-003-2 R2 only requires a BA to develop data specifications for reporting in real-time (i.e., bullet 2.1). There should be requirements for day-ahead as well. There are a number of data requirements that are proposed to be deleted and replaced with an ambiguous reference to a "specification for the data necessary", or a data specification, without any minimal requirements for what should be in that data specification. This approach will likely not go over well with the regulators. The SDT should be able to define a minimal list of data required, e.g, "such data specification will at minimum include: next-day load forecasts, next-day planned outages, generator capacity changes, protection system failures, special protection system status, real-time monitoring of generation and transmission, transmission Facility status, etc., etc." (note that these are all examples of specific requirements within the existing standards that the SDT is proposing to delete), possibly as an attachment to the standard.
City of Vero	No	Related to the BA performing a day-ahead plan discussed in FMPA's response to question 2, TOP-003-2 R2 only requires a BA to develop data specifications for reporting in real-time (i.e., bullet 2.1). There should be requirements for day-ahead

Organization	Yes or No	Question 3 Comment
		as well. Response: The Balancing Authority has one role: To balance Load and resources. A key component of this role is to be able to recover		

Organization	Yes or No	Question 3 Comment
from events that cause imbalance. The commenter intermingles the obligation of the Load-Serving Entity with that of the Balancing Authority. The SDT believes that in order for a Balancing Authority to comply with CPS and DCS and the requirements for emergency plans in EOP that they must plan and therefore a separate requirement is not needed and would actually represent double jeopardy. BAL-001-0.1a, BAL-002-1, EOP-001-0b, EOP-002-3, and EOP-003-1 cover these issues for the BA. The data specification concept has already been approved by FERC for Reliability Coordinators in the IRO standards. No change made.		
Consumers Energy	No	The standard as written is more vague than the current TOP-003. It follows the logic of IRO-010 and talks about specification documents instead of actions that need to be taken. We do not support this standard as written.
Response: The data specification concept has already been approved by FERC for Reliability Coordinators in the IRO standards. No change made.		
Cowlitz County PUD	No	After reviewing the industry comments submitted, Cowlitz is respectfully perplexed why comments were not addressed related to lack of recourse the receiving entity of a data specification has if the data specification is unreasonable. The data specification receiving entity must have some recourse to appeal unreasonable obligation requirements short of appealing a violation finding through the RE/NERC/FERC or ultimately a court of law. Due to the undefined nature of what constitutes a reasonable data specification document other than a “mutually agreeable format,” the risk of capricious dictatorial demands having no reliability return is high. The usage of “format” can only encompass the organization, plan, and style of the data to be submitted; this can’t be used to limit data submittal to that which is available at a rate of transmittal which is possible. Cowlitz can’t find a remedy for requirement R5 without allowing for some risk of entity intransigent behavior leading to RE or ERO intervention. However, there are current standards that allow, but limit, this risk by defining allowable exceptions. Examples which include such exceptions to requirements are “unless such actions would violate safety...,” contained in several standards; and “unless it provides a reliability reason

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 3 Comment</th></tr>
<tr><td></td><td></td><td>to the requestor...,” contained in Standard IRO-006-5. Cowlitz suggests the following exemptions: Unless data or information is not available without installation of additional equipment, or can’t be reasonably available due to existing equipment limitations, available personnel limitations, or unexpected equipment failure.</td></tr>
<tr><td colspan="3">Response: The SDT asserts that there are existing arbitration processes that entities can employ short of going to NERC, FERC, or courts. No change made.</td></tr>
<tr><td>Idaho Power Company</td><td>No</td><td>TOP-003 will require that we create a list of data necessary to complete our operational planning analysis. Currently I don't think we have a good process for doing analysis so defining the data required may be difficult.</td></tr>
<tr><td colspan="3">Response: Compliance with this requirement will be mandatory, resulting in the need for the list mentioned by the commenter.</td></tr>
<tr><td>Liberty Electric Power LLC</td><td>No</td><td>Multiple entities commented in the prior round that the standard would expose RE's to violation space in the event of a communications failure. Although the SDT stated in the consideration of comments that "It is not the intent of the SDT that TOP-003-2 penalizes entities for communication errors. The intent is to have the data communications established.", the plain language of the standard is in conflict with this position. The standard as written states a RE "shall satisfy the obligations of the documented specifications for data." Among the specifications of real time data requests are the periodicity of the submission. For example, PJM in Manual 14D, Generator Operational Requirements, states "All data items, regardless of type, are collected and disseminated at the same 2-second rate. Instantaneous MW and MVAR information is collected on the same data scan as Integrated MWh and MVARh." If a RE has a loss of their RTU, they will have failed to "satisfy the obligations of the documented specifications for data", and be exposed to a potential violation.If the intent of the SDT is as stated in the previous consideration of comments, there must be some language to that effect added to the standard. In R1, adding a bullet 1.21 "an alternative format for use in the event of interruption of the mutually agreed format" would close the hole in the language as written and</td></tr>
</table>

Organization	Yes or No	Question 3 Comment
		satisfy the stated objections.
Response: Loss of an RTU or other communication problems are covered in the COM standards. This requirement is solely for the set up required to fulfill an entity's data obligations. No change made.		
Luminant Energy; Luminant Generation Company LLC	Negative	See comments submitted by Luminant.
Luminant	No	TOP-003-2 as currently written does not provide any recourse for the entity receiving a data request if that entity feels the data request is unreasonable either in content or timing or if the entity does not have the data available to submit. As such I would recommend modify R5 as follows:R5. Each......shall satisfy the obligations of the documented specification for data. R5.1. If the entity receiving the data request cannot provide the requested data either in content or timing then the entity receiving the data request shall notify the requesting entity and provide a reason for not providing the data.
Response: The SDT asserts that there are existing arbitration processes that entities can employ short of going to NERC, FERC, or courts. No change made.		
Great River Energy	Affirmative	Great River Energy agrees with the comments of the MRO NSRF
American transmission Company	No	Requirement R3 and R4 should specify which entities are required to respond to data requests. For example, a TOP in Indiana who sends a request to a TOP in Wisconsin; should the TOP in Wisconsin be required to respond. ATC recommends that the term "contiguous entity" be referenced and added to the requirements.+
MidAmerican Energy	No	See the NSRF comments
Lincoln Electric System	Negative	Please refer to comments submitted by the MRO NSRF for LES' concerns.

Organization	Yes or No	Question 3 Comment
Muscatine Power & Water	Negative	Please see comments submitted by the MRO NSRF
MRO NSRF	No	Requirement R3, and R4 must specify which entities are required to respond to data requests. For example should a TOP in Indiana send a request to a TOP in Wisconsin, must it be complied with. Suggest a, "contiguous entity" reference.Requirements R1 and R3 are very vague and need to add more specificity similar to that from existing standard TOP-005 which includes specific guidelines.
Response: The SDT believes that data requirements may go beyond contiguous entities and that any entity receiving a data specification is obligated to respond. No change made.		
City Utilities of Springfield, Missouri	Negative	City Utilities of Springfield, MO supports the comments from SPP.
Southwest Power Pool Regional Entity	No	SPP RE does not believe TOP-003-2 addresses the requirements in PRC-001.
Response: Without specific comments, the SDT is unable to respond as the SDT believes the requirements are met.		
Texas Reliability Entity	No	1) Overall, this change to TOP-003-2 will cause differences in what each TOP/BA thinks it needs in terms of data, which will be difficult to audit. There should be a minimum set of data that the TOP/BA should address (especially when removing more specific Requirements such as those that are deleted from PRC-001-1.) For example, if a TOP or BA decides not to monitor its SPSs, which is currently required by PRC-001-1, there will be no repercussions from a compliance standpoint, but an impact to monitoring the state of reliability will occur. 2) R1: We suggest adding "analysis functions" after Operational Planning Analysis to fully capture performance requirements for a TOP during Real-Time. 3) R2: We suggest adding "Operational Planning Analyses" in front of "analysis functions". The Operational Planning Analysis, by definition, includes "Expected

Organization	Yes or No	Question 3 Comment
		system conditions such as load forecast(s), generation output levels . . .,” which relate to the Real Power balance requirement that the BA must comply with. A BA should also create a documented specification for the data necessary for it to perform an Operational Planning Analysis, which may include development of integrated operational plans, acquiring reliability-related services from Generator Operators, providing generation dispatch to the Reliability Coordinator, and other responsibilities as dictated by the Functional Model. 4) R3 We suggest adding “analysis functions” after Operational Planning Analysis to fully capture performance requirements for a TOP during Real-Time. 5) R4: We suggest “Operational Planning Analyses” in front of “analysis functions” to be consistent with our comment that R2 should require “Operational Planning Analysis” data in the BA’s data specification. 6) R3 and R4: What is the required time frame required for the TOP and BA to distribute changes to its data specification? We suggest adding a sentence that the TOP or BA must distribute its data specification within 30 calendar days of creation or revision. 7) R5: What is the required time frame for an Entity to satisfy the obligations of the data specification? None is specified. We suggest a time frame of 30 calendar days from the date of receipt to comply with changes to data specifications. 8) The VRF and VSL justification document was inconsistent and unconvincing in several respects related to TOP-003-2 R2. That should be revisited after the requirements are firmed up.

Response: 1. The SDT believes that each Transmission Operator and Balancing Authority will have different requirements for data. That is one of the reasons for the data specification concept. Any omissions in the data specification will be filtered out by the inability of the Transmission Operator or Balancing Authority to fulfill their obligations and should therefore be quickly rectified. Any penalties associated with such omission would thus be picked up in the other standards associated with those duties. No change made.

Organization	Yes or No	Question 3 Comment
2. The SDT sees no additional clarity being provided with the suggested change. No change made. 3. Requirement R1 previously included both the Transmission Operator and Balancing Authority. However, multiple comments in previous postings pointed out that Balancing Authorities do not perform Operational Planning Analyses and thus the requirement was split as it is now shown. No change made. 4. The SDT sees no additional clarity being provided with the suggested change. No change made. 5. Balancing Authorities do not perform Operational Planning Analyses. No change made. 6. The SDT sees no additional clarity being provided with the suggested change. The timeframe is essentially determined in Requirements R1, Part 1.4 and R2, Part 2.4. No change made. 7. Requirements R1, Part 1.4 and R2, Part 2.4 identify the timeframe involved. No change made. 8. Without specific comments, the SDT is unable to respond.		
ReliabilityFirst Corporation	Abstain	ReliabilityFirst abstains and offers the same comments as submitted via the previous comment posting period.
Response: The SDT points RFC to the responses posted for the previous posting. Without any further specific comments, the SDT has no further responses to offer.		
PNGC Group Comments		Comments: In addition to the same Applicability argument we made in Question 1 for TOP-001-2, the PNGC comment group has a couple of minor issues with TOP-003-2:1. We question the Violation Risk Factor (VRF) of “Medium” for R5. R1-4 have VRFs of “Low” so the “Medium” designation for R5 seems unwarranted. If the SDT views the failure of TOPs and BAs to distribute data requests to other entities in an agreeable format as a “Low” risk, then the failure of those other entities to respond to issued data requests should also be a “Low” risk. We believe R1-5 should all have a “Low” VRF. 2. R1 and R2 require the BA and TOP create a documented specification for data needed to perform analysis functions and Real-time monitoring. We question R1.2 and R2.2: “A mutually agreeable format.” There absolutely should be a mutually

Organization	Yes or No	Question 3 Comment
		agreeable format for the data but the standard doesn't define how that is to be accomplished. It seems to us that the TOP and BA will just issue the directive without consultation and that violation of R1.2 and R2.2 by the TOP or BA is unenforceable. We suggest expanding M1 and M2 to include acknowledgement by entities that are the subject of requests. The acknowledgment should include that the request was received and the data format is agreed to.
Response: Requirements R1 through R4 all represent actions that are taking place 'ahead' of time. Therefore, there is some flexibility regarding them. Requirement R5 is the actual supply of data and there is no slack involved. No change made.		
Kansas City Power & Light		There is no reliability purpose served by an Entity developing and posting specifications of data needed to perform its Operational Planning Analysis and Real-time monitoring. The only reliability action that matters is the request for data specific to other Entities in order to perform analysis and monitor operating conditions. These requirements would be more effective if they targeted the following principles:1. Identify the data needed to perform analysis and effectively monitor operating conditions,2. Identify the Entities that may have data useful to support analysis and monitoring operating conditions and, 3. Seek to obtain the data from other Entities by engaging the other Entities and coming to a mutual agreement regarding data exchange with the Entity. Requirement R5 does not allow for "mutual agreement" as the SDT has suggested in their response to comments from the last draft. As written, this requirement will cause an Entity that is a recipient of a request for data to fail the requirement if a mutual agreement cannot be made. The SDT further states in their response to comments that requirements R1 and R2 ensure disparity between Entities cannot occur. On the contrary, the specifications that are developed as required by these requirements lock an Entity into that specification. If another Entity cannot meet any part of the specification in a data exchange request, there is no recourse in these requirements to relax the specification. The SDT has good intentions, however, these requirements as written

Organization	Yes or No	Question 3 Comment
		do not allow for the flexibility needed in the exchange of data with other parties.
Response: The SDT disagrees. There is a definite reliability benefit to creating the data specifications as they are required in order for the Transmission Operator and Balancing Authority to obtain the data they need to fulfill their responsibilities. The recipient of the data specification must receive clear data requirements or it may fail to provide data necessary to support the reliability reason that instigated the issuance of the data specification. Requirement R5 does not include mutual agreement because that concept is covered in Requirements R1 and R2. The SDT asserts that there are existing arbitration processes that entities that provide adequate recourse if issues can't be resolved. No change made.

Response: Thank you for following the instructions on submitting comments. Your comments are addressed below.		
City of Tacoma, Department of Public Utilities, Light Division, dba Tacoma Power	Affirmative	If a Transmission Operator or a Balancing Authority is requesting data from another entity, they must demonstrate a reliability impact validating the need for the requested data.
Response: By limiting data to that specified in Requirements R1 and R2, the SDT believes that only reliability related data will be requested. No change made.		
Nebraska Public Power District	Affirmative	NPPD joins comments submitted by the Southwest Power Pool (SPP).
Southwest Power Pool, Inc.	Affirmative	We continue to disagree with the successive ballot process that forces entities to decide on a voting position concurrent with the submittal of comments on the same. NERC needs to explore other ways to expedite the voting/comment process without forcing industry to have faith that changes will be made after approval. Although SPP votes in favor of this standard, we have outstanding comments that should be addressed. We have submittted them in the standards processs and reiterate some of them here. The Purpose Statement is too general and does not provide any direction of how the proposed standard will meet its stated intent. As written the Purpose Statement is applicable to any NERC standard that exists or can be imagined. We suggest additional wording of how this particular standard intends to do what it intends to is

Organization	Yes or No	Question 3 Comment
		needed. For example, "...through requiring all operating parties who need to take action have the knowledge and obligation to do so." Deleting the requirements from PRC-001 and including them in R1 and R2 of TOP-003-2 raises the question of what other types of data or information need to be included in the specification that do not normally come to mind when considering this type of information. To be sure that all the bases are covered, we would suggest that the SDT provide a guideline which incorporates the types of data and information they envisioned when drafting these requirements. Additionally, incorporating protective relay information in the data specifications of R1 and R2 raises the potential for auditors to question the contents of an entity's specification. Again, guidance is needed on the part of the TOP and BA in developing the specification initially. Could the SDT provide this initial guidance, or list of examples, in the form of a guideline? We have concerns with R1 and R2 being as open-ended as they are, especially since they are followed by the obligation to provide that data contained in R5. For example, how do you resolve issues when a mutual agreement cannot be reached? If an entity feels that the requestor is asking for data that goes beyond what they would reasonably need to perform their analysis, what process is used to resolve the stand-off?
Response: The SDT is a process user and does not determine the elements of the process. If the commenter has problems with the successive ballot concept, it should be directed to the NERC Standards Committee. The SDT believes that the Purpose Statement is direct and to the point and clearly identifies what is required. No change made. The SDT re-iterates its position that the Transmission Operator and Balancing Authority are the best ones to determine the contents of the data specification and that any attempt to provide a minimal list or other guidance would be short-sighted and possibly misleading. The SDT believes that an auditor can only question what is contained in the requirements and in this case that would include only the existence of the data specification and not its contents. Any omissions of data will be caught up in failures to adhere to other standards. No change made. The SDT asserts that there are existing arbitration processes that entities can employ short of going to NERC, FERC, or courts. No		

Organization	Yes or No	Question 3 Comment
change made.		
Tacoma Public Utilities	Affirmative	If a Transmission Operator or a Balancing Authority is requesting data from another entity, they must demonstrate a reliability impact validating the need for the requested data.
Response: By limiting data to that specified in Requirements R1 and R2, the SDT believes that only reliability related data will be requested.		
Brazos Electric Power Cooperative, Inc.	Negative	Additional clarification is necessary that warrants our negative vote. See the issues raised in the comments by ACES Power Marketing.
Southwest Transmission Cooperative, Inc.	Affirmative	Generally, we agree with the standard. However, we have one concern regarding the Data Retention section. The third bullet compels the Transmission Operator to retain evidence for three calendar years that it distributed its data specification. Because the data needs do not change frequently, it is possible that the Transmission Operator will have periods greater than three years in which the data specification was not updated and, thus, not communicated. What data and information would the Transmission Operator use to demonstrate compliance in this situation? Would an attestation be appropriate? If so, the measure should be updated to reflect this. All of the responses to comments regarding concerns of Requirement R5 indicate that the SDT intended for Requirement R5 to apply to the general satisfaction of the data specification and not any specific data points. However, the Data Retention section does not support this view point. It requires retention of 90 days worth of data. Normally, short periods of data are retained when they are expected to be voluminous. Thus, we assume the Data Retention section was anticipating that the actual data supplied would be retained. This seems inconsistent with the concept of generally satisfying the data specification. It would make more sense to have a statement from the Transmission Operator indicating the data specification has been satisfied or documentation of the enabling of data links to demonstrate general

Organization	Yes or No	Question 3 Comment
		satisfaction of the data requirements. Under the Compliance Enforcement Authority section, we suggest “entities” in the first bullet and “functional entities” in the second bullet should be changed to “registered entities”. This will make them consistent with one another and the function model. The “Reliability Functional Model Technical Document” describes a functional entity not as a specific company but rather a specific part of the functional model such as a Balancing Authority. Registered entities are specific companies. For example, SPP is a registered entity that works for their Regional Entity as the Reliability Coordinator functional entity.
ACES Power Marketing	Yes	Generally, we agree with the standard. However, we have one concern regarding the Data Retention section. The third bullet compels the Transmission Operator to retain evidence for three calendar years that it distributed its data specification. Because the data needs do not change frequently, it is possible that the Transmission Operator will have periods greater than three years in which the data specification was not updated and, thus, not communicated. What data and information would the Transmission Operator use to demonstrate compliance in this situation? Would an attestation be appropriate? If so, the measure should be updated to reflect this. All of the responses to comments regarding concerns of Requirement R5 indicate that the SDT intended for Requirement R5 to apply to the general satisfaction of the data specification and not any specific data points. However, the Data Retention section does not support this view point. It requires retention of 90 days worth of data. Normally, short periods of data are retained when they are expected to be voluminous. Thus, we assume the Data Retention section was anticipating that the actual data supplied would be retained. This seems inconsistent with the concept of generally satisfying the data specification. It would make more sense to have a statement from the Transmission Operator indicating the data specification has been satisfied or documentation of the enabling of data links to demonstrate general satisfaction of the data requirements.

Organization	Yes or No	Question 3 Comment
		Under the Compliance Enforcement Authority section, we suggest "entities" in the first bullet and "functional entities" in the second bullet should be changed to "registered entities". This will make them consistent with one another and the function model. The "Reliability Functional Model Technical Document" describes a functional entity not as a specific company but rather a specific part of the functional model such as a Balancing Authority. Registered entities are specific companies. For example, SPP is a registered entity that works for their Regional Entity as the Reliability Coordinator functional entity.
Response: The SDT believes that data specifications will change within a 3 year period and thus the situation cited is not relevant. If by some chance the specification didn't change, there are many ways to show that and the SDT doesn't feel that this exception needs to be spelled out in the standard. No change made. Data retention for Requirement R5 does not require that all data be kept for 90 days. It states that an entity must show that they fulfilled the obligation of the requirement. One way to do that would be to keep the data but there are other ways to show it. No change made. The SDT sees no additional clarity being provided with the suggested change. No change made.		
Manitoba Hydro	Yes	R2.1 - For consistency with R2 and completeness, 'analysis functions' should be added to R2.1. Suggested wording: 'A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring'.
Response: The SDT agrees and has made conforming changes to Requirement R2, Part 2.1. **Part 2.1**. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring.		
NextEra Energy, Inc.	Yes	NextEra believes additional editing is needed to provide the step-by-step clarity the proposed Reliability Standard seeks to implement. To provide more clarity, NextEra suggests that in R3, R4 and R5 be rewritten as follows: "R3. Consistent with the requirements of R1, each Transmission Operator shall distribute its request for data

Organization	Yes or No	Question 3 Comment
		to each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider that has data required to be used in the Transmission Operator's Operational Planning Analysis and Real-time monitoring process. ""R.4 Consistent with the requirements of R2, each Balancing Authority shall distribute its data request to each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider that has data required to be used in the Balancing Authority's analysis functions and Real-time monitoring process.""R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider that receives a data request pursuant to Requirement R3 or R4 shall provide the requested data."
Response: The SDT sees no additional clarity being provided with the suggested change. No change made.		
NV Energy	Yes	We see no problem with what was changed in this posting; however, please note issues raised related to TOP-003-2 in the comment submitted on Question 6.
Response: Please see response to Q6.		
Occidental Chemical	Affirmative	See Ingleside Cogeneration LP comment form
Ingleside Cogeneration LP	Yes	We are encouraged that the SDT has added a statement in M3 and M4 calling for those TOPs and BAs who post their data specifications to also electronically notify the downstream data suppliers. This is a good first step in the use of a web-based data collection process - which we hope will replace the spreadsheet-based process mostly in place today. A goal of such a system must be to consolidate all operational data requirements into a single template, so that data suppliers are not subject to redundant criteria.

Response: Thank you for your support.		

4. The SDT is suggesting the retirement of three requirements in PRC-001 since those requirements deal with data handling and can now be incorporated in the data specification concept suggested for TOP-003-2. Do you agree with the changes the drafting team has made? If you do not support these changes or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.

Summary Consideration: The comments received were mainly requesting clarification or suggesting semantic changes. Clarification has been provided where necessary. The semantic changes were not seen as providing additional clarity and have not been incorporated.

One change to the standard was made due to industry comments. Section 1.2 of the Compliance Section was deleted as duplicative of Section 1.4.

Organization	Yes or No	Question 4 Comment
AEP		While AEP supports, in general, the removal of redundant requirements across standards, we do not yet agree with the proposed changes to TOP-003-2 (for the reasons provided in our response to Question #3). As such, AEP will reserve comment on any future changes that might be made to PRC-001 until further progress is made on TOP-003-2.
Response: Please see response to Q3.		
American transmission Company		ATC agrees with removing R6 from PRC-001, however ATC does not believe it is appropriately addressed in TOP-003-2. If the intent is to have SPS data as a part of a data specification, it should be stated in the requirements of TOP-003-2.
MRO NSRF		The NSRF agrees with removing R6 from PRC-001, however we do not feel it is appropriately addressed in TOP-003-2. If the intent is to have SPS data as a part of a data specification, it should be stated in the requirements of TOP-003-2.
Response: The intent of the data specification requirement concept is that the Transmission Operator and Balancing Authority will request all of the data that they need to fulfill their responsibilities. If that includes SPS data, then they will be expected to request it.		

Organization	Yes or No	Question 4 Comment
No change made.		
Florida Municipal Power Agency		Please see response to Question 6
City of Vero		Please see response to Question 6
Beaches Energy Services of theCity of Jacksonville Beach, Florida		Please see response to Question 6
Response: Please see response to Q6.		
Manitoba Hydro		Section 1.4 Compliance Monitoring and Assessment Processes - Section 1.4 should be removed as it is identical to Section 1.2 'Compliance Monitoring and Reset Time Frame'.
Response: The SDT agrees that the sections are duplicative and has deleted Section 1.2.		
Southwest Power Pool Regional Entity		SPP RE does not believe TOP-003-2 addresses the requirements in PRC-001.
Response: The SDT disagrees. The data specification is required to contain all of the information that a Transmission Operator or Balancing Authority needs to fulfill its obligations. No change made.		
SPP Standards Review Group		No (The Yes/No boxes weren't on the screen. All I got was the comment box.)Deleting the requirements from PRC-001 and including them in R1 and R2 of TOP-003-2 raises the question of what other types of data or information need to be included in the specification that do not normally come to mind when considering this type of information. To be sure that all the bases are covered, we would suggest that the SDT provide a guideline which incorporates the types of data and information they envisioned when drafting these requirements. Additionally, incorporating protective

Organization	Yes or No	Question 4 Comment
		relay information in the data specifications of R1 and R2 raises the potential for auditors to question the contents of an entity's specification. Again, guidance is needed on the part of the TOP and BA in developing the specification initially. Could the SDT provide this initial guidance, or list of examples, in the form of a guideline? Also, measures for R1 and R3 are missing.
Response: The SDT re-iterates its position that the Transmission Operator and Balancing Authority are the best ones to determine the contents of the data specification and that any attempt to provide a minimal list or other guidance would be short-sighted and possibly misleading. The SDT believes that an auditor can only question what is contained in the requirements and in this case that would include only the existence of the data specification and not its contents. Any omissions of data will be caught up in failures to adhere to other standards. No change made. The scope of the changes that the SDT was allowed to make only involved the deletion of the requirements and did not represent a revision of the standard as a whole. That will be taken up in a later project. No change made.		
NV Energy		No, we believe there may be reliability gaps introduced with the specific deletion of old R2 from PRC-001. We are concerned that the open-ended specification of required data per proposed TOP-003 R1 may not adequately cover the notification of status and conditions for certain protection systems and SPS. With the requirement R2 in place, there is no doubt about the need to make notification of these sorts of losses or status changes. Absent the requirement, it is likely that inconsistent specifications for such information by TOP's or BA's will result.
Response: The SDT disagrees. The data specification is required to contain all of the information that a Transmission Operator or Balancing Authority needs to fulfill its obligations. No change made.		
ACES Power Marketing		No. While we are supportive of the changes, they do not appear to be coordinated with the Project 2007-06 System Protection Coordination that was started recently. It appears to retain the retired requirements.
Response: The version of PRC-001 that is posted on the web site is over two years old and does not represent the current work being done with that standard. The SDT has coordinated the changes to PRC-001 with the Project 2007-06 team and the next iteration		

Organization	Yes or No	Question 4 Comment
shown by that project will not have the data requirements. No change made.		
Texas Reliability Entity		No.1) Requirements R2, R5 and R6 of PRC-001-1, which are proposed to be deleted, are not actually replaced by any new or revised requirements in other standards, resulting in reliability gaps. The PRC-001-1 requirements relate to Same-day and Real-time Operations, whereas the TOP-003-2 requirements relate only to the Operations Planning time horizon. The real-time elements of the PRC-001-1 requirements are lost. 2) R2- Removal of R2 assumes that the requirement intent will be included in TOP-003-2 R1 or R2 specification, but there is no new requirement to replace R2 of PRC-001. 3) R2 - The requirements to "take corrective action as soon as possible" are extremely important to the reliability of the system and deleting them introduces a reliability gap. In the Issues Database document there is indication that R5 of TOP-001-2 satisfies the need for corrective action as soon as possible with the following phrase "Addressed in Requirement R5 in proposed TOP-001-2 where the Transmission Operator coordinates its operations." However, the text of TOP-001-2 R5 does not actually support this approach and therefore leaves a reliability gap in the Standards. 4) Texas RE disagrees with several of the PRC-001 issues listed as complete in the Issues Database. The referenced TOP Standards are extremely limited in scope and lacking in details (especially in light of ignoring Real-Time issues) and are not considered interchangeable with the deleted PRC-001 Requirements as suggested. 5) R5- Removal of R5 assumes that the requirement intent will be included in TOP-003-2, but there is no new requirement to replace R5 of PRC-001.. R5 is related to the coordination of changes affecting protection systems of others. R5 should not be removed because it deals with coordination issues and not merely specification and provision of data. 6) R6-We object to the proposed removal of R6 because this Real-time requirement is not picked up anywhere else, and elimination of the requirement to monitor and

Organization	Yes or No	Question 4 Comment
		communicate the status of Special Protection Systems will cause a reliability gap. 7) There are no Measures for Requirements R1 and R3.
Response: 1. The SDT disagrees. TOP-003-2 sets up the transfer of Real-time information as shown in Requirements R1 and R2. No change made. 2. The data specification is required to contain all of the information that a Transmission Operator or Balancing Authority needs to fulfill its obligations. No change made. 3. Once the SDT provides notification as per TOP-001-2, Requirement R5, the SDT believes that they will be directed as to what to do. No change made. 4. Without specific comments, the SDT is unable to respond. However, the SDT disagrees that the proposed standards ignore Real-time. No change made. 5. The Transmission Operator already has the responsibility in its core set of duties to provide such coordination and the SDT believes that a separate requirement is not needed to reinforce this. No change made. 6. The SDT disagrees. The data specification is required to contain all of the information that a Transmission Operator or Balancing Authority needs to fulfill its obligations. No change made. 7. The scope of the changes that the SDT was allowed to make only involved the deletion of the requirements and did not represent a revision of the standard as a whole. That will be taken up in a later project. No change made.		
NextEra Energy, Inc.		Yes, we agree.
Liberty Electric Power LLC		Yes. Thank you to the SDT for removing these requirements.
Bonneville Power Administration		Yes, BPA is in support of the retirement of the three requirements in PRC-001 as the SDT is suggesting.
Essential Power, LLC		Yes, I support the recommendation.
Arizona Public Service		Yes, we agree with the changes the drafting team has made.

Organization	Yes or No	Question 4 Comment
Company		
Southern Company		Yes, we agree with the SDT's suggestion
City of Austin dba Austin Energy		We agree.
Imperial Irrigation District (IID)		Yes
Duke Energy		Yes
MidAmerican Energy		Yes - retire the three requiements in PRC-001
Cowlitz County PUD		Cowlitz supports the retirement.
FirstEnergy Corp		FE agrees with the changes that have been made by the drafting team.
Ingleside Cogeneration LP		Ingleside Cogeneration LP agrees that relay and equipment status can be included in a telemetry specification as part of TOP-003-2 - which is redundant with PRC-001-1 R2 and R6. Similarly, the coordination of changes in generation operating conditions such as de-ratings that could require changes in the TOP's Protection System (R5) can be captured in existing data submission vehicles that TOP-003-2 will also cover.
Oncor Electric Delivery		Agree with changes
Dominion		Agree with changes made.
Response: Thank you for your support.		

5. **The VRF, VSL, and Time Horizons are part of a non-binding poll. Please indicate whether you agree or disagree with the VRF, VSL, and Time Horizon assignments. If you do not support these assignments or you agree in general but feel that alternative language would be more appropriate, please provide specific suggestions in your comments.**

Summary Consideration: Several typos in the VRF/VSL justification document were pointed out by commenters and have been fixed. No other changes have been made to the VRFs or VSLs.

Organization	Yes or No	Question 5 Comment
PNGC Group Comments	No	Please see our response to Question 2.
Response: Please see response to Q2.		
AEP	No	In general, the VRFs and VSLs are too severe and punitive. Those stated for R1, R2, and R5 of TOP-001-2 are especially so, given what we see as open-endedness to what might be requested. As a result, AEP cannot support the proposed VRFs and VSLs.
Response: The SDT believes that the VRFs and VSLs follow accepted guidelines. Without any specific comments, the SDT is unable to provide specific responses. No change made.		
ACES Power Marketing	No	The Moderate and High VSLs for TOP-001-2 R3, R5, R6, and R8 incorrectly use an "or" condition when "and" is necessary to establish the range of percentages of performance. As written now, any percentage from 0 to 100% qualifies for both VSLs. The following boiler plate language that is written before the VSLs for TOP-001-2 R8 needs to be included before all sets of VSLS that give an option to use integers or percentages. Otherwise, the VSLs will overlap. It should be included before TOP-001-2 R3, R5, and R6. "For the Requirement X VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this

Organization	Yes or No	Question 5 Comment
		manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.“ For the Severe VSL of TOP-002-3 R3, an extra space is needed before “15%”.
Response: The SDT agrees and has made conforming changes. The second ‘or’ condition in the Moderate and High VSLs is now “and”. The boilerplate language cited is merely an explanation of the SDT’s intent. The standard has been modified to show this language for Requirements R3, R5, R6, and R8 as suggested. The SDT agrees and has corrected the typo.		
MidAmerican Energy	No	See the NSRF comments
MRO NSRF	No	TOP-001-2 The adding the language of “or 5% or less of the affected Transmission Operators, whichever is less”, “or more than 5% or less than or equal to 10% of the affected Transmission Operators, whichever is less”, “or more then 10% or less than or equal to 15% of the affected Transmission Operators, whichever is less”, “ or more than 15% of the affected Transmission Operators, whichever is less” to R3, R5, and R6 is confusing and not necessary. For example: 10 affected TOs. The lower VSL states: The TO did not inform one other TO or 5% or less of the affected TOs, whichever is less. 5% of 10 is .5 TOs which is less than 1. The percentage language should be removed. TOP-003-2 - Same issue with VSLs as with TOP-001-2. The percentage language should be removed from R3 and R4. PRC-001-2 - R1 VSL for High and Severe seem arbitrary. Not knowing limitations are not as bad as not knowing purpose? Suggest either breakdown by number of systems. Ie: did not know purpose and limitations of 1 protection scheme, etc. Or Binary. Severe - did not know purpose and limitation of protections systems in its area.
Response: The percentage language was added at the direct behest of the Quality Review Team and utilizes standard language for		

Organization	Yes or No	Question 5 Comment
this type of situation. No change made.		
Luminant	No	The VSL for TOP-003-2 R5 places a more stringent severity level on the entities receiving the data requests than it places on the entities that are responsible for creating the data requests. As such, I would suggest changing the VSL for TOP-003-2 R5 to the following:Lower: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy one of the obligations of the documented specification for data Moderate: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy two of the obligations of the documented specification for data High: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy three of the obligations of the documented specification for data Severe: The responsible entity receiving a data specification in Requirement R3 or R4 did not satisfy four or more of the obligations of the documented specifications for data.
Response: The SDT sees the previous requirements in TOP-003-2 as ahead of time requirements which mean that there is some slack that can be incorporated into the deliberations without jeopardizing reliability and VSLs reflect this fact. However, Requirement R5 is about the actual data transfer and there is no room for error, thus the more stringent VSL. No change made.		
Kansas City Power & Light	No	In addition, the VSL for R5 in TOP-003 does not reflect partial efforts to exchange data by Entities.
Response: Requirement R5 is about the actual data transfer and there is no room for error, thus the more stringent VSL. No change made.		
Liberty Electric Power LLC	No	As written data transmission failures subject REs to a severe violation in R5, see Q3 response.
Response: Please see response to Q3.		
NV Energy	No	PRC-001 R1: Though this requirement does not appear to be within the scope of the

Organization	Yes or No	Question 5 Comment
		SDT's efforts in this project, we note that for R1 (familiarity of purpose and limitations of protection systems), there is no Measure in the Standard, and the VSL's appear to be quite subjective. I would like to make a specific suggestion, but cannot do so without knowing what sort of Measures are intended for this requirement. Perhaps, change the VSL language to state "Entity does not possess documentation describing purpose/limitations of its protection systems for its Operator personnel."
Response: The scope of the changes that the SDT was allowed to make only involved the deletion of the requirements and did not represent a revision of the standard as a whole. That will be taken up in a later project. No change made.		
Duke Energy	No	o TOP-001-2 VSLs should be revised consistent with our comments on the requirements. o TOP-003-2 VSLs have explanatory language on how the SDT intends the VSLs to be used. This language needs to be incorporated into the VSLs more directly, because compliance personnel will not be bound by the SDT's intent.
Response: No changes were made to the requirements as explained in Q1. No change made. The SDT believes that the VSL language is correct and will not need to be changed to reflect the explanation which will be deleted from the final draft. It was provided here for ease of reference to commenters. No change made.		
Texas Reliability Entity	No	1) VSL for TOP-001-2 R3: Operational Planning Analysis, by definition, excludes Real-Time issues such as "actual Emergencies." We suggest improving the requirement as discussed above and then making conforming revisions to this VSL. 2) VSL for TOP-001-2 R5: "When conditions permit" is subjective and ambiguous therefore consistency in auditing will not occur. Are you sure that "whichever is less" is what you mean to say here? (also applies to VSLs for R3, R6 and R8) 3) TOP-001-2 R7: VRF justification statement is incomplete ("The requirements are viewed as similar since they both refer to <missing text>") 4) TOP-001-2 R8: In the VRF justification, the text in the second and third bullets

Organization	Yes or No	Question 5 Comment
		appears to be garbled. 5) TOP-001-2 R9: We recommend this requirement be assigned a "High" VRF. Uncorrected SOL violations could cause bulk power system instability, separation, and or cascading if exacerbated in Real-Time by other SOL violations, contingencies, faults, or misoperations (and may be dependent on the SOL Methodology timing in FAC-011 and not be captured in TOP-001-2 R7). Note that the VRF justification for R10 correctly refers to a High VRF for R9. Additionally, remove the word "local" in all places used in the R9 VRF justification.
Response: 1. No changes were made to the requirement as explained in Q1. Therefore, no changes are necessary to the VSL. **2.** The SDT reviewed the indicated wording and verified that it is what was meant. As conditions permit is well accepted terminology in a situation where a hard and fast value is not possible. No change made. **3.** The SDT agrees and has corrected the text. **4.** The SDT agrees and has corrected the text. **5.** SOLs, by definition, can't cause instability, etc., and thus the VRF is correctly stated as Medium. The VRF justification document will be corrected accordingly. The SDT believes that the use of 'local' is appropriate.		
Oncor Electric Delivery	No	For TPL-001"Oncor respectfully takes the position that the proposed language in R6 will not provide a coordinated communication effort in the event of a planned outage of telemetry, control equipment and associated communication channels. The term "negatively impacted interconnected registered entities" is too broad and too subjective. Oncor believes that the Reliability Coordinator is in the best position to determine who is negatively impacted and that they should be the entity that makes further notification after receiving the initial planned outage request from the originating entity."
Response: Please see response to Q1.		
Cowlitz County PUD	No	After reviewing the industry comments submitted, Cowlitz is respectfully perplexed

Organization	Yes or No	Question 5 Comment
		why comments were not addressed related to the VSL binary treatment of R5. A data specification document may be very complex, and the Standard does not define non-compliance other than obligations were not satisfied. One data variable missing (either accidental omission or inability to provide) can incur an immediate violation if the data specification document does not include any leniency in this regard. Further, the proposed VLS for R5 does not allow for any credit of the entity's effort in fulfilling the obligations set forth in a data specification document.
Response: The SDT disagrees. Requirement R5 is not about individual failures in communications. Please see response to Q3. No change made.		
Bonneville Power Administration		TOP-001-2 VRFs/VSLs - NO - BPA recommends a sliding scale based on duration and percentage of the SOL violation. Example: If an entity is high by 2% of the SOL for 1 minute, their VSL should be substantially lower than if they were 25% off for more than 30 minutes. Sliding scale should start at the bottom ... couple of MW for a minute ... as an example. TOP-002-3: VRFs/VSLs - NO - BPA recommends a sliding scale based on how far off the original study was from the after the fact analysis. Example: If an entity did not have a study, the penalty should be severe. If an entity did have a study, but it was only 5% off, the penalty should be less severe. TOP-003-2 VRFs/VSLs - YES - BPA is in support.
Response: The SDT understands the concept of a sliding scale that is being suggested but finds it impractical and potentially unwieldy to implement. In addition, it doesn't take into account the fact that 2% on one line in a particular location may be a more severe impact on the overall reliability of the system than 25% on another line. No change made.		
Western Eledtricity Coordinating Council	Yes	I support the language of the VSLs for the proposed standards. I also understand the logic behind the statement included above the VSLs for R8 of TOP-001 and R3 and R4 of TOP-003. However, I question whether or not it is appropriate for this type of language to appear in the VSLs. It seems that this should be handled by the Regional

Organization	Yes or No	Question 5 Comment
		Enforcement departments.
Response: That language will be removed in the final draft. No change made.		
Independent Electricity System Operator	Yes	In the Violation Severity Levels section of the standards, items that contain "whichever is less" following the "or" statement, may be difficult to interpret.As a suggestion, this could be addressed by improving the wording, providing examples or categorizing non-compliance as a percentage only (rather than a number "or" percentage, whichever is less)
Response: The percentage language was added at the direct behest of the Quality Review Team and utilizes standard language for this type of situation. No change made.		
City of Austin dba Austin Energy	Yes	The VSL for TOP-001-2, R8 includes instruction to "start with the Severe VSL first and then to work your way to the left until you find the situation that fits." It explains that the goal is to assign a Severe VSL to a small entity who has just one affected reliability entity to inform and fails to do so. This structure usually makes sense; however, it is not applicable to R8. R8 requires the TOP to inform its RC of SOLs that have been identified as supporting reliability. The variability in the requirement is in the number of SOLs identified not in the number of registered entities to inform. The intent of being non-discriminatory by size of entity is already covered with regards to the number of SOLs identified because the VSL uses the "# SOLs or % of SOLs, whichever is less" approach, and the instruction becomes unnecessary. Austin Energy recommends that the SDT remove the instruction statement above R8.
Response: The statement will be removed in the final draft. No change made.

Progress Energy Carolinas	Negative	Comments submitted
Response: Thank you for submitting comments.		
City of Green Cove Springs	Negative	The existing TOP-001-1 R7 essentially requires communication to the RC and neighboring TOPs any time a Facility is to be switched. The new TOP-001-2 R5 will only require such communication when such switching would result in an "Adverse Reliability Impact" defined as: "The impact of an event that results in frequency-related instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that affects a widespread area of the Interconnection." This significantly reduces the requirements for communication / notification for switching Facilities. It is worthwhile to communicate switching of some Facilities whether or not they would result in an "Adverse Reliability Impact". Suggest rephrasing to something like any unplanned switching of Facilities not "noticed" through data provision of TOP-003-2. With the number of human error events that have occurred, we should not be reducing the communication / notification requirements. R8 is not needed since it is already covered in FAC-014-2 R5.2. As a result, R9, R10 and R11 ought to be modified to refer to FAC-014-2 rather than R8.
Response: R7: The SDT believes that notification for any switching event is contrary to good operating practice as it would load up the message queue with unnecessary information and could lead to an operator missing an important message within a group of unneeded messages. TOP-003-2 allows for an entity to request reliability-based information from another entity so they may include status on any piece of equipment that may possibly effect its operations. Therefore, the SDT does not believe that a reliability gap has been created. No change made. R8: The SDT asserts that there are subtle differences in TOP-001-2 and FAC-014-2 that the commenter is missing. FAC-014-2 provides a simple list of SOLs while TOP-001-2 is looking at particular SOLs that need special treatment. Therefore, there is no redundancy. No change made.		

City of Green Cove Springs	Negative	The existing TOP-002-2 requires that both the BA and TOP perform current day, next day and seasonal plans. In the new TOP-002-3, the BA is eliminated from the applicability. Nowhere else in the standards is there a requirement for the BA to perform current-day, next-day and seasonal planning. The mapping document points to BAL-002 and the requirement for a BA to have enough Contingency Reserves (and confuses the references saying the R2 of BAL-002-1 requires a "plan", which it does not say). However, this is a real-time requirement of a BA and is not an operations planning analysis and is not a day-ahead plan. There ought to be a day-ahead plan to start enough generation to enable the load plus operating reserves to be met, which the existing TOP-02-2 standard essentially assigns to the BA. The mapping document also points to BAL-001, but, a 12-month rolling average of ACE has very little to do with day-ahead planning. And finally, the mapping document points to coordination needed in the Functional Model. The Functional Model is not mandatory and should not be depended upon in this manner. The mapping document says that the TOP develops the plan and passes it to the BA. This is not the case for unit commitment. For unit commitment, it is usually the other way around. TOPs develop constraints (e.g., SOLs) that the market participants use to transact; hence, the market participants (which involve the BAs) develop the transactions (which include unit commitment) often in parallel with the TOPs plans. TOPs do not plan or direct unit commitment except in cases where a unit needs to be "reliability must-run". We are aware that there may be efforts to insert next-day planning into new BAL standards under development; however, it will be some time before those new standards are approved. IN the meantime, the new TOP standards should include operational planning analyses for the BA on an interim basis until those new BA standard(s) are approved and mandatory so that we do not create a gap in the interim. In addition, the standard has eliminated the current-day day and seasonal assessments and focuses only on next-day. we believes that both current-day and seasonal remain important, to cover changes from yesterday’s plan (e.g., unplanned outages that have occurred since yesterday’s plan), and to coordinate planned outages seasonally.

Response: The Balancing Authority has one role - to balance Load and resources. A key component of this role is to be able to recover from events that cause imbalance. The commenter intermingles the obligation of the Load-Serving Entity with that of the Balancing Authority. The SDT believes that in order for a Balancing Authority to comply with CPS and DCS and the requirements for emergency plans in EOP standards that they must plan and therefore a separate requirement is not needed and would actually represent double jeopardy. BAL-001-0.1a, BAL-002-1, EOP-001-0b, EOP-002-3, and EOP-003-1 cover these issues for the Balancing Authority. The standard has not eliminated other planning periods as Operational Planning Analysis covers all of the periods cited. What it does do is mandate a next-day analysis. Current day will be handled in Real-time operations and thus isn't needed in this planning environment. The SDT believes that longer term studies will be run by entities on an as needed basis but that requirements are only necessary for next-day. No change made.		
City of Green Cove Springs	Negative	R1 - The SDT introduces a new term "Stability Limit" which seems duplicative of an SOL and adds a layer of ambiguity. What Stability Limits exist that would not be an SOL or IROL? Also, R1 and R2 become inconsistent with R1 referring to "Facility Ratings" and "Stability Limits" whereas R2 refers to "SOLs" and "IROLs". It would seem the two requirements should consistently use "SOLs" and "IROLs" consistently with FAC-014-2. Related to the BA performing a day-ahead plan discussed in FMPA's response to question 2, TOP-003-2 R2 only requires a BA to develop data specifications for reporting in real-time (i.e., bullet 2.1). There should be requirements for day-ahead as well. There are a number of data requirements that are proposed to be deleted and replaced with an ambiguous reference to a "specification for the data necessary", or a data specification, without any minimal requirements for what should be in that data specification. This approach will likely not go over well with the regulators. The SDT should be able to define a minimal list of data required, e.g, "such data specification will at minimum include: next-day load forecasts, next-day planned outages, generator capacity changes, protection system failures, special protection system status, real-time monitoring of generation and transmission, transmission Facility status, etc., etc." (note that these are all examples of specific requirements within the existing standards that the SDT is proposing to delete), possibly as an attachment to the standard.

Response: Stability Limit is a defined term in the NERC Glossary. IROLs and SOLs represent only part of what the Operational Planning Analysis (OPA) is to include. The OPA is to analyze all expected system conditions against all operating criteria. The SDT finds that is accomplished within a Transmission Operator Area by having an OPA that is assessed not to exceed any of its Facility Ratings or Stability Limits. While IROLs and SOLs represent many of these, they may not be granular enough to represent all of them. No change made. The SDT agrees and has made conforming changes to Requirement R2, Part2.1. **Part 2.1**. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring. The data specification concept has already been approved by FERC for Reliability Coordinators in the IRO standards. No change made.		
City of Green Cove Springs	Negative	While we agrees with a results-based approach to standards, it seems to us that there have been a number of human-error based problems that justify agreed upon protocols and procedures being covered by the standards. Hence, TOP-004 R6, which requires development of formal policies and procedures among neighboring TOPs should not be eliminated from the standards. On the Mapping Document, TOP-004-2 R5, on the discussion that the requirement be deleted, the document says that the TOP does not have the authority to unilaterally separate without the approval of the RC. FMPA believes that they do if there is an imminent threat (e.g., the exceptions to IRO-001-2 of “unless such actions would violate safety, equipment, or regulatory or statutory requirements”). So, while FMPA agrees that the requirement can be deleted, the reason for the deletion does not seem accurate.
Response: TOP-004-2, Requirement R6 has been superseded by the NERC Reliability Standards taken as a whole. Examples of such would be the proposed TOP-001-2. The SDT agrees and has updated the mapping document accordingly.		
City of Garland	Negative	R5 VSL levels should have low, moderate, and high - not just severe

Response: As explained in Q5, there is no room for error in Requirement R5 and thus it has been assigned a binary VSL. No change made.		
Commonwealth of Massachusetts Department of Public Utilities	Negative	o There is use of the term "Reliability Directive" in the standard which is currently and formally under development as part of another project. The posting states that this definition was agreed to by all affected project teams using it, however if the other project team formally charged with this definition's development, changes it, then this standard and perhaps others, will have to be revisited. Bringing these standards forward seems inefficient and problematic for many. o Also in Requirement 8 there was an issue expressed by one RSC member that System Operating Limits are local limits and should not be subject of part of the NERC standards and the requirement as written creates a "subset" of SOLs that affect reliability. This could create an overly complicated standard and could lead to compliance difficulties.
Response: Please see response to identical comments in Q1.		
Detroit Edison Company	Negative	R3- The sentence should read "... inform its Reliability Coordinator and other Transmission Operator(s), ..." The word other is missing in the current draft. R6- The statement "... negatively impacted interconnected NERC registered entities..." is to vague. This could be an easy trip up during an audit. M6- same as R6- The statement "... negatively impacted interconnected NERC registered entities..." is to vague. VSLs- R6- The statement "... negatively impacted interconnected NERC registered entities..." is to vague.
Response: Please see response to identical comments in Q1.		

East Kentucky Power Coop.	Negative	The standard as proposed does not appear to comply with the stated intent of Project 2007-03, that being: "The industry needs clearer, unambiguous and enforceable standards in order to effectively operate the Bulk Electric System." Not only are the changes to TOP-003 as vague-or ambiguous--if not more so than the previous TOP-003-1 standard, the requirements do not provide for any consistency between companies. For example, who between two parties determines, or in the case of an inability to reach agreement, who is responsible for arbitrating an agreement when two neighboring entities are attempting to establish a "mutually agreeable format". Resolution could be problematic when required changes to a format between entities A and B would require format changes between entities A and C, A and D, and A and E, and would potentially require entity A to maintain several different format standards to meet the requirements for coordination between entities B, C, D, and E. Many items previously in TOP-003-1 appear to have been completely abandoned in lieu of much less prescriptive specifications in TOP-003-2. For example, clear provisions regarding timing of data availability listed in TOP-003-1 are not specified in any form in TOP-003-2 other than to require that entities needing to share data essentially "work it out amongst themselves". The standard needs to better guide entities in regard to the type of data-at a minimum-they SHOULD be requesting and obtaining. Alternately, such format specifications should be left to the authority of the RC to coordinate among TO/BA entities for which they are responsible.
Response: Please see response to identical comment in Q3.		
INTELLIBIND	Negative	There should either be a description of what the specific vote is for, or a link to the information for each vote if you want to encourage affirmative voting.
Response: Your comment will be passed on to staff for consideration in future postings.		
National Association of Regulatory Utility Commissioners	Negative	Given the standard uses the term Reliability Directive as a defined term but is not proposing to define the term in this standard for adoption in the glossary, it is inappropriate to finalize this standard.

Response: Please see response to Q1.		
Oncor Electric Delivery	Negative	Oncor believes that the Reliability Coordinator is in the best position to determine who the negatively impacted interconnected registered entities are and to effectively coordinate communication efforts after receiving the initial planned outage request from the originating entity. In addition, the term “negatively impacted interconnected registered entities” is too broad and too subjective. As a result, we recommend R6 be revised to: Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.
Response: Please see response to identical comment in Q1.		
ReliabilityFirst Corporation	Negative	ReliabilityFirst votes in the negative and offers the same comments as submitted via the previous comment posting period.
Response: Without specific comments, the SDT is unable to respond other than to point to previous posting responses.		
Santee Cooper	Negative	The implementation date should be at least twelve months to be consistent with TOP-001-2 and TOP-002-3. What was the rationale of reducing the implementation time from twenty-four months to ten months?
Response: The implementation date was reduced due to multiple comments in the previous posting as commenters felt that the proposed standards reflected what was already being done and would not incorporate much change. The ten month implementation period was intended to allow time for dissemination of the data specification prior to the other changes taking effect (the standards with a 12 month implementation period.)		

Seattle City Light	Negative	While the idea of making each BA and TOP formally outline a data specification for all the information it needs to perform its Operational Planning Analysis is a worthy concept, the requirements in this Standard for evidence and data retention are onerous. Specifically the requirement to retain all electronic or hard copies of data transmittals or retain attestations from all receiving entities would require a tremendous amount of resources to be compliant. It may also be technically impossible to comply with these requirements because the data specifications developed individually by each entity may not be compatible with each other. The formats and periodicity of data collected by each entity may not be compatible with the specifications and it could be impossible to comply with these requests without major changes to the infrastructure. As an alternative, most of the NERC registered entities are currently required to provide that data to their Reliability Coordinators (RC) using the specifications already developed by the RCs and that data could be used by the TOPs and BAs to perform their functions. Seattle City Light supports the efforts of the Real Time Operations Standards Drafting Team and approves of the direction proposed in these new TOP Standards. We are prepared to vote “affirmative” once details as discussed above are addressed and resolved.
Response: Please see response to identical comment in Q3.		
Southwest Transmission Cooperative, Inc.	Negative	The Moderate and High VSLs for TOP- 001-2 R3, R5, R6, and R8 incorrectly use an “or” condition when “and” is necessary to establish the range of percentages of performance. As written now, any percentage from 0 to 100% qualifies for both VSLs “For the Requirement X VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.” For the Severe VSL of TOP-002-3 R3, an extra space is needed before “15%”.
Response: Please see response to identical comment in Q5.		

Western Electricity Coordinating Council	Abstain	I agree with the language of the VSLs for TOP-003-2. I also understand the logic behind the statement included above the VSLs for R3 and R4. However, I question whether or not it is appropriate for this type of language to appear in the VSLs. Is seems that this should be handled by the Regional Enforcement departements.
Response: The language will be removed from the final drafts. No change made.		
Mississippi Power	Affirmative	See comments submitted via the electronic comments form by Antonio Grayson.
Gulf Power Company	Affirmative	See comments submitted via the electronic comments form by Antonio Grayson.
Georgia Power Company	Affirmative	See comments submitted by Antonio Grayson.
Bonneville Power Administration	Affirmative	Please see BPA's submitted comments
Alabama Power Company	Affirmative	See comments submitted via the electronic comments form by Antonio Grayson.
Southern Company Generation	Affirmative	Please see comments submitted by Antonio Grayson on behalf of each part of Southern Company.
Response: Thank you for submitting comments.		
Nebraska Public Power District	Affirmative	NPPD joins comments submitted by the Southwest Power Pool (SPP).

Southwest Power Pool, Inc.	Affirmative	We continue to disagree with the successive ballot process that forces entities to decide on a voting position concurrent with the submittal of comments on the same. NERC needs to explore other ways to expedite the voting/comment process without forcing industry to have faith that changes will be made after approval. Although SPP votes in favor of this standard, we have outstanding comments that should be addressed. We have submittted them in the standards processs and reiterate some of them here. The Purpose Statement is too general and does not provide any direction of how the proposed standard will meet its stated intent. As written the Purpose Statement is applicable to any NERC standard that exists or can be imagined. We suggest additional wording of how this particular standard intends to do what it intends to is needed. For example, "...by requiring applicable entities to have the data necessary to perform reliability analyses and real-time monitoring.'
Response: Please see response to identical comment in previous questions.		
City of Tacoma, Department of Public Utilities, Light Division, dba Tacoma Power	Affirmative	If a Transmission Operator or a Balancing Authority is requesting data from another entity, they must demonstrate a reliability impact validating the need for the requested data.
Response: Please see response to identical comment in Q3.		
City of Tacoma, Department of Public Utilities, Light Division, dba Tacoma Power	Affirmative	We would like to request that specific definitions are included for the individual time horizons. We suggest the following potential definitions: 1. Same Day Operations - Routine actions required within the time frame of a day, but not real-time. 2. Real-time Operations - Actions required within one hour or less to preserve the reliability of the bulk electric system. 3. Operations Assessment - Follow-up evaluations and reporting of real-time operations.
Response: The latest set of approved Time Horizon classifications is posted on the Reliability Standards Resources Web Page.		
Electric Reliability Council of Texas, Inc.	Affirmative	ERCOT supports the SDT's modifications.

Response: Thank you for your support.

END OF REPORT

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.
12. Seventh posting of revised standard on March 22, 2012.

Proposed Action Plan and Description of Current Draft:
The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that 3 requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated on a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.

Reliability Directive — A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

A. Introduction

1. **Title:** **Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:** To prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences.

4. **Applicability**

   4.1. Balancing Authority

   4.2. Transmission Operator

   4.3. Generator Operator

   4.4. Distribution Provider

   4.5. Load-Serving Entity

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities..

B. Requirements

R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R2. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations]*

R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. *[Violation Risk Factor: High] [Time Horizon: Operations Planning,]*

R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations are relay or equipment failures, and changes in generation, Transmission, or Load. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.** *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

Rationale: The class of SOL included in Requirements R8, R9, and R11 was created in response to industry comments that there were SOLs that deserved increased attention. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.

R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

C. Measures

M1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence that it complied with each Reliability Directive issued and identified as such by the Transmission Operator(s) unless such action would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M2. Each Balancing Authority, Generation Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence which may include, but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Transmission Operator of its inability to comply with identified, Reliability Directive(s) issued in accordance with Requirement R2. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M3. Each Transmission Operator shall make available, upon request, evidence that it has informed its Reliability Coordinator and Transmission Operators that it knew or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis in accordance with Requirement R3. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M4. Each Transmission Operator shall make available, upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R4, unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M5. Each Transmission Operator shall make available, upon request, evidence that it informed its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas in accordance with Requirement R5, unless conditions did not permit such communications. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M6. Each Balancing Authority and Transmission Operator shall make available, upon request, evidence that it notified its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment, and associated communication channels in accordance with Requirement R6. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Balancing Authority or Transmission Operator may provide an attestation that an event has not occurred.

M7. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v as specified in Requirement R7. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M8. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis in accordance with Requirement R8. Such evidence could include, but is not limited to, an electronic or hard copy of information from the Operational Planning Analysis used in its assessment, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M9. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an SOL for a continuous duration that would cause a violation of the Facility

Rating or Stability criteria upon which it is based, as specified in Requirement R8 and in Requirement R9. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M10. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded in accordance with Requirement R10. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M11. Each Transmission Operator shall make available evidence of when it acted or directed others to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8, in accordance with Requirement R11. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

Exception Reporting

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall each keep data or evidence for each applicable Requirement R1 through R6, R8, and R10 through R11 and Measure M1 through M6, M8, and M10 through M11 for the current calendar year and one previous calendar year,

with the exception of voice recordings which shall be retained for a minimum of 90 calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has exceeded an identified IROL and its associated IROL T_v or SOL identified in Requirement R8 as specified in Requirements R7 and R9 and Measurements M7 and M9.

If a Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, or Load-Serving Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity did not comply with an identified Reliability Directive issued by the Transmission Operator, and such action would not have violated safety, equipment, regulatory, or statutory requirements.
R2	N/A	N/A	N/A	The responsible entity did not inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator.
For the Requirement R3, R5, R6, and R8 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.				
R3	The Transmission Operator did not inform one other Transmission Operator, or 5% or less of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform two other Transmission Operators, or more than 5% and less than or equal to 10% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform three other Transmission Operators, or more than 10% and less than or equal to 15% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or an anticipated Emergency condition based on its assessment of its Operational Planning Analysis. OR The Transmission Operator did not inform four or more other Transmission Operators, or more than 15% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.
R4	N/A	N/A	N/A	The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, when the requesting

	Lower	Moderate	High	Severe
				entity had implemented its comparable emergency procedures, and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R5	The Transmission Operator did not inform one other Transmission Operator, or 5% or less of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform two other Transmission Operators, or more than 5% and less than or equal to 10% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform three other Transmission Operators, or more than 10% and less than or equal to 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform its Reliability Coordinator of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications. OR The Transmission Operator did not inform four or more other Transmission Operators, or more than 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications.
R6	The responsible entity did not notify one negatively-impacted interconnected NERC-registered entity, or 5% or less of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify two negatively-impacted interconnected NERC-registered entities, or more than 5% and less than or equal to 10% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify three negatively-impacted interconnected NERC-registered entities, or more than 10% and less than or equal to 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment and associated communication channels between the affected entities.	The responsible entity did not notify its Reliability Coordinator of a planned outage of telemetering equipment, control equipment, and associated communication channels. OR, The responsible entity did not notify four or more negatively-impacted interconnected NERC-registered entities, or more than 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering and

	Lower	Moderate	High	Severe
				control equipment and associated communication channels between the affected entities.
R7	N/A	N/A	N/A	The Transmission Operator exceeded an identified Interconnection Reliability Operating Limit (IROL) for a continuous duration greater than its associated IROL T_v.
R8	The Transmission Operator did not inform its Reliability Coordinator of one SOL, or 5% or less of the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs, or more than 5% and less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs, or more than 10% and less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs, or more than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**
R9	N/A	N/A	N/A	The Transmission Operator exceeded a System Operating Limit (SOL), as identified in Requirement R8, for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R10	N/A	N/A	N/A	The Transmission Operator did not inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, had been exceeded.
R11	N/A	N/A	N/A	The Transmission Operator did not act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's

	Lower	Moderate	High	Severe
				$T_{v,}$ or of an SOL identified in Requirement R8.

E. Regional Variances

None identified.

Version History

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.
12. Seventh posting of revised standard on March 22, 2012.

Proposed Action Plan and Description of Current Draft:
The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that 3 requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	~~3~~2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated on a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.

Reliability Directive — A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

A. Introduction

1. **Title:** **Transmission Operations**
2. **Number:** TOP-001-2
3. **Purpose:** To prevent instability, uncontrolled separation, or cascading outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences.
4. **Applicability**
   - **4.1.** Balancing Authority
   - **4.2.** Transmission Operator
   - **4.3.** Generator Operator
   - **4.4.** Distribution Provider
   - **4.5.** Load-Serving Entity
5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities..

B. Requirements

R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each Reliability Directive issued and identified as such by its Transmission Operator(s), unless such action would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: ~~Operations Planning,~~ Same-day Operations, Real-Time Operations]*

R2. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations]*

R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operator(s) that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. *[Violation Risk Factor: High] [Time Horizon: Operations Planning,]*

R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Examples of such operations are relay or equipment failures, and changes in generation, Transmission, or Load. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.** *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

Rationale: The class of SOL included in Requirements R8, R9, and R11 was created in response to industry comments that there were SOLs that deserved increased attention. Examples of such SOLs include WECC Path SOLs, SOLs on transmission facilities maintaining service to significant events or buildings, such as the stadium for major nationally televised events, prominent government buildings, and military installations.

R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

C. Measures

M1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence that it complied with each Reliability Directive issued and identified as such by the Transmission Operator(s) unless such action would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M2. Each Balancing Authority, Generation Operator, Distribution Provider, and Load-Serving Entity shall make available, upon request, evidence which may include, but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Transmission Operator of its inability to comply with identified, Reliability Directive(s) issued in accordance with Requirement R2. If no event has occurred, the Balancing Authority, Generator Operator, Distribution Provider, or Load-Serving Entity may provide an attestation that an event has not occurred.

M3. Each Transmission Operator shall make available, upon request, evidence that it has informed its Reliability Coordinator and Transmission Operators that it knew or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis in accordance with Requirement R3. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M4. Each Transmission Operator shall make available, upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R4, unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M5. Each Transmission Operator shall make available, upon request, evidence that it informed its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas in accordance with Requirement R5, unless conditions did not permit such communications. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M6. Each Balancing Authority and Transmission Operator shall make available, upon request, evidence that it notified its Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of telemetering equipment, control equipment, and associated communication channels in accordance with Requirement R6. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. If no event has occurred, the Balancing Authority or Transmission Operator may provide an attestation that an event has not occurred.

M7. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v as specified in Requirement R7. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M8. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis in accordance with Requirement R8. Such evidence could include, but is not limited to, an electronic or hard copy of information from the Operational Planning Analysis used in its assessment, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M9. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an SOL for a continuous duration that would cause a violation of the Facility

Rating or Stability criteria upon which it is based, as specified in Requirement R8 and in Requirement R9. Such evidence could include, but is not limited to, dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M10. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded in accordance with Requirement R10. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

M11. Each Transmission Operator shall make available evidence of when it acted or directed others to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8, in accordance with Requirement R11. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts. If no event has occurred, the Transmission Operator may provide an attestation that an event has not occurred.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

Exception Reporting

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, and Load-Serving Entity shall each keep data or evidence for each applicable Requirement R1 through R6, R8, and R10 through R11 and Measure M1 through M6, M8, and M10 through M11 for the current calendar year and one previous calendar year,

with the exception of voice recordings which shall be retained for a minimum of ~~ninety~~ 90 calendar days, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has exceeded an identified IROL and its associated IROL T_v or SOL identified in Requirement R8 as specified in Requirements R7 and R9 and Measurements M7 and M9.

If a Balancing Authority, Transmission Operator, Generator Operator, Distribution Provider, or Load-Serving Entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity did not comply with an identified Reliability Directive issued by the Transmission Operator, and such action would not have violated safety, equipment, regulatory, or statutory requirements.
R2	N/A	N/A	N/A	The responsible entity did not inform its Transmission Operator of its inability to perform an identified Reliability Directive issued by that Transmission Operator.
For the Requirement R3, R5, R6, and R8 VSLs only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.				
R3	The Transmission Operator did not inform one other Transmission Operator, or 5% or less of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform two other Transmission Operators, or more than 5% ~~or~~and less than or equal to 10% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform three other Transmission Operators, or more than 10% ~~or~~and less than or equal to 15% of the affected Transmission Operators, whichever is less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or an anticipated Emergency condition based on its assessment of its Operational Planning Analysis. OR The Transmission Operator did not inform four or more other Transmission Operators, or more than 15% of the affected Transmission Operators, whichever is ~~less, that~~less, that are known or expected to be affected by an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.
R4	N/A	N/A	N/A	The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, when the requesting

	Lower	Moderate	High	Severe
				entity had implemented its comparable emergency procedures, and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R5	The Transmission Operator did not inform one other Transmission Operator, or 5% or less of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform two other Transmission Operators, or more than 5% ~~or~~and less than or equal to 10% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform three other Transmission Operators, or more than 10% ~~or~~and less than or equal to 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on respective Transmission Operator Areas when conditions did permit such communications.	The Transmission Operator did not inform its Reliability Coordinator of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications. OR The Transmission Operator did not inform four or more other Transmission Operators, or more than 15% of the affected Transmission Operators, whichever is less, of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas when conditions did permit such communications.
R6	The responsible entity did not notify one negatively-impacted interconnected NERC-registered entity, or 5% or less of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify two negatively-impacted interconnected NERC-registered entities, or more than 5% ~~or~~and less than or equal to 10% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment, and associated communication channels between the affected entities.	The responsible entity did not notify three negatively-impacted interconnected NERC-registered entities, or more than 10% ~~or~~and less than or equal to 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering equipment, control equipment and associated communication channels between the affected entities.	The responsible entity did not notify its Reliability Coordinator of a planned outage of telemetering equipment, control equipment, and associated communication channels. OR, The responsible entity did not notify four or more negatively-impacted interconnected NERC-registered entities, or more than 15% of the negatively impacted NERC registered entities, whichever is less, of a planned outage of telemetering and

	Lower	Moderate	High	Severe
				control equipment and associated communication channels between the affected entities.
R7	N/A	N/A	N/A	The Transmission Operator exceeded an identified Interconnection Reliability Operating Limit (IROL) for a continuous duration greater than its associated IROL T_v.
~~For the Requirement R8 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.~~				
R8	The Transmission Operator did not inform its Reliability Coordinator of one SOL, or 5% or less of the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs, or more than 5% ~~or~~and less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs, or more than 10% ~~or~~and less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs, or more than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis**.**
R9	N/A	N/A	N/A	The Transmission Operator exceeded a System Operating Limit (SOL), as identified in Requirement R8, for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R10	N/A	N/A	N/A	The Transmission Operator did not inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, had been exceeded.

	Lower	Moderate	High	Severe
R11	N/A	N/A	N/A	The Transmission Operator did not act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.

E. Regional Variances

None identified.

Version History

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.
12. Seventh posting of revised standard on March 22, 2012.

Proposed Action Plan and Description of Current Draft:
The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that three requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements and will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that Transmission Operators have plans for operating within specified limits.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have evidence of a completed Operational Planning Analysis in accordance with Requirement R1. Such evidence could include, but is not limited to, dated power flow study results.

M2. Each Transmission Operator shall have evidence that it has developed a plan to operate within each IROL and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 in accordance with Requirement R2. Such evidence could include, but it is not limited to, plans for precluding operating in excess of each IROL and each SOL which, while not an IROL, was identified as a result of the Operational Planning Analysis.

M3. Each Transmission Operator shall have evidence that it notified all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Investigations

Self-Reporting

Complaints

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Transmission Operator shall keep data or evidence to show compliance for each Requirement for a rolling six-month period for analyses, the most recent 90 calendar days for voice recordings, and 12 months for operating logs and e-mail records, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not have an Operational Planning Analysis that represented projected System conditions allowing it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not develop a plan to operate within those IROLs and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1.
For the Requirement R3 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.				
R3	The Transmission Operator did not notify one NERC-registered entity, or 5% or less of the	The Transmission Operator did not notify two NERC-registered entities, or more than 5%, and	The Transmission Operator did not notify three NERC-registered entities, or more than 10% and	The Transmission Operator did not notify four or more NERC-registered entities, or more

	NERC-registered entities, whichever is less identified in the plan(s) cited, as to their role in the plan(s).	less than or equal to 10% of the NERC-registered entities, whichever is less, identified in the plan(s) as to their role in the plan(s).	less than or equal to 15% of the NERC-registered entities, whichever is less, identified in the plan(s) as to their role in the plan(s).	than15% of the NERC-registered entities identified in the plan(s) as to their role in the plan(s).

E. Regional Variances

None identified.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that Transmission Operators have plans for operating within specified limits.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. Each Transmission Operator shall develop a plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have evidence of a completed Operational Planning Analysis in accordance with Requirement R1. Such evidence could include, but is not limited to, dated power flow study results.

M2. Each Transmission Operator shall have evidence that it has developed a plan to operate within each IROL and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 in accordance with Requirement R2. Such evidence could include, but it is not limited to, plans for precluding operating in excess of each IROL and each SOL which, while not an IROL, was identified as a result of the Operational Planning Analysis.

M3. Each Transmission Operator shall have evidence that it notified all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Investigations

Self-Reporting

Complaints

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Transmission Operator shall keep data or evidence to show compliance for each Requirement for a rolling six-~~-~~month period for analyses, the most recent ~~three months~~90 calendar days for voice recordings, and 12 months for operating logs and e-mail records, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not have an Operational Planning Analysis that represented projected System conditions allowing it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not develop a plan to operate within those IROLs and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its internal area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1.
For the Requirement R3 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.
12. Seventh posting of revised standard on March 22, 2012.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008, following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that three requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements and will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**

2. **Number:** TOP-003-2

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their operational planning and Real-time monitoring responsibilities.

4. **Applicability**

   4.1. Transmission Operator.

   4.2. Balancing Authority.

   4.3. Generator Owner.

   4.4. Generator Operator.

   4.5. Interchange Authority.

   4.6. Load-Serving Entity.

   4.7. Transmission Owner.

   4.8. Distribution Provider.

5. **Effective Date:** All requirements, except Requirement R5, will become effective the first day of the first calendar quarter ten months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all the requirements, except Requirement R5, become effective the first day of the first calendar quarter ten months following Board of Trustees' adoption. Requirement R5 will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, Requirement R5 becomes effective the first day of the first calendar quarter twelve months following Board of Trustees' adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

B. Requirements

R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

1.1. A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses and Real-time monitoring.

1.2. A mutually-agreeable format.

1.3. A periodicity for providing data.

1.4. The deadline by which the respondent is to provide the indicated data.

R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

2.1. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring.

2.2. A mutually-agreeable format.

2.3. A periodicity for providing data.

2.4. The deadline by which the respondent is to provide the indicated data.

R3. Each Transmission Operator shall distribute its data specification, as developed in Requirement R1,to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority shall distribute its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall make available its dated, current, in-force documented specification for data in accordance with Requirement R1.

M2. Each Balancing Authority shall make available its dated, current, in-force documented specification for data in accordance with Requirement R2.

M3. Each Transmission Operator shall make available evidence that it has distributed its data specification, as developed in Requirement R1,to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R3. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M4. Each Balancing Authority shall make available evidence that it has distributed its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall make available evidence that it has satisfied the obligations of the documented specifications for data, in accordance with Requirement R5. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each responsible entity shall keep data or evidence to show compliance, as identified below, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator shall retain its dated, current, in-force, documented specification for the data necessary for it to perform their Operational Planning Analyses and Real-time monitoring, in accordance with Requirement R1 and Measurement M1, as well as any documents in force since the last compliance audit.

- Each Balancing Authority shall retain its dated, current, in-force, documented specification for the data necessary for it to perform their analysis functions and Real-time monitoring, in accordance with Requirement R2 and Measurement M2, as well as any documents in force since the last compliance audit.

- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R1 to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R3 and Measurement M3.

- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4 and Measurement M4.

- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall retain evidence for the most recent 90 calendar days that it has satisfied the obligations of the documented specifications for data, in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The Transmission Operator did not include one of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include two of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include three of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include four of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring. OR, The Transmission Operator did not include a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.
R2	The Balancing Authority did not include one of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include two of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include three of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their analysis functions and Real-time monitoring.	The Balancing Authority did not include four of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for them to perform their analysis functions and Real-time monitoring. OR, The Balancing Authority did not include a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.
For the Requirement R3 VSL only, the intent of the SDT is to start with the Severe VSL first and then to work your way to the left until you find the situation that fits. In this manner, the VSL will not be discriminatory by size of entity. If a small entity has just one affected reliability entity to inform, the intent is that that situation would be a Severe violation.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**

2. **Number:** TOP-003-2

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their operational planning and Real-time monitoring responsibilities.

4. **Applicability**

   4.1. Transmission Operator.

   4.2. Balancing Authority.

   4.3. Generator Owner.

   4.4. Generator Operator.

   4.5. Interchange Authority.

   4.6. Load-Serving Entity.

   4.7. Transmission Owner.

   4.8. Distribution Provider

5. **Effective Date:** All requirements, except Requirement R5, will become effective the first day of the first calendar quarter ten months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all the requirements, except Requirement R5, become effective the first day of the first calendar quarter ten months following Board of Trustees' adoption. Requirement R5 will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, Requirement R5 becomes effective the first day of the first calendar quarter twelve months following Board of Trustees' adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

B. Requirements

R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

1.1. A list of data and information needed by the Transmission Operator to support its Operational Planning Analyses and Real-time monitoring.

1.2. A mutually-agreeable format.

1.3. A periodicity for providing data.

1.4. The deadline by which the respondent is to provide the indicated data.

R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

2.1. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring.

2.2. A mutually-agreeable format.

2.3. A periodicity for providing data.

2.4. The deadline by which the respondent is to provide the indicated data.

R3. Each Transmission Operator shall distribute its data specification, as developed in Requirement R1,to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority shall distribute its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall make available its dated, current, in-force documented specification for data in accordance with Requirement R1.

M2. Each Balancing Authority shall make available its dated, current, in-force documented specification for data in accordance with Requirement R2.

M3. Each Transmission Operator shall make available evidence that it has distributed its data specification, as developed in Requirement R1,to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements in accordance with Requirement R3. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M4. Each Balancing Authority shall make available evidence that it has distributed its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4. Such evidence could include, but is not limited to, web postings with an electronic notice of the posting, dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall make available evidence that it has satisfied the obligations of the documented specifications for data, in accordance with Requirement R5. Such evidence could include, but is not limited to, electronic or hard copies of data transmittals or attestations of receiving entities.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

- For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.
- For functional entities that work for their Regional Entity, the ERO shall serve as the Compliance Enforcement Authority.

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audit

Self-Certification

Spot Checking

Compliance Investigation

Self-Reporting

Complaint

1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each responsible entity shall keep data or evidence to show compliance, as identified below, unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator shall retain its dated, current, in-~~-~~force, documented specification for the data necessary for it to perform their Operational Planning Analyses and Real-time monitoring, in accordance with Requirement R1 and Measurement M1, as well as any documents in force since the last compliance audit.

- Each Balancing Authority shall retain its dated, current, in-~~-~~force, documented specification for the data necessary for it to perform their analysis functions and Real-time monitoring, in accordance with Requirement R2 and Measurement M2, as well as any documents in force since the last compliance audit.

- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R1 to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R3 and Measurement M3.

- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification as developed in Requirement R2 to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements, in accordance with Requirement R4 and Measurement M4.

- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall retain evidence for the most recent 90 calendar days that it has satisfied the obligations of the documented specifications for data~~,~~ in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until mitigation is complete and approved or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The Transmission Operator did not include one of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include two of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include three of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring.	The Transmission Operator did not include four of the parts (Part 1.1 through Part 1.4) of the documented specification for the data necessary for them to perform their Operational Planning Analyses and Real-time monitoring. OR, The Transmission Operator did not include a documented specification for the data necessary for it to perform its Operational Planning Analyses and Real-time monitoring.
R2	The Balancing Authority did not include one of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.	The Balancing Authority did not include two of the parts (Part 2.1 through Part 2.4) of the documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring.   - IRO-005-4 - Reliability Coordination – Current Day Operations
- Project 2007-09, Generator Verification:
  - MOD-025-2 - Verification and Data Reporting of Generator Real and Reactive Power Capability

TOP-001-2: Transmission Operations, TOP-002-3: Operations Planning and TOP-003-1: Operational Reliability Data cannot be implemented until all three of the above standards have been implemented.

Revision to Sections of Approved Standards and Definitions

There are no new definitions in the proposed set of standards.

Two drafting teams (Project 2006-06 and Project 2007-03) have coordinated on a common definition of Reliability Directive and agreed that the Reliability Coordination Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference.

> **Reliability Directive** - A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impacts.

Compliance with Standard

There are three standards associated with this project for which industry approval will be requested: TOP-001-2: Transmission Operations, TOP-002-3: Operations Planning, and TOP-003-1: Operational Reliability Data.

Standard	Functions that must Comply with the Associated Requirements							
	TOP	BA	GO	GOP	IA	LSE	DP	TO
PER-001-0: Operating Personnel Responsibility and Authority	Retired							

TOP-001-2: Transmission Operations	X	X		X		X	X	
TOP-002-3: Operations Planning	X							
TOP-003-1: Operational Reliability Data	X	X	X	X	X	X	X	X
TOP-004-2: Real-Time Transmission Operations	Retired							
TOP-005-2: Operational Reliability Data	Retired							
TOP-006-1: Monitoring System Conditions	Retired							
TOP-007-0: Reporting System Operating Limits (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	Retired							
TOP-008-1: Response to Transmission Limit Violations	Retired							
PRC-001-2	Retired Requirements R2, R5, and R6.							

The effective date is the date entities are expected to meet the performance identified in these standards. Note that entities have been given several months beyond the regulatory approval date (preparation time) to fully comply with new requirements.

Effective Date of Revised Standards

All requirements except TOP-003-2, Requirements R1 and R2 will become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all the requirements except TOP-003-2, Requirements R1 and R2 become effective the first day of the first calendar quarter twelve months following Board of Trustees adoption, or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities.

Requirements R1 and R2 of TOP-003-2 will become effective the first day of the first calendar quarter ten months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, Requirements R1 and R2 of TOP-003-2 become effective the first day of the first calendar quarter ten months following Board of Trustees approval.

The twelve month period is to allow for entities to update processes and train operators on the revised requirements. The two month differential for TOP-003-2, Requirements R1 and R2 is to provide time for recipients of a data specification to respond to the request for data.

Retirement Date for Existing Standards

The existing Standards shall be retired at midnight of the day immediately prior to the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements will be retired at midnight of the day immediately prior to the first day of the first calendar quarter twelve months following Board of Trustees adoption.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Note: The Project 2007-03 SDT is recommending retirement of three requirements in PRC-001-1 because those requirements address data and data requirements which is covered in TOP-003-2. This redline shows the retired requirements, and a mapping document showing the approved requirements in PRC-001 and the proposed disposition of those requirements is posted on the Project 2007-03 page. The ballot of the conforming changes to PRC-001 is associated with the approval of TOP-003-2 and the implementation plan for this project.

More complete revisions to PRC-001 are addressed in the scope of Project 2007-06 SDT.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.
12. Seventh posting of revised standards on March 22, 2012.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008, following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that three requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **System Protection Coordination**

2. **Number:** PRC-001-2

3. **Purpose:**

   To ensure system protection is coordinated among operating entities.

4. **Applicability**

   4.1. Balancing Authorities

   4.2. Transmission Operators

   4.3. Generator Operators

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees' adoption.

B. Requirements

R1. Each Transmission Operator, Balancing Authority, and Generator Operator shall be familiar with the purpose and limitations of protection system schemes applied in its area. *[Violation Risk factor: High][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

R2. A Generator Operator or Transmission Operator shall coordinate new protective systems and changes as follows.

R2.1. Each Generator Operator shall coordinate all new protective systems and all protective system changes with its Transmission Operator and Host Balancing Authority. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

R2.2. Each Transmission Operator shall coordinate all new protective systems and all protective system changes with neighboring Transmission Operators and Balancing Authorities. *[Violation Risk Factor: High]][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

R3. Each Transmission Operator shall coordinate protection systems on major transmission lines and interconnections with neighboring Generator Operators, Transmission Operators, and Balancing Authorities. *[Violation Risk Factor: High]][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

C. Measures

M1. Each Generator Operator and Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, revised fault analysis study, letters of agreement on settings, notifications of changes, or other equivalent evidence that will be used to confirm that there was coordination of new protective systems or changes as noted in Requirements 2, 2.1, and 2.2.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity shall be responsible for compliance monitoring.

1.2. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Generator Operator and Transmission Operator shall have current, in-force documents available as evidence of compliance for Measure 1.

If an entity is found non-compliant, the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

1.3. Compliance Monitoring and Assessment Processes

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

Reqmt. #	VRF	Time Horizon	Lower	Moderate	High	Severe
R1	High	Operations Planning, Same-day Operations, Real-time Operations	N/A	N/A	The responsible entity failed to be familiar with the limitations of protection system schemes applied in its area.	The responsible entity failed to be familiar with the purpose of protection system schemes applied in its area.
R2	N/A	N/A	N/A	N/A	N/A	N/A
R2.1	High	Operations Planning, Same-day Operations, Real-time Operations	The Generator Operator failed to coordinate one new protective system or protective System change with either its Transmission Operator or its Host Balancing Authority or both.	The Generator Operator failed to coordinate two new protective systems or protective System changes with either its Transmission Operator or its Host Balancing Authority, or both.	The Generator Operator failed to coordinate three new protective systems or protective System changes with either its Transmission Operator or its Host Balancing Authority, or both.	The Generator Operator failed to coordinate more than three new protective systems or protective System changes with its Transmission Operator or its Host Balancing Authority, or both.
R2.2	High	Operations Planning, Same-day Operations, Real-time Operations	The Transmission Operator failed to coordinate one new protective system or protective System change with neighboring Transmission Operators or Balancing Authorities, or both.	The Transmission Operator failed to coordinate two new protective systems or protective System changes with neighboring Transmission Operators or Balancing Authorities, or both.	The Transmission Operator failed to coordinate three new protective systems or protective System changes with neighboring Transmission Operators or Balancing Authorities, or both.	The Transmission Operator failed to coordinate more than three new protective systems or protective System changes with neighboring Transmission Operators or Balancing Authorities, or both.
R3	High	Operations Planning, Same-day	The Transmission Operator failed	The Transmission Operator failed	The Transmission Operator failed	The Transmission Operator failed

		Operations, Real-time Operations	to coordinate protection Systems on major transmission lines and interconnections with one of its neighboring Generator Operators, Transmission Operators, or Balancing Authorities.	to coordinate protection Systems on major transmission lines and interconnections with two of its neighboring Generator Operators, Transmission Operators, or Balancing Authorities.	to coordinate protection Systems on major transmission lines and interconnections with three of its neighboring Generator Operators, Transmission Operators, or Balancing Authorities.	to coordinate protection Systems on major transmission lines and interconnections with three or more of its neighboring Generator Operators, Transmission Operators, and Balancing Authorities.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
0	August 25, 2005	Fixed Standard number in Introduction from PRC-001-1 to PRC-001-0	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2	TBD	Delete data requirements as they are now handled in TOP-003-2.	Deleted Requirements 2, 5, and 6.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Note: The Project 2007-03 SDT is recommending retirement of three requirements in PRC-001-1 because those requirements address data and data requirements~~,~~ which is covered in TOP-003-2. This redline shows the retired requirements, and a mapping document showing the approved requirements in PRC-001 and the proposed disposition of those requirements is posted on the Project 2007-03 page. The ballot of the conforming changes to PRC-001 is associated with the approval of TOP-003-2 and the implementation plan for this project.

More complete revisions to PRC-001 are addressed in the scope~~-~~ of Project 2007-06 SDT.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.
9. Fourth posting of revised standard on August 4, 2010.
10. Fifth posting of revised standard on April 26, 2011.
11. Sixth posting of revised standard on December 14, 2011.

~~11.~~12. Seventh posting of revised standards on March 22, 2012.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008, following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. ~~-~~As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. The SDT is also recommending that ~~3~~ three requirements in PRC-0001-1 be retired due to the fact that those requirements deal with data and data requirements will be covered in the proposed TOP-003-2.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for successive ballot.	1Q12
2. Post for recirculation ballot.	2Q12
3. Submit to BOT.	~~3~~2Q12

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **System Protection Coordination**

2. **Number:** PRC-001-2

3. **Purpose:**

   To ensure system protection is coordinated among operating entities.

4. **Applicability**

   4.1. Balancing Authorities

   4.2. Transmission Operators

   4.3. Generator Operators

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twelve months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twelve months following Board of Trustees' adoption.

B. Requirements

R1. Each Transmission Operator, Balancing Authority, and Generator Operator shall be familiar with the purpose and limitations of protection system schemes applied in its area. *[Violation Risk factor: High][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

R2. A Generator Operator or Transmission Operator shall coordinate new protective systems and changes as follows.

R2.1. Each Generator Operator shall coordinate all new protective systems and all protective system changes with its Transmission Operator and Host Balancing Authority. *[Violation Risk Factor: High][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

R2.2. Each Transmission Operator shall coordinate all new protective systems and all protective system changes with neighboring Transmission Operators and Balancing Authorities. *[Violation Risk Factor: High]][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

R3. Each Transmission Operator shall coordinate protection systems on major transmission lines and interconnections with neighboring Generator Operators, Transmission Operators, and Balancing Authorities. *[Violation Risk Factor: High]][Time Horizon: Operations Planning, Same-day Operations, Real-time Operations]*

C. Measures

M1. Each Generator Operator and Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, revised fault analysis study, letters of agreement on settings, notifications of changes, or other equivalent evidence that will be used to confirm that there was coordination of new protective systems or changes as noted in Requirements 2, 2.1, and 2.2.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

The Regional Entity shall be responsible for compliance monitoring.

~~1.2. Compliance Monitoring and Reset Time Frame~~

~~One or more of the following methods will be used to assess compliance:~~

- ~~Self-certification (Conducted annually with submission according to schedule.)~~
- ~~Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)~~
- ~~Periodic Audit (Conducted once every three years according to schedule.)~~
- ~~Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)~~

~~The Performance-Reset Period shall be 12 months from the last finding of non-compliance.~~

~~1.3.~~1.2. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

Each Generator Operator and Transmission Operator shall have current, in-force documents available as evidence of compliance for Measure 1.

If an entity is found non-compliant, the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

~~1.4.~~1.3. Compliance Monitoring and Assessment Processes

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)

- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

~~1.5.~~1.4. Additional Compliance Information

None.

2. Violation Severity Levels

Reqmt. #	VRF	Time Horizon	Lower	Moderate	High	Severe
R1	High	Operations Planning, Same-day Operations, Real-time Operations	N/A	N/A	The responsible entity failed to be familiar with the limitations of protection system schemes applied in its area.	The responsible entity failed to be familiar with the purpose of protection system schemes applied in its area.
R2	N/A	N/A	N/A	N/A	N/A	N/A
R2.1	High	Operations Planning, Same-day Operations, Real-time Operations	The Generator Operator failed to coordinate one new protective system or protective ~~system~~ System change with either its Transmission Operator or its Host Balancing Authority or both.	The Generator Operator failed to coordinate two new protective systems or protective ~~system~~ System changes with either its Transmission Operator or its Host Balancing Authority, or both.	The Generator Operator failed to coordinate three new protective systems or protective ~~system~~ System changes with either its Transmission Operator or its Host Balancing Authority, or both.	The Generator Operator failed to coordinate more than three new protective systems or protective ~~system~~ System changes with its Transmission Operator or its Host Balancing Authority, or both.
R2.2	High	Operations Planning, Same-day Operations, Real-time Operations	The Transmission Operator failed to coordinate one new protective system or protective ~~system~~ System change with neighboring Transmission Operators or Balancing Authorities, or both.	The Transmission Operator failed to coordinate two new protective systems or protective ~~system~~ System changes with neighboring Transmission Operators or Balancing Authorities, or both.	The Transmission Operator failed to coordinate three new protective systems or protective ~~system~~ System changes with neighboring Transmission Operators or Balancing Authorities, or both.	The Transmission Operator failed to coordinate more than three new protective systems or protective ~~system~~ System changes with neighboring Transmission Operators or Balancing Authorities, or both.
R3	High	Operations Planning,	The Transmission	The Transmission	The Transmission	The Transmission

		Same-day Operations, Real-time Operations	Operator failed to coordinate protection ~~systems~~ Systems on major transmission lines and interconnections with one of its neighboring Generator Operators, Transmission Operators, or Balancing Authorities.	Operator failed to coordinate protection ~~systems~~ Systems on major transmission lines and interconnections with two of its neighboring Generator Operators, Transmission Operators, or Balancing Authorities.	Operator failed to coordinate protection ~~systems~~ Systems on major transmission lines and interconnections with three of its neighboring Generator Operators, Transmission Operators, or Balancing Authorities.	Operator failed to coordinate protection ~~systems~~ Systems on major transmission lines and interconnections with three or more of its neighboring Generator Operators, Transmission Operators, and Balancing Authorities.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
0	August 25, 2005	Fixed Standard number in Introduction from PRC-001-1 to PRC-001-0	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2	TBD	Delete data requirements as they are now handled in TOP-003-2.	Deleted Requirements 2, 5, and 6.

Resolution of Issues Assigned to Project 2007-03 Real-time Operations Standard Drafting Team

Standard	Source	Language	Resolution
TOP-001			
TOP-001-1	FERC Order 693	1580 - Consider adding other measures and levels of non-compliance.	Measures and VSLs have been assigned to all requirements.
TOP-001-1	FERC Order 693	1585 - Clarify the definition of "emergency" and define the criteria for entering into the various states. Also define the authority for declaring these states.	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03 which has not yet started. The TOP standards have been re-written to specifically address what a Transmission Operator is responsible for. The proposed TOP requirements are no longer restricted to the undefined term 'operating emergency' and are now more inclusive and stringent than the previous requirement. Indeed, the undefined term 'operating emergency' is no longer utilized in the proposed revisions. Therefore, any delay in defining operating states in the EOP Project has no effect on the TOP standards.
TOP-001-1	FERC Order 693	1588 - Consider Santa Clara's comments to provide that the transmission operator may	This is covered in proposed TOP-001-2, Requirement R5.

Standard	Source	Language	Resolution
		notify the reliability coordinator or the balancing authority that it is removing facilities from service as part of the standards development process.	
TOP-001-1	Version 0 Team	What is 'clear decision making authority'?	Requirement using this term was deleted as not needed in a reliability standard. The standards already require the necessary actions.
TOP-001-1	Version 0 Team	Need to define single, central communications point during emergencies	This is an issue for COM standards.
TOP-001-1	Version 0 Team	Some emergencies will require follow up notification as opposed to immediate	Requirements have been re-written to eliminate confusion.
TOP-001-1	Version 0 Team	Define emergency	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03 which has not yet started.
TOP-001-1	Version 0 Team	Need to expand included entities	Applicability has been reviewed by the SDT and changed as required.
TOP-002			
TOP-002-2	FERC Order 693	1600 - Address critical energy infrastructure confidentiality as part of the routine standard development process.	Restrictions due to confidentiality have been eliminated by re-writing the data specification requirements in proposed TOP-003-2.

Standard	Source	Language	Resolution
TOP-00-2	FERC Order 693	1601 – Require next day analysis for all IROLs to identify and communicate control actions to system operators	See proposed TOP-002-3, Requirements R1, R2, and R3.
TOP-002-2	FERC Order 693	1603 - Requires next-day analysis of minimum voltages at nuclear power plants auxiliary power buses.	Next day analysis is required in proposed TOP-002-3, R1. A specified minimum voltage limit is by definition an SOL which must be studied in proposed TOP-002-3, Requirement R1. Additionally, approved NUC-001-2, Requirements R3 & R4.1 require the transmission entity to incorporate NPIRs in their planning and operating analyses. Approved FAC-011-2 and approved FAC-014-2, Requirement R2 require the Transmission Operator to incorporate SOLs into their analyses. All data required for Operational Planning Analyses is stipulated in proposed TOP-003-2. Approved NUC-001-2, Requirements R3 & R8 covers the information flowing back to the nuclear plant operator.
TOP-002-2	FERC Order 693	1604/1608 - Requires simulation contingencies to match what will actually happen in the field.	This is covered in proposed TOP-002-3, Requirement R1 by the phrase "and shall represent projected System conditions".
TOP-002-2	FERC Order 693	1606 - Commenters did not take issue with the proposed interpretation of the term "deliverability" as "the ability to deliver the output from generation resources to firm load without any reliability criteria violations for plausible generation dispatches."[1] The Commission adopts this proposed	Deliverability and limits are included in Operational Planning Analysis in TOP-002-3, Requirement R1. Operational Planning Analysis contains deliverability and much more and is thus more stringent than the Order. Limit violations in the Operational Planning Analysis will show any deliverability problems regardless of type and proposed requirements mandate

[1] Id. at P 974.

Standard	Source	Language	Resolution
		interpretation. In order to ensure the necessary clarity, the term as used in Requirement R7 of TOP-002-2 should be understood in this manner.	that these issues be resolved. In addition, the proposed requirements clearly state that an individual entity, the Transmission Operator, is wholly responsible for these concerns which is an improvement over the previous vaguely worded requirement that placed this responsibility with the Balancing Authority which has no control over the issues involved.
TOP-002-1	Fill in the Blank Team	Remove "in accordance with NERC, Regional Reliability Organization, sub-regional, and local reliability requirements" from R6 and "in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes" from R12 .	Requirement R6 has been deleted. For the Balancing Authority – deleted as not applicable as the Balancing Authority needs only respond to CPS and DCS. For the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. Requirement R12 has been deleted as duplicative of MOD-030-2 (not yet approved).
TOP-002-2: R19	NERC Audit Observation Team	How do you address the term - verify "Accurate"	Requirement R19 was eliminated as unmeasurable.
TOP-002-2	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R5 of PRC-001-1 in TOP-002 R1, R3, R4, or R5 or TOP-003 R1, R3, R4	See proposed TOP-003-2, Requirement R1.
TOP-002-1	Version 0 Team	Define N-1	Requirement R6 has been deleted.

Standard	Source	Language	Resolution
			For the Balancing Authority – deleted as not applicable as the Balancing Authority needs only respond to CPS and DCS. For the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. This term is no longer in use for this standard.
TOP-002-1	Version 0 Team	Define ‘without intentional delay’	This term was considered unmeasurable and has been deleted from this standard.
TOP-002-1	Version 0 Team	Reliability should ‘trump’ confidentiality	The SDT has removed all references to confidentiality by re-writing the data specification requirements.
TOP-002-1	Version 0 Team	Coordination of planning required	The SDT has re-written and tightened up the requirements for distributing data and information.
TOP-002-1	Version 0 Team	Limit of 2 tests per year	This requirement has been deleted by the SDT as verification testing is not needed in this standard.
TOP-002-1	VRF Team	R9 – related to INT-003	Requirement R9 has been deleted as it is duplicative of approved INT-003-2
TOP-002-1	VRF Team	R14 & 14.1 – ambiguous	Deleted – duplicative of proposed TOP-003-2.
TOP-002-1	VRF Team	R2 – administrative in nature, not a real requirement	The SDT agreed and deleted this requirement.
		TOP-003	
TOP-003-0	FERC Order 693	1620 & 1621 - Incorporate an appropriate lead time for planned outages using suggestions from the various commenters. We direct the ERO to modify the Reliability	The SDT posed a question on this issue as a fact finding exercise in the second posting of this project in order to assist them in making a decision on how to respond to the FERC directive as requested in Order 693 – “The ERO should utilize the information filed by

Standard	Source	Language	Resolution
		Standard to incorporate an appropriate lead time for planned outages.	commenters in the Reliability Standards development process." The majority of respondents indicated that they do not feel that there is a reliability based need for such a North American requirement. Several respondents pointed out that such a requirement (if needed at all for reliability) would be better suited to a regional standard and several others stated that such requirements already exist in their particular regions. There are several regions that have existing rules for lead times but they are all different and are based on the requirements of their regional markets. Any attempt to impose a North American standard runs the risk of interfering with those FERC approved markets. While NERC Reliability Standards are intended to promote reliability, they must at the same time accommodate competitive electricity markets. After reviewing the industry comments, the SDT concluded that proposed TOP-001-2, Requirements R5 & R6 adequately cover this issue. The SDT bases this position on the requirement which includes the Operations Planning Time Horizon that covers the period from one day to one year. The requirement mandates that actions are coordinated. The SDT interprets this to include planned outages when they are known. Therefore, the SDT has not included a standard lead time in the revised requirements.
TOP-003-0	FERC Order 693	1622 - Consider TVA's suggestion for including breaker outages within the	New data specifications in proposed TOP-003-2 handle this concern.

Standard	Source	Language	Resolution
		meaning of facilities that are subject to advance notice for planned outages.	
TOP-003-0	FERC Order 693	1624 - Require any facility, that in the opinion of the reliability coordinator, balancing authority, or transmission operator, will have a direct impact on the reliability of the bulk power system be subject to the requirement R1 for planned outage coordination.	New data specifications in proposed TOP-003-2, Requirement R1 (and bullets) handle this concern.
TOP-003-0	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R5 of PRC-001-1 in TOP-002 R1, R3, R4, or R5 or TOP-003 R1, R3, R4	See proposed TOP-003-2, Requirement R1
TOP-003-0	Version 0 Team	Outage information needed sooner than 1 day prior	New data specifications in proposed TOP-003-2 handle this concern.
TOP-003-0	Version 0 Team	RA can't request outage cancellation	Deleted – now covered in Project 2006-06.
TOP-003-0	Version 0 Team	Submit outage data ASAP but no later than noon day ahead	New data specifications in proposed TOP-003-2 handle this concern.
TOP-003-0	VRF Team	R4 – poorly written	Deleted – now covered in Project 2006-06.
TOP-003-1	FMPA – Frank Gaffney	With respect to requirement R1.2, why is the TOP responsible for providing generator outage information? Isn't that the BA's or GOP's responsibility and isn't this redundant with IRO-010-1?	Requirement deleted as duplicative of proposed TOP-003-2, R1.

Standard	Source	Language	Resolution
TOP-004			
TOP-004-1	FERC Order 693	1636 - Modify requirement R4 to state that the system should be restored to respect proven limits as soon as possible taking no more than 30 minutes.	Replaced by proposed TOP-001-2, R7 through R11. T_v is more stringent than the existing 30 minute requirement for IROLs and 30 minutes is retained for selected SOLs. Unknown states, in this context, cannot exist because valid operating limits have been determined for all Facilities in a TOP's footprint. The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to Emergencies.
TOP-004-1	FERC Order 693	1637 - Reliability coordinators should report any IROL violations to NERC on a monthly basis for one year beginning August 2, 2007.	Not within the scope of the SDT.
TOP-004-1	FERC Order 693	1638 - Defines high risk conditions under which the system must be operated to respect multiple outages in requirement R3. We direct the ERO to develop a modification to the Reliability Standard that explicitly incorporates this interpretation with the details identified in the Reliability Standards development process (. . .the Commission proposed to interpret "multiple outages" in the context of Requirement R3 to include multiple element outages resulting from high risk conditions such as hurricanes, wild fires, ice storms or	The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to the cited situations. The method chosen to respond to a given catastrophic challenge to a localized portion of the bulk power system cannot be predetermined by science; rather, it is an art. Reliability entities develop their response mechanisms based on experience in their local areas to achieve the maximum societal benefit during these periods. In addition, FAC-011-2 and FAC-014-2 deal with specific requirements for dealing with multiple contingencies.

Standard	Source	Language	Resolution
		periods of high solar magnetic disturbances during which the probability of multiple outages approaches that of a single element outage. This is not an exhaustive list but is meant to contain illustrative examples, and the Reliability Standards development process should develop a procedure to identify applicable high risk conditions. Under . . . high-risk conditions, the Commission understands that systems are normally operated in a more secure manner so that the Bulk-Power System can withstand multiple outages. These multiple outages exceed the normal N-1 criterion because the probability of multiple outages during high risk conditions approaches that of a single outage during normal conditions.)	
TOP-004-1	FERC Order 693	1639 - Consider Santa Clara's comments regarding changes to requirement R2 in the standards development process. (Santa Clara states that Requirement R2 of the Reliability Standard should be revised to include frequency monitoring in addition to the monitoring of voltage, real and reactive power flows.)	This is covered as part of the new data specification requirements in proposed TOP-003-2 for the Transmission Operator & Balancing Authority. The Reliability Coordinator is covered by proposed IRO-010-1, Requirement R3.
TOP-004-1	FERC Order 693	1641 - NERC should report the results of the survey to the Commission within 18 months	Not within the scope of the SDT.

Standard	Source	Language	Resolution
		of the effective date of this rule.	
TOP-004-1	Fill in the Blank Team	No action required	No action required.
TOP-004-1	Version 0 Team	Operations should conform to planning standards	Operations and planning are different timeframes with different problems and solutions
TOP-004-1	Version 0 Team	Vagueness in application of IROL limits	Requirement moved to proposed TOP-001-2, Requirement R5 and clarified.
TOP-004-1	Version 0 Team	Define SOL & IROL	These are defined terms in the NERC Glossary.
TOP-004-1	Version 0 Team	Clarify roles	Applicability has been reviewed and updated as necessary.
TOP-004-1	Version 0 Team	Define (or remove) practical	The term has been removed.
TOP-004-1	Version 0 Team	Specify disconnection as acceptable in R5	The requirement has been deleted. Relationships between the Reliability Coordinator and Transmission Operator as described in the revised standards cover these actions.
TOP-005			
TOP-005-1	FERC Order 693	1648 - Include information about the operational status of special protection systems and power system stabilizers in Attachment 1.	Attachment 1 has been deleted and replaced by the new data specification requirement in proposed TOP-003-2.
TOP-005-1	FERC Order 693	1649 - Delete references to confidentiality agreements but ensure critical energy infrastructure confidentiality is addressed in the standards development process.	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	FERC Order 693	1650 - Consider FirstEnergy’s modifications to Attachment 1 and ISO-NE’s recommended revision to requirement R4 in the standards	Attachment 1 has been deleted and replaced by the new data specification requirement in proposed TOP-003-2.

Standard	Source	Language	Resolution
		development process. ISO-NE recommends that the reference to "purchasing-selling entity" in Requirement R4 should be replaced with "generator owner, transmission owner, and LSE.	Requirement R4 has been superseded by proposed TOP-003-2 which does include the indicated entities.
TOP-005-1	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R2 of PRC-001-1 in TOP-005. Note: These requirements are being removed from PRC.	See proposed TOP-003-2, Requirement R1

TOP-005-1	Version 0 Team	Generator data should include voltage control & stabilizers	New data specifications in proposed TOP-003-2 handle this concern.
TOP-005-1	Version 0 Team	GO needs to supply data to BA & TO	New data specifications in proposed TOP-003-2 handle this concern
TOP-005-1	Received for the November 4, 2009 Technical Conference on Interpretations of Standards	NERC staff believes that the interpretation does not support the stated purpose of IRO-005-1: "The Reliability Coordinator must be continuously aware of conditions within its Reliability Coordinator Area and include this information in its reliability assessments. The	While this issue was entered against the Transmission Operator as the interpretation request was primarily for TOP-005-1, the emphasis on such informative actions has shifted in current revision projects. The proposed IRO-010-1, Requirement R1 gives the Reliability Coordinator the right to ask for any reliability related data that they need to perform their Reliability Coordinator task.

Standard	Source	Language	Resolution
	from Manitoba Hydro	Reliability Coordinator must monitor BES parameters that may have significant impacts upon the Reliability Coordinator Area and neighboring Reliability Coordinator Areas." Given that Requirement R12 pre-supposes that the SPS is armed to address inter-Balancing Authority or inter-Transmission Operator impacts (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation), the argument not discussed in the interpretation is that the SPS itself with one communication channel in service can be viewed for advance planning or reliability assessment purposes as a single contingency (loss of the communication channel). The question asked by the requestor indicates that the operation of the SPS on a single channel is known ahead of the timeframe for which the SPS may be armed and that the condition was not first identified when the SPS was called to operate. In this regard, the Reliability Coordinator must be aware of the less dependable state of the SPS in order to properly assess the impact and plan for the next single contingency that it conceivably could	And it also mandates the Transmission Operator to provide said data in Requirement R3. (Note – This standard has been approved by the BOT but has not yet been approved by FERC.)

Standard	Source	Language	Resolution
		experience. In this case, the Reliability Coordinator may wish to consider the loss of an armed SPS when performing its reliability assessments. While the Reliability Coordinator may not elect to proactively position the system to withstand the loss of the SPS that is operating on a single communication channel, the Reliability Coordinator may elect to develop a contingency plan in the event the SPS does fail to operate as designed or if the remaining communication channel is lost. The importance of the SPS relative to current or anticipated system conditions would be considerations for the Reliability Coordinator. This consideration only becomes possible if the Transmission Operator notifies the Reliability Coordinator that the SPS is operating on a single communication channel. Therefore, Transmission Operator notification to the Reliability Coordinator of this condition raises the Reliability Coordinator's situational awareness that may influence current or future operating conditions or decisions in a preventive rather than reactive manner. NERC staff does agree that the SPS	

Standard	Source	Language	Resolution
		is still mission capable with only one communication channel in service, but degraded in terms of its dependability due to the unavailability of redundant communications channels. The fact that a second communications channel was part of the original design of the SPS suggests that both channels were important to the dependability of the system, and that the unavailability of either channel causes some degradation in the overall dependability of the SPS. Additionally, the team equated “any degradation” with “potential failure to operate as expected” in IRO-005. The use of the term “or” connecting these two phrases in the standard indicates these were not intended to be equivalent. Therefore, NERC staff believes the conclusion reached by the team that the two terms are synonymous is incorrect. Further, the specific circumstances contemplated in the interpretation request are not likely to occur often and the additional burden to Transmission Operators to notify the Reliability Coordinator is de minimis when compared to the improved situational awareness that would result. On	

Standard	Source	Language	Resolution
		this basis, NERC staff believes the interpretation is not serving the best interests of reliability and should be remanded to the team for further consideration of the NERC staff opinion.	
TOP-006			
TOP-006-1	FERC Order 693	1660 & 1661 - Add requirement related to the provision of minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the bulk power system.	Minimum capabilities for Transmission Operators are being handled in project 2009-02, Real-time Monitoring and Analysis Capabilities. Requirement for phase angle information is covered by proposed TOP-003-2.
TOP-006-1	FERC Order 693	1663 - Clarify the meaning of “appropriate technical information” concerning protective relays. To provide more clarity, criteria that define what “appropriate technical information” is necessary should be specified so that operators can make better informed decisions.	This term is no longer used. Requirement R3 deleted as duplicative of proposed PER-005-1 (training) and TOP-003-2 (data).
TOP-006-1	FERC Order 693	1664 - Consider APPA’s comments regarding missing measures in the standards development process.	Measures have been assigned to all requirements.
TOP-006-1	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards.	See proposed TOP-003-2, Requirement R1

Standard	Source	Language	Resolution
		Consider putting R6 of PRC-001-1 in TOP-003 R5 or TOP-006. Note: These requirements are being retired in PRC-001-1.	
TOP-006-1	Version 0 Team	Need to match roles with FM	Applicability has been reviewed by the SDT and changed as required in accordance with the FM and the Compliance Registry.
TOP-006-1	Version 0 Team	Monitor frequency at multiple points	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	Version 0 Team	Load forecasting data required	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	Version 0 Team	GO needs to provide normal & emergency data	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	VRFs Team	R1, 1.1, 1.2 – 'available in emergency situation' may be needed	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-1	VRFs Team	R3 – define appropriate	This requirement was deleted as duplicative of approved PRC-001-1, Requirement R1.
TOP-006-1	VRFs Team	R4 – What information is required and what is a load pattern?	New data specifications in proposed TOP-003-2 handle this concern.
TOP-006-2	FMPA – Frank Gaffney	With respect to requirements R1 and R1.2, why are BAs responsible for information regarding transmission resources available for use? Isn't that the role of the TOP?	Deleted – covered as part of the new data specification requirements in proposed TOP-003-2.
TOP-006-2	FMPA – Frank Gaffney	With respect to requirement R2, why is the BA responsible for monitoring transmission line status, voltage, load tap changer settings, and reactive power in general?	Deleted – SDT agrees.

Standard	Source	Language	Resolution
		Monitoring and managing reactive resources, voltage and tap settings is clearly made the responsibility of the TOP in VAR-001-1a.	
TOP-006-2	FMPA – Frank Gaffney	With respect to requirement R3 why does the BA need to understand protective relaying? Isn't that the role of the TOP and GOP?	Requirement R3 deleted as duplicative of proposed PER-005-1 (training) and proposed TOP-003-2 (data).
TOP-007			
TOP-007-0	FERC Order 693	1673 - Consider the NRC's comments on voltage requirements as part of the standards development process.	Next day analysis is required in proposed TOP-002-3, R1. A specified minimum voltage limit is by definition an SOL which must be studied in proposed TOP-002-3, Requirement R1. Additionally, approved NUC-001-2, Requirements R3 & R4.1 require the transmission entity to incorporate NPIRs in their planning and operating analyses. Approved FAC-011-2 and approved FAC-014-2, Requirement R2 require the Transmission Operator to incorporate SOLs into their analyses. All data required for Operational Planning Analyses is stipulated in proposed TOP-003-2. Approved NUC-001-2, Requirements R3 & R8 covers the information flowing back to the nuclear plant operator.
TOP-007-0	Version 0 Team	Need to define evidence of evaluation	This term isn't used in the requirements – no action required.
TOP-007-0	Version 0 Team	Need to tighten the non-compliance terms	Measures and VSL have been assigned to all requirements.
TOP-007-0	Version 0 Team	Not enforceable with current criteria	Not enough information provided to address concern.
TOP-007-0	Version 0 Team	RA should be included	Reliability Coordinator is now covered in Project 2006-06.

Standard	Source	Language	Resolution
TOP-007-0	Version 0 Team	More of a compliance issue than a true standard	Not enough information provided to address concern.
		TOP-008	
TOP-008-1	FERC Order 693	1681 - Consider APPA's comments regarding missing measures in the standards development process.	Measures have been assigned to all requirements.
		PER-001	
PER-001-0	Version 0 Team	Data retention should be 1 year	This standard will be retired.
		Transferred from Project	
PRC-001	Project 2007-06	1441- S- Ref 10339 - Clarify the term corrective action. 1440. We believe that [t]he transmission operator shall take corrective action as soon as possible refers to transmission operators taking operator control actions. It does not refer to troubleshooting, repairing or replacing failed relays or equipment, etc., since these time-consuming corrective actions would prolong the risk of cascading failures to the Bulk-Power System. 1441. We direct the ERO to clarify the term corrective action consistent with this discussion when it modifies PRC-001-1 in the Reliability Standards development process.	Addressed in Requirement R5 in proposed TOP-001-2 where the Transmission Operator coordinates its operations.
PRC-001	Project 2007-06	1444 - S- Ref 10340 - Consider First Energy and the California PUCs comments about the	Addressed in Requirement R5 in proposed TOP-001-2 where the Transmission Operator coordinates its operations. The

Standard	Source	Language	Resolution
		maximum time for corrective actions in the standards development process. 1428. California PUC contends that imposing a time restriction for returning a system to a stable state may cause more harm than good since additional information and options may be available as time elapses. It repeats its suggestion from its earlier comments on the Staff Preliminary Assessment and proposes the following alternative language: Transmission or generation operators shall carry out corrective control actions, i.e., returning the system to a stable state that respects system requirements as soon as possible, and no longer than 30 minutes, except where a longer response time is feasible, or where a longer response is demonstrated to produce a better ultimate solution without unacceptable interim risk. 1431. FirstEnergy contends that Requirement R2.1 essentially requires generator operators to report all protective relay or equipment failures, since generator operators may not be able to tell which failures will reduce system reliability. FirstEnergy suggests that R2.1 should be	Transmission Operator is the true functional entity responsible here. Covered as part of the new data specification requirements in proposed TOP-003-2.

Standard	Source	Language	Resolution
		revised to require generator operators to report all equipment failures or outages. FirstEnergy further suggests that PRC-001-1 be revised to provide that if a company performs reasonable testing procedures, undiscoverable equipment failures will not be violations of R2.1	
PRC-001	Project 2007-06	1449 - S- Ref 10341 - Upon detection of failures in relays or protection system elements on the bulk power system that threaten reliability, relevant transmission operators must be informed promptly, but within a specified period of time. -- (2) a requirement that transmission and generator operators be informed immediately upon the detection of failures in relays or protection system elements on the Bulk-Power System that would threaten reliable operation, so that these entities could carry out appropriate corrective control actions consistent with those used in mitigating IROL violations.	Covered as part of the new data specification requirements in proposed TOP-003-2.
PRC-001	Project 2007-06	1449 - S- Ref 10343 - Para 1420. Once informed, transmission operators must carry out corrective control actions that return the system to a stable state that respects system requirements as soon as possible and no	Covered in TOP-001-2, Requirement R11.

		longer than 30 minutes. 1440. [t]he transmission operator shall take corrective action as soon as possible refers to transmission operators taking operator control actions. It does not refer to troubleshooting, repairing or replacing failed relays or equipment, etc., since these time-consuming corrective actions would prolong the risk of cascading failures to the Bulk-Power System.	

Violation Risk Factor and Violation Severity Level Assignments

Project 2007-03 Real-time Operations

Violation Risk Factor and Violation Severity Level Assignments

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in TOP-001-2 – Transmission Operations, TOP-002-3 – Operations Planning, and TOP-003-2 – Operational Reliability Data.

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

Justification for Assignment of Violation Risk Factors in TOP-001-2, TOP-002-3, TOP-003-2:

The SDT applied the following NERC criteria when proposing VRFs for the requirements in TOP-001-2:

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a Cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or Cascading failures; or, a requirement in a planning time frame that, if violated, could, under Emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a Cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or Cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or Cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under Emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or Cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement
A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor and control the Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the Eemergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. A planning requirement that is administrative in nature.

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:[1]

Guideline (1) — Consistency with the Conclusions of the Final Blackout Report
The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the bulk power system.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the bulk power system:[2]

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief

Guideline (2) — Consistency within a Reliability Standard
The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

Guideline (3) — Consistency among Reliability Standards

[1] North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").
[2] Id. at footnote 15.

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) — Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC's definition of that risk level.

Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC's VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC's Reliability Standards and implies that these requirements should be assigned a "High" VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are eleven requirements in TOP-001-2. None of the eleven requirements were assigned a "Lower" VRF. Requirements R1, R2, R4, R7, and R11 were assigned a "High" VRF while all of the other requirements were given a "Medium" VRF.

VRF for TOP-001-2, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements so only one VRF was assigned. Therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved IRO-001-1.1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to complying with a directive: IRO-001-1.1 for a directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with a Reliability Directive issued by a Transmission Operator could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or Cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R1 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved TOP-001-1.1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to the inability of complying with a directive: IRO-001-1.1 for a directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Not informing a Transmission Operator of the inability to perform a Reliability Directive could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or Cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R2 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R5) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to informing other reliability entities of known or expected conditions.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify other reliability entities of known or expected Emergency conditions could lead to bulk power system instability, separation or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R3 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R4 is a new requirement, so there are no comparable requirements in other standards with which to compare VRFs.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to render Emergency assistance could lead to bulk power system instability, separation or Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R4 has only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R5) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to the coordination of activities with other reliability entities.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate activities could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or Cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate activities will not, by itself, lead to instability, separation, or Cascading failures.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R5 contains only one objective. Therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R6 has been assigned a Medium VRF and is the replacement for proposed TOP-003-1, Requirement R3 which was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate outages could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or Cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system, regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate outages will not, by itself, lead to instability, separation, or Cascading failures

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R6 contains only one objective. Therefore only one VRF was assigned to the requirement.

VRF for TOP-001-2, Requirement R7:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-004-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to operating within the IROL.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R7 mandates that entities operate within each identified IROL and its associated IROL T_v. By definition, if an entity fails to do so, bulk power system instability, separation, or Cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R7 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R8:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R8 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R8 is a notification requirement. If the Transmission Operator failed to notify the Reliability Coordinator of a specific System Operating Limit (SOL) that supports local area reliability, the Transmission Operator is still obligated to operate to alleviate the SOL through the proposed TOP-001-2, Requirement R9. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or Cascading failures.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R8 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R9:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R9 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R9 mandates that entities operate within each identified local SOL. Since local SOLs in Requirement R9, by definition, can't cause bulk power system instability, separation, or Cascading this requirement was assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R9 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R10:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R10 is a new requirement that was assigned a Medium VRF. When evaluating the VRF to be assigned to this requirement, the SDT took into account that this requirement is an informational item, not the actual action to alleviate the problem. The action is covered in proposed TOP-001-2, Requirements R7 and R9. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or Cascading failures. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R10 mandates that entities notify their Reliability Coordinator of actions taken to alleviate a problem. The action has already been taken as per proposed TOP-001-2, Requirements R7, R9, and R11 and this requirement is a simple notification requirement for informational purposes only. Therefore, bulk power system instability, separation, or Cascading failures are not likely to occur due to a failure to notify the Reliability Coordinator. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 5 - Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R10 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R11:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R11 is a new requirement, so there are no comparable requirements with which to compare VRFs. However, it is similar to approved TOP-008-1, Requirement R1 which has a High VRF. It is also

similar to proposed TOP-001-2, Requirement R7 which has been assigned a High VRF. Therefore, there is consistency among Reliability Standards.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R11 mandates that entities act or direct others to act to mitigate the magnitude and duration of exceeding an IROL and its associated IROL T_v or SOL identified in Requirement R8. By definition, if an entity fails to do so, bulk power system instability, separation, or Cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R11 addresses a single objective and has a single VRF.

Justification for Assignment of Violation Severity Levels for TOP-001-2, TOP-002-3, TOP-003-2:

In developing the VSLs for the TOP standard, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:

Lower	Moderate	High	Severe
Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full intent of the requirement.	Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.	Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.	Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.

FERC's VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in TOP-xxx-x meet the FERC Guidelines for assessing VSLs:

Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the "default" for penalty calculations.

VSLs for TOP-001-2 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines – Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved IRO-001-1.1, Requirement R8. That VSL has a Moderate violation for not complying with the Reliability Coordinator's directive for a valid reason but not informing the Reliability Coordinator of this fact. It then goes on to establish a Severe VSL for not complying with the directive. The SDT found little reason to separate out a Moderate VSL for not informing	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		the Transmission Operator. Whether it was for a valid reason or not, the consequences of the Transmission Operator not being aware of the fact that the directive was not being followed are potentially catastrophic. Therefore, the SDT has proposed only a Severe VSL and this VSL I more stringent than the VSL cited. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved TOP-001-1.1a, Requirement R3. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines – There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSL for a similar requirement is for the approved TOP-001-1a, Requirement R5. Those VSLs are also based on failure to notify reliability entities with no Lower or Higher VSL and a Moderate VSL for failure to inform while taking action and the Severe VSL for failure to inform and also not taking action. The SDT has split out the action part of the original requirement (see proposed TOP-001-2, Requirement R11) and this	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		requirement is now simply about failure to inform. The SDT gradated the VSLs at that point but the new VSLs and the old are equivalent at the Moderate level since the original VSL would have required failure to inform two entities – the Reliability Coordinator and at least one Transmission Operator. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are for the approved TOP-001-1a, Requirement R5. Those VSLs are also based on failure to notify reliability entities with no Lower or Higher VSL and a Moderate VSL for failure to inform while taking action and the Severe VSL for failure to inform and also not taking action. The SDT has split out the action part of the original requirement (see proposed TOP-001-2, Requirement R11) and this	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		requirement is now simply about failure to inform. The SDT gradated the VSLs at that point but the new VSLs and the old are equivalent at the Moderate level since the original VSL would have required failure to inform two entities – the Reliability Coordinator and at least one Transmission Operator. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R6.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to proposed TOP-003-1, Requirement R3. The VSL for that requirement is binary. When assigning the VSL for the new requirement, the SDT felt that it was possible to provide a gradual increasing scale for the VSL and assigned the VSLs appropriately.	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R7.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved TOP-004-2, Requirement R1. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R8:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R8.	Meets NERC's VSL guidelines. There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R9:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R9.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R10:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R10.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R11:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R11.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs but it is similar to approved TOP-008-1, Requirement R1. That VSL is binary as is the one proposed for this new requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

		Therefore, it decided that the VSL for this requirement should be binary. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.

Violation Risk Factor and Violation Severity Level Assignments

Project 2007-03 Real-time Operations

Violation Risk Factor and Violation Severity Level Assignments

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in TOP-001-2 – Transmission Operations, TOP-002-3 – Operations Planning, and TOP-003-2 – Operational Reliability Data.

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

Justification for Assignment of Violation Risk Factors in TOP-001-2, TOP-002-3, TOP-003-2:

The SDT applied the following NERC criteria when proposing VRFs for the requirements in TOP-001-2:

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to ~~bulk~~ Bulk ~~electric~~ Electric ~~system~~ System instability, separation, or a ~~cascading~~ Cascading sequence of failures, or could place the ~~bulk electric system~~Bulk Electric System at an unacceptable risk of instability, separation, or ~~cascading~~ Cascading failures; or, a requirement in a planning time frame that, if violated, could, under ~~emergency~~Emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to ~~bulk electric system~~Bulk Electric System instability, separation, or a ~~cascading~~ Cascading sequence of failures, or could place the ~~bulk electric system~~Bulk Electric System at an unacceptable risk of instability, separation, or ~~cascading~~ Cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

A requirement that, if violated, could directly affect the electrical state or the capability of the ~~bulk electric system~~Bulk Electric System, or the ability to effectively monitor and control the ~~bulk electric system~~Bulk Electric System. However, violation of a medium risk requirement is unlikely to lead to ~~bulk electric system~~Bulk Electric System instability, separation, or ~~cascading~~ Cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the ~~bulk electric system~~Bulk Electric System, or the ability to effectively monitor, control, or restore the ~~bulk electric system~~Bulk Electric System. However, violation of a medium risk requirement is unlikely, under ~~emergency~~Emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to ~~bulk electric system~~Bulk Electric System instability, separation, or ~~cascading~~ Cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the ~~bulk electric system~~Bulk Electric System, or the ability to effectively monitor and control the ~~bulk electric system~~Bulk Electric System; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the Eemergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the ~~bulk electric system~~Bulk Electric System, or the ability to effectively monitor, control, or restore the ~~bulk electric system~~Bulk Electric System. A planning requirement that is administrative in nature.

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:[1]

Guideline (1) — Consistency with the Conclusions of the Final Blackout Report

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the ~~Bulk-Power System~~bulk power system.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the ~~Bulk-Power System~~bulk power system:[2]

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief

Guideline (2) — Consistency within a Reliability Standard

[1] North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").
[2] Id. at footnote 15.

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

Guideline (3) — Consistency among Reliability Standards

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) — Consistency with NERC's Definition of the Violation Risk Factor Level

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC's definition of that risk level.

Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC's VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC's Reliability Standards and implies that these requirements should be assigned a "High" VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are eleven requirements in TOP-001-2. None of the eleven requirements were assigned a "Lower" VRF. Requirements R1, R2, R4, R7, and R11 were assigned a "High" VRF while all of the other requirements were given a "Medium" VRF.

VRF for TOP-001-2, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements so only one VRF was assigned. Therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R8) in approved IRO-001-1.1 that is assigned a High VRF. The requirements are viewed as similar since they both refer to complying with a directive: IRO-001-1.1 for a directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with a Reliability Directive issued by a Transmission Operator could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. Therefore, this requirement is assigned a High VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R1 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in approved TOP-001-1.1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to the inability of complying with a directive: IRO-001-1.1 for a directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Not informing~~-~~ a Transmission Operator of the inability to perform ~~A~~a Reliability Directive could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R2 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R5) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to informing other reliability entities of known or expected conditions.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify other reliability entities of known or expected Emergency conditions could lead to bulk power system instability, separation or ~~cascading~~ Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R3 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R4 is a new requirement, so there are no comparable requirements in other standards with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to render ~~emergency~~ Emergency assistance could lead to bulk power system instability, separation or ~~cascading~~ Cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R4 has only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R5) in approved TOP-001-1a that is assigned a High VRF. The requirements are viewed as similar since they both refer to the coordination of activities with other reliability entities.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate activities could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate activities will not, by itself, lead to instability, separation, or ~~cascading~~ Cascading failures.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R5 contains only one objective. Therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R6 has been assigned a Medium VRF and is the replacement~~-~~ for proposed TOP-003-1, Requirement R3 which was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate outages could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. The applicable entities are always responsible for maintaining the

reliability of the bulk power system, regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate outages will not, by itself, lead to instability, separation, or ~~cascading~~ Cascading failures

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R6 contains only one objective. Therefore only one VRF was assigned to the requirement.

VRF for TOP-001-2, Requirement R7:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in approved TOP-004-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to operating within the IROL.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R7 mandates that entities operate within each identified IROL and its associated IROL T_V. By definition, if an entity fails to do so, bulk power system instability, separation, or ~~cascading~~ Cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R7 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R8:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- ~~Bulk power system instability, separation, or cascading failures. Therefore, this requirement was assigned a Medium VRF.~~ FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R8 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R8 is a notification requirement. If the Transmission Operator failed to notify the Reliability Coordinator of a specific System Operating Limit (SOL) that supports local area reliability, the Transmission Operator is still obligated to operate to alleviate the SOL through the proposed TOP-001-2, Requirement R9. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R8 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R9:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R9 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R9 mandates that entities operate within each identified local SOL. Since local SOLs in Requirement R9, by definition, can't cause bulk power system instability, separation, or ~~cascading~~ Cascading this requirement was assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R9 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R10:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R10 is a new requirement that was assigned a Medium VRF. When evaluating the VRF to be assigned to this requirement, the SDT took into account that this requirement is an informational item, not the actual action to alleviate the problem. The action is covered in proposed TOP-001-2, Requirements R7 and R9~~ which have High VRFs~~. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or ~~cascading~~ Cascading failures. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R10 mandates that entities notify their Reliability Coordinator of actions taken to alleviate a problem. The action has already been taken as per proposed TOP-001-2, Requirements R7, R9, and R11 and this requirement is a simple notification requirement for informational purposes only. Therefore, bulk power system instability, separation, or ~~cascading~~ Cascading failures are not likely to occur due to a failure to notify the Reliability Coordinator. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 5 - Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R10 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R11:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R11 is a new requirement, so there are no comparable requirements with which to compare VRFs. However, it is similar to approved TOP-008-1, Requirement R1 which has a High VRF. It is also similar to proposed TOP-001-2, Requirement R7 which has been assigned a High VRF. Therefore, there is consistency among Reliability Standards.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R11 mandates that entities act or direct others to act to mitigate the magnitude and duration of exceeding an IROL and its associated IROL T_v or SOL identified in Requirement R8. By definition, if an entity fails to do so, bulk power system instability, separation, or ~~cascading~~ Cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R11 addresses a single objective and has a single VRF.

Justification for Assignment of Violation Severity Levels for TOP-001-2, TOP-002-3, TOP-003-2:

In developing the VSLs for the TOP standard, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:

Lower	Moderate	High	Severe
Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full intent of the requirement.	Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.	Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.	Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.

FERC's VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in TOP-xxx-x meet the FERC Guidelines for assessing VSLs:

Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

A violation of a "binary" type requirement must be a "Severe" VSL.

Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

VSLs should not expand on what is required in the requirement.

Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VSLs for TOP-001-2 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines – Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved IRO-001-1.1, Requirement R8. That VSL has a Moderate violation for not complying with the Reliability Coordinator's directive for a valid reason but not informing the Reliability Coordinator of this fact. It then goes on to establish a Severe VSL for not complying with the directive. The SDT found little reason to separate out a Moderate VSL for not informing	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		the Transmission Operator. Whether it was for a valid reason or not, the consequences of the Transmission Operator not being aware of the fact that the directive was not being followed are potentially catastrophic. Therefore, the SDT has proposed only a Severe VSL and this VSL I ~~s~~ more stringent than the VSL cited. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the approved TOP-001-1.1a, Requirement R3. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R3.	Meets NERC's VSL guidelines – There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSL for a similar requirement is for the approved TOP-001-1a, Requirement R5. Those VSLs are also based on failure to notify reliability entities with no Lower or Higher VSL and a Moderate VSL for failure to inform while taking action and the Severe VSL for failure to inform and also not taking action. The SDT has split out the action part of the original requirement (see proposed TOP-001-2, Requirement R11) and this	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		requirement is now simply about failure to inform. The SDT gradated the VSLs at that point but the new VSLs and the old are equivalent at the Moderate level since the original VSL would have required failure to inform two entities – the Reliability Coordinator and at least one Transmission Operator. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R5.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are for the approved TOP-001-1a, Requirement R5. Those VSLs are also based on failure to notify reliability entities with no Lower or Higher VSL and a Moderate VSL for failure to inform while taking action and the Severe VSL for failure to inform and also not taking action. The SDT has split out the action part of the original requirement (see proposed TOP-001-2, Requirement R11) and this	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		requirement is now simply about failure to inform. The SDT gradated the VSLs at that point but the new VSLs and the old are equivalent at the Moderate level since the original VSL would have required failure to inform two entities – the Reliability Coordinator and at least one Transmission Operator. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R6.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to proposed TOP-003-1, Requirement R3. The VSL for that requirement is binary. When assigning the VSL for the new requirement, the SDT felt that it was possible to provide a gradual increasing scale for the VSL and assigned the VSLs appropriately.	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R7.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to approved TOP-004-2, Requirement R1. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R8:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R8.	Meets NERC's VSL guidelines. There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R9:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R9.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R10:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R10.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R11:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R11.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs but it is similar to approved TOP-008-1, Requirement R1. That VSL is binary as is the one proposed for this new requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

		Therefore, it decided that the VSL for this requirement should be binary. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

A. Introduction

1. **Title:** **Operating Personnel Responsibility and Authority**

2. **Number:** PER-001-0.1

3. **Purpose:** Transmission Operator and Balancing Authority operating personnel must have the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System.

4. **Applicability**

   4.1. Transmission Operators.

   4.2. Balancing Authorities.

5. **Effective Date:** December 10, 2009

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System.

C. Measures

M1. The Transmission Operator and Balancing Authority provide documentation that operating personnel have the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System. These responsibilities and authorities are understood by the operating personnel. Documentation shall include:

M1.1 A written current job description that states in clear and unambiguous language the responsibilities and authorities of each operating position of a Transmission Operator and Balancing Authority. The job description identifies personnel subject to the authority of the Transmission Operator and Balancing Authority.

M1.2 The current job description is readily accessible in the control room environment to all operating personnel.

M1.3 A written current job description that states operating personnel are responsible for complying with the NERC reliability standards.

M1.4 Written operating procedures that state that, during normal and emergency conditions, operating personnel have the authority to take or direct timely and appropriate real-time actions. Such actions shall include shedding of firm load to prevent or alleviate System Operating Limit Interconnection or Reliability Operating Limit violations. These actions are performed without obtaining approval from higher-level personnel within the Transmission Operator or Balancing Authority.

D. Compliance

1. **Compliance Monitoring Process**

   Periodic Review: An on-site review including interviews with Transmission Operator and Balancing Authority operating personnel and document verification will be conducted every three years. The job description identifying operating personnel authorities and responsibilities will be reviewed, as will the written operating procedures or other documents delineating the authority of the operating personnel to take actions necessary to maintain the reliability of the Bulk Electric System during normal and emergency conditions.

1.1. Compliance Monitoring Responsibility

Self-certification: The Transmission Operator and Balancing Authority shall annually complete a self-certification form developed by the Regional Reliability Organization based on measures M1.1 to M1.4.

1.2. Compliance Monitoring Period and Reset Timeframe

One calendar year.

1.3. Data Retention

Permanent.

1.4. Additional Compliance Information

2. Levels of Non-Compliance

2.1. Level 1: The Transmission Operator or Balancing Authority has written documentation that includes three of the four items in M1.

2.2. Level 2: The Transmission Operator or Balancing Authority has written documentation that includes two of the four items in M1.

2.3. Level 3: The Transmission Operator or Balancing Authority has written documentation that includes one of the four items in M1.

2.4. Level 4: The Transmission Operator or Balancing Authority has written documentation that includes none of the items in M1, or the personnel interviews indicate Transmission Operator or Balancing Authority do not have the required authority.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
0.1	April 15, 2009	Replaced “position” with “job” on M1.1	Errata
0.1	December 10, 2009	Approved by FERC — added effective date	Update

A. Introduction

1. Title: **Reliability Responsibilities and Authorities**

2. Number: TOP-001-1

Purpose: To ensure reliability entities have clear decision-making authority and capabilities to take appropriate actions or direct the actions of others to return the transmission system to normal conditions during an emergency.

3. Applicability

3.1. Balancing Authorities

3.2. Transmission Operators

3.3. Generator Operators

3.4. Distribution Providers

3.5. Load Serving Entities

4. Effective Date: January 1, 2007

B. Requirements

R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.

R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.

R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.

R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.

R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate the emergency.

R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.

R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless:

R7.1. For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility.

R7.2. For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility.

R7.3. When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.

R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance it shall request emergency assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.

C. Measures

M1. Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, signed agreements, an authority letter signed by an officer of the company, or other equivalent evidence that will be used to confirm that it has the authority, and has exercised the authority, to alleviate operating emergencies as described in Requirement 1.

M2. If an operating emergency occurs the Transmission Operator that experienced the emergency shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it took immediate actions to alleviate the operating emergency including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc. (Requirement 2)

M3. Each Transmission Operator, Balancing Authority, and Generator Operator shall have and provide upon request evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it complied with its Reliability Coordinator's reliability directives. If the Transmission Operator, Balancing Authority or Generator Operator did not comply with the directive because it would violate safety, equipment, regulatory or statutory requirements, it shall provide evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that it immediately informed the Reliability Coordinator of its inability to perform the directive. (Requirement 3)

M4. Each Balancing Authority, Generator Operator, Distribution Provider and Load Serving Entity shall have and provide upon request evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it complied with its Transmission Operator's reliability directives. If the Balancing Authority, Generator Operator, Distribution Provider and Load Serving Entity did not comply with the directive because it would violate safety, equipment, regulatory or

statutory requirements, it shall provide evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that it immediately informed the Transmission Operator of its inability to perform the directive. (Requirements 3 and 4)

M5. The Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it informed its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and took actions to avoid, when possible, or to mitigate an emergency. (Requirement 5)

M6. The Transmission Operator, Balancing Authority, and Generator Operator shall each have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it rendered assistance to others as requested, provided that the requesting entity had implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements. (Requirement 6)

M7. The Transmission Operator and Generator Operator shall each have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it notified either their Transmission Operator in the case of the Generator Operator, or other Transmission Operators, and the Reliability Coordinator when it removed Bulk Electric System facilities from service if removing those facilities would burden neighboring systems. (Requirement 7)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Transmission Operator shall have the current in-force document to show that it has the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area. (Measure 1)

Each Transmission Operator shall keep 90 days of historical data (evidence) for Measures 1 through 7, including evidence of directives issued for Measures 3 and 4.

Each Balancing Authority shall keep 90 days of historical data (evidence) for Measures 3, 4 and 6 including evidence of directives issued for Measures 3 and 4.

Each Generator Operator shall keep 90 days of historical data (evidence) for Measures 3, 4, 6 and 7 including evidence of directives issued for Measures 3 and 4.

Each Distribution Provider and Load-serving Entity shall keep 90 days of historical data (evidence) for Measure 4.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

1.4. Additional Compliance Information

None.

2. Levels of Non-Compliance for a Balancing Authority:

2.1. Level 1: Not applicable.

2.2. Level 2: Not applicable.

2.3. Level 3: Not applicable.

2.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

2.4.1 Did not comply with a Reliability Coordinator's or Transmission Operator's reliability directive or did not immediately inform the Reliability Coordinator or Transmission Operator of its inability to perform that directive (R3)

2.4.2 Did not render emergency assistance to others as requested, in accordance with R6.

3. Levels of Non-Compliance for a Transmission Operator

3.1. Level 1: Not applicable.

3.2. Level 2: Not applicable.

3.3. Level 3: Not applicable.

3.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

3.4.1 Does not have the documented authority to act as specified in R1.

3.4.2 Does not have evidence it acted with the authority specified in R1.

3.4.3 Did not take immediate actions to alleviate operating emergencies as specified in R2.

3.4.4 Did not comply with its Reliability Coordinator's reliability directive or did not immediately inform the Reliability Coordinator of its inability to perform that directive, as specified in R3.

3.4.5 Did not inform its Reliability Coordinator and other potentially affected Transmission Operators of real time or anticipated emergency conditions as specified in R5.

3.4.6 Did not take actions to avoid, when possible, or to mitigate an emergency as specified in R5.

3.4.7 Did not render emergency assistance to others as requested, as specified in R6.

3.4.8 Removed Bulk Electric System facilities from service under conditions other than those specified in R7.1, 7.2, and 7.3, and removing those facilities burdened a neighbor system.

4. Levels of Non-Compliance for a Generator Operator:

4.1. Level 1: Not applicable.

4.2. Level 2: Not applicable.

4.3. Level 3: Not applicable.

4.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

4.4.1 Did not comply with a Reliability Coordinator or Transmission Operator's reliability directive or did not immediately inform the Reliability Coordinator or Transmission Operator of its inability to perform that directive, as specified in R3.

4.4.2 Did not render all available emergency assistance to others as requested, unless such actions would violate safety, equipment, or regulatory or statutory requirements as specified in R6.

4.4.3 Removed Bulk Electric System facilities from service under conditions other than those specified in R7.1, 7.2, and 7.3, and burdened a neighbor system.

5. Levels of Non-Compliance for a Distribution Provider or Load Serving Entity

5.1. Level 1: Not applicable.

5.2. Level 2: Not applicable.

5.3. Level 3: Not applicable

5.4. Level 4: Did not comply with a Transmission Operator's reliability directive or immediately inform the Transmission Operator of its inability to perform that directive, as specified in R4.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised

A. Introduction

1. **Title:** **Normal Operations Planning**

2. **Number:** TOP-002-2a

3. **Purpose:** Current operations plans and procedures are essential to being prepared for reliable operations, including response for unplanned events.

4. **Applicability**

   4.1. Balancing Authority.

   4.2. Transmission Operator.

   4.3. Generator Operator.

   4.4. Load Serving Entity.

   4.5. Transmission Service Provider.

5. **Effective Date:** Immediately after approval of applicable regulatory authorities. FERC Approved 12/2/09

B. Requirements

R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.

R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.

R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.

R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator, so that normal Interconnection operation will proceed in an orderly and consistent manner.

R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.

R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in system configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.

R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.

R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.

R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.

R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).

R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject to confidentiality requirements), and to its Reliability Coordinator.

R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes.

R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.

R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

R14.1. Changes in real and reactive output capabilities. (Retired August 1, 2007)

R14.1. Changes in real output capabilities. (Effective August 1, 2007)

R14.2. Automatic Voltage Regulator status and mode setting. (Retired August 1, 2007)

R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to:

R16.1. Changes in transmission facility status.

R16.2. Changes in transmission facility rating.

R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.

R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.

R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.

C. Measures

M1. Each Balancing Authority and Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, documented planning procedures, copies of current day plans, copies of seasonal operations plans, or other equivalent evidence that will be used to confirm that it maintained a set of current plans. (Requirement 1 Part 1).

M2. Each Balancing Authority and Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, copies of current day plans or other equivalent evidence that will be used to confirm that its plans address Requirements 5, 6, and 10.

M3. Each Balancing Authority shall have and provide upon request evidence that could include, but is not limited to, copies of current day plans or other equivalent evidence that will be used to confirm that its plans address Requirements 7, 8, and 9.

M4. Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, its next-day, and current-day Bulk Electric System studies used to determine SOLs or other equivalent evidence that will be used to confirm that its studies reflect current system conditions. (Requirement 11 Part 1)

M5. Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that the results of Bulk Electric System studies were made available to the Transmission Operators, Balancing Authorities (subject to confidentiality requirements), and to its Reliability Coordinator. (Requirement 11 Part 2)

M6. Each Generator Operator shall have and provide upon request evidence that, when requested by either a Transmission Operator or Balancing Authority, it performed a generating real and reactive capability verification and provided the results to the requesting entity in accordance with Requirement 13.

M7. Each Generator Operator shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that without any intentional time delay, it notified its Balancing Authority and Transmission Operator of changes in real and reactive capabilities and AVR status. (Requirement 14)

M8. Each Generator Operator shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that, on request, it provided a forecast of expected real power output to assist in operations planning. (Requirement 15)

M9. Each Transmission Operators shall have and provide upon request evidence that could include, but is not limited to, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that, without any intentional time delay, it notified its Balancing Authority and Reliability Coordinator of changes in capabilities and characteristics. (Requirement16)

M10. Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider and Load Serving Entity shall have and provide upon request evidence that could include, but is not limited to, a list of interconnected transmission facilities and their line identifiers at each end or other equivalent evidence that will be used to confirm that it used uniform line identifiers when referring to transmission facilities of an interconnected network. (Requirement 18)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 calendar days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

For Measures 1 and 2, each Transmission Operator shall have its current plans and a rolling 6 months of historical records (evidence).

For Measures 1, 2, and 3 each Balancing Authority shall have its current plans and a rolling 6 months of historical records (evidence).

For Measure 4, each Transmission Operator shall keep its current plans (evidence).

For Measures 5 and 9, each Transmission Operator shall keep 90 days of historical data (evidence).

For Measures 6, 7 and 8, each Generator Operator shall keep 90 days of historical data (evidence).

For Measure 10, each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, and Load-serving Entity shall have its current list interconnected transmission facilities and their line identifiers at each end or other equivalent evidence as evidence.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

1.4. Additional Compliance Information

None.

2. **Levels of Non-Compliance for Balancing Authorities:**

   2.1. **Level 1:** Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

   2.2. **Level 2:** Not applicable.

   2.3. **Level 3:** Not applicable.

   2.4. **Level 4**: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

      2.4.1 Did not maintain an updated set of current-day plans as specified in R1.

      2.4.2 Plans did not meet one or more of the requirements specified in R5 through R10.

3. **Levels of Non-Compliance for Transmission Operators**

   3.1. **Level 1:** Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

   3.2. **Level 2:** Not applicable.

   3.3. **Level 3:** One or more of Bulk Electric System studies were not made available as specified in R11.

   3.4. **Level 4:** There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

      3.4.1 Did not maintain an updated set of current-day plans as specified in R1.

      3.4.2 Plans did not meet one or more of the requirements in R5, R6, and R10.

      3.4.3 Studies not updated to reflect current system conditions as specified in R11.

      3.4.4 Did not notify its Balancing Authority and Reliability Coordinator of changes in capabilities and characteristics as specified in R16.

4. **Levels of Non-Compliance for Generator Operators:**

   4.1. **Level 1:** Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

   4.2. **Level 2:** Not applicable.

   4.3. **Level 3:** Not applicable.

   4.4. **Level 4:** There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

      4.4.1 Did not verify and provide a generating real and reactive capability verification and provide the results to the requesting entity as specified in R13.

      4.4.2 Did not notify its Balancing Authority and Transmission Operator of changes in capabilities and characteristics as specified in R14.

      4.4.3 Did not provide a forecast of expected real power output to assist in operations planning as specified in R15.

5. **Levels of Non-Compliance for Transmission Service Providers and Load-serving Entities:**

   5.1. **Level 1:** Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

5.2. Level 2: Not applicable.

5.3. Level 3: Not applicable.

5.4. Level 4: Not applicable.

E. Regional Differences

None identified.

2a	December 2, 2009	Interpretation of R11 approved by FERC on December 2, 2009	Same Interpretation

Appendix 1

Interpretation of Requirement R11

Requirement Number and Text of Requirement

Requirement R11: The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject to confidentiality requirements), and to its Reliability Coordinator.

Question #1
Is the Transmission Operator required to conduct a "unique" study for each operating day, even when the actual or expected system conditions are identical to other days already studied? In other words, can a study be used for more than one day?

Response to Question #1
Requirement R11 mandates that each Transmission Operator review (i.e., study) the state of its Transmission Operator area both in advance of each day and during each day. Each day must have "a" study that can be applied to it, but it is not necessary to generate a "unique" study for each day. Therefore, it is acceptable for a Transmission Operator to use a particular study for more than one day.

Question #2
Are there specific actions required to implement a "study"? In other words, what constitutes a study?

Response to Question #2
The requirement does not mandate a particular type of review or study. The review or study may be based on complex computer studies or a manual reasonability review of previously existing study results. The requirement is designed to ensure the Transmission Operator maintains sensitivity to what is happening or what is about to happen.

Question #3
Does the term, "to determine SOLs" as used in the first sentence of Requirement R11 mean the "determination of system operating limits" or does it mean the "identification of potential SOL violations?"

Response to Question #3
TOP-002-2 covers real-time and near-real-time studies. Requirement R11 is meant to include both determining new limits and identifying potential "exceedances" of pre-defined SOLs. If system conditions indicate to the Transmission Operator that prior studies and SOLs may be outdated, TOP-002-2 mandates the Transmission Operator to conduct a study to identify SOLs for the new conditions. If the Transmission Operator determines that system conditions do not warrant a new study, the primary purpose of the review is to check that the previously defined (i.e., defined from the current SOLs in use, or the set defined by the planners) SOLs are not expected to be exceeded. As written, the standard provides the Transmission Operator discretion regarding when to look for new SOLs and when to rely on its current set of SOLs.

A. Introduction

1. **Title:** **Planned Outage Coordination**
2. **Number:** TOP-003-1
3. **Purpose:** Scheduled generator and transmission outages that may affect the reliability of interconnected operations must be planned and coordinated among Balancing Authorities, Transmission Operators, and Reliability Coordinators.
4. **Applicability**
   - **4.1.** Generator Operators.
   - **4.2.** Transmission Operators.
   - **4.3.** Balancing Authorities.
   - **4.4.** Reliability Coordinators.
5. **Proposed Effective Date:**

   In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

   In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

B. Requirements

R1. Generator Operators and Transmission Operators shall provide planned outage information.

- **R1.1.** Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements.
- **R1.2.** Each Transmission Operator shall provide outage information daily to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation.
- **R1.3.** Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.

R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators as required.

R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.

R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.

C. Measures

M1. Evidence that the Generator Operator, Transmission Operator, and Balancing Authority reported and coordinated scheduled outage information as indicated in the requirements above.

D. Compliance

1. Compliance Monitoring Process

Each Regional Reliability Organization shall conduct a review every three years to ensure that each responsible entity has a process in place to provide planned generator and/or bulk transmission outage information to their Reliability Coordinator, and with neighboring Transmission Operators and Balancing Authorities.

Investigation: At the discretion of the Regional Reliability Organization or NERC, an investigation may be initiated to review the planned outage process of a monitored entity due to a complaint of non-compliance by another entity. Notification of an investigation must be made by the Regional Reliability Organization to the entity being investigated as soon as possible, but no later than 60 days after the event. The form and manner of the investigation will be set by NERC and/or the Regional Reliability Organization.

1.1. Compliance Monitoring Responsibility

A Reliability Coordinator makes a request for an outage to "not be taken" because of a reliability impact on the grid and the outage is still taken. The Reliability Coordinator must provide all its documentation within three business days to the Regional Reliability Organization. Each Regional Reliability Organization shall report compliance and violations to NERC via the NERC Compliance Reporting process.

1.2. Compliance Monitoring Period and Reset Timeframe

One calendar year without a violation from the time of the violation.

1.3. Data Retention

One calendar year.

1.4. Additional Compliance Information

Not specified.

2. Violation Severity Levels:

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Generator Operator failed to provide outage information, in accordance with its Transmission Operators established outage reporting requirements, to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW).
R1.1	N/A	N/A	N/A	The Transmission Operator failed to provide outage information, in accordance with its Reliability Coordinators established outage reporting requirement, to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation.
R1.2	The responsible entity failed to provide the information by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	N/A	N/A	N/A

R#	Lower	Moderate	High	Severe
R1.3	N/A	N/A	N/A	The responsible entity failed to plan or coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators when required.
R2	The responsible entity planned and coordinated scheduled outages of telemetering and control equipment and associated communication channels with its Reliability Coordinator, but failed to coordinate with affected neighboring Transmission Operators, Balancing Authorities, and Generator Operators.	N/A	N/A	The responsible entity failed to plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.
R3	N/A	N/A	N/A	The Reliability Coordinator failed to resolve any scheduling of potential reliability conflicts.
R4	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 30 minutes but less than or equal to 35 minutes.	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 35 minutes but less than or equal to 40 minutes.	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 40 minutes but less than or equal to 45 minutes.	The Transmission Operator entering an unknown operating state (i.e., any state for which valid operating limits have not been determined), failed to restore operations to respect proven reliable power system limits for more than 45 minutes.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1		Modified R1.2 Modified M1 Replaced Levels of Non-compliance with the Feb 28, BOT approved Violation Severity Levels (VSLs)	Revised
1	October 17, 2008	Adopted by NERC Board of Trustees	
1	March 23, 2011	Order issued by FERC approving TOP-003-1 (approval effective 5/23/11)	

A. Introduction

1. **Title:** **Transmission Operations**

2. **Number:** TOP-004-2

3. **Purpose:** To ensure that the transmission system is operated so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single Contingency and specified multiple Contingencies.

4. **Applicability:**

   4.1. Transmission Operators

5. **Proposed Effective Date:** Twelve months after BOT adoption of FAC-014.

B. Requirements

R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.

R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.

R4. If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.

R5. Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected, it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.

R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including:

R6.1. Monitoring and controlling voltage levels and real and reactive power flows.

R6.2. Switching transmission elements.

R6.3. Planned outages of transmission elements.

R6.4. Responding to IROL and SOL violations.

C. Measures

M1. Each Transmission Operator that enters an unknown operating state for which valid limits have not been determined, shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, alarm program printouts, or other equivalent evidence that will be used to determine if it restored operations to respect proven reliable power system limits within 30 minutes as specified in Requirement 4.

M2. Each Transmission Operator shall have and provide upon request current policies and procedures that address the execution and coordination of activities that impact inter- and intra-Regional reliability for each of the topics listed in Requirements 6.1 through 6.6.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Transmission Operator shall keep 90 days of historical data for Measure 1.

Each Transmission Operator shall have current, in-force policies and procedures, as evidence of compliance to Measure 2.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

1.4. Additional Compliance Information

None.

2. Levels of Non-Compliance:

2.1. Level 1: Not applicable.

2.2. Level 2: Did not have formal policies and procedures to address one of the topics listed in R6.1 through R6.4.

2.3. .**Level 3:** Did not have formal policies and procedures to address two of the topics listed in R6.1 through R6.4.

2.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

2.4.1 Did not restore operations to respect proven reliable power system limits within 30 minutes as specified in R4.

2.4.2 Did not have formal policies and procedures to address three or all of the topics listed in R6.1 through R6.4.

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Added language from Missing Measures and Compliance Elements adopted by Board of Trustees on November 1, 2006	Revised
2	December 19, 2007	Revised to reflect merging of both sets of changes approved by BOT on November 1, 2006 (Addition of measures and compliance elements and revisions to R3 and R6 with conforming changes made as errata to Levels of Non-compliance)	Revised Errata

A. Introduction

1. **Title:** **Operational Reliability Information**

2. **Number:** TOP-005-2

3. **Purpose:** To ensure reliability entities have the operating data needed to monitor system conditions within their areas.

4. **Applicability**

   4.1. Transmission Operators.

   4.2. Balancing Authorities.

   4.3. Purchasing Selling Entities.

5. **Proposed Effective Date:** In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

   In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

B. Requirements

R1. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."

R2. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005 "Electric System Reliability Data," unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.

R3. Each Purchasing-Selling Entity shall provide information as requested by its Host Balancing Authorities and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.

C. Measures

M1. Evidence that the Balancing Authority, Transmission Operator, and Purchasing-Selling Entity is providing the information required, within the time intervals specified, and in a format agreed upon by the requesting entities.

D. Compliance

1. **Compliance Monitoring Process**

   1.1. Compliance Monitoring Responsibility

   Self-Certification: Entities shall annually self-certify compliance to the measures as required by its Regional Reliability Organization.

   Exception Reporting: Each Region shall report compliance and violations to NERC via the NERC compliance reporting process.

1.2. Compliance Monitoring Period and Reset Time Frame

Periodic Review: Entities will be selected for operational reviews at least every three years. One calendar year without a violation from the time of the violation.

1.3. Data Retention

Not specified.

1.4. Additional Compliance Information

Not specified.

2. Violation Severity Levels:

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The ISN data recipient failed to sign the NERC Confidentiality Agreement for "Electric System Reliability Data".
R2	The responsible entity failed to provide any of the data requested by other Balancing Authorities or Transmission Operators.	N/A	N/A	The responsible entity failed to provide all of the data requested by its host Balancing Authority or Transmission Operator.
R3	The responsible entity failed to provide any of the data requested by other Balancing Authorities or Transmission Operators.	N/A	N/A	The responsible entity failed to provide all of the data requested by its host Balancing Authority or Transmission Operator.

E. Regional Variances

None identified.

Attachment 1-TOP-005

Electric System Reliability Data

This Attachment lists the types of data that Balancing Authorities, and Transmission Operators are expected to share with other Balancing Authorities and Transmission Operators.

1. The following information shall be updated at least every ten minutes:

1.1. Transmission data. Transmission data for all Interconnections plus all other facilities considered key, from a reliability standpoint:

1.1.1 Status.

1.1.2 MW or ampere loadings.

1.1.3 MVA capability.

1.1.4 Transformer tap and phase angle settings.

1.1.5 Key voltages.

1.2. Generator data.

1.2.1 Status.

1.2.2 MW and MVAR capability.

1.2.3 MW and MVAR net output.

1.2.4 Status of automatic voltage control facilities.

1.3. Operating reserve.

1.3.1 MW reserve available within ten minutes.

1.4. Balancing Authority demand.

1.4.1 Instantaneous.

1.5. Interchange.

1.5.1 Instantaneous actual interchange with each Balancing Authority.

1.5.2 Current Interchange Schedules with each Balancing Authority by individual Interchange Transaction, including Interchange identifiers, and reserve responsibilities.

1.5.3 Interchange Schedules for the next 24 hours.

1.6. Area Control Error and frequency.

1.6.1 Instantaneous area control error.

1.6.2 Clock hour area control error.

1.6.3 System frequency at one or more locations in the Balancing Authority.

2. Other operating information updated as soon as available.

2.1. Interconnection Reliability Operating Limits and System Operating Limits in effect.

2.2. Forecast of operating reserve at peak, and time of peak for current day and next day.

2.3. Forecast peak demand for current day and next day.

2.4. Forecast changes in equipment status.

2.5. New facilities in place.

2.6. New or degraded special protection systems.

2.7. Emergency operating procedures in effect.

2.8. Severe weather, fire, or earthquake.

2.9. Multi-site sabotage.

A. Introduction

1. **Title:** **Monitoring System Conditions**

2. **Number:** TOP-006-2

3. **Purpose:** To ensure critical reliability parameters are monitored in real-time.

4. **Applicability**

    4.1. Transmission Operators.

    4.2. Balancing Authorities.

    4.3. Generator Operators.

    4.4. Reliability Coordinators.

5. **Proposed Effective Date:** In those jurisdictions where no regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after BOT adoption.

    In those jurisdictions where regulatory approval is required, the standard shall become effective on the latter of either April 1, 2009 or the first day of the first calendar quarter, three months after applicable regulatory approval.

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use.

R1.1. Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use.

R1.2. Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.

R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.

R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel.

R4. Each Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.

R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to indicate, if appropriate, the need for corrective action.

R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.

R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.

C. Measures

M1. The Generator Operator shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Host Balancing Authority and Transmission Operator of all generation resources available for use. (Requirement 1.1)

M2. Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use. (Requirement 1.2)

M3. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, computer printouts or other equivalent evidence that will be used to confirm that it monitored each of the applicable items listed in Requirement 2.

M4. Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, printouts, training documents, description documents or other equivalent evidence that will be used to confirm that it has weather forecasts and past load patterns, available to predict the system's near-term load pattern. (Requirement 4)

M5. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a description of its EMS alarm capability, training documents, or other equivalent evidence that will be used to confirm that important deviations in operating conditions and the need for corrective actions will be brought to the attention of its operators. (Requirement 5)

M6. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a list of the frequency monitoring points available to the shift-operators or other equivalent evidence that will be used to confirm that it monitors system frequency. (Requirement 7)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Generator Operator shall keep 90 days of historical data (evidence) for Measure 1.

Each Transmission Operator and Balancing Authority shall keep 90 days of historical data (evidence) for Measure 2.

Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have current documents as evidence for Measure 3, 5 and 6.

Each Transmission Operator and Balancing Authority shall have current documents as evidence of compliance to Measure 4.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

1.4. Additional Compliance Information

None.

2. Violation Severity Levels:

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity failed to know the status of all generation and transmission resources available for use, even though said information was reported by the Generator Operator, Transmission Operator, or Balancing Authority.
R1.1	N/A	N/A	N/A	The Generator Operator failed to inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use.
R1.2	N/A	N/A	N/A	The responsible entity failed to inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.
R2	N/A	The responsible entity monitors the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, but is not aware of the status of rotating and static reactive resources.	The responsible entity fails to monitor all of the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of all rotating and static reactive resources.	The responsible entity fails to monitor any of the applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.
R3	The responsible entity failed to provide any of the appropriate technical information concerning protective relays to their operating personnel.	N/A	N/A	The responsible entity failed to provide all of the appropriate technical information concerning protective relays to their operating personnel.

R#	Lower	Moderate	High	Severe
R4	N/A	N/A	The responsible entity has either weather forecasts or past load patterns, available to predict the system's near-term load pattern, but not both.	The responsible entity failed to have both weather forecasts and past load patterns, available to predict the system's near-term load pattern.
R5	N/A	N/A	The responsible entity used monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions, but does not have indication of the need for corrective action.	The responsible entity failed to use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions.
R6	N/A	N/A	N/A	The responsible entity failed to use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.
R7	N/A	N/A	N/A	The responsible entity failed to monitor system frequency.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2		Modified R4 Modified M4 Modified Data Retention for M4 Replaced Levels of Non-compliance with the Feb 28, BOT approved Violation Severity Levels (VSLs)	Revised
2	October 17, 2008	Adopted by NERC Board of Trustees	
2	March 23, 2011	Order issued by FERC approving TOP-006-2 (approval effective 5/23/11)	

A. Introduction

1. **Title:** Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations

2. **Number:** TOP-007-0

3. **Purpose:**

   This standard ensures SOL and IROL violations are being reported to the Reliability Coordinator so that the Reliability Coordinator may evaluate actions being taken and direct additional corrective actions as needed.

4. **Applicability:**

   4.1. Transmission Operators.

   4.2. Reliability Coordinators.

5. **Effective Date:** April 1, 2005

B. Requirements

R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded and the actions being taken to return the system to within limits.

R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.

R3. A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2.

R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.

C. Measures

M1. Evidence that the Transmission Operator informed the Reliability Coordinator when an IROL or SOL was exceeded and the actions taken to return the system to within limits.

M2. Evidence that the Transmission Operator returned the system to within IROL within 30 minutes for each incident that an IROL, or SOL that became an IROL due to changed system conditions, was exceeded.

M3. Evidence that the Reliability Coordinator evaluated actions and provided direction required to return the system to within limits.

D. Compliance

1. **Compliance Monitoring Process**

   1.1. Compliance Monitoring Responsibility

   The Reliability Coordinator shall report any IROL violation exceeding 30 minutes to the Regional Reliability Organization and NERC within 72 hours. Each Regional Reliability Organization shall report any such violations to NERC via the NERC compliance reporting process. The Reliability Coordinator shall report any SOL violation that has become an IROL violation because of changed system conditions; i.e. exceeding the limit will require action to prevent:

1.1.1. System instability.

1.1.2. Unacceptable system dynamic response or equipment tripping.

1.1.3. Voltage levels in violation of applicable emergency limits.

1.1.4. Loadings on transmission facilities in violation of applicable emergency limits.

1.1.5. Unacceptable loss of load based on regional and/or NERC criteria.

1.2. Compliance Monitoring Period and Reset Timeframe

The reset period is monthly.

1.3. Data Retention

The data retention period is three months.

2. Levels of Non-Compliance

2.1. The Transmission Operator did not inform the Reliability Coordinator of an IROL or an SOL that has become an IROL because of changed system conditions, and the actions they are taking to return the system to within limits, or

2.2. The Transmission Operator did not take corrective actions as directed by the Reliability Coordinator to return the system to within the IROL within 30 minutes. (See Table 1-TOP-007-0 below.)

2.3. The limit violation was reported to the Reliability Coordinator, who did not provide appropriate direction to the Transmission Operator, resulting in an IROL violation in excess of 30 minutes duration.

Table 1-TOP-007-0 IROL and SOL Reporting Levels of Non-Compliance

Percentage by which IROL or SOL that has become an IROL is exceeded*	Limit exceeded for more than 30 minutes, up to 35 minutes.	Limit exceeded for more than 35 minutes, up to 40 minutes.	Limit exceeded for more than 40 minutes, up to 45 minutes.	Limit exceeded for more than 45 minutes.
Greater than 0%, up to and including 5%	Level 1	Level 2	Level 2	Level 3
Greater than 5%, up to and including 10%	Level 2	Level 2	Level 3	Level 3
Greater than 10%, up to and including 15%	Level 2	Level 3	Level 3	Level 4
Greater than 15%, up to and including 20%	Level 3	Level 3	Level 4	Level 4
Greater than 20%, up to and including 25%	Level 3	Level 4	Level 4	Level 4
Greater than 25%	Level 4	Level 4	Level 4	Level 4

*Percentage used in the left column is the flow measured at the end of the time period (30, 35, 40, or 45 minutes).

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata

A. Introduction

1. **Title:** **Response to Transmission Limit Violations**
2. **Number:** TOP-008-1
3. **Purpose:** To ensure Transmission Operators take actions to mitigate SOL and IROL violations.
4. **Applicability**

   4.1. Transmission Operators.
5. **Effective Date:** January 1, 2007

B. Requirements

R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.

R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.

R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.

R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.

C. Measures

M1. The Transmission Operator involved in an SOL or IROL violation shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications, alarm program printouts, or other equivalent evidence that will be used to determine if it took immediate steps to relieve the condition. (Requirement 1)

M2. The Transmission Operator that disconnects an overloaded facility shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications, alarm program print outs, or other equivalent evidence that will be used to determine if it disconnected an overloaded facility in accordance with Requirement 3 Part 1

M3. The Transmission Operator that disconnects an overloaded facility shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it notified its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permitted, otherwise, immediately thereafter. (Requirement 3 Part 2)

M4. The Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, computer facilities documents, computer printouts, training documents,

copies of analysis program results, operator logs or other equivalent evidence that will be used to confirm that it has sufficient information and analysis tools to determine the cause(s) of SOL violations. (Requirement 4 Part 1)

M5. The Transmission Operator that violates an SOL shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it used the results of these analyses to immediately mitigate the SOL violation. (Requirement 4 Part 3)

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

Regional Reliability Organizations shall be responsible for compliance monitoring.

1.2. Compliance Monitoring and Reset Time Frame

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

1.3. Data Retention

Each Transmission Operator shall keep 90 days of historical data (evidence) for Measure 1, 2 and 3.

Each Transmission Operator shall have current documents as evidence of compliance to Measures 4 and 5.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance data

1.4. Additional Compliance Information

None.

2. Levels of Non-Compliance for Transmission Operator

2.1. Level 1: Not applicable.

2.2. Level 2: Disconnected an overloaded facility as specified in R3 but did not notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, or immediately thereafter.

2.3. Level 3: Not applicable.

2.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

2.4.1 Did not take immediate steps to relieve an IROL or SOL violation in accordance with R1.

2.4.2 Did not disconnect an overloaded facility as specified in R3.

2.4.3 Does not have sufficient information and analysis tools to determine the cause(s) of SOL violations. (R4 Part 1)

2.4.4 Did not use the results of analyses to immediately mitigate an SOL violation. (R4 Part 3)

E. Regional Differences

None identified.

Mapping Document

Project 2007-03 Real-time Operations

Mapping document showing the translation of TOP-001-1 — Reliability Responsibilities and Authorities; TOP-002-2a — Normal Operations Planning; TOP-003-1 — Planned Outage Coordination; TOP-004-2 — Transmission Operations; TOP-005-2 — Operational Reliability Information; TOP-006-2 – Monitoring System Conditions; TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations; TOP-008-1 - Response to Transmission Limit Violations; PRC-001-1 – System Protection Coordination; and PER-001-0 - Operating Personnel Responsibility and Authority.

Standard TOP-001-1 — Reliability Responsibilities and Authorities		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.	Deleted	This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. Deletion of this requirement doesn't alleviate responsibility for actions, as each individual requirement in the Reliability Standards now specifies an action and a responsible entity. These needed actions required for reliability of the bulk power System have been more clearly laid out in revised standards. (See FERC Order 693a, Paragraph 112.) The requirement is also non-specific, ambiguous, and not performance-oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. All of this makes this requirement redundant. The overall reliability of the bulk power System is not adversely affected by the deletion of this requirement. In FERC Order 693a, Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities, which makes this requirement superfluous; and, thus, it can be deleted.

		FERC Order 693a, Paragraph 112: "In response to Avista, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of reliability standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize Reliability Coordinators to issue directives. Under the voluntary reliability scheme in place prior to Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a Reliability Coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies, including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.	Proposed TOP-001-2, Requirement R11	Replaced by proposed TOP-001-2, R11: The undefined term 'operating emergencies' is no longer utilized, and the requirement has been made more stringent by not restricting Transmission Operator actions to that undefined condition. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant time frame. TOP-001-2, R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued	Proposed IRO-001-3, Requirements R2, R3 & R4.	Replaced by: IRO-001-3, R2. Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent

by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.		identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-001-3, R3. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with its Reliability Coordinator's direction per Requirement R2, unless the direction per Requirement R2 cannot be implemented or such actions would violate safety, equipment, regulatory or statutory requirements. IRO-001-3, R4. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform, as directed per Requirement R3.
R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load-Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.	Proposed TOP-001-2, Requirements R1 & R2	Replaced by proposed: TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each reliability directive issued and identified as such by its Transmission Operator(s), unless such actions would violate safety, equipment, regulatory, or statutory requirements. TOP-001-2, R2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform an identified reliability directive issued by that Transmission Operator.
R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate	Proposed TOP-001-2, Requirement R3 Proposed TOP-001-2, Requirement R11.	Replaced by proposed: TOP-001-2, R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operators that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis.

the emergency.		TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant time frame.
R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.	Proposed TOP-001-2, Requirement R4 for the Transmission Operator. Approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 for the Balancing Authority	Replaced by proposed TOP-001-2, R4. TOP-001-2, R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The Generator Operator was deleted from this requirement since it can't be contacted directly by others and will only respond to such requests if they were in the form of a reliability directive from its Transmission Operator, which is covered in proposed TOP-001-2, Requirement R1. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 covers the Balancing Authority. So to eliminate a redundancy, the Balancing Authority has been removed from this requirement. In addition, the Balancing Authority must still respond to any Reliability Directive from the Transmission Operator, as stated in proposed TOP-001-2, Requirement R1. EOP-001-2b, R1. Balancing Authorities shall have

		operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities.
R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless: R7.1 - For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.2 - For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.3 - When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R5	R7: Replaced by proposed TOP-001-2, R5 for the Transmission Operator. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. R7 – The Generator Operator can't know if their actions will burden neighboring Systems, since they do not have reliability data. The Transmission Operator will know if the Generator Operator actions will burden neighboring Systems and is required to act on this information, as per proposed TOP-001-2, R5. R7.1 – Replaced by proposed TOP-001-2, R5 for both the Transmission Operator and the Generator Operator. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. R7.2 - Replaced by proposed TOP-001-2, R5 for the Transmission Operator. After-the-fact notifications have been replaced by the proposed TOP-003-2, R1 and approved IRO-010-1a, since those actions will now be seen through telemetry.

notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.		TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading Outages.
R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance, it shall request emergency assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.	Approved EOP-002-3, Requirement R6. Approved VAR-001-1, Requirement R8. Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirements R1, R8, and R12. Approved IRO-009-1, Requirements R1 and R2. Approved EOP-003-1, Requirement R1.	Real Power Balance and Reactive Power Balance are not defined terms. First sentence – Real Power: For the Balancing Authority part of the requirement, replaced by approved EOP-002-2.1, Requirement R6. The Transmission Operator does not balance Real Power so that part of the sentence can be deleted per the NERC Functional Model V5. First sentence – Reactive Power: Replaced by Approved VAR-001-1, Requirement R8 for the Transmission Operator, which covers Reactive Power requirements and the meaning of balancing Reactive Power for the Transmission Operator. The Balancing Authority must be told by the Transmission Operator to take actions regarding Reactive Power per the NERC Functional Model V5 (see proposed TOP-001-2, Requirement R1) and, therefore, the Balancing Authority can be deleted from this part of the requirement. Second sentence – The Balancing Authority must be told by the Transmission Operator to take actions regarding

		Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, the Balancing Authority is not necessary. Replaced by approved VAR-001-1, Requirements R1, R8, and R12 for the Transmission Operator. Third sentence – Replaced by approved IRO-009-1, Requirements R1 and R2 for the Reliability Coordinator. Replaced by approved EOP-003-1, Requirement R1 for the Transmission Operator and Balancing Authority. EOP-002-3, R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. VAR-001-1 R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. VAR-001-1, R8. Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – including reactive generation scheduling; transmission line and reactive resource switching; and, if necessary, Load shedding – to maintain System and Interconnection voltages within established limits. VAR-001-1, R12. The Transmission Operator shall direct corrective action, including Load reduction necessary to prevent voltage collapse when reactive resources are insufficient. TOP-001-2, R1. Each Balancing Authority, Generator

		Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. IRO-009-1, R1. For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more operating processes, procedures, or plans that identify actions it shall take, or actions it shall direct others to take (up to and including Load shedding) that can be implemented in time to prevent exceeding those IROLs. IRO-009-1, R2.For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more operating processes, procedures, or plans that identify actions it shall take, or actions it shall direct others to take (up to and including Load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's Tv. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load rather than risk an uncontrolled failure of components or Cascading Outages of the Interconnection.
Standard TOP-002-2a — Normal Operations Planning		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for	Approved BAL-001-0.1a. Approved BAL-002-1.	First sentence – Deleted for Balancing Authority, retained for Transmission Operator. The Balancing Authority is required to balance by approved BAL-001-0.1a and approved BAL-002-1 and

reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.	Approved EOP-002-2.1, Requirement R6. Proposed TOP-002-3, Requirements R1 through R3.	must take action, per approved EOP-002-2.1, Requirement R6 and, thus, the Balancing Authority part of this sentence can be deleted. Retained for Transmission Operator and moved to proposed TOP-002-3, Requirements R1 through R3. This is patterned after the approved IRO-008-1, Requirement R1 for the Reliability Coordinator. Second sentence – Deleted as superfluous. Use of appropriate personnel and equipment is incumbent to responsible entities, as per their certification as NERC registered entities. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing Real Power demand and supply in Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of Load, and because Contingency Reserve activation does not typically apply to the loss of Load, the application of DCS is limited to the loss of supply, and does not apply to the loss of Load. EOP-002-2.1, R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. TOP-002-3, R1: Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.

		TOP-002-3, R2: Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. TOP-002-3, R3: Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.	Deleted	The SDT reviewed the purpose of the Reliability Standard and believes that this requirement referred to operations planning. Given the current definition of Transmission Operator in the Glossary and Functional Model v5, operations planning is part of what the Transmission Operator is required to do and, as such, this requirement is no longer needed and can be deleted. Functional Model V5: Transmission Operator: The entity responsible for the reliability of its "local" transmission System, and that operates or directs the operations of the transmission Facilities.
R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.	Proposed TOP-003-2. Approved MOD-001-1a, Requirements R1 & R2. Approved MOD-030-2, Requirement R3.	For all but the Transmission Service Provider, moved to proposed TOP-003-2 requires the transfer of any and all required data, regardless of time frame involved. The Transmission Service Provider provisions are already covered in: • Approved MOD-001-1a, Requirement R1: Transmission Operators select transfer capability methodology from approved MOD-028, -029, or -030. • Approved MOD-030-2, Requirement R3: Transmission Operator gives transmission model updated at least once per day to Transmission Service Provider.

		• Approved MOD-001-1a, Requirement R2: Transmission Service Providers use the methodology designated in approved MOD-001-1a, Requirement R1 by the Transmission Operator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. MOD-001-1a, R1. Each Transmission Operator shall select one of the methodologies listed below for calculating Available Transfer Capability (ATC) or Available Flowgate Capability (AFC) for each ATC Path per time period identified in R2 for those Facilities within its Transmission operating area. MOD-030-2, R3. The Transmission Operator shall make available to the Transmission Service Provider a Transmission model to determine Available Flowgate Capability (AFC) that meets the following criteria: [LA1]MOD-001-1a, R2. Each Transmission Service Provider shall calculate ATC or AFC values, as listed below, using[LA2] the methodology or methodologies selected by its Transmission Operator(s).
R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator so that normal Interconnection operation will proceed in an orderly and consistent manner.	Proposed TOP-003-2, Requirement R5. Approved IRO-010-1a, Requirement R3.	Proposed TOP-003-2 requires the transfer of any and all required data between and amongst Balancing Authorities and Transmission Operators, regardless of the time frame involved. Data requirements for Reliability Coordinators are covered in approved IRO-010-1a, Requirement R3 making this requirement redundant for Reliability Coordinators, so the Reliability Coordinator has been removed here. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

		specifications for data. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.	Approved BAL-001-0.1a. Proposed TOP-003-2, Requirement R4. Proposed TOP-002-3, Requirement R1.	The part of the requirement dealing with the Balancing Authority is replaced by approved BAL-001-0.1a. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built into the Functional Model. Therefore, the Transmission Operator should be developing the plan and passing it down to the Balancing Authority. The Balancing Authority provides any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R5. The part of the requirement dealing with the Transmission Operator has been moved to proposed TOP-002-3, Requirement R1. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing Real Power demand and supply in Real-time. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

		specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in System configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.	Approved BAL-002-1, Requirements R2 – R4. Proposed TOP-003-2, Requirement R5. Proposed TOP-002-3, Requirement R1	The part of this requirement dealing with the Balancing Authority is replaced by approved BAL-002-1, Requirements R2 through R4 and approved EOP-002-2.1 and the proposed EOP-002-3, Requirement R6. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in to the Functional Model. Therefore, the Transmission Operator should be doing the plan and passing it down to the Balancing Authority. The Balancing Authority gets any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R4. The part of the requirement dealing with the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. The n-1 contingency planning is 'built in' to the Operational Planning Analysis since SOLs are derived according to FAC-010-2.1, FAC-011-2, and FAC-014-2 which includes contingency planning. The SDT does not believe that there is a need for the last part of the sentence 'in accordance with…' with the advent of the ERO and enforceable reliability standards.

		As stated in the NERC Functional Model V5: " the Balancing Authority's mission is to maintain the balance between Loads and resources in Real-time within its Balancing Authority Area by keeping its actual Interchange equal to its scheduled Interchange and meeting its frequency bias obligation." To this end and in accordance with approved NERC Reliability Standards BAL-001-0.1a and approved BAL-002-1), Balancing Authorities are required to meet all control performance and disturbance recovery criteria for any System condition. Balancing Authorities are not responsible for the operation of the transmission System. The Transmission Operator is responsible for the Real-time operating reliability of the transmission assets under its purview and, as such, has the authority to issue reliability-related directives to entities within its Transmission Operator Area. Balancing Authorities are required to implement directives received from the Transmission Operator or the Reliability Coordinator regarding Load, generation and Interchange for transmission concerns both predicted (e.g., through Unit Commitment) and actual (e.g., through re-dispatch, Interchange modifications or Load shedding). If the Balancing Authorities' actions do not resolve the transmission issues, it is the Transmission Operators' or Reliability Coordinators' responsibility to direct alternative actions. BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: BAL-002-1, R3. Each Balancing Authority or Reserve Sharing Group shall activate sufficient Contingency Reserve to comply with the DCS. BAL-002-1, R4. Balancing Authority or Reserve Sharing Group shall meet the Disturbance Recovery Criterion within the Disturbance Recovery Period for 100% of Reportable Disturbances. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator,

		Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. FAC-010-2.1, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable planning of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-011-2, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-014-2, Purpose. To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing Real Power demand and supply in Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of Load and because Contingency

		Reserve activation does not typically apply to the loss of Load, the application of DCS is limited to the loss of supply and does not apply to the loss of Load.
R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.	Approved BAL-002-1, Requirement R2. Proposed TOP-002-3, Requirement R1.	The Balancing Authority is required to always plan to meet and recover from Contingency events, as stated in approved BAL-002-1, Requirement R2 and, therefore, this requirement is redundant and can be deleted, as all elements of the requirement are now covered in other standards. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and are replaced by proposed TOP-002-3, Requirement R1. Operational Planning Analysis includes deliverability considerations, since any deliverability problems will appear as limit violations in the analysis. BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.	Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirement R1. Proposed TOP-002-3, Requirement R1	The Balancing Authority must be told by the Transmission Operator to take actions regarding Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, this requirement can be deleted, as all elements of the requirement are now covered in other standards. Voltage and Reactive Power balance are the responsibility of the Transmission Operator and are replaced by approved VAR-001-1, Requirement R1. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and is replaced by proposed TOP-002-3, Requirement

		R1 since any deliverability problems will appear as limit violations in the analysis. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.	Approved INT-003-2, Requirement R1.	Replaced by approved INT-003-2, R1. INT-003-2, R1. Each Receiving Balancing Authority shall confirm Interchange Schedules with the Sending Balancing Authority prior to implementation in the Balancing Authority's ACE equation.
R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).	Deleted for Balancing Authority. Proposed TOP-002-3, Requirements R1 & R2.	Balancing Authority - The Balancing Authority is only responsible to respond to Reliability Directives as per the definition of Balancing Authority in the NERC Glossary, and, thus, this requirement should never have been applicable to the Balancing Authority. SOLs and IROLs are limits for which the Balancing Authority may not have (and is not required to have) the ability to monitor or control. The Transmission Operator, who is required to monitor SOLs, instructs the Balancing Authority as to what to do in these situations.

		As stated in the NERC Functional Model V5, "the Balancing Authority's mission is to maintain the balance between Loads and resources in Real-time within its Balancing Authority Area by keeping its actual Interchange equal to its scheduled Interchange and meeting its frequency bias obligation". The Balancing Authority does not possess the bulk power System information necessary to manage Transmission flows. Therefore, the Balancing Authority can only plan to meet SOLs and IROLs by responding to directions from the Transmission Operator, including scheduling and operating resources within the limits prescribed by the Transmission Operator. Transmission Operator – replaced by proposed TOP-002-3, Requirement R1 (analysis of SOLs) & Requirement R2 (avoid IROLs). TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. TOP-002-3, R2. Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability in its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.
R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall	Approved FAC-011-2. Approved FAC-014-2.	First sentence – Replaced by FAC-011-2 and FAC-014-2 where SOLs are determined. FAC-011-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.

update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.	Proposed TOP-002-3, Requirements R1 & R3.	FAC-014-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. Second sentence – Replaced by approved FAC-014-2, R2 & R5.1. FAC-014-2, R2. The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2, R5.1. The Reliability Coordinator shall provide its SOLs (including the subset of SOLs that are IROLs) to adjacent Reliability Coordinators and Reliability Coordinators who indicate a reliability-related need for those limits, and to the Transmission Operators, Transmission Planners, Transmission Service Providers and Planning Authorities within its Reliability Coordinator Area. Third sentence – Replaced by proposed TOP-002-3. 'update… as necessary' is ambiguous and the SDT believes that proposed TOP-002-3 is a better solution. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-002-3, R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total	Approved MOD-028-1, Requirement R6.1. Approved MOD-029-1a, Requirement R3. Approved MOD-	Replaced by approved MOD-028-1, Requirement R6.1, MOD-029-1a, Requirement R3, and MOD-030-2, Requirement R2.4. Because IROLs by definition are a subset of SOLs, IROLs are included.

Transfer Capability and Available Transfer Capability calculation processes.	30-2 Requirement R2.4.	MOD-028-1, R6.1,Determine the incremental Transfer Capability for each ATC Path by increasing generation and/or decreasing Load within the source Balancing Authority area and decreasing generation and/or increasing Load within the sink Balancing Authority area until either: A System Operating Limit is reached on the Transmission Service Provider's System, or A SOL is reached on any other adjacent System in the Transmission model that is not on the study path and the distribution factor is 5% or greater. MOD-029-1a, R3, Each Transmission Operator shall establish the TTC at the lesser of the value calculated in R2 or any System Operating Limit (SOL) for that ATC Path. MOD-030-2, R2.4, Establish the TFC of each of the defined Flowgates as equal to: For thermal limits, the System Operating Limit (SOL) of the Flowgate. For voltage or stability limits, the flow that will respect the SOL of the Flowgate.
R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.	Proposed MOD-25-2, Requirement R1 Proposed TOP-003-2, Requirement R5	Replaced by proposed MOD-025-2, R1. MOD-025-2, R1: Each Generator Owner shall: 1.1. Verify the Real and Reactive Power capability of its generating units and shall verify the Reactive Power capability of its synchronous condenser units in accordance with Attachment 1. 1.2. Record the information on Attachment 2 (or on the Generator Owner's form that contains the same information as Attachment 2); 1.3. Submit within 90 calendar days of the date the

		data is recorded to its Transmission Planner. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics; including but not limited to: 14.1 - Changes in real and reactive output capabilities. (Retired August 1, 2007) 14.2 - Changes in real output capabilities. (Effective August 1, 2007) 14.3 - Automatic Voltage Regulator status and mode setting. (Retired August 1, 2007)	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to: 16.1	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.

- Changes in transmission facility status. 16.2 - Changes in transmission facility rating		
R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.	Deleted	This requirement adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a System reliability issue. This is an administrative item, as seen in the measure, which simply requires a list of line identifiers. The true reliability issue is not the name of a line but what is happening to it, pointing out the difficulty in assigning compliance responsibility for such a requirement, as well as the near impossibility of coming up with truly unique identifiers on a nation-wide basis. The bottom line is that this situation is handled by the operators as part of their normal responsibilities, and no one is aware of a switching error caused by confusion over line identifiers.
R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.	Deleted	This is part of an entity's certification and is no longer required in standards. Furthermore, accuracy is a relative term that would be difficult to measure and assess compliance with. What is accurate? All calculated line flows are within 5% of actual flows? What if 14,999 lines out of 15,000 had calculated line flows within 5% and the 15,000th had a 6% error? Do we now call the model inaccurate and not rely on the results? How do you define actual flows when meters have accuracy errors, as well (i.e., no perfect meter exists)?
Standard TOP-003-1 — Planned Outage Coordination		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment

R1. Generator Operators and Transmission Operators shall provide planned outage information. 1.1 - Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements. 1.2 - Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements. 1.3 - Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	Proposed TOP-003-2, Requirements R1 & R2	Replaced by proposed TOP-003-2, Requirements R1 & R2. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring.
R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R1 Proposed TOP-003-	Replaced by: proposed TOP-001-2, Requirement R5 which requires the Transmission Operator to coordinate actions while proposed TOP-003-2, Requirement R1 requires the Transmission Operator to identify the data it needs from the Balancing Authority to coordinate outages of voltage regulation equipment. Further, proposed TOP-003-2,

generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators, as required.	2, Requirement R5	Requirement R5 requires the Balancing Authority to provide the data to the Transmission Operator that the Transmission Operator identified it needs. TOP-001-2, R5: Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations, known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. TOP-003-2, R1: Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R5: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.	Proposed TOP-001-2, Requirement R6	Moved to proposed TOP-001-2, Requirement R6 TOP-001-2, R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC-registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.
R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.	Proposed IRO-001-3, R2 Proposed IRO-005-4, R1	Moved to the proposed IRO-001-3, Requirements R3 and proposed IRO-005-4, Requirement R1 which gives the Reliability Coordinator the authority to resolve the conflict. IRO-001-3, R2: Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability

		Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-005-4, R1: When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
Standard TOP-004-2 — Transmission Operations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.	Proposed TOP-001-2, Requirements R7and R9	Moved to proposed TOP-001-2, Requirements R7and R9. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL)

		identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. These requirements are not limited by single or multiple Contingencies, but are based solely on identified IROLs (and selected SOLs), regardless of how they were identified or whether they were identified by the Transmission Operator or Reliability Coordinator. FAC-011-02 and FAC-014-2 work collectively to establish how multiple Contingencies are considered in IROLs and SOLs. FAC-014-2, R6 requires the Planning Coordinator to identify the subset of multiple Contingencies from TPL-003 which result in stability limits and to provide this list to the Reliability Coordinators. FAC-011-2, R3.3 requires the Reliability Coordinator to include in their SOL methodology a process for determining which of the stability limits associated with multiple Contingencies are used to establish SOLs. FAC-014-2, R1 requires the Reliability Coordinator to determine which subset of SOLs qualify as IROLS. FAC-014-2, R1 requires the Reliability Coordinator to ensure SOLs, including IROLs, are established for its Reliability Coordinator Area, while FAC-014-2, R2 also requires the TOP to establish SOLs for its area. Thus, IROLs and SOLs that consider multiple outages will be developed appropriately and the Transmission Operator will operate to them. FAC-011-2, R1, The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall: R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs.

		FAC-011-2, R3, The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each: R3.3. A process for determining which of the stability limits associated with the list of multiple Contingencies (provided by the Planning Authority in accordance with FAC-014 Requirement 6) are applicable for use in the operating horizon, given the actual or expected System conditions. R3.3.1. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple Contingencies. FAC-014-2, R1, The Reliability Coordinator shall ensure that SOLs, including Interconnection Reliability Operating Limits (IROLs), for its Reliability Coordinator Area are established and that the SOLs (including Interconnection Reliability Operating Limits) are consistent with its SOL Methodology. FAC-014-2, R2, The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2 R6, The Planning Authority shall identify the subset of multiple Contingencies (if any), from Reliability Standard TPL-003 which result in stability limits. R6.1. The Planning Authority shall provide this list of multiple Contingencies and the associated stability limits to the Reliability Coordinators that monitor the Facilities associated with these Contingencies and limits. R6.2. If the Planning Authority does not identify any stability-related multiple Contingencies, the

		Planning Authority shall so notify the Reliability Coordinator. TOP-001-2, R7: Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9: Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R4. If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.	Proposed TOP-001-2, Requirements R7 and R9 Approved EOP-006-2	The SDT has determined a better way to handle such a situation is to treat it like an IROL or restoration scenario, and to take the same type of actions that you would apply for alleviating those situations. Therefore, it is replaced by proposed TOP-001-2, Requirements R7 and R9 and the approved EOP-006-2. This allows the operator sufficient flexibility within a structured environment to take the necessary actions for the reliability of the bulk power System. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. EOP-006-2, Purpose: Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
R5. Each Transmission Operator shall make every effort to remain connected to the	Deleted	Normally, the Transmission Operator does not have the right to unilaterally separate – that can only be done through the authorization of the Reliability

Interconnection. If the Transmission Operator determines that by remaining interconnected it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.		Coordinator, unless failure to act immediately would violate safety, equipment, or regulatory or statutory requirements, thus this requirement is a moot point under the Functional Model definitions and can be deleted.
R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including: 6.1 - Monitoring and controlling voltage levels and real and reactive power flows. 6.2 - Switching transmission elements. 6.3 - Planned outages of transmission elements. 6.4 - Responding to IROL and SOL violations.	Proposed TOP-001-2 Approved VAR-001-1, Requirement R1 Proposed TOP-001-2, Requirements R7 and R9 ProposedTOP-001-2, Requirement R5 Proposed TOP-001-2, Requirement R11	The first sentence has been superseded by the NERC Reliability Standards, taken as a whole. Examples of such would be the proposed TOP-001-2. The second sentence was replaced as follows: R6.1 is duplicative of approved VAR-001-1, Requirement R1 for Reactive. Real Power flows are covered in proposed TOP-001-2, Requirements R7 and R9. R6.2 is covered in proposed TOP-001-2, Requirement R5. R6.3 – moved to proposedTOP-001-2, Requirement R5. R6.4 – moved to proposed TOP-001-2, Requirement R11. TOP-001-2, Purpose: To prevent instability, uncontrolled separation, or Cascading Outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators.

		TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard TOP-005-2 — Operational Reliability Information		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area. 1.1 - Each Reliability Coordinator shall identify the data requirements from the list in Attachment 1-TOP-005-0 "Electric System Reliability Data" and any	Approved IRO-010-1a, Requirement R3	Moved to approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.

additional operating information requirements relating to operation of the bulk power system within the Reliability Coordinator Area.		
R2. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."	Deleted	Confidentiality is not a reliability issue, but a market or business issue. Since this is not a reliability issue, it does not belong in the Reliability Standards and can be deleted.
R3. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-0 "Electric System Reliability Data," unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R4. Each Purchasing-Selling Entity shall provide information, as requested by its Host Balancing Authorities and Transmission Operators, to enable them to conduct operational reliability assessments and coordinate reliable operations.	Deleted	Deleted as redundant to NAESB standard –All operating data that a Purchasing Selling Entity has, that a Transmission Operator or Balancing Authority needs is part of eTag and is acquired through that system.

Standard TOP-006-2 – Monitoring System Conditions		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use. 1.1 - Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use. 1.2 - Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	R1 & R1.1 are replaced by proposed TOP-003-2, Requirement R1. R1.2 – replaced by approved IRO-010-1a, Requirement R3. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3. Approved BAL-005-0.1b. Proposed TOP-001-2, Requirement R10. Approved IRO-008-1, Requirement R2.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-

		time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading outages. The act of monitoring is un-measureable. Entities will be in violation of other standards if they don't perform adequate monitoring. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs, and approved IRO-008-1, Requirement R2 for Real-time assessments every 30 minutes for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring.

		TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading outages.
R4. Each Transmission Operator and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading outages.
R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to	Deleted	Deleted as this is covered in the certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs; approved IRO-008-1, Requirement R2

indicate, if appropriate, the need for corrective action.		for Real-time assessments every 30 minutes for Reliability Coordinators BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R7 for Transmission Operator avoiding IROLs. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.

R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); approved EOP-003-1, Requirement R2 for Transmission Operator avoiding underfrequency; approved EOP-006-2, Requirement R8 for resynchronization for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. EOP-003-1, R2. Each Transmission Operator and Balancing Authority shall establish plans for automatic Load shedding for underfrequency or undervoltage conditions. EOP-006-2, R8. The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization.
Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded, and the actions being taken to return the system to within limits.	Proposed TOP-001-2, Requirement R10	Moved to proposed TOP-001-2, Requirement R10. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded.

R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.	Proposed TOP-001-2, Requirement R11	Moved to proposed TOP-001-2, Requirement R11. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R3. A Transmission Operator shall take all appropriate actions, up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2.	Approved EOP-003-1, Requirements R1 and in proposed EOP-003-2, Requirement R1	Replaced by approved EOP-003-1, Requirements R1. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load rather than risk an uncontrolled failure of components or Cascading outages of the Interconnection.
R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.	Approved IRO-008-1, Requirement R3	Replaced by approved IRO-008-1, Requirement R3. IRO-008-1, R3. When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.
Standard TOP-008-1 - Response to Transmission Limit Violations		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Proposed Language in New Standard or Comment**
R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.	Approved EOP-003-1, Requirements R1 and in proposed EOP-003-2, Requirement R1 Proposed TOP-001-2, Requirement R11	Replaced by approved EOP-003-1, Requirements R1 and proposed TOP-001-2, Requirement R11. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load, rather than risk an uncontrolled failure of components or Cascading Outages of the Interconnection. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement

		R8.
R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.	Proposed TOP-001-2, Requirements R7 and R9 Approved IRO-009-1, Requirement R5	First sentence – Replaced by proposed TOP-001-2, Requirements R7 and R9. Second sentence – Replaced by approved IRO-009-1, Requirement R5 for the Reliability Coordinator who is now responsible for such matters. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. IRO-009-1, R5. If unanimity cannot be reached on the value for an IROL or its Tv, each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration.
R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.	Deleted	Placing this procedure in a requirement when it is only one of the possible options for alleviating the condition is bad practice and should not be mandated in standards. A standard should not be mandating disconnection. This is in conflict with other reliability standards where disconnection is dependent on System conditions and coordination with other functional entities. Such actions, taken unilaterally, could make conditions worse.
R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted	Proposed TOP-003-2, Requirement R1 Proposed TOP-002-3, Requirement R1	Data piece is replaced by proposed TOP-003-2, Requirement R1. Analysis tools are covered in the certification process for core capabilities and, therefore, are not needed

in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.	Proposed TOP-001-2, Requirement R7 Proposed TOP-001-2, Requirement R11	here. The Transmission Operator will be in violation of other standards if they don't maintain their initial certification. For example, they can't develop their limits without maintaining their tools. Replaced by proposed TOP-002-3, Requirement R1 for analysis. Replaced by proposed TOP-001-2, Requirement R7 for real-time analysis required for IROL mitigation. Proposed TOP-001-2, Requirement R11 covers mitigation of limit violations. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard PER-001-0 - Operating Personnel Responsibility and Authority		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable	Deleted	In FERC Order 693a, Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of reliability standards that mandate compliance with such directives. The SDT reasonably applied this same logic to Transmission Operators and

operation of the Bulk Electric System.		Balancing Authorities and that makes this requirement superfluous and, thus, it can be deleted. FERC Order 693a, Paragraph 112: In response to Avista, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of reliability standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a Reliability Coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, these are vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
Standard PRC-001-1 – System Protection Coordination		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R2. Each Generator Operator and Transmission Operator shall notify reliability entities of relay or equipment failures as follows:	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R5. A Generator Operator or Transmission Operator shall coordinate changes in generation, transmission, load or operating conditions that could require changes in the protection systems of others: R5.1. Each Generator Operator	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

shall notify its Transmission Operator in advance of changes in generation or operating conditions that could require changes in the Transmission Operator's protection systems. R5.2. Each Transmission Operator shall notify neighboring Transmission Operators in advance of changes in generation, transmission, load, or operating conditions that could require changes in the other Transmission Operators' protection systems.		specifications for data.
R6. Each Transmission Operator and Balancing Authority shall monitor the status of each Special Protection System in their area, and shall notify affected Transmission Operators and Balancing Authorities of each change in status.	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

Mapping Document

Project 2007-03 Real-time Operations

Mapping document showing the translation of TOP-001-1 — Reliability Responsibilities and Authorities; TOP-002-2a — Normal Operations Planning; TOP-003-1 — Planned Outage Coordination; TOP-004-2 — Transmission Operations; TOP-005-2 — Operational Reliability Information; TOP-006-2 – Monitoring System Conditions; TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations; TOP-008-1 - Response to Transmission Limit Violations; PRC-001-1 – System Protection Coordination; and PER-001-0 - Operating Personnel Responsibility and Authority.

Standard TOP-001-1 — Reliability Responsibilities and Authorities		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.	Deleted	This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. Deletion of this requirement doesn't alleviate responsibility for actions, as each individual requirement in the Reliability Standards now specifies an action and a responsible entity. These needed actions required for reliability of the bulk power ~~system~~System have been more clearly laid out in revised standards. (See FERC Order 693a, ~~paragraph~~ Paragraph 112.) The requirement is also non-specific, ambiguous, and not performance~~-~~oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. All of this makes this requirement redundant. The overall reliability of the bulk power ~~system~~System is not adversely affected by the deletion of this requirement. In FERC Order 693a, ~~paragraph~~ Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities~~, —~~, which makes this requirement superfluous~~,~~; and, thus, it can be

		deleted. FERC Order 693a, ~~paragraph~~Paragraph 112: “In response to Avista, the Commission clarifies that a ~~reliability~~ Reliability ~~coordinator’s~~ Coordinator’s authority to issue directives arises out of the Commission’s approval of ~~Reliability~~ reliability ~~Standards~~ standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize ~~reliability~~ Reliability ~~coordinators~~ Coordinators to issue directives. Under the voluntary reliability scheme in place prior to ~~section~~ Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a ~~reliability~~ Reliability ~~coordinator’s~~ Coordinator’s directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies, including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.	Proposed TOP-001-2, Requirement R11	Replaced by proposed TOP-001-2, R11: The undefined term ‘operating emergencies’ is no longer utilized, and the requirement has been made more stringent by not restricting Transmission Operator actions to that undefined condition. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant time frame. TOP-001-2, R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL’s T_v, or of an SOL identified in Requirement R8.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator,	Proposed IRO-001-3, Requirements R2, R3 & R4.	Replaced by: IRO-001-3, R2. Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators,

and each Balancing Authority and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.		Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-001-3, R3. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with its Reliability Coordinator's direction per Requirement R2, unless the direction per Requirement R2 cannot be implemented or such actions would violate safety, equipment, regulatory or statutory requirements. IRO-001-3, R4. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall inform its Reliability Coordinator- upon recognition of its inability to perform, as directed per Requirement R3.
R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load-Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.	Proposed TOP-001-2, Requirements R1 & R2	Replaced by proposed: TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each ~~Reliability~~ reliability ~~Directive~~ directive issued and identified as such by its Transmission Operator(s), unless such actions would violate safety, equipment, regulatory, or statutory requirements. TOP-001-2, R2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform an identified ~~Reliability~~ reliability ~~Directive~~ directive issued by that Transmission Operator.
R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or	Proposed TOP-001-2, Requirement R3 Proposed TOP-001-2, Requirement	Replaced by proposed: TOP-001-2, R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operators that are known or expected to be affected

anticipated emergency conditions, and take actions to avoid, when possible, or mitigate the emergency.	R11.	by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant ~~timeframe~~time frame.
R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.	Proposed TOP-001-2, Requirement R4 for the Transmission Operator. Approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 for the Balancing Authority	Replaced by proposed TOP-001-2, R4. TOP-001-2, R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The Generator Operator was deleted from this requirement since it can't be contacted directly by others and will only respond to such requests if they were in the form of a ~~Reliability~~ reliability ~~Directive~~ directive from its Transmission Operator, which is covered in proposed TOP-001-2, Requirement R1. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 covers the Balancing Authority. ~~s~~So to eliminate a redundancy, the Balancing Authority has been removed from this requirement. In addition, the Balancing Authority must still respond to any Reliability Directive from the Transmission

		Operator, as stated in proposed TOP-001-2, Requirement R1. EOP-001-2b, R1. Balancing Authorities shall have operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities.
R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless: R7.1 - For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.2 - For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.3 - When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R5	R7: Replaced by proposed TOP-001-2, R5 for the Transmission Operator. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. R7 – The Generator Operator can't know if their actions will burden neighboring ~~system~~Systems, since they do not have reliability data. The Transmission Operator will know if the Generator Operator actions will burden neighboring ~~system~~Systems and is required to act on this information, as per proposed TOP-001-2, R5. R7.1 – Replaced by proposed TOP-001-2, R5 for both the Transmission Operator and the Generator Operator. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. R7.2 - Replaced by proposed TOP-001-2, R5 for the Transmission Operator.

damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.		After-~~-~~the-~~-~~fact notifications have been replaced by the proposed TOP-003-2, R1 and approved IRO-010-1a, since those actions will now be seen through telemetry. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and ~~cascading~~ Cascading ~~outages~~Outages.
R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance, it shall request emergency assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.	Approved EOP-002-3, Requirement R6. Approved VAR-001-1, Requirement R8. Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirements R1, R8, and R12. Approved IRO-009-1, Requirements R1 and R2. Approved EOP-003-1, Requirement R1.	Real Power Balance and Reactive Power Balance are not defined terms. First sentence – ~~real power~~Real Power: For the Balancing Authority part of the requirement, replaced by approved EOP-002-2.1, Requirement R6. The Transmission Operator does not balance ~~real~~ Real ~~power~~ Power so that part of the sentence can be deleted per the NERC Functional Model V5. First sentence – ~~reactive~~ Reactive ~~power~~Power: Replaced by Approved VAR-001-1, Requirement R8 for the Transmission Operator, which covers ~~reactive power~~Reactive Power requirements and the meaning of balancing ~~reactive power~~Reactive Power for the Transmission Operator. The Balancing Authority must be told by the Transmission Operator to take actions regarding ~~reactive power~~Reactive Power per the NERC Functional Model V5 (see proposed TOP-001-2, Requirement R1) and, therefore, the Balancing

		Authority can be deleted from this part of the requirement. Second sentence – The Balancing Authority must be told by the Transmission Operator to take actions regarding ~~reactive power~~Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, the Balancing Authority is not necessary. Replaced by approved VAR-001-1, Requirements R1, R8, and R12 for the Transmission Operator. Third sentence – Replaced by approved IRO-009-1, Requirements R1 and R2 for the Reliability Coordinator. Replaced by approved EOP-003-1, Requirement R1 for the Transmission Operator and Balancing Authority. EOP-002-3, R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. VAR-001-1 R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. VAR-001-1, R8. Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – including reactive generation scheduling; transmission line and reactive resource switching; and, if necessary, ~~load~~Load shedding – to maintain ~~system~~System and Interconnection voltages within established limits.

		VAR-001-1, R12. The Transmission Operator shall direct corrective action, including ~~load~~Load reduction ~~,~~ ~~necessary to~~necessary to prevent voltage collapse when reactive resources are insufficient. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. IRO-009-1, R1. For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more ~~Operating~~ operating ~~Processes~~processes, ~~Procedures~~procedures, or ~~Plans~~ plans that identify actions it shall take, or actions it shall direct others to take (up to and including ~~load~~Load shedding) that can be implemented in time to prevent exceeding those IROLs. IRO-009-1, R2.For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more ~~Operating~~ operating ~~Processes~~processes, ~~Procedures~~procedures, or ~~Plans~~ plans that identify actions it shall take, or actions it shall direct others to take (up to and including ~~load~~Load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's Tv. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer ~~load~~Load rather than risk an uncontrolled failure of components or ~~cascading~~ Cascading ~~outages~~ Outages of the Interconnection.

Standard TOP-002-2a — Normal Operations Planning		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.	Approved BAL-001-0.1a. Approved BAL-002-1. Approved EOP-002-2.1, Requirement R6. Proposed TOP-002-3, Requirements R1 through R3.	First sentence – Deleted for Balancing Authority, retained for Transmission Operator. The Balancing Authority is required to balance by approved BAL-001-0.1a and approved BAL-002-1 and must take action, per approved EOP-002-2.1, Requirement R6 and, thus, the Balancing Authority part of this sentence can be deleted. Retained for Transmission Operator and moved to proposed TOP-002-3, Requirements R1 through R3. This is patterned after the approved IRO-008-1, Requirement R1 for the Reliability Coordinator. Second sentence – Deleted as superfluous. Use of appropriate personnel and equipment is incumbent to responsible entities, as per their certification as NERC registered entities. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing ~~real power~~Real Power demand and supply in ~~real~~Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of ~~load~~Load, and because Contingency Reserve activation does not typically apply to the loss of ~~load~~Load, the application of DCS is limited to the loss of supply, and does not apply to the loss of ~~load~~Load. EOP-002-2.1, R6. If the Balancing Authority cannot comply with the Control Performance and

		Disturbance Control Standards, then it shall immediately implement remedies to do so. TOP-002-3, R1: Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. TOP-002-3, R2: Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. TOP-002-3, R3: Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.	Deleted	The SDT reviewed the purpose of the Reliability Standard and believes that this requirement referred to operations planning. Given the current definition of Transmission Operator in the Glossary and Functional Model v5, operations planning is part of what the Transmission Operator is required to do and, as such, this requirement is no longer needed and can be deleted. Functional Model V5: Transmission Operator: The entity responsible for the reliability of its “local” transmission ~~system~~System, and that operates or directs the operations of the transmission ~~facilities~~Facilities.
R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-	Proposed TOP-003-2. Approved MOD-	For all but the Transmission Service Provider, moved to proposed TOP-003-2 requires the transfer of any and all required data, regardless of ~~timeframe~~time frame involved.

day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.	001-1a, Requirements R1 & R2. Approved MOD-030-2, Requirement R3.	The Transmission Service Provider provisions are already covered in: • Approved MOD-001-1a, Requirement R1: Transmission Operators select transfer capability methodology from approved MOD-028, -029, or -030. • Approved MOD-030-2, Requirement R3: Transmission Operator gives transmission model updated at least once per day to Transmission Service Provider. • Approved MOD-001-1a, Requirement R2: Transmission Service Providers use the methodology designated in approved MOD-001-1a, Requirement R1 by the Transmission Operator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. MOD-001-1a, R1. Each Transmission Operator shall select one of the methodologies~~1~~ listed below for calculating Available Transfer Capability (ATC) or Available Flowgate Capability (AFC) for each ATC Path per time period identified in R2 for those Facilities within its Transmission operating area. MOD-030-2, R3. The Transmission Operator shall make available to the Transmission Service Provider a Transmission model to determine Available Flowgate Capability (AFC) that meets the following criteria: [LA1]MOD-001-1a, R2. Each Transmission Service Provider shall calculate ATC or AFC values, as listed below, using[LA2] the methodology or methodologies selected by its Transmission Operator(s).
R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-	Proposed TOP-003-2, Requirement R5. Approved IRO-010-	Proposed TOP-003-2 requires the transfer of any and all required data between and amongst Balancing Authorities and Transmission Operators, regardless of the ~~timeframe~~time frame involved.

day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator, so that normal Interconnection operation will proceed in an orderly and consistent manner.	1a, Requirement R3.	Data requirements for Reliability Coordinators are covered in approved IRO-010-1a, Requirement R3 making this requirement redundant for Reliability Coordinators, so the Reliability Coordinator has been removed here. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.	Approved BAL-001-0.1a. Proposed TOP-003-2, Requirement R4. Proposed TOP-002-3, Requirement R1.	The part of the requirement dealing with the Balancing Authority is replaced by approved BAL-001-0.1a. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built into the Functional Model. Therefore, the Transmission Operator should be developing the plan and passing it down to the Balancing Authority. The Balancing Authority provides any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R5. The part of the requirement dealing with the Transmission Operator has been moved to proposed

		TOP-002-3, Requirement R1. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing ~~real power~~Real Power demand and supply in ~~real~~Real-time. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in System configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.	Approved BAL-002-1, Requirements R2 – R4. Proposed TOP-003-2, Requirement R5. Proposed TOP-002-3, Requirement R1	The part of this requirement dealing with the Balancing Authority is replaced by approved ~~BAL-002-0 and proposed~~ BAL-002-1, Requirements R2 through R4 and approved EOP-002-2.1 and the proposed EOP-002-3, Requirement R6. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in to the Functional Model. Therefore, the Transmission Operator should be doing the plan and passing it down to the Balancing Authority. The Balancing Authority gets any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R4.

		The part of the requirement dealing with the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. The n-1 contingency planning is 'built in' to the Operational Planning Analysis since SOLs are derived according to FAC-010-2.1, FAC-011-2, and FAC-014-2 which includes contingency planning. The SDT does not believe that there is a need for the last part of the sentence 'in accordance with…' with the advent of the ERO and enforceable reliability standards. As stated in the NERC Functional Model V5: " the Balancing Authority's mission is to maintain the balance between ~~load~~Loads and resources in ~~real time~~Real-time within its Balancing Authority Area by keeping its actual ~~interchange~~Interchange equal to its scheduled ~~interchange~~Interchange and meeting its frequency bias obligation." To this end and in accordance with approved NERC Reliability Standards BAL-001-0.1a and ~~BAL-002-0 (and the proposed~~ approved BAL-002-1), Balancing Authorities are required to meet all control performance and disturbance recovery criteria for any ~~system~~System condition. Balancing Authorities are not responsible for the operation of the transmission ~~system~~System. The Transmission Operator is responsible for the ~~real~~Real-time operating reliability of the transmission assets under its purview~~,~~ and, as such, has the authority to issue reliability-related directives to entities within its Transmission Operator Area. Balancing Authorities are required to implement directives received from the Transmission Operator or the Reliability Coordinator regarding ~~load~~Load, generation and ~~interchange~~Interchange for transmission concerns both predicted (e.g., through Unit Commitment) and actual (e.g., through re-dispatch, Interchange modifications or ~~load~~Load shedding). If the Balancing Authorities' actions do not resolve the transmission issues, it is the Transmission Operators' or Reliability Coordinators' responsibility to direct alternative actions.

		BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: BAL-002-1, R3. Each Balancing Authority or Reserve Sharing Group shall activate sufficient Contingency Reserve to comply with the DCS. BAL-002-1, R4. Balancing Authority or Reserve Sharing Group shall meet the Disturbance Recovery Criterion within the Disturbance Recovery Period for 100% of Reportable Disturbances. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. FAC-010-2.1, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable planning of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-011-2, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-014-2, Purpose. To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are

		determined based on an established methodology or methodologies. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing ~~real power~~Real Power demand and supply in ~~real~~Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of ~~load~~Load and because Contingency Reserve activation does not typically apply to the loss of ~~load~~Load, the application of DCS is limited to the loss of supply and does not apply to the loss of ~~load~~Load.
R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.	Approved BAL-002-1, Requirement R2. Proposed TOP-002-3, Requirement R1.	The Balancing Authority is required to always plan to meet and recover from Contingency events, as stated in approved BAL-002-1, Requirement R2 and, therefore, this requirement is redundant and can be deleted, as all elements of the requirement are now covered in other standards. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and are replaced by proposed TOP-002-3, Requirement R1. Operational Planning Analysis includes deliverability considerations, since any deliverability problems will appear as limit violations in the analysis. BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next

		day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.	Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirement R1. Proposed TOP-002-3, Requirement R1	The Balancing Authority must be told by the Transmission Operator to take actions regarding ~~reactive power~~Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, this requirement can be deleted, as all elements of the requirement are now covered in other standards. Voltage and ~~reactive power~~Reactive Power balance are the responsibility of the Transmission Operator and are replaced by approved VAR-001-1, Requirement R1. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and is replaced by proposed TOP-002-3, Requirement R1 since any deliverability problems will appear as limit violations in the analysis. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during

		anticipated normal and Contingency event conditions.
R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.	Approved INT-003-2, Requirement R1.	Replaced by approved INT-003-2, R1. INT-003-2, R1. Each Receiving Balancing Authority shall confirm Interchange Schedules with the Sending Balancing Authority prior to implementation in the Balancing Authority's ACE equation.
R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).	Deleted for Balancing Authority. Proposed TOP-002-3, Requirements R1 & R2.	Balancing Authority - The Balancing Authority is only responsible to respond to Reliability Directives as per the definition of Balancing Authority in the NERC Glossary, and, thus, this requirement should never have been applicable to the Balancing Authority. SOLs and IROLs are limits for which the Balancing Authority may not have (and is not required to have) the ability to monitor or control. The Transmission Operator, who is required to monitor SOLs, instructs the Balancing Authority as to what to do in these situations. As stated in the NERC Functional Model V5, "the Balancing Authority's mission is to maintain the balance between ~~load~~Loads and resources in ~~real time~~Real-time within its Balancing Authority Area by keeping its actual ~~interchange~~Interchange equal to its scheduled ~~interchange~~Interchange and meeting its frequency bias obligation". The Balancing Authority does not possess the bulk power ~~system~~System information necessary to manage Transmission flows. Therefore, the Balancing Authority can only plan to meet SOLs and IROLs by responding to directions from the Transmission Operator, including scheduling and operating resources within the limits prescribed by the Transmission Operator. Transmission Operator – replaced by proposed TOP-002-3, Requirement R1 (analysis of SOLs) & Requirement R2 (avoid IROLs). TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during

		anticipated normal and Contingency event conditions. TOP-002-3, R2. Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability in its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.
R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.	Approved FAC-011-2. Approved FAC-014-2. Proposed TOP-002-3, Requirements R1 & R3.	First sentence – Replaced by FAC-011-2 and FAC-014-2 where SOLs are determined. FAC-011-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-014-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. Second sentence – Replaced by approved FAC-014-2, R2 & R5.1. FAC-014-2, R2. The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2, R5.1. The Reliability Coordinator shall provide its SOLs (including the subset of SOLs that are IROLs) to adjacent Reliability Coordinators and Reliability Coordinators who indicate a reliability-related need for those limits, and to the Transmission Operators, Transmission Planners, Transmission Service Providers and Planning Authorities within its Reliability Coordinator Area. Third sentence – Replaced by proposed TOP-002-3.

		'update… as necessary' is ambiguous and the SDT believes that proposed TOP-002-3 is a better solution. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-002-3, R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes.	Approved MOD-028-1, Requirement R6.1. Approved MOD-029-1a, Requirement R3. Approved MOD-30-2 Requirement R2.4.	Replaced by approved MOD-028-1, Requirement R6.1, MOD-029-1a, Requirement R3, and MOD-030-2, Requirement R2.4. Because IROLs by definition are a subset of SOLs, IROLs are included. MOD-028-1, R6.1,Determine the incremental Transfer Capability for each ATC Path by increasing generation and/or decreasing ~~load~~Load within the source Balancing Authority area and decreasing generation and/or increasing ~~load~~Load within the sink Balancing Authority area until either: A System Operating Limit is reached on the Transmission Service Provider's ~~system~~System, or A SOL is reached on any other adjacent ~~system~~System in the Transmission model that is not on the study path and the distribution factor is 5% or greater. MOD-029-1a, R3, Each Transmission Operator shall establish the TTC at the lesser of the value calculated in R2 or any System Operating Limit (SOL) for that ATC Path. MOD-030-2, R2.4, Establish the TFC of each of the defined Flowgates as equal to:

		For thermal limits, the System Operating Limit (SOL) of the Flowgate. For voltage or stability limits, the flow that will respect the SOL of the Flowgate.
R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.	Proposed MOD-25-2, Requirement R1 Proposed TOP-003-2, Requirement R5	Replaced by proposed MOD-025-2, R1. MOD-025-2, R1: Each Generator Owner shall: 1.1. Verify the Real and Reactive Power capability of its generating units and shall verify the Reactive Power capability of its synchronous condenser units in accordance with Attachment 1. 1.2. Record the information on Attachment 2 (or on the Generator Owner's form that contains the same information as Attachment 2); 1.3. Submit within 90 calendar days of the date the data is recorded to its Transmission Planner. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, ~~Interchange~~Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics; including but not limited to: 14.1 - Changes in real and reactive output capabilities. (Retired August 1, 2007) 14.2 - Changes in real output capabilities. (Effective August 1, 2007) 14.3 - Automatic Voltage Regulator status and mode setting. (Retired August 1,	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

2007)		
R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to: 16.1 - Changes in transmission facility status. 16.2 - Changes in transmission facility rating	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.	Deleted	This requirement adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a ~~system~~System reliability issue. This is an administrative item, as seen in the measure, which simply requires a list of line identifiers. The true reliability issue is not the name of a line but what is happening to it, pointing out the difficulty in assigning compliance responsibility for such a requirement, as well as the near impossibility of coming up with truly unique identifiers on a nation-wide basis. The bottom line is that this situation is handled by the operators

		as part of their normal responsibilities, and no one is aware of a switching error caused by confusion over line identifiers.
R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.	Deleted	This is part of an entity's certification and is no longer required in standards. Furthermore, accuracy is a relative term that would be difficult to measure and assess compliance with. What is accurate? All calculated line flows are within 5% of actual flows? What if 14,999 lines out of 15,000 had calculated line flows within 5% and the 15,000th had a 6% error? Do we now call the model inaccurate and not rely on the results? How do you ~~even~~ define actual flows when meters have accuracy errors, as well (i.e., no perfect meter exists)?
Standard TOP-003-1 — Planned Outage Coordination		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Generator Operators and Transmission Operators shall provide planned outage information. 1.1 - Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements. 1.2 - Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50	Proposed TOP-003-2, Requirements R1 & R2	Replaced by proposed TOP-003-2, Requirements R1 & R2. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring.

MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements. 1.3 - Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.		
R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators, as required.	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R1 Proposed TOP-003-2, Requirement R5	Replaced by: proposed TOP-001-2, Requirement R5 which requires the Transmission Operator to coordinate actions while proposed TOP-003-2, Requirement R1 requires the Transmission Operator to identify the data it needs from the Balancing Authority to coordinate outages of voltage regulation equipment. Further, proposed TOP-003-2, Requirement R5 requires the Balancing Authority to provide the data to the Transmission Operator that the Transmission Operator identified it needs. TOP-001-2, R5: Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations, known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. TOP-003-2, R1: Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R5: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data

		specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.	Proposed TOP-001-2, Requirement R6	Moved to proposed TOP-001-2, Requirement R6 TOP-001-2, R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC--registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.
R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.	Proposed IRO-001-3, R2 Proposed IRO-005-4, R1	Moved to the proposed IRO-001-3, Requirements R3 and proposed IRO-005-4, Requirement R1 which gives the Reliability Coordinator the authority to resolve the conflict. IRO-001-3, R2: Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-005-4, R1: When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
Standard TOP-004-2 — Transmission Operations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. TOP-001-2, R7. Each Transmission Operator shall not

System Operating Limits (SOLs).		operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.	Proposed TOP-001-2, Requirements R7and R9	Moved to proposed TOP-001-2, Requirements R7and R9. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. These requirements are not limited by single or multiple Contingencies, but are based solely on identified IROLs (and selected SOLs), regardless of how they were identified or whether they were identified by the Transmission Operator or Reliability Coordinator. FAC-011-02 and FAC-014-2 work collectively to establish how multiple ~~contingencies~~ Contingencies are considered in IROLs and SOLs. FAC-014-2, R6 requires the Planning Coordinator to identify the subset of multiple ~~contingencies~~ Contingencies from TPL-003 which result in stability limits and to provide this list to the Reliability Coordinators. FAC-011-2, R3.3 requires the Reliability Coordinator to include in their SOL methodology a process for determining which of the stability limits associated with multiple ~~contingencies~~ Contingencies are used to

		establish SOLs. FAC-014-2, R1 requires the Reliability Coordinator to determine which subset of SOLs qualify as IROLS. FAC-014-2, R1 requires the Reliability Coordinator to ensure SOLs, including IROLs, are established for its Reliability Coordinator Area, while FAC-014-2, R2 also requires the TOP to establish SOLs for its area. Thus, IROLs and SOLs that consider multiple outages will be developed appropriately and the Transmission Operator will operate to them. FAC-011-2, R1, The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall: R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs. FAC-011-2, R3, The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each: R3.3. A process for determining which of the stability limits associated with the list of multiple ~~contingencies~~ Contingencies (provided by the Planning Authority in accordance with FAC-014 Requirement 6) are applicable for use in the operating horizon, given the actual or expected ~~system~~System conditions. R3.3.1. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple ~~contingencies~~Contingencies. FAC-014-2, R1, The Reliability Coordinator shall ensure that SOLs, including Interconnection Reliability Operating Limits (IROLs), for its Reliability Coordinator Area are established and that the SOLs (including Interconnection Reliability Operating Limits) are consistent with its SOL Methodology.

		FAC-014-2, R2, The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2 R6, The Planning Authority shall identify the subset of multiple ~~contingencies~~ Contingencies (if any), from Reliability Standard TPL-003 which result in stability limits. R6.1. The Planning Authority shall provide this list of multiple ~~contingencies~~ Contingencies and the associated stability limits to the Reliability Coordinators that monitor the ~~facilities~~Facilities associated with these ~~contingencies~~ Contingencies and limits. R6.2. If the Planning Authority does not identify any stability-related multiple ~~contingencies~~Contingencies, the Planning Authority shall so notify the Reliability Coordinator. TOP-001-2, R7: Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9: Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R4. If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be	Proposed TOP-001-2, Requirements R7 and R9 Approved EOP-	The SDT has determined a better way to handle such a situation is to treat it like an IROL or restoration scenario, and to take the same type of actions that you would apply for alleviating those situations. Therefore, it is replaced by proposed TOP-001-2,

considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.	006-2	Requirements R7 and R9 and the approved EOP-006-2. This allows the operator sufficient flexibility within a structured environment to take the necessary actions for the reliability of the bulk power ~~system~~System. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. EOP-006-2, Purpose: Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
R5. Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected~~,~~ it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.	Deleted	Normally, ~~T~~the Transmission Operator does not have the right to unilaterally separate – that can only be done through the authorization of the Reliability Coordinator, unless failure to act immediately would violate safety, equipment, or regulatory or statutory requirements, thus this requirement is a moot point under the Functional Model definitions and can be deleted.
R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that	Proposed TOP-001-2 Approved VAR-001-1, Requirement R1 Proposed TOP-001-2, Requirements R7 and R9	The first sentence has been superseded by the NERC Reliability Standards, taken as a whole. Examples of such would be the proposed TOP-001-2. The second sentence was replaced as follows: R6.1 is duplicative of approved VAR-001-1, Requirement R1 for ~~reactive~~Reactive. ~~Real power~~Real Power flows are covered in proposed TOP-001-2, Requirements R7 and R9.

impact inter- and intra-Regional reliability, including: 6.1 - Monitoring and controlling voltage levels and real and reactive power flows. 6.2 - Switching transmission elements. 6.3 - Planned outages of transmission elements. 6.4 - Responding to IROL and SOL violations.	ProposedTOP-001-2, Requirement R5 Proposed TOP-001-2, Requirement R11	R6.2 is covered in proposed TOP-001-2, Requirement R5. R6.3 – moved to proposedTOP-001-2, Requirement R5. R6.4 – moved to proposed TOP-001-2, Requirement R11. TOP-001-2, Purpose: To prevent instability, uncontrolled separation, or ~~cascading outages~~Cascading Outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load.

		TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard TOP-005-2 — Operational Reliability Information		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area. 1.1 - Each Reliability Coordinator shall identify the data requirements from the list in Attachment 1-TOP-005-0 "Electric System Reliability Data**"** and any additional operating information requirements relating to operation of the bulk power system within the Reliability Coordinator Area.	Approved IRO-010-1a, Requirement R3	Moved to approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R2. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."	Deleted	Confidentiality is not a reliability issue, but a market or business issue. Since this is not a reliability issue, it does not belong in the Reliability Standards and can be deleted.
R3. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-0 "Electric System Reliability Data," unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.		specifications for data.
R4. Each Purchasing-Selling Entity shall provide information, as requested by its Host Balancing Authorities and Transmission Operators, to enable them to conduct operational reliability assessments and coordinate reliable operations.	Deleted	Deleted as redundant to NAESB standard –All operating data that a Purchasing Selling Entity has, that a Transmission Operator or Balancing Authority needs is part of eTag and is acquired through that system.

Standard TOP-006-2 – Monitoring System Conditions		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use. 1.1 - Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use. 1.2 - Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	R1 & R1.1 are replaced by proposed TOP-003-2, Requirement R1. R1.2 – replaced by approved IRO-010-1a, Requirement R3. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator,

Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.		Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3. Approved BAL-005-0.1b. Proposed TOP-001-2, Requirement R10. Approved IRO-008-1, Requirement R2.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and ~~cascading~~ Cascading outages. The act of monitoring is un-measureable. Entities will be in violation of other standards if they don't perform adequate monitoring. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs, and approved IRO-008-1, Requirement R2 for Real-time assessments every 30 minutes for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that

		all ~~facilities~~Facilities and ~~load~~Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the ~~system~~System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and ~~c~~Cascading outages.
R4. Each Transmission Operator~~,~~ and Balancing Authority shall have information, including weather forecasts and past load	Proposed TOP-003-2, Requirements R1 & R2	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority.

patterns, available to predict the system's near-term load pattern.	Approved IRO-010-1a, Requirement R3.	Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and ~~cascading~~ Cascading outages.
R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to indicate, if appropriate, the need for corrective action.	Deleted	Deleted as this is covered in the certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs; approved IRO-008-1, Requirement R2 for ~~real~~Real-time assessments every 30 minutes for Reliability Coordinators BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all ~~facilities~~Facilities and ~~load~~Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the ~~system~~System to within limits when an

		IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R7 for Transmission Operator avoiding IROLs. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all ~~facilities~~Facilities and ~~load~~Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.
R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); approved EOP-003-1, Requirement R2 for Transmission Operator avoiding underfrequency; approved EOP-006-2, Requirement R8 for resynchronization for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the

		Regulating Reserve. The standard also ensures that all ~~facilities~~Facilities and ~~load~~Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. EOP-003-1, R2. Each Transmission Operator and Balancing Authority shall establish plans for automatic ~~load~~Load shedding for underfrequency or undervoltage conditions. EOP-006-2, R8. The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization.
Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded, and the actions being taken to return the system to within limits.	Proposed TOP-001-2, Requirement R10	Moved to proposed TOP-001-2, Requirement R10. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the ~~system~~System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded.
R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.	Proposed TOP-001-2, Requirement R11	Moved to proposed TOP-001-2, Requirement R11. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R3. A Transmission Operator shall take all appropriate actions, up to and including shedding firm load,	Approved EOP-003-1, Requirements R1	Replaced by approved EOP-003-1, Requirements R1. EOP-003-1, R1. After taking all other remedial steps, a

or directing the shedding of firm load, in order to comply with Requirement R2.	and in proposed EOP-003-2, Requirement R1	Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer ~~load~~Load rather than risk an uncontrolled failure of components or ~~cascading~~ Cascading outages of the Interconnection.
R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.	Approved IRO-008-1, Requirement R3	Replaced by approved IRO-008-1, Requirement R3. IRO-008-1, R3. When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.
Standard TOP-008-1 - Response to Transmission Limit Violations		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Proposed Language in New Standard or Comment**
R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.	Approved EOP-003-1, Requirements R1 and in proposed EOP-003-2, Requirement R1 Proposed TOP-001-2, Requirement R11	Replaced by approved EOP-003-1, Requirements R1 and proposed TOP-001-2, Requirement R11. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer ~~load~~Load, rather than risk an uncontrolled failure of components or ~~cascading outages~~Cascading Outages of the Interconnection. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the	Proposed TOP-001-2, Requirements R7 and R9 Approved IRO-009-1, Requirement R5	First sentence – Replaced by proposed TOP-001-2, Requirements R7 and R9. Second sentence – Replaced by approved IRO-009-1, Requirement R5 for the Reliability Coordinator who is now responsible for such matters. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection

Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.		Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. IRO-009-1, R5. If unanimity cannot be reached on the value for an IROL or its Tv, each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration.
R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.	Deleted	Placing this procedure in a requirement when it is only one of the possible options for alleviating the condition is bad practice and should not be mandated in standards. A standard should not be mandating disconnection. This is in conflict with other ~~Reliability~~ reliability ~~Standards~~ standards where disconnection is dependent on System conditions and coordination with other functional entities. Such actions, taken unilaterally, could make conditions worse.
R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.	Proposed TOP-003-2, Requirement R1 Proposed TOP-002-3, Requirement R1 Proposed TOP-001-2, Requirement R7 Proposed TOP-001-2, Requirement R11	Data piece is replaced by proposed TOP-003-2, Requirement R1. Analysis tools are covered in the certification process for core capabilities and, therefore, are not needed here. The Transmission Operator will be in violation of other standards if they don't maintain their initial certification. For example, they can't develop their limits without maintaining their tools. Replaced by proposed TOP-002-3, Requirement R1 for analysis. Replaced by proposed TOP-001-2, Requirement R7 for real-time analysis required for IROL mitigation.

		Proposed TOP-001-2, Requirement R11 covers mitigation of limit violations. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard PER-001-0 - Operating Personnel Responsibility and Authority		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Proposed Language in New Standard or Comment**
R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System.	Deleted	In FERC Order 693a, ~~paragraph~~Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of ~~Reliability~~ reliability ~~Standards~~ standards that mandate compliance with such directives. The SDT reasonably applied this same logic to Transmission Operators and Balancing Authorities and that makes this requirement superfluous and, thus, it can be deleted. FERC Order 693a, ~~paragraph~~Paragraph 112: In response to Avista, the Commission clarifies that a ~~reliability~~ Reliability ~~coordinator's~~ Coordinator's authority to issue directives arises out of the Commission's approval of ~~Reliability~~ reliability ~~Standards~~ standards that mandate compliance with

		such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to ~~section~~ Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a ~~reliability~~ Reliability ~~coordinator's~~ Coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, ~~we view~~ these are~~as~~ vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
Standard PRC-001-1 – System Protection Coordination		
Requirement in Approved Standard	**Translation to New Standard or Other Action**	**Proposed Language in New Standard or Comment**
R2. Each Generator Operator and Transmission Operator shall notify reliability entities of relay or equipment failures as follows:	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R5. A Generator Operator or Transmission Operator shall coordinate changes in generation, transmission, load or operating conditions that could require changes in the protection systems of others: R5.1. Each Generator Operator shall notify its Transmission Operator in advance of changes in generation or operating conditions that could require changes in the Transmission Operator's protection systems.	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

R5.2. Each Transmission Operator shall notify neighboring Transmission Operators in advance of changes in generation, transmission, load, or operating conditions that could require changes in the other Transmission Operators' protection systems.		
R6. Each Transmission Operator and Balancing Authority shall monitor the status of each Special Protection System in their area, and shall notify affected Transmission Operators and Balancing Authorities of each change in status.	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

Standards Announcement

Project 2007-03 Real-Time Transmission Operations

Three Recirculation Ballot Windows Open April 27, 2012 through 8 p.m. Eastern on May 6, 2012

Now Available

The Real-time Operations Standards Drafting Team (RTO SDT) made the following minor revisions to three standards in response to stakeholder comments from the posting that ended on April 20, 2012:

- TOP-001-2 Transmission Operations:
  - Deleted Operations Planning from the Time Horizons for Requirement R1
  - Added clarifying language to the VSLs for Requirements R3, R5, and R6 for consistency with Requirement R8
- TOP-002-3 Operations Planning:
  - Changed from 3 months to 90 calendar days in Data Retention for consistency
- TOP-003-2 Operational Reliability Data:
  - Added analysis functions to Requirement R2, Part 2.1 for consistency with the main requirement

Recirculation ballots of the following standards are **open through 8 p.m. Eastern on Sunday, May 6, 2012:**

- TOP-001-2 Transmission Operations
- TOP-002-3 Operations Planning
- TOP-003-2 Operational Reliability Data

Clean and redline versions of these standards and the associated single implementation plan and VRFs and VSLs, are posted on the project webpage. Note that TOP-001-2, TOP-002-3, and TOP-003-2 reflect the merging of the following ten standards into three standards, making it impractical to post a "redline" of the three proposed standards that shows the changes to the last balloted versions of these standards. The last approved versions of the standards listed below, as well as a redline showing the proposed modifications to PRC-001-1 have been posted on the project's web page for easy reference.

- PER-001-0.1 Operating Personnel Responsibility and Authority
- PRC-001-2 System Protection Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2a Normal Operations Planning
- TOP-003-1 Planned Outage Coordination

- TOP-004-2 Transmission Operations
- TOP-005-2 Operational Reliability Information
- TOP-006-2 Monitoring System Conditions
- TOP-007-0 Reporting SOL and IROL Violations
- TOP-008-1 Response to Transmission Limit Violations

Instructions

In the recirculation ballot, votes are counted by exception. Only members of the ballot pools may cast a ballot; all ballot pool members may change their previously cast votes. A ballot pool member who failed to cast a ballot during the last ballot window may cast a ballot in the recirculation ballot window. If a ballot pool member does not participate in the recirculation ballot, that member's vote cast in the previous ballot will be carried over as that member's vote in the recirculation ballot. Members of the ballot pools associated with this project may log in and submit their votes for the standards by clicking here.

Next Steps

Voting results will be posted and announced after the ballot windows close. If approved, the standard(s) will be submitted to the Board of Trustees for adoption.

Background

The Project 2007-03 drafting team has attempted to eliminate redundancy in the Transmission Operations (TOP) family of standards. As part of this process, the drafting team has made an effort to reorganize the standards and requirements in a more logical manner. The team has also made revisions to address outstanding Order 693 directives.

Standards Development Process

The Standard Processes Manual contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. For more information or assistance, please contact Monica Benson at monica.benson@nerc.net.

For more information or assistance, please contact Monica Benson,
Standards Process Administrator, at monica.benson@nerc.net or at 404-446-2560.

Standards Announcement

Project 2007-03 – Real-time Operations

Recirculation Ballot Results

Now Available

Recirculation ballots of three Real-time Operations standards concluded Sunday May 6, 2012:

- TOP-001-2 Transmission Operations
- TOP-002-3 Operations Planning
- TOP-003-2 Operational Reliability Data

Voting statistics for each ballot are listed below, and the Ballots Results page provides a link to the detailed results.

Standard	Quorum	Approval
TOP-001-2 Transmission Operations	Quorum: 79.36%	Approval: 76.84%
TOP-002-3 Operations Planning	Quorum: 79.36%	Approval: 88.11%
TOP-003-2 Operational Reliability Data	Quorum: 79.36%	Approval: 80.79%

Next Steps

TOP-001-2 - Transmission Operations, TOP-002-3 - Operations Planning, and TOP-003-2 - Operational Reliability will be presented to the NERC Board of Trustees for adoption and subsequently filed with regulatory authorities. The VRFs and VSLs for all three standards (unchanged from those included in the versions of the standards posted for recirculation ballot) will be presented to the board for approval.

Background

The Project 2007-03 drafting team has attempted to eliminate redundancy in the Transmission Operations (TOP) family of standards. As part of this process, the drafting team has made an effort to reorganize the standards and requirements in a more logical manner. The team has also made revisions to address outstanding Order 693 directives.

Additional information is available on the project page.

Project 2007-03 Real-time Transmission Operations
Drafting Team Roster

Name and Title	Company and Address	Contact Info	Bio
James Case, P.E. Director, Weekly Operations & SDT Chair	Entergy Services 6540 Watkins Drive Jackson, MS 39213	1.601.985.2345 jcase@entergy.com	Jim Case was named director of weekly operations in June. 2008. Immediately prior to being named to this position, Mr. Case served in transmission operations as manager of transmission system security. As director of weekly operations, Mr. Case is responsible for the design, implementation and maintenance of procedures and processes necessary to ensure compliance with Entergy's transmission tariff on file with the Federal Energy Regulatory Commission that governs Entergy's weekly procurement process. Mr. Case also leads the implementation of integration into the MISO RTO for Entergy's transmission function. Mr. Case has over thirty-eight years of electric utility experience, most recently in transmission operations. He has experience in all phases of transmission and distribution, including field engineering, construction management, distribution standards, and bulk power operations. Mr. Case currently directs a group that performs security-constrained unit commitment including independent offers on a week-ahead basis for Entergy. In addition to his previous assignment in transmission operations, he has served as manager of transmission security coordination, staff engineer in distribution standards, and district engineer in the south-central district of Entergy Mississippi. Before joining Entergy, Mr. Case worked for the Union Carbide Nuclear Division and Gulf Power Company. Mr. Case is active nationally in NERC. He is a member of the NERC Operating Committee, Chair of the SERC Operating Committee, Chair of the NERC Real-time Operations Standards Drafting Team, member of the Reliability Coordination Standards Drafting Team, member of the

			Interconnected Reliable Operations Standards Drafting Team, past member of the Version 0 Standards Drafting Team, the Reliability Coordination Working Group, the Congestion Management Working Group, and the ANSI C62 working group concerned with surge arrester standards. Mr. Case has a bachelor's degree in electrical engineering from Mississippi State University and a master's degree in business administration from the University of Arkansas at Little Rock. Mr. Case is a senior member of the Institute of Electrical and Electronics Engineers, Inc., a member of the Power Engineering Society, and is a registered professional engineer in Mississippi. Mr. Case is a member of Eta Kappa Nu, Tau Beta Pi, Beta Gamma Sigma and Alpha Epsilon Lambda.
Karl Tammar Transmission Operations Manager & SDT Vice Chair	Sharyland Utilities 6900 Interstate 40 West, Suite 100 Amarillo, TX 79119	1.806.358.9070 ktammar@sharyland.com	Karl Tammar is the Manager of Transmission Operations for Sharyland Utilities, LLP. Mr. Tammar joined Sharyland Utilities in October 2010. He is responsible for developing and leading the transmission operations organization for Sharyland Utilities, including building a new transmission operations center to control and operate Sharyland's transmission assets. Mr. Tammar has over 30 years of experience in the electric utility industry that includes management and engineering positions with electric utility companies including Northeast Utilities, Montana-Dakota Utilities, and the New York Independent System Operator. He has served on numerous NERC and regional reliability committees, task forces, and working groups; most recently as the Vice Chair of the NERC Real-time Operations Standards Drafting Team. Mr. Tammar has an MBA in Accounting from Union College and a Master's in Electric Power Engineering from Rensselaer Polytechnic Institute. He is a member of the Institute of Electrical and Electronics Engineers (IEEE), and a member of the IEEE's Power and Energy Society and Technology

			Management Council.
Albert DiCaprio Strategist	PJM 955 Jefferson Ave. Valley Forge Corporate Center Norristown, PA 19403	1.610.666.8854 dicapram@pjm.com	Mr. DiCaprio has been employed by PJM since 1970. His experience at PJM includes the System Operations Department in which he helped develop PJM's generation control program, PJM's Accounting for regulation program, and PJM's Fuel Supply Emergency procedures; in the System Performance Department he initiated performance monitoring and benchmarking programs and PJM's Energy by Fuel type tracking system; and he helped launch PJM's first retail customer support program. As Senior Strategist, Mr. DiCaprio provides analysis and support for PJM positions on NERC standards and FERC initiatives. Mr. DiCaprio has served on various NERC committees most notably as Chairman of the Performance Subcommittee when the first Control Performance Standard was approved and on the Task Force whose efforts led to the development of the NERC Functional Model. Mr. DiCaprio serves as the chairman of the ISO/RTO's Standards Review Committee who review and comment on NERC Reliability Standards, NAESB Business Practices, and FERC initiatives related to reliability standards. Active in the IEEE, Mr. DiCaprio is a senior member and has published various papers and has served on Technical Activities committees for two Joint IEEE-CIGRE conferences. Internationally, Mr. DiCaprio serves as the chairman of the International Group on Comparison of Transmission Operation Practices. Mr. DiCaprio has been part of CIGRE's initiative into Energy Markets and has been active with Study Committee C5 (Markets and Regulation) since its beginning in 2000 and received the CIGRE 2009 Technical Committee Award for his contributions to the Study Committee. Mr. DiCaprio is also active in a Joint Working Group with Markets and Operations, and Working Groups on System Design (WG C5-7) and on Integration of Renewable

			resources and Demand-side Management (WG C5-11). Mr. DiCaprio has a Bachelor's Degree in Electrical Engineering from Drexel University and a Master's Degree in System Operations from the University of PA.
Jason Marshall Director, Reliability Compliance	ACES Power marketing 4140 West 99th Street Carmel, IN 46032	1.317.344.7204 jmarshall@acespower.com	Jason Marshall is currently Director of Reliability Compliance for ACES Power Marketing (APM) in Carmel, IN. Mr. Marshall joined APM in April 2011 in this role. Mr. Marshall is currently responsible for leading APM's reliability compliance support service which provides advice, guidance, and processes to share resources and reliability compliance intelligence among APM's members and the National Rural Electric Cooperative Association (NRECA). Mr. Marshall has 15 years of experience in the energy industry including extensive experience in bulk power operations and ERO compliance. Mr. Marshall began his career in 1996 with Duke Energy as an Associate Engineer supporting their transmission tariff and bulk power operations. Immediately prior to joining APM, Mr. Marshall held positions of progressively increasing responsibility in operations engineering and ERO standards development and compliance at Midwest ISO in Carmel, IN. Mr. Marshall also has worked as a reliability coordinator for the MAIN Coordination Center in Lombard, IL. Mr. Marshall's industry experience includes reliability coordination, transmission operations, balancing authority operations, operations planning, EMS support, transmission tariff administration, reliability policy analysis, and new business start up. He has served on numerous NERC committees, drafting teams, and task forces. Mr. Marshall also has served as chairman of several RFC standards drafting teams and vice-chairman of the ISO/RTO Council's Standards Review Committee. Mr. Marshall graduated with a Bachelor of Science degree in electrical engineering from Rose-Hulman Institute of Technology. He also received a Master of Science in Electrical Engineering (with a power systems

			emphasis) from Clemson University and a Master of Business Administration from the University of Indianapolis. Mr. Marshall is a NERC-certified Reliability Operator and a Registered Professional Engineer in the states of North Carolina and Indiana.
H. Steven Myers Principal, Operatoing & Planning Standards	ERCOT 2705 West Lake Drive Taylor, TX 76574	1.512.248.3077 smyers@ercot.com	Steve Myers, Principal, Operating & Planning Standards at the Electric Reliability Council of Texas (ERCOT), has over forty-two years of electric system operations experience. Mr. Myers first joined ERCOT in 1996 as the Security Center Manager at the inception of the ERCOT Independent System Operator (ISO). During his time at ERCOT, he has served as Security Center Manager, Manager of System Operations, Manager of Operations Support, Manager of Operating Standards, and now as Principal, Operating & Planning Standards. Mr. Myers has served in various positions related to NERC activities, standards development, and reliability standards compliance. He has been a member of the NERC RCWG, NERC ORS, the original RRSWG, the Version 0 Operating Standards SDT, numerous Reliability Standards SDTs, the NERC FMWG, and is presently an ISO/RTO Segment representative to the NERC Standards Committee. Mr. Myers is also a member of the ISO/RTO Council Standards Review Committee (SRC). Prior to joining ERCOT, Mr. Myers served as Manager of the North Texas Security Center. He also served as Operations Supervisor and as Supervisor of Operations Engineering for an investor-owned electric utility; including generation and transmission operations. As a more junior engineer, he served as an engineer in electrical distribution, with responsibilities including supervision of a transformer repair shop, supervision of an underground network group, and as an operations engineer at the system control center.

			Mr. Myers is a graduate of New Mexico State University, with a Bachelor of Science in Electrical Engineering (BSEE). He has a Master of Business Administration (MBA) degree in Management from the University of Texas at Arlington, and is a Registered Professional Engineer in the State of Texas. Mr. Myers served as an officer in the U. S. Naval Reserve as an Assistant Resident Officer in Charge of Construction in San Diego, California. His electrical engineering training enabled his oversight of all contracts for electrical systems on all bases in the San Diego area. Mr. Myers also gained experience with oversight of contracts of every nature on three assigned Navy bases in the area.
Gregory Van Pelt	CAISO 250 Outcropping Way Folsom, CA 95630	1.916.351.2190 gvanpelt@caiso.com	Gregory Van Pelt is currently an External Affairs Manager for the California Independent System Operator (ISO). Mr. Van Pelt has been involved in power system operations for nearly 40 years and was part of the original start-up staff at the ISO. Prior to his current assignment, his responsibilities included real-time operations, operations training, outage management, regional coordination and compliance, as well as developing and coordinating emergency response actions. Before coming to the ISO, Mr. Van Pelt spent 25 years with the Southern California Edison Company where his responsibilities were primarily in Electric System Operations and Emergency Management.

Exhibit H

Southwest Blackout Event Analysis

Analysis of PSW Report Recommendations Addressed by Currently Enforceable and Revised Board-Approved TOP Standards[1]

Current Standards	Future Standards
Report Recommendation 2: *TOPs and BAs should ensure that their next-day studies are updated to reflect next-day operating conditions external to their systems, such as generation and transmission outages and scheduled interchanges, which can significantly impact the operation of their systems. TOPs and BAs should take the necessary steps, such as executing nondisclosure agreements, to allow the free exchange of next-day operations data between operating entities. Also, RCs should review the procedures in the region for coordinating next-day studies, ensure adequate data exchange among BAs and TOPs, and facilitate the next-day studies of BAs and TOPs.*	
TOP-002-2a, Requirement R19: R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations. **IRO-008-1, Requirements R1 and R3:** R1. Each Reliability Coordinator shall perform an Operational Planning Analysis to assess whether the planned operations for the next day within its Wide Area, will exceed any of its Interconnection Reliability Operating Limits (IROLs) during anticipated normal and Contingency event conditions R3. When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share	**Proposed TOP-002-3, Requirement R1:** R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions **that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions**. (Emphasis added - Note that the nqualifier "accurate" was removed as ambiguous; the concept of accuracy is captured in the bolded phrase. Without a reasonable degree of accuracy in its Operational Planning Analysis, a TOP cannot meet this Requirement.) **The following Requirements from currently enforceable Reliability Standards will remain in effect and contribute to meeting Report Recommendation 2:**

[1] This analysis was prepared at the request of the NERC Board of Trustees, for the purpose of determining whether the TOP standards as revised under Project 2007-03 Real-time Operations were consistent with the recommendations in the 2011 Southwest Blackout Event. *Arizona-Southern California Outages on September 8, 2011, Causes and Recommendations*, prepared by the Staffs of the Federal Energy Regulatory Commission and the North American Electric Reliability Corporation, April 2012. This report is available at: http://www.nerc.com/files/AZOutage_Report_01MAY12.pdf. While that report contained a number of recommendations that were not specific to real-time operations, those were not included in this analysis because they were not pertinent to the standards in question (i.e., the Board-approved TOP-001-2, TOP-002-3, and TOP-003-2).

Analysis of PSW Report Recommendations Addressed by Currently Enforceable and Revised Board-Approved TOP Standards[1]

Current Standards	Future Standards
its results with those entities that are expected to take those actions. **IRO 010-1a, Requirements R1 and R3:** R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and cascading outages. The specification shall include the following: s R1.1. List of required data and information needed by the Reliability Coordinator to support Real-Time Monitoring, Operational Planning Analyses, and Real-Time Assessments. R1.2. Mutually agreeable format. R1.3. Timeframe and periodicity for providing data and information (based on its hardware and software requirements, and the time needed to do its Operational Planning Analyses). R1.4. Process for data provision when automated Real-Time system operating data is unavailable. R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. **IRO 004-2, Requirement R1:** R1. Each Transmission Operator, Balancing Authority, and Transmission Service Provider shall comply with the directives of its	**IRO-008-1, Requirements R1 and R3:** R1. Current Standards	Future Standards
R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations. **TOP-008-1, Requirement R4:** R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.	time monitoring. R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and Real-time monitoring. The specification shall include: 2.1. A list of data and information needed by the Balancing Authority to support its analysis functions and Real-time monitoring. **Proposed TOP-003-2 Requirements R3 (Transmission Operator) and R4 (Balancing Authority)** address the distribution of the data specifications to applicable entities. Requirement R5 then mandates that the requested applicable entities must supply the data. R3. Each Transmission Operator shall distribute its data specification, as developed in Requirement R1, to entities that have data required by the Transmission Operator's Operational Planning Analysis and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. R4. Each Balancing Authority shall distribute its data specification, as developed in Requirement R2, to entities that have data required by the Balancing Authority's analysis functions and Real-time monitoring process used in meeting its NERC-mandated reliability requirements. R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.

Analysis of PSW Report Recommendations Addressed by Currently Enforceable and Revised Board-Approved TOP Standards[1]	
Current Standards	**Future Standards**
	Additionally, the scope of Project 2009-02 Real-time Monitoring and Analysis Capabilities, currently in development, includes establishment of requirements for monitoring and analysis capabilities provided to System Operators to support Real-time System Operations.
TOP-004-2, Requirement R4 R4. If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.	Proposed TOP standards (TOP-001-2, TOP-002-3, and TOP-003-2) do not include an explicit reference to **'unknown state'** since system limits can and should be determined and conditions can be monitored to know when they have been exceeded. The proposed TOP standards prohibit operation outside of IROLs, or SOLs identified in TOP 001-2 R8, which supports continuous reliability and accountability. **Proposed TOP-001-2, Requirements R7, R8, and R9.** R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. Finally, approved EOP-006-2, which becomes enforceable on 7/1/2013

Analysis of PSW Report Recommendations Addressed by Currently Enforceable and Revised Board-Approved TOP Standards[1]

<table>
<tr><th>Current Standards</th><th>Future Standards</th></tr>
<tr><td></td><td>supports these Requirements to ensure recovery. EOP-006-2 has the following purpose: Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.</td></tr>
<tr><td colspan="2">Report Recommendation 12: TOPs should review existing operating processes and procedures to ensure that post-contingency mitigation plans reflect the time necessary to take mitigating actions, including control actions, to return the system to a secure N-1 state as soon as possible but no longer than 30 minutes following a single contingency. As part of this review, TOPs should consider the effect of relays that automatically isolate facilities without providing operators sufficient time to take mitigating measures.</td></tr>
<tr><td>TOP-004-2, Requirement R2:
R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.

TOP-002-2a, Requirement R10:
R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).

TOP-008-1, Requirements R1 and R2:
R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.

R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System</td><td>The Proposed TOP standards prohibit operation outside of IROLs, or SOLs identified in TOP 001-2 R8. The proposed standards reflect the responsibilities contained in the Functional Model. The TOP is accountable to remain within IROLs and SOLs provided by the RC, and any SOLs that the TOP establishes using the RCs methodology. TOP-001-2, Requirement R7 requires that a Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v which is a more limiting circumstance than the current standards, since T_v is less than 30 minutes. Requirement R8 then continues to raise the bar by including selected SOLs that should receive the same basic treatment as IROLs while limiting operations in Requirement R9 to durations that can't exceed the applicable ratings. Finally, Requirement R11 states that the Transmission Operator must act, or direct others to act, to mitigate any such situations.

TOP-001-2, Requirements R7, R8, R9, and R11:
R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.</td></tr>
</table>

Analysis of PSW Report Recommendations Addressed by Currently Enforceable and Revised Board-Approved TOP Standards[1]	
Current Standards	**Future Standards**
to the most limiting parameter.	R8. Each Transmission Operator shall inform its Reliability Coordinator of each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area based on its assessment of its Operational Planning Analysis. R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. Finally, this recommendation and the above Requirements are supported by the currently enforceable **EOP-003-1, Requirement R1**. R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load, rather than risk an uncontrolled failure of components or Cascading Outages of the Interconnection. Proposed standards do not use the word 'immediate' because it is not measurable. The concept of 'immediate' action has been systematically replaced within NERC standards as they are revised to improve accountability. For example, revised EOP standards require action in time to avoid cascading; the proposed TOP standards require action within a determined time limit (T_v) based on system models.

Current Standards	Future Standards
TOP-002-2a, Requirement R6: R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in system configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.	This Requirement is replaced by proposed TOP-002-3, Requirement R1 and R2. The N-1 contingency planning is 'built in' to the Operational Planning Analysis since SOLs are derived according to FAC-010-2.1, FAC-011-2, and FAC-014-2 which includes contingency planning. The proposed standard is an improvement over the current standard because it requires responsible entities to establish limits according to their functional model area of responsibility and prescribes the required actions for operation of the BES in a manner that supports continuous reliability and accountability. **Proposed TOP-002-3, Requirements R1 and R2:** R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. R2. Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability in its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.

Analysis of PSW Report Recommendations Addressed by Currently Enforceable and Revised Board-Approved TOP Standards[1]	
Current Standards	**Future Standards**
Report Recommendation 27: *TOPs should have: (1) the tools necessary to determine phase angle differences following the loss of lines; and (2) mitigation and operating plans for reclosing lines with large phase angle differences. TOPs should also train operators to effectively respond to phase angle differences. These plans should be developed based on the seasonal and next-day contingency analyses that address the angular differences across opened system elements.*	
TOP-004-2, Requirement R6, subrequirement R6.2: R6: Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including: R6.2. Switching transmission elements.	Proposed TOP-002-3, Requirement R2 covers the creation of a plan to mitigate situations shown in the Operating Planning Analysis required in TOP-002-3, Requirement R1. SOLs are derived according to FAC-010-2.1, FAC-011-2, and FAC-014-2 which includes consideration of equipment limitations. The proposed standard is an improvement over the current standard because it links to specific limits rather than the ambiguous concept of 'transmission reliability', which is only measurable by its absence. **Proposed TOP-002-3, Requirements R2 and R3:** R2. Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability in its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).

Analysis of PSW Report Recommendations Addressed by Currently Enforceable and Revised Board-Approved TOP Standards[1]	
Current Standards	**Future Standards**
	Further, Project 2009-02 Real-time Reliability Monitoring and Analysis Capabilities is underway and will establish requirements for the functionality, performance, and change management capabilities for RC, TOP, GOP, and BA for use by System Operators in support of reliable System operations.

Exhibit I

Resolution of Order No. 693 Directives Assigned to Project 2007-03

Resolution of Issues Assigned to Project 2007-03 Real-time Operations Standard Drafting Team

Standard	Source	Language	Resolution
TOP-001			
TOP-001-1	FERC Order 693	1580 - Consider adding other measures and levels of non-compliance.	Measures and VSLs have been assigned to all requirements.
TOP-001-1	FERC Order 693	1585 - Clarify the definition of "emergency" and define the criteria for entering into the various states. Also define the authority for declaring these states.	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03.
TOP-001-1	FERC Order 693	1588 - Consider Santa Clara's comments to provide that the transmission operator may notify the reliability coordinator or the balancing authority that it is removing facilities from service as part of the standards development process.	This is covered in proposed TOP-001-2, Requirement R5.
TOP-001-1	Version 0 Team	What is 'clear decision making authority'?	Requirement using this term was deleted as not needed in a reliability standard. The standards already require the necessary actions.

Standard	Source	Language	Resolution
TOP-001-1	Version 0 Team	Need to define single, central communications point during emergencies	This is an issue for COM standards.
TOP-001-1	Version 0 Team	Some emergencies will require follow up notification as opposed to immediate	Requirements have been re-written to eliminate confusion.
TOP-001-1	Version 0 Team	Define emergency	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03.
TOP-001-1	Version 0 Team	Need to expand included entities	Applicability has been reviewed by the SDT and changed as required.

TOP-003			
TOP-003-0	FERC Order 693	1621 - Incorporate an appropriate lead time for planned outages using suggestions from the various commenters. We direct the ERO to modify the Reliability Standard to incorporate an appropriate lead time for planned outages.	The SDT posed a question on this issue as a fact finding exercise in the second posting of this project in order to assist them in making a decision on how to respond to the FERC directive as requested in Order 693 – "The ERO should utilize the information filed by commenters in the Reliability Standards development process." The majority of respondents indicated that they do not feel that there is a reliability based need for such a North American requirement. Several respondents pointed out that such a requirement (if needed at all for reliability) would be better suited to a regional standard and several others stated that such requirements already exist in their particular regions. There are several regions that have existing rules for lead times but they are all different and are based on the requirements of their regional markets. Any attempt to impose a North American standard runs the risk of interfering with those FERC approved markets. While NERC Reliability Standards are intended to promote reliability, they must at the same time accommodate competitive electricity markets. After reviewing the industry comments, the SDT concluded that proposed TOP-003-2 dealing with data specifications adequately cover this issue. The data specification must include any and all data required by the Transmission Operator and Balancing Authority. The SDT intends that planned outage data and timings would be included in such a data specification. Therefore, the SDT has not included a standard lead time in the

			revised requirements.
TOP-004			
TOP-004-1	FERC Order 693	1630 - Modify requirement R4 to state that the system should be restored to respect proven limits as soon as possible taking no more than 30 minutes.	Replaced by proposed TOP-001-2, R7 through R11. T_v is more stringent than the existing 30 minute requirement for IROLs and the selected SOLs are now tied to the specific ratings from which the SOLs were derived. Unknown states, in this context, cannot exist because valid operating limits have been determined for all Facilities in a TOP's footprint. The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to Emergencies.
TOP-004-1	FERC Order 693	1638 - Defines high risk conditions under which the system must be operated to respect multiple outages in requirement R3. We direct the ERO to develop a modification to the Reliability Standard that explicitly incorporates this interpretation with the details identified in the Reliability Standards development process (. . .the Commission proposed to interpret "multiple outages" in the context of Requirement R3 to include multiple element outages resulting from high risk conditions such as hurricanes, wild fires, ice storms or periods of high solar magnetic disturbances during which the probability of multiple outages approaches that of a single element	The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to the cited situations. The method chosen to respond to a given catastrophic challenge to a localized portion of the bulk power system cannot be predetermined by science; rather, it is an art. Reliability entities develop their response mechanisms based on experience in their local areas to achieve the maximum societal benefit during these periods. In addition, FAC-011-2 and FAC-014-2 deal with specific requirements for dealing with multiple contingencies.

		outage. This is not an exhaustive list but is meant to contain illustrative examples, and the Reliability Standards development process should develop a procedure to identify applicable high risk conditions. Under . . . high-risk conditions, the Commission understands that systems are normally operated in a more secure manner so that the Bulk-Power System can withstand multiple outages. These multiple outages exceed the normal N-1 criterion because the probability of multiple outages during high risk conditions approaches that of a single outage during normal conditions.)	
TOP-004-1	Version 0 Team	Vagueness in application of IROL limits	Requirement moved to proposed TOP-001-2, Requirement R5 and clarified.
Transferred from Project 2007-06			
PRC-001	Project 2007-06	1441- S- Ref 10339 - Clarify the term corrective action. 1440. We believe that [t]he transmission operator shall take corrective action as soon as possible refers to transmission operators taking operator control actions. It does not refer to troubleshooting, repairing or replacing failed relays or equipment, etc., since these time-consuming corrective actions would prolong the risk of cascading failures to the Bulk-Power	Addressed in Requirement R5 in proposed TOP-001-2 where the Transmission Operator coordinates its operations.

		System. 1441. We direct the ERO to clarify the term corrective action consistent with this discussion when it modifies PRC-001-1 in the Reliability Standards development process.	
PRC-001	Project 2007-06	1444 - S- Ref 10340 - Consider First Energy and the California PUCs comments about the maximum time for corrective actions in the standards development process. 1428. California PUC contends that imposing a time restriction for returning a system to a stable state may cause more harm than good since additional information and options may be available as time elapses. It repeats its suggestion from its earlier comments on the Staff Preliminary Assessment and proposes the following alternative language: Transmission or generation operators shall carry out corrective control actions, i.e., returning the system to a stable state that respects system requirements as soon as possible, and no longer than 30 minutes, except where a longer response time is feasible, or where a longer response is demonstrated to produce a better ultimate solution without unacceptable interim risk. 1431. FirstEnergy contends that	Addressed in Requirement R5 in proposed TOP-001-2 where the Transmission Operator coordinates its operations. The Transmission Operator is the true functional entity responsible here. Covered as part of the new data specification requirements in proposed TOP-003-2.

		Requirement R2.1 essentially requires generator operators to report all protective relay or equipment failures, since generator operators may not be able to tell which failures will reduce system reliability. FirstEnergy suggests that R2.1 should be revised to require generator operators to report all equipment failures or outages. FirstEnergy further suggests that PRC-001-1 be revised to provide that if a company performs reasonable testing procedures, undiscoverable equipment failures will not be violations of R2.1	
PRC-001	Project 2007-06	1449 - S- Ref 10343 - Para 1420. Once informed, transmission operators must carry out corrective control actions that return the system to a stable state that respects system requirements as soon as possible and no longer than 30 minutes. 1440. [t]he transmission operator shall take corrective action as soon as possible refers to transmission operators taking operator control actions. It does not refer to troubleshooting, repairing or replacing failed relays or equipment, etc., since these time-consuming corrective actions would prolong the risk of cascading failures to the Bulk-Power System.	Covered in TOP-001-2, Requirement R11.

Mapping Document

Project 2007-03 Real-time Operations

Mapping document showing the translation of TOP-001-1 — Reliability Responsibilities and Authorities; TOP-002-2a — Normal Operations Planning; TOP-003-1 — Planned Outage Coordination; TOP-004-2 — Transmission Operations; TOP-005-2 — Operational Reliability Information; TOP-006-2 – Monitoring System Conditions; TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations; TOP-008-1 - Response to Transmission Limit Violations; PRC-001-1 – System Protection Coordination; and PER-001-0 - Operating Personnel Responsibility and Authority.

Standard TOP-001-1 — Reliability Responsibilities and Authorities		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall have the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area and shall exercise specific authority to alleviate operating emergencies.	Deleted	This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. Deletion of this requirement doesn't alleviate responsibility for actions, as each individual requirement in the Reliability Standards now specifies an action and a responsible entity. These needed actions required for reliability of the bulk power System have been more clearly laid out in revised standards. (See FERC Order 693a, Paragraph 112.) The requirement is also non-specific, ambiguous, and not performance-oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. All of this makes this requirement redundant. The overall reliability of the bulk power System is not adversely affected by the deletion of this requirement. In FERC Order 693a, Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities, which makes this requirement superfluous; and, thus, it can be deleted.

		FERC Order 693a, Paragraph 112: "In response to Avista, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of reliability standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize Reliability Coordinators to issue directives. Under the voluntary reliability scheme in place prior to Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a Reliability Coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, we view these as vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
R2. Each Transmission Operator shall take immediate actions to alleviate operating emergencies, including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc.	Proposed TOP-001-2, Requirement R11	Replaced by proposed TOP-001-2, R11: The undefined term 'operating emergencies' is no longer utilized, and the requirement has been made more stringent by not restricting Transmission Operator actions to that undefined condition. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant time frame. TOP-001-2, R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall comply with reliability directives issued by the Reliability Coordinator, and each Balancing Authority and Generator Operator shall comply with reliability directives issued	Proposed IRO-001-3, Requirements R2, R3 & R4.	Replaced by: IRO-001-3, R2. Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent

by the Transmission Operator, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Transmission Operator, Balancing Authority or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive so that the Reliability Coordinator or Transmission Operator can implement alternate remedial actions.		identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-001-3, R3. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with its Reliability Coordinator's direction per Requirement R2, unless the direction per Requirement R2 cannot be implemented or such actions would violate safety, equipment, regulatory or statutory requirements. IRO-001-3, R4. Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform, as directed per Requirement R3.
R4. Each Distribution Provider and Load Serving Entity shall comply with all reliability directives issued by the Transmission Operator, including shedding firm load, unless such actions would violate safety, equipment, regulatory or statutory requirements. Under these circumstances, the Distribution Provider or Load-Serving Entity shall immediately inform the Transmission Operator of the inability to perform the directive so that the Transmission Operator can implement alternate remedial actions.	Proposed TOP-001-2, Requirements R1 & R2	Replaced by proposed: TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each reliability directive issued and identified as such by its Transmission Operator(s), unless such actions would violate safety, equipment, regulatory, or statutory requirements. TOP-001-2, R2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform an identified reliability directive issued by that Transmission Operator.
R5. Each Transmission Operator shall inform its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and take actions to avoid, when possible, or mitigate	Proposed TOP-001-2, Requirement R3 Proposed TOP-001-2, Requirement R11.	Replaced by proposed: TOP-001-2, R3. Each Transmission Operator shall inform its Reliability Coordinator and Transmission Operators that are known or expected to be affected by each actual and anticipated Emergency based on its assessment of its Operational Planning Analysis.

the emergency.		TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8. The inclusion of the T_v term adds clarity and tends to make the new requirement more stringent than the existing requirement by providing a relevant time frame.
R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall render all available emergency assistance to others as requested, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements.	Proposed TOP-001-2, Requirement R4 for the Transmission Operator. Approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 for the Balancing Authority	Replaced by proposed TOP-001-2, R4. TOP-001-2, R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The Generator Operator was deleted from this requirement since it can't be contacted directly by others and will only respond to such requests if they were in the form of a reliability directive from its Transmission Operator, which is covered in proposed TOP-001-2, Requirement R1. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. The approved EOP-001-0 and proposed EOP-001-2b, Requirement R1 covers the Balancing Authority. So to eliminate a redundancy, the Balancing Authority has been removed from this requirement. In addition, the Balancing Authority must still respond to any Reliability Directive from the Transmission Operator, as stated in proposed TOP-001-2, Requirement R1. EOP-001-2b, R1. Balancing Authorities shall have

		operating agreements with adjacent Balancing Authorities that shall, at a minimum, contain provisions for emergency assistance, including provisions to obtain emergency assistance from remote Balancing Authorities.
R7. Each Transmission Operator and Generator Operator shall not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless: R7.1 - For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.2 - For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility. R7.3 - When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R5	R7: Replaced by proposed TOP-001-2, R5 for the Transmission Operator. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. R7 – The Generator Operator can't know if their actions will burden neighboring Systems, since they do not have reliability data. The Transmission Operator will know if the Generator Operator actions will burden neighboring Systems and is required to act on this information, as per proposed TOP-001-2, R5. R7.1 – Replaced by proposed TOP-001-2, R5 for both the Transmission Operator and the Generator Operator. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. R7.2 - Replaced by proposed TOP-001-2, R5 for the Transmission Operator. After-the-fact notifications have been replaced by the proposed TOP-003-2, R1 and approved IRO-010-1a, since those actions will now be seen through telemetry.

notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.		TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading Outages.
R8. During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance, it shall request emergency assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding.	Approved EOP-002-3, Requirement R6. Approved VAR-001-1, Requirement R8. Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirements R1, R8, and R12. Approved IRO-009-1, Requirements R1 and R2. Approved EOP-003-1, Requirement R1.	Real Power Balance and Reactive Power Balance are not defined terms. First sentence – Real Power: For the Balancing Authority part of the requirement, replaced by approved EOP-002-2.1, Requirement R6. The Transmission Operator does not balance Real Power so that part of the sentence can be deleted per the NERC Functional Model V5. First sentence – Reactive Power: Replaced by Approved VAR-001-1, Requirement R8 for the Transmission Operator, which covers Reactive Power requirements and the meaning of balancing Reactive Power for the Transmission Operator. The Balancing Authority must be told by the Transmission Operator to take actions regarding Reactive Power per the NERC Functional Model V5 (see proposed TOP-001-2, Requirement R1) and, therefore, the Balancing Authority can be deleted from this part of the requirement. Second sentence – The Balancing Authority must be told by the Transmission Operator to take actions regarding

		Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, the Balancing Authority is not necessary. Replaced by approved VAR-001-1, Requirements R1, R8, and R12 for the Transmission Operator. Third sentence – Replaced by approved IRO-009-1, Requirements R1 and R2 for the Reliability Coordinator. Replaced by approved EOP-003-1, Requirement R1 for the Transmission Operator and Balancing Authority. EOP-002-3, R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. VAR-001-1 R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. VAR-001-1, R8. Each Transmission Operator shall operate or direct the operation of capacitive and inductive reactive resources within its area – including reactive generation scheduling; transmission line and reactive resource switching; and, if necessary, Load shedding – to maintain System and Interconnection voltages within established limits. VAR-001-1, R12. The Transmission Operator shall direct corrective action, including Load reduction necessary to prevent voltage collapse when reactive resources are insufficient. TOP-001-2, R1. Each Balancing Authority, Generator

		Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. IRO-009-1, R1. For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more operating processes, procedures, or plans that identify actions it shall take, or actions it shall direct others to take (up to and including Load shedding) that can be implemented in time to prevent exceeding those IROLs. IRO-009-1, R2.For each IROL (in its Reliability Coordinator Area) that the Reliability Coordinator identifies one or more days prior to the current day, the Reliability Coordinator shall have one or more operating processes, procedures, or plans that identify actions it shall take, or actions it shall direct others to take (up to and including Load shedding) to mitigate the magnitude and duration of exceeding that IROL such that the IROL is relieved within the IROL's Tv. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load rather than risk an uncontrolled failure of components or Cascading Outages of the Interconnection.
Standard TOP-002-2a — Normal Operations Planning		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for	Approved BAL-001-0.1a. Approved BAL-002-1.	First sentence – Deleted for Balancing Authority, retained for Transmission Operator. The Balancing Authority is required to balance by approved BAL-001-0.1a and approved BAL-002-1 and

reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained.	Approved EOP-002-2.1, Requirement R6. Proposed TOP-002-3, Requirements R1 through R3.	must take action, per approved EOP-002-2.1, Requirement R6 and, thus, the Balancing Authority part of this sentence can be deleted. Retained for Transmission Operator and moved to proposed TOP-002-3, Requirements R1 through R3. This is patterned after the approved IRO-008-1, Requirement R1 for the Reliability Coordinator. Second sentence – Deleted as superfluous. Use of appropriate personnel and equipment is incumbent to responsible entities, as per their certification as NERC registered entities. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing Real Power demand and supply in Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of Load, and because Contingency Reserve activation does not typically apply to the loss of Load, the application of DCS is limited to the loss of supply, and does not apply to the loss of Load. EOP-002-2.1, R6. If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. TOP-002-3, R1: Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.

		TOP-002-3, R2: Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability internal to its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1. TOP-002-3, R3: Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R2. Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose.	Deleted	The SDT reviewed the purpose of the Reliability Standard and believes that this requirement referred to operations planning. Given the current definition of Transmission Operator in the Glossary and Functional Model v5, operations planning is part of what the Transmission Operator is required to do and, as such, this requirement is no longer needed and can be deleted. Functional Model V5: Transmission Operator: The entity responsible for the reliability of its "local" transmission System, and that operates or directs the operations of the transmission Facilities.
R3. Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall coordinate its current-day, next-day, and seasonal operations with its Transmission Operator.	Proposed TOP-003-2. Approved MOD-001-1a, Requirements R1 & R2. Approved MOD-030-2, Requirement R3.	For all but the Transmission Service Provider, moved to proposed TOP-003-2 requires the transfer of any and all required data, regardless of time frame involved. The Transmission Service Provider provisions are already covered in: • Approved MOD-001-1a, Requirement R1: Transmission Operators select transfer capability methodology from approved MOD-028, -029, or -030. • Approved MOD-030-2, Requirement R3: Transmission Operator gives transmission model updated at least once per day to Transmission Service Provider.

		• Approved MOD-001-1a, Requirement R2: Transmission Service Providers use the methodology designated in approved MOD-001-1a, Requirement R1 by the Transmission Operator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. MOD-001-1a, R1. Each Transmission Operator shall select one of the methodologies listed below for calculating Available Transfer Capability (ATC) or Available Flowgate Capability (AFC) for each ATC Path per time period identified in R2 for those Facilities within its Transmission operating area. MOD-030-2, R3. The Transmission Operator shall make available to the Transmission Service Provider a Transmission model to determine Available Flowgate Capability (AFC) that meets the following criteria: [LA1]MOD-001-1a, R2. Each Transmission Service Provider shall calculate ATC or AFC values, as listed below, using[LA2] the methodology or methodologies selected by its Transmission Operator(s).
R4. Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator so that normal Interconnection operation will proceed in an orderly and consistent manner.	Proposed TOP-003-2, Requirement R5. Approved IRO-010-1a, Requirement R3.	Proposed TOP-003-2 requires the transfer of any and all required data between and amongst Balancing Authorities and Transmission Operators, regardless of the time frame involved. Data requirements for Reliability Coordinators are covered in approved IRO-010-1a, Requirement R3 making this requirement redundant for Reliability Coordinators, so the Reliability Coordinator has been removed here. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

		specifications for data. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R5. Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns.	Approved BAL-001-0.1a. Proposed TOP-003-2, Requirement R4. Proposed TOP-002-3, Requirement R1.	The part of the requirement dealing with the Balancing Authority is replaced by approved BAL-001-0.1a. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built into the Functional Model. Therefore, the Transmission Operator should be developing the plan and passing it down to the Balancing Authority. The Balancing Authority provides any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R5. The part of the requirement dealing with the Transmission Operator has been moved to proposed TOP-002-3, Requirement R1. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing Real Power demand and supply in Real-time. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

		specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in System configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements.	Approved BAL-002-1, Requirements R2 – R4. Proposed TOP-003-2, Requirement R5. Proposed TOP-002-3, Requirement R1	The part of this requirement dealing with the Balancing Authority is replaced by approved BAL-002-1, Requirements R2 through R4 and approved EOP-002-2.1 and the proposed EOP-002-3, Requirement R6. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in to the Functional Model. Therefore, the Transmission Operator should be doing the plan and passing it down to the Balancing Authority. The Balancing Authority gets any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2, Requirement R4. The part of the requirement dealing with the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. The n-1 contingency planning is 'built in' to the Operational Planning Analysis since SOLs are derived according to FAC-010-2.1, FAC-011-2, and FAC-014-2 which includes contingency planning. The SDT does not believe that there is a need for the last part of the sentence 'in accordance with…' with the advent of the ERO and enforceable reliability standards.

		As stated in the NERC Functional Model V5: " the Balancing Authority's mission is to maintain the balance between Loads and resources in Real-time within its Balancing Authority Area by keeping its actual Interchange equal to its scheduled Interchange and meeting its frequency bias obligation." To this end and in accordance with approved NERC Reliability Standards BAL-001-0.1a and approved BAL-002-1), Balancing Authorities are required to meet all control performance and disturbance recovery criteria for any System condition. Balancing Authorities are not responsible for the operation of the transmission System. The Transmission Operator is responsible for the Real-time operating reliability of the transmission assets under its purview and, as such, has the authority to issue reliability-related directives to entities within its Transmission Operator Area. Balancing Authorities are required to implement directives received from the Transmission Operator or the Reliability Coordinator regarding Load, generation and Interchange for transmission concerns both predicted (e.g., through Unit Commitment) and actual (e.g., through re-dispatch, Interchange modifications or Load shedding). If the Balancing Authorities' actions do not resolve the transmission issues, it is the Transmission Operators' or Reliability Coordinators' responsibility to direct alternative actions. BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: BAL-002-1, R3. Each Balancing Authority or Reserve Sharing Group shall activate sufficient Contingency Reserve to comply with the DCS. BAL-002-1, R4. Balancing Authority or Reserve Sharing Group shall meet the Disturbance Recovery Criterion within the Disturbance Recovery Period for 100% of Reportable Disturbances. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator,

		Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. FAC-010-2.1, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable planning of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-011-2, Purpose: To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. FAC-014-2, Purpose. To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. BAL-001-0.1a, Purpose: To maintain Interconnection steady-state frequency within defined limits by balancing Real Power demand and supply in Real-time. BAL-002-1, Purpose: The purpose of the Disturbance Control Standard (DCS) is to ensure the Balancing Authority is able to utilize its Contingency Reserve to balance resources and demand and return Interconnection frequency within defined limits following a Reportable Disturbance. Because generator failures are far more common than significant losses of Load and because Contingency

		Reserve activation does not typically apply to the loss of Load, the application of DCS is limited to the loss of supply and does not apply to the loss of Load.
R7. Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency.	Approved BAL-002-1, Requirement R2. Proposed TOP-002-3, Requirement R1.	The Balancing Authority is required to always plan to meet and recover from Contingency events, as stated in approved BAL-002-1, Requirement R2 and, therefore, this requirement is redundant and can be deleted, as all elements of the requirement are now covered in other standards. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and are replaced by proposed TOP-002-3, Requirement R1. Operational Planning Analysis includes deliverability considerations, since any deliverability problems will appear as limit violations in the analysis. BAL-002-1, R2. Each Regional Reliability Organization, sub-Regional Reliability Organization or Reserve Sharing Group shall specify its Contingency Reserve policies, including: TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.	Proposed TOP-001-2, Requirement R1. Approved VAR-001-1, Requirement R1. Proposed TOP-002-3, Requirement R1	The Balancing Authority must be told by the Transmission Operator to take actions regarding Reactive Power (see proposed TOP-001-2, Requirement R1) and, thus, this requirement can be deleted, as all elements of the requirement are now covered in other standards. Voltage and Reactive Power balance are the responsibility of the Transmission Operator and are replaced by approved VAR-001-1, Requirement R1. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and is replaced by proposed TOP-002-3, Requirement

		R1 since any deliverability problems will appear as limit violations in the analysis. TOP-001-2, R1. Each Balancing Authority, Generator Operator, Distribution Provider, and Load-Serving Entity shall comply with each identified Reliability Directive issued and identified as such by its Transmission Operator, unless such actions would violate safety, equipment, regulatory, or statutory requirements. VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions.
R9. Each Balancing Authority shall plan to meet Interchange Schedules and ramps.	Approved INT-003-2, Requirement R1.	Replaced by approved INT-003-2, R1. INT-003-2, R1. Each Receiving Balancing Authority shall confirm Interchange Schedules with the Sending Balancing Authority prior to implementation in the Balancing Authority's ACE equation.
R10. Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs).	Deleted for Balancing Authority. Proposed TOP-002-3, Requirements R1 & R2.	Balancing Authority - The Balancing Authority is only responsible to respond to Reliability Directives as per the definition of Balancing Authority in the NERC Glossary, and, thus, this requirement should never have been applicable to the Balancing Authority. SOLs and IROLs are limits for which the Balancing Authority may not have (and is not required to have) the ability to monitor or control. The Transmission Operator, who is required to monitor SOLs, instructs the Balancing Authority as to what to do in these situations.

		As stated in the NERC Functional Model V5, "the Balancing Authority's mission is to maintain the balance between Loads and resources in Real-time within its Balancing Authority Area by keeping its actual Interchange equal to its scheduled Interchange and meeting its frequency bias obligation". The Balancing Authority does not possess the bulk power System information necessary to manage Transmission flows. Therefore, the Balancing Authority can only plan to meet SOLs and IROLs by responding to directions from the Transmission Operator, including scheduling and operating resources within the limits prescribed by the Transmission Operator. Transmission Operator – replaced by proposed TOP-002-3, Requirement R1 (analysis of SOLs) & Requirement R2 (avoid IROLs). TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions that will allow it to assess whether the planned operations for the next day within its Transmission Operator Area will exceed any of its Facility Ratings or Stability Limits during anticipated normal and Contingency event conditions. TOP-002-3, R2. Each Transmission Operator shall plan to operate within each Interconnection Reliability Operating Limit (IROL) and each System Operating Limit (SOL) which, while not an IROL, has been identified by the Transmission Operator as supporting reliability in its Transmission Operator Area, identified as a result of the Operational Planning Analysis performed in Requirement R1.
R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall	Approved FAC-011-2. Approved FAC-014-2.	First sentence – Replaced by FAC-011-2 and FAC-014-2 where SOLs are determined. FAC-011-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies.

update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.	Proposed TOP-002-3, Requirements R1 & R3.	FAC-014-2: Purpose - To ensure that System Operating Limits (SOLs) used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or methodologies. Second sentence – Replaced by approved FAC-014-2, R2 & R5.1. FAC-014-2, R2. The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2, R5.1. The Reliability Coordinator shall provide its SOLs (including the subset of SOLs that are IROLs) to adjacent Reliability Coordinators and Reliability Coordinators who indicate a reliability-related need for those limits, and to the Transmission Operators, Transmission Planners, Transmission Service Providers and Planning Authorities within its Reliability Coordinator Area. Third sentence – Replaced by proposed TOP-002-3. 'update… as necessary' is ambiguous and the SDT believes that proposed TOP-002-3 is a better solution. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-002-3, R3. Each Transmission Operator shall notify all NERC registered entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s).
R12. The Transmission Service Provider shall include known SOLs or IROLs within its area and neighboring areas in the determination of transfer capabilities, in accordance with filed tariffs and/or regional Total	Approved MOD-028-1, Requirement R6.1. Approved MOD-029-1a, Requirement R3. Approved MOD-	Replaced by approved MOD-028-1, Requirement R6.1, MOD-029-1a, Requirement R3, and MOD-030-2, Requirement R2.4. Because IROLs by definition are a subset of SOLs, IROLs are included.

Transfer Capability and Available Transfer Capability calculation processes.	30-2 Requirement R2.4.	MOD-028-1, R6.1,Determine the incremental Transfer Capability for each ATC Path by increasing generation and/or decreasing Load within the source Balancing Authority area and decreasing generation and/or increasing Load within the sink Balancing Authority area until either: A System Operating Limit is reached on the Transmission Service Provider's System, or A SOL is reached on any other adjacent System in the Transmission model that is not on the study path and the distribution factor is 5% or greater. MOD-029-1a, R3, Each Transmission Operator shall establish the TTC at the lesser of the value calculated in R2 or any System Operating Limit (SOL) for that ATC Path. MOD-030-2, R2.4, Establish the TFC of each of the defined Flowgates as equal to: For thermal limits, the System Operating Limit (SOL) of the Flowgate. For voltage or stability limits, the flow that will respect the SOL of the Flowgate.
R13. At the request of the Balancing Authority or Transmission Operator, a Generator Operator shall perform generating real and reactive capability verification that shall include, among other variables, weather, ambient air and water conditions, and fuel quality and quantity, and provide the results to the Balancing Authority or Transmission Operator operating personnel as requested.	Proposed MOD-25-2, Requirement R1 Proposed TOP-003-2, Requirement R5	Replaced by proposed MOD-025-2, R1. MOD-025-2, R1: Each Generator Owner shall: 1.1. Verify the Real and Reactive Power capability of its generating units and shall verify the Reactive Power capability of its synchronous condenser units in accordance with Attachment 1. 1.2. Record the information on Attachment 2 (or on the Generator Owner's form that contains the same information as Attachment 2); 1.3. Submit within 90 calendar days of the date the

		data is recorded to its Transmission Planner. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics; including but not limited to: 14.1 - Changes in real and reactive output capabilities. (Retired August 1, 2007) 14.2 - Changes in real output capabilities. (Effective August 1, 2007) 14.3 - Automatic Voltage Regulator status and mode setting. (Retired August 1, 2007)	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R16. Subject to standards of conduct and confidentiality agreements, Transmission Operators shall, without any intentional time delay, notify their Reliability Coordinator and Balancing Authority of changes in capabilities and characteristics including but not limited to: 16.1	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.

- Changes in transmission facility status. 16.2 - Changes in transmission facility rating		
R17. Balancing Authorities and Transmission Operators shall, without any intentional time delay, communicate the information described in the requirements R1 to R16 above to their Reliability Coordinator.	Approved IRO-010-1a, Requirement R3	Replaced by approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R18. Neighboring Balancing Authorities, Transmission Operators, Generator Operators, Transmission Service Providers and Load Serving Entities shall use uniform line identifiers when referring to transmission facilities of an interconnected network.	Deleted	This requirement adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a System reliability issue. This is an administrative item, as seen in the measure, which simply requires a list of line identifiers. The true reliability issue is not the name of a line but what is happening to it, pointing out the difficulty in assigning compliance responsibility for such a requirement, as well as the near impossibility of coming up with truly unique identifiers on a nation-wide basis. The bottom line is that this situation is handled by the operators as part of their normal responsibilities, and no one is aware of a switching error caused by confusion over line identifiers.
R19. Each Balancing Authority and Transmission Operator shall maintain accurate computer models utilized for analyzing and planning system operations.	Deleted	This is part of an entity's certification and is no longer required in standards. Furthermore, accuracy is a relative term that would be difficult to measure and assess compliance with. What is accurate? All calculated line flows are within 5% of actual flows? What if 14,999 lines out of 15,000 had calculated line flows within 5% and the 15,000th had a 6% error? Do we now call the model inaccurate and not rely on the results? How do you define actual flows when meters have accuracy errors, as well (i.e., no perfect meter exists)?
Standard TOP-003-1 — Planned Outage Coordination		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment

R1. Generator Operators and Transmission Operators shall provide planned outage information. 1.1 - Each Generator Operator shall provide outage information daily to its Transmission Operator for scheduled generator outages planned for the next day (any foreseen outage of a generator greater than 50 MW). The Transmission Operator shall establish the outage reporting requirements. 1.2 - Each Transmission Operator shall provide outage information daily to its Reliability Coordinator, and to affected Balancing Authorities and Transmission Operators for scheduled generator and bulk transmission outages planned for the next day (any foreseen outage of a transmission line or transformer greater than 100 kV or generator greater than 50 MW) that may collectively cause or contribute to an SOL or IROL violation or a regional operating area limitation. The Reliability Coordinator shall establish the outage reporting requirements. 1.3 - Such information shall be available by 1200 Central Standard Time for the Eastern Interconnection and 1200 Pacific Standard Time for the Western Interconnection.	Proposed TOP-003-2, Requirements R1 & R2	Replaced by proposed TOP-003-2, Requirements R1 & R2. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring.
R2. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of system voltage regulating equipment, such as automatic voltage regulators on	Proposed TOP-001-2, Requirement R5 Proposed TOP-003-2, Requirement R1 Proposed TOP-003-	Replaced by: proposed TOP-001-2, Requirement R5 which requires the Transmission Operator to coordinate actions while proposed TOP-003-2, Requirement R1 requires the Transmission Operator to identify the data it needs from the Balancing Authority to coordinate outages of voltage regulation equipment. Further, proposed TOP-003-2,

generators, supplementary excitation control, synchronous condensers, shunt and series capacitors, reactors, etc., among affected Balancing Authorities and Transmission Operators, as required.	2, Requirement R5	Requirement R5 requires the Balancing Authority to provide the data to the Transmission Operator that the Transmission Operator identified it needs. TOP-001-2, R5: Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations, known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. TOP-003-2, R1: Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R5: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Operator, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall plan and coordinate scheduled outages of telemetering and control equipment and associated communication channels between the affected areas.	Proposed TOP-001-2, Requirement R6	Moved to proposed TOP-001-2, Requirement R6 TOP-001-2, R6. Each Balancing Authority and Transmission Operator shall notify its Reliability Coordinator and negatively impacted interconnected NERC-registered entities of planned outages of telemetering equipment, control equipment and associated communication channels between the affected entities.
R4. Each Reliability Coordinator shall resolve any scheduling of potential reliability conflicts.	Proposed IRO-001-3, R2 Proposed IRO-005-4, R1	Moved to the proposed IRO-001-3, Requirements R3 and proposed IRO-005-4, Requirement R1 which gives the Reliability Coordinator the authority to resolve the conflict. IRO-001-3, R2: Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability

		Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. IRO-005-4, R1: When the results of an Operational Planning Analysis or Real-time Assessment indicate an anticipated or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.
Standard TOP-004-2 — Transmission Operations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.	Proposed TOP-001-2, Requirements R7and R9	Moved to proposed TOP-001-2, Requirements R7and R9. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL)

		identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.	Proposed TOP-001-2, Requirements R7 and R9	Moved to proposed TOP-001-2, Requirements R7 and R9. These requirements are not limited by single or multiple Contingencies, but are based solely on identified IROLs (and selected SOLs), regardless of how they were identified or whether they were identified by the Transmission Operator or Reliability Coordinator. FAC-011-02 and FAC-014-2 work collectively to establish how multiple Contingencies are considered in IROLs and SOLs. FAC-014-2, R6 requires the Planning Coordinator to identify the subset of multiple Contingencies from TPL-003 which result in stability limits and to provide this list to the Reliability Coordinators. FAC-011-2, R3.3 requires the Reliability Coordinator to include in their SOL methodology a process for determining which of the stability limits associated with multiple Contingencies are used to establish SOLs. FAC-014-2, R1 requires the Reliability Coordinator to determine which subset of SOLs qualify as IROLS. FAC-014-2, R1 requires the Reliability Coordinator to ensure SOLs, including IROLs, are established for its Reliability Coordinator Area, while FAC-014-2, R2 also requires the TOP to establish SOLs for its area. Thus, IROLs and SOLs that consider multiple outages will be developed appropriately and the Transmission Operator will operate to them. FAC-011-2, R1, The Reliability Coordinator shall have a documented methodology for use in developing SOLs (SOL Methodology) within its Reliability Coordinator Area. This SOL Methodology shall: R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs.

		FAC-011-2, R3, The Reliability Coordinator's methodology for determining SOLs, shall include, as a minimum, a description of the following, along with any reliability margins applied for each: R3.3. A process for determining which of the stability limits associated with the list of multiple Contingencies (provided by the Planning Authority in accordance with FAC-014 Requirement 6) are applicable for use in the operating horizon, given the actual or expected System conditions. R3.3.1. This process shall address the need to modify these limits, to modify the list of limits, and to modify the list of associated multiple Contingencies. FAC-014-2, R1, The Reliability Coordinator shall ensure that SOLs, including Interconnection Reliability Operating Limits (IROLs), for its Reliability Coordinator Area are established and that the SOLs (including Interconnection Reliability Operating Limits) are consistent with its SOL Methodology. FAC-014-2, R2, The Transmission Operator shall establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology. FAC-014-2 R6, The Planning Authority shall identify the subset of multiple Contingencies (if any), from Reliability Standard TPL-003 which result in stability limits. R6.1. The Planning Authority shall provide this list of multiple Contingencies and the associated stability limits to the Reliability Coordinators that monitor the Facilities associated with these Contingencies and limits. R6.2. If the Planning Authority does not identify any stability-related multiple Contingencies, the

		Planning Authority shall so notify the Reliability Coordinator. TOP-001-2, R7: Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9: Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based.
R4. If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.	Proposed TOP-001-2, Requirements R7 and R9 Approved EOP-006-2	The SDT has determined a better way to handle such a situation is to treat it like an IROL or restoration scenario, and to take the same type of actions that you would apply for alleviating those situations. Therefore, it is replaced by proposed TOP-001-2, Requirements R7 and R9 and the approved EOP-006-2. This allows the operator sufficient flexibility within a structured environment to take the necessary actions for the reliability of the bulk power System. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. EOP-006-2, Purpose: Ensure plans are established and personnel are prepared to enable effective coordination of the System restoration process to ensure reliability is maintained during restoration and priority is placed on restoring the Interconnection.
R5. Each Transmission Operator shall make every effort to remain connected to the	Deleted	Normally, the Transmission Operator does not have the right to unilaterally separate – that can only be done through the authorization of the Reliability

Interconnection. If the Transmission Operator determines that by remaining interconnected it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.		Coordinator, unless failure to act immediately would violate safety, equipment, or regulatory or statutory requirements, thus this requirement is a moot point under the Functional Model definitions and can be deleted.
R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including: 6.1 - Monitoring and controlling voltage levels and real and reactive power flows. 6.2 - Switching transmission elements. 6.3 - Planned outages of transmission elements. 6.4 - Responding to IROL and SOL violations.	Proposed TOP-001-2 Approved VAR-001-1, Requirement R1 Proposed TOP-001-2, Requirements R7 and R9 ProposedTOP-001-2, Requirement R5 Proposed TOP-001-2, Requirement R11	The first sentence has been superseded by the NERC Reliability Standards, taken as a whole. Examples of such would be the proposed TOP-001-2. The second sentence was replaced as follows: R6.1 is duplicative of approved VAR-001-1, Requirement R1 for Reactive. Real Power flows are covered in proposed TOP-001-2, Requirements R7 and R9. R6.2 is covered in proposed TOP-001-2, Requirement R5. R6.3 – moved to proposedTOP-001-2, Requirement R5. R6.4 – moved to proposed TOP-001-2, Requirement R11. TOP-001-2, Purpose: To prevent instability, uncontrolled separation, or Cascading Outages that adversely impact the reliability of the Interconnection by ensuring prompt action to prevent or mitigate such occurrences VAR-001-1, R1. Each Transmission Operator, individually and jointly with other Transmission Operators, shall ensure that formal policies and procedures are developed, maintained, and implemented for monitoring and controlling voltage levels and Mvar flows within their individual areas and with the areas of neighboring Transmission Operators.

		TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. TOP-001-2, R5. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on those respective Transmission Operator Areas, unless conditions do not permit such communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard TOP-005-2 — Operational Reliability Information		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area. 1.1 - Each Reliability Coordinator shall identify the data requirements from the list in Attachment 1-TOP-005-0 "Electric System Reliability Data" and any	Approved IRO-010-1a, Requirement R3	Moved to approved IRO-010-1a, Requirement R3. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.

additional operating information requirements relating to operation of the bulk power system within the Reliability Coordinator Area.		
R2. As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."	Deleted	Confidentiality is not a reliability issue, but a market or business issue. Since this is not a reliability issue, it does not belong in the Reliability Standards and can be deleted.
R3. Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-0 "Electric System Reliability Data," unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.	Proposed TOP-003-2, Requirement R5	Replaced by proposed TOP-003-2, Requirement R5. TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R4. Each Purchasing-Selling Entity shall provide information, as requested by its Host Balancing Authorities and Transmission Operators, to enable them to conduct operational reliability assessments and coordinate reliable operations.	Deleted	Deleted as redundant to NAESB standard –All operating data that a Purchasing Selling Entity has, that a Transmission Operator or Balancing Authority needs is part of eTag and is acquired through that system.

Standard TOP-006-2 – Monitoring System Conditions		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use. 1.1 - Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use. 1.2 - Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	R1 & R1.1 are replaced by proposed TOP-003-2, Requirement R1. R1.2 – replaced by approved IRO-010-1a, Requirement R3. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. IRO-010-1a, R3. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship.
R2. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3. Approved BAL-005-0.1b. Proposed TOP-001-2, Requirement R10. Approved IRO-008-1, Requirement R2.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-

		time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading outages. The act of monitoring is un-measureable. Entities will be in violation of other standards if they don't perform adequate monitoring. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs, and approved IRO-008-1, Requirement R2 for Real-time assessments every 30 minutes for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring.

		TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading outages.
R4. Each Transmission Operator and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern.	Proposed TOP-003-2, Requirements R1 & R2 Approved IRO-010-1a, Requirement R3.	Replaced by proposed TOP-003-2, Requirement R1 for the Transmission Operator & R2 for Balancing Authority. Replaced by approved IRO-010-1a, Requirement R1 for the Reliability Coordinator. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-003-2, R2. Each Balancing Authority shall create a documented specification for the data necessary for it to perform its analysis functions and required Real-time monitoring. IRO-010-1a, R1. The Reliability Coordinator shall have a documented specification for data and information to build and maintain models to support Real-time monitoring, Operational Planning Analyses, and Real-time Assessments of its Reliability Coordinator Area to prevent instability, uncontrolled separation, and Cascading outages.
R5. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to	Deleted	Deleted as this is covered in the certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R10 for Transmission Operator avoiding IROLs; approved IRO-008-1, Requirement R2

indicate, if appropriate, the need for corrective action.		for Real-time assessments every 30 minutes for Reliability Coordinators BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. IRO-008-1, R1. Each Reliability Coordinator shall perform a Real-Time Assessment at least once every 30 minutes to determine if its Wide Area is exceeding any IROLs or is expected to exceed any IROLs.
R6. Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, Requirement R7 for Transmission Operator avoiding IROLs. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v.

R7. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency.	Deleted	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); approved EOP-003-1, Requirement R2 for Transmission Operator avoiding underfrequency; approved EOP-006-2, Requirement R8 for resynchronization for Reliability Coordinators. BAL-005-01b, Purpose: This standard establishes requirements for Balancing Authority Automatic Generation Control (AGC) necessary to calculate Area Control Error (ACE) and to routinely deploy the Regulating Reserve. The standard also ensures that all Facilities and Load electrically synchronized to the Interconnection are included within the metered boundary of a Balancing Area so that balancing of resources and demand can be achieved. EOP-003-1, R2. Each Transmission Operator and Balancing Authority shall establish plans for automatic Load shedding for underfrequency or undervoltage conditions. EOP-006-2, R8. The Reliability Coordinator shall coordinate or authorize resynchronizing islanded areas that bridge boundaries between Transmission Operators or Reliability Coordinators. If the resynchronization cannot be completed as expected the Reliability Coordinator shall utilize its restoration plan strategies to facilitate resynchronization.
Standard TOP-007-0 - Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded, and the actions being taken to return the system to within limits.	Proposed TOP-001-2, Requirement R10	Moved to proposed TOP-001-2, Requirement R10. TOP-001-2, R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the System to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded.

R2. Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.	Proposed TOP-001-2, Requirement R11	Moved to proposed TOP-001-2, Requirement R11. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
R3. A Transmission Operator shall take all appropriate actions, up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2.	Approved EOP-003-1, Requirements R1 and in proposed EOP-003-2, Requirement R1	Replaced by approved EOP-003-1, Requirements R1. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load rather than risk an uncontrolled failure of components or Cascading outages of the Interconnection.
R4. The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.	Approved IRO-008-1, Requirement R3	Replaced by approved IRO-008-1, Requirement R3. IRO-008-1, R3. When a Reliability Coordinator determines that the results of an Operational Planning Analysis or Real-Time Assessment indicates the need for specific operational actions to prevent or mitigate an instance of exceeding an IROL, the Reliability Coordinator shall share its results with those entities that are expected to take those actions.
Standard TOP-008-1 - Response to Transmission Limit Violations		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.	Approved EOP-003-1, Requirements R1 and in proposed EOP-003-2, Requirement R1 Proposed TOP-001-2, Requirement R11	Replaced by approved EOP-003-1, Requirements R1 and proposed TOP-001-2, Requirement R11. EOP-003-1, R1. After taking all other remedial steps, a Transmission Operator or Balancing Authority operating with insufficient generation or transmission capacity shall shed customer Load, rather than risk an uncontrolled failure of components or Cascading Outages of the Interconnection. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement

		R8.
R2. Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.	Proposed TOP-001-2, Requirements R7 and R9 Approved IRO-009-1, Requirement R5	First sentence – Replaced by proposed TOP-001-2, Requirements R7 and R9. Second sentence – Replaced by approved IRO-009-1, Requirement R5 for the Reliability Coordinator who is now responsible for such matters. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration that would cause a violation of the Facility Rating or Stability criteria upon which it is based. IRO-009-1, R5. If unanimity cannot be reached on the value for an IROL or its Tv, each Reliability Coordinator that monitors that Facility (or group of Facilities) shall, without delay, use the most conservative of the values (the value with the least impact on reliability) under consideration.
R3. The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.	Deleted	Placing this procedure in a requirement when it is only one of the possible options for alleviating the condition is bad practice and should not be mandated in standards. A standard should not be mandating disconnection. This is in conflict with other reliability standards where disconnection is dependent on System conditions and coordination with other functional entities. Such actions, taken unilaterally, could make conditions worse.
R4. The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted	Proposed TOP-003-2, Requirement R1 Proposed TOP-002-3, Requirement R1	Data piece is replaced by proposed TOP-003-2, Requirement R1. Analysis tools are covered in the certification process for core capabilities and, therefore, are not needed

in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.	Proposed TOP-001-2, Requirement R7 Proposed TOP-001-2, Requirement R11	here. The Transmission Operator will be in violation of other standards if they don't maintain their initial certification. For example, they can't develop their limits without maintaining their tools. Replaced by proposed TOP-002-3, Requirement R1 for analysis. Replaced by proposed TOP-001-2, Requirement R7 for real-time analysis required for IROL mitigation. Proposed TOP-001-2, Requirement R11 covers mitigation of limit violations. TOP-003-2, R1. Each Transmission Operator shall create a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. TOP-002-3, R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. TOP-001-2, R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. TOP-001-2, R11. Each Transmission Operator shall act, or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8.
Standard PER-001-0 - Operating Personnel Responsibility and Authority		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R1. Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable	Deleted	In FERC Order 693a, Paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of reliability standards that mandate compliance with such directives. The SDT reasonably applied this same logic to Transmission Operators and

operation of the Bulk Electric System.		Balancing Authorities and that makes this requirement superfluous and, thus, it can be deleted. FERC Order 693a, Paragraph 112: In response to Avista, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of reliability standards that mandate compliance with such directives. Avista is correct that contracts are unnecessary to authorize reliability coordinators to issue directives. Under the voluntary reliability scheme in place prior to Section 215 of the FPA, a contractual basis was needed to assure that entities would comply with a Reliability Coordinator's directive. Pursuant to the current, mandatory reliability scheme established by statute, contracts are no longer needed. We view the concerns raised by Avista as part of the transition from a voluntary to mandatory scheme. Although, as noted by Avisa, IRO-001-1 retains references to contracts, these are vestiges of an earlier program that no longer control, given the current, mandatory mechanism.
Standard PRC-001-1 – System Protection Coordination		
Requirement in Approved Standard	Translation to New Standard or Other Action	Proposed Language in New Standard or Comment
R2. Each Generator Operator and Transmission Operator shall notify reliability entities of relay or equipment failures as follows:	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
R5. A Generator Operator or Transmission Operator shall coordinate changes in generation, transmission, load or operating conditions that could require changes in the protection systems of others: R5.1. Each Generator Operator	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented

shall notify its Transmission Operator in advance of changes in generation or operating conditions that could require changes in the Transmission Operator's protection systems. R5.2. Each Transmission Operator shall notify neighboring Transmission Operators in advance of changes in generation, transmission, load, or operating conditions that could require changes in the other Transmission Operators' protection systems.		specifications for data.
R6. Each Transmission Operator and Balancing Authority shall monitor the status of each Special Protection System in their area, and shall notify affected Transmission Operators and Balancing Authorities of each change in status.	Proposed TOP-003-2, Requirement R5.	Moved to proposed TOP-003-2, R5: TOP-003-2, R5. Each Transmission Operator, Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, Transmission Owner, and Distribution Provider receiving a data specification in Requirement R3 or R4 shall satisfy the obligations of the documented specifications for data.
