1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☒ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments: Standards define "good utility practices" therefore it's our opinion that these requirements should remain.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: ATC does not agree with SAR DT that SOLs are only important to local operations and that they should be removed from these standards. If SOLs are removed from NERC standards then any real-time identifications of an SOL that becomes an IROL will be difficult if not impossible to determine.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☐ Yes

   ☒ No

   Comments: Comments submitted during the comment period should be given a greater weight in the creation of new standards. Comments submitted to other groups and different efforts are specific to those initiatives and the inclusion in this effort should be limited.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

5. **Are there standards that should be added to the SAR?**

The following standards should be added to the SAR:

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☒ No

Comments: ATC agrees that there is a reliability-related need to review and revise this set of standards, but we do not agree with the overly prescriptive changes appearing in the SAR.

7. Do you agree with the scope of this SAR?

☐ Yes

☒ No

Comments: The scope of this SAR is overly prescriptive in that is has already determined a solution to the perceived deficiency. A scope needs to be detailed enough to provide a solid base for discussion and review, but not so detailed that the solution has been identified. The solution will be developed by the SDT along with industry feedback. ATC believes that this SAR is overly prescriptive and should be re-written.

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments:

9. If you have any other comments on this SAR that you haven't identified above, please provide them here.

Comments: Comment in the SAR:

"R14 and R15 apply to the Generator Operator and as such do not belong in the TOP standards. The drafting team should look to find another place for these requirements if possible."

ATC disagree with this statement. The "Purpose" statement sets the need for the standard. All entities that are needed to support the "Purpose" should be identified in the Applicability section. The label of TOP should not be the justification to exclude any entity that is not a Transmission Operator.

Please use this form to submit comments on the proposed Real-time Transmission Operations and Balancing of Load and Generation SAR. Comments must be submitted by **June 13, 2007**. Please submit the completed form by e-mail to sarcomm@nerc.net with the words "Real-time TOP & BA" in the subject line. If you have questions please contact Ed Dobrowolski at 609-947-3673 or ed.dobrowolski@nerc.net

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments:

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☐ No

   Comments:

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☐ Yes

   ☒ No

   Comments: CenterPoint Energy disagrees with the suggestion to remove the real and reactive capability verification testing from TOP-002-2, R13. The capability of a generator must be periodically tested to ensure that the machine will perform to its limits. Additional language should be added such that these tests are conducted on a periodic basis and not just at the requests of a BA or TOP.

   CenterPoint Energy believes that the requirements of TOP-002-2, R14 and R15 do belong in the Transmission Operations Standards as those variables will have a direct impact on daily operations. Any additional details or clarification can be added to other standards if necessary.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR:

6. **Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?**

   ☐ Yes

   ☐ No

   Comments:

7. **Do you agree with the scope of this SAR?**

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☒ Keep these items as requirements in standards

   ☒ Move these items into references

   Comments: Where the identification of procedures and good utility practice bring clarity to TOP requirements, they should be retained, although not as separate requirements.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: Where SOLs impact the Bulk Electric System, they are a reliability issue and should not be moved into guides or other reference documents.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☒ No

   Comments: Comments submitted should certainly be considered by the standard drafting team, but the standard drafting team should not be bound to incorporate all comments into the revised standards.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed: COM-001-1, COM-002-2 and PER-001-0. See response to question 7.

5. **Are there standards that should be added to the SAR?**

The following standards should be added to the SAR: None

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☐ No

Comments: The reliability-related need is to provide clarity and remove redundancy.

7. Do you agree with the scope of this SAR?

☐ Yes

☒ No

Comments: This SAR should focus only on TOP standards.

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments: None

9. If you have any other comments on this SAR that you haven't identified above, please provide them here.

Comments: If the ultimate goal is to eliminate PER-001-0 as stated on page SAR-4, it should be noted that responsibility and authority are to be provided to "operating personnel" in either a TO or a BA. However, in standard TOP-001 Requirement 1, it deals specifically with Transmission Operators, and Balancing Authority personnel are not covered under this standard. Consideration should be given to either add BAs to TOP-001 R1 or they should be given "responsibility and authority" in some other standard if PER-001 is eliminated.

Also, NERC should create a companion database for the standards that links each requirement, its compliance elements and applicable entities. Such a cross-reference would facilitate standards actions dealing with groups of standards.

Please use this form to submit comments on the proposed Real-time Transmission Operations and Balancing of Load and Generation SAR. Comments must be submitted by **June 13, 2007**. Please submit the completed form by e-mail to sarcomm@nerc.net with the words "Real-time TOP & BA" in the subject line. Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☒ Move these items into references

   Comments: Such information is of value and should not be lost, but does not belong in a Standard. A Standard must apply continent-wide and not be of the nature of dictating any particular practice or procedure.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☒ Yes

   ☐ No

   Comments: There may be some confusion across the industry about "what are SOLs". I think there is good agreement that IROLs are applicable at the NERC Standard level, but there is some identifiable reluctance within the industry to say that there is no place at all for SOLs in the NERC Standards. At the very least, there needs to be a good definition of SOL (which I believe there is), but some are concerned with the idea that IROLs are a "subset" of SOLs. Some believe that once a differentiation is made, the two should be considered separately and have separate requirements. I personally believe that IROLs are a subset of SOLs. I further believe that routine planning, operations planning, and real-time operations should be addressing all SOLs. Only during real-time operations or, more accurately, fresh post-analysis, can it be fully determined that an SOL may have sufficient consequences associated with it to qualify it as an IROL. If an IROL can be identified in advance, since by definition it relates to a single contingency, I believe a case could be made that planning and operations planning requirements have not been satisfied. In the great majority of cases, a system may be driven into an IROL through a series of unplanned events such that the system indeed may be subject to undesirable results from a "next" single contingency. However, prudent operations should dictate that no system plan to be in such a state.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

☒ Yes

☐ No

Comments: Each submitted comment containing technical content deserves to be given equal review by the Standard Drafting Team (SDT) once a SAR has been approved and a SDT has been selected.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR:

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☒ No

Comments: I believe that revising the set of standards for clarity and for reducing redundancy will benefit reliability by reducing confusion. There is also a common sense reason to revise them to avoid "multiple jeopardy" by exposure to the same requirement in multiple standards.

7. Do you agree with the scope of this SAR?

☒ Yes

☐ No

Comments:

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments:

9. If you have any other comments on this SAR that you haven’t identified above, please provide them here.

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☒ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments: FirstEnergy agrees in general that Good Utility Practices in and of themselves do not belong in the standards. However, for the two examples cited we believe these are important processes for ensuring a reliable electric system and therefore should remain within the reliability standards. Exclusion of requirments based on Good Utility Pratices will need to be evaluated and addressed on a case by case basis and commented on via the standard drafting process.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☒ Yes

   ☐ No

   Comments: The reliability standards governing real-time operations should be focused on the subset of SOLs that qualify as IROLs.(reference FAC-010-1 R1.3). Blanket removal of all SOL references should be avoided and will need to be done on a case by case basis.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments:

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR:

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☐ No

Comments:

7. Do you agree with the scope of this SAR?

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☒ Move these items into references

   Comments: Subjective commentary that is not measurable or enforceable should be removed from the standards and placed in the Reliability Readiness Evaluation and Improvement Program Reference Manual or something similar.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: SOLs are a critical part operational situational awareness and of a "defense-in-depth" approach to operating reliably. It is critical for the Transmission Operator and Reliability Coordinator to be aware of areas that are stressed within his/her TOP and RC area (local and wide area view). Advance knowledge of what may initially be local or even minor issues to the BES, will allow the development of the most effective and appropriate solutions for resolving the SOLs and ensuring that they DO NOT evolve into IROLs.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments: Not sure what the question is but, Yes capturing previous analysis regarding standard content and including in this SAR and subsequent standard revisions is appropriate and effective use of previous NERC groups efforts.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR:

6. **Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?**

   ☒ Yes

   ☐ No

   Comments:

7. **Do you agree with the scope of this SAR?**

   ☒ Yes

   ☐ No

   Comments:

8. **If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.**

   ☐ Regional Variances

   ☐ Business Practices

   Comments:

9. **If you have any other comments on this SAR that you haven't identified above, please provide them here.**

Comments: The revisions being made under this SAR should be well coordinated with the revisions being made under the Reliability Coordination SAR (Project 2006-06). Both SARs are seeking to revise COM-001 and COM-002. It is also critical that language proposed in the revisions of both projects be well coordinated because of the interrelated nature of the applicable standards.

Please use this form to submit comments on the proposed Real-time Transmission Operations and Balancing of Load and Generation SAR. Comments must be submitted by **June 13, 2007**. Please submit the completed form by e-mail to sarcomm@nerc.net with the words "Real-time TOP & BA" in the subject line. Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments: We agree that good utility practice and procedures should not be included in standards. However, care should be taken not to remove coordination requirements which are in fact necessary to reliability planning and operation.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: We strongly disagree with this idea. Respecting SOLs is a fundamental operational requirement. Transmission Operators must be required to closely montior their area; failing to do so may ultimately lead to cascading failures, as was witnessed on August 14, 2003. An SOLs, left unchecked, will become an IROL, which is why it is imperative that all SOLs be monitored and respected at the TOP level.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments: This may be a reasonable approach. However, the SAR DT may want to consider if they then need to pass all comments dealing specifically with the standards on to the Standards Drafting team from this process.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

Some of the standards included in this SAR for revision appear to create a conflict with other ongoing SAR and Standard drafting activites. We are becoming more and more concerned about the parallel changes taking place.

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR: No.

6. **Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?**

   ☒ Yes

   ☐ No

   Comments:

7. **Do you agree with the scope of this SAR?**

   ☐ Yes

   ☒ No

   Comments: Please see response to Q#4.

8. **If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.**

   ☐ Regional Variances

   ☐ Business Practices

   Comments:

9. **If you have any other comments on this SAR that you haven't identified above, please provide them here.**

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments: We concur that good utility practices and administrative procedures should not be included in standards. Nonetheless, we suggest the SDT to assess which of the existing requirements, including the procedural ones, are indeed actions needed to preserve reliability and hence keep them in the standards.

   While we agree that TOP-002-2, R2 may be removed, we do not agree that TOP-001-1 R7 should be removed since the notification and coordination of generation and transmission outages are necessary to ensure that reliability impact of the planned removal of the BES facility is assessed. It is not an administrative procedure or good utility practice; it is a reliability requirement.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: We strongly disagree with this notion. Respecting SOLs and mitigating their violations are fundamental to the reliable operation of the transmission operator's area which may ultimately affect the interconnected system. And since IROLs are a subset of SOLs, and that some SOLs may become IROLs as system condition changes, it is imperative that all SOLs be monitored and observed at all time.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments: This seems to be a reasonable approach. However, the SDT should take these into consideration only when reviewing and revising the standards, and use its judgment on their individual merit rather than taking them as given mandates or directives.

4. **Are there any standards included in the SAR that shouldn't be included?**

The following standards were included in the SAR and should be removed:

(i) We do not understand the basis to include COM-001-1, COM-002-1 and EOP-001-0 in this SAR. While there are requirements in these standards that reference TOPs, there are other standards that also reference TOPs but they are not included in this set.

(ii) Some of the standards included in this SAR for revision appear to create a coordination need or potential conflicts with other SARs and draft standards:

(a) The Operating Personnel Communications Protocol (OPCP) SAR is proposing to modify COM-001-1, COM-002-1, TOP-001-1, TOP-002-2, TOP-007-0 and TOP-008-1. How does this SAR Drafting Team propose to coordinate with the OPCP SAR drafting team to avoid either duplicated work effort or making changes to these standards while the draft set proposed by the other SDT are being commented or balloted? It seems like this would be difficult to accomplish and that one SAR should be delayed.

(b) The Operate within Interconnected Operating Limits SDT is in the process of modifying the TOP-003, TOP-005, and TOP-006 standards as a result of changes to IRO-007-1 to IRO-011-1 standards. The coordination issues as indicated above would also need to be considered. We suggest that drafting of the standards included in this SAR be put on hold until after the IRO standards are balloted and approved.

(c) The Reliability-based Control SAR, which will develop the BAL-007 to BAL-011, standards is posted for comments. The coordination issues as indicated above would also need to be considered. We suggest that drafting of the standards included in this SAR be put on hold until after the BAL standards are balloted and approved.

(d) Finally, the System Personnel Training drafting team is proposing to eliminate PER-001 through PER-004. This SAR would have to be updated to reflect those changes. Again this SAR should be put on hold until the PER standards are balloted.

5. **Are there standards that should be added to the SAR?**

The following standards should be added to the SAR: No.

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☐ No

Comments:

7. Do you agree with the scope of this SAR?

☐ Yes

☒ No

Comments: Please see our comments under Q2 and Q4 regarding the notion of the SAR DT, and the potential conflicts with other efforts currently underway or to start soon.

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments:

9. If you have any other comments on this SAR that you haven't identified above, please provide them here.

Comments:

Specific to the proposed changes to the standards, we offer the following comments:

TOP-001

R2: the SDT suggests to remove this requirement. However, R2 holds TOP responsible for taking immediate actions to alleviate operating emergencies which may be within the TOP area and not monitored by an RC, whereas R3 requires several operating entities to comply with the RC directives. The two requirements serve different purposes.

R8: the SDT suggests to delete this requirement. We suggest the SDT to exercise caution and compare this requirement (restoring the system during an emergency) with other related standards to ensure that this is indeed covered elsewhere.

TOP-002

R1: the SDT suggests to remove this as it is redundant with TOP-008-1 R1. Please note that TOP-002 R1 requires plans whereas TOP-008 R1 requires TOP to take action in real time. These reuqirements are different. If the SDT wants to revise TOP-002 R1 to eliminate vague requirements, we suggest that the second sentence "In addition, each Balancing Authority andTransmission Operator shall be responsible for using available personnel and systemequipment to implement these plans to ensure that interconnected system reliability will be maintained." be deleted.

R3: the SDT suggests deleting R3 as it is redundant with TOP-004-1 R1. We disagree with this proposal. R3 requires the various operating entities to coordinate and develop operational plans; whereas TOP-004-1 requires the TOP to operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs). They are required for different time frames and purposes.

R4: the SDT suggests deleting R4 as it is redundant with IRO-005-2, R9. We Disagree with this proposal. Deleting R4 would remove the obligation for BA and Top to coordinate their activities with the RC. Additionally, the two requirements serve different purposes: R4 in TOP-002 serves to ensure that normal Interconnection operation will proceed in an orderly and consistent manner; whereas R9 in IRO-005-2 serves to require the RC to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS, or DCS violations.

R6: the SDT suggests deleting R6 as it is redundant with BAL-002-0 R4 and IRO-005-2 R9. We agree that there is redundancy with BAL-002-0 R4, but we not agree that it is redundant with IRO-005-2 R9. Deleting R6 would remove the obligation for BA and Top to coordinate their activities with the RC. Additionally, the two requirements serve different purposes: R6 in TOP-002 require TOP and BA to plan for contingencies; whereas R9 in IRO-005-2 serves to require the RC to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS, or DCS violations.

R7 and R9: the SDT suggests deleting these requirements as they are redundant with BAL-007 through -011. We do not agree with the deletion of both requirements, due to the fact the standards BAL-007 to BAL-011 have failed the ballot process, and are now part of the Reliability-based Control SAR which is posted for comments. Please see our comments on Q4 (ii), above.

R8, R10 and R11: the SDT suggests deleting these requirements as they are redundant with IRO-005-2 R9. We agree with this deletion provided that R4 is retained. Othewise, R10 and R11 should be retained.

R18: the SDT suggests to move this to FAC-009-1. We do not agree since the purpose of FAC-009-1 is "To ensure that Facility Ratings used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or Methodologies". We veiw that R18 crosses a number of Standards so there may be a better home than FAC-009-1.

TOP-003-0

R3: the SDT suggests deleting R1.3 as it is redundant with IRO-010, R3 as part of the over-all data specification effort. We believe the referenced requirement should be R4.

TOP-004-0

R1: the SDT suggests deleting R1 as it is redundant with IRO-009-1, R4. We disagree with this. SAR IRO-009-1 holds the RC responsible for operated within IROL. We feel strongly that the TOP must also operate its system to respect IROL. Further, we need to defer any changes to remove or modify SOL until after the definition of Adequate Level of reliability is defined. We also provided other reasons for retaining it. Please see our comments on Q2, above.

R2: the SDT suggests deleting R2 as it is simply the definition of an IROL and is redundant with FAC-010-1 and FAC-011-1. We disagree with this proposal since R2 requires TOP to operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency. FAC-010-1 and FAC-011-1 deal with the methodology to determine SOL and IROL. They hold different entities for doing very different things altogether.

R3: We disagree with removing this requirement for the above same reason.

TOP-005-1

R2: the SDT suggests deleting this requirment. We agree that R2 is not a reliability requirement, but the SDT needs to recommend a home for entities that receive data from the ISN that it must sign the NERC Confidentiality Agreement for “Electric System Reliability Data".

TOP-006-1

R1: the SDT suggests deleting R1 as it is redundant with FAC-009-1, R2. We disagree with this proposal since R1 deals with real-time data such as facility status, resource availability; whereas FAC-009-1 deals with establishing ratings.

R4: the SDT suggests deleting R4 as it is redundant with BAL-001 and -002 and is also addressed in IRO-010-1, R1 and R3. We disagree as R4 requires the operating entities to do things that are very different from any of BAL-001, BAL-002 and IRO-010-1.

R7: the SDT considers deleting Balancing Authority as it is covered in BAL-005-0, R8 and deleting Reliability Coordinator as it is covered in BAL-008-1, R1. We do not agree with both. In the first case, the requirements for the BA in R7 is to monitor system frequency which is different than those in BAL-005-0, R8 which specify the data and metering requirements. In the second case, BAL-008 doesn't yet exist (falied ballot).

TOP-008

R3: the SDT suggests deleting R3 as it is a local utility risk consideration and not a reliability issue as currently worded. We do not agree with the deletion since the requirement implies that the action taken by the TOP has interconnected system implication.

Please use this form to submit comments on the proposed Real-time Transmission Operations and Balancing of Load and Generation SAR. Comments must be submitted by **June 13, 2007**. Please submit the completed form by e-mail to sarcomm@nerc.net with the words "Real-time TOP & BA" in the subject line. If you have questions please contact Ed Dobrowolski at 609-947-3673 or ed.dobrowolski@nerc.net

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments: Good utility practices and procedures should not be included in standards. They are vague statements and do not belong in the standards even as a reference. If good utility practice statements were acceptable there would only be a need for one requirement and that is that all entities shall institute good utility practice. True standards need to be developed and superfluous information should not remain in the standards.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☐ No

   Comments:

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments: This may be a reasonable approach. However, the SAR DT may want to consider if they then need to pass all comments dealing specifically with the standards on to the Standards Drafting team from this process.

4. **Are there any standards included in the SAR that shouldn't be included?**

The following standards were included in the SAR and should be removed: We do agree that this SAR appears to cover the right set of standards. However, it potentially conflicts with other SARs and draft standards.

The Operating Personnel Communications Protocol (OPCP) SAR is proposing to modify COM-1-1, COM-002-2, TOP-001-1, TOP-002-2, TOP-007-0, TOP-008-0 standards. All of these standards are proposed to be modified in this SAR. How does this SAR Drafting Team propose to coordinate with the OPCP SAR drafting team. It seems like this would be difficult to accomplish and that one SAR should be delayed.

The Operate within Interconnected Operating Limits Standard Drafting team is in the process of modifying the TOP-003, TOP-005, and TOP-006 standards. Assuming these standards are eventually approved, this SAR will have to be modified to reflect the new versions of the standards. Again, this SAR should be delayed until the Operate within Interconnected Operating Limits Standards have completed the ballot process.

Finally, System Personnel Training drafting team is proposing to eliminate PER-001 through PER-004. This SAR would have to be updated to reflect those changes. Again this SAR should be delayed until these standards are balloted.

5. **Are there standards that should be added to the SAR?**

The following standards should be added to the SAR: No.

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☐ No

Comments:

7. Do you agree with the scope of this SAR?

☒ Yes

☒ No

Comments: This SAR should be written to apply only to TOPs. This is an opportunity to create a good quality set of standards and eliminate the existing ambiguous requirements. You should start with a clean slate.

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments:

9. If you have any other comments on this SAR that you haven't identified above, please provide them here.

Comments: The SAR proposes to add the language "without delay" to a number of requirements. We are concerned that this wording could be interpreted in a standard to require the need for immediate control action. We propose that the standard drafting team should clarify that the "without delay" language does not require immediate control action but requires the applicable entity to begin evaluations necessary to take control actions. These evaluations may include but are not limited to verifying the limit, measurement, or performing a on-line power flow study.

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments: We agree that good utility practice and procedures should not be included in standards. However, care should be taken not to remove coordination requirements which are in fact necessary to reliability planning and operation.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: We strongly disagree with this idea. Respecting SOLs is a fundamental operational requirement. Transmission Operators must be required to closely montior their area; failing to do so may ultimately lead to cascading failures, as was witnessed on August 14. SOLs, left unchecked, will become an IROL, which is why it is imperative that all SOLs be monitored and respected at the TOP level.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments: This may be a reasonable approach. However, the SAR DT may want to consider if they then need to pass all comments dealing specifically with the standards on to the Standards Drafting team from this process.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

Some of the standards included in this SAR for revision appear to create a conflict with other ongoing SAR and Standard drafting activites. We are becoming more and more concerned about the parallel changes taking place.

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR: No.

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☐ No

Comments:

7. Do you agree with the scope of this SAR?

☐ Yes

☒ No

Comments: Please see response to Q#4.

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments:

9. If you have any other comments on this SAR that you haven't identified above, please provide them here.

Comments: ISO New England supports Quebec's proposal not to be subjected to BAAL-007-1 requirements because of their single BA Interconnection status.

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☒ Move these items into references

   Comments:

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: While SOLs may be local in nature, the mitigation of SOL violations has the potential to impact several entities of the functional model - oftentimes from different companies. Without a standard, it will be difficult to properly justify actions taken to mitigate SOL violations.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments:

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR:

6. **Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?**

   ☒ Yes

   ☐ No

   Comments:

7. **Do you agree with the scope of this SAR?**

   ☒ Yes

   ☒ No

   Comments: Except for not addressing the SOL issue described above.

8. **If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.**

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☒ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments: If the "procedures and good utility practice" are enforceable, the above requirements should remain in the standards. If these requirements are removed from the standard, where will the reference documents be located? An attachment to the Standard or a separate manual not quickly and easily accessible to those who need it?

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: If the "procedures and good utility practice" are enforceable, the above requirements should remain in the standards. An attachment to the Standard or a separate manual not quickly and easily accessible to those who need it?

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments:

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

5. **Are there standards that should be added to the SAR?**

The following standards should be added to the SAR:

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☐ No

Comments: The standards must be revised to clearly define the responsible entity for each requirement. There can't be any room for a requirement to fall through the cracks because the assignment of responsibility is not clear. Redundancy between Standards does not mitigate the risk of inadequate assignment of responsibility, but rather it may increase the likelihood that responsible entities assume that the requirements are met by others.

7. Do you agree with the scope of this SAR?

☒ Yes

☐ No

Comments:

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments:

9. If you have any other comments on this SAR that you haven't identified above, please provide them here.

Comments:
Specific to COM-001-1 Telecommunications:

In general, we support the proposed revisions to this standard with the following exceptions.

Periodicity and type of testing should not be defined explicitly in the standard. The onus must be placed on each organizaton to determine the periodicity and testing requirements as necessary to meet expected performance criteria. Such requirements would require regular review and adjustment to address changing conditions.

Appendix B - FERC Order 693: We are concerned that the proposed expansion of the Standard to included Generator Operators and Distribution Providers is unachievable within a reasonable period of time relative to ongoing efforts to comply with current standards. i.e. - too much too fast.

Specific to TOP-005 Operational Reliability Information

If the proposed changes are adopted, only one requirement R3 remains in this standard. This requirement involves Balancing Authorities (BAs)and Transmission Operators (TOs) supplying on-line information to associated BAs and TOs for reliability assessments and coordinated operations. This same information is also transmitted to the Reliability Coordinators (RCs)via requirement R1. (which is now to be transferred to and covered by IRO-010-1).

If the RCs are receiving all the required reliability data anyway, why can't all concerned BAs and TOs get this same data from the RCs instead of directly from the concerned utility? Won't all BAs and TOs be required to send reliability data the closest RCs, even if they are not already a direct or associate member of any established RC?

Keeping TOP-005 only for R3 opens the door to potential reliability analysis and data being developed and transmitted between interconnected BAs and TOs that is NOT also transmitted to RCs. It may be better to make TOP-005 R3. part of another standard (such as IRO-010) to ensure RCs are properly informed, and then eliminate TOP-005 altogether.

Please use this form to submit comments on the proposed Real-time Transmission Operations and Balancing of Load and Generation SAR. Comments must be submitted by **June 13, 2007**. Please submit the completed form by e-mail to sarcomm@nerc.net with the words "Real-time TOP & BA" in the subject line. If you have questions please contact Ed Dobrowolski at 609-947-3673 or ed.dobrowolski@nerc.net

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☒ Move these items into references

   Comments: While we agree that the procedures and good utility practices do not necessarily need to be in the standard itself, the reference documents must be issued concurrent with the implementation of the revised standard. There is a great deal of information that is very useful for the utilities implementing the standards.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☒ Yes

   ☐ No

   Comments: A System Operating Limit (SOL) does not necessarily need to be included in the standard itself, but the literature on Good Utility Practice must be issued concurrent with the implementation of the revised standard. There is a great deal of information that is very useful for the utilities implementing the standards.

   To aid understanding of a System Operating Limit (SOL), it would be very helpful to add some examples of a SOL in the Glossary of Terms.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments:

4. **Are there any standards included in the SAR that shouldn't be included?**

The following standards were included in the SAR and should be removed: There are several TOP standards currently under revision in other SAR's. There must be clear coordination between the Drafting Teams of the various SAR's as they are revising the Reliability Standards.

5. **Are there standards that should be added to the SAR?**

The following standards should be added to the SAR:

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☐ No

Comments: The current versions of the standards are very voluminous and confusing. These revisions should remove the ambiguity and lead to a small set of quality reliability related requirements to be complied with.

7. Do you agree with the scope of this SAR?

☒ Yes

☐ No

Comments: The current versions of the standards are very voluminous and confusing. These revisions should remove the ambiguity and lead to a small set of quality reliability related requirements to be complied with.

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments: We are not aware of any at this time, since we do not know the detailed changes and wording that will be in the Reliability Standards. It is imperative to include red-line versions of the revised standards to allow determination of what needs to be included in the reference documents.

9. If you have any other comments on this SAR that you haven't identified above, please provide them here.

Comments: As the standards are revised, it is necessary to insure there is, at a minumim, one measurement for each requirement. If a measure can not be determined for a requirement, the requirement should be rewritten or deleted.

Please use this form to submit comments on the proposed Real-time Transmission Operations and Balancing of Load and Generation SAR. Comments must be submitted by **June 13, 2007**. Please submit the completed form by e-mail to sarcomm@nerc.net with the words "Real-time TOP & BA" in the subject line. If you have questions please contact Ed Dobrowolski at 609-947-3673 or ed.dobrowolski@nerc.net

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☒ Keep these items as requirements in standards

   ☒ Move these items into references

   Comments: Each case should be reviewed on an individual basis. It was not clear in the examples you provided. It is possible that some procedures may need to be reworded into standard language and for others it may be appropriate to move to a reference document.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: SOLs should be retained as part of the NERC Standards. The NYISO does not believe that SOLs are only important to local operations. SOLs also occur on BPS facilities and can cause reliability issues outside of the local utility operations, without being an IROL.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments: This may be a reasonable approach. The NYISO would recommend that all subsequent comments be provided to the Standards Drafting Team for consiration in revising the standards.

4. **Are there any standards included in the SAR that shouldn't be included?**

The following standards were included in the SAR and should be removed: We do agree that this SAR appears to cover the right set of standards. However, it potentially conflicts with other SARs and draft standards.

The Operating Personnel Communications Protocol (OPCP) SAR is proposing to modify COM-1-1, COM-002-2, TOP-001-1, TOP-002-2, TOP-007-0, TOP-008-0 standards. All of these standards are proposed to be modified in this SAR. How does this SAR Drafting Team propose to coordinate with the OPCP SAR drafting team. It seems like this would be difficult to accomplish and that one SAR should be delayed.

The Operate within Interconnected Operating Limits Standard Drafting team is in the process of modifying the TOP-003, TOP-005, and TOP-006 standards. Assuming these standards are eventually approved, this SAR will have to be modified to reflect the new versions of the standards. Again, this SAR should be delayed until the Operate within Interconnected Operating Limits Standards have completed the ballot process.

Finally, System Personnel Training drafting team is proposing to eliminate PER-001 through PER-004. This SAR would have to be updated to reflect those changes. Again this SAR should be delayed until these standards are balloted.

5. **Are there standards that should be added to the SAR?**

The following standards should be added to the SAR: No.

6. **Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?**

☒ Yes

☐ No

Comments:

7. **Do you agree with the scope of this SAR?**

☒ Yes

☐ No

Comments:

8. **If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.**

☐ Regional Variances

☐ Business Practices

Comments:

9. **If you have any other comments on this SAR that you haven't identified above, please provide them here.**

Comments: The SAR proposes to add the language "without delay" to a number of requirements. We are concerned that this wording could be interpreted in a standard to require the need for immediate control action. We propose that the standard drafting team should clarify that the "without delay" language does not require immediate control action but requires the applicable entity to begin evaluations necessary to take control actions. These evaluations may include but are not limited to verifying the limit, measurement, or performing a on-line power flow study.

Please use this form to submit comments on the proposed Real-time Transmission Operations and Balancing of Load and Generation SAR. Comments must be submitted by **June 13, 2007**. Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments: We agree that good utility practice and procedures should not be included in standards. However, care should be taken not to remove coordination requirements which are in fact necessary to reliability planning and operation.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments: We strongly disagree with this idea. Respecting SOLs is a fundamental operational requirement. Transmission Operators must be required to closely montior their area; failing to do so may ultimately lead to cascading failures, as was witnessed on August 14. An SOLs, left unchecked, will become an IROL, which is why it is imperative that all SOLs be monitored and respected at the TOP level.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

   ☐ No

   Comments: This may be a reasonable approach. However, the SAR DT may want to consider if they then need to pass all comments dealing specifically with the standards on to the Standards Drafting team from this process.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

Some of the standards included in this SAR for revision appear to create a conflict with other ongoing SAR and Standard drafting activites. We are becoming more and more concerned about the parallel changes taking place.

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR: No.

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☒ Yes

☐ No

Comments:

7. Do you agree with the scope of this SAR?

☐ Yes

☒ No

Comments: Please see response to Q#4.

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments:

9. If you have any other comments on this SAR that you haven't identified above, please provide them here.

Comments: HQT(Quebec) wishes to proposed that the Province of Quebec not be subjected to BAAL-007-1 requirements and so not be subject to compliance to that standard. Since Quebec is a single BA Interconnection, BAAL-007 is not relevant. For Quebec, BAAL-008 is the Standard that is more relevant for reliable operation.

Quebec proposes to follow the rest of BAAL-008 to BAAL-011 and would be willing to participate in the field test for those Standards.

Please use this form to submit comments on the proposed Real-time Transmission Operations and Balancing of Load and Generation SAR. Comments must be submitted by **June 13, 2007**. Please submit the completed form by e-mail to sarcomm@nerc.net with the words "Real-time TOP & BA" in the subject line. If you have questions please contact Ed Dobrowolski at 609-947-3673 or ed.dobrowolski@nerc.net

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☒ Move these items into references

   Comments:

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☒ Yes

   ☒ No

   Comments: There are many Standard requirements outside the scope of this SAR which require the RC to "monitor" potential SOLs.

   As an example, IRO-003, R1 says each Reliability Coordinator shall monitor all Bulk Electric System facilities to ensure the RC is able to determine any potential System Operating Limit. If this SAR removes the standards in scope that mention SOLs but leaves IRO-003, R1, to be enforced, then ambuiguity will result.

   IRO-003, R2 says each Reliability Coordinator shall know the current status of all critical facilities whose failure, degradation or disconnection could result in an SOL. Again, it appears in other standards (outside the scope of this SAR) that the RC is responsible (enforceble requirement) for being aware of preliminary events that could lead to an SOL.

   Additionally, IRO-002, R6 also contains such references to SOLs as well as other IRO Standards. Therefore, it appears the scope of the SAR should be broadened to include other standard requirements not contained in this SAR.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

☒ Yes

☒ No

Comments: This SAR does not provide the referenced assessments the SAR drafting team has made on comments contained in Appendix B. Therefore, we can not agree or disagree with the team's assessment.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed:

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR: IRO-002, IRO-003, IRO-005, IRO-006. However, there could be others.

6. **Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?**

   ☒ Yes

   ☐ No

   Comments:

7. **Do you agree with the scope of this SAR?**

   ☐ Yes

   ☒ No

   Comments: The SAR needs to be broadened in scope to cover all standard requirements that contain references of the RC being responsible for SOLs and not just a subset of standards.

8. **If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.**

   ☐ Regional Variances

   ☐ Business Practices

   Comments:

9. **If you have any other comments on this SAR that you haven't identified above, please provide them here.**

Comments: It is recommended that the drafting team members review all alleged duplications closely to be sure that the true meaning of the duplicated statement is the same as the orginal statement before being deleted. There could be instances where the words are the same but the meaning behind the duplication could be different.

Please use this form to submit comments on the proposed Real-time Transmission Operations and Balancing of Load and Generation SAR. Comments must be submitted by **June 13, 2007**. Please submit the completed form by e-mail to sarcomm@nerc.net with the words “Real-time TOP & BA” in the subject line. If you have questions please contact Ed Dobrowolski at 609-947-3673 or ed.dobrowolski@nerc.net

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☒ Keep these items as requirements in standards

   ☒ Move these items into references

   Comments: I am all for removing items that are "not standards" from the standards. However, references can be hard to keep track of. And they will "creep" into standard via the Readiness Assessment process.

   Each "requirement" up for deletion should be reviewed individually. Even the SAR drafting team disagrees on them. The example cited above (TOP-001-1, R7) is slated for revision in the Detailed Description portion of the SAR itself. The TOP-002-2, R2 should be removed.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☒ No

   Comments:
   - Without a standard requiring action on SOL's, many entities will live with them in the hope that nothing else will happen.
   - If you make the RC aware of small problems (SOL), they can be corrected before they are big problems (IROL).
   - The determination of whether an SOL is an IROL is made by the RC. If there is no notification, how can he make that determination?
   - Some coordination of SOL remediation may need to occur between entities. The corrective action I want to take may put my neighbor in extremise. The coordination is best done while keeping the RC informed.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☒ Yes

☐ No

Comments:

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed: None

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR: None

6. **Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?**

Background Information

The Real-time SAR for Transmission Operations and Balancing of Load and Generation includes revising the following standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Please review the SAR and then submit your comments on this form and e-mail to sarcomm@nerc.net by **June 13, 2007** with the words "**Real-time TOP & BA**" in the subject line.

You do not have to answer all questions. ***Insert a "check" mark in the appropriate boxes by clicking the gray areas.***

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

   ☐ Keep these items as requirements in standards

   ☐ Move these items into references

   Comments: The WECC RCCWG believes that some provisions of TOP-001-1 R1 are standard requirements, and that whether TOP-002-2 R2 is a standard requirement is less clear. The group agrees that in order to be a standard requirement there needs to be a link to an impact on the Bulk Electric System. The requirements need to be reworded to be measurable and substantiable.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on "good utility practice." Do you agree?**

   ☐ Yes

   ☐ No

   Comments: While it is true that some SOLs do not have Bulk Electric System impact, such as a wave trap or customer transformer overload (local issues), others may lead to an impact on the Bulk Electic System. The group feels that if it can be shown through studies that a SOL does not have an impact on the Bulk Electic System, that particular SOL could be exempted from standards requirements. The group also questions whether a SAR without Bulk Electric System impact, but with potential local impact that would require a NERC disturbance report should be a standard requirement.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the standard drafting team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the standard drafting team?**

   ☐ Yes

   ☐ No

   Comments: The references, such as FERC Order 693, are so detailed that the WECC RCCWG does not believe the group can comment on the standard drafting team assessment of those comments.

4. **Are there any standards included in the SAR that shouldn't be included?**

   The following standards were included in the SAR and should be removed: None are currently identified, but some may become apparent later.

5. **Are there standards that should be added to the SAR?**

   The following standards should be added to the SAR: None are currently identified, but some may become apparent later.

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

☐ Yes

☐ No

Comments: The WECC RCCWG believes that some of the standard requirements need to be clarified.

7. Do you agree with the scope of this SAR?

☐ Yes

☐ No

Comments:

8. If you aware of any regional variances or business practices that should be developed in association with this SAR please list them here.

☐ Regional Variances

☐ Business Practices

Comments:

9. If you have any other comments on this SAR that you haven't identified above, please provide them here.

Comments: The WECC RCCWG suggests differentiating TOP directives from Reliability Coordinator directives. This may be done with specific language. It should be clear to the entity receiving a directive who issued that directive. It may be beneficial to have a NERC definition for a "Reliability Coordinator Directive" and a "Transmission Operator Directive".

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Consideration of Comments on First Draft of the Real-time Operations SAR for Transmission Operations and Balancing of Load and Generation

The Real-time Operations SAR requesters thank all stakeholders who submitted comments on Draft 1 of the Real-time Operations SAR. This SAR was posted for a 30-day public comment period from May 15 through June 13, 2007. The requesters asked stakeholders to provide feedback on the SAR through a special SAR Comment Form. There were 23 sets of comments, including comments from 62 different people from 43 companies representing 8 of the 10 Industry Segments as shown in the table on the following pages.

Based on the comments received, the SAR drafting team is recommending that the SAR be re-posted to include specific issues that were pointed out by the commenters:

- Inclusion of IRO-004, -005 & -006 in the scope.
- Correction to the reference in TOP-001-1, R2.
- Correction to the reference in TOP-002-2, R3.
- Clarified the reason for recommending the deletion of TOP-002-2, R8.
- Corrected the reference in TOP-002-2, R10.
- Removed the recommendation for deleting TOP-002-2, R11.
- Rewording of the recommendation in TOP-002-2, R14 & R15.
- Clarified the deletion requested in TOP-004-1, R1.

Based on stakeholder comments, the SAR DT is proposing to retain requirements to (1) be aware of SOLs and (2) monitor system conditions related to SOLs.

In this "Consideration of Comments" document stakeholder comments have been organized so that it is easier to see the responses associated with each question. All comments received on the standards can be viewed in their original format at:

http://www.nerc.com/~filez/standards/Real-time_Operations_Project_2007-03.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.[1]

[1] The appeals process is in the Reliability Standards Development Procedures: http://www.nerc.com/standards/newstandardsprocess.html.

The Industry Segments are:

1 — Transmission Owners
2 — RTOs, ISOs
3 — Load-serving Entities
4 — Transmission-dependent Utilities
5 — Electric Generators
6 — Electricity Brokers, Aggregators, and Marketers
7 — Large Electricity End Users
8 — Small Electricity End Users
9 — Federal, State, Provincial Regulatory or other Government Entities
10 – Regional Reliability Organizations, Regional Entities

Index to Questions, Comments, and Responses

1. **The TOP standards seem to refer in many places to procedures and good utility practice as opposed to true standards. (See TOP-001-1, R7 and TOP-002-2, R2.) Should these items remain as standard requirements or should procedures and good utility practices be removed from the standards and be placed into reference documents?**

Summary Consideration: The SAR drafting team appreciates that the industry is near consensus on the removal of 'good utility practices' from NERC standards. We recognize that care must be taken to continue to require compliance with a necessary and sufficient set of standards for the continued reliable operation of the Bulk Electric System while moving some of the existing language from standards into reference documents. We also note that reference documents must be made readily available for continued usage. Our detailed responses are listed with each comment.

Question #1			
Commenter	**Keep these items as requirements in standards**	**Move these items into references**	**Comment**
ATC LLC	☑		Standards define "good utility practices" therefore it's our opinion that these requirements should remain.
Response: The general consensus of the commenters was to remove 'good utility practice' from the standards. The SAR drafting team appreciates your comment and agrees that any requirement that is strongly linked to assuring reliability, very specific, and consistently measurable should remain in the standards. General statements that are typically hard if not impossible to measure should be removed from the standards. 'Good utility practice' spans a wide range of acceptable practices, while standards set a specific bar that all must meet. Standards should not codify procedures that are simply one way of meeting a standard requirement.			
Manitoba Hydro	☑		If the "procedures and good utility practice" are enforceable, the above requirements should remain in the standards. If these requirements are removed from the standard, where will the reference documents be located? An attachment to the Standard or a separate manual not quickly and easily accessible to those who need it?
Response: The general consensus of the commenters was to remove 'good utility practice' from the standards. The SAR drafting team has not considered the ultimate location of any reference material. The SAR DT will pass this comment on to the NERC staff in order to come to a reasoned conclusion. One good location that could be considered would be a 'references' section on the NERC web site. The intent should be to have the reference documents readily available for consultation as well as for use in developing training.			
FirstEnergy	☑		FirstEnergy agrees in general that Good Utility Practices in and of themselves do not belong in the standards. However, for the two examples cited we believe these are important processes for ensuring a reliable electric system and therefore should remain within the reliability standards. Exclusion of requirments based on Good Utility Pratices will

Question #1			
Commenter	**Keep these items as requirements in standards**	**Move these items into references**	**Comment**
			need to be evaluated and addressed on a case by case basis and commented on via the standard drafting process.
Response: The general consensus of the commenters was to remove 'good utility practice' from the standards. The SAR drafting team agrees with the concept of addressing these issues on a case by case basis. The examples cited may ultimately be considered to be requirements; the team was attempting to amplify the concept of removing redundant and superfluous requirements to help deal with the unavoidable angst that was expected to occur due to the idea of removing some standards when this SAR was posted for comments. We will pass your comments along to the eventual Standards Drafting Team.			
City of Tallahassee	☑	☑	I am all for removing items that are "not standards" from the standards. However, references can be hard to keep track of. And they will "creep" into standard via the Readiness Assessment process. Each "requirement" up for deletion should be reviewed individually. Even the SAR drafting team disagrees on them. The example cited above (TOP-001-1, R7) is slated for revision in the Detailed Description portion of the SAR itself. The TOP-002-2, R2 should be removed.
Response: The general consensus of the commenters was to remove 'good utility practice' from the standards. The SAR drafting team agrees with your comments. Each requirement will be reviewed individually to assure that it is necessary and not redundant. We had debated whether to revise or delete TOP-001-1, R7 and wrote it up to revise it for now. These comments will be passed on to the Standards Drafting Team.			
Duke Energy	☑	☑	Where the identification of procedures and good utility practice bring clarity to TOP requirements, they should be retained, although not as separate requirements.
Response: The general consensus of the commenters was to remove 'good utility practice' from the standards. The SAR drafting team agrees with your comments. The structure of NERC standards are such that the usual background and explanatory material that once were contained in the NERC Operating Policies have no formal spot for archiving these types of issues. The Standards Drafting Team should work with NERC staff to assure that the clarity remains while not inadvertently retaining additional, unnecessary requirements.			
NYISO	☑	☑	Each case should be reviewed on an individual basis. It was not clear in the examples you provided. It is possible that some procedures may need to be reworded into standard language and for others it may be appropriate to move to a reference document.
Response: The general consensus of the commenters was to remove 'good utility practice' from the standards. The SAR drafting team agrees with your comments. Industry comments indicate that each and every requirement that is necessary to			

Question #1			
Commenter	**Keep these items as requirements in standards**	**Move these items into references**	**Comment**
assure continued reliable operation of the Bulk Electric System should be retained. The SAR DT will pass this comment on to the NERC staff in order to come to a reasoned conclusion on the topic of a reference document. One good location that could be considered would be a 'references' section on the NERC web site. The intent should be to have the reference documents readily available for consultation as well as for use in developing training. It is also clear that each individual change will need an explanation in order to gain industry consensus. The SAR drafting team found that our deliberations tended to link the various requirements across several standards, and that only by considering several at once did redundancies appear. It will behoove the Standards Drafting Team and NERC to fully explain the need for each change in order to help the balloting group gain confidence that the course being plotted will result in continued reliable operation of the Bulk Electric System.			
IESO			We concur that good utility practices and administrative procedures should not be included in standards. Nonetheless, we suggest the SDT to assess which of the existing requirements, including the procedural ones, are indeed actions needed to preserve reliability and hence keep them in the standards. While we agree that TOP-002-2, R2 may be removed, we do not agree that TOP-001-1 R7 should be removed since the notification and coordination of generation and transmission outages are necessary to ensure that reliability impact of the planned removal of the BES facility is assessed. It is not an administrative procedure or good utility practice; it is a reliability requirement.
Response: The SAR drafting team thanks you for your comments and has taken them under advisement. The reason that the SAR includes the elimination of the examples cited is to remove redundancy. In the specific case of TOP-001-1, R7, the requirement is basically "don't burden your neighbors" and "tell the RC what is going on". The additional language in R7 and its sub-requirements is unnecessary. TOP-003-0, R1.2 already requires data sharing to enable outage coordination to avoid burdening neighbors. TOP-001-1, R3 requires all BA/TOP/GOs to comply with RC reliability directives. Finally, IRO-004-1, R6 requires the RC to issue reliability directives to BA/TOP/GOs if the results of their studies indicate potential SOL or IROL violations. Therefore, this issue is already covered in other areas and is redundant in this location and should be removed. However, the Standards Drafting Team will make the final decision on the form that the standard will take when it goes to ballot.			
HQT			We agree that good utility practice and procedures should not be included in standards. However, care should be taken not to remove coordination requirements which are in fact necessary to reliability planning and operation.

Question #1			
Commenter	**Keep these items as requirements in standards**	**Move these items into references**	**Comment**
ISO-NE			We agree that good utility practice and procedures should not be included in standards. However, care should be taken not to remove coordination requirements which are in fact necessary to reliability planning and operation.
NPCC CP9 RSWG			We agree that good utility practice and procedures should not be included in standards. However, care should be taken not to remove coordination requirements which are in fact necessary to reliability planning and operation.
Response: The team thanks you for your comments and is in agreement that reliable interconnected operation requires coordination which would continue to be enforced by specific standards.			
IRC SRC			Good utility practices and procedures should not be included in standards. They are vague statements and do not belong in the standards even as a reference. If good utility practice statements were acceptable there would only be a need for one requirement and that is that all entities shall institute good utility practice. True standards need to be developed and superfluous information should not remain in the standards.
Response: The SAR drafting team thanks you for your support on this issue. The sentiment expressed in your comment is exactly what we were thinking in asking this question. NERC standards must have a strong link to assuring reliability, be very specific, and consistently measurable.			
WECC RCCWG			The WECC RCCWG believes that some provisions of TOP-001-1 R1 are standard requirements, and that whether TOP-002-2 R2 is a standard requirement is less clear. The group agrees that in order to be a standard requirement there needs to be a link to an impact on the Bulk Electric System. The requirements need to be reworded to be measurable and substantiable.
Response: The SAR drafting team thanks you for your comments and is in agreement. Your comment identified yet another requirement which needs scrutiny if it is to remain in NERC standards.			
Entergy (Franklin)		☑	Move to reference documents or eliminate 'good practices' from standards, and also eliminate redundant requirements.
ERCOT		☑	Such information is of value and should not be lost, but does not belong in a Standard. A Standard must apply continent-wide and not be of the nature of dictating any particular practice or procedure.

Question #1			
Commenter	**Keep these items as requirements in standards**	**Move these items into references**	**Comment**
MRO		☑	While we agree that the procedures and good utility practices do not necessarily need to be in the standard itself, the reference documents must be issued concurrent with the implementation of the revised standard. There is a great deal of information that is very useful for the utilities implementing the standards.
FRCC		☑	Subjective commentary that is not measurable or enforceable should be removed from the standards and placed in the Reliability Readiness Evaluation and Improvement Program Reference Manual or something similar.
Response: The SAR drafting team agrees with your comments. The decision of when or whether to issue reference documents will be passed to the Standards Drafting Team and NERC staff. We agree that the concepts included in this SAR which may be moved to reference material are of such importance that the reference material publishing schedule will need to be prompt in order to minimize concern over the potential loss thereof.			
AEP		☑	
Ameren		☑	
Entergy (Davis)		☑	
ITC Transco		☑	
PSC SC		☑	
SOCO Transmission		☑	
Response: The SAR drafting team thanks you for your support on this issue.			
CenterPoint			No comment.

2. **The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on 'good utility practice'. Do you agree?**

Summary Consideration: Based on stakeholder comments, the SAR DT is proposing to retain requirements to (1) be aware of SOLs and (2) monitor system conditions related to SOLs.

The SAR DT believes that the sole purpose of NERC standards is to ensure BES reliability. The majority of the team believes that NERC standards are not intended to cover local events which have no impact on neighboring system reliability. The requirements currently embedded in NERC standards exist due to many reasons. During the V0 drafting effort massive duplication of requirements was noticed by the drafting team but left within the standards due to the mandate to "not change anything, just re-format it for standards".

SOLs, by NERC's own definition, are not cascading events. This does not mean that they are not important (and RCs are still required to monitor them) but there is no reliability reason to require some entity to not violate an SOL. Interconnected Transmission Systems must continue to operate so as not to burden their neighbors or risk BES reliability. These are fundamental requirements for continued reliable operation of the BES. If you follow all of the other standards for planning and operational planning, such as FAC-011 and the IRO standards, you should never find yourself within one Contingency of violating an IROL.

Question #2			
Commenter	**Yes**	**No**	**Comment**
AEP		☑	We disagree with this statement. Just what does the SAR DT consider to be a true BES reliability issue? The team's opinion seems contradictory to NERC's efforts to have the Regions agree that all non-radial transmission facilities 100 kV and above are Bulk Electric System facilities. On one end of the spectrum there is a NERC effort to expand the definition and size of BES. Then you efforts like this SAR to reduce the size and scope. While the most severe and significant BES reliability issue may be IROL violations (IROL violations can lead to instability, uncontrolled separation, or cascading outages), that surely is not the only reliability issue. Multiple SOL events can lead to a situation where you have a new, non-studied IROL. Should we not operate the system such to prevent us from entering or approaching IROL limits? If the only limits that have applicable Reliability Standards is IROLs, then are we not setting up the system to approach the "edge of the cliff" before we take appropriate defensive action? While we agree not all

Question #2			
Commenter	**Yes**	**No**	**Comment**
			SOLs have a significant impact on the overall reliability of the BES, we do not agree that means all requirements related to SOLs should be removed from the NERC Standards. That would be a move towards less reliability in the future, not a step towards improving reliability. And just what is meant by local utility operations not being a true BES reliability issue. If the system is not operated to respect SOLs, then that could jeopardize a firm power purchase from a distance resource via firm transmission service that a "local utility" is relying upon. Loss of that firm power purchase, could lead to having to shed customer load? Why is that not a BES reliability issue? Isn't that one of the reasons the BES exists is to support such commerce? Violating SOLs could also result in the tripping of generation outlets, resulting in loss of generation. That too is not a BES reliability issue? Before we could support removing requirements related to SOLs, the SAR DT team would need to provide a definition of what exactly is considered a BES reliability issue. Most of the TLRs that are implemented today are for relieving SOLs not IROLs. Therefore, removing requirements related to SOLs would be in direct conflict with current practices and does not improve the reliability practices from what we have today. At a minimum, RCs and TOPs need to monitor and know the EHV system SOLs and ensure operation within those SOLs and to monitor and operate to other SOLs as specified in the agreements between the RC and TOPs and BAs (see ORG-021-1 R3). While it is not practical or necessary to ticket every car speeding on the freeway, on the contrary it is also not practical or necessary to remove the speedometer from the cars. We feel that the requirements for the SOL are like the speedometers; therefore, removing requirements related to SOLs is inappropriate and could lead to less reliable operations.
Response: The SAR drafting team is utilizing the definition of SOL developed in FAC-011-1 which states that: R1.2 …SOLs shall not exceed associated Facility Ratings. R2.1 …In the pre-contingency state, the BES shall demonstrate transient, dynamic, and voltage stability; all Facilities shall be within their Facility Ratings and within their thermal, voltage, and stability limits. R2.2 Following the single Contingencies identified in Requirements 2.2.1 through 2.2.3, the system shall demonstrate transient, dynamic, and voltage stability; all Facilities shall be operating within their Facility Ratings; and within their thermal, voltage, and stability limits; and Cascading Outages or uncontrolled separation shall not occur. FAC-011-1 also requires that the RC; R1.3**.** Include a description of how to identify the subset of SOLs that qualify as IROLs.			

Question #2			
Commenter	**Yes**	**No**	**Comment**
The SAR drafting team concludes from this that SOLs, "… while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on 'good utility practice'." Nor do we find anything in your comments that leads us to believe otherwise. According to FAC-011-1, unless and until SOLs qualify as IROLs they are not a threat to BES reliability and do not require RCs to do more than monitor their status.			
ATC LLC		☑	ATC does not agree with SAR DT that SOLs are only important to local operations and that they should be removed from these standards. If SOLs are removed from NERC standards then any real-time identifications of an SOL that becomes an IROL will be difficult if not impossible to determine.
Response: As noted above, the SAR drafting team is utilizing the definition of SOL developed in FAC-011-1 which requires that the RC ; R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs. The SAR drafting team concludes from this that SOLs can either be effectively identified prior to the time they become IROLs, or they will be flagged for RC attention since they fail the requirement of R1.3 and demand special processing from the TOP and RC. According to FAC-011-1, unless and until SOLs qualify as IROLs or are identified as impossible to classify, they are not a threat to BES			
Duke Energy		☑	Where SOLs impact the Bulk Electric System, they are a reliability issue and should not be moved into guides or other reference documents.
Response: As noted above, the SAR drafting team is utilizing the definition of SOL developed in FAC-011-1 which requires that the RC: R1.3. Include a description of how to identify the subset of SOLs that qualify as IROLs. The SAR drafting team concludes from this that SOLs which will impact the reliability of the BES will be identified as IROLs and treated appropriately as per the requirements of IRO-005-2, IRO-006-3 and others.			
IESO		☑	We strongly disagree with this notion. Respecting SOLs and mitigating their violations are fundamental to the reliable operation of the transmission operator's area which may ultimately affect the interconnected system. And since IROLs are a subset of SOLs, and that some SOLs may become IROLs as system condition changes, it is imperative that all SOLs be monitored and observed at all time.
City of Tallahassee		☑	- Without a standard requiring action on SOL's, many entities will live with them in the hope that nothing else will happen. - If you make the RC aware of small problems (SOL), they can be corrected before they are big problems (IROL).

Question #2			
Commenter	**Yes**	**No**	**Comment**
			- The determination of whether an SOL is an IROL is made by the RC. If there is no notification, how can he make that determination? - Some coordination of SOL remediation may need to occur between entities. The corrective action I want to take may put my neighbor in extremise. The coordination is best done while keeping the RC informed.
Response: As noted above, the SAR drafting team agrees with you, but notes that this requirement is already covered by IRO-005-2 which states that : R1**.** Each Reliability Coordinator shall monitor its Reliability Coordinator Area parameters, including but not limited to the following: R1.2**.** Current pre-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope. R1.3**.** Current post-contingency element conditions (voltage, thermal, or stability), including any applicable mitigation plans to alleviate SOL or IROL violations, including the plan's viability and scope. Your comment appears to be covered by IRO-005-2. The SAR DT reviewed the proposed deletion of R10 and R11 from TOP-002-2 and made the following modifications to this posting: ▪ R10: delete due to duplication with TOP-004-0, R1; ▪ R11: shall remain.			
FRCC		☑	SOLs are a critical part operational situational awareness and of a "defense-in-depth" approach to operating reliably. It is critical for the Transmission Operator and Reliability Coordinator to be aware of areas that are stressed within his/her TOP and RC area (local and wide area view). Advance knowledge of what may initially be local or even minor issues to the BES, will allow the development of the most effective and appropriate solutions for resolving the SOLs and ensuring that they DO NOT evolve into IROLs.
NPCC CP9 RSWG HQT ISO-NE		☑	We strongly disagree with this idea. Respecting SOLs is a fundamental operational requirement. Transmission Operators must be required to closely montior their area; failing to do so may ultimately lead to cascading failures, as was witnessed on August 14, 2003. An SOLs, left unchecked, will become an IROL, which is why it is imperative that all SOLs be monitored and respected at the TOP level.
ITC Transco		☑	While SOLs may be local in nature, the mitigation of SOL violations has the potential to impact several entities of the functional model - oftentimes from different companies. Without a standard, it will be difficult to properly justify actions taken to mitigate SOL violations.

<table>
<tr><th colspan="4">Question #2</th></tr>
<tr><th>Commenter</th><th>Yes</th><th>No</th><th>Comment</th></tr>
<tr><td>NYISO</td><td></td><td>☑</td><td>SOLs should be retained as part of the NERC Standards. The NYISO does not believe that SOLs are only important to local operations. SOLs also occur on BPS facilities and can cause reliability issues outside of the local utility operations, without being an IROL.</td></tr>
<tr><td colspan="4">Response: The SAR DT reviewed the proposed deletion of R10 and R11 from TOP-002-2 and made the following modifications to this posting:
R10: delete due to duplication with TOP-004-0, R1;
R11: shall remain.
TOP-002-2, R11 requires “The Transmission Operator shall …. determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.” This requirement means that the TOP must be aware of SOLs. TOP-006-0, R2 requires “Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources.” This requirement addresses the comment that ‘Transmission Operators must be required to closely monitor their area’.</td></tr>
<tr><td>SOCO Transmission</td><td>☑</td><td>☑</td><td>There are many Standard requirements outside the scope of this SAR which require the RC to "monitor" potential SOLs.

As an example, IRO-003, R1 says each Reliability Coordinator shall monitor all Bulk Electric System facilities to ensure the RC is able to determine any potential System Operating Limit. If this SAR removes the standards in scope that mention SOLs but leaves IRO-003, R1, to be enforced, then ambiguity will result.

IRO-003, R2 says each Reliability Coordinator shall know the current status of all critical facilities whose failure, degradation or disconnection could result in an SOL. Again, it appears in other standards (outside the scope of this SAR) that the RC is responsible (enforceable requirement) for being aware of preliminary events that could lead to an SOL.

Additionally, IRO-002, R6 also contains such references to SOLs as well as other IRO Standards. Therefore, it appears the scope of the SAR should be broadened to include other standard requirements not contained in this SAR.</td></tr>
<tr><td>ERCOT</td><td>☑</td><td></td><td>There may be some confusion across the industry about "what are SOLs". I think there is good agreement that IROLs are applicable at the NERC Standard level, but there is</td></tr>
</table>

Question #2			
Commenter	**Yes**	**No**	**Comment**
			some identifiable reluctance within the industry to say that there is no place at all for SOLs in the NERC Standards. At the very least, there needs to be a good definition of SOL (which I believe there is), but some are concerned with the idea that IROLs are a "subset" of SOLs. Some believe that once a differentiation is made, the two should be considered separately and have separate requirements. I personally believe that IROLs are a subset of SOLs. I further believe that routine planning, operations planning, and real-time operations should be addressing all SOLs. Only during real-time operations or, more accurately, fresh post-analysis, can it be fully determined that an SOL may have sufficient consequences associated with it to qualify it as an IROL. If an IROL can be identified in advance, since by definition it relates to a single contingency, I believe a case could be made that planning and operations planning requirements have not been satisfied. In the great majority of cases, a system may be driven into an IROL through a series of unplanned events such that the system indeed may be subject to undesirable results from a "next" single contingency. However, prudent operations should dictate that no system plan to be in such a state.
MRO	☑		A System Operating Limit (SOL) does not necessarily need to be included in the standard itself, but the literature on Good Utility Practice must be issued concurrent with the implementation of the revised standard. There is a great deal of information that is very useful for the utilities implementing the standards. To aid understanding of a System Operating Limit (SOL), it would be very helpful to add some examples of a SOL in the Glossary of Terms.
Response: The SAR drafting team thanks the commenters for their input.			
FirstEnergy	☑		The reliability standards governing real-time operations should be focused on the subset of SOLs that qualify as IROLs.(reference FAC-010-1 R1.3). Blanket removal of all SOL references should be avoided and will need to be done on a case by case basis.
Response: The SAR drafting team agrees that care must be taken to consider each standard on a case to case basis, but with overall considerations as to how the standards work together to form a coherent whole.			
WECC RCCWG			While it is true that some SOLs do not have Bulk Electric System impact, such as a wave trap or customer transformer overload (local issues), others may lead to an impact on the Bulk Electic System. The group feels that if it can be shown through studies that a SOL does not have an impact on the Bulk Electic System, that particular SOL could be exempted from standards requirements. The group also questions whether a SOL without Bulk Electric System impact, but with potential local impact that would require a NERC disturbance report should be a standard requirement.
Response: Every SOL that qualifies as an IROL is covered by applicable standards such as IRO-004, -005 & -006.			

Question #2			
Commenter	**Yes**	**No**	**Comment**
Ameren	☑		
Entergy (Davis)	☑		
CenterPoint			No comment.
Entergy (Franklin)			No comment.
IRC SRC			No comment.
PSC SC			No comment.

3. **The SAR DT identified many comments submitted (See Appendix B of the SAR) on the technical content of the standards and the SAR drafting team believes that the Standards Drafting Team should consider these comments, subsequent to the approval of the SAR, in the development of Standards Revisions. Do you agree with the SAR drafting team's assessment of those comments that are being recommended for referral to the Standards Drafting Team?**

Summary Consideration: Industry consensus is to pass along all accumulated comments to the Standards Drafting Team for their consideration. (Note that the SAR DT revised the SAR to include comments recommending specific modifications to specific requirements that were provided by stakeholders during this comment period.)

Question #3			
Commenter	**Yes**	**No**	**Comment**
ATC LLC		☑	Comments submitted during the comment period should be given a greater weight in the creation of new standards. Comments submitted to other groups and different efforts are specific to those initiatives and the inclusion in this effort should be limited.
Response: The SAR DT agrees and the weight of consensus of the industry will govern the final response.			
CenterPoint		☑	CenterPoint Energy disagrees with the suggestion to remove the real and reactive capability verification testing from TOP-002-2, R13. The capability of a generator must be periodically tested to ensure that the machine will perform to its limits. Additional language should be added such that these tests are conducted on a periodic basis and not just at the requests of a BA or TOP. CenterPoint Energy believes that the requirements of TOP-002-2, R14 and R15 do belong in the Transmission Operations Standards as those variables will have a direct impact on daily operations. Any additional details or clarification can be added to other standards if necessary.
Response: The reason that this was included in the SAR is that it was considered duplicative with MOD-024 & MOD-025 by the CESDT. This point needs to be considered by the Standards Drafting Team.			
Duke Energy	☑	☑	Comments submitted should certainly be considered by the standard drafting team, but the standard drafting team should not be bound to incorporate all comments into the revised standards.
Response: The SAR DT agrees and the weight of consensus of the industry will govern the final response.			
SOCO Transmission	☑	☑	This SAR does not provide the referenced assessments the SAR drafting team has made on comments contained in Appendix B. Therefore, we can not agree or disagree with the team's assessment.

Question #3			
Commenter	**Yes**	**No**	**Comment**
Response: Thank you for your comment. Basically, the SAR DT made the decision to simply pass on the aggregated comments to the Standards Drafting Team.			
WECC RCCWG			The references, such as FERC Order 693, are so detailed that the WECC RCCWG does not believe the group can comment on the standard drafting team assessment of those comments.
Response: Thank you for your comment. Basically, the SAR DT made the decision to simply pass on the aggregated comments to the Standards Drafting Team.			
AEP	☑		Yes, we agree that the Standard Drafting Team should review and consider the merits of those comments and incorporate those comments that make sense and our complimentary to maintaining and improving reliable operations into the revised Standards.
ERCOT	☑		Each submitted comment containing technical content deserves to be given equal review by the Standard Drafting Team (SDT) once a SAR has been approved and a SDT has been selected.
IESO	☑		This seems to be a reasonable approach. However, the SDT should take these into consideration only when reviewing and revising the standards, and use its judgment on their individual merit rather than taking them as given mandates or directives.
FRCC	☑		Not sure what the question is but, Yes capturing previous analysis regarding standard content and including in this SAR and subsequent standard revisions is appropriate and effective use of previous NERC groups efforts.
NPCC CP9 RSWG HQT IRC SRC ISO-NE	☑		This may be a reasonable approach. However, the SAR DT may want to consider if they then need to pass all comments dealing specifically with the standards on to the Standards Drafting team from this process.
NYISO	☑		This may be a reasonable approach. The NYISO would recommend that all subsequent comments be provided to the Standards Drafting Team for consiration in revising the standards.
Response: Thank you for your comment.			
Ameren	☑		
Entergy (Davis)	☑		
Entergy (Franklin)	☑		
ITC Transco	☑		
Manitoba Hydro	☑		

Question #3			
Commenter	**Yes**	**No**	**Comment**
MRO	☑		
PSC SC	☑		
City of Tallahassee	☑		
FirstEnergy	☑		
Response: Thank you for your support.			

4. **Are there any standards included in the SAR that shouldn't be included?**

Summary Consideration: The SAR DT believes that there was not a consensus to delete any standards and the best way to address these comments is to pass them on to the eventual SDT and allow them and the industry (through balloting) to make the final decision.

Question #4		
Commenter	**The following standards were included in the SAR and should be removed:**	**Comment**
Duke Energy		COM-001-1, COM-002-2 and PER-001-0. See response to question 7.
Response: The weight of the industry consensus is that real-time is not restricted to just TOP standards and should include COM and PER.		
IESO		(i) We do not understand the basis to include COM-001-1, COM-002-1 and EOP-001-0 in this SAR. While there are requirements in these standards that reference TOPs, there are other standards that also reference TOPs but they are not included in this set. (ii) Some of the standards included in this SAR for revision appear to create a coordination need or potential conflicts with other SARs and draft standards: (a) The Operating Personnel Communications Protocol (OPCP) SAR is proposing to modify COM-001-1, COM-002-1, TOP-001-1, TOP-002-2, TOP-007-0 and TOP-008-1. How does this SAR Drafting Team propose to coordinate with the OPCP SAR drafting team to avoid either duplicated work effort or making changes to these standards while the draft set proposed by the other SDT are being commented or balloted? It seems like this would be difficult to accomplish and that one SAR should be delayed. (b) The Operate within Interconnected Operating Limits SDT is in the process of modifying the TOP-003, TOP-005, and TOP-006 standards as a result of changes to IRO-007-1 to IRO-011-1 standards. The coordination issues as indicated above would also need to be considered. We suggest that drafting of the standards included in

Question #4		
Commenter	**The following standards were included in the SAR and should be removed:**	**Comment**
		this SAR be put on hold until after the IRO standards are balloted and approved. (c) The Reliability-based Control SAR, which will develop the BAL-007 to BAL-011, standards is posted for comments. The coordination issues as indicated above would also need to be considered. We suggest that drafting of the standards included in this SAR be put on hold until after the BAL standards are balloted and approved. (d) Finally, the System Personnel Training drafting team is proposing to eliminate PER-001 through PER-004. This SAR would have to be updated to reflect those changes. Again this SAR should be put on hold until the PER standards are balloted.
Response: 1. The basis for inclusion of certain standards in this SAR is the comments received from various groups that clearly indicated the need to coordinate issues in different standards such as COM with real-time operations. This is being done to promote consistency and eliminate redundancy in the standards. **2.** All this SAR is trying to do is to point out possible redundancies in the standards. Your comments will be passed on to the eventual Standards Drafting Team. It will be up to them and the NERC staff to resolve any potential conflicts.		
MRO		There are several TOP standards currently under revision in other SAR's. There must be clear coordination between the Drafting Teams of the various SAR's as they are revising the Reliability Standards.
HQT		Some of the standards included in this SAR for revision appear to create a conflict with other ongoing SAR and Standard drafting activities. We are becoming more and more concerned about the parallel changes taking place.
IRC SRC		We do agree that this SAR appears to cover the right set of standards. However, it potentially conflicts with other SARs and draft standards. The Operating Personnel Communications Protocol (OPCP) SAR is proposing to modify COM-1-1, COM-002-2, TOP-001-1, TOP-002-2, TOP-007-0, TOP-008-0 standards. All of these standards are proposed to be modified in this SAR. How does this SAR Drafting

Question #4		
Commenter	**The following standards were included in the SAR and should be removed:**	**Comment**
		Team propose to coordinate with the OPCP SAR drafting team. It seems like this would be difficult to accomplish and that one SAR should be delayed. The Operate within Interconnected Operating Limits Standard Drafting team is in the process of modifying the TOP-003, TOP-005, and TOP-006 standards. Assuming these standards are eventually approved, this SAR will have to be modified to reflect the new versions of the standards. Again, this SAR should be delayed until the Operate within Interconnected Operating Limits Standards have completed the ballot process. Finally, System Personnel Training drafting team is proposing to eliminate PER-001 through PER-004. This SAR would have to be updated to reflect those changes. Again this SAR should be delayed until these standards are balloted.
ISO-NE		Some of the standards included in this SAR for revision appear to create a conflict with other ongoing SAR and Standard drafting activities. We are becoming more and more concerned about the parallel changes taking place.
NYISO		We do agree that this SAR appears to cover the right set of standards. However, it potentially conflicts with other SARs and draft standards. The Operating Personnel Communications Protocol (OPCP) SAR is proposing to modify COM-1-1, COM-002-2, TOP-001-1, TOP-002-2, TOP-007-0, TOP-008-0 standards. All of these standards are proposed to be modified in this SAR. How does this SAR Drafting Team propose to coordinate with the OPCP SAR drafting team. It seems like this would be difficult to accomplish and that one SAR should be delayed. The Operate within Interconnected Operating Limits Standard Drafting team is in the process of modifying the TOP-003, TOP-005,

Question #4		
Commenter	**The following standards were included in the SAR and should be removed:**	**Comment**
		and TOP-006 standards. Assuming these standards are eventually approved, this SAR will have to be modified to reflect the new versions of the standards. Again, this SAR should be delayed until the Operate within Interconnected Operating Limits Standards have completed the ballot process. Finally, System Personnel Training drafting team is proposing to eliminate PER-001 through PER-004. This SAR would have to be updated to reflect those changes. Again this SAR should be delayed until these standards are balloted.
NPCC CP9 RSWG		Some of the standards included in this SAR for revision appear to create a conflict with other ongoing SAR and Standard drafting activities. We are becoming more and more concerned about the parallel changes taking place.
Response: All this SAR is trying to do is to point out possible redundancies in the standards. Your comments will be passed on to the eventual Standards Drafting Team. It will be up to them and the NERC staff to resolve any potential conflicts.

FRCC		No comment.
ITC Transco		No comment.

5. **Are there standards that should be added to the SAR?**

Summary Consideration: The SAR will be re-posted to consider the inclusion of IRO-004, -005 & -006 in the scope.

Question #5		
Commenter	**The following standards should be added to the SAR:**	**Comment**
SOCO Transmission	IRO-002, IRO-003, IRO-005, IRO-006. However, there could be others.	
Response: The SAR DT agrees that IRO-006 should be included in the scope of this SAR for the sole topic of eliminating redundancies relating to the applicability of TOP's and BA's in the respective documents. We are uncertain about what the comments on IRO-002 & -003 mean. In reviewing this issue, it appears that IRO-004 & -005 have the same problems as IRO-006 and therefore should be included in the scope of this SAR. This will require a re-posting of the SAR for consideration by the industry.		
Entergy (Davis)	No.	
City of Tallahassee	None.	
Duke Energy	None.	
IESO	No.	
PSC SC	None.	
HQT	No.	
IRC SRC	No.	
ISO-NE	No.	
NYISO	No.	
NPCC CP9 RSWG	No.	
WECC RCCWG		None are currently identified, but some may become apparent later.

6. Do you agree that there is a reliability-related need to revise the set of standards addressed in this SAR?

Summary Consideration: The consensus is that there is a reliability-related need for this SAR.

Question #6			
Commenter	**Yes**	**No**	**Comment**
ATC LLC	☑	☑	ATC agrees that there is a reliability-related need to review and revise this set of standards, but we do not agree with the overly prescriptive changes appearing in the SAR.
Response: The SAR is a scoping document and the changes represent topics that are open to debate. The SAR DT intended to be prescriptive only in defining the scope of the work area. The SAR DT did not intend to be prescriptive in the requirements being proposed. A SAR DT does not define solutions, and this DT did not intend to define solutions. How prescriptive the standard will be is decided by the comments to the Standard DT.			
ERCOT	☑	☑	I believe that revising the set of standards for clarity and for reducing redundancy will benefit reliability by reducing confusion. There is also a common sense reason to revise them to avoid "multiple jeopardy" by exposure to the same requirement in multiple standards.
Response: Thank you, the concept that reliability requires clear unambiguous standards has support from other commenters as well as from the SAR DT.			
WECC RCCWG			The WECC RCCWG believes that some of the standard requirements need to be clarified.
Ameren	☑		It is important that the standards address those things, and only those things, that affect the reliability of the BES so that time and attention are not diverted from the most worthwhile initiatives.
Duke Energy	☑		The reliability-related need is to provide clarity and remove redundancy.
Manitoba Hydro	☑		The standards must be revised to clearly define the responsible entity for each requirement. There can't be any room for a requirement to fall through the cracks because the assignment of responsibility is not clear. Redundancy between Standards does not mitigate the risk of inadequate assignment of responsibility, but rather it may increase the likelihood that responsible entities assume that the requirements are met by others.
MRO	☑		The current versions of the standards are very voluminous and confusing. These revisions should remove the ambiguity and lead to a small set of quality reliability related requirements to be complied with.

7. **Do you agree with the scope of this SAR?**

Summary Consideration: The consensus is that the industry agrees with the stated purpose of the SAR. However, as indicated in the response for question #5, there will be a re-posting of the SAR to consider the inclusion of certain IRO standards.

Question #7			
Commenter	**Yes**	**No**	**Comment**
ATC LLC		☑	The scope of this SAR is overly prescriptive in that is has already determined a solution to the perceived deficiency. A scope needs to be detailed enough to provide a solid base for discussion and review, but not so detailed that the solution has been identified. The solution will be developed by the SDT along with industry feedback. ATC believes that this SAR is overly prescriptive and should be re-written.
Response: The SAR is a scoping document and the changes represent topics that are open to consideration. The SAR DT intended to be prescriptive only in defining the scope of the work area. A SAR DT does not define solutions, and this DT did not intend to define solutions. How prescriptive the standard will be is decided by the comments to the Standard DT.			
Duke Energy		☑	This SAR should focus only on TOP standards.
Response: The intent of the SAR was to cover unresolved real time operations issues that had been raised by FERC and other commenters. The general industry favors the wider scope.			
IESO		☑	Please see our comments under Q2 and Q4 regarding the notion of the SAR DT, and the potential conflicts with other efforts currently underway or to start soon.
HQT		☑	Please see response to Q#4.
ISO-NE		☑	Please see response to Q#4.
NPCC CP9 RSWG		☑	Please see response to Q#4.
Response: The concern about coordination with other Standard Drafting Teams is addressed by the Standards Committee and the NERC Standards Process Manager. There is also a difference between standards and requirements. There are standards that appropriately fall under more than one NERC Project; however, the requirements within that given standard should be unique to a given DT. If there are any duplicative requirements, then that is best addressed in the Standards process. To limit the scope of this SAR because another SAR may also address the same standard may in the end preclude a needed change in a specific requirement.			
SOCO Transmission		☑	The SAR needs to be broadened in scope to cover all standard requirements that contain references of the RC being responsible for SOLs and not just a subset of standards.
Response: The intent of the SAR was to cover unresolved real time operations issues that had been raised by FERC and other commenters. There is a newly constituted SAR DT to address RC issues and standards that should address your concerns. If there are additional RC standards that need to be addressed, then a new SAR can be submitted.			

Question #7			
Commenter	**Yes**	**No**	**Comment**
IRC SRC	☑	☑	This SAR should be written to apply only to TOPs. This is an opportunity to create a good quality set of standards and eliminate the existing ambiguous requirements. You should start with a clean slate.
Response: The intent of the SAR was to cover unresolved Real Time Operations issues that had been raised by FERC and other commenters**.**			
ITC Transco	☑	☑	Except for not addressing the SOL issue described above.
Response: This was addressed in the responses to question #2.			
AEP	☑		We agree with the purpose stated for this SAR. We do not agree with all of the specific changes suggested in the SAR. However, the SAR is written that the Standard Drafting Team is to consider the changes, which we do support. We believe that through a thorough debate and analysis by the Standard Drafting Team, that they too will conclude that not all the recommendations should be implemented.
Response: Thank you for your support.			
MRO	☑		The current versions of the standards are very voluminous and confusing. These revisions should remove the ambiguity and lead to a small set of quality reliability related requirements to be complied with.
Response: Thank you for your support.

8. **If you aware of any regional variances or business practices that should be developed in association with this SAR, please list them here.**

Summary Consideration: No specific comments upon the content of the SAR were submitted relative to this question.

Question #8			
Commenter	**Regional Variances**	**Business Practices**	**Comment**
MRO			We are not aware of any at this time, since we do not know the detailed changes and wording that will be in the Reliability Standards. It is imperative to include red-line versions of the revised standards to allow determination of what needs to be included in the reference documents.
Response: The SAR DT thanks MRO for its comment. The comment suggests a process that relates to the activities of the yet-to-be-established Standard Drafting Team. We agree that it is important to be able to see what specific changes are being recommended in the content of the specific standard(s) being revised, as well as any related standard(s).

9. **If you have any other comments on this SAR that you haven't identified above, please provide them here.**

Summary Consideration: Accommodating changes to the SAR will be made as noted below.

Question #9	
Commenter	**Comment**
AEP	AEP encourages additional aids (i.e. whitepapers and/or teleconferences) during the drafting process to better understand the drive for removing SOLs from some of the standards.
Response: The SAR drafting team agrees that more in depth discussion of the topic can serve only to improve understanding and improvement of standard requirements and we will pass this comment on to the SDT.	
ATC LLC	Comment in the SAR: "R14 and R15 apply to the Generator Operator and as such do not belong in the TOP standards. The drafting team should look to find another place for these requirements if possible." ATC disagree with this statement. The "Purpose" statement sets the need for the standard. All entities that are needed to support the "Purpose" should be identified in the Applicability section. The label of TOP should not be the justification to exclude any entity that is not a Transmission Operator.
Response: You make a very good point. We may have overstated the problem. The SAR will be changed to read: "R14 and R15 apply to the Generator Operator and as such may be better addressed in other standards. The Standards Drafting Team should look to find another place for these requirements if possible."	
Entergy (Franklin)	We agree that the proposed changes need to be evaluated. However, it is important that the revised standards are balloted separately so that the entire set is not rejected because of an issue with one of the standards nor approved as a set with flaws or concerns in one or more of the standards.
Response: The SAR drafting team will forward your comment to the Standard Drafting Team (SDT) when it is established. One of the important decisions the SDT must make is whether to vote all changes as one package or whether some of the changes may stand alone and may be balloted individually.	
Duke Energy	If the ultimate goal is to eliminate PER-001-0 as stated on page SAR-4, it should be noted that responsibility and authority are to be provided to "operating personnel" in either a TO or a BA. However, in standard TOP-001 Requirement 1, it deals specifically with Transmission Operators, and Balancing Authority personnel are not covered under this standard. Consideration should be given to either add BAs to TOP-001 R1 or they should be given "responsibility and authority" in some other standard if PER-001 is eliminated. Also, NERC should create a companion database for the standards that links each requirement, its compliance elements and applicable entities. Such a cross-reference would facilitate standards actions dealing with groups of standards.

Question #9	
Commenter	**Comment**
Response: (1) Your point is well made. The SDT can decide whether to submit the elimination of PER-001 and to modify TOP-001 to include the BA. (2) Such a database is not within the scope of the SAR DT, however we will pass this comment on to the NERC staff.	
IESO	Specific to the proposed changes to the standards, we offer the following comments: TOP-001 R2: the SDT suggests to remove this requirement. However, R2 holds TOP responsible for taking immediate actions to alleviate operating emergencies which may be within the TOP area and not monitored by an RC, whereas R3 requires several operating entities to comply with the RC directives. The two requirements serve different purposes. R8: the SDT suggests to delete this requirement. We suggest the SDT to exercise caution and compare this requirement (restoring the system during an emergency) with other related standards to ensure that this is indeed covered elsewhere. TOP-002 R1: the SDT suggests to remove this as it is redundant with TOP-008-1 R1. Please note that TOP-002 R1 requires plans whereas TOP-008 R1 requires TOP to take action in real time. These reuqirements are different. If the SDT wants to revise TOP-002 R1 to eliminate vague requirements, we suggest that the second sentence "In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and systemequipment to implement these plans to ensure that interconnected system reliability will be maintained." be deleted. R3: the SDT suggests deleting R3 as it is redundant with TOP-004-1 R1. We disagree with this proposal. R3 requires the various operating entities to coordinate and develop operational plans; whereas TOP-004-1 requires the TOP to operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs). They are required for different time frames and purposes. R4: the SDT suggests deleting R4 as it is redundant with IRO-005-2, R9. We Disagree with this proposal. Deleting R4 would remove the obligation for BA and Top to coordinate their activities with the RC. Additionally, the two requirements serve different purposes: R4 in TOP-002 serves to ensure that normal Interconnection operation will proceed in an orderly and consistent manner; whereas R9 in IRO-005-2 serves to require the RC to develop and implement action plans to mitigate potential or

Question #9	
Commenter	**Comment**
	actual SOL, IROL, CPS, or DCS violations. R6: the SDT suggests deleting R6 as it is redundant with BAL-002-0 R4 and IRO-005-2 R9. We agree that there is redundancy with BAL-002-0 R4, but we not agree that it is redundant with IRO-005-2 R9. Deleting R6 would remove the obligation for BA and Top to coordinate their activities with the RC. Additionally, the two requirements serve different purposes: R6 in TOP-002 require TOP and BA to plan for contingencies; whereas R9 in IRO-005-2 serves to require the RC to develop and implement action plans to mitigate potential or actual SOL, IROL, CPS, or DCS violations. R7 and R9: the SDT suggests deleting these requirements as they are redundant with BAL-007 through -011. We do not agree with the deletion of both requirements, due to the fact the standards BAL-007 to BAL-011 have failed the ballot process, and are now part of the Reliability-based Control SAR which is posted for comments. Please see our comments on Q4 (ii), above. R8, R10 and R11: the SDT suggests deleting these requirements as they are redundant with IRO-005-2 R9. We agree with this deletion provided that R4 is retained. Othewise, R10 and R11 should be retained. R18: the SDT suggests to move this to FAC-009-1. We do not agree since the purpose of FAC-009-1 is "To ensure that Facility Ratings used in the reliable planning and operation of the Bulk Electric System (BES) are determined based on an established methodology or Methodologies". We veiw that R18 crosses a number of Standards so there may be a better home than FAC-009-1. TOP-003-0 R3: the SDT suggests deleting R1.3 as it is redundant with IRO-010, R3 as part of the over-all data specification effort. We believe the referenced requirement should be R4. TOP-004-0 R1: the SDT suggests deleting R1 as it is redundant with IRO-009-1, R4. We disagree with this. SAR IRO-009-1 holds the RC responsible for operated within IROL. We feel strongly that the TOP must also operate its system to respect IROL. Further, we need to defer any changes to remove or modify SOL until after the definition of Adequate Level of reliability is defined. We also provided other reasons for retaining it. Please see our comments on Q2, above.

Question #9	
Commenter	**Comment**
	R2: the SDT suggests deleting R2 as it is simply the definition of an IROL and is redundant with FAC-010-1 and FAC-011-1. We disagree with this proposal since R2 requires TOP to operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency. FAC-010-1 and FAC-011-1 deal with the methodology to determine SOL and IROL. They hold different entities for doing very different things altogether. R3: We disagree with removing this requirement for the above same reason. TOP-005-1 R2: the SDT suggests deleting this requirment. We agree that R2 is not a reliability requirement, but the SDT needs to recommend a home for entities that receive data from the ISN that it must sign the NERC Confidentiality Agreement for "Electric System Reliability Data". TOP-006-1 R1: the SDT suggests deleting R1 as it is redundant with FAC-009-1, R2. We disagree with this proposal since R1 deals with real-time data such as facility status, resource availability; whereas FAC-009-1 deals with establishing ratings. R4: the SDT suggests deleting R4 as it is redundant with BAL-001 and -002 and is also addressed in IRO-010-1, R1 and R3. We disagree as R4 requires the operating entities to do things that are very different from any of BAL-001, BAL-002 and IRO-010-1. R7: the SDT considers deleting Balancing Authority as it is covered in BAL-005-0, R8 and deleting Reliability Coordinator as it is covered in BAL-008-1, R1. We do not agree with both. In the first case, the requirements for the BA in R7 is to monitor system frequency which is different than those in BAL-005-0, R8 which specify the data and metering requirements. In the second case, BAL-008 doesn't yet exist (falied ballot). TOP-008 R3: the SDT suggests deleting R3 as it is a local utility risk consideration and not a reliability issue as currently worded. We do not agree with the deletion since the requirement implies that the action taken by the TOP has interconnected system implication.
Response: TOP-001-1, R2 comment: You are correct that R2 and R3 address different concepts. However, the drafting	

Question #9	
Commenter	**Comment**
	team should have stated that the redundancy was between R1 and R2, rather than R2 and R3. R1 clearly states that the Transmission Operator shall exercise specific authority to alleviate operating emergencies. R2 is largely procedural in nature rather than stating what is to be done. This will be corrected in the re-posted SAR. TOP-001-1, R8 comment: The drafting team agrees. The SDT must include due diligence in comparing various requirements in its consideration of whether to delete R8. TOP-002-2 R1 comment: Your point is understood. The drafting team feels that the TOP has plans in place in order to take the actions required by TOP-008-1 R1. However, the requirement to have plans and the requirement to implement those plans are two different concepts. Your point about deleting the second sentence of TOP-002-2 R1 is a good recommendation. The drafting team will forward your comment to the SDT for its consideration as it makes specific revisions. TOP-002-2, R3 comment: Your statement is correct. The redundancy should reference IRO-004-1, R4, rather than TOP-004-1, R1. TOP-002-2, R7 and R9 comment: At the time the SAR was drafted, the outcome of the BAL-007—011 was not known. The SDT must take this into account as they consider whether to delete R7 and R9. TOP-002-2 R8, R10, and R11 comment: The drafting team agrees that there are complex interrelationships and redundancies throughout the standards. As the SDT considers deleting requirements, they must also watch for these relationships. TOP-002-2, R18 comment: The SAR requires that the SDT consider moving this requirement to FAC-009-1, it does not require that it do so. Part of the methodology required by FAC-009-1 is to include identifiers.
Manitoba Hydro	Specific to COM-001-1 Telecommunications: In general, we support the proposed revisions to this standard with the following exceptions. Periodicity and type of testing should not be defined explicitly in the standard. The onus must be placed on each organizaton to determine the periodicity and testing requirements as necessary to meet expected performance criteria. Such requirements would require regular review and adjustment to address changing conditions. Appendix B - FERC Order 693: We are concerned that the proposed expansion of the Standard to

Question #9	
Commenter	**Comment**
	included Generator Operators and Distribution Providers is unachievable within a reasonable period of time relative to ongoing efforts to comply with current standards, i.e., too much too fast. Specific to TOP-005 Operational Reliability Information If the proposed changes are adopted, only one requirement R3 remains in this standard. This requirement involves Balancing Authorities (BAs)and Transmission Operators (TOs) supplying on-line information to associated BAs and TOs for reliability assessments and coordinated operations. This same information is also transmitted to the Reliability Coordinators (RCs)via requirement R1. (which is now to be transferred to and covered by IRO-010-1). If the RCs are receiving all the required reliability data anyway, why can't all concerned BAs and TOs get this same data from the RCs instead of directly from the concerned utility? Won't all BAs and TOs be required to send reliability data the closest RCs, even if they are not already a direct or associate member of any established RC? Keeping TOP-005 only for R3 opens the door to potential reliability analysis and data being developed and transmitted between interconnected BAs and TOs that is NOT also transmitted to RCs. It may be better to make TOP-005 R3. part of another standard (such as IRO-010) to ensure RCs are properly informed, and then eliminate TOP-005 altogether.
Response: COM-001-1 comment: Your comment may apply if there is valid reason for different performance criteria in different organizations. The SAR drafting team will forward your comment to the Standard Drafting Team (SDT) once the SAR is approved, since it deals with a specific treatment of a requirement that the SAR directs the SDT to consider for revision. Appendix B – FERC Order 693 comment: Your concern is noted. However, the drafting teams must address directives of FERC in the revision of standards. You are encouraged to continue your review and to make appropriate comments of each draft of the standard that is posted. TOP-005-1 comments: The purview of the RC may differ from that of the BA and TOP. The RC must have a wider view of the system for which it is responsible and may not analyze down to the "local" level of each BA and TOP system. However, your concepts are interesting and should be part of the activity of the Standards Drafting Team (SDT) when the team is considering the revisions as directed by the SAR.	
MRO	As the standards are revised, it is necessary to insure there is, at a minumim, one measurement for each requirement. If a measure can not be determined for a requirement, the requirement should be rewritten or deleted.
Response: Some measurements may realistically relate to more than one requirement. However, each requirement should	

Question #9	
Commenter	**Comment**
have a measurement which does apply to it. One of the aspects of a good standard requirement is for it to be clear as to what is to be done, by whom, and to what expected result.	
FRCC	The revisions being made under this SAR should be well coordinated with the revisions being made under the Reliability Coordination SAR (Project 2006-06). Both SARs are seeking to revise COM-001 and COM-002. It is also critical that language proposed in the revisions of both projects be well coordinated because of the interrelated nature of the applicable standards.
Response: Each SDT should review related actions of other projects to the extent that the timing allows them to do so. In most cases, each project is revised from a different perspective and conflicting revisions should not occur. This need to coordinate between drafting teams is recognized and the drafting team guidelines caution the drafting teams to keep this in perspective throughout their work.	
IRC SRC	The SAR proposes to add the language "without delay" to a number of requirements. We are concerned that this wording could be interpreted in a standard to require the need for immediate control action. We propose that the standard drafting team should clarify that the "without delay" language does not require immediate control action but requires the applicable entity to begin evaluations necessary to take control actions. These evaluations may include but are not limited to verifying the limit, measurement, or performing a on-line power flow study.
NYISO	The SAR proposes to add the language "without delay" to a number of requirements. We are concerned that this wording could be interpreted in a standard to require the need for immediate control action. We propose that the standard drafting team should clarify that the "without delay" language does not require immediate control action but requires the applicable entity to begin evaluations necessary to take control actions. These evaluations may include but are not limited to verifying the limit, measurement, or performing a on-line power flow study.
Response: The SAR drafting team agrees with your comment. Actions include recognition, investigation, and verification prior to actual control actions. We will pass this comment along to the eventual SDT.	
SOCO Transmission	It is recommended that the drafting team members review all alleged duplications closely to be sure that the true meaning of the duplicated statement is the same as the orginal statement before being deleted. There could be instances where the words are the same but the meaning behind the duplication could be different.
Response: Thank you for your suggestion. The guidelines for the SDT require that they pay close attention to background and content of each requirement considered for revision or retirement.	
WECC RCCWG	The WECC RCCWG suggests differentiating TOP directives from Reliability Coordinator directives. This may be done with specific language. It should be clear to the entity receiving a directive who issued that directive. It may be beneficial to have a NERC definition for a "Reliability Coordinator Directive" and a "Transmission Operator Directive".
Response: The SAR drafting team encourages you to continue to review drafts of standard revisions that the SDT will post	

Question #9	
Commenter	**Comment**
for comment. You may suggest specific changes to specific standard requirements at that time. If there is not an existing standard for which this comment appropriately relates, you may submit a SAR to request the establishment of such requirements.

Standard Authorization Request Form

Title of Proposed Standard	Real Time Operations (Project 2007-03)
Request Date	March 15, 2007
Revised Date	August 6, 2007

SAR Requestor Information		**SAR Type** (*Check a box for each one that applies.*)	
Name	Jim Case	☐	New Standard
Primary Contact	Jim Case	X	Revision to existing Standard
Telephone	870.541.3908	X	Withdrawal of existing Standard
E-mail	jcase@entergy.com	☐	Urgent Action

Purpose

Applicable Standards:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- IRO-004-1 Reliability Coordination – Operations Planning
- IRO-005-2 Reliability Coordination – Current Day Operations
- IRO-006-3 Reliability Coordination – Transmission Loading Relief
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The purpose of revising these standards is to:

1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards.
2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B.
3. Consider other general improvements as described in Appendix A.
4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Industry Need

The industry needs clearer, unambiguous and enforceable standards in order to effectively operate the Bulk Electric System.

Detailed Description

The drafting team should address the following general changes:

- Adjust measures to match any changes to requirements.
- Add measures as needed to complete the alignment of measures with requirements.
- Address issues outlined in Appendix A.
- Review the industry comments provided during the Version 0 process, CESDT Project, RRSWG efforts, VRF work, etc., as outlined in Appendix B.
- Address the comments from FERC Order 693 as outlined in Appendix B.

In addition, the drafting team should consider the following specific changes in the TOP and COM standards:

- TOP-001-1:
  - Removal of R2 due to redundancy with R1. R2 largely describes an ill-defined procedure which should not be in a standard.
  - Adding the wording ‘without delay’ after the phrase ‘shall comply’ in the first sentence of R3.
  - Adding the wording ‘without delay’ in place of ‘immediately’ in all requirements where appropriate.
  - Eliminating R5 in light of possible redundancy with IROL standards.
  - Deleting the phrase ‘all available’ from R6.
  - Replacing ‘burden’ with ‘adversely impact system reliability of’ in R7.
  - Replacing ‘generator outage’ with ‘generation facility’ in R7.1.
  - Replacing ‘at the earliest possible time’ with ‘without delay’ in R7.3.
  - Deleting R8 as it is redundant with IROL, BAL, VAR and EOP standards.
- TOP-002-2:
  - Deleting R1 as it is redundant with TOP-008-1 R1.
  - Deleting R2 as it is simply good utility practice and not really a reliability standard.
  - Deleting R3 as it is redundant with IRO-004-1, R4.
  - Deleting R4 as it is redundant with IRO-005-2, R9.
  - Deleting R5 as it is simply good utility practice and not really a reliability standard.
  - Deleting R6 as it is redundant with BAL- 002-0, R4 and IRO-005-2, R9.
  - Deleting R7 and R9 as they are redundant with BAL-007 through -011.
  - Deleting R8 as it is an unmeasurable requirement.
  - Deleting R10 as it is redundant with TOP-004-0, R1.
  -
  - Deleting R12 as it is redundant with FAC-010 and -011.
  - Removing references to the Balancing Authority and real power output from R13 as they are contractual issues and as such can not be incorporated in a standard. The remaining language should be clarified.
  - R14 and R15 apply to the Generator Operator and as such may be better addressed in other standards. The drafting team should look to find another place for these requirements if possible.
  - Deleting R16.2 as it is redundant with FAC-009-1.
  - Deleting R17 as it is no longer needed if the above mentioned changes are made.

  - R18 should be moved to FAC-009-1.
  - Deleting R19 as it can not be measured.
- TOP-003-0:
  - The drafting team should review the 50 MW requirement in R1.1 to determine the size where a generator can have an adverse impact on the Bulk Electric System. See FAC-008-3.
  - Delete Reliability Coordinator when IRO-010-1 is placed in service.
  - Delete R1.3 as it is redundant with IRO-010, R3 as part of the over-all data specification effort.)
  - Re-wording R2 to require general coordination of all facilities that affect Bulk Electric System reliability.
  - Delete R4 in deference to the RC Project.
- TOP-004-1:
  - Delete the reference to SOL in R1.
  - Deleting R2 as it is simply the definition of an IROL and is redundant with FAC-010-1 and FAC-011-1...
  - Deleting R3 as it is redundant with FAC-010-1 and FAC-011-1.
  - Re-word R6 for clarity.
- TOP-005-1:
  - Deleting R1 as it is redundant with IRO-010-1.
  - Deleting R1.1 as it is redundant with IRO-010-1.
  - Deleting R2 as it is not a reliability concern.
  - Re-wording R3 to provide more clarity and simplicity.
  - Deleting R4 as it is redundant with INT-001-2, R1.
  - When IRO-010-1 becomes effective, Attachment 1 should be translated into a technical specification. It is only a partial list of required data.
- TOP-006-1:
  - Deleting R1 as it is redundant with FAC-009-1, R2.
  - Deleting the Balancing Authority from R2 as the list of items does not apply. Consider deleting the Reliability Coordinator from R2 as it is redundant with IRO-007-1, R1.
  - Moving R3 to PRC-001.
  - Deleting R4 as it is redundant with BAL-001 and -002 and is also addressed in IRO-010-1, R1 and R3.
  - Deleting R5 as (1) it is good utility practice and not a true reliability requirement or (2) provide clarification on the utilization of alarm processing and to provide definition of important deviations or (3) move the requirement to ORG-004-0.
  - Deleting R6 as it is redundant with BAL-005-0, R17.
  - R7: Consider deleting Balancing Authority as it is covered in BAL-005-0, R8. Consider deleting Reliability Coordinator as it is covered in BAL-008-1, R1.
- TOP-007-0:
  - Rewording R2 to say that the Transmission Operator shall act ‘without delay’ to return the transmission system to within IROL as soon as possible but not longer than the IROL T_v. The 30 minute time frame should be deleted as it is redundant with IRO-009-1, R2.
  - Delete R4 in deference to the RC Project.
- TOP-008-0:
  - Deleting R1 as it is redundant with TOP-007-0, R3.
  - R2: Suggested wording as follows:
    - R2a: For each IROL or SOL that is identified in advance of Real-time, the TOP shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take to prevent exceeding those IROLs or SOLs or to mitigate actual violations *(Violation Risk Factor: Medium) (Mitigation Time Horizon: Operations*

    - *Planning)*
    - R2b. If the involved TOPs cannot agree on a solution or if there is a difference in derived operating limits (IROLs or SOLs), the more conservative solution or limit shall be utilized.
  - Deleting R3 as it is a local utility risk consideration and not a reliability issue as currently worded.
  - Re-wording R4 for clarity.
- COM-001-1:
  - Re-word R1 to provide clarity to terms such as ‘adequate’ and ‘reliable’. The term ‘telecommunication facilities’ needs to be explicitly defined or re-worded to provide clarity.
  - Define ‘internally’ in R1.1.
  - Delete R1.4 on the basis that it is covered in the new definitions of ‘adequate’ and ‘reliable’. The current phrasing could be interpreted that specific telecommunication devices must be redundant. We believe that this was not the original intent of this requirement. The intent should be to provide redundant telecommunication capability between reliability entities.
  - In R2, periodicity and type of testing, ‘vital’ and ‘special attention’ should be defined.
  - Re-word R3 to make clear that each reliability entity shall notify reliability entities to which you have a communication path prior to changes in telecommunication facilities that would affect them and to resolve any coordination issues.
  - Delete R6 as it is simply an ERO procedural issue. It is assumed that if it belongs in standards that it would be in CIP as opposed to COM. This would then cause the deletion of Attachment 1 and would remove NERC Net User Organization as an applicable entity.
- COM-002-2:
  - Delete the first sentence of R1 as it is redundant with COM-001-1 if the Generator Operator is added as an applicable entity in COM-001-1. Delete the second sentence as it is redundant with PER-003-0, R3.
  - Re-word R1.1 to provide clarity as to the definition of applicable areas. Delete the requirement for firm load shedding as it is not a reliability issue.
  - Re-word R2 to provide clarity for the terminology ‘clear, concise and definitive’. The use of scripts is a possible solution.

Remove applicability and all references to TOP in PER-001-0 due to redundancy with TOP-001-1, R1 with the ultimate goal to eliminate PER-001-0.

There is an industry need to retain good utility practice information that may be deleted from standards requirements. Any requirements so deleted should be considered for movement into appropriate guides or reference documents.

Note that Appendix B is an informative attachment that contains material that should be addressed in the standards revision process. It should not be considered to contain mandatory changes to the standard.

Reliability Functions

The Standard will Apply to the Following Functions *(Check box for each one that applies.)*		
X	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
X	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports Interconnection frequency in real time.
☐	Interchange Coordinator	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
☐	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
☐	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator area.
☐	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
X	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
☐	Transmission Owner	Owns and maintains transmission facilities.
X	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
X	Distribution Provider	Delivers electrical energy to the End-use customer.
☐	Generator Owner	Owns and maintains generation facilities.
X	Generator Operator	Operates generation unit(s) to provide real and reactive power.
☐	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
☐	Market Operator	Interface point for reliability functions with commercial functions.

☐	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the End-use Customer.

Reliability and Market Interface Principles

Applicable Reliability Principles *(Check box for all that apply.)*	
X	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
X	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
X	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
X	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
X	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
X	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
X	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.

Does the proposed Standard comply with all of the following Market Interface Principles? *(Select 'yes' or 'no' from the drop-down box.)*
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes
2. An Organization Standard shall not give any market participant an unfair competitive advantage.Yes
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

Appendix A

Reliability Standard Review Guidelines

Applicability
Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

Purpose
Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

Performance Requirements
Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable Bulk Electric System, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

Measurability
Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

Technical Basis in Engineering and Operations
Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

Completeness
Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

Consequences for Noncompliance
In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

Clear Language
Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

Practicality
Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

Capability Requirements versus Performance Requirements
In general, requirements for entities to have 'capabilities' (this would include facilities for communication, agreements with other entities, etc.), should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to 'maintain' their capabilities.

Consistent Terminology
To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a 'unique' definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the 'verb list' from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

Violation Risk Factors (Risk Factor)

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

This is a requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the Bulk Electric System. A requirement that is administrative in nature;

Or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the Bulk Electric System. A planning requirement that is administrative in nature.

Time Horizon

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

Violation Severity Levels

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. (‘Violation severity levels’ replaces the existing ‘levels of non-compliance.’) The violation severity levels may be applied for each requirement or combined to cover multiple requirements, as long as it is clear which requirements are included.

The violation severity levels should be based on the following definitions:

- **Lower: mostly compliant with minor exceptions** — the responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — the responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — the responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.

- **Severe: poor performance or results** — the responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Compliance Monitor

Replace, ‘Regional Reliability Organization’ with ‘Compliance Enforcement Authority’

Fill-in-the-blank Requirements

Do not include any ‘fill-in-the-blank’ requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

Requirements for Regional Reliability Organization

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

Effective Dates

Must be 1st day of 1st quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan.

Associated Documents

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, ‘Associated Documents’.

Appendix B: List of Comments

The following items are comments received from various sources that shall be considered by the SDT.

COM-001-1

CESDT: (Compliance Elements Standards Drafting Team)

- R1: clarify 'adequate', 'reliable' and 'internally'.
- The statement 'Where applicable, these facilities shall be redundant and diversely routed' should be a guide and not a requirement. It would also appear that this is duplicated in COM-002-2, R1.
- R2: clarify the term ' Special attention'.
- R3: clarify 'shall provide a means' and the 'ability to investigate'.

VRFSDT: (Violation Risk Factors Standards Drafting Team)

- R6: administrative.

Version 0 Industry Comments:

- Gerald Reahlt, Manitoba: There may be redundancy here with Policy 5A Requirement 1.
- Robert Snow: R1 **-** In section R1, for all but the smallest areas, redundancy and diversely routed telecommunications is required.
- Guy Zito, NPCC: R1 thru R5 **-** Add "Transmission Owners, Generator Owners, Generator Operators and Load Serving Entities" to the list of FM entities this applies to.
- Ralph Rufrano, NYPA: NPCC's participating members recommend changing R1 to;
  Each Reliability Authority, Transmission Operator, Balancing Authority, Transmission Owner, Generator Owner, Generator Operator and Load Serving Entity shall provide adequate and reliable telecommunications facilities internally and with others for the exchange of Interconnection and operating information necessary to maintain reliability. Where applicable, these facilities shall be redundant and diversely routed. -and changing R2 – R5 from "Each Reliability Authority, Transmission Operator, and Balancing Authority shall" To "Each Reliability Authority, Transmission Operator, Balancing Authority, Transmission Owner, Generator Owner, Generator Operator and Load Serving Entity shall" -Remove R6 and attachment 029-1 should be removed. Those procedures apply to NERCnet users, which is a small subset of community that R1 – R5 apply to. Also, these procedures are the steps for obtaining and using NERCnet. Those procedures should not be part of a Reliability Standard.

FERC Order 693:

- Expand the applicability of the standard to include Generator Operators and Distribution Providers and include requirements for their telecommunication facilities (or as an alternative to applying this Reliability Standard to Generator Operators and Distribution Providers, develop a new Reliability Standard that will address the requirements for telecommunication facilities applicable to Generator Operators and Distribution Providers).
- Identify specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation
- Include adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions

COM-002-2

CESDT:

- R1, part 2: clarify 'Such communication shall be staffed and available for addressing a real-time emergency condition'.
- R2: clarify 'clear, concise and definitive manner'. Define 'directive'.

V0 Industry Comments:

- Mike Kormos, PJM: In a Market environment voice communication with generators is not necessarily required.
- FRCC: R1 - Reliability Authority should be included in this requirement.
- Ray Morella, First Energy: R2 - All groups active in the industry should be required to report sabotage incidents and security breaches.
- Guy Zito, NPCC: R4 - Even though this is a direct translation of the existing Policy, NPCC requests a clarification of the repeat back requirements, specifically are they for emergency, abnormal, normal, all of the above, provide specific examples.

FERC Order 693:

- Expand the applicability to include distribution providers as applicable entities.
- Include a new requirement for the Reliability Coordinator to assess and approve actions that have impacts beyond the area view of a Transmission Operator or Balancing Authority.
- Require tightened communications protocols, especially for communications during alerts and emergencies.
  - Alternatively, develop a new Reliability Standard that responds to Blackout Report Recommendation No. 26 in the manner described above.
- Include APPA's suggestions to complete the Measures and Levels of Non-Compliance.

PER-001-0

V0 Industry Comments:

- Southern Company: Compliance Monitoring Process - The Data Retention requirement for this standard should be 1 year. The probability exists that over time, the job description and perhaps other documentation will be modified. There should not be a requirement to keep past versions of authorizing documents for an indefinite period of time.
- Bill Squib, ECAR: In the Compliance Monitoring Process… if the Reset Period is One Calendar Year, then why is the Data Retention Permanent. In addition, what kind of data is considered for Data Retention. Surely a 10-year old Job Description that has been updated several times does not need to be retained permanently.

TOP-001-1

CESDT:

- R8: essentially duplicated in other areas; clarify reactive power balance.

V0 Industry Comments:

- Michael Moltane, ECAR: (1) Need good, clear definition of "Reliability Emergency" for this to work. Otherwise we will get into the endless and age-old discussion of "what is an emergency?" (2) R1: Recommend adding wording to the sentence "clear decision making authority" that such authority should be documented and incorporated into Operating Procedures so that there will not be any confusion in real time emergencies as to who is responsible for what, and to whom.
- Roman Carter, Southern Company: (1) This req. states "The RA, BA, and TO shall have the responsibility…". The original language in Policy 5 for this requirement uses Operating Authority and this includes entities such as the GO, TO, and BA but not the Reliability Coordinator. Throughout this V-0 Standard the RA is subsituted for the RC even within this requirement. Since the original policy says RCs are excluded, this poses a conflict for this requirement. This is also in Req's 2, 4, 5. (2) There are times when a Generator Operator must act quickly and may not have time to notify the Transmission Operator. There needs to be an exception here (like that listed in 7C for the RA and TOP) for emergency situations that allows follow up notification by the GO.
- Southern Company: R4 and R6 - Should specify that the local RA will handle all communications with other potentially impacted Reliability Coordinators. As written (Reliability Authority or …), these requirements could lead to multiple notifications and potential confusion as to exactly what action is going to happen or has taken place. In general, all communications with adjacent Reliability Authorities should be through the local Reliability Coordinator. (Note that R4 may intend that RA contact other RAs, etc., but this is not clear and could easily be misinterpreted.)
- Peter Henderson, IMO: In the sentence: "Under these circumstances the Transmission Operator or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive …" The use of "or" is confusing and may create ambiguity. The specific role of entity responsible for 'providing' and 'receiving' information needs to be clarified. Should this be combined responsibility applicable to all or for any? **For the purposes of effective implementation/enforcement of these standards, we recommended that the associated measures, compliance monitoring process and levels of non compliance should also be (a) simultaneously mapped/specified where these exist already and (b) specifed/addressed in the very near future, where these do not exist today for consistency. **This comment also applies to Standards 19, 21, 26, 34 and 35.

FERC Order 693:

- Include Measures and Levels of Non-Compliance for Requirement R8.
- Consider adding other Measures and Levels of Non-Compliance in the Reliability Standard.
- Consider revising Requirements R7.2 and R7.3 to provide that the transmission operator may notify the Reliability Coordinator or the Balancing Authority that it is removing facilities from service as suggested by Santa Clara.

TOP-002-2

CESDT:

- R1, part2: clarify 'Transmission Operator shall be responsible for using available personnel and system equipment'.
- R2: too vague
- R3: too vague; clarify 'coordinate'.
- R4: too vague; clarify 'coordinate'.
- R12: duplicated in FAC-013.

- R13: duplicated in MOD-024 & MOD-025.
- R17: incorrectly written.
- R19: too vague; clarify 'accuracy'; determine timeliness of model.

Regional Reliability Standards Working Group (RRSWG):

- R6: remove 'in accordance with NERC, Regional Reliability Organization, sub-regional, and local reliability requirements'.
- R12: remove 'in accordance with filed tariffs and/or regional Total transfer Capability and Available Transfer capability calculation processes'.

V0 Industry Comments:

- Alan Johnson, Mirant: Concerned that the translation from Control Area to BA or TOP creates a new requirement for the GOP. The proposed language allows the possibility of the GOP having to perform tests at the request of both the BA and TOP. The GOP should only be required to perform 2 seasonal capability tests per year (winter and summer) within pre-defined parameters.
- Southern Company: General - Hierarchical structure seems to be implied, but not explicitly defined in the translation of Control Area and Reliability Coordinator language to functional model language. May want to consider writing requirements such that all Balancing Authorities and Transmission Operators within a given Reliability Authority's area should coordinate their operations planning, etc.
- PG&E: R3, R4, R5 - The parentheticals "where confidentiality agreements allow" imply that confidentiality agreements trump coordination of operational plans needed to assure system reliability. They should be eliminated. Reliability Authorities would then be responsible for coordination between each other, etc. Seems confusing and/or difficult to follow as written.
- Roman Carter, Southern Company: (1) 4, 5 - Requirement says LSE, TSP, and GO coordinate with BA (where confidentiality agreements allow). Under the F.M., the BA can delegate certain tasks that prevent the BA from meeting the Conf. Agreement in order for the BA to meet the obligations of the BA. Version-0 Standard should recognize this ability. (2) Requirement states without intentional delay. How is this enforceable? The burden of proof is with the enforcement organization.
- Ray Morella, First Energy: R7 - Need to explicitly and precisely define what N-1 contingency means.
- Raj Rana, AEP: R18 - R18 only needs to state that the BALANCING AUTHORITIES shall, without any intentional time delay, communicate the information described in the requirement R15 above to their RELIABILITY AUTHORITY, or add such statement to R15. R17 already requires notification to the RA, and these were the activities that Policy today requires notification to the RA, as referenced in Policy 6A R6.1 - 6.5.
- Peter Lebro, National Grid: R3, R4, R5, R12, R17: Confidentiality of information should not be a factor when it comes to reliability – this needs to be addressed otherwise Companies may hide behind the confidentiality clause and not provide the data necessary to conduct operational reliability assessments and coordinate reliable operations.

FERC Order 693:

- Delete references to confidentiality agreements in Requirements R3 and R4, but address the issue separately to ensure that necessary protections are in place related to confidential information.
- Require the next-day analysis for all IROLs to identify and communicate control actions to system operators that can be implemented within 30 minutes following a contingency to return the system to a reliable operating state and prevent cascading outages.
- Require next day analysis of minimum voltages at nuclear power plants auxiliary power busses.
- Require simulation contingencies to match what will actually happen in the field.

TOP-003-0

VRF:

- R4: poorly written.

V0:

- Peter Lebro, National Grid: Standard 16:R1, Standard 37:R4: In the standards it states outage data (generation and transmission) is only required to be submitted by noon of the day ahead, the emphasis should be on submitting the data as soon as it is known but no later that noon day ahead.
- Anita Lee, AESO: CMP - Third paragraph - The RA should "direct" the cancellation of an outage, not "request".
- Robert Snow: Outage information is needed by neighboring reliability authorities much sooner than one day pror to the outage.

FERC Order 693:

- Include a new requirement to communicate longer term outages well in advance to ensure reliability and accuracy of ATC calculations.
- Make any facility below the voltage thresholds that, in the opinion of the Transmission Operator, Balancing Authority, or Reliability Coordinator, will have a direct impact on the operation of the Bulk Power System, subject to Requirement R1 for planned outage coordination.
- Incorporate an appropriate lead time for planned outages.

TOP-004-1

CESDT:

- R1: TOP cannot always operate within IROL.
- R2: need to be able to measure ‘planning to prevent such an occurrence’.
- R3: same comments as R2; clarify ‘when practical’.
- R5: clarify ‘every effort to remain connected’ and ‘imminent danger’.

V0:

- Brandian, ISO-NE: In the existing policy the overall role of monitoring of SOL or IROL was assigned to a Control Area. In the applicable version 0 standards a clarification on the role and relationship between Reliability Authority and Transmission Operator should be made with regards to the monitoring of SOL & IROL.
- Guy Zito, NPCC: (1) These Standards must clearly identify, define and provide examples of what a SOL and IROL are. The reason for this is that this is not consistently interpreted by industry. (2) (Also in R5) This needs to be clarified whether these requirements have to be fulfilled by both presently worded RA (i.e. new proposed terminology RC) and TO - “individually or jointly”. It is not clear that who would be overall monitor. A more clear role needs to be identified in this standard. Also Reliability entity should be termed as ‘RC’.
- Robert Snow: Transmission Security during operation should conform to the applicable portions of Table 1 in the planning standards.

- Vinod Kotecha, Con Edison: There remains vagueness in the application of Interconnection Reliability Operating Limits (IROL) and guidelines for how it is calculated. The RC has been designated as being responsible for maintaining the interconnection within IROLs, however debate on how these should be calculated continues.
- Tracy Edwards, BPA: R5 indicates that every effort shall be made to remain connected to the Interconnection. However the second sentence of the requirement implies that it may be acceptable to disconnect from the Interconnection if there is imminent danger of violating an IROL or SOL. There can be other conditions other than violating IROL's or SOL's that place the system at great risk. In fact, violating an IROL or SOL in itself does not necessary mean the system is at imminent risk. Therefore, change the second sentence of R5 to read as follows: The Reliability Authority or Transmission Operator may take such actions as disconnecting from the Interconnection, as it deems necessary, to protect its Area.
- Roman Carter, Southern Company: It is not practical to say the RA and the TOP operate, when practical, to protect against instability, separation, or cascading outages. Recommend removing "when practical" because when is it ever practical to allow cascading outages.

<u>FERC Order 693:</u>

- Modify Requirement R4 to state that the system should be restored to respect proven limits as soon as possible, taking no more than 30 minutes.
- Define high risk conditions under which the system must be operated to respect multiple outages in Requirement R3.

<u>TOP-005-1</u>

<u>V0:</u>

- Brandian, ISO-NE: Applicability - Add Generator Owners and Load Serving Entities. Extend R5 to include these Functional Model entities.
- Ed Riley, CAISO: R1 - Current policy is for data to be updated every 10 minutes, and is in Standard 15. This rate is too slow and should be increased (every 4-10 seconds) when possible. This should be addressed in Version 1.
- Robert Snow: In Attachment 1, the generator data should include status of voltage control and power system stabilizer facilities.
- Tracy Edwards, BPA: Attachment 015-1: Need a time frame for this data, it is not measurable as it reads now.
- Peter Lebro, National Grid: National Grid USA would like to make the following recommendations to be considered when drafting the next draft of Version 0. Standard 15: There should be a requirement on generators to provide the necessary data as there is a requirement on the PSE’s (R6), a paragraph R7 should be inserted which reads ‘Generation Operators shall provide information requested by their host Balancing Authority and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.’

<u>FERC Order 693:</u>

- Include information about the operational status of special protection systems and power system stabilizers in Attachment 1.
- Delete references to confidentiality agreements, but address the issue separately to ensure that necessary protections are in place related to confidential information.

TOP-006-1

CESDT:

- R3: quantify relay information that is required and the scope of the relays to be included; clarify what constitutes 'appropriate technical information'.
- R6: clarify 'measure requirement'

VRF:

- R1, 1.1 & 1.2: may need 'available in emergency situation'
- R3: define 'appropriate'.
- R4: what information is required and what is a load pattern?

V0:

- Guy Zito, NPCC: Associated Measure, Compliance Monitoring Process and Levels of Non Compliance are missing and needs to be defined in this standard simultaneously.
- Michael Moltane, ECAR: R1.1: Should clarify that the the Gen Operator needs to provide "normal and emergency capability for use", as opposed to current wording of just ".all generation resources available for use" (i.e., stretch capability, maximum run time for emergency capability, etc.). R7: Indicates that entities shall "monitor system frequency"……recommend adding wording to indicate frequency shall monitor system frequency at multiple points on their system.
- Alan Boesch, NPPD: R4 - In the Functional Model load forecasts are developed by the Load Serving Entity and provided to the Balancing Authority. The BA sends the agregated information to the RA. The TOP is not involved in this process. Please change the requirement to match the functional model.
- Various entities: R4 - Load forecasting is the starting point for planning capacity for obligations and thus, deemed to be required for reliability.

FERC Order 693:

- Include a new requirement related to the provision of minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the Bulk Power System.
- Clarify the meaning of "appropriate technical information" concerning protective relays.

TOP-007-0

V0:

- Ed Riley, CAISO: Measures - 2nd paragraph should be changed to read "…within IROL or SOL…" The CAISO believes that suggesting that the determination of an SOL becoming an IROL after the fact is inappropriate.
- Eric Grant, Progress: R1-R5 - In general, unless better bounds/criteria are set for the determination of IROLs, this standard will not be enforceable or auditable.
- Phil Creech, Progress: "Applicability" for this standard should include "Reliability Authorities".
- Various entities: R5 - This should be considered as a compliance monitoring or administrative procedure rather than a standard.

- Martin Huang, BC Transmission: R1 and M1 both requires the Reliability Coordinate be informed of any IROL or SOL violation but the level of non-compliance only applies when the limit is exceeded more than 30 minutes and none for failure to report the violation.
- Tracy Edwards, BPA: (1) Compliance Monitoring Process: (bullets following the first paragraph) 2) … Is vague and not measureable 3) … Would not necessarily make it an IROL. 4) … Would not nessarly make it an IROL. 5) … Is vague and there is no unacceptable loss of load definition for NERC that is measurable. (2) Compliance Monitoring Process: (first paragraph, second sentence) If this sentence were true the violation would have been an IROL to begin with. Give an example of this scenario. (3) Give an example of how you would show evidence something was evaluated. This does not seem like a possible measure. Also the RC may not have needed to give any additional direction and would therefore not have any evidence as required by the measure.
- Linda Campbell, FRCC: Standard 008, M1-M3. What kind of evidence is anticipated? The word evidence can be very subjective and broad. Also the RA should be removed from these measures.

FERC Order 693:

- Consider comments from APPA, FirstEnergy and SoCal Edison that the Reliability Standards would benefit from the elimination of overlapping matters in TOP-007-0 and TOP-008-1.
- Consider comments from the NRC that raised some significant issues regarding nuclear power plants voltage requirements.

TOP-008-0

CESDT:

- R2: clarify ‘prevent the likelihood’.
- R4, part 2: clarify ‘in all operating timeframes’.

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Standard Authorization Request Form

Title of Proposed Standard	Real Time Operations (Project 2007-03)
Request Date	March 15, 2007
Revised Date	August 6, 2007

SAR Requestor Information		**SAR Type** (*Check a box for each one that applies.*)	
Name	Jim Case	☐	New Standard
Primary Contact	Jim Case	X	Revision to existing Standard
Telephone	870.541.3908	X	Withdrawal of existing Standard
E-mail	jcase@entergy.com	☐	Urgent Action

Purpose
Applicable Standards: ▪ COM-001-1 Telecommunications ▪ COM-002-2 Communications and Coordination ▪ IRO-004-1 Reliability Coordination – Operations Planning ▪ IRO-005-2 Reliability Coordination – Current Day Operations ▪ IRO-006-3 Reliability Coordination – Transmission Loading Relief ▪ TOP-001-1 Reliability Responsibilities and Authorities ▪ TOP-002-2 Normal Operations Planning ▪ TOP-003-0 Planned Outage Coordination ▪ TOP-004-1 Transmission Operations ▪ TOP-005-1 Operational Reliability Information ▪ TOP-006-1 Monitoring System Conditions ▪ TOP-007-0 Reporting Sol and IROL Violations ▪ TOP-008-0 Response to Transmission Violations ▪ PER-001-0 Operating Personnel Responsibility and Authority The purpose of revising these standards is to: 1. Clarify requirements for real-time operations of the Bulk Electric System in the cited standards. 2. Consider stakeholder comments received during the initial development of the standards and other comments received from ERO regulatory authorities as noted in Appendix B. 3. Consider other general improvements as described in Appendix A. 4. This satisfies the ANSI procedure requirement for five-year review of the standards.

Formatted: Bullets and Numbering

Industry Need

The industry needs clearer, unambiguous and enforceable standards in order to effectively operate the Bulk Electric System.

Detailed Description

The drafting team should address the following general changes:

- Adjust measures to match any changes to requirements.
- Add measures as needed to complete the alignment of measures with requirements.
- Address issues outlined in Appendix A.
- Review the industry comments provided during the Version 0 process, CESDT Project, RRSWG efforts, VRF work, etc., as outlined in Appendix B.
- Address the comments from FERC Order 693 as outlined in Appendix B.

In addition, the drafting team should consider the following specific changes in the TOP and COM standards:

- TOP-001-1:
  - Removal of R2 due to redundancy with R1. R2 largely describes an ill-defined procedure which should not be in a standard.
  - Adding the wording 'without delay' after the phrase 'shall comply' in the first sentence of R3.
  - Adding the wording 'without delay' in place of 'immediately' in all requirements where appropriate.
  - Eliminating R5 in light of possible redundancy with IROL standards.
  - Deleting the phrase 'all available' from R6.
  - Replacing 'burden' with 'adversely impact system reliability of' in R7.
  - Replacing 'generator outage' with 'generation facility' in R7.1.
  - Replacing 'at the earliest possible time' with 'without delay' in R7.3.
  - Deleting R8 as it is redundant with IROL, BAL, VAR and EOP standards.
- TOP-002-2:
  - Deleting R1 as it is redundant with TOP-008-1 R1.
  - Deleting R2 as it is simply good utility practice and not really a reliability standard.
  - Deleting R3 as it is redundant with IRO-004-1, R4.
  - Deleting R4 as it is redundant with IRO-005-2, R9.
  - Deleting R5 as it is simply good utility practice and not really a reliability standard.
  - Deleting R6 as it is redundant with BAL- 002-0, R4 and IRO-005-2, R9.
  - Deleting R7 and R9 as they are redundant with BAL-007 through -011.
  - Deleting R8 as it is an unmeasurable requirement.
  - Deleting R10 as it is redundant with TOP-004-0, R1.
  -
  - Deleting R12 as it is redundant with FAC-010 and -011.
  - Removing references to the Balancing Authority and real power output from R13 as they are contractual issues and as such can not be incorporated in a standard. The remaining language should be clarified.
  - R14 and R15 apply to the Generator Operator and as such may be better addressed in other standards. The drafting team should look to find another place for these requirements if possible.
  - Deleting R16.2 as it is redundant with FAC-009-1.
  - Deleting R17 as it is no longer needed if the above mentioned changes are made.

Deleted: 3

Deleted: TOP-004-1 R1

Deleted: ,

Formatted: Bullets and Numbering

Deleted: and R11 as they are redundant with IRO-005-2, R9.

Deleted:

Deleted: do not belong in the TOP

  - R18 should be moved to FAC-009-1.
  - Deleting R19 as it can not be measured.
- TOP-003-0:
  - The drafting team should review the 50 MW requirement in R1.1 to determine the size where a generator can have an adverse impact on the Bulk Electric System. See FAC-008-3.
  - Delete Reliability Coordinator when IRO-010-1 is placed in service.
  - Delete R1.3 as it is redundant with IRO-010, R3 as part of the over-all data specification effort.)
  - Re-wording R2 to require general coordination of all facilities that affect Bulk Electric System reliability.
  - Delete R4 in deference to the RC Project.
- TOP-004-1:
  - Delete the reference to SOL in R1
  - Deleting R2 as it is simply the definition of an IROL and is redundant with FAC-010-1 and FAC-011-1...
  - Deleting R3 as it is redundant with FAC-010-1 and FAC-011-1.
  - Re-word R6 for clarity.
- TOP-005-1:
  - Deleting R1 as it is redundant with IRO-010-1.
  - Deleting R1.1 as it is redundant with IRO-010-1.
  - Deleting R2 as it is not a reliability concern.
  - Re-wording R3 to provide more clarity and simplicity.
  - Deleting R4 as it is redundant with INT-001-2, R1.
  - When IRO-010-1 becomes effective, Attachment 1 should be translated into a technical specification. It is only a partial list of required data.
- TOP-006-1:
  - Deleting R1 as it is redundant with FAC-009-1, R2.
  - Deleting the Balancing Authority from R2 as the list of items does not apply. Consider deleting the Reliability Coordinator from R2 as it is redundant with IRO-007-1, R1.
  - Moving R3 to PRC-001.
  - Deleting R4 as it is redundant with BAL-001 and -002 and is also addressed in IRO-010-1, R1 and R3.
  - Deleting R5 as (1) it is good utility practice and not a true reliability requirement or (2) provide clarification on the utilization of alarm processing and to provide definition of important deviations or (3) move the requirement to ORG-004-0.
  - Deleting R6 as it is redundant with BAL-005-0, R17.
  - R7: Consider deleting Balancing Authority as it is covered in BAL-005-0, R8. Consider deleting Reliability Coordinator as it is covered in BAL-008-1, R1.
- TOP-007-0:
  - Rewording R2 to say that the Transmission Operator shall act 'without delay' to return the transmission system to within IROL as soon as possible but not longer than the IROL T_v. The 30 minute time frame should be deleted as it is redundant with IRO-009-1, R2.
  - Delete R4 in deference to the RC Project
- TOP-008-0:
  - Deleting R1 as it is redundant with TOP-007-0, R3.
  - R2: Suggested wording as follows:
    - R2a: For each IROL or SOL that is identified in advance of Real-time, the TOP shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take to prevent exceeding those IROLs or SOLs or to mitigate actual violations *(Violation Risk Factor: Medium) (Mitigation Time Horizon: Operations*

Deleted: as it is redundant with IRO-009-1, R4

Deleted:

Planning)

- R2b. If the involved TOPs cannot agree on a solution or if there is a difference in derived operating limits (IROLs or SOLs), the more conservative solution or limit shall be utilized.

- Deleting R3 as it is a local utility risk consideration and not a reliability issue as currently worded.
- Re-wording R4 for clarity.

- COM-001-1:
  - Re-word R1 to provide clarity to terms such as ‘adequate’ and ‘reliable’. The term ‘telecommunication facilities’ needs to be explicitly defined or re-worded to provide clarity.
  - Define ‘internally’ in R1.1.
  - Delete R1.4 on the basis that it is covered in the new definitions of ‘adequate’ and ‘reliable’. The current phrasing could be interpreted that specific telecommunication devices must be redundant. We believe that this was not the original intent of this requirement. The intent should be to provide redundant telecommunication capability between reliability entities.
  - In R2, periodicity and type of testing, ‘vital’ and ‘special attention’ should be defined.
  - Re-word R3 to make clear that each reliability entity shall notify reliability entities to which you have a communication path prior to changes in telecommunication facilities that would affect them and to resolve any coordination issues.
  - Delete R6 as it is simply an ERO procedural issue. It is assumed that if it belongs in standards that it would be in CIP as opposed to COM. This would then cause the deletion of Attachment 1 and would remove NERC Net User Organization as an applicable entity.
- COM-002-2:
  - Delete the first sentence of R1 as it is redundant with COM-001-1 if the Generator Operator is added as an applicable entity in COM-001-1. Delete the second sentence as it is redundant with PER-003-0, R3.
  - Re-word R1.1 to provide clarity as to the definition of applicable areas. Delete the requirement for firm load shedding as it is not a reliability issue.
  - Re-word R2 to provide clarity for the terminology ‘clear, concise and definitive’. The use of scripts is a possible solution.

Remove applicability and all references to TOP in PER-001-0 due to redundancy with TOP-001-1, R1 with the ultimate goal to eliminate PER-001-0.

There is an industry need to retain good utility practice information that may be deleted from standards requirements. Any requirements so deleted should be considered for movement into appropriate guides or reference documents.

Note that Appendix B is an informative attachment that contains material that should be addressed in the standards revision process. It should not be considered to contain mandatory changes to the standard.

Reliability Functions

The Standard will Apply to the Following Functions *(Check box for each one that applies.)*		
X	Reliability Coordinator	Responsible for the real-time operating reliability of its Reliability Coordinator Area in coordination with its neighboring Reliability Coordinator's wide area view.
X	Balancing Authority	Integrates resource plans ahead of time, and maintains load-interchange-resource balance within a Balancing Authority Area and supports Interconnection frequency in real time.
☐	Interchange Coordinator	Ensures communication of interchange transactions for reliability evaluation purposes and coordinates implementation of valid and balanced interchange schedules between Balancing Authority Areas.
☐	Planning Coordinator	Assesses the longer-term reliability of its Planning Coordinator Area.
☐	Resource Planner	Develops a >one year plan for the resource adequacy of its specific loads within a Planning Coordinator area.
☐	Transmission Planner	Develops a >one year plan for the reliability of the interconnected Bulk Electric System within its portion of the Planning Coordinator area.
X	Transmission Service Provider	Administers the transmission tariff and provides transmission services under applicable transmission service agreements (e.g., the pro forma tariff).
☐	Transmission Owner	Owns and maintains transmission facilities.
X	Transmission Operator	Ensures the real-time operating reliability of the transmission assets within a Transmission Operator Area.
X	Distribution Provider	Delivers electrical energy to the End-use customer.
☐	Generator Owner	Owns and maintains generation facilities.
X	Generator Operator	Operates generation unit(s) to provide real and reactive power.
☐	Purchasing-Selling Entity	Purchases or sells energy, capacity, and necessary reliability-related services as required.
☐	Market Operator	Interface point for reliability functions with commercial functions.

116-390 Village Boulevard, Princeton, New Jersey 08540-5721
Phone: 609.452.8060 ▪ Fax: 609.452.9550 ▪ www.nerc.com

☐	Load-Serving Entity	Secures energy and transmission service (and related reliability-related services) to serve the End-use Customer.

Reliability and Market Interface Principles

Applicable Reliability Principles *(Check box for all that apply.)*	
X	1. Interconnected bulk electric systems shall be planned and operated in a coordinated manner to perform reliably under normal and abnormal conditions as defined in the NERC Standards.
X	2. The frequency and voltage of interconnected bulk electric systems shall be controlled within defined limits through the balancing of real and reactive power supply and demand.
X	3. Information necessary for the planning and operation of interconnected bulk electric systems shall be made available to those entities responsible for planning and operating the systems reliably.
X	4. Plans for emergency operation and system restoration of interconnected bulk electric systems shall be developed, coordinated, maintained and implemented.
X	5. Facilities for communication, monitoring and control shall be provided, used and maintained for the reliability of interconnected bulk electric systems.
X	6. Personnel responsible for planning and operating interconnected bulk electric systems shall be trained, qualified, and have the responsibility and authority to implement actions.
X	7. The security of the interconnected bulk electric systems shall be assessed, monitored and maintained on a wide area basis.

Does the proposed Standard comply with all of the following Market Interface Principles? *(Select 'yes' or 'no' from the drop-down box.)*
1. The planning and operation of bulk electric systems shall recognize that reliability is an essential requirement of a robust North American economy. Yes
2. An Organization Standard shall not give any market participant an unfair competitive advantage.Yes
3. An Organization Standard shall neither mandate nor prohibit any specific market structure. Yes
4. An Organization Standard shall not preclude market solutions to achieving compliance with that Standard. Yes
5. An Organization Standard shall not require the public disclosure of commercially sensitive information. All market participants shall have equal opportunity to access commercially non-sensitive information that is required for compliance with reliability standards. Yes

Appendix A

Reliability Standard Review Guidelines

Applicability
Does this reliability standard clearly identify the functional classes of entities responsible for complying with the reliability standard, with any specific additions or exceptions noted? Where multiple functional classes are identified is there a clear line of responsibility for each requirement identifying the functional class and entity to be held accountable for compliance? Does the requirement allow overlapping responsibilities between Registered Entities possibly creating confusion for who is ultimately accountable for compliance?

Does this reliability standard identify the geographic applicability of the standard, such as the entire North American bulk power system, an interconnection, or within a regional entity area? If no geographic limitations are identified, the default is that the standard applies throughout North America.

Does this reliability standard identify any limitations on the applicability of the standard based on electric facility characteristics, such as generators with a nameplate rating of 20 MW or greater, or transmission facilities energized at 200 kV or greater or some other criteria? If no functional entity limitations are identified, the default is that the standard applies to all identified functional entities.

Purpose
Does this reliability standard have a clear statement of purpose that describes how the standard contributes to the reliability of the bulk power system? Each purpose statement should include a value statement.

Performance Requirements
Does this reliability standard state one or more performance requirements, which if achieved by the applicable entities, will provide for a reliable Bulk Electric System, consistent with good utility practices and the public interest?

Does each requirement identify who shall do what under what conditions and to what outcome?

Measurability
Is each performance requirement stated so as to be objectively measurable by a third party with knowledge or expertise in the area addressed by that requirement?

Does each performance requirement have one or more associated measures used to objectively evaluate compliance with the requirement?

If performance results can be practically measured quantitatively, are metrics provided within the requirement to indicate satisfactory performance?

Technical Basis in Engineering and Operations
Is this reliability standard based upon sound engineering and operating judgment, analysis, or experience, as determined by expert practitioners in that particular field?

Completeness
Is this reliability standard complete and self-contained? Does the standard depend on external information to determine the required level of performance?

Consequences for Noncompliance
In combination with guidelines for penalties and sanctions, as well as other ERO and regional entity compliance documents, are the consequences of violating a standard clearly known to the responsible entities?

Clear Language
Is the reliability standard stated using clear and unambiguous language? Can responsible entities, using reasonable judgment and in keeping with good utility practices, arrive at a consistent interpretation of the required performance?

Practicality
Does this reliability standard establish requirements that can be practically implemented by the assigned responsible entities within the specified effective date and thereafter?

Capability Requirements versus Performance Requirements
In general, requirements for entities to have 'capabilities' (this would include facilities for communication, agreements with other entities, etc.), should be located in the standards for certification. The certification requirements should indicate that entities have a responsibility to 'maintain' their capabilities.

Consistent Terminology
To the extent possible, does this reliability standard use a set of standard terms and definitions that are approved through the NERC reliability standards development process?

If the standard uses terms that are included in the NERC Glossary of Terms Used in Reliability Standards, then the term must be capitalized when it is used in the standard. New terms should not be added unless they have a 'unique' definition when used in a NERC reliability standard. Common terms that could be found in a college dictionary should not be defined and added to the NERC Glossary.

Are the verbs on the 'verb list' from the DT Guidelines? If not – do new verbs need to be added to the guidelines or could you use one of the verbs from the verb list?

Violation Risk Factors (Risk Factor)

High Risk Requirement

A requirement that, if violated, could directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to Bulk Electric System instability, separation, or a cascading sequence of failures, or could place the Bulk Electric System at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement

This is a requirement that, if violated, could directly affect the electrical state or the capability of the Bulk Electric System, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to Bulk Electric System instability, separation, or cascading failures;

or a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the Bulk Electric System, or the ability to effectively monitor, control, or restore the Bulk Electric System. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to Bulk Electric System instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement

A requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the Bulk Electric System. A requirement that is administrative in nature;

Or a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the Bulk Electric System. A planning requirement that is administrative in nature.

Time Horizon

Deleted: Mitigation

The drafting team should also indicate the time horizon available for mitigating a violation to the requirement using the following definitions:

- **Long-term Planning** — a planning horizon of one year or longer.
- **Operations Planning** — operating and resource plans from day-ahead up to and including seasonal.
- **Same-day Operations** — routine actions required within the timeframe of a day, but not real-time.
- **Real-time Operations** — actions required within one hour or less to preserve the reliability of the bulk electric system.
- **Operations Assessment** — follow-up evaluations and reporting of real time operations.

Violation Severity Levels

The drafting team should indicate a set of violation severity levels that can be applied for the requirements within a standard. (‘Violation severity levels’ replaces the existing ‘levels of non-compliance.’) The violation severity levels may be applied for each requirement or combined to cover multiple requirements, as long as it is clear which requirements are included.

The violation severity levels should be based on the following definitions:

- **Lower: mostly compliant with minor exceptions** — the responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more minor details. Equivalent score: 95% to 99% compliant.
- **Moderate: mostly compliant with significant exceptions** — the responsible entity is mostly compliant with and meets the intent of the requirement but is deficient with respect to one or more significant elements. Equivalent score: 85% to 94% compliant.
- **High: marginal performance or results** — the responsible entity has only partially achieved the reliability objective of the requirement and is missing one or more significant elements. Equivalent score: 70% to 84% compliant.

- **Severe: poor performance or results** — the responsible entity has failed to meet the reliability objective of the requirement. Equivalent score: less than 70% compliant.

Compliance Monitor

Replace, 'Regional Reliability Organization' with 'Compliance Enforcement Authority'.

Deleted: Electric Reliability Organization'

Fill-in-the-blank Requirements

Do not include any 'fill-in-the-blank' requirements. These are requirements that assign one entity responsibility for developing some performance measures without requiring that the performance measures be included in the body of a standard – then require another entity to comply with those requirements.

Every reliability objective can be met, at least at a threshold level, by a North American standard. If we need regions to develop regional standards, such as in under-frequency load shedding, we can always write a uniform North American standard for the applicable functional entities as a means of encouraging development of the regional standards.

Requirements for Regional Reliability Organization

Do not write any requirements for the Regional Reliability Organization. Any requirements currently assigned to the RRO should be re-assigned to the applicable functional entity.

Effective Dates

Must be 1st day of 1st quarter after entities are expected to be compliant – must include time to file with regulatory authorities and provide notice to responsible entities of the obligation to comply. If the standard is to be actively monitored, time for the Compliance Monitoring and Enforcement Program to develop reporting instructions and modify the Compliance Data Management System(s) both at NERC and Regional Entities must be provided in the implementation plan.

Associated Documents

If there are standards that are referenced within a standard, list the full name and number of the standard under the section called, 'Associated Documents'.

Appendix B: List of Comments

The following items are comments received from various sources that shall be considered by the SDT.

COM-001-1

CESDT: (Compliance Elements Standards Drafting Team)

- R1: clarify ‘adequate’, ‘reliable’ and ‘internally’.
- The statement ‘Where applicable, these facilities shall be redundant and diversely routed’ should be a guide and not a requirement. It would also appear that this is duplicated in COM-002-2, R1.
- R2: clarify the term ‘ Special attention’.
- R3: clarify ‘shall provide a means’ and the ‘ability to investigate’.

VRFSDT: (Violation Risk Factors Standards Drafting Team)

- R6: administrative.

Version 0 Industry Comments:

- Gerald Reahlt, Manitoba: There may be redundancy here with Policy 5A Requirement 1.
- Robert Snow: R1 - In section R1, for all but the smallest areas, redundancy and diversely routed telecommunications is required.
- Guy Zito, NPCC: R1 thru R5 - Add “Transmission Owners, Generator Owners, Generator Operators and Load Serving Entities” to the list of FM entities this applies to.
- Ralph Rufrano, NYPA: NPCC's participating members recommend changing R1 to;
  Each Reliability Authority, Transmission Operator, Balancing Authority, Transmission Owner, Generator Owner, Generator Operator and Load Serving Entity shall provide adequate and reliable telecommunications facilities internally and with others for the exchange of Interconnection and operating information necessary to maintain reliability. Where applicable, these facilities shall be redundant and diversely routed. -and changing R2 – R5 from "Each Reliability Authority, Transmission Operator, and Balancing Authority shall" To "Each Reliability Authority, Transmission Operator, Balancing Authority, Transmission Owner, Generator Owner, Generator Operator and Load Serving Entity shall" -Remove R6 and attachment 029-1 should be removed. Those procedures apply to NERCnet users, which is a small subset of community that R1 – R5 apply to. Also, these procedures are the steps for obtaining and using NERCnet. Those procedures should not be part of a Reliability Standard.

FERC Order 693:

- Expand the applicability of the standard to include Generator Operators and Distribution Providers and include requirements for their telecommunication facilities (or as an alternative to applying this Reliability Standard to Generator Operators and Distribution Providers, develop a new Reliability Standard that will address the requirements for telecommunication facilities applicable to Generator Operators and Distribution Providers).
- Identify specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation
- Include adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions

COM-002-2

CESDT:

- R1, part 2: clarify ‘Such communication shall be staffed and available for addressing a real-time emergency condition’.
- R2: clarify ‘clear, concise and definitive manner’. Define ‘directive’.

V0 Industry Comments:

- Mike Kormos, PJM: In a Market environment voice communication with generators is not necessarily required.
- FRCC: R1 - Reliability Authority should be included in this requirement.
- Ray Morella, First Energy: R2 - All groups active in the industry should be required to report sabotage incidents and security breaches.
- Guy Zito, NPCC: R4 - Even though this is a direct translation of the existing Policy, NPCC requests a clarification of the repeat back requirements, specifically are they for emergency, abnormal, normal, all of the above, provide specific examples.

FERC Order 693:

- Expand the applicability to include distribution providers as applicable entities.
- Include a new requirement for the Reliability Coordinator to assess and approve actions that have impacts beyond the area view of a Transmission Operator or Balancing Authority.
- Require tightened communications protocols, especially for communications during alerts and emergencies.
    - Alternatively, develop a new Reliability Standard that responds to Blackout Report Recommendation No. 26 in the manner described above.
- Include APPA’s suggestions to complete the Measures and Levels of Non-Compliance.

PER-001-0

V0 Industry Comments:

- Southern Company: Compliance Monitoring Process - The Data Retention requirement for this standard should be 1 year. The probability exists that over time, the job description and perhaps other documentation will be modified. There should not be a requirement to keep past versions of authorizing documents for an indefinite period of time.
- Bill Squib, ECAR: In the Compliance Monitoring Process… if the Reset Period is One Calendar Year, then why is the Data Retention Permanent. In addition, what kind of data is considered for Data Retention. Surely a 10-year old Job Description that has been updated several times does not need to be retained permanently.

TOP-001-1

CESDT:

- R8: essentially duplicated in other areas; clarify reactive power balance.

V0 Industry Comments:

- Michael Moltane, ECAR: (1) Need good, clear definition of "Reliability Emergency" for this to work. Otherwise we will get into the endless and age-old discussion of "what is an emergency?" (2) R1: Recommend adding wording to the sentence "clear decision making authority" that such authority should be documented and incorporated into Operating Procedures so that there will not be any confusion in real time emergencies as to who is responsible for what, and to whom.
- Roman Carter, Southern Company: (1) This req. states "The RA, BA, and TO shall have the responsibility…". The original language in Policy 5 for this requirement uses Operating Authority and this includes entities such as the GO, TO, and BA but not the Reliability Coordinator. Throughout this V-0 Standard the RA is subsituted for the RC even within this requirement. Since the original policy says RCs are excluded, this poses a conflict for this requirement. This is also in Req's 2, 4, 5. (2) There are times when a Generator Operator must act quickly and may not have time to notify the Transmission Operator. There needs to be an exception here (like that listed in 7C for the RA and TOP) for emergency situations that allows follow up notification by the GO.
- Southern Company: R4 and R6 - Should specify that the local RA will handle all communications with other potentially impacted Reliability Coordinators. As written (Reliability Authority or …), these requirements could lead to multiple notifications and potential confusion as to exactly what action is going to happen or has taken place. In general, all communications with adjacent Reliability Authorities should be through the local Reliability Coordinator. (Note that R4 may intend that RA contact other RAs, etc., but this is not clear and could easily be misinterpreted.)
- Peter Henderson, IMO: In the sentence: "Under these circumstances the Transmission Operator or Generator Operator shall immediately inform the Reliability Coordinator or Transmission Operator of the inability to perform the directive …" The use of "or" is confusing and may create ambiguity. The specific role of entity responsible for 'providing' and 'receiving' information needs to be clarified. Should this be combined responsibility applicable to all or for any? **For the purposes of effective implementation/enforcement of these standards, we recommended that the associated measures, compliance monitoring process and levels of non compliance should also be (a) simultaneously mapped/specified where these exist already and (b) specifed/addressed in the very near future, where these do not exist today for consistency. **This comment also applies to Standards 19, 21, 26, 34 and 35.

FERC Order 693:

- Include Measures and Levels of Non-Compliance for Requirement R8.
- Consider adding other Measures and Levels of Non-Compliance in the Reliability Standard.
- Consider revising Requirements R7.2 and R7.3 to provide that the transmission operator may notify the Reliability Coordinator or the Balancing Authority that it is removing facilities from service as suggested by Santa Clara.

TOP-002-2

CESDT:

- R1, part2: clarify 'Transmission Operator shall be responsible for using available personnel and system equipment'.
- R2: too vague
- R3: too vague; clarify 'coordinate'.
- R4: too vague; clarify 'coordinate'.
- R12: duplicated in FAC-013.

- R13: duplicated in MOD-024 & MOD-025.
- R17: incorrectly written.
- R19: too vague; clarify 'accuracy'; determine timeliness of model.

Regional Reliability Standards Working Group (RRSWG):

- R6: remove 'in accordance with NERC, Regional Reliability Organization, sub-regional, and local reliability requirements'.
- R12: remove 'in accordance with filed tariffs and/or regional Total transfer Capability and Available Transfer capability calculation processes'.

V0 Industry Comments:

- Alan Johnson, Mirant: Concerned that the translation from Control Area to BA or TOP creates a new requirement for the GOP. The proposed language allows the possibility of the GOP having to perform tests at the request of both the BA and TOP. The GOP should only be required to perform 2 seasonal capability tests per year (winter and summer) within pre-defined parameters.
- Southern Company: General - Hierarchical structure seems to be implied, but not explicitly defined in the translation of Control Area and Reliability Coordinator language to functional model language. May want to consider writing requirements such that all Balancing Authorities and Transmission Operators within a given Reliability Authority's area should coordinate their operations planning, etc.
- PG&E: R3, R4, R5 - The parentheticals "where confidentiality agreements allow" imply that confidentiality agreements trump coordination of operational plans needed to assure system reliability. They should be eliminated. Reliability Authorities would then be responsible for coordination between each other, etc. Seems confusing and/or difficult to follow as written.
- Roman Carter, Southern Company: (1) 4, 5 - Requirement says LSE, TSP, and GO coordinate with BA (where confidentiality agreements allow). Under the F.M., the BA can delegate certain tasks that prevent the BA from meeting the Conf. Agreement in order for the BA to meet the obligations of the BA. Version-0 Standard should recognize this ability. (2) Requirement states without intentional delay. How is this enforceable? The burden of proof is with the enforcement organization.
- Ray Morella, First Energy: R7 - Need to explicitly and precisely define what N-1 contingency means.
- Raj Rana, AEP: R18 - R18 only needs to state that the BALANCING AUTHORITIES shall, without any intentional time delay, communicate the information described in the requirement R15 above to their RELIABILITY AUTHORITY, or add such statement to R15. R17 already requires notification to the RA, and these were the activities that Policy today requires notification to the RA, as referenced in Policy 6A R6.1 - 6.5.
- Peter Lebro, National Grid: R3, R4, R5, R12, R17: Confidentiality of information should not be a factor when it comes to reliability – this needs to be addressed otherwise Companies may hide behind the confidentiality clause and not provide the data necessary to conduct operational reliability assessments and coordinate reliable operations.

FERC Order 693:

- Delete references to confidentiality agreements in Requirements R3 and R4, but address the issue separately to ensure that necessary protections are in place related to confidential information.
- Require the next-day analysis for all IROLs to identify and communicate control actions to system operators that can be implemented within 30 minutes following a contingency to return the system to a reliable operating state and prevent cascading outages.
- Require next day analysis of minimum voltages at nuclear power plants auxiliary power busses.
- Require simulation contingencies to match what will actually happen in the field.

TOP-003-0

VRF:

- R4: poorly written.

V0:

- Peter Lebro, National Grid: Standard 16:R1, Standard 37:R4: In the standards it states outage data (generation and transmission) is only required to be submitted by noon of the day ahead, the emphasis should be on submitting the data as soon as it is known but no later that noon day ahead.
- Anita Lee, AESO: CMP - Third paragraph - The RA should "direct" the cancellation of an outage, not "request".
- Robert Snow: Outage information is needed by neighboring reliability authorities much sooner than one day pror to the outage.

FERC Order 693:

- Include a new requirement to communicate longer term outages well in advance to ensure reliability and accuracy of ATC calculations.
- Make any facility below the voltage thresholds that, in the opinion of the Transmission Operator, Balancing Authority, or Reliability Coordinator, will have a direct impact on the operation of the Bulk Power System, subject to Requirement R1 for planned outage coordination.
- Incorporate an appropriate lead time for planned outages.

TOP-004-1

CESDT:

- R1: TOP cannot always operate within IROL.
- R2: need to be able to measure ‘planning to prevent such an occurrence’.
- R3: same comments as R2; clarify ‘when practical’.
- R5: clarify ‘every effort to remain connected’ and ‘imminent danger’.

V0:

- Brandian, ISO-NE: In the existing policy the overall role of monitoring of SOL or IROL was assigned to a Control Area. In the applicable version 0 standards a clarification on the role and relationship between Reliability Authority and Transmission Operator should be made with regards to the monitoring of SOL & IROL.
- Guy Zito, NPCC: (1) These Standards must clearly identify, define and provide examples of what a SOL and IROL are. The reason for this is that this is not consistently interpreted by industry. (2) (Also in R5) This needs to be clarified whether these requirements have to be fulfilled by both presently worded RA (i.e. new proposed terminology RC) and TO - “individually or jointly”. It is not clear that who would be overall monitor. A more clear role needs to be identified in this standard. Also Reliability entity should be termed as ‘RC’.
- Robert Snow: Transmission Security during operation should conform to the applicable portions of Table 1 in the planning standards.

- Vinod Kotecha, Con Edison: There remains vagueness in the application of Interconnection Reliability Operating Limits (IROL) and guidelines for how it is calculated. The RC has been designated as being responsible for maintaining the interconnection within IROLs, however debate on how these should be calculated continues.
- Tracy Edwards, BPA: R5 indicates that every effort shall be made to remain connected to the Interconnection. However the second sentence of the requirement implies that it may be acceptable to disconnect from the Interconnection if there is imminent danger of violating an IROL or SOL. There can be other conditions other than violating IROL's or SOL's that place the system at great risk. In fact, violating an IROL or SOL in itself does not necessary mean the system is at imminent risk. Therefore, change the second sentence of R5 to read as follows: The Reliability Authority or Transmission Operator may take such actions as disconnecting from the Interconnection, as it deems necessary, to protect its Area.
- Roman Carter, Southern Company: It is not practical to say the RA and the TOP operate, when practical, to protect against instability, separation, or cascading outages. Recommend removing "when practical" because when is it ever practical to allow cascading outages.

FERC Order 693:

- Modify Requirement R4 to state that the system should be restored to respect proven limits as soon as possible, taking no more than 30 minutes.
- Define high risk conditions under which the system must be operated to respect multiple outages in Requirement R3.

TOP-005-1

V0:

- Brandian, ISO-NE: Applicability - Add Generator Owners and Load Serving Entities. Extend R5 to include these Functional Model entities.
- Ed Riley, CAISO: R1 - Current policy is for data to be updated every 10 minutes, and is in Standard 15. This rate is too slow and should be increased (every 4-10 seconds) when possible. This should be addressed in Version 1.
- Robert Snow: In Attachment 1, the generator data should include status of voltage control and power system stabilizer facilities.
- Tracy Edwards, BPA: Attachment 015-1: Need a time frame for this data, it is not measurable as it reads now.
- Peter Lebro, National Grid: National Grid USA would like to make the following recommendations to be considered when drafting the next draft of Version 0. Standard 15: There should be a requirement on generators to provide the necessary data as there is a requirement on the PSE’s (R6), a paragraph R7 should be inserted which reads ‘Generation Operators shall provide information requested by their host Balancing Authority and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.’

FERC Order 693:

- Include information about the operational status of special protection systems and power system stabilizers in Attachment 1.
- Delete references to confidentiality agreements, but address the issue separately to ensure that necessary protections are in place related to confidential information.

TOP-006-1

CESDT:

- R3: quantify relay information that is required and the scope of the relays to be included; clarify what constitutes ‘appropriate technical information’.
- R6: clarify ‘measure requirement’

VRF:

- R1, 1.1 & 1.2: may need ‘available in emergency situation’
- R3: define ‘appropriate’.
- R4: what information is required and what is a load pattern?

V0:

- Guy Zito, NPCC: Associated Measure, Compliance Monitoring Process and Levels of Non Compliance are missing and needs to be defined in this standard simultaneously.
- Michael Moltane, ECAR: R1.1: Should clarify that the the Gen Operator needs to provide “normal and emergency capability for use”, as opposed to current wording of just “.all generation resources available for use” (i.e., stretch capability, maximum run time for emergency capability, etc.). R7: Indicates that entities shall “monitor system frequency”……recommend adding wording to indicate frequency shall monitor system frequency at multiple points on their system.
- Alan Boesch, NPPD: R4 - In the Functional Model load forecasts are developed by the Load Serving Entity and provided to the Balancing Authority. The BA sends the agregated information to the RA. The TOP is not involved in this process. Please change the requirement to match the functional model.
- Various entities: R4 - Load forecasting is the starting point for planning capacity for obligations and thus, deemed to be required for reliability.

FERC Order 693:

- Include a new requirement related to the provision of minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the Bulk Power System.
- Clarify the meaning of “appropriate technical information” concerning protective relays.

TOP-007-0

V0:

- Ed Riley, CAISO: Measures - 2nd paragraph should be changed to read “…within IROL or SOL…” The CAISO believes that suggesting that the determination of an SOL becoming an IROL after the fact is inappropriate.
- Eric Grant, Progress: R1-R5 - In general, unless better bounds/criteria are set for the determination of IROLs, this standard will not be enforceable or auditable.
- Phil Creech, Progress: "Applicability" for this standard should include "Reliability Authorities".
- Various entities: R5 - This should be considered as a compliance monitoring or administrative procedure rather than a standard.

- Martin Huang, BC Transmission: R1 and M1 both requires the Reliability Coordinate be informed of any IROL or SOL violation but the level of non-compliance only applies when the limit is exceeded more than 30 minutes and none for failure to report the violation.
- Tracy Edwards, BPA: (1) Compliance Monitoring Process: (bullets following the first paragraph) 2) … Is vague and not measureable 3) … Would not necessarily make it an IROL. 4) … Would not nessarly make it an IROL. 5) … Is vague and there is no unacceptable loss of load definition for NERC that is measurable. (2) Compliance Monitoring Process: (first paragraph, second sentence) If this sentence were true the violation would have been an IROL to begin with. Give an example of this scenario. (3) Give an example of how you would show evidence something was evaluated. This does not seem like a possible measure. Also the RC may not have needed to give any additional direction and would therefore not have any evidence as required by the measure.
- Linda Campbell, FRCC: Standard 008, M1-M3. What kind of evidence is anticipated? The word evidence can be very subjective and broad. Also the RA should be removed from these measures.

FERC Order 693:

- Consider comments from APPA, FirstEnergy and SoCal Edison that the Reliability Standards would benefit from the elimination of overlapping matters in TOP-007-0 and TOP-008-1.
- Consider comments from the NRC that raised some significant issues regarding nuclear power plants voltage requirements.

TOP-008-0

CESDT:

- R2: clarify ‘prevent the likelihood’.
- R4, part 2: clarify ‘in all operating timeframes’.

Maureen E. Long
Standards Process
Manager

August, 06, 2007

TO: REGISTERED BALLOT BODY

Ladies and Gentlemen:

Announcement: Comment Periods Open

The Standards Committee (SC) announces the following standards action:

SAR for Real-Time Transmission Operations and Balancing of Load and Generation (Project 2007-03) Posted for 30-day Comment Period August 9–September 7, 2007

The second draft of the SAR for Project 2007-03 Real-time Transmission Operations and Balancing of Load and Generation proposes modifying the following standards that relate to various aspects of Reliability Coordination:

- COM-001-1 Telecommunications
- COM-002-2 Communications and Coordination
- IRO-004-1 Reliability Coordination – Operations Planning
- IRO-005-2 Reliability Coordination – Current Day Operations
- IRO-006-3 Reliability Coordination – Transmission Loading Relief
- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination
- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

The modifications will address concerns raised by FERC and stakeholders and will bring the standards into conformance with the latest version of the Reliability Standards Development Procedure and the ERO Sanctions Guidelines. Please use the comment form to provide comments on the second draft of this SAR.

Standards Development Process

The NERC posting and balloting procedures are described in the *Reliability Standards Development Procedure Manual*, which contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. If you have any questions, please contact me at 813-468-5998 or maureen.long@nerc.net.

Sincerely,

Maureen E. Long

Background Information:

The SAR for Real-time Transmission Operations and Balancing of Load and Generation (Project 2007-03) was posted for comment from May 15 through June 13, 200. The SAR Drafting Team considered the comments and corrected all noted typographical errors and made the following revisions to the SAR:

- Added IRO-004, IRO-005 & IRO-006 to the scope of standards to be reviewed to eliminate redundant requirements.

- Clarified that the reason for recommending the deletion of TOP-002-2, R8 is because the requirement is unmeasurable.

  R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.)

- Removed the recommendation for deleting TOP-002-2, R11:

  R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.

- Reworded the recommendation in TOP-002-2, R14 & R15 to clarify that these requirements may be better addressed in other standards.

  R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

  R14.1. Changes in real output capabilities.

  R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

- Clarified the deletion requested in TOP-004-1, R1 is the reference to ‘SOLs’

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words “Real-time TOP_BA SAR” in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☐ Yes

   ☐ No

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☒ Yes

   ☒ No

   Comments: We agree with the concept of eliminating redundancy in the NERC Standards. However, Project 2006-08 involves re-writing IRO-006 in three phases and is currently in phase one. Any changes required to IRO-006 to eliminate redundancy of Transmission Operator and Balancing Authority requirements in other standards should be coordinated with, and handed off to, the Project 2006-08 IRO-006 Standard Drafting Team. Thus, IRO-006 should not be included in the scope of this SAR. We have no objection to including IRO-004 and IRO-005 into the scope of this project and we stand by our comments to the first SAR.

  R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

  R14.1. Changes in real output capabilities.

  R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

- Clarified the deletion requested in TOP-004-1, R1 is the reference to 'SOLs'

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words "Real-time TOP_BA SAR" in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☐ Yes

   ☒ No

   Comments: The SDT has not provided any information as to scope of work that will be performed on IRO-004, 005 and 006 in the posted version of the SAR. Therefore ATC does not agree with the expanded scope. The SAR SDT must provide information as to why these standards must be worked on as part of this effort. We request that the SAR SDT provided the necessary information and post a revised version of the SAR for comment.

   Additional comments:

   Issue 1:
   A majority of comments submitted on Question 2 (Initial SAR posting) did not support the SDT proposal to remove SOL requirements from NERC's Reliability Standards. ATC believes that SOLs are a BES issue and must continue to be part of NERC Reliability Standards. ATC does not agree with the SDT proposed compromise that would limit Reliability Standards to only requiring monitoring of SOL. (Note: The SAR provides little to no justification as to why SOL should be removed from NERC Reliability Standards.)

   "Question 2 (initial SAR posting): The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on 'good utility practice'. Do you agree?"

   Issue 2:
   ATC continues to disagree with the current scope of work. We find that scope of work's description is overly prescriptive and not complete. It seems that the SAR is attempting to remove requirements that address SOL conditions from NERC standards but that is never specifically stated in the SAR. It's also import to note that in Appendix B of the SAR no specific request was made to remove SOL from NERC standards. Many of the requests in Appendix B only support clarification and removal of redundant requirements.

   It's our position that the effort to remove SOLs from NERC standards will reduce interconnection reliability. Therefore ATC can not support this SAR until a proper scope of work is developed. The scope should be limited to clarifying existing requirements by; removing redundancy, better alignments of requirements to measures and removal/clarification of ambiguous language.

   Issue 2a:

   COM-001 Is currently being worked on in projects 2006-04 & 2006-06
   COM-002 Is currently being worked on in projects 2006-06 & 2007-02
   IRO-004 Is currently being worked on in project 2007-02
   IRO-005 Is currently being worked on in project 2007-02 & 2007-18

IRO-006 Is currently being worked on in project 2006-08

Lastly ATC believes that this project should be delayed until the all previously identified efforts have been completed in order to insure an efficient work flow. If this project is moved into the standard development phase five Standards will have parallel efforts on going. Coordination will be extremely difficult if not impossible to manage.

Background Information:

The SAR for Real-time Transmission Operations and Balancing of Load and Generation (Project 2007-03) was posted for comment from May 15 through June 13, 200. The SAR Drafting Team considered the comments and corrected all noted typographical errors and made the following revisions to the SAR:

- Added IRO-004, IRO-005 & IRO-006 to the scope of standards to be reviewed to eliminate redundant requirements.

- Clarified that the reason for recommending the deletion of TOP-002-2, R8 is because the requirement is unmeasurable.

  R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.)

- Removed the recommendation for deleting TOP-002-2, R11:

  R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.

- Reworded the recommendation in TOP-002-2, R14 & R15 to clarify that these requirements may be better addressed in other standards.

  R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

  R14.1. Changes in real output capabilities.

  R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

- Clarified the deletion requested in TOP-004-1, R1 is the reference to 'SOLs'

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words "Real-time TOP_BA SAR" in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☒ Yes

   ☐ No

   Comments:

   We have additional comments on other parts of this revised SAR.

   COMMENTS ON TOP-001-1

   We suggest the deletion of the first recommended change to TOP-001-1:

   - Removal of R2 due to redundancy with R1. R2 largely describes an ill-defined procedure which should not be in a standard.

   This suggested change was revised from the first posting of this SAR, changing "with R3" to "with R1". Each of the three requirements of TOP-001-1 address different responsibilities of a TOP. R1 states a TOP has responsibility and authority, R2 states the TOP will take action, and R3 states the TOP and others will comply with the directives of the RC, or TOP. We do not agree R2 contains an ill-defined procedure.

   However, we may agree to remove TOP-001-1 R2 because it may be redundant with TOP-008-1 R1.

   We also suggest revising the TOP-001-1 draft change from:

   Eliminating R5 in light of possible redundancy with IROL standards.

   to:

   Eliminating R5 IF REDUNDANT with IROL standards.

   COMMENTS ON TOP-002-2

   The first suggestion of TOP-002-2 suggests deleting R1 as it is redundant with TOP-008-1 R1. We recommend changing the TOP-008-1 reference to R2, rather than R1. We agree that TOP-002-2 can be eliminated as being redundant with TOP-008-1 R2, not TOP-008-1 R1.

   We do not agree with the suggestion that TOP-002-2 that R4 should be deleted. TOP-002-2 R4 is a requirement on the BA and TOP while IRO-005-2 R9 is a requirement on the RC.

We do not agree with the suggestion of deleting TOP-002-2 R6 as it is redundant with IRO-005-2 R9. However, we do agree with deleting R6 if the reason is changed to being redundant with EOP-001 R3.2. With this change we agree with deleting TOP-002-2 R6.

We do not agree with the suggestion to delete TOP-002-2 R7 and R9. Both these requirements should remain in TOP-002. The reason for the suggested deletion is R7 and R9 are redundant with BAL-007 through BAL-011. However, BAL-007 through BAL-011 were not approved by the Ballot Body and are not NERC standards. Therefore TOP-002-2 R7 and R9 are not redundant and the suggestion should be deleted.

TOP-002-2 R12 should not be deleted. We believe it is not redudant of the requirements in FAC-010 SOL Methodology for the Planning Horizon and FAC-011 SOL Methodology for the Operations Horizon.

COMMENTS ON TOP-004-1

The first entry for TOP-004-1 suggests deleting reference to SOL in R1. Deleting R1 indicates TOPs are not required to operate within SOLs. TOPs should operate within SOLs and this entry should be deleted from the SAR.

COMMENTS ON TOP-005-1

It is suggested deleting R1 and R1.1 as they are redundant with IRO-010-1. However, IRO-010-1 is not an approved standard so R1 and R1.1 should remain in TOP-005-1. That is unless the SAR is changed to say R1 and R1.1 should be deleted after IRO-010-1 is approved and has provisions that duplicte R1 and R1.1.

It is suggested that R4 be deleted from TOP-005-1. Do not delete R4 (PSE provides information as requested for reliability assessments and coordinate operations) as it is significantly more encompassing than INT-001-2 R1 (which only requires PSEs provide Arranged Interchange to the IA.) If anything is done INT-001-2 R1 should be deleted and TOP-005-1 R4 should be kept.

COMMENTS ON TOP-006-1

It is suggested that R1 be deleted from TOP-006-1. Do not delete R1 (report facility status) as it is significantly different than FAC-009-1 R2 (report facility ratings). They are not the same.

It is suggested that R4 be deleted from TOP-006-1 as the requriement is redundant with BAL-001 and -002 and is addressed in IRO-010 R1 and R3. R4 should only be deleted if the requirements are actually included in the final approved IRO-010.

It is suggested that R6 (use sufficient metering) be deleted from TOP-006-1 as the requirement is redundant with BAL-005-1 (annually check and calibrate time error and frequency devices). We suggest R6 be kept in TOP-006-1 since the requirements are not in BAL-005-1.

COMMENTS ON TOP-007-0

It is suggested to delete R4 in deference to the RC Project. We suggest R4 be kept in TOP-007-0 until the RC Project is a NERC approved standard.

COMMENTS ON TOP-008-0

It is suggested to delete R1 (relieve IROL or SOL) as it is redundant with TOP-007-0 R3 (relieve IROL). We suggest R1 be kept in TOP-008-0 or include SOLs in TOP-007-0 R3.

COMMENTS ON COM-001-1

No Comments.

COMMENTS ON COM-002-2

The first bullet is to delete the second sentence of COM-002-2 R1 as it is redundant with PER-003-0 R3. However, there is no R3 in PER-003-0 so we recommend the second sentence stay in COM-002-2 R1.

Background Information:

The SAR for Real-time Transmission Operations and Balancing of Load and Generation (Project 2007-03) was posted for comment from May 15 through June 13, 200. The SAR Drafting Team considered the comments and corrected all noted typographical errors and made the following revisions to the SAR:

- Added IRO-004, IRO-005 & IRO-006 to the scope of standards to be reviewed to eliminate redundant requirements.

- Clarified that the reason for recommending the deletion of TOP-002-2, R8 is because the requirement is unmeasurable.

  R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.)

- Removed the recommendation for deleting TOP-002-2, R11:

  R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.

- Reworded the recommendation in TOP-002-2, R14 & R15 to clarify that these requirements may be better addressed in other standards.

  R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

  R14.1. Changes in real output capabilities.

  R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

- Clarified the deletion requested in TOP-004-1, R1 is the reference to 'SOLs'

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words "Real-time TOP_BA SAR" in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☒ Yes

   ☐ No

   Comments: FirstEnergy, like some other entities, is concerned that the SAR drafting team did not provide an opportunity to comment on their proposed resolution to the SOL issue identified in Question 2 of the previous draft's comment form. While it is not crystal clear to us that the SAR Drafting Team intended to removal all references to SOLs from the Standards, it is also not clear to us that the revisions made to the SAR by the drafting team adequately addressed the views expressed by the commenters. The messages sent by the SAR Drafting Team in the Comment Summary and the individual responses to comments seem mixed. The response to comments document indicates that the SAR drafting team will pass comments on to the Standard Drafting Team; however, the modifications to the SAR were minor and did not provide any guideance to the Standard Drafting Team on the method for applying these comments. Furthermore, the SAR Drafting Team did not seem to embrace the comments provided by the industry on this topic. We understand that the comments received were provided by a small segment of the industry; however, we are also aware that the communication from the commenters was was clear. The majority of commenters supported the retention of SOLs in the standards as necessary and appropriate.

   All of this being said, while we clearly do not agree with the wholesale removal of SOLs from the Standards, but we do support the removal of SOLs from TOP-004-1 Requirement 1 as specified in the SAR. We support this because the methodology used to determine SOLs, and for that matter, IROLs is not clearly defined. This means that one organization may be using a methodology that produces an eight hour SOL while another's method may produce a one hour SOL. We believe that the company using an eight hour limit should not be bound as tightly to that limit as a company that uses a one hour limit. Therefore, the SAR should direct the Standard Drafting team to develop, or at least investigate the development, of a limit methodology applicable across all of NERC that can be consistently applied.

   FE also offers the following comments to specific items revised in the SAR:
   ☐ Added IRO-004, IRO-005 & IRO-006 to the scope of the standards to be reviewed to eliminate redundant requirements.
   FE agrees

   ☐ Clarified that the reason for recommending the deletion of TOP-002-2, R8 is because the requirement is unmeasurable.
   R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.
   FE disagrees with this direction.
   There does not appear to be an industry agreed upon justification given to remove this requirement in lieu of developing 'R8' along with eliminating ambiguity in the existing measure for this requirement described in 'M3'.

   ☐ Removed the recommendation for deleting TOP-002-2, R11:
   R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators

shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.

FE agrees

☐ Reworded the recommendation in TOP-002-2, R14 & R15 to clarify that these requirements may be better addressed in other standards.

R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but no limited to:

R14.1. Changes in real output capabilities

R15. Generator Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

FE agrees, but with the following provision:

The SDT should also develop clear justification for addressing these requirements in "other standards" while identifying the appropriate "other standards"; and, if justified, the SDT should develop a clear, industry approved plan to transfer these requirements to those identified standards.

☐ Clarified the deletion requested in TOP-004-1, R1 is the reference to 'SOLs'

R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

FE agrees, but with the following provision:

The SDT should also consider verbiage in the standards with regard to how SOLs can still be conveyed with some indirect measure (non-sanctioned) of importance in development of the applicable standards.

- Clarified the deletion requested in TOP-004-1, R1 is the reference to 'SOLs'

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words "Real-time TOP_BA SAR" in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☐ Yes

   ☒ No

   Comments: Both IRO-006-3 and draft IRO-006-4 have the TOP listed in applicability section. However, neither actually has any requirement in the standard. They simply reference the TOP in the requirements.

   We think that the scope should not be restricted to only eliminate redundancy in IRO-004, -005 and -006 but should permit other changes in those standards. Hydro-Québec TransÉnergie would probably have some proposition to make because of the characteristics of Québec Interconnexion.

   The SAR drafting team should modify the scope so that all requirements to monitor and control flows within SOLs are not eliminated. While the SAR drafting team points out in their response to the comments that NERC's definition defines an SOL as local, eliminating all requirements to monitor and control to SOLs will be detrimental to reliability. Multiple SOLs occuring on a system may be a sign of an undetected IROL or, if left unchecked, propagate into an IROL. This was the cause of the August 14th blackout. Clearly there should be an obligation on the part of the TOP and RC to monitor and mitigate these limits to prevent such propagation.

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words “Real-time TOP_BA SAR” in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☒ Yes

   ☒ No

   Comments:

   Since this comment form has only one question, we are checking both boxes - yes for inclusion of IRO-004, -005 and -006 but no to some of the changes made or not made to the previous SAR, and provide additional comments as follows:

   (1) Specific to the bullets provided in the background section, above, we agree with the first bullet and do not have any comments on the 2nd to 4th bullets. However, we do not agree with the 5th bullet to remove reference to SOL from TOP-004-1 R1, which requires that "Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs)."

   In the SAR DT's response posted in Consideration of Comments, it states that "Based on stakeholder comments, the SAR DT is proposing to retain requirements to (1) be aware of SOLs and (2) monitor system conditions related to SOLs." Removing reference to SOL in TOP-004-1 R1 contradicts with the above statement. Further, we continue to strongly disagree with the SDT that TOPs are not required to operate within SOLs - We agree that all SOLs are not created equally but there are those SOLs which have a tremendous impact on system reliability, much in the same way as IROLs, and given the appropriate conditions, these very SOLs, if not complied with, could have a highly detrimental impact on the system and subsequntly the interconnection (also see comments by others in the Consideration of Comments).

   (2) In the Consideration for Comments, the SAR DT responded to our previous comments under Question #9, from TOP-001 R2 to TOP-002 R18. We appreciate that the DT's concurs with most of our comments.

   However, we are unable to find the DT's response to our other comments, from TOP-003 to TOP-008. A review of the revised SAR indicates that changes proposed in the previous SAR for these standards/requirements would remain, some of which we expressed disagreement in our previous comment submission. Not seeing a response from the SAR DT, we are uncertain whether our comments were overlooked, or the DT concluded that our comments did not result in any material changes to the proposed revisions to these standards.

   Assuming it was an oversight, we are providing our comments on TOP-003 to TOP-008 again as follows. We would appreciate seeing the DT's response to these comments when the Consideration of Comments on this revised SAR is posted.

   TOP-003-0

   R3: the SDT suggests deleting R1.3 as it is redundant with IRO-010, R3 as part of the over-all data specification effort. We believe the referenced requirement should be R4.

   TOP-004-0

R1: the SDT suggests deleting R1 as it is redundant with IRO-009-1, R4. We disagree with this. SAR IRO-009-1 holds the RC responsible for operated within IROL. We feel strongly that the TOP must also operate its system to respect IROL. Further, we need to defer any changes to remove or modify SOL until after the definition of Adequate Level of reliability is defined. We also provided other reasons for retaining it. Please see our comments on Q2, above.

R2: the SDT suggests deleting R2 as it is simply the definition of an IROL and is redundant with FAC-010-1 and FAC-011-1. We disagree with this proposal since R2 requires TOP to operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency. FAC-010-1 and FAC-011-1 deal with the methodology to determine SOL and IROL. They hold different entities for doing very different things altogether.

R3: We disagree with removing this requirement for the above same reason.

TOP-005-1

R2: the SDT suggests deleting this requirement. We agree that R2 is not a reliability requirement, but the SDT needs to recommend a home for entities that receive data from the ISN that it must sign the NERC Confidentiality Agreement for "Electric System Reliability Data".

TOP-006-1

R1: the SDT suggests deleting R1 as it is redundant with FAC-009-1, R2. We disagree with this proposal since R1 deals with real-time data such as facility status, resource availability; whereas FAC-009-1 deals with establishing ratings.

R4: the SDT suggests deleting R4 as it is redundant with BAL-001 and -002 and is also addressed in IRO-010-1, R1 and R3. We disagree as R4 requires the operating entities to do things that are very different from any of BAL-001, BAL-002 and IRO-010-1.

R7: the SDT considers deleting Balancing Authority as it is covered in BAL-005-0, R8 and deleting Reliability Coordinator as it is covered in BAL-008-1, R1. We do not agree with both. In the first case, the requirements for the BA in R7 is to monitor system frequency which is different than those in BAL-005-0, R8 which specify the data and metering requirements. In the second case, BAL-008 doesn't yet exist (failed ballot).

TOP-008

R3: the SDT suggests deleting R3 as it is a local utility risk consideration and not a reliability issue as currently worded. We do not agree with the deletion since the requirement implies that the action taken by the TOP has interconnected system implication.

Background Information:

The SAR for Real-time Transmission Operations and Balancing of Load and Generation (Project 2007-03) was posted for comment from May 15 through June 13, 200. The SAR Drafting Team considered the comments and corrected all noted typographical errors and made the following revisions to the SAR:

- Added IRO-004, IRO-005 & IRO-006 to the scope of standards to be reviewed to eliminate redundant requirements.

- Clarified that the reason for recommending the deletion of TOP-002-2, R8 is because the requirement is unmeasurable.

  R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.)

- Removed the recommendation for deleting TOP-002-2, R11:

  R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.

- Reworded the recommendation in TOP-002-2, R14 & R15 to clarify that these requirements may be better addressed in other standards.

  R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

  R14.1. Changes in real output capabilities.

  R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

- Clarified the deletion requested in TOP-004-1, R1 is the reference to ‘SOLs’

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words “Real-time TOP_BA SAR” in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☐ Yes

   ☒ No

   Comments: Both IRO-006-3 and draft IRO-006-4 have the TOP listed in applicability section. However, neither actually has any requirement in the standard. They simply reference the TOP in the requirements.

   Because there is not the typical question regarding additional comments in the comment form, we will provide those here.

   R8 in TOP-002-2 should not be eliminated because it is not measurable. The standards drafting should attempt to modify it so that there is a requirement on maintaining voltage or reactive levels that is measurable. If this is not possible deletion may be appropriate, but the industy, not the SAR drafting team, should not be making this determination.

   Because the SAR states that R14 and R15 in TOP-002-2 may be better addressed in other standards, we are concerned that the standards drafting team may delete these requirements under the assumption that another team will add them to another standard. This standard drafting team should not remove these requirements unless they simply are not needed for reliability or added to another standard in conjunction with the deletion.

   The SAR drafting team should modify the scope so that all requirements to monitor and control flows within SOLs are not eliminated. While the SAR drafting team points out in their response to the comments that NERC's definition defines an SOL as local, eliminating all requirements to monitor and control to SOLs will be detrimental to reliability. Multiple SOLs occuring on a system may be a sign of an undetected IROL or, if left unchecked, propagate into an IROL. This was the cause of the August 14th blackout. Clearly there should be an obligation on the part of the TOP and RC to monitor and mitigate these limits to prevent such propagation.

   ☐ Yes

   ☒ No

   Comments: We are concerned that the SAR drafting team did not provide an opportunity to comment on their proposed resolution to the SOL issue identified in Question 2 of the previous draft's comment form. It appears that the drafting team did not adequately address the view expressed by the majority of the commenters. We draw this conclusion from the inconsistency in the determination of what is a consensus and what isn't. For example, the comment form shows that the SAR drafting team wrote: "The SAR drafting team appreciates that the industry is near consensus," in response to comments on Question 1. There were 13 yes votes in support, 6 no votes against and 4 abstentions. In response to question 7, the SAR drafting team wrote: "The consensus is that the industry agrees with the stated purpose of the SAR." There were 14 yes votes indicating support, nine no votes indicating disagreement and no abstentions. Question 2 asked if the commenter agreed that SOLs should be moved into guides or good utility practices. 13 commenters voted no, 6 voted yes and 7 abstained. Given that the drafting team found near consensus on question 1 and consensus on question 7, we question why the drafting team does not view the responses to question 2 as a consensus?

   We are further troubled by the drafting team's solution to this SOL issue. In the responses, the SAR DT proposes to retain requirements to be aware of SOLs and monitor system conditions related to SOLs. However, there is actually no scope changes that reflect this response in draft 2 of the SAR. Addtionally, the drafting team asked only one specific question in the comment form for draft 2. It is unusual to not add the general open ended question that allows the commenter to provide any additional comments. We find this unusual given that the drafting team chose the word propose in their response. Use of this word would tend to invite a response because one is not sure that the proposal is acceptable. If the drafting team had an expectation that the proposal may not be acceptable, why would they not ask if the proposal is acceptable in the comment form? We believe they should have asked specifically if the proposed solution would "bridge the divide" between the commenters and the drafting team. Clearly they are on opposite ends of a spectrum with the SOL issue and one would think it would be prudent to determine if the gap has been narrowed enough before moving on to the standards drafting phase.

   We also believe that the SAR DT did not follow the Reliability Standards Development Procedure. On page 16, under step 2 is the following paragraph:

   "The requester, assisted by the SAR drafting team if one is appointed, shall give prompt consideration to written views and objections of all participants. An effort to resolve all expressed objections shall be made and each objector shall be advised of the disposition of the objection and the reasons therefore."

   It would appear that the SAR DT did not fully resolve expressed objections with removal of SOL requirements and should continue working to do so.

   We also have the following specific issues with the SAR.

R8 in TOP-002-2 should not be eliminated because it is not measurable. The standards drafting team should attempt to modify it so that there is a requirement on maintaining voltage or reactive levels that is measurable. If this is not possible, deletion would then be appropriate. The SAR drafting team should not be making this determination.

Because the SAR states that R14 and R15 in TOP-002-2 may be better addressed in other standards, we are concerned that the standards drafting team may delete these requirements under the assumption that another team will add them to another standard. This standard drafting team should not remove these requirements unless they simply are not needed for reliability or are added to another standard in conjunction with the deletion.

The SAR drafting team should modify the scope so that all requirements to monitor and control flows within SOLs are not eliminated. While the SAR drafting team points out in their response to the comments that NERC's definition defines an SOL as local, eliminating all requirements to monitor and control to SOLs will be detrimental to reliability. To the extent that an SOL is truly local (i.e. radial load serving line), there is no need for this requirement. However, there are SOLs that may not pose a transmission security problem but could impose a generation adequacy problem on another system if the equipment should become damaged. Imports into another system may then be reduced. Additionally, multiple SOLs occuring on a system may be a sign of an undetected IROL. Clearly there should be an obligation on the part of the TOP and RC to review the situation to rule it out.

Comment Form for Second Draft of SAR for Project 2007-03 — Real-time Transmission Operations and Balancing of Load and Generation

Please use this form to submit comments on the proposed SAR. Comments must be submitted by **September 7, 2007**. Background Information:

The SAR for Real-time Transmission Operations and Balancing of Load and Generation (Project 2007-03) was posted for comment from May 15 through June 13, 200. The SAR Drafting Team considered the comments and corrected all noted typographical errors and made the following revisions to the SAR:

- Added IRO-004, IRO-005 & IRO-006 to the scope of standards to be reviewed to eliminate redundant requirements.

- Clarified that the reason for recommending the deletion of TOP-002-2, R8 is because the requirement is unmeasurable.

  R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.)

- Removed the recommendation for deleting TOP-002-2, R11:

  R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.

- Reworded the recommendation in TOP-002-2, R14 & R15 to clarify that these requirements may be better addressed in other standards.

  R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

  R14.1. Changes in real output capabilities.

  R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

- Clarified the deletion requested in TOP-004-1, R1 is the reference to 'SOLs'

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words "Real-time TOP_BA SAR" in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☒ Yes

   ☒ No

   Comments: If the SAR Drafting team feels that the Standard Drafting Team can handle three additional standards the MRO has no issue with including them in the scope.

   Additional comments:

   It has come to our attention that TOP-001-1 R3 is an exact duplicate of IRO-001-1 R8. Of theses two instances, it seems most appropriate to remove the Requirement in IRO-001-1 as that standard is focused on the responsibilities and authorities of the Reliability Coordinator. The MRO recommends either including this in the scope of this SAR or adding this comment to the future work of the IRO-001-1 standard.

   R8 in TOP-002-2 should not be eliminated because it is not measurable. The SDT should attempt to modify it so that there is a requirement on maintaining voltage or reactive levels that is measurable. If this is not possible, deletion would then be appropriate. It would seem more appropriate for the SDT to make this determination rather than the SAR DT.

   Because the SAR states that R14 and R15 in TOP-002-2 may be better addressed in other standards, we are concerned that the standards drafting team may delete these requirements under the assumption that another team will add them to another standard. This standard drafting team should not remove these requirements unless they simply are not needed for reliability or are added to another standard in conjunction with the deletion.

   The MRO members are also confused on the SOL issue. In the Consideration of Comments to SAR 1 question #2, the SAR DT asked the if it would be appropriate to remove all requirements related to SOLs from the NERC Reliability Standards. 5 groups of commenters agreed with removing SOLs, 9 disagreed and 5 abstained. The SAR DT concluded that they would propose to retain requirements to (1) be aware of SOLs and (2) monitor system conditions related to SOLs, yet nothing was changed in the scope of this SAR to reflect that decision. It would have been advantageous to request comments on the new direction proposed by the SAR DT on SOLs as it was heavily commented on during the last round of comments.

   The MRO members are also confused on the SOL issue. In the Consideration of Comments to SAR 1 question #2, the SAR DT asked the if it would be appropriate to remove all requirements related to SOLs from the NERC Reliability Standards. 5 groups of commenters agreed with removing SOLs, 9 disagreed and 5 abstained. The SAR DT concluded that they would propose to retain requirements to (1) be aware of SOLs and (2) monitor system conditions related to SOLs, yet nothing was changed in the scope of this SAR to reflect that decision. It would have been advantageous to request comments on the new direction proposed by the SAR DT on SOLs as it was heavily commented on during the last round of comments. Also it appears that all SOL are not crated equal, see the discussion below discussing potential SOL issues.

To the extent that an SOL is truly local (i.e. radial load serving line), there is no need for the SOL requirements. However, there are SOLs that may not pose a transmission security problem but could impose a generation adequacy problem on another system if the equipment should become damaged. Imports into another system may then be reduced. Additionally, multiple SOLs occuring on a system may be a sign of an undetected IROL. Clearly there should be an obligation on the part of the TOP and RC to review the situation to rule it out.

Background Information:

The SAR for Real-time Transmission Operations and Balancing of Load and Generation (Project 2007-03) was posted for comment from May 15 through June 13, 200. The SAR Drafting Team considered the comments and corrected all noted typographical errors and made the following revisions to the SAR:

- Added IRO-004, IRO-005 & IRO-006 to the scope of standards to be reviewed to eliminate redundant requirements.

- Clarified that the reason for recommending the deletion of TOP-002-2, R8 is because the requirement is unmeasurable.

  R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.)

- Removed the recommendation for deleting TOP-002-2, R11:

  R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.

- Reworded the recommendation in TOP-002-2, R14 & R15 to clarify that these requirements may be better addressed in other standards.

  R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

  R14.1. Changes in real output capabilities.

  R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

- Clarified the deletion requested in TOP-004-1, R1 is the reference to ‘SOLs’

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words “Real-time TOP_BA SAR” in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☒ Yes

   ☐ No

   Comments: TOP-001-1 R7.3 Replacing "at the earliest time" with "without delay" is not appropriate, since the step covers "When time does not permit.........". With this change, if there were any delay, it would be a noncompliance.

   TOP-007-0 Rewording R2 to say act "without delay", in lieu of "as soon as possible" is not desirable. With this change, if there were any delay, it would be a noncompliance.

   ☒ Yes

   ☐ No

   Comments: In IRO-004-1 Reliability Coodination Operations Planning section 4.6 Generator Owners should be deleted. This standard is also applicable to generator operators as listed in 4.7. The justification for deleting GO is that this reliability standard addresses the operation of a generating facility. The GOP and not the GO would be the entity most knowledgable of equipment capabilities and ratings. The GOP would be the entity conducting and supervising any testing or unit operation required to comply with this standard. The GOP is most likely the entity responsible for maintenance of unit equipment so the GOP would be most familiar with equipment limits, ratings and capabilities. In addition, replacing GO with GOP in this standard and other standards has the following benefits:

   1. How a facility is operated has more impact on reliability than ownership of a facility.
   2. Removing the GO from responsibility will more clearly define who is responsible for standard compliance at jointly-owned facilities.
   3. For jointly-owned facilities, this change eliminates the need for each owner to make redundant submittals and streamlines administration for each Regional Entity.
   4. As the industry moves away from the regulated model, more non-traditional entities will become owners of facilities. These owners typically contract operation responsibilities to entities with operating experience. The operating entity will more fully understand the importance of reliability and would be in a better position to comply.
   5. Requiring the GO to be responsible for standard compliance may in some cases discourage non-traditional entities from owning generating assets, which will hinder competition in the market.

The SAR for Real-time Transmission Operations and Balancing of Load and Generation (Project 2007-03) was posted for comment from May 15 through June 13, 200. The SAR Drafting Team considered the comments and corrected all noted typographical errors and made the following revisions to the SAR:

- Added IRO-004, IRO-005 & IRO-006 to the scope of standards to be reviewed to eliminate redundant requirements.

- Clarified that the reason for recommending the deletion of TOP-002-2, R8 is because the requirement is unmeasurable.

  R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency.)

- Removed the recommendation for deleting TOP-002-2, R11:

  R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator.

- Reworded the recommendation in TOP-002-2, R14 & R15 to clarify that these requirements may be better addressed in other standards.

  R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but not limited to:

  R14.1. Changes in real output capabilities.

  R15. Generation Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output).

- Clarified the deletion requested in TOP-004-1, R1 is the reference to 'SOLs'

  R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).

Please review the revised SAR and then answer the question on the following page. Please submit your comments by **September 7, 2007** to sarcomm@nerc.com with the words "Real-time TOP_BA SAR" in the subject line.

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

   ☒ Yes

   ☐ No

Consideration of Comments on 2nd Draft of SAR for Real-time Transmission Operations and Balancing of Load and Generation (Project 2007-03)

The Real-time Transmission Operations and Balancing of Load and Generation SAR requesters thank all commenters who submitted comments on the first draft of SAR. This SAR was posted for a 30-day public comment period from August 7, 2007 through September 7, 2007. The requesters asked stakeholders to provide feedback on the SAR through a special SAR Comment Form. There were 15 sets of comments, including comments from 46 different people from 30 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

Based on the comments received, several minor changes were made to the SAR:

- A definitive statement was added to the SAR to clarify that the intent and scope of the SAR was not to remove requirements to monitor and be aware of SOLs.
- As suggested, Generator Owner was added to the list of applicable entities.
- For TOP-002-2: R7, R9, and R12 are no longer marked for possible deletion.
- In COM-002-2, a typo was corrected to point out that the correct reference is to PER-003-1 and not PER-003-0.

The SAR DT feels that these changes are not of a magnitude to require the re-posting of the SAR and is recommending that the SAR be forwarded to the Standards Committee for approval to move on to the standards development process.

It should be noted that there have been opinions expressed that more clarity is needed around SOLs – What are they? Who is responsible? Are they needed at all? While there are commenters who want this SAR DT to address those concerns, this SAR DT stands on its original goal, to remove oversights and problems caused by Version 0, et al. and to revise the resultant set of requirements with respect to the directives in FERC Order 693 and the latest Standard Review Guidelines.

In this "Consideration of Comments" document stakeholder comments have been organized so that it is easier to see the responses associated with each question. All comments received on the standards can be viewed in their original format at:

http://www.nerc.com/~filez/standards/Real-time_Operations_Project_2007-03.html

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.[1]

[1] The appeals process is in the Reliability Standards Development Procedures: http://www.nerc.com/standards/newstandardsprocess.html.

The Industry Segments are:

1 — Transmission Owners
2 — RTOs, ISOs
3 — Load-serving Entities
4 — Transmission-dependent Utilities
5 — Electric Generators
6 — Electricity Brokers, Aggregators, and Marketers
7 — Large Electricity End Users
8 — Small Electricity End Users
9 — Federal, State, Provincial Regulatory or other Government Entities
10 – Regional Reliability Organizations, Regional Entities

Index to Questions, Comments, and Responses

1. Do you agree to expand the scope of the SAR to include IRO-004, -005, & -006 for the purpose of eliminating redundancy related to the Transmission Operator and Balancing Authority?

Summary Consideration:

The consensus (12 submissions, 65 persons, 21 companies, 31 industry segment representations vs. 5 submissions, 9 persons, 9 companies and 10 industry segment representations) agreed that the scope of the SAR should be expanded to include the three subject IRO standards.

The primary concern voiced in this comment submittal was with the issue of SOLs. It is noted that the SOL issue is not what this SAR was about. This SAR was issued to clarify issues from Version 0, from the ERO regulatory agencies and other cited comments – and to improve the overall quality of the resultant set of requirements and standards.

The current SAR DT is composed of industry experts with long experience regarding the various NERC efforts to attempt to clearly define system limits. However, the current SAR DT does not claim to possess comprehensive knowledge of all of the issues related to SOL issues. We believe that the SOL issue must be addressed directly in a specific SAR effort formed to address it with a larger multi-disciplinary group.

It is clear that more clarity is needed around SOLs – What are they? Who is responsible? Are they needed at all? While there are commenters who want this SAR DT to address those concerns, this SAR DT stands on its original goal, to remove oversights and problems caused by Version 0, et al.

Question #1			
Commenter	**Yes**	**No**	**Comment**
Manitoba Hydro	☑		Although it is not covered in this SAR's second draft we are assuming from your response to comments on the initial draft that Requirements will remain to ensure that SOLs will be monitored by the RC and TOP and that appropriate action will be taken when SOLs are exceeded. This we agree with.
Manitoba supports expanding the scope. **Response:** Unless changed in the Standards process, IRO-005 R2 would still require that SOLs be monitored; and IRO-005 R17 would still require that SOL violations be corrected. The SAR DT defines a scope, it can not and does not ensure that a given requirement remains or is deleted. The best the SAR DT can ensure is that an issue in its scope has the opportunity to be addressed.			

Question #1			
Commenter	**Yes**	**No**	**Comment**
Northeast Utilities	☑		TOP-001-1 R7.3 Replacing "at the earliest time" with "without delay" is not appropriate, since the step covers "When time does not permit.........". With this change, if there were any delay, it would be a noncompliance. TOP-007-0 Rewording R2 to say act "without delay", in lieu of "as soon as possible" is not desirable. With this change, if there were any delay, it would be a noncompliance.
NE Utilities supports expanding the scope of the SAR. **Response:** This wording should be discussed during the standards process. TOP-001-1 is an exclusion from the prohibition on 'blindly' removing facilities from service. The proposal to change the phraseology is suggested to address the issue that the current requirement allows too much leeway in informing the RC of what was done. TOP-007-0 does require a TOP to act to correct an IROL, and if the TOP does not act - then it is in non-compliance with the standard. The issue raised by the comment has been previously debated. "As soon as possible" was considered too subjective, whereas "without delay" was considered less subjective. The real question is what constitutes "action". The time associated with evaluating the system is considered (by the writers of the proposal) to be an action. The impetus behind the requirement is that each TOP already has its list of IROL response procedures, and therefore (unless there is a real good reason) the TOP should be implementing those procedures. The underlying 'evaluation action' is the time when reasoned adjustments to the plan is expected. One can debate how long the evaluation time should be, and even debate what is an evaluation but no one was able to come up with a standardized performance. It is left to the voters to decide if this is a problem and if it is how to fix the problem.			
PPL Susquehanna	☑		IRO-004-1 is applicable to Generator Owners, currently the SAR only list the generator operators. The reliability functions listed in the SAR should be revised to include Generator Owner.
PPL Susquehanna supports expanding the scope of the SAR. **Response:** Thank you, the SAR Applicability list will be so amended.			
Reliant Energy	☑		In IRO-004-1 Reliability Coodination Operations Planning section 4.6 Generator Owners should be deleted. This standard is also applicable to generator operators as listed in 4.7. The justification for deleting GO is that this reliability standard addresses the

Question #1			
Commenter	**Yes**	**No**	**Comment**
			operation of a generating facility. The GOP and not the GO would be the entity most knowledgable of equipment capabilities and ratings. The GOP would be the entity conducting and supervising any testing or unit operation required to comply with this standard. The GOP is most likely the entity responsible for maintenance of unit equipment so the GOP would be most familiar with equipment limits, ratings and capabilities. In addition, replacing GO with GOP in this standard and other standards has the following benefits: 1. How a facility is operated has more impact on reliability than ownership of a facility. 2. Removing the GO from responsibility will more clearly define who is responsible for standard compliance at jointly-owned facilities. 3. For jointly-owned facilities, this change eliminates the need for each owner to make redundant submittals and streamlines administration for each Regional Entity. 4. As the industry moves away from the regulated model, more non-traditional entities will become owners of facilities. These owners typically contract operation responsibilities to entities with operating experience. The operating entity will more fully understand the importance of reliability and would be in a better position to comply. 5. Requiring the GO to be responsible for standard compliance may in some cases discourage non-traditional entities from owning generating assets, which will hinder competition in the market.

Reliant supports expanding the scope of the SAR

Response:
The scope of this SAR with regard to IRO-004 is to simply eliminate redundancies within that standard for the TOP. We suggest that you should submit these comments to the SDT dealing with specific changes to the IRO requirements.

1. The line of reasoning for obligating an Owner for providing 'unit ratings' is as follows: The Owner has the inherent right (as the owner of the facility) to rate that facility in any way the owner sees fit. On the other hand, the Operator of the asset can be a third party that must respect the owner's boundaries and still work within the constraints of the BES. The Operator has the right / obligation to use the Owner's rating to stay within the reliability constraints of the BES. The Operator may further constrain a units operation, but should not (without the owner's permission) violate the Owner's imposed unit rating.

2. The asset belongs to the Owner, and the Owner's risk management should be respected.

3. This is a legal / contractual issue not a NERC issue.

Question #1			
Commenter	**Yes**	**No**	**Comment**
4. This is a legal / contractual issue not a NERC issue. 5. This is an opinion / projection that is outside NERC / the SAR DT concerns.			
American Electric Power	☑		We agree with the concept of eliminating redundancy in the NERC Standards. However, Project 2006-08 involves re-writing IRO-006 in three phases and is currently in phase one. Any changes required to IRO-006 to eliminate redundancy of Transmission Operator and Balancing Authority requirements in other standards should be coordinated with, and handed off to, the Project 2006-08 IRO-006 Standard Drafting Team. Thus, IRO-006 should not be included in the scope of this SAR. We have no objection to including IRO-004 and IRO-005 into the scope of this project and we stand by our comments to the first SAR.
AEP supports expanding the SAR for IRO-004 and 005. **Response:** IRO-006 The SAR DT recognizes that there is a need for coordination among different NERC Projects but it is the Standards DT that has the responsibility for coordinating any changes that the Industry approves, and to coordinate them with other Projects (in coordination with the NERC Standards Manager and the NERC Standards Committee). Project 2006-08 is designed to focus on the TLR process. The SAR DT is focused on responding to previous unanswered comments; and in identifying and eliminating redundancies.			
Entergy	☑		We have additional comments on other parts of this revised SAR. COMMENTS ON TOP-001-1 We suggest the deletion of the first recommended change to TOP-001-1: o Removal of R2 due to redundancy with R1. R2 largely describes an ill-defined procedure which should not be in a standard. This suggested change was revised from the first posting of this SAR, changing "with R3" to "with R1". Each of the three requirements of TOP-001-1 address different

Question #1			
Commenter	**Yes**	**No**	**Comment**
			responsibilities of a TOP. R1 states a TOP has responsibility and authority, R2 states the TOP will take action, and R3 states the TOP and others will comply with the directives of the RC, or TOP. We do not agree R2 contains an ill-defined procedure. However, we may agree to remove TOP-001-1 R2 because it may be redundant with TOP-008-1 R1. We also suggest revising the TOP-001-1 draft change from: - Eliminating R5 in light of possible redundancy with IROL standards. to: - Eliminating R5 IF REDUNDANT with IROL standards. COMMENTS ON TOP-002-2 The first suggestion of TOP-002-2 suggests deleting R1 as it is redundant with TOP-008-1 R1. We recommend changing the TOP-008-1 reference to R2, rather than R1. We agree that TOP-002-2 can be eliminated as being redundant with TOP-008-1 R2, not TOP-008-1 R1. We do not agree with the suggestion that TOP-002-2 that R4 should be deleted. TOP-002-2 R4 is a requirement on the BA and TOP while IRO-005-2 R9 is a requirement on the RC. We do not agree with the suggestion of deleting TOP-002-2 R6 as it is redundant with IRO-005-2 R9. However, we do agree with deleting R6 if the reason is changed to being redundant with EOP-001 R3.2. With this change we agree with deleting TOP-002-2 R6. We do not agree with the suggestion to delete TOP-002-2 R7 and R9. Both these requirements should remain in TOP-002. The reason for the suggested deletion is R7 and R9 are redundant with BAL-007 through BAL-011. However, BAL-007 through BAL-011 were not approved by the Ballot Body and are not NERC standards. Therefore TOP-002-2 R7 and R9 are not redundant and the suggestion should be deleted. TOP-002-2 R12 should not be deleted. We believe it is not redudant of the requirements in FAC-010 SOL Methodology for the Planning Horizon and FAC-011 SOL Methodology for the Operations Horizon.

Question #1			
Commenter	**Yes**	**No**	**Comment**
			COMMENTS ON TOP-004-1 The first entry for TOP-004-1 suggests deleting reference to SOL in R1. Deleting R1 indicates TOPs are not required to operate within SOLs. TOPs should operate within SOLs and this entry should be deleted from the SAR. COMMENTS ON TOP-005-1 It is suggested deleting R1 and R1.1 as they are redundant with IRO-010-1. However, IRO-010-1 is not an approved standard so R1 and R1.1 should remain in TOP-005-1. That is unless the SAR is changed to say R1 and R1.1 should be deleted after IRO-010-1 is approved and has provisions that duplicte R1 and R1.1. It is suggested that R4 be deleted from TOP-005-1. Do not delete R4 (PSE provides information as requested for reliability assessments and coordinate operations) as it is significantly more encompassing than INT-001-2 R1 (which only requires PSEs provide Arranged Interchange to the IA.) If anything is done INT-001-2 R1 should be deleted and TOP-005-1 R4 should be kept. COMMENTS ON TOP-006-1 It is suggested that R1 be deleted from TOP-006-1. Do not delete R1 (report facility status) as it is significantly different than FAC-009-1 R2 (report facility ratings). They are not the same. It is suggested that R4 be deleted from TOP-006-1 as the requriement is redundant with BAL-001 and -002 and is addressed in IRO-010 R1 and R3. R4 should only be deleted if the requirements are actually included in the final approved IRO-010. It is suggested that R6 (use sufficient metering) be deleted from TOP-006-1 as the requirement is redundant with BAL-005-1 (annually check and calibrate time error and frequency devices). We suggest R6 be kept in TOP-006-1 since the requirements are not in BAL-005-1. COMMENTS ON TOP-007-0

Question #1			
Commenter	**Yes**	**No**	**Comment**
			It is suggested to delete R4 in deference to the RC Project. We suggest R4 be kept in TOP-007-0 until the RC Project is a NERC approved standard. COMMENTS ON TOP-008-0 It is suggested to delete R1 (relieve IROL or SOL) as it is redundant with TOP-007-0 R3 (relieve IROL). We suggest R1 be kept in TOP-008-0 or include SOLs in TOP-007-0 R3. COMMENTS ON COM-001-1 No Comments. COMMENTS ON COM-002-2 The first bullet is to delete the second sentence of COM-002-2 R1 as it is redundant with PER-003-0 R3. However, there is no R3 in PER-003-0 so we recommend the second sentence stay in COM-002-2 R1.

Entergy agrees with expanding the scope of the SAR.

Response:

1. **TOP-001-1**: Entergy and the DT both agree with the removal of **R2**; but Entergy disagrees with the rationale provided. The purpose of the SAR DT is to provide a scope for a Standard DT. The SAR DT's rationale is provided to help understand the DT's justification, the rationale is not provided for approval or inclusion in the standard. This reply also applies to the comment for **R5**. Entergy approves considering **R5** for removal, but does not agree with the justification. The words used in the request's justification are not under debate. The debate is whether or not to keep the item in scope.

2. **TOP-002-2**: Entergy and the DT both agree with the removal of **R1**; but Entergy disagrees with the rationale provided. The issue that must be resolved is whether or not it is sufficient that a NERC standard hold one entity responsible for coordinating a given task, or should every entity be assigned partial responsibility. This requirement is therefore included within scope and will best be debated in the Standards Development process.
   We both agree with the removal of **R6**; but Entergy disagrees with the rationale provided.

   You are correct that BAL-007 – 011 have not been approved and therefore R7 and R8 can not be held redundant.

Question #1			
Commenter	**Yes**	**No**	**Comment**

However, this does not remove TOP-002-2 from the scope of the SAR.

You are correct that R12 is not redundant with the FAC-010 & 011 standards. The elimination of this requirement does not materially affect the scope of the request, as TOP-002 will still remain in scope.

3. **TOP-004-1**: The commenter stated that removing R1 of TOP-004 will remove the obligation of TOPs from operating within SOLs. The SAR DT notes that IRO-005 R17 properly places the responsibility on the RC who in turn has the authority to require the TOP to act. The debate is best carried out by the Industry in the standards process not in the scoping phase. If the Industry agrees that the responsibility is on the RC and that a requirement on the TOPs is unnecessary then the requirements on the TOPs will be removed. If the Industry agrees that there is a separate need for TOPs to have a standard requirement on them, then the requirement will be retained. Either way there is a need for the issue to be discussed.

4. **TOP-005-1**: The commenter is correct that the observed redundancy for R1 and R1.1 is predicated on a non-approved standard. The SAR DT agrees that any Industry-approved changes should / must be coordinated with the other BOT-approved standards in place at the time the new modifications are to be implemented.

   The commenter is correct that TOP-005-1 R4 is more inclusive then INT-001-2 R1. The SAR DT's intent was to delete one of the two. The decision of which if any of the two requirements to retain, modify or delete is to be decided by the industry.

5. **TOP-006-1:** The commenter is correct that the data requirements of TOP-006-1 R1 (unit availability) is different from the data requirements of FAC-009-1 R2 (unit capability / rating).

   Regarding R4 the SAR DT agrees that any Industry-approved changes should / must be coordinated with the other BOT-approved standards in place at the time the new modifications are to be implemented.

   The commenter is correct that R6 (sufficient metering) is different from BAL-005-1 (calibration).

   TOP-007-0: Regarding R4, the SAR DT agrees with Entergy that any Industry-approved changes should / must be coordinated with the other BOT-approved standards in place at the time the new modifications are to be implemented.

6. **TOP-008-0:** The debate over SOL/IROL is best carried out by the Industry in the standards process not in the scoping phase. If the Industry agrees that the responsibility is on the RC and that a requirement on the TOPs is unnecessary then the requirements on the TOPs will be removed. If the Industry agrees that there is a separate need for TOPs to have a standard requirement on them, then the requirement will be retained. Either way there is a need for the issue to be

Question #1			
Commenter	**Yes**	**No**	**Comment**
			discussed. 7. The redundancy is between PER-003-1 (not PER-003-0) R3 and COM-002-2 R1.
FirstEnergy Corp.	☑		FirstEnergy, like some other entities, is concerned that the SAR drafting team did not provide an opportunity to comment on their proposed resolution to the SOL issue identified in Question 2 of the previous draft's comment form. While it is not crystal clear to us that the SAR Drafting Team intended to removal all references to SOLs from the Standards, it is also not clear to us that the revisions made to the SAR by the drafting team adequately addressed the views expressed by the commenters. The messages sent by the SAR Drafting Team in the Comment Summary and the individual responses to comments seem mixed. The response to comments document indicates that the SAR drafting team will pass comments on to the Standard Drafting Team; however, the modifications to the SAR were minor and did not provide any guideance to the Standard Drafting Team on the method for applying these comments. Furthermore, the SAR Drafting Team did not seem to embrace the comments provided by the industry on this topic. We understand that the comments received were provided by a small segment of the industry; however, we are also aware that the communication from the commenters was was clear. The majority of commenters supported the retention of SOLs in the standards as necessary and appropriate. All of this being said, while we clearly do not agree with the wholesale removal of SOLs from the Standards, but we do support the removal of SOLs from TOP-004-1 Requirement 1 as specified in the SAR. We support this because the methodology used to determine SOLs, and for that matter, IROLs is not clearly defined. This means that one organization may be using a methodology that produces an eight hour SOL while another's method may produce a one hour SOL. We believe that the company using an eight hour limit should not be bound as tightly to that limit as a company that uses a one hour limit. Therefore, the SAR should direct the Standard Drafting team to develop, or at least investigate the development, of a limit methodology applicable across all of NERC that can be consistently applied. FE also offers the following comments to specific items revised in the SAR: Added IRO-004, IRO-005 & IRO-006 to the scope of the standards to be reviewed to eliminate redundant requirements. FE agrees

Question #1			
Commenter	**Yes**	**No**	**Comment**
			Clarified that the reason for recommending the deletion of TOP-002-2, R8 is because the requirement is unmeasurable. R8. Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency. FE disagrees with this direction. There does not appear to be an industry agreed upon justification given to remove this requirement in lieu of developing 'R8' along with eliminating ambiguity in the existing measure for this requirement described in 'M3'. Removed the recommendation for deleting TOP-002-2, R11: R11. The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator. FE agrees Reworded the recommendation in TOP-002-2, R14 & R15 to clarify that these requirements may be better addressed in other standards. R14. Generator Operators shall, without any intentional time delay, notify their Balancing Authority and Transmission Operator of changes in capabilities and characteristics including but no limited to: R14.1. Changes in real output capabilities R15. Generator Operators shall, at the request of the Balancing Authority or Transmission Operator, provide a forecast of expected real power output to assist in operations planning (e.g., a seven-day forecast of real output). FE agrees, but with the following provision: The SDT should also develop clear justification for addressing these requirements in "other standards" while identifying the appropriate "other standards"; and, if justified, the SDT should develop a clear, industry approved plan to transfer these requirements to those identified standards.

<table>
<tr><th colspan="4">Question #1</th></tr>
<tr><th>Commenter</th><th>Yes</th><th>No</th><th>Comment</th></tr>
<tr><td></td><td></td><td></td><td>Clarified the deletion requested in TOP-004-1, R1 is the reference to 'SOLs'
R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).
FE agrees, but with the following provision:

The SDT should also consider verbiage in the standards with regard to how SOLs can still be conveyed with some indirect measure (non-sanctioned) of importance in development of the applicable standards.</td></tr>
<tr><td colspan="4">FE agrees that IRO-004, 005 and 006 should be included in the scope of the SAR to eliminate redundancies

Response:
TOP-002-2
The debate regarding the removal of given requirements will be part of the standards development process (not the SAR process). The direction and philosophy of the Industry will be decided by the comments and responses to the standards. The Industry will decide whether or not to retain TOP-002-2 R8. The comments and responses will decide whether or not the measures associated with are appropriate. The question is whether or not to have the debate, and your response shows that there is such a need.

The SAR DT recognizes the need for coordination among standards. However, the SAR DT has the responsibility for defining the scope, it does not have the responsibility or the power to develop an implementation scheme for changes that have not yet been identified let alone approved. It is the Standards DT responsibility to coordinate the implementation of any changes that the industry approves during the standards development phase of the process.

TOP-004-1
The issue of SOL definition and requirements will be dictated by what requirements and standards are approved by the Industry.</td></tr>

Question #1			
Commenter	**Yes**	**No**	**Comment**
Group			
Response: The RTO SAR DT thanks you for your support.			
IESO	☑	☑	Since this comment form has only one question, we are checking both boxes - yes for inclusion of IRO-004, -005 and -006 but no to some of the changes made or not made to the previous SAR, and provide additional comments as follows: (1) Specific to the bullets provided in the background section, above, we agree with the first bullet and do not have any comments on the 2nd to 4th bullets. However, we do not agree with the 5th bullet to remove reference to SOL from TOP-004-1 R1, which requires that "Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs)." In the SAR DT's response posted in Consideration of Comments, it states that "Based on stakeholder comments, the SAR DT is proposing to retain requirements to (1) be aware of SOLs and (2) monitor system conditions related to SOLs." Removing reference to SOL in TOP-004-1 R1 contradicts with the above statement. Further, we continue to strongly disagree with the SDT that TOPs are not required to operate within SOLs - We agree that all SOLs are not created equally but there are those SOLs which have a tremendous impact on system reliability, much in the same way as IROLs, and given the appropriate conditions, these very SOLs, if not complied with, could have a highly detrimental impact on the system and subsequntly the interconnection (also see comments by others in the Consideration of Comments). (2) In the Consideration for Comments, the SAR DT responded to our previous comments under Question #9, from TOP-001 R2 to TOP-002 R18. We appreciate that the DT's concurs with most of our comments. However, we are unable to find the DT's response to our other comments, from TOP-003 to TOP-008. A review of the revised SAR indicates that changes proposed in the previous SAR for these standards/requirements would remain, some of which we expressed disagreement in our previous comment submission. Not seeing a response from the SAR DT, we are uncertain whether our comments were overlooked, or the DT concluded that our comments did not result in any material changes to the proposed revisions to these

Question #1			
Commenter	Yes	No	Comment
			standards. Assuming it was an oversight, we are providing our comments on TOP-003 to TOP-008 again as follows. We would appreciate seeing the DT's response to these comments when the Consideration of Comments on this revised SAR is posted. TOP-003-0 R3: the SDT suggests deleting R1.3 as it is redundant with IRO-010, R3 as part of the over-all data specification effort. We believe the referenced requirement should be R4. TOP-004-0 R1: the SDT suggests deleting R1 as it is redundant with IRO-009-1, R4. We disagree with this. SAR IRO-009-1 holds the RC responsible for operated within IROL. We feel strongly that the TOP must also operate its system to respect IROL. Further, we need to defer any changes to remove or modify SOL until after the definition of Adequate Level of reliability is defined. We also provided other reasons for retaining it. Please see our comments on Q2, above. R2: the SDT suggests deleting R2 as it is simply the definition of an IROL and is redundant with FAC-010-1 and FAC-011-1. We disagree with this proposal since R2 requires TOP to operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency. FAC-010-1 and FAC-011-1 deal with the methodology to determine SOL and IROL. They hold different entities for doing very different things altogether. R3: We disagree with removing this requirement for the above same reason. TOP-005-1 R2: the SDT suggests deleting this requirement. We agree that R2 is not a reliability requirement, but the SDT needs to recommend a home for entities that receive data from the ISN that it must sign the NERC Confidentiality Agreement for “Electric System Reliability Data".

Question #1			
Commenter	**Yes**	**No**	**Comment**
			TOP-006-1 R1: the SDT suggests deleting R1 as it is redundant with FAC-009-1, R2. We disagree with this proposal since R1 deals with real-time data such as facility status, resource availability; whereas FAC-009-1 deals with establishing ratings. R4: the SDT suggests deleting R4 as it is redundant with BAL-001 and -002 and is also addressed in IRO-010-1, R1 and R3. We disagree as R4 requires the operating entities to do things that are very different from any of BAL-001, BAL-002 and IRO-010-1. R7: the SDT considers deleting Balancing Authority as it is covered in BAL-005-0, R8 and deleting Reliability Coordinator as it is covered in BAL-008-1, R1. We do not agree with both. In the first case, the requirements for the BA in R7 is to monitor system frequency which is different than those in BAL-005-0, R8 which specify the data and metering requirements. In the second case, BAL-008 doesn't yet exist (failed ballot). TOP-008 R3: the SDT suggests deleting R3 as it is a local utility risk consideration and not a reliability issue as currently worded. We do not agree with the deletion since the requirement implies that the action taken by the TOP has interconnected system implication.

IESO supports expanding the scope of the SAR.

Response:

The IESO requests a comprehensive debate on SOLs, and that requires an independent SAR. The proposal to change TOP-004 would eliminate the immediate conflict and allow NERC to have a standard that all entities agree with (i.e. everyone agrees that TOPs should operate within IROLs.) while leaving the debate on SOLs for another SAR. As such the decision would be made by the voters and not by the SAR DT. The concern among some is with the fact that System Operating Limits are not “in every case” adhered to (or needed to be adhered to) – as IESO notes in its comments “not all SOLs are created equal.” TOPs often make use of multiple System Operating limits (instantaneous, short term and longer term limits). Exceeding a given limit while respecting a shorter time limit is an everyday occurrence. When is the TOP non-compliant? To which value? IROLs on the other hand are not viewed in the standards in the same way as SOLs. The IROL standards go as far as to require proactive operations before the limit is violated.

Question #1			
Commenter	**Yes**	**No**	**Comment**

The SAR DT did not see a contradiction in retaining requirements to monitor SOLs because although it is not uncommon to exceed some SOLs, it is still important to know what is happening on the system. By leaving the monitoring to RCs, the standards ensure that someone is watching out for 'reliability' but not necessarily for a precise limit compliance. RCs must be aware of those SOLs that do "have a tremendous impact". But unless and until there is a better definition of SOL, it will be impossible to separate which SOLs require compliance and which SOLs do not.

TOP-003-0
IRO-010-1 (dated March 8, 2007) does not have an R4. The SDT reference to R3 (which states that everyone must provide data to the RC) is a good replacement for the prescriptive TOP-003-0 R1.3 (which fixes times of day). Indeed one could argue that such timing requirements belong to NAESB not NERC.

The SAR DT does recognize that IRO-010-1 has not been approved. Therefore the Standards DT must consider that any Industry-approved changes should / must be coordinated with the other BOT-approved standards in place at the time the new modifications are to be implemented.

TOP-004-0
The SAR DT interprets R1 (having the RC and TOP both responsible for the same IROL) as redundant and suggests that the Industry consider formalizing the requestor's view. IESO asks that this debate not be raised. The SAR DT believes that it should be discussed. The SAR DT merely keeps this issue in its scope; the voters will decide the merit of that view.

R2 follows the same logic as R1. The SAR DT believes that the issue of whether or not RC and TOP having identical responsibilities is redundant is an issue that they want in their SAR.

R3 – The debate between RC and TOP not withstanding, this requirement must be kept within scope, if for no other reason then the fact that both FERC and NERC require removal of all references to RRO.

TOP-005-1
The SAR DT is not responsible for finding a home for the ISN. IESO agrees that the current requirement "is not a reliability requirement". IESO has not provided any justification for its position that the SAR DT has that obligation.

TOP-006-1
IESO is correct that the data requirements of TOP-006-1 R1 (unit availability) are different from the data requirements of FAC-009-1 R2 (unit capability / rating).

Contrary to the IESO statement, R4 requires does not require operating entities to do anything; R4 requires them to have

Question #1			
Commenter	**Yes**	**No**	**Comment**
data to predict "near-term load patterns". The SAR DT original comment was based on the concept that the real objective of load forecasting is system control. Hence whether or not an entity has data, the BAL standards require them to control the system. Of course near-term load forecasting is used in other areas of operation (e.g. unit commitment); the fact is that R4 is considered by some as being meaningless as a standard. As long as the entities have access to the internet they will have information to predict load. R7: The SAR DT does recognize that BAL-008 & 009 were not approved, but is also aware that they are under active reconsideration. R7 requires monitoring of frequency. The issue of redundancy arises from the fact that BA-005 requires BA have the information to compute ACE, and by definition ACE includes frequency, ergo, the BA is for all practical purposes monitoring frequency. Even if BAL-008 doesn't pass again, the RC is responsible for reliability (real power, reactive power, voltage and frequency). It makes no sense to have a standard for each item that must be monitored. Common sense must be applied to the standards. **TOP-008** See first two paragraphs of Response.			
MRO	☑	☑	If the SAR Drafting team feels that the Standard Drafting Team can handle three additional standards the MRO has no issue with including them in the scope. Additional comments: It has come to our attention that TOP-001-1 R3 is an exact duplicate of IRO-001-1 R8. Of theses two instances, it seems most appropriate to remove the Requirement in IRO-001-1 as that standard is focused on the responsibilities and authorities of the Reliability Coordinator. The MRO recommends either including this in the scope of this SAR or adding this comment to the future work of the IRO-001-1 standard. R8 in TOP-002-2 should not be eliminated because it is not measurable. The SDT should attempt to modify it so that there is a requirement on maintaining voltage or reactive levels that is measurable. If this is not possible, deletion would then be appropriate. It would seem more appropriate for the SDT to make this determination rather than the SAR DT. Because the SAR states that R14 and R15 in TOP-002-2 may be better addressed in

Question #1			
Commenter	**Yes**	**No**	**Comment**
			other standards, we are concerned that the standards drafting team may delete these requirements under the assumption that another team will add them to another standard. This standard drafting team should not remove these requirements unless they simply are not needed for reliability or are added to another standard in conjunction with the deletion. The MRO members are also confused on the SOL issue. In the Consideration of Comments to SAR 1 question #2, the SAR DT asked the if it would be appropriate to remove all requirements related to SOLs from the NERC Reliability Standards. 5 groups of commenters agreed with removing SOLs, 9 disagreed and 5 abstained. The SAR DT concluded that they would propose to retain requirements to (1) be aware of SOLs and (2) monitor system conditions related to SOLs, yet nothing was changed in the scope of this SAR to reflect that decision. It would have been advantageous to request comments on the new direction proposed by the SAR DT on SOLs as it was heavily commented on during the last round of comments. Also it appears that all SOL are not crated equal, see the discussion below discussing potential SOL issues. To the extent that an SOL is truly local (i.e. radial load serving line), there is no need for the SOL requirements. However, there are SOLs that may not pose a transmission security problem but could impose a generation adequacy problem on another system if the equipment should become damaged. Imports into another system may then be reduced. Additionally, multiple SOLs occuring on a system may be a sign of an undetected IROL. Clearly there should be an obligation on the part of the TOP and RC to review the situation to rule it out.
MRO supports expanding the scope of the SAR. **Response:** Both TOP-001 and TOP-002 are included in the scope of this SAR, and MRO will have the opportunity to be involved in what is or isn't included in those standard. Regarding the issue of SOLs, the SAR DT did not and does not intend to include a complete discussion of all the issues that must be debated on that topic. The SAR DT agrees with MRO that not all SOLs are created equal, and that is the reason the DT is proposing within this Project to, as much as possible, focus on IROLs. To eliminate confusion, MRO may desire to submit its own SAR regarding how to address SOLs.			

Question #1			
Commenter	**Yes**	**No**	**Comment**
ISO New England **NY ISO**		☑	Both IRO-006-3 and draft IRO-006-4 have the TOP listed in applicability section. However, neither actually has any requirement in the standard. They simply reference the TOP in the requirements. Because there is not the typical question regarding additional comments in the comment form, we will provide those here. R8 in TOP-002-2 should not be eliminated because it is not measurable. The standards drafting should attempt to modify it so that there is a requirement on maintaining voltage or reactive levels that is measurable. If this is not possible deletion may be appropriate, but the industy, not the SAR drafting team, should not be making this determination. Because the SAR states that R14 and R15 in TOP-002-2 may be better addressed in other standards, we are concerned that the standards drafting team may delete these requirements under the assumption that another team will add them to another standard. This standard drafting team should not remove these requirements unless they simply are not needed for reliability or added to another standard in conjunction with the deletion. The SAR drafting team should modify the scope so that all requirements to monitor and control flows within SOLs are not eliminated. While the SAR drafting team points out in their response to the comments that NERC's definition defines an SOL as local, eliminating all requirements to monitor and control to SOLs will be detrimental to reliability. Multiple SOLs occuring on a system may be a sign of an undetected IROL or, if left unchecked, propagate into an IROL. This was the cause of the August 14th blackout. Clearly there should be an obligation on the part of the TOP and RC to monitor and mitigate these limits to prevent such propagation.
ISO NE & NYISO do not support expansion of the scope of the SAR. **Response:** **IRO-006** The commenter is correct that the TOP is not in IRO-006. **TOP-002-2** The debate regarding the removal of given requirements will be part of the standards development process. The direction and			

Question #1			
Commenter	**Yes**	**No**	**Comment**
philosophy of the Industry will be decided by the comments and responses to the standards. The Industry will decide whether or not to retain TOP-002-2 **R8**. The comments and responses will decide whether or not the measures associated with are appropriate. The question posed by the DT is whether or not to have the debate, and your comments show that there is such a need. Regarding R14 and R15, the SAR DT does not add or remove anything; and in fact the Standards Drafting Team does not add or remove anything. The voters decide what gets included and what gets excluded. The SAR DT has proposed a scope of standards to be addressed for the purpose of eliminating redundancies and removing non-standards. The voters decide which standards / requirements get modified or changed. **SOLs** The issue of whether or not there is a need for a standard that SOLs should be monitored is proposed. If the voters agree they will eliminate the requirement and if they want to keep it they will retain the requirements. The SAR DT wants to have the debate whether or not NY and NE agree, SARs are scoping documents designed to request changes. Once approved the SAR is the starting point for debates on issues identified by the SAR drafter. NY and NE must participate in the standards process to make their point, rather than avoid the impending required debate.			
MISO Stakeholders		☑	We are concerned that the SAR drafting team did not provide an opportunity to comment on their proposed resolution to the SOL issue identified in Question 2 of the previous draft's comment form. It appears that the drafting team did not adequately address the view expressed by the majority of the commenters. We draw this conclusion from the inconsistency in the determination of what is a consensus and what isn't. For example, the comment form shows that the SAR drafting team wrote: "The SAR drafting team appreciates that the industry is near consensus," in response to comments on Question 1. There were 13 yes votes in support, 6 no votes against and 4 abstentions. In response to question 7, the SAR drafting team wrote: "The consensus is that the industry agrees with the stated purpose of the SAR." There were 14 yes votes indicating support, nine no votes indicating disagreement and no abstentions. Question 2 asked if the commenter agreed that SOLs should be moved into guides or good utility practices. 13 commenters voted no, 6 voted yes and 7 abstained. Given that the drafting team found near consensus on question 1 and consensus on question 7, we question why the drafting team does not view the responses to question 2 as a consensus? We are further troubled by the drafting team's solution to this SOL issue. In the responses, the SAR DT proposes to retain requirements to be aware of SOLs and monitor system conditions related to SOLs. However, there is actually no scope changes that

Question #1			
Commenter	**Yes**	**No**	**Comment**
			reflect this response in draft 2 of the SAR. Addtionally, the drafting team asked only one specific question in the comment form for draft 2. It is unusual to not add the general open ended question that allows the commenter to provide any additional comments. We find this unusual given that the drafting team chose the word propose in their response. Use of this word would tend to invite a response because one is not sure that the proposal is acceptable. If the drafting team had an expectation that the proposal may not be acceptable, why would they not ask if the proposal is acceptable in the comment form? We believe they should have asked specifically if the proposed solution would "bridge the divide" between the commenters and the drafting team. Clearly they are on opposite ends of a spectrum with the SOL issue and one would think it would be prudent to determine if the gap has been narrowed enough before moving on to the standards drafting phase. We also believe that the SAR DT did not follow the Reliability Standards Development Procedure. On page 16, under step 2 is the following paragraph: "The requester, assisted by the SAR drafting team if one is appointed, shall give prompt consideration to written views and objections of all participants. An effort to resolve all expressed objections shall be made and each objector shall be advised of the disposition of the objection and the reasons therefore." It would appear that the SAR DT did not fully resolve expressed objections with removal of SOL requirements and should continue working to do so. We also have the following specific issues with the SAR. R8 in TOP-002-2 should not be eliminated because it is not measurable. The standards drafting team should attempt to modify it so that there is a requirement on maintaining voltage or reactive levels that is measurable. If this is not possible, deletion would then be appropriate. The SAR drafting team should not be making this determination. Because the SAR states that R14 and R15 in TOP-002-2 may be better addressed in other standards, we are concerned that the standards drafting team may delete these requirements under the assumption that another team will add them to another standard. This standard drafting team should not remove these requirements unless

Question #1			
Commenter	**Yes**	**No**	**Comment**
			they simply are not needed for reliability or are added to another standard in conjunction with the deletion. The SAR drafting team should modify the scope so that all requirements to monitor and control flows within SOLs are not eliminated. While the SAR drafting team points out in their response to the comments that NERC's definition defines an SOL as local, eliminating all requirements to monitor and control to SOLs will be detrimental to reliability. To the extent that an SOL is truly local (i.e. radial load serving line), there is no need for this requirement. However, there are SOLs that may not pose a transmission security problem but could impose a generation adequacy problem on another system if the equipment should become damaged. Imports into another system may then be reduced. Additionally, multiple SOLs occuring on a system may be a sign of an undetected IROL. Clearly there should be an obligation on the part of the TOP and RC to review the situation to rule it out.

MISO does not support expanding the scope of the SAR.

Response:

If MISO Stakeholders believes that there was a blatant disregard for the process they can file a complaint with the NERC Standards Committee.

MISO Stakeholders should not be troubled by the SAR DT's "solution" to the SOL issue, because the SAR DT did not provide a solution – they provided a scope of work to address prior industry questions to reduce / eliminate redundancies. If MISO Stakeholders would like to propose SOL standards, again they are free to draft a SAR on SOLs. This was not an SOL SAR.

TOP-002-2:
MISO Stakeholders proposes that the Standards DT (not the SAR DT) decide on whether or not to keep R8. The SAR DT thanks MISO Stakeholders for their agreement to keep this requirement within scope.

Regarding **R14** and **R15** MISO Stakeholders has a position that they want to effect. That is a legitimate position, but the SAR DT cannot ensure that the MISO Stakeholders position will be agreed to in the standards process. MISO Stakeholders has the misconception that the Standards DT will write the final requirements. The Standards DT will not remove any requirements unless the industry approves of removing those requirements.

Regarding monitoring requirements, MISO Stakeholders has a position on the requirements and they ask that the SAR DT protect that position. It is not the responsibility of the DT to protect a given company's position. This SAR is a scoping

Question #1			
Commenter	**Yes**	**No**	**Comment**
document not a process to ensure any one position. The idea of protecting equipment from damage is a laudable goal but it is not a goal of this SAR. To be a goal of a standard, the term Equipment damage would need to be defined. This DT does not include that concern in its purpose. Regarding Generation adequacy, that is outside the purpose of this SAR. Adequacy will be dealt with in a separate SAR. Here again, there is no reason MISO Stakeholders can not submit its own SAR to address this concern.			
American Transmission Co.		☑	The SDT has not provided any information as to scope of work that will be performed on IRO-004, 005 and 006 in the posted version of the SAR. Therefore ATC does not agree with the expanded scope. The SAR SDT must provide information as to why these standards must be worked on as part of this effort. We request that the SAR SDT provided the necessary information and post a revised version of the SAR for comment. Additional comments: Issue 1: A majority of comments submitted on Question 2 (Initial SAR posting) did not support the SDT proposal to remove SOL requirements from NERC's Reliability Standards. ATC believes that SOLs are a BES issue and must continue to be part of NERC Reliability Standards. ATC does not agree with the SDT proposed compromise that would limit Reliability Standards to only requiring monitoring of SOL. (Note: The SAR provides little to no justification as to why SOL should be removed from NERC Reliability Standards.) "Question 2 (initial SAR posting): The SAR DT believes that SOLs, while very important to local utility operations, are not a true Bulk Electric System reliability issue, and as such, believes that any requirements related to SOLs should be moved into guides or other reference documents, to be added to the literature on 'good utility practice'. Do you agree?" Issue 2: ATC continues to disagree with the current scope of work. We find that scope of work's description is overly prescriptive and not complete. It seems that the SAR is attempting to remove requirements that address SOL conditions from NERC standards but that is never specifically stated in the SAR. It's also import to note that in Appendix B of the SAR no specific request was made to remove SOL from NERC standards. Many of the requests in Appendix B only support clarification and removal of redundant

Question #1			
Commenter	**Yes**	**No**	**Comment**
			requirements. It's our position that the effort to remove SOLs from NERC standards will reduce interconnection reliability. Therefore ATC can not support this SAR until a proper scope of work is developed. The scope should be limited to clarifying existing requirements by; removing redundancy, better alignments of requirements to measures and removal/clarification of ambiguous language. Issue 2a: COM-001 Is currently being worked on in projects 2006-04 & 2006-06 COM-002 Is currently being worked on in projects 2006-06 & 2007-02 IRO-004 Is currently being worked on in project 2007-02 IRO-005 Is currently being worked on in project 2007-02 & 2007-18 IRO-006 Is currently being worked on in project 2006-08 Lastly ATC believes that this project should be delayed until the all previously identified efforts have been completed in order to insure an efficient work flow. If this project is moved into the standard development phase five Standards will have parallel efforts on going. Coordination will be extremely difficult if not impossible to manage.

ATC does not support expanding the scope.

Response:

ATC requests a response to why the SAR DT asked to include the subject three standards. Answer: In reviewing a comment received during the last round of comments, it was brought to the DT's attention that there were redundancies in IRO004, 005 and 006. In order to address those redundancies it was necessary to ask the industry if the scope could be expanded. As these three standards have been found acceptable to the majority of the current commenters, the SAR DT will now include them in the scope and will post the new SAR for approval.

Issue 1. The purpose of the SAR is to remove redundancies, the issue of SOLs is left to the Industry decide by the process. If this particular SAR does not meet ATC's concerns then ATC should submit its own request.

Question #1			
Commenter	**Yes**	**No**	**Comment**
Regarding the question of being prescriptive (which in the next paragraph ATC states we should further limit) - the SAR DT was prescriptive in exactly what is to be in the scope of work. The idea was to ensure that the Standards DT isn't inundated with other people's unrelated issues. ATC states that the scope is incomplete but does not specify how to complete it. Is it a redundancy that was missed or is it an unrelated issue? The SAR simply proposes a scope of work designed primarily to eliminate redundancies. Deletion or changes to existing requirements would occur in the standards drafting process. We agree with ATC that the scope should be focused (i.e., prescriptive) on removing redundancies. For items that are not included in this SAR's scope, ATC is encouraged to submit its own scope of work Regarding **Issue 2a** – ATC lists a number of standards that are addressed in various other NERC projects. The SAR DT would remind ATC that each standard has more than one requirement. And it is these diverse requirements that each Project is addressing. If there is overlapping requirements then ATC is encouraged to bring that to the attention of NERC Staff. **Lastly**, the SAR DT works at the will of NERC. The DT was assigned to begin its work and complete its scoping document. If ATC does not agree with NERC starting this project, then they should inform the NERC staff and the NERC Standards Committee of their concerns.			

Question #1			
Commenter	**Yes**	**No**	**Comment**
Hydro-Québec TransÉnergie		☑	Both IRO-006-3 and draft IRO-006-4 have the TOP listed in applicability section. However, neither actually has any requirement in the standard. They simply reference the TOP in the requirements. We think that the scope should not be restricted to only eliminate redundancy in IRO-004, -005 and -006 but should permit other changes in those standards. Hydro-Québec TransÉnergie would probably have some proposition to make because of the characteristics of Québec Interconnexion. The SAR drafting team should modify the scope so that all requirements to monitor and control flows within SOLs are not eliminated. While the SAR drafting team points out in their response to the comments that NERC's definition defines an SOL as local, eliminating all requirements to monitor and control to SOLs will be detrimental to reliability. Multiple SOLs occuring on a system may be a sign of an undetected IROL or, if left unchecked, propagate into an IROL. This was the cause of the August 14th blackout. Clearly there should be an obligation on the part of the TOP and RC to monitor and mitigate these limits to prevent such propagation.

HQ TransEnergie does not support expanding the scope.

Response:
The commenter is correct that the TOP is not in IRO-006.

When the Standards process begins, Hydro Quebec can suggest changes to those standards in scope. And if that is not suffcient Hydro Quebec is encougaged to submit its own SAR.

Regarding monitoring requirements, Hydro Quebec has a position on the requirements and they ask that the SAR DT protect that position. It is not the responsibility of the DT to protect a given position. This SAR is simply a scoping document.

IRO-005-2 R1 requires the RC to monitor SOLs. Clearly multiple SOLs in different parts of a system can only be coordinated by an RC. At best a TOP can only deal with its own limited subset. That is a current requirement and unless changed through the Reliability Standards Development Procedure, that requirement will remain.

Maureen E. Long
Standards Process Manager

November 13, 2007

TO: REGISTERED BALLOT BODY

Ladies and Gentlemen:

Announcement: Nomination Period Opens for Standard Drafting Team

The Standards Committee announces the following standards action:

Nominations for Project 2007-03 Real-time Operations Standards Drafting Team (November 13–November 30, 2007)

The Standards Committee is seeking industry experts to serve on the Real-time Operations Standards Drafting Team. The drafting team will work to modify the following standards:

- COM-001 — Telecommunications
- COM-002 — Communications and Coordination
- IRO-004 — Reliability Coordination — Operations Planning
- IRO-005 — Reliability Coordination — Current Day Operations
- IRO-006 — Reliability Coordination — Transmission Loading Relief
- TOP-001 — Reliability Responsibilities and Authorities
- TOP-002 — Normal Operations Planning
- TOP-003 — Planned Outage Coordination
- TOP-004 — Transmission Operations
- TOP-005 — Operational Reliability Information
- TOP-006 — Monitoring System Conditions
- TOP-007 — Reporting SOL and IROL Violations
- TOP-008 — Response to Transmission Violations
- PER-001 — Operating Personnel Responsibility and Authority

If you are interested in serving on this standard drafting team, please complete this nomination form and send it to sarcomm@nerc.net by November 30, 2007 with the words "Real-time SDT" in the subject line. For questions, please contact Ed Dobrowolski at 609-947-3673 or ed.dobrowolski@nerc.net.

Standards Development Process

The *Reliability Standards Development Procedure* contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. If you have any questions, please contact me at 813-468-5998 or maureen.long@nerc.net.

Sincerely,

Maureen E. Long

Nomination Form for Real-time Operations Standard Drafting Team (Project 2007-03)

Please return this form to sarcomm@nerc.net by November 30, 2007 with the words "Real-time SDT" in the subject line. If you have any questions, please contact Ed Dobrowolski at 609-947-3673 or ed.dobrowolski@nerc.net.

All candidates should be prepared to participate actively at these meetings.

Name: Organization: Address: Office Telephone: E-mail:
Please briefly describe your experience and qualifications to serve on the Real-time Operations Standards Drafting Team. Prefer experience in managing real-time operations for entities registered as Transmission Operators, Transmission Owners, Balancing Authorities and Reliability Coordinators. Previous experience working on or applying NERC or IEEE standards is beneficial, but not a requirement.

I represent the following NERC Reliability Region(s) (check all that apply):	**I represent the following Industry Segment (check one):**	
☐ ERCOT ☐ FRCC ☐ MRO ☐ NPCC ☐ RFC ☐ SERC ☐ SPP ☐ WECC ☐ NA – Not Applicable	☐	1 — Transmission Owners
	☐	2 — RTOs, ISOs
	☐	3 — Load-serving Entities
	☐	4 — Transmission-dependent Utilities
	☐	5 — Electric Generators
	☐	6 — Electricity Brokers, Aggregators, and Marketers
	☐	7 — Large Electricity End Users
	☐	8 — Small Electricity End Users
	☐	9 — Federal, State, and Provincial Regulatory or other Government Entities
	☐	10 — Regional Reliability Organizations and Regional Entities

Which of the following Function(s)[1] do you have expertise or responsibilities:

☐ Balancing Authority	☐ Planning Coordinator
☐ Compliance Enforcement Authority	☐ Transmission Operator
☐ Distribution Provider	☐ Transmission Owner
☐ Generator Operator	☐ Transmission Planner
☐ Generator Owner	☐ Transmission Service Provider
☐ Interchange Authority	☐ Purchasing-selling Entity
☐ Load-serving Entity	☐ Resource Planner
☐ Market Operator	☐ Reliability Coordinator

Provide the names and contact information for two references who could attest to your technical qualifications and your ability to work well in a group.

[1] These functions are defined in the NERC Functional Model, which is downloadable from the NERC Web site.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the first posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project Pre-2006, Operate Within Interconnection Reliability Operating Limits (IRO-008 through IRO-010), and Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. First posting of revised standards.	October 2008
2. Second posting of revised standards.	January 2009
3. Third posting of revised standards.	April 2009
4. Post for ballot.	July 2009
5. Post for re-ballot.	September 2009
6. Submit to BOT.	September 2009
7. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. Title: **Coordination of Transmission Operations**

2. Number: TOP-001-2

3. Purpose:

To ensure coordination between and among functional entities for the reliability of the Bulk Electric System (BES).

4. Applicability

4.1. Balancing Authorities

4.2. Transmission Operators

4.3. Generator Operators

4.4. Distribution Providers

4.5. Load-Serving Entities

5. Effective Date: All requirements become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless the respective entity informs the Transmission Operator that such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R2. Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of Real-Time or anticipated Emergency conditions, including potential impacts caused by disconnections prior to switching. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall render emergency assistance to others, as requested and available, unless such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R4. Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to affect other reliability entities with those entities unless System conditions do not permit such coordination. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R5. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R6. The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R7. Each Transmission Operator shall operate the Bulk Electric System to the most limiting parameter when there is a difference in derived operating limits amongst reliability entities. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

C. Measures

M1. The Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall each make available upon request, in accordance with Requirement R1, evidence that it either: (a) complied with reliability directives issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M2. The Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and affected Transmission Operators of Real-Time or anticipated Emergency conditions, including potential impacts caused by disconnections prior to switching, in accordance with Requirement R2. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M3. The Transmission Operator, Balancing Authority, and Generator Operator shall each make available upon request, evidence that requested and available emergency assistance was rendered to others in accordance with Requirement R3 unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M4. The Transmission Operator and Generator Operator shall each make available upon request, evidence that operations were coordinated among affected reliability entities in accordance with Requirement R4 unless System conditions do not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M5. The Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M6. The Transmission Operator shall make available evidence of when it acted or directed others to mitigate the magnitude and duration of exceeding an IROL within the IROL's

Tv in accordance with Requirement R6. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M7. The Transmission Operator shall make available evidence such as dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts, of any occasion when it operated to a limiting parameter due to differing operating limits amongst reliability entities in accordance with Requirement R7.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall each retain for the current calendar year and one previous calendar year, in accordance with Requirement R1 and Measurement M1, evidence that it either: (a) complied with reliability directives issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements.
- The Transmission Operator shall retain evidence for the current calendar year and one previous calendar year that it has informed its Reliability Coordinator and affected Transmission Operators of Real-Time or anticipated Emergency conditions in accordance with Requirement R2 and Measurement M2.

- The Transmission Operator, Balancing Authority, and Generator Operator shall retain evidence for the current calendar year and one previous calendar year that requested and available emergency assistance was rendered to others in accordance with Requirement R3 and Measurement M3 unless such actions would violate safety, equipment, regulatory, or statutory requirements.
- The Transmission Operator and Generator Operator shall retain evidence for the current calendar year and one previous calendar year that operations known or expected to affect other Reliability Entities were coordinated among affected Reliability Entities in accordance with Requirement R4 and Measurement M4 unless System conditions do not permit such coordination.
- The Transmission Operator shall make available evidence for three calendar years that it has informed its Reliability Coordinator of actions being taken to return the System to within limits when an IROL or SOL has been exceeded in accordance with Requirement R5 and Measurement M5.
- The Transmission Operator shall make available evidence of when it acted, or directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv in accordance with Requirement R6 and Measurement M6.
- The Transmission Operator shall retain evidence for the current calendar year and one previous calendar year of any occasion when it operated to a limiting parameter due to differing operating limits amongst reliability entities in accordance with Requirement R7 and Measurement M7.

If a Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, or Generator Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with reliability directives issued by the Transmission Operator, unless the respective entity informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements on one occasion.	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with reliability directives issued by the Transmission Operator, unless the respective entity informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements on two occasions.	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with reliability directives issued by the Transmission Operator, unless the respective entity informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements on three occasions.	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with reliability directives issued by the Transmission Operator, unless the respective entity informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements on four or more occasions.
R2	The Transmission Operator did not inform its Reliability Coordinator and affected Transmission Operators of real- time or Emergency conditions on one occasion.	The Transmission Operator did not inform its Reliability Coordinator and affected Transmission Operators of real- time or Emergency conditions on two occasions.	The Transmission Operator did not inform its Reliability Coordinator and affected Transmission Operators of real- time or Emergency conditions on three occasions.	The Transmission Operator did not inform its Reliability Coordinator and affected Transmission Operators of real- time or Emergency conditions on four or more occasions.
R3	N/A	N/A	N/A	The Transmission Operator, Balancing Authority, or Generator Operator did not render emergency assistance to others, as requested and available, unless such actions would violate safety, equipment, regulatory, or statutory requirements.

	Lower	Moderate	High	Severe
R4	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to affect other reliability entities with one affected reliability entity or 25% or less of the affected reliability entities unless System conditions did not permit such coordination.	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to affect other reliability entities with two affected reliability entities or more than 25% or less than or equal to 50% of the affected reliability entities unless System conditions did not permit such coordination.	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to affect other reliability entities with three affected reliability entities or more than 50% or less than or equal to 75% of the affected reliability entities unless System conditions did not permit such coordination.	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to affect other reliability entities with four or more affected entities or more than 75% of the affected entities unless System conditions did not permit such coordination.
R5	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded on one occasion.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded on two occasions.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded on three occasions.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded on four or more occasions.
R6	The Transmission Operator did not make available evidence of the timing of when it acted, or directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv on one occasion.	The Transmission Operator did not make available evidence of the timing of when it acted, or directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv on two occasions.	The Transmission Operator did not make available evidence of the timing of when it acted, or directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv on three occasions.	The Transmission Operator did not make available evidence of the timing of when it acted, or directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv on four or more occasions.

	Lower	Moderate	High	Severe
R7	The Transmission Operator did not operate the BES to the most limiting parameter when there was a difference in derived operating limits amongst reliability entities on one occasion.	The Transmission Operator did not operate the BES to the most limiting parameter when there was a difference in derived operating limits amongst reliability entities on two occasions.	The Transmission Operator did not operate the BES to the most limiting parameter when there was a difference in derived operating limits amongst reliability entities on three occasions.	The Transmission Operator did not operate the BES to the most limiting parameter when there was a difference in derived operating limits amongst reliability entities on four or more occasions.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2	TBD	Revisions pursuant to Project 2007-03	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the first posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project Pre-2006, Operate Within Interconnection Reliability Operating Limits (IRO-008 through IRO-010), and Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. First posting of revised standards.	October 2008
2. Second posting of revised standards.	January 2009
3. Third posting of revised standards.	April 2009
4. Post for ballot.	July 2009
5. Post for re-ballot.	September 2009
6. Submit to BOT.	September 2009
7. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

Simulated Contingencies – The act of using planning and operating models to replicate Contingency responses that depict the net effect of design considerations

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that reliability entities have coordinated plans for meeting expected operating conditions.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and Simulated Contingency events. *[Violation Risk Factor: Low] [Time Horizon: Same-day Operations]*

R2. The Transmission Operator shall plan to preclude operating in excess of any Interconnection Reliability Operating Limits (IROLs) including those identified as a result of the assessment performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations]*

R3. The Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s). *[Violation Risk Factor: High] [Time Horizon: Same-day Operations]*

C. Measures

M1. The Transmission Operator shall have evidence that it has assessed next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated operator logs or reports.

M2. The Transmission Operator shall have evidence that it has planned to preclude operating in excess of the IROLs identified as a result of the assessment performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans, processes, or procedures for precluding operating in excess of each IROL.

M3. The Transmission Operator shall make available evidence that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

   1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Transmission Operator shall retain evidence for a rolling six month period that it has assessed next day operations in accordance with Requirement R1 and Measurement M1.
- The Transmission Operator shall retain evidence for a rolling six month period that it has planned to preclude operating in excess of any IROL identified as a result of the assessment performed in Requirement R1 in accordance with Requirement R2 and Measurement M2.
- The Transmission Operator shall retain evidence for a rolling twelve-month period that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3 and Measurement M3.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not perform an assessment for the next day's operation that indicated whether it will exceed any of its SOLs during anticipated normal and Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not plan to preclude operating in excess of any IROLs identified as a result of the assessment performed in Requirement R1.
R3	The Transmission Operator did not notify one of the reliability entities or 25% or less of the reliability entities identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify two of the reliability entities or more than 25% and less than or equal to 50% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify three of the reliability entities or more than 50% and less than or equal to 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify four or more of the reliability entities or more than 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).

E. Regional Variances

None identified.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**
2. **Number:** TOP-003-1
3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to plan and operate the Transmission system.
4. **Applicability**
   - **4.1.** Transmission Operators.
   - **4.2.** Balancing Authorities.
   - **4.3.** Generator Owners.
   - **4.4.** Generator Operators.
   - **4.5.** Interchange Authorities.
   - **4.6.** Load-Serving Entities.
   - **4.7.** Transmission Owners.
5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall have a documented specification for data to support its Real-time monitoring and reliability assessments. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

- **R1.1.** A list of required data to be exchanged.
- **R1.2.** A mutually agreeable format.
- **R1.3.** A timeframe and periodicity for providing data.

R2. Each Transmission Operator shall distribute its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R3. Each Balancing Authority shall distribute its data specification to entities that provide Facility status to the Balancing Authority. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R5. Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator and Balancing Authority shall make available its dated, current, in force documented specification for data to support its reliability assessments in accordance with Requirement R1.

M2. Each Transmission Operator shall make available evidence that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M3. Each Balancing Authority shall make available evidence that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall make available evidence that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) in accordance with Requirement R4. The data is limited to that needed by the Transmission Operator to support Operational Planning Analyses and reliability assessments. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those entities necessary for reliability assessments and Real-time operation in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

Regional Entity

1.2. Compliance Monitoring Period and Reset Timeframe

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certification

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator and Balancing Authority shall retain their dated, current, in force, documented specification for data to support their reliability assessments in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2 and Measurement M2.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall retain evidence for 90 calendar days that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) in accordance with Requirement R4 and Measurement M4.
- Each Transmission Operator and Balancing Authority shall retain evidence for 90 calendar days that it has provided to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those entities necessary for reliability assessments and Real-Time operations in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The Transmission Operator or Balancing Authority did not have one of the required elements of the documented specification for data to support its real-time monitoring and reliability assessments.	The Transmission Operator or Balancing Authority did not have two of the required elements of the documented specification for data to support its real-time monitoring and reliability assessments.	N/A	The Transmission Operator or Balancing Authority did not have a documented specification for data and information to support its real-time monitoring and reliability assessments.
R2	The Transmission Operator did not distribute its data specification to one entity or 25% or less of the entities that has Facilities monitored by the Transmission Operator or to one entity or 25% or less of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to two entities or more than 25% and less than or equal to50% of the entities that have Facilities monitored by the Transmission Operator or to two entities or more than 25% and less than or equal to 50% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to three entities or more than 50% and less than or equal to 75% of the entities that have Facilities monitored by the Transmission Operator or to three entities or more than 50% and less than or equal to 75% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to four or more entities or more than 75% of the entities that have Facilities monitored by the Transmission Operator or to four or more entities or more than 75% of the entities that provide Facility status to the Transmission Operator.
R3	The Balancing Authority did not distribute its data specification to one entity or 25% or less of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to two entities or more than 25% and less than or equal to 50% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to three entities or more than 50% and less than or equal to 75% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to four or more entities or more than 75% of the entities that provide Facility status to the Balancing Authority.
R4	N/A	N/A	N/A	The Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, or Transmission Owner did not

				provide data and information, as specified in Requirement R1, to its Transmission Operator(s).
R5	N/A	N/A	N/A	The Transmission Operator or Balancing Authority did not provide to other Transmission Operators or Balancing Authorities with immediate responsibility for operational reliability, the data and information requested by those entities necessary for real-time monitoring and reliability assessments.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the first posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project Pre-2006, Operate Within Interconnection Reliability Operating Limits (IRO-008 through IRO-010), and Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. First posting of revised standards.	October 2008
2. Second posting of revised standards.	January 2009
3. Third posting of revised standards.	April 2009
4. Post for ballot.	July 2009
5. Post for re-ballot.	September 2009
6. Submit to BOT.	September 2009
7. Submit to governmental authorities.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Real-time Transmission Operations**

2. **Number:** TOP-004-3

3. **Purpose:** To ensure that Transmission Operators act to preserve the reliability of the Bulk Electric System in Real-time.

4. **Applicability:**

   4.1. Transmission Operators.

5. **Proposed Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limits (IROLs) and its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R2. Each Transmission Operator shall have Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside identified Interconnection Reliability Operating Limits (IROLs) and their associated IROL T_v as specified in Requirement R1. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion outside of the identified IROL and applicable IROL T_v.

M2. Each Transmission Operator shall make available evidence that it has Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2. Such evidence could include but is not limited to a dated document with confirmation of the Agreement in electronic or hard copy format.

D. Compliance

1. **Compliance Monitoring Process**

   1.1. Compliance Enforcement Authority

   Regional Entity

   1.2. Compliance Monitoring and Reset Time Frame

   Not applicable

   1.3. Compliance Monitoring and Enforcement Processes

   Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

Exception Reporting of any occasion in which it has operated outside an identified IROL and the applicable IROL T_v as specified in Requirement R1 and Measurement M1.

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Transmission Operator shall retain evidence for three calendar years of any occasion in which it has operated outside identified IROL and its associated IROL T_v as specified in Requirement R1 and Measurement M1.
- The Transmission Operator shall retain evidence that it has current in force Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2 and Measurement M2 as well as any Agreements in force since the last compliance audit.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

Submit exception reports of each instance of exceeding an IROL for time greater than the associated IROL T_v to the Compliance Enforcement Authority within thirty calendar days of the event.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not operate within an identified Interconnection Reliability Operating Limits (IROL) and the associated IROL T_v for any single occasion.
R2	The Transmission Operator does not have Agreements with one of its directly interconnected Transmission Operators or 25% or less of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.	The Transmission Operator does not have Agreements with two of its directly interconnected Transmission Operators or more than 25% and less than or equal to 50% of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.	The Transmission Operator does not have Agreements with three of its directly interconnected Transmission Operators or more than 50% and less than or equal to 75% of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.	The Transmission Operator does not have Agreements with four or more of its directly interconnected Transmission Operators or more than 75% of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.

E. Regional Variances

None identified.

Deleted: of 13

A. Introduction

1. **Title:** **Coordination of Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:**

To ensure coordination between and among functional entities for the reliability of the Bulk Electric System (BES).

4. **Applicability**

4.1. Balancing Authorities

4.2. Transmission Operators

4.3. Generator Operators

4.4. Distribution Providers

4.5. Load-Serving Entities

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with reliability directives issued by the Transmission Operator, unless the respective entity informs the Transmission Operator that such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R2. Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of Real-Time or anticipated Emergency conditions, including potential impacts caused by disconnections prior to switching. *[Violation Risk Factor:High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R3. Each Transmission Operator, Balancing Authority, and Generator Operator shall render emergency assistance to others, as requested and available, unless such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R4. Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to affect other reliability entities with those entities unless System conditions do not permit such coordination. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R4.1.

R5. Each Transmission Operator shall inform its Reliability Coordinator ~~when an IROL or SOL has been exceeded and the~~ of actions being taken to return the system to within limits when an

IROL or SOL has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R6. The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_V. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R7. Each Transmission Operator shall operate the Bulk Electric System to the most limiting parameter when there is a difference in derived operating limits amongst reliability entities. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*

C. Measures

M1. The Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall each make available upon request, in accordance with Requirement R1, evidence that it either: (a) complied with reliability directives issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M2. The Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and affected Transmission Operators of Real-Time or anticipated Emergency conditions, including potential impacts caused by disconnections prior to switching, in accordance with Requirement R2. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M3. The Transmission Operator, Balancing Authority, and Generator Operator shall each make available upon request, evidence that requested and available emergency assistance was rendered to others in accordance with Requirement R3 unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M4. The Transmission Operator and Generator Operator shall each make available upon request, evidence that operations were coordinated among affected reliability entities in accordance with Requirement R4 unless System conditions do not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M5. The Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M6. The Transmission Operator shall make available evidence of when it acted or directed others to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_V in accordance with Requirement R6. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M7. The Transmission Operator shall make available evidence such as dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts, of any occasion

or

Page 3: [12] Deleted	**Edd**	**9/25/2008 10:28:00 AM**

not remove Bulk Electric System facilities from service if removing those facilities would burden neighboring systems unless:

Page 3: [13] Comment [Edd6]	**Edd**	**9/25/2008 11:05:00 AM**

The sub-requirements have been incorporated into the main requirement.

Page 3: [14] Deleted	**Edd**	**9/25/2008 10:29:00 AM**

For a generator outage, the Generator Operator shall notify and coordinate with the Transmission Operator. The Transmission Operator shall notify the

Reliability Coordinator and other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility.

For a transmission facility, the Transmission Operator shall notify and coordinate with its Reliability Coordinator. The Transmission Operator shall notify other affected Transmission Operators, and coordinate the impact of removing the Bulk Electric System facility.

When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, the Generator Operator shall notify the Transmission Operator, and the Transmission Operator shall notify its Reliability Coordinator and adjacent Transmission Operators, at the earliest possible time.

Page 3: [15] Comment [Edd7] **Edd** **9/25/2008 11:05:00 AM**

Deleted due to redundancy with CPS, DCS, and VAR standards. Deleted requirement for real power as redundant with EOP-002-2, R1 & R6. This is only applicable to the BA. Deleted requirement for reactive as one can't supply emergency reactive assistance remotely.

Page 3: [16] Deleted **longm** **10/6/2008 8:37:00 AM**

During a system emergency, the Balancing Authority and Transmission Operator shall immediately take action to restore the Real and Reactive Power Balance. If the Balancing Authority or Transmission Operator is unable to restore Real and Reactive Power Balance it shall request emergency assistance from the Reliability Coordinator. If corrective action or emergency assistance is not adequate to mitigate the Real and Reactive Power Balance, then the Reliability Coordinator, Balancing Authority, and Transmission Operator shall implement firm load shedding

Page 1: [17] Deleted **Edd** **9/25/2008 10:12:00 AM**

Page 4: [19] Deleted **Edd** **9/25/2008 10:52:00 AM**

Each Transmission Operator, Balancing Authority, and Generator Operator shall have and provide upon request evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it complied with its Reliability Coordinator's reliability directives. If the Transmission Operator, Balancing Authority or Generator Operator did not comply with the directive because it would violate safety, equipment, regulatory or statutory requirements, it shall provide evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that it immediately informed the Reliability Coordinator of its inability to perform the directive. (Requirement 3)

Page 4: [20] Deleted longm 10/6/2008 8:37:00 AM

Each Balancing Authority, Generator Operator, Distribution Provider and Load Serving Entity shall have and provide upon request evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it complied with its Transmission Operator's reliability directives. If the Balancing Authority, Generator Operator, Distribution Provider and Load Serving Entity did not comply with the directive because it would violate safety, equipment, regulatory or statutory requirements, it shall provide evidence such as operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that it immediately informed the Transmission Operator of its inability to perform the directive. (Requirements 3 and 4)

Page 4: [21] Deleted Edd 9/25/2008 10:53:00 AM

The Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it informed its Reliability Coordinator and any other potentially affected Transmission Operators of real time or anticipated emergency conditions, and took actions to avoid, when possible, or to mitigate an emergency. (Requirement 5)

Page 4: [22] Deleted Edd 9/25/2008 10:54:00 AM

The Transmission Operator, Balancing Authority, and Generator Operator shall each have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it rendered assistance to others as requested, provided that the requesting entity had implemented its comparable emergency procedures, unless such actions would violate safety, equipment, or regulatory or statutory requirements. (Requirement 6)

Page 5: [23] Deleted Edd 9/25/2008 11:03:00 AM

Each Transmission Operator shall have the current in-force document to show that it has the responsibility and clear decision-making authority to take whatever actions are needed to ensure the reliability of its area. (Measure 1)

Each Transmission Operator shall keep 90 days of historical data (evidence) for Measures 1 through 7, including evidence of directives issued for Measures 3 and 4.

Each Balancing Authority shall keep 90 days of historical data (evidence) for Measures 3, 4 and 6 including evidence of directives issued for Measures 3 and 4.

Each Generator Operator shall keep 90 days of historical data (evidence) for Measures 3, 4, 6 and 7 including evidence of directives issued for Measures 3 and 4.

Each Distribution Provider and Load-serving Entity shall keep 90 days of historical data (evidence) for Measure 4.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

Page 9: [24] Deleted **Edd** **9/25/2008 11:17:00 AM**

Level 1: Not applicable.

Level 2: Not applicable.

Level 3: Not applicable.

Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

Did not comply with a Reliability Coordinator's or Transmission Operator's reliability directive or did not immediately inform the Reliability Coordinator or Transmission Operator of its inability to perform that directive (R3)

Did not render emergency assistance to others as requested, in accordance with R6.

Levels of Non-Compliance for a Transmission Operator

Level 1: Not applicable.

Level 2: Not applicable.

Level 3: Not applicable.

Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

Does not have the documented authority to act as specified in R1.

Does not have evidence it acted with the authority specified in R1.

Did not take immediate actions to alleviate operating emergencies as specified in R2.

Did not comply with its Reliability Coordinator's reliability directive or did not immediately inform the Reliability Coordinator of its inability to perform that directive, as specified in R3.

Did not inform its Reliability Coordinator and other potentially affected Transmission Operators of real time or anticipated emergency conditions as specified in R5.

Did not take actions to avoid, when possible, or to mitigate an emergency as specified in R5.

Did not render emergency assistance to others as requested, as specified in R6.

Removed Bulk Electric System facilities from service under conditions other than those specified in R7.1, 7.2, and 7.3, and removing those facilities burdened a neighbor system.

Levels of Non-Compliance for a Generator Operator:

Level 1: Not applicable.

Level 2: Not applicable.

Level 3: Not applicable.

Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

Did not comply with a Reliability Coordinator or Transmission Operator's reliability directive or did not immediately inform the Reliability Coordinator or Transmission Operator of its inability to perform that directive, as specified in R3.

Did not render all available emergency assistance to others as requested, unless such actions would violate safety, equipment, or regulatory or statutory requirements as specified in R6.

Removed Bulk Electric System facilities from service under conditions other than those specified in R7.1, 7.2, and 7.3, and burdened a neighbor system.

Levels of Non-Compliance for a Distribution Provider or Load Serving Entity

Level 1: Not applicable.

Level 2: Not applicable.

Level 3: Not applicable

Level 4: Did not comply with a Transmission Operator's reliability directive or immediately inform the Transmission Operator of its inability to perform that directive, as specified in R4.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the first posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project Pre-2006, Operate Within Interconnection Reliability Operating Limits (IRO-008 through IRO-010), and Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. First posting of revised standards.	October 2008
2. Second posting of revised standards.	January 2009
3. Third posting of revised standards.	April 2009
4. Post for ballot.	July 2009
5. Post for re-ballot.	September 2009
6. Submit to BOT.	September 2009
7. Submit to regulatory authorities for approval.	October 2009

Deleted: Adopted by Board of Trustees: November 1, 2006

Deleted: 2

Deleted: Normal

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

Simulated Contingencies – The act of using planning and operating models to replicate Contingency responses that depict the net effect of design considerations

Deleted: Adopted by Board of Trustees: November 1, 2006

A. Introduction

1. **Title:** **Operations Planning**
2. **Number:** TOP-002-3
3. **Purpose:** To ensure that reliability entities have coordinated plans for meeting expected operating conditions.
4. **Applicability**

   4.1.

   4.2. Transmission Operator.

   4.3.

   4.4.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and Simulated Contingency events. *[Violation Risk Factor: Low] [Time Horizon: Same-day Operations]*

R2. The Transmission Operator shall plan to preclude operating in excess of any Interconnection Reliability Operating Limits (IROLs) including those identified as a result of the assessment performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations]*

R3. The Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s). *[Violation Risk Factor: High] [Time Horizon: Same-day Operations]*

C. Measures

M1. The Transmission Operator shall have evidence that it has assessed next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated operator logs or reports.

M2. The Transmission Operator shall have evidence that it has planned to preclude operating in excess of the IROLs identified as a result of the assessment performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans, processes, or procedures for precluding operating in excess of each IROL.

M3. The Transmission Operator shall make available evidence that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Transmission Operator shall retain evidence for a rolling six month period that it has assessed next day operations in accordance with Requirement R1 and Measurement M1.
- The Transmission Operator shall retain evidence for a rolling six month period that it has planned to preclude operating in excess of any IROL identified as a result of the assessment performed in Requirement R1 in accordance with Requirement R2 and Measurement M2.
- The Transmission Operator shall retain evidence for a rolling twelve-month period that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3 and Measurement M3.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

Deleted: 2

Deleted: Normal

Deleted: Monitoring Responsibility

Deleted: Reliability Organizations shall be responsible for compliance monitoring.

Deleted: One or more of the following methods will be used to assess compliance:¶
<#>Self-certification (Conducted annually with submission according to schedule.)¶
<#>Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.) ¶
<#>Periodic Audit (Conducted once every three years according to schedule.)¶
<#>Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 calendar days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)¶
The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

Deleted: For Measures 1 and 2, each Transmission Operator shall have its current plans and a rolling 6 months of historical records (evidence).¶
For Measures 1, 2, and 3 each Balancing Authority shall have its current plans and a rolling 6 months of historical records (evidence).¶
For Measure 4, each Transmission Operator shall keep its current plans (evidence).¶
For Measures 5 and 9, each Transmission Operator shall keep 90 days of historical data (evidence).¶
For Measures 6, 7 and 8, each Generator Operator shall keep 90 days of historical data (evidence).¶
For Measure 10, each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, and Load-serving Entity shall have its current list interconnected transmission facilities and their line identifiers at each end or other equivalent evidence as evidence.¶
If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.¶
Evidence used as part of a trigge ... [29]

Deleted: of Non-Compliance for Balancing Authorities:

Deleted: Adopted by Board of Trustees: November 1, 2006

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not perform an assessment for the next day's operation that indicated whether it will exceed any of its SOLs during anticipated normal and Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not plan to preclude operating in excess of any IROLs identified as a result of the assessment performed in Requirement R1.
R3	The Transmission Operator did not notify one of the reliability entities or 25% or less of the reliability entities identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify two of the reliability entities or more than 25% and less than or equal to 50% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify three of the reliability entities or more than 50% and less than or equal to 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify four or more of the reliability entities or more than 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).

E. Regional Variances

None identified.

Each Balancing Authority and Transmission Operator shall maintain a set of current plans that are designed to evaluate options and set procedures for reliable operation through a reasonable future time period. In addition, each Balancing Authority and Transmission Operator shall be responsible for using available personnel and system equipment to implement these plans to ensure that interconnected system reliability will be maintained

Page 3: [18] Deleted **longm** **10/6/2008 8:47:00 AM**

Each Balancing Authority and Transmission Operator shall ensure its operating personnel participate in the system planning and design study processes, so that these studies contain the operating personnel perspective and system operating personnel are aware of the planning purpose

Page 3: [19] Deleted **longm** **10/6/2008 8:47:00 AM**

Each Load Serving Entity and Generator Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal operations with its Host Balancing Authority and Transmission Service Provider. Each Balancing Authority and Transmission Service Provider shall coordinate its current-day, next-day, and seasonal operations with its Transmission Operator

Page 3: [20] Deleted **longm** **10/6/2008 8:47:00 AM**

Each Balancing Authority and Transmission Operator shall coordinate (where confidentiality agreements allow) its current-day, next-day, and seasonal planning and operations with neighboring Balancing Authorities and Transmission Operators and with its Reliability Coordinator, so that normal Interconnection operation will proceed in an orderly and consistent manner

Page 3: [21] Deleted **longm** **10/6/2008 8:47:00 AM**

Each Balancing Authority and Transmission Operator shall plan to meet scheduled system configuration, generation dispatch, interchange scheduling and demand patterns

Page 3: [22] Deleted **longm** **10/6/2008 8:47:00 AM**

ach Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in system configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements

Page 3: [23] Deleted	longm	10/6/2008 8:47:00 AM

Each Balancing Authority shall plan to meet capacity and energy reserve requirements, including the deliverability/capability for any single Contingency

Page 3: [24] Deleted	longm	10/6/2008 8:47:00 AM

Each Balancing Authority shall plan to meet voltage and/or reactive limits, including the deliverability/capability for any single contingency

Page 3: [25] Deleted	longm	10/6/2008 8:47:00 AM

Each Balancing Authority shall plan to meet Interchange Schedules and ramps

Page 3: [26] Deleted	longm	10/6/2008 8:47:00 AM

Each Balancing Authority and Transmission Operator shall plan to meet all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs

Page 3: [27] Deleted	longm	10/6/2008 8:48:00 AM

The Transmission Operator shall perform seasonal, next-day, and current-day Bulk Electric System studies to determine SOLs. Neighboring Transmission Operators shall utilize identical SOLs for common facilities. The Transmission Operator shall update these Bulk Electric System studies as necessary to reflect current system conditions; and shall make the results of Bulk Electric System studies available to the Transmission Operators, Balancing Authorities (subject confidentiality requirements), and to its Reliability Coordinator

Page 1: [28] Deleted	Edd	9/25/2008 2:26:00 PM

Adopted by Board of Trustees: November 1, 2006

Page 4: [29] Deleted	Edd	9/25/2008 2:49:00 PM

For Measures 1 and 2, each Transmission Operator shall have its current plans and a rolling 6 months of historical records (evidence).

For Measures 1, 2, and 3 each Balancing Authority shall have its current plans and a rolling 6 months of historical records (evidence).

For Measure 4, each Transmission Operator shall keep its current plans (evidence).

For Measures 5 and 9, each Transmission Operator shall keep 90 days of historical data (evidence).

For Measures 6, 7 and 8, each Generator Operator shall keep 90 days of historical data (evidence).

For Measure 10, each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, and Load-serving Entity shall have its current list interconnected transmission facilities and their line identifiers at each end or other equivalent evidence as evidence.

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,

The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

Page 5: [30] Deleted	Edd	9/25/2008 2:53:00 PM

Level 1: Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

Level 2: Not applicable.

Level 3: Not applicable.

Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

Did not maintain an updated set of current-day plans as specified in R1.

Plans did not meet one or more of the requirements specified in R5 through R10.

Levels of Non-Compliance for Transmission Operators

Level 1: Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

Level 2: Not applicable.

Level 3: One or more of Bulk Electric System studies were not made available as specified in R11.

Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

Did not maintain an updated set of current-day plans as specified in R1.

Plans did not meet one or more of the requirements in R5, R6, and R10.

Studies not updated to reflect current system conditions as specified in R11.

Did not notify its Balancing Authority and Reliability Coordinator of changes in capabilities and characteristics as specified in R16.

Levels of Non-Compliance for Generator Operators:

Level 1: Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

Level 2: Not applicable.

Level 3: Not applicable.

Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:

Did not verify and provide a generating real and reactive capability verification and provide the results to the requesting entity as specified in R13.

Did not notify its Balancing Authority and Transmission Operator of changes in capabilities and characteristics as specified in R14.

Did not provide a forecast of expected real power output to assist in operations planning as specified in R15.

Levels of Non-Compliance for Transmission Service Providers and Load-serving Entities:

Level 1: Did not use uniform line identifiers when referring to transmission facilities of an interconnected network as specified in R18.

Level 2: Not applicable.

Level 3: Not applicable.

Level 4: Not applicable.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.

Deleted:

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the first posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project Pre-2006, Operate Within Interconnection Reliability Operating Limits (IRO-008 through IRO-010), and Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. First posting of revised standards.	October 2008
2. Second posting of revised standards.	January 2009
3. Third posting of revised standards.	April 2009
4. Post for ballot.	July 2009
5. Post for re-ballot.	September 2009
6. Submit to BOT.	September 2009
7. Submit to regulatory authorities for approval.	October 2009

Deleted: Adopted by NERC Board of Trustees: February 8, 2005

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** Operational Reliability Data
2. **Number:** TOP-003-1
3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to plan and operate the Transmission system.
4. **Applicability**
   - **4.1.**
   - **4.2.** Transmission Operators.
   - **4.3.** Balancing Authorities.
   - **4.4.**
   - **4.5.** Generator Owners.
   - **4.6.** Generator Operators.
   - **4.7.** Interchange Authorities.
   - **4.8.** Load-Serving Entities.
   - **4.9.** Transmission Owners.
5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall have a documented specification for data to support its Real-time monitoring and reliability assessments. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

- **R1.1.** A list of required data to be exchanged.
- **R1.2.** A mutually agreeable format.
- **R1.3.** A timeframe and periodicity for providing data.

R2. Each Transmission Operator shall distribute its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R3. Each Balancing Authority shall distribute its data specification to entities that provide Facility status to the Balancing Authority. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator(s). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R5. Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator and Balancing Authority shall make available its dated, current, in force documented specification for data to support its reliability assessments in accordance with Requirement R1.

Deleted: <#>Evidence that the Generator Operator, Transmission Operator, Balancing Authority, and Reliability Coordinator reported and coordinated scheduled outage information as indicated in the requirements above.

Deleted: <#>¶

M2. Each Transmission Operator shall make available evidence that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M3. Each Balancing Authority shall make available evidence that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall make available evidence that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) in accordance with Requirement R4. The data is limited to that needed by the Transmission Operator to support Operational Planning Analyses and reliability assessments. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those entities necessary for reliability assessments and Real-time operation in accordance with Requirement R9. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

Deleted: Page Break

Deleted: Each Regional Reliability Organization shall conduct a review every three years to ensure that each responsible entity has a process in place to provide planned generator and/or bulk transmission outage information to their Reliability Coordinator, and with neighboring Transmission Operators and Balancing Authorities.¶
Investigation: At the discretion of the Regional Reliability Organization or NERC, an investigation may be initiated to review the planned outage process of a monitored entity due to a complaint of non-compliance by another entity. Notification of an investigation must be made by the Regional Reliability Organization to the entity being investigated as soon as possible, but no later than 60 days after the event. The form and manner of the investigation will be set by NERC and/or the Regional Reliability Organization.

Compliance

1. Compliance Monitoring Process

Deleted: Responsibility

Deleted: A Reliability Coordinator makes a request for an outage to "not be taken" because of a reliability impact on the grid and the outage is still taken. The Reliability Coordinator must provide all its documentation within three business days to the Regional Reliability Organization. Each Regional Reliability Organization shall report compliance and violations to NERC via the NERC Compliance Reporting process.

1.4. Data Retention

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

Deleted: One calendar year.

- Each Transmission Operator and Balancing Authority shall retain their dated, current, in force, documented specification for data to support their reliability assessments in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2 and Measurement M2.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall retain evidence for 90 calendar days that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) in accordance with Requirement R4 and Measurement M4.
- Each Transmission Operator and Balancing Authority shall retain evidence for 90 calendar days that it has provided to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those entities necessary for reliability assessments and Real-Time operations in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the first posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project Pre-2006, Operate Within Interconnection Reliability Operating Limits (IRO-008 through IRO-010), and Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. First posting of revised standards.	October 2008

Deleted: Effective Date:

Deleted: October 1, 2007

A. Introduction

1. Title: **Real-time Transmission Operations**

2. Number: TOP-004-3

3. Purpose: To ensure that Transmission Operators act to preserve the reliability of the Bulk Electric System in Real-time.

4. Applicability:

4.1. Transmission Operators.

5. Proposed Effective Date: All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limits (IROLs) and its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R2. Each Transmission Operator shall have Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside identified Interconnection Reliability Operating Limits (IROLs) and their associated IROL T_v as specified in Requirement R1. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion outside of the identified IROL and applicable IROL T_v.

M2. Each Transmission Operator shall make available evidence that it has Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2. Such evidence could include but is not limited to a dated document with confirmation of the Agreement in electronic or hard copy format.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

Exception Reporting of any occasion in which it has operated outside an identified IROL and the applicable IROL T_v as specified in Requirement R1 and Measurement M1.

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Transmission Operator shall retain evidence for three calendar years of any occasion in which it has operated outside identified IROL and its associated IROL T_v as specified in Requirement R1 and Measurement M1.
- The Transmission Operator shall retain evidence that it has current in force Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2 and Measurement M2 as well as any Agreements in force since the last compliance audit.

Formatted: Bullets and Numbering

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

Deleted: Each Transmission Operator shall keep 90 days of historical data for Measure 1. ¶
Each Transmission Operator shall have current, in-force policies and procedures, as evidence of compliance to Measure 2.¶
If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.¶
Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor, ¶
The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data

1.5. Additional Compliance Information

Submit exception reports of each instance of exceeding an IROL for time greater than the associated IROL T_v to the Compliance Enforcement Authority within thirty calendar days of the event.

Deleted: None.

2. Violation Severity Levels

Deleted: of Non-Compliance:

Formatted Table

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not operate within an identified Interconnection Reliability Operating Limits (IROL) and the associated IROL T_v for any single occasion.
R2	The Transmission Operator does not	The Transmission Operator does not	The Transmission Operator does not	The Transmission Operator does not

This is now covered by R1 with the inclusion of IROL and IROL T_v.

Page 3: [6] Comment [Edd3] | **Edd** | **9/25/2008 4:01:00 PM**

This was deleted as unmeasurable.

Page 3: [7] Comment [Edd4] | **Edd** | **9/25/2008 4:02:00 PM**

The first sentence was deleted as unmeasurable. The second sentence was deleted as it is covered by TOP-001-1.

Page 3: [8] Comment [Edd5] | **Edd** | **9/25/2008 4:03:00 PM**

The first sentence was deleted as it is good utility practice. The second sentence was deleted as all of the sub-requirements were deleted:

R6.1 as duplicative of FAC-008 & FAC-009;

R6.2 as duplicative of VAR-001-1, R1 for voltage levels and reactive power and real power by R10;

R6.3 as it is now covered in new R3;

R6.4 as now covered in TOP-002-3;

R6.5 as already covered by FAC-011 & FAC-014; and

R6.6 as now covered in TOP-002-3.

Page 3: [9] Deleted | **longm** | **10/6/2008 9:18:00 AM**

Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency

Page 3: [10] Deleted | **longm** | **10/6/2008 9:18:00 AM**

Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator

Page 3: [11] Deleted	longm	10/6/2008 9:19:00 AM

If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes

Page 3: [12] Change	longm	10/6/2008 9:16:00 AM

Formatted Bullets and Numbering

Page 3: [13] Deleted	longm	10/6/2008 9:18:00 AM

Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected, it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area

Page 3: [14] Deleted	longm	10/6/2008 9:18:00 AM

Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including:

Page 3: [15] Deleted	longm	10/6/2008 9:19:00 AM

Monitoring and controlling voltage levels and real and reactive power flows.

Page 3: [16] Deleted	longm	10/6/2008 9:19:00 AM

Switching transmission elements.

Page 3: [17] Deleted	longm	10/6/2008 9:19:00 AM

Planned outages of transmission elements.

Page 3: [18] Deleted	longm	10/6/2008 9:19:00 AM

Responding to IROL and SOL violations.

Page 3: [19] Deleted	longm	10/6/2008 9:20:00 AM

Each Transmission Operator that enters an unknown operating state for which valid limits have not been determined, shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, alarm program printouts, or other equivalent evidence that will be used to determine if it restored operations to respect proven reliable power system limits within 30 minutes as specified in Requirement 4.

Reliability Organizations shall be responsible for compliance monitoring.

Page 3: [25] Deleted	Edd	9/25/2008 4:09:00 PM

One or more of the following methods will be used to assess compliance:

Self-certification (Conducted annually with submission according to schedule.)

Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)

Periodic Audit (Conducted once every three years according to schedule.)

Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the first posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project Pre-2006, Operate Within Interconnection Reliability Operating Limits (IRO-008 through IRO-010), and Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. First posting of revised standards.	October 2008
2. Second posting of revised standards.	January 2009
3. Third posting of revised standards.	April 2009
4. Post for ballot.	July 2009
5. Post for re-ballot.	September 2009
6. Submit to BOT.	September 2009
7. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** ~~**Operational Reliability Information**~~

2. **Number:** ~~TOP-005-1~~

3. **Purpose:** ~~To ensure reliability entities have the operating data needed to monitor system conditions within their areas.~~

4. **Applicability**

   4.1. ~~Transmission Operators.~~

   4.2. ~~Balancing Authorities.~~

   4.3. ~~Reliability Coordinators.~~

   4.4. ~~Purchasing Selling Entities.~~

5. **Effective Date:** ~~November 1, 2006~~ All requirements will be retired on the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements are retired twenty-four months following Board of Trustees adoption.

B. Requirements

R1. ~~Each Transmission Operator and Balancing Authority shall provide its Reliability Coordinator with the operating data that the Reliability Coordinator requires to perform operational reliability assessments and to coordinate reliable operations within the Reliability Coordinator Area.~~

R1.1. ~~Each Reliability Coordinator shall identify the data requirements from the list in Attachment 1-TOP-005-0 "Electric System Reliability Data" and any additional operating information requirements relating to operation of the bulk power system within the Reliability Coordinator Area.~~

~~**R2.** As a condition of receiving data from the Interregional Security Network (ISN), each ISN data recipient shall sign the NERC Confidentiality Agreement for "Electric System Reliability Data."~~

R3. ~~Upon request, each Balancing Authority and Transmission Operator shall provide to other Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability, the operating data that are necessary to allow these Balancing Authorities and Transmission Operators to perform operational reliability assessments and to coordinate reliable operations. Balancing Authorities and Transmission Operators shall provide the types of data as listed in Attachment 1-TOP-005-0 "Electric System Reliability Data," unless otherwise agreed to by the Balancing Authorities and Transmission Operators with immediate responsibility for operational reliability.~~

R4. ~~Each Purchasing-Selling Entity shall provide information as requested by its Host Balancing Authorities and Transmission Operators to enable them to conduct operational reliability assessments and coordinate reliable operations.~~

C. Measures

M1. ~~Evidence that the Reliability Coordinator, Balancing Authority, Transmission Operator, and Purchasing-Selling Entity is providing the information required, within the time intervals specified, and in a format agreed upon by the requesting entities.~~

D. Compliance

Comment [Edd1]: Deleted – covered by IRO-010-1, R3.

Comment [Edd2]: Deleted – covered in IRO-010.

Comment [Edd3]: Deleted – not a reliability concern.

Comment [Edd4]: Deleted – now covered in TOP-003-1.

Comment [Edd5]: Deleted – the PSE does not have any unique information needed by the TOP or BA.

Comment [Edd6]: Due to the large number of changes made to the requirements and measures, and the new format for compliance elements, the new compliance elements are only shown in the clean version for ease of reading and comprehension.

1. **Compliance Monitoring Process**

   1.1. **Compliance Monitoring Responsibility**

   ~~Self-Certification: Entities shall annually self-certify compliance to the measures as required by its Regional Reliability Organization.~~

   ~~Exception Reporting: Each Region shall report compliance and violations to NERC via the NERC compliance reporting process.~~

   1.2. **Compliance Monitoring Period and Reset Time Frame**

   ~~Periodic Review: Entities will be selected for operational reviews at least every three years. One calendar year without a violation from the time of the violation.~~

   1.3. **Data Retention**

   ~~Not specified.~~

   1.4. **Additional Compliance Information**

   Not specified.

2. **Levels of Non-Compliance**

   ~~**2.1. Level 1:** Each entity responsible for reporting information under Requirements R1 to R5 is providing the requesting entities with the data required, in specified time intervals and format, but there are problems with consistency of delivery identified in the measuring process that need remedy (e.g., the data is not supplied consistently due to equipment malfunctions, or scaling is incorrect).~~

   ~~**2.2. Level 2:** N/A.~~

   ~~**2.3. Level 3:** N/A.~~

   2.4. ~~**Level 4:** Each entity responsible for reporting information under Requirements R1 to R5 is not providing the requesting entities with data with the specified content, timeliness, or format. The information missing is included in the requesting entity's list of data.~~

E. Regional Differences

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
2	TBD	TBD.	Pursuant to changes in Project 2007-03.

Attachment 1-TOP-005-0

Electric System Reliability Data

~~This Attachment lists the types of data that Reliability Coordinators, Balancing Authorities, and Transmission Operators are expected to provide, and are expected to share with each other~~.

3. ~~The following information shall be updated at least every ten minutes~~:

3.1. ~~Transmission data. Transmission data for all Interconnections plus all other facilities considered key, from a reliability standpoint~~:

~~**3.1.1** Status.~~

~~**3.1.2** MW or ampere loadings.~~

~~**3.1.3** MVA capability.~~

~~**3.1.4** Transformer tap and phase angle settings.~~

3.1.5 ~~Key voltages~~.

~~**3.2.** Generator data.~~

~~**3.2.1** Status.~~

~~**3.2.2** MW and MVAR capability.~~

~~**3.2.3** MW and MVAR net output.~~

3.2.4 ~~Status of automatic voltage control facilities~~.

~~**3.3.** Operating reserve.~~

3.3.1 ~~MW reserve available within ten minutes~~.

~~**3.4.** Balancing Authority demand.~~

3.4.1 ~~Instantaneous~~.

~~**3.5.** Interchange.~~

~~**3.5.1** Instantaneous actual interchange with each Balancing Authority.~~

~~**3.5.2** Current Interchange Schedules with each Balancing Authority by individual Interchange Transaction, including Interchange identifiers, and reserve responsibilities.~~

3.5.3 ~~Interchange Schedules for the next 24 hours~~.

~~**3.6.** Area Control Error and frequency.~~

~~**3.6.1** Instantaneous area control error.~~

~~**3.6.2** Clock hour area control error.~~

3.6.3 ~~System frequency at one or more locations in the Balancing Authority~~.

~~**4.** Other operating information updated as soon as available.~~

~~**4.1.** Interconnection Reliability Operating Limits and System Operating Limits in effect.~~

~~**4.2.** Forecast of operating reserve at peak, and time of peak for current day and next day.~~

~~**4.3.** Forecast peak demand for current day and next day.~~

~~**4.4.** Forecast changes in equipment status.~~

~~**4.5.** New facilities in place.~~

~~**4.6.** New or degraded special protection systems.~~

~~**4.7.** Emergency operating procedures in effect.~~

~~**4.8.** Severe weather, fire, or earthquake.~~

4.9. ~~Multi-site sabotage~~.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the first posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Changes made in this project are dependent on corresponding changes to Project Pre-2006, Operate Within Interconnection Reliability Operating Limits (IRO-008 through IRO-010), and Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. First posting of revised standards.	October 2008
2. Second posting of revised standards.	January 2009
3. Third posting of revised standards.	April 2009
4. Post for ballot.	July 2009
5. Post for re-ballot.	September 2009
6. Submit to BOT.	September 2009
7. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** ~~**Monitoring System Conditions**~~

2. **Number:** ~~TOP-006-1~~

3. **Purpose:**

   ~~To ensure critical reliability parameters are monitored in real-time~~.

4. **Applicability**

   4.1. ~~Transmission Operators~~.

   4.2. ~~Balancing Authorities~~.

   4.3. ~~Generator Operators~~.

   4.4. ~~Reliability Coordinators~~.

5. **Effective Date:** All requirements will be retired on the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements are retired twenty-four months following Board of Trustees adoption.

Deleted: January 1, 2007

B. Requirements

R1. ~~Each Transmission Operator and Balancing Authority shall know the status of all generation and transmission resources available for use~~.

Comment [Edd1]: Delete – now covered in TOP-002-3.

R1.1. ~~Each Generator Operator shall inform its Host Balancing Authority and the Transmission Operator of all generation resources available for use~~.

Comment [Edd2]: Delete – now covered in TOP-002-3.

R1.2. ~~Each Transmission Operator and Balancing Authority shall inform the Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use~~.

Comment [Edd3]: Delete – now covered in IRO-010-1, R3.

R2. ~~Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor applicable transmission line status, real and reactive power flows, voltage, load-tap-changer settings, and status of rotating and static reactive resources~~.

Comment [Edd4]: Delete – now covered in TOP-002-3.

R3. ~~Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall provide appropriate technical information concerning protective relays to their operating personnel~~.

Comment [Edd5]: Delete – now covered in PRC-001-1, R1.

R4. ~~Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have information, including weather forecasts and past load patterns, available to predict the system's near-term load pattern~~.

Comment [Edd6]: Load patterns now covered in the new TOP-005. Remainder not required for reliability.

R5. ~~Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use monitoring equipment to bring to the attention of operating personnel important deviations in operating conditions and to indicate, if appropriate, the need for corrective action~~.

Comment [Edd7]: Delete – now covered in TOP-004-2.

R6. ~~Each Balancing Authority and Transmission Operator shall use sufficient metering of suitable range, accuracy and sampling rate (if applicable) to ensure accurate and timely monitoring of operating conditions under both normal and emergency situations~~.

Comment [Edd8]: Delete – now covered in TOP-004-2.

R7. ~~Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall monitor system frequency~~.

Comment [Edd9]: Delete – RC handled in IRO standards. TOP & BA now covered in certification process and no longer required in standards.

C. Measures

~~**M1.** The Generator Operator shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Host Balancing Authority and Transmission Operator of all generation resources available for use. (Requirement 1.1)~~

~~**M2.** Each Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, operator logs, voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it informed its Reliability Coordinator and other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use. (Requirement 1.2)~~

~~**M3.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, computer printouts or other equivalent evidence that will be used to confirm that it monitored each of the applicable items listed in Requirement 2.~~

~~**M4.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, printouts, training documents, description documents or other equivalent evidence that will be used to confirm that it has weather forecasts and past load patterns, available to predict the system's near-term load pattern. (Requirement 4)~~

~~**M5.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a description of its EMS alarm capability, training documents, or other equivalent evidence that will be used to confirm that important deviations in operating conditions and the need for corrective actions will be brought to the attention of its operators. (Requirement 5)~~

~~**M6.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include but is not limited to, a list of the frequency monitoring points available to the shift operators or other equivalent evidence that will be used to confirm that it monitors system frequency. (Requirement 7)~~

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

~~Regional Reliability Organizations shall be responsible for compliance monitoring~~.

1.2. Compliance Monitoring and Reset Time Frame

~~One or more of the following methods will be used to assess compliance:~~

- ~~Self-certification (Conducted annually with submission according to schedule.)~~
- ~~Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)~~
- ~~Periodic Audit (Conducted once every three years according to schedule.)~~
- ~~Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)~~

~~The Performance-Reset Period shall be 12 months from the last finding of non-compliance~~.

1.3. Data Retention

~~Each Generator Operator shall keep 90 days of historical data (evidence) for Measure 1.~~

~~Each Transmission Operator and Balancing Authority shall keep 90 days of historical data (evidence) for Measure 2.~~

~~Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have current documents as evidence for Measure 3, 5 and 6..~~

~~Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have current documents as evidence of compliance to Measure 4.~~

~~If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.~~

~~Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,~~

~~The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data~~

1.4. Additional Compliance Information

~~None.~~

2. Levels of Non-Compliance for Reliability Coordinators:

~~**2.1. Level 1:** Not applicable.~~

~~**2.2. Level 2:** Not applicable.~~

~~**2.3. Level 3:** Not applicable.~~

~~**2.4. Level 4:** There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~**2.4.1** Does not monitor all of the applicable items listed in Requirement 2.~~

~~**2.4.2** Did not have the information specified in R4.~~

~~**2.4.3** Did not bring to the attention of its operators, important deviations in operating conditions and the need for corrective actions. (Requirement 5)~~

2.4.4 ~~No evidence it monitors system frequency. (Requirement 7)~~

3. Levels of Non-Compliance for Generator Operators:

~~**3.1. Level 1:** Not applicable.~~

~~**3.2. Level 2:** Not applicable.~~

~~**3.3. Level 3:** Not applicable.~~

3.4. ~~**Level 4:** Did not inform its Host Balancing Authority and/or the Transmission Operator of all generation resources available for use. (R1.1)~~

4. Levels of Non-Compliance for Transmission Operators and Balancing Authorities:

~~**4.1. Level 1:** Not applicable.~~

~~**4.2. Level 2:** Not applicable.~~

~~**4.3. Level 3:** Not applicable.~~

~~**4.4. Level 4:** There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~**4.4.1** Did not inform the Reliability Coordinator and/or other affected Balancing Authorities and Transmission Operators of all generation and transmission resources available for use in accordance with R1.2.~~

~~**4.4.2** Does not monitor all the applicable items listed in R2.~~

~~**4.4.3** Did not have the information specified in R4.~~

~~**4.4.4** Does not have monitoring to bring to the attention of operating personnel important deviations in operating conditions and the need for corrective actions as specified in R5.~~

4.4.5 ~~No evidence it monitors system frequency. (R7).~~

E. Regional Differences

~~None identified~~.

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the first posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Changes made in this project are dependent on corresponding changes to Project Pre-2006, Operate Within Interconnection Reliability Operating Limits (IRO-008 through IRO-010), and Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. First posting of revised standards.	October 2008
2. Second posting of revised standards.	January 2009
3. Third posting of revised standards.	April 2009
4. Post for ballot.	July 2009
5. Post for re-ballot.	September 2009
6. Submit to BOT.	September 2009
7. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

~~**1. Title:** Reporting System Operating Limit (SOL) and Interconnection Reliability Operating Limit (IROL) Violations~~

~~**2. Number:** TOP-007-0~~

~~**3. Purpose:**~~

~~This standard ensures SOL and IROL violations are being reported to the Reliability Coordinator so that the Reliability Coordinator may evaluate actions being taken and direct additional corrective actions as needed.~~

~~**4. Applicability:**~~

~~**4.1.** Transmission Operators.~~

~~**4.2.** Reliability Coordinators.~~

5. Effective Date: ~~April 1, 2005~~ All requirements will be retired on the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements are retired twenty-four months following Board of Trustees adoption.

B. Requirements

~~**R1.** A Transmission Operator shall inform its Reliability Coordinator when an IROL or SOL has been exceeded and the actions being taken to return the system to within limits.~~

Comment [Edd1]: Moved to TOP-001-2, R9 (redlined version).

~~**R2.** Following a Contingency or other event that results in an IROL violation, the Transmission Operator shall return its transmission system to within IROL as soon as possible, but not longer than 30 minutes.~~

Comment [Edd2]: Moved to TOP-004-2, R1.

R3. ~~A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2.~~

Comment [Edd3]: This authority already exists and does not need to be cited in a requirement. .

R4. ~~The Reliability Coordinator shall evaluate actions taken to address an IROL or SOL violation and, if the actions taken are not appropriate or sufficient, direct actions required to return the system to within limits.~~

Comment [Edd4]: Delete as this is now covered in the IROL Project.

C. Measures

M1. ~~Evidence that the Transmission Operator informed the Reliability Coordinator when an IROL or SOL was exceeded and the actions taken to return the system to within limits.~~

M2. ~~Evidence that the Transmission Operator returned the system to within IROL within 30 minutes for each incident that an IROL, or SOL that became an IROL due to changed system conditions, was exceeded.~~

M3. ~~Evidence that the Reliability Coordinator evaluated actions and provided direction required to return the system to within limits.~~

D. Compliance

~~**1. Compliance Monitoring Process**~~

~~**1.1. Compliance Monitoring Responsibility**~~

~~The Reliability Coordinator shall report any IROL violation exceeding 30 minutes to the Regional Reliability Organization and NERC within 72 hours. Each Regional Reliability Organization shall report any such violations to NERC via the NERC compliance reporting process. The Reliability Coordinator shall report any SOL~~

~~violation that has become an IROL violation because of changed system conditions; i.e. exceeding the limit will require action to prevent:~~

~~**1.1.1.** System instability.~~

~~**1.1.2.** Unacceptable system dynamic response or equipment tripping.~~

1.1.3. ~~Voltage levels in violation of applicable emergency limits.~~

~~**1.1.4.** Loadings on transmission facilities in violation of applicable emergency limits.~~

~~**1.1.5.** Unacceptable loss of load based on regional and/or NERC criteria.~~

~~**1.2. Compliance Monitoring Period and Reset Timeframe**~~

~~The reset period is monthly.~~

~~**1.3. Data Retention**~~

~~The data retention period is three months.~~

~~**2. Levels of Non-Compliance**~~

~~**2.1.** The Transmission Operator did not inform the Reliability Coordinator of an IROL or an SOL that has become an IROL because of changed system conditions, and the actions they are taking to return the system to within limits, or~~

~~**2.2.** The Transmission Operator did not take corrective actions as directed by the Reliability Coordinator to return the system to within the IROL within 30 minutes. (See Table 1-TOP-007-0 below.)~~

2.3. ~~The limit violation was reported to the Reliability Coordinator, who did not provide appropriate direction to the Transmission Operator, resulting in an IROL violation in excess of 30 minutes duration.~~

~~**Table 1-TOP-007-0 IROL and SOL Reporting Levels of Non-Compliance**~~

~~Percentage by which IROL or SOL that has become an IROL is exceeded*~~	~~Limit exceeded for more than 30 minutes, up to 35 minutes.~~	~~Limit exceeded for more than 35 minutes, up to 40 minutes.~~	~~Limit exceeded for more than 40 minutes, up to 45 minutes.~~	~~Limit exceeded for more than 45 minutes.~~
~~Greater than 0%, up to and including 5%~~	~~Level 1~~	~~Level 2~~	~~Level 2~~	~~Level 3~~
~~Greater than 5%, up to and including 10%~~	~~Level 2~~	~~Level 2~~	~~Level 3~~	~~Level 3~~
~~Greater than 10%, up to and including 15%~~	~~Level 2~~	~~Level 3~~	~~Level 3~~	~~Level 4~~
~~Greater than 15%, up to and including 20%~~	~~Level 3~~	~~Level 3~~	~~Level 4~~	~~Level 4~~
~~Greater than 20%, up to and including 25%~~	~~Level 3~~	~~Level 4~~	~~Level 4~~	~~Level 4~~
~~Greater than 25%~~	~~Level 4~~	~~Level 4~~	~~Level 4~~	~~Level 4~~

~~*Percentage used in the left column is the flow measured at the end of the time period (30, 35, 40, or 45 minutes).~~

~~E. Regional Differences~~

~~None identified.~~

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

Formatted: Font: Bold

Deleted: ¶

A. Introduction

1. **Title:** ~~**Response to Transmission Limit Violations**~~

~~2.~~ **Number:** ~~TOP-008-0~~

~~3.~~ **Purpose:** ~~To ensure Transmission Operators take actions to mitigate SOL and IROL violations.~~

4. **Applicability**

~~**4.1.** Transmission Operators.~~

5. **Effective Date:** All requirements will be retired on the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements are retired twenty-four months following Board of Trustees adoption.

B. Requirements

~~**R1.** The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.~~

~~**R2.** Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.~~

~~**R3.** The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.~~

~~**R4.** The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation.~~

Comment [Edd1]: Deleted – now covered by TOP-003-1 for IROL. Taking immediate steps for relief of all SOLs experienced or contributed to may not always be prudent, especially if other organizations are addressing the cause. In such cases, uncoordinated immediate actions may be counterproductive. Accordingly, requiring immediate action to relieve all SOLs was deleted in consideration of TOP-001-1 and TOP-004-2 Requirements applied in combination.

Comment [Edd2]: First sentence moved to TOP-002-1. Second sentence moved to TOP-001, R1. .

Comment [Edd3]: Delete first sentence – bad operating practice, actually eliminates operator flexibility and thus increases risk to the System. Delete second sentence as duplicative of IRO-009-1 as well as FAC-010-1, FAC-011-1, and FAC-014-1.

Comment [Edd4]: Delete – now covered in TOP-004-2.

C. Measures

~~Not specified.~~

D. Compliance

~~Not specified.~~

E. Regional Differences

~~None identified.~~

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** ~~**Operating Personnel Responsibility and Authority**~~

~~2.~~ **Number:** ~~PER-001-0~~

3. **Purpose:** ~~Transmission Operator and Balancing Authority operating personnel must have the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System~~.

4. **Applicability**

   4.1. ~~Transmission Operators~~.

   4.2. ~~Balancing Authorities~~.

5. **Effective Date:** 1. All requirements will be retired on the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements are retired twenty-four months following Board of Trustees adoption.

Deleted: April 1, 2005

Deleted:

Deleted:

B. Requirements

~~**R1.** Each Transmission Operator and Balancing Authority shall provide operating personnel with the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System~~.

Comment [Edd1]: This statement is not needed in a reliability standard. The standards already require the necessary actions. The concept of protecting the operator by requiring authorization within a company for him/her to shed firm load is not a reliability requirement.

C. Measures

~~**M1.** The Transmission Operator and Balancing Authority provide documentation that operating personnel have the responsibility and authority to implement real-time actions to ensure the stable and reliable operation of the Bulk Electric System. These responsibilities and authorities are understood by the operating personnel. Documentation shall include:~~

~~**M1.1** A written current job description that states in clear and unambiguous language the responsibilities and authorities of each operating position of a Transmission Operator and Balancing Authority. The position description identifies personnel subject to the authority of the Transmission Operator and Balancing Authority.~~

~~**M1.2** The current job description is readily accessible in the control room environment to all operating personnel.~~

~~**M1.3** A written current job description that states operating personnel are responsible for complying with the NERC reliability standards.~~

~~**M1.4** Written operating procedures that state that, during normal and emergency conditions, operating personnel have the authority to take or direct timely and appropriate real-time actions. Such actions shall include shedding of firm load to prevent or alleviate System Operating Limit Interconnection or Reliability Operating Limit violations. These actions are performed without obtaining approval from higher-level personnel within the Transmission Operator or Balancing Authority.~~

D. Compliance

1. **Compliance Monitoring Process**

~~Periodic Review: An on-site review including interviews with Transmission Operator and Balancing Authority operating personnel and document verification will be conducted every three years. The job description identifying operating personnel authorities and responsibilities will be reviewed, as will the written operating procedures or other documents delineating the~~

~~authority of the operating personnel to take actions necessary to maintain the reliability of the Bulk Electric System during normal and emergency conditions.~~

~~1.1. Compliance Monitoring Responsibility~~

~~Self-certification: The Transmission Operator and Balancing Authority shall annually complete a self-certification form developed by the Regional Reliability Organization based on measures M1.1 to M1.4.~~

1.2. Compliance Monitoring Period and Reset Timeframe

~~One calendar year~~.

1.3. Data Retention

~~Permanent~~.

1.4. Additional Compliance Information

2. Levels of Non-Compliance

~~**2.1. Level 1:** The Transmission Operator or Balancing Authority has written documentation that includes three of the four items in M1.~~

~~**2.2. Level 2:** The Transmission Operator or Balancing Authority has written documentation that includes two of the four items in M1.~~

~~**2.3. Level 3:** The Transmission Operator or Balancing Authority has written documentation that includes one of the four items in M1.~~

2.4. ~~**Level 4:** The Transmission Operator or Balancing Authority has written documentation that includes none of the items in M1, or the personnel interviews indicate Transmission Operator or Balancing Authority do not have the required authority.~~

E. Regional Differences

~~None identified~~.

Comment Form for 1st Draft of Standards for Real-Time Operations (Project 2007-03)

Comments on the 1st draft of the standards for Real-Time Operations (Project 2007-03). Comments must be submitted by **November 20, 2008**. If you have questions please contact Ed Dobrowolski at ed.dobrowolski@nerc.net or by telephone at 609-947-3673.

Background Information:

The Real-Time Operations Standard Drafting Team (RTO SDT) has attempted to eliminate redundancy in the TOP family of standards. As part of this process, the RTO SDT has also made an effort to re-organize the standards and requirements in a more logical manner. In addition, the RTO SDT has supplied a complete set of VRFs, Time Horizons, Measures, and Compliance elements including VSLs. An Implementation Plan has been provided to show the timeframe for compliance.

The Real-Time Operations Standard Drafting Team would like to receive industry comments on this group of standards.

You do not have to answer all questions. Enter All Comments in Simple Text Format.

Insert a “check” mark in the appropriate boxes by double-clicking the gray areas.

1. The SDT has deleted the phrase ‘without intentional delay’ from all situations that require specific actions or responses as it was felt that this term is unmeasurable and that operator action and response in a timely manner is part of good utility practice and common sense. Do you agree with this change? If not, please provide specific suggestions for improvement.

   ☐ Yes

   ☐ No

   Comments:

2. The SDT has eliminated SOLs from TOP-004-2, Requirement R1. The SDT felt that requiring a TOP to operate within all SOLs could effectively reduce the TOPs operational flexibility by eliminating the TOP’s ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time. The SDT determined that operating within each IROL and its IROL T_v was the reliability issue in this requirement. Do you agree with deleting the language about SOLs in TOP-004-2, Requirement R1? If not, please provide specific suggestions for improvement.

   ☐ Yes

   ☐ No

   Comments:

3. The SDT is concerned about the inclusion of SOL in TOP-001-2, Requirement R5. The SDT thinks that the TOP notifying its RC of every SOL that has been exceeded may create an overload of messages for the RC that does not facilitate preserving reliability. Do you agree that SOL should remain in this requirement? If not, please provide specific suggestions for improvement.

   ☐ Yes

   ☐ No

   Comments:

4. TOP-002-3 Requirement R1 uses the new proposed term Simulated Contingency. The term’s use is intended to clarify that the Contingencies used in the next day assessment are intended to model Contingencies that could occur based on the projected System topology and not Contingencies that have actually occurred on the System. The SDT is concerned that the definition may inadvertently lead the reader to believe that a power System simulator is required. Do you believe that the definition and term accomplish the intention of clarifying TOP-002-3 Requirement R1 without confusing the reading into believing a power System simulator is required? If not,

please suggest alternative wording for TOP-002-3 Requirement R1 that communicates the SDT's intent.

☐ Yes

☐ No

Comments:

5. TOP-004-2, Measure M1: The SDT has adopted the position for this measure and others like it that the absence of an IROL Violation Report is a sufficient measure as opposed to retaining massive amounts of data for later audit. Do you agree with this assessment? If not, please provide specific suggestions for improvement.

☐ Yes

☐ No

Comments:

6. The SDT has included VRFs and Time Horizons with this posting. Do you agree with the assignments that have been made? If not, please make specific suggestions for improvement.

☐ Yes

☐ No

Comments:

7. The SDT has included Measures and Data Retention with this posting. Do you agree with the assignments that have been made? If not, please make specific suggestions for improvement.

☐ Yes

☐ No

Comments:

8. The SDT has included compliance elements including VSL for this posting. Do you agree with the assignments that have been made? If not, please provide specific suggestions for change.

☐ Yes

☐ No

Comments:

9. The SDT has provided an Implementation Plan with this posting. Do you agree with the implementation timeframes? If not, please provide specific suggestions for improvement.

☐ Yes

☐ No

Comments:

10. The SDT is recommending retirement of TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0. Do you agree with these retirements? If not, please provide specific reasons for your position.

☐ Yes

☐ No

Comments:

11. If you are aware of any regional variances or any conflicts between the proposed standards and any regulatory function, rule order, tariff, rate schedule, legislative requirement or agreement that would be required as a result of these standards, please identify them here.

☐ Yes

☐ No

Comments:

12. Are there any other issues that need to be addressed? Please be specific.

☐ Yes

☐ No

Implementation Plan
For Project 2007-03: Real-Time Operations

Prerequisite Approvals

Changes made in this project to TOP-001-2, R3; TOP-002-3, R16, R17; TOP-005-1, R1; TOP-006-1, R1 are dependent on corresponding changes being approved in Project Pre-2006, Operate within Interconnection Reliability Operating Limits:

- IRO-008-1: Reliability Coordinator Operational Analyses and Real-Time Assessments
- IRO-009-1: Reliability Coordinator Actions to Operate Within IROLs
- IRO-010-1: Reliability Coordinator Data Specification and Collection

Changes made in this project to TOP-005-1, R1; TOP-007-0, R4 are dependent on corresponding changes being approved in Project 2006-06, Reliability Coordination:

- COM-001-1: Telecommunications
- COM-002-2: Communications and Coordination
- IRO-001-1: Reliability Coordination – Responsibilities and Authorities
- IRO-002-1: Reliability Coordination – Facilities
- IRO-014-1: Procedures to Support Coordination between Reliability Coordinators
- IRO-015-1: Notifications and Information Exchange between Reliability Coordinators
- IRO-016-1: Coordination of Real-Time Activities between Reliability Coordinators
- PER-004-1: Reliability Coordination – Staffing
- PRC-001-1: System Protection Coordination

Changes made in this project to TOP-002-3, R12 are dependent on corresponding changes being approved in Project 2006-07, ATC/TTC/AFC and CBM/TRM Revisions:

- MOD-001-1: Available Transmission System Capability
- MOD-008-1: TRM Calculation Methodology
- MOD-028-1: Area Interchange Methodology
- MOD-029-1: Rated System Path Methodology
- MOD-030-1: Flowgate Methodology

Revision to Sections of Approved Standards and Definitions

There is one new definition in the proposed set of standards.

Simulated Contingencies – The act of using planning and operating models to replicate Contingency responses that depict the net effect of design considerations.

A mapping table showing the disposition of existing requirements in the affected standards is shown below.

Existing Requirement	New Location
TOP-001-2 (redline version)	
R1	Deleted – The SDT does not feel that this requirement is needed in a reliability standard. Other standards already require the necessary actions. If this statement was intended to protect the operator from liability, it doesn't provide any real protection.
R2	Deleted – The SDT feels that dictating 'immediate action' could be detrimental to reliability.
R3 (re-formatted to R1)	All references to the RC and RC responsibilities have been removed from TOP standards as they are now covered in the revisions being undertaken in Project 2006-06. .
R4	The DP & LSE have been moved into the new R1 in the revised standard.
R5 (re-formatted to R2)	The added phrasing was adapted from TOP-008-0, R3. Deletions were made due to redundancies with TOP-004-3, R1.
R6 (re-formatted to R3)	Retained with changes.
R7 (re-formatted to R4)	Retained and expanded to incorporate sub-requirements.
R7.1 – R7.3	The sub-requirements have been moved into the main requirement in the revised standard.
R8	The first sentence has been deleted due to redundancies with CPS, DCS, and VAR standards. The requirement for real power in the second sentence was deleted as redundant with EOP-002-2, R1 & R6. The requirement in the second sentence for reactive power was deleted since you can't supply emergency reactive assistance remotely.
new R5	This requirement was moved here from TOP-007-0, R1.
new R6	This requirement was moved here from TOP-007-0, R2.
new R7	This requirement was moved from TOP-008, R2.
TOP-002-3 (redline version)	
R1	Deleted as BA only needs to respond to CPS and DCS and thus was not applicable. TOP now covered in new R1 below.
R2	Deleted as good utility practice but unmeasurable.
R3	LSE and GOP are governed by their Interconnection Operating Agreements and therefore not necessary here. TSP deleted as not applicable. TOP covered in new R3.
R4	Deleted as duplicative of proposed IRO-001-2, R1.
R5	Replaced by new R1.
R6	BA deleted as covered in BAL-002-0, R4. TOP covered in new R1.
R7	Deleted as duplicative of BAL-002-0, R1.
R8	Delete as not applicable to BA.
R9	Delete as duplicated in BAL-001 and BAL-002.
R10	Delete as not applicable to BA. TOP covered in new R2.
R11	First sentence covered in new R1. Second sentence deleted as this is now covered in proposed IRO-009-1 as well as FAC-010-1, FAC-011-1, and FAC-014-1. Third sentence covered in new R3.
R12	Deleted as now covered in MOD standards as part of Project 2006-07.

R13	Deleted as verification upon request not seen as needed by this standard. Passed on to Generator Verification team. Data now part of revised TOP-003-1 data specification requirements.
R14	Data now part of revised TOP-003-1 data specification requirements.
R15	Deleted as duplicative of IRO-010-1, R3. Data now part of revised TOP-003-1 data specification requirements.
R16	Data now part of revised TOP-003-1 data specification requirements.
R17	Deleted as duplicative of IRO-010-1, R3.
R18	Deleted as the SDT feels that this is a 'how' as opposed to a 'what'.
R19	Deleted as unmeasurable.
new R1, R2, & R3	New.
TOP-003-1 (redline version)	
R1	This requirement is now covered in the re-worded requirements below for the data specification.
R2	Deleted as now covered in IRO-001-2, R1 (proposed).
R3	Deleted as now covered in.IRO-001-2, R1 (proposed).
R4	Deleted as now covered in Project 2006-06.
R1 through R5 (re-formatted)	New data specification requirements.
TOP-004-3 (redline version)	
R1	Retained with changes.
R2	This is now covered by R1 with the inclusion of IROL and IROL T_v.
R3	This is now covered by R1 with the inclusion of IROL and IROL T_v.
R4	Deleted as unmeasurable.
R5	The first sentence was deleted as unmeasurable. The second sentence was deleted as it is covered by TOP-001-1, R1 & R4.
R6	The first sentence was deleted as it is good utility practice. The second sentence was deleted as all of the sub-requirements were deleted: R6.1 as duplicative of FAC-008 & FAC-009; R6.2 as duplicative of VAR-001-1, R1 for voltage levels and reactive power and real power by R10; R6.3 as it is now covered in new R2; R6.4 as now covered in TOP-002-3, R2.
new R2 (re-formatted)	Rewording of previous requirement.
TOP-005-1 (redline version)	
R1	Deleted – covered by IRO-010-1, R3.
R1.1	Deleted – covered in IRO-010.
R2	Deleted – The SDT did not feel that this was a legitimate reliability concern.
R3	Deleted – now covered as part of the new data specification requirements in TOP-003-1.
R4	Deleted – the PSE does not have any unique information needed by the TOP or BA.

TOP-006-1 (redline version)	
R1	Delete – now covered as part of the new data specification requirements in TOP-003-1.
R1.1	Delete – now covered as part of the new data specification requirements in TOP-003-1.
R1.2	Delete – now covered in IRO-010-1, R3.
R2	Delete – now covered as part of the new data specification requirements in TOP-003-1..
R3	Delete – now covered in PRC-001-1, R1.
R4	Deleted – now covered as part of the new data specification requirements in TOP-003-1.
R5	Delete – covered in certification process and no longer required in standards.
R6	Delete – covered in certification process and no longer required in standards.
R7	Delete – RC handled in IRO standards. TOP & BA now covered in certification process and no longer required in standards.
TOP-007-0 (redline version)	
R1	Moved to TOP-001-2, R5 (redlined version).
R2	Moved to TOP-001-2, R6 (redlined version).
R3	This authority already exists and does not need to be cited in a requirement. .
R4	Delete as this is now covered in the IROL Project.
TOP-008-0 (redline version)	
R1	Deleted – now covered by TOP-001-2, R6 for IROL. Taking immediate steps for relief of all SOLs experienced or contributed to may not always be prudent, especially if other organizations are addressing the cause. In such cases, uncoordinated immediate actions may be counterproductive. Accordingly, requiring immediate action to relieve all SOLs was deleted in consideration of TOP-001-1 and TOP-004-3 requirements applied in combination.
R2	First sentence replaced by TOP-004-3, R1. Second sentence moved to TOP-001-2, R7 (redlined versions).
R3	Delete first sentence – bad operating practice, actually eliminates operator flexibility and thus increases risk to the System. Delete second sentence as duplicative of IRO-009-1 as well as FAC-010-1, FAC-011-1, and FAC-014-1. Some phrasing moved to TOP-001-2, R2.
R4	Delete – now covered as part of the new data specification requirements in TOP-003-1.
PER-001-0 (redline version)	
R1	Deleted - This statement is not needed in a reliability standard. The standards already require the necessary actions.

Compliance with Standard

Standard	Functions that must Comply with the Associated Requirements							
	TOP	BA	GO	GOP	IA	LSE	DSP	TO
PER-001-0: Operating Personnel Responsibility and Authority	Retired							
TOP-001-2: Coordination of Transmission Operations	X	X		X		X	X	
TOP-002-3: Operations Planning	X							
TOP-003-1: Operational Reliability Data	X	X	X	X	X	X		X
TOP-004-2: Real-Time Transmission Operations	X							
TOP-005-2: Operational Reliability Data	Retired							
TOP-006-1: Monitoring System Conditions	Retired							
TOP-007-0: Reporting System Operating Limits (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	Retired							
TOP-008-0: Response to Transmission Limit Violations	Retired							

The effective date is the date entities are expected to meet the performance identified in these standards. Note that entities have been given several months beyond the regulatory approval date (preparation time) to fully comply with new requirements.

The assumption used by the SDT in establishing this Implementation Plan is that the projects mentioned in the prerequisites: Pre-2006, Operate within Interconnection Reliability Operating Limits; 2006-06, Reliability Coordination; and Project 2006-07, ATC/TTC/AFC and CBM/TRM Revisions have been approved prior to the implementation of this Project 2007-03, Real-Time Operations.

Effective Date of Revised Standards
All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

Retirement Date for Existing Standards
All requirements will be retired twenty-four months following the first day of the first quarter following regulatory approval.

Standards Announcement

Two Comment Periods Open

Standards Committee Interpretation Procedure
October 7–November 5, 2008

The Standards Committee has posted a comment form for a 30-day period to gather feedback regarding on its draft procedure for interpretations of standards. The comment period is now open **until 8 p.m. EST on November 5, 2008**.

The Standards Committee wants to revise the process of handling interpretations of approved standards to ensure that requests for interpretation are processed as efficiently as possible, with the objective of getting an interpretation to pre-ballot posting within 90 days from the date of receipt of a valid request. NERC will track the time for processing of interpretations from the date of receipt of a valid request to the date of ballot to provide insight into the effectiveness of this process.

Please use this electronic form to submit comments. If you experience any difficulties in using the electronic form, please contact Barbara Bogenrief at 609-452-8060.

The status, purpose, and supporting documents for this project — including an off-line, unofficial copy of the questions listed in the comment form — are posted at the following site:

http://www.nerc.com/filez/sc.html

Real-time Operations Standards (Project 2007-03)
October 7–November 20, 2008

The Real-time Operations Standards Drafting Team has posted a comment form for a 45-day period to gather feedback regarding the first drafts of the revised standards and associated implementation plan for Project 2007-03 — Real-time Operations Standards. The comment period is now open **until 8 p.m. EST on November 20, 2008**.

The drafting team has attempted to eliminate redundancy in the Transmission Operations (TOP) family of standards. As part of this process, the drafting team has made an effort to reorganize the standards and requirements in a more logical manner. In addition, the drafting team has supplied a complete set of Violation Risk Factors, Time Horizons, Measures, and Compliance elements including Violation Severity Levels. An Implementation Plan has been provided to show the timeframe for compliance.

- TOP-001-1 Reliability Responsibilities and Authorities
- TOP-002-2 Normal Operations Planning
- TOP-003-0 Planned Outage Coordination

- TOP-004-1 Transmission Operations
- TOP-005-1 Operational Reliability Information
- TOP-006-1 Monitoring System Conditions
- TOP-007-0 Reporting Sol and IROL Violations
- TOP-008-0 Response to Transmission Violations
- PER-001-0 Operating Personnel Responsibility and Authority

Please use this electronic form to submit comments. If you experience any difficulties in using the electronic form, please contact Barbara Bogenrief at 609-452-8060.

The status, purpose, and supporting documents for this project – including an off-line, unofficial copy of the questions listed in the comment form – are posted at the following site:

Although we agree with the concept and agree that it is unmeasurable, we do not believe that removal of the concept is acceptable and suggest reqording to "as soon as possible but not more than..."
Yes
No
We agree that not every SOL requires communications to another entity. However, there are subsets of SOLs that have the potential to become IROLs or, outside of that subset, left unmitigated, there are other SOLs which will become IROLs. We believe that there should be a requirement to inform the RC when these conditions occur.
No
Change the definition of Simulated Contingencies to: "The act of using planning and operating models to replicate Contingency responses."
Yes
We agree that having evidence of proof for non-events has no value. The focus should be to have evidence of compliance for instances when an event in which compliance was required occurred.
No
TOP-001 - all VRFs but R4 should be HIGH (change R5 and R7). TOP-002 - raise R1 from Low to Medium. It is more than just an administrative requirement.
Yes
NPCC participant members agree provided that only the data specified is required to be dated, not the actual data.
Yes
Yes
No
The note next to R4 in TOP-006 reads: "Load patterns now covered in the new TOP-005. Remainder not required for reliability." We understand that TOP-005 is to be retired, and we are unable to find the new TOP-005 that covers this requirement.

Notification should be provided to the RC only when an IROL is exceeded. Too much information flowing to the RC could potentially mask a reliability problem.
No
Don't believe the current definition implies that a simulator is required. However, the definition of Simulated Contingency is not clear and very ambiguous. Suggested definition for Simulated Contingency is a contingency evaluated using planning and operating models of the BES.
Yes
Yes

TOP001-2 R2 the disconnections prior to switching portion of this requirement. Does this mean the RC and TOPs have to be called prior to switching in emergency situations? (e.g. a line is about to burn down) TOP004-3 R2 what is meant by Agreements in this context? An Agreement is a contract written or verbal. Do Interchange Agreements between TOPs fulfill this obligation? What is meant by synchronous BES tie line and should this be a defined term? Is this just to differentiate between AC and DC tie lines?
Individual
John McCawley

Yes
This phrase is not measureable!
Yes
Although we agree with the SDT's change regarding SOLs, TOPs should not allow an unintended consequence of this change to be less emphasis on resolving or mitigating SOLs.
Yes
We interpret this requirement to indicate that a TOP is required to inform the RC only if action is taken to mitigate an SOL, i.e., if the TOP decides that no action is required for an SOL, the TOP is not required to notify the RC.
No
For additional clarification, we suggest the following alternative wording for the Definition of Simulated Contingencies: "The act of using planning and operating models to model single branch or unit outages in the modeled network."
Yes
No
For TOP-001, R1, R2, R4 - the risk factor should not be the same for each time horizon shown. i.e., for operations planning, same day operations, real-time operations. We suggest R5 should have a Low VRF. For TOP-002-3, the time horizon for each of these requirements (R1-R3) should be "Operations Planning".
No
If the changes suggested above are agreed to by the SDT, please make the appropriate corresponding changes to the measurements.
No
TOP-001, R4. We suggesting changing the words "affect and affected" to "impact and impacted", respectively.
No
The SDT may want to consider a closer implementation date since there are no new requirements included in the proposed revisions to these standards.
Yes
Although we agree with the retirements of TOP-005, 006, 007 and 008, the following discrepancies are noted: Top-006-1, R5 indicates this requirement has been removed to new TOP-005. TOP-005 is being eliminated and a new TOP-005 is not being developed. Where does this requirement reside? or is it really needed? TOP-008-0, R1 indicates this requirement has been moved to TOP-003-1, which is the standard for Operational Reliability Data. Should this read that it has been moved to TOP-004? Per-001-0, R1. We agree with the elimination of this Standard The authority of the system operator is mandated in FERC Order 693, paragraph 112.
Yes
We suggest eliminating R2 of TOP-004-3. An interconnection agreement between two entities will include this requirement.
Individual
Craig McLean
Manitoba Hydro
Yes
Yes
No
As per TOP-004-3, exceeding an SOL does not necessarily put the BES at risk. The SOL for a thermal limit could very well be set for an ambient temperture much higher than the actual ambient temperture. Notifying the RC for such an event would be a waste of resources. We feel it is not necessary to make it mandatory to notify the RC when exceeding a SOL. TOPs should be mandated by a Requirement to document all SOL violations and action taken. Such action may

include but is not limited to: simply further monitoring or making a temporary alarm level adjustment.
Yes
Yes
No
TOP-001-2. Data retention for all requirements should be the same. That is, curent year plus the previous year.
No
TOP-001-2 R5.. SOLs should be removed from the requirement and the VSLs.

PJM Interconnection
Yes
PJM supports the deletion and recognizes the problem in measuring "intent".
Yes
The SDT has correctly balanced the need for flexible responses to non-impactive problems.
No
The issue here is in defining what is impactive and what is not. A flow value that creates a temporary overload on a radial line may not be of concern to an RC, thus informing the RC that the flows are under the limit is merely a distraction. During Emergency Conditions such non-relevant information can be more then distractive it can needlessly tie up people to the point of causing those people to overlook real problems. The standard could be written to include a requirement that the RC must inform the TOP of any overloads that it, the RC, requires to be informed of. Then the TOP is obligated to provide information about the critical SOLs and mandated to report on the relief of every SOL.
No
The definition needs more work to avoid confusion. The word "simulated" will itself likely be a point of contention. One solution would be to delete the word "simulated". If this issue of post-contingency simulation becomes a problem, then a Standard Interpretation can be issued.
Yes
No
TOP-001 - all VRFs but R4 should be HIGH (change R5 and R7) TOP-002 - raise R1 from Low to Medium some type of OPB assessment is required, it is more then just an administrative requirement.

TOP-003-1 Requirement 4. Entities are to provide data, as specified in R1, to their Transmission Operators. Does R1.2 (mutually agreeable format) cover the entities who are reporting data to their Transmission Operators? If the request for data is not done on a regular basis, the entities in R4 need to receive a proper request from the Transmission Operator and be given time to gather the data. Neither R1 or R4 clearly address this process and the standard should address how the entities in R4 will be made aware of any specification of data needed by the Transmission Operator or Balancing Authority.

Yes
This change is consistent with the fact that BES operation is a risk-based endeavor. While IROL risk is so severe it is unlikely to be properly evaluated by a TOP, SOLs should be considered as

part of the normal risk assessment.
No
This has proven to be a duplicative effort since the RC is monitoring the facilities also. Change the text to say, "to the extent that the RC does not have systems in place, the TOP will â€¦.".
No
This change is not necessary. The "Contigency" definition is for things that could but are not certain to happen. Obviously, there is no basis for a contingency that has occurred. Once occurred, it is an event.
Yes
An absence is sufficient.
Yes
No
There are inconsistencies in specified retention periods among several requirements. While we do not know the reason for this, we recommend that the SDT review the different retention periods and provide as much consistencies as possible.
No
1. For the TOP-001-2 VSLs for R4, what if the TOP or GOP does not coordinate because of system conditions. Is it possible that those entities might disagree as to what is a system condition? How would this disagreement be handled? 2. For the TOP-001-2 VSLs for R6, the timing is only one element of the evidence. These VSLs should be rewritten because the VSLs add to the requirement. The VSL should be changed to replace "the timing of when it acted" with "its actions" plus, add the text "when it" between the words "or" and "directed others".

Suggest revising R5 to read "Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when a reportable SOL (as identified by its Reliability Coordinator)has been exceeded. Suggest revising R6 to read "The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROLâ€™s Tv and shall inform its Reliability Coordinator of such actions.
No
We suggest revising the stated purpose rather than creating a new definition. We suggest revising purpose to read " To ensure that reliability entities have coordinated plans for meeting expected operating conditions including contingencies that could occur based on projected system topology."
Yes
No
TOP-001-2 We believe that R5 and R7 warrant high VRF. TOP-002-3 R1 warrants something higher than low. How can the TOP meet the intent of R2 (VRF = high) if it has failed at R1? We suggest that R1 and R2 should be high. R3 should be reduced to low since the RC is required by IRO-004-1 @R3 to develop action plans in conjunction with its TOPs. The heavier burden should be placed on the RC. The time horizon for R1-3 should be changed to Operations Planning
No
TOP-001-2 @M4 - We don't agree with the underlying requirement (see comment to question 12). We do not agree with data retention requirements for M1 and M3 this standard. In our mind, there are two tenants that must be honored above all. The first is to follow reliability directives whenever possible, the 2nd is to provide data necessary for reliability assessments. Where an entity fails to comply, the requestor should immediately file a complaint with the region or NERC. We expect either of these to perform a prompt review. So, we don't see the need to keep data for a year nor do we see value in keeping data until next compliance audit when found non compliant. TOP-002-3 @ M3 should be removed as we do not agree with underlying requirement (see comment to question 12).
No
TOP-001-2 R1 - Could be interpreted that non-compliance is based on number of occasions whereby entity invoked safety, equipment, regulatory, or statutory requirements as opposed to number of occasions whereby entity failed to comply with reliability directives. Suggest revising to read "â€¦.did not comply with reliability directives issued by the Transmission Operator and did not inform the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements, on one occasion." Suggest use of similar language for each Severity Level. R3 - Suggest revising to read "The Transmission Operator, Balancing Authority, or Generator Operator did not render emergency assistance to others, as requested and did not inform the requestor that such actions would violate safety, equipment, regulatory, or statutory requirements. R4 - Revise to conform to comment in question 12. TOP-003-1 R4 - Do not agree that a any failure to provide data warrants severe. Is reliable operations jeopardized for failure to report an outage on a 10 Mw peaking CT as it is for a 1000 Mw base load unit? We don't see them as the same and would rather see something akin to the following: Low - Failed to provide > 25% of data required Moderate - failed to provide 26-50% of data required High - Failed to provide 51-75% of data required Severe - failed to provide > 75% of data required
Yes
While we agree with the SDT that all prerequisites must occur prior to implementation of this plan, we wish to cite, for the record, the sheer volume of draft standards that are now 'dependant' for prerequisite action on preceding drafts. We would like to see a moratorium on new drafts until the current back log is cleared. We are concerned that new drafts are being reviewed with the potential that ramifications of underlying/preceding drafts aren't being fully understood and/or that modifications made to any such drafts may not follow through in later draft standards predicated upon them.
No
We believe that the existing standards are more clear those contained in this draft. This draft

seems to be trying to delineate TOP and BA standards/requirements from RC standards/requirements. In doing so, the draft loses the feeling of cohesiveness of the existing standards.
Yes
Typically, GO, GOP, PSE, LSE entities are prohibited from by federal and/or state Standards/Codes of Conduct from access to much of the information that would be required to perform any type of 'reliability assessment', determination of criticality or adverse impact. Only entities such as the RC, TO, TOP and perhaps BA have access to all the necessary information to make such determinations. For the GO, GOP, PSE, LSE entities, any such determination is really a business risk assessment, not a reliability assessment.
Yes
Generic comment - There appears to be a hieracy created by Reliability Standards with the RC being highest, followed by (equally?) the BA and TOP. If this is true, we'd prefer that the RC identify requirements necessary to enable it to meet its requirements under the standards. As new standards are being created, there appears to be the potential for some entities to have to provide the same information or have to coordinate actions with multiple entities but at different times, using different protocols. As examples: IRO-002-2 already requires the RC "to determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability Coordinators." EOP-002-2 states "A Balancing Authority anticipating an operating capacity or energy emergency shall perform all actions necessary including bringing on all available generation, postponing equipment maintenance, scheduling interchange purchases in advance, and being prepared to reduce firm load." In order to meet this requirement, the BA will likely have to request GO/GOP to provided unit availability data (outages, derates) and the DP, TOP and/or LSE to provide load projections. This same information will likely be needed (and required) by the RC to peform its assessments. In this project TOP-001-008@ R4 states "Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to affect other reliability entities." and TOP-003-1@ R4 requires entities to provide data, as specified in Requirement R1, to its Transmission Operator(s). If these entities have provided the information required by their respective RC and the RC is required to coordinate with other RCs (IRO-014-1) there appears to be duplication which increases the workload of each entity and introduces opportunity for miscommunication or what may appear to conflicting submission of data (assuming that format and timeline differ). Specific comments TOP-001-2 R3 - concern about ambiguity of phrase "to others", particularty from the GOP perspective. For reliability standards, the GOP should only be required to provide such assistance when so requested by its RC. Any other obligations should be included in the terms and conditions of its Interconnection Agreement with the TO or DP and, as such, is outside the scope of these standards. R4 - Concern about phrase "coordinate its respective operations known or expected to affect other reliability entities with those entities", particularly as it applies to GOP. GOP doesn't have access to data, nor the expertise, to make reliability assessments and may be precluded by Codes/Standards from coordinating with other entities. Suggest revising to require GOP to provide data as required by its RC to perform reliability assessments. Since GOP has to follow emergency directives issued by RC or TOP, there is nothing for the GOP to coordinate. If GOP actions or planned actions are deemed to have the potential to result in adverse impact to reliability, the RC or TOP should issue a directive to GOP to cancel such actions. TOP-002-3 - R3 should be deleted given that IRO-004@R3 states that "Each RC shall, in conjunction with its Transmission Operators and Balancing Authorities, develop action plans that may be required, including reconfiguration of the transmission system, re-dispatching of generation, reduction or curtailment of Interchange Transactions, or reducing load to return transmission loading to within acceptable SOLs or IROLs." TOP-003 R1.2 - Am concerned about the term "mutually agreeable format". Does the phrase 'mutually agreeable' apply to ALL applicable entities, or just the TOP and BA? Aren't there enough protocols and tools currently in existence (SDX, ICCP, RCIS) that the standard could at least address use of existing formats as opposed to 'mutually agreeable'? R4 - Does not require entities to provide data to BA although R1 requires BA to "â€¦have a documented specification for dataâ€¦.." and R3 requires each BA to "distribute its data specification to entitiesâ€¦". We suggest revising R4 to read "Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator and Balancing Authority." We removed the plural indicator as we believe that each entity's facility can be in only one TOP and BA area. If information relative to that facilty is needed by multiple TOPs or BAs, those entities should share information. The entity should not be required to submit data for the same facility to multiple reliability entities.

Entergy System Planning & Operations (Gen & Mktg)
Yes

No
The RC should be aware of SOL exceedances in order to perform their function and maintain situational awareness.
Yes
The definition of "Simulated Contingency" provides enough clarity to avoid confusion.
Yes
Yes
Yes
The Implementation Plan refers to items in other proposed standards that will take the place of existing requirements, some of which are referred to by project number and others by standard number. In either case, the proposed standard that will contain the requirement should be presented or easily referenced. for example the propose IRO standards that will accommodate requirements moved from the TOP standards are not available for review and confirmation. Also, several requirements were deleted because they were "immeasurable". Some of these items should be revisited and determined if an alternative "measurable" requirement can be drafted. For example, it is important that an entity not continue operate in an unknown operating state (TOP-004 R3) and promptly return to an analyzed conditions/or perform an analysis for the current condition.
Individual
Edward J Davis
Entergy Services
No
There is merit in holding entities accountable for making timely notifications,etc. Would an entity be compliant if they waited 6 months to notify the TOP of changed in Real Power capability? Perhaps the measures can be worded such that proof of the event's time and proof of the notification's time are not significantly different. However, we suspect that entities for which the requirement is applicable would WANT guidance on what is timely and what is not. Leaving that much up to the interpretation of audit teams is not very desirable.
Yes
We agree as this was the original intention of the NERC OLDTF that first developed the terms SOL and IROL.
No
SOLs should be removed. While certain SOLs may need to be communicated to the RC per internal processes, only IROLs should be required to be reported. Reporting of every SOL could "water down" the communications to the RC and add confusion when IROLs are reported.
No
There can be much confusion with the standards when terms are used in multiple ways. The poster child for this is "critical facilities." I agree with the intent of the SDT, but suggest the term "Postulated Contingencies."
Yes
No
TOP-002-3 R1: VRF should be Medium since you can't do R2 or R3 without it. TOP-003-1 R5 - VRF should be Medium, the same as R4
No
TOP-002-3 M1: We suggest a good example of compliance evidence be power flow models and study results instead of operator logs. If not, what does "assessment" mean in R1?
Yes
Yes

No
Yes
Please expound upon the reasons why the SDT determined that TOP-002-2 R19 and TOP-004-2 R4 are unmeasurable. TOP-001-2 R4 is going to be very difficult to measure. Any guidance the SDT can provide on how to demonstrate compliance would be appreciated. TOP-002-3 R3: The requirement that was mapped to this in the implementation plan used the phrase "shall coordinate." We think that R3, as written, is too vague. Also, it is more command and control versus a collaborative effort as implied by the previous use of "coordinate."

No
Requirement 2 of TOP-001-2 already contains a provision for the TOP to inform its RC of real-time or anticipated emergency conditions. If a particular SOL is considered an emergency condition, then it would be reported. Otherwise, it is not required. Therefore, we agree that notifying the RC of every SOL is not necessary.
No
The proposed definition of â€œSimulated Contingencyâ€ is not clear. Also, it is not apparent why a new definition is even needed. Make the definition part of the requirement. Why couldnâ€™t â€œSimulatedâ€ be replaced with something like â€œdepictedâ€, â€œrepresentedâ€ or â€œportrayedâ€. Possible wording for the Requirement 1 might be â€œThe Transmission Operator shall have an assessment for the next dayâ€™s operation that indicates whether it will exceed any of its System Operating Limits (SOLâ€™s) during anticipated normal conditions and Contingency events represented through planning and operational analysis models reflecting design parameters and system conditions.â€ In the event the drafting team does not agree to implement our suggested change above, the drafting needs to address this issue also in IRO-004-01, R1 where the requiement states normal or anticipated contingency events and not "simulated events". The two requirements should be consistent in terms.
Yes
Yes
Yes
Yes
No
Both TOP-001-1, R1, and PER-001-0, R1, were deleted. These standard requirements require operating personnel under the TOP and BA to have the responsibility and authority to implement real time actions to ensure the stable and reliable operation of the bulk electric system. Additionally, in paragraph 1330 of FERC Order 693, FERC approved PER-001-0 as mandatory and enforceable. Accordingly, FERC is clear in its intention that the operating personnel of the TOP and BA have authority to take action without any managerial approval being required. Also, in paragraph 1582 of the Order 693, FERC states R3 of Reliability Standard IRO-001-0 establishes the decision-making authority of the reliability coordinator, but not operating personnel of the TOP or BA. These facts stated above could be exposing a reliability gap if this standard is approved as written because the entities performing the TOP and BA functions must have the support of a NERC standard to be able to take immediate action without management approval or intervention. Reliability Standards Compliance programs are based on abiding by the NERC standards. By the TOP and BA not having clear decision-making authority from a NERC standard could lead to senior management of a company stepping in and requiring their approval before operating personnel are allowed to take action to alleviate problem. This could lead to jeopardizing reliability. ï€ TOP-001-1, R2 has been deleted. It would seem logical that a requirement for the TOP to take immediate action to alleviate operating emergencies including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc., would be worthy of being kept in the

standard. If it is a duplication of an existing requirement, then please reference where the duplicate requirement is located. ï€ Under TOP-001-2, R2 the phrase "including potential impacts caused by disconnections prior to switching" was added to the requirment. This addition seems to provide too much specificity and provides a very granular view for the requirement. It is best to remove this phrase and bring the requirement back to a higher level and end the sentence after "emergency conditions". ï€ It was noted that TOP-001-2, R3 replaces TOP-001-1, R6 and that the following component of the old R3 was deleted: "provided that the requesting entity has implemented its comparable emergency procedures". For an entity to render emergency assistance to another entity who has not implemented their own internal company emergency procedures prior to seeking help from others is not a wise decision. Deleting this phrase would create a burden on others providing the emergency assistance. Unless it can be shown there are other standard requirements already containing this required action, we recommend NOT removing this phrase. ï€ Removal of the BA from requirement (TOP-002-2, R1) to plan operations into the future is not appropriate. Although it is agreed that CPS and DCS are much of the real-time basis for reliable operation, due to the physical requirements to start or even change output of many units, it is absolutely necessary that the BA plan a near-term operating horizon of several hours so that DCS and Energy Emergencies can be avoided. Removing the requirement for the BA to plan because DCS covers everything would be like removing the requirement for TOP to plan and just rely on the fact that the TOP has to correct SOLâ€™s and IROLâ€™s under TOP-004-1, R1 without any planning. Also, without this requirement to plan, under what basis would the BA have to request the generator output planning information currently in TOP-002-2, R15 that the SDT says will become part of TOP-003-1 data specifications? The Generator Operator could say there is no need for the BA to plan beyond what is needed for DCS and CPS and thus claim such requests are not needed. By removing this requirement the SDT has removed any basis for doing near-term planning. ï€ Similarly to the comment above for R1, the BA has a need to plan for the items covered in TOP-002-2, R5. Such a requirement should be included in the new R1 of TOP-002-3. ï€ TOP-002-2, R8 requires the need to plan to meet Interchange Schedules and ramps, and should be carried forward to TOP-002-3. Even though INT-006 requires the BA to consider ramping capability in approving/denying Arranged Interchange, generation dispatch and unit capability can change significantly after an Arranged Interchange is approved. The BA must consider (i.e. plan) near-term ramps in being able to meet an upcoming Interchange ramp. The result of not planning for a ramp that can no longer be met is a frequency deviation. The ability to ramp is not a parameter in the BAL-001 and BAL-002 standards. ACE is the basis for BAL-001 and BAL-002 and ramping capability is only one contribution to ACE and thus those standards should not be used as a reason for removing this requirement. In addition, the CPS criteria of BAL-001 are not granular enough (CPS1 is 12 month rolling average and CPS2 is a calendar month number) to manage real-time issues that can cause reliability problems. ï€ In the new TOP-003-1 which addresses reliability data needs, R2 and R3 require distribution to entities â€œthat provide Facility statusâ€. Why is the term â€œstatusâ€ used? Why would not the distribution be to any entity that is the source of data under the specification R1 and not limit it to a â€œFacility statusâ€ source? ï€ In the mapping table of the Implementation Plan, TOP-006-1 R5, R6 and R7 were deleted with a reason given by the SDT that the monitoring activities are covered in the certification process. It is unclear how a one time verification of the activity during certification translates into a requirement that the monitoring processes continue â€“ and more importantly that violations have a penalty. It is recommended that these requirements be retained (and perhaps others deleted added back as well). ï€ Under TOP-004-3, R2 states that Agreements between TOPs are required for switching of BES tie lines. It is felt that this type of detailed information would be contained in the Interconnection Agreements between the two parties. Only when there are not existing Agreements in place would this requirement be necessary. In those cases where it is necessary, it is recommended that "specify switching" be replaced with "specify the procedures for switching". ï€ Under TOP-003-1, R4, the Balancing Authority should be added along with the Transmission Operator as receiving data as specified in R1. Requirement 1 requires the TOP and BA to have documented specification for data, and R4 requires the responsible entities to provide this data only to the TOP. If the BA is required to have the documented specification for data support, then the responsible entities should be required to provide appropriate data not only to the TOP but to the BA as well.

Yes

In the purpose statement the term "functional entities" is used. The term creates a confusion of terms between the purpose statement and requirements. Requirements 4 and 7 call for coordination among "other reliability entities" and "reliability entities" respectively. Therefore, recommend replacing "functional" with "reliability". The limits mentioned in TOP-001-2,R5 need more description. The recommended change is as follows: â€œEach Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within the IROL limits when an IROL or SOL has been exceeded.â€ Requirement 7 of TOP-001-2 is duplicative as it applies to the TOP to that of standard IRO-005-2, R13. Could this result in a double jeopardy for non compliance with this requirement? In TOP-003-1, in the Purpose statement replace "system" with "System". In R1 of TOP-003-1, it is recommended that the term "specification" throughout the standard be replaced with a better term to describe what is meant in the standard. For example, the word "catalog" may be a better term. Also, it recommended that in the sub-bullet R1.3 the word "providing" should be replaced with "exchanging". In TOP-001-2, In section 1.4 of Data Retention the term "reliability entities" is capitalized. Should it be in lower case? On several requirements (e.g., TOP-006-1, R1;TOP-008-1, R1) recommended for retirement, there is a comment in the redline version stating that the requirement is covered in another standard. Upon reviewing the other standard, the requirement was not found. Was the latest version of the standard posted properly on the NERC website?

Individual

Dan Rochester

Independent Electricity System Operator

No

This phrase should not be removed. If measurability is required, similar language ("without delay") in R4 of the recently approved IRO-009 standard should be used, with a condition to assess if there was a 5 minute delay for assigning a High VSL.

No

We strongly disagree with removing the requirement for the TOP to operate within SOLs. We are unable to understand the argument that this requirement will "reduce the operational flexibility by eliminating th TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time." SOLs are detemined to set upper bounds beyond which transmission facilities may be overloaded or system voltage may be depressed or the operators will be operating in an unknown state. If such upper bounds are to be ignored to enhance operating flexibility, then why should SOLs be determined in the first place and how do we ensure operating reliability? Further, FAC-014 requires TOPS to develop SOLs, why would we be requiring the TOPs to do so while we suggest that they do not need to operate within the bounds that they themselves develop in the first place? Do the two sets of standards contradict each other? We are also very concerned that R1/R2 in TOP-002 requires the TOP to assess potential exceedence of IROLs only but not SOLs. This sends a the wrong message to the industry that TOPs do not need to plan their operations to within established SOLs. So why do we mandate the TOPs to calculate SOLs to begin with? We feel strongly that R2 in TOP-002 should be revised so that it includes as part of the requirement, preclusion of operating in excess of any SOLs. We believe that completely removing SOLs from the requirement is contrary to the long-term objective of enhancing reliability. Further, we believe that all SOLs should be respected in the planning time-frame and in real time with the exception of low likelihood or rare circumstances. We do recognize that there are instances where post-contingency, a TOP may not be able to respect its repreparation limits for the next contingency. Those instances must however be limited to situations in which, after applying available means to eliminate the violation short of firm load shedding, and where it can be demonstrated that the SOL violation cannot propagate into an IROL violation following the next worst contingency. That is, the repreparation limit is non-impactive to the BES. We need only recall that some blackout events started by exceedence of local area limits (SOLs). When sufficient events occur (such as when a line rating is not observed or its overload not corrected), cascade overloading on another transmission line and yet another transmission line and so on may occur. An apparently non-impactive SOL, if not observed and whose exceedence not corrected, can result in cascading outages.

Yes

SOLs are intended to ensure reliabile operation of the BES. TOPs, who calculate these SOLs to begin with, shall not intentionally operate its system to be very near or exceeding SOLs. Thus, we do not expect SOL exceedences to occur so frequently that reporting to the RC will create an overload of messages.

No

We do not see the need to define this new term. Further, the definition is inaccurate (mixing contingency which is a "what-if" event with system response) and confusing (we are unable to understanding the meaning of "the net effect of design considerations" in an operational planning assessment domain. Having said that, we do not interpret the term to mean the requirement for a "simulator". To eliminate the concern of misinterpretation, we suggest that R1 be reworded to "â€¦ during anticipated normal conditions and analyzed contingency events."

No

First of all, we do not agree with the removal of SOL from R1 so we do not agree with M1. On the approach the SDT is proposing, we do not agree with the rationale that the absence of an IROL violation report is a sufficient measure. We believe the TOP should be required to provide evidence to demonstrate compliance (in this case, the data showing operating within IROL and Tv).

No

TOP-001 R1: We do not agree wth a High VRF. Not complying with the TOP's directives does not

necessarily result in cascading outages or instablility. And since the responsible entities are allowed to not comply with the directives for safety and other reasons, we are unable to ratioanlize how impactive a risk can be when an entity violates this requirement. R2: We are unable to assess the VRF for this requirement since we do not understand the meaning of "â€¦.potential impacts caused by disconnections prior to switching." R3: We do not agree with a Hgh VRF for the same reason as for R1, viz. if provisions for not complying is given, how high a risk it is if a responsible entity violates this requirement? TOP-002 R1: We suggest raising the VRF for R1 to a Medium. Day ahead operationL assessment of system conditions against established limits is essential in ensuring sufficient resources are available and operational plans are in place to prevent exceeding limits and to provide mitigating measures when such exceedence occurs. This assessment uses established limtis and as such, is equially impactive, if not more impactive, than developing the limits themselves. TOP-003 R5: We do not agree with a Low VRF assigned to this requirement whose intent is essentially the same as R4 except R5 goes beyond the local TOPs and BAs to the adjacent or higher level entities, which also need this data to ensure reliable operation. We suggest this VRF should be Medium - the same for R4.
No
We do not agree with some of the requirements (see above) and hence do not agree with some of the Measures. Other than that, we generally agree with the measures and retention periods for those requirements that we agree with.
No
a. We do not agree with some of the requirements, and suspect other commenters may express disagreements with some requirements. This may result in changes to the requirements and as such, the VSLs will need to be revised. b. A number of the VSLs proposed in the TOP standards, e.g. TOP-001, R1 and R2, are graded according to the number of repeated violations. This approach may need to be changed since recent FERC NOPR proposes that repeated violation is not to be the basis for different violation levels. c. TOP-003, R1: It appears that missing one of the subrequirements is assigned a Low VSL, missing 2 of them is assigned a Medium VSL and missing all 3 or having no documented specification is assigned a Severe. We suggest to move the first 2 conditions to Medium and High.
Yes
We generally agree with the implementation timeframes that are dependent on the implementation of other standards. However, we reserve judgment on any specific issues that may arise when more definitive dates are proposed.
No
The note next to R4 in the red-line version of TOP-006 says: "Load patterns now covered in the new TOP-005. Remainder not required for reliability." Since TOP-005 is to be retired, we are unable to find a new TOP-005 that covers this requirement. Please explain the relevance of this note.

Yes
We agree with the SDT's logic in eliminating SOLs from TOP-004-2 Requirement R1.
Yes
R5 should be revised to also require the TOP to notify the RC of the particular IROL or SOL that has been exceeded.
No
We believe that the definition of Simulated Contingencies should be revised as follows: The act of using planning and operating models to model single branch or unit outages in the modeled network.
Yes
Yes
Yes
No

TOP-003-1 Requirement R5 VSLs should be patterned after the VSLs for Requirements R2 and R3, i.e. a graduated scale since R5 is not a binary requirement. TOP-002-3 Requirement R3 - if only one reliability entity is identified in plans to preclude exceeding an IROL, and that entity is not notified, which VSL would apply - "Lower" or "Severe"?
Yes
Yes
TOP-005-1 Requirement R2 has been deleted because it is not a reliability concern. Has this requirement been picked up in NERC Rules of Procedure or business practices? TOP-006-1 Requirement R4 is being deleted, and the comment says that load patterns are covered under TOP-005. But TOP-005 is also being deleted - is it intended that load data will be covered by TOP-003 now?
No
Yes
TOP-001-2 Requirement R4, Measure M4 and VSLs for R4 : What does the word "affect" mean? Any operation by a TO or GO could have a slight affect on other reliability entities. The word "affect" should be qualified in some manner, to avoid a requirement to coordinate operations with negligible impact. We suggest using the phrase "have a reliability impact upon" instead of the word "affect". TOP-004-3 Requirement R2, Measure M2 : What does "specify switching" mean? We suggest this wording be removed from the requirement. This requirement may have been moved from TOP-004-1 Requirement R6, but it is unclear. TOP-008-0 Requirement R1 is being deleted. The Comment says that this is now covered by TOP-003-1, and in consideration of TOP-001 and TOP-004 requirments in combination. We think the Comment should not reference TOP-003-1. TOP-002-2 Requirement R11 contains a requirement for a seasonal assessments to determine SOLs. Where is this requirement in the revised standards?

Agree that it would increase workload while trying to return the system within limits. This requirement should probably move to TOP-004-3. R6 should maybe move there also as Real-Time Operations?
No
Change the definition from "design considerations" to "planned outages".
Yes
SDT has cleaned up TOP-004-3 well, removing duplicate requirements from other standards. I don't believe R2 (Agreements of switching) is necessary since TOP-001-2 R3 appears to cover assisting to mitigate emergencies/IROLs. It seems to me TOP-001 R5 and R6 are also real time operations and should go to TOP-004-3 has R2 and R3.
Yes
Yes
Yes
I think TOP-001-2 R6 would be better to say the TOP "shall act to ensure mitigation of the magnitudeâ€¦" thus eliminating extraneous phrasing "direct others".
Yes
Yes
Yes
WECC TOP-STD-007-0 would now need to link to TOP-004-3 (R1).
Yes
Good Ideas - thanks. However, do not see anything analogous to the current TOP-001 R1. and think we should retain something of this nature.

Yes
Intent is an enforcement issue. Thus, it does not belong in the standard.
No
The TOP should be required to operate within SOLs. SOLs by definition can by be voltage or stability limited. SOLs, if exceeded, can be become IROLs. What in the standards will ensure that the TOP is sure the exceeding the SOL will not result in an IROL. The situation described in the question may not even require that an SOL be defined. No where in the standards is there a requirement that every thermal limit must be encompassed in a SOL. If a TOP decides to "ride" out an SOL rather than mitigate the violation, in reality the TOP has indicated that the current SOL is invalid. Why can't the TOP just determine what the new SOL is?
Yes
We believe that the TOP notifying the RC of every SOL that has been violated does not create an overload messages. The TOPs in the Midwest ISO reliability footprint already notify the RC of all SOL violations and we have not found it to be a burden. In fact, we have found it actually improves operations because it causes the RC to continuously validate the results of the real-time contingency analysis against the TOPs. We do believe that the requirement should not be prescriptive to require a particular type of communication such as via the phone. To a certain degree this requirement can be met by simply having redundant models and contingency analysis in the EMS. We observe that the requirement is not for the TOP to notify the RC every time that an SOL is violated. In fact, the requirement is only to notify the RC of the actions to be taken. Thus, if no actions are taken, the TOP does not have to notify the RC. We believe the language should be strengthened to clarify that the TOP should notify the RC everytime an SOL is violated even when no mitigation is taken.
No
Why can't you just use the term potential in front of Contingency?
Yes
Individual
Thad Ness
AEP
Yes
Yes
The purpose statement in TOP-004-1 is consistent with the IROL NERC defined term. We suggest keeping the original purpose statement from TOP-004-1. If SOL are to be reported then some prioritization needs to be given. We suggest reporting the largest SOL if there are several common to an area of congestion.
Yes
The TOP-001-1 purpose statement deals with emergencies and taking actions to resolve them. The TOP-001-2 purpose statement deals with coordination. We concur that notifying the RC of every SOL violation could be overwhelming and counter productive to reliability. If SOL are to be reported then some prioritization needs to be given. We suggest reporting the largest SOL if there are several common to an area of congestion.
No
The "Simulated Contingency" definition lacks clarity and its use in TOP-002-3 R1 does imply that an offline load flow program would be required when conducting a next day assessment. Suggested wording: Replace "and Simulated Contingency" with "and/or potential contingency".
No
Refer to question 3 response. The TOP-001-2 three year data retention for SOL violations seems

excessive. Data that has been retained this long tends to lose its value. We would like to hear an argument from the SDT how this improves system reliability. Similarly, the three year data retention for distributing data specifications in TOP-003-1 (R2/M2, R3,M3) also seems excessive. We propose that the current and previous calendar years would suffice.
Yes
Yes
Yes
The intent of TOP-004-03 R2 requires some clarification. It seems unnecessary to have an agreement for switching every BES tieline. It seems unlikely that every conceivable situation for switching a tieline could be covered in any type of agreement.

FirstEnergy
Dave Folk
FirstEnergy
Yes
Yes
No
However, the SDT should develop rules that will drive the reporting of incidences where entities exceed SOLs on a regular basis. As an example: the operating studies show that the facility emergency thermal limit is expected to be exceeded by 25% for 4 consecutive hours of 5 consecutive operating days. The goal should be to flag instances where SOLs are exceeded on a regular or routine basis in an effort to highlight situations where mitigation actions or system reinforcement projects may be needed or required to preserve the reliability of the BES.
No
We believe that the definition is not needed and that the use of the word "simulated" in and of itself provides sufficient clarity that the requirement does not refer to actual Contingency events. The premise of the requirement is an assessment of "next day" system condition so it is unclear how this could in anyway be construed to be an actual contingency event. However, what is not clear in the requirements is what type of contingencies are to be evaluated? Is it single Contingency (N-1) events only. What if bus faults were not studied would there be a potential for non-compliance? There should be some tie to the TPL standards to specifically identify which Contingencies must be evaluated for Next Day analysis.
Yes
No
The VRF for TOP-001-2 R7 should be a "High." Failure to follow the most conservative limit in times of uncertainty could negatively impact real-time reliability. The VRF for TOP-002-1 R4 seems inconsistent. It has a qualifying concept of urgency of time in the phrase "â€¦ unless System conditions do not permit such coordination." which implies critical to the reliability of the BES yet it has been assigned a Medium VRF. Also, failure to coordinate an action may not always result in an impact on the BES, but the action does in theory bear a risk to the reliability of the BES. This VRF should be a High. The VRFs for TOP-002-3 seem inconsistent. Requirement 2 which requires planning to mitigate a potential IROL discovered in the study required under R1 has a High VRF while R1 which requires the study be done has a Low. It is difficult to understand how a source requirement such as R1 can have a lower VRF then a derivative requirement such as R2. R1 and R2 should both have Medium VRFs since they are planning in nature and do not have an immediate impact on the BES. The VRF for TOP-003-1 R4 and R5 seem inconsistent. The drafting team appears to consider it a Medium risk for an entity not to supply operating data to its Transmission Operator, but a Low risk for that Transmission Operator not to supply the operating data to an entity "with immediate responsibility for operational reliability." The VRF for R5 should also be a Medium.
Yes
No
The VSL for TOP-001 R1 should all be revised to state, "â€¦ The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with reliability directives issued by the Transmission Operator, and the respective entity failed to inform the Transmission

Operator that such actions would violate safety, equipment, regulatory, or statutory requirements on (one, two, three, four or more) occasion." The VSL for TOP-001 R3 should be revised to state, "The Transmission Operator, Balancing Authority or Generator Operator did not render emergency assistance to others, as requested and available, and such actions would not violate safety, equipment, regulatory, or statutory requirements. The VSL for TOP-001 R4 should be revised in a similar fashion to R1 and R3 above. The VSL for TOP-002 R3 as written implies that an entity that interacts with only one reliability entity would not receive a violation greater than "lower." In addition, as written these VSLs seem to allow the Compliance Auditor the opportunity to choose how to apply the VSL. As an example the entity with one reliability entity could be found to be guilty of a "Lower" violation because they missed their one reliability entity or they could be guilty of a "Severe" violation because they missed 100% of their reliability entities. Suggest the drafting team eliminate the first sentence of each of these VSLs and use percentages as the test of violation severity. The VSL for TOP-003 R2 as written implies that an entity that interacts with only one data supplier would not receive a violation greater than "lower." In addition, as written these VSLs seem to allow the Compliance Auditor the opportunity to choose how to apply the VSL. As an example the entity with one data supplier could be found to be guilty of a "Lower" violation because they missed their one data supplier entity or they could be guilty of a "Severe" violation because they missed 100% of their data supplier entities. Suggest the drafting team eliminate the first sentence of each of these VSLs and use percentages as the test of violation severity. The VSL for TOP-003 R3 has the same problem as R2. Suggest the drafting team eliminate the first sentence of each of these VSLs and use percentages as the test of violation severity. The VSL for TOP-004 R1 states, "The Transmission Operator did not operate within an identified Interconnection Reliability Operating Limits (IROL) and the associated IROL Tv for any single occasion." This should be changed to state, "The Transmission Operator failed to mitigate an identified Interconnection Reliability Operating Limits (IROL) and within the allotted IROL Tv for any single occasion." The VSL for TOP-004 R2 as written implies that an entity with only 1 tie line would not receive a violation greater than "lower." In addition, as written these VSLs seem to allow the Compliance Auditor the opportunity to choose how to apply the VSL. As an example the entity with one tie line could be found to be guilty of a "Lower" violation because they missed their one directly connected entity or they could be guilty of a "Severe" violation because they missed 100% of their directly connected entities. Suggest the drafting team eliminate the first sentence of each of these VSLs and use percentages as the test of violation severity.
Yes
Yes
While we support the reduction in the overall number of standards, the deleted standards contained some requirements whose deletion we can not support. We have communicated these requirements and the issues surrounding them in the responses to other questions on this form including question 12 at the end of this form.
Not aware of any.
Yes
In TOP-001-2 R2, the term "disconnections" is ambiguous. In addition, as written this requires the RC be notified prior to operator action. While we agree that we do not want operators taking actions that sacrifice accuracy for speed, we do not support the concept of approving all mitigation actions prior to implementation. Nor do we believe this concept serves to preserve or enhance reliability in situations where time is of the essence. The motivations behind the original requirements were 1) to preserve the reliability of the interconnection through recognition and mitigation actions and 2) to ensure that removal of overloaded transmission facilities was done only when it preserved or enhanced reliability. We feel these two concepts should be managed as individual requirements similar to the requirements in effect today. The Drafting Team should include the system conditions of overload, abnormal voltage, and reactive conditions, and endangered equipment as system conditions permissible for action then communication. In TOP-001-2 R3, the Drafting Team dropped the concept of the requesting entity implementing its comparable emergency procedures prior to an entity being required to lend assistance. This could lead to a request and requirement for TOp A to shed load in its area when TOp B, the entity requesting the assistance, has not shed load that would mitigate the emergency in its own area. This requirement should be revised to state, "Each Transmission Operator, Balancing Authority, and Generator Operator shall render emergency assistance to others, as requested and available, unless such actions would violate safety, equipment, regulatory or statutory requirements and provided the requesting entity has implemented its comparable emergency procedures." In TOP-001-2 R4, the Drafting Team preserved limiting the delay in notifications to system conditions. This change as written does not provide additional clarity as to which system conditions require and do not require notification in advance of action. This seems to make this Requirement too vague to be measurable. As currently proposed, this requirement means someone must decide which system conditions require and do not require advance coordination. Additional rules need to be developed by the team concerning the system conditions that require notification in advance of action. While we agree that we do not want operators taking actions that sacrifice

accurracy for speed, we do not support the concept of approving all mitigation actions prior to implementation. Nor do we believe such a concept serves to preserve or enhance reliability in situations where time is of the essence. We recommend the drafting team restore TOP-001-1 R7.3 that states, "When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, GOp notifies TOp, TOp notifies RC and adjacent TOps at earliest possible time." As currently written this proposed requirement leaves it open for the operator to complete the mitigation actions prior to notifications taking place when system conditions do not permit such coordination which is inconsistent with the Drafting Team's action on other requirements, but is appropriate considering the potential system conditions. In TOP-001-2 R5, the Drafting Team is supporting action in advance of communication, we support this stance. The Drafting Team proposes to delete TOP-007-0 R3 that states, "A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2" because the authority already exists and does not need to be cited in a requirement. Other than the Reliability Standards, where does this authority exist? It seems that the drafting team intends to remove all requirements that provide for this authority in the Reliability Standards. We cannot support this stance. Without this provision in the standards, there is nothing to preclude an organization from requiring its operators to obtain approval from superiors within the organization prior to taking an action such as load shed, redispatch, reconfiguration, etc. that they know will preserve or enhance the reliability of the BES. While we agree these requirements do not provide any legal protection to the operator, they do enhance reliability of the BES by ensuring authority to act remains in the hands of the operator at the controls of the System. The Drafting Team deleted TOP-002-2 R1 because they feel the BA only needs to respond to CPS and DCS. Does the BA only have responsibility for responding to CPS and DCS? How does the TOp meet its obligations without BA assistance? How about MVAR support? It is not realistic to require a TOp to issue a reliability directive to a BA, GOp, GO, DP, etc. each time it needs some assistance in preparing a plan for future system conditions. We request the Drafting Team reconsider the application of the "BA only needs to respond to CPS and DCS" concept and instead apply the measure of reliability of the BES as the litmus test for requirements. The Drafting Team deleted TOP-002-2 R2 as a good utility practice that is not measurable. We support this change since the TPL standards will support the interface between operations and planning. The Drafting Team deleted TOP-002-2 R3 as the LSE and GOP are governed by their Interconnection Operating Agreements. We are concerned with relying on agreements as a sole means of providing for BES Reliability. Reliability related behavior is best governed by reliability standards. Therefore, we request the drafting team reinstate R3 of TOP-002-2. In TOP-002-3 R1 and R2 the drafting team dropped the BA plan from the requirement. How will the TOP obtain information and assistance needed from the BA necessary to plan to meet scheduled system configuration in light of the fact that the work plan for these standards does not include any revisions to the BAL standards to require that support? The Drafting Team deleted TOP-002-2 R7. With this deletion, how will the BA's plan for energy reserves insure its deliverability without TOp assistance? The implementation plan does not include any revisions to the BAL standards to verify deliverability. This deletion seems to segment the planning activities too much to ensure reliability. The Drafting Team deleted TOP-002-2 R8 and R10. With this deletion, how does the TOp meet its voltage and reactive obligations without BA assistance? The implementation plan does not include any revisions to the BAL standards and CPS and DCS do not cover reactive support. Whatâ€™s left in the standards to ensure reactive capacity is available on generating units to support voltage needs? The Drafting Team deleted TOP-002-2 R18. This requirement should be retained and revised to state, "Neighboring BAs, TOps, TOs, use identical Tie- line names based on terminal end facility names when referring to transmission facilities.â€ The purpose of this requirement is to ensure Company A and Company B are sure they are talking about the same Tie-line. The Drafting Team deleted TOP-003-0 R1. This deletion eliminates the requirement for the GOp to provide outage data to the TOp. This requirement should be retained. The Drafting Team has developed this standard based on the changes planned or proposed for other standards. This standard should not be finalized until all other standards that these changes are based on have been regulatory approved in order to avoid creating a reliability gap through deletion of an existing standard and the failed adoption of a proposed standard. TOP-004-3 R2 uses the term "Agreement" that is currently defined as "A contract or arrangement, either written or verbal and sometimes enforceable by law." Until the proposed revision to the definition of the term "Agreement" that would include "mutually agreed upon procedures and protocols" this requirement should be revised to state, "TOp has Agreements or mutually agreed upon procedures or protocols with directly interconnected TOps that specify switching of synchronous BES tie lines." TOP-003-1 R1 be revised to state, "Each Transmission Operator, Balancing Authority, Generator Operator, Generator Owner, Transmission Owner, Purchasing-Selling Entity, Load Serving Entity, and Distribution Provider shall provide all data requested in writing by the Transmission Operator or Balancing Authority using the periodicity and in the format requested." With the adoption of this change, TOP-003-1 R2, R3, and R5 could be dropped because R1 covers all entities and data requirements. In addition, with this change, the VRF for R1 should be changed to "High." The PSE should be added to the applicability of this requirement as they may

have information that intermediary TOps need concerning large magnitude near-term sales and purchase power transfers that are unconfirmed with a high probability of implementation that should be studied by operations planners for potential impacts on the reliability of the BES. The Drafting Team proposes to delete the TOP-006-1 R5, R6 and R7 as they are "covered by the certification process and no longer necessary." The certification program is being scaled back in part due to the reliability standards and the drafting team is removing requirements from the standards because the certification program covers it. We should not rely on programs outside of the reliability standards to provide for the reliability of the BES. These three requirements should be reinstated and revised to improve clarity and measurability.

Yes
Yes
Yes
No
This question is not consistent with TOP-004-2 M1, you either need the report or the data. You should be able to prove compliance with the report, stating absence of an IROL Violation Report in the question does not make sense.
Yes
No
1. The measures seem to repeat the requirements perhaps this could be avoided since additional detail in the measures are not enforceable only the requirements are. 2. In the standard TOP-001-2 the retention period for requirement 5 and measure 5 is longer than required for R1 through R4, what is the reasoning for this? 3. In the standard TOP-001-2, there is no retention period given for requirement 6 and measure 6. 4. In all of the standards and in the last sentence of the section "1.4 Data Retention", isn't it extreme to retain "all" requested and submitted subsequent audit records? 5. In the standard TOP-002-3, requirement 3 depends on requirement 2 but these requirements don't have the same retention period, should they? 6. Measure 5 of the standard TOP-003-1 references requirement 9, shouldn't it reference requirement 5? 7. In the standard TOP-003-1, the retention periods for R4/M4 and R5/M5 are only for 90 calendar days but the rest of the requirements have a retention period for 3 years, shouldn't R4/M4 and R5/M5 have the same retention period as the rest of the requirements in this standard? 8. The MRO has concerns about storing large amounts of real-time data. In TOP-003-01, should R1, R4, and R5 data retention be set at 90 days? 9. In the standard TOP-004-3, M2's last sentence references the text "confirmation". What is needed for confirmation? Would a signature page be an example?
No
1. For the TOP-001-2 VSLs for R1, these VSLs should be reworded because complying to the requirement would meet those VSLs. The MRO would suggest replacing "unless" with an "and" plus change the trailing text to read "â€¦ the respective entity did not inform the transmission operator â€¦". 2. For the TOP-001-2 VSLs for R2, what about the situation where the transmission operator did inform the RC and the affected TOP of a real-time emergency condition on an occasion but the notification was after the disconnection of switches? 3. For the TOP-001-2 VSLs for R4, what if the TOP or GOP does not coordinate because of system conditions. Is it possible that those entities might disagree as to what is a system condition? How would this disagreement be handled? 4. For the TOP-001-2 VSLs for R6, the timing is only one element of the evidence. These VSLs should be rewritten because the VSLs add to the requirement. The VSL should be changed to replace "the timing of when it acted" with "its actions" plus, add the text "when it" between the words "or" and "directed others".
Yes
Yes
Yes

In standard TOP-004-3 and in section "1.5 Additional Compliance Information", what if you don't meet this reporting process? What will happen?
Individual
Rick White
Northeast Utilities
Yes
Yes
No
We do not believe that the TOP informing the RC of every SOL exceedance should be required, and would not facilitate preserving reliability. Suggest removing "or SOL" from the requirement.
No
Suggest adding the words "such as P/SSE, power flow, etc." to the definition after the word "models". This might help to clarify the intent. Ending the definition after the word "responses" would make it a cleaner definition. Additionally, the defined term is "Simulated Contingencies". R1 uses the term "Simulated Contingency". This should be reconciled by either changing the defined term, or R1 should use the defined term and drop the word "events" from the end of the sentence.
Yes
We agree that having evidence of non-events has little value.
No
TOP-002 - Raise R1 from Low to Medium.

Presumably the RC should be aware when an SOL has been exceeded by their own EMS and contingency analysis program.
No
Suggest using the phrase "potential contigency" rather than "simulated contingency".
Yes
Yes
No
In TOP-001, the majority of retention requirements are current year plus one, except one is 3 years and one isn't specified. All retention requirements in this standard should be the same. In TOP-002 M1 add operating plans or guides as evidence that an assessment was performed. In TOP-002 retention requirements should be the same for all requirements.
No

TOP-001 R1 Failure to follow a directive one even one occasion without reason should be treated as a severe VSL, similar to R3. TOP-002 R1 & R2 VSL should not be severe, there should be VSLs at all levels. It is not logical to have a severe VSL for not performing a day ahead analysis, and a Lower VSL for not following a reliability directive. TOP-004 R4 should have VSL for all levels, similar to R2,R3
Yes
Yes
No
Yes
TOP-001 R2 the phrase "disconnections prior to switching" needs to be clarified. Does this refer to individual facilities or complete disconnection from an interconnection? TOP-001 R3 It would be helpful to have a definition of 'emergency', recognizing this is a broader issue than just this standard. TOP-003 R1 It is unclear who is this data exchange requirement is applicable to. By reading on to R2 and R3, one can assume the intended audience, however the requirement should be written to clear as a standalone item. TOP-004 R1 This requirement should be incorporated into TOP-001, as it logically flows from the requirements there. This would facilitate possible eliminate of TOP-004 altogether. TOP-004 R2 The phrase "specify switching" is unclear. Believe this is an unnecessary requirement as TOP-001 R4 already requires the coordination of operations.
Group
IRC Standards Review Committee
Charles Yeung
Southwest Power Pool
Yes
We agree with the change. The drafting team could address the timeliness of actions in the VSLs. If directed by the FERC to maintain the language, we suggest the wording to be "as soon as possible but within the time limitation of the associated SOL".
Yes
SOLs should be mitigated within their equipment time limits. Though we are not prepared to propose a specific time period due to the limited time to provide comments on such a complex issue, we ask that the SDT work with industry to develop an appropriate time period that is measurable and propose it for consideration. The procedures should give appropriate consideration to consequences that are more severe than the violation.
No
We suggest using the term "potential contingencies" and avoid coming up with a new definition. The proposed definition is unclear and will lead to confusion.
Yes
We agree that having evidence of proof for non-events does not make sense. These are event-triggered standards and the focus should be to have evidence of compliance when an event in which compliance was required occurred. Some would argue that evidence is needed because a TOP could fail to report an event. It should be kept in mind that a TOP that fails to report a violation would also be able to manipulate data to show continuous compliance.
No
TOP-001 R1: A High VRF may not be appropriate in all cases. There are some directives that relate to local limits that would by no means result in cascading outages or instability. Perhaps the VSL matrix should assign a low VSL for non IROL directives. R2: We are unable to assess the VRF for this requirement since we do not understand the meaning of "â€¦.potential impacts caused by disconnections prior to switching." R3: We do not necessarily agree with a High VRF for the same reason as for R1, unless the VSL matrix addresses the difference between extreme events and local issues. TOP-002 R1: We suggest raising the VRF for R1 to a Medium. TOP-003 R5: Should perhaps be elevated to Medium if the measure were more specific. An entity can't prove the negative (prove you've provided data to every entity that requested it). The measure and VSL should deal with a complaint being submitted by an operating entity that did not get the data it needed and requested.
No
In general, TOP-001 is an event triggered standard. For example, a limit is violated and not corrected, an entity failed to followed a directive, etc.. Since it's impossible to prove the negative when there isn't an event, what these measures will cause is entities to pass requests around to get statements from others to have something to show an auditor. TOP-003 It should be acceptable (rather that keeping evidence that each entity was sent a specification) that the

specification be available to an accessible site and that the entities were made aware of its location. The measures should revolve around failure to obtain or provide data and either an event occurred or a complaint arose.
No
In general, these are binary requirements. An entity followed a directive or not, data was provided or it was not, a study was done or it was not. The true fix is to develop a sanctions matrix that deals with binary requirements rather than coming up with subjective ways to measure something that is yes/no. That said, we would not recommend spending a great deal of time making modifications, as there will most likely be an order directing modifications once the standard is filed.
Yes
Yes
No
Yes
We appreciate this as a first effort in reducing the redundancy in the V0 standards. There should be some clarity in the use of the term SOL in these standards. According to the NERC Glossary, SOLs include both IROLs and local facility limits. These standards use SOL in the context of only a local facility limit. The temporary exceedance of local facility limit (within the time limitations of the rating) should not be construed to be a violation in these standards. Failure to correct a local facility limit to the point where it leads to an IROL or damages equipment should be a violation. Records should only be maintained if the local limit is exceeded and not corrected within the allowable time of the limit. The record keeping required for non-violations in these standards is unnecessary.
Individual

American Transmission Company
Yes
Yes
Yes
No
The phrase "Simulated Contingency" should be replaced with a more concrete concept. ATC suggest that the SDT link the requirement to FAC-011. The purpose of FAC-011 is to ensure that SOLs used in the reliability operations of the BES are determined based on an established SOL methodology.
Yes
Yes
Yes
No
TOP-001-2 VSL: VSLs for R1 and R2 are written for when an entity does not follow a directive multiple times. Per FERC VSL should be based on the single non-compliance event. ATC suggest that the VSLs be re-written based on FERC guidelines. VSLs for R5 and R6 are based on the entity not having evidence of compliance not on the fact that they did not comply with the requirement. ATC suggest that the VSL be rewritten in order to address the requirement not the evidence to support the requirement. VSL for TOP-002-3 Requirement 3: If in a plan you identify one reliability entity and fail to notify that entity what is the VSL level that will be assigned. This seems to fall in both Lower and Severe. ATC believes that the VSL's should only have a single method for determining the VSL level in order to prevent conflicting determinations.
Yes
Yes
No

Yes
TOP-001-2 Requirement 2: First Concern: NERC Definition for Emergency: "Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System" ATC's believe that anticipating an abnormal system condition that could result in an Emergency would be very difficult to certify compliance. It's our position that the requirement should be limited to actual Real-Time Emergency conditions. If the SDT disagrees than we request information on how a company could certify compliance on its ability to anticipate an emergency. Second Concern: Currently the requirement requires notification of an automatic or immediate manual action prior to the action for an Emergency. We believe that notification prior to switching may put the system and/or equipment at a greater level of risk. The requirement should contain language that states notification should be done "if time permits" otherwise it should be done following the action. TOP-001-2 Requirement 4: What is the minimum level of "affect" that requires communication? TOP-002-3 Requirement 1: Would a single assessment of next day's operation satisfy this requirement? or, Is the requirement asking for multiple next day operations to account for load changes expected throughout the day?

Consideration of Comments on First Draft of Revised TOP Standards Real-time Operations — Project 2007-03

The Standards Committee thanks all commenters who submitted comments on the 1st draft of the revised TOP standards, Real-time Operations Project. These standards were posted for a 45-day public comment period from October 7, 2008 through November 20, 2008. The stakeholders were asked to provide feedback on the SAR through a special Standard Comment Form. There were more than 26 sets of comments, including comments from more than 90 different people from approximately 50 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

The SDT is recommending that the standards be re-posted to allow for feedback on the changes made due to industry comments to the first posting.

Changes have been made to the following:

- TOP-001-2 & TOP-003-1 Purpose statements
- Requirements:
  - TOP-001-2: R1, R2, R3, R4, and R7
  - TOP-002-3: R1, R2, and R3
  - TOP-003-1: R1, R4, and R5
  - TOP-004-3, R2
- Measures:
  - TOP-001-2, M1, M2, M3, M4, and M7
  - TOP-003-1, M1, and M4
  - TOP-004-3, M2
- Data retention:
  - TOP-001-2, R1 through R7
  - TOP-002-3, R3
  - Top-003-1, R1, R4, and R5
- VSLs:
  - TOP-001-2, R1, R3, R4, and R6
  - TOP-002-3, R1 and R3
  - TOP-003-1, R1, R2, R3, and R4
  - TOP-004-3, R1 and R2
- In addition, two bullets were added to TOP-003-1, Requirement R1.1 to address directives in FERC Order 693.

Definitions:

- Deleted the definition of "Simulated Contingencies" as stakeholders indicated the definition is not needed.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.[1]

[1] The appeals process is in the Reliability Standards Development Procedures: http://www.nerc.com/standards/newstandardsprocess.html.

1. The SDT has deleted the phrase 'without intentional delay' from all situations that require specific actions or responses as it was felt that this term is unmeasurable and that operator action and response in a timely manner is part of good utility practice and common sense. Do you agree with this change? If not, please provide specific suggestions for improvement.

Summary Consideration:

The majority of respondents agreed with the deletion of the phrase 'without intentional delay' and thus no changes have been made to the standard.

Organization	Yes or No	Question 1 Comment
ISO-NE NPCC	No	Although we agree with the concept and agree that it is unmeasurable, we do not believe that removal of the concept is acceptable and suggest reqording to "as soon as possible but not more than..."
ISO-NE	Yes	We agree with the change. The drafting team could address the timeliness of actions in the VSLs. If directed by the FERC to maintain the language, we suggest the wording to be "as soon as possible but within the time limitation of the associated SOL".
Response: The use of the term "without intentional delay" was used in context with how quickly the responsible entity acts and not how quickly its actions achieved the desired response. Your suggestion appears to attempt to time bound the amount of time it takes to achieve results from the actions taken by the responsible entity. Thus, the SDT does not agree with your suggestion. Additionally, the definition of SOL does not include a time limit.		
IRC Standards ISO-NE NPCC Review Committee	Yes	We agree with the change. The drafting team could address the timeliness of actions in the VSLs. If directed by the FERC to maintain the language, we suggest the wording to be "as soon as possible but within the time limitation of the associated SOL".
Response: The SDT does not believe that timeliness should be addressed in the VSLs unless there is a clear measurable requirement for timeliness. The Commission established in their VSL order several guidelines, one of which requires that VSLs do not add to the requirement. Establishing timeliness in the VSLs when there is not a clear measurable requirement for timeliness would thus violate the Commission's guideline.		
Entergy Services	No	There is merit in holding entities accountable for making timely notifications, etc. Would an entity be compliant if they waited 6 months to notify the TOP of changed in Real Power capability? Perhaps the measures can be worded such that proof of the event's time and proof of the notification's time are not significantly different. However, we suspect that entities for which the requirement is applicable would WANT guidance on what is timely and what is not. Leaving that much up to the interpretation of audit teams is not very desirable.

Organization	Yes or No	Question 1 Comment
Response: While the SDT agrees with your point that entities would want guidance on what is timely and agree that the extreme example of six months would be far too long, the SDT noticed that you have not suggested a time requirement. Thus, the SDT concludes that you must have detected the problems with establishing a time requirement. Some of the problems include that what is timely in one situation and one applicable entity may ultimately vary with another. Thus, setting a specific time requirement that is measurable and usable in all situations is not appropriate. The SDT also agrees that it is not desirable to leave the interpretation of what is timely up to the compliance auditors but do not see a better way. Applicable entities will have to work with their TOP to assess what their expectations are as far as timeliness.		
Independent Electricity System Operator	No	This phrase should not be removed. If measurability is required, similar language ("without delay") in R4 of the recently approved IRO-009 standard should be used, with a condition to assess if there was a 5 minute delay for assigning a High VSL.
Response: This is the only comment that was received in this regard and the SDT (and the remainder of the industry as seen from comments received) continues to believe that removing the phrase is correct for TOP standards.		
Santee Cooper	Yes	
SERC OC Standards Review Group	Yes	This phrase is not measureable!
PJM InterconnectiC OC Standaon	Yes	PJM supports the deletion and recognizes the problem in measuring "intent".
Dominion - Electric Market Policy	Yes	
Southern Company Transmission	Yes	
Bonneville Power Administration	Yes	
Midwest ISO Stakholders Standards Collaborators	Yes	Intent is an enforcement issue. Thus, it does not belong in the standard.

Response: Thank you for your response.		

2. The SDT has eliminated SOLs from TOP-004-2, Requirement R1. The SDT felt that requiring a TOP to operate within all SOLs could effectively reduce the TOPs operational flexibility by eliminating the TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time. The SDT determined that operating within each IROL and its IROL T_v was the reliability issue in this requirement. Do you agree with deleting the language about SOLs in TOP-004-2, Requirement R1? If not, please provide specific suggestions for improvement.

Summary Consideration:

There was a general consensus amongst responders that the elimination was appropriate.

Organization	Yes or No	Question 2 Comment
SERC OC Standards Review Group	Yes	Although we agree with the SDT's change regarding SOLs, TOPs should not allow an unintended consequence of this change to be less emphasis on resolving or mitigating SOLs.
Response: The SDT agrees with you that the TOPs should not de-emphasize resolving or mitigating SOLs and do not believe the revised standard does this.		
Midwest ISO Stakholders Standards Collaborators	No	The TOP should be required to operate within SOLs. SOLs by definition can by be voltage or stability limited. SOLs, if exceeded, can be become IROLs. What in the standards will ensure that the TOP is sure the exceeding the SOL will not result in an IROL. The situation described in the question may not even require that an SOL be defined. No where in the standards is there a requirement that every thermal limit must be encompassed in a SOL. If a TOP decides to "ride" out an SOL rather than mitigate the violation, in reality the TOP has indicated that the current SOL is invalid. Why can't the TOP just determine what the new SOL is?
Response: IROLs must be determined by studies. To the extent that a TOP has an expectation that an SOL might be exceeded, the TOP and RC are obligated to verify that an IROL will not be exceeded. In other words, when determining the operating region, the TOP and RC must be aware of both the SOL operating region and the IROL operating region. Honoring every SOL could present problems to the TOP where they may have to choose to violate another requirement to meet the requirement to operate within all SOLs. For example, when two or more limits are in danger of violation, and mitigating one would exacerbate the other, the TOP clearly is faced with a reliability and compliance conundrum. Under the SDT's proposal, however, the TOP has the opportunity to monitor the status of the systems and make the wisest possible choice to preserve reliability. The SDT feels that the FAC standards address thermal limits.		
Independent Electricity System Operator	No	We strongly disagree with removing the requirement for the TOP to operate within SOLs. We are unable to understand the argument that this requirement will "reduce the operational flexibility by eliminating the TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time."

Organization	Yes or No	Question 2 Comment
		SOLs are determined to set upper bounds beyond which transmission facilities may be overloaded or system voltage may be depressed or the operators will be operating in an unknown state. If such upper bounds are to be ignored to enhance operating flexibility, then why should SOLs be determined in the first place and how do we ensure operating reliability? Further, FAC-014 requires TOPS to develop SOLs, why would we be requiring the TOPs to do so while we suggest that they do not need to operate within the bounds that they themselves develop in the first place? Do the two sets of standards contradict each other? We are also very concerned that R1/R2 in TOP-002 requires the TOP to assess potential exceedence of IROLs only but not SOLs. This sends a the wrong message to the industry that TOPs do not need to plan their operations to within established SOLs. So why do we mandate the TOPs to calculate SOLs to begin with? We feel strongly that R2 in TOP-002 should be revised so that it includes as part of the requirement, preclusion of operating in excess of any SOLs. We believe that completely removing SOLs from the requirement is contrary to the long-term objective of enhancing reliability. Further, we believe that all SOLs should be respected in the planning time-frame and in real time with the exception of low likelihood or rare circumstances. We do recognize that there are instances where post-contingency, a TOP may not be able to respect its repreparation limits for the next contingency. Those instances must however be limited to situations in which, after applying available means to eliminate the violation short of firm load shedding, and where it can be demonstrated that the SOL violation cannot propagate into an IROL violation following the next worst contingency. That is, the repreparation limit is non-impactive to the BES. We need only recall that some blackout events started by exceedence of local area limits (SOLs). When sufficient events occur (such as when a line rating is not observed or its overload not corrected), cascade overloading on another transmission line and yet another transmission line and so on may occur. An apparently non-impactive SOL, if not observed and whose exceedence not corrected, can result in cascading outages.
Response: Your initial argument that exceeding an SOL may be the point where “system voltage may be depressed” focus on the subset of SOLs that are IROLs. There is an explicit requirement still in the proposed standards to operate within IROLs. Thus, the only SOLs that these proposed draft standards do require a TOP to operate within are those that exclude the IROL subset. The SDT does not believe that the proposed TOP standards conflict with the FAC-014 standard. Determining SOLs is required to operate the System and SOLs will be operated within in most instances. However, SOLs do not represent limits that if exceeded could cause cascading, uncontrolled outages or blackouts. Furthermore, part of the purpose of FAC-014 is to communicate your SOLs to other entities so that they can respect your operational limits.		
IRC Standards Review Committee	Yes	SOLs should be mitigated within their equipment time limits. Though we are not prepared to propose a specific time period due to the limited time to provide comments on such a complex issue, we ask that the SDT work with industry to develop an appropriate time period that is measurable and propose it for consideration. The procedures should

Organization	Yes or No	Question 2 Comment
		give appropriate consideration to consequences that are more severe than the violation.
Response: SOLs may be based on equipment time limits but by definition there is not an associated T_v and any decision to associate a time limit with the SOL to protect the equipment from damage is an independent operational decision that is made by the TOP and TO. Thus, the SDT does not believe it is necessary to establish a time limit.		
AEP	Yes	The purpose statement in TOP-004-1 is consistent with the IROL NERC defined term. We suggest keeping the original purpose statement from TOP-004-1. If SOL are to be reported then some prioritization needs to be given. We suggest reporting the largest SOL if there are several common to an area of congestion.
Response: Purpose statement **–** No other comments were received and the SDT feels that the changes properly reflect what was changed in the standard so no changes made**.** Prioritization or largest SOL – Most commenters support the removal of SOLs. Therefore, no change is required.		
ISO-NE	Yes	SOLs should be mitigated within a defined time period with appropriate consideration to the consequences
NPCC	Yes	
Santee Cooper	Yes	
PJM Interconnection	Yes	The SDT has correctly balanced the need for flexible responses to non-impactive problems.
Dominion - Electric Market Policy	Yes	
Southern Company Transmission	Yes	
Bonneville Power Administration	Yes	
FirstEnergy	Yes	

Organization	Yes or No	Question 2 Comment
MRO NERC Standards Review Subcommittee	Yes	
ITC Transmission	Yes	
Manitoba Hydro	Yes	
Consumers Energy Company	Yes	
Ameren	Yes	This change is consistent with the fact that BES operation is a risk-based endeavor. While IROL risk is so severe it is unlikely to be properly evaluated by a TOP, SOLs should be considered as part of the normal risk assessment.
Oncor Electric Delivery	Yes	
Entergy Services	Yes	We agree as this was the original intention of the NERC OLDTF that first developed the terms SOL and IROL.
Duke Energy	Yes	We agree with the SDT's logic in eliminating SOLs from TOP-004-2 Requirement R1.
Northeast Utilities	Yes	
American Transmission Company	Yes	
Response: Thank you for your response.		

3. The SDT is concerned about the inclusion of SOL in TOP-001-2, Requirement R5. The SDT thinks that the TOP notifying its RC of every SOL that has been exceeded may create an overload of messages for the RC that does not facilitate preserving reliability. Do you agree that SOL should remain in this requirement? If not, please provide specific suggestions for improvement.

Summary Consideration:

This question was poorly worded and as a result the commenters may have been led astray. The consensus of the industry at this point is that not all SOLs need to be reported but that some subset of them should. The SDT will re-phrase the question in the second posting so that the intent is clear and so that a definitive position on the issue can be established.

Organization	Yes or No	Question 3 Comment
NPCC	No	We agree that not every SOL requires communications to another entity. However, there are subsets of SOLs that have the potential to become IROLs or, outside of that subset, left unmitigated, there are other SOLs which will become IROLs. We believe that there should be a requirement to inform the RC when these conditions occur.
ISO-NE	No	We agree that not every SOL requires communications to another entity. However, there are subsets of SOLs that have the potential to become IROLs or, outside of that subset, left unmitigated, there are other SOLs which will become IROLs. We believe that there should be a requirement to inform the RC when these conditions occur.
Santee Cooper	No	Notification should be provided to the RC only when an IROL is exceeded. Too much information flowing to the RC could potentially mask a reliability problem.
SERC OC Standards Review Group	Yes	We interpret this requirement to indicate that a TOP is required to inform the RC only if action is taken to mitigate an SOL, i.e., if the TOP decides that no action is required for an SOL, the TOP is not required to notify the RC.
Manitoba Hydro	No	As per TOP-004-3, exceeding an SOL does not necessarily put the BES at risk. The SOL for a thermal limit could very well be set for an ambient temperature much higher than the actual ambient temperature. Notifying the RC for such an event would be a waste of resources. We feel it is not necessary to make it mandatory to notify the RC when exceeding a SOL. TOPs should be mandated by a Requirement to document all SOL violations and action taken. Such action may include but is not limited to: simply further monitoring or making a temporary alarm level adjustment.
PJM Interconnection	No	The issue here is in defining what is impactive and what is not. A flow value that creates a temporary overload on a radial line may not be of concern to an RC, thus informing the RC that the flows are under the limit is merely a distraction. During Emergency Conditions such non-relevant information can be more then distractive it can needlessly tie up people

Organization	Yes or No	Question 3 Comment
		to the point of causing those people to overlook real problems. The standard could be written to include a requirement that the RC must inform the TOP of any overloads that it, the RC, requires to be informed of. Then the TOP is obligated to provide information about the critical SOLs and mandated to report on the relief of every SOL.
Dominion - Electric Market Policy	Yes	Suggest revising R5 to read "Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when a reportable SOL (as identified by its Reliability Coordinator)has been exceeded. Suggest revising R6 to read "The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv and shall inform its Reliability Coordinator of such actions.
Southern Company Transmission	No	Requirement 2 of TOP-001-2 already contains a provision for the TOP to inform its RC of real-time or anticipated emergency conditions. If a particular SOL is considered an emergency condition, then it would be reported. Otherwise, it is not required. Therefore, we agree that notifying the RC of every SOL is not necessary.
Ameren	No	This has proven to be a duplicative effort since the RC is monitoring the facilities also. Change the text to say, "to the extent that the RC does not have systems in place, the TOP will ?.".
Midwest ISO Stakholders Standards Collaborators	Yes	We believe that the TOP notifying the RC of every SOL that has been violated does not create an overload messages. The TOPs in the Midwest ISO reliability footprint already notify the RC of all SOL violations and we have not found it to be a burden. In fact, we have found it actually improves operations because it causes the RC to continuously validate the results of the real-time contingency analysis against the TOPs. We do believe that the requirement should not be prescriptive to require a particular type of communication such as via the phone. To a certain degree this requirement can be met by simply having redundant models and contingency analysis in the EMS. We observe that the requirement is not for the TOP to notify the RC every time that an SOL is violated. In fact, the requirement is only to notify the RC of the actions to be taken. Thus, if no actions are taken, the TOP does not have to notify the RC. We believe the language should be strengthened to clarify that the TOP should notify the RC every time an SOL is violated even when no mitigation is taken.
FirstEnergy	No	However, the SDT should develop rules that will drive the reporting of incidences where entities exceed SOLs on a regular basis. As an example: the operating studies show that the facility emergency thermal limit is expected to be exceeded by 25% for 4 consecutive hours of 5 consecutive operating days. The goal should be to flag instances where SOLs are exceeded on a regular or routine basis in an effort to highlight situations where mitigation actions or system reinforcement projects may be needed or required to preserve the reliability of the BES.
ITC Transmission	No	Presumably the RC should be aware when an SOL has been exceeded by their own EMS and contingency analysis program.

Organization	Yes or No	Question 3 Comment
Montenay Power Corp.	No	
Ameren	No	This has proven to be a duplicative effort since the RC is monitoring the facilities also. Change the text to say, "to the extent that the RC does not have systems in place, the TOP will ?.".
Entergy System Planning & Operations (Gen & Mktg)	No	The RC should be aware of SOL exceedances in order to perform their function and maintain situational awareness.
Entergy Services	No	SOLs should be removed. While certain SOLs may need to be communicated to the RC per internal processes, only IROLs should be required to be reported. Reporting of every SOL could "water down" the communications to the RC and add confusion when IROLs are reported.
Independent Electricity System Operator	Yes	SOLs are intended to ensure reliable operation of the BES. TOPs, who calculate these SOLs to begin with, shall not intentionally operate its system to be very near or exceeding SOLs. Thus, we do not expect SOL exceedences to occur so frequently that reporting to the RC will create an overload of messages.
Northeast Utilities	No	We do not believe that the TOP informing the RC of every SOL exceedance should be required, and would not facilitate preserving reliability. Suggest removing "or SOL" from the requirement.
Duke Energy	Yes	R5 should be revised to also require the TOP to notify the RC of the particular IROL or SOL that has been exceeded.
AEP	Yes	The TOP-001-1 purpose statement deals with emergencies and taking actions to resolve them. The TOP-001-2 purpose statement deals with coordination. We concur that notifying the RC of every SOL violation could be overwhelming and counter productive to reliability. If SOL are to be reported then some prioritization needs to be given. We suggest reporting the largest SOL if there are several common to an area of congestion.
Response: This question was poorly worded and as a result the commenters may have been led astray. The consensus of the industry at this point is that not all SOLs need to be reported but that some subset of them should. The SDT will re-phrase the question in the second posting so that the intent is clear and so that a definitive position on the issue can be established.		
Bonneville Power Administration	No	Agree that it would increase workload while trying to return the system within limits. This requirement should probably move to TOP-004-3. R6 should maybe move there also as Real-Time Operations?

Organization	Yes or No	Question 3 Comment
Response: The SDT believes that it could be moved and be equally effective however this is the only comment received on this matter so the SDT is not going to make a change.		
American Transmission Company	Yes	
MRO NERC Standards Review Subcommittee	Yes	
Consumers Energy Company	Yes	
Oncor Electric Delivery	Yes	
Response: Thank you for your response.		

4. TOP-002-3 Requirement R1 uses the new proposed term Simulated Contingency. The term's use is intended to clarify that the Contingencies used in the next day assessment are intended to model Contingencies that could occur based on the projected System topology and not Contingencies that have actually occurred on the System. The SDT is concerned that the definition may inadvertently lead the reader to believe that a power System simulator is required. Do you believe that the definition and term accomplish the intention of clarifying TOP-002-3 Requirement R1 without confusing the reader into believing a power System simulator is required? If not, please suggest alternative wording for TOP-002-3 Requirement R1 that communicates the SDT's intent.

Summary Consideration:

After review of all comments received, the SDT believes that the addition of the definition is not necessary. Accordingly, the definition will be eliminated and the wording of TOP-002-3, Requirement R1 has been revised accordingly.

TOP-002-3, R1: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

Organization	Yes or No	Question 4 Comment
NPCC	No	Change the definition of Simulated Contingencies to: "The act of using planning and operating models to replicate Contingency responses."
Santee Cooper	No	Don't believe the current definition implies that a simulator is required. However, the definition of Simulated Contingency is not clear and very ambiguous. Suggested definition for Simulated Contingency is a contingency evaluated using planning and operating models of the BES.
Oncor Electric Delivery	No	"Study Contingency" may be a better choice and would remove the possible link between simulator and simulated contingency
American Transmission Company	No	The phrase "Simulated Contingency" should be replaced with a more concrete concept. ATC suggest that the SDT link the requirement to FAC-011. The purpose of FAC-011 is to ensure that SOLs used in the reliability operations of the BES are determined based on an established SOL methodology.
Response: The definition was intended to indicate that, although studies are not required for an assessment, the assessment should include all expected results from the System response to Contingencies which had been modeled in the development of System Operating Limits. The methodology of developing the SOLs includes the Contingencies that are to be considered in the development of those limits. The SDT has revised the wording of Requirement R1 to simplify and clarify		

Organization	Yes or No	Question 4 Comment
expectations. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*		
SERC OC Standards Review Group	No	For additional clarification, we suggest the following alternative wording for the Definition of Simulated Contingencies: "The act of using planning and operating models to model single branch or unit outages in the modeled network."
Duke Energy	No	We believe that the definition of Simulated Contingencies should be revised as follows: The act of using planning and operating models to model single branch or unit outages in the modeled network.
Response: The SDT feels that the information you suggest is addressed in the required methodology to be used in the development of System Operating Limits**.** The definition was intended to indicate that, although studies are not required for an assessment, the assessment should include all expected results from the System response to Contingencies which had been modeled in the development of System Operating Limits. The methodology of developing the SOLs includes the Contingencies that are to be considered in the development of those limits. The SDT has revised the wording of Requirement R1 to simplify and clarify expectations. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*		
PJM Interconnection	No	The definition needs more work to avoid confusion. The word "simulated" will itself likely be a point of contention. One solution would be to delete the word "simulated". If this issue of post-contingency simulation becomes a problem, then a Standard Interpretation can be issued.
Southern Company Transmission	No	The proposed definition of "Simulated Contingency" is not clear. Also, it is not apparent why a new definition is even needed. Make the definition part of the requirement. Why couldn't ?Simulated? be replaced with something like "depicted", "represented" or "portrayed". Possible wording for the Requirement 1 might be ?The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOL's) during anticipated normal conditions and Contingency events represented through planning and operational analysis models reflecting design parameters and system conditions.? In the event the drafting team does not agree to implement our suggested change above, the drafting needs to address this issue also in IRO-004-01, R1 where the requirement states normal or anticipated contingency events and not "simulated events". The two requirements should be consistent in terms.
Bonneville Power Administration	No	Change the definition from "design considerations" to "planned outages".
Response: After reviewing all comments submitted, the SDT agrees that the definition seems to lack needed clarity The definition was intended to indicate that,		

Organization	Yes or No	Question 4 Comment
although studies are not required for an assessment, the assessment should include all expected results from the System response to Contingencies which had been modeled in the development of System Operating Limits. The methodology of developing the SOLs includes the Contingencies that are to be considered in the development of those limits. The SDT has revised the wording of Requirement R1 to simplify and clarify expectations. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*		
Dominion - Electric Market Policy	No	We suggest revising the stated purpose rather than creating a new definition. We suggest revising purpose to read " To ensure that reliability entities have coordinated plans for meeting expected operating conditions including contingencies that could occur based on projected system topology."
Response: The SDT believes that the existing purpose statement is appropriate and that required methodologies for determination of system operating limits include the concept of contingencies that could occur and the projected system topology**.** After reviewing all comments submitted, the SDT agrees that the definition seems to lack needed clarity The definition was intended to indicate that, although studies are not required for an assessment, the assessment should include all expected results from the System response to Contingencies which had been modeled in the development of System Operating Limits. The methodology of developing the SOLs includes the Contingencies that are to be considered in the development of those limits. The SDT has revised the wording of Requirement R1 to simplify and clarify expectations. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*		
Midwest ISO Stakholders Standards Collaborators	No	Why can't you just use the term potential in front of Contingency?
ITC Transmission	No	Suggest using the phrase "potential contingency" rather than "simulated contingency".
ISO-NE	No	We suggest using the term "potential contingencies" and avoid coming up with a new definition. The proposed definition is unclear and will lead to confusion.
IRC Standards Review Committee	No	We suggest using the term "potential contingencies" and avoid coming up with a new definition. The proposed definition is unclear and will lead to confusion.
AEP	No	The "Simulated Contingency" definition lacks clarity and its use in TOP-002-3 R1 does imply that an offline load flow program would be required when conducting a next day assessment. Suggested wording: Replace "and Simulated Contingency" with "and/or potential contingency".

Organization	Yes or No	Question 4 Comment
Response: After reviewing all comments submitted, the SDT agrees that the definition does not lend added clarity. Your suggestion is a good one. The SDT has revised the wording of TOP-002-3, Requirement R1. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*		
FirstEnergy	No	We believe that the definition is not needed and that the use of the word "simulated" in and of itself provides sufficient clarity that the requirement does not refer to actual Contingency events. The premise of the requirement is an assessment of "next day" system condition so it is unclear how this could in anyway be construed to be an actual contingency event. However, what is not clear in the requirements is what type of contingencies are to be evaluated? Is it single Contingency (N-1) events only. What if bus faults were not studied would there be a potential for non-compliance? There should be some tie to the TPL standards to specifically identify which Contingencies must be evaluated for Next Day analysis.
Ameren	No	This change is not necessary. The "Contingency" definition is for things that could but are not certain to happen. Obviously, there is no basis for a contingency that has occurred. Once occurred, it is an event.
Response: After reviewing all comments submitted, the SDT agrees that the definition is not needed. The SDT has revised the wording of TOP-002-3, Requirement R1. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]* As to what type of Contingency must be considered, the Transmission Operator is not limited to single Contingencies or bus faults but must study any and all conditions that may result in exceeding any of its System Operating Limits during anticipated normal conditions as stated in the Requirement. The potential Contingencies to be studied are limited to those spelled out in the TPL standard.		
Entergy Services	No	There can be much confusion with the standards when terms are used in multiple ways. The poster child for this is "critical facilities." I agree with the intent of the SDT, but suggest the term "Postulated Contingencies."
Independent Electricity System Operator	No	We do not see the need to define this new term. Further, the definition is inaccurate (mixing contingency which is a "what-if" event with system response) and confusing (we are unable to understanding the meaning of "the net effect of design considerations" in an operational planning assessment domain. Having said that, we do not interpret the term to mean the requirement for a "simulator". To eliminate the concern of misinterpretation, we suggest that R1 be reworded to "? during anticipated normal conditions and analyzed contingency events."
Response: After reviewing all comments submitted, the SDT believes that use of the term "potential Contingencies" is appropriate. The SDT will revise the wording		

Organization	Yes or No	Question 4 Comment
of TOP-002-3, Requirement R1 to simplify and clarify. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*.		
Northeast Utilities	No	Suggest adding the words "such as P/SSE, power flow, etc." to the definition after the word "models". This might help to clarify the intent. Ending the definition after the word "responses" would make it a cleaner definition. Additionally, the defined term is "Simulated Contingencies". R1 uses the term "Simulated Contingency". This should be reconciled by either changing the defined term, or R1 should use the defined term and drop the word "events" from the end of the sentence.
Response: After reviewing all comments received, the SDT believes the definition does not lend needed clarity. Further, the SDT recognizes that an assessment does not necessarily require a study to be performed each time the assessment is made. The SDT agrees that a robust underlying power flow study or model effort may be a good basis for an assessment, but is not required in all cases. After reviewing all comments submitted, the SDT believes that use of the term "potential Contingencies" is appropriate. The SDT has revised the wording of TOP-002-3, Requirement R1 to simplify and clarify expectations. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*		
MRO NERC Standards Review Subcommittee	Yes	
Consumers Energy Company	Yes	
Entergy System Planning & Operations (Gen & Mktg)	Yes	The definition of "Simulated Contingency" provides enough clarity to avoid confusion.
Response: Thank you for your response. Note that most commenters indicated that the definition wasn't needed or was unclear. After reviewing all comments submitted, the SDT believes that use of the term "potential Contingencies" is appropriate. The SDT has revised the wording of TOP-002-3, Requirement R1 to simplify and clarify expectations. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*		

5. TOP-004-2, Measure M1: The SDT has adopted the position for this measure and others like it that the absence of an IROL Violation Report is a sufficient measure as opposed to retaining massive amounts of data for later audit. Do you agree with this assessment? If not, please provide specific suggestions for improvement.

Summary Consideration:

The consensus of comments received from industry is in agreement with the SDT position so no changes were made.

Organization	Yes or No	Question 5 Comment
MRO NERC Standards Review Subcommittee	No	This question is not consistent with TOP-004-2 M1, you either need the report or the data. You should be able to prove compliance with the report, stating absence of an IROL Violation Report in the question does not make sense.
Independent Electricity System Operator	No	First of all, we do not agree with the removal of SOL from R1 so we do not agree with M1.On the approach the SDT is proposing, we do not agree with the rationale that the absence of an IROL violation report is a sufficient measure. We believe the TOP should be required to provide evidence to demonstrate compliance (in this case, the data showing operating within IROL and Tv).
Response: If there has been no IROL violation, then there will be no violation data. The SDT believes that requiring retention of massive amounts of normal operating data does not make sense. The SDT believes that IROL Violation Reports, and the required supporting information, serves the purpose. Absence of the report indicates there has been no violation.		
Bonneville Power Administration	Yes	SDT has cleaned up TOP-004-3 well, removing duplicate requirements from other standards. I don't believe R2 (Agreements of switching) is necessary since TOP-001-2 R3 appears to cover assisting to mitigate emergencies/IROLs. It seems to me TOP-001 R5 and R6 are also real time operations and should go to TOP-004-3 has R2 and R3.
Response: The SDT believes that you have raised a legitimate point on TOP-004-3, R2 and will raise a question in the next posting to see what the industry feels on this topic**.** The SDT believes that it could be moved and be equally effective however this is the only comment received on this matter so the SDT is not going to make a change		
ISO-NE	Yes	We agree that having evidence of proof for non-events does not make sense. These are event-triggered standards and the focus should be to have evidence of compliance when an event in which compliance was required occurred. Some

Organization	Yes or No	Question 5 Comment
		would argue that evidence is needed because a TOP could fail to report an event. It should be kept in mind that a TOP that fails to report a violation would also be able to manipulate data to show continuous compliance.
IRC Standards Review Committee	Yes	We agree that having evidence of proof for non-events does not make sense. These are event-triggered standards and the focus should be to have evidence of compliance when an event in which compliance was required occurred. Some would argue that evidence is needed because a TOP could fail to report an event. It should be kept in mind that a TOP that fails to report a violation would also be able to manipulate data to show continuous compliance.
NPCC	Yes	We agree that having evidence of proof for non-events has no value. The focus should be to have evidence of compliance for instances when an event in which compliance was required occurred.

6. The SDT has included VRFs and Time Horizons with this posting. Do you agree with the assignments that have been made? If not, please make specific suggestions for improvement.

Summary Consideration:

While the SDT appreciates the perspective of comments for increasing the proposed Violation Risk Factors for various Requirements, the position taken by the SDT was to recognize that these standards represent not best practices, but the threshold of performance below which warrants penalties; including the potential for very severe penalties. The SDT, therefore, drafted and continues to support the position that only non-performance which, in itself, creates an adverse impact on reliability warrants a high VRF. Further, specific non-performance which may exacerbate (but not cause) an adverse impact on reliability generally may not warrant a high VRF because absent the non-performance in the primary area of concern, an adverse impact to reliability would not exist or would be minimal.

In each case, the SDT adopted the most appropriate level of risk assignment. This was done considering the following:

1. Direct correlation of adverse impact to reliability through non-performance of the specific requirement,
2. Whether non-performance of the specific requirement represented less-than-best practice as opposed to or compared with inadequate performance that represents dereliction of duty or imposing burden on others and which warrants penalty (i.e., performance which is merely less than best practice, but still adequate for reliability should not create or exacerbate risk)
3. The timing or urgency for which the adverse impact to reliability could occur

The following changes were made due to industry comments:

TOP-001-2, R2: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions

TOP-002-3, R1: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

TOP-002-3, R2: The Transmission Operator shall plan to preclude operating in excess of any Interconnection Reliability Operating Limits (IROLs) including those identified as a result of the assessment performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

TOP-002-3, R3: The Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s). *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

TOP-003-1, R5: Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

Organization	Yes or No	Question 6 Comment
NPCC	No	TOP-001 - all VRFs but R4 should be HIGH (change R5 and R7). TOP-002 - raise R1 from Low to Medium. It is more than just an administrative requirement.
PJM Interconnection	No	TOP-001 - all VRFs but R4 should be HIGH (change R5 and R7) TOP-002 - raise R1 from Low to Medium some type of OPB assessment is required, it is more then just an administrative requirement.
Response: TOP-001: With no reasons provided for the suggested changes, the SDT doesn't have any basis for making these changes. TOP-002-3, R1**:** The SDT agrees. The VRF for Requirement R1 has been changed to Medium. The presumption was that while the TOP is required to meet R1 and, therefore, need not have additional requirements to tell *HOW* Requirement R1 is met. However, comments prompted further consideration. It is apparent that adjacent entities would not be able to meet Requirement R1 without information otherwise unknown to them. That lack of information in the Operations Planning timeframe could cause that planning to be flawed. Therefore, the SDT is increasing this VRF from low to medium. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*		
SERC OC Standards Review Group	No	For TOP-001, R1, R2, R4 - the risk factor should not be the same for each time horizon shown. i.e., for operations planning, same day operations, real-time operations. We suggest R5 should have a Low VRF. For TOP-002-3, the time horizon for each of these requirements (R1-R3) should be "Operations Planning".
Response: The SDT did not see a need for a different VRF for each Time Horizon. R5 **-** The SDT disagrees. It is important to advise the Reliability Coordinator of actions being taken to restore limits, etc. Absent such reporting and coordination, the chances increase that the RC may direct others to take actions which are either duplicative or counter to the actions being taken by the TOP to restore operations to within limits. Minimally, informing the RC of actions would enable the RC to assure that the event does not escalate. The risk created by not informing the RC of actions being taken warrants higher than a low VRF. TOP-002-3: The SDT agrees. The Time Horizons for Requirements R1 – R3 have been changed to Operations Planning. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]* **TOP-002-3, R2:** The Transmission Operator shall plan to preclude operating in excess of any Interconnection Reliability Operating Limits (IROLs) including those identified as a result of the assessment performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*		

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 6 Comment</th></tr>
<tr><td colspan="3">TOP-002-3, R3: The Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s). [Violation Risk Factor: High] [Time Horizon: Operations Planning]</td></tr>
<tr><td>Dominion - Electric Market Policy</td><td>No</td><td>TOP-001-2We believe that R5 and R7 warrant high VRF.

TOP-002-3 R1 warrants something higher than low. How can the TOP meet the intent of R2 (VRF = high) if it has failed at R1? We suggest that R1 and R2 should be high.

R3 should be reduced to low since the RC is required by IRO-004-1 @R3 to develop action plans in conjunction with its TOPs. The heavier burden should be placed on the RC.

The time horizon for R1-3 should be changed to Operations Planning</td></tr>
<tr><td colspan="3">Response: TOP-001-2: With no reasons provided for the suggested changes, the SDT doesn’t have any basis for making these changes

TOP-002-3, R1: The SDT agrees. The VRF for Requirement R1 has been changed to Medium. However, comments prompted further consideration. It is apparent that adjacent entities would not be able to meet Requirement R1 without information otherwise unknown to them. That lack of information in the Operations Planning timeframe could cause that planning to be flawed. Therefore, the SDT is increasing this VRF from low to medium.

TOP-002-3, R1: The Transmission Operator shall have an assessment for the next day’s operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning]

TOP-002-3, R3: The SDT disagrees. While the burden for “bigger picture” (i.e., the heavier burden) may rest on the RC, communications are required from the TOP for any expected performance or awareness by any other entity included in the plan (includes RC). If conflicting performance expectations occur, or there is a need to revise plans based on the RC review of all respective TOPs plans, then these should be resolved by the RC, as noted in the cited IRO standard. But absent the sharing of this information, it s not clear how others (including the RC) would be made aware of plans (which can then be coordinated among TOPs by the RC as needed).

TOP-002-3: The SDT agrees. The Time Horizons for Requirements R1 – R3 have been changed to Operations Planning.

TOP-002-3, R1: The Transmission Operator shall have an assessment for the next day’s operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. [Violation Risk Factor: Medium] [Time Horizon: Operations Planning]

TOP-002-3, R2: The Transmission Operator shall plan to preclude operating in excess of any Interconnection Reliability Operating Limits (IROLs) including those identified as a result of the assessment performed in Requirement R1. [Violation Risk Factor: High] [Time Horizon: Operations Planning]

TOP-002-3, R3: The Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s). [Violation Risk Factor: High] [Time Horizon: Operations Planning]</td></tr>
<tr><td>FirstEnergy</td><td>No</td><td>The VRF for TOP-001-2 R7 should be a "High." Failure to follow the most conservative limit in times of uncertainty could negatively impact real-time reliability.</td></tr>
</table>

Organization	Yes or No	Question 6 Comment
		The VRF for TOP-002-1 R4 seems inconsistent. It has a qualifying concept of urgency of time in the phrase "? unless System conditions do not permit such coordination." which implies critical to the reliability of the BES yet it has been assigned a Medium VRF. Also, failure to coordinate an action may not always result in an impact on the BES, but the action does in theory bear a risk to the reliability of the BES. This VRF should be a High. The VRFs for TOP-002-3 seem inconsistent. Requirement 2 which requires planning to mitigate a potential IROL discovered in the study required under R1 has a High VRF while R1 which requires the study be done has a Low. It is difficult to understand how a source requirement such as R1 can have a lower VRF then a derivative requirement such as R2. R1 and R2 should both have Medium VRFs since they are planning in nature and do not have an immediate impact on the BES. The VRF for TOP-003-1 R4 and R5 seem inconsistent. The drafting team appears to consider it a Medium risk for an entity not to supply operating data to its Transmission Operator, but a Low risk for that Transmission Operator not to supply the operating data to an entity "with immediate responsibility for operational reliability." The VRF for R5 should also be a Medium.
Response: TOP-001-2, R7**:** The SDT has deleted Requirement R7 as duplicative of IRO-05-3, Requirement R10. TOP-002-3, R4: There is no Requirement R4. TOP-002-3, R1**:** The SDT agrees. The VRF for Requirement R1 has been changed to Medium. However, comments prompted further consideration. It is apparent that adjacent entities would not be able to meet Requirement R1 without information otherwise unknown to them. That lack of information in the Operations Planning timeframe could cause that planning to be flawed. Therefore, the SDT is increasing this VRF from low to medium. TOP-002-3, R2: The SDT disagrees. Since IROLs are involved, the SDT feels that by definition the VRF must be high. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]* TOP-003-1, R4 & R5: The SDT agrees. The VRF for Requirement R5 has been changed to Medium. **TOP-003-1, R5**: Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*		
ISO-NE	No	TOP-001R1: A High VRF may not be appropriate in all cases. There are some directives that relate to local limits that would by no means result in cascading outages or instability. Perhaps the VSL matrix should assign a low VSL for non IROL directives. R2: We are unable to assess the VRF for this requirement since we do not understand the meaning of "?.potential impacts

Organization	Yes or No	Question 6 Comment
		caused by disconnections prior to switching." R3: We do not necessarily agree with a High VRF for the same reason as for R1, unless the VSL matrix addresses the difference between extreme events and local issues. TOP-002R1: We suggest raising the VRF for R1 to a Medium. TOP-003R5: Should perhaps be elevated to Medium if the measure were more specific. An entity can't prove the negative (prove you've provided data to every entity that requested it). The measure and VSL should deal with a complaint being submitted by an operating entity that did not get the data it needed and requested.
IRC Standards Review Committee	No	TOP-001R1: A High VRF may not be appropriate in all cases. There are some directives that relate to local limits that would by no means result in cascading outages or instability. Perhaps the VSL matrix should assign a low VSL for non IROL directives. R2: We are unable to assess the VRF for this requirement since we do not understand the meaning of "?.potential impacts caused by disconnections prior to switching." R3: We do not necessarily agree with a High VRF for the same reason as for R1, unless the VSL matrix addresses the difference between extreme events and local issues. TOP-002R1: We suggest raising the VRF for R1 to a Medium. TOP-003R5: Should perhaps be elevated to Medium if the measure were more specific. An entity can't prove the negative (prove you've provided data to every entity that requested it). The measure and VSL should deal with a complaint being submitted by an operating entity that did not get the data it needed and requested.
Independent Electricity System Operator	No	TOP-001R1: We do not agree with a High VRF. Not complying with the TOP's directives does not necessarily result in cascading outages or instability. And since the responsible entities are allowed to not comply with the directives for safety and other reasons, we are unable to rationalize how impactive a risk can be when an entity violates this requirement. R2: We are unable to assess the VRF for this requirement since we do not understand the meaning of "?.potential impacts caused by disconnections prior to switching." R3: We do not agree with a High VRF for the same reason as for R1, viz. if provisions for not complying is given, how high a risk it is if a responsible entity violates this requirement? TOP-002R1: We suggest raising the VRF for R1 to a Medium. Day ahead operational assessment of system conditions against established limits is essential in ensuring sufficient resources are available and operational plans are in place to prevent exceeding limits and to provide mitigating measures when such exceedence occurs. This assessment uses established limits and as such, is equally impactive, if not more impactive, than developing the limits themselves.

Organization	Yes or No	Question 6 Comment
		TOP-003R5: We do not agree with a Low VRF assigned to this requirement whose intent is essentially the same as R4 except R5 goes beyond the local TOPs and BAs to the adjacent or higher level entities, which also need this data to ensure reliable operation. We suggest this VRF should be Medium - the same for R4.
Response: TOP-001-2, R1**:** The SDT disagrees. Directives should be followed. What is described here by the commenter is a need to provide better directives… but if a directive is given it must be presumed in Real-time to be needed, and must be followed. As appropriate after the fact, a review of the directive can be made with a goal toward higher quality directives. But in Real-time the SDT position is that if directives are not followed, a high risk to reliability is likely. Therefore, the SDT disagrees with the comment and no change has been made. TOP-001-2, R2: The intent of the phrase was to note one of the areas especially necessary to communicate (i.e., the opening of Interconnections or connections to generators, areas, etc). This is one of many things that need to be communicated if System conditions permit. Since this specific phrase was confusing to some, and since it describes only one of many possible conditions, the SDT has deleted the phrase. **TOP-001-2, R2:** Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions**.** TOP-001-2, R3: The SDT disagrees and has left the VRF as is. If emergency assistance is requested it should be rendered if available. If it is requested for improper reasons or is found to be a convenience rather than a necessity, then such a finding should be dealt with after the fact. But during the emergency period, requests should be honored (if possible without threatening life or property, or violating laws or other regulations, standards, etc.). TOP-002-3, R1: The SDT agrees. The VRF for Requirement R1 has been changed to Medium. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]* TOP-003-1, R5: The SDT agrees. The VRF for Requirement R5 has been changed to Medium. **TOP-003-1, R5**: Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*		
Entergy Services	No	TOP-002-3 R1: VRF should be Medium since you can't do R2 or R3 without it. TOP-003-1 R5 - VRF should be Medium, the same as R4
Response: TOP-002-3, R1: The SDT agrees. The VRF for Requirement R1 has been changed to Medium. **TOP-002-3, R1**: The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]* TOP-003-1, R5: The SDT agrees. The VRF for Requirement R5 has been changed to Medium.

7. The SDT has included Measures and Data Retention with this posting. Do you agree with the assignments that have been made? If not, please make specific suggestions for improvement.

Summary Consideration:

While the majority of the commenters agreed with the parameters, the following changes have been made due to industry comments:

Since the data retention for all requirements was the same in TOP-001-2, the data retention requirements for each requirement and measure were deleted and replaced with the following:

TOP-001-2, data retention: The Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance ~~as identified below~~ for each applicable Requirement and Measure for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~.

TOP-002-3, M1. The Transmission Operator shall have evidence that it has assessed next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated power flow study results.

Since the data retention for all requirements was the same in TOP-002-3, the data retention requirements for each requirement and measure were deleted and replaced with the following:

TOP-002-3, data retention: The Transmission Operator shall keep data or evidence to show compliance for each Requirement and Measure for a rolling six month period unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

TOP-004-3, M2: Each Transmission Operator shall make available evidence that it has Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2. Such evidence could include but is not limited to a dated document with confirmation of the Agreement, such as a signature page or a memorandum of understanding, in electronic or hard copy format.

Organization	Yes or No	Question 7 Comment
NPCC	Yes	NPCC participant members agree provided that only the data specified is required to be dated, not the actual data.
Response: The SDT feels that your comment is covered in TOP-003-1, R1.2 which states “a mutually agreed upon format” between the two entities. The specifics of the request for information will be agreed upon by the parties involved and dated accordingly**.**		
Santee Cooper	No	OK with the measures and data retention with the exception of our concerns discussed in Question 12.
Response: Thank you for your response and please see the response to question 12.		

Organization	Yes or No	Question 7 Comment
SERC OC Standards Review Group	No	If the changes suggested above are agreed to by the SDT, please make the appropriate corresponding changes to the measurements.
Independent Electricity System Operator	No	We do not agree with some of the requirements (see above) and hence do not agree with some of the Measures. Other than that, we generally agree with the measures and retention periods for those requirements that we agree with.
Response: Please see the above responses.		
PJM Interconnection	No	TOP-003 M1-M5 - they all introduce a new requirement (i.e. the report be dated) - that requirement should be dropped from the measures.
Response: M1 **-** The SDT believes that it is imperative to have dated documentation pertaining to all reliability related information that is passed on between operating entities. This is particularly true whenever system upgrades/changes are done or equipment ratings are changed. Adding the word 'dated' to the Measure does not alter the requirement and is only common sense. M2 – M5: 'Dated' is only employed here with respect to the use of operator logs as a type of evidence. This does not alter the requirement in any fashion and is simply a common sense statement.		
Dominion - Electric Market Policy	No	TOP-001-2 @M4 - We don't agree with the underlying requirement (see comment to question 12). We do not agree with data retention requirements for M1 and M3 this standard. In our mind, there are two tenants that must be honored above all. The first is to follow reliability directives whenever possible, the 2nd is to provide data necessary for reliability assessments. Where an entity fails to comply, the requestor should immediately file a complaint with the region or NERC. We expect either of these to perform a prompt review. So, we don't see the need to keep data for a year nor do we see value in keeping data until next compliance audit when found non compliant. TOP-002-3 @ M3 should be removed as we do not agree with underlying requirement (see comment to question 12).
Response: The SDT feels your comment about TOP-001-2, M4 really pertains to TOP-001-2, R4. The SDT believes that this requirement is necessary in order to keep other entities appraised of the status of a generator or plant when that status can directly impact the reliability of the BES. In many cases the RC or BA is not directly responsible for voltage control in a particular area. The TOP in these cases would most likely be the responsible party for monitoring and responding to area voltage concerns. If the GOP were not to advise the TOP in these cases about unit voltage control capability changes it could certainly impact the reliability of the BES. The SDT does not feel that measures M1 and M3 of TOP-001-2 are only associated with conditions of non-compliance. The measures are there to insure that entities simply show that they either complied with a directive or offered emergency assistance. If they couldn't comply for any of the reasons stated in Requirements R1 or R3 of TOP-001-2 they can show proof as to the reason why. The data retention times for both of these measures seems agreeable by all other responders, therefore		

Organization	Yes or No	Question 7 Comment
the SDT will retain the retention periods as stated in the draft. The SDT feels your comment about TOP-002-3, M3 really pertains to TOP-002-3, R3. The SDT feels this requirement is necessary to insure all entities help in addressing a potential IROL limit and that each entity knows their specific role in the plan. The requirement and measures will remain as drafted.		
MRO NERC Standards Review Subcommittee	No	1. The measures seem to repeat the requirements perhaps this could be avoided since additional detail in the measures are not enforceable only the requirements are. 2. In the standard TOP-001-2 the retention period for requirement 5 and measure 5 is longer than required for R1 through R4, what is the reasoning for this? 3. In the standard TOP-001-2, there is no retention period given for requirement 6 and measure 6.4. In all of the standards and in the last sentence of the section "1. 4 Data Retention", isn't it extreme to retain "all" requested and submitted subsequent audit records? 5. In the standard TOP-002-3, requirement 3 depends on requirement 2 but these requirements don't have the same retention period, should they? 6. Measure 5 of the standard TOP-003-1 references requirement 9, shouldn't it reference requirement 5? 7. In the standard TOP-003-1, the retention periods for R4/M4 and R5/M5 are only for 90 calendar days but the rest of the requirements have a retention period for 3 years, shouldn't R4/M4 and R5/M5 have the same retention period as the rest of the requirements in this standard? 8. The MRO has concerns about storing large amounts of real-time data. In TOP-003-01, should R1, R4, and R5 data retention be set at 90 days? 9. In the standard TOP-004-3, M2's last sentence references the text "confirmation". What is needed for confirmation? Would a signature page be an example?
Response: 1. The SDT feels that the measures simply reinforce the requirements and explains what is needed for compliance. 2. The SDT has changed the data retention requirements in TOP-001-2 to the same timeframe (current calendar year plus previous calendar year) for all requirements for consistency purposes. **TOP-001-2, data retention:** The Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance ~~as identified below~~ for each applicable Requirement and Measure for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~. 3. The SDT has changed the data retention requirements in TOP-001-2 to the same timeframe (current calendar year plus previous calendar year) for all requirements for consistency purposes.		

Organization	Yes or No	Question 7 Comment
4. The interpretation of the SDT on "all" requested and submitted subsequent audit records" means any supporting data required to be provided following a compliance audit. This would be a reasonable request, and that data should be kept with the original audit records. 5. The SDT agrees that all data retention requirements in TOP-002-3 should be the same. **TOP-002-3, data retention**: The Transmission Operator shall keep data or evidence to show compliance for each Requirement and Measure for a rolling six month period unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation. 6. The SDT has already taken care of this and the change has been made. Thank You for the comment. 7&8. The data retention periods for TOP-003-1 have been changed so that they are all the same - 3 calendar years (except for Requirement/Measure 1). The SDT feels a signature page would be acceptable and has changed the standard accordingly. **TOP-004-3, M2**: Each Transmission Operator shall make available evidence that it has Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2. Such evidence could include but is not limited to a dated document with confirmation of the Agreement, such as a signature page or a memorandum of understanding, in electronic or hard copy format.		
ITC Transmission	No	In TOP-001, the majority of retention requirements are current year plus one, except one is 3 years and one isn't specified. All retention requirements in this standard should be the same. In TOP-002 M1 add operating plans or guides as evidence that an assessment was performed. In TOP-002 retention requirements should be the same for all requirements.
Response: The SDT will change the data retention requirements in TOP-001-2 for all 6 requirements to the same timeframe for consistency purposes (current calendar year plus previous calendar year). **TOP-001-2, data retention:** The Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance ~~as identified below~~ for each applicable Requirement and Measure for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~. The SDT feels that operating plans or guides are not required in TOP-002-3, M1. TOP-002-3, R1 simply states that the TOP needs to do an assessment for the next days operation to identify any potential SOL's . If there are no potential SOL's identified in the assessment then there is no need for plans or guides on how to address SOL's.		
ISO-NE	No	In general, TOP-001 is an event triggered standard. For example, a limit is violated and not corrected, an entity failed to followed a directive, etc.. Since it's impossible to prove the negative when there isn't an event, what these measures will

Organization	Yes or No	Question 7 Comment
		cause is entities to pass requests around to get statements from others to have something to show an auditor. TOP-003 It should be acceptable (rather that keeping evidence that each entity was sent a specification) that the specification be available to an accessible site and that the entities were made aware of its location. The measures should revolve around failure to obtain or provide data and either an event occurred or a complaint arose.
IRC Standards Review Committee	No	In general, TOP-001 is an event triggered standard. For example, a limit is violated and not corrected, an entity failed to followed a directive, etc.. Since it's impossible to prove the negative when there isn't an event, what these measures will cause is entities to pass requests around to get statements from others to have something to show an auditor. TOP-003 It should be acceptable (rather that keeping evidence that each entity was sent a specification) that the specification be available to an accessible site and that the entities were made aware of its location. The measures should revolve around failure to obtain or provide data and either an event occurred or a complaint arose.
Response: The SDT believes that all the measures in TOP-001-2 are appropriate and should easily be able to be complied with for auditing purposes. If an entity is asked to follow a directive or help in some way during an emergency those directives and conversations should be documented and most likely recorded. Even if there were not an event on the System, the SDT feels that all directives and requests between entities should be required to be written down at a minimum and therefore should be easy to retain for proof at a later time if needed. The SDT believes that mandating all entities to forward all required data specification information to one site is beyond the scope of the SDT. The measures do in fact revolve around failure to obtain or provide data. The SDT will make no changes to TOP-003 based on these comments.		
Manitoba Hydro	No	TOP-001-2. Data retention for all requirements should be the same. That is, current year plus the previous year.
Response: The SDT will change the data retention requirements in TOP-001-2 for all 6 requirements to the same timeframe for consistency purposes (current calendar year plus previous calendar year). **TOP-001-2, data retention:** The Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance ~~as identified below~~ for each applicable Requirement and Measure for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~.		
Ameren	No	There are inconsistencies in specified retention periods among several requirements. While we do not know the reason for this, we recommend that the SDT review the different retention periods and provide as much consistencies as possible.
Response: The SDT has reviewed the data retention requirements and made changes for consistency where necessary.		
Entergy Services	No	TOP-002-3 M1: We suggest a good example of compliance evidence be power flow models and study results instead of operator logs. If not, what does "assessment" mean in R1?

Organization	Yes or No	Question 7 Comment
Response: The SDT understands that the term assessment may mean different things to different entities. TOP-002-3, R1 indicates that the TOP needs to assess whether normal or Contingency conditions for the next day may exceed an SOL. Generally speaking this will only be known to the TOP through load flow studies and security analysis. TOP-002-3, M1 states "Such evidence could include but is not limited to dated operator logs or reports". As for the evidence, the SDT agrees that power flow outputs and study results are more appropriate and has made that change. **TOP-002-3, M1**. The Transmission Operator shall have evidence that it has assessed next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated power flow study results.		
AEP	No	Refer to question 3 response. The TOP-001-2 three year data retention for SOL violations seems excessive. Data that has been retained this long tends to lose its value. We would like to hear an argument from the SDT how this improves system reliability. Similarly, the three year data retention for distributing data specifications in TOP-003-1 (R2/M2, R3, M3) also seems excessive. We propose that the current and previous calendar years would suffice.
Response: The SDT will change the data retention requirements in TOP-001-2 for all 6 requirements to the same timeframe for consistency purposes (current calendar year plus previous calendar year). **TOP-001-2, data retention:** The Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance ~~as identified below~~ for each applicable Requirement and Measure for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~. The data retention periods for TOP-003-1 have been changed so that they are all the same.		
Northeast Utilities	Yes

FirstEnergy	Yes	

Organization	Yes or No	Question 7 Comment
Montenay Power Corp.	Yes	
Consumers Energy Company	Yes	
Oncor Electric Delivery	Yes	
Duke Energy	Yes	
Response: Thank you for your comments.		

8. The SDT has included compliance elements including VSL for this posting. Do you agree with the assignments that have been made? If not, please provide specific suggestions for change.

Summary Consideration:

Due to industry comments, the SDT has changed the following requirements, measures, and VSLs:

TOP-001-2, R1: Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with each reliability directive issued by the Transmission Operator, unless the respective entity informs the Transmission Operator that such actions would violate safety, equipment, regulatory or statutory requirements.

TOP-001-2, R2: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions.

TOP-001-2, R4: Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination.

VSL

TOP-001-2, R1:

R1	N/A	N/A	N/A	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with a reliability directive issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements

TOP-001-1, R3, Severe VSL: The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, and such actions would not violate safety, equipment, regulatory, or statutory requirements.

TOP-001-2, R4 VSL:

R4	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with 25% or less of the affected reliability entities unless conditions did not permit such coordination	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with more than 25% or less than or equal to 50% of the affected reliability entities unless conditions did not permit such coordination	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with more than 50% or less than or equal to 75% of the affected reliability entities unless conditions did not permit such coordination.	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with more than 75% of the affected entities unless conditions did not permit such coordination.

TOP-001-2, R6 VSL:

R6	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v on one occasion.	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v on two occasions.	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v on three occasions.	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v on four or more occasions.

TOP-002-3, R3 VSL:

R3	The Transmission Operator did not notify 25% or less of the reliability entities identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify more than 25% and less than or equal to 50% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 50% and less than or equal to 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).

TOP-003-1, R2 VSL:

R2	The Transmission Operator did not distribute its data specification to 25% or less of the entities that has Facilities monitored by the Transmission Operator or to 25% or less of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to more than 25% and less than or equal to50% of the entities that have Facilities monitored by the Transmission Operator or to more than 25% and less than or equal to 50% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to more than 50% and less than or equal to 75% of the entities that have Facilities monitored by the Transmission Operator or more than 50% and less than or equal to 75% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to more than 75% of the entities that have Facilities monitored by the Transmission Operator or more than 75% of the entities that provide Facility status to the Transmission Operator.

TOP-003-1, R3 VSL:

R3	The Balancing Authority did not distribute its data specification to 25% or less of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 25% and less than or equal to 50% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 50% and less than or equal to 75% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 75% of the entities that provide Facility status to the Balancing Authority

Organization	Yes or No	Question 8 Comment
Santee Cooper	No	OK with the VSLs with the exception of our concerns discussed in Question 12.
Response: Thank you for your response and please see the response to question 12**.**		
SERC OC Standards Review Group	No	TOP-001, R4. We suggesting changing the words "affect and affected" to "impact and impacted", respectively.

Organization	Yes or No	Question 8 Comment
Response: The SDT has changed the requirement. **TOP-001-2, R4:** Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination.		
Dominion - Electric Market Policy	No	TOP-001-2R1 - Could be interpreted that non-compliance is based on number of occasions whereby entity invoked safety, equipment, regulatory, or statutory requirements as opposed to number of occasions whereby entity failed to comply with reliability directives. Suggest revising to read "?.did not comply with reliability directives issued by the Transmission Operator and did not inform the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements, on one occasion." Suggest use of similar language for each Severity Level. R3 - Suggest revising to read "The Transmission Operator, Balancing Authority, or Generator Operator did not render emergency assistance to others, as requested and did not inform the requestor that such actions would violate safety, equipment, regulatory, or statutory requirements. R4 - Revise to conform to comment in question 12. TOP-003-1 R4 - Do not agree that a any failure to provide data warrants severe. Is reliable operations jeopardized for failure to report an outage on a 10 Mw peaking CT as it is for a 1000 Mw base load unit? We don't see them as the same and would rather see something akin to the following: Low - Failed to provide > 25% of data required Moderate - failed to provide 26-50% of data required High - Failed to provide 51-75% of data required Severe - failed to provide > 75% of data required
Response: On TOP-001-2, R1, the SDT agrees with your suggestion and has made conforming changes to clarify that noncompliance is based on a single occurrence where directions were not obeyed except in those cases where the TOP was not informed of safety, equipment, regulatory, or statutory requirements that prevented compliance with the directives. We also removed the Lower, Moderate and High VSLs at the suggestion of ITC Transmission. **TOP-001-2, R1 VSL**:		

R1	N/A	N/A	N/A	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with a reliability directive

Organization	Yes or No	Question 8 Comment
		issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements.
: On TOP-001-2, R3, the SDT agrees and has made conforming changes for the same reasoning as indicated in our response for TOP-001-1, R1, above. **TOP-001-1, R3, Severe VSL**: The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, and such actions would not violate safety, equipment, regulatory, or statutory requirements. On TOP-001-2, R4: The SDT will ask a specific question of the industry on deleting the GOP from this requirement in the next posting. On TOP-003-1, R4, the SDT thanks you for your comment, but does not agree. The intent of this requirement is to guarantee that the TOP will have all the data necessary to perform Real-time monitoring and reliability assessments. As such, the data that is requested is either supplied or it isn't, creating a binary situation. Attempting to divine 4 levels of non-compliance in a binary situation results in imprecise boundaries and increased auditor discretion, both of which lead to regulatory uncertainty, which is what the SDT is attempting to minimize.		
Bonneville Power Administration	Yes	I think TOP-001-2 R6 would be better to say the TOP "shall act to ensure mitigation of the magnitude?" thus eliminating extraneous phrasing "direct others".
Response: The phrase "ensure mitigation" potentially introduces new obligations on the TOP via the compliance process, e.g., how would we measure that the TOP "ensured mitigation" when the term "ensure" means to essentially guarantee in all situations? Therefore, the SDT did not change the language of Requirement R6.		
FirstEnergy	No	The VSL for TOP-001 R1 should all be revised to state, "? The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with reliability directives issued by the Transmission Operator, and the respective entity failed to inform the Transmission Operator that such actions would violate safety, equipment, regulatory,

Organization	Yes or No	Question 8 Comment
		or statutory requirements on (one, two, three, four or more) occasion. " The VSL for TOP-001 R3 should be revised to state, "The Transmission Operator, Balancing Authority or Generator Operator did not render emergency assistance to others, as requested and available, and such actions would not violate safety, equipment, regulatory, or statutory requirements. The VSL for TOP-001 R4 should be revised in a similar fashion to R1 and R3 above. The VSL for TOP-002 R3 as written implies that an entity that interacts with only one reliability entity would not receive a violation greater than "lower." In addition, as written these VSLs seem to allow the Compliance Auditor the opportunity to choose how to apply the VSL. As an example the entity with one reliability entity could be found to be guilty of a "Lower" violation because they missed their one reliability entity or they could be guilty of a "Severe" violation because they missed 100% of their reliability entities. Suggest the drafting team eliminate the first sentence of each of these VSLs and use percentages as the test of violation severity. The VSL for TOP-003 R2 as written implies that an entity that interacts with only one data supplier would not receive a violation greater than "lower." In addition, as written these VSLs seem to allow the Compliance Auditor the opportunity to choose how to apply the VSL. As an example the entity with one data supplier could be found to be guilty of a "Lower" violation because they missed their one data supplier entity or they could be guilty of a "Severe" violation because they missed 100% of their data supplier entities. Suggest the drafting team eliminate the first sentence of each of these VSLs and use percentages as the test of violation severity. The VSL for TOP-003 R3 has the same problem as R2. Suggest the drafting team eliminate the first sentence of each of these VSLs and use percentages as the test of violation severity. The VSL for TOP-004 R1 states, "The Transmission Operator did not operate within an identified Interconnection Reliability Operating Limits(IROL) and the associated IROL Tv for any single occasion." This should be changed to state, "The Transmission Operator failed to mitigate an identified Interconnection Reliability Operating Limits (IROL) and within the allotted IROL Tv for any single occasion. " The VSL for TOP-004 R2 as written implies that an entity with only 1 tie line would not receive a violation greater than "lower." In addition, as written these VSLs seem to allow the Compliance Auditor the opportunity to choose how to apply the VSL. As an example the entity with one tie line could be found to be guilty of a "Lower" violation because they missed their one directly connected entity or they could be guilty of a "Severe" violation because they missed 100% of their directly connected entities. Suggest the drafting team eliminate the first sentence of each of these VSLs and use percentages as the test of violation severity.

Response: On TOP-001-2, R1 and R3 VSL, the SDT made changes to accommodate industry concerns.

TOP-001-2, R1 VSL:

Organization	Yes or No	Question 8 Comment			
R1	N/A	N/A	N/A	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with a reliability directive issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements	

TOP-001-1, R3, Severe VSL: The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, and such actions would not violate safety, equipment, regulatory, or statutory requirements.

On TOP-001-2, R4, the SDT cannot determine your intent as to why the VSL for R4 should be revised, because the comment indicates that it should be revised "in a similar fashion to R1 and R3", yet, R4 does not have the clarifying clause that was the subject of the comments in R1 and R3. Therefore, no change was made with regard to binary VSL but wording changes for clarity have been made.

TOP-001-2, R4 VSL:

R4	The Transmission Operator or Generator Operator did not	The Transmission Operator or Generator Operator did not	The Transmission Operator or Generator Operator did not	The Transmission Operator or Generator Operator did not

Organization	Yes or No	Question 8 Comment			
	coordinate their respective operations known or expected to impact other reliability entities with 25% or less of the affected reliability entities unless conditions did not permit such coordination	coordinate their respective operations known or expected to impact other reliability entities with more than 25% or less than or equal to 50% of the affected reliability entities unless conditions did not permit such coordination	coordinate their respective operations known or expected to impact other reliability entities with more than 50% or less than or equal to 75% of the affected reliability entities unless conditions did not permit such coordination.	coordinate their respective operations known or expected to impact other reliability entities with more than 75% of the affected entities unless conditions did not permit such coordination.	

On TOP-002-3, R3 the SDT agrees and has made appropriate changes.

TOP-002-3, R3 VSL:

R3	The Transmission Operator did not notify 25% or less of the reliability entities identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify more than 25% and less than or equal to 50% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 50% and less than or equal to 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).

On TOP-003-1, R2 and R3, the SDT agrees.

TOP-003-1, R2 VSL:

R2	The Transmission Operator did not distribute its data specification to 25%	The Transmission Operator did not distribute its data specification to more	The Transmission Operator did not distribute its data specification to more	The Transmission Operator did not distribute its data specification to more

Organization	Yes or No	Question 8 Comment			
	or less of the entities that have Facilities monitored by the Transmission Operator or to 25% or less of the entities that provide Facility status to the Transmission Operator.	than 25% and less than or equal to50% of the entities that have Facilities monitored by the Transmission Operator or to more than 25% and less than or equal to 50% of the entities that provide Facility status to the Transmission Operator.	than 50% and less than or equal to 75% of the entities that have Facilities monitored by the Transmission Operator or more than 50% and less than or equal to 75% of the entities that provide Facility status to the Transmission Operator.	than 75% of the entities that have Facilities monitored by the Transmission Operator or more than 75% of the entities that provide Facility status to the Transmission Operator.	
TOP-003-1, R3 VSL:					
R3	The Balancing Authority did not distribute its data specification to 25% or less of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 25% and less than or equal to 50% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 50% and less than or equal to 75% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 75% of the entities that provide Facility status to the Balancing Authority	

On TOP-004-3, R1, the SDT feels the suggested wording is basically equivalent to what is already there so no change was made.

On TOP-004-3, R2, the SDT is going to ask a question on the elimination of this requirement in the next posting so no changes have been made at this time.

Organization	Yes or No	Question 8 Comment
MRO NERC Standards Review Subcommittee	No	1. For the TOP-001-2 VSLs for R1, these VSLs should be reworded because complying to the requirement would meet those VSLs. The MRO would suggest replacing "unless" with an "and" plus change the trailing text to read "? the respective entity did not inform the transmission operator ?". 2. For the TOP-001-2 VSLs for R2, what about the situation where the transmission operator did inform the RC and the affected TOP of a real-time emergency condition on an occasion but the notification was after the disconnection of switches? 3. For the TOP-001-2 VSLs for R4, what if the TOP or GOP does not coordinate because of system conditions. Is it possible that those entities might disagree as to what is a system condition? How would this disagreement be handled? 4. For the TOP-001-2 VSLs for R6, the timing is only one element of the evidence. These VSLs should be rewritten because the VSLs add to the requirement. The VSL should be changed to replace "the timing of when it acted" with "its actions" plus, add the text "when it" between the words "or" and "directed others".

Response: On TOP-001-1, R1, the SDT has made this change.

TOP-001-1, R1 VSL:

R1	N/A	N/A	N/A	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with a reliability directive issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate

Organization	Yes or No	Question 8 Comment

				safety, equipment, regulatory, or statutory requirements

On TOP-001-2, R2, the SDT removed the phrase from the requirement which should alleviate the concern.

TOP-001-2, R2: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions.

On TOP-001-2, R4, the SDT believes that the respective entity makes the determination but that they must be prepared to defend their actions on a case by case basis.

On TOP-001-2, R6, the RTOSDT agrees with your comment and has made conforming changes.

TOP-001-2, R6 VSL:

R6	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv on one occasion.	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv on two occasions.	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv on three occasions.	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv on four or more occasions.

Organization	Yes or No	Question 8 Comment
ITC Transmission	No	TOP-001 R1 Failure to follow a directive one even one occasion without reason should be treated as a severe VSL, similar to R3. TOP-002 R1 & R2 VSL should not be severe, there should be VSLs at all levels. It is not logical to have a severe VSL for not performing a day ahead analysis, and a Lower VSL for not following a reliability directive. TOP-004 R4 should have VSL for all levels, similar to R2,R3

Response: On TOP-001-2, R1, the SDT has made changes accordingly.

Organization	Yes or No	Question 8 Comment

TOP-001-2, R1 VSL:

R1	N/A	N/A	N/A	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with a reliability directive issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements

On TOP-002-3, R1 and R2, the SDT agrees and has changed TOP-001-2, R1 VSL. .

In response to your final comment, there is no TOP-004-3, R4,

Organization	Yes or No	Question 8 Comment
ISO-NE	No	In general, these are binary requirements. An entity followed a directive or not, data was provided or it was not, a study was done or it was not. The true fix is to develop a sanctions matrix that deals with binary requirements rather than coming up with subjective ways to measure something that is yes/no. That said, we would not recommend spending a great deal of time making modifications, as there will most likely be an order directing modifications once the standard is filed.

Organization	Yes or No	Question 8 Comment
IRC Standards Review Committee	No	In general, these are binary requirements. An entity followed a directive or not, data was provided or it was not, a study was done or it was not. The true fix is to develop a sanctions matrix that deals with binary requirements rather than coming up with subjective ways to measure something that is yes/no. Organization	Yes or No	Question 8 Comment

	occasion.	occasions.	occasions.	more occasions.

Organization	Yes or No	Question 8 Comment
Independent Electricity System Operator	No	a. We do not agree with some of the requirements, and suspect other commenters may express disagreements with some requirements. This may result in changes to the requirements and as such, the VSLs will need to be revised. b. A number of the VSLs proposed in the TOP standards, e.g. TOP-001, R1 and R2, are graded according to the number of repeated violations. This approach may need to be changed since recent FERC NOPR proposes that repeated violation is not to be the basis for different violation levels c. TOP-003, R1: It appears that missing one of the subrequirements is assigned a Low VSL, missing 2 of them is assigned a Medium VSL and missing all 3 or having no documented specification is assigned a Severe. We suggest to move the first 2 conditions to Medium and High.

Response:.

Understood.

The language of the requirement will determine if violations can be accumulated. If the requirement is plural, violations can be accumulated to assess the VSL. Without specific examples, the SDT cannot make specific changes.

On TOP-003-1, R1, the RTO SDT agrees with your suggestion and has made conforming changes.

TOP-003-1, R1:The SDT disagrees and has not made a change.

Organization	Yes or No	Question 8 Comment
Duke Energy	No	TOP-003-1 Requirement R5 VSLs should be patterned after the VSLs for Requirements R2 and R3, i.e. a graduated scale since R5 is not a binary requirement. TOP-002-3 Requirement R3 - if only one reliability entity is identified in plans to preclude exceeding an IROL, and that entity is not notified, which VSL would apply - "Lower" or "Severe"?

Response: The SDT continues to view Requirement R5 as a binary requirement, and did not change the VSLs per your suggestion.

On TOP-002-3, R3, the SDT has made changes to address your concern.

TOP-002-3, R3 VSL:

R3	The Transmission Operator did not notify 25% or less of the reliability	The Transmission Operator did not notify more than 25% and less than or	The Transmission Operator did not notify more than 50% and less than or	The Transmission Operator did not notify more than 75% of the

Organization	Yes or No	Question 8 Comment

	entities identified in the plan(s) cited as to their role in the plan(s).	equal to 50% of the reliability entities identified in the plan(s) as to their role in the plan(s).	equal to 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).	reliability entities identified in the plan(s) as to their role in the plan(s).

Organization	Yes or No	Question 8 Comment
American Transmission Company	No	TOP-001-2 VSL: VSLs for R1 and R2 are written for when an entity does not follow a directive multiple times. Per FERC VSL should be based on the single non-compliance event. ATC suggest that the VSLs be re-written based on FERC guidelines. VSLs for R5 and R6 are based on the entity not having evidence of compliance not on the fact that they did not comply with the requirement. ATC suggest that the VSL be rewritten in order to address the requirement not the evidence to support the requirement. VSL for TOP-002-3 Requirement 3: If in a plan you identify one reliability entity and fail to notify that entity what is the VSL level that will be assigned. This seems to fall in both Lower and Severe. ATC believes that the VSL's should only have a single method for determining the VSL level in order to prevent conflicting determinations.

Response: On TOP-001-2, R1, that SDT agrees and has made conforming changes to the VSLs. The language of the requirement will determine if violations can be accumulated. If the requirement is plural, violations can be accumulated to assess the VSL

TOP-001-2, R1: Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with each reliability directive issued by the Transmission Operator, unless the respective entity informs the Transmission Operator that such actions would violate safety, equipment, regulatory or statutory requirements.

TOP-001-2, R1 VSL:

R1	N/A	N/A	N/A	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with a reliability directive issued by the

Organization	Yes or No	Question 8 Comment

				Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements

On TOP-001-2, R2, however, the SDT disagrees that this is a binary requirement and did not change the VSLs.

On the VSLs for TOP-001-2, R5 and R6, the SDT understands your concerns, but without evidence of action, how can one prove compliance? The SDT sees no conflict between the VSLs as worded currently and the requirements.

On the VSL for TOP-002-3, R3, the SDT has made a change to address your concerns.

TOP-002-3, R3 VSL:

R3	The Transmission Operator did not notify 25% or less of the reliability entities identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify more than 25% and less than or equal to 50% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 50% and less than or equal to 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).

9. The SDT has provided an Implementation Plan with this posting. Do you agree with the implementation timeframes? If not, please provide specific suggestions for improvement.

Summary Consideration: The SDT feels that the Implementation Plan is well supported by the industry due to the fact there was only a single negative comment received. Therefore, the SDT will follow the timeframe for the Implementation Plan as drafted.

Organization	Yes or No	Question 9 Comment
SERC OC Standards Review Group	No	The SDT may want to consider a closer implementation date since there are no new requirements included in the proposed revisions to these standards.
Response: The RTO SDT feels the longer implementation dates are necessary in order to ensure that the projects mentioned in the prerequisites: Pre-2006, Operate within Interconnection Reliability Operating Limits; 2006-06, Reliability Coordination; and Project 2006-07, ATC/TTC/AFC and CBM/TRM Revisions have been approved prior to the implementation of this Project 2007-03, Real-Time Operations.		
Dominion - Electric Market Policy	Yes	While we agree with the SDT that all prerequisites must occur prior to implementation of this plan, we wish to cite, for the record, the sheer volume of draft standards that are now 'dependant' for prerequisite action on preceding drafts. We would like to see a moratorium on new drafts until the current back log is cleared. We are concerned that new drafts are being reviewed with the potential that ramifications of underlying/preceding drafts aren't being fully understood and/or that modifications made to any such drafts may not follow through in later draft standards predicated upon them.
Response: The SDT appreciates your concern but this is outside the scope of the SDT.

10. The SDT is recommending retirement of TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0. Do you agree with these retirements? If not, please provide specific reasons for your position.

Summary Consideration:

Due to industry comments, the following were changed:

TOP-001-2, R2: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions.

TOP-003-1, Purpose: To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their functional responsibilities.

TOP-003-1, R1: Each Transmission Operator and Balancing Authority shall have a documented specification for data required to fulfill their respective responsibilities per the NERC Functional Model. The specification shall include:

TOP-003-1, R4: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies).

TOP-003-1, M4: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall make available evidence that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies) in accordance with Requirement R4. The data is limited to that needed by the Transmission Operator to support Operational Planning Analyses and reliability assessments. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

Organization	Yes or No	Question 10 Comment
NPCC	No	The note next to R4 in TOP-006 reads: "Load patterns now covered in the new TOP-005. Remainder not required for reliability." We understand that TOP-005 is to be retired, and we are unable to find the new TOP-005 that covers this requirement.
Independent Electricity System Operator	No	The note next to R4 in the red-line version of TOP-006 says: "Load patterns now covered in the new TOP-005. Remainder not required for reliability." Since TOP-005 is to be retired, we are unable to find a new TOP-005 that covers this requirement. Please explain the relevance of this note.
Response: TOP-006-1**:** There was a problem with the original posted material. You are correct; this is now covered under the data specification requirements of TOP-003-1.		

Organization	Yes or No	Question 10 Comment
SERC OC Standards Review Group	Yes	Although we agree with the retirements of TOP-005, 006, 007 and 008, the following discrepancies are noted: Top-006-1, R5 indicates this requirement has been removed to new TOP-005. TOP-005 is being eliminated and a new TOP-005 is not being developed. Where does this requirement reside? or is it really needed? TOP-008-0, R1 indicates this requirement has been moved to TOP-003-1, which is the standard for Operational Reliability Data. Should this read that it has been moved to TOP-004? Per-001-0, R1. We agree with the elimination of this Standard The authority of the system operator is mandated in FERC Order 693, paragraph 112.
Response: TOP-006-1**:** There was a problem with the original posted material. You are correct; this is now covered under the data specification requirements of TOP-003-1. TOP-008-0: There was a problem with the original posted material. As re-posted in the Implementation Plan, this should read: Deleted – now covered by TOP-001-2, R6 for IROL. Taking immediate steps for relief of all SOLs experienced or contributed to may not always be prudent, especially if other organizations are addressing the cause. In such cases, uncoordinated immediate actions may be counterproductive. Accordingly, requiring immediate action to relieve all SOLs was deleted in consideration of TOP-001-1 and TOP-004-3 requirements applied in combination. PER-001-0: Thank you for your response.		
Dominion - Electric Market Policy	No	We believe that the existing standards are more clear those contained in this draft. This draft seems to be trying to delineate TOP and BA standards/requirements from RC standards/requirements. In doing so, the draft loses the feeling of cohesiveness of the existing standards.
Response: The re-drafting effort is trying to delineate the RC vs. TOP/BA standards as was pointed out in the SAR for this project.		
Southern Company Transmission	No	Both TOP-001-1, R1, and PER-001-0, R1, were deleted. These standard requirements require operating personnel under the TOP and BA to have the responsibility and authority to implement real time actions to ensure the stable and reliable operation of the bulk electric system. Additionally, in paragraph 1330 of FERC Order 693, FERC approved PER-001-0 as mandatory and enforceable. Accordingly, FERC is clear in its intention that the operating personnel of the TOP and BA have authority to take action without any managerial approval being required. Also, in paragraph 1582 of the Order 693, FERC states R3 of Reliability Standard IRO-001-0 establishes the decision-making authority of the reliability coordinator, but not operating personnel of the TOP or BA. These facts stated above could be exposing a reliability gap if this standard is approved as written because the entities performing the TOP and BA functions must have the support of a NERC standard to be able to take immediate action without management approval or intervention. Reliability Standards Compliance programs are based on abiding by the NERC standards. By the TOP and BA not having clear decision-making authority from a NERC standard could lead to senior management of a company stepping in and requiring their approval before operating personnel are allowed to take action to alleviate problem. This could lead to jeopardizing

Organization	Yes or No	Question 10 Comment
		reliability. TOP-001-1, R2 has been deleted. It would seem logical that a requirement for the TOP to take immediate action to alleviate operating emergencies including curtailing transmission service or energy schedules, operating equipment (e.g., generators, phase shifters, breakers), shedding firm load, etc., would be worthy of being kept in the standard. If it is a duplication of an existing requirement, then please reference where the duplicate requirement is located.? Under TOP-001-2, R2 the phrase "including potential impacts caused by disconnections prior to switching" was added to the requirement. This addition seems to provide too much specificity and provides a very granular view for the requirement. It is best to remove this phrase and bring the requirement back to a higher level and end the sentence after "emergency conditions". It was noted that TOP-001-2, R3 replaces TOP-001-1, R6 and that the following component of the old R3 was deleted: "provided that the requesting entity has implemented its comparable emergency procedures". For an entity to render emergency assistance to another entity who has not implemented their own internal company emergency procedures prior to seeking help from others is not a wise decision. Deleting this phrase would create a burden on others providing the emergency assistance. Unless it can be shown there are other standard requirements already containing this required action, we recommend NOT removing this phrase." Removal of the BA from requirement (TOP-002-2, R1) to plan operations into the future is not appropriate. Although it is agreed that CPS and DCS are much of the real-time basis for reliable operation, due to the physical requirements to start or even change output of many units, it is absolutely necessary that the BA plan a near-term operating horizon of several hours so that DCS and Energy Emergencies can be avoided. Removing the requirement for the BA to plan because DCS covers everything would be like removing the requirement for TOP to plan and just rely on the fact that the TOP has to correct SOL's and IROL's under TOP-004-1, R1 without any planning. Also, without this requirement to plan, under what basis would the BA have to request the generator output planning information currently in TOP-002-2, R15 that the SDT says will become part of TOP-003-1 data specifications? The Generator Operator could say there is no need for the BA to plan beyond what is needed for DCS and CPS and thus claim such requests are not needed. By removing this requirement the SDT has removed any basis for doing near-term planning. Similarly to the comment above for R1, the BA has a need to plan for the items covered in TOP-002-2, R5. Such a requirement should be included in the new R1 of TOP-002-3.? TOP-002-2, R8 requires the need to plan to meet Interchange Schedules and ramps, and should be carried forward to TOP-002-3. Even though INT-006 requires the BA to consider ramping capability in approving/denying Arranged Interchange, generation dispatch and unit capability can change significantly after an Arranged Interchange is approved. The BA must consider (i.e. plan) near-term ramps in being able to meet an upcoming Interchange ramp. The result of not planning for a ramp that can no longer be met is a frequency deviation. The ability to ramp is not a parameter in the BAL-

Organization	Yes or No	Question 10 Comment
		001 and BAL-002 standards. ACE is the basis for BAL-001 and BAL-002 and ramping capability is only one contribution to ACE and thus those standards should not be used as a reason for removing this requirement. In addition, the CPS criteria of BAL-001 are not granular enough (CPS1 is 12 month rolling average and CPS2 is a calendar month number) to manage real-time issues that can cause reliability problems. In the new TOP-003-1 which addresses reliability data needs, R2 and R3 require distribution to entities that provide Facility status. Why is the term status used? Why would not the distribution be to any entity that is the source of data under the specification R1 and not limit it to a Facility status source? In the mapping table of the Implementation Plan, TOP-006-1 R5, R6 and R7 were deleted with a reason given by the SDT that the monitoring activities are covered in the certification process. It is unclear how a one time verification of the activity during certification translates into a requirement that the monitoring processes continue and more importantly that violations have a penalty. It is recommended that these requirements be retained (and perhaps others deleted added back as well). Under TOP-004-3, R2 states that Agreements between TOPs are required for switching of BES tie lines. It is felt that this type of detailed information would be contained in the Interconnection Agreements between the two parties. Only when there are not existing Agreements in place would this requirement be necessary. In those cases where it is necessary, it is recommended that "specify switching" be replaced with "specify the procedures for switching". Under TOP-003-1, R4, the Balancing Authority should be added along with the Transmission Operator as receiving data as specified in R1. Requirement 1 requires the TOP and BA to have documented specification for data, and R4 requires the responsible entities to provide this data only to the TOP. If the BA is required to have the documented specification for data support, then the responsible entities should be required to provide appropriate data not only to the TOP but to the BA as well.

Response: TOP-001-1, R1 & PER-001-0, R1: Standards are written to a functional entity, not to individuals. How an organization meets the standard is entirely up to them.

TOP-001-1, R2: In the opinion of the SDT, TOP-004-3, R1 covers this issue.

TOP-001-2, R2: The SDT agrees and the phrase has been deleted.

TOP-001-2, R2: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions**.**

TOP-001-2, R3: The SDT believes that there may be an issue here and will provide a specific question in the next posting to see what the industry thinks.

TOP-002-2, R1, R5 & R15: The SDT believes that in order for a BA to comply with CPS and DCS that they must plan and therefore a separate requirement is not required and would actually represent double jeopardy. The BAL standards cover these issues.

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 10 Comment</th></tr>
<tr><td colspan="3">TOP-002-2, R8: The SDT believes that your comment contains the answer to the question in that BAL covers ACE and ramping is part of ACE.

TOP-003-1, R2 & R3: The SDT feels that the suggested wording is really equivalent and therefore no change was made.

TOP-006-1, R5, R6, & R7: Performance to other requirements adequately covers the need to monitor and therefore no separate specific monitoring requirement is needed.

TOP-004-3, R2: The SDT is asking a question in the second posting regarding the possible deletion of this requirement.

TOP-003-1, R4: Due to your comments, the SDT has changed TOP-003-1 as shown below.

TOP-003-1, Purpose: To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their functional responsibilities.

TOP-003-1, R1: Each Transmission Operator and Balancing Authority shall have a documented specification for data required to fulfill their respective responsibilities per the NERC Functional Model. The specification shall include:

TOP-003-1, R4: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies).

TOP-003-1, M4: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall make available evidence that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies) in accordance with Requirement R4. The data is limited to that needed by the Transmission Operator to support Operational Planning Analyses and reliability assessments. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.</td></tr>
<tr><td>FirstEnergy</td><td>Yes</td><td>While we support the reduction in the overall number of standards, the deleted standards contained some requirements whose deletion we can not support. We have communicated these requirements and the issues surrounding them in the responses to other questions on this form including question 12 at the end of this form.</td></tr>
<tr><td colspan="3">Response: Please see the response to question 12.</td></tr>
<tr><td>Duke Energy</td><td>Yes</td><td>TOP-005-1 Requirement R2 has been deleted because it is not a reliability concern. Has this requirement been picked up in NERC Rules of Procedure or business practices?

TOP-006-1 Requirement R4 is being deleted, and the comment says that load patterns are covered under TOP-005. But TOP-005 is also being deleted - is it intended that load data will be covered by TOP-003 now?</td></tr>
<tr><td colspan="3">Response: TOP-005-1: The way that the standards have been re-written, data from the ISN is no longer being requested.

TOP-006-1: There was a problem with the original posted material. You are correct; this is now covered under the data specification requirements of TOP-003-1.</td></tr>
<tr><td>MRO NERC Standards</td><td>Yes</td><td></td></tr>

11. If you are aware of any regional variances or any conflicts between the proposed standards and any regulatory function, rule order, tariff, rate schedule, legislative requirement or agreement that would be required as a result of these standards, please identify them here.

Summary Consideration:

No respondents cited any regulatory function, rule order, tariff, rate schedule. legislative requirement or agreement that would impact the revised standards.

Organization	Yes or No	Question 11 Comment
Dominion - Electric Market Policy	Yes	Typically, GO, GOP, PSE, LSE entities are prohibited from by federal and/or state Standards/Codes of Conduct from access to much of the information that would be required to perform any type of 'reliability assessment', determination of criticality or adverse impact. Only entities such as the RC, TO, TOP and perhaps BA have access to all the necessary information to make such determinations. For the GO, GOP, PSE, LSE entities, any such determination is really a business risk assessment, not a reliability assessment.
Response: The requirement is not for the GO, GOP, PSE, or LSE to perform a reliability assessment. The requirement is the aforementioned entities to supply operational data such as unit output, derates, total load, known interchange schedules, etc., in an agreed upon format and periodicity to the TOP who will perform the reliability assessment.		
MRO NERC Standards Review Subcommittee	Yes	
Response: Without a specific reference, the SDT is unable to respond to your comment.		
Bonneville Power Administration	Yes	WECC TOP-STD-007-0 would now need to link to TOP-004-3 (R1).
Response: That is an administrative matter for WECC and beyond the scope of the SDT.

American Transmission Company	No	
ISO-NE	No	
Response: Thank you for your response.		

12. Are there any other issues that need to be addressed? Please be specific.

Summary Consideration:

In response to industry comments, the following were changed:

TOP-001-2, Purpose: To ensure coordination between and among reliability entities for the reliability of the Bulk Electric System (BES).

TOP-001-2, R2: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions.

TOP-001-2, R3: Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, unless such actions would violate safety, equipment, regulatory or statutory requirements.

TOP-001-2, R4: Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination.

TOP-001-2, M4: The Transmission Operator and Generator Operator shall each make available upon request, evidence that operations were coordinated among impacted reliability entities in accordance with Requirement R4 unless conditions do not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

TOP-001-2, Data Retention for R5: The Transmission Operator shall make available evidence for the current calendar year and one previous year that it has informed its Reliability Coordinator of actions being taken to return the System to within limits when an IROL or SOL has been exceeded in accordance with Requirement R5 and Measurement M5.

TOP-001-2, Data Retention for R6: The Transmission Operator shall make available evidence for the current calendar year and one previous calendar year of when it acted, or directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv in accordance with Requirement R6 and Measurement M6.

TOP-001-2, R4 VSL	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with 25% or less of the affected reliability entities unless conditions did not permit such coordination.	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with more than 25% or less than or equal to 50% of the affected reliability entities unless conditions	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with more than 50% or less than or equal to 75% of the affected reliability entities unless conditions	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with more than 75% of the affected entities unless conditions did not permit such coordination.

		did not permit such coordination.	did not permit such coordination.	

TOP-003-1, R4: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies).

Organization	Yes or No	Question 12 Comment
Santee Cooper	Yes	TOP001-2 R2 the disconnections prior to switching portion of this requirement. Does this mean the RC and TOPs have to be called prior to switching in emergency situations? (e.g. a line is about to burn down) TOP004-3 R2 what is meant by Agreements in this context? An Agreement is a contract written or verbal. Do Interchange Agreements between TOPs fulfill this obligation? What is meant by synchronous BES tie line and should this be a defined term? Is this just to differentiate between AC and DC tie lines?
Response: TOP-001-2, R2**:** The SDT has changed the requirement to provide additional clarity as to intent. . **TOP-001-2, R2**: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions. TOP-004-3, R2**:** Agreement is a defined term in the NERC Glossary. The SDT will post a question in the next iteration on this topic.		
SERC OC Standards Review Group	Yes	We suggest eliminating R2 of TOP-004-3. An interconnection agreement between two entities will include this requirement.
Response: The SDT will ask a question on this topic in the next posting. .		
Dominion - Electric Market Policy	Yes	Generic comment - There appears to be a hieracy created by Reliability Standards with the RC being highest, followed by (equally?) the BA and TOP. If this is true, we'd prefer that the RC identify requirements necessary to enable it to meet its requirements under the standards. As new standards are being created, there appears to be the potential for some entities to have to provide the same information or have to coordinate actions with multiple entities but at different times, using different protocols. As examples:IRO-002-2 already requires the RC "to determine the data requirements to support its reliability coordination tasks and shall request such data from its Transmission Operators, Balancing Authorities, Transmission Owners, Generation Owners, Generation Operators, and Load-Serving Entities, or adjacent Reliability

Organization	Yes or No	Question 12 Comment
		Coordinators." EOP-002-2 states "A Balancing Authority anticipating an operating capacity or energy emergency shall perform all actions necessary including bringing on all available generation, postponing equipment maintenance, scheduling interchange purchases in advance, and being prepared to reduce firm load." In order to meet this requirement, the BA will likely have to request GO/GOP to provided unit availability data (outages, derates) and the DP, TOP and/or LSE to provide load projections. This same information will likely be needed (and required) by the RC to perform its assessments. In this project TOP-001-008@ R4 states "Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to affect other reliability entities." and TOP-003-1@ R4 requires entities to provide data, as specified in Requirement R1, to its Transmission Operator(s). If these entities have provided the information required by their respective RC and the RC is required to coordinate with other RCs (IRO-014-1) there appears to be duplication which increases the workload of each entity and introduces opportunity for miscommunication or what may appear to conflicting submission of data (assuming that format and timeline differ). Specific commentsTOP-001-2 R3 - concern about ambiguity of phrase "to others", particularity from the GOP perspective. For reliability standards, the GOP should only be required to provide such assistance when so requested by its RC. Any other obligations should be included in the terms and conditions of its Interconnection Agreement with the TO or DP and, as such, is outside the scope of these standards. R4 - Concern about phrase "coordinate its respective operations known or expected to affect other reliability entities with those entities", particularly as it applies to GOP. GOP doesn't have access to data, nor the expertise, to make reliability assessments and may be precluded by Codes/Standards from coordinating with other entities. Suggest revising to require GOP to provide data as required by its RC to perform reliability assessments. Since GOP has to follow emergency directives issued by RC or TOP, there is nothing for the GOP to coordinate. If GOP actions or planned actions are deemed to have the potential to result in adverse impact to reliability, the RC or TOP should issue a directive to GOP to cancel such actions. TOP-002-3 - R3 should be deleted given that IRO-004@R3 states that "Each RC shall, in conjunction with its Transmission Operators and Balancing Authorities, develop action plans that may be required, including reconfiguration of the transmission system, re-dispatching of generation, reduction or curtailment of Interchange Transactions, or reducing load to return transmission loading to within acceptable SOLs or IROLs." TOP-003R1.2 - Am concerned about the term "mutually agreeable format". Does the phrase 'mutually agreeable' apply to ALL applicable entities, or just the TOP and BA? Aren't there enough protocols and tools currently in existence (SDX, ICCP, RCIS) that the standard could at least address use of existing formats as opposed to 'mutually agreeable'? R4 - Does not require entities to provide data to BA although R1 requires BA to "?have a documented specification for data?.." and R3 requires each BA to "distribute its data specification to entities?". We suggest revising R4 to read "Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator and Balancing Authority." We removed the plural indicator as we believe that each entity's facility can be in only one TOP and BA area. If information relative to that facility is needed by multiple TOPs or BAs, those entities should share information. The entity should not be

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 12 Comment</th></tr>
<tr><td></td><td></td><td>required to submit data for the same facility to multiple reliability entities.</td></tr>
<tr><td colspan="3"> Response: Generic –The re-drafting effort is trying to delineate the RC vs. TOP/BA standards as was pointed out in the SAR for this project.
TOP-001-2, R3 - The SDT has reviewed this requirement and made changes to provide clarity. BA's have been removed to avoid duplication with EOP-001-0, Requirement R1 and the GOP is essentially under the control of the BA and therefore isn't needed here.
TOP-001-2, R3: Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, unless such actions would violate safety, equipment, regulatory or statutory requirements.
TOP-001-2, R4 – The SDT believes that the industry needs to weigh in on this topic and will ask a specific question in the next posting.
TOP-002-3, R3 – The SDT disagrees and believes that it is important for the TOP to study its own system which may not be the same as what the RC studies as the objectives are different. No change made.
TOP-003-1, R1.2 –The SDT believes the term "mutually agreeable" gives leeway for the reliability entities to exchange the required data and doesn't preclude any protocols.
TOP-003-1, R4 – The SDT agrees with the inclusion of the BA and has changed Requirement R4 accordingly. The plurals are correct as multiple reporting requirements do exist and need to be accommodated in a national standard. If there is a single reporting requirement, then this wording remains intact and should not cause a problem.
TOP-003-1, R4: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies). </td></tr>
<tr><td>Southern Company Transmission</td><td>Yes</td><td> In the purpose statement the term "functional entities" is used. The term creates a confusion of terms between the purpose statement and requirements. Requirements 4 and 7 call for coordination among "other reliability entities" and "reliability entities" respectively. Therefore, recommend replacing "functional" with "reliability".
The limits mentioned in TOP-001-2,R5 need more description. The recommended change is as follows: ?Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within the IROL limits when an IROL or SOL has been exceeded.?
Requirement 7 of TOP-001-2 is duplicative as it applies to the TOP to that of standard IRO-005-2, R13. Could this result in a double jeopardy for non compliance with this requirement?
In TOP-003-1, in the Purpose statement replace "system" with "System".
In R1 of TOP-003-1, it is recommended that the term "specification" throughout the standard be replaced with a better term to describe what is meant in the standard. For example, the word "catalog" may be a better term. Also, it recommended that in the sub-bullet R1.3 the word "providing" should be replaced with "exchanging" . </td></tr>
</table>

Organization	Yes or No	Question 12 Comment
		In TOP-001-2, In section 1.4 of Data Retention the term "reliability entities" is capitalized. Should it be in lower case? On several requirements (e.g., TOP-006-1, R1;TOP-008-1, R1) recommended for retirement, there is a comment in the redline version stating that the requirement is covered in another standard. Upon reviewing the other standard, the requirement was not found. Was the latest version of the standard posted properly on the NERC website?
Response: 1 – The SDT thanks you for your comment and will replace 'functional entity' with 'reliability entity'. **TOP-001-2, Purpose**: To ensure coordination between and among reliability entities for the reliability of the Bulk Electric System (BES). 2 – The SDT believes the as written requirement is correct as it includes SOL or IROL limits, as appropriate, with the current wording. 3 – Your reference is incorrect, the standard cited has been updated and the correct reference is IRO-005-3, Requirement R10. Having said that, you are correct in your premise and TOP-001-2, Requirement R7 has been deleted. 4 – "System" is a defined term, but in the context of the Purpose statement "Transmission System" is not a defined term and therefore should not be capitalized. 5 – The SDT believes specification is the correct word. "Catalog" as suggested or "list, file, register, etc." is limiting in nature. Using the word "specification" augments the sub-requirements. The SDT finds providing and exchanging in this context to be basically equivalent and no change was made. 6 – The SDT thanks you for your comment. 'Reliability entities' is not a defined term and therefore should be lower case. TOP-006-1**:** This is now covered under the data specification requirements of TOP-003-1. TOP-008-1: As re-posted in the Implementation Plan, this should read: "Deleted – now covered by TOP-001-2, R6 for IROL. Taking immediate steps for relief of all SOLs experienced or contributed to may not always be prudent, especially if other organizations are addressing the cause. In such cases, uncoordinated immediate actions may be counterproductive. Accordingly, requiring immediate action to relieve all SOLs was deleted in consideration of TOP-001-1 and TOP-004-3 requirements applied in combination."		
Bonneville Power Administration	Yes	Good Ideas - thanks. However, do not see anything analogous to the current TOP-001 R1. and think we should retain something of this nature.
Response: The SDT thanks you for your comment but believes Requirement R1 of TOP-001-1 is not measurable. Furthermore, as identified in the Implementation Plan, the SDT does not feel that this requirement is needed in a Reliability Standard. Other standards already require the necessary actions. If this statement was intended to protect the operator from liability, it doesn't provide any real protection.		
FirstEnergy	Yes	1. In TOP-001-2 R2, the term "disconnections" is ambiguous. In addition, as written this requires the RC be notified prior to operator action. While we agree that we do not want operators taking actions that sacrifice accuracy for speed, we do not support the concept of approving all mitigation actions prior to implementation. Nor do we believe this concept serves to preserve or enhance reliability in situations where time is of the essence. The motivations behind the original requirements were 1) to preserve the reliability of the interconnection through recognition and mitigation actions and 2) to

Organization	Yes or No	Question 12 Comment
		ensure that removal of overloaded transmission facilities was done only when it preserved or enhanced reliability. We feel these two concepts should be managed as individual requirements similar to the requirements in effect today. The Drafting Team should include the system conditions of overload, abnormal voltage, and reactive conditions, and endangered equipment as system conditions permissible for action then communication. 2. In TOP-001-2 R3, the Drafting Team dropped the concept of the requesting entity implementing its comparable emergency procedures prior to an entity being required to lend assistance. This could lead to a request and requirement for TOp A to shed load in its area when TOp B, the entity requesting the assistance, has not shed load that would mitigate the emergency in its own area. This requirement should be revised to state, "Each Transmission Operator, Balancing Authority, and Generator Operator shall render emergency assistance to others, as requested and available, unless such actions would violate safety, equipment, regulatory or statutory requirements and provided the requesting entity has implemented its comparable emergency procedures. " 3. In TOP-001-2 R4, the Drafting Team preserved limiting the delay in notifications to system conditions. This change as written does not provide additional clarity as to which system conditions require and do not require notification in advance of action. This seems to make this Requirement too vague to be measurable. As currently proposed, this requirement means someone must decide which system conditions require and do not require advance coordination. Additional rules need to be developed by the team concerning the system conditions that require notification in advance of action. While we agree that we do not want operators taking actions that sacrifice accuracy for speed, we do not support the concept of approving all mitigation actions prior to implementation. Nor do we believe such a concept serves to preserve or enhance reliability in situations where time is of the essence. We recommend the drafting team restore TOP-001-1 R7.3 that states, "When time does not permit such notifications and coordination, or when immediate action is required to prevent a hazard to the public, lengthy customer service interruption, or damage to facilities, GOp notifies TOp, TOp notifies RC and adjacent TOps at earliest possible time." As currently written this proposed requirement leaves it open for the operator to complete the mitigation actions prior to notifications taking place when system conditions do not permit such coordination which is inconsistent with the Drafting Team's action on other requirements, but is appropriate considering the potential system conditions. 4. In TOP-001-2 R5, the Drafting Team is supporting action in advance of communication, we support this stance. 5. The Drafting Team proposes to delete TOP-007-0 R3 that states, "A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load, in order to comply with Requirement R2" because the authority already exists and does not need to be cited in a requirement. Other than the Reliability Standards, where does this authority exist? It seems that the drafting team intends to remove all requirements that provide for this authority in the Reliability Standards. We cannot support this stance. Without this provision in the standards, there is nothing to preclude an organization from requiring its operators to obtain approval from superiors within the organization prior to taking an action such as load shed, redispatch, reconfiguration, etc. that they know will preserve or enhance the reliability of the BES. While we agree these requirements do not provide any legal protection to the operator, they do enhance reliability of the BES by ensuring authority to act remains in the hands of the operator at the controls of the

Organization	Yes or No	Question 12 Comment
		System. 6. The Drafting Team deleted TOP-002-2 R1 because they feel the BA only needs to respond to CPS and DCS. Does the BA only have responsibility for responding to CPS and DCS? How does the TOp meet its obligations without BA assistance? How about MVAR support? It is not realistic to require a TOp to issue a reliability directive to a BA, GOp, GO, DP, etc. each time it needs some assistance in preparing a plan for future system conditions. We request the Drafting Team reconsider the application of the "BA only needs to respond to CPS and DCS" concept and instead apply the measure of reliability of the BES as the litmus test for requirements. 7. The Drafting Team deleted TOP-002-2 R2 as a good utility practice that is not measurable. We support this change since the TPL standards will support the interface between operations and planning. 8. The Drafting Team deleted TOP-002-2 R3 as the LSE and GOP are governed by their Interconnection Operating Agreements. We are concerned with relying on agreements as a sole means of providing for BES Reliability. Reliability related behavior is best governed by reliability standards. Therefore, we request the drafting team reinstate R3 of TOP-002-2. 9. In TOP-002-3 R1 and R2 the drafting team dropped the BA plan from the requirement. How will the TOP obtain information and assistance needed from the BA necessary to plan to meet scheduled system configuration in light of the fact that the work plan for these standards does not include any revisions to the BAL standards to require that support? 10. The Drafting Team deleted TOP-002-2 R7. With this deletion, how will the BA's plan for energy reserves insure its deliverability without TOp assistance? The implementation plan does not include any revisions to the BAL standards to verify deliverability. This deletion seems to segment the planning activities too much to ensure reliability. 11. The Drafting Team deleted TOP-002-2 R8 and R10. With this deletion, how does the TOp meet its voltage and reactive obligations without BA assistance? The implementation plan does not include any revisions to the BAL standards and CPS and DCS do not cover reactive support. What's left in the standards to ensure reactive capacity is available on generating units to support voltage needs? 12. The Drafting Team deleted TOP-002-2 R18. This requirement should be retained and revised to state, "Neighboring BAs, TOps, TOs, use identical Tie- line names based on terminal end facility names when referring to transmission facilities. The purpose of this requirement is to ensure Company A and Company B are sure they are talking about the same Tie-line. 13. The Drafting Team deleted TOP-003-0 R1. This deletion eliminates the requirement for the GOp to provide outage data to the TOp. This requirement should be retained. 14. The Drafting Team has developed this standard based on the changes planned or proposed for other standards. This standard should not be finalized until all other standards that these changes are based on have been regulatory approved in order to avoid creating a reliability gap through deletion of an existing standard and the failed adoption of a proposed

Organization	Yes or No	Question 12 Comment
		standard. 15. TOP-004-3 R2 uses the term "Agreement" that is currently defined as "A contract or arrangement, either written or verbal and sometimes enforceable by law." Until the proposed revision to the definition of the term "Agreement" that would include "mutually agreed upon procedures and protocols" this requirement should be revised to state, "TOp has Agreements or mutually agreed upon procedures or protocols with directly interconnected TOps that specify switching of synchronous BES tie lines." 16. TOP-003-1 R1 be revised to state, "Each Transmission Operator, Balancing Authority, Generator Operator, Generator Owner, Transmission Owner, Purchasing-Selling Entity, Load Serving Entity, and Distribution Provider shall provide all data requested in writing by the Transmission Operator or Balancing Authority using the periodicity and in the format requested." With the adoption of this change, TOP-003-1 R2, R3, and R5 could be dropped because R1 covers all entities and data requirements. 17. In addition, with this change, the VRF for R1 should be changed to "High." The PSE should be added to the applicability of this requirement as they may have information that intermediary TOps need concerning large magnitude near-term sales and purchase power transfers that are unconfirmed with a high probability of implementation that should be studied by operations planners for potential impacts on the reliability of the BES. 18. The Drafting Team proposes to delete the TOP-006-1 R5, R6 and R7 as they are "covered by the certification process and no longer necessary." The certification program is being scaled back in part due to the reliability standards and the drafting team is removing requirements from the standards because the certification program covers it. We should not rely on programs outside of the reliability standards to provide for the reliability of the BES. These three requirements should be reinstated and revised to improve clarity and measurability.

Response: 1 – The SDT has modified TOP-001-2, Requirement R2 for clarity.

TOP-001-2, R2: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions.

2 – The SDT is going to ask a specific question in the next posting on this issue.

3 – The SDT believes the requirement as written addresses when coordination is required with the statement of “operations known or expected to affect other reliability entities”. The SDT also believes it would be nearly impossible to list every scenario concerning conditions. Furthermore, the SDT believes statements such as “at the earliest possible time” and “as soon as possible” are not measurable. No change made.

4 – Thanks for your comment.

5 – The SDT believes this is covered in EOP-001-0, Requirement R3.3.

6 – The SDT believes DCS and CPS criterion is only applicable to the BA function. Furthermore, the SDT does not fully understand the premise of your question and

Organization	Yes or No	Question 12 Comment
does not see the parallel between your concern and TOP-002-2, Requirement R1. 7 – Thanks for your comment. 8 – This is addressed in TOP-003-1, R4. 9 – This is addressed in TOP-003-1, R5. 10 – This is addressed in TOP-003-1, R5. 11 – The SDT believes that this is already covered by VAR-001. 12 – This is being addressed by Project 2007-02: Operations Communications protocols. . 13 – This is addressed in TOP-003-1, R4. 14 – This is addressed in the proposed Implementation Plan. Note that in some Canadian jurisdictions, a standard becomes enforceable once the BOT approves a standard, subject to any delays identified in the associated Implementation Plan. 15 – The SDT may be deleting this requirement. A specific question will be raised in the next posting on this topic. 16 – The SDT believes that the current wording provides the flexibility needed to fulfill this task. No change made. 17 – The SDT doesn't believe that a specification falls within the definition of High VRF. The SDT believes that PSE data would be commercial data and not reliability data and has not made this change. 18 – TOP-006-1, R5, R6, & R7: Performance to other requirements adequately covers the need to monitor and therefore no separate specific monitoring requirement is needed.		
MRO NERC Standards Review Subcommittee	Yes	In standard TOP-004-3 and in section "1.5 Additional Compliance Information", what if you don't meet this reporting process? What will happen?
Response: The SDT believes having a reason to miss the reporting process also means you violated Requirement R1 of the standard and a penalty would be assessed.		
ITC Transmission	Yes	1. TOP-001 R2 the phrase "disconnections prior to switching" needs to be clarified. Does this refer to individual facilities or complete disconnection from an interconnection? 2. TOP-001 R3 It would be helpful to have a definition of 'emergency', recognizing this is a broader issue than just this standard. 3. TOP-003 R1 It is unclear who is this data exchange requirement is applicable to. By reading on to R2 and R3, one can assume the intended audience, however the requirement should be written to clear as a standalone item.

Organization	Yes or No	Question 12 Comment
		4. TOP-004 R1 This requirement should be incorporated into TOP-001, as it logically flows from the requirements there. This would facilitate possible eliminate of TOP-004 altogether. 5. TOP-004 R2 The phrase "specify switching" is unclear. Believe this is an unnecessary requirement as TOP-001 R4 already requires the coordination of operations.
Response: 1 – The SDT has removed this phrase. **TOP-001-2, R2**: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions. 2 –The SDT will use the word "emergency" as it is consistent with EOP standards. 3 – The SDT believes reading the requirements as a whole provides the clarity you are seeking. 4 – The SDT will evaluate this idea after the industry responds to the question on elimination of Requirement R2. 5 – The SDT will ask a specific question about eliminating this requirement in the next posting.		
ISO-NE	Yes	We appreciate this as a first effort in reducing the redundancy in the V0 standards. There should be some clarity in the use of the term SOL in these standards. According to the NERC Glossary, SOLs include both IROLs and local facility limits. These standards use SOL in the context of only a local facility limit. The temporary exceedance of local facility limit (within the time limitations of the rating) should not be construed to be a violation in these standards. Failure to correct a local facility limit to the point where it leads to an IROL or damages equipment should be a violation. Records should only be maintained if the local limit is exceeded and not corrected within the allowable time of the limit. The record keeping required for non-violations in these standards is unnecessary.
IRC Standards Review Committee	Yes	We appreciate this as a first effort in reducing the redundancy in the V0 standards. There should be some clarity in the use of the term SOL in these standards. According to the NERC Glossary, SOLs include both IROLs and local facility limits. These standards use SOL in the context of only a local facility limit. The temporary exceedance of local facility limit (within the time limitations of the rating) should not be construed to be a violation in these standards. Failure to correct a local facility limit to the point where it leads to an IROL or damages equipment should be a violation. Records should only be maintained if the local limit is exceeded and not corrected within the allowable time of the limit. The record keeping required for non-violations in these standards is unnecessary.
Response: While you are technically correct on the use of the terminology, actual review of the requirements doesn't indicate any need to change any of the wording used in the proposed revisions.		

Organization	Yes or No	Question 12 Comment
The SDT agrees that record keeping for non-violations is unnecessary.		
Indiana Municipal Power Agency	Yes	TOP-003-1 Requirement 4. Entities are to provide data, as specified in R1, to their Transmission Operators. Does R1.2 (mutually agreeable format) cover the entities who are reporting data to their Transmission Operators? If the request for data is not done on a regular basis, the entities in R4 need to receive a proper request from the Transmission Operator and be given time to gather the data. Neither R1 or R4 clearly address this process and the standard should address how the entities in R4 will be made aware of any specification of data needed by the Transmission Operator or Balancing Authority.
Response: The SDT believes the standard as drafted covers who needs to provide required data, in what format, and the timeframe and periodicity.		
Ameren	Yes	Standard TOP-004-3, section "1.5 Additional Compliance Information" - should this be included in R1/M1? Why is there a separate section at the end?
Response: This statement is dictated by the Compliance Guidelines. Because there is no impact to reliability if the report is not filed, the action of filing the report does not meet the criteria for an enforceable reliability requirement. Note that in accordance with the Sanctions Guidelines, if an entity fails to file the report as identified, then the Compliance Enforcement Authority may determine that the failure to report justifies a larger penalty than would otherwise be assessed.		
Entergy System Planning & Operations (Gen & Mktg)	Yes	The Implementation Plan refers to items in other proposed standards that will take the place of existing requirements, some of which are referred to by project number and others by standard number. In either case, the proposed standard that will contain the requirement should be presented or easily referenced. for example the propose IRO standards that will accommodate requirements moved from the TOP standards are not available for review and confirmation. Also, several requirements were deleted because they were "immeasurable". Some of these items should be revisited and determined if an alternative "measurable" requirement can be drafted. For example, it is important that an entity not continue operate in an unknown operating state (TOP-004 R3) and promptly return to an analyzed conditions/or perform an analysis for the current condition.
Response: The referenced standards and projects are all readily available on the NERC web site. To have included them in the Implementation Plan would have created an extremely large and unmanageable document. The SDT did look at alternative measures in each case and where requirements were deleted, decided that there was no suitable alternative.		
Entergy Services	Yes	1. Please expound upon the reasons why the SDT determined that TOP-002-2 R19 and TOP-004-2 R4 are unmeasurable. 2. TOP-001-2 R4 is going to be very difficult to measure. Any guidance the SDT can provide on how to demonstrate

Organization	Yes or No	Question 12 Comment
		compliance would be appreciated. 3. TOP-002-3 R3: The requirement that was mapped to this in the implementation plan used the phrase "shall coordinate." We think that R3, as written, is too vague. Also, it is more command and control versus a collaborative effort as implied by the previous use of "coordinate."
Response: 1 –TOP-002-2, R19 is unmeasurable because 'accurate' is not a measurable term. TOP-004-2, R4 is unmeasurable because 'valid' is a vague term. 2 – The SDT believes the criteria are identified in the Measures. Beyond that, the SDT can't provide compliance guidance. 3 – The SDT believes the requirements as drafted provide an appropriate level of reliability and places the responsibility on the TOP where it belongs. No change made.		
Duke Energy	Yes	1. TOP-001-2 Requirement R4, Measure M4 and VSLs for R4 : What does the word "affect" mean? Any operation by a TO or GO could have a slight affect on other reliability entities. The word "affect" should be qualified in some manner, to avoid a requirement to coordinate operations with negligible impact. We suggest using the phrase "have a reliability impact upon" instead of the word "affect". 2. TOP-004-3 Requirement R2, Measure M2 : What does "specify switching" mean? We suggest this wording be removed from the requirement. This requirement may have been moved from TOP-004-1 Requirement R6, but it is unclear. 3. TOP-008-0 Requirement R1 is being deleted. The Comment says that this is now covered by TOP-003-1, and in consideration of TOP-001 and TOP-004 requirements in combination. We think the Comment should not reference TOP-003-1. 4. TOP-002-2 Requirement R11 contains a requirement for a seasonal assessments to determine SOLs. Where is this requirement in the revised standards?
Response: 1 – The SDT has incorporated your suggested language. **TOP-001-2, R4**: Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination. **TOP-001-2, M4**: The Transmission Operator and Generator Operator shall each make available upon request, evidence that operations were coordinated among impacted reliability entities in accordance with Requirement R4 unless conditions do not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.		

TOP-001-2, R4 VSL	The Transmission Operator or Generator Operator did not	The Transmission Operator or Generator Operator did not	The Transmission Operator or Generator Operator did not	The Transmission Operator or Generator Operator did not

Organization	Yes or No	Question 12 Comment

	coordinate their respective operations known or expected to impact other reliability entities with 25% or less of the affected reliability entities unless conditions did not permit such coordination.	coordinate their respective operations known or expected to impact other reliability entities with more than 25% or less than or equal to 50% of the affected reliability entities unless conditions did not permit such coordination.	coordinate their respective operations known or expected to impact other reliability entities with more than 50% or less than or equal to 75% of the affected reliability entities unless conditions did not permit such coordination.	coordinate their respective operations known or expected to impact other reliability entities with more than 75% of the affected entities unless conditions did not permit such coordination.

2 – The SDT will ask a specific question in the next posting about deleting this requirement.

3 – The SDT made this correction in the revised Implementation Plan that was posted during the first comment period.

4 – The SDT believes reliability has been improved by requiring an assessment for next day operations and that this is as far out as a requirement needs to cover. You can always do more that the requirements. Longer term studies are done in planning and complement these assessments.

Organization	Yes or No	Question 12 Comment
AEP	Yes	The intent of TOP-004-03 R2 requires some clarification. It seems unnecessary to have an agreement for switching every BES tieline. It seems unlikely that every conceivable situation for switching a tieline could be covered in any type of agreement.

Response: The SDT will ask a question in the next posting about deleting this requirement.

Organization	Yes or No	Question 12 Comment
American Transmission Company	Yes	1. TOP-001-2 Requirement 2: First Concern: NERC Definition for Emergency: "Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System" ATC's believe that anticipating an abnormal system condition that could result in an Emergency would be very difficult to certify compliance. It's our position that the requirement should be limited to actual Real-Time Emergency conditions. If the SDT disagrees than we request information on how a company could certify compliance on its ability to anticipate an emergency. 2. Second Concern: Currently the requirement requires notification of an automatic or immediate manual action prior to the action for an Emergency. We believe that notification prior to switching may put the system and/or equipment at a greater level of risk. The requirement should contain language that states notification should be done "if time permits"

Organization	Yes or No	Question 12 Comment
		otherwise it should be done following the action. 3. TOP-001-2 Requirement 4:What is the minimum level of "affect" that requires communication? 4. TOP-002-3 Requirement 1: Would a single assessment of next day's operation satisfy this requirement? or, Is the requirement asking for multiple next day operations to account for load changes expected throughout the day?
Response: 1 – The SDT studied your suggestion but feels that the requirement is clear as written and that your suggestion could result in a reduction in the reliability of the system. To the degree that an entity anticipates an Emergency, that information should be shared and this is what the requirement says. 2 – The SDT has changed the requirement to address your concern. **TOP-001-2, R2**: Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions. 3 – The SDT will replace the word "affect" with "have a reliability impact upon". **TOP-001-2, R4**: Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination. 4 – There is only one assessment required but an assessment may require multiple studies. It is up to the entity to determine how many studies they must perform in order to assess of their next day operations

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	July 2009
2. Post for re-ballot.	September 2009
3. Submit to BOT.	September 2009
4. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Coordination of Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:**

   To ensure coordination between and among reliability entities for the reliability of the Bulk Electric System (BES).

4. **Applicability**

   4.1. Balancing Authorities

   4.2. Transmission Operators

   4.3. Generator Operators

   4.4. Distribution Providers

   4.5. Load-Serving Entities

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with each reliability directive issued by the Transmission Operator, unless the respective entity informs the Transmission Operator that such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R2. Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R3. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, unless such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R4. Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R5. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R6. The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

C. Measures

M1. The Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall each make available upon request, in accordance with Requirement R1, evidence that it either: (a) complied with each reliability directive issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M2. The Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions in accordance with Requirement R2. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M3. The Transmission Operator shall make available upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R3 unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M4. The Transmission Operator and Generator Operator shall each make available upon request, evidence that operations were coordinated among impacted reliability entities in accordance with Requirement R4 unless conditions do not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M5. The Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M6. The Transmission Operator shall make available evidence of when it acted or directed others to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v in accordance with Requirement R6. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance for each applicable Requirement and Measure for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, or Generator Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with a reliability directive issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements.
R2	The Transmission Operator did not inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions on one occasion.	The Transmission Operator did not inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions on two occasions.	The Transmission Operator did not inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions on three occasions.	The Transmission Operator did not inform its Reliability Coordinator and affected Transmission Operators of actual and anticipated Emergency conditions on four or more occasions.
R3	N/A	N/A	N/A	The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, and such actions would not violate safety, equipment, regulatory, or statutory requirements.

	Lower	Moderate	High	Severe
R4	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with 25% or less of the affected reliability entities unless conditions did not permit such coordination.	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with more than 25% or less than or equal to 50% of the affected reliability entities unless conditions did not permit such coordination.	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with more than 50% or less than or equal to 75% of the affected reliability entities unless conditions did not permit such coordination.	The Transmission Operator or Generator Operator did not coordinate their respective operations known or expected to impact other reliability entities with more than 75% of the affected entities unless conditions did not permit such coordination.
R5	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded on one occasion.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded on two occasions.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded on three occasions.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded on four or more occasions.
R6	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v on one occasion.	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v on two occasions.	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v on three occasions.	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v on four or more occasions.

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2	TBD	Revisions pursuant to Project 2007-03	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	July 2009
2. Post for re-ballot.	September 2009
3. Submit to BOT.	September 2009
4. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. Title: **Coordination of Transmission Operations**

2. Number: TOP-001-2

3. Purpose:

To ensure coordination between and among ~~functional~~reliability entities for the reliability of the Bulk Electric System (BES).

4. Applicability

4.1. Balancing Authorities

4.2. Transmission Operators

4.3. Generator Operators

4.4. Distribution Providers

4.5. Load-Serving Entities

5. Effective Date: All requirements become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with each reliability directive~~s~~ issued by the Transmission Operator, unless the respective entity informs the Transmission Operator that such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R2. Each Transmission Operator shall inform its Reliability Coordinator and affected Transmission Operators of ~~Real-Time or~~ actual and anticipated Emergency conditions~~, including potential impacts caused by disconnections prior to switching~~. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R3. Each Transmission Operator~~, Balancing Authority, and Generator Operator~~ shall render emergency assistance to other~~s~~ Transmission Operators, as requested and available, unless such actions would violate safety, equipment, regulatory or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R4. Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected to ~~affect~~have a reliability impact on other reliability entities with those entities unless ~~System~~ conditions do not permit such coordination. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R5. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R6. The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

~~R7.Each Transmission Operator shall operate the Bulk Electric System to the most limiting parameter when there is a difference in derived operating limits amongst reliability entities. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*~~

C. Measures

M1. The Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall each make available upon request, in accordance with Requirement R1, evidence that it either: (a) complied with each reliability directive~~s~~ issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M2. The Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and affected Transmission Operators of ~~Real-Time or~~ actual and anticipated Emergency conditions~~, including potential impacts caused by disconnections prior to switching,~~ in accordance with Requirement R2. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M3. The Transmission Operator~~, Balancing Authority, and Generator Operator~~ shall ~~each~~ make available upon request, evidence that requested and available emergency assistance was rendered to other~~s~~ Transmission Operators in accordance with Requirement R3 unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M4. The Transmission Operator and Generator Operator shall each make available upon request, evidence that operations were coordinated among ~~affected~~impacted reliability entities in accordance with Requirement R4 unless ~~System~~ conditions do not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M5. The Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL or SOL has been exceeded in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M6. The Transmission Operator shall make available evidence of when it acted or directed others to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v in accordance with Requirement R6. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

~~M7.The Transmission Operator shall make available evidence such as dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts, of any occasion when it operated to a limiting parameter due to differing operating limits amongst reliability entities in accordance with Requirement R7.~~

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance ~~as identified below~~ for each applicable Requirement and Measure for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~.

- ~~The Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall each retain for the current calendar year and one previous calendar year, in accordance with Requirement R1 and Measurement M1, evidence that it either: (a) complied with reliability directives issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements.~~

- ~~The Transmission Operator shall retain evidence for the current calendar year and one previous calendar year that it has informed its Reliability Coordinator and affected Transmission Operators of Real-Time or anticipated Emergency conditions in accordance with Requirement R2 and Measurement M2.~~

- ~~The Transmission Operator, Balancing Authority, and Generator Operator shall retain evidence for the current calendar year and one previous calendar year that requested and available emergency assistance was rendered to others in accordance with Requirement R3 and Measurement M3 unless such actions would violate safety, equipment, regulatory, or statutory requirements.~~
- ~~The Transmission Operator and Generator Operator shall retain evidence for the current calendar year and one previous calendar year that operations known or expected to affect other Reliability Entities were coordinated among affected Reliability Entities in accordance with Requirement R4 and Measurement M4 unless System conditions do not permit such coordination.~~
- ~~The Transmission Operator shall make available evidence for three calendar years that it has informed its Reliability Coordinator of actions being taken to return the System to within limits when an IROL or SOL has been exceeded in accordance with Requirement R5 and Measurement M5.~~
- ~~The Transmission Operator shall make available evidence of when it acted, or directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v in accordance with Requirement R6 and Measurement M6.~~
- ~~The Transmission Operator shall retain evidence for the current calendar year and one previous calendar year of any occasion when it operated to a limiting parameter due to differing operating limits amongst reliability entities in accordance with Requirement R7 and Measurement M7.~~

If a Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, or Generator Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	~~The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with reliability directives issued by the Transmission Operator, unless the respective entity informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements on one occasion.~~ N/A	~~The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with reliability directives issued by the Transmission Operator, unless the respective entity informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements on two occasions.~~ N/A	~~The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with reliability directives issued by the Transmission Operator, unless the respective entity informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements on three occasions.~~ N/A	The Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator did not comply with a reliability directive~~s~~ issued by the Transmission Operator, ~~unless~~and the respective entity did not inform~~ed~~ the Transmission Operator that such action~~s~~ would violate safety, equipment, regulatory, or statutory requirements~~ on four or more occasions~~.

0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2	TBD	Revisions pursuant to Project 2007-03	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	July 2009
2. Post for re-ballot.	September 2009
3. Submit to BOT.	September 2009
4. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that reliability entities have coordinated plans for meeting expected operating conditions.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. The Transmission Operator shall plan to preclude operating in excess of any Interconnection Reliability Operating Limits (IROLs) including those identified as a result of the assessment performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

R3. The Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s). *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

C. Measures

M1. The Transmission Operator shall have evidence that it has assessed next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated power flow study results.

M2. The Transmission Operator shall have evidence that it has planned to preclude operating in excess of the IROLs identified as a result of the assessment performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans, processes, or procedures for precluding operating in excess of each IROL.

M3. The Transmission Operator shall make available evidence that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. **Compliance Monitoring Process**

   1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance for each Requirement and Measure for a rolling six month period unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not perform an assessment for the next day's operation that indicated whether it will exceed any of its SOLs during anticipated normal and potential Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not plan to preclude operating in excess of any IROLs identified as a result of the assessment performed in Requirement R1.
R3	The Transmission Operator did not notify 25% or less of the reliability entities identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify more than 25% and less than or equal to 50% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 50% and less than or equal to 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).

E. Regional Variances

None identified.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

~~**Simulated Contingencies** — The act of using planning and operating models to replicate Contingency responses that depict the net effect of design considerations~~

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that reliability entities have coordinated plans for meeting expected operating conditions.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and ~~Simulated~~potential Contingency events. *[Violation Risk Factor: ~~Low~~Medium] [Time Horizon: ~~Same-day~~ Operations Planning]*

R2. The Transmission Operator shall plan to preclude operating in excess of any Interconnection Reliability Operating Limits (IROLs) including those identified as a result of the assessment performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: ~~Same-day~~ Operations Planning]*

R3. The Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s). *[Violation Risk Factor: High] [Time Horizon: ~~Same-day~~ Operations Planning]*

C. Measures

M1. The Transmission Operator shall have evidence that it has assessed next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated ~~operator logs or reports~~ power flow study results.

M2. The Transmission Operator shall have evidence that it has planned to preclude operating in excess of the IROLs identified as a result of the assessment performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans, processes, or procedures for precluding operating in excess of each IROL.

M3. The Transmission Operator shall make available evidence that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. **Compliance Monitoring Process**

   1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance ~~as identified below~~ for each Requirement and Measure for a rolling six month period unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation~~:~~.

- ~~The Transmission Operator shall retain evidence for a rolling six month period that it has assessed next day operations in accordance with Requirement R1 and Measurement M1.~~
- ~~The Transmission Operator shall retain evidence for a rolling six month period that it has planned to preclude operating in excess of any IROL identified as a result of the assessment performed in Requirement R1 in accordance with Requirement R2 and Measurement M2.~~
- ~~The Transmission Operator shall retain evidence for a rolling twelve- month period that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3 and Measurement M3.~~

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not perform an assessment for the next day's operation that indicated whether it will exceed any of its SOLs during anticipated normal and potential Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not plan to preclude operating in excess of any IROLs identified as a result of the assessment performed in Requirement R1.
R3	The Transmission Operator did not notify ~~one of the reliability entities or~~ 25% or less of the reliability entities identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify ~~two of the reliability entities or~~ more than 25% and less than or equal to 50% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify ~~three of the reliability entities or~~ more than 50% and less than or equal to 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify ~~four or more of the reliability entities or~~ more than 75% of the reliability entities identified in the plan(s) as to their role in the plan(s).

E. Regional Variances

None identified.

Version History

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed "Proposed" from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
2	TBD	Changes pursuant to Project 2007-03	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	July 2009
2. Post for re-ballot.	September 2009
3. Submit to BOT.	September 2009
4. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**

2. **Number:** TOP-003-1

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their functional responsibilities.

4. **Applicability**

   4.1. Transmission Operators.

   4.2. Balancing Authorities.

   4.3. Generator Owners.

   4.4. Generator Operators.

   4.5. Interchange Authorities.

   4.6. Load-Serving Entities.

   4.7. Transmission Owners.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall have a documented specification for data required to fulfill their respective responsibilities per the NERC Functional Model. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R1.1. A list of required data to be exchanged including, but not limited to:

- Long term outages of Bulk Electric System equipment when they are known,
- Equipment at voltage levels lower than the Bulk Electric System, at the discretion of the Transmission Operator or Balancing Authority.

R1.2. A mutually agreeable format.

R1.3. A timeframe and periodicity for providing data.

R2. Each Transmission Operator shall distribute its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R3. Each Balancing Authority shall distribute its data specification to entities that provide Facility status to the Balancing Authority. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R5. Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator and Balancing Authority shall make available its dated, current, in force documented specification for data in accordance with Requirement R1.

M2. Each Transmission Operator shall make available evidence that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M3. Each Balancing Authority shall make available evidence that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall make available evidence that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies) in accordance with Requirement R4. The data is limited to that needed by the Transmission Operator to support Operational Planning Analyses and reliability assessments. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those entities necessary for reliability assessments and Real-time operation in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

Regional Entity

1.2. Compliance Monitoring Period and Reset Timeframe

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certification

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator and Balancing Authority shall retain their dated, current, in force, documented specification for data in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2 and Measurement M2.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall retain evidence for three calendar years that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies) in accordance with Requirement R4 and Measurement M4.
- Each Transmission Operator and Balancing Authority shall retain evidence for three calendar years that it has provided to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those entities necessary for reliability assessments and Real-Time operations in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The Transmission Operator or Balancing Authority did not have one of the required elements of the documented specification for data.	The Transmission Operator or Balancing Authority did not have two of the required elements of the documented specification for data.	N/A	The Transmission Operator or Balancing Authority did not have a documented specification for data.
R2	The Transmission Operator did not distribute its data specification to 25% or less of the entities that has Facilities monitored by the Transmission Operator or to 25% or less of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to more than 25% and less than or equal to50% of the entities that have Facilities monitored by the Transmission Operator or to more than 25% and less than or equal to 50% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to more than 50% and less than or equal to 75% of the entities that have Facilities monitored by the Transmission Operator or more than 50% and less than or equal to 75% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to more than 75% of the entities that have Facilities monitored by the Transmission Operator or more than 75% of the entities that provide Facility status to the Transmission Operator.
R3	The Balancing Authority did not distribute its data specification to 25% or less of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 25% and less than or equal to 50% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 50% and less than or equal to 75% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 75% of the entities that provide Facility status to the Balancing Authority.
R4	N/A	N/A	N/A	The Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, or Transmission Owner did not provide data and information, as specified in Requirement R1, to its Transmission Operator(s) or Balancing Authority(ies).

R5	N/A	N/A	N/A	The Transmission Operator or Balancing Authority did not provide to other Transmission Operators or Balancing Authorities with immediate responsibility for operational reliability, the data and information requested by those entities necessary for real-time monitoring and reliability assessments.

E. Regional Variances

None identified.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**

2. **Number:** TOP-003-1

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to ~~plan and operate the Transmission system~~ fulfill their functional responsibilities.

4. **Applicability**

   4.1. Transmission Operators.

   4.2. Balancing Authorities.

   4.3. Generator Owners.

   4.4. Generator Operators.

   4.5. Interchange Authorities.

   4.6. Load-Serving Entities.

   4.7. Transmission Owners.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall have a documented specification for data ~~to support its Real-time monitoring and reliability assessments~~ required to fulfill their respective responsibilities per the NERC Functional Model. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R1.1. A list of required data to be exchanged including, but not limited to:

- Long term outages of Bulk Electric System equipment when they are known,
- Equipment at voltage levels lower than the Bulk Electric System, at the discretion of the Transmission Operator or Balancing Authority.

R1.2. A mutually agreeable format.

R1.3. A timeframe and periodicity for providing data.

R2. Each Transmission Operator shall distribute its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R3. Each Balancing Authority shall distribute its data specification to entities that provide Facility status to the Balancing Authority. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall provide data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies). *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R5. Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments. *[Violation Risk Factor: ~~Low~~Medium]* *[Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator and Balancing Authority shall make available its dated, current, in force documented specification for data ~~to support its reliability assessments~~ in accordance with Requirement R1.

M2. Each Transmission Operator shall make available evidence that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M3. Each Balancing Authority shall make available evidence that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall make available evidence that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies) in accordance with Requirement R4. The data is limited to that needed by the Transmission Operator to support Operational Planning Analyses and reliability assessments. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those entities necessary for reliability assessments and Real-time operation in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

Regional Entity

1.2. Compliance Monitoring Period and Reset Timeframe

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certification

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator and Balancing Authority shall retain their dated, current, in force, documented specification for data ~~to support their reliability assessments~~ in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2 and Measurement M2.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner shall retain evidence for ~~90~~ three calendar ~~days~~years that it has provided data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies) in accordance with Requirement R4 and Measurement M4.
- Each Transmission Operator and Balancing Authority shall retain evidence for ~~90~~three calendar ~~days~~years that it has provided to other Transmission Operators and Balancing Authorities with immediate responsibility for operational reliability, the data requested by those entities necessary for reliability assessments and Real-Time operations in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The Transmission Operator or Balancing Authority did not have one of the required elements of the documented specification for data. ~~to support its real-time monitoring and reliability assessments.~~	The Transmission Operator or Balancing Authority did not have two of the required elements of the documented specification for data. ~~to support its real-time monitoring and reliability assessments.~~	N/A	The Transmission Operator or Balancing Authority did not have a documented specification for data. ~~and information to support its real-time monitoring and reliability assessments.~~
R2	The Transmission Operator did not distribute its data specification to ~~one entity or~~ 25% or less of the entities that has Facilities monitored by the Transmission Operator or to ~~one entity or~~ 25% or less of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to ~~two entities or~~ more than 25% and less than or equal to50% of the entities that have Facilities monitored by the Transmission Operator or to ~~two entities or~~ more than 25% and less than or equal to 50% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to ~~three entities or~~ more than 50% and less than or equal to 75% of the entities that have Facilities monitored by the Transmission Operator or ~~to three entities or~~ more than 50% and less than or equal to 75% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to ~~four or more entities or~~ more than 75% of the entities that have Facilities monitored by the Transmission Operator or ~~to four or more entities or~~ more than 75% of the entities that provide Facility status to the Transmission Operator.
R3	The Balancing Authority did not distribute its data specification to ~~one entity or~~ 25% or less of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to ~~two entities or~~ more than 25% and less than or equal to 50% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to ~~three entities or~~ more than 50% and less than or equal to 75% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to ~~four or more entities or~~ more than 75% of the entities that provide Facility status to the Balancing Authority.
R4	N/A	N/A	N/A	The Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, or Transmission Owner did not

				provide data and information, as specified in Requirement R1, to its Transmission Operator(s) or Balancing Authority(ies).
R5	N/A	N/A	N/A	The Transmission Operator or Balancing Authority did not provide to other Transmission Operators or Balancing Authorities with immediate responsibility for operational reliability, the data and information requested by those entities necessary for real-time monitoring and reliability assessments.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Real-time Transmission Operations**
2. **Number:** TOP-004-3
3. **Purpose:** To ensure that Transmission Operators act to preserve the reliability of the Bulk Electric System in Real-time.
4. **Applicability:**

   4.1. Transmission Operators.
5. **Proposed Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limit (IROL) and its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R2. Each Transmission Operator shall have Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an identified Interconnection Reliability Operating Limit (IROL) and its associated IROL T_v as specified in Requirement R1. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion outside of the identified IROL and applicable IROL T_v.

M2. Each Transmission Operator shall make available evidence that it has Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2. Such evidence could include but is not limited to a dated document with confirmation of the Agreement, such as a signature page or a memorandum of understanding, in electronic or hard copy format.

D. Compliance

1. **Compliance Monitoring Process**

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

Exception Reporting of any occasion in which it has operated outside an identified IROL and the applicable IROL T_v as specified in Requirement R1 and Measurement M1.

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Transmission Operator shall retain evidence for three calendar years of any occasion in which it has operated outside an identified IROL and its associated IROL T_v as specified in Requirement R1 and Measurement M1.
- The Transmission Operator shall retain evidence that it has current in force Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2 and Measurement M2 as well as any Agreements in force since the last compliance audit.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

Submit exception reports of each instance of exceeding an IROL for time greater than the associated IROL T_v to the Compliance Enforcement Authority within thirty calendar days of the event.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not operate within an identified Interconnection Reliability Operating Limit (IROL) and the associated IROL T_v for any single occasion.
R2	The Transmission Operator does not have Agreements with one of its directly interconnected Transmission Operators or 25% or less of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.	The Transmission Operator does not have Agreements with two of its directly interconnected Transmission Operators or more than 25% and less than or equal to 50% of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.	The Transmission Operator does not have Agreements with three of its directly interconnected Transmission Operators or more than 50% and less than or equal to 75% of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.	The Transmission Operator does not have Agreements with four or more of its directly interconnected Transmission Operators or more than 75% of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.

2	December 19, 2007	Revised to reflect merging of both sets of changes approved by BOT on November 1, 2006 (Addition of measures and compliance elements and revisions to R3 and R6 with conforming changes made as errata to Levels of Non-compliance)	Revised Errata
3	TBD	Changes pursuant to Project 2007-03	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	July 2009
2. Post for re-ballot.	September 2009
3. Submit to BOT.	September 2009
4. Submit to governmental authorities.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Real-time Transmission Operations**

2. **Number:** TOP-004-3

3. **Purpose:** To ensure that Transmission Operators act to preserve the reliability of the Bulk Electric System in Real-time.

4. **Applicability:**

   4.1. Transmission Operators.

5. **Proposed Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limit~~s~~ (IROL~~s~~) and its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R2. Each Transmission Operator shall have Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an identified Interconnection Reliability Operating Limit~~s~~ (IROL~~s~~) and ~~their~~ its associated IROL T_v as specified in Requirement R1. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion outside of the identified IROL and applicable IROL T_v.

M2. Each Transmission Operator shall make available evidence that it has Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2. Such evidence could include but is not limited to a dated document with confirmation of the Agreement, such as a signature page or a memorandum of understanding, ~~of the Agreement~~ in electronic or hard copy format.

D. Compliance

1. **Compliance Monitoring Process**

   1.1. Compliance Enforcement Authority

   Regional Entity

   1.2. Compliance Monitoring and Reset Time Frame

   Not applicable

   1.3. Compliance Monitoring and Enforcement Processes

   Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

Exception Reporting of any occasion in which it has operated outside an identified IROL and the applicable IROL T_v as specified in Requirement R1 and Measurement M1.

1.4. Data Retention

The Transmission Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- The Transmission Operator shall retain evidence for three calendar years of any occasion in which it has operated outside an identified IROL and its associated IROL T_v as specified in Requirement R1 and Measurement M1.
- The Transmission Operator shall retain evidence that it has current in force Agreements with directly interconnected Transmission Operators that specify switching of synchronous BES tie lines in accordance with Requirement R2 and Measurement M2 as well as any Agreements in force since the last compliance audit.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

Submit exception reports of each instance of exceeding an IROL for time greater than the associated IROL T_v to the Compliance Enforcement Authority within thirty calendar days of the event.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator did not operate within an identified Interconnection Reliability Operating Limit~~s~~ (IROL) and the associated IROL T_v for any single occasion.
R2	The Transmission Operator does not have Agreements with one of its directly interconnected Transmission Operators or 25% or less of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.	The Transmission Operator does not have Agreements with two of its directly interconnected Transmission Operators or more than 25% and less than or equal to 50% of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.	The Transmission Operator does not have Agreements with three of its directly interconnected Transmission Operators or more than 50% and less than or equal to 75% of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.	The Transmission Operator does not have Agreements with four or more of its directly interconnected Transmission Operators or more than 75% of its directly interconnected Transmission Operators that address switching of synchronous BES tie lines.

E. Regional Variances

None identified.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 3Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in this standard have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	July 2009
2. Post for re-ballot.	September 2009
3. Submit to BOT.	September 2009
4. Submit to regulatory authorities for approval.	October 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

Introduction

1. **Title:** ~~**Response to Transmission Limit Violations**~~

2. **Number:** ~~TOP-008-1~~

3. **Purpose:** ~~To ensure Transmission Operators take actions to mitigate SOL and IROL violations.~~

4. **Applicability**

   4.1. ~~Transmission Operators.~~

5. **Effective Date:** ~~January 1, 2007~~ All requirements will be retired on the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, all requirements are retired twenty-four months following Board of Trustees adoption.

A. Requirements

R1. ~~The Transmission Operator experiencing or contributing to an IROL or SOL violation shall take immediate steps to relieve the condition, which may include shedding firm load.~~

R2. ~~Each Transmission Operator shall operate to prevent the likelihood that a disturbance, action, or inaction will result in an IROL or SOL violation in its area or another area of the Interconnection. In instances where there is a difference in derived operating limits, the Transmission Operator shall always operate the Bulk Electric System to the most limiting parameter.~~

R3. ~~The Transmission Operator shall disconnect the affected facility if the overload on a transmission facility or abnormal voltage or reactive condition persists and equipment is endangered. In doing so, the Transmission Operator shall notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permits, otherwise, immediately thereafter.~~

R4. ~~The Transmission Operator shall have sufficient information and analysis tools to determine the cause(s) of SOL violations. This analysis shall be conducted in all operating timeframes. The Transmission Operator shall use the results of these analyses to immediately mitigate the SOL violation~~.

B. Measures

M1. ~~The Transmission Operator involved in an SOL or IROL violation shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications, alarm program printouts, or other equivalent evidence that will be used to determine if it took immediate steps to relieve the condition. (Requirement 1)~~

M2. ~~The Transmission Operator that disconnects an overloaded facility shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings, electronic communications, alarm program print outs, or other equivalent evidence that will be used to determine if it disconnected an overloaded facility in accordance with Requirement 3 Part 1~~

M3. ~~The Transmission Operator that disconnects an overloaded facility shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to determine if it notified its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, if time permitted, otherwise, immediately thereafter. (Requirement 3 Part 2)~~

M4. ~~The Transmission Operator shall have and provide upon request evidence that could include, but is not limited to, computer facilities documents, computer printouts, training documents, copies of analysis program results, operator logs or other equivalent evidence that will be used to confirm that it has sufficient information and analysis tools to determine the cause(s) of SOL violations. (Requirement 4 Part 1)~~

M5. ~~The Transmission Operator that violates an SOL shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence that will be used to confirm that it used the results of these analyses to immediately mitigate the SOL violation. (Requirement 4 Part 3)~~

C. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Responsibility

~~Regional Reliability Organizations shall be responsible for compliance monitoring.~~

1.2. Compliance Monitoring and Reset Time Frame

~~One or more of the following methods will be used to assess compliance:~~

~~- Self-certification (Conducted annually with submission according to schedule.)~~

~~- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)~~

~~- Periodic Audit (Conducted once every three years according to schedule.)~~

~~- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)~~

~~The Performance-Reset Period shall be 12 months from the last finding of non-compliance.~~

1.3. Data Retention

~~Each Transmission Operator shall keep 90 days of historical data (evidence) for Measure 1, 2 and 3.~~

~~Each Transmission Operator shall have current documents as evidence of compliance to Measures 4 and 5.~~

~~If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.~~

~~Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,~~

~~The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance data~~

1.4. Additional Compliance Information

~~None.~~

2. Levels of Non-Compliance for Transmission Operator

2.1. Level 1~~: Not applicable.~~

2.2. Level 2: ~~Disconnected an overloaded facility as specified in R3 but did not notify its Reliability Coordinator and all neighboring Transmission Operators impacted by the disconnection prior to switching, or immediately thereafter.~~

2.3. Level 3: ~~Not applicable.~~

2.4. Level 4: ~~There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:~~

~~2.4.1Did not take immediate steps to relieve an IROL or SOL violation in accordance with R1.~~

~~2.4.2Did not disconnect an overloaded facility as specified in R3.~~

~~2.4.3Does not have sufficient information and analysis tools to determine the cause(s) of SOL violations. (R4 Part 1)~~

2.4.1 ~~Did not use the results of analyses to immediately mitigate an SOL violation. (R4 Part 3)~~

D. Regional Differences

~~None identified.~~

Unofficial Comment Form for Second Draft of Standards for Real-Time Operations (Project 2007-03)

Please use the electronic comment form located at the link below to submit comments on the second draft of the standards for Real-Time Operations (Project 2007-03). Comments must be submitted by **May 7, 2009**. If you have questions please contact Ed Dobrowolski at ed.dobrowolski@nerc.net or by telephone at 609-947-3673.

http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Background Information:

In the second posting for Project 2007-03, the Real-Time Operations Standard Drafting Team (RTO SDT) has attempted to clarify the proposed changes to the TOP family of standards based on industry comments received from the first posting. In doing so, several questions arose for which the RTO SDT is seeking industry guidance.

The RTO SDT is seeking comments on its second drafts of the following proposed standards:

- TOP-001-2 — Reliability Responsibilities and Authorities
- TOP-002-3 — Normal Operations Planning
- TOP-003-1 — Planned Outage Coordination
- TOP-004-3 — Transmission Operations
- TOP-008-1 — Response to Transmission Violations

1. TOP-001-2, R3: Regarding the requirement to provide emergency assistance - The SDT deleted the phrase “provided that the requesting entity has implemented its comparable emergency procedures” from the first iteration of the revised standard. Based on comments received from the first posting, the SDT is considering reinstating this phrase. Do you agree that this phrase should be reinstated?

   ☐ Yes

   ☐ No

   Comments:

2. TOP-001-2, R4: Regarding the requirement to coordinate operations – Based on comments received from the first posting, the SDT is considering deleting the GOP from this requirement. Comments were received questioning the role of the GOP in reliability analysis beyond providing the data in TOP-003-1, Requirement R4. Do you agree that the GOP should be deleted from this requirement?

   ☐ Yes

   ☐ No

   Comments:

3. TOP-001-2, R5: Regarding SOL exceedance notification – The consensus of the industry in the first posting was that some subset of SOLs needs to be reported but there was no clear cut agreement on what subset to report to the RC. The subset of SOLs to be reported must be easily identifiable and measurable while supporting reliability. Please remember in your response that as per the NERC Glossary that IROLs are a subset of SOLs. Given that requirement, what subset of SOLs do you feel need to be reported?

   ☐ Yes

   ☐ No

   Comments:

4. TOP-004-3, R2: Regarding Agreements on switching – Based on comments received from the first posting, the SDT is considering deleting this requirement. TOP-001-3, Requirement R4 already requires coordination of operations. Given that requirement, is TOP-004-3, Requirement R2 still necessary? Do you agree that TOP-004-3, Requirement R2 can be deleted?

   ☐ Yes

   ☐ No

   Comments:

5. The RTO SDT is attempting to respond to a directive in FERC Order 693 where a specific country-wide advance notice time period for planned outage notification would be established. Prior to writing such a requirement, the RTO SDT is polling the industry to see if it is needed and what the time period would be. Please indicate if you agree with such a provision. If you agree then please provide a number of days that you would consider appropriate for such advance notice, e.g., 7 days. If you disagree, then please state specific reasons for your disagreement.

☐ Yes

☐ No

Comments (including # of days if appropriate):

6. Do you generally support the revised standards? If your response is ‘No’, please explain your single biggest concern with the revised standards, including which specific requirement or set of requirements causes you the most concern and why.

☐ Yes

☐ No

Comments:

Implementation Plan for Project 2007-03: Real-Time Operations

Prerequisite Approvals

Changes made in this project to TOP-005-1, R1; TOP-007-0, R4 are dependent on corresponding changes being approved in Project 2006-06, Reliability Coordination:

- COM-001-1: Telecommunications
- COM-002-2: Communications and Coordination
- IRO-001-1: Reliability Coordination – Responsibilities and Authorities
- IRO-002-1: Reliability Coordination – Facilities
- IRO-014-1: Procedures to Support Coordination between Reliability Coordinators
- IRO-015-1: Notifications and Information Exchange between Reliability Coordinators
- IRO-016-1: Coordination of Real-Time Activities between Reliability Coordinators
- PER-004-1: Reliability Coordination – Staffing
- PRC-001-1: System Protection Coordination

Revision to Sections of Approved Standards and Definitions

There are no new definitions in the proposed set of standards.

Compliance with Standard

Standard	Functions that must Comply with the Associated Requirements							
	TOP	BA	GO	GOP	IA	LSE	DSP	TO
PER-001-0: Operating Personnel Responsibility and Authority	Retired							
TOP-001-2: Coordination of Transmission Operations	X	X		X		X	X	
TOP-002-3: Operations Planning	X							
TOP-003-1: Operational Reliability Data	X	X	X	X	X	X		X
TOP-004-2: Real-Time Transmission Operations	X							
TOP-005-2: Operational Reliability Data	Retired							
TOP-006-1: Monitoring System Conditions	Retired							
TOP-007-0: Reporting System Operating Limits (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	Retired							
TOP-008-1: Response to Transmission Limit Violations	Retired							

The effective date is the date entities are expected to meet the performance identified in these standards. Note that entities have been given several months beyond the regulatory approval date (preparation time) to fully comply with new requirements.

116-390 Village Boulevard
Princeton, New Jersey 08540-5721
609.452.8060 | www.nerc.com

The assumption used by the SDT in establishing this Implementation Plan is that the project mentioned in the prerequisites: Project 2006-06, Reliability Coordination; has been approved prior to the implementation of this Project 2007-03, Real-Time Operations.

Effective Date of Revised Standards
All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

Retirement Date for Existing Standards
All requirements will be retired twenty-four months following the first day of the first quarter following regulatory approval.

Implementation Plan for Project 2007-03: Real-Time Operations

Prerequisite Approvals

~~Changes made in this project to TOP-001-2, R3; TOP-002-3, R16, R17; TOP-005-1, R1; TOP-006-1, R1 are dependent on corresponding changes being approved in Project Pre-2006, Operate within Interconnection Reliability Operating Limits:~~

- ~~IRO-008-1: Reliability Coordinator Operational Analyses and Real-Time Assessments~~
- ~~IRO-009-1: Reliability Coordinator Actions to Operate Within IROLs~~
- ~~IRO-010-1: Reliability Coordinator Data Specification and Collection~~

Changes made in this project to TOP-005-1, R1; TOP-007-0, R4 are dependent on corresponding changes being approved in Project 2006-06, Reliability Coordination:

- COM-001-1: Telecommunications
- COM-002-2: Communications and Coordination
- IRO-001-1: Reliability Coordination – Responsibilities and Authorities
- IRO-002-1: Reliability Coordination – Facilities
- IRO-014-1: Procedures to Support Coordination between Reliability Coordinators
- IRO-015-1: Notifications and Information Exchange between Reliability Coordinators
- IRO-016-1: Coordination of Real-Time Activities between Reliability Coordinators
- PER-004-1: Reliability Coordination – Staffing
- PRC-001-1: System Protection Coordination

~~Changes made in this project to TOP-002-3, R12 are dependent on corresponding changes being approved in Project 2006-07, ATC/TTC/AFC and CBM/TRM Revisions:~~

- ~~MOD-001-1: Available Transmission System Capability~~
- ~~MOD-008-1: TRM Calculation Methodology~~
- ~~MOD-028-1: Area Interchange Methodology~~
- ~~MOD-029-1: Rated System Path Methodology~~
- ~~MOD-030-1: Flowgate Methodology~~

Revision to Sections of Approved Standards and Definitions

There ~~is one~~ are no new definitions in the proposed set of standards.

~~**Simulated Contingencies** – The act of using planning and operating models to replicate Contingency responses that depict the net effect of design considerations.~~

~~A mapping table showing the disposition of existing requirements in the affected standards is shown below.~~

~~Existing Requirement~~	~~New Location~~
~~TOP-001-2 (redline version)~~	
~~R1~~	~~Deleted – The SDT does not feel that this~~

	~~requirement is needed in a reliability standard. Other standards already require the necessary actions. If this statement was intended to protect the operator from liability, it doesn't provide any real protection.~~
~~R2~~	~~Deleted – The SDT feels that dictating 'immediate action' could be detrimental to reliability.~~
~~R3 (re-formatted to R1)~~	~~All references to the RC and RC responsibilities have been removed from TOP standards as they are now covered in the revisions being undertaken in Project 2006-06. .~~
~~R4~~	~~The DP & LSE have been moved into the new R1 in the revised standard.~~
~~R5 (re-formatted to R2)~~	~~The added phrasing was adapted from TOP-008-0, R3. Deletions were made due to redundancies with TOP-004-3, R1.~~
~~R6 (re-formatted to R3)~~	~~Retained with changes.~~
~~R7 (re-formatted to R4)~~	~~Retained and expanded to incorporate sub-requirements.~~
~~R7.1 – R7.3~~	~~The sub-requirements have been moved into the main requirement in the revised standard.~~
~~R8~~	~~The first sentence has been deleted due to redundancies with CPS, DCS, and VAR standards. The requirement for real power in the second sentence was deleted as redundant with EOP-002-2, R1 & R6. The requirement in the second sentence for reactive power was deleted since you can't supply emergency reactive assistance remotely.~~
~~new R5~~	~~This requirement was moved here from TOP-007-0, R1.~~
~~new R6~~	~~This requirement was moved here from TOP-007-0, R2.~~
~~new R7~~	~~This requirement was moved from TOP-008, R2.~~
~~TOP-002-3 (redline version)~~	
~~R1~~	~~Deleted as BA only needs to respond to CPS and DCS and thus was not applicable. TOP now covered in new R1 below.~~
~~R2~~	~~Deleted as good utility practice but unmeasurable.~~
~~R3~~	~~LSE and GOP are governed by their Interconnection Operating Agreements and therefore not necessary here. TSP deleted~~

	~~as not applicable. TOP covered in new R3.~~
~~R4~~	~~Deleted as duplicative of proposed IRO-001-2, R1.~~
~~R5~~	~~Replaced by new R1.~~
~~R6~~	~~BA deleted as covered in BAL-002-0, R4. TOP covered in new R1.~~
~~R7~~	~~Deleted as duplicative of BAL-002-0, R1.~~
~~R8~~	~~Delete as not applicable to BA.~~
~~R9~~	~~Delete as duplicated in BAL-001 and BAL-002.~~
~~R10~~	~~Delete as not applicable to BA. TOP covered in new R2.~~
~~R11~~	~~First sentence covered in new R1. Second sentence deleted as this is now covered in proposed IRO-009-1 as well as FAC-010-1, FAC-011-1, and FAC-014-1. Third sentence covered in new R3.~~
~~R12~~	~~Deleted as now covered in MOD standards as part of Project 2006-07.~~
~~R13~~	~~Deleted as verification upon request not seen as needed by this standard. Passed on to Generator Verification team. Data now part of revised TOP-003-1 data specification requirements.~~
~~R14~~	~~Data now part of revised TOP-003-1 data specification requirements.~~
~~R15~~	~~Deleted as duplicative of IRO-010-1, R3. Data now part of revised TOP-003-1 data specification requirements.~~
~~R16~~	~~Data now part of revised TOP-003-1 data specification requirements.~~
~~R17~~	~~Deleted as duplicative of IRO-010-1, R3.~~
~~R18~~	~~Deleted as the SDT feels that this is a 'how' as opposed to a 'what'.~~
~~R19~~	~~Deleted as unmeasurable.~~
~~new R1, R2, & R3~~	~~New.~~
~~TOP-003-1 (redline version)~~	
~~R1~~	~~This requirement is now covered in the re-worded requirements below for the data specification.~~
~~R2~~	~~Deleted as now covered in IRO-001-2, R1 (proposed).~~
~~R3~~	~~Deleted as now covered in.IRO-001-2, R1 (proposed).~~
~~R4~~	~~Deleted as now covered in Project 2006-06.~~
~~R1 through R5 (re-formatted)~~	~~New data specification requirements.~~
~~TOP-004-3 (redline version)~~	
~~R1~~	~~Retained with changes.~~

~~R2~~	~~This is now covered by R1 with the inclusion of IROL and IROL T_v.~~
~~R3~~	~~This is now covered by R1 with the inclusion of IROL and IROL T_v.~~
~~R4~~	~~Deleted as unmeasurable.~~
~~R5~~	~~The first sentence was deleted as unmeasurable. The second sentence was deleted as it is covered by TOP-001-1, R1 & R4.~~
~~R6~~	~~The first sentence was deleted as it is good utility practice. The second sentence was deleted as all of the sub-requirements were deleted:~~ ~~R6.1 as duplicative of FAC-008 & FAC-009;~~ ~~R6.2 as duplicative of VAR-001-1, R1 for voltage levels and reactive power and real power by R10;~~ ~~R6.3 as it is now covered in new R2;~~ ~~R6.4 as now covered in TOP-002-3, R2.~~
~~new R2 (re-formatted)~~	~~Rewording of previous requirement.~~
~~TOP-005-1 (redline version)~~	
~~R1~~	~~Deleted – covered by IRO-010-1, R3.~~
~~R1.1~~	~~Deleted – covered in IRO-010.~~
~~R2~~	~~Deleted – The SDT did not feel that this was a legitimate reliability concern.~~
~~R3~~	~~Deleted – now covered as part of the new data specification requirements in TOP-003-1.~~
~~R4~~	~~Deleted – the PSE does not have any unique information needed by the TOP or BA.~~
~~TOP-006-1 (redline version)~~	
~~R1~~	~~Delete – now covered as part of the new data specification requirements in TOP-003-1.~~
~~R1.1~~	~~Delete – now covered as part of the new data specification requirements in TOP-003-1.~~
~~R1.2~~	~~Delete – now covered in IRO-010-1, R3.~~
~~R2~~	~~Delete – now covered as part of the new data specification requirements in TOP-003-1..~~
~~R3~~	~~Delete – now covered in PRC-001-1, R1.~~
~~R4~~	~~Deleted – now covered as part of the new data specification requirements in TOP-003-1.~~
~~R5~~	~~Delete – covered in certification process~~

	~~and no longer required in standards.~~
~~R6~~	~~Delete – covered in certification process and no longer required in standards.~~
~~R7~~	~~Delete – RC handled in IRO standards. TOP & BA now covered in certification process and no longer required in standards.~~
~~TOP-007-0 (redline version)~~	
~~R1~~	~~Moved to TOP-001-2, R5 (redlined version).~~
~~R2~~	~~Moved to TOP-001-2, R6 (redlined version).~~
~~R3~~	~~This authority already exists and does not need to be cited in a requirement. .~~
~~R4~~	~~Delete as this is now covered in the IROL Project.~~
~~TOP-008-0 (redline version)~~	
~~R1~~	~~Deleted – now covered by TOP-001-2, R6 for IROL. Taking immediate steps for relief of all SOLs experienced or contributed to may not always be prudent, especially if other organizations are addressing the cause. In such cases, uncoordinated immediate actions may be counterproductive. Accordingly, requiring immediate action to relieve all SOLs was deleted in consideration of TOP-001-1 and TOP-004-3 requirements applied in combination.~~
~~R2~~	~~First sentence replaced by TOP-004-3, R1. Second sentence moved to TOP-001-2, R7 (redlined versions).~~
~~R3~~	~~Delete first sentence – bad operating practice, actually eliminates operator flexibility and thus increases risk to the System. Delete second sentence as duplicative of IRO-009-1 as well as FAC-010-1, FAC-011-1, and FAC-014-1. Some phrasing moved to TOP-001-2, R2.~~
~~R4~~	~~Delete – now covered as part of the new data specification requirements in TOP-003-1.~~
~~PER-001-0 (redline version)~~	
~~R1~~	~~Deleted – This statement is not needed in a reliability standard. The standards already require the necessary actions.~~

Compliance with Standard

Standard	Functions that must Comply with the Associated Requirements							
	TOP	BA	GO	GOP	IA	LSE	DSP	TO
PER-001-0: Operating Personnel Responsibility and Authority	Retired							
TOP-001-2: Coordination of Transmission Operations	X	X		X		X	X	
TOP-002-3: Operations Planning	X							
TOP-003-1: Operational Reliability Data	X	X	X	X	X	X		X
TOP-004-2: Real-Time Transmission Operations	X							
TOP-005-2: Operational Reliability Data	Retired							
TOP-006-1: Monitoring System Conditions	Retired							
TOP-007-0: Reporting System Operating Limits (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	Retired							
TOP-008-~~0~~1: Response to Transmission Limit Violations	Retired							

The effective date is the date entities are expected to meet the performance identified in these standards. Note that entities have been given several months beyond the regulatory approval date (preparation time) to fully comply with new requirements.

The assumption used by the SDT in establishing this Implementation Plan is that the project~~s~~ mentioned in the prerequisites: ~~Pre-2006, Operate within Interconnection Reliability Operating Limits;~~ Project 2006-06, Reliability Coordination; ~~and Project 2006-07, ATC/TTC/AFC and CBM/TRM Revisions have~~ has been approved prior to the implementation of this Project 2007-03, Real-Time Operations.

Effective Date of Revised Standards
All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

Retirement Date for Existing Standards
All requirements will be retired twenty-four months following the first day of the first quarter following regulatory approval.

NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Standards Announcement

Comment Period Open
April 7–May 7, 2009

Now available at: http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Project Name:
2007-03 — Real-time Operations Standards

Due Date and Submittal Information:
The comment period is open **until 8 p.m. EDT on May 7, 2009**. Please use this electronic form to submit comments. If you experience any difficulties in using the electronic form, please contact Lauren Koller at Lauren.Koller@nerc.net. An off-line, unofficial copy of the comment form is posted on the project page: http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Content for Comment Period:
The Real-time Operations Standards Drafting Team is seeking comments on its second drafts of the following proposed standards:

- TOP-001-2 — Reliability Responsibilities and Authorities
- TOP-002-3 — Normal Operations Planning
- TOP-003-1 — Planned Outage Coordination
- TOP-004-3 — Transmission Operations
- TOP-008-1 — Response to Transmission Violations

The drafting team revised purpose statements, requirements, measures, data retention, and VSLs. In addition, two bullets were added to TOP-003-1, Requirement R1.1 to address directives in FERC Order 693. The team deleted the definition of "Simulated Contingencies," as stakeholders indicated the definition is not needed.

Other Materials Posted:

- A revised implementation plan
- The drafting team's consideration of industry comments received during the first comment period

Project Background:
The drafting team has attempted to eliminate redundancy in the Transmission Operations (TOP) family of standards. As part of this process, the drafting team has made an effort to reorganize the standards and requirements in a more logical manner. In addition, the drafting team has

supplied a complete set of Violation Risk Factors, Time Horizons, Measures, and Compliance elements including Violation Severity Levels. An Implementation Plan has been provided to show the timeframe for compliance.

Applicability of Standards in Project:

- Transmission Operator
- Transmission Owner
- Balancing Authority
- Generator Owner
- Generator Operator
- Interchange Authority
- Load-Serving Entity
- Distribution Provider

Standards Development Process

The Reliability Standards Development Procedure contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

Some suggestions: TOP-002-3 1) R1. Remove "and potential Contingency events". Any event could temporarily increase flows over the SOL (or IROL) or cause the SOL to decrease until the flows are mitigated per ROP-001. The system studies set the SOL's to protect the system for such events. The mitigation is then required in TOP-001-2 then (and TOP-004 if it is kept). 2) R1. Reword R1 similar to that of R2 in that TOP "plans" to preclude operating in excess of any SOLs for anticipated normal conditions. This is normal operational planning. All entities should not be planning to exceed SOL for normal conditions. Rewording: R1. "The Transmission Operator shall plan next day's operation to preclude operating in excess of any System Operating Limits (SOLs) during anticipated normal conditions."

Project 2007-02 Operating Personnel Comm Protocols SDT
Harry Tom

Yes
The Operating Personnel Communication Protocols standard drafting team respectfully requests that the Real Time Operations team incorporate the following into your proposed TOP-001: "Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have procedures for the communication of information concerning the transmission emergency alerts in accordance with the conditions described in Attachment 1 Transmission Emergency Alerts ." In addition, the Applicability Section 4 would need to include Reliability Coordinators. The Operating Personnel Communications Protocols Project 2007-02 was initiated to ensure that real time system operators use standardized communication protocols during normal and emergency operations to improve situational awareness and shorten response time. The SDT developed a new COM-003-1 Standard that has yet to be posted and is dependent upon revising at least two other standards (CIP-001 and appropriate TOP Standard). COM-003 contains requirements that specify: 1. Use of three-part communication; 2. English language; 3. Common time zone; 4. NATO alpha-numeric alphabet; 5. Mutually agreed line identifiers; 6. The use of pre-defined system condition terminology such as those contained in the RCWG Alert Level Guide and EOP-002-2. This request is based on recent NERC Standards Committee direction to our team to incorporate the Reliability Coordinator Working Group's (RCWG) Alert Level Guide into a Standard. The consensus of our team is that a TOP Standard is the most appropriate location for the Transmission Emergency Alert language from the Guide as the energy emergency alert language is currently described in EOP-002-2. The RCWG Guide proposes the use of pre-defined system condition descriptions for use during emergencies for reliability related information. This guide was developed in response to a Blackout Report recommendation. Our team placed the energy cyber and physical security emergency alert language into CIP-001. Since the Real Time Operations SDT is currently modifying TOP-001 through 004, we seek your consent to incorporate the transmission emergency alert language to comply with the wishes of the Standards Committee. We believe that a TOP Standard is the most appropriate location for this language for the following reasons: • The levels of emergency conditions related to the transmission system is based upon maintaining the transmission system within Interconnection Reliability Operating Limits. • Your proposed TOP-001 R2 already requires the sharing of information of actual and anticipated transmission emergency conditions and the use of pre-defined terminology supports the efficient sharing of such information. The following text is appended here for the record. It is the OPCP SDT proposal for a revised TOP Standard that incorporates the TEA material. Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 1 of 17 Effective Date: October 1, 2007 A. Introduction 1. Title: Transmission Operations 2. Number: TOP-004-3 3. Purpose: To ensure that the transmission system is operated so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single Contingency and specified multiple Contingencies; and to communicate transmission emergency alerts. 4. Applicability: 4.1. Reliability Coordinator 4.2. Balancing Authority 4.3. Transmission Operators 5. Proposed Effective Date: First day of first calendar quarter, one calendar year following applicable regulatory approval; or, in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter a year from the date of Board of Trustee adoption. B. Requirements R1. Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs). R2. Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency. R3. Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator. R4. If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes. R5. Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected, it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area. R6. Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including: R6.1. Monitoring and controlling voltage levels and real and reactive power flows. R6.2. Switching transmission elements. R6.3. Planned outages of transmission elements. R6.4. Responding to IROL and SOL violations. R7. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have procedures for the communication of information concerning the transmission emergency alerts in accordance with the conditions described in Attachment 1-TOP-004-3. C. Measures Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 2 of 17 Effective Date: October 1, 2007 M1. Each Transmission Operator that enters an unknown operating state for which valid limits have not been determined, shall have and provide upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, alarm program printouts, or other equivalent evidence that will be used to determine if it restored operations to respect proven reliable power system limits within 30 minutes as specified in Requirement 4. M2. Each Transmission Operator shall have and provide upon request current policies and procedures that address the execution and coordination of activities that impact inter- and intra-Regional reliability for each of the topics listed in Requirements 6.1 through 6.6. M3. Each Reliability Coordinator, Balancing Authority, Transmission Operator shall have

and provide upon request the procedures or guidelines that will be used to confirm that it meets Requirement 7. Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 3 of 17 Effective Date: October 1, 2007 D. Compliance 1. Compliance Monitoring Process 1.1. Compliance Monitoring Responsibility Regional Reliability Organizations shall be responsible for compliance monitoring. 1.2. Compliance Monitoring and Reset Time Frame One or more of the following methods will be used to assess compliance: - Self-certification (Conducted annually with submission according to schedule.) - Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.) - Periodic Audit (Conducted once every three years according to schedule.) - Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.) The Performance-Reset Period shall be 12 months from the last finding of non-compliance. 1.3. Data Retention Each Transmission Operator shall keep 90 days of historical data for Measure 1. Each Transmission Operator shall have current, in-force policies and procedures, as evidence of compliance to Measure 2. If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer. Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor, The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data 1.4. Additional Compliance Information None. 2. Levels of Non-Compliance: 2.1. Level 1: Not applicable. 2.2. Level 2: Did not have formal policies and procedures to address one of the topics listed in R6.1 through R6.4. 2.3. .Level 3: Did not have formal policies and procedures to address two of the topics listed in R6.1 through R6.4. Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 4 of 17 Effective Date: October 1, 2007 2.4. Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation: 2.4.1 Did not restore operations to respect proven reliable power system limits within 30 minutes as specified in R4. 2.4.2 Did not have formal policies and procedures to address three or all of the topics listed in R6.1 through R6.4. E. Regional Differences None identified. Version History Version Date Action Change Tracking 0 April 1, 2005 Effective Date New 0 August 8, 2005 Removed “Proposed” from Effective Date Errata 1 November 1, 2006 Added language from Missing Measures and Compliance Elements adopted by Board of Trustees on November 1, 2006 Revised 2 December 19, 2007 Revised to reflect merging of both sets of changes approved by BOT on November 1, 2006 (Addition of measures and compliance elements and revisions to R3 and R6 with conforming changes made as errata to Levels of Non-compliance) Revised Errata Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 5 of 17 Effective Date: October 1, 2007 Attachment 1-TOP-004-3 Transmission Emergency Alert (TEA) Levels Introduction This Attachment provides the procedures by which a Transmission Operator or Reliability Coordinator can advise of actions taken to manage potential or actual Interconnected Reliability Operating Limit (IROL) violations. All three operating alert states (EEAs, TEAs and SEAs) are independent of each other and should be declared independently but they may also be declared concurrently. A. General Requirements 1. Initiation by Reliability Coordinator. A Transmission Emergency Alert (TEA) may be initiated only by a Reliability Coordinator at: 1) the Reliability Coordinator’s own request, or 2) upon the request of a Transmission Operator 1.1. Situations for initiating alert. A Transmission Emergency Alert may be initiated for the following reasons: • When all the available generation resources (would also include dispatchable load facilities that dispatch similar to generators on an economic basis) have been committed to respect an IROL in the pre-contingency state or; • When load curtailment procedures have been implemented to respect an IROL. 2. Notification. A Reliability Coordinator who declares a Transmission Emergency Alert shall notify all Transmission Operators and Balancing Authorities in its Reliability Area. The Reliability Coordinator shall also notify Reliability Coordinators of the situation via the Reliability Coordinator Information System (RCIS) using the “System Emergency” category. Additionally, conference calls between Reliability Coordinators shall be held as necessary to communicate system conditions. The Reliability Coordinator shall also notify all Transmission Operators and Balancing Authorities in its Reliability Area and Reliability Coordinators when the alert has ended. B. Transmission Emergency Alert Levels Introduction Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 6 of 17 Effective Date: October 1, 2007 To ensure that all Reliability Coordinators clearly understand potential and actual actions taken to manage IROLs on the Interconnection, NERC has established three levels of Transmission Alerts. The Reliability Coordinators will use these terms when explaining actions taken to manage IROLs to each other. A Transmission Emergency Alert is an emergency communication protocol , not a daily operating practice, and is not an alternative to compliance with NERC reliability standards. The Reliability Coordinator may declare whatever alert level is appropriate, and need not proceed through the alerts sequentially. 1. Transmission Emergency Alert 1 (TEA 1) – All available generation resources committed to respecting IROLs. Circumstances: • The Reliability Coordinator or Transmission Operator foresees or is experiencing conditions where all available generation resources are committed to respect the IROL and/or is concerned about its ability to respect the IROL. 2. Transmission Emergency Alert 2 (TEA 2) — Load management procedures in effect to respect IROLs. Circumstances: • The Reliability Coordinator or Transmission Operator foresees or has implemented procedures up to, but excluding, interruption of firm load commitments. When time permits, these procedures may include, but are not limited to: • Public appeals to reduce demand. • Voltage reduction. • Interruption of non-firm end use loads in accordance with applicable contracts (for emergency purposes, not economic reasons) • Demand-side management. • Utility load conservation measures • TLR 6 Note: TLR 5 would normally be implemented in advance of this alert state. Under some circumstances TLRs may not be available or effective and would not be called prior to this alert state. During TEA 2, Reliability Coordinators and Transmission

Operators have the following responsibilities: 2.1 Declaration period. The declaring Reliability Coordinator shall update the RCIS under “System Emergency” at a minimum of every hour until the TEA 2 is terminated. 2.2 Evaluating and mitigating transmission limitations. The Reliability Coordinators shall review all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs) and transmission loading relief procedures in effect that may be contributing to the alert level. Where appropriate, the Reliability Coordinators shall inform the Transmission Operators Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 7 of 17 Effective Date: October 1, 2007 under their purview of the pending Transmission Emergency Alert and request that they increase their ATC by actions such as restoring transmission elements that are out of service, reconfiguring their transmission system, adjusting phase angle regulator tap positions, implementing emergency operating procedures and redispatching generation. The following additional actions should also be considered where appropriate: • Notification of ATC adjustments. Resulting increases in ATCs shall be communicated to the market via posting on the appropriate OASIS websites by the Transmission Providers. • Availability of generation redispatch options. Available generation redispatch options shall be immediately communicated to the declaring Reliability Coordinator. • Evaluating impact of current transmission loading relief events. The Reliability Coordinators shall evaluate the impact of any current transmission loading relief events on the ability to supply emergency assistance to the declaring entity. This evaluation shall include analysis of system reliability and involve close communication among Reliability Coordinators. • Initiating inquiries on re-evaluating SOLs and IROLs. The Reliability Coordinators shall consult with the Balancing Authorities and Transmission Providers in their Reliability Areas about the possibility of re-evaluating and revising SOLs or IROLs. 2.3 Coordination of emergency responses. The Reliability Coordinator shall communicate and coordinate the implementation of emergency operating responses. 2.4 Actions Prior to Declaration of TEA 3. Before declaring a TEA 3, all available generation resources must be committed. This includes but is not limited to: • All available generation units are on-line. All generation capable of being on-line in the time frame of the emergency is on-line including quick-start and peaking units, regardless of cost. • Purchases made regardless of cost. All firm and non-firm purchases have been made, regardless of cost. • Non-firm sales recalled and contractually interruptible loads and demand-side management curtailed. All non-firm sales have been recalled, contractually interruptible retail loads curtailed, and demand-side management activated within provisions of the agreements. Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 8 of 17 Effective Date: October 1, 2007 • Operating Reserves. Operating reserves are being utilized such that the declaring entity may be carrying reserves below the required minimum or has initiated emergency assistance through its operating reserve sharing program. 3. Transmission Emergency Alert 3 (TEA 3) — Firm load curtailment in effect to respect IROLs. Circumstances: The Reliability Coordinator or Transmission Operator foresees or has implemented firm load obligation interruption to respect an IROL. 3.1 Continue actions from TEA 2. The Reliability Coordinators and the declaring entity shall continue to take all actions initiated during TEA 2. 3.2 Declaration Period. The declaring Reliability Coordinator shall update the RCIS under “System Emergency” at a minimum of every hour until the TEA 3 is terminated. 3.3 Use of Transmission short-time limits. The Reliability Coordinators shall request the appropriate Transmission Providers within their Reliability Area to utilize available short-time transmission limits or other emergency operating procedures in order to increase transfer capabilities. 3.4 Re-evaluating and revising SOLs and IROLs. The Reliability Coordinator of the declaring entity shall evaluate the risks of revising SOLs and IROLs on the reliability of the overall transmission system. Re-evaluation of SOLs and IROLs shall be coordinated with other Reliability Coordinators and only with the agreement of the Transmission Operator whose equipment would be affected. The resulting increases in transfer capabilities shall only be made available to the declaring entity who has requested an TEA 3 condition. SOLs and IROLs shall only be revised as long as a TEA 3 condition exists or as allowed by the Transmission Operator whose equipment is at risk. The following are minimum requirements that must be met before SOLs or IROLs are revised: 3.4.2 Mitigation of cascading failures. The Reliability Coordinator shall use its best efforts to ensure that revising SOLs or IROLs would not result in any cascading failures within the Interconnection. 3.5 Returning to pre-emergency SOLs and IROLs. Whenever the transmission systems can be returned to their pre-emergency SOLs or IROLs, the declaring Entity shall notify its respective Reliability Coordinator. 3.5.1 Notification of other parties. When an alert has been downgraded, the Reliability Coordinator shall notify via the RCIS the affected Reliability Coordinators, Transmission Operators and Balancing Authorities that their systems can be returned to their normal limits. Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 9 of 17 Effective Date: October 1, 2007 4. Transmission Emergency Alert 0 (TEA 0) - Termination. When the declaring Entity is able to respect IROL requirements and is no longer concerned with its ability to respect IROLs, it shall request its Reliability Coordinator to terminate the alert. 4.1. Notification. The Reliability Coordinator shall notify Reliability Coordinators via the RCIS of the termination. The Reliability Coordinator shall also notify the affected Transmission Operators and Balancing Authorities. RCIS Posting Examples Each RCIS posting should be clear and concise. If the actions are being taken as a result of a contingency, the contingency should also be identified as the cause. The following are examples of possible of RCIS postings: TEA 1 (name of RC) is declaring a TEA 1 on the (name of the interface). TEA 2 (name of RC) is declaring a TEA 2 on the (name of the interface). Flows from (direction of flow that impacts the interface) aggravate this interface. (amount of MW relief) of (type of load management procedures that have been or expected to be implemented ie voltage reduction, curtailable load reductions) of relief has been (or is expected) to be implemented to respect the limit. These actions are expected to last the next (length of time – hours/days) and should be sufficient to prevent the need for Firm load shedding. TEA 3 (name of RC) is declaring a TEA 3 on the (name of the interface). Flows from (direction of flow that impacts the interface) aggravate this interface. (amount of MW relief) of Firm Load curtailments have been (or is expected) implemented to respect the limit. These actions are expected to last the next (length of time –

hours/days). Contingency Example If the TEA is being declared as a result of a contingency the message could be modified simply by adding the contingency description as below: (name of RC) is declaring a TEA 2 on the (name of the interface). This is a result of a contingency on (name of the interface or contingent element). Flows from (direction of flow that impacts the interface) aggravate this interface. (amount of MW relief) of (type of load management procedures that have been Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 10 of 17 Effective Date: October 1, 2007 or are expected to be implemented i.e. voltage reduction, curtailable load reductions) to respect the limit. These actions are expected to last the next (length of time – hours/days) and should be sufficient to prevent the need for Firm load shedding. Updates When updating postings only significant changes need be identified. The following is appropriate: (name of RC) remains in a TEA (2 or 3) on the (name of the interface). (amount of MW relief) of (type of load management procedures that have been or are expected to be implemented i.e. voltage reduction, curtailable load reductions, firm load reductions) have been implemented (description of the change i.e. increased/reduce by amount of MW change or identify no change). Standard TOP-004-3 — Transmission Operations Example #1 IROL violation on “X” No Global Adequacy Concerns IROL “X” 500 MW - A to B 300 MW - B to A Intertie Limit Intertie Limit Imp 300 Imp 200 Exp 200 Exp 100 EEA 1 No 2 No 3 No TEA 1 Yes 2 Yes 3 Yes In this example the available generation in A is in excess of its load requirements. The available generation in B is less than its load requirements. Area B will be relying on the full transfer capability of the interface “X” plus an additional import of 100 MW to the maximum limit on the intertie in Area B. With the implementation of the interruptible load and V/R the firm load requirements in B cannot be met without the use of Firm load shedding. • In this scenario an EEA is not required as the BA is able to meet its global BA Total Load 2,500 MW BA Total Gen 2,900 MW BAImpLimit500MW Zone A Zone B Load 1,500 MW Load 1,000 MW Gen available 2,800 MW Gen available 100 MW Imp 0 MW Imp 100 MW Exp 0 MW Exp 0 MW Interruptible 50 MW Load Interruptible 50 MW Load V/R 50 MW V/R 50 MW Balancing Authority “X” Adopted by Board of Trustees: November 1, 2006 Page 11 of 17 Effective Date: October 1, 2007 Standard TOP-004-3 — Transmission Operations Adopted by Board of Trustees: November 1, 2006 Page 12 of 17 Effective Date: October 1, 2007 load/generation requirements. • When this situation is forecast a TEA 1 should be issued to indicate the potential concerns with the ability to respect the IROL limit “X” without the use of load management procedures. • When load management procedures are implemented in Real Time to respect the IROL “X”, a TEA 2 should be issued. • When Firm load is curtailed to respect the limit a TEA 3 should be issued. Standard TOP-004-3 — Transmission Operations Example #2 Global Adequacy Deficiency No IROL Violation IROL “X” 500 MW - A to B 300 MW - B to A Intertie Limit Intertie Limit Imp 300 Imp 200 Exp 200 Exp 100 EEA 1 Yes 2 Yes 3 No TEA 1 No 2 No 3 No In this example the available generation in A is less than its load requirements. The available generation in B is less than its load requirements. There is a Global Adequacy deficiency after considering full import capability and utilization of interruptible load and V/R. Yes
Is there a typo in the question? TOP-001 does not have a rev 3. Assuming the intent is to refer to TOP-001-2, R4 we agree.
Yes
Follow existing Guidelines, GADS states “well in advance” as notification for “Planned” outages. This typically means more than 30 days in advance. PJM uses the 30 day definition for “Planned”. Nuclear / INPO uses 28 days (4 weeks) from an INPO definition for “Planned”. 30 days seems to be a reasonable requirement.
No
In general, Exelon supports the revisions and appreciates the work being done by the SDT to consolidate and clarify the requirements. We have some concerns with the langauge in TOP-001-2 R4. "Coordinate" - We believe this needs to be better defined. "Known or expected to have a reliability impact" - Reliability impact needs to be defined better, can measures be identified, such as; cause a system to violate a limit under expected conditions? Consider adding the words “in the judgment of the TOP ” before the word “expected.” Otherwise this may become a point of contenetion and difficulty during an audit. If the GO is not removed (see question 2)the GO is not likely to have the ability to know what reliability impacts its actions might have. "other reliability entities" - needs to be defined. "Unless conditions do not permit such coordination" - if this clause is getting at the issue of time not available, consider “unless based on the reasonable judgment of the TO, considering the facts and circumstances at the time, conditions do not permit such coordination.” We feel the point of the requiremnts should be when a GO/TO knows or reasonably should know that an action will have a substantial adverse reliability impact on another operating entity (define), the GO/TO should inform the other entity and consider that other entity’s input in deciding how to operate, if time permits.

Yes
Particularly since R2 contains no requirement for communications concerning notification of any problems or communication with the GOP. Likely the first time GOP will be aware of condition is at failure of RC/TO efforts to resolve same.
Yes
Assume this is System Operating Limit and Interconnect Reliability Operating Limit (need to cite for first time acronym use as was done with 'BES' in purpose statement). Unsure of exact setpoint of reporting, but would likely be at anytime load approaches or exceeds planned or immediately available generation; perhaps within 2-5% greater then parity.
Yes
Yes
Current policy under some existing contract operators requires initial notification on a rolling 3 year plan and additional

notification to 'dispatcher' at 30 days. Generally, verbal notification is also conducted between generating facilities and Transmission operator on a much shorter and timely basis additionally. Transmission/Distribution company has a similar long range, and short notification cycle.
Yes
During 'blackout' that resulted in this program, GOP's received more intial information on problem and expected recovery from CNN then from 'chain of command'. If response is expected inclusion in information stream must also be included.

Real Time Best Practices Standards Study Group
Frank Koza
No
The Real-time Best Practices Standards Study Group (RTBPSSG) feels that the deletion of TOP-004-2, R4 (Restore system operations from an unknown operating state to proven and reliable limits within 30 minutes) does not provide an adequate level of reliability for the operation of the Bulk Electric System (BES) and the reasoning provided for the removal is flawed. The RTBPSSG believes that this is an important consideration for operations that should not be deleted and that with more deliberations an acceptable measure for such a requirement can be developed. The concept of operating in a known state has long been a fundamental concept of reliable system operations and if this requirement is deleted then there is no requirement to cover this concept. The idea of operating to preclude IROLs or to return to within the limit in Tv does not adequately address this concern.
Group
PJM's NERC and Regional Coordination Department
Patrick Brown
Yes
PJM supports the intent and the concept of comparability as intended by this requirement. However, PJM would note that TOP Emergency Procedures are not identical and are designed around the reliablity needs and capabilities of the individual TOP. When dealing with compliance, the interpretation of what is and what is not comparable could have unintended consequences.
Yes
The data obligations for GOPs to coordinate with its TOPs is covered in TOP-001-2 R1. The operational obligations for GOPs to coordinate with TOPs is covered in IRO-005. IRO-005-3 R1 places a requirement on the RC to have access to operating data (which specifically includes planned generation outages – R 1.9). Thus the RC already has the responsibility to get the data in question. Given that the RC has the authority to request and obtain that data, one could argue that there is no need to also mandate that the GOP coordinate the same data, since that obligation already lies with the RC - see R4).
PJM agrees that reporting should be based upon and restricted to reliability issues. Given the broad scope of the term

SOL as defined in the NERC Glossary, PJM agrees that the requirement should be limited to a subset of the SOLs PJM proposes: 1. The TOP requirement on limit reporting parallel the RC requirement on IROLs 2. The TOP report violations (not exceedences) of any limit predefined by the TOP to be an essential limit (i.e. for a defined local condition that is deemed by the TOP to be of special concern and is not covered by any predefined IROL). This approach provides a TOP the flexibility, when appropriate, to go beyond the definition of BES and to use reliability considerations rather than arbitary formulae to drive its operational reporting.
Yes
PJM agrees that there is no need to include a requirement that focuses on switching procedures.
No
A mandated common time-period would likely conflict with some already FERC-approved procedures. Moreover, a common timing requirement will likely as reduce the benefits and flexibility of some procedures, as it would provide benefits to others.
Yes
Group
Southern Compnay
Hugh Francis
Yes
Yes, the phrase should be reinstated. Also, these actions should be coordinated by the Reliability Coordinator(s). Thus, we believe the verbiage should ultimately be: “provided that the requesting entity has implemented its comparable emergency procedures as coordinated by the Reliability Coordinator(s)”.
No
The GOP needs to communicate problems that could impact normal operation.
The subset will be pre-contingency IROL exceedences, post-contingency IROL exceedences, and real-time facilities experiencing SOL exceedences.
Yes
Redundant requirements in separate standards are both confusing and waste resources.
No
No time limit needs to be established. Entities need to be able to plan short term outages, generation and transmission. The Eastern Interconnection presently has an advanced outage notification through the NERC SDX.
No
TOP-001 R2: The phrase “shall coordinate its respective operations known or expected to have a reliability impact on other reliability entities” could cause compliance issues due to the resulting subjectivity of the identification of other reliability entities. Recommend that it replaced with “shall coordinate its respective operations known or expected to have a reliability impact on adjacent reliability entities”. It should be the responsibility of the adjacent reliability entity to further coordinate, if necessary, other appropriate reliability entities. The Measures and VSLs would need to be modified accordingly. TOP-002 R2 uses the word "plan" as a verb, and then it is referenced in R3 as a noun. This is propagated in the Measures and VSLs. Suggest the following wording change in R2: The Transmission Operator shall have a coordinated plan…… TOP-003 R1.1 - suggest that "Long term" be removed and replaced with "Planned". "Long term" could be interpreted to mean an outage that will not occur for quite some time (long lead time), or an outage that will occur sooner but will last for a long time. All outages should be communicated. R1.2 - Disagree with this requirement. We recommend that it be struck. The TO and the BA must be able to specify formats that can be utilized by their processes to ensure reliability.
Individual
James H. Sorrels, Jr.
American Electric Power
Yes
AEP would suggest that the phrase be reinstated with a change of the word “implemented” to “taken into consideration”. It is important that entities not solely rely on emergency assistance when alternatives may be available. The timing itself may necessitate alternative approaches.
Yes
AEP appreciates the removal of redundant requirements, where possible to do so. We do not see the need for the GOP to be involved.
Yes
While it is expected that the Transmission Operators work in conjunction with the Reliability Coordinators to mitigate most SOL violations, a NERC requirement to report all SOL violations seems impractical. The IROLs provide a clear and logical subset of SOLs that should be reported to the RC.
Yes

Please note the typographical error in question 4. TOP-001-3 in question 4 should read TPO-001-2.
No
The current rules for each region are followed today and coordination is done very well. Seams agreements address the coordination across regions. Therefore, a country-wide period is not necessary from a reliability perspective. If it is otherwise determined to be necessary, AEP believes that it should be done at the IROL level since, by definition, these are the situations with wide area impact.
Yes
Individual
Jianmei Chai
Consumers Energy Company
Yes
An Entity can not be required to take actions for another if the requesting entity has not taken all steps available to them to correct the situation.
No
No
Communication of planned or scheduled outages should take place in the planning phase. Communication should be as early in the phase as possible for all TOs GOs and BAs effected by the outage. To have a nationwide standard is too confining and removes possible flexibility that can come from open communication. TOP-003-0 requires communication of outage information on a daily basis.
No
TOP-003-1 R1.1 needs to be more specific in identifying the ‘equipment’ to be considered for inclusion.
Individual
Brent Ingebrigtson

Yes
No
The requirement should state that the Generator Operators should be required to “coordinate” with their respective TOP not simply provide data.
No
All SOL exceedances on the BES should be reported to the RC and corrective actions should be coordinated with the RC.
Yes
No
The RCs already have advance notification requirements which TOPs must follow. Most BES facilities have limited impact on neighboring systems. Depending on the level of notification, this could impose an undue burden on Transmisson Operators and field switching personnel in performing needed maintenance. The Regions should identify a subset of facilities (similar to the ECAR Facility Outage Notification Table) subject to advanced notification requirements. Should a country-wide advance notice time period be established it should only apply to 200kV and above.

Darryl Curtis
Oncor Electric Delivery
Yes
This phrase should be reinstated.
Yes
GOP should be deleted from this requirement.
Yes
Comments: Report all SOLs that require firm load to be dropped to return transmission elements within limits.

No
Comments (including # of days if appropriate): Oncor Electric Delivery does not believe a country-wide notification period is necessary. As each interconnection has it’s unique characteristics, there is no assurance that a common advance notification period would work for all. Additionally, setting a common date within a NERC standard seems inconsistent with the intent of reliability based standards. Advanced notification seems to be more of a market function and is not reliability based.

Nied
Con Edison System Ops
Yes
I justify this by saying that this phrase should already included in an operating agreement between the TO's. ...but, having this wording in the standard as well will serve to ensure that TO's have their documents and agreements up to date.
No
The GOP wording should remain.
Let me start out by saying that ConEd reports all SOL's that occur on its system to the NYISO, our RC/BA/TOP. Only those SOL's should be reported to a higher authority (NPCC and above) that result from the TO operating its system in a state which is not allowed. That is, real time SOL's that arise from the TO operating its system on a post-contingency basis due to an exception granted by its RC should not be reported.
Yes
It should be deleted. I see no need for keeping the R2 wording in there. It's confusing and leaves too much up to interpretation. As stated above, the "coordination of operations" wording in R4 would suffice.
Unless the piece of equipment is in a direct neighboring system, what utility would this offer to a TO? "Operations are already coordinated" amongst neighboring TO's with regard to tie-lines. It would not offer much in the way of information on how we operate our system. However, ConEd already sends notification of all of its approved outages on the Bulk Electric System to the NYISO via email automatically. So, I dont think it would be difficult to do if someone decides that they want 7 or 10 day notifiation on something. If this requirement came into being, the NYISO could then disburse COnEd's outage info to NPCC and rest of the East. A hard-line 7 or 10 day rule will be tough to enforce though. Many outages get approved much closer to the actual date...many within 2 days of the start.
No single concern. Each revision should be analyzed on its own merits.

IROL's only
Yes
No
We do not believe there is a reliability need to establish an industry wide advance notification procedure for transmission outages. We believe that the need for advance notification of transmission outages should be identified completely between the TOP and RC in their outage coordination procedures.
Yes
Individual
Ed Davis
Entergy Services
No
There could be situations in which the TOP requesting support cannot implement comparable procedures. For instance, if reconfiguration from a neighboring system would resolve the situation, but reconfiguration on the requestor’s system would not.
No
The status of large generators can have a reliability impact on other reliability entities, and they should be included in this standard.
Instances where an IROL is exceeded should be required to be reported to the RC. It should be left to the RC and TOP to agree to other SOLs that are important enough to be required to be reported to the RC.
Yes
No
There are processes already in place to ensure that outages are coordinated between affected systems. Creating a nation-wide requirement to set an advance notice time is not in the best interests of reliability. Rather flexibility should be allowed to coordinate and agree upon required maintenance activities that are necessary to ensure continued reliability.
Yes
Individual
Greg Rowland
Duke Energy
Yes
No
We believe it’s critical for the GOP to coordinate operations with the TOP.
Yes
Given that geography varies, system interdependencies and ratings philosophy, TOP/RC should agree on what to report.
Yes
No
This comment form is not the right place to address this issue. We would have significant concerns with the idea – too much to support a requirement that hasn’t been drafted yet. Existing processes are in place between neighboring entities to exchange this type of information.
No
- TOP-001 R2 Need to change “affected” to “adjacent”, and in the VSLs. - TOP-001 R4 Change “other” to “adjacent”, and in the VSLs. - TOP-001 R4 If coordinating means that we’re posting the information on SDX, then we are in agreement. - TOP-001 R6 Need clarification on what Tv means. Will we be able to establish variable Tvs based upon the specific IROLs? - TOP-001 R7 Where has this requirement been moved to, or has it been deleted? If it has been deleted, why? - TOP-002 R1 Need to add (N-1) after Contingency, and in the VSL. - TOP-002 R2 does not require a written plan but R3 requires notification of entities in the plan. - TOP-002 R3 VSLs should be changed back to what they were before this revision. - TOP-003-1 R1 The term “NERC Functional Model” should not be used in a requirement because it reduces clarity, due to fact that the NERC Functional Model is evolving over time.

Ameren
Yes
No
GOPs need to coordinate their activities. For instance, a small tube leak might not mandate an immediate outage for a plant electrically near a known SOL/IROL area. To the extent the GOP and TOP coordinate when the outage to repair this condition will occur, BES reliability benefits.
Yes
No
Agreements (formal or informal) are necessary to describe the conditions under which the coordinated switching in TOP-001 takes place. It will be impossible for Transmission Planners to properly analyze the conditions that can be expected if there are no “rules” for operation.
No
First, the definition of planned outage is anything but an industry standard. So the rules around timing are putting the cart before the horse, And, anything in “days” is not practical given the need to get to short-term planned maintenance and the impacts of weather and forced outages on these planned outages. If a notification time is absolutely deemed necessary, 30 minutes to 1 hour would be workable under a mandatory, enforceable NERC standard framework.
Yes
The team has done a significant amount of work in getting these standards cleaned up. There was too much duplication and uncertainty.
Group
SERC OC Standards Review Group
Jim Griffith
Yes
Also, it is not clear in the context of TOP-001 what kinds of assistance an operator of transmission should give to another Transmission Operator (for example, refer to EOP-001, R1 for clarification)
No
Yes
The subset of SOLs, other than IROLs (which must be reported), should be agreed upon between each Reliability Coordinator and the TOPs within the RC’s reliability area.
Yes
If the SDT agrees with deleting R2, we suggest that R1 should be included in TOP-002 and TOP-004-3 retired.
No
A time limit does not need to be established. Entities need to be able to plan short term outages, both transmission and generation when conditions permit in order to minimize impacts to the reliability of the system. For example, a transmission line in need of maintenance might only be available upon the outage (forced or planned) on a particular generator. With a standard in place, this opportunity would be missed. Delaying maintenance on a transmission line puts it at a greater risk of a forced outage.
Yes
TOP-001 R2 - The phrase "shall coordinate its respective operations known or expected to have a reliability impact on other reliability entities" could cause compliance issues due to the resulting subjectivity of the identification of other reliability entities. We recommend that it replaced with "shall coordinate its respective operations known or expected to have a reliability impact on adjacent reliability entities". It should be the responsibility of the adjacent reliability entity to further coordinate, if necessary, other appropriate reliability entities. The Measures and VSLs would need to be modified accordingly. Top-001, Requirement 4 - we suggest changing “other reliability entities” to “adjacent reliability entities”. TOP-002 R2 uses the word "plan" as a verb, and then it is referenced in R3 as a noun. This is propagated in the Measures and VSLs. We suggest the following wording change in R2: “The Transmission Operator shall have a coordinated plan...... “ TOP-003 R1.2 – We disagree with this requirement and we recommend that it be struck. The TOP and the BA must be able to specify formats that can be utilized by their processes to ensure reliability.
Group
FirstEnergy Corp
Doug Hohlbaugh
Yes

We support reinstating the proposed text and it should be clarified, provided that it can be shown that the action requested to assist the other party will mitigate an adverse reliability problem. FE suggests that the text should indicate "provided that the requesting entity has implemented its comparable emergency procedures capable of lessening or mitigating the impact of the emergency and that the assistance requested will help to alleviate an adverse reliability problem."
No
TOP-001-2 R4 requires the actions of the GOP be coordinated with impacted entities while TOP-003-1 R4 requires the GOP to provide data to the TOP and BAs. These are two completely different aspects of the BES operation and both need to be addressed by a standard.
Yes
The question as written does not lend itself to a yes/no answer, the selection of yes was made to indicate that we agree some subset of SOL, when exceeded, warrants the a TOP notification to the RC. FE believes that the appropriate subset are those SOLs that are associated with a previously defined Interconnection Reliability Operating Limit (IROL) as determined via the FAC-014 reliability standard.
Yes
Yes, we agree with the recommendation to delete TOP-004-4 R2. Since this change would leave only one requirement within the TOP-004-4 standard, we urge the team to consider incorporating the requirement into another standard. One suggestion is consider adding the requirement to standard IRO-005-3 titled "Reliability Coordination — Current Day Operations". This could be added as a new requirement of IRO-005-3 or possibly a sub-requirement of requirement R11 of the IRO-005-3 standard. Alternatively, the requirement could be placed into the TOP-001 standard.
No
We do not believe there is a reliability need to establish a common industry wide lead-time for planned BES facility outages. It should be left to the RC and the applicable entities that it monitors (TOPs, GOPs) to establish agreed upon outage coordination procedures. In fact, it should not be expected that a minimum lead-time must always be rigidly adhered to. Consider that many transmission lines can only be taken out of service during a generator outage. If generator unit experienced a forced outage that would permit certain transmission lines to be maintained, such maintenance should not be delayed to simply adhere to a specific lead-time requirement. The RC's and their monitored entities should be given the flexibility to develop a process that is suitable to meet their needs.
No
The drafting team's response to FE's fifth comment in the Draft 1 Question 12 is not sufficient for us to understand their thought process on the matter. Our prior comment raised a concern with the removal of TOP-007-0 R3 that states, "A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load …" The SDT responded that this matter is covered in EOP-001-0, Requirement R3.3 that states, "R3. Each Transmission Operator and Balancing Authority shall have emergency plans that will enable it to mitigate operating emergencies. At a minimum, Transmission Operator and Balancing Authority emergency plans shall include: … R3.3. The tasks to be coordinated with and among adjacent Transmission Operators and Balancing Authorities." The SDT is proposing to retire PER-001 and FE believes the PER-001 requirement R1 and its associated measure M1.4 should be re-enforced within the TOP standards. This operator authority was a focal point of recent readiness evaluations within the industry and should be explicit within a TOP requirement. We would appreciate further explanation from the SDT if they feel the change is still not required. FE disagrees with the SDT's response to our comment on Draft 1 Q4 which questioned which contingencies are required to be evaluated within the operating horizon. The prior TOP-002-2 requirement R6 stated "R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in system configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements." This concept is lost in the newly proposed TOP standards. In responding the SDT stated that "the Transmission Operator is not limited to single Contingencies or bus faults but must study any and all conditions that may result in exceeding any of its System Operating Limits during anticipated normal conditions as stated in the Requirement. The potential Contingencies to be studied are limited to those spelled out in the TPL standard." FirstEnergy does not agree that there is an expectation to cover all TPL contingencies within the operating horizon. As vetted by industry in the recent proposed and subsequently withdrawn SAR that proposed to evaluate "credible multiple contingencies" it is clear that studies within the planning and operations horizon are distinctly different and that there is no expectation to cover events in real-time or within the operating horizon (next day, next month, through one year out) beyond single contingency. We ask the SDT to clarify their comment in this regard. We would like the SDT to explain why it found the need to introduce the term "each" in requirement R1 of TOP-002-1. As re-worded, the focus of the compliance audit may become too structured on strict adherence to each directive rather than the TOP meeting the intent of the RC's directives. If the wording remains, we believe the VSLs can be better graded and that missing a single directive should not warrant a severe VSL. Many of the proposed VSLs use a quartile approach (0-25%, 25-50%,50%-75% and >75%) of gauging if some reliability action was missed. FERC in its VSL Order dated June 19, 2008 took exception to the quartile approach and felt it violates its Guideline 1 "Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance" see paragraphs 19 through 21. The VSL DT revised the VLS that previously used a quartile score to reflect a 0-5%, 5%-10%, 10-15% and >15% graded VSL approach. Its suggested that the SDT reconsider its use of quartile VSLs. We believe the VSLs for TOP-001-2 R6 violates the Commission's Guideline 4 established in their VSL order. The VSLs are based on the number times the

TOP did not act to mitigate the magnitude and duration of an IROL exceedance within its Tv. However, the associated requirement states “The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL’s Tv.” Note that the requirement talks about “an IROL” in the singular. Thus, failure to act on one occasion is a single violation. Failure to act on two occasions is two separate violations not a higher VSL. We suggest that a binary Severe VSL be selected or that you modify the requirement to consider IROLs in the plural. In TOP-003-1 R1.1 second bullet the SDT introduced a new requirement that for data exchange related to equipment at voltage levels below the BES and left the need for this data at the discretion of the TOP or BA. FirstEnergy believes the inclusion of equipment lower than normal BES levels should not be introduced on an ad-hoc standard by standard basis. Rather, if such equipment is deemed necessary for the reliability of the BES then the Facilities may need to be subject to other reliability standards such as vegetation management, preventative maintenance, etc. Inclusion of such equipment should be a registration issue handled through the Regional Entity and not within individual standard requirements. However, providing such data could be requested and provided on a voluntary basis, but if the equipment is deemed essential for BES reliability other standards likely apply.

Jalal Babik
Yes
As currently written an entity could be found non-compliant for not providing emergency assistance to a requesting entity that is not willing to help itself. That punishes the wrong party.
Yes
We support the change. FERC Codes/Standards of Conduct prohibit transfer of non-public transmission information to ‘marketing entities’. Most staffs on the ‘transmission side’ of the industry (TO, TOP, TP, RC) are reluctant to share any non-public information with those on the ‘generation side’ (GO, GOP) because they are unsure whether or not those staffs are deemed ‘marketing entities’.
Yes
In addition to IROLs, the subset of SOLs that need to be reported should include any other SOL exceedances that the RC requests notification of and, in the Eastern Interconnection, any other SOL exceedances associated with permanent, reliability flowgates as defined in the NERC Book of Flowgates.
Yes
It is not clear what an agreement between TOPs to “specify switching” of tie lines is supposed to be. If it is supposed to be an interconnection agreement, those are usually between Transmission Owners. Requirement R2 can be deleted.
No
(including # of days if appropriate): We don’t recommend a country-wide advance notice. However, we agree that it is within the purview of the Reliability Coordinators to reach agreement with the applicable entity and set outage reporting requirements to meet their reliability assessment needs without the development of a new NERC reliability standard.
Yes
TOP-001 uses the term ‘reliability entities’ in the purpose statement while TOP-003 uses the term ‘functional responsibilities’. The Functional Model uses the term ‘Responsible Entities”. We suggest that NERC and the SDT make every effort to use consistent terms. We continue to have concerns with the current standards review/approval process. Having to make comments on new draft standards that are predicted upon other draft standards that have not been approved is a non-productive process. As stated in the implementation plan “Changes made in this project to TOP-005-1, R1; TOP-007-0, R4 are dependent on corresponding changes being approved in Project 2006-06 Reliability Coordination: • COM-001-1: Telecommunications • COM-002-2: Communications and Coordination • IRO-001-1: Reliability Coordination – Responsibilities and Authorities • IRO-002-1: Reliability Coordination – Facilities • IRO-014-1: Procedures to Support Coordination between Reliability Coordinators • IRO-015-1: Notifications and Information Exchange between Reliability Coordinators • IRO-016-1: Coordination of Real-Time Activities between Reliability Coordinators • PER-004-1: Reliability Coordination – Staffing • PRC-001-1: System Protection Coordination”

Yes
It is expected that further details of emergency assistance to be provided would be covered in Operating Agreements.
No
We believe there are occasions when a GOP may need to take actions that would require coordination with or notification of the RC/TOP/BA or others who could be impacted. At this time it is not clear what other standards could obligate the GOP to do so if the GOP were removed from this requirement.
No
System Operating Limits are meant to “ensure operation within acceptable reliability criteria”. Understanding that there is a subset of more critical SOL’s defined by IROL, we suggest that the TOP should inform the RC of all SOLs and the

actions being taken to address the exceedances which can be accomplished via SCADA or other means of action and communication when necessary.
No
Operating Agreements cover activities other than switching. We believe the requirement should be retained but any duplication eliminated.
No
While we agree in principle with this proposal, it must be recognized that factors affecting equipment outages vary from region to region. Such notification requirements should be established within each region based on the needs of the RC.
No
We disagree with removing the requirement for the TOP to operate within SOLs. We are unable to understand the argument that this requirement will "reduce the operational flexibility by eliminating the TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time." SOLs are determined to set upper bounds beyond which transmission facilities may be overloaded or system voltage may be depressed or the operators will be operating in an unknown state. If such upper bounds are to be ignored to enhance operating flexibility, then why should SOLs be determined in the first place and how do we ensure operating reliability? Further, FAC-014 requires TOPS to develop SOLs, why would we be requiring the TOPs to do so while we suggest that they do not need to operate within the bounds that they themselves develop in the first place? Do the two sets of standards contradict each other? TOP-002-3 M1--Power flow study results will not be available for those days where studies are not required. Those days may be considered pre-studied or a normal “studied” state. How is this to be measured? TOP-002-3 R2, R3 – A plan should be required when the review warrants it and should include both IROL and SOL. In a normal state there may already be existing coordination between reliability entities with no need to re-communicate. TOP-003-1 R1: Reference to the Functional Model in the requirement may not be appropriate. This requirement may be clearer if the specific responsibilities are included. R1.1 “Long Term Outages” should be defined or clarified. What about other outages that are potentially impactive? In general, it is not clear that the data specification includes real time communications or operational planning requirements. The Data Retention change in Section D 1.4 of TOP-003-1, Operational Reliability Data, from 90 calendar days to three calendar years is excessive. Voice recorder designs vary, and some voice recorders are designed to retain data for 90 days. Have data recordings stored longer than 90 days only if requested by the RC or TOP.

No
When a compliance audit is conducted, the compliance auditor will not be evaluating a third party TOP to determine if they implemented all of their comparable procedures prior to requesting emergency assistance. They will simply review if the TOP being audited responded to the request for emergency assistance. If they did not, they are not necessarily in violation of the requirement because the requirement does recognize legal restrictions for not responding. Thus, if a third party TOP requested the audited TOP to shed load but had not done so themselves, the audited TOP may have appropriately and compliantly refused because their state laws and regulations prevent them from shedding load for neighbors unless they are doing the same.
No
What if the unit is a reliability must run unit? With this requirement in place, the GOP may be more proactive in keeping the unit running (i.e. willing to take a greater risk damaging the unit if there is already a problem with the unit). Without

the requirement, the GOP may shut the unit down at the first sign of any problem.
All SOL exceedances should be reported to the Reliability Coordinator. The Reliability Coordinator has the ultimate reliability authority. If the RC is not made aware of an SOL exceedance, how can the RC evaluate if the exceedance is actually approaching an IROL? Further, multiple SOL exceedances can be a sign of a greater reliability problem that the RC needs to rectify.
Yes
No
We do not believe there is a reliability need to establish an industry wide advance notification procedure for transmission outages. We believe that the need for advance notification of transmission outages should be identified completely between the TOP and RC in their outage coordination procedures. In fact, we believe such a requirement could actually be a detriment to reliability. Consider that many transmission lines can only be taken out of service during a generator outage. If the generator were to trip, the transmission line could not be taken out of service for lack of sufficient advance notice delaying the maintenance of the line and, thus, increasing the potential for the line to be forced out. It is not clear what reliability benefit could even be achieved by having an industry wide advance notification requirement. We believe that should such a requirement become a reality, there will be further reliability detriment as TO/TOPs delay maintenance in a struggle to transition to comply with such a requirement.
No
We believe removing the requirements for SOLs in this standard will make it unacceptable to FERC. Thus, the drafting team will have to start over when FERC remands the standard. The VSLs for TOP-001-2 R2 are based on the number of times the TOP did not inform the RC of Emergency conditions. Over what time period does this apply? In perpetuity? From last compliance audit? We believe the VSLs for TOP-001-2 R6 violates the Commission's guideline 4 established in their VSL order. The VSLs are based on the number times the TOP did not act to mitigate the magnitude and duration of an IROL exceedance within its Tv. However, the associated requirement states "The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv." Note that the requirement talks about "an IROL" in the singular. Thus, failure to act on one occasion is a single violation. Failure to act on two occasions is two separate violations not a higher VSL. We suggest that a binary Severe VSL be selected or that you modify the requirement to consider IROLs in the plural. In TOP-002-3, the drafting team should consider making R2 a sub-requirement of R1. Isn't it a sub-component of the assessment the TOP must have in R1? R3 should be made sub-requirement of R2. M1 deviates from R1 in that M1 says that the TOP shall have evidence that it performed an assessment while R1 says it shall have an assessment. Likewise, the VSL differs from the requirement in the same way and should be made to match the requirement. In TOP-003-1, we note that R3 requires the BA to distribute its data specification but there is not a similar requirement to have a data specification like R1 for the TOP. We believe R3 belongs in the BAL standards. We also suggest that the VSLs for R4 and R5 could be graded to include multiple levels. In R4, we believe the additional VSLs could be defined based on the percentage of data that is not supplied. The VSLs for R5 could be graded based on the number TOPs and BAs that the TOP did not supply data and information to. We further believe that the portion of the requirement in R5 that applies to the BA should be moved to the BAL standards. In TOP-004-3, M1 appears to be a measure of non-compliance with R1. Aren't measures supposed to identify how compliance is measured not non-compliance? The VSLs measure non-compliance.

Yes
This is a tough one to answer, there are conceivably two types of timelines for emergencies, e.g., an emergency where response is required within minutes vs. response during a longer period of time. If a response is needed in minutes, such as post-contingency with a facility within a 10 minute emergency rating, there may be no time for a sequential step-by-step process where deleting the phrase is appropriate and entities will need to trust that the TOP is making the correct decisions. If there is time, such as a pre-contingency forecast that an element may exceed a rating, but the contingency has not occurred, then a step-by-step sequential process where the TOP in an emergency state takes action first is more appropriate. How about something like: "provided that, time permitting, the requesting entity has implemented its comparable emergency procedures". Of course this introduces the difficult to measure "time permitting", but maybe this could be clarified as pre-contingency vs. post-contingency
Yes
Yes, it is appropriate to delete GOP from this requirement. However, consider adding a bullet under TOP-003-1 R1.1 that includes planned and unplanned generator capacity changes (which is then referred to in R4), similar to the current TOP-002-2, R14.1.
Yes
We assume "Yes" means we agree that a subset of SOLs should be reported. First, any voltage stability and transient stability limited SOLs should be reported. Second, for thermally limited SOLs, an equipment voltage class threshold for the facility with the thermal limit is probably the easiest to implement, e.g., > 200 kV, and seems consistent with other

standards with this threshold (e.g., PRC 023, FAC-003). We are a bit confused with handling of IROLs, IRO-009-1 seems to make the RC responsible for managing IROLs, and therefore, no reporting of IROLs seems to be needed in TOP-001-2; hence, should SOLs that are IROLs be reported? Note that there seems to be a conflict between this requirement and the requirements of IRO-009-1, e.g., both the TOP and the RC are being held accountable to managing IROLs. This arrangement seems fraught with potential for confusion. We believe only one entity ought to be responsible for managing IROLs, and that entity should probably be the RC. This comment applies to R6 of TOP 001 2, and this comment also applies to the conflict between TOP-004-3 R1 and IRO 009-1 R4, which assign the responsibility of operating within IROL limits to both the RC and TOP. Who has primary responsibility? Who takes leadership in a situation? Is RC primary with TOP back-up?
Yes
If the requirement is deleted, you might want to consider changing the time frame to include the Planning Horizon to clarify that operating procedures / agreements between utilities are required in the long term (e.g., interconnection agreements, etc.), as well as to align with FAC-002 and the TPL standards
Yes
We believe that such a provision is necessary to enable coordination of major maintenance outages to ensure resource adequacy for the region for generation related outages, and to ensure coordination of scheduled transmission outages in a localized area, for seasonal assessment purposes. There are probably two types of maintenance to be addressed, major maintenance schedules, and more minor maintenance due to equipment failure that does not cause an unscheduled outage. First, each region does seasonal assessments, it may be a good idea to tie major maintenance schedules as input into the region’s seasonal assessments, but allow flexibility in the actual schedules of these major maintenance schedules, with a reasonable input time frame to provide that input, e.g., two months before the start of the season. Second, there will always be unexpected maintenance schedules of shorter duration due to equipment failure that does not cause the facility to have an unscheduled outage, but, needs to be corrected. These are much more difficult to coordinate and schedule and may not allow a multi-day advance notice, so, maybe we could make the requirement only apply to major maintenance schedules.
Yes
We generally support the revised standards, but did have a few additional comments: • The data retention is significantly longer than earlier standards, e.g., three years rather than 3 months, and the data retention is not consistent between standards, e.g., TOP-001-2 is one year, TOP-002-3 is six months, TOP-003-1 and TOP-004-3. What is your reasoning behind these changes and the inconsistencies between them? Also, saving daily operating data for three years seems a long time. • TOP-002-3 R1 probably ought to refer to TOP-003-1 as one of the sources of data for the assessments. • Do the standards require current day plans? TOP-002-3 and IRO-004-1 only covers next day. Are we making current day equivalent to real-time, and therefore not requiring a plan for the current day? • TOP-002-3 R1 assigns the same task to the TOP that the RC has in IRO 004 1 R1, although not as confusing as real-time operations with two entities responsible for the same thing, as discussed above in the comments to TOP-001-2, this also has potential for confusion of roles, responsibilities and actions. Should only one entity be responsible for next day plans, e.g., the RC? Or is the distinction that RCs study interfaces, whereas the TOPs assess its entire system? If so, should such a distinction exist?

No
We believe there are occasions when a GOP may need to take actions that would require coordination with or notification of the RC/TOP/BA or others who could be impacted. At this time it is not clear what other standards could obligate the GOP to do so if the GOP were removed from this requirement.
No
System Operating Limits are meant to “ensure operation within acceptable reliability criteria”. Understanding that there is a subset of more critical SOL’s defined by IROL, we suggest that the TOP should inform the RC of all SOLs and the actions being taken to address the exceedances.
No
: No, this requirement should not be deleted. Agreements among TOPs are needed to ensure proper coordination of operational plans and actions. However, we do not agree that “switching of synchronous tie lines” should be specified in the requirement, nor should it be the only action specified in a TOP agreement as there are other items such as coordinating reactive power and voltage support, planned and forced outages, emergency operation, restoration, re-synchronization, etc. that need to be included in the agreement. We suggest this requirement be revised to: “Each Transmission Operator shall have Agreements with directly interconnected Transmission Operators that specifies operation coordination among them.”
No
This should be handled on a local or regional basis. There is a wide diversity of systems in place with reporting

requirements defined, in some cases based in market requirements. It may not be reasonable to place the least common requirement on all entities in NERC.
No
We generally support the direction the SDT is moving but would require consideration of the comments provided in this transmittal. What is replacing TOP-001 R7? The requirement was previously TOP-008-R2, got moved to TOP-001 R7, but now both TOP-001 R7 is deleted and TOP-008 is deleted. Is there still going to be a requirement to use the most restrictive limit when multiple entities have different limits? TOP-003-1 makes reference to functional responsibilities and responsibilities per the NERC Functional Model. We do not agree with these references since it is unclear the status of the NERC Functional Model and how it relates to the NERC Standards. It has been noted that the NERC Functional Model is only for guidance and is not a standard. The Data Retention change in Section D 1.4 of TOP-003-1, Operational Reliability Data, from 90 calendar days to three calendar years is excessive. Voice recorder designs vary, and some are designed to retain data for 90 days. The SDT should take into consideration the storage media. In some cases equipment is changed and the data may not be obtainable, or cost prohibited.

Yes
We agree R2 is not necessary and should be deleted. Additionally, the use of the term "Agreements" is concerning, especially when the additional language requires one to "specify switching".
Yes
Yes
In general, we appreciate the drafting team's work and feel the drafted standards are a positive move towards more simplified requirements. However, we do have some concerns, detailed below. TOP-001 >We feel the new R3 should also be applicable to BAs & GOs. >R4 - The phrase “reliability entities” needs definition. It is not clear who is being referenced. >R6 – consider adding language to include SOLs. TOP-002 >R1- We assume that the use of the defined term “Contingency” implies N-1 contingency planning. Yet, it is not clearly stated as such and therefore open to some interpretation. We recommend adding language to clarify, similar to the current version. >R2 – What is the intent here? Please clarify if planning is intended to entirely prevent the exceedence of an IROL, or to not exceed an IROL Tv. >R3 - The phrase “reliability entities” needs definition. It is not clear who is being referenced. >Deletion of the current R3 raises a concern as to what now requires LSEs and GOPs to coordinate their planning. This can present problems with TOPs and BAs attempting to collect needed data. >Deletion of current R8 – where is this covered elsewhere? TOP-003 >R1.1 “long term” needs more definition; we recommend changing to operating horizon >R1.1 We do not believe it was the drafting team’s intent to require outage reports of all BES components (breakers, etc), nor do we feel that is reasonable. We recommend the addition of a clarifying statement such as: “BES components specified by the Transmission Operator and Balancing Authority.” >R5 uses the phrase “immediate responsibility” – suggest changing this to “responsible for real time operations.” >It is not yet clear where the current R2 and R3 are being moved to. The previous draft indicated they would be moved to IRO standards. Please provide the link to those drafts or the project they are being worked under.

Yes
Yes
We believe this is covered by various other requirements in various other standards and need not be maintained here.
No
System Operating Limits are meant to “ensure operation within acceptable reliability criteria”. Understanding that there is a subset of more critical SOL’s defined by IROL, we suggest that the TOP should inform the RC of all SOLs and the actions being taken to address the exceedances, either through SCADA or other means. This should ensure keeping an eye on SOLs so that cascading into an IROL will not occur.
Yes
We beleive this is sufficiently covered by the Standards in their totality.
No

While we agree in principle with this proposal, it must be recognized that factors affecting equipment outages vary from region to region and, as such, notification requirements should be established within each region based on the needs of the RC. These may be dictated by an entities market structure, which should not be influenced by NERC Standards.
No
We disagree with removing the requirement for the TOP to operate within SOLs. We are unable to understand the argument that this requirement will "reduce the operational flexibility by eliminating the TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time." SOLs are determined to set upper bounds beyond which transmission facilities may be overloaded or system voltage may be depressed or the operators will be operating in an unknown state. If such upper bounds are to be ignored to enhance operating flexibility, then why should SOLs be determined in the first place and how do we ensure operating reliability? Further, FAC-014 requires TOPS to develop SOLs, why would we be requiring the TOPs to do so while we suggest that they do not need to operate within the bounds that they themselves develop in the first place? Do the two sets of standards contradict each other? TOP-002-3 M1--Power flow study results will not be available for those days where studies are not required. Those days may be considered pre-studied or a normal "studied" state. How is this to be measured? TOP-002-3 R2, R3 – A plan should be required when the review warrants it and should include both IROL and SOL. In a normal state there may already be existing coordination between reliability entities with no need to re-communicate. TOP-003-1 R1: Reference to the Functional Model in the requirement may not be appropriate. This requirement may be clearer if the specific responsibilities are included. R1.1 "Long Term Outages" should be defined or clarified. What about other outages that are potentially impactive? In general, it is not clear that the data specification includes real time communications or operational planning requirements. The Data Retention change in Section D 1.4 of TOP-003-1, Operational Reliability Data, from 90 calendar days to three calendar years is excessive. Voice recorder designs vary, and some voice recorders are designed to retain data for 90 days. Have data recordings stored longer than 90 days only if requested by the RC or TOP.
Individual
Armin Klusman
CenterPoint Energy
No
CenterPoint Energy does not see a reliability-related need to establish a continent-wide requirement that specifies the time frames for advance notification of planned outages. Such an approach does not appear practical considering the varying types of outages (circuit breakers, transformers, buses, and lines) and differing long-range and short-range scheduling time frames. As regional practices are already in place, CenterPoint Energy recommends outage scheduling time frames continue to be determined on a regional basis.
No
CenterPoint Energy believes reliability requirements should not include vague and unmeasurable, fill-in-the-blank provisions, like those shown in TOP-003 Requirement 1. R1 states "Each Transmission Operator and Balancing Authority shall have a documented specification for data required to fulfill their respective responsibilities per the NERC Functional Model." In addition, CenterPoint Energy disagrees with the accompaning TOP-003 Requirement 4 that requires numerous entities to comply with fill-in-the-blank provisions developed through R1. As written, R1 leaves it open to the whim of a Transmission Operator or Balancing Authority to conjure a list of required data, without any process for impacted entities to argue the reasonablesss of the data. In R1.1, the SDT has added two examples of required data by stating "Long term outages of Bulk Electric System equipment when they are known" and "Equipment at voltage levels lower than the Bulk Electric System, at the discretion of the Transmission Operator or Balancing Authority". These vague examples leave it to the total discretion of a Transmission Operator or Balancing Authority. CenterPoint Energy recommends rewording Requirement 1 and deleting TOP-003 Requirement 4.

IROLs are a sufficient subset to report.
Yes

No
After the review of the paragraph 1612 of the FERC final order 693, the MRO NSRS would like them to be more specific about the type of outages and consistent with the Reliability Coordinator's requirement; the Reliability Coordinator has a wide-area view. How would this country-wide advance notice improve reliability for two independent systems not physically interconnected?
Yes
See response to question number 5 which is "After the review of the paragraph 1612 of the FERC final order 693, the MRO NSRS would like them to be more specific about the type of outages and consistent with the Reliability Coordinator's requirement; the Reliability Coordinator has a wide-area view. How would this country-wide advance notice improve reliability for two independent systems not physically interconnected?" In TOP-001-1 R1, what is a reliability directive? Should this be defined? The NERC standard COM-002-2 talks about the RC issuing a reliability directive, what is a directive? Not every communication is a directive; please clarify what is a reliability directive. Should each directive start off by stating that it's a directive and that 3 way communication should be used? (In the MISO Business Practice RTO-OP-002 R7, Telephone Communications Protocol, section 3.2.1, when issuing a Reliability Directive the following must be stated: "This is a Reliability Directive and I will need you to repeat it back.") Other MISO Business Practices which discuss reliability directives are RTO-BPM-006-R2 and RTO-EOP-003-R8. The current standard TOP-002-2a includes an interpretation of R11 stating among other things that a "unique" study is not needed for each operating day. The MRO NSRS recommends revising the TOP-002-3 R1 to include this interpretation. For the TOP-003-1 R1, "Each Transmission Operator and Balancing Authority shall have a documented specification for data to support its Real-time monitoring and reliability assessments required to fulfill their respective responsibilities per the NERC Functional Model.", the MRO NSRS believes that this phrase "NERC Functional Model" should be removed since it is unclear as it reads now and it should be replaced with "R1.1, R1.2, and R1.3".

Ben Li
Yes
No
We believe there are occasions when a GOP may need to take actions that would require notification to the RC/TOP/BA or others who could be impacted. This is not following directives; it is for the GOP to make known to others of actions it will take that can have a reliability impact or affect others. If a predetermined list of actions to be communicated is established, then this requirement is not needed. At this time it is not clear what other standards provide this list which collectively obligates the GOP to notify parties that would be impacted. If the requirements for a GOP to communicate and coordinating actions such as removing AVR from service, derating real and reactive capabilities, removing units, protective relays, stabilizers, exciters, etc. out of service, are covered by other standards, then we do not disagree with the proposed deletion.
No
(Please note that CAISO abstained from the following comments) System Operating Limits are meant to ensure operation within acceptable reliability criteria. We understand that IROL is one subset of the SOL's but there is another subset of SOLs that either have special relevance to the TOP, or though not determined to be IROLs at the onset, would have an adverse impact on interconnected system reliability if their exceedances are not mitigated or are simply ignored. We believe the TOPs are in the best position to determine this subset, subject to the concurrence of its Reliability Coordinators.
No
(Note that CAISO abstained from the following comments) No, this requirement should not be deleted. Agreements among TOPs are needed to ensure proper coordination of operational plans and actions. However, we do not agree that "switching of synchronous tie lines" should be specified in the requirement, nor should it be the only action specified in a TOP agreement as there are other items such as coordinating reactive power and voltage support, planned and forced outages, emergency operation, restoration, re-synchronization, etc. that need to be included in the agreement. We suggest this requirement be revised to: "Each Transmission Operator shall have Agreements with directly interconnected Transmission Operators that specifies operation coordination among them."
No
This should be handled on a local or regional basis. There is a wide diversity of systems in place with reporting requirements defined, in some cases based in market requirements. It may not be reasonable to place the least common requirement on all entities in NERC.
No
(1) We believe there is a fundamental principle that TOPs need to operate their systems within SOLs. We propose the SDT re-instate the deleted words from TOP-004 R1 that address SOLs. Recognizing that not all SOLs have an impact on interconnected system reliability if their exceedances are not mitigated within some target time period, we propose the SDT consider qualifying the SOLs which the TOP must operate within along the same line as we propose in our

comments under Q2, namely, the set to be identified by the TOP subject to its RC's concurrence. (Please note that ERCOT abstained from these comments) To more fully address the issue with some SOLs that do not have any reliability impacts, we propose the SDT consider revising the definition of SOL. This will eliminate the need for each TOP to identify this subset and obtain the RC's concurrence. (2) We generally support the direction the SDT is moving but would require consideration of the comments provided in this transmittal. What is replacing TOP-001 R7? The requirement was previously TOP-008-R2, got moved to TOP-001 R7, but now both TOP-001 R7 is deleted and TOP-008 is deleted. Is there still going to be a requirement to use the most restrictive limit when multiple entities have different limits? TOP-003-1 makes reference to functional responsibilities and responsibilities per the NERC Functional Model. We do not agree with these references since it is unclear the status of the NERC Functional Model and how it relates to the NERC Standards. It has been noted that the NERC Functional Model is only for guidance and is not a standard.

Yes
This phrase pre-supposes that the assisting TOP will need to implement emergency procedures in order to assist the requesting TOP. This may not always be the case if the assisting TOP is willing and able to provide assistance without any detrimental impact to its own system. If such an arrangement were to be permitted, the details would be covered in Operating Agreements between the two entities. The SDT may therefore wish to consider catering for this and other possibilities by appending the clause "…subject to the provisions of operating agreements where established…"
No
TOP-001-2 R4, as written, stipulates the need for coordination of operations, i.e., coordination with or notification of the RCs/TOPs/BAs or others who could be impacted by the GOPs actions and operational plans. This is more than merely providing data, which is covered by TOP-003-1 R4. On the latter requirement (TOP-003-1, R4), we are unable to find an explanation for the addition of "….including, but not limited to:" and the bulleted items that follow. It suggests that only the listed information needs to be provided. Requirement R1.1 would serve the intended purpose by simply saying: "A list of required data to be exchanged." We suggest deleting the added wording and bullets.
No
System Operating Limits are meant to "ensure operation within acceptable reliability criteria". Understanding that there is a subset of more critical SOL's defined as IROLs, we suggest that the TOP should inform the RC of all SOLs and the actions being taken to address the exceedances. Further, this question runs counter with the SDT's proposal/decision to remove the requirement for the TOP to operate within SOLs from TOP-004-2, R1, to which we expressed a strong disagreement when commenting on the last posting. If there is no requirement for the TOP to operate within SOLs, then what purpose would it serve for the TOP to report exceeding SOLs? Similarly, what purpose would TOP-002, R1 serve? We suggest the SDT to first establish a principle regarding the need to operate within SOLs, then consider the implication of removing such a requirement from TOP-004-2, R1, when assessing other related requirements such as reporting exceedance (TOP-001, R5), performing day ahead assessment (TOP-002, R1), and developing methodology to calculate SOLs (FAC-014), etc. Finally, if the industry wishes to reduce the potential number of reports, such as those instances in which the SOLs are temporarily exceeded (popping in and out), a time and/or a percentage of SOL threshold may be introduced to achieve this.
No
We agree that specificity language such as "specify switching of synchronous BES tie lines" does not need to be included in R2. However, Operating Agreements cover activities other than switching, such as emergency assistance, switching coordination and communication, voltage/VAR support, system restoration, synchronization, etc. We suggest keeping R2, revising it to eliminate any duplication with other requirements and defining the minimum elements that

should be included in the agreement.
Yes
While we agree in principle with this proposal, it must be recognized that factors affecting equipment outages vary from region to region. Such notification requirements should be established within each region based on the needs of the RC. Our experience in handling short and long term planned outages informs us that the timing and duration of outages will determine the allocation of time and other resource to assess impacts of the outages on the system. For short duration outages, a short term assessment is usually adequate as system conditions and topology are more predictable. The longer the duration of a planned outage, the less predictable are the system conditions and the more likely that other transmission facilities will be out of service during that period.
No
We do not support the revised standards. Our biggest concern is the removal of the requirement for TOP to operate within SOLs as stated in our response to Q#3. As stated in our previous comments we are unable to understand the argument that this requirement will "reduce the operational flexibility by eliminating the TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time." SOLs are determined to set upper bounds beyond which transmission facilities may be overloaded or system voltage may be depressed or the operators will be operating in an unknown state, even before IROL violations become evident. If such upper bounds are to be ignored to enhance operating flexibility, the BES would be very vulnerable to instability, uncontrolled separation, or cascading outages upon the occurrence of subsequent contingencies. The 2003 blackout started off with an SOL violation, and is a good example of how a "localized" problem can propagate thru the interconnected network to become a widespread reliability problem. Further, FAC-014 requires TOPS to develop SOLs, why would we be requiring the TOPs to do so while we suggest that they do not need to operate within the bounds that they themselves develop in the first place? Do the two sets of standards contradict each other? We are also very concerned that R1/R2 in TOP-002 requires the TOP to assess potential exceedence of IROLs only but not SOLs. We feel strongly that R2 in TOP-002 should be revised so that it includes as part of the requirement, preclusion of operating in excess of any SOLs. Further, we believe that all SOLs should be respected in the planning time-frame and in real time with the exception of low likelihood or rare circumstances. WE believe the SDT may have misinterpreted our previous comments. By “system voltage may be depressed” we were saying the voltage may be lower than normal, we did not explicit state or imply that the depressed voltage will cause a collapse which appeared was the basis of the SDT’s response that we were talking about IROL - a subset of SOL. The argument that the TOP is required to calculate SOL but does not need to operate within all the time seems irrational. Operating with SOL all the time and correct exceedance within some defined time period is necessary to ensure reliability. The examples/rationale cited in the question asked in the previous comment form: “The SDT felt that requiring a TOP to operate within all SOLs could effectively reduce the TOPs operational flexibility by eliminating the TOP’s ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time.” was but one such situation. Load shedding to reduce equipment loading is often regarded by TOPs as an exception, i.e., load is not shed to correct a temporary exceedance of equipment rating or a potential exceedance of applicable equipment rating if a contingency were to occur. The rationale is simply to not shed load if exceedance of the facility’s continuous rating is expected to be temporary, or if a contingency were to occur then the expected loading will exceed the concerned equipment’s applicable rating since we do not shed load pre-contingency to avoid shedding load after a contingency has occurred. Operating within an SOL w/o having to shed load under some circumstances is clearly conveyed in our comments (underlined in our comments above). However, without the fundamental requirement to operating within SOL, it opens the door to various kinds of unreliable operating conditions. A first overloaded line, which trips because it loading is not corrected, will cause loading on other lines to increase. There is no certainty as to when and where loading on the remaining system will cease to cause additional tripping. Also, the absence of such a requirement begs the question on the need to: (a) Calculate SOL (FAC-014) in the first place. The SDT’s response that FAC-014 also requires the TOP to “communicate your SOLs to other entities so that they can respect your operational limits” seems a bit unfair since the TOP, as the SOL developer, does not itself need to respect the SOL but others do. And who are these “other entities” within the TOP area that need to respect the SOLs - The BA, GOP or the RC, while the TOP has the transmission reliability authority within its area and takes primary responsibility in transmission reliability (other than the RC who has a wide-area view and has the final authority)? (b) Perform day ahead analysis (TOP-002, R1) without requiring any follow-on actions if the analysis shows that SOLs will be exceeded. Developing SOLs and assessing if they will be exceeded would simply be an academic exercise. We are unable to determine how will not respecting SOLs and not having follow-on actions when SOLs are assessed to be exceeded contribute to reliability? (c) Report exceedances and corrective actions taken (TOP-001, R5). This serves no purpose if a TOP is not required to operate within SOLs. (2) TOP-002, R1 requires a TOP to assess next day operations and identify if any SOLs will be exceeded, and the actions related to SOL stops there. It is irresponsible for the TOP to not do anything such as adjusting outage plans and/or requesting adjustment to resource plans to arrive at operating conditions that will no cause SOLs to be exceeded. A requirement similar to that of R2 (for the IROL) should be developed. The only difference between them would be the need to prepare for load shedding when mitigating measures run out. (3) We noted that some VSLs are graded according to the number of occurrences. Please refer to the recent posting on the revised VSLs for 8 sets of standards, in which the VSLSDT made reference to the June 2008 FERC Order on VSL. In the Order, FERC provided a guideline (among others) that VSLs should not be determined by the number of occurrence. Specifically, FERC’s Guideline #4 stipulates that: Guideline 4 — VSLs should be based on a single violation, not on a cumulative number of violations (unless stated otherwise in the requirement). We suggest the SDT to

revise these VSLs accordingly.
Individual

American Transmission Company
No
The Standard states that the TOP render emergency assistance as requested and available. There are other standards (EOP-001, EOP-005, EOP-008) that require an entity to implement its emergency procedures. If an entity does not implement emergency procedures when required it would be a violation. Adding a sentence here that requires the requesting entity to implement its comparable emergency procedures would be redundant to the other Standards.
No
This requirement does not get into the specifics of what is required of the GOP other than to state that it shall coordinate its operations, which is an important function. TOP-003-1 requires specificity regarding data exchange which is a different and more specific scope than TOP-001-2 R4. The two requirements are very different in scope and are, therefore, not redundant.
No
Again, TOP-001-3 requires general coordination vs. TOP-004-3 has a very specific requirement regarding agreements that specify switching of synchronous BES tie lines. The two requirements are different in scope and are, therefore, not redundant.
No
We support the revised Standards. However, the questions asked do not reflect the current redlined versions of the Standards. We should be commenting on the version of the Standard that the drafting team wants to move forward with. The comment form and questions should match the current redlined version and not ask questions related to a proposed changed version.
Individual
Michael Ayotte
ITC Transmission
No
Generators have an important role in supporting BES reliability and that should be recognized. Taking a unit offline, particularly a must-run unit, should be coordinated with the TOP.
At a minimum, the Transmission Operator should report any SOL that has exceeded or is expected to exceed 30 minutes.
Yes
We would rather see a requirement that the RC specify the time period requirements for planned outages. While not opposed to having a uniform time requirement, we are not sure if it is necessary. If a time period is to be developed, it should consider voltage level, in other words more lead time for higher voltages. In addition, RC specified planned outage time period requirements should apply to transmission and generation outages.

Consideration of Comments on Second Draft of Standards for Real-Time Operations (Project 2007-03)

The Real-time Operations Standard Drafting Team thanks all commenters who submitted comments on the Second Draft of Standards for Real-Time Operations (Project 2007-03). These standards were posted for a 30-day public comment period from April 7, 2009 through May 8, 2009. The stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 37 sets of comments, including comments from more than 130 different people from over 45 companies representing all 10 Industry Segments as shown in the table on the following pages.

http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Due to industry comments, a need to ensure the VSLs conform to the latest set of VSL guidelines, and continuing to respond to Order 693 directives, the following items have been changed:

- TOP-001-2: R2, R3, R4, R5 (added), R6 (added), R7, M2, M5 (added) M6 (added), R1-R8 VSLs
- TOP-002-3: R1, R2, M1, R1-R3 VSLs
- TOP-003-1, R1, R1 bullet #1, R4, R5, M4, M5, data retention for R4 & R5, R1-R5 VSLs
- TOP-004-3: R1 (moved to TOP-001-2, R5), R2 (delete)

The RTO SDT supports the following definition of Reliability Directive drafted by the Reliability Coordination SDT and capitalized the use of this term in TOP-001-2, Requirement R1 and associated measure and violation severity levels. (Comments on the definition are being solicited by the RTO SDT.)

> **Reliability Directive:** A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency

Due to the number of changes, the SDT is recommending a third posting.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at gerry.adamski@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.[1]

[1] The appeals process is in the Reliability Standards Development Procedures: http://www.nerc.com/standards/newstandardsprocess.html.

1. TOP-001-2, R3: Regarding the requirement to provide emergency assistance - The SDT deleted the phrase "provided that the requesting entity has implemented its comparable emergency procedures" from the first iteration of the revised standard. Based on comments received from the first posting, the SDT is considering reinstating this phrase. Do you agree that this phrase should be reinstated?

Summary Consideration:

The vast majority of respondents are suggesting that the phrase be reinstated into the language of the standard. Therefore, even though the SDT does not find any technical merit in restoring the phrase, the phrase has been placed back in the requirement.

Due to industry comments, the SDT has modified the following requirement:

TOP-001-2, R3: Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures unless such actions would violate safety, equipment, regulatory, or statutory requirements.

Organization	Yes or No	Question 1 Comment
Midwest ISO Stakeholders Standards Collaborators	No	When a compliance audit is conducted, the compliance auditor will not be evaluating a third party TOP to determine if they implemented all of their comparable procedures prior to requesting emergency assistance. They will simply review if the TOP being audited responded to the request for emergency assistance. If they did not, they are not necessarily in violation of the requirement because the requirement does recognize legal restrictions for not responding. Thus, if a third party TOP requested the audited TOP to shed load but had not done so themselves, the audited TOP may have appropriately and compliantly refused because their state laws and regulations prevent them from shedding load for neighbors unless they are doing the same.
American Transmission Company	No	The Standard states that the TOP render emergency assistance as requested and available. There are other standards (EOP-001, EOP-005, EOP-008) that require an entity to implement its emergency procedures. If an entity does not implement emergency procedures when required it would be a violation. Adding a sentence here that requires the requesting entity to implement its comparable emergency procedures would be redundant to the other Standards.
Oglethorpe Power Corporation	No	
Xcel Energy	No	
Response: The SDT discussed the comment and understands the issues being presented but the vast majority of respondents are suggesting that the phrase be reinstated into the language of the standard and the SDT has done so.		

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td colspan="3">TOP-001-2, R3: Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures unless such actions would violate safety, equipment, regulatory, or statutory requirements.</td></tr>
<tr><td>WECC</td><td>No</td><td>Leave phrase deleted and current red line indicates that this is only TO to TO assistance, we believe this is too restrictive and reinstate BA's and GO's.</td></tr>
<tr><td colspan="3">Response: The SDT discussed the comment and understands the issues being presented but the vast majority of respondents are suggesting that the phrase be reinstated into the language of the standard and the SDT has done so. The Balancing Authority and Generator Operator must respond to reliability directives as per TOP-001-1, Requirement R1 so that assistance on a Balancing Authority –Transmission Operator or Generation Operator-Transmission Operator level is covered.
TOP-001-2, R3: Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures unless such actions would violate safety, equipment, regulatory, or statutory requirements.</td></tr>
<tr><td>Entergy Services</td><td>No</td><td>There could be situations in which the TOP requesting support cannot implement comparable procedures. For instance, if reconfiguration from a neighboring system would resolve the situation, but reconfiguration on the requestor's system would not.</td></tr>
<tr><td colspan="3">Response: The SDT does not consider comparable procedures to be identical operating actions. The SDT discussed the comment and understands the issues being presented but the vast majority of respondents are suggesting that the phrase be reinstated into the language of the standard and the SDT has done so.
TOP-001-2, R3: Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures unless such actions would violate safety, equipment, regulatory, or statutory requirements.</td></tr>
<tr><td>Independent Electricity System Operator</td><td>Yes</td><td>This phrase pre-supposes that the assisting TOP will need to implement emergency procedures in order to assist the requesting TOP. This may not always be the case if the assisting TOP is willing and able to provide assistance without any detrimental impact to its own system. If such an arrangement were to be permitted, the details would be covered in Operating Agreements between the two entities. The SDT may therefore wish to consider catering for this and other possibilities by appending the clause subject to the provisions of operating agreements where established?</td></tr>
<tr><td>PJM's NERC and Regional Coordination Department</td><td>Yes</td><td>PJM supports the intent and the concept of comparability as intended by this requirement. However, PJM would note that TOP Emergency Procedures are not identical and are designed around the reliablity needs and capabilities of the individual TOP. When dealing with compliance, the interpretation of what is and what is not comparable could have unintended consequences.</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
SERC OC Standards Review Group	Yes	Also, it is not clear in the context of TOP-001 what kinds of assistance an operator of transmission should give to another Transmission Operator (for example, refer to EOP-001, R1 for clarification)
FirstEnergy Corp	Yes	We support reinstating the proposed text and it should be clarified, provided that it can be shown that the action requested to assist the other party will mitigate an adverse reliability problem. FE suggests that the text should indicate provided that the requesting entity has implemented its comparable emergency procedures capable of lessening or mitigating the impact of the emergency and that the assistance requested will help to alleviate an adverse reliability problem.
Dominion Resources Inc.	Yes	As currently written an entity could be found non-compliant for not providing emergency assistance to a requesting entity that is not willing to help itself. That punishes the wrong party.
Northeast Power Coordinating Council	Yes	It is expected that further details of emergency assistance to be provided would be covered in Operating Agreements.
Southern Compnay	Yes	Yes, the phrase should be reinstated. Also, these actions should be coordinated by the Reliability Coordinator(s). Thus, we believe the verbiage should ultimately be: provided that the requesting entity has implemented its comparable emergency procedures as coordinated by the Reliability Coordinator(s).
FMPA and its All Requirements Project Participants, as follows: Kissimmee Utility Authority, City of Vero Beach, Lakeland Electric, Florida Municipal Power Pool	Yes	This is a tough one to answer, there are conceivably two types of timelines for emergencies, e.g., an emergency where response is required within minutes vs. response during a longer period of time. If a response is needed in minutes, such as post-contingency with a facility within a 10 minute emergency rating, there may be no time for a sequential step-by-step process where deleting the phrase is appropriate and entities will need to trust that the TOP is making the correct decisions. If there is time, such as a pre-contingency forecast that an element may exceed a rating, but the contingency has not occurred, then a step-by-step sequential process where the TOP in an emergency state takes action first is more appropriate. How about something like: provided that, time permitting, the requesting entity has implemented its comparable emergency procedures. Of course this introduces the difficult to measure time permitting, but maybe this could be clarified as pre-contingency vs. post-contingency
American Electric Power	Yes	AEP would suggest that the phrase be reinstated with a change of the word implemented to taken into consideration. It is important that entities not solely rely on emergency assistance when alternatives may be available. The timing itself may necessitate alternative approaches.
Consumers Energy Company	Yes	An Entity can not be required to take actions for another if the requesting entity has not taken all steps available to them to correct the situation.

Organization	Yes or No	Question 1 Comment
Con Edison System Ops	Yes	I justify this by saying that this phrase should already included in an operating agreement between the TO's. ...but, having this wording in the standard as well will serve to ensure that TO's have their documents and agreements up to date.
Oncor Electric Delivery	Yes	This phrase should be reinstated.
Manitoba Hydro	Yes	
Duke Energy	Yes	
Ameren	Yes	
Brazos Electric Power Cooperative, Inc.	Yes	
New York Independent System Operator	Yes	
ISO New England Inc.	Yes	
Puget Sound Energy	Yes	
Bonneville Power Administration	Yes	
MRO NERC Standards Review Subcommittee	Yes	
IRC Standards Review Committee	Yes	
PacifiCorp	Yes	
NextEra Energy	Yes	

Organization	Yes or No	Question 1 Comment
Resources, LLC		
Colmac Clarion	Yes	
E.ON U.S.	Yes	

Response: Thank you for your response. The vast majority of respondents are suggesting that the phrase be reinstated into the language of the standard and the SDT has done so.

> **TOP-001-2, R3**: Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures unless such actions would violate safety, equipment, regulatory, or statutory requirements.

2. **TOP-001-2, R4: Regarding the requirement to coordinate operations – Based on comments received from the first posting, the SDT is considering deleting the GOP from this requirement. Comments were received questioning the role of the GOP in reliability analysis beyond providing the data in TOP-003-1, Requirement R4. Do you agree that the GOP should be deleted from this requirement?**

Summary Consideration: There was no consensus on the removal of the Generator Operator; therefore, the SDT agrees to retain the Generator Operator in TOP-001-2, R4.

Organization	Yes or No	Question 2 Comment
FirstEnergy Corp	No	TOP-001-2 R4 requires the actions of the GOP be coordinated with impacted entities while TOP-003-1 R4 requires the GOP to provide data to the TOP and BAs. These are two completely different aspects of the BES operation and both need to be addressed by a standard.
Northeast Power Coordinating Council	No	We believe there are occasions when a GOP may need to take actions that would require coordination with or notification of the RC/TOP/BA or others who could be impacted. At this time it is not clear what other standards could obligate the GOP to do so if the GOP were removed from this requirement.
IRC Standards Review Committee	No	We believe there are occasions when a GOP may need to take actions that would require notification to the RC/TOP/BA or others who could be impacted. This is not following directives; it is for the GOP to make known to others of actions it will take that can have a reliability impact or affect others. If a predetermined list of actions to be communicated is established, then this requirement is not needed. At this time it is not clear what other standards provide this list which collectively obligates the GOP to notify parties that would be impacted. If the requirements for a GOP to communicate and coordinating actions such as removing AVR from service, derating real and reactive capabilities, removing units, protective relays, stabilizers, exciters, etc. out of service, are covered by other standards, then we do not disagree with the proposed deletion.
Southern Company	No	The GOP needs to communicate problems that could impact normal operation.
E.ON U.S.	No	The requirement should state that the Generator Operators should be required to coordinate with their respective TOP not simply provide data.
Entergy Services	No	The status of large generators can have a reliability impact on other reliability entities, and they should be included in this standard.
Duke Energy	No	We believe it’s critical for the GOP to coordinate operations with the TOP.

Organization	Yes or No	Question 2 Comment
Ameren	No	GOPs need to coordinate their activities. For instance, a small tube leak might not mandate an immediate outage for a plant electrically near a known SOL/IROL area. To the extent the GOP and TOP coordinate when the outage to repair this condition will occur, BES reliability benefits.
Brazos Electric Power Cooperative, Inc.	No	If a GOP is to comply with directives from a TOP in R1, then a requirement "to coordinate operations" is needed in R4.
New York Independent System Operator	No	We believe there are occasions when a GOP may need to take actions that would require coordination with or notification of the RC/TOP/BA or others who could be impacted. At this time it is not clear what other standards could obligate the GOP to do so if the GOP were removed from this requirement.
Con Edison System Ops	No	The GOP wording should remain.
Independent Electricity System Operator	No	TOP-001-2 R4, as written, stipulates the need for coordination of operations, i.e., coordination with or notification of the RCs/TOPs/BAs or others who could be impacted by the GOPs actions and operational plans. This is more than merely providing data, which is covered by TOP-003-1 R4.On the latter requirement (TOP-003-1, R4), we are unable to find an explanation for the addition of .including, but not limited to: and the bulleted items that follow. It suggests that only the listed information needs to be provided. Requirement R1.1 would serve the intended purpose by simply saying: A list of required data to be exchanged. We suggest deleting the added wording and bullets.
American Transmission Company	No	This requirement does not get into the specifics of what is required of the GOP other than to state that it shall coordinate its operations, which is an important function. TOP-003-1 requires specificity regarding data exchange which is a different and more specific scope than TOP-001-2 R4. The two requirements are very different in scope and are, therefore, not redundant.
Response: There was no consensus on the removal of the Generator Operator; therefore, the SDT agrees to retain the Generator Operator in TOP-001-2, R4.		
Midwest ISO Stakeholders Standards Collaborators	No	What if the unit is a reliability must run unit? With this requirement in place, the GOP may be more proactive in keeping the unit running (i.e. willing to take a greater risk damaging the unit if there is already a problem with the unit). Without the requirement, the GOP may shut the unit down at the first sign of any problem.
ITC Transmission	No	Generators have an important role in supporting BES reliability and that should be recognized. Taking a unit offline, particularly a must-run unit, should be coordinated with the TOP.
Response: The SDT has agreed to retain the Generator Operator. The SDT believes that the specific issue mentioned in your comments related to a reliability-		

Organization	Yes or No	Question 2 Comment
must-run generator's failure to coordinate operations is a contractual issue rather than a reliability issue.		
SERC OC Standards Review Group	No	
WECC	No	
Consumers Energy Company	No	
Response: Thank you for your response.		
PJM's NERC and Regional Coordination Department	Yes	The data obligations for GOPs to coordinate with its TOPs is covered in TOP-001-2 R1. The operational obligations for GOPs to coordinate with TOPs is covered in IRO-005. IRO-005-3 R1 places a requirement on the RC to have access to operating data (which specifically includes planned generation outages R 1.9). Thus the RC already has the responsibility to get the data in question. Given that the RC has the authority to request and obtain that data, one could argue that there is no need to also mandate that the GOP coordinate the same data, since that obligation already lies with the RC - see R4).
Dominion Resources Inc.	Yes	We support the change. FERC Codes/Standards of Conduct prohibit transfer of non-public transmission information to "marketing entities". Most staffs on the "transmission side" of the industry (TO, TOP, TP, RC) are reluctant to share any non-public information with those on the "generation side" (GO, GOP) because they are unsure whether or not those staffs are deemed "marketing entities".
FMPA and its All Requirements Project Participants, as follows: Kissimmee Utility Authority, City of Vero Beach, Lakeland Electric, Florida Municipal Power Pool	Yes	Yes, it is appropriate to delete GOP from this requirement. However, consider adding a bullet under TOP-003-1 R1.1 that includes planned and unplanned generator capacity changes (which is then referred to in R4), similar to the current TOP-002-2, R14.1.
Colmac Clarion	Yes	Particularly since R2 contains no requirement for communications concerning notification of any problems or communication with the GOP. Likely the first time GOP will be aware of condition is at failure of RC/TO efforts to resolve same.

Organization	Yes or No	Question 2 Comment
American Electric Power	Yes	AEP appreciates the removal of redundant requirements, where possible to do so. We do not see the need for the GOP to be involved.
Oncor Electric Delivery	Yes	GOP should be deleted from this requirement.
ISO New England Inc.	Yes	We believe this is covered by various other requirements in various other standards and need not be maintained here.
Oglethorpe Power Corporation	Yes	
Exelon	Yes	
NextEra Energy Resources, LLC	Yes	
Manitoba Hydro	Yes	
Xcel Energy	Yes	
Puget Sound Energy	Yes	
PacifiCorp	Yes	
Bonneville Power Administration	Yes	
MRO NERC Standards Review Subcommittee	Yes	
Response: Thank you for your response. The SDT agreed to retain the Generator Operator as described in the summary response.		

3. TOP-001-2, R5: Regarding SOL exceedance notification – The consensus of the industry in the first posting was that some subset of SOLs needs to be reported but there was no clear cut agreement on what subset to report to the RC. The subset of SOLs to be reported must be easily identifiable and measurable while supporting reliability. Please remember in your response that as per the NERC Glossary that IROLs are a subset of SOLs. Given that requirement, what subset of SOLs do you feel need to be reported?

Summary Consideration: The majority of responses indicate that some subset of SOL violations should be reported but that not all SOL violations should be reported. Given the majority position stated by industry, the SDT has added TOP-001-1, Requirement R6 and modified TOP-001-1 Requirement R7 to require a subset of SOLs to be reported to the RC.

TOP-001-2, R6. Each Transmission Operator shall inform its Reliability Coordinator of all SOLs which, while not IROLs, support its local area reliability.

TOP-001-2, R7. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOLs as identified in Requirement R6, has been exceeded.

Organization	Yes or No	Question 3 Comment
Northeast Power Coordinating Council	No	System Operating Limits are meant to ensure operation within acceptable reliability criteria. Understanding that there is a subset of more critical SOL's defined by IROL, we suggest that the TOP should inform the RC of all SOLs and the actions being taken to address the exceedances which can be accomplished via SCADA or other means of action and communication when necessary.
ISO New England Inc.	No	System Operating Limits are meant to ensure operation within acceptable reliability criteria. Understanding that there is a subset of more critical SOL's defined by IROL, we suggest that the TOP should inform the RC of all SOLs and the actions being taken to address the exceedances, either through SCADA or other means. This should ensure keeping an eye on SOLs so that cascading into an IROL will not occur.

Response: The majority of responses indicate that some subset of SOL violations should be reported but that not all SOL violations should be reported. Given the majority position stated by industry, the SDT has added TOP-001-1, Requirement R6 and modified TOP-001-1 Requirement R7 to require a subset of SOLs to be reported to the RC.

TOP-001-2, R6. Each Transmission Operator shall inform its Reliability Coordinator of all SOLs which, while not IROLs, support its local area reliability.

TOP-001-2, R7. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOLs as identified in Requirement R6, has been exceeded.

There is nothing in the standard that precludes you from reporting all SOL exceedances to the Reliability Coordinator and SCADA may be used to accomplish this task but the SDT does not feel that it is either warranted to spell out a specific method or to report all SOLs.

Organization	Yes or No	Question 3 Comment
MRO NERC Standards Review Subcommittee	No	IROLs are a sufficient subset to report.
Manitoba Hydro	No	IROL's only
IRC Standards Review Committee	No	(Please note that CAISO abstained from the following comments) System Operating Limits are meant to ensure operation within acceptable reliability criteria. We understand that IROL is one subset of the SOL's but there is another subset of SOLs that either have special relevance to the TOP, or though not determined to be IROLs at the onset, would have an adverse impact on interconnected system reliability if their exceedances are not mitigated or are simply ignored. We believe the TOPs are in the best position to determine this subset, subject to the concurrence of its Reliability Coordinators.
PacifiCorp	No	PacifiCorp has no specific subset of SOLs to suggest, however, they must be clear and easily identifiable and measurable. Suggested subsets should be included in the next comment phase for this SAR.
WECC	No	All SOL's should be reported to the RC
E.ON U.S.	No	All SOL exceedances on the BES should be reported to the RC and corrective actions should be coordinated with the RC.
New York Independent System Operator	No	System Operating Limits are meant to ensure operation within acceptable reliability criteria. Understanding that there is a subset of more critical SOL's defined by IROL, we suggest that the TOP should inform the RC of all SOLs and the actions being taken to address the exceedances.
Bonneville Power Administration		No preference, we report identified WECC rated paths.
NextEra Energy Resources, LLC		No comment.
PJM's NERC and Regional Coordination Department		PJM agrees that reporting should be based upon and restricted to reliability issues. Given the broad scope of the term SOL as defined in the NERC Glossary, PJM agrees that the requirement should be limited to a subset of the SOLsPJM proposes: 1. The TOP requirement on limit reporting parallel the RC requirement on IROLs 2. The TOP report violations (not exceedences) of any limit predefined by the TOP to be an essential limit (i.e. for a defined local condition that is deemed by the TOP to be of special concern and is not covered by any

Organization	Yes or No	Question 3 Comment
		predefined IROL). This approach provides a TOP the flexibility, when appropriate, to go beyond the definition of BES and to use reliability considerations rather than arbitary formulae to drive its operational reporting.
Midwest ISO Stakeholders Standards Collaborators		All SOL exceedances should be reported to the Reliability Coordinator. The Reliability Coordinator has the ultimate reliability authority. If the RC is not made aware of an SOL exceedance, how can the RC evaluate if the exceedance is actually approaching an IROL? Further, multiple SOL exceedances can be a sign of a greater reliability problem that the RC needs to rectify.
Southern Company		The subset will be pre-contingency IROL exceedences, post-contingency IROL exceedences, and real-time facilities experiencing SOL exceedences.
Con Edison System Ops		Let me start out by saying that ConEd reports all SOL's that occur on its system to the NYISO, our RC/BA/TOP.Only those SOL's should be reported to a higher authority (NPCC and above) that result from the TO operating its system in a state which is not allowed. That is, real time SOL's that arise from the TO operating its system on a post-contingency basis due to an exception granted by its RC should not be reported.
Entergy Services		Instances where an IROL is exceeded should be required to be reported to the RC. It should be left to the RC and TOP to agree to other SOLs that are important enough to be required to be reported to the RC.
ITC Transmission		At a minimum, the Transmission Operator should report any SOL that has exceeded or is expected to exceed 30 minutes.
SERC OC Standards Review Group	Yes	The subset of SOLs, other than IROLs (which must be reported), should be agreed upon between each Reliability Coordinator and the TOPs within the RCs reliability area.
FirstEnergy Corp	Yes	The question as written does not lend itself to a yes/no answer, the selection of yes was made to indicate that we agree some subset of SOL, when exceeded, warrants the a TOP notification to the RC. FE believes that the appropriate subset are those SOLs that are associated with a previously defined Interconnection Reliability Operating Limit (IROL) as determined via the FAC-014 reliability standard.
Dominion Resources Inc.	Yes	In addition to IROLs, the subset of SOLs that need to be reported should include any other SOL exceedances that the RC requests notification of and, in the Eastern Interconnection, any other SOL exceedances associated with permanent, reliability flowgates as defined in the NERC Book of Flowgates.
FMPA and its All Requirements Project Participants, as follows:	Yes	We assume “Yes” means we agree that a subset of SOLs should be reported. First, any voltage stability and transient stability limited SOLs should be reported. Second, for thermally limited SOLs, an equipment voltage

Organization	Yes or No	Question 3 Comment
Kissimmee Utility Authority, City of Vero Beach, Lakeland Electric, Florida Municipal Power Pool		class threshold for the facility with the thermal limit is probably the easiest to implement, e.g., > 200 kV, and seems consistent with other standards with this threshold (e.g., PRC 023, FAC-003). We are a bit confused with handling of IROLs, IRO-009-1 seems to make the RC responsible for managing IROLs, and therefore, no reporting of IROLs seems to be needed in TOP-001-2; hence, should SOLs that are IROLs be reported?Note that there seems to be a conflict between this requirement and the requirements of IRO-009-1, e.g., both the TOP and the RC are being held accountable to managing IROLs. This arrangement seems fraught with potential for confusion. We believe only one entity ought to be responsible for managing IROLs, and that entity should probably be the RC. This comment applies to R6 of TOP 001 2, and this comment also applies to the conflict between TOP-004-3 R1 and IRO 009-1 R4, which assign the responsibility of operating within IROL limits to both the RC and TOP. Who has primary responsibility? Who takes leadership in a situation? Is RC primary with TOP back-up?
American Electric Power	Yes	While it is expected that the Transmission Operators work in conjunction with the Reliability Coordinators to mitigate most SOL violations, a NERC requirement to report all SOL violations seems impractical. The IROLs provide a clear and logical subset of SOLs that should be reported to the RC.
Oncor Electric Delivery	Yes	Comments: Report all SOLs that require firm load to be dropped to return transmission elements within limits.
Duke Energy	Yes	Given that geography varies, system interdependencies and ratings philosophy, TOP/RC should agree on what to report.
Brazos Electric Power Cooperative, Inc.	Yes	The IROL subset needs to be reported.
Puget Sound Energy	Yes	Interconnections or major paths as specified by the region only
Response: The majority of responses indicate that some subset of SOL violations should be reported but that not all SOL violations should be reported. Given the majority position stated by industry, the SDT has added TOP-001-1, Requirement R6 and modified TOP-001-1 Requirement R7 to require a subset of SOLs to be reported to the RC. **TOP-001-2, R6**. Each Transmission Operator shall inform its Reliability Coordinator of all SOLs which, while not IROLs, support its local area reliability. **TOP-001-2, R7**. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOLs as identified in Requirement R6, has been exceeded.		
Independent Electricity System Operator	No	System Operating Limits are meant to ensure operation within acceptable reliability criteria. Understanding that there is a subset of more critical SOL's defined as IROLs, we suggest that the TOP should inform the RC of all

Organization	Yes or No	Question 3 Comment
		SOLs and the actions being taken to address the exceedances.Further, this question runs counter with the SDT's proposal/decision to remove the requirement for the TOP to operate within SOLs from TOP-004-2, R1, to which we expressed a strong disagreement when commenting on the last posting. If there is no requirement for the TOP to operate within SOLs, then what purpose would it serve for the TOP to report exceeding SOLs? Similarly, what purpose would TOP-002, R1 serve? We suggest the SDT to first establish a principle regarding the need to operate within SOLs, then consider the implication of removing such a requirement from TOP-004-2, R1, when assessing other related requirements such as reporting exceedance (TOP-001, R5), performing day ahead assessment (TOP-002, R1), and developing methodology to calculate SOLs (FAC-014), etc. Finally, if the industry wishes to reduce the potential number of reports, such as those instances in which the SOLs are temporarily exceeded (popping in and out), a time and/or a percentage of SOL threshold may be introduced to achieve this.
Response: The majority of responses indicate that some subset of SOL violations should be reported but that not all SOL violations should be reported. Given the majority position stated by industry, the SDT has added TOP-001-1, Requirement R6 and modified TOP-001-1 Requirement R7 to require a subset of SOLs to be reported to the RC. **TOP-001-2, R6**. Each Transmission Operator shall inform its Reliability Coordinator of all SOLs which, while not IROLs, support its local area reliability. **TOP-001-2, R7**. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOLs as identified in Requirement R6, has been exceeded. The SDT does not plan to reintroduce a requirement to operate within all SOLs. The SDT believes that the true reliability requirement is to operate within IROLs and that non-IROL SOLs are a local operating issue. Further, no other commenters have expressed this concern.		
Colmac Clarion	Yes	Assume this is System Operating Limit and Interconnect Reliability Operating Limit (need to cite for first time acronym use as was done with 'BES' in purpose statement). Unsure of exact setpoint of reporting, but would likely be at anytime load approaches or exceeds planned or immediately available generation; perhaps within 2-5% greater then parity.
Response: The majority of responses indicate that some subset of SOL violations should be reported but that not all SOL violations should be reported. Given the majority position stated by industry, the SDT has modified Requirement R7 to require a subset of SOLs to be reported to the RC. To satisfy the concerns expressed by the minority, the SDT will make that subset of SOLs include the any non-IROL SOLs that the RC identifies as required to be reported to it. The requirement will further specify that this communication may be accomplished through SCADA to reduce communication burdens. **TOP-001-2, R6**. Each Transmission Operator shall inform its Reliability Coordinator of all SOLs which, while not IROLs, support its local area reliability. **TOP-001-2, R7**. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOLs as identified in Requirement R6, has been exceeded.		

Organization	Yes or No	Question 3 Comment
The drafting team added the full term, “System Operating Limits” as suggested.		
Ameren	Yes	
Response: Thank you for your response.		

4. TOP-004-3, R2: Regarding Agreements on switching – Based on comments received from the first posting, the SDT is considering deleting this requirement. TOP-001-3, Requirement R4 already requires coordination of operations. Given that requirement, is TOP-004-3, Requirement R2 still necessary? Do you agree that TOP-004-3, Requirement R2 can be deleted?

Summary Consideration: The requirements of Reliability Standards should specify "What" is to be done to ensure reliability. The SDT feels that operating agreements may be one example of "How" Reliability Entities work to coordinate operations, but does not feel Reliability Standards should restrict the industry participants with regard to the various methods that may be used to ensure coordination is effected. The majority of respondents agree with this position and that the requirement should be deleted. In the next posting, TOP-004-3, Requirement R2 will be deleted.

In addition, since there would only be one requirement left in TOP-004-3, Requirement R1 has been moved to TOP-001-2, Requirement R5.

Organization	Yes or No	Question 4 Comment
Northeast Power Coordinating Council	No	Operating Agreements cover activities other than switching. We believe the requirement should be retained but any duplication eliminated.
Response: The SDT agrees that agreements may cover activities other than switching. The requirements of Reliability Standards should specify "What" is to be done to ensure reliability. The SDT feels that operating agreements may be one example of "How" Reliability Entities work to coordinate operations, but does not feel Reliability Standards should restrict the industry participants with regard to the various methods that may be used to ensure coordination is effected.		
IRC Standards Review Committee	No	(Note that CAISO abstained from the following comments)No, this requirement should not be deleted. Agreements among TOPs are needed to ensure proper coordination of operational plans and actions. However, we do not agree that "switching of synchronous tie lines" should be specified in the requirement, nor should it be the only action specified in a TOP agreement as there are other items such as coordinating reactive power and voltage support, planned and forced outages, emergency operation, restoration, re-synchronization, etc. that need to be included in the agreement. We suggest this requirement be revised to: "Each Transmission Operator shall have Agreements with directly interconnected Transmission Operators that specifies operation coordination among them."
Response: The SDT believes you have hit upon precisely the concern it has. The proposed TOP-001-2, Requirement R4 requires coordination of operations with other Reliability Entities when operations are known or expected to have a reliability impact upon other Reliability Entities. The SDT recognizes that having an agreement in place specifying switching of synchronous BES tie lines, per the content of TOP-004-3, Requirement R2 is a subject that rightfully should be included with the coordination that is required by TOP-001-2, Requirement R4. Conversely, the full coordination of operations cannot be included within the more narrowly defined scope of coverage of TOP-004-3, Requirement R2. Further the SDT recognizes that the scope and number of individual agreements, which may be needed to ensure that all operations are fully coordinated for all operations known or expected to have a reliability impact upon other Reliability Entities is highly likely to vary greatly from region to region or organizational arrangement to organizational arrangement. Thus, the SDT does not feel it is appropriate, nor even feasible, to try to list in the Reliability Standards all the individual types of agreements which may be required. "What" is needed is a requirement that all Reliability Entities properly		

Organization	Yes or No	Question 4 Comment
and adequately coordinate operations with other reliability entities. Having agreements of various types may be one example of "How" that coordination is put into place.		
WECC	No	We believe there is a need for clear agreements
Ameren	No	Agreements (formal or informal) are necessary to describe the conditions under which the coordinated switching in TOP-001 takes place. It will be impossible for Transmission Planners to properly analyze the conditions that can be expected if there are no "rules" for operation.
Brazos Electric Power Cooperative, Inc.	No	Either leave TOP-004-3, R2 as is or move a requirement for an Agreement into TOP-001-3, R4.
Response: The SDT cannot disagree that agreements may be appropriate, depending upon the relevant regional requirements and organizational arrangements. However, the SDT believes that "What" is required is coordination of operations. The SDT further believes that agreements may be an example of "How" coordination is accomplished, but not necessarily the only way.		
New York Independent System Operator	No	No, this requirement should not be deleted. Agreements among TOPs are needed to ensure proper coordination of operational plans and actions. However, we do not agree that switching of synchronous tie lines should be specified in the requirement, nor should it be the only action specified in a TOP agreement as there are other items such as coordinating reactive power and voltage support, planned and forced outages, emergency operation, restoration, re-synchronization, etc. that need to be included in the agreement. We suggest this requirement be revised to: Each Transmission Operator shall have Agreements with directly interconnected Transmission Operators that specifies operation coordination among them.
Response: The SDT agrees with you that switching should not be the only action specified for agreement. The SDT cannot disagree that agreements may be appropriate, depending upon the relevant regional requirements and organizational arrangements. However, the SDT believes that "What" is required is coordination of operations. The SDT further believes that agreements may be an example of "How" coordination is accomplished, but not necessarily the only way. The SDT does not believe it is possible to list all the possible ways of "How" a requirement may be met.		
Independent Electricity System Operator	No	We agree that specificity language such as specify switching of synchronous BES tie lines does not need to be included in R2. However, Operating Agreements cover activities other than switching, such as emergency assistance, switching coordination and communication, voltage/VAR support, system restoration, synchronization, etc. We suggest keeping R2, revising it to eliminate any duplication with other requirements and defining the minimum elements that should be included in the agreement.
Response: The SDT agrees with you that switching should not be the only action specified for agreement. The SDT cannot disagree that agreements may be		

Organization	Yes or No	Question 4 Comment
appropriate, depending upon the relevant regional requirements and organizational arrangements. However, the SDT believes that "What" is required is coordination of operations. The SDT further believes that agreements may be an example of "How" coordination is accomplished, but not necessarily the only way. The SDT does not believe it is possible to list all the possible ways of "How" a requirement may be met. The SDT does not believe that an agreement necessarily equates to coordination, although, depending upon organizational arrangements and relationships, agreements may be an appropriate part of "How" coordination is effected.		
American Transmission Company	No	Again, TOP-001-3 requires general coordination vs. TOP-004-3 has a very specific requirement regarding agreements that specify switching of synchronous BES tie lines. The two requirements are different in scope and are, therefore, not redundant.
Response: The SDT agrees that an agreement and coordination differ in scope. Whereas coordination is "What" is required to ensure reliability, an agreement may be part of "How" coordination is effected.		
SERC OC Standards Review Group	Yes	If the SDT agrees with deleting R2, we suggest that R1 should be included in TOP-002 and TOP-004-3 retired.
FirstEnergy Corp	Yes	Yes, we agree with the recommendation to delete TOP-004-4 R2. Since this change would leave only one requirement within the TOP-004-4 standard, we urge the team to consider incorporating the requirement into another standard. One suggestion is consider adding the requirement to standard IRO-005-3 titled "Reliability Coordination - Current Day Operations". This could be added as a new requirement of IRO-005-3 or possibly a sub-requirement of requirement R11 of the IRO-005-3 standard. Alternatively, the requirement could be placed into the TOP-001 standard.
Response: The SDT agrees and has moved TOP-004-3, R1 to TOP-001-2, R5.		
FMPA and its All Requirements Project Participants, as follows: Kissimmee Utility Authority, City of Vero Beach, Lakeland Electric, Florida Municipal Power Pool	Yes	If the requirement is deleted, you might want to consider changing the time frame to include the Planning Horizon to clarify that operating procedures / agreements between utilities are required in the long term (e.g., interconnection agreements, etc.), as well as to align with FAC-002 and the TPL standards
Response: Since switching of synchronous BES tie lines is an operations activity that may be included in the higher level "operations known or expected to have a reliability impact on other reliability entities", the SDT believes that the proposed Time Horizons proposed are appropriate. The Planning Horizon is applicable to activities more than one year in the future, and, therefore switching activities are not expected to have a reliability impact upon other entities in that Time Horizon. No change made.		
Exelon	Yes	Is there a typo in the question? TOP-001 does not have a rev 3. Assuming the intent is to refer to TOP-001-2,

Organization	Yes or No	Question 4 Comment
		R4 we agree.
American Electric Power	Yes	Please note the typographical error in question 4. TOP-001-3 in question 4 should read TPO-001-2.
Response: You are correct – the reference should have been TOP-001-2.		
Dominion Resources Inc.	Yes	It is not clear what an agreement between TOPs to "specify switching" of tie lines is supposed to be. If it is supposed to be an interconnection agreement, those are usually between Transmission Owners. Requirement R2 can be deleted.
Xcel Energy	Yes	We agree R2 is not necessary and should be deleted. Additionally, the use of the term "Agreements" is concerning, especially when the additional language requires one to "specify switching".
Midwest ISO Stakeholders Standards Collaborators	Yes	
MRO NERC Standards Review Subcommittee	Yes	
PacifiCorp	Yes	
Southern Company	Yes	Redundant requirements in separate standards are both confusing and waste resources.
NextEra Energy Resources, LLC	Yes	
Colmac Clarion	Yes	
E.ON U.S.	Yes	
Con Edison System Ops	Yes	It should be deleted. I see no need for keeping the R2 wording in there. It's confusing and leaves too much up to interpretation. As stated above, the "coordination of operations" wording in R4 would suffice.
Manitoba Hydro	Yes	
Entergy Services	Yes	

Organization	Yes or No	Question 4 Comment
Duke Energy	Yes	
ISO New England Inc.	Yes	We beleive this is sufficiently covered by the Standards in their totality.
Puget Sound Energy	Yes	
ITC Transmission	Yes	
Bonneville Power Administration	Yes	
PJM's NERC and Regional Coordination Department	Yes	PJM agrees that there is no need to include a requirement that focuses on switching procedures.
Response: The SDT thanks you for your support.		

5. The RTO SDT is attempting to respond to a directive in FERC Order 693 where a specific country-wide advance notice time period for planned outage notification would be established. Prior to writing such a requirement, the RTO SDT is polling the industry to see if it is needed and what the time period would be. Please indicate if you agree with such a provision. If you agree then please provide a number of days that you would consider appropriate for such advance notice, e.g., 7 days. If you disagree, then please state specific reasons for your disagreement.

Summary Consideration: Order 693, paragraph 1621 stated: "We direct the ERO to modify the Reliability Standard to incorporate an appropriate lead time for planned outages." The SDT posed this question as a fact finding exercise in order to assist them in making a decision on how to respond to the FERC directive. In that regard, the SDT thanks all those who took the time and effort to explain their reasoning as part of their comments. The majority of respondents indicated that they do not feel that there is a reliability based need for such a North American requirement. Several respondents pointed out that such a requirement (if needed at all for reliability) would be better suited to a regional standard and several others stated that such requirements already exist in their particular regions.

After reviewing the industry comments, the SDT concluded that TOP-001-1, Requirement R4 adequately covers this issue. The SDT bases this position on the requirement which includes the Operations Planning Time Horizon that covers the period from one day to one year. The requirement mandates that all plans are coordinated. The SDT interprets this to include planned outages when they are known.

Therefore, the SDT will not be drafting an additional requirement for a national standard advance notice time period for planned outage notification.

Organization	Yes or No	Question 5 Comment (including # of days if appropriate):
PJM's NERC and Regional Coordination Department	No	A mandated common time-period would likely conflict with some already FERC-approved procedures. Moreover, a common timing requirement will likely as reduce the benefits and flexibility of some procedures, as it would provide benefits to others.
Consumers Energy Company	No	Communication of planned or scheduled outages should take place in the planning phase. Communication should be as early in the phase as possible for all TOs GOs and BAs effected by the outage. To have a nationwide standard is too confining and removes possible flexibility that can come from open communication. TOP-003-0 requires communication of outage information on a daily basis.
SERC OC Standards Review Group	No	A time limit does not need to be established. Entities need to be able to plan short term outages, both transmission and generation when conditions permit in order to minimize impacts to the reliability of the system. For example, a transmission line in need of maintenance might only be available upon the outage (forced or planned) on a particular generator. With a standard in place, this opportunity would be missed. Delaying maintenance on a transmission line puts it at a greater risk of a forced outage.

Organization	Yes or No	Question 5 Comment (including # of days if appropriate):
FirstEnergy Corp	No	We do not believe there is a reliability need to establish a common industry wide lead-time for planned BES facility outages. It should be left to the RC and the applicable entities that it monitors (TOPs, GOPs) to establish agreed upon outage coordination procedures. In fact, it should not be expected that a minimum lead-time must always be rigidly adhered to. Consider that many transmission lines can only be taken out of service during a generator outage. If generator unit experienced a forced outage that would permit certain transmission lines to be maintained, such maintenance should not be delayed to simply adhere to a specific lead-time requirement. The RC's and their monitored entities should be given the flexibility to develop a process that is suitable to meet their needs.
Dominion Resources Inc.	No	(including # of days if appropriate): We don't recommend a country-wide advance notice. However, we agree that it is within the purview of the Reliability Coordinators to reach agreement with the applicable entity and set outage reporting requirements to meet their reliability assessment needs without the development of a new NERC reliability standard.
Northeast Power Coordinating Council	No	While we agree in principle with this proposal, it must be recognized that factors affecting equipment outages vary from region to region. Such notification requirements should be established within each region based on the needs of the RC.
Midwest ISO Stakeholders Standards Collaborators	No	We do not believe there is a reliability need to establish an industry wide advance notification procedure for transmission outages. We believe that the need for advance notification of transmission outages should be identified completely between the TOP and RC in their outage coordination procedures. In fact, we believe such a requirement could actually be a detriment to reliability. Consider that many transmission lines can only be taken out of service during a generator outage. If the generator were to trip, the transmission line could not be taken out of service for lack of sufficient advance notice delaying the maintenance of the line and, thus, increasing the potential for the line to be forced out. It is not clear what reliability benefit could even be achieved by having an industry wide advance notification requirement. We believe that should such a requirement become a reality, there will be further reliability detriment as TO/TOPs delay maintenance in a struggle to transition to comply with such a requirement.
MRO NERC Standards Review Subcommittee	No	After the review of the paragraph 1612 of the FERC final order 693, the MRO NSRS would like them to be more specific about the type of outages and consistent with the Reliability Coordinator's requirement; the Reliability Coordinator has a wide-area view. How would this country-wide advance notice improve reliability for two independent systems not physically interconnected?
IRC Standards Review Committee	No	This should be handled on a local or regional basis. There is a wide diversity of systems in place with reporting requirements defined, in some cases based in market requirements. It may not be reasonable to place the least common requirement on all entities in NERC.
Southern Compnay	No	No time limit needs to be established. Entities need to be able to plan short term outages, generation and transmission.

Organization	Yes or No	Question 5 Comment (including # of days if appropriate):
		The Eastern Interconnection presently has an advanced outage notification through the NERC SDX.
American Electric Power	No	The current rules for each region are followed today and coordination is done very well. Seams agreements address the coordination across regions. Therefore, a country-wide period is not necessary from a reliability perspective. If it is otherwise determined to be necessary, AEP believes that it should be done at the IROL level since, by definition, these are the situations with wide area impact.
E.ON U.S.	No	The RCs already have advance notification requirements which TOPs must follow. Most BES facilities have limited impact on neighboring systems. Depending on the level of notification, this could impose an undue burden on Transmisson Operators and field switching personnel in performing needed maintenance. The Regions should identify a subset of facilities (similar to the ECAR Facility Outage Notification Table) subject to advanced notification requirements. Should a country-wide advance notice time period be established it should only apply to 200kV and above.
Oncor Electric Delivery	No	Comments (including # of days if appropriate): Oncor Electric Delivery does not believe a country-wide notification period is necessary. As each interconnection has it's unique characteristics, there is no assurance that a common advance notification period would work for all. Additionally, setting a common date within a NERC standard seems inconsistent with the intent of reliability based standards. Advanced notification seems to be more of a market function and is not reliability based.
Manitoba Hydro	No	We do not believe there is a reliability need to establish an industry wide advance notification procedure for transmission outages. We believe that the need for advance notification of transmission outages should be identified completely between the TOP and RC in their outage coordination procedures.
Entergy Services	No	There are processes already in place to ensure that outages are coordinated between affected systems. Creating a nation-wide requirement to set an advance notice time is not in the best interests of reliability. Rather flexibility should be allowed to coordinate and agree upon required maintenance activities that are necessary to ensure continued reliability.
Duke Energy	No	This comment form is not the right place to address this issue. We would have significant concerns with the idea too much to support a requirement that hasn't been drafted yet. Existing processes are in place between neighboring entities to exchange this type of information.
Ameren	No	First, the definition of planned outage is anything but an industry standard. So the rules around timing are putting the cart before the horse, And, anything in days is not practical given the need to get to short-term planned maintenance and the impacts of weather and forced outages on these planned outages. If a notification time is absolutely deemed necessary, 30 minutes to 1 hour would be workable under a mandatory, enforceable NERC standard framework.

Organization	Yes or No	Question 5 Comment (including # of days if appropriate):
Brazos Electric Power Cooperative, Inc.	No	At this time I see no reliability benefit for this requirement.
New York Independent System Operator	No	This should be handled on a local or regional basis. There is a wide diversity of systems in place with reporting requirements defined, in some cases based in market requirements. It may not be reasonable to place the least common requirement on all entities in NERC.
ISO New England Inc.	No	While we agree in principle with this proposal, it must be recognized that factors affecting equipment outages vary from region to region and, as such, notification requirements should be established within each region based on the needs of the RC. These may be dictated by an entities market structure, which should not be influenced by NERC Standards.
CenterPoint Energy	No	CenterPoint Energy does not see a reliability-related need to establish a continent-wide requirement that specifies the time frames for advance notification of planned outages. Such an approach does not appear practical considering the varying types of outages (circuit breakers, transformers, buses, and lines) and differing long-range and short-range scheduling time frames. As regional practices are already in place, CenterPoint Energy recommends outage scheduling time frames continue to be determined on a regional basis.
Con Edison System Ops		Unless the piece of equipment is in a direct neighboring system, what utility would this offer to a TO? "Operations are already coordinated" amongst neighboring TO's with regard to tie-lines. It would not offer much in the way of information on how we operate our system.However, ConEd already sends notification of all of its approved outages on the Bulk Electric System to the NYISO via email automatically. So, I dont think it would be difficult to do if someone decides that they want 7 or 10 day notifiation on something. If this requirement came into being, the NYISO could then disburse COnEd's outage info to NPCC and rest of the East.A hard-line 7 or 10 day rule will be tough to enforce though. Many outages get approved much closer to the actual date...many within 2 days of the start.
ITC Transmission		We would rather see a requirement that the RC specify the time period requirements for planned outages. While not opposed to having a uniform time requirement, we are not sure if it is necessary. If a time period is to be developed, it should consider voltage level, in other words more lead time for higher voltages. In addition, RC specified planned outage time period requirements should apply to transmission and generation outages.
WECC	Yes	We believe outage notification to the RC for all equipment 100kV and above, and all generator outges of 50MW and above should be a mininum of 96 hours notice in advance.
FMPA and its All Requirements Project Participants, as follows:	Yes	We believe that such a provision is necessary to enable coordination of major maintenance outages to ensure resource adequacy for the region for generation related outages, and to ensure coordination of scheduled transmission outages in a localized area, for seasonal assessment purposes. There are probably two types of maintenance to be addressed,

Organization	Yes or No	Question 5 Comment (including # of days if appropriate):
Kissimmee Utility Authority, City of Vero Beach, Lakeland Electric, Florida Municipal Power Pool		major maintenance schedules, and more minor maintenance due to equipment failure that does not cause an unscheduled outage. First, each region does seasonal assessments, it may be a good idea to tie major maintenance schedules as input into the region's seasonal assessments, but allow flexibility in the actual schedules of these major maintenance schedules, with a reasonable input time frame to provide that input, e.g., two months before the start of the season. Second, there will always be unexpected maintenance schedules of shorter duration due to equipment failure that does not cause the facility to have an unscheduled outage, but, needs to be corrected. These are much more difficult to coordinate and schedule and may not allow a multi-day advance notice, so, maybe we could make the requirement only apply to major maintenance schedules.
Exelon	Yes	Follow existing Guidelines, GADS states "well in advance" as notification for "Planned" outages. This typically means more than 30 days in advance. PJM uses the 30 day definition for "Planned". Nuclear / INPO uses 28 days (4 weeks) from an INPO definition for "Planned". 30 days seems to be a reasonable requirement.
Colmac Clarion	Yes	Current policy under some existing contract operators requires initial notification on a rolling 3 year plan and additional notification to 'dispatcher' at 30 days. Generally, verbal notification is also conducted between generating facilities and Transmission operator on a much shorter and timely basis additionally. Transmission/Distribution company has a similar long range, and short notification cycle.
Independent Electricity System Operator	Yes	While we agree in principle with this proposal, it must be recognized that factors affecting equipment outages vary from region to region. Such notification requirements should be established within each region based on the needs of the RC. Our experience in handling short and long term planned outages informs us that the timing and duration of outages will determine the allocation of time and other resource to assess impacts of the outages on the system. For short duration outages, a short term assessment is usually adequate as system conditions and topology are more predictable. The longer the duration of a planned outage, the less predictable are the system conditions and the more likely that other transmission facilities will be out of service during that period.
PacifiCorp	Yes	The appropriate number of days should be established on a region-wide basis, not a country wide basis. Each region has unique infrastructure that requires specific advance notice.
Bonneville Power Administration	Yes	No preference.
NextEra Energy Resources, LLC		No comment.
Xcel Energy	Yes	

Organization	Yes or No	Question 5 Comment (including # of days if appropriate):
Response: Thank you for your response. Please see the summary response for details.		

6. Do you generally support the revised standards? If your response is 'No', please explain your single biggest concern with the revised standards, including which specific requirement or set of requirements causes you the most concern and why.

Summary Consideration: Due to industry comments the SDT changed the following:

TOP-001-2, R2. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators known or expected to be affected of actual Emergency and anticipated Emergency conditions.

TOP-001-2, R4. Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected by the Transmission Operator to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination. Such operations include, but are not limited to, relay or equipment failures and changes in generation, Transmission, Load, or operating conditions.

TOP-001-2, R6. Each Transmission Operator shall inform its Reliability Coordinator of all System Operating Limits (SOLs) which, while not IROLs, support its local area reliability.

TOP-001-2, R7.Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOLs as identified in Requirement R6, has been exceeded.

TOP-001-2, R2 VSL	The Transmission Operator did not inform one affected Transmission Operator of an actual Emergency or anticipated Emergency conditions.	The Transmission Operator did not inform two affected Transmission Operators of an actual Emergency or anticipated Emergency conditions.	The Transmission Operator did not inform three affected Transmission Operators of an actual Emergency or anticipated Emergency conditions.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or anticipated Emergency conditions. OR The Transmission Operator did not inform four or more affected Transmission Operators of actual Emergency and anticipated Emergency conditions.

TOP-001-2, R6 VSL	The Transmission Operator did not inform its Reliability Coordinator of one SOL which, while not an IROL, supports its local area reliability.	The Transmission Operator did not inform its Reliability Coordinator of two SOLs which, while not IROLs, supports its local area reliability.	The Transmission Operator did not inform its Reliability Coordinator of three SOLs which, while not IROLs, supports its local area reliability.	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs which, while not IROLs, supports its local area reliability.

TOP-002-3, R1.Each Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential single Contingency events.

TOP-002-3, M1.Each Transmission Operator shall have evidence of an assessment for next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated power flow study results.

TOP-002-3, R1 VSL	N/A	N/A	N/A	The Transmission Operator does not have an assessment for the next day's operation that indicated whether it will exceed any of its SOLs during anticipated normal and potential single Contingency event conditions.

TOP-003-1, R1. Each Transmission Operator and Balancing Authority shall have a documented specification for data necessary for Real-time monitoring and reliability assessments. The specification shall include:

TOP-003-1, Part 1.1, bullet #1: Long term outages of Bulk Electric System equipment, as specified by the Transmission Operator or Balancing Authority,

TOP-003-1, R4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall satisfy the obligations of the documented specifications for data. .

TOP-003-1, R5. Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities , the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments.

TOP-003-1, M4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R4. The evidence shall be that there are no Transmission Operators as identified in Requirement R2 or Balancing Authorities as identified in Requirement R3 with outstanding requests for data that have been unfilled.

TOP-003-1, M5.Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities the data requested by those entities necessary for reliability assessments and Real-time operation in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

TOP-003-1, R4 VSL	N/A	N/A	N/A	The responsible entity receiving a data specification in Requirement R2 or R3 did not satisfy the obligations of the documented specifications for data

Organization	Yes or No	Question 6 Comment
Real Time Best Practices Standards Study Group	No	The Real-time Best Practices Standards Study Group (RTBPSSG) feels that the deletion of TOP-004-2, R4 (Restore system operations from an unknown operating state to proven and reliable limits within 30 minutes) does not provide an adequate level of reliability for the operation of the Bulk Electric System (BES) and the reasoning provided for the removal is flawed. The RTBPSSG believes that this is an important consideration for operations that should not be deleted and that with more deliberations an acceptable measure for such a requirement can be developed. The concept of operating in a known state has long been a fundamental concept of reliable system operations and if this requirement is deleted then there is no requirement to cover this concept. The idea of operating to preclude IROLs or to return to within the limit in Tv does not adequately address this concern.
Response: Returning below IROLs within T_v is the same as returning from an unknown state within 30 minutes on a practical basis. T_v can be shorter than 30 minutes and thus promotes a more reliable condition. Without specific suggestions as to how to measure the deleted requirement, the SDT is unable to respond other than to maintain the current position. No action taken.		
American Transmission Company	No	We support the revised Standards. However, the questions asked do not reflect the current redlined versions of the Standards. We should be commenting on the version of the Standard that the drafting team wants to move forward with. The comment form and questions should match the current redlined version and not ask questions related to a proposed changed version.
Response: Without specific indications of where you feel errors were made, the SDT is unable to respond.		
Northeast Power Coordinating Council	No	1. We disagree with removing the requirement for the TOP to operate within SOLs. We are unable to understand the argument that this requirement will "reduce the operational flexibility by eliminating the TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time."SOLs are determined to set upper bounds beyond which transmission facilities may be overloaded or system voltage may be depressed or the operators will be operating in an unknown state. If such upper bounds are to be ignored to enhance operating flexibility, then why should SOLs be determined in the first place and how do we ensure operating reliability?Further, FAC-014 requires TOPS to develop SOLs, why would we be requiring the TOPs to do so while we suggest that they do not need to operate within the bounds that they themselves develop in the first place? Do the two sets of standards contradict each other 2. TOP-002-3 M1--Power flow study results will not be available for those days where studies are not required. Those days may be considered pre-studied or a normal studied state. How is this to be measured?

Organization	Yes or No	Question 6 Comment
		3. TOP-002-3 R2, R3 ? A plan should be required when the review warrants it and should include both IROL and SOL. In a normal state there may already be existing coordination between reliability entities with no need to re-communicate. 4. TOP-003-1R1: Reference to the Functional Model in the requirement may not be appropriate. This requirement may be clearer if the specific responsibilities are included. R1.1 Long Term Outages should be defined or clarified. 5. What about other outages that are potentially impactive? 6. In general, it is not clear that the data specification includes real time communications or operational planning requirements. 7. The Data Retention change in Section D 1.4 of TOP-003-1, Operational Reliability Data, from 90 calendar days to three calendar years is excessive. Voice recorder designs vary, and some voice recorders are designed to retain data for 90 days. Have data recordings stored longer than 90 days only if requested by the RC or TOP.
ISO New England Inc.	No	1. We disagree with removing the requirement for the TOP to operate within SOLs. We are unable to understand the argument that this requirement will "reduce the operational flexibility by eliminating the TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time."SOLs are determined to set upper bounds beyond which transmission facilities may be overloaded or system voltage may be depressed or the operators will be operating in an unknown state. If such upper bounds are to be ignored to enhance operating flexibility, then why should SOLs be determined in the first place and how do we ensure operating reliability? Further, FAC-014 requires TOPS to develop SOLs, why would we be requiring the TOPs to do so while we suggest that they do not need to operate within the bounds that they themselves develop in the first place? Do the two sets of standards contradict each other? 2. TOP-002-3 M1--Power flow study results will not be available for those days where studies are not required. Those days may be considered pre-studied or a normal studied state. How is this to be measured? 3. TOP-002-3 R2, R3 A plan should be required when the review warrants it and should include both IROL and SOL. In a normal state there may already be existing coordination between reliability entities with no need to re-communicate. 4. TOP-003-1R1: Reference to the Functional Model in the requirement may not be appropriate. This requirement may be clearer if the specific responsibilities are included. 5. Organization	Yes or No	Question 6 Comment
		impactive? 6. In general, it is not clear that the data specification includes real time communications or operational planning requirements. 7. The Data Retention change in Section D 1.4 of TOP-003-1, Operational Reliability Data, from 90 calendar days to three calendar years is excessive. Voice recorder designs vary, and some voice recorders are designed to retain data for 90 days. Have data recordings stored longer than 90 days only if requested by the RC or TOP.
Response: 1 – Based on the previous comments received on this issue, the industry agrees with the SDT position of deleting this phrase. You have not presented any justification or additional evidence that would cause the SDT to reverse its decision. No, the SDT does not believe the two standards contradict each other. 2 – Neither the measure nor the requirement states that you must have a power flow study for each day. The measure states that you COULD have a power flow study as one method of measuring compliance. 3 - As drafted it is required to have a plan to mitigate IROL as identified by the next day assessment. Mitigation plans are not required for "normal" states. The SDT addressed the SOL issue in point #1. 4 –The SDT agrees and has deleted the reference to the Functional Model. The timeframe indicated here is Operations Planning which incorporates one day to one year. This should be sufficient to 'define' long term. No action taken for this comment. **TOP-003-1, R1**. Each Transmission Operator and Balancing Authority shall have a documented specification for data necessary for Real-time monitoring and reliability assessments. The specification shall include: 5 – The statement includes the term 'but not limited to' so it does not preclude the inclusion of other information. No action taken. 6 – This is a specification and not the actual transfer of data so the Time Horizon is Operations Planning. No change made. 7 – The SDT has modified Measures 4 & 5 as a result of researching your comment. The SDT has changed data retention for Requirements 4 & 5 to 90 days. **TOP-003-1, M4**. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R4. The evidence shall be that there are no Transmission Operators as identified in Requirement R2 or Balancing Authorities as identified in Requirement R3 with outstanding requests for data that have been unfilled. **TOP-003-1, M5**. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities the data requested by those entities necessary for reliability assessments and Real-time operation in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.		
Midwest ISO Stakeholders Standards Collaborators	No	1. We believe removing the requirements for SOLs in this standard will make it unacceptable to FERC. Thus, the drafting team will have to start over when FERC remands the standard.

Organization	Yes or No	Question 6 Comment
		2. The VSLs for TOP-001-2 R2 are based on the number of times the TOP did not inform the RC of Emergency conditions. Over what time period does this apply? In perpetuity? From last compliance audit? 3. We believe the VSLs for TOP-001-2 R6 violates the Commission's guideline 4 established in their VSL order. The VSLs are based on the number times the TOP did not act to mitigate the magnitude and duration of an IROL exceedance within its Tv. However, the associated requirement states The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv. Note that the requirement talks about an IROL in the singular. Thus, failure to act on one occasion is a single violation. Failure to act on two occasions is two separate violations not a higher VSL. We suggest that a binary Severe VSL be selected or that you modify the requirement to consider IROLs in the plural. 4. In TOP-002-3, the drafting team should consider making R2 a sub-requirement of R1. Isn't it a sub-component of the assessment the TOP must have in R1? 5. R3 should be made sub-requirement of R2. 6. M1 deviates from R1 in that M1 says that the TOP shall have evidence that it performed an assessment while R1 says it shall have an assessment. Likewise, the VSL differs from the requirement in the same way and should be made to match the requirement. 7. In TOP-003-1, we note that R3 requires the BA to distribute its data specification but there is not a similar requirement to have a data specification like R1 for the TOP. 8. We believe R3 belongs in the BAL standards. 9. We also suggest that the VSLs for R4 and R5 could be graded to include multiple levels. In R4, we believe the additional VSLs could be defined based on the percentage of data that is not supplied. The VSLs for R5 could be graded based on the number TOPs and BAs that the TOP did not supply data and information to. We further believe that the portion of the requirement in R5 that applies to the BA should be moved to the BAL standards. 10. In TOP-004-3, M1 appears to be a measure of non-compliance with R1. Aren't measures supposed to identify how compliance is measured not non-compliance? The VSLs measure non-compliance.

Response: 1 – Based on the previous comments received on this issue, the industry agrees with the SDT position. You have not presented any justification or additional evidence that would cause the SDT to reverse its decision.

2 – The SDT has revised the VSL.

Organization	Yes or No	Question 6 Comment		
TOP-001-2, R2 VSL	The Transmission Operator did not inform one other Transmission Operator of an actual Emergency or anticipated Emergency conditions.	The Transmission Operator did not inform two other Transmission Operators of an actual Emergency or anticipated Emergency conditions.	The Transmission Operator did not inform three other Transmission Operators of an actual Emergency or anticipated Emergency conditions.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or anticipated Emergency conditions. OR The Transmission Operator did not inform four or more other Transmission Operators of an actual Emergency or anticipated Emergency conditions.
3 – The SDT agrees with the suggested change to the VSL.				
TOP-001-2, R6 VSL	The Transmission Operator did not inform its Reliability Coordinator of one SOL which, while not an IROL, support its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs which, while not IROLs, support its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs which, while not IROLs, support its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs which, while not IROLs, support its local area reliability**.**
4 & 5 – The SDT believes these are separate standalone requirements. No change made. 6 – The SDT has changed M1 and the R1 VSL. **TOP-002-3, M1**. Each Transmission Operator shall have evidence of an assessment for next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated power flow study results.				
TOP-002-3, R1 VSL	N/A	N/A	N/A	The Transmission Operator does not have an assessment for the next day's operation that indicated whether it will exceed any of its SOLs during anticipated normal and potential single Contingency

Organization	Yes or No	Question 6 Comment		
				event conditions.

7 – Please see R2 of TOP-003-1.

8 – The SDT does not believe that there is a relevant spot in the BAL standards for such a requirement. No change made.

9 – The SDT has reworded Requirement R4, M4, and the wording of the Severe VSL to accommodate your concerns. The SDT does not feel that with this new wording any change is required to add levels of VSL. The SDT reviewed the R5 VSL and feels that it is correct and has not made a change in this area.

> **TOP-003-1, R4**. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall satisfy the obligations of the documented specifications for data. .
>
> **TOP-003-1, M4**. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R4. The evidence shall be that there are no Transmission Operators as identified in Requirement R2 or Balancing Authorities as identified in Requirement R3 with outstanding requests for data that have been unfilled.

TOP-003-1, R4 VSL	N/A	N/A	N/A	The responsible entity receiving a data specification in Requirement R2 or R3 did not satisfy the obligations of the documented specifications for data. .

10 – The SDT felt it would be easier to provide information if and when an IROL and IROL T_V was violated compared to providing information of every operating hour proving that an IROL and IROL T_V was not violated. No change made.

Organization	Yes or No	Question 6 Comment
FirstEnergy Corp	No	1. The drafting team's response to FE's fifth comment in the Draft 1 Question 12 is not sufficient for us to understand their thought process on the matter. Our prior comment raised a concern with the removal of TOP-007-0 R3 that states, "A Transmission Operator shall take all appropriate actions up to and including shedding firm load, or directing the shedding of firm load ?? The SDT responded that this matter is covered in EOP-001-0, Requirement R3.3 that states, R3. Each Transmission Operator and Balancing Authority shall have emergency plans that will enable it to mitigate operating emergencies. At a minimum, Transmission Operator and Balancing Authority emergency plans shall include: R3.3. The tasks to be coordinated with and among adjacent Transmission Operators and Balancing Authorities.? 2. The SDT is proposing to retire PER-001 and FE believes the PER-001 requirement R1 and its associated measure M1.4 should be re-enforced within the TOP standards. This operator authority was a focal point of recent readiness evaluations within the industry and should be explicit within a TOP

Organization	Yes or No	Question 6 Comment
		requirement. We would appreciate further explanation from the SDT if they feel the change is still not required. 3. FE disagrees with the SDT's response to our comment on Draft 1 Q4 which questioned which contingencies are required to be evaluated within the operating horizon. The prior TOP-002-2 requirement R6 stated R6. Each Balancing Authority and Transmission Operator shall plan to meet unscheduled changes in system configuration and generation dispatch (at a minimum N-1 Contingency planning) in accordance with NERC, Regional Reliability Organization, subregional, and local reliability requirements. This concept is lost in the newly proposed TOP standards. In responding the SDT stated that the Transmission Operator is not limited to single Contingencies or bus faults but must study any and all conditions that may result in exceeding any of its System Operating Limits during anticipated normal conditions as stated in the Requirement. The potential Contingencies to be studied are limited to those spelled out in the TPL standard. FirstEnergy does not agree that there is an expectation to cover all TPL contingencies within the operating horizon. As vetted by industry in the recent proposed and subsequently withdrawn SAR that proposed to evaluate credible multiple contingencies? it is clear that studies within the planning and operations horizon are distinctly different and that there is no expectation to cover events in real-time or within the operating horizon (next day, next month, through one year out) beyond single contingency. We ask the SDT to clarify their comment in this regard. 4. We would like the SDT to explain why it found the need to introduce the term each in requirement R1 of TOP-002-1. As re-worded, the focus of the compliance audit may become too structured on strict adherence to each directive rather than the TOP meeting the intent of the RC's directives. If the wording remains, we believe the VSLs can be better graded and that missing a single directive should not warrant a severe VSL. Many of the proposed VSLs use a quartile approach (0-25%, 25-50%,50%-75% and >75%) of gauging if some reliability action was missed. FERC in its VSL Order dated June 19, 2008 took exception to the quartile approach and felt it violates its Guideline 1 ?Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance? see paragraphs 19 through 21. The VSL DT revised the VLS that previously used a quartile score to reflect a 0-5%, 5%-10%, 10-15% and >15% graded VSL approach. Its suggested that the SDT reconsider its use of quartile VSLs. 5. We believe the VSLs for TOP-001-2 R6 violates the Commission's Guideline 4 established in their VSL order. The VSLs are based on the number times the TOP did not act to mitigate the magnitude and duration of an IROL exceedance within its Tv. However, the associated requirement states The Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's Tv. Note that the requirement talks about an IROL in the singular. Thus, failure to act on one occasion is a single violation. Failure to act on two occasions is two separate violations not a higher VSL. We suggest that a binary Severe VSL be selected or that you modify the

Organization	Yes or No	Question 6 Comment
		requirement to consider IROLs in the plural. 6. In TOP-003-1 R1.1 second bullet the SDT introduced a new requirement that for data exchange related to equipment at voltage levels below the BES and left the need for this data at the discretion of the TOP or BA. FirstEnergy believes the inclusion of equipment lower than normal BES levels should not be introduced on an ad-hoc standard by standard basis. Rather, if such equipment is deemed necessary for the reliability of the BES then the Facilities may need to be subject to other reliability standards such as vegetation management, preventative maintenance, etc. Inclusion of such equipment should be a registration issue handled through the Regional Entity and not within individual standard requirements. However, providing such data could be requested and provided on a voluntary basis, but if the equipment is deemed essential for BES reliability other standards likely apply.

Response: 1 – The SDT apologizes for any confusion. The duplicative standard is EOP-001-0, Requirement R2.3.

2 – The SDT deleted this requirement for numerous reasons. First, it is not measurable. Second, the standards themselves, once approved by FERC, not only grant but demand operating personnel implement real-time actions to ensure stable and reliable operations of the BES. No change made.

3 – The SDT has reviewed its response provided to the comments from First Energy for Q4 in Draft 1 and agrees that it was incorrect. The SDT added the word 'single' to TOP-002-3, Requirement R1 to clarify its position which is based on the development of the new TPL-001-1 standard.

> **TOP-002-3, R1**. The Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential single Contingency events.

4 – The SDT believes that you meant TOP-001-2, Requirement R1. The SDT believes that if an entity misses a reliability directive, it is a Severe violation. No change made.

5 – The SDT agrees with the suggested change to the VSL.

TOP-001-2, R6 VSL	The Transmission Operator did not inform its Reliability Coordinator of one SOL which, while not an IROL, supports its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs which, while not IROLs, supports its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs which, while not IROLs, supports its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs which, while not IROLs, supports its local area reliability**.**

6 – The SDT did not introduce a new requirement but was responding to a directive in Order 693, paragraph 1626 when this bullet was crafted. The SDT believes that if this data is required for planned outages then it is also important enough to be required in general. No change made.

Organization	Yes or No	Question 6 Comment
IRC Standards Review	No	(1) We believe there is a fundamental principle that TOPs need to operate their systems within SOLs. We propose the SDT re-instate the deleted words from TOP-004 R1 that address SOLs. Recognizing that not

Organization	Yes or No	Question 6 Comment
Committee		all SOLs have an impact on interconnected system reliability if their exceedances are not mitigated within some target time period, we propose the SDT consider qualifying the SOLs which the TOP must operate within along the same line as we propose in our comments under Q2, namely, the set to be identified by the TOP subject to its RC's concurrence.(Please note that ERCOT abstained from these comments) To more fully address the issue with some SOLs that do not have any reliability impacts, we propose the SDT consider revising the definition of SOL. This will eliminate the need for each TOP to identify this subset and obtain the RC's concurrence. (2) We generally support the direction the SDT is moving but would require consideration of the comments provided in this transmittal.What is replacing TOP-001 R7? The requirement was previously TOP-008-R2, got moved to TOP-001 R7, but now both TOP-001 R7 is deleted and TOP-008 is deleted. Is there still going to be a requirement to use the most restrictive limit when multiple entities have different limits? (3) TOP-003-1 makes reference to functional responsibilities and responsibilities per the NERC Functional Model. We do not agree with these references since it is unclear the status of the NERC Functional Model and how it relates to the NERC Standards. It has been noted that the NERC Functional Model is only for guidance and is not a standard.
Response: 1 – Based on the previous comments received on this issue, the industry agrees with the SDT position of deleting this. You have not presented any justification or additional evidence that would cause the SDT to reverse its decision. For clarity, the SDT has added a new requirement to TOP-001-2 to cover the issue on SOLs that must be reported. **TOP-001-2, R7**. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOL as identified in Requirement R6, has been exceeded. 2 – As pointed out in the responses to comments for the first posting, the SDT deleted this requirement as it is duplicative of IRO-05-3, Requirement R10. 3 – The SDT agrees and has changed the requirement accordingly. **TOP-003-1, R1**. Each Transmission Operator and Balancing Authority shall have a documented specification for data necessary for Real-time monitoring and reliability assessments. The specification shall include:		
Exelon	No	In general, Exelon supports the revisions and appreciates the work being done by the SDT to consolidate and clarify the requirements. We have some concerns with the langauge in TOP-001-2 R4."Coordinate" - We believe this needs to be better defined. "Known or expected to have a reliability impact" – Reliability impact needs to be defined better, can measures be identified, such as; cause a system to violate a limit under expected conditions? Consider adding the words in the judgment of the TOP before the word expected. Otherwise this may become a point of contenetion and difficulty during an audit.If the GO is not removed (see question 2)the GO is not

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 6 Comment</th></tr>
<tr><td></td><td></td><td>likely to have the ability to know what reliability impacts its actions might have."other reliability entities" - needs to be defined.

"Unless conditions do not permit such coordination" - if this clause is getting at the issue of time not available, consider unless based on the reasonable judgment of the TO, considering the facts and circumstances at the time, conditions do not permit such coordination.? We feel the point of the requiremnts should be when a GO/TO knows or reasonably should know that an action will have a substantial adverse reliability impact on another operating entity (define), the GO/TO should inform the other entity and consider that other entity's input in deciding how to operate, if time permits.</td></tr>
<tr><td colspan="3">Response: The SDT believes that through analysis, reliability impacts on other reliability entities will be known and/or expected and this information should be shared to support reliability. No change made.

The SDT does not see an industry consensus for removing the Generator Operator from this requirement. However, the Generation Operator will not know what causes an impact unless they have been told so by the Transmission Operator. Therefore, the SDT has added the suggested wording to the requirement.

TOP-001-2, R4. Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected by the Transmission Operator to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination. Such operations include, but are not limited to, relay or equipment failures and changes in generation, Transmission, Load, or operating conditions.

The SDT believes the requirement as drafted is sufficient. No change made.</td></tr>
<tr><td>Consumers Energy Company</td><td>No</td><td>TOP-003-1 R1.1 needs to be more specific in identifying the equipment to be considered for inclusion.</td></tr>
<tr><td colspan="3">Response: The SDT believes the individual entities are best capable of determining the data required to fulfill their reliability functions. No change made.</td></tr>
<tr><td>Duke Energy</td><td>No</td><td>- TOP-001 R2 Need to change affected to adjacent, and in the VSLs.- TOP-001 R4 Change other to adjacent,

- and in the VSLs.- TOP-001 R4 If coordinating means that we're posting the information on SDX, then we are in agreement.-

- TOP-001 R6 Need clari</td></tr>
<tr><td colspan="3">Response: Based on stakeholder comments, the SDT changed, "affected" to "other" in TOP-001, Requirement R2. 'Other' provides flexibility and includes "adjacent."

The SDT believes that posting on SDX could be coordination but that the key element is that actions are coordinated in some manner. No change made.</td></tr>
</table>

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 6 Comment</th></tr>
<tr><td>New York Independent System Operator</td><td>No</td><td>We generally support the direction the SDT is moving but would require consideration of the comments provided in this transmittal.What is replacing TOP-001 R7? The requirement was previously TOP-008-R2, got moved to TOP-001 R7, but now both TOP-001 R7 is deleted and TOP-008 is deleted. Is there still going to be a requirement to use the most restrictive limit when multiple entities have different limits?

TOP-003-1 makes reference to functional responsibilities and responsibilities per the NERC Functional Model. We do not agree with these references since it is unclear the status of the NERC Functional Model and how it relates to the NERC Standards. It has been noted that the NERC Functional Model is only for guidance and is not a standard.

The Data Retention change in Section D 1.4 of TOP-003-1, Operational Reliability Data, from 90 calendar days to three calendar years is excessive. Voice recorder designs vary, and some are designed to retain data for 90 days. The SDT should take into consideration the storage media. In some cases equipment is changed and the data may not be obtainable, or cost prohibited.</td></tr>
<tr><td colspan="3">Response: As pointed out in the responses to comments for the first posting, the SDT deleted this requirement as it is duplicative of IRO-05-3, Requirement R10.

The SDT agrees and has changed the requirement accordingly.

TOP-003-1, R1. Each Transmission Operator and Balancing Authority shall have a documented specification for data necessary for Real-time monitoring and reliability assessments. The specification shall include:

The SDT has modified Measures 4 & 5 as a result of researching your comment. The SDT has changed the data retention for Requirements 4 & 5 to 90 days.

TOP-003-1, M4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R4. The evidence shall be that there are no Transmission Operators as identified in Requirement R2 or Balancing Authorities as identified in Requirement R3 with outstanding requests for data that have been unfilled.

TOP-003-1, M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities the data requested by those entities necessary for reliability assessments and Real-time operation in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.</td></tr>
<tr><td>CenterPoint Energy</td><td>No</td><td>CenterPoint Energy believes reliability requirements should not include vague and unmeasurable, fill-in-the-blank provisions, like those shown in TOP-003 Requirement 1. R1 states Each Transmission Operator and Balancing Authority shall have a documented specification for data required to fulfill their respective responsibilities per the NERC Functional Model. In addition, CenterPoint Energy disagrees with the accompaning TOP-003 Requirement 4 that requires numerous entities to comply with fill-in-the-blank provisions developed through R1. As written, R1 leaves it open to the whim of a Transmission Operator or Balancing Authority to conjure a list of required data, without any process for impacted entities</td></tr>
</table>

Organization	Yes or No	Question 6 Comment
		to argue the reasonabless of the data. In R1.1, the SDT has added two examples of required data by stating Long term outages of Bulk Electric System equipment when they are known and Equipment at voltage levels lower than the Bulk Electric System, at the discretion of the Transmission Operator or Balancing Authority?. These vague examples leave it to the total discretion of a Transmission Operator or Balancing Authority. CenterPoint Energy recommends rewording Requirement 1 and deleting TOP-003 Requirement 4.
Response: The SDT has changed Requirements R1 and R4 to provide clarity to this issue. **TOP-003-1, R1**. Each Transmission Operator and Balancing Authority shall have a documented specification for data necessary for Real-time monitoring and reliability assessments. The specification shall include: **TOP-003-1, R4**. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall satisfy the obligations of the documented specifications for data.		
Independent Electricity System Operator	No	We do not support the revised standards. Our biggest concern is the removal of the requirement for TOP to operate within SOLs as stated in our response to Q#3. As stated in our previous comments we are unable to understand the argument that this requirement will "reduce the operational flexibility by eliminating the TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time."SOLs are determined to set upper bounds beyond which transmission facilities may be overloaded or system voltage may be depressed or the operators will be operating in an unknown state, even before IROL violations become evident. If such upper bounds are to be ignored to enhance operating flexibility, the BES would be very vulnerable to instability, uncontrolled separation, or cascading outages upon the occurrence of subsequent contingencies. The 2003 blackout started off with an SOL violation, and is a good example of how a "localized" problem can propagate thru the interconnected network to become a widespread reliability problem.Further, FAC-014 requires TOPS to develop SOLs, why would we be requiring the TOPs to do so while we suggest that they do not need to operate within the bounds that they themselves develop in the first place? Do the two sets of standards contradict each other? We are also very concerned that R1/R2 in TOP-002 requires the TOP to assess potential exceedence of IROLs only but not SOLs. We feel strongly that R2 in TOP-002 should be revised so that it includes as part of the requirement, preclusion of operating in excess of any SOLs. Further, we believe that all SOLs should be respected in the planning time-frame and in real time with the exception of low likelihood or rare circumstances. WE believe the SDT may have misinterpreted our previous comments. By system voltage may be depressed? we were saying the voltage may be lower than normal, we did not explicit state or imply that the depressed voltage will cause a collapse which appeared was the basis of the SDT's response that we

Organization	Yes or No	Question 6 Comment
		were talking about IROL - a subset of SOL. The argument that the TOP is required to calculate SOL but does not need to operate within all the time seems irrational. Operating with SOL all the time and correct exceedance within some defined time period is necessary to ensure reliability. The examples/rationale cited in the question asked in the previous comment form: The SDT felt that requiring a TOP to operate within all SOLs could effectively reduce the TOPs operational flexibility by eliminating the TOP's ability to determine that a mitigation, such as load shedding, was more severe than the risk of the SOL violation itself, such as exceeding a thermal limit for a short time. was but one such situation. Load shedding to reduce equipment loading is often regarded by TOPs as an exception, i.e., load is not shed to correct a temporary exceedance of equipment rating or a potential exceedance of applicable equipment rating if a contingency were to occur. The rationale is simply to not shed load if exceedance of the facility's continuous rating is expected to be temporary, or if a contingency were to occur then the expected loading will exceed the concerned equipment's applicable rating since we do not shed load pre-contingency to avoid shedding load after a contingency has occurred.Operating within an SOL w/o having to shed load under some circumstances is clearly conveyed in our comments (underlined in our comments above). However, without the fundamental requirement to operating within SOL, it opens the door to various kinds of unreliable operating conditions. A first overloaded line, which trips because it loading is not corrected, will cause loading on other lines to increase. There is no certainty as to when and where loading on the remaining system will cease to cause additional tripping. Also, the absence of such a requirement begs the question on the need to:(a) Calculate SOL (FAC-014) in the first place. The SDT's response that FAC-014 also requires the TOP to ?communicate your SOLs to other entities so that they can respect your operational limits? seems a bit unfair since the TOP, as the SOL developer, does not itself need to respect the SOL but others do. And who are these ?other entities? within the TOP area that need to respect the SOLs - The BA, GOP or the RC, while the TOP has the transmission reliability authority within its area and takes primary responsibility in transmission reliability (other than the RC who has a wide-area view and has the final authority)? (b) Perform day ahead analysis (TOP-002, R1) without requiring any follow-on actions if the analysis shows that SOLs will be exceeded. Developing SOLs and assessing if they will be exceeded would simply be an academic exercise. We are unable to determine how will not respecting SOLs and not having follow-on actions when SOLs are assessed to be exceeded contribute to reliability? (c) Report exceedances and corrective actions taken (TOP-001, R5). This serves no purpose if a TOP is not required to operate within SOLs. (2) TOP-002, R1 requires a TOP to assess next day operations and identify if any SOLs will be exceeded, and the actions related to SOL stops there. It is irresponsible for the TOP to not do anything such as adjusting outage plans and/or requesting adjustment to resource plans to arrive at operating conditions that will no cause SOLs to be exceeded. A requirement similar to that of R2 (for the IROL) should be developed. The only difference between them would be the need to prepare for load shedding when

Organization	Yes or No	Question 6 Comment
		mitigating measures run out. (3) We noted that some VSLs are graded according to the number of occurrences. Please refer to the recent posting on the revised VSLs for 8 sets of standards, in which the VSLSDT made reference to the June 2008 FERC Order on VSL. In the Order, FERC provided a guideline (among others) that VSLs should not be determined by the number of occurrence. Specifically, FERC's Guideline #4 stipulates that:Guideline 4 VSLs should be based on a single violation, not on a cumulative number of violations (unless stated otherwise in the requirement).We suggest the SDT to revise these VSLs accordingly.
Response: Based on the previous comments received on this issue, the industry agrees with the SDT position of deleting this requirement. You have not presented any justification or additional evidence that would cause the SDT to reverse its decision. The SDT has added TOP-001-2, Requirement R6 and modified TOP-001-2, Requirement R7 to provide clarity around this position. The SDT does not feel that the 2 standards contradict each other. **TOP-001-2, R6.** Each Transmission Operator shall inform its Reliability Coordinator of all System Operating Limits (SOLs) which, while not IROLs, support its local area reliability**.** **TOP-001-2, R7**. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOLs as identified in Requirement R6, has been exceeded. TOP-002-3 is for planning purposes only. TOP-001-2 addresses operations. TOP-002-3, Requirement R1 explicitly requires the assessment of SOLs and Requirement R2 states that you should *plan* to avoid operating in excess of IROLs. You have not presented any evidence to convince the SDT to change our position and the majority of the industry agrees with the SDT's position. A change was made to TOP-001-2 to address operations as shown above. The SDT feels that TOP-002-3, Requirements R1 & R2 provides sufficient assurance that the next day operations will be reliable. The SDT does not agree with the contention that the revised standards will lead to unreliable operating conditions nor have you provided evidence of this contention. The SDT has not received consequential comments to cause the SDT to change its position. No change made. (b) The SDT feels that TOP-002-3, Requirements R1 & R2 provides sufficient assurance that the next day operations will be reliable. The SDT does not agree with the contention that the revised standards will lead to unreliable operating conditions nor have you provided evidence of this contention. The SDT has not received consequential comments to cause the SDT to change its position. No change made. (c) The SDT has modified TOP-001-2, Requirement R7 to provide clarity on what SOLs need to be reported. (2) The SDT feels that TOP-002-3, Requirements R1 & R2 provides sufficient assurance that the next day operations will be reliable. The SDT does not agree with the contention that the revised standards will lead to unreliable operating conditions nor have you provided evidence of this contention. The SDT has not received consequential comments to cause the SDT to change its position. No change made. (3) If the requirement is singular, then each occurrence is a separate violation. If the requirement is plural, then multiple occurrences are a single violation. The SDT believes this is consistent with the FERC Order on VSLs. Without specific references, the SDT sees no reason for change.		
Southern Compnay	No	TOP-001 R2: The phrase shall coordinate its respective operations known or expected to have a reliability

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 6 Comment</th></tr>
<tr><td></td><td></td><td>impact on other reliability entities could cause compliance issues due to the resulting subjectivity of the identification of other reliability entities. Recommend that it replaced with shall coordinate its respective operations known or expected to have a reliability impact on adjacent reliability entities?. It should be the responsibility of the adjacent reliability entity to further coordinate, if necessary, other appropriate reliability entities. The Measures and VSLs would need to be modified accordingly

.TOP-002 R2 uses the word "plan" as a verb, and then it is referenced in R3 as a noun. This is propagated in the Measures and VSLs. Suggest the following wording change in R2: The Transmission Operator shall have a coordinated plan??

TOP-003 R1.1 - suggest that "Long term" be removed and replaced with "Planned". "Long term" could be interpreted to mean an outage that will not occur for quite some time (long lead time), or an outage that will occur sooner but will last for a long time. All outages should be communicated.

R1.2 - Disagree with this requirement. We recommend that it be struck. The TO and the BA must be able to specify formats that can be utilized by their processes to ensure reliability.</td></tr>
<tr><td colspan="3">Response: The word ‘coordinate’ is not used in TOP-001-2, Requirement R2 but upon review the SDT has modified the wording to address your concern about affected Transmission Operators.

TOP-001-2, R2. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators known or expected to be affected of actual Emergency and anticipated Emergency conditions.

The SDT sees no reason to change the wording in TOP-002-3, Requirements R2 & R3. Plan can be both a noun and a verb and the usage here is self-explanatory.

Long term is ‘defined’ by the use of the Operations Planning Time Horizon which is limited to one year.

The SDT believes that R1.2 is a reasonable attempt to solve the problem where there are 2 different systems involved. Deleting the requirement doesn’t solve the problem. No change made.</td></tr>
<tr><td>Brazos Electric Power Cooperative, Inc.</td><td>No</td><td>See responses to previous questions.</td></tr>
<tr><td colspan="3">Response: Please see responses to previous comments.</td></tr>
<tr><td>Bonneville Power Administration</td><td>Yes</td><td>Some suggestions:TOP-002-3 1) R1. Remove "and potential Contingency events". Any event could temporarily increase flows over the SOL (or IROL) or cause the SOL to decrease until the flows are mitigated per ROP-001. The system studies set the SOL's to protect the system for such events. The mitigation is then required in TOP-001-2 then (and TOP-004 if it is kept).</td></tr>
</table>

Organization	Yes or No	Question 6 Comment
		2) R1. Reword R1 similar to that of R2 in that TOP "plans" to preclude operating in excess of any SOLs for anticipated normal conditions. This is normal operational planning. All entities should not be planning to exceed SOL for normal conditions. Rewording: R1. "The Transmission Operator shall plan next days operation to preclude operating in excess of any System Operating Limits (SOLs) during anticipated normal conditions."
Response: The SDT believes that the phrase must remain as you must perform an assessment including Contingencies to properly analyze any exceedances of SOLs. The SDT feels that TOP-002-3, Requirements R1 & R2 provide sufficient assurance that the next day operations will be reliable. The SDT does not agree with the contention that the revised standards will lead to unreliable operating conditions nor have you provided evidence of this contention. The SDT has not received consequential comments to cause the SDT to change its position. No change made.		
Project 2007-02 Operating Personnel Comm Protocols SDT	Yes	The Operating Personnel Communication Protocols standard drafting team respectfully requests that the Real Time Operations team incorporate the following into your proposed TOP-001: ?Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have procedures for the communication of information concerning the transmission emergency alerts in accordance with the conditions described in Attachment 1 Transmission Emergency Alerts .? In addition, the Applicability Section 4 would need to include Reliability Coordinators. The Operating Personnel Communications Protocols Project 2007-02 was initiated to ensure that real time system operators use standardized communication protocols during normal and emergency operations to improve situational awareness and shorten response time. The SDT developed a new COM-003-1 Standard that has yet to be posted and is dependent upon revising at least two other standards (CIP-001 and appropriate TOP Standard). COM-003 contains requirements that specify:1. Use of three-part communication; 2. English language; 3. Common time zone; 4. NATO alpha-numeric alphabet; 5. Mutually agreed line identifiers; 6. The use of pre-defined system condition terminology such as those contained in the RCWG Alert Level Guide and EOP-002-2.This request is based on recent NERC Standards Committee direction to our team to incorporate the Reliability Coordinator Working Group’s (RCWG) Alert Level Guide into a Standard. The consensus of our team is that a TOP Standard is the most appropriate location for the Transmission Emergency Alert language from the Guide as the energy emergency alert language is currently described in EOP-002-2. The RCWG Guide proposes the use of pre-defined system condition descriptions for use during emergencies for reliability related information. This guide was developed in response to a Blackout Report recommendation. Our team placed the energy cyber and physical security emergency alert language into CIP-001. Since the Real Time Operations SDT is currently modifying TOP-001 through 004, we seek your consent to incorporate the transmission emergency alert language to comply with the wishes of the Standards Committee.We believe that a TOP

Organization	Yes or No	Question 6 Comment
		Standard is the most appropriate location for this language for the following reasons:? The levels of emergency conditions related to the transmission system is based upon maintaining the transmission system within Interconnection Reliability Operating Limits. ? Your proposed TOP-001 R2 already requires the sharing of information of actual and anticipated transmission emergency conditions and the use of pre-defined terminology supports the efficient sharing of such information. The following text is appended here for the record. It is the OPCP SDT proposal for a revised TOP Standard that incorporates the TEA material.Standard TOP-004-3 ? Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 1 of 17Effective Date: October 1, 2007A.Introduction1.Title: Transmission Operations2.Number: TOP-004-33.Purpose: To ensure that the transmission system is operated so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single Contingency and specified multiple Contingencies; and to communicate transmission emergency alerts.4.Applicability:4.1.Reliability Coordinator4.2.Balancing Authority4.3.Transmission Operators5.Proposed Effective Date: First day of first calendar quarter, one calendar year following applicable regulatory approval; or, in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter a year from the date of Board of Trustee adoption.B.RequirementsR1.Each Transmission Operator shall operate within the Interconnection Reliability Operating Limits (IROLs) and System Operating Limits (SOLs).R2.Each Transmission Operator shall operate so that instability, uncontrolled separation, or cascading outages will not occur as a result of the most severe single contingency.R3.Each Transmission Operator shall operate to protect against instability, uncontrolled separation, or cascading outages resulting from multiple outages, as specified by its Reliability Coordinator.R4.If a Transmission Operator enters an unknown operating state (i.e. any state for which valid operating limits have not been determined), it will be considered to be in an emergency and shall restore operations to respect proven reliable power system limits within 30 minutes.R5.Each Transmission Operator shall make every effort to remain connected to the Interconnection. If the Transmission Operator determines that by remaining interconnected, it is in imminent danger of violating an IROL or SOL, the Transmission Operator may take such actions, as it deems necessary, to protect its area.R6.Transmission Operators, individually and jointly with other Transmission Operators, shall develop, maintain, and implement formal policies and procedures to provide for transmission reliability. These policies and procedures shall address the execution and coordination of activities that impact inter- and intra-Regional reliability, including:R6.1.Monitoring and controlling voltage levels and real and reactive power flows.R6.2.Switching transmission elements.R6.3.Planned outages of transmission elements.R6.4.Responding to IROL and SOL violations.R7.Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have procedures for the communication of information concerning the transmission emergency alerts in accordance with the conditions described in Attachment 1-TOP-004-3.C.MeasuresStandard TOP-004-3 ? Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 2 of 17Effective Date: October 1, 2007M1.Each Transmission Operator that enters an unknown operating state for which valid limits have not been determined, shall have and provide

Organization	Yes or No	Question 6 Comment
		upon request evidence that could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, alarm program printouts, or other equivalent evidence that will be used to determine if it restored operations to respect proven reliable power system limits within 30 minutes as specified in Requirement 4.M2.Each Transmission Operator shall have and provide upon request current policies and procedures that address the execution and coordination of activities that impact inter- and intra-Regional reliability for each of the topics listed in Requirements 6.1 through 6.6.M3.Each Reliability Coordinator, Balancing Authority, Transmission Operator shall have and provide upon request the procedures or guidelines that will be used to confirm that it meets Requirement 7.Standard TOP-004-3 ? Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 3 of 17Effective Date: October 1, 2007D.Compliance1.Compliance Monitoring Process1.1.Compliance Monitoring ResponsibilityRegional Reliability Organizations shall be responsible for compliance monitoring.1.2.Compliance Monitoring and Reset Time FrameOne or more of the following methods will be used to assess compliance:-Self-certification (Conducted annually with submission according to schedule.)-Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)-Periodic Audit (Conducted once every three years according to schedule.)-Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)The Performance-Reset Period shall be 12 months from the last finding of non-compliance.1.3.Data RetentionEach Transmission Operator shall keep 90 days of historical data for Measure 1.Each Transmission Operator shall have current, in-force policies and procedures, as evidence of compliance to Measure 2.If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor,The Compliance Monitor shall keep the last periodic audit report and all supporting compliance data1.4.Additional Compliance InformationNone.2.Levels of Non-Compliance:2.1.Level 1: Not applicable.2.2.Level 2: Did not have formal policies and procedures to address one of the topics listed in R6.1 through R6.4.2.3..Level 3: Did not have formal policies and procedures to address two of the topics listed in R6.1 through R6.4.Standard TOP-004-3 Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 4 of 17Effective Date: October 1, 20072.4.Level 4: There shall be a separate Level 4 non-compliance, for every one of the following requirements that is in violation:2.4.1Did not restore operations to respect proven reliable power system limits within 30 minutes as specified in R4.2.4.2Did not have formal policies and procedures to address three or all of the topics listed in R6.1 through R6.4.E.Regional DifferencesNone identified.Version HistoryVersionDateActionChange Tracking0April 1, 2005Effective DateNew0August 8, 2005Removed Proposed from Effective DateErrata1November 1, 2006Added language from Missing Measures and Compliance Elements adopted by Board of Trustees on November

Organization	Yes or No	Question 6 Comment
		1, 2006Revised2December 19, 2007Revised to reflect merging of both sets of changes approved by BOT on November 1, 2006 (Addition of measures and compliance elements and revisions to R3 and R6 with conforming changes made as errata to Levels of Non-compliance)RevisedErrataStandard TOP-004-3 ? Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 5 of 17Effective Date: October 1, 2007Attachment 1-TOP-004-3 Transmission Emergency Alert (TEA) LevelsIntroductionThis Attachment provides the procedures by which a Transmission Operator or Reliability Coordinator can advise of actions taken to manage potential or actual Interconnected Reliability Operating Limit (IROL) violations.All three operating alert states (EEAs, TEAs and SEAs) are independent of each other and should be declared independently but they may also be declared concurrently.A. General Requirements1. Initiation by Reliability Coordinator. A Transmission Emergency Alert (TEA) may be initiated only by a Reliability Coordinator at:1) the Reliability Coordinator's own request, or2) upon the request of a Transmission Operator1.1. Situations for initiating alert. A Transmission Emergency Alert may be initiated for the following reasons: When all the available generation resources (would also include dispatchable load facilities that dispatch similar to generators on an economic basis) have been committed to respect an IROL in the pre-contingency state or; When load curtailment procedures have been implemented to respect an IROL.2. Notification. A Reliability Coordinator who declares a Transmission Emergency Alert shall notify all Transmission Operators and Balancing Authorities in its Reliability Area. The Reliability Coordinator shall also notify Reliability Coordinators of the situation via theReliability Coordinator Information System (RCIS) using the System Emergency category. Additionally, conference calls between Reliability Coordinators shall be held as necessary to communicate system conditions. The Reliability Coordinator shall also notify all Transmission Operators and Balancing Authorities in its Reliability Area and Reliability Coordinators when the alert has ended.B. Transmission Emergency Alert LevelsIntroductionStandard TOP-004-3 Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 6 of 17Effective Date: October 1, 2007To ensure that all Reliability Coordinators clearly understand potential and actual actions taken to manage IROLs on the Interconnection, NERC has established three levels of Transmission Alerts. The Reliability Coordinators will use these terms when explaining actions taken to manage IROLs to each other. A Transmission Emergency Alert is an emergency communication protocol , not a daily operating practice, and is not an alternative to compliance with NERC reliability standards. The Reliability Coordinator may declare whatever alert level is appropriate, and need not proceed through the alerts sequentially.1. Transmission Emergency Alert 1 (TEA 1) ? All available generation resources committed to respecting IROLs.Circumstances: The Reliability Coordinator or Transmission Operator foresees or is experiencing conditions where all available generation resources are committed to respect the IROL and/or is concerned about its ability to respect the IROL.2. Transmission Emergency Alert 2 (TEA 2) Load management procedures in effect to respect IROLs.Circumstances: The Reliability Coordinator or Transmission Operator foresees or has implemented procedures up to, but excluding, interruption of firm load commitments. When time permits, these procedures may include, but are not limited to:?Public

Organization	Yes or No	Question 6 Comment
		appeals to reduce demand.?Voltage reduction. Interruption of non-firm end use loads in accordance with applicable contracts (for emergency purposes, not economic reasons) Demand-side management.Utility load conservation measures?TLR 6Note: TLR 5 would normally be implemented in advance of this alert state. Under some circumstances TLRs may not be available or effective and would not be called prior to this alert state.During TEA 2, Reliability Coordinators and Transmission Operators have the following responsibilities:2.1 Declaration period. The declaring Reliability Coordinator shall update the RCIS under System Emergency at a minimum of every hour until the TEA 2 is terminated.2.2 Evaluating and mitigating transmission limitations. The Reliability Coordinators shall review all System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs) and transmission loading relief procedures in effect that may be contributing to the alert level. Where appropriate, the Reliability Coordinators shall inform the Transmission OperatorsStandard TOP-004-3 Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 7 of 17Effective Date: October 1, 2007under their purview of the pending Transmission Emergency Alert and request that they increase their ATC by actions such as restoring transmission elements that are out of service, reconfiguring their transmission system, adjusting phase angle regulator tap positions, implementing emergency operating procedures and redispatching generation.The following additional actions should also be considered where appropriate: Notification of ATC adjustments. Resulting increases in ATCs shall be communicated to the market via posting on the appropriate OASIS websites by the Transmission Providers. Availability of generation redispatch options. Available generation redispatch options shall be immediately communicated to the declaring Reliability Coordinator. Evaluating impact of current transmission loading relief events. The Reliability Coordinators shall evaluate the impact of any current transmission loading relief events on the ability to supply emergency assistance to the declaring entity. This evaluation shall include analysis of system reliability and involve close communication among Reliability Coordinators. Initiating inquiries on re-evaluating SOLs and IROLs. The Reliability Coordinators shall consult with the Balancing Authorities and Transmission Providers in their Reliability Areas about the possibility of re-evaluating and revising SOLs or IROLs.2.3 Coordination of emergency responses. The Reliability Coordinator shall communicate and coordinate the implementation of emergency operating responses.2.4 Actions Prior to Declaration of TEA 3. Before declaring a TEA 3, all available generation resources must be committed. This includes but is not limited to: All available generation units are on-line. All generation capable of being on-line in the time frame of the emergency is on-line including quick-start and peaking units, regardless of cost. Purchases made regardless of cost. All firm and non-firm purchases have been made, regardless of cost. Non-firm sales recalled and contractually interruptible loads and demand-side management curtailed. All non-firm sales have been recalled, contractually interruptible retail loads curtailed, and demand-side management activated within provisions of the agreements.Standard TOP-004-3 ? Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 8 of 17Effective Date: October 1, 2007?Operating Reserves. Operating reserves are being utilized such that the declaring entity may be carrying reserves below the required minimum or has initiated emergency assistance through its operating reserve sharing program.3.

Organization	Yes or No	Question 6 Comment
		Transmission Emergency Alert 3 (TEA 3) ? Firm load curtailment in effect to respect IROLs.Circumstances:The Reliability Coordinator or Transmission Operator foresees or has implemented firm load obligation interruption to respect an IROL.3.1 Continue actions from TEA 2. The Reliability Coordinators and the declaring entity shall continue to take all actions initiated during TEA 2.3.2 Declaration Period. The declaring Reliability Coordinator shall update the RCIS under ?System Emergency? at a minimum of every hour until the TEA 3 is terminated.3.3 Use of Transmission short-time limits. The Reliability Coordinators shall request the appropriate Transmission Providers within their Reliability Area to utilize available short-time transmission limits or other emergency operating procedures in order to increase transfer capabilities.3.4 Re-evaluating and revising SOLs and IROLs. The Reliability Coordinator of the declaring entity shall evaluate the risks of revising SOLs and IROLs on the reliability of the overall transmission system. Re-evaluation of SOLs and IROLs shall be coordinated with other Reliability Coordinators and only with the agreement of the Transmission Operator whose equipment would be affected. The resulting increases in transfer capabilities shall only be made available to the declaring entity who has requested an TEA 3 condition. SOLs and IROLs shall only be revised as long as a TEA 3 condition exists or as allowed by the Transmission Operator whose equipment is at risk. The following are minimum requirements that must be met before SOLs or IROLs are revised:3.4.2 Mitigation of cascading failures. The Reliability Coordinator shall use its best efforts to ensure that revising SOLs or IROLs would not result in any cascading failures within the Interconnection.3.5 Returning to pre-emergency SOLs and IROLs. Whenever the transmission systems can be returned to their pre-emergency SOLs or IROLs, the declaring Entity shall notify its respective Reliability Coordinator.3.5.1 Notification of other parties. When an alert has been downgraded, the Reliability Coordinator shall notify via the RCIS the affected Reliability Coordinators, Transmission Operators and Balancing Authorities that their systems can be returned to their normal limits.Standard TOP-004-3 ? Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 9 of 17Effective Date: October 1, 20074. Transmission Emergency Alert 0 (TEA 0) - Termination.When the declaring Entity is able to respect IROL requirements and is no longer concerned with its ability to respect IROLs, it shall request its Reliability Coordinator to terminate the alert.4.1. Notification. The Reliability Coordinator shall notify Reliability Coordinators via the RCIS of the termination. The Reliability Coordinator shall also notify the affected Transmission Operators and Balancing Authorities.RCIS Posting ExamplesEach RCIS posting should be clear and concise. If the actions are being taken as a result of a contingency, the contingency should also be identified as the cause.The following are examples of possible of RCIS postings:TEA 1(name of RC) is declaring a TEA 1 on the (name of the interface).TEA 2(name of RC) is declaring a TEA 2 on the (name of the interface). Flows from (direction of flow that impacts the interface) aggravate this interface. (amount of MW relief) of (type of load management procedures that have been or expected to be implemented ie voltage reduction, curtailable load reductions) of relief has been (or is expected) to be implemented to respect the limit. These actions are expected to last the next (length of time ? hours/days) and should be sufficient to prevent the need for Firm load shedding.TEA 3(name of RC) is declaring a TEA 3 on the (name of the

Organization	Yes or No	Question 6 Comment
		interface). Flows from (direction of flow that impacts the interface) aggravate this interface. (amount of MW relief) of Firm Load curtailments have been (or is expected) implemented to respect the limit. These actions are expected to last the next (length of time ? hours/days).Contingency ExampleIf the TEA is being declared as a result of a contingency the message could be modified simply by adding the contingency description as below:(name of RC) is declaring a TEA 2 on the (name of the interface). This is a result of a contingency on (name of the interface or contingent element). Flows from (direction of flow that impacts the interface) aggravate this interface. (amount of MW relief) of (type of load management procedures that have beenStandard TOP-004-3 ? Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 10 of 17Effective Date: October 1, 2007or are expected to be implemented i.e. voltage reduction, curtailable load reductions) to respect the limit. These actions are expected to last the next (length of time ? hours/days) and should be sufficient to prevent the need for Firm load shedding.UpdatesWhen updating postings only significant changes need be identified. The following is appropriate:(name of RC) remains in a TEA (2 or 3) on the (name of the interface). (amount of MW relief) of (type of load management procedures that have been or are expected to be implemented i.e. voltage reduction, curtailable load reductions, firm load reductions) have been implemented (description of the change i.e. increased/reduce by amount of MW change or identify no change).Standard TOP-004-3 ? Transmission OperationsExample #1IROL violation on X No Global Adequacy ConcernsIROL ?X?500 MW - A to B300 MW - B to AIntertie Limit Intertie LimitImp 300 Imp 200Exp 200 Exp 100EEA1 No2 No3 NoTEA1 Yes2 Yes3 YesIn this example the available generation in A is in excess of its load requirements. The available generation in B is less than its load requirements. Area B will be relying on the full transfer capability of the interface ?X? plus an additional import of 100 MW to the maximum limit on the intertie in Area B. With the implementation of the interruptible load and V/R the firm load requirements in B cannot be met without the use of Firm load shedding.In this scenario an EEA is not required as the BA is able to meet its globalBA Total Load 2,500 MWBA Total Gen 2,900 MWBAImpLimit500MWZone AZone BLoad 1,500 MWLoad 1,000 MWGen available 2,800 MWGen available 100 MWImp 0 MWImp 100 MWExp 0 MWExp 0 MWInterruptible 50 MWLoadInterruptible 50 MWLoadV/R 50 MWV/R 50 MWBalancing Authority X Adopted by Board of Trustees: November 1, 2006 Page 11 of 17Effective Date: October 1, 2007Standard TOP-004-3 ? Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 12 of 17Effective Date: October 1, 2007load/generation requirements .When this situation is forecast a TEA 1 should be issued to indicate the potential concerns with the ability to respect the IROL limit X without the use of load management procedures. When load management procedures are implemented in Real Time to respect the IROL X, a TEA 2 should be issued.When Firm load is curtailed to respect the limit a TEA 3 should be issued.Standard TOP-004-3 ? 		utilization of interruptible load and V/R.BA Total Load 2,500 MWBA Total Gen 1,800 MWZone AZone BLoad 1,500 MWLoad 1,000 MWGen available 900 MWGen available 900 MWImp 300 MWImp 200 MWExp 0 MWExp 0 MWInterruptible 100 MWLoadInterruptible 50 MWLoadV/R 50 MWV/R 50 MWBalancing Authority X Adopted by Board of Trustees: November 1, 2006 Page 13 of 17Effective Date: October 1, 2007Standard TOP-004-3 Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 14 of 17Effective Date: October 1, 2007?EEA procedures should be followed?There is no need for a TEA to be issuedStandard TOP-004-3 ? Transmission OperationsExample #3Global Adequacy DeficiencyIROL ViolationIROL ?X?500 MW - A to B300 MW - B to AIntertie Limit Intertie LimitImp 300 Imp 200Exp 200 Exp 100EEA1 Yes2 Yes3 NoTEA1 Yes2 Yes3 YesIn this example the available generation in A meets its load requirements. The available generation in B is less than its load requirements. There is a Global Adequacy deficiency after considering full import capability. There is also an IROL violation at X in the direction of A to B to meet the load requirements in B depending on where load management procedures are implemented.Adopted by Board of Trustees: November 1, 2006 Page 15 of 17Effective Date: October 1, 2007?An EEA 1 and a TEA 1 should be issued to identify the potential issuesBA Total Load 2,500 MWBA Total Gen 1,700 MWBAImpLimit500MWABLoad 1,500 MWLoad 1,000 MWGen available 1,600 MWGen available 100 MWImp 300 MWImp 200 MWExp 0 MWExp 0 MWInterruptible 100 MWLoadInterruptible 50 MWLoadV/R 50 MWV/R 50 MWBalancing Authority X Standard TOP-004-3 ? Transmission OperationsAdopted by Board of Trustees: November 1, 2006 Page 16 of 17Effective Date: October 1, 2007 When load management procedures are implemented to manage the transfer from A to B a TEA 2 should be issued (assumes B will be deficient before the global deficiency occurs).?An EEA 2 should be issued when load management procedures are being implemented in A to manage global requirements. TEA 3 should also be issued when Firm load is shed in B to meet the load requirements in B while respecting the IROL.Standard TOP-004-3 Transmission OperationsExample #4Transaction CurtailmentsIROL X 500 MW - A to B300 MW - B to AIntertie Limit Intertie LimitImp 300 Imp 200Exp 200 Exp 100EEA1 No2 No3 NoTEA1 No2 No3 NoIn this example there are no global adequacy concerns. There is an export transaction in B that is causing a limit concern on X in the A to B direction. With the available generation in B plus the transfer capability there is no concern for violating the IROL limit. The transaction is creating a situation where it will be required curtailed at some point to prevent the IROL violation. Assuming the TLR procedure would be effective at relieving this constraint regardless of the TLR level (at either the TLR 3 or 5 level) no TEA would be required as there is no concern that the IROL can't be respected with control actions that don't involve load management procedures.BA Total Load 2,500 MWBA Total Gen 2,500 MWBAImpLimit500MWABLoad 1,500 MWLoad 1,000 MWGen available 2,000 MWGen available 500 MWImp 200 MWImp 0 MWExp 0 MWExp 100 MWInterruptible 100 MWLoadInterruptible 50 MWLoadV/R 50 MWV/R 50 MWBalancing Authority X Adopted by Board of Trustees: November 1, 2006 Page 17 of 17Effective Date: October 1, 2007

Response: As per the wording of the attached document**: "**may be initiated only by a Reliability Coordinator' this certainly seems to say that this requirement

Organization	Yes or No	Question 6 Comment
belongs in the IRO family of standards as opposed to the TOP family of standards. This request should be forwarded to Project 2006-06.		
SERC OC Standards Review Group	Yes	TOP-001 R2 - The phrase "shall coordinate its respective operations known or expected to have a reliability impact on other reliability entities" could cause compliance issues due to the resulting subjectivity of the identification of other reliability entities. We recommend that it replaced with "shall coordinate its respective operations known or expected to have a reliability impact on adjacent reliability entities". It should be the responsibility of the adjacent reliability entity to further coordinate, if necessary, other appropriate reliability entities. The Measures and VSLs would need to be modified accordingly. Top-001, Requirement 4 - we suggest changing other reliability entities to adjacent reliability entities. TOP-002 R2 uses the word "plan" as a verb, and then it is referenced in R3 as a noun. This is propagated in the Measures and VSLs. We suggest the following wording change in R2: The Transmission Operator shall have a coordinated plan...... ? TOP-003 R1.2 We disagree with this requirement and we recommend that it be struck. The TOP and the BA must be able to specify formats that can be utilized by their processes to ensure reliability.
Response: The word 'coordinate' is not used in TOP-001-2, Requirement R2 but upon review the SDT has modified the wording to address your concern about affected Transmission Operators. **TOP-001-2, R2.** Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators known or expected to be affected of actual Emergency and anticipated Emergency conditions. If there are known 3rd party impacts, it only makes sense that all entities need to be informed. 'Other' provides that flexibility and includes adjacent. The SDT sees no reason to change the wording in TOP-002-3, Requirements R2 & R3. Plan can be both a noun and a verb and the usage here is self-explanatory. The SDT believes that R1.2 is a reasonable attempt to solve the problem where there are 2 different system involved. Deleting the requirement doesn't solve the problem. No change made.		
Dominion Resources Inc.	Yes	TOP-001 uses the term reliability entities in the purpose statement while TOP-003 uses the term functional responsibilities. The Functional Model uses the term Responsible Entities. We suggest that NERC and the SDT make every effort to use consistent terms. We continue to have concerns with the current standards review/approval process. Having to make comments on new draft standards that are predicted upon other draft standards that have not been approved is a non-productive process.As stated in the implementation plan ?Changes made in this project

Organization	Yes or No	Question 6 Comment
		to TOP-005-1, R1; TOP-007-0, R4 are dependent on corresponding changes being approved in Project 2006-06 Reliability Coordination: COM-001-1: Telecommunications? COM-002-2: Communications and Coordination? IRO-001-1: Reliability Coordination Responsibilities and Authorities? IRO-002-1: Reliability Coordination Facilities? IRO-014-1: Procedures to Support Coordination between Reliability Coordinators? IRO-015-1: Notifications and Information Exchange between Reliability Coordinators? IRO-016-1: Coordination of Real-Time Activities between Reliability Coordinators? PER-004-1: Reliability Coordination Staffing? PRC-001-1: System Protection Coordination?
Response: The SDT has reviewed the wording indicated and sees no reason for confusion or concern and has not made any changes to these statements. The Standards Committee and NERC staff has the responsibility for coordinating multiple standards and deciding what can be posted concurrently. The SDT has no control over this.		
MRO NERC Standards Review Subcommittee	Yes	See response to question number 5 which is ?After the review of the paragraph 1612 of the FERC final order 693, the MRO NSRS would like them to be more specific about the type of outages and consistent with the Reliability Coordinator's requirement; the Reliability Coordinator has a wide-area view. How would this country-wide advance notice improve reliability for two independent systems not physically interconnected? In TOP-001-1 R1, what is a reliability directive? Should this be defined? The NERC standard COM-002-2 talks about the RC issuing a reliability directive, what is a directive? Not every communication is a directive; please clarify what is a reliability directive. Should each directive start off by stating that it's a directive and that 3 way communication should be used? (In the MISO Business Practice RTO-OP-002 R7, Telephone Communications Protocol, section 3.2.1, when issuing a Reliability Directive the following must be stated: This is a Reliability Directive and I will need you to repeat it back.) Other MISO Business Practices which discuss reliability directives are RTO-BPM-006-R2 and RTO-EOP-003-R8. The current standard TOP-002-2a includes an interpretation of R11 stating among other things that a unique study is not needed for each operating day. The MRO NSRS recommends revising the TOP-002-3 R1 to include this interpretation. For the TOP-003-1 R1, Each Transmission Operator and Balancing Authority shall have a documented specification for data to support its Real-time monitoring and reliability assessments required to fulfill their respective responsibilities per the NERC Functional Model., the MRO NSRS believes that this phrase NERC Functional Model should be removed since it is unclear as it reads now and it should be replaced with R1.1, R1.2, and R1.3.
Response: See the response to question 5.		

Organization	Yes or No	Question 6 Comment
The Reliability Coordination SDT is proposing the following as a definition of reliability directive. **Reliability Directive:** A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency, Neither the measure nor the requirement states that you must have a power flow study for each day. The measure states that you COULD have a power flow study as one method of measuring compliance. The SDT feels that this is clear and no change is necessary. The SDT agrees and has modified the requirement accordingly. **TOP-003-1, R1**. Each Transmission Operator and Balancing Authority shall have a documented specification for data necessary for Real-time monitoring and reliability assessments. The specification shall include:		
FMPA and its All Requirements Project Participants, as follows: Kissimmee Utility Authority, City of Vero Beach, Lakeland Electric, Florida Municipal Power Pool	Yes	We generally support the revised standards, but did have a few additional comments:? The data retention is significantly longer than earlier standards, e.g., three years rather than 3 months, and the data retention is not consistent between standards, e.g., TOP-001-2 is one year, TOP-002-3 is six months, TOP-003-1 and TOP-004-3. What is your reasoning behind these changes and the inconsistencies between them? Also, saving daily operating data for three years seems a long time. TOP-002-3 R1 probably ought to refer to TOP-003-1 as one of the sources of data for the assessments. Do the standards require current day plans? TOP-002-3 and IRO-004-1 only covers next day. Are we making current day equivalent to real-time, and therefore not requiring a plan for the current day?? TOP-002-3 R1 assigns the same task to the TOP that the RC has in IRO 004 1 R1, although not as confusing as real-time operations with two entities responsible for the same thing, as discussed above in the comments to TOP-001-2, this also has potential for confusion of roles, responsibilities and actions. Should only one entity be responsible for next day plans, e.g., the RC? Or is the distinction that RCs study interfaces, whereas the TOPs assess its entire system? If so, should such a distinction exist?
Response: The SDT has changed the data retention for TOP-003-1, Requirements 2, 3, and 5 to 90 days. The SDT finds no reliability reason to specify the data sources employed in TOP-002-3. That seems more like a 'how' as opposed to a 'what'. No change made. The next day plan referenced here becomes the basis of the current day plan today. No change made. The Transmission Operator is responsible for its area and the Reliability Coordinator is responsible for theirs. The SDT sees no conflict here. No change made.		
Colmac Clarion	Yes	During 'blackout' that resulted in this program, GOP's received more intial information on problem and expected recovery from CNN then from 'chain of command'. If response is expected inclusion in information stream must also be included.

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 6 Comment</th></tr>
<tr><td colspan="3">Response: The SDT can not respond unless specific references and suggestions are provided.</td></tr>
<tr><td>Xcel Energy</td><td>Yes</td><td>In general, we appreciate the drafting team's work and feel the drafted standards are a positive move towards more simplified requirements. However, we do have some concerns, detailed below.
TOP-001>We feel the new R3 should also be applicable to BAs & GOs.
>R4 - The phrase reliability entities needs definition. It is not clear who is being referenced.
>R6 consider adding language to include SOLs.
TOP-002>R1- We assume that the use of the defined term ?Contingency? implies N-1 contingency planning. Yet, it is not clearly stated as such and therefore open to some interpretation. We recommend adding language to clarify, similar to the current version.
>R2 What is the intent here? Please clarify if planning is intended to entirely prevent the exceedence of an IROL, or to not exceed an IROL Tv.
>R3 - The phrase reliability entities needs definition. It is not clear who is being referenced.
>Deletion of the current R3 raises a concern as to what now requires LSEs and GOPs to coordinate their planning. This can present problems with TOPs and BAs attempting to collect needed data.
>Deletion of current R8 where is this covered elsewhere?
TOP-003>R1.1 long term needs more definition; we recommend changing to operating horizon
>R1.1 We do not believe it was the drafting teams intent to require outage reports of all BES components (breakers, etc), nor do we feel that is reasonable. We recommend the addition of a clarifying statement such as: BES components specified by the Transmission Operator and Balancing Authority.
>R5 uses the phrase immediate responsibility suggest changing this to responsible for real time operations.
>It is not yet clear where the current R2 and R3 are being moved to. The previous draft indicated they would be moved to IRO standards. Please provide the link to those drafts or the project they are being worked under.</td></tr>
<tr><td colspan="3">Response: TOP-001-2, R3: The obligation is on the Transmission Operator to coordinate emergency assistance and is not a task for the Balancing Authority or Generator Operator. No change made.
R4: Reliability entities are the entities certified by NERC as such. No change made.</td></tr>
</table>

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 6 Comment</th></tr>
<tr><td colspan="3">R6: The industry is indicating approval of having this requirement limited to IROL and IROL T_v. No change made.

TOP-002-3, R1: The SDT has modified the wording to address this concern.

TOP-002-3, R1. Each Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential single Contingency events.

R2: The statement is to plan to avoid exceedances of an IROL with no timing element involved. No change made.

R3: Reliability entities are the entities certified by NERC as such. No change made.

R3: TOP-003-1 covers the data requirements. No change made.

R8: The SDT assumes you mean the current approved standard as opposed to what was posted. This was deleted because Balancing Authorities can't deliver anything. No change made.

TOP-003-1, R1.1: Long term is 'defined' by the use of the Operations Planning Time Horizon which is limited to one year.

R1.1: The SDT agrees and has changed the requirement accordingly.

TOP-003-1, R1.1, bullet #1: Long term outages of Bulk Electric System equipment, as specified by the Transmission Operator or Balancing Authority,

R5: The SDT has deleted that terminology.

TOP-003-1, R5. Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities , the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments.

R2: This is being covered in Project 2006-06.</td></tr>

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 4Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	September 2009
2. Post for re-ballot.	November 2009
3. Submit to BOT.	December 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Coordination of Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:** To ensure coordination between and among reliability entities for the reliability of the Bulk Electric System (BES).

4. **Applicability**

    4.1. Balancing Authorities

    4.2. Transmission Operators

    4.3. Generator Operators

    4.4. Distribution Providers

    4.5. Load-Serving Entities

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with each Reliability Directive issued by the Transmission Operator, unless the respective entity informs the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R2. Each Transmission Operator shall inform its Reliability Coordinator and other Transmission Operators known or expected to be affected of actual Emergency and anticipated Emergency conditions. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R3. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R4. Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected by the Transmission Operator to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination. Such operations include, but are not limited to, relay or equipment failures and changes in generation, Transmission, Load, or operating conditions. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R5. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limit (IROL) and its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R6. Each Transmission Operator shall inform its Reliability Coordinator of all System Operating Limits (SOLs) which, while not IROLs, support its local area reliability**.** *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations*

R7. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOL as identified in Requirement R6, has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R8. Each Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

C. Measures

M1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall each make available upon request, in accordance with Requirement R1, evidence that it either: (a) complied with each Reliability Directive issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M2. Each Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and affected Transmission Operators of actual Emergency and anticipated Emergency conditions in accordance with Requirement R2. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M3. Each Transmission Operator shall make available upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R3 unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M4. Each Transmission Operator and Generator Operator shall each make available upon request, evidence that operations were coordinated among impacted reliability entities in accordance with Requirement R4 unless conditions do not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M5. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an identified Interconnection Reliability Operating Limit (IROL) and its associated IROL T_v as specified in Requirement R5. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion outside of the identified IROL and applicable IROL T_v.

M6. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of all SOLs which, while not IROLs, support its local area reliability in accordance with Requirement R6. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M7. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOL as identified in Requirement R6, has been exceeded in accordance with Requirement R7. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M8. Each Transmission Operator shall make available evidence of when it acted or directed others to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v in accordance with Requirement R8. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

Each Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance for each applicable Requirement R1 through R4 and R6 through R8 and Measure M1 through M4 and M6 through M8 for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement

Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has operated outside an identified IROL and its associated IROL T_v as specified in Requirement R5 and Measurement M5.

If a Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, or Generator Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity did not comply with a Reliability Directive issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements.
R2	The Transmission Operator did not inform one other Transmission Operator of an actual Emergency or anticipated Emergency conditions.	The Transmission Operator did not inform two other Transmission Operators of an actual Emergency or anticipated Emergency conditions.	The Transmission Operator did not inform three other Transmission Operators of an actual Emergency or anticipated Emergency conditions.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or an anticipated Emergency condition.. OR The Transmission Operator did not inform four or more other Transmission Operators of an actual Emergency or anticipated Emergency conditions.
R3	N/A	N/A	N/A	The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, when the requesting entity had implemented its comparable emergency procedures and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R4	The responsible entity did not coordinate its respective operations known or expected by the Transmission Operator to impact other reliability entities with 5% or less of the affected reliability entities when conditions did permit such	The responsible entity did not coordinate its respective operations known or expected by the Transmission Operator to impact other reliability entities with more than 5% or less than or equal to 10% of the affected reliability entities when	The responsible entity did not coordinate its respective operations known or expected by the Transmission Operator to impact other reliability entities with more than 10% or less than or equal to 15% of the affected reliability entities when	The responsible entity did not coordinate its respective operations known or expected by the Transmission Operator to impact other reliability entities with more than 15% of the affected entities when conditions did permit such coordination.

	Lower	Moderate	High	Severe
	coordination.	conditions did permit such coordination.	conditions did permit such coordination.	
R5	N/A	N/A	N/A	The Transmission Operator did not operate within an identified Interconnection Reliability Operating Limit (IROL) and the associated IROL T_v for any single occasion.
R6	The Transmission Operator did not inform its Reliability Coordinator of one SOL which, while not an IROL, supports its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs which, while not IROLs, supports its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs which, while not IROLs, supports its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs which, while not IROLs, supports its local area reliability**.**
R7	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when one SOL (that supports its local area reliability) has been exceeded.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when two SOLs (that support its local area reliability) have been exceeded.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when three SOLs (that support its local area reliability) have been exceeded.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL has been exceeded OR The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when four or more SOLs (that support its local area reliability) have been exceeded..
R8	N/A	N/A	N/A	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's $T_{v.}$.

E. Regional Variances

None identified.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 4Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	September 2009
2. Post for re-ballot.	November 2009
3. Submit to BOT.	December 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Coordination of Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:** To ensure coordination between and among reliability entities for the reliability of the Bulk Electric System (BES).

4. **Applicability**

   4.1. Balancing Authorities

   4.2. Transmission Operators

   4.3. Generator Operators

   4.4. Distribution Providers

   4.5. Load-Serving Entities

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with each ~~r~~Reliability ~~d~~Directive issued by the Transmission Operator, unless the respective entity informs the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R2. Each Transmission Operator shall inform its Reliability Coordinator and ~~affected~~ other Transmission Operators known or expected to be affected of actual Emergency and anticipated Emergency conditions. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R3. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R4. Each Transmission Operator and Generator Operator shall coordinate its respective operations known or expected by the Transmission Operator to have a reliability impact on other reliability entities with those entities unless conditions do not permit such coordination. Such operations include, but are not limited to, relay or equipment failures and changes in generation, Transmission, Load, or operating conditions. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R5. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limit (IROL) and its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R6. Each Transmission Operator shall inform its Reliability Coordinator of all System Operating Limits (SOLs) which, while not IROLs, support its local area reliability. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations*

R7. Each Transmission Operator shall inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOL~~s~~ as identified in Requirement R6, has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R8. ~~The~~ Each Transmission Operator shall act or direct others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

C. Measures

M1. ~~The~~ Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall each make available upon request, in accordance with Requirement R1, evidence that it either: (a) complied with each ~~r~~Reliability ~~d~~Directive issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M2. ~~The~~ Each Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and affected Transmission Operators of actual Emergency and anticipated Emergency conditions in accordance with Requirement R2. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M3. ~~The~~ Each Transmission Operator shall make available upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R3 unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M4. ~~The~~ Each Transmission Operator and Generator Operator shall each make available upon request, evidence that operations were coordinated among impacted reliability entities in accordance with Requirement R4 unless conditions do not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M5. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an identified Interconnection Reliability Operating Limit (IROL) and its associated IROL T_v as specified in Requirement R5. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion outside of the identified IROL and applicable IROL T_v.

M6. ~~The~~Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of all SOLs which, while not IROLs, support its local area reliability in accordance with Requirement R6. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M7. ~~The~~ Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOL as identified in Requirement R6, has been exceeded in accordance with Requirement R~~5~~7. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M8. ~~The~~ Each Transmission Operator shall make available evidence of when it acted or directed others to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v in accordance with Requirement R~~6~~8. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable.

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

~~The~~ Each Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance for each applicable Requirement R1 through R4 and R6 through R8 and Measure M1 through M4 and M6 through M8 for the current calendar year and one previous calendar year unless directed by its Compliance

Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

~~The~~Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has operated outside an identified IROL and its associated IROL T_v as specified in Requirement R5 and Measurement M5.

If a Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, or Generator Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The ~~Balancing Authority, Distribution Provider, Load-Serving Entity, or Generator Operator~~ responsible entity did not comply with a ~~r~~Reliability ~~d~~Directive issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements.
R2	The Transmission Operator did not inform ~~its Reliability Coordinator and~~ one affected other Transmission Operator~~s~~ of an actual Emergency ~~and~~ or anticipated Emergency conditions ~~on one occasion~~.	The Transmission Operator did not inform ~~its Reliability Coordinator and~~ two affected other Transmission Operators of an actual Emergency ~~and~~ or anticipated Emergency conditions ~~on two occasions~~.	The Transmission Operator did not inform ~~its Reliability Coordinator and~~ three affected other Transmission Operators of an actual Emergency ~~and~~ or anticipated Emergency conditions ~~on three occasions~~.	The Transmission Operator did not inform its Reliability Coordinator ~~and affected Transmission Operators~~ of an actual Emergency ~~and~~ or an anticipated Emergency condition~~s~~. ~~on four or more occasions~~. OR The Transmission Operator did not inform four or more other Transmission Operators of an actual Emergency or anticipated Emergency conditions.
R3	N/A	N/A	N/A	The Transmission Operator did not render emergency assistance to other Transmission

	Lower	Moderate	High	Severe
				Operators, as requested and available, ~~provided that~~when the requesting entity ~~has~~had implemented its comparable emergency procedures and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R4	The ~~Transmission Operator or Generator Operator~~ responsible entity did not coordinate ~~their~~ its respective operations known or expected by the Transmission Operator to impact other reliability entities with ~~2~~5% or less of the affected reliability entities ~~unless~~ when conditions did ~~not~~ permit such coordination.	The ~~Transmission Operator or Generator Operator~~ responsible entity did not coordinate ~~their~~ its respective operations known or expected by the Transmission Operator to impact other reliability entities with more than ~~2~~5% or less than or equal to ~~5~~10% of the affected reliability entities ~~unless~~ when conditions did ~~not~~ permit such coordination.	The ~~Transmission Operator or Generator Operator~~ responsible entity did not coordinate ~~their~~ its respective operations known or expected by the Transmission Operator to impact other reliability entities with more than ~~5~~10% or less than or equal to ~~7~~15% of the affected reliability entities ~~unless~~ when conditions did ~~not~~ permit such coordination.	The ~~Transmission Operator or Generator Operator~~ responsible entity did not coordinate ~~their~~ its respective operations known or expected by the Transmission Operator to impact other reliability entities with more than ~~7~~15% of the affected entities ~~unless~~ when conditions did ~~not~~ permit such coordination.
R5	N/A	N/A	N/A	The Transmission Operator did not operate within an identified Interconnection Reliability Operating Limit (IROL) and the associated IROL T_v for any single occasion.
R6	The Transmission Operator did not inform its Reliability Coordinator of one SOL which, while not an IROL, supports its local area reliability.	The Transmission Operator did not inform its Reliability Coordinator of two SOLs which, while not IROLs, supports its local area	The Transmission Operator did not inform its Reliability Coordinator of three SOLs which, while not IROLs, supports its local area	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs which, while not IROLs, supports its local area

	Lower	Moderate	High	Severe
		reliability.	reliability.	reliability.
R~~5~~7	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when ~~an~~one ~~IROL or~~ SOL (that supports its local area reliability) has been exceeded ~~on one occasion~~.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when ~~an~~two ~~IROL or~~ SOLs (that support its local area reliability) ~~has~~have been exceeded ~~on two occasions~~.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when ~~an~~three ~~IROL or~~ SOLs ~~has~~(that support its local area reliability) have been exceeded ~~on three occasions~~.	The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL ~~or SOL~~ has been exceeded ~~on four or more occasions~~ OR The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when four or more SOLs (that support its local area reliability) have been exceeded..
R~~6~~8	~~The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's~~ ~~T_v~~ ~~on one occasion.~~ N/A	~~The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's~~ ~~T_v~~ ~~on two occasions.~~ N/A	~~The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's~~ ~~T_v~~ ~~on three occasions.~~ N/A	The Transmission Operator did not make available evidence of its actions or when it directed others to act, to mitigate the magnitude and duration of exceeding an IROL within the IROL's T_v, ~~on four or more occasions~~.

4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 4Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	September 2009
2. Post for re-ballot.	November 2009
3. Submit to BOT.	December 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**
2. **Number:** TOP-002-3
3. **Purpose:** To ensure that reliability entities have coordinated plans for meeting expected operating conditions.
4. **Applicability**

   4.1. Transmission Operator.
5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential single Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. Each Transmission Operator shall plan to preclude operating in excess of those Interconnection Reliability Operating Limits (IROLs) identified as a result of the assessment performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

R3. Each Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s). *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have evidence of an assessment for next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated power flow study results.

M2. Each Transmission Operator shall have evidence that it has planned to preclude operating in excess of the IROLs identified as a result of the assessment performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans, processes, or procedures for precluding operating in excess of each IROL.

M3. Each Transmission Operator shall make available evidence that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. **Compliance Monitoring Process**

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

Each Transmission Operator shall keep data or evidence to show compliance for each Requirement and Measure for a rolling six month period unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator does not have an assessment for the next day's operation that indicated whether it will exceed any of its SOLs during anticipated normal and potential single Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not plan to preclude operating in excess of those IROLs identified as a result of the assessment performed in Requirement R1.
R3	The Transmission Operator did not notify 5% or less of the reliability entities identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify more than 5% and less than or equal to 10% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 10% and less than or equal to 15% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than 15% of the reliability entities identified in the plan(s) as to their role in the plan(s).

E. Regional Variances

None identified.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The schedule shows completion of the project in 4Q09. The current draft is the second posting of the revised standards. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	September 2009
2. Post for re-ballot.	November 2009
3. Submit to BOT.	December 2009

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that reliability entities have coordinated plans for meeting expected operating conditions.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. ~~The~~ Each Transmission Operator shall have an assessment for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs) during anticipated normal conditions and potential single Contingency events. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. ~~The~~ Each Transmission Operator shall plan to preclude operating in excess of ~~any~~ those Interconnection Reliability Operating Limits (IROLs) ~~including those~~ identified as a result of the assessment performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

R3. ~~The~~ Each Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s). *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

C. Measures

M1. ~~The~~ Each Transmission Operator shall have evidence ~~that it has assessed~~ of an assessment for next day operations in accordance with Requirement R1. Such evidence could include but is not limited to dated power flow study results.

M2. ~~The~~ Each Transmission Operator shall have evidence that it has planned to preclude operating in excess of the IROLs identified as a result of the assessment performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans, processes, or procedures for precluding operating in excess of each IROL.

M3. ~~The~~ Each Transmission Operator shall make available evidence that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. **Compliance Monitoring Process**

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Reset Time Frame

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

~~The~~ Each Transmission Operator shall keep data or evidence to show compliance for each Requirement and Measure for a rolling six month period unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator ~~did not perform~~ does not have an assessment for the next day's operation that indicated whether it will exceed any of its SOLs during anticipated normal and potential single Contingency event conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not plan to preclude operating in excess of ~~any~~ those IROLs identified as a result of the assessment performed in Requirement R1.
R3	The Transmission Operator did not notify ~~2~~5% or less of the reliability entities identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify more than ~~2~~5% and less than or equal to ~~5~~10% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than ~~5~~10% and less than or equal to ~~7~~15% of the reliability entities identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify more than ~~7~~15% of the reliability entities identified in the plan(s) as to their role in the plan(s).

E. Regional Variances

None identified.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**
2. **Number:** TOP-003-2
3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their functional responsibilities.
4. **Applicability**
   - **4.1.** Transmission Operators.
   - **4.2.** Balancing Authorities.
   - **4.3.** Generator Owners.
   - **4.4.** Generator Operators.
   - **4.5.** Interchange Authorities.
   - **4.6.** Load-Serving Entities.
   - **4.7.** Transmission Owners.
5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall have a documented specification for data necessary for Real-time monitoring and reliability assessments. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

1.1. A list of required data to be exchanged including, but not limited to:

- Long term outages of Bulk Electric System equipment, as specified by the Transmission Operator or Balancing Authority, .
- Equipment at voltage levels lower than the Bulk Electric System, at the discretion of the Transmission Operator or Balancing Authority.

1.2. A mutually agreeable format.

1.3. A timeframe and periodicity for providing data.

R2. Each Transmission Operator shall distribute its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R3. Each Balancing Authority shall distribute its data specification to entities that provide Facility status to the Balancing Authority. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall satisfy the obligations of the documented specifications for data. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R5. Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities, the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator and Balancing Authority shall make available its dated, current, in force documented specification for data in accordance with Requirement R1.

M2. Each Transmission Operator shall make available evidence that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M3. Each Balancing Authority shall make available evidence that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R4. The evidence shall be that there are no Transmission Operators as identified in Requirement R2 or Balancing Authorities as identified in Requirement R3 with outstanding requests for data to the subject entity that have been unfilled.

M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities the data requested by those entities necessary for reliability assessments and Real-time operation in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

Regional Entity

1.2. Compliance Monitoring Period and Reset Timeframe

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certification

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator and Balancing Authority shall retain their dated, current, in force, documented specification for data necessary for Real-time monitoring and reliability assessments in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2 and Measurement M2.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall retain evidence for 90 calendar days that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R4 and Measurement M4.
- Each Transmission Operator and Balancing Authority shall retain evidence for 90 calendar days that it has provided to other Transmission Operators and Balancing Authorities the data requested by those entities

necessary for reliability assessments and Real-Time operations in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The responsible entity did not have one of the required elements of the documented specification for data necessary for Real-time monitoring and reliability assessments.	The responsible entity did not have two of the required elements of the documented specification for data necessary for Real-time monitoring and reliability assessments.	N/A	The responsible entity did not have a documented specification for data necessary for Real-time monitoring and reliability assessments.
R2	The Transmission Operator did not distribute its data specification to 5% or less of the entities that has Facilities monitored by the Transmission Operator or to 5% or less of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to more than 5% and less than or equal to10% of the entities that have Facilities monitored by the Transmission Operator or to more than 5% and less than or equal to 10% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to more than 10% and less than or equal to 15% of the entities that have Facilities monitored by the Transmission Operator or more than 10% and less than or equal to 15% of the entities that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to more than 15% of the entities that have Facilities monitored by the Transmission Operator or more than 15% of the entities that provide Facility status to the Transmission Operator.
R3	The Balancing Authority did not distribute its data specification to 5% or less of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 5% and less than or equal to 10% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 10% and less than or equal to 15% of the entities that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to more than 15% of the entities that provide Facility status to the Balancing Authority.
R4	N/A	N/A	N/A	The responsible entity receiving a data specification in Requirement R2 or R3 did not satisfy the obligations of the documented specifications for data. .
R5	N/A	N/A	N/A	The responsible entity did not provide to other Transmission Operators or Balancing Authorities the data and information requested by those entities necessary for real-time monitoring and reliability assessments.

E. Regional Variances

None identified.

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**

2. **Number:** TOP-003-~~1~~2

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their functional responsibilities.

4. **Applicability**

   4.1. Transmission Operators.

   4.2. Balancing Authorities.

   4.3. Generator Owners.

   4.4. Generator Operators.

   4.5. Interchange Authorities.

   4.6. Load-Serving Entities.

   4.7. Transmission Owners.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall have a documented specification for data necessary for Real-time monitoring and reliability assessments~~required to fulfill their respective responsibilities per the NERC Functional Model~~. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

~~R1.1.~~1.1. A list of required data to be exchanged including, but not limited to:

- Long term outages of Bulk Electric System equipment, as specified by the Transmission Operator or Balancing Authority, ~~when they are known,~~.
- Equipment at voltage levels lower than the Bulk Electric System, at the discretion of the Transmission Operator or Balancing Authority.

~~R1.2.~~1.2. A mutually agreeable format.

~~R1.3.~~1.3. A timeframe and periodicity for providing data.

R2. Each Transmission Operator shall distribute its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R3. Each Balancing Authority shall distribute its data specification to entities that provide Facility status to the Balancing Authority. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall satisfy the obligations of the documented specifications for data. ~~provide data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies)~~. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning~~, Same-day Operations, Real-Time Operations~~]*

~~C.~~R5. Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities ~~with immediate responsibility for operational reliability~~, the data requested by those other Transmission Operators and Balancing Authorities necessary for Real-time monitoring and reliability assessments. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator and Balancing Authority shall make available its dated, current, in force documented specification for data in accordance with Requirement R1.

M2. Each Transmission Operator shall make available evidence that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M3. Each Balancing Authority shall make available evidence that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall make available evidence that it has satisfied the obligations of the documented specifications for data ~~provided data, as specified in Requirement R1, to its Transmission Operator(s) and Balancing Authority(ies)~~ in accordance with Requirement R4. ~~The data is limited to that needed by the Transmission Operator to support Operational Planning Analyses and reliability assessments. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.~~ The evidence shall be that there are no Transmission Operators as identified in Requirement R2 or Balancing Authorities as identified in Requirement R3 with outstanding requests for data to the subject entity that have been unfilled.

M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities ~~with~~

~~immediate responsibility for operational reliability,~~ the data requested by those entities necessary for reliability assessments and Real-time operation in accordance with Requirement R5. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

Regional Entity

1.2. Compliance Monitoring Period and Reset Timeframe

Not applicable

1.3. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certification

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.4. Data Retention

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator and Balancing Authority shall retain their dated, current, in force, documented specification for data necessary for Real-time monitoring and reliability assessments in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2 and Measurement M2.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall retain

evidence for ~~three~~90 calendar ~~years~~days that it has satisfied the obligations of the documented specifications for data ~~provided data, as specified in Requirement R1to its Transmission Operator(s) and Balancing Authority(ies)~~ in accordance with Requirement R4 and Measurement M4.

- Each Transmission Operator and Balancing Authority shall retain evidence for ~~three~~90 calendar ~~years~~days that it has provided to other Transmission Operators and Balancing Authorities ~~with immediate responsibility for operational reliability,~~ the data requested by those entities necessary for reliability assessments and Real-Time operations in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until found compliant.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.5. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The ~~Transmission Operator or Balancing Authority~~ responsible entity did not have one of the required elements of the documented specification for data necessary for Real-time monitoring and reliability assessments.	The ~~Transmission Operator or Balancing Authority~~ responsible entity did not have two of the required elements of the documented specification for data necessary for Real-time monitoring and reliability assessments.	N/A	The ~~Transmission Operator or Balancing Authority~~ responsible entity did not have a documented specification for data necessary for Real-time monitoring and reliability assessments.
R2	The Transmission Operator did not distribute its data specification to ~~2~~5% or less of the entities that has Facilities monitored by the Transmission Operator or to ~~2~~5% or less of the entities that provide Facility status to the Transmission Operator. Unofficial Comment Form for Third Draft of Standards for Real-Time Operations (Project 2007-03)

Please **DO NOT** use this comment form. Please use the electronic comment form located at the link below to submit comments on the third draft of the standards for Real-Time Operations (Project 2007-03). Comments must be submitted by **September 24, 2009**. If you have questions please contact Ed Dobrowolski at ed.dobrowolski@nerc.net or by telephone at 609-947-3673.

http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Background Information:
In the 3rd posting for Project 2007-03, the Real-Time Operations Standard Drafting Team (RTO SDT) has attempted to clarify the proposed changes to the TOP family of standards based on industry comments received for the 2nd posting.

***Please use the electronic comment form to submit your final responses to NERC.**

1. TOP-001-2: Do you agree with the changes made to this standard? If not, please supply specific reasons why you do not agree with the changes made.

   ☐ Yes
   ☐ No
   Comments:

2. TOP-002-3: Do you agree with the changes made to this standard? If not, please supply specific reasons why you do not agree with the changes made.

   ☐ Yes
   ☐ No
   Comments:

3. TOP-003-1: Do you agree with the changes made to this standard? If not, please supply specific reasons why you do not agree with the changes made.

   ☐ Yes
   ☐ No
   Comments:

4. TOP-004-3: Do you agree with the decision to move the lone remaining requirement of this standard to TOP-001-2? If not, please supply specific reasons why you do not agree with this move.

   ☐ Yes
   ☐ No
   Comments:

5. TOP-001-2, Requirement R1: Do you believe that the Balancing Authority issues Reliability Directives directly for transmission-related limits and therefore should be in the TOP standards,(vote YES); or do you believe that the Balancing Authority in its role as a Balancing Authority issues Reliability Directives to balance load and generation and only indirectly affects transmission flows (recognizing that an entity that serves as both a Transmission Operator and a Balancing Authority would be covered under the Transmission Operator requirement) (Vote NO). Please be as specific as possible with your reply.

   ☐ Yes
   ☐ No
   Comments:

6. Do you agree that with the changes in the 3rd posting that this project is ready to go to ballot? If not, please supply specific reasons why not.

   ☐ Yes
   ☐ No

Project Name
2007-03 — Real-time Operations Standards

Due Date and Submittal Information
The comment period is open **until 8 p.m. EDT on September 24, 2009**. Please use this electronic form to submit comments. If you experience any difficulties in using the electronic form, please contact Lauren Koller at Lauren.Koller@nerc.net. An off-line, unofficial copy of the comment form is posted on the project page: http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Content for Comment Period
The Real-time Operations Standards Drafting Team is seeking comments on its revised drafts of the following proposed standards:

- TOP-001-2 — Reliability Responsibilities and Authorities
- TOP-002-3 — Normal Operations Planning TOP-003-2 — Planned Outage Coordination

Other Materials Posted
The drafting team's consideration of industry comments received during the previous comment period

Project Background
The drafting team has attempted to eliminate redundancy in the Transmission Operations (TOP) family of standards. As part of this process, the drafting team has made an effort to reorganize the standards and requirements in a more logical manner. In addition, the drafting team has supplied a complete set of Violation Risk Factors, time horizons, measures, and compliance elements including Violation Severity Levels. An implementation plan has been provided to show the timeframe for compliance.

Applicability of Standards in Project
Transmission Operator
Transmission Owner
Balancing Authority
Generator Owner
Generator Operator
Interchange Authority
Load-Serving Entity
Distribution Provider

Standards Development Process

The Reliability Standards Development Procedure contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

BAs that neither own nor operate transmission should not issue reliability directives for transmission-related limits. Without the tools and knowledge of a Transmission Operator, the BA could isssue conflicting orders to the TOP's operating plans. Certainly, the BA should relay a TOP directive but not be the initiator.
Yes

No
(1) In R1, reliability directive is capitalized in indicating (or implying) it is a defined term. But this term has not yet been defined despite our understanding that there are currently three SDTs that are reviewing and/or attempting to define this term and the term (Directive). We suggest to make this term lower case until it is defined. (2) R2: the revised wording seems a bit odd as the phrase “expected to be affected” could be interpreted to be describing the actual or anticipated Emergency conditions. We suggest R2 to be revised to: “Each Transmission Operator shall inform its Reliability Coordinator and known or expected to be affected Transmission Operators of actual Emergency and anticipated Emergency conditions” to enhance clarity. Alternatively, we propose inserting a comma after “expected to be affected”. (3) R3: Add a comma after “…comparable emergency procedures”. (4)Similar to their IROL counterparts, operating within all SOLs and mitigating their exceedances within some predetermined time period is fundamental to reliable operations. (5) As pointed out in our previous comments, we did not agree that VSLs should be determined based on the number of times a requirement was violated. While it is appropriate to determine the VSLs for R6 based on the number of SOLs that support local area reliability not reported to the RC since these numbers

represent the extent of missing the total set, the same approach should not be applied to the determination of R7 since the progressive VSLs appear to make a difference between IROL and SOL(Note: the former has a Severe VSL for failing to notify one exceedance whereas for the latter the VSLs are graded based on the number of SOLs whose exceedances a TOP failed to notify its RC). Note that R7 requires that the TOP inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOL as identified in Requirement R6, has been exceeded. The requirement does not make any distinction between IROL and SOL, and requires that there shall not be even a single incident that the TOP does not inform its RC of actions being taken to mitigate an IROL or SOL exceedance. Hence, missing even one SOL would violate the bulk of the intent of R7. We suggest the VSLs for Low, Moderate and High be removed, and revise the VSL for Severe to: The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limit when an IROL or SOL has been exceeded.
No
(1) We continue to disagree with the way R2 is worded. R1 requires a TOP to conduct next day analysis to assess if any of the SOLs will be exceeded. R2 requires that the TOP develop plans to preclude operating in excess of only the IROLs identified as a result of the assessment performed in R1. Given our stance on this issue and understanding that IROLs represent a subset of SOLs, we believe R2 should be changed to SOL. In our view, a TOP needs to conduct next day analysis to assess if any of the established limits will be exceeded, develop plans to preclude operating in excess of the IROLs and SOLs, and make resources and actions available for mitigating exceedances if and when they occur. Like operating within SOLs and IROLs, this is fundamental to reliable operation. We suggest R2 be revised to include all SOLs. Remove “single” from R1.
Yes
Regarding R4, M4, it does not appear to be warranted that a Generator Owner, Generator Operator, Interchange Authority, or Load-Serving Entity provide evidence that there are no outstanding requests for data. As the originator of the request, the evidence that there are no outstanding requests for data should be provided by the Balancing Authority or Transmission Operator, as applicable.
Yes
No
The BA’s role is to balance load-generation-interchange and does not have any direct role in monitoring and operating system conditions within transmission-related limits.
No
We continue to strongly disagree with removing the requirements for a TOP to plan and make day ahead arrangement for operating with all SOLs, and during day at hand and real time operate the system within established SOLs (and IROLs) and mitigate SOL exceedances within a predetermined time period. These are the most critical tasks for the TOPs, and are fundamental to ensuring reliability. We are unable to support these standards if the necessary requirements are not reinstated/revised (as suggested in Q1 to change R5 of TOP-001 and in Q2 to change R1 and R2 of TOP-002). R6 should be reworded to read "Each Transmission Operator shall inform its Reliability Coordinator of all System Operating Limits (SOLs)which, while not IROLs, support its Transmission Operator area reliability.

R.4 - The changes suggested to R. 4 are too vague to result in effective coordination. What is meant by “expected relay failures”? How is an expected relay failure assessed? What criteria is used to determine what we consider a risk of an expected relay failure - what conditions? R.6 - is again too vague for making consistent operating decisions. What criteria is applied for identifying SOL’s that support “local area reliability”? What is a local area, how large is it, what reliability criteria is violated on the violation of an SOL? R.7 - SOL’s identified in R6 are vague.
Yes

Yes
Yes
No
The BA is responsible to operate its generation assets within the reliability constraints established by the Transmission Operator and Reliability Coordinator.
No
Changes are still required to TOP-001-2

No
What is definition for when an SOL supports or does not support Local Area Reliabilty? Is this for 100kV and above? What are the timing requirements for returning elements to a level below their SOL?
No
R2 should include SOLs. In R3 the plan should be shared with the RC.
No
Is mutually agreeable a formal process? Should it be in writing? The RC should be involved because of the numerous formats it has to deal with.
Yes
No
In WECC, the RC deals mainly with the BAs. The BAs with their responsibility to maintain load and resources, ACE, and frequency places them in a position to direct and control all other activities on the interconnection. The RC expects the BAs to accomplish and direct actions to restore or mitigate contingencies in the interconnection.

I do agree with most every thing However I do not understand what is meant by the phrase "expected to affect" a TO. How does the TO experiencing the emergency know if his emergency affect every TO. Granted he should know of the main ones but can he be sure that a remote line is affected that has a 2-5% response factor.
Yes

In R2, strike the words “known or”. In R4, remove the added words “by the Transmission Operator” from the second sentence . The addition of this phrase implies that the Generator Operator does have the obligation to initiate the coordination of changes in generation with the transmission operator. The requirement is clearer without this phrase. In R4, change the wording to “Such operations MAY include…” We believe the intent of the sentence was only to provide a list of examples. R6 requires the TOP to identify a sub-set of SOLs that is larger than IROLS and “support its local area reliability”. It is unclear what criteria a TOP would use to identify this subset, which will lead to inconsistent implementation and confusion. The TOP should inform the RC of all SOLs and the actions being taken to address any SOL exceedance which can be accomplished via SCADA or other means of action and communication when necessary. The measures for R5 and R8 need to be clear that these are event driven requirements and only evidence is required if an “event” has occurred.
Yes
Yes
Yes
No
Balancing Authorities do not operate transmission. They would only issue requirements with regard to capacity and energy emergencies.
No
The comments on TOP-001-2, particularly in regard to R6, need to be resolved before balloting.

This standard seems to conflict with MOD-001, Requirement 7. This standard requires that: When calculating ATC or AFC the Transmission Service Provider shall use assumptions no more limiting than those used in the planning of operations for the corresponding time period studied, providing such planning of operations has been performed for that time period. When applying the requirements from TOP-002-3 along with the MOD-001 standard, it seems that all TSP’s will need to calculate ATC or AFC up to the calculated IROL for the time period. When the two standards are looked at independently they are fine, when you look at both, there is some confusion on where NERC wants

the TSP’s to go.

R1 - By capitalizing the term ‘Reliability Directive”, the SDT introduced a discrepancy as this term does not currently exist in the NERC Glossary of Terms. We are opposed to approving revisions to existing or new standards when they are predicated upon references to other ‘draft’ terms, standards, requirements, etc. R4 – We have reviewed the various comments made concerning retention of GOP in this requirement, and philosophically agree but find it impossible to determine how GOP can coordinate” its respective operations known or expected by the Transmission Operator to have a reliability impact….” without knowing what constitutes “expected to have a reliability impact”. The GOP can only coordinate to the extent the TOP has provided predefined information that is required to be coordinated. This information should be included in the Interconnection Agreement or some other agreement that clearly spells out what the GOP is expected to communicate in order to coordinate. We would prefer inclusion of this requirement in TOP-003 as part of R4 (referencing R2 and R3) or we could support the requirement in TOP-001 if it referenced coordination of data required in TOP-003 @ R2 and R3. Also the statement”operating conditions” is sufficiently vague. The SDT needs to clarify what constitutes an operating condition?

Requirement R-1 and Measure M-1 require modification for clarity. Replacing the undefined term “assessment” with the NERC defined term “Operational Planning Assessment” throughout the TOP-002-3 standard will help to clarify both line items. Using “Operational Planning Analysis” in measure M-1 clarifies that the power flow study does not have to be performed day-ahead (see the definition of Operational Planning Analysis). This is in-line with the recent interpretation issued by NERC discussed in the appendix of TOP-002-2a. Using “Operational Planning Analysis” in requirement R-1 ensures the planner understands that his or her assessment is meant to be more than just a determination of System Operating Limits. Requirement R-1 would also benefit from clarifying “single Contingency event.” Current day-ahead contingency analysis is limited to determining system performance during single transmission line, generator and transformer outages. However, using “single Contingency event” could include lightning struck towers with two or more transmission lines or even bus failures at which multiple transmission lines terminate. Unless it is the intent of the standard team to increase the scope of TOP-002 I recommend finishing requirement R-1 with “. . . involving transmission lines, transformers, and generators.”

Southern Company
Hugh Francis
No
The measure for R2 does not carry forth the definition of which other TOP should be informed. R2 requires informing other TOPs that are expected to be affected. The measurement requires that contact was made with all TOPs that were affected. The list of TOPs that are expected to be affected before the fact may be different than the list of TOPs that actually were affected. Would suggest minor change in R2 from “Transmission Operators known or expected to be affected of actual Emergency and anticipated Emergency conditions” to “Transmission Operators known or expected to be affected of actual Emergency or anticipated Emergency conditions” The second “each” in M1 and M4 should be deleted. Would suggest modifying VSL for M5 to read in the same tense of the Measure. Specifically, instead of “The Transmission Operator did not operate within an identified” to “The Transmission Operator operated outside an identified”
Yes
No
R1 is written for the Operations Planning timeframe. As such, would suggest rewording “shall have a documented specification for data necessary for Real-time monitoring and reliability assessments” to “shall have a documented specification for data necessary for reliability assessments and Real-time monitoring”. Having “Real-time monitoring” mentioned first may convey the impression that “Real-time” also applies to the reliability assessments. Also, would suggest rewording “Equipment at voltage levels lower than” to “Outages of equipment at voltage levels lower than.”
Yes
No

TOP-001-2 does not mention any entity except for the Transmission Operator as issuing Reliability Directives. Yes, it is appropriate for the Balancing Authority to issue Reliability Directives that are related to his responsibilities (issues regarding balance load and generation), but there should be no confusion that the Reliability Coordinator has ultimate authority and thus could issues overriding Reliability Directives. The definition of a Balancing Authority in the NERC Glossary is, "The responsible entity that integrates resource plans ahead of time, maintains load-interchange-generation balance within a Balancing Authority Area, and supports Interconnection frequency in real time." This definition gives them no responsibility for transmission limits. However, the Balancing Authority does need to be able to give Reliability Directives in order to aid in the resolution of transmission-related limit problems.
Additional clarification per our previous comments is required. Re-posting may not be required.

Howard Rulf
We Energies
No
We Energies joined MISO's comments for this project. We have one additional comment for this question. The BA may need to issue Directives to Generator Operators or Distribution Providers in response to a TOP or RC need to resolve a transmission issue. Basically "pass-through" the Directive from the TOP or RC to the entity that will actually carry out the directed action.
Group
SERC OC Standards Review Group
Gerald Beckerle, Vice Chair - SERC Operating Committee
No
Is Reliability Directive a defined term since it is capitalized in R1 and throughout the Standard, but not currently found in the NERC Glossary of Terms. R2 – We suggest that “other transmission operators” should be changed to “adjacent transmission operators”. R3 – What is specifically meant by the words, “emergency assistance”? For example, do the words as written require a utility to provide line crews to assist in storm restoration? We suggest that the language be tightened up to focus emergency assistance on those things that were intended by the language. R4 – we suggest removing “and Generator Operator” and the term “by the Transmission Operator” from the first sentence. It appears that the original wording implies that the Generator Operator would have knowledge of conditions on the transmission system. We also suggest removing the last sentence – listing some but not all items that may have operating impacts and in which communications is necessary, concerns the SERC OC Standards Review Group. R6 – We suggest revising R6 to read: Each Transmission Operator shall inform its Reliability Coordinator of any System Operating Limits (SOLs) which, while not IROLs, will require mitigating actions if exceeded. The current word “all” seems to indicate that every SOL would be in this list. R8 – Why is R8 needed – it appears to be a duplication of R5 and the two could be combined. General comment on measures: Measures that are event driven need to be clear that evidence would only be required if an event occurred. That is, the entity should not have to prove a negative.
Yes
No
R1 – Does “specification for data” mean a complete listing of data points or a listing of types of data required for different types of facilities such as “generation, transmission, etc.” Also, does this standard apply solely to internal requirements of a BA and its TOP? The concern is the multiple types of formats that may be required in order to exchange data with an expanded list of entities external to the BA or TOP. M5 measurements should be modeled similar to the measurement in M4, in particular, that last sentence of M4. Is TOP-003-2 a new standard utilizing an existing number? If so,

does the previous TOP-003-1, Planned Outage Coordination have to be retired? The migration from the current TOP-003-1 to the new TOP-003-2 seems like it could cause confusion. Would it be better to just retire TOP-003-1 and form a new standard number like TOP-011-1? R4 and R5: Should there be a time requirement for complying with a data request?
Yes
We are unsure how to respond to this question as it pertains to TOP-001-2, R1.
No
See the above comments. Note: The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review Group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers.

IRC Standards Review Committee
Ben Li
No
Requirement 1: Reliability Directive, as a defined term has been introduced and the definition has not been provided in this posting. If the intent is to use this as a defined term anticipating that it will be defined and approved soon under a different project, then we suggest these standards not be put up for balloting until the term is approved.
No
Requirement #1: It is not clear why we introduce 'single' Contingency event since a TOP may be required to study multiple contingencies identified by its RC (See FAC-011-2, Requirement R3). A better term may be "Contineg‍ency events identified in FAC-011."
Yes
Yes
No
The BA’s role is to balance load-generation-interchange only; it does not have any direct role in monitoring and operating system conditions within transmission-related limits.
No
(1) The SRC is concerned that the absence of an explicit requirement for operating within SOLs may be problematic. Operating within SOLs is an important operating practice that will position the system to be stable within the acceptable reliability criteria included in the definition of SOLs and the requirements to be included in the methodology that is used to determine SOLs. The SRC recognizes that SOLs cover the full range from minor localized limits through Interconnection Operating Reliability Limits (IROLs), and that SOLs are defined to respect the facility and equipment ratings that are included in the determination of the values of SOLs. The suggested requirement R6 in TOP-001-2 for a TOP to identify SOLs, for which the TOP is to notify the RC when the SOLs are exceeded, is intended to address those SOLs that, while not meeting the definition of IROLs, may have potential impact that is important from a local viewpoint. Although these SOLs may not cause an impact equivalent to or greater than that in the definition of Adverse Reliability Impact, they deserve additional attention, including monitoring and notifications between TOPs and RCs. If the SDT holds the view that operating within the identified SOLs and correcting their exceedances are implicit and precursory to R7 and R8, then we would suggest to make it explicit by revising R5, by saying, for example: R5. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limit (IROL) and its associated IROL Tv, and each System Operating Limit (SOL) as identified in R6 and its associated time period as determined by the TOP. Similar to their IROL counterparts, operating within SOLs and mitigating their exceedances within some predetermined time period is fundamental to reliable operations, although for IROLs the interconnected system impact is readily obvious compared to the SOLs. The same principle holds true for day-ahead operational planning so that the needed control measures can be identified and made available in advance to prevent operating in excess of SOLs and to mitigate exceedances if and when they occur during day at hand and real-time operations. To this end, we suggest the SDT consider revising R2 of

TOP-002-3 to: "Each Transmission Operator shall plan to preclude operating in excess of those System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs) identified as a result of the assessment performed in Requirement R1." (2) Also there is concern that a definition for Reliability Directive has not been determined and agreed upon through the standards development process. Until such time that the definition of Reliability Directive can be developed and agreed to, the references to Reliability Directives or these standards should not go to ballot.
Group
FirstEnergy
Sam Ciccone
No
R3 – This requirement requires "comparable emergency procedures" be implemented which is appropriate and consistent with the previous standards, but it lacks, and the previous standards lacked, the concept of mitigation. An entity should not be required to shed load for the sake of requiring a neighboring entity to shed load to mitigate the emergency condition. As currently written, in order for an entity to require its neighbor to shed load that will mitigate the emergency condition, the requesting entity is required to shed load first. We suggest this be revised to say, "comparable emergency procedures that mitigate (lessen or eliminate) the impact of the emergency." R6 – This requirement is ambiguous. By definition a System Operating Limit is "The value (such as MW, MVar, Amperes, Frequency or Volts) that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria. System Operating Limits are based upon certain operating criteria. These include, but are not limited to: (a) ♣ Facility Ratings (Applicable pre- and post-Contingency equipment or facility ratings) ♣ Transient Stability Ratings (Applicable pre- and post-Contingency Stability Limits) ♣ Voltage Stability Ratings (Applicable pre- and post-Contingency Voltage Stability) ♣ System Voltage Limits (Applicable pre- and post-Contingency Voltage Limits)" As written, the TOP will be required to inform the RC of all equipment ratings that "support local area reliability." This could be interpreted as requiring an entity to report equipment ratings for facilities operated at 100 kV or less which we believe is not the intent of the SDT. These facilities certainly support local area reliability on some level but are not monitored by the RC and serve little or no value to the RC. FAC-014-2 requires the TOP in Req. R2 to "establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology." Therefore, it appears that TOP-001-2 Req. R6 may not be necessary. However, if the intent of FAC-014-2 Req. R2 is to establish SOLs from an Operations PLANNING horizon (not sure since FAC-014-2 does not include time horizons with the requirements), and the intent of TOP-001-2 Req. R6 is to inform the RC from a REAL-TIME operations horizon, then Req. R6 of TOP-001-2 should be consistent with FAC-014 and written as follows: "R6. Each Transmission Operator shall inform its Reliability Coordinator of all System Operating Limits (SOLs) which are consistent with its Reliability Coordinator's SOL methodology."
Yes
Yes
We agree with the changes to TOP-003-1. However, we feel that R3 should be re-written to be consistent with the wording in R2. We suggest a change as follows: "R3. Each Balancing Authority shall distribute its data specification to entities that have Facilities monitored by the Balancing Authority and to entities that provide Facility status to the Balancing Authority."
Yes
Yes
The question as written is confusing based on the present wording of TOP-001-2 R1. Nevertheless, we believe that the Balancing Authority (BA) should be applicable in the TOP-001-2 standard and that their role as stated in R1 is correct. The BA receives direction from the TOP when redispatch solutions are needed to alleviate transmission-related limits (i.e. voltage, thermal, etc).
No
We feel that the current draft still has issues to be addressed before balloting begins (see our comments on Questions 1 through 5). Also, we provide the following additional comments: 1. The mapping of all the requirements and standards associated with this project provided within the

Implementation Plan during the first posting is a valuable tool for industry personnel in charge of tracking compliance. However, this mapping matrix now appears to be removed from the implementation plan. We feel that the team and/or NERC should provide a revised mapping document during the next posting of documents for this project so that industry can review it. Then it should be retained as a reference tool for industry when transitioning their compliance documentation from the current standards to the new standards. 2. The implementation plan currently states: "The assumption used by the SDT in establishing this Implementation Plan is that the project mentioned in the prerequisites: Project 2006-06, Reliability Coordination; has been approved prior to the implementation of this Project 2007-03, Real-Time Operations." It should be clear that the implementation clock for these Real-Time Operations standards starts only after "applicable regulatory approval" of the standards associated with Project 2006-06.

It’s our understanding that a definition of the term for a Reliability Directive (RD) may be currently under development/review/approval. However, since RD is not currently found in the NERC glossary, we request that it be added to the definition section of this standard. For example, are base points issued by the market area of an RTO considered an RD? Is there a method to distinguish such base points as constituting an RD from those that are not RDs? The team correctly capitalizes “Transmission” and “Load” since they are terms included in the NERC dictionary and does not capitalize “generation” since it is not included. It would seem that adding the term to NERC glossary would be the best resolution, but, in the interim, it should be well defined within the context that it is being used in any requirement (refer to R4). We are concerned that R5 is a duplication of a requirement in FAC-009 and perhaps others as well. Correspondingly, M5 would also be duplicative. Again, it appears that R6 may be duplicative of FAC-014, R5.2. If not, the phrase “support its local area reliability” should be clarified. While we appreciate the team’s efforts to better distinguish IROLs from SOLs in R7., more work is necessary to better define the difference. (e.g., exceeding limits vs. n-1)
Yes
Yes
AEP would appreciate that the reference to “Long term outages” in R1.1.1. be specified in terms of the time elapsed.
Yes
Yes
Even in conditions where the BA is providing RDs to balance load and generation, the changes may still impact the BES. Under such circumstances, there remains a need for the BA to be aware of loadings on the BES.
No
AEP believes that one more draft is needed to verify that key edits provided by stakeholders during this round are included before proceeding to ballot.

• The definition of “Reliability Directive” drafted by the Reliability Coordination SDT should also be commented on in this TOP effort. We are concerned that the definition is too broad and would encompass what we consider normal communications. A key point of the definition should be that each communication of a Reliability Directive is required to be identified as such to the receiving entity. • R2 should say that the TOP shall inform its RC and direct interconnected TOPs. The phrase “known or expected to be affected” opens the TOP to non-compliance if they don’t expect someone to be affected, and it turns out that they are affected. • R3 – strike the phrase “provided that the

requesting entity has implemented its comparable emergency procedures". In this situation we should not be wasting time getting proof that the requester has implemented their procedures before rendering assistance. • R4 is confusing. Relay and equipment failures are not operations; they are operating events. Also, what is meant by the phrase "unless conditions do not permit such coordination"? • R5 is confusing and appears to duplicate R8. Delete R8 and reword R5 as follows: "Each Transmission Operator shall operate or direct others to operate within IROL Tv for each identified Interconnection Reliability Operating Limit (IROL)." • R6 should include identified IROLs in the communication to the RC. Reword R6 as follows: "Each Transmission Operator shall inform its Reliability Coordinator of all identified IROLs and those System Operating Limits (SOLs) which support its local area reliability." • Revise Measures and VSLs to reflect these changes to TOP-001-2
No
• R1 , M1 and Data Retention could be interpreted to require that daily assessments (which could include a dated Power Flow) will have to be kept for 6 months. This could take up a lot of space. • R2 as worded gives the impression that an IROL will be identified during a daily assessment respecting an SOL per R1. First, if you respect the SOL there will be no IROL. Second, simple day-ahead studies with an online Power Flow looking for contingencies might not identify an IROL. It might, but you would probably need to examine some multiple contingencies before something would cascade. R2 could be revised to read that each TOP shall plan to preclude operating in excess of any identified IROL's during the day-ahead assessment per R1. Also, maybe this requirement should be an RC requirement.
No
• The data specification in R1 is broad and could force a company to name every breaker, voltage point, MW point, etc. on their system. Perhaps an ICCP document or something similar could be used, but it's not clear as the requirement is currently written. • Also, this standard goes into a lot of detail in R1 through R4. This standard could be simply one requirement, R5.
Yes
Yes
The BA is involved in generation dispatch, which directly affects transmission flows.
No
We believe that more clarity is needed on the requirements in these standards before going to ballot.

R1- There is not an associated definition for the term Reliability Directive (nor is there one in the documents associated with Project 2006-06). The term "directive" is the subject of much debate as evidenced by the recent attempt at clarification by the NERC advisory on communications. This term needs to be defined and an opportunity for stakeholder comment, prior to moving this standard to ballot. R1- We feel that GOP should be removed from this requirement. The TOP should coordinate with any entity it necessary. Alternatively, it could be reworded to read: "The TOP shall coordinate operations with the GOP…". R2- Should be redrafted to read: "Each Transmission Operator shall inform its Reliability Coordinator and other impacted Transmission Operators of actual or anticipated Emergency conditions." Alternatively, this requirement could be abbreviated to have the TOP notify the RC, as the sharing of that condition by the RC to other impacted entities is covered by the proposed project 2006-06, IRO-001-2 R4: "Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area." R3- Though addressed in the previous draft version, we continue to disagree with retaining this requirement. Determining if the other entity has implemented a comparable emergency procedure places the burden upon the entity providing assistance to verify completion of internal processes by the requesting entity. This is not reasonable or practical in an emergency situation, and requires the operator to make a subjective decision. Additionally, assuming the requesting entity is compliant with the NERC standards (e.g. EOP-002), there is no reason for the assisting entity to confirm that the deficient entity has properly implemented their comparable procedure. R4- The term 'reliability

impact' is vague. In reality, every change on the system has a reliability impact, whether it be positive or negative. We recommend instead using the phrase “adverse reliability impact”. To what degree must operations be coordinated? The proposed requirement indicates that changes in generation and Load must be coordinated. Does this mean changes in dispatch levels of every generator must be coordinated? How are changes in Load coordinated and what would constitute a significant change worthy of coordination? We recommend striking the last sentence that indicates examples. R5- This implies that the “Interconnection” will specify the IROL Tv. The NERC Glossary defines this at <= 30 minutes. Are there IROL Tvs <= 30 minutes? If not, why not just eliminate the hassle of trying to define and keep up with the IROL Tv and just state < 30 minutes in this requirement (and remove the IROL Tv definition)? R8- The phrase “…”within the IROL's Tv” should be deleted. The TOP should be directing others to act regardless of whether or not the elapsed time is within or exceeded the IROL Tv. 1.4. Data Retention The data retention section implies that compliance is to the Measure as well as the Requirement. We believe that compliance is measured to the Requirement only.
Yes
R1- Is there a need to specify IROLs as well?
No
R5- We are concerned that this may be liberally applied to require entities to provide data to other entities with no clear reliability need. We feel this requirement could place extreme and unnecessary burden on entities to provide data in a specified format and time interval.
Yes
No
No
We feel several modifications are needed before this is ready to ballot, as detailed in our previous responses. Also, the SDT indicates that changes in this project are dependent upon changes in Project 2006-06. Final drafts of those standards are not complete and it is not clear from a mapping perspective as to how some of the requirements originally in TOP are now covered under those standards.

US Bureau of Reclamation
No
The proposed addition of the term 'by the Transmission Operator" makes the Transmission Operator the reliability entity the exclusive source for determining when operations are expected to have a known or expected reliability impact on other reliability entities. This would eliminate the Generator Operator's ability to determine which operations can have an impact on other reliability entities such as Transmision Operators. The response from the SDT clearly indicated that "further the SDT recognizes that the scope and number of individual agreements, which may be needed to ensure that all operations are fully coordinated for all operations known or expected to have a reliability impact upon other Reliability Entities is highly likely to vary greatly from region to region or organizational arrangement to organizational arrangement.” If the Transmission Operator is to be the exlusive source for the determination of those operations have or are expected to have a reliability impact on other reliability entities, then a separate requirement and measure is needed to ensure that such a determination is properly conveyed to the Generator Operator. Prior to this addition, the Generator Operator was able to make the operational impact assessment. The SDT should either create a new requirement for the TOP to provide to the Generator Operators the operations that have or are expected to have impacts on reliability entities or alter the language that the reliability entities determine when their respective operations impact other realiability entities.
Yes
No
The modification of the language related to data specifications creates a potential for compliance

violation for the reliaibility entities other than the Transmission Operator. The specifications for data " necessary for Real-time monitoring and reliability assessments" needs to be more expicit. The language allows it to be below the BES voltage threshold. This is coupled with the requirement that no outstanding requests for rata from the transmission operator are unfilled. This double negative is easier to restate that all data requests from the transmission operator must be filled. This is very open ended. Should the data request is unreasonable, the other reliability entities would be non-compliant. The data specification need to be subject to review and approval by the Reliability Coordinator in the case of conflict brought by the reliabilty entity. The requirement, in case of conflict, would not be invoked until the data specifications are approved. This opportunity for appeal of the specifications ensures transmission operators apply technical reasoning in developing the specifications.
Yes
No
The term "Reliability Directive is not a defined term. The question is poorly worded since the TOP-001-2 R1 specifically reserves the reliability directive to Tranmission Operator for this standard. The Balancing Authority does not issue directives. It works within its capacity and emergency plan to aleviate imbalances. After implementing all of its remedies the Balancing authority works through the reliability coordinator. The Reliability Coordinator may declare an emergency and take specific actions. See the refercences below: EOP 002 - R2. Each Balancing Authority shall implement its capacity and energy emergency plan, when required and as appropriate, to reduce risks to the interconnected system. R5. .... The Balancing Authority shall not unilaterally adjust generation in an attempt to return Interconnection frequency to normal beyond that supplied through frequency bias action and Interchange Schedule changes. Such unilateral adjustment may overload transmission facilities. R6 If the Balancing Authority cannot comply with the Control Performance and Disturbance Control Standards, then it shall immediately implement remedies to do so. These remedies include, but are not limited to: R6.1. Loading all available generating capacity. R6.2. Deploying all available operating reserve. R6.3. Interrupting interruptible load and exports. R6.4. Requesting emergency assistance from other Balancing Authorities. R6.5. Declaring an Energy Emergency through its Reliability Coordinator; and R6.6. Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads. R7. Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall: R7.1. Manually shed firm load without delay to return its ACE to zero; and R7.2. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0 "Energy Emergency Alert Levels." R8. A Reliability Coordinator that has any Balancing Authority within its Reliability Coordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002-0 "Energy Emergency Alert Levels." The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.
No
The two outstanding issues related to the new language proposed by the SDT need to be resolved first. TOP 001 needs to be modified to either recognize that the GOP can determine which operations can impact other reliability entities or insert a new requirement that the TOP must develop and provide to the GOP the operations that may impact other reliability entities. TOP 003 needs to be modified to either place specific limitations on the data specifications developed by the TOP or that the Reliability Coordinator must approve data specification developed by the TOP when they are disputed by the reliability entity which must satisfy the obligations such data specifications impose on them.

No
No requirement to define IROL TV. R6 is already covered in the MOD standards.
Yes

Yes
Yes
No
Because the team is use the term Reliability Directive our answer may depend on what how this term is finally defined. We believe that the term needs to be defined and approved by skateholders prior to this standard being posted for balloting.
No
Changes needed to remove R6 from draft TOP-001-2 and to include a requirement to establish TV for all IROL's.
Group
Platte River Power Authority Operations Group
Deb Schaneman
Yes
In R1 Reliability Directive is capitalized as a defined term but isn't in the NERC Glossary of Terms or Definitions or the Terms Used in Standard section of version 2 of the standard. Where is this term defined?
No
Is "an assessment" consistent with the interpretation of TOP-002-2 R11 by Orlando Utilities Commission or are you requiring a real-time contingency analysis tool? We believe there should be no requirements for the TOP to have a real-time contingency analysis tool if the BA and RC have the tool and model the TOP's system.
No
it isn't clear in R1 and R5 what is required for "Real-time...reliability assessments." Is a Real-time...reliability assessment" consistent with the interpretation of TOP-002-2 R11 by Orlando Utilities Commission or are you requiring a real-time contingency analysis tool? We believe there should be no requirement for the TOP to have a real-time contingency analysis tool if the BA and RC have the tool and model the TOP's system.
Yes
No
The Transmission Operator issues the "Transmission" reliability directive and the Balancing Authority issues directives to balance the generation to load.
No
Terms need to be defined and clarificaiton needs to be added.

(1) In R1, reliability directive is capitalized in indicating (or implying) it is a defined term. But this term has not yet been defined despite our understanding that there are currently three SDTs that are reviewing and/or attempting to define this term and the term (Directive). We suggest to make this term lower case until it is defined. (2) R2: the revised wording seems a bit odd as the phrase "expected to be affected" could be interpreted to be describing the actual or anticipated Emergency conditions. We suggest R2 to be revised to: "Each Transmission Operator shall inform its Reliability Coordinator and known or expected to be affected Transmission Operators of actual Emergency and anticipated Emergency conditions" to enhance clarity. Alternatively, we propose inserting a comma after "expected to be affected". (3) R3: We suggestion to add a comma after "...comparable emergency procedures". (4) R5 to R8: The very issue that we brought up during the last 2 postings came under the spot light with the changes made at this posting. The SDT in response to industry

comments made changes to qualify the SOLs whose exceedances are to be reported (in R7) based on a list of SOLs identified in R6 (the SDT added this requirement for this reason). While we don't think such identification is necessary, and in fact may expose the system to unreliability since such a list would be selective and hence bound to miss some SOLs that affect reliability, we nevertheless are encouraged by the changes and the addition since it is a step in the right direction. In our view though, it did not go far enough. However, without an explicit requirement that the TOP shall operate within all SOLs (as in the case for IROL in R5) and to act or direct others to act to mitigate the magnitude and duration of exceeding all SOL within some time frame (as in the case for IROL in R8), the requirements to identify a list of SOLs (in R6) and informing its Reliability Coordinator of actions being taken to return the system to within limits when one of these SOLs has been exceeded (in R7), appear inconsistent. We therefore recommend that R5 be altered as follows: R5. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limit (IROL) and its associated IROL Tv, and each other System Operating Limit (SOL) and its associated time period as determined by the TOP. Similar to their IROL counterparts, operating within all SOLs and mitigating their exceedances within some predetermined time period is fundamental to reliable operations, although for IROLs the interconnected system impact is readily obvious than for SOLs. The same principle holds true for day-ahead operational planning so that the needed control measures can be identified and made available in advance to prevent operating in excess of SOLs and to mitigate exceedances if and when they occur during day at hand and real-time operations. (5) As pointed out in our previous comments, we did not agree that VSLs should be determined based on the number of times a requirement was violated. While it is appropriate to determine the VSLs for R6 based on the number of SOLs that support local area reliability not reported to the RC since these numbers represent the extent of missing the total set, the same approach should not be applied to the determination of R7 since the progressive VSLs appear to make a difference between IROL and SOL (Note: the former has a Severe VSL for failing to notify one exceedance whereas for the latter the VSLs are graded based on the number of SOLs whose exceedances a TOP failed to notify its RC). Note that R7 requires that the TOP inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOL as identified in Requirement R6, has been exceeded. The requirement does not make any distinction between IROL and SOL, and requires that there shall not be even a single incident that the TOP does not inform its RC of actions being taken to mitigate an IROL or SOL exceedance. Hence, missing even one SOL would violate the bulk of the intent of R7. We suggest the VSLs for Low, Moderate and High be removed, and revise the VSL for Severe to: The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limit when an IROL or SOL has been exceeded.
No
(1) We continue to disagree with the way R2 is worded. R1 requires a TOP to conduct next day analysis to assess if any of the SOLs will be exceeded. R2 requires that the TOP develop plans to preclude operating in excess of only the IROLs identified as a result of the assessment performed in R1. Given our stance on this issue and understanding that IROLs represent a subset of SOLs, we believe R2 should be changed to refer to SOLs. In our view, a TOP needs to conduct next day analysis to assess if any of the established limits will be exceeded, develop plans to preclude operating in excess of the IROLs and SOLs, and make resources and actions available for mitigating exceedances if and when they occur. Like operating within SOL sand IROLs, this is fundamental to reliable operation. We suggest R2 be revised to include all SOLs.
Yes
Yes
No
The BA's role is to balance load-generation-interchange and does not have any direct role in monitoring and operating system conditions within transmission-related limits.
No
We continue to strongly disagree with removing the requirements for a TOP to plan and make day ahead arrangement for operating with all SOLs, and during day at hand and real time operate the system within established SOLs (and IROLs) and mitigate SOL exceedances within a predetermined time period. These are the most critical tasks for the TOPs, and are fundamental to ensuring

reliability. We are unable to support these standards if the necessary requirements are not reinstated/revised (as suggested in Q1 to change R5 of TOP-001 and in Q2 to change R2 of TOP-002). Finally, we recommend changing "local" in R6 to "Transmission Operator" to avoid creating ambiguity regarding what is referred to in the requirement.

Comments: The term "Reliability Directive" needs to be added to the NERC Glossary of Terms (it was not in the April 2009 version).
No
Comments: Change R1 wording. "R1:The wording is still incorrect in our interpretation. The wording needs to be changed to state that an assessment of the next days planned study conditions SOL'S is still valid with the expected next day's conditions. The previous wording isn't realistic because many days the assessment could determine a contingency response would cause the in place SOL to be exceeded. Some contingencies require the SOL to be lowered to prepare for the next condition which would cause real-time system readjustment. And the next contingency and the next contingency …. Some days the assessment would say the SOL could be exceeded for HLH. The key to those SOL'S is that the SOL'S are set at a level where the worst contingency for that path would not cause the interconnection to go unstable, i.e. cascading outages.. Suggest clarifying what is meant by "their" in R3: "Each Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s)." Perhaps state "their role in the TOP's Plans".
No
Regarding M4 (last sentence): "The evidence shall be that there are no Transmission Operators as identified in Requirement R2 or Balancing Authorities as identified in Requirement R3 with outstanding requests for data to the subject entity that have been unfilled". This doesn't mention the "TIMEFRAME" response time to provide data after a request is made. (i.e. 30 days, 60 days or whatever the reasonable "TIMEFRAME" is to modify databases or communication channels.) The VSL should be adjusted accordingly. If an entity has just received a request and is being audited the next week before fulfilling the request that would be a SEVERE VSL, which seems inappropriate.
Yes
No
Transmission-related issues are the responsibility of the TOP not the BA.
No
Correct R1 to assess the SOL is proper, not that the SOL could be exceeded. Where does the seasonal planning operations coordination described in TOP-002-2 R3 go? Re: the MOD-001-1 proposal.

NERC Standards Review Subcommitte
Carol Gerou
No
A. In R4, states that the TOP and GOP shall coordinate operations "known or expected" by the TOP that have a reliability impact on other reliability entities. Is the TOP used twice in this requirement the same TOP or neighboring TOPs? Please clarify. B. In R4, the GOP will not know of "known or expected" operations of the TOP. Please clarify. C. In R4, as stated the GOP is required to notify the TOP of "relay and equipment failure and changes to generation", does this include all relays and all equipment associated with a generator? D. In R4, the reference to the term "Load", a TOP and GOP don't have loads. Therefore, how can they be required to coordinate something they don't have? Or E. In R4, the reference to the term "operating conditions", the GOP may not know of a severe or changing "operating condition" that is taking place on the transmission system. F. In R2 and R4, "expected to be affected" would include known. Please strike known. G. Both R5 and R6 require the TOP to identify a sub-set of SOLs that may be larger than the IROL subset ahead of time and notify the RC of what actions it is taking to return the system to within operating limits when they are exceeded. Why is there not a requirement to also operate within those SOLs and return within the

SOL if exceeded? H. The VSLs for R7 appear to assume that the sample set of SOLs that would be reported to the RC is a small number by using one, two, three and four in each successive VSL. What if the sample set is large (i.e. 1000 SOLs)? Should the VSLs be based on percentages? I. The measures for R5 and R8 need to be clear than they currently are that these are event driven requirements and only data is required if an “event” has occurred.
Yes

NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Consideration of Comments on Real-time Operations Standards — Project 2007-03

The Real-time Operations Standard Drafting Team thanks all commenters who submitted comments on the third draft of the standards for Real-Time Operations (Project 2007-03). These standards were posted for a 30-day public comment period from August 25, 2009 through September 24, 2009. The stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 26 sets of comments, including comments from more than 80 different people from over 45 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Changes have been made to the project standards as indicated below due to industry comments and miscellaneous updates:

Minor wordsmithing was done to TOP-001-2, Requirement R1 to add 'identified' to Reliability Directive so that there can be no confusion – the listed functional entities are only responsible for 'identified' Reliability Directives.

Requirement R2 was added to TOP-001-2 to allow a responsible entity to inform the Transmission Operator is it is unable to perform a Reliability Directive.

TOP-001-2, Requirement R3 was altered to tie the cited Emergencies to those noted in the assessment of the Operational Planning Analysis. This ties down the 'known or expected' language that caused some entities concern.

The Generator Operator was removed from TOP-001-2, Requirement R5 based on comments received which indicated that the Generator Operator did not posses the knowledge to participate in the required actions. This requirement was also changed to use the defined terms "Adverse Reliability Impact" to clarify what 'reliability impact' was involved and "Transmission Operator Areas" to clarify the portion of the BES involved.

TOP-001-2, Requirement R6 was added. This requirement is currently TOP-003-0, Requirement R3. The SDT believed that this requirement was going to be handled by another SDT and had originally deleted it from Project 2007-03. However, that is no longer the case and it is being added back in at this time.

TOP-001-2, Requirement R7 has had clarifying language added to show that the System Operating Limits identified in Requirement R8 are part of this requirement.

Requirement R8 of TOP-001-2 has been altered to indicate that the System Operating Limits cited will have been identified in the Operational Planning Analysis required in TOP-002-3, Requirement R1.

TOP-001-2, Requirement R9 was added to accommodate the addition of System Operating Limits in Requirement R8 similar to what was done in Requirement R7 for IROLs.

TOP-001-2, Requirement R10 has had some minor wordsmithing changes for additional clarity.

TOP-001-2, Requirement R11 has been clarified to indicate the System Operating Limits identified in Requirement R8 must be included here as well.

Requirements R12 through R14 have been added to TOP-001-2 to address a FERC Order 693 directive on minimum capabilities for Transmission Operators. Originally this directive was going to be handled by Project 2009-02, Real-time Reliability Monitoring and Analysis Capabilities but that project is now on indefinite hold so the need to address the directive has returned to Project 2007-03.

The VSL's for Requirements R3, R5, R8, and R10 of TOP-001-2 have been adjusted to align with the most recent VSL guidelines.

TOP-002-3, Requirement R1 was altered to make use of a defined term 'Operational Planning Analysis' that clearly shows the intent of what is required. A rationale text box was added to describe the reasoning for this change. TOP-002-3, Requirement R2 has been clarified to show that the System Operating Limits discussed in TOP-001-2 are included here.

Data retention for TOP-002-3 has been modified to agree with the latest guidelines.

The VSL's for TOP-002-3, Requirement R3 have been adjusted to align with the latest guidelines.

TOP-003-2, Requirements R1 and R5 have been changed to align with the addition of 'Operational Planning Analysis' in TOP-002-3.

TOP-003-2, Requirement R3 has been clarified so that monitoring and status are both explicitly included.

Measure M5 of TOP-003-2 has been changed to more clearly state what evidence is required.

The VSL's for Requirements R2 and R3 of TOP-003-2 have been changed to align with the latest guidelines.

Due to the number of comments received requesting an additional posting, and the number of changes made to the revised standards, the SDT agrees that an additional posting is required, however the team also recommends that this posting take place in parallel with an initial ballot.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Herbert Schrayshuen, at 609-452-8060 or at herb.schrayshuen@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.[1]

[1] The appeals process is in the Reliability Standards Development Procedures: http://www.nerc.com/standards/newstandardsprocess.html.

1. **TOP-001-2: Do you agree with the changes made to this standard? If not, please supply specific reasons why you do not agree with the changes made.**

Summary Consideration: A number of comments were received requesting clarification of terminology or intent within the various requirements. The SDT has answered all of the comments and made a number of the requested changes as shown below. However, no changes were made as to content or context of the requirements.

Due to industry comments, the following changes were made to the standard:

R3. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.

R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements.

R5. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load.

R8. Each Transmission Operator shall inform it's Reliability Coordinator of all SOLs which, while not IROL, have been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis**.R9**. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration exceeding 30 minutes.

M1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall make available upon request, , evidence that it either: (a) complied with each Reliability Directive issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M3. Each Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and all other Transmission Operators that it knew or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis in accordance with Requirement R3. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M5. Each Transmission Operator shall make available upon request, evidence that operations it coordinated its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators in accordance with Requirement R5 unless conditions did not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

R8 VSL	The Transmission Operator did not inform its Reliability Coordinator of one SOL, or 5% or less of	The Transmission Operator did not inform its Reliability Coordinator of two SOLs or more than 5%	The Transmission Operator did not inform its Reliability Coordinator of three SOLs or more than	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs or more

	the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability**.**	or less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**	10% or less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**	than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**
R10 VSL	N/A	N/A	N/A	The Transmission Operator did inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL as identified in Requirement R8, has been exceeded.

Organization	Yes or No	Question 1 Comment
Independent Electricity System Operator	No	(1) In R1, reliability directive is capitalized in indicating (or implying) it is a defined term. But this term has not yet been defined despite our understanding that there are currently three SDTs that are reviewing and/or attempting to define this term and the term (Directive). We suggest to make this term lower case until it is defined. (2) R2: the revised wording seems a bit odd as the phrase “expected to be affected” could be interpreted to be describing the actual or anticipated Emergency conditions. We suggest R2 to be revised to: “Each Transmission Operator shall inform its Reliability Coordinator and known or expected to be affected Transmission Operators of actual Emergency and anticipated Emergency conditions” to enhance clarity. Alternatively, we propose inserting a comma after “expected to be affected”. (3) R3: We suggestion to add a comma after “comparable emergency procedures”. (4) R5 to R8: The very issue that we brought up during the last 2 postings came under the spot light with the changes made at this posting. The SDT in response to industry comments made changes to qualify the SOLs whose exceedances are to be reported (in R7) based on a list of SOLs identified in R6 (the SDT added this requirement for this reason). While we don’t think such identification is necessary, and in fact may expose the system to unreliability since such a list would be selective and hence bound to miss some SOLs that affect reliability, we nevertheless are encouraged by the changes and the addition since it is a step in the right

Organization	Yes or No	Question 1 Comment
		direction. In our view though, it did not go far enough. However, without an explicit requirement that the TOP shall operate within all SOLs (as in the case for IROL in R5) and to act or direct others to act to mitigate the magnitude and duration of exceeding all SOL within some time frame (as in the case for IROL in R8), the requirements to identify a list of SOLs (in R6) and informing its Reliability Coordinator of actions being taken to return the system to within limits when one of these SOLs has been exceeded (in R7), appear inconsistent. We therefore recommend that R5 be altered as follows:R5. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limit (IROL) and its associated IROL Tv, and each other System Operating Limit (SOL) and its associated time period as determined by the TOP. Similar to their IROL counterparts, operating within all SOLs and mitigating their exceedances within some predetermined time period is fundamental to reliable operations, although for IROLs the interconnected system impact is readily obvious than for SOLs. The same principle holds true for day-ahead operational planning so that the needed control measures can be identified and made available in advance to prevent operating in excess of SOLs and to mitigate exceedances if and when they occur during day at hand and real-time operations. (5) As pointed out in our previous comments, we did not agree that VSLs should be determined based on the number of times a requirement was violated. While it is appropriate to determine the VSLs for R6 based on the number of SOLs that support local area reliability not reported to the RC since these numbers represent the extent of missing the total set, the same approach should not be applied to the determination of R7 since the progressive VSLs appear to make a difference between IROL and SOL (Note: the former has a Severe VSL for failing to notify one exceedance whereas for the latter the VSLs are graded based on the number of SOLs whose exceedances a TOP failed to notify its RC). Note that R7 requires that the TOP inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or SOL as identified in Requirement R6, has been exceeded. The requirement does not make any distinction between IROL and SOL, and requires that there shall not be even a single incident that the TOP does not inform its RC of actions being taken to mitigate an IROL or SOL exceedance. Hence, missing even one SOL would violate the bulk of the intent of R7. We suggest the VSLs for Low, Moderate and High be removed, and revise the VSL for Severe to:The Transmission Operator did not make available evidence that it had informed itsReliability Coordinator of actions being taken to return the system to within limit when an IROL or SOL has been exceeded.
Northeast Power Coordinating Council	No	(1) In R1, reliability directive is capitalized in indicating (or implying) it is a defined term. But this term has not yet been defined despite our understanding that there are currently three SDTs that are reviewing and/or attempting to define this term and the term (Directive). We suggest to make this term lower case until it is defined. (2) R2: the revised wording seems a bit odd as the phrase “expected to be affected” could be interpreted to be describing the actual or anticipated Emergency conditions. We suggest R2 to be revised to: “Each Transmission Operator shall inform its Reliability Coordinator and known or expected to be affected Transmission Operators of actual Emergency and anticipated Emergency conditions” to enhance clarity.

Organization	Yes or No	Question 1 Comment
		Alternatively, we propose inserting a comma after “expected to be affected”. (3) R3: Add a comma after “comparable emergency procedures”. (4)Similar to their IROL counterparts, operating within all SOLs and mitigating their exceedances within some predetermined time period is fundamental to reliable operations. (5) As pointed out in our previous comments, we did not agree that VSLs should be determined based on the number of times a requirement was violated. While it is appropriate to determine the VSLs for R6 based on the number of SOLs that support local area reliability not reported to the RC since these numbers represent the extent of missing the total set, the same approach should not be applied to the determination of R7 since the progressive VSLs appear to make a difference between IROL and SOL(Note: the former has a Severe VSL for failing to notify one exceedance whereas for the latter the VSLs are graded based on the number of SOLs whose exceedances a TOP failed to notify its RC). The requirement does not make any distinction between IROL and SOL, and requires that there shall not be even a single incident that the TOP does not inform its RC of actions being taken to mitigate an IROL or SOL exceedance. Hence, missing even one SOL would violate the bulk of the intent of R7. We suggest the VSLs for Low, Moderate and High be removed, and revise the VSL for Severe to:The Transmission Operator did not make available evidence that it had informed itsReliability Coordinator of actions being taken to return the system to within limit when an IROL or SOL has been exceeded.

Response: (1) Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn’t been approved by the industry.

> **Reliability Directive -** A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

(2) The SDT has revised Requirement R2 (now Requirement R3) based on your comments and the comments of others.

> **R3**. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.

(3) The comma has been added as suggested. (Note – Requirement R3 is now Requirement R4.)

> **R4**. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements.

(4) The SDT agrees that operating within a certain subset of SOLs such as IROLs is fundamental to reliability. However, the SDT does not believe operating within all SOLs is necessary and actually reduces reliability by eliminating an operator’s operational flexibility such as reducing the life of a piece of equipment

Organization	Yes or No	Question 1 Comment
to avoid shedding firm end use Load. However, the SDT realizes that there may be a certain set of SOLs that are considered important by the Transmission Operator and that would be treated in a similar vein to IROLs. The new Requirement R9 addresses this concern. **R9**. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration exceeding 30 minutes. (5) The SDT has reviewed the various VSLs to assure that they follow the latest guidelines and has revised several of them accordingly. Examples are shown below.		

R8 VSL	The Transmission Operator did not inform its Reliability Coordinator of one SOL, or 5% or less of the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs or more than 5% or less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs or more than 10% or less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs or more than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**
R10 VSL	N/A	N/A	N/A	The Transmission Operator did not inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL as identified in Requirement R8, has been exceeded.

MRO NERC Standards Review Subcommittee	No	A. In R4, states that the TOP and GOP shall coordinate operations “known or expected” by the TOP that have a reliability impact on other reliability entities. Is the TOP used twice in this requirement the same TOP or neighboring TOPs? Please clarify. B. In R4, the GOP will not know of “known or expected” operations of the TOP. Please clarify. C. In R4, as stated the GOP is required to notify the TOP of “relay and equipment failure and changes to generation”, does this include all relays and all equipment associated with a generator? D. In R4, the reference to the term “Load”, a TOP and GOP don’t have loads. Therefore, how can they be

Organization	Yes or No	Question 1 Comment
		required to coordinate something they don't have? Or E. In R4, the reference to the term "operating conditions", the GOP may not know of a severe or changing "operating condition" that is taking place on the transmission system. F. In R2 and R4, "expected to be affected" would include known. Please strike known. G. Both R5 and R6 require the TOP to identify a sub-set of SOLs that may be larger than the IROL subset ahead of time and notify the RC of what actions it is taking to return the system to within operating limits when they are exceeded. Why is there not a requirement to also operate within those SOLs and return within the SOL if exceeded? H. The VSLs for R7 appear to assume that the sample set of SOLs that would be reported to the RC is a small number by using one, two, three and four in each successive VSL. What if the sample set is large (i.e. 1000 SOLs)? Should the VSLs be based on percentages?I. The measures for R5 and R8 need to be clear than they currently are that these are event driven requirements and only data is required if an "event" has occurred.

Response: (A) This is the same Transmission Operator.

(B) The SDT agrees that the Generator Operator will not know of operations on the BES. The requirement has been deleted.

(C) This would include all relays and equipment that could impact the Bulk Electric System. Requirement R4 (now Requirement R5) has been changed to provide greater clarity as to the intent of the requirement.

> **R5**. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load.

(D) A Transmission Operator must be able to forecast and monitor the Load on its portion of the Bulk Electric System. They must be aware of significant changes that could cause changes to expected Load. No change made.

(E) The SDT agrees that the Generator Operator will not know of operations on the BES. The requirement has been deleted.

(F) The SDT disagrees and feels that both terms are needed but has added terminology to clarify the expectation. (Note – Requirement R4 is now Requirement R5.)

> **R3**. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.

> **R5**. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load.

(G) By definition, IROLs could result in cascading outages, widespread outages, and blackouts. SOLs will not. Thus, the SDT believes that requiring the

Organization	Yes or No	Question 1 Comment
Transmission Operator to operate within all SOLs that are not IROLs would eliminate the Transmission Operator's operational flexibility. However, the SDT realizes that there may be a certain set of SOLs that are considered important by the Transmission Operator and that would be treated in a similar vein to IROLs. The new Requirement R9 addresses this concern. **R9**. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration exceeding 30 minutes. (H) The SDT has reviewed the VSLs for Requirement R8 and revised them based on the latest guidelines.		

R8 VSL	The Transmission Operator did not inform its Reliability Coordinator of one SOL, or 5% or less of the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs or more than 5% or less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs or more than 10% or less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs or more than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**

Organization	Yes or No	Question 1 Comment
Bonneville Power Administration	No	Comments: The term “Reliability Directive” needs to be added to the NERC Glossary of Terms (it was not in the April 2009 version).
Platte River Power Authority Operations Group	Yes	In R1 Reliability Directive is capitalized as a defined term but isn't in the NERC Glossary of Terms or Definitions or the Terms Used in Standard section of version 2 of the standard. Where is this term defined?
IRC Standards Review Committee	No	Requirement 1: Reliability Directive, as a defined term has been introduced and the definition has not been provided in this posting. If the intent is to use this as a defined term anticipating that it will be defined and approved soon under a different project, then we suggest these standards not be put up for balloting until the term is approved.
Response: Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry. **Reliability Directive** - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.		

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td>Ed Stein - self</td><td>No</td><td>I do agree with most every thing However I do not understand what is meant by the phrase "expected to affect" a TO. How does the TO experiencing the emergency know if his emergency affect every TO. Granted he should know of the main ones but can he be sure that a remote line is affected that has a 2-5% response factor.</td></tr>
<tr><td colspan="3">Response: The SDT has made a clarifying change to the requirement which should alleviate your concern.

R3. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.</td></tr>
<tr><td>ITC Holdings</td><td>No</td><td>In R2, strike the words “known or”.

In R4, remove the added words “by the Transmission Operator” from the second sentence . The addition of this phrase implies that the Generator Operator does have the obligation to initiate the coordination of changes in generation with the transmission operator. The requirement is clearer without this phrase.

In R4, change the wording to “Such operations MAY include”? We believe the intent of the sentence was only to provide a list of examples.

R6 requires the TOP to identify a sub-set of SOLs that is larger than IROLS and “support its local area reliability”. It is unclear what criteria a TOP would use to identify this subset, which will lead to inconsistent implementation and confusion. The TOP should inform the RC of all SOLs and the actions being taken to address any SOL exceedance which can be accomplished via SCADA or other means of action and communication when necessary.

The measures for R5 and R8 need to be clear that these are event driven requirements and only evidence is required if an “event” has occurred.</td></tr>
<tr><td colspan="3">Response: The SDT feels that the term ‘known’ has a different connotation than ‘expected’ and therefore both are required. However, the SDT has made clarifying changes so that expectations are clear. .

R3. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.

R5. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load.

The SDT agrees with the second suggestion for Requirement R4 (now Requirement R5) and has made that change. However, the SDT does not agree with the deletion of Transmission Operator that was suggested and has retained it in the requirement.

R5. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. Based on comments received during the first and second posting, the industry did not reach a consensus that all SOL exceedances should be reported. The majority (it was a small majority) of responders felt that some subset of SOL exceedances should be reported. They felt the subset should be greater than IROLs but less than all SOLs. The remaining respondents were split between only IROLs and all SOLs. This split was likely based on the differing characteristics of the BES in various areas. Thus, the SDT felt drafting the requirement as is represented a reasonable compromise because the Transmission Operators could report the appropriate amount of SOLs based on the characteristics of their portion of the BES. Few additional comments have been received on this issue during this posting, thus the SDT assumes the industry largely agrees this is a reasonable compromise. The SDT feels that the measures are clear as written and has not made a change.		
SERC OC Standards Review Group	No	Is Reliability Directive a defined term since it is capitalized in R1 and throughout the Standard, but not currently found in the NERC Glossary of Terms. R2 We suggest that “other transmission operators” should be changed to “adjacent transmission operators”. R3 What is specifically meant by the words, “emergency assistance”? For example, do the words as written require a utility to provide line crews to assist in storm restoration? We suggest that the language be tightened up to focus emergency assistance on those things that were intended by the language. R4 we suggest removing “and Generator Operator” and the term “by the Transmission Operator” from the first sentence. It appears that the original wording implies that the Generator Operator would have knowledge of conditions on the transmission system. We also suggest removing the last sentence listing some but not all items that may have operating impacts and in which communications is necessary, concerns the SERC OC Standards Review Group. R6 We suggest revising R6 to read: Each Transmission Operator shall inform its Reliability Coordinator of any System Operating Limits (SOLs) which, while not IROLs, will require mitigating actions if exceeded. The current word “all” seems to indicate that every SOL would be in this list. R8 Why is R8 needed ? it appears to be a duplication of R5 and the two could be combined. General comment on measures: Measures that are event driven need to be clear that evidence would only be required if an event occurred. That is, the entity should not have to prove a negative.
Response: Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn’t been approved by the industry. **Reliability Directive -** A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.		

Organization	Yes or No	Question 1 Comment
The SDT discussed and felt that it is possible that some Transmission Operators could affect one another even if they are not adjacent as a result of sharing ties. Thus, no change has been made. R3 – Emergency assistance is not a defined term and could be different from entity to entity. The SDT can't define this term and doesn't feel that it is necessary. Each Transmission Operator will respond according to its set policies and procedures as required by EOP-001-2. No change made. The SDT agrees that the Generator Operator will not know of operations on the BES. However, the Generator Operator may know that his unit is critical to reliability. If his unit is critical to reliability, the SDT expects the Generator Operator should notify the Transmission Operator of all known issues that could reasonably be expected to cause the unit to be at a greater likelihood to be forced out. In Requirement R4 (now requirement R5), the SDT has modified the listing to reflect that it is not all inclusive based on comments from other respondents. **R5**. Each Transmission Operator shall coordinate its respective operations known or expected to have a Burden on the portion of the BES of other reliability entities with those entities unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, Load, or operating conditions. The SDT has modified the wording of Requirement R6 (now Requirement R8) to provide greater clarity. **R8**. Each Transmission Operator shall inform it's Reliability Coordinator of all SOLs which, while not IROL, have been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis**.** Requirements R5 & R8 (now Requirements R7 & R10) are slightly different and thus serve slightly different reliability goals. Requirement R7 (now Requirement R8) requires the Transmission Operator to operate within an IROL. Requirement R10 (now Requirement R11), however, requires the Transmission Operator to mitigate an exceedance if one has occurred. For example: If an exceedance occurs and goes away on its own within T_v, there is no violation of Requirement R7. However, if that exceedance occurs and the Transmission Operator doesn't act to mitigate it within T_v then they are in violation of Requirement R10. No change made. The SDT feels that the measures are clear as written and has not made a change in this regard.		
American Electric Power	No	It's our understanding that a definition of the term for a Reliability Directive (RD) may be currently under development/review/approval. However, since RD is not currently found in the NERC glossary, we request that it be added to the definition section of this standard. For example, are base points issued by the market area of an RTO considered an RD? Is there a method to distinguish such base points as constituting an RD from those that are not RDs? The team correctly capitalizes "Transmission" and "Load" since they are terms included in the NERC dictionary and does not capitalize "generation" since it is not included. It would seem that adding the term to NERC glossary would be the best resolution, but, in the interim, it should be well defined within the context that it is being used in any requirement (refer to R4). We are concerned that R5 is a duplication of a requirement in FAC-009 and perhaps others as well. Correspondingly, M5 would also be duplicative. Again, it appears that R6 may be duplicative of FAC-014, R5.2. If not, the phrase "support its local area reliability" should be clarified.

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td></td><td></td><td>While we appreciate the team’s efforts to better distinguish IROLs from SOLs in R7., more work is necessary to better define the difference. (e.g., exceeding limits vs. n-1)</td></tr>
<tr><td colspan="3">Response: Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn’t been approved by the industry.

Reliability Directive - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

The SDT does not believe this is a duplication of the FAC-009 requirements. While many SOLs will be based on a facility rating, not all SOLs are based on facility ratings. Thus, the requirement is needed.

The SDT does not feel that this requirement duplicates FAC-014 as the requirement is specific to those SOLs that are in support of local reliability. The SDT has clarified Requirement R8 to make it clear how the SOLs are identified.

R8. Each Transmission Operator shall inform it’s Reliability Coordinator of all SOLs which, while not IROL, have been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis.

IROLs are a defined subset of SOLs. The SDT believes that the FAC-011-2 and FAC-014-2 standards provide a great amount of detail to distinguish IROLs from SOLs.</td></tr>
<tr><td>American Transmission Organization</td><td>No</td><td>No requirement to define IROL TV.

R6 is already covered in the MOD standards.</td></tr>
<tr><td colspan="3">Response: FAC-014-2, Requirement R5.1.2 requires the Reliability Coordinator to identify the IROL T_V. No change made.

The SDT does not believe that Requirement R6 (now Requirement R9) is covered in the MOD standards. The SDT feels that you may have meant FAC-014-2. The SDT does not feel that this requirement duplicates FAC-014 as the requirement is specific to those SOLs that are in support of local reliability. The SDT has clarified Requirement R8 to make it clear how the SOLs are identified.

R8. Each Transmission Operator shall inform it’s Reliability Coordinator of all SOLs which, while not IROL, have been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis.</td></tr>
<tr><td>Manitoba Hydro</td><td>No</td><td>R.4 - The changes suggested to R. 4 are too vague to result in effective coordination.

What is meant by “expected relay failures”? How is an expected relay failure assessed? What criteria is used to determine what we consider a risk of an expected relay failure - what conditions?

R.6 - is again too vague for making consistent operating decisions. What criteria is applied for identifying SOL’s that support “local area reliability”? What is a local area, how large is it, what reliability criteria is violated on the violation of an SOL</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
		R.7 – SOL's identified in R6 are vague.

Response: The intent of Requirement R4 (now Requirement R5) was to require coordination. The SDT has made clarifying changes to the requirement.

> **R5**. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. .

Relay failures were cited as an example of conditions that may require coordination. The wording was changed to state 'may' apply so if you have nothing that applies to this condition, you do not have to coordinate them. No change made for this comment but clarifying language was applied.

> **R5**. Each Transmission Operator shall coordinate its respective operations known or expected to have a Burden on the portion of the BES of other reliability entities with those entities unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, Load, or operating conditions.

The SDT has clarified Requirement R8 to make it clear how the SOLs are identified.

> **R8**. Each Transmission Operator shall inform it's Reliability Coordinator of all SOLs which, while not IROL, have been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis**.**

Organization	Yes or No	Question 1 Comment
Electric Market Policy	No	R1 - By capitalizing the term "Reliability Directive", the SDT introduced a discrepancy as this term does not currently exist in the NERC Glossary of Terms. We are opposed to approving revisions to existing or new standards when they are predicated upon references to other "draft" terms, standards, requirements, etc. R4 We have reviewed the various comments made concerning retention of GOP in this requirement, and philosophically agree but find it impossible to determine how GOP can coordinate" its respective operations known or expected by the Transmission Operator to have a reliability impact". without knowing what constitutes "expected to have a reliability impact". The GOP can only coordinate to the extent the TOP has provided predefined information that is required to be coordinated. This information should be included in the Interconnection Agreement or some other agreement that clearly spells out what the GOP is expected to communicate in order to coordinate. We would prefer inclusion of this requirement in TOP-003 as part of R4 (referencing R2 and R3) or we could support the requirement in TOP-001 if it referenced coordination of data required in TOP-003 @ R2 and R3. Also the statement"operating conditions" is sufficiently vague. The SDT needs to clarify what constitutes an operating condition?

Response: Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.

> **Reliability Directive** - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the

Organization	Yes or No	Question 1 Comment
recipient is necessary to address an actual or expected Emergency. The SDT agrees and has deleted the requirement. The wording was changed to state 'may' apply so if you have nothing that applies to this condition, you do not have to coordinate them. **R5**. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load.		
Xcel Energy	No	R1- There is not an associated definition for the term Reliability Directive (nor is there one in the documents associated with Project 2006-06). The term "directive" is the subject of much debate as evidenced by the recent attempt at clarification by the NERC advisory on communications. This term needs to be defined and an opportunity for stakeholder comment, prior to moving this standard to ballot. R1- We feel that GOP should be removed from this requirement. The TOP should coordinate with any entity it necessary. Alternatively, it could be reworded to read: "The TOP shall coordinate operations with the GOP". R2- Should be redrafted to read: "Each Transmission Operator shall inform its Reliability Coordinator and other impacted Transmission Operators of actual or anticipated Emergency conditions."Alternatively, this requirement could be abbreviated to have the TOP notify the RC, as the sharing of that condition by the RC to other impacted entities is covered by the proposed project 2006-06, IRO-001-2 R4: "Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area." R3- Though addressed in the previous draft version, we continue to disagree with retaining this requirement. Determining if the other entity has implemented a comparable emergency procedure places the burden upon the entity providing assistance to verify completion of internal processes by the requesting entity. This is not reasonable or practical in an emergency situation, and requires the operator to make a subjective decision. Additionally, assuming the requesting entity is compliant with the NERC standards (e.g. EOP-002), there is no reason for the assisting entity to confirm that the deficient entity has properly implemented their comparable procedure. R4- The term "reliability impact" is vague. In reality, every change on the system has a reliability impact, whether it be positive or negative. We recommend instead using the phrase "adverse reliability impact". To what degree must operations be coordinated? The proposed requirement indicates that changes in generation and Load must be coordinated. Does this mean changes in dispatch levels of every generator must be coordinated? How are changes in Load coordinated and what would constitute a significant change worthy of coordination? We recommend striking the last sentence that indicates examples. R5- This implies that the "Interconnection" will specify the IROL Tv. The NERC Glossary defines this at <= 30

Organization	Yes or No	Question 1 Comment
		minutes. Are there IROL Tvs <= 30 minutes? If not, why not just eliminate the hassle of trying to define and keep up with the IROL Tv and just state < 30 minutes in this requirement (and remove the IROL Tv definition)? R8- The phrase “within the IROL’s Tv” should be deleted. The TOP should be directing others to act regardless of whether or not the elapsed time is within or exceeded the IROL Tv. 1.4. Data RetentionThe data retention section implies that compliance is to the Measure as well as the Requirement. We believe that compliance is measured to the Requirement only.

Response: Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn’t been approved by the industry.

> **Reliability Directive** - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

Your second comment regarding Requirement R1 does not appear to be consistent with the requirement. Your comment appears to assume that Requirement R1 is focused on coordination but rather the requirement is for the Generator Operator among others to follow the Transmission Operator’s Reliability Directives. No change made.

The SDT agrees that there is some confusion created by the wording of the requirement and has modified the requirement based on the comments of other respondents in an attempt to provide greater clarity. However, the SDT did not adopt the term ‘impacted’.

> **R3**. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.

The SDT disagrees with your comment regarding Requirement R3 (now Requirement R4). Requirement R3 (now Requirement R4) provides the Transmission Operator the option of not providing emergency assistance if the requesting Transmission Operator has not implemented comparable procedures. It does not require the assisting Transmission Operator to verify that the requesting Transmission Operator has implemented comparable procedures. The assisting Transmission Operator could simply provide emergency assistance rather than verifying the requesting Transmission Operator has not implemented its procedures. While the SDT does not favor inclusion of the comparable procedures language, the respondents in previous postings overwhelmingly desired the inclusion. It does not cause a reliability gap so the SDT cannot identify a reason not to include it. No change made.

R4 – The SDT has changed Requirement R4 (now Requirement R5) to provide greater clarity based on your comment and that of others.

> **R5**. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load.

R5 – Earlier standards work determined that the previous definition of IROL was not satisfactory and that the T_v definition was needed to improve the meaning. The SDT does not see a need to remove the definition. Further, the removal of the definition would expand the scope of the SDT beyond the Transmission Operator standards and is not warranted.

Organization	Yes or No	Question 1 Comment
R8 (now Requirement R11) – The SDT agrees the Transmission Operator should be acting with expediency to resolve an IROL. The requirement does not allow the Transmission Operator to wait to resolve the IROL exceedance but rather recognizes that the Transmission Operator requires time to assess how to resolve the exceedance. Assessing is one form of acting and the language of the requirement is appropriate as it is written. No change made. Data retention – The language in the data retention section is standard verbiage that simply states that you must retain the data necessary to measure the compliance with the requirement. No change made.		
FirstEnergy	No	R3 This requirement requires "comparable emergency procedures" be implemented which is appropriate and consistent with the previous standards, but it lacks, and the previous standards lacked, the concept of mitigation. An entity should not be required to shed load for the sake of requiring a neighboring entity to shed load to mitigate the emergency condition. As currently written, in order for an entity to require its neighbor to shed load that will mitigate the emergency condition, the requesting entity is required to shed load first. We suggest this be revised to say, "comparable emergency procedures that mitigate (lessen or eliminate) the impact of the emergency." R6 This requirement is ambiguous. By definition a System Operating Limit is "The value (such as MW, MVar, Amperes, Frequency or Volts) that satisfies the most limiting of the prescribed operating criteria for a specified system configuration to ensure operation within acceptable reliability criteria. System Operating Limits are based upon certain operating criteria. These include, but are not limited to: (a) Facility Ratings (Applicable pre- and post-Contingency equipment or facility ratings)? Transient Stability Ratings (Applicable pre- and post-Contingency Stability Limits)? Voltage Stability Ratings (Applicable pre- and post-Contingency Voltage Stability)? System Voltage Limits (Applicable pre- and post-Contingency Voltage Limits)"As written, the TOP will be required to inform the RC of all equipment ratings that "support local area reliability." This could be interpreted as requiring an entity to report equipment ratings for facilities operated at 100 kV or less which we believe is not the intent of the SDT. These facilities certainly support local area reliability on some level but are not monitored by the RC and serve little or no value to the RC.FAC-014-2 requires the TOP in Req. R2 to "establish SOLs (as directed by its Reliability Coordinator) for its portion of the Reliability Coordinator Area that are consistent with its Reliability Coordinator's SOL Methodology." Therefore, it appears that TOP-001-2 Req. R6 may not be necessary. However, if the intent of FAC-014-2 Req. R2 is to establish SOLs from an Operations PLANNING horizon (not sure since FAC-014-2 does not include time horizons with the requirements), and the intent of TOP-001-2 Req. R6 is to inform the RC from a REAL-TIME operations horizon, then Req. R6 of TOP-001-2 should be consistent with FAC-014 and written as follows: "R6. Each Transmission Operator shall inform its Reliability Coordinator of all System Operating Limits (SOLs) which are consistent with its Reliability Coordinator's SOL methodology."
Response: R3 – The SDT has modified the requirement (now Requirement R4) in response to other commenters. **R4**. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or		

Organization	Yes or No	Question 1 Comment
statutory requirements. R6 – Based on comments from other respondents, the SDT has modified Requirement R5 to use "Burden" rather than reliability impact. The SDT believes this will lessen your concern that facilities below 100 kV are included. Further, the SDT believes this issue is largely an issue around the definition of BES. Standards apply only to the BES and facilities impactive to the BES. Defining the BES is beyond the scope of this SDT. The SDT believes that FAC-014-2, Requirement R2 covers the operating horizon as well. The intent of Requirement R9 is not to duplicate FAC-014-2, Requirement R2 but for the Transmission Operator to identify the subset of SOLs from FAC-014-2, Requirement R2 that impact local area reliability to the point that the Reliability Coordinator may need to become involved. Thus, the Transmission Operator would communicate to the Reliability Coordinator SOL exceedances for this subset of SOLs. The SDT has made a clarifying change to Requirement R6 (now Requirement R8). **R8**. Each Transmission Operator shall inform it's Reliability Coordinator of all SOLs which, while not IROL, have been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis**.**		
Duke Energy	No	The definition of "Reliability Directive" drafted by the Reliability Coordination SDT should also be commented on in this TOP effort. We are concerned that the definition is too broad and would encompass what we consider normal communications. A key point of the definition should be that each communication of a Reliability Directive is required to be identified as such to the receiving entity. R2 should say that the TOP shall inform its RC and direct interconnected TOPs. The phrase "known or expected to be affected" opens the TOP to non-compliance if they don't expect someone to be affected, and it turns out that they are affected. R3 strike the phrase "provided that the requesting entity has implemented its comparable emergency procedures". In this situation we should not be wasting time getting proof that the requester has implemented their procedures before rendering assistance. R4 is confusing. Relay and equipment failures are not operations; they are operating events. Also, what is meant by the phrase "unless conditions do not permit such coordination" R5 is confusing and appears to duplicate R8. Delete R8 and reword R5 as follows: "Each Transmission Operator shall operate or direct others to operate within IROL Tv for each identified Interconnection Reliability Operating Limit (IROL)." R6 should include identified IROLs in the communication to the RC. Reword R6 as follows: "Each Transmission Operator shall inform its Reliability Coordinator of all identified IROLs and those System Operating Limits (SOLs) which support its local area reliability." Revise Measures and VSLs to reflect these changes to TOP-001-2
Response: Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.		

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td colspan="3">
Reliability Directive - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.
R2 – (now Requirement R3) The SDT disagrees that only directly interconnected Transmission Operators should be included. It is possible that a Transmission Operator could be adversely impacted by another Transmission Operator that is not directly interconnected. Furthermore, the SDT has made a clarifying change to the requirement wording.
R3. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.
R3 - While the SDT does not favor inclusion of the comparable procedures language, the respondents in previous postings overwhelmingly desired the inclusion. It does not cause a reliability gap so the SDT cannot identify a reason not to include it.
R4 – (now Requirement R5) Relay failures were cited as an example of conditions that may require coordination. The wording was changed to state ‘may’ apply so if you have nothing that applies to this condition, you do not have to coordinate them.
R5. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load.
The phrase “unless conditions do not permit such coordination” was intended to cover any situation that may prevent coordination from occurring up front. One example that may prevent coordination would be the need to take emergency actions such as ordering a unit to re-dispatch to relieve an IROL.
Requirements R5 & R8 (now Requirements R8 & R11) are slightly different and thus serve slightly different reliability goals. Requirement R8 requires the Transmission Operator to operate within an IROL. Requirement R11, however, requires the Transmission Operator to mitigate an exceedance if one has occurred. For example: If an exceedance occurs and goes away on its own within T_v, there is no violation of Requirement R8. However, if that exceedance occurs and the Transmission Operator doesn’t act to mitigate it within T_v then they are in violation of Requirement R11. No change made.
R6 (now Requirement R9) – IROL exceedances would be covered under Requirement R3 as they would represent an emergency condition. No change made.
VSLs and Measures have been revised as necessary.
</td></tr>
<tr><td>Southern Company</td><td>No</td><td>
The measure for R2 does not carry forth the definition of which other TOP should be informed. R2 requires informing other TOPs that are expected to be affected. The measurement requires that contact was made with all TOPs that were affected. The list of TOPs that are expected to be affected before the fact may be different than the list of TOPs that actually were affected.Would suggest minor change in R2 from “Transmission Operators known or expected to be affected of actual Emergency and anticipated Emergency conditions” to “Transmission Operators known or expected to be affected of actual Emergency or anticipated Emergency conditions”
The second “each” in M1 and M4 should be deleted.
Would suggest modifying VSL for M5 to read in the same tense of the Measure. Specifically, instead of “The Transmission Operator did not operate within an identified” to “The Transmission Operator operated outside
</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
		an identified”
Response: The SDT agrees that there is some confusion created by the wording of the requirement and has modified the requirement based on the comments by you and other respondents in an attempt to provide greater clarity. **R3**. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis. **M3**. Each Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and all other Transmission Operators that it knew or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis in accordance with Requirement R3. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. The SDT agrees that the second each in M1 and M5 should be deleted and has modified the measures accordingly. **M1**. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall make available upon request, in accordance with Requirement R1, evidence that it either: (a) complied with each Reliability Directive issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format. **M5.** Each Transmission Operator shall make available upon request, evidence that operations it coordinated its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators in accordance with Requirement R5 unless conditions did not permit such coordination. Such evidence could include, but is not limited to, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence. While the proposed modification to Measure M6 is one way to write the VSL, the SDT does not see an issue with the way the VSL is currently modified and has left it unchanged.		
US Bureau of Reclamation	No	The proposed addition of the term 'by the Transmission Operator" makes the Transmission Operator the reliability entity the exclusive source for determining when operations are expected to have a known or expected reliability impact on other reliability entities. This would eliminate the Generator Operator's ability to determine which operations can have an impact on other reliability entities such as Transmision Operators.The response from the SDT clearly indicated that "further the SDT recognizes that the scope and number of individual agreements, which may be needed to ensure that all operations are fully coordinated for all operations known or expected to have a reliability impact upon other Reliability Entities is highly likely to vary greatly from region to region or organizational arrangement to organizational arrangement. If the Transmission Operator is to be the exlusive source for the determination of those operations have or are expected to have a reliability impact on other reliability entities, then a separate requirement and measure is needed to ensure that such a determination is properly conveyed to the Generator Operator. Prior to this addition, the Generator Operator was able to make the operational impact assessment. The SDT should

<table>
<tr><th>Organization</th><th>Yes or No</th><th colspan="5">Question 1 Comment</th></tr>
<tr><td></td><td></td><td colspan="5">either create a new requirement for the TOP to provide to the Generator Operators the operations that have or are expected to have impacts on reliability entities or alter the language that the reliability entities determine when their respective operations impact other realiability entities.</td></tr>
<tr><td colspan="7">Response: The SDT agrees that the Generator Operator will not know of operations on the BES and has deleted the requirement.</td></tr>
<tr><td>Midwest ISO Standards Collaborators</td><td>No</td><td colspan="5">We largely agree with the requirements but have a few suggestions.In R2 and R4, “expected to be affected” would include known. Please strike known.

R5 and R6 require the TOP to identify a sub-set of SOLs that may be larger than the IROL subset ahead of time and to notify the RC of what actions it is taking to return the system to within operating limits when they are exceeded. Why is there not a requirement to also operate within those SOLs and return within the SOL if exceeded?

The VSLs for R7 appear to assume that the sample set of SOLs that would be reported to the RC is a small number by using one, two, three and four in each successive VSL. What if the sample set is large (i.e. 1000 SOLs)? Should the VSLs be based on percentages?

The measures for R5 and R8 need to be clear that these are event driven requirements and only evidence is required if an “event” has occurred.</td></tr>
<tr><td colspan="7">Response: The SDT feels that the term ‘known’ has a different connotation than ‘expected’ and therefore both are required. No change made.

The SDT determined that the Reliability Coordinator should be notified when the SOLs in Requirements R5 and R6 (now Requirements R8 & R9) are exceeded so that the assessor can be situationally aware and assess the need for additional action. At the same time, the SDT did not want to limit the operational flexibility of a Transmission Operator to temporarily exceed an SOL by a slight amount to avoid having to take drastic actions such as shedding load unnecessarily. No change made.

The SDT has reviewed all of the VSLs based on the latest guidelines and made changes accordingly. The R10 VSL is an example of such changes.</td></tr>
<tr><td>R10 VSL</td><td colspan="2">N/A</td><td>N/A</td><td>N/A</td><td colspan="2">The Transmission Operator did not inform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL has been exceeded</td></tr>
<tr><td colspan="7">The SDT feels that the measures are clear as written and has not made a change.</td></tr>
<tr><td>WECC RC</td><td>No</td><td colspan="5">What is definition for when an SOL supports or does not support Local Area Reliabilty?</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
		Is this for 100kV and above? What are the timing requirements for returning elements to a level below their SOL?
Response: The SDT has changed Requirement R8 to clarify this issue. **R8**. Each Transmission Operator shall inform it's Reliability Coordinator of all SOLs which, while not IROL, have been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis**.** The Reliability Standards are for the BES which is 100 kV and above unless specific exceptions are noted in the Applicability Section. Timing requirements would be based on the specific SOL characteristic such as if it is based on a facility thermal rating.		
James A Maenner	Yes	
Lakeland Electric	Yes	
Salt River Project	Yes	
The Detroit Edison Company	Yes	
Response: Thank you for your response.		

2. TOP-002-3: Do you agree with the changes made to this standard? If not, please supply specific reasons why you do not agree with the changes made.

Summary Consideration: Industry comments centered on requests for clarification from the SDT. The SDT has responded to these comments and made changes as noted below.

R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions.

R2. Each Transmission Operator shall plan to preclude operating in excess of those Interconnection Reliability Operating Limits (IROLs) and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1.

Data retention - Each Transmission Operator shall keep data or evidence to show compliance for each Requirement and Measure for a rolling 90 day period unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Organization	Yes or No	Question 2 Comment
Independent Electricity System Operator	No	(1) We continue to disagree with the way R2 is worded. R1 requires a TOP to conduct next day analysis to assess if any of the SOLs will be exceeded. R2 requires that the TOP develop plans to preclude operating in excess of only the IROLs identified as a result of the assessment performed in R1. Given our stance on this issue and understanding that IROLs represent a subset of SOLs, we believe R2 should be changed to refer to SOLs. In our view, a TOP needs to conduct next day analysis to assess if any of the established limits will be exceeded, develop plans to preclude operating in excess of the IROLs and SOLs, and make resources and actions available for mitigating exceedances if and when they occur. Like operating within SOL sand IROLs, this is fundamental to reliable operation. We suggest R2 be revised to include all SOLs.
Response: In response to your comment and those of others, the SDT has made a change to Requirement R2 to include certain, qualified SOLs that have been identified as needed for local are reliability. **R2**. Each Transmission Operator shall plan to preclude operating in excess of those Interconnection Reliability Operating Limits (IROLs) and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1.		
Northeast Power Coordinating Council	No	(1) We continue to disagree with the way R2 is worded. R1 requires a TOP to conduct next day analysis to assess if any of the SOLs will be exceeded. R2 requires that the TOP develop plans to preclude operating in excess of only the IROLs identified as a result of the assessment performed in R1. Given our stance on this issue and understanding that IROLs represent a subset of SOLs, we believe R2 should be changed to SOL. In our view, a TOP needs to conduct next day analysis to assess if any of the established limits will be exceeded, develop plans to preclude operating in excess of the IROLs and SOLs, and make resources and actions available for mitigating exceedances if and when they occur. Like operating within SOLs and

Organization	Yes or No	Question 2 Comment
		IROLs, this is fundamental to reliable operation. We suggest R2 be revised to include all SOLs. (2) Remove "single" from R1.
Response: (1) In response to your comment and those of others, the SDT has made a change to Requirement R2 to include certain, qualified SOLs that have been identified as needed for local are reliability. **R2**. Each Transmission Operator shall plan to preclude operating in excess of those Interconnection Reliability Operating Limits (IROLs) and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1. (2) The SDT disagrees with removing single from Requirement R1. By not including the word single, some may interpret this requirement to operate within all multiple Contingencies which is contrary to how the industry operates and what is necessary for reliability. However, the SDT has made a clarifying change to the requirement. **R1**. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions.		
Bonneville Power Administration	No	Comments: Change R1 wording. "R1:The wording is still incorrect in our interpretation. The wording needs to be changed to state that an assessment of the next days planned study conditions SOL'S is still valid with the expected next day's conditions. The previous wording isn't realistic because many days the assessment could determine a contingency response would cause the in place SOL to be exceeded. Some contingencies require the SOL to be lowered to prepare for the next condition which would cause real-time system readjustment. And the next contingency and the next contingency ?. Some days the assessment would say the SOL could be exceeded for HLH. The key to those SOL'S is that the SOL'S are set at a level where the worst contingency for that path would not cause the interconnection to go unstable, i.e. cascading outages.. Suggest clarifying what is meant by "their" in R3:"Each Transmission Operator shall notify all reliability entities identified in theplan(s) cited in Requirement R2 as to their role in the plan(s)." Perhaps state "their role in the TOP's Plans".
Response: The SDT believes Requirement R1 as drafted aligns with the interpretation for TOP-002-2a, Requirement R11. However, the SDT has made clarifying changes to the requirement. **R1**. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. 'Their' refers to the antecedent all reliability entities. The SDT finds no additional clarity from the proposed wording change. No change made.		
Platte River Power Authority Operations Group	No	Is "an assessment" consistent with the interpretation of TOP-002-2 R11 by Orlando Utilities Commission or are you requiring a real-time contingency analysis tool?We believe there should be no requirements for the TOP to have a real-time contingency analysis tool if the BA and RC have the tool and model the TOP's system.

Organization	Yes or No	Question 2 Comment
Response: The SDT has made clarifying changes to the requirement. **R1**. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions.		
Duke Energy	No	R1 , M1 and Data Retention could be interpreted to require that daily assessments (which could include a dated Power Flow) will have to be kept for 6 months. This could take up a lot of space. R2 as worded gives the impression that an IROL will be identified during a daily assessment respecting an SOL per R1. First, if you respect the SOL there will be no IROL. Second, simple day-ahead studies with an online Power Flow looking for contingencies might not identify an IROL. It might, but you would probably need to examine some multiple contingencies before something would cascade. R2 could be revised to read that each TOP shall plan to preclude operating in excess of any identified IROL's during the day-ahead assessment per R1. Also, maybe this requirement should be an RC requirement.
Response: The SDT agrees with your concern and has changed the data retention to 90 days. **Data retention** - Each Transmission Operator shall keep data or evidence to show compliance for each Requirement and Measure for a rolling 90 day period unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation. R2. Requirement R2 requires an entity to compare SOLs/IROLs to flows and to identify any new SOLs/IROLs as needed. The SDT does not see that any additional clarity would be gained by the change of wording suggested for Requirement R2. No change made.		
WECC RC	No	R2 should include SOLs. In R3 the plan should be shared with the RC.
Response: The SDT believes SOL are local in nature and as such do not require a plan. When correctly identified, operating outside or exceeding a SOL will only harm the entity exceeding the SOL, not the Interconnection. R3. The Reliability Coordinator is a functional entity and is thus covered by the existing wording. No change made.		
IRC Standards Review Committee	No	Requirement #1: It is not clear why we introduce 'single' Contingency event since a TOP may be required to study multiple contingencies identified by its RC (See FAC-011-2, Requirement R3). A better term may be "Continegency events identified in FAC-011."
Response: The SDT disagrees with removing single from Requirement R1. By not including the word single, some may interpret this requirement to operate within all multiple Contingencies which is contrary to how the industry operates and what is necessary for reliability. However, the SDT has made clarifying change to the requirement. **R1**. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions.		

Organization	Yes or No	Question 2 Comment
Salt River Project	No	
Response: Without specific comments, the SDT is unable to provide a response.		
Xcel Energy	Yes	R1- Is there a need to specify IROLs as well?
Response: IROLs are addressed in TOP-002-3, Requirement R2.		
Lakeland Electric	Yes	Requirement R-1 and Measure M-1 require modification for clarity. Replacing the undefined term “assessment” with the NERC defined term “Operational Planning Assessment” throughout the TOP-002-3 standard will help to clarify both line items. Using “Operational Planning Analysis” in measure M-1 clarifies that the power flow study does not have to be performed day-ahead (see the definition of Operational Planning Analysis). This is in-line with the recent interpretation issued by NERC discussed in the appendix of TOP-002-2a. Using “Operational Planning Analysis” in requirement R-1 ensures the planner understands that his or her assessment is meant to be more than just a determination of System Operating Limits. Requirement R-1 would also benefit from clarifying “single Contingency event.” Current day-ahead contingency analysis is limited to determining system performance during single transmission line, generator and transformer outages. However, using “single Contingency event” could include lightning struck towers with two or more transmission lines or even bus failures at which multiple transmission lines terminate. Unless it is the intent of the standard team to increase the scope of TOP-002 I recommend finishing requirement R-1 with “. . . involving transmission lines, transformers, and generators.”
Response: Operational Planning Assessment is not a currently defined term. The SDT believes that you meant ‘Operational Planning Analysis and agrees and has made the change. The SDT disagrees with removing single from Requirement R1. By not including the word single, some may interpret this requirement to operate within all multiple Contingencies which is contrary to how the industry operates and what is necessary for reliability. FAC-011-2 Requirement R3.3 already requires a Reliability Coordinator to determine SOLs from a list of multiple Contingencies that the Planning Coordinator identifies per FAC-014-2, Requirement R6 as having Stability limits. To remove the word single here would only cause confusion if additional multiple Contingencies over and above those used to identify SOLs in FAC-011-2, Requirement R3.3 are required to be tested. They are not required or needed for reliability. No change made in this regard. **R1**. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions.		
Entergy Services, Inc	Yes	This standard seems to conflict with MOD-001, Requirement 7. This standard requires that: When calculating ATC or AFC the Transmission Service Provider shall use assumptions no more limiting than those used in the planning of operations for the corresponding time period studied, providing such planning of operations has been performed for that time period. When applying the requirements from TOP-002-3 along with the MOD-001 standard, it seems that all TSP’s will need to calculate ATC or AFC up to the calculated IROL for the time

Organization	Yes or No	Question 2 Comment
		period. When the two standards are looked at independently they are fine, when you look at both, there is some confusion on where NERC wants the TSP's to go.
Response: TOP-002-3 is not applicable to Transmission Service Providers and the SDT does not see any conflict. MOD-001, Requirement R7 requires AFC/ATC/TTC studies to use no more limiting assumptions than what is used in real-time studies, i.e., the Transmission Operator sets the limits and the Transmission Service Provider follows. No change made.		
American Electric Power	Yes

Southern Company	Yes	
The Detroit Edison Company	Yes	
US Bureau of Reclamation	Yes	

Organization	Yes or No	Question 2 Comment
MRO NERC Standards Review Subcommittee	Yes	N/A
Response: Thank you for your response.		

3. TOP-003-1: Do you agree with the changes made to this standard? If not, please supply specific reasons why you do not agree with the changes made.

Summary Consideration: Due to industry comments, the following clarifying changes were made:

R1. Each Transmission Operator and Balancing Authority shall have a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring.

Part 1.1, last bullet: Operating parameters for equipment at voltage levels lower than the Bulk Electric System, at the discretion of the Transmission Operator or Balancing Authority.

Part 1.3 A periodicity for providing data.

Part 1.4 The deadline by which the respondent is to provide the indicated data.

R3. Each Balancing Authority shall distribute its data specification to entities that have Facilities monitored by the Balancing Authority and to entities that provide Facility status to the Balancing Authority.

M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities the data requested by those entities necessary for Operational Planning Analysis and Real-time operation in accordance with Requirement R5. . The evidence shall be that there are no Transmission Operators or Balancing Authorities with outstanding requests for data to the subject responsible entity that have been unfilled.

Organization	Yes or No	Question 3 Comment
WECC RC	No	Is mutually agreeable a formal process? Should it be in writing? The RC should be involved because of the numerous formats it has to deal with.
Response: The SDT used the phrase 'mutually agreeable' because it did not feel it would be necessary to have one format that fits all, nor do it feel it would be feasible to do so. The SDT feels that this phrasing allows the entities involved the flexibility they need to make this happen and therefore does not believe that the process needs to be formal or in writing but recognizes that entities are not prevented from doing so. The requirement is clear that the specification must be 'documented.' The Reliability Coordinator is not required to be directly involved. This requirement is focused on the Transmission Operator and Balancing Authority receiving the date they need to perform their function to meet the NERC reliability requirements. Any data that the Transmission Operator or Balancing Authority needs to collect because the Reliability Coordinator requires the data from them is likely to be included in this list. Reliability Coordinator requirements are covered in the IRO family of standards.		
SERC OC Standards Review Group	No	R1 Does "specification for data" mean a complete listing of data points or a listing of types of data required for different types of facilities such as "generation, transmission, etc." Also, does this standard apply solely to internal requirements of a BA and its TOP? The concern is the multiple types of formats that may be required in order to exchange data with an expanded list of entities external to the BA or TOP.

Organization	Yes or No	Question 3 Comment
		M5 measurements should be modeled similar to the measurement in M4, in particular, that last sentence of M4. Is TOP-003-2 a new standard utilizing an existing number? If so, does the previous TOP-003-1, Planned Outage Coordination have to be retired? The migration from the current TOP-003-1 to the new TOP-003-2 seems like it could cause confusion. Would it be better to just retire TOP-003-1 and form a new standard number like TOP-011-1? R4 and R5: Should there be a time requirement for complying with a data request?

Response: The specification for data is intended to ensure the Transmission Operator and Balancing Authority have the data they need to complete their functional responsibilities. A complete listing of the data points or a listing of the types of data required would both seem to allow the Transmission Operator and Balancing Authority to specify the data they need to complete their function responsibilities.

M5 measures**:** The SDT agrees with your suggestion and has modified Measure M5 as shown below.

M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities the data requested by those entities necessary for Operational Planning Analysis and Real-time operation in accordance with Requirement R5. . The evidence shall be that there are no Transmission Operators or Balancing Authorities with outstanding requests for data to the subject responsible entity that have been unfilled.

TOP-003-1 will be retired as per the Implementation Plan filed for this project. The numbering scheme for standards is controlled by the NERC Standards Process Manager and is not in the scope of the SDT.

R4 and R5: The data specification required by Requirement R1 includes, per part 1.3, a timeframe and periodicity of the data. To clarify this, the SDT has broken this out into 2 distinct parts.

Part 1.3 A periodicity for providing data.

Part 1.4 The deadline by which the respondent is to provide the indicated data.

Organization	Yes or No	Question 3 Comment
Southern Company	No	R1 is written for the Operations Planning timeframe. As such, would suggest rewording “shall have a documented specification for data necessary for Real-time monitoring and reliability assessments” to “shall have a documented specification for data necessary for reliability assessments and Real-time monitoring”. Having “Real-time monitoring” mentioned first may convey the impression that “Real-time” also applies to the reliability assessments. Also, would suggest rewording “Equipment at voltage levels lower than” to “Outages of equipment at voltage levels lower than.”

Response: The SDT has made clarifying changes to the wording of the requirement.

R1. Each Transmission Operator and Balancing Authority shall have a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring.

Organization	Yes or No	Question 3 Comment
The SDT has clarified the wording for this part in response to your comment. **Part 1.1, last bullet**: Operating parameters for equipment at voltage levels lower than the Bulk Electric System, at the discretion of the Transmission Operator or Balancing Authority.		
Xcel Energy	No	R5- We are concerned that this may be liberally applied to require entities to provide data to other entities with no clear reliability need. We feel this requirement could place extreme and unnecessary burden on entities to provide data in a specified format and time interval.
Response: The SDT believes that the requirement is reasonable in that requests must fall within the parameters of the data specifications provided by each entity. No change made**.**		
Bonneville Power Administration	No	Regarding M4 (last sentence): "The evidence shall be that there are noTransmission Operators as identified in Requirement R2 or Balancing Authorities asidentified in Requirement R3 with outstanding requests for data to the subject entitythat have been unfilled".This doesn't mention the "TIMEFRAME" response time to provide data after a request is made. (i.e. 30 days, 60 days or whatever the reasonable "TIMEFRAME" is to modify databases or communication channels.) The VSL should be adjusted accordingly. If an entity has just received a request and is being audited the next week before fulfilling the request that would be a SEVERE VSL, which seems inappropriate.
Response: The SDT has clarified Parts 1.3 and 1.4 to address your concerns. **Part 1.3** A periodicity for providing data. **Part 1.4** The deadline by which the respondent is to provide the indicated data.		
Duke Energy	No	The data specification in R1 is broad and could force a company to name every breaker, voltage point, MW point, etc. on their system. Perhaps an ICCP document or something similar could be used, but it's not clear as the requirement is currently written. Also, this standard goes into a lot of detail in R1 through R4. This standard could be simply one requirement, R5.
Response: The specification for data is intended to ensure the Transmission Operator and Balancing Authority have the data they need to complete their functional responsibilities. A complete listing of the data points or a listing of the types of data required would both seem to allow the Transmission Operator and Balancing Authority to specify the data they need to complete their function responsibilities. The SDT believes that the requirements, as written, are correct and lend themselves more readily to measurement.		
US Bureau of Reclamation	No	The modification of the language related to data specifications creates a potential for compliance violation for the

Organization	Yes or No	Question 3 Comment
		reliaibility entities other than the Transmission Operator. The specifications for data " necessary for Real-time monitoring and reliability assessments" needs to be more expicit. The language allows it to be below the BES voltage threshold. This is coupled with the requirement that no outstanding requests for rata from the transmission operator are unfilled. This double negative is easier to restate that all data requests from the transmission operator must be filled. This is very open ended. Should the data request is unreasonable, the other reliability entities would be non-compliant. The data specification need to be subject to review and approval by the Reliability Coordinator in the case of conflict brought by the reliabilty entity. The requirement, in case of conflict, would not be invoked until the data specifications are approved. This opportunity for appeal of the specifications ensures transmission operators apply technical reasoning in developing the specifications.
Response: The SDT disagrees with your assessment. Part 1.3 has been changed and Part 1,4 added to address your concern. Part 1.2 requires a mutually agreeable format. Requirement R4 requires the entities receiving the data specification to provide it in a format that they agreed upon which includes the timeframe. **Part 1.3** A periodicity for providing data. **Part 1.4** The deadline by which the respondent is to provide the indicated data.		
MRO NERC Standards Review Subcommittee	No	The term "Long term outages" in the first sub bullet is not clear, please clarify.
American Electric Power	Yes	AEP would appreciate that the reference to "Long term outages" in R1.1.1. be specified in terms of the time elapsed.
Response: The Transmission Operator and Balancing Authority will have to define what long term outages are in their data specification. They could be different for various Transmission Operators and Balancing Authorities so no set time frame can be selected. No change made.		
Northeast Power Coordinating Council	Yes	Regarding R4, M4, it does not appear to be warranted that a Generator Owner, Generator Operator, Interchange Authority, or Load-Serving Entity provide evidence that there are no outstanding requests for data. As the originator of the request, the evidence that there are no outstanding requests for data should be provided by the Balancing Authority or Transmission Operator, as applicable.
Response: The SDT is addressing the need to show evidence without introducing the need to "prove a negative". If no outstanding request for data can be found, then compliance exists. If there has indeed been a request, but the entity has not provided the data, the requester will likely provide a complaint and a copy of the request. An attestation that all requests have been fulfilled may suffice. No change made.		
FirstEnergy	Yes	We agree with the changes to TOP-003-1. However, we feel that R3 should be re-written to be consistent with the wording in R2. We suggest a change as follows: "R3. Each Balancing Authority shall distribute its data specification to entities that have Facilities monitored by the Balancing Authority and to entities that provide

Organization	Yes or No	Question 3 Comment
		Facility status to the Balancing Authority."
Response: The SDT agrees with your suggestion and has changed the Requirement R3 wording to be consistent with the sequence contained in Requirement R2. **R3**. Each Balancing Authority shall distribute its data specification to entities that have Facilities monitored by the Balancing Authority and to entities that provide Facility status to the Balancing Authority.

5. TOP-001-2, Requirement R1: Do you believe that the Balancing Authority issues Reliability Directives directly for transmission-related limits and therefore should be in the TOP standards,(vote YES); or do you believe that the Balancing Authority in its role as a Balancing Authority issues Reliability Directives to balance load and generation and only indirectly affects transmission flows (recognizing that an entity that serves as both a Transmission Operator and a Balancing Authority would be covered under the Transmission Operator requirement) (Vote NO). Please be as specific as possible with your reply.

Summary Consideration: The overwhelming majority of respondents ‘voted’ No to this question which validates the position of the SDT. Thus, no changes were necessary.

Organization	Yes or No	Question 5 Comment
SERC OC Standards Review Group		We are unsure how to respond to this question as it pertains to TOP-001-2, R1.
Electric Market Policy	No	
Xcel Energy	No	
ITC Holdings	No	Balancing Authorities do not operate transmission. They would only issue requirements with regard to capacity and energy emergencies.
Midwest ISO Standards Collaborators	No	Balancing Authorities do not operate transmission. They would only issue requirements with regard to capacity and energy emergencies.
James A Maenner	No	BAs that neither own nor operate transmission should not issue reliability directives for transmission-related limits. Without the tools and knowledge of a Transmission Operator, the BA could isssue conflicting orders to the TOP's operating plans. Certainly, the BA should relay a TOP directive but not be the initiator.
Manitoba Hydro	No	The BA is responsible to operate its generation assets within the reliability constraints established by the Transmission Operator and Reliability Coordinator.
Independent Electricity System Operator	No	The BA’s role is to balance load-generation-interchange and does not have any direct role in monitoring and operating system conditions within transmission-related limits.
Northeast Power Coordinating Council	No	The BA’s role is to balance load-generation-interchange and does not have any direct role in monitoring and operating system conditions within transmission-related limits.

Organization	Yes or No	Question 5 Comment
IRC Standards Review Committee	No	The BA's role is to balance load-generation-interchange only; it does not have any direct role in monitoring and operating system conditions within transmission-related limits.
Platte River Power Authority Operations Group	No	The Transmission Operator issues the "Transmission" reliability directive and the Balancing Authority issues directives to balance the generation to load.
Bonneville Power Administration	No	Transmission-related issues are the responsibility of the TOP not the BA.
The Detroit Edison Company	No	We believe that the Balancing Authority in its role as a Balancing Authority issues Reliability Directives to balance load and generation and only indirectly affects transmission flows and should not be in the TOP standards.
WECC RC	No	In WECC, the RC deals mainly with the BAs. The BAs with their responsibility to maintain load and resources, ACE, and frequency places them in a position to direct and control all other activities on the interconnection. The RC expects the BAs to accomplish and direct actions to restore or mitigate contingencies in the interconnection.
Southern Company	No	TOP-001-2 does not mention any entity except for the Transmission Operator as issuing Reliability Directives.Yes, it is appropriate for the Balancing Authority to issue Reliability Directives that are related to his responsibilities (issues regarding balance load and generation), but there should be no confusion that the Reliability Coordinator has ultimate authority and thus could issues overriding Reliability Directives. The definition of a Balancing Authority in the NERC Glossary is, "The responsible entity that integrates resource plans ahead of time, maintains load-interchange-generation balance within a Balancing Authority Area, and supports Interconnection frequency in real time." This definition gives them no responsibility for transmission limits. However, the Balancing Authority does need to be able to give Reliability Directives in order to aid in the resolution of transmission-related limit problems.
We Energies	No	We Energies joined MISO's comments for this project. We have one additional comment for this question. The BA may need to issue Directives to Generator Operators or Distribution Providers in response to a TOP or RC need to resolve a transmission issue. Basically "pass-through" the Directive from the TOP or RC to the entity that will actually carry out the directed action.
Response: Thank you for your response.		
American Transmission Organization	No	Because the team is use the term Reliability Directive our answer may depend on what how this term is finally defined. We believe that the term needs to be defined and approved by skateholders prior to this standard being posted for balloting.

Organization	Yes or No	Question 5 Comment
US Bureau of Reclamation	No	The term "Reliability Directive is not a defined term. The question is poorly worded since the TOP-001-2 R1 specifically reserves the reliability directive to Tranmission Operator for this standard. The Balancing Authority does not issue directives. It works within its capacity and emergency plan to aleviate imbalances. After implementing all of its remedies the Balancing authority works through the reliability coordinator. The Reliability Coordinator may declare an emergency and take specific actions. See the refercences below:EOP 002 - R2. Each Balancing Authority shall implement its capacity and energy emergency plan, when required and as appropriate, to reduce risks to the interconnected system.R5. . The Balancing Authority shall not unilaterally adjust generation in an attempt to return Interconnection frequency to normal beyond that supplied through frequency bias action and Interchange Schedule changes. Such unilateral adjustment may overload transmission facilities.R6 If the Balancing Authority cannot comply with the Control Performance andDisturbance Control Standards, then it shall immediately implement remedies to do so.These remedies include, but are not limited to:R6.1. Loading all available generating capacity.R6.2. Deploying all available operating reserve.R6.3. Interrupting interruptible load and exports.R6.4. Requesting emergency assistance from other Balancing Authorities.R6.5. Declaring an Energy Emergency through its Reliability Coordinator; and R6.6. Reducing load, through procedures such as public appeals, voltage reductions, curtailing interruptible loads and firm loads.R7. Once the Balancing Authority has exhausted the steps listed in Requirement 6, or if these steps cannot be completed in sufficient time to resolve the emergency condition, the Balancing Authority shall:R7.1. Manually shed firm load without delay to return its ACE to zero; andR7.2. Request the Reliability Coordinator to declare an Energy Emergency Alert in accordance with Attachment 1-EOP-002-0 “Energy Emergency Alert Levels.”R8. A Reliability Coordinator that has any Balancing Authority within its ReliabilityCoordinator area experiencing a potential or actual Energy Emergency shall initiate an Energy Emergency Alert as detailed in Attachment 1-EOP-002-0 “Energy Emergency Alert Levels.” The Reliability Coordinator shall act to mitigate the emergency condition, including a request for emergency assistance if required.
NERC Standards Review Subcommittee	No	The MRO NSRS believes any directives that a BA may issue should be in the BAL standards. R1, states that a BA, DP, LSE, and GOP shall comply with a Reliability Directive issued by a TOP. Reliability Directive is not defined by NERC. A definition has not been proposed.
Response: Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn’t been approved by the industry. **Reliability Directive -** A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.		
American Electric Power	Yes	Even in conditions where the BA is providing RDs to balance load and generation, the changes may still impact the BES. Under such circumstances, there remains a need for the BA to be aware of loadings on the BES.

Organization	Yes or No	Question 5 Comment
Duke Energy	Yes	The BA is involved in generation dispatch, which directly affects transmission flows.
Response: The Balancing Authority does not directly originate Directives to alleviate Transmission issues. They only respond to what they are told by the Reliability Coordinator or Transmission Operator. The majority of commenters agree with this position. No change made.		
FirstEnergy	Yes	The question as written is confusing based on the present wording of TOP-001-2 R1. Nevertheless, we believe that the Balancing Authority (BA) should be applicable in the TOP-001-2 standard and that their role as stated in R1 is correct. The BA receives direction from the TOP when redispatch solutions are needed to alleviate transmission-related limits (i.e. voltage, thermal, etc).
Ed Stein - self	Yes	
Lakeland Electric	Yes	
Response: Thank you for your response.		

6. Do you agree that with the changes in the 3rd posting that this project is ready to go to ballot? If not, please supply specific reasons why not.

Summary Consideration: No changes were made to requirements as a result of the comments received to this question. However, due to the number of comments received requesting an additional posting, and the number of changes made to the revised standards, the SDT agrees that an additional posting is required.

Organization	Yes or No	Question 6 Comment
Southern Company		Additional clarification per our previous comments is required. Re-posting may not be required.
Ed Stein - self	No	Due to my earlier response
Electric Market Policy	No	See comments above
WECC RC	No	See previous comments.
SERC OC Standards Review Group	No	See the above comments.Note: The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review Group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers.
ITC Holdings	No	The comments on TOP-001-2, particularly in regard to R6, need to be resolved before balloting.
Response: Please see the responses to previous comments.		
IRC Standards Review Committee	No	(1) The SRC is concerned that the absence of an explicit requirement for operating within SOLs may be problematic. Operating within SOLs is an important operating practice that will position the system to be stable within the acceptable reliability criteria included in the definition of SOLs and the requirements to be included in the methodology that is used to determine SOLs.The SRC recognizes that SOLs cover the full range from minor localized limits through Interconnection Operating Reliability Limits (IROLs), and that SOLs are defined to respect the facility and equipment ratings that are included in the determination of the values of SOLs. The suggested requirement R6 in TOP-001-2 for a TOP to identify SOLs, for which the TOP is to notify the RC when the SOLs are exceeded, is intended to address those SOLs that, while not meeting the definition of IROLs, may have potential impact that is important from a local viewpoint. Although these SOLs may not cause an impact equivalent to or greater than that in the definition of Adverse Reliability Impact, they deserve additional attention, including monitoring and notifications between TOPs and RCs. If the SDT holds the view that operating within the identified SOLs and correcting their exceedances are implicit and precursory to R7 and R8, then we would

Organization	Yes or No	Question 6 Comment
		suggest to make it explicit by revising R5, by saying, for example: R5. Each Transmission Operator shall operate within each identified Interconnection Reliability Operating Limit (IROL) and its associated IROL Tv, and each System Operating Limit (SOL) as identified in R6 and its associated time period as determined by the TOP. Similar to their IROL counterparts, operating within SOLs and mitigating their exceedances within some predetermined time period is fundamental to reliable operations, although for IROLs the interconnected system impact is readily obvious compared to the SOLs. The same principle holds true for day-ahead operational planning so that the needed control measures can be identified and made available in advance to prevent operating in excess of SOLs and to mitigate exceedances if and when they occur during day at hand and real-time operations. To this end, we suggest the SDT consider revising R2 of TOP-002-3 to: "Each Transmission Operator shall plan to preclude operating in excess of those System Operating Limits (SOLs) and Interconnection Reliability Operating Limits (IROLs) identified as a result of the assessment performed in Requirement R1." (2) Also there is concern that a definition for Reliability Directive has not been determined and agreed upon through the standards development process. Until such time that the definition of Reliability Directive can be developed and agreed to, the references to Reliability Directives or these standards should not go to ballot.
Response: The SDT agrees that operating within a certain subset of SOLs such as IROLs is fundamental to reliability and has made changes throughout TOP-001-2 and TOP-002-3 accordingly. (2) Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry. **Reliability Directive -** A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.		
NERC Standards Review Subcommittee	No	A. A Reliability Directive must be defined and there must be an opportunity to comment before balloting can begin. B. Our responses to the previous questions are additional reasons why this standard should not go to ballot and that this standard needs another comment period.
Response: A. Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated to a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry. **Reliability Directive -** A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency. B. The SDT agrees that one more draft and posting is necessary.		

Organization	Yes or No	Question 6 Comment
American Electric Power	No	AEP believes that one more draft is needed to verify that key edits provided by stakeholders during this round are included before proceeding to ballot.
Response: The SDT agrees that one more posting is necessary..		
Manitoba Hydro	No	Changes are still required to TOP-001-2
Response: The SDT has made changes to TOP-001-2 and agrees that one more posting is necessary.		
American Transmission Organization	No	Changes needed to remove R6 from draft TOP-001-2 and to include a requirement to establish TV for all IROL's.
Response: Requirement R6 (now Requirement R8) was added in response to substantial industry comments received in the second posting and remains in the proposed standard. FAC-014-2, Requirement R5.1.2 requires the Reliability Coordinator to identify the IROL T_v. No change made.		
Bonneville Power Administration	No	Correct R1 to assess the SOL is proper, not that the SOL could be exceeded. Where does the seasonal planning operations coordination described in TOP-002-2 R3 go? Re: the MOD-001-1 proposal.
Response: The SDT does not understand the comment nor is it able to see a correspondence to any of the Requirement R1's. Without a definitive reference, the SDT is unable to respond to your comment. The new TOP-003-2, Requirement R1 addresses all time frames, including seasonal planning operations coordination.		
Platte River Power Authority Operations Group	No	Terms need to be defined and clarificaiton needs to be added.
Duke Energy	No	We believe that more clarity is needed on the requirements in these standards before going to ballot.
Response: The SDT has clarified requirements, defined terms and agrees that one more draft and posting is necessary.		
US Bureau of Reclamation	No	The two outstanding issues related to the new language proposed by the SDT need to be resolved first.TOP 001 needs to be modified to either recognize that the GOP can determine which operations can impact other reliability entities or insert a new requirement that the TOP must develop and provide to the GOP the operations that may impact other reliability entities.

Organization	Yes or No	Question 6 Comment
		TOP 003 needs to be modified to either place specific limitations on the data specifications developed by the TOP or that the Reliability Coordinator must approve data specification developed by the TOP when they are disputed by the reliability entity which must satisfy the obligations such data specifications impose on them.
Response: The SDT agrees that the Generator Operator will not know of operations on the BES and has deleted the requirement. The SDT has changes Part 1.3 and added Part 1.4 to address these concerns. Part 1.2 requires a mutually agreeable format. Requirement R4 requires the entities receiving the data specification to provide it in a format that they agreed upon which includes the timeframe.		
Independent Electricity System Operator	No	We continue to strongly disagree with removing the requirements for a TOP to plan and make day ahead arrangement for operating with all SOLs, and during day at hand and real time operate the system within established SOLs (and IROLs) and mitigate SOL exceedances within a predetermined time period. These are the most critical tasks for the TOPs, and are fundamental to ensuring reliability. We are unable to support these standards if the necessary requirements are not reinstated/revised (as suggested in Q1 to change R5 of TOP-001 and in Q2 to change R2 of TOP-002). Finally, we recommend changing “local” in R6 to “Transmission Operator” to avoid creating ambiguity regarding what is referred to in the requirement.
Response: The SDT has made numerous changes to TOP-001-2 and TOP-002-3 to include the concept of local reliability SOLs. In Requirement R6 (now Requirement R8) “local” was intended to clarify that these SOLs, while important, did not affect bulk power system reliability. The SDT continues to believe that the use of the word “local” conveys the intent better than the term “Transmission Operator” would.		
Northeast Power Coordinating Council	No	We continue to strongly disagree with removing the requirements for a TOP to plan and make day ahead arrangement for operating with all SOLs, and during day at hand and real time operate the system within established SOLs (and IROLs) and mitigate SOL exceedances within a predetermined time period. These are the most critical tasks for the TOPs, and are fundamental to ensuring reliability. We are unable to support these standards if the necessary requirements are not reinstated/revised (as suggested in Q1 to change R5 of TOP-001 and in Q2 to change R1 and R2 of TOP-002). R6 should be reworded to read "Each Transmission Operator shall inform its Reliability Coordinator of all System Operating Limits (SOLs)which, while not IROLs, support its Transmission Operator area reliability.
Response: The SDT has made numerous changes to TOP-001-2 and TOP-002-3 to include the concept of local reliability SOLs.		
Xcel Energy	No	We feel several modifications are needed before this is ready to ballot, as detailed in our previous responses. Also, the SDT indicates that changes in this project are dependent upon changes in Project 2006-06. Final drafts of those standards are not complete and it is not clear from a mapping perspective as to how some of the

Organization	Yes or No	Question 6 Comment
		requirements originally in TOP are now covered under those standards.
FirstEnergy	No	We feel that the current draft still has issues to be addressed before balloting begins (see our comments on Questions 1 through 5). Also, we provide the following additional comments:1. The mapping of all the requirements and standards associated with this project provided within the Implementation Plan during the first posting is a valuable tool for industry personnel in charge of tracking compliance. However, this mapping matrix now appears to be removed from the implementation plan. We feel that the team and/or NERC should provide a revised mapping document during the next posting of documents for this project so that industry can review it. Then it should be retained as a reference tool for industry when transitioning their compliance documentation from the current standards to the new standards. 2. The implementation plan currently states: "The assumption used by the SDT in establishing this Implementation Plan is that the project mentioned in the prerequisites: Project 2006-06, Reliability Coordination; has been approved prior to the implementation of this Project 2007-03, Real-Time Operations." It should be clear that the implementation clock for these Real-Time Operations standards starts only after "applicable regulatory approval" of the standards associated with Project 2006-06.
Response: The SDT agrees that one more posting is necessary. The mapping matrix, which clearly identifies the linkages to Project 2006-06, has undergone substantial revision and will be provided with the next posting. The current plan of the SDT for this project is to submit it for approval simultaneously with Project 2006-06, Reliability Coordination.		
James A Maenner	Yes	
Lakeland Electric	Yes	
Midwest ISO Standards Collaborators	Yes	
Salt River Project	Yes	
The Detroit Edison Company	Yes	
Response: Thank you for your response.		

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.

Proposed Action Plan and Description of Current Draft:

The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. The current draft is the fourth posting of the revised standards and represents one additional posting that was not anticipated. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	2Q10
2. Post for recirculation ballot.	TBD
3. Submit to BOT.	TBD

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated on a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.

Reliability Directive — A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency.

A. Introduction

1. **Title:** **Coordination of Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:** To ensure coordination between and among reliability entities for the reliability of the Bulk Electric System (BES).

4. **Applicability**

   4.1. Balancing Authorities

   4.2. Transmission Operators

   4.3. Generator Operators

   4.4. Distribution Providers

   4.5. Load-Serving Entities

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with each identified Reliability Directive issued by its Transmission Operator, unless the respective entity informs its Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform a Reliability Directive issued by that Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Same Day Operations, Real-time Operations]*

R3. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R5. Each Transmission Operator shall coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators unless conditions do not permit such coordination. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall coordinate planned outages of telemetering and control equipment and associated communication channels between the affected entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R7. Each Transmission Operator shall not operate outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R8. Each Transmission Operator shall inform its Reliability Coordinator of all SOLs which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis**.** *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration exceeding 30 minutes. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions to return the system to within limits when an IROL, or each SOL identified in Requirement R8, has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v or an SOL identified in Requirement R8. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

Requirements R12, R13, and R14 are in response to FERC Order 693, paragraphs 1660 & 1661 dealing with minimum capabilities for the Transmission Operator.

R12. Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities within its Transmission Operator Area. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

R13. Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities identified in its Operational Planning Analysis within any Transmission Operator Area. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations, Same-day Operations, Operations Planning]*

R14. Each Transmission Operator shall provide approval rights for planned maintenance of its monitoring and analysis capabilities to its System Operators. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

C. Measures

M1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall make available upon request, evidence that it either: (a) complied with each Reliability Directive issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall make available upon request, evidence which may include, but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Transmission Operator of its inability to comply with issued Reliability Directive(s) in accordance with Requirement R2.

M3. Each Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and all other Transmission Operators that it knew or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis in accordance with Requirement R3. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M4. Each Transmission Operator shall make available upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R4 unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M5. Each Transmission Operator shall make available upon request, evidence that operations it coordinated its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators in accordance with Requirement R5 unless conditions did not permit such coordination. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M6. Each Transmission Operator, Balancing Authority, and Generator Operator shall make available upon request, evidence that planned outages of telemetering and control equipment and associated communication channels were coordinated among impacted reliability entities in accordance with Requirement R6. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M7. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside any identified Interconnection Reliability Operating Limit (IROL) for a continuous duration exceeding its associated IROL T_v as specified in Requirement R7. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion.

M8. Each Transmission Operator shall make available evidence that it has informed it's Reliability Coordinator of each SOLs which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis in accordance with Requirement R8. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M9. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an SOL for a continuous duration exceeding 30 minutes as specified in Requirement R9. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion.

M10. Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded in accordance with Requirement R9. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M11. Each Transmission Operator shall make available evidence of when it acted or directed others to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v or

SOL identified in Requirement R8 in accordance with Requirement R10 Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M12. Each Transmission Operator shall make available evidence that it can monitor, or has access to information about, conditions and Facilities within its Transmission Operator Area in accordance with Requirement R11. Such evidence could include Energy Management System description documents, computer printouts, or SCADA data collection system communications performance printouts.

M13. Each Transmission Operator shall make available evidence that it can monitor, or has access to information about, conditions and Facilities identified in its Operational Planning Analysis within any Transmission Operator Area in accordance with Requirement R12. Such evidence could include Energy Management System description documents, computer printouts, or SCADA data collection system communications performance printouts.

M14. Each Transmission Operator shall make available evidence that it's System Operators have approval rights for planned maintenance of its monitoring and analysis capabilities in accordance with Requirement R13. Such evidence could include a documented procedure that shows that the Transmission Operator's System Operator has the authority to veto planned outages to monitoring and analysis capabilities.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.3. Data Retention

Each Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance for each applicable Requirement R1 through R6, R8, and R10 through R14 and Measure M1 through M6, M8, and M10 through M14 for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has operated outside an identified IROL and its associated IROL T_v or SOL identified in Requirement R8 as specified in Requirements R7 and R9 and Measurements M7 and M9.

If a Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, or Generator Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity did not comply with a Reliability Directive issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements.
R2	N/A	N/A	N/A	The responsible entity did not comply with a Reliability Directive issued by its Transmission Operator, and the respective entity did not inform the Transmission Operator of its inability to do so.
R3	The Transmission Operator did not inform one other affected Transmission Operator or 5% or less of the other Transmission Operators affected whichever is less of an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform two other affected Transmission Operators or more than 5% or less than or equal to 10% of the affected Transmission Operators whichever is less of an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform three other affected Transmission Operators or more than 10% or less than or equal to 15% of the affected Transmission Operators whichever is less of an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or an anticipated Emergency condition based on its assessment of its Operational Planning Analysis. OR The Transmission Operator did not inform four or more other affected Transmission Operators or more than 15% of the affected Transmission operators whichever is less of an actual or anticipated Emergency based on its assessment of its Operational Planning Analysis.
R4	N/A	N/A	N/A	The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, when the requesting entity had implemented its comparable emergency procedures, and such

	Lower	Moderate	High	Severe
				actions would not have violated safety, equipment, regulatory, or statutory requirements.
R5	The Transmission Operator did not coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with one affected reliability entity or 5% or less of the affected reliability entities whichever is less when conditions did permit such coordination.	The Transmission Operator did not coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with two affected reliability entities or more than 5% or less than or equal to 10% of the affected reliability entities whichever is less when conditions did permit such coordination.	The Transmission Operator did not coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with three affected reliability entities or more than 10% or less than or equal to 15% of the affected reliability entities whichever is less when conditions did permit such coordination.	The Transmission Operator did not coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with four or more affected reliability entities or more than 15% of the affected entities whichever is less when conditions did permit such coordination.
R6	The responsible entity did not coordinate its respective planned outages of telemetering and control equipment and associated communication channels with one affected reliability entity or 5% or less of the affected entities whichever is less.	The responsible entity did not coordinate its respective planned outages of telemetering and control equipment and associated communication channels with two affected reliability entities or more than 5% or less than or equal to 10% of the affected entities whichever is less.	The responsible entity did not coordinate its respective planned outages of telemetering and control equipment and associated communication channels with three affected reliability entities or more than 10% or less than or equal to 15% of the affected entities whichever is less.	The responsible entity did not coordinate its respective planned outages of telemetering and control equipment and associated communication channels with four or more affected reliability entities or more than 15% of the affected entities whichever is less.
R7	N/A	N/A	N/A	The Transmission Operator exceeded an identified Interconnection Reliability Operating Limit (IROL) for a continuous duration greater than its associated IROL T_v.
R8	The Transmission Operator did not inform its Reliability Coordinator of one SOL, or 5% or less of the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of two SOLs or more than 5% or less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of three SOLs or more than 10% or less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**	The Transmission Operator did not inform its Reliability Coordinator of four or more SOLs or more than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability**.**

	Lower	Moderate	High	Severe
R9	N/A	N/A	N/A	The Transmission Operator exceeded a System Operating Limit (SOL) as identified in Requirement R9 for a continuous duration greater than 30 minutes.
R10	N/A	N/A	N/A	The Transmission Operator did notinform its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded.
R11	N/A	N/A	N/A	The Transmission Operator did not act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v or SOL identified in Requirement R8.
R12	N/A	N/A	N/A	The Transmission Operator did not have monitoring capability, or access to information about, the conditions and Facilities within its Transmission Operator Area.
R13	N/A	N/A	N/A	The Transmission Operator did not monitor, or have access to information about, conditions and Facilities identified in its Operational Planning Analysis within any Transmission Operator Area.
R14	N/A	N/A	N/A	The Transmission Operator's System operator did not have approval rights for planned maintenance of its monitoring and analysis capabilities.

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.

Proposed Action Plan and Description of Current Draft:
The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. The current draft is the fourth posting of the revised standards and represents one additional posting that was not anticipated. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, and TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	2Q10
2. Post for recirculation ballot.	TBD
3. Submit to BOT.	TBD

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

Three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated on a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.

Reliability Directive — A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency.

A. Introduction

1. **Title:** **Coordination of Transmission Operations**

2. **Number:** TOP-001-2

3. **Purpose:** To ensure coordination between and among reliability entities for the reliability of the Bulk Electric System (BES).

4. **Applicability**

   4.1. Balancing Authorities

   4.2. Transmission Operators

   4.3. Generator Operators

   4.4. Distribution Providers

   4.5. Load-Serving Entities

5. **Effective Date:** All requirements become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall comply with each identified Reliability Directive issued by ~~the~~ its Transmission Operator, unless the respective entity informs ~~the~~ its Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

~~R1.~~R2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform a Reliability Directive issued by that Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Same Day Operations, Real-time Operations]*

R3. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergenc~~y~~ies based on its assessment of its Operational Planning Analysis ~~and anticipated Emergency conditions~~. *[Violation Risk Factor: High] [Time Horizon: Same-day Operations, Real-Time Operations]*

~~R2.~~R4. Each Transmission Operator shall render emergency assistance to other Transmission Operators, as requested and available, provided that the requesting entity has implemented its comparable emergency procedures, unless such actions would violate safety, equipment, regulatory, or statutory requirements. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

~~R3.~~R5. Each Transmission Operator ~~and Generator Operator~~ shall coordinate its ~~respective~~ operations known or expected ~~by the Transmission Operator~~ to ~~have~~result in ~~a reliability impact~~ an Adverse Reliability Impact on ~~the portion of the BES of~~ other ~~reliability entities~~Transmission Operator Areas with those ~~entities~~ Transmission Operators unless conditions do not permit such coordination. Such operations may include~~, but are not limited to,~~ relay or equipment failures and changes in generation, Transmission, or Load ~~or operating conditions~~. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall coordinate planned outages of telemetering and control equipment and associated communication channels between the affected entities. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

~~R4.~~R7. Each Transmission Operator shall not operate ~~within~~outside ~~each~~any identified Interconnection Reliability Operating Limit (IROL) ~~and~~for a continuous duration exceeding its associated IROL T_v. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

~~R5.~~R8. Each Transmission Operator shall inform its Reliability Coordinator of all ~~System Operating Limits (~~SOLs~~)~~ which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis**.** *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R9. Each Transmission Operator shall not operate outside any System Operating Limit (SOL) identified in Requirement R8 for a continuous duration exceeding 30 minutes. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

~~R9.~~R10. Each Transmission Operator shall inform its Reliability Coordinator of its actions ~~being taken~~ to return the system to within limits when an IROL, or each SOL ~~as~~ identified in Requirement R~~6~~8, has been exceeded. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v or an SOL identified in Requirement R8. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations]*

Requirements R12, R13, and R14 are in response to FERC Order 693, paragraphs 1660 & 1661 dealing with minimum capabilities for the Transmission Operator.

R12. Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities within its Transmission Operator Area. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations]*

~~R12.~~R13. Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities identified in its Operational Planning Analysis within any Transmission Operator Area. *[Violation Risk Factor: High] [Time Horizon: Real-Time Operations, Same-day Operations, Operations Planning]*

R14. Each Transmission Operator shall provide approval rights for planned maintenance of its monitoring and analysis capabilities to its System Operators. *[Violation Risk Factor: Medium] [Time Horizon: Real-Time Operations]*

C. Measures

M1. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall ~~each~~ make available upon request, ~~in accordance with Requirement R1,~~ evidence that it either: (a) complied with each Reliability Directive issued by the Transmission Operator or, (b) informed the Transmission Operator that such actions would violate safety, equipment, regulatory, or statutory requirements, in accordance with Requirement R1. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

M2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall make available upon request, evidence which may include, but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent evidence in electronic or hard copy format, that it informed its Transmission

Operator of its inability to comply with issued Reliability Directive(s) in accordance with Requirement R2.

~~**M2.**~~**M3.** Each Transmission Operator shall make available upon request, evidence that it has informed its Reliability Coordinator and ~~affected~~ all other Transmission Operators that it knew or expected to be affected of actual ~~Emergency~~ and anticipated Emergenc~~y~~ies ~~conditions~~ based on its assessment of its Operational Planning Analysis in accordance with Requirement R~~2~~3. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

~~**M3.**~~**M4.** Each Transmission Operator shall make available upon request, evidence that requested and available emergency assistance was rendered to other Transmission Operators in accordance with Requirement R~~3~~4 unless such actions would violate safety, equipment, regulatory, or statutory requirements. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence in electronic or hard copy format.

~~**M4.**~~**M5.** Each Transmission Operator ~~and Generator Operator~~ shall ~~each~~ make available upon request, evidence that operations ~~were~~ it coordinated its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas with those Transmission Operators ~~among with impacted reliability entities~~ in accordance with Requirement R~~4~~5 unless ~~-~~conditions ~~do~~ did not permit such coordination. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M6. Each Transmission Operator, Balancing Authority, and Generator Operator shall make available upon request, evidence that planned outages of telemetering and control equipment and associated communication channels were coordinated among impacted reliability entities in accordance with Requirement R6. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

~~**M5.**~~**M7.** Each Transmission Operator shall make available evidence for any occasion in which it has operated outside any identified Interconnection Reliability Operating Limit (IROL) ~~and~~for a continuous duration exceeding its associated IROL T_v as specified in Requirement R~~58~~7. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion ~~outside of the identified IROL and applicable IROL T_v~~.

~~**M6.**~~**M8.** Each Transmission Operator shall make available evidence that it has informed ~~its~~it's Reliability Coordinator of ~~all~~ each SOLs which, while not an IROL~~s~~, has been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis in accordance with Requirement R~~6~~8. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

M9. Each Transmission Operator shall make available evidence for any occasion in which it has operated outside an SOL for a continuous duration exceeding 30 minutes as specified in Requirement R9. Such evidence could include but is not limited to dated computer logs or reports in electronic or hard copy format specifying the date, time, duration, and details of the excursion.

~~**M9.**~~**M10.** Each Transmission Operator shall make available evidence that it has informed its Reliability Coordinator of actions being taken to return the system to within limits when an

IROL, or ~~each~~an SOL ~~as~~ identified in Requirement R~~6~~8, has been exceeded in accordance with Requirement R~~7~~9. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

~~M10.~~M11. Each Transmission Operator shall make available evidence of when it acted or directed others to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v or SOL identified in Requirement R8 in accordance with Requirement R~~8~~10~~.~~ Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

~~M11.~~M12. Each Transmission Operator shall make available evidence that it can monitor, or has access to information about, conditions and Facilities within its Transmission Operator Area in accordance with Requirement R11. Such evidence could include Energy Management System description documents, computer printouts, or SCADA data collection system communications performance printouts.

M13. Each Transmission Operator shall make available evidence that it can monitor, or has access to information about, conditions and Facilities identified in its Operational Planning Analysis within any Transmission Operator Area in accordance with Requirement R12. Such evidence could include Energy Management System description documents, computer printouts, or SCADA data collection system communications performance printouts.

M14. Each Transmission Operator shall make available evidence that it's System Operators have approval rights for planned maintenance of its monitoring and analysis capabilities in accordance with Requirement R13. Such evidence could include a documented procedure that ~~will~~ shows that the Transmission Operator's System Operator has the authority to veto planned outages to monitoring and analysis capabilities.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

~~1.2.~~Regional Entity ~~**Compliance Monitoring and Reset Time Frame**~~

~~Not applicab~~

~~1.3.~~1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

~~1.4.~~1.3. Data Retention

Each Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, and Generator Operator shall each keep data or evidence to show compliance for each applicable Requirement R1 through R~~4~~6, R8, and R~~6~~10 through R~~8~~1~~0~~34 and Measure M1 through M~~4~~6, M8, and M~~6~~10 through M~~8~~14 for the current calendar year and one previous calendar year unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

Each Transmission Operator shall retain evidence for three calendar years of any occasion in which it has operated outside an identified IROL and its associated IROL T_v or SOL ~~as~~ identified in Requirement R8 as specified in Requirements R~~5~~7 and R9 and Measurements M~~5~~7 and M9.

If a Balancing Authority, Transmission Operator, Distribution Provider, Load-Serving Entity, or Generator Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

~~1.5.~~1.4. Additional Compliance Information

None.

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The responsible entity did not comply with a Reliability Directive issued by the Transmission Operator, and the respective entity did not inform the Transmission Operator that such action would violate safety, equipment, regulatory, or statutory requirements.
R2	N/A	N/A	N/A	The responsible entity did not comply with a Reliability Directive issued by its Transmission Operator, and the respective entity did not inform the Transmission Operator of its inability to do so.
R3	The Transmission Operator did not inform one other affected Transmission Operator or 5% or less of the other Transmission Operators affected whichever is less of an actual ~~Emergency~~ or anticipated Emergency ~~conditions~~ based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform two other affected Transmission Operators or more than 5% or less than or equal to 10% of the affected Transmission Operators whichever is less of an actual ~~Emergency~~ or anticipated Emergency ~~conditions~~ based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform three other affected Transmission Operators or more than 10% or less than or equal to 15% of the affected Transmission Operators whichever is less of an actual ~~Emergency~~ or anticipated Emergency ~~conditions~~ based on its assessment of its Operational Planning Analysis.	The Transmission Operator did not inform its Reliability Coordinator of an actual Emergency or an anticipated Emergency condition based on its assessment of its Operational Planning Analysis~~.~~. OR The Transmission Operator did not inform four or more other affected Transmission Operators or more than 15% of the affected Transmission operators whichever is less of an actual ~~Emergency~~ or anticipated Emergency ~~conditions~~based on its assessment of its Operational Planning Analysis.
R4	N/A	N/A	N/A	The Transmission Operator did not render emergency assistance to other Transmission Operators, as requested and available, when the requesting entity had implemented its comparable

	Lower	Moderate	High	Severe
				emergency procedures, and such actions would not have violated safety, equipment, regulatory, or statutory requirements.
R5	The ~~responsible entity~~Transmission Operator did not coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas ~~its respective operations known or expected by the Transmission Operator to impact other reliability entities~~ with one affected reliability entity or 5% or less of the affected reliability entities whichever is less when conditions did permit such coordination.	The ~~responsible entity~~Transmission Operator did not coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas ~~coordinate its respective operations known or expected by the Transmission Operator to impact other reliability entities~~ with two affected reliability entities or more than 5% or less than or equal to 10% of the affected reliability entities whichever is less when conditions did permit such coordination.	The ~~responsible entity~~Transmission Operator did not coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas ~~its respective operations known or expected by the Transmission Operator to impact other reliability entities~~ with three affected reliability entities or more than 10% or less than or equal to 15% of the affected reliability entities whichever is less when conditions did permit such coordination.	The ~~responsible entity~~Transmission Operator did not coordinate its operations known or expected to result in an Adverse Reliability Impact on other Transmission Operator Areas ~~its respective operations known or expected by the Transmission Operator to impact other reliability entities~~ with four or more affected reliability entities or more than 15% of the affected entities whichever is less when conditions did permit such coordination.
R6	The responsible entity did not coordinate its respective planned outages of telemetering and control equipment and associated communication channels with one affected reliability entity or 5% or less of the affected entities whichever is less.	The responsible entity did not coordinate its respective planned outages of telemetering and control equipment and associated communication channels with two affected reliability entities or more than 5% or less than or equal to 10% of the affected entities whichever is less.	The responsible entity did not coordinate its respective planned outages of telemetering and control equipment and associated communication channels with three affected reliability entities or more than 10% or less than or equal to 15% of the affected entities whichever is less.	The responsible entity did not coordinate its respective planned outages of telemetering and control equipment and associated communication channels with four or more affected reliability entities or more than 15% of the affected entities whichever is less.
R~~5~~7	N/A	N/A	N/A	The Transmission Operator ~~did not operate within~~ exceeded an identified Interconnection Reliability Operating Limit (IROL) ~~and the~~for a continuous duration greater than its associated IROL T_v ~~for any single occasion~~.
R~~6~~8	The Transmission Operator did not inform its Reliability Coordinator of	The Transmission Operator did not inform its Reliability Coordinator of	The Transmission Operator did not inform its Reliability Coordinator of	The Transmission Operator did not inform its Reliability Coordinator of four

	Lower	Moderate	High	Severe
	one SOL, or 5% or less of the SOLs, whichever is less, which, while not an IROL, has been identified by the Transmission Operator as support~~s~~ing its local area reliability.	two SOLs or more than 5% or less than or equal to 10% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as support~~s~~ing its local area reliability.	three SOLs or more than 10% or less than or equal to 15% of the Sols whichever is less, which, while not IROLs, have been identified by the Transmission Operator as support~~s~~ing its local area reliability.	or more SOLs or more than 15% of the SOLs whichever is less, which, while not IROLs, have been identified by the Transmission Operator as support~~s~~ing its local area reliability.
R9	N/A	N/A	N/A	The Transmission Operator exceeded a System Operating Limit (SOL) as identified in Requirement R9 for a continuous duration greater than 30 minutes.
R~~7~~10	~~The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when one SOL (that supports its local area reliability) has been exceeded~~ N/A	~~The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when two SOLs (that support its local area reliability) have been exceeded.~~ N/A	~~The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when three SOLs (that support its local area reliability) have been exceeded.~~ N/A	The Transmission Operator did not ~~make available evidence that it had~~ inform~~ed~~ its Reliability Coordinator of actions being taken to return the system to within limits when an IROL, or an SOL identified in Requirement R8, has been exceeded. ~~OR~~ ~~The Transmission Operator did not make available evidence that it had informed its Reliability Coordinator of actions being taken to return the system to within limits when four or more SOLs (that support its local area reliability) have~~was ~~been exceeded.~~
R~~8~~11	N/A	N/A	N/A	The Transmission Operator did not ~~make available evidence of its~~ act ~~ions~~ or ~~when it~~ direct ~~ed~~ others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v or SOL ~~-~~identified in Requirement R8.

2	TBD	Revisions pursuant to Project 2007-03	Revised

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.

Proposed Action Plan and Description of Current Draft:
The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. The current draft is the fourth posting of the revised standards and represents one additional posting that was not anticipated. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	2Q10
2. Post for recirculation ballot.	TBD
3. Submit to BOT.	TBD

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that reliability entities have coordinated plans for meeting expected operating conditions.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

> Rationale for Requirement R1:
>
> By definition, Operational Planning Analysis includes Contingency analysis.
>
> By stating this Requirement in this manner, the SDT is stating that a Transmission Operator must have analysis tools or procedures to perform the Operational Planning Analysis (or has contracted the service). Since the Requirement does not mandate how the analysis is completed, if tools are used, the Transmission Operator must be able to complete the analysis even if those tools are not available.

B. Requirements

R1. Each Transmission Operator shall have an Operational Planning Analysis that represents projected System conditions. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. Each Transmission Operator shall plan to preclude operating in excess of those Interconnection Reliability Operating Limits (IROLs) and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

R3. Each Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s). *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have evidence of a completed Operational Planning Analysis in accordance with Requirement R1. Such evidence could include but is not limited to dated power flow study results.

M2. Each Transmission Operator shall have evidence that it has planned to preclude operating in excess of the IROLs and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans, processes, or procedures for precluding operating in excess of each IROL and each SOL identified as a result of the Operational Planning Analysis.

M3. Each Transmission Operator shall have evidence that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Regional Entity

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.3. Data Retention

Each Transmission Operator shall keep data or evidence to show compliance for each Requirement and Measure for a rolling six month period for analyses, the most recent three months for voice recordings, and 12 months for operating logs and e-mail records unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation.

If a Transmission Operator is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None.

2. Violation Severity Levels

R#	Lower	Moderate	High	Severe
R1	N/A	N/A	N/A	The Transmission Operator does not have an Operational Planning Analysis that represented projected System conditions.
R2	N/A	N/A	N/A	The Transmission Operator did not plan to preclude operating in excess of those IROLs and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1.
R3	The Transmission Operator did not notify one reliability entity or 5% or less of the reliability entities whichever is less, identified in the plan(s) cited as to their role in the plan(s).	The Transmission Operator did not notify two reliability entities or more than 5% and less than or equal to 10% of the reliability entities whichever is less, identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify three reliability entities or more than 10% and less than or equal to 15% of the reliability entities whichever is less, identified in the plan(s) as to their role in the plan(s).	The Transmission Operator did not notify four or more reliability entities or more than 15% of the reliability entities whichever is less, identified in the plan(s) as to their role in the plan(s).

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operations Planning**

2. **Number:** TOP-002-3

3. **Purpose:** To ensure that reliability entities have coordinated plans for meeting expected operating conditions.

4. **Applicability**

   4.1. Transmission Operator.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

Rationale for Requirement R1:

By definition, Operational Planning Analysis includes Contingency analysis.

By stating this Requirement in this manner, the SDT is stating that a Transmission Operator must have analysis tools or procedures to perform the Operational Planning Analysis (or has contracted the service). Since the Requirement does not mandate how the analysis is completed, if tools are used, the Transmission Operator must be able to complete the analysis even if those tools are not available.

B. Requirements

R1. Each Transmission Operator shall have an ~~assessment~~ Operational Planning Analysis that represents projected System conditions.~~for the next day's operation that indicates whether it will exceed any of its System Operating Limits (SOLs); sduring anticipated normal conditions and potential single Contingency events~~; *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R2. Each Transmission Operator shall plan to preclude operating in excess of those Interconnection Reliability Operating Limits (IROLs) and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability, identified as a result of the ~~assessment~~Operational Planning Analysis performed in Requirement R1. *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

R3. Each Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s). *[Violation Risk Factor: High] [Time Horizon: Operations Planning]*

C. Measures

M1. Each Transmission Operator shall have evidence of ~~an~~ ~~assessment~~ a completed Operational Planning Analysis ~~for its next day operations~~ in accordance with Requirement R1. Such evidence could include but is not limited to dated power flow study results.

M2. Each Transmission Operator shall have evidence that it has planned to preclude operating in excess of the IROLs and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability, identified as a result of the ~~assessment~~Operational Planning Analysis performed in Requirement R1 in accordance with Requirement R2. Such evidence could include but it is not limited to plans, processes, or procedures for precluding operating in excess of each IROL and each SOL identified as a result of the Operational Planning Analysis.

M3. Each Transmission Operator shall ~~make available~~have evidence that it notified all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in the plan(s) in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, or e-mail records.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Enforcement Authority

Standard Development Roadmap

This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.

Development Steps Completed:

1. SAR version 1 posted on May 15, 2007.
2. SAR version 1 comment period closed on June 13, 2007.
3. SAR version 2 posted on August 7, 2007.
4. SAR version 2 comment period closed on September 7, 2007.
5. SAR approved by SC on November 1, 2007.
6. First posting of revised standards on October 7, 2008.
7. Second posting of revised standards on April 7, 2009.
8. Third posting of revised standards on August 25, 2009.

Proposed Action Plan and Description of Current Draft:
The SDT began meeting in January 2008 following the approval of the SAR by the SC. The original schedule showed completion of the project in 4Q09. The current draft is the fourth posting of the revised standards and represents one additional posting that was not anticipated. As part of the proposed revisions, TOP-004-2, TOP-005-1, TOP-006-1, TOP-007-0, TOP-008-0, and PER-001-0 will be retired. The requirements in those standards have been eliminated or moved to other standards within this project. Some changes made in this project are dependent on corresponding changes to Project 2006-06, Reliability Coordination, being approved.

Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post for ballot.	2Q10
2. Post for recirculation ballot.	TBD
3. Submit to BOT.	TBD

Definitions of Terms Used in Standard

This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.

There are no new or revised definitions proposed in this standard revision.

A. Introduction

1. **Title:** **Operational Reliability Data**

2. **Number:** TOP-003-2

3. **Purpose:** To ensure that the Transmission Operator and Balancing Authority have the data needed to fulfill their functional responsibilities.

4. **Applicability**

   4.1. Transmission Operators.

   4.2. Balancing Authorities.

   4.3. Generator Owners.

   4.4. Generator Operators.

   4.5. Interchange Authorities.

   4.6. Load-Serving Entities.

   4.7. Transmission Owners.

5. **Effective Date:** All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

B. Requirements

R1. Each Transmission Operator and Balancing Authority shall have a documented specification for the data necessary for it to perform its required Operational Planning Analyses and Real-time monitoring. The specification shall include: *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

1.1. A list of required data to be exchanged including, but not limited to:

- Long term outages of Bulk Electric System equipment, as specified by the Transmission Operator or Balancing Authority.
- Operating parameters for equipment at voltage levels lower than the Bulk Electric System, at the discretion of the Transmission Operator or Balancing Authority.

1.2. A mutually agreeable format.

1.3. A periodicity for providing data.

1.4. The deadline by which the respondent is to provide the indicated data.

R2. Each Transmission Operator shall distribute its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R3. Each Balancing Authority shall distribute its data specification to entities that have Facilities monitored by the Balancing Authority and to entities that provide Facility status to the Balancing Authority. *[Violation Risk Factor: Low] [Time Horizon: Operations Planning]*

R4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall satisfy the obligations of the documented specifications for data. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning]*

R5. Each Transmission Operator and Balancing Authority shall provide to other Transmission Operators and Balancing Authorities, the data requested by those other Transmission Operators and Balancing Authorities necessary for Operational Planning Analysis and Real-time monitoring. *[Violation Risk Factor: Medium] [Time Horizon: Operations Planning, Same-day Operations, Real-Time Operations]*

C. Measures

M1. Each Transmission Operator and Balancing Authority shall make available its dated, current, in force documented specification for data in accordance with Requirement R1.

M2. Each Transmission Operator shall make available evidence that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, date and contents, or e-mail records.

M3. Each Balancing Authority shall make available evidence that it has distributed its data specification to entities that have Facilities monitored by the Balancing Authority and to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3. Such evidence could include but is not limited to dated operator logs, voice recordings, postal receipts showing the recipient, or e-mail records.

M4. Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall make available evidence that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R4. The evidence shall be that there are no Transmission Operators as identified in Requirement R2 or Balancing Authorities as identified in Requirement R3 with outstanding requests for data to the subject entity that have been unfilled.

M5. Each Transmission Operator and Balancing Authority shall make available evidence that it has provided to other Transmission Operators and Balancing Authorities the data requested by those entities necessary for Operational Planning Analysis and Real-time operation in accordance with Requirement R5. The evidence shall be that there are no Transmission Operators or Balancing Authorities with outstanding requests for data to the subject responsible entity that have been unfilled.

D. Compliance

1. Compliance Monitoring Process

1.1. Compliance Monitoring Process

Regional Entity

1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certification

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

1.3. Data Retention

Each responsible entity shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Transmission Operator and Balancing Authority shall retain their dated, current, in force, documented specification for the data necessary for them to perform their required Operational Planning Analyses and Real-time monitoring in accordance with Requirement R1 and Measurement M1 as well as any documents in force since the last compliance audit.
- Each Transmission Operator shall retain evidence for three calendar years that it has distributed its data specification to entities that have Facilities monitored by the Transmission Operator and to entities that provide Facility status to the Transmission Operator in accordance with Requirement R2 and Measurement M2.
- Each Balancing Authority shall retain evidence for three calendar years that it has distributed its data specification to entities that have Facilities monitored by the Balancing Authority and to entities that provide Facility status to the Balancing Authority in accordance with Requirement R3 and Measurement M3.
- Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-Serving Entity, and Transmission Owner receiving a data specification in Requirement R2 or R3 shall retain evidence for 90 calendar days that it has satisfied the obligations of the documented specifications for data in accordance with Requirement R4 and Measurement M4.
- Each Transmission Operator and Balancing Authority shall retain evidence for 90 calendar days that it has provided to other Transmission Operators and Balancing Authorities the data requested by those entities necessary for Operational Planning Analysis and Real-Time operations in accordance with Requirement R5 and Measurement M5.

If a responsible entity is found non-compliant, it shall keep information related to the non-compliance until found compliant or the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

1.4. Additional Compliance Information

None

2. Violation Severity Levels

	Lower	Moderate	High	Severe
R1	The responsible entity did not have one of the required elements of the documented specification for the data necessary for them to perform their required Operational Planning Analyses and Real-time monitoring.	The responsible entity did not have two of the required elements of the documented specification for the data necessary for them to perform their required Operational Planning Analyses and Real-time monitoring.	N/A	The responsible entity did not have a documented specification for the data necessary for them to perform their required Operational Planning Analyses and Real-time monitoring.
R2	The Transmission Operator did not distribute its data specification to one reliability entity or 5% or less of the reliability entities whichever is less, that have Facilities monitored by the Transmission Operator or to one reliability entity or 5% or less of the entities whichever is less, that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to two reliability entities or more than 5% and less than or equal to10% of the reliability entities whichever is less, that have Facilities monitored by the Transmission Operator or to two reliability entities or more than 5% and less than or equal to 10% of the entities whichever is less, that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to three reliability entities or more than 10% and less than or equal to 15% of the reliability entities whichever is less, that have Facilities monitored by the Transmission Operator or three reliability entities or more than 10% and less than or equal to 15% of the reliability entities whichever is less, that provide Facility status to the Transmission Operator.	The Transmission Operator did not distribute its data specification to four or more reliability entities or more than 15% of the entities whichever is less, that have Facilities monitored by the Transmission Operator or four or more of the reliability entities or more than 15% of the reliability entities whichever is less,that provide Facility status to the Transmission Operator.
R3	The Balancing Authority did not distribute its data specification to one reliability entity or 5% or less of the entities whichever is less, that have Facilities monitored by the Balancing Authority and to one reliability entity or 5% or less of the reliability entities whichever is less, that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to two reliability entities or more than 5% and less than or equal to 10% of the entities whichever is less, that have Facilities monitored by the Balancing Authority and to two reliability entities or more than 5% and less than or equal to 10% of the reliability entities whichever is less, that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to three reliability entities or more than 10% and less than or equal to 15% of the entities whichever is less, that have Facilities monitored by the Balancing Authority and to three reliability entities or more than 10% and less than or equal to 15% of the reliability entities whichever is less, that provide Facility status to the Balancing Authority.	The Balancing Authority did not distribute its data specification to four or more reliability entities or more than 15% of the entities whichever is less, that have Facilities monitored by the Balancing Authority and to four or more reliability entities or more than 15% of the reliability entities whichever is less,that provide Facility status to the Balancing Authority.
R4	N/A	N/A	N/A	The responsible entity receiving a data specification in Requirement R2 or R3 did not satisfy the obligations of the

				documented specifications for data.
R5	N/A	N/A	N/A	The responsible entity did not provide to other Transmission Operators or Balancing Authorities the data and information requested by those entities necessary for Operational Planning Analysis and Real-time monitoring.

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Implementation Plan for Project 2007-03: Real-Time Operations

Prerequisite Approvals

Some changes made in this project are dependent on corresponding changes being approved in Project 2006-06, Reliability Coordination:

- COM-001-1 — Telecommunications
- COM-002-2 — Communications and Coordination
- IRO-001-1 — Reliability Coordination — Responsibilities and Authorities
- IRO-002-1 — Reliability Coordination — Facilities
- IRO-014-1 — Procedures to Support Coordination between Reliability Coordinators
- IRO-015-1 — Notifications and Information Exchange between Reliability Coordinators
- IRO-016-1 — Coordination of Real-Time Activities between Reliability Coordinators
- PER-004-1 — Reliability Coordination — Staffing
- PRC-001-1 — System Protection Coordination

It is the intent of the SDT that Project 2006-06 and Project 2007-03 be filed together so that the changes to the different standards can be coordinated.

Revision to Sections of Approved Standards and Definitions

There are no new definitions in the proposed set of standards.

However, three separate drafting teams wrote definitions for Reliability Directive. The three drafting teams have coordinated on a common definition and agreed that the Reliability Coordinator Standards Drafting Team (Project 2006-06) would write the definition and post it for vetting by the industry. The agreed upon definition is included here for ease of reference although it needs to be noted that this is still a draft and hasn't been approved by the industry.

Reliability Directive — A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency.

Compliance with Standard

Standard	Functions that must Comply with the Associated Requirements							
	TOP	BA	GO	GOP	IA	LSE	DP	TO
PER-001-0: Operating Personnel Responsibility and Authority	Retired							
TOP-001-2: Coordination of Transmission Operations	X	X		X		X	X	
TOP-002-3: Operations Planning	X							
TOP-003-1: Operational Reliability Data	X	X	X	X	X	X		X
TOP-004-2: Real-Time Transmission	Retired							

Operations	
TOP-005-2: Operational Reliability Data	Retired
TOP-006-1: Monitoring System Conditions	Retired
TOP-007-0: Reporting System Operating Limits (SOL) and Interconnection Reliability Operating Limit (IROL) Violations	Retired
TOP-008-1: Response to Transmission Limit Violations	Retired

The effective date is the date entities are expected to meet the performance identified in these standards. Note that entities have been given several months beyond the regulatory approval date (preparation time) to fully comply with new requirements.

The assumption used by the SDT in establishing this Implementation Plan is that the project mentioned in the prerequisites: Project 2006-06, Reliability Coordination; has been approved prior to the implementation of this Project 2007-03, Real-Time Operations.

Effective Date of Revised Standards
All requirements will become effective the first day of the first calendar quarter twenty-four months following applicable regulatory approval. In those jurisdictions where no regulatory approval is required, the requirements become effective the first day of the first calendar quarter twenty-four months following Board of Trustees adoption.

Retirement Date for Existing Standards
All requirements will be retired twenty-four months following the first day of the first quarter following regulatory approval.

Mapping Table

The following table indicates the disposition of the existing standards related to this project.

Existing Requirement	Resolution
TOP-001-1	
R1	Deleted – Deletion of this requirement doesn't alleviate responsibility for actions as each individual requirement in the Reliability Standards now specifies an action and a responsible entity. Needed actions required for reliability of the bulk power system have been more clearly laid out in revised standards. (See FERC Order 693a, paragraph 112.) The requirement is also non-specific, ambiguous, and not performance oriented. If an entity doesn't perform as specified in an individual requirement, then they are held accountable at that level. This is a generic requirement that is no longer necessary since there are now specific requirements that cover all needed reliability actions. All of this makes this requirement redundant. The overall reliability of the bulk power system is not adversely affected by the deletion of this requirement.
R2	Deleted for Reliability Coordinator - The Reliability Coordinator has the ultimate responsibility for the reliability of the bulk power system and the Transmission Operator must respond to Reliability Coordinator directives as per proposed IRO-001-2, Requirement R2.

	Replaced for Transmission Operator – Based on the interpretation of the undefined term 'operating emergency' as equivalent to 'Emergency' as defined in the Glossary which points to 'Adverse Reliability Impact' which in turn points to IROLs, this has been replaced by proposed TOP-001-2, Requirements R7 through R10.
R3	Moved for Reliability Coordinator - All references to the Reliability Coordinator and Reliability Coordinator responsibilities have been removed from the TOP standards as they are now covered in the revisions being undertaken in Project 2006-06. This requirement is now covered in the proposed IRO-001-2, Requirements R2 & R3. Replaced for Transmission Operator – Proposed TOP-001-2, Requirement R1 now covers the Balancing Authority and Generator Operator responding to Transmission Operator directives.
R4	Retained and moved to proposed TOP-001-2, Requirement R1.
R5	Retained and moved to proposed TOP-001-2, Requirement R2. The intent of the "mitigation" phrasing was replaced by proposed TOP-001-2, Requirement R10. (Also, see explanation for R2 above.) Also, this is covered in approved EOP-001-0, Requirement R3 and the proposed EOP-001-2, Requirement R2.
R6	Retained and moved to proposed TOP-001-2, Requirement R3 for the Transmission Operator. The Generator Operator was removed since they can't be contacted directly by others and will only respond to such requests if they were in the form of a Reliability Directive from its Transmission Operator which is covered in proposed TOP-001-2, Requirement R1. EOP-001-0, Requirement R1 covers the Balancing Authority so to eliminate a redundancy the Balancing Authority has been removed from this requirement. In addition, the Balancing Authority must still respond to any Reliability Directive from the Transmission Operator as stated in proposed TOP-001-2, Requirement R1.
R7	Retained in concept but re-worded as part of proposed TOP-001-2, Requirements R4 & R5. After the fact notifications have been deleted since those actions will be seen through telemetry as cited in the proposed TOP-003-2 and proposed IRO-001-2. The term 'burden' was considered by the SDT to be vague, ambiguous, unmeasurable, and undefined and has been replaced by a NERC defined term 'Burden'.
R8	Real Power Balance and Reactive Power Balance are not defined terms. First sentence – Deleted due to: - The Balancing Authority is covered in approved EOP-002-2.1, Requirement R6. Therefore, this portion of the requirement is superfluous and can be deleted. The Transmission Operator does not balance real power so that part of the sentence can be deleted. Approved VAR-001-1, Requirement R8 covers reactive power requirements and the meaning of balancing reactive power for the Transmission Operator. The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power (see proposed TOP-001-2, Requirement R1) and can therefore be deleted from this part of the requirement. Second sentence – Deleted due to: The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power (see proposed TOP-001-2, Requirement R1) and can thus be deleted. Transmission Operators are covered under approved VAR-001-1, Requirement R1 thus making this part of the requirement redundant. Third sentence – The Reliability Coordinator is now covered in proposed IRO-009-1, Requirements R1 through R4 and can be deleted here. The Transmission Operator and Balancing Authority are covered in approved EOP-003-1, Requirement R1. Therefore, this is redundant and can be deleted.
TOP-002-2	

R1	First sentence – Deleted for Balancing Authority, Retained for Transmission Operator - The Balancing Authority is required to balance by approved BAL-001-0.1a and approved BAL-002-0 and must take action per approved EOP-002-2.1, Requirement R6 and thus can be deleted. Retained for Transmission Operator in proposed TOP-002-3, Requirements R1 through R3. This is patterned after the proposed IRO-008-1, Requirement R1 for the Reliability Coordinator. Second sentence – Deleted. The Balancing Authority is covered in approved BAL-002-0, Requirement R3 and thus is redundant and can be deleted here. The Transmission Operator is covered in the proposed TOP-001-2, Requirement R10 and is thus also redundant and can be deleted. In addition, approved EOP-001-2, Requirement R3 covers the Transmission Operator having plans in place to mitigate emergency conditions.
R2	Deleted - The SDT reviewed the purpose of the Reliability Standard and believes that this requirement referred to operations planning. Given the current definition of Transmission Operator in the Glossary and Functional Model v5, operations planning is part of what the Transmission Operator is required to do and as such this requirement is no longer needed and can be deleted.
R3	For all but the Transmission Service Provider, proposed TOP-003-2 requires the transfer of any and all data required for Real-time operations or Operational Planning Analyses regardless of timeframe involved. That makes this requirement redundant and it can be deleted. The Transmission Service Provider is covered in the proposed MOD-028-1, MOD-029-1, and MOD-030-1 and is thus redundant and can be deleted.
R4	Deleted – Proposed TOP-003-2 requires the transfer of any and all data required for Real-time operations or Operational Planning Analyses between and amongst Balancing Authorities and Transmission Operators regardless of timeframe involved. That makes this requirement redundant and it can be deleted for Balancing Authorities and Transmission Operators. Data requirements for Reliability Coordinators are covered in proposed IRO-010-1, Requirement R3 making this requirement redundant for Reliability Coordinators and it is therefore deleted.
R5	The Balancing Authority is covered by approved BAL-001-0.1a and thus can be deleted. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in to the Functional Model. Therefore, the Transmission Operator should be doing the plan and passing it down to the Balancing Authority. The Balancing Authority gets any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2. Transmission Operator - replaced by proposed TOP-002-3, requirements R1 through R3.
R6	The Balancing Authority is covered by approved BAL-002-0, Requirements R2 through R4 and approved EOP-002-2.1, Requirement R6 and thus can be deleted. The Functional Model requires a Balancing Authority to operate under the direction of the Transmission Operator for such matters. It is also a basic tenet of operations and good standards that only one entity should be 'in charge'. The Balancing Authority can only work within the constraints handed down by the Transmission Operator. Any needed coordination issues are built in to the Functional Model. Therefore, the Transmission Operator should be doing the plan and passing it down to the Balancing Authority. The Balancing Authority gets any needed data to the Transmission Operator through the data specification requirements in proposed TOP-003-2.

	Transmission Operator - replaced by proposed TOP-002-3, Requirements R1 through R3. The SDT does not believe that there is a need for the last part of the sentence 'in accordance with…' with the advent of the ERO and enforceable reliability standards. As stated in the NERC Functional Model V4, the Balancing Function: "Integrates resource plans ahead of time, maintains load-interchange-generation balance within a Balancing Authority Area and supports Interconnection frequency in real time." To this end and in accordance with approved NERC Reliability Standards BAL-001-0.1a and BAL-002-0, Balancing Authorities are required to meet all control performance and disturbance recovery criteria for any system condition. Balancing Authorities are not responsible for the operation of the transmission system. The Transmission Operator is responsible for the real-time operating reliability of the transmission assets under its purview, and as such has the authority to issue reliability-related directives to entities within its Transmission Operator Area. Balancing Authorities are required to implement directives received from the Transmission Operator or the Reliability Coordinator regarding load, generation and interchange for transmission concerns both predicted (e.g., through Unit Commitment) and actual (e.g., through re-dispatch, Interchange modifications or load shedding). If the Balancing Authorities' actions do not resolve the transmission issues, it is the Transmission Operators' or Reliability Coordinators' responsibility to direct alternative actions.
R7	The Balancing Authority is required to always plan to meet and recover from Contingency events as stated in approved BAL-002-0, Requirement R2 and therefore this requirement is redundant and can be deleted. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and is covered in proposed TOP-002-3, Requirements R1 and R2. Operational Planning Analysis includes deliverability considerations.
R8	Deleted - The Balancing Authority must be told by the Transmission Operator to take actions regarding reactive power (see proposed TOP-001-2, Requirement R1) and thus this requirement can be deleted. Voltage and reactive are the responsibility of the Transmission Operator and are covered under approved VAR-001-1, Requirement R1. Deliverability is not in the control of the Balancing Authority; it is a Transmission Operator responsibility and is covered in proposed TOP-002-3, Requirement R1 and R2.
R9	This is covered in approved INT-003-2 and is redundant and can be deleted.
R10	Balancing Authority - deleted as for transmission, the Balancing Authority is only responsible to respond to Reliability Directives as per the definition of Balancing Authority in the Glossary and thus this requirement is not applicable to the Balancing Authority. The SDT position is that SOLs and IROLs are transmission items for which the Balancing Authority has no information or control. The Transmission Operator instructs the Balancing Authority as to what to do in these situations. Transmission Operator - covered in proposed TOP-002-3, Requirement R1 (analysis of SOLs) & Requirement R2 (avoid IROLs. As stated in the NERC Functional Model V4, the Balancing Authority is responsible for integrating resource plans ahead of time, maintaining load-interchange-generation balance within a Balancing Authority Area and supporting Interconnection frequency in real time. The Balancing Authority does not possess the bulk power system information necessary to manage transmission flows. Therefore, the Balancing Authority can only plan to meet SOLs and IROLs by responding to directions from the Transmission Operator.
R11	Deleted: First sentence – Proposed TOP-003-2 requires the transfer of any and all data required for real-time operations or Operational Planning Analyses regardless of the timeframe involved. Operational Planning Analyses are covered in proposed TOP-002-3, Requirement R1. Second sentence deleted as this is now covered in the proposed IRO-009-1, Requirement R5 for

	IROLs and the SDT has moved toward an operating philosophy for the Transmission Operator based on avoiding IROLs (and selected SOLs) and acting within the IROL T_v. Third sentence – 'update… as necessary' is ambiguous and the SDT believes that proposed TOP-003-2, Requirement R1 better covers this for studies and covered in proposed TOP-002-3, Requirement R3 for distribution so this is redundant and can be deleted.
R12	Deleted as duplicative of proposed MOD-028-2, MOD-029-2, or MOD-030-2 .
R13	Deleted as duplicative of approved FAC-008-1 & approved FAC-009-1, Requirement R1.3.
R14	Deleted – duplicative of proposed TOP-003-2.
R15	Deleted – duplicative of proposed TOP-003-2.
R16	Deleted – duplicative of proposed TOP-003-2.
R17	Deleted - duplicative of proposed IRO-010-1, Requirement R3.
R18	Deleted as the SDT feels that this requirement adds no reliability benefit. Entities have existing processes that handle this issue. There has never been a documented case of the lack of uniform line identifiers contributing to a system reliability issue. This is an administrative item as seen in the measure which simply requires a list of line identifiers. The SDT feels that the true reliability issue is not the name of a line but what is happening to it, pointing out the difficulty in assigning compliance responsibility for such a requirement, as well as the near impossibility of coming up with truly unique identifiers on a nation-wide basis. The bottom line is that this situation is handled by the operators as part of their normal responsibilities and no one is aware of a switching error caused by confusion over line identifiers.
R19	Deleted - Order 693, paragraph 1660 states that FERC is not interested in analytical tools but rather in capabilities. This requirement is tool-specific and as such is not suitable for Reliability Standards per Order 693.
TOP-003-1	
R1	Deleted as duplicative of proposed TOP-003-2, Requirement R1.
R2	Balancing Authority deleted since Balancing Authority is only required to respond to Reliability Directives regarding voltage. Proposed TOP-001-2, Requirement R4 covers coordination issues. Proposed TOP-003-2, Requirement R1 handles data requirements.
R3	Retained as proposed TOP-001-2, Requirement R6.
R4	Deleted – covered by proposed TOP-001-2, Requirements R4 & R5 as the SDT expects the entities to resolve any conflicts based on this requirement. If the conflict can't be resolved, the (proposed) IRO-001-2, Requirement R1 gives the Reliability Coordinator the authority to resolve the conflict. .
TOP-004-2	
R1	Moved to proposed TOP-001-2, R7 with the note that the SDT has moved toward an operating philosophy based on avoiding IROLs (and selected SOLs) and the IROL T_v.
R2	Moved to proposed TOP-001-2, Requirement R7 with the note that the SDT has moved toward an operating philosophy based on avoiding IROLs (and selected SOLs) and the IROL T_v.
R3	Moved to proposed TOP-001-2, Requirement R7. This requirement is not limited by single or multiple Contingencies but is based solely on identified IROLs regardless of how they were identified or whether they were identified by the Transmission Operator or Reliability Coordinator.
R4	Deleted due to the fact that the SDT believes the best way to handle such a situation is to treat it

	like an IROL or restoration scenario and to take the same type of actions that you would apply for alleviating those situations. Therefore, it is covered under proposed TOP-001-2, Requirement R7 and the proposed EOP-006-2. This allows the operator sufficient flexibility within a structured environment to take the necessary actions for the reliability of the bulk power system.
R5	The Transmission Operator does not have the right to unilaterally separate – that can only be done through the authorization of the Reliability Coordinator, thus the first sentence is a moot point and that portion of the requirement can be deleted. The second sentence has been replaced by proposed TOP-001-2, R7 through R10 with the note that the SDT has moved toward an operating philosophy based on avoiding IROLs (and selected SOLs) and the IROL T_v.
R6	The first sentence was deleted as it is has been superseded by the NERC Reliability Standards taken as a whole. The second sentence can be deleted as all of the sub-requirements are covered elsewhere: R6.1 is duplicative of approved VAR-001-1, Requirement R1 for reactive. Real power flows are covered in proposed TOP-001-2, Requirement R7. R6.2 is covered in proposed TOP-001-2, Requirement R4 R6.3 – moved to proposedTOP-001-2, Requirement R4; R6.4 – moved to proposed TOP-001-2, Requirements R7 through R10 with the note that the SDT has moved toward an operating philosophy based on avoiding IROLs (and selected SOLs) and the IROL T_v. Also, a Transmission Operator must have a documented Operating Procedure covering every applicable standard requirement in order to pass an audit
TOP-005-2	
R1	Confidentiality is not a reliability issue but a market or business issue. Since this is not a reliability issue, it does not belong in the Reliability Standards and can be deleted.
R2	Deleted – covered by proposed TOP-003-2.
R3	Deleted –All operating data that a Purchasing Selling Entity has that a Transmission Operator or Balancing Authority needs is part of eTag and is acquired through that system. This is a NAESB standard and can thus be deleted. Purchasing Selling Entity is covered under the INT standards and thus can be deleted.
TOP-006-2	
R1	R1 & R1.1 - Deleted – covered as part of the new data specification requirements in proposed TOP-003-2. R1.2 - Deleted – covered by proposed IRO-010-1, Requirement R3.
R2	Deleted – covered as part of the new data specification requirements in proposed TOP-003-2 for the Transmission Operator & Balancing Authority. The Reliability Coordinator is covered by proposed IRO-010-1, Requirement R3.
R3	Deleted – as duplicative of proposed PER-005-1 (training) and proposed TOP-003-2 (data).
R4	Deleted – covered as part of the new data specification requirements in proposed TOP-003-2.
R5	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, for Transmission Operator avoiding IROLs; proposed IRO-008-1, Requirement R2 for real-time assessments every 30 minutes for Reliability Coordinators.

R6	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-o.1b for ACE calculations (Balancing Authority); proposed TOP-001-2, for Transmission Operator avoiding IROLs.
R7	Deleted – covered in certification process for initial core capabilities. Entities will be in violation of other standards if they don't maintain their initial certification. For example, approved BAL-005-0.1b for ACE calculations (Balancing Authority); approved EOP-003-1, for Transmission Operator avoiding underfrequency; proposed EOP-006-2, Requirement R8 for resynchronization for Reliability Coordinators.
TOP-007-0	
R1	Moved to proposed TOP-001-2, R9 with the note that the SDT has moved toward an operating philosophy based on avoiding IROLs (and selected SOLs) and the IROL T_v.
R2	Moved to proposed TOP-001-2, R7 with the note that the SDT has moved toward an operating philosophy based on avoiding IROLs (and selected SOLs) and the IROL T_v.
R3	Deleted - Covered in approved EOP-003-1, Requirements R1 & R3. and proposed TOP-001-2, Requirement R10.
R4	Deleted as duplicative of approved IRO-001-1.1, R3.
TOP-008-1	
R1	Deleted – as duplicative of approved EOP-003-1, Requirements R1, R3 & R5 and proposed TOP-001-2, Requirement R10.
R2	First sentence - Deleted as duplicative of proposed TOP-001-2, Requirement R7 with the note that the SDT has moved toward an operating philosophy based on avoiding IROLs (and selected SOLs) and the IROL T_v. Second sentence – deleted as this is now handled by the Reliability Coordinator as cited in proposed IRO-009-1, Requirement R5.
R3	Delete first sentence – Placing this procedure in a requirement when it is only one of the possible options for alleviating the condition is bad practice and should not be mandated in standards. If the situation involves an IROL it is covered in proposed TOP-001-2, Requirements R7 through R10. If it is not an IROL, then the owner still has the right to protect their equipment within the limitations of their contracts and obligation to comply with the Reliability Standards. Delete second sentence as duplicative of proposed TOP-001-2, Requirements R4 & R5. The SDT feels that a standard should not be mandating disconnection. This is in conflict with other Reliability Standards where disconnection is dependent on system conditions and coordination with other functional entities. Such actions, taken unilaterally, could make conditions worse.
R4	Deleted – information is covered as part of the new data specification requirements in proposed TOP-003-2. Analysis tools are covered in the certification process for initial core capabilities. The Transmission Operator will be in violation of other standards if they don't maintain their initial certification. For example, they can't develop their limits without maintaining their tools. Operational Planning Analyses are required in proposed TOP-002-3 while real-time analysis is required for IROL mitigation in proposed TOP-001-2 thus covering the operational timeframes. Proposed TOP-001-2, R10 covers mitigation of limit violations with the note that the SDT has moved toward an operating philosophy based on avoiding IROLs (and selected SOLs) and the IROL T_v.
PER-001-0	

R1	Deleted - In FERC Order 693a, paragraph 112, the Commission clarifies that a Reliability Coordinator's authority to issue directives arises out of the Commission's approval of Reliability Standards that mandate compliance with such directives. The SDT believes that this same logic applies to Transmission Operators and Balancing Authorities and that makes this requirement superfluous and thus it can be deleted.

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Resolution of Issues Assigned to Real-time Operations SDT (Project 2007-03)

Standard	Source	Language	Resolution
TOP-001			
TOP-001-1	FERC Order 693	1580 - Consider adding other measures and levels of non-compliance.	Measures and VSLs have been assigned to all requirements.
TOP-001-1	FERC Order 693	1585 - Clarify the definition of "emergency" and define the criteria for entering into the various states. Also define the authority for declaring these states.	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03 which has not yet started.
TOP-001-1	FERC Order 693	1588 - Consider Santa Clara's comments to provide that the transmission operator may notify the reliability coordinator or the balancing authority that it is removing facilities from service as part of the standards development process.	This is covered in proposed TOP-001-2, Requirement R5.
TOP-001-1	Version 0 Team	What is 'clear decision making authority'?	Requirement using this term was deleted as not needed in a reliability standard. The standards already require the necessary actions.
TOP-001-1	Version 0 Team	Need to define single, central communications point during emergencies	This is an issue for COM standards.
TOP-001-1	Version 0 Team	Some emergencies will require follow up notification as opposed to immediate	Requirements have been re-written to eliminate confusion.
TOP-001-1	Version 0 Team	Define emergency	The RTOSDT feels that the TOP-001 standard should be restricted to Transmission System operations and that definition of operating states more correctly belong in EOP-001 as pointed out in Order 693, paragraph 560. To make certain that the issue is handled there; the RTOSDT has entered an official item in the NERC database of project issues in this

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

Standard	Source	Language	Resolution
			regard. This will require the SDT working on revisions to EOP-001 to formally address this concern. EOP-001 is listed in the Reliability Standards Development Plan under Project 2009-03 which has not yet started.
TOP-001-1	Version 0 Team	Need to expand included entities	Applicability has been reviewed by the SDT and changed as required.
TOP-002			
TOP-002-2	FERC Order 693	1600 - Address critical energy infrastructure confidentiality as part of the routine standard development process.	Restrictions due to confidentiality have been eliminated by re-writing the data specification requirements in proposed TOP-003-2.
TOP-00-2	FERC Order 693	1601 – Require next day analysis for all IROLs to identify and communicate control actions to system operators	See proposed TOP-002-3, Requirements R1, R2, and R3.
TOP-002-2	FERC Order 693	1603 - Requires next-day analysis of minimum voltages at nuclear power plants auxiliary power buses.	Next day analysis is required in proposed TOP-002-3, R1. A specified minimum voltage limit is by definition an SOL which must be studied in proposed TOP-002-3, Requirement R1. Additionally, approved NUC-001-2, Requirements R3 & R4.1 require the transmission entity to incorporate NPIRs in their planning and operating analyses. Approved FAC-011-2 and approved FAC-014-2, Requirement R2 require the Transmission Operator to incorporate SOLs into their analyses. All data required for Operational Planning Analyses is stipulated in proposed TOP-003-2. Approved NUC-001-2, Requirements R3 & R8 covers the information flowing back to the nuclear plant operator.
TOP-002-2	FERC Order 693	1604/1608 - Requires simulation contingencies to match what will actually happen in the field.	To the extent possible, this is covered in proposed TOP-002-3, Requirement R1 by the phrase “and shall represent projected System conditions”.
TOP-002-2	FERC Order 693	1606 - Commenters did not take issue with the proposed interpretation of the term “deliverability” as “the ability to deliver the output from generation resources to firm load without any	Deliverability and limits are implicitly included in Operational Planning Analysis in TOP-002-3, Requirement R1.

Standard	Source	Language	Resolution
		reliability criteria violations for plausible generation dispatches."[1] The Commission adopts this proposed interpretation. In order to ensure the necessary clarity, the term as used in Requirement R7 of TOP-002-2 should be understood in this manner.	
TOP-002-1	Fill in the Blank Team	Remove "in accordance with NERC, Regional Reliability Organization, sub-regional, and local reliability requirements" from R6 and "in accordance with filed tariffs and/or regional Total Transfer Capability and Available Transfer Capability calculation processes" from R12 .	Requirement R6 has been deleted. For the Balancing Authority – deleted as not applicable as the Balancing Authority needs only respond to CPS and DCS. For the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. Requirement R12 has been deleted as duplicative of MOD-030-2 (not yet approved).
TOP-002-2: R19	NERC Audit Observation Team	How do you address the term - verify "Accurate"	Requirement R19 was eliminated as unmeasurable.
TOP-002-2	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R5 of PRC-001-1 in TOP-002 R1, R3, R4, or R5 or TOP-003 R1, R3, R4	See proposed TOP-003-2, Requirement R1.
TOP-002-1	Version 0 Team	Define N-1	Requirement R6 has been deleted. For the Balancing Authority – deleted as not applicable as the Balancing Authority needs only respond to CPS and DCS. For the Transmission Operator - replaced by proposed TOP-002-3, Requirement R1. This term is no longer in use for this standard.
TOP-002-1	Version 0 Team	Define 'without intentional delay'	This term was considered unmeasurable and has been deleted from this standard.

[1] Id. at P 974.

Standard	Source	Language	Resolution
TOP-002-1	Version 0 Team	Reliability should 'trump' confidentiality	The SDT has removed all references to confidentiality by re-writing the data specification requirements.
TOP-002-1	Version 0 Team	Coordination of planning required	The SDT has re-written and tightened up the requirements for distributing data and information.
TOP-002-1	Version 0 Team	Limit of 2 tests per year	This requirement has been deleted by the SDT as verification testing is not needed in this standard.
TOP-002-1	VRF Team	R9 – related to INT-003	Requirement R9 has been deleted as it is duplicative of approved INT-003-2
TOP-002-1	VRF Team	R14 & 14.1 – ambiguous	Deleted – duplicative of proposed TOP-003-2.
TOP-002-1	VRF Team	R2 – administrative in nature, not a real requirement	The SDT agreed and deleted this requirement.
TOP-003			
TOP-003-0	FERC Order 693	1620 & 1621 - Incorporate an appropriate lead time for planned outages using suggestions from the various commenters. We direct the ERO to modify the Reliability Standard to incorporate an appropriate lead time for planned outages.	The SDT posed a question on this issue as a fact finding exercise in the second posting of this project in order to assist them in making a decision on how to respond to the FERC directive as requested in Order 693 – "The ERO should utilize the information filed by commenters in the Reliability Standards development process." The majority of respondents indicated that they do not feel that there is a reliability based need for such a North American requirement. Several respondents pointed out that such a requirement (if needed at all for reliability) would be better suited to a regional standard and several others stated that such requirements already exist in their particular regions. There are several regions that have existing rules for lead times but they are all different and are based on the requirements of their regional markets. Any attempt to impose a North American standard runs the risk of interfering with those FERC approved markets. While NERC Reliability Standards are intended to promote reliability, they must at the same time accommodate competitive electricity markets. After reviewing the industry comments, the SDT concluded that proposed TOP-001-2, Requirements R5 & R6 adequately cover this issue. The SDT bases this position on the requirement which includes the Operations

Standard	Source	Language	Resolution
			Planning Time Horizon that covers the period from one day to one year. The requirement mandates that actions are coordinated. The SDT interprets this to include planned outages when they are known. Therefore, the SDT has not included a standard lead time in the revised requirements.
TOP-003-0	FERC Order 693	1622 - Consider TVA's suggestion for including breaker outages within the meaning of facilities that are subject to advance notice for planned outages.	New data specifications in proposed TOP-003-2 handle this concern. Note – For this and other issues noted as handled by the new data specification standard: FERC staff has indicated that they do not agree with this approach as an equal and effective substitute for the approved requirements.
TOP-003-0	FERC Order 693	1624 - Require any facility, that in the opinion of the reliability coordinator, balancing authority, or transmission operator, will have a direct impact on the reliability of the bulk power system be subject to the requirement R1 for planned outage coordination.	New data specifications in proposed TOP-003-2, Requirement R1 (and bullets) handle this concern.
TOP-003-0	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R5 of PRC-001-1 in TOP-002 R1, R3, R4, or R5 or TOP-003 R1, R3, R4	See proposed TOP-003-2, Requirement R1
TOP-003-0	Version 0 Team	Outage information needed sooner than 1 day prior	New data specifications in proposed TOP-003-2 handle this concern.
TOP-003-0	Version 0 Team	RA can't request outage cancellation	Deleted – now covered in Project 2006-06.
TOP-003-0	Version 0 Team	Submit outage data ASAP but no later than noon day ahead	New data specifications in proposed TOP-003-2 handle this concern.
TOP-003-0	VRF Team	R4 – poorly written	Deleted – now covered in Project 2006-06.
TOP-003-1	FMPA – Frank Gaffney	With respect to requirement R1.2, why is the TOP responsible for providing generator outage	Requirement deleted as duplicative of proposed TOP-003-2, R1.

NERC
NORTH AMERICAN ELECTRIC RELIABILITY CORPORATION

Standard	Source	Language	Resolution
		information? Isn't that the BA's or GOP's responsibility and isn't this redundant with IRO-010-1?	
TOP-004			
TOP-004-1	FERC Order 693	1636 - Modify requirement R4 to state that the system should be restored to respect proven limits as soon as possible taking no more than 30 minutes.	Replaced by proposed TOP-001-2, R8 through R11 with the note that the SDT has moved toward an operating philosophy based on identifying, avoiding, mitigating, and responding to IROLs and the IROL T_v. T_v is more stringent than the existing 30 minute requirement. Unknown states, in this context, cannot exist because valid operating limits have been determined for all Facilities in a TOP's footprint. The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to emergencies.
TOP-004-1	FERC Order 693	1637 - Reliability coordinators should report any IROL violations to NERC on a monthly basis for one year beginning August 2, 2007.	Not within the scope of the SDT.
TOP-004-1	FERC Order 693	1638 - Defines high risk conditions under which the system must be operated to respect multiple outages in requirement R3. We direct the ERO to develop a modification to the Reliability Standard that explicitly incorporates this interpretation with the details identified in the Reliability Standards development process (. . .the Commission proposed to interpret "multiple outages" in the context of Requirement R3 to include multiple element outages resulting from high risk conditions such as hurricanes, wild fires, ice storms or periods of high solar magnetic disturbances during which the probability of multiple outages approaches that of a single element outage. This is not an exhaustive list but is meant to contain illustrative examples, and the Reliability Standards development process	The SDT feels that proposed EOP-001-2 dealing with emergency operations planning covers the general intent of being prepared to react to the cited situations. The method chosen to respond to a given catastrophic challenge to a localized portion of the bulk power system cannot be predetermined by science; rather, it is an art. Reliability entities develop their response mechanisms based on experience in their local areas to achieve the maximum societal benefit during these periods. In addition, FAC-011-2 and FAC-014-2 deal with specific requirements for dealing with multiple contingencies.

Standard	Source	Language	Resolution
		should develop a procedure to identify applicable high risk conditions. Under . . . high-risk conditions, the Commission understands that systems are normally operated in a more secure manner so that the Bulk-Power System can withstand multiple outages. These multiple outages exceed the normal N-1 criterion because the probability of multiple outages during high risk conditions approaches that of a single outage during normal conditions.)	
TOP-004-1	FERC Order 693	1639 - Consider Santa Clara's comments regarding changes to requirement R2 in the standards development process. (Santa Clara states that Requirement R2 of the Reliability Standard should be revised to include frequency monitoring in addition to the monitoring of voltage, real and reactive power flows.)	This is covered as part of the new data specification requirements in proposed TOP-003-2 for the Transmission Operator & Balancing Authority. The Reliability Coordinator is covered by proposed IRO-010-1, Requirement R3.
TOP-004-1	FERC Order 693	1641 - NERC should report the results of the survey to the Commission within 18 months of the effective date of this rule.	Not within the scope of the SDT.
TOP-004-1	Fill in the Blank Team	No action required	No action required.
TOP-004-1	Version 0 Team	Operations should conform to planning standards	Operations and planning are different timeframes with different problems and solutions
TOP-004-1	Version 0 Team	Vagueness in application of IROL limits	Requirement moved to proposed TOP-001-2, Requirement R5 and clarified.
TOP-004-1	Version 0 Team	Define SOL & IROL	These are defined terms in the NERC Glossary.
TOP-004-1	Version 0 Team	Clarify roles	Applicability has been reviewed and updated as necessary.
TOP-004-1	Version 0 Team	Define (or remove) practical	The term has been removed.
TOP-004-1	Version 0 Team	Specify disconnection as acceptable in R5	The requirement has been deleted. Relationships between the Reliability Coordinator and Transmission Operator as described in the revised standards cover these actions.

TOP-005-1	Version 0 Team	GO needs to supply data to BA & TO	New data specifications in proposed TOP-003-2 handle this concern
TOP-005-1	Received for the November 4, 2009	NERC staff believes that the interpretation does not support the stated purpose of IRO-005-1:	While this issue was entered against the Transmission Operator as the interpretation request was primarily for TOP-005-1, the emphasis on such

Standard	Source	Language	Resolution
	Technical Conference on Interpretations of Standards from Manitoba Hydro	”The Reliability Coordinator must be continuously aware of conditions within its Reliability Coordinator Area and include this information in its reliability assessments. The Reliability Coordinator must monitor BES parameters that may have significant impacts upon the Reliability Coordinator Area and neighboring Reliability Coordinator Areas.” Given that Requirement R12 pre-supposes that the SPS is armed to address inter-Balancing Authority or inter-Transmission Operator impacts (e.g., could potentially affect transmission flows resulting in a SOL or IROL violation), the argument not discussed in the interpretation is that the SPS itself with one communication channel in service can be viewed for advance planning or reliability assessment purposes as a single contingency (loss of the communication channel). The question asked by the requestor indicates that the operation of the SPS on a single channel is known ahead of the timeframe for which the SPS may be armed and that the condition was not first identified when the SPS was called to operate. In this regard, the Reliability Coordinator must be aware of the less dependable state of the SPS in order to properly assess the impact and plan for the next single contingency that it conceivably could experience. In this case, the Reliability Coordinator may wish to consider the loss of an armed SPS when performing its reliability assessments. While the Reliability Coordinator may not elect to proactively position the system to withstand the loss of the SPS that is operating on a single communication channel, the Reliability Coordinator may elect to develop a contingency plan in the event the SPS does fail to operate as designed or if the remaining	informative actions has shifted in current revision projects. The proposed IRO-010-1, Requirement R1 gives the Reliability Coordinator the right to ask for any reliability related data that they need to perform their Reliability Coordinator task. And it also mandates the Transmission Operator to provide said data in Requirement R3. (Note – This standard has been approved by the BOT but has not yet been approved by FERC.)

Standard	Source	Language	Resolution
		communication channel is lost. The importance of the SPS relative to current or anticipated system conditions would be considerations for the Reliability Coordinator. This consideration only becomes possible if the Transmission Operator notifies the Reliability Coordinator that the SPS is operating on a single communication channel. Therefore, Transmission Operator notification to the Reliability Coordinator of this condition raises the Reliability Coordinator's situational awareness that may influence current or future operating conditions or decisions in a preventive rather than reactive manner. NERC staff does agree that the SPS is still mission capable with only one communication channel in service, but degraded in terms of its dependability due to the unavailability of redundant communications channels. The fact that a second communications channel was part of the original design of the SPS suggests that both channels were important to the dependability of the system, and that the unavailability of either channel causes some degradation in the overall dependability of the SPS. Additionally, the team equated "any degradation" with "potential failure to operate as expected" in IRO-005. The use of the term "or" connecting these two phrases in the standard indicates these were not intended to be equivalent. Therefore, NERC staff believes the conclusion reached by the team that the two terms are synonymous is incorrect. Further, the specific circumstances contemplated in the interpretation request are not likely to occur often and the additional burden to Transmission Operators to notify the Reliability Coordinator is de minimis when compared to the improved	

Standard	Source	Language	Resolution
		situational awareness that would result. On this basis, NERC staff believes the interpretation is not serving the best interests of reliability and should be remanded to the team for further consideration of the NERC staff opinion.	
TOP-006			
TOP-006-1	FERC Order 693	1660 & 1661 - Add requirement related to the provision of minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the bulk power system.	TOP-001-2, Requirements R11 through R13 cover the minimum capability issue. Requirement for phase angle information is covered by proposed TOP-003-2.
TOP-006-1	FERC Order 693	1663 - Clarify the meaning of "appropriate technical information" concerning protective relays. To provide more clarity, criteria that define what "appropriate technical information" is necessary should be specified so that operators can make better informed decisions.	This term is no longer used. Requirement R3 deleted as duplicative of proposed PER-005-1 (training) and TOP-003-2 (data).
TOP-006-1	FERC Order 693	1664 - Consider APPA's comments regarding missing measures in the standards development process.	Measures have been assigned to all requirements.
TOP-006-1	NERC Standards DT Coordinators	Requirements R2, R5, and R6 (for coordination in real-time) of PRC-001-1 System Protection Coordination are better addressed in the TOP family of standards. Consider putting R6 of PRC-001-1 in TOP-003 R5 or TOP-006. Note: These requirements are being retired in PRC-001-1.	See proposed TOP-003-2, Requirement R1
TOP-006-1	Version 0 Team	Need to match roles with FM	Applicability has been reviewed by the SDT and changed as required in accordance with the FM and the Compliance Registry.
TOP-006-1	Version 0 Team	Monitor frequency at multiple points	New data specifications in proposed TOP-003-2 handle this concern.

Violation Risk Factor and Violation Severity Level Assignments

This document provides the drafting team's justification for assignment of Violation Risk Factors (VRFs) and Violation Severity Levels (VSLs) for each requirement in TOP-001-2 — Coordination of Transmission Operations, TOP-002-3 — Operations Planning, and TOP-003-2 — Operational Reliability Data.

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

Justification for Assignment of VRF in TOP-001-2, TOP-002-2, and TOP-003-2:

The SDT applied the following NERC criteria when proposing VRFs for the requirements in TOP-001-2:

High Risk Requirement
A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

Medium Risk Requirement
A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

Lower Risk Requirement
A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions

anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:[1]

Guideline (1) — Consistency with the Conclusions of the Final Blackout Report
The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:[2]

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

Guideline (2) — Consistency within a Reliability Standard
The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

Guideline (3) — Consistency among Reliability Standards
The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

Guideline (4) — Consistency with NERC's Definition of the Violation Risk Factor Level
Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC's definition of that risk level.

Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation

[1] North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) ("VRF Rehearing Order").
[2] Id. at footnote 15.

> Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC's VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC's Reliability Standards and implies that these requirements should be assigned a "High" VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

There are thirteen requirements in TOP-001-2. None of the thirteen requirements were assigned a "Lower" VRF. Requirements R1, R2, R3, R4, R8, and R11 were assigned a "High" VRF while all of the other requirements were given a "Medium" VRF.

VRF for TOP-001-2, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements so only one VRF was assigned. Therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R2) in proposed IRO-001-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to complying with a Reliability Directive: IRO-001-2 for a Reliability Directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to comply with a Reliability Directive issued by a Transmission Operator could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R1 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in proposed IRO-001-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to the inability of complying with a Reliability Directive: IRO-001-2 for a Reliability Directive issued by a Reliability Coordinator and TOP-001-2 for a Reliability Directive issued by a Transmission Operator.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Inability to comply with a Reliability Directive issued by a Transmission Operator could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R2 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R4) in proposed IRO-001-2 that is assigned a High VRF. The requirements are viewed as similar since they both refer to informing other reliability entities of known or expected conditions: IRO-001-2 for a Reliability Coordinator and TOP-001-2 for a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify other reliability entities of known or expected Emergency conditions could lead to bulk power system instability, separation or cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R3 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R4 is a new requirement, so there are no comparable requirements in other standards with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to render emergency assistance could lead to bulk power system instability, separation or cascading failures. Thus, this requirement meets the criteria for a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R4 has only one objective, therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in proposed IRO-014-2 that is assigned a Medium VRF. The

requirements are viewed as similar since they both refer to the coordination of activities with other reliability entities: TOP-001-2 for Transmission Operators and IRO-014-2 for Reliability Coordinators. The assignment of the Medium VRF was made based on the premise that failure to coordinate activities, by itself, would not directly cause or contribute to bulk power system instability, separation, or a cascading sequence of failures. For a requirement to be assigned a "High" VRF there should be the expectation that failure to meet the required performance "will" result in instability, separation, or cascading failures. This is not the case when an applicable entity fails to coordinate activities. While the SDT agrees that, under some circumstances, it is possible that a failure to coordinate activities may put the applicable entity in a position where it is not as prepared as it should be to address the potential situation, the failure to coordinate would not, by itself, result in instability, separation, or cascading failures. If the applicable entity failed to coordinate activities, it would still be expected to handle the situation if it occurred.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate activities could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate activities will not, by itself, lead to instability, separation, or cascading failures.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R5 contains only one objective. Therefore only one VRF was assigned.

VRF for TOP-001-2, Requirement R6:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R7 has been assigned a Medium VRF and is the replacement (and a copy of) for approved TOP-003-1, Requirement R3.which was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to coordinate outages could directly affect the electrical state or the capability of the bulk power system. However, violation of this requirement is unlikely to lead to bulk power system instability, separation, or cascading failures. The applicable entities are always responsible for maintaining the reliability of the bulk power system regardless of the situation. Thus, this requirement meets NERC's criteria for a Medium VRF. Failure to coordinate outages will not, by itself, lead to instability, separation, or cascading failures
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2 Requirement R7 contains only one objective. Therefore only one VRF was assigned to the requirement.

VRF for TOP-001-2, Requirement R7:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.

- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R8 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R8 mandates that entities operate within each identified IROL and its associated IROL T_v. By definition, if an entity fails to do so, bulk power system instability, separation, or cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R8 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R8:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R9 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R9 is a notification requirement. If the Transmission Operator failed to notify the Reliability Coordinator of a specific System Operating Limit (SOL) that supports local area reliability, the Transmission Operator is still obligated to operate to alleviate the SOL through the proposed TOP-001-2, Requirement R8. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R9 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R9:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R10 is a new requirement that was assigned a Medium VRF. When evaluating the VRF to be assigned to this requirement, the SDT took into account that this requirement is an informational item, not the actual action to alleviate the problem. The action is covered in proposed TOP-001-2, Requirement R8 which has a High VRF. If the Transmission Operator failed to notify the Reliability Coordinator of actions to alleviate a specific SOL that supports local area reliability, the Transmission Operator is still obligated to operate to alleviate the SOL through the proposed TOP-001-2, Requirement R8. Therefore, the simple act of failing to notify the Reliability Coordinator, while it may impair the Reliability Coordinator's understanding, does not, in itself, lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R10 mandates that entities notify their Reliability Coordinator of actions taken to alleviate a problem. The action has already been taken as per proposed TOP-001-2, Requirement R8 and this requirement is a simple notification requirement for informational

purposes only. Therefore, bulk power system instability, separation, or cascading failures are not likely to occur due to a failure to notify the Reliability Coordinator. Therefore, this requirement was assigned a Medium VRF.

- FERC's Guideline 5 - Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R10 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R10:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R11 is a new requirement, so there are no comparable requirements with which to compare VRFs. However, it is similar to approved TOP-008-1, Requirement R1 which has a High VRF. Therefore, there is consistency among Reliability Standards.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R11 mandates that entities operate within each identified IROL and its associated IROL T_v or SOL identified in Requirement R8. By definition, if an entity fails to do so, bulk power system instability, separation, or cascading failures are likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R11 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R11:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R11 is a new requirement, so there are no comparable requirements with which to compare VRFs. However, it is similar to approved IRO-002-1, Requirement R8 which has a High VRF. Therefore, there is consistency among Reliability Standards.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R11 mandates that a Transmission Operator shall monitor the conditions and Facilities within its Transmission Operator Area. By definition, if an entity fails to do so, bulk power system instability, separation, or cascading failures are more likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R11 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R12:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R12 is a new requirement, so there are no comparable requirements with which to compare

VRFs. However, it is similar to approved IRO-001-1, Requirement R8 which has a High VRF. Therefore, there is consistency among Reliability Standards.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R11 mandates that a Transmission Operator shall monitor the conditions and Facilities external its Transmission Operator Area subject to certain constraints. By definition, if an entity fails to do so, bulk power system instability, separation, or cascading failures are more likely to occur. Therefore, this requirement was assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R12 addresses a single objective and has a single VRF.

VRF for TOP-001-2, Requirement R13:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-001-2, Requirement R13 is a new requirement, so there are no comparable requirements with which to compare VRFs. However, it is similar to approved IRO-002-1, Requirement R9 which has a Medium VRF. Therefore, there is consistency among Reliability Standards.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. TOP-001-2, Requirement R13 mandates that entities have control over planned outages of their monitoring and analysis capabilities. By definition, if an entity fails to do so, bulk power system instability, separation, or cascading failures are unlikely to occur. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R13 addresses a single objective and has a single VRF.

There are three requirements in TOP-002-3. None of the three requirements were assigned a "Lower" VRF. Requirement R2 was assigned a "High" VRF while Requirements R1 & R3 were given a "Medium" VRF.

VRF for TOP-002-3, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements so only one VRF was assigned. Therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in proposed IRO-008-1 that is also assigned a Medium VRF. The requirements are viewed as similar since they both refer to preparing an Operational Planning Analysis: IRO-008-1 for a Reliability Coordinator and TOP-002-3 for a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. This is an advanced planning requirement. So, while not having an Operational Planning Analysis could hinder the Transmission Operator, in and of itself, it does not directly affect the electrical state or the capability of the bulk power system and would not directly lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a Medium VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-002-3, Requirement R1 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-002-3, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-002-3, Requirement R2 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to preclude operating in violation of limits could directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-002-3, Requirement R2 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-002-3, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. TOP-002-3, Requirement R3 is a new requirement, so there are no comparable requirements with which to compare VRFs.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to notify other reliability entities of their roles in mitigating potential problems does not, in and of itself, lead to bulk power system instability, separation or cascading failures. This is an advance planning requirement, not Real-time. The Transmission Operator still retains the operating requirements to preclude operating in exceedances of established limits. Thus, this requirement meets the criteria for a Medium VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-002-3 Requirement R3 contains only one objective, therefore only one VRF was assigned.

There are five requirements in TOP-003-2. Three of the five requirements were assigned a "Lower" VRF - Requirements R1, R2, and R3. Requirements R4 and R5 were assigned a "Medium" VRF.

VRF for TOP-003-2, Requirement R1:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements so only one VRF was assigned. Therefore, there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R1) in proposed IRO-010-1 that is also assigned a Low VRF. The

requirements are viewed as similar since they both refer to data specifications: IRO-010-1 for a Reliability Coordinator and TOP-003-2 for a Transmission Operator.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to compile a data specification does not relieve a Transmission Operator from its responsibility to reliably operate the bulk power system so this requirement, in and of itself, does not directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a Low VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-003-2, Requirement R1 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-003-2, Requirement R2:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R2) in proposed IRO-010-1 that is assigned a Low VRF. The requirements are viewed as similar since they both refer to the distribution of the data specification: IRO-010-1 for a Reliability Coordinator and TOP-003-2 for a Transmission Operator.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to distribute the data specification does not relieve a Transmission Operator from its responsibility to reliably operate the bulk power system so this requirement, in and of itself, does not directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a Low VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-003-2, Requirement R2 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-003-2, Requirement R3:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R2) in proposed IRO-010-1 that is assigned a Low VRF. The requirements are viewed as similar since they both refer to the distribution of the data specification: IRO-010-1 for a Reliability Coordinator and TOP-003-2 for a Balancing Authority.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to distribute the data specification does not relieve a Balancing Authority from its responsibility to reliably operate the bulk power system so this requirement, in and of itself, does not directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement is assigned a Low VRF.

- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-003-2 Requirement R3 contains only one objective, therefore only one VRF was assigned.

VRF for TOP-003-2, Requirement R4:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in proposed IRO-010-1 that is assigned a Medium VRF. The requirements are viewed as similar since they both refer to the provision of data: IRO-010-1 for a Reliability Coordinator and TOP-003-2 for a Transmission Operator and Balancing Authority.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide the data requested does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. However, it greatly increases the likelihood of such problems and therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-003-2, Requirement R4 has only one objective, therefore only one VRF was assigned.

VRF for TOP-003-2, Requirement R5:

- FERC's Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC's Guideline 3 — Consistency among Reliability Standards. There is a similar requirement (Requirement R3) in proposed IRO-010-1 that is assigned a Medium VRF. The requirements are viewed as similar since they both refer to the provision of data: IRO-010-1 for a Reliability Coordinator and TOP-003-2 for a Transmission Operator and Balancing Authority.
- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. Failure to provide the data requested does not, in and of itself, directly affect the electrical state or the capability of the bulk power system and will not lead to bulk power system instability, separation, or cascading failures. However, it greatly increases the likelihood of such problems and therefore, this requirement is assigned a Medium VRF.
- FERC's Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. TOP-003-2, Requirement R5 contains only one objective. Therefore only one VRF was assigned.

Justification for Assignment of VSLs for TOP-001-2, TOP-002-2, TOP-003-2:

In developing the VSLs for the TOP standard, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:

Lower	Moderate	High	Severe
Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full intent of the requirement.	Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.	Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.	Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.

FERC's VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in TOP-xxx-x meet the FERC Guidelines for assessing VSLs:

Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance

> Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties

> A violation of a "binary" type requirement must be a "Severe" VSL.
>
> Do not use ambiguous terms such as "minor" and "significant" to describe noncompliant performance.

Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement

> VSLs should not expand on what is required in the requirement.

Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations

> . . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VSLs for TOP-001-2 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
R1.	Meets NERC's VSL guidelines – Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the proposed IRO-001-2, Requirement R2. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The most comparable VSL for a similar requirement is for the proposed IRO-001-2, Requirement R3. That VSL is also based on a single violation and is binary. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R3.	Meets NERC's VSL guidelines – There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental	The most comparable VSL for a similar requirement is for the proposed IRO-001-2, Requirement R4. Those VSLs are also based on failure to notify reliability entities in a graduated scale from Lower to	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
	violations.	Severe. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-001-2 Requirement R4:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R5.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The most comparable VSLs for a similar requirement are for the proposed IRO-014-2, Requirement R1. Those VSLs are also based on a graduated scale from Lower to Severe. The VSLs assignments are similar between the two standards. Thus, the VSLs in the proposed standard do not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R6.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to approved TOP-003-1, Requirement R3. The VSL for that requirement is binary. When assigning the VSL for the new requirement, the SDT felt that it was possible to provide a gradual increasing scale	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
		for the VSL and assigned the VSLs appropriately.			

VSLs for TOP-001-2 Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R7.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R8:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R8.	Meets NERC's VSL guidelines.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with	The VSL is based on a single violation and not cumulative violations.

			violations.	the requirement.	

VSLs for TOP-001-2 Requirement R9:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R9.	Meets NERC's VSL guidelines.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R10:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R10.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The proposed requirement is new and there are no comparable VSLs but it is similar to approved TOP-008-1, Requirement R1. That VSL is binary as is the one proposed for this new requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

		already proposed.			

VSLs for TOP-001-2 Requirement R11:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R11.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs but it is similar to approved IRO-002-1, Requirement R8. That is a multiple part requirement but the VSL for the part dealing with monitoring is binary as is the one proposed for this new requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-001-2 Requirement R12:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R12.	Meets NERC's VSL guidelines -	The proposed requirement is new and	The proposed VSL does not use any ambiguous terminology,	The proposed VSL uses the same terminology as used	The VSL is based on a single violation and

	Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	there are no comparable VSLs but it is similar to approved IRO-002-1, Requirement R8. That is a multiple part requirement but the VSL for the part dealing with monitoring is binary as is the one proposed for this new requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	in the associated requirement, and is, therefore, consistent with the requirement.	not cumulative violations.

VSLs for TOP-001-2 Requirement R13:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R13.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is new and there are no comparable VSLs but it is similar to approved IRO-002-1, Requirement R9. That VSL is incremental. However, the SDT felt that this requirement, while similar but not exactly the same, warranted a binary VSL. Thus, the VSL in the	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

		proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-002-3 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R1.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	There is a similar requirement in proposed IRO-008-1, Requirement R1. That VSL is not binary as is the one proposed for this requirement. It proposes a graduated situation based on a number of days missing from the analysis. In looking at the VSL for this requirement, the SDT decided that it was an all or nothing situation – one either did the proper analysis or it didn't. Therefore, it decided that the VSL for this requirement should be binary. Thus, the VSL in the proposed standard does not lower the level of compliance currently	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

		required by setting VSLs that are less punitive than those already proposed.			

VSLs for TOP-002-3 Requirement R2:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R2.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance	The proposed requirement is new and there are no comparable VSLs. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-002-3 Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R3.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental	The proposed requirement is new and there are no comparable VSLs Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

	violations.	those already proposed.			

VSLs for TOP-003-2 Requirement R1:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R1.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to proposed IRO-010-1, Requirement R1. The proposed VSLs are similar in that they build on a graduated scale based on missing parts of the requirement. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

	violation and the VSLs follow the guidelines for incremental violations.	on 5% increments towards the Severe level. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	violations.	the requirement.	

VSLs for TOP-003-2 Requirement R3:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R3.	Meets NERC's VSL guidelines - There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is similar to proposed IRO-010-1, Requirement R2. The proposed VSLs both build on 5% increments towards the Severe level. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-003-2 Requirement R4:

R#	Compliance with NERC's VSL	Guideline 1	Guideline 2	Guideline 3	Guideline 4

	Guidelines				
R4.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to proposed IRO-010-1, Requirement R3. The proposed VSLs both build on 5% increments towards the Severe level. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for TOP-003-2 Requirement R5:

R#	Compliance with NERC's VSL Guidelines	Guideline 1	Guideline 2	Guideline 3	Guideline 4
R5.	Meets NERC's VSL guidelines - Severe: Missing most or all of the significant elements (or a significant percentage) of the required performance.	The proposed requirement is similar to proposed IRO-010-1, Requirement R3. The proposed VSLs both build on 5% increments towards the Severe level. Thus, the VSL in the proposed standard does not lower the level of compliance currently required by setting VSLs that are less punitive than those already proposed.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

Unofficial Comment Form for 4th Draft of Real-Time Operations Standards (Project 2007-03)

Please **DO NOT** use this form. Please use the electronic form located at the link below to submit comments on the 4th draft of the standards for Real-Time Operations (Project 2007-03). Comments must be submitted by **September 3, 2010**. If you have questions please contact Ed Dobrowolski at ed.dobrowolski@nerc.net or by telephone at 609-947-3673.

http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Background Information:
In the 4th posting for Project 2007-03, the Real-Time Operations Standard Drafting Team (RTOSDT) has attempted to clarify the proposed changes to the TOP family of standards based on industry comments received for the 3rd posting.

1. TOP-001-2: Do you agree with the changes made to this standard? This includes all aspects of this standard – requirements, measures, data retention, VRF, Time Horizon, and VSL. If not, please supply specific reasons why you do not agree with the changes made.

   ☐ Yes

   ☐ No

   Comments:

2. TOP-002-3: Do you agree with the changes made to this standard? This includes all aspects of this standard – requirements, measures, data retention, VRF, Time Horizon, and VSL. If not, please supply specific reasons why you do not agree with the changes made.

   ☐ Yes

   ☐ No

   Comments:

3. TOP-003-1: Do you agree with the changes made to this standard? This includes all aspects of this standard – requirements, measures, data retention, VRF, Time Horizon, and VSL. If not, please supply specific reasons why you do not agree with the changes made.

   ☐ Yes

   ☐ No

   Comments:

4. The implementation plan compares the already approved requirements in the "TOP" standards with those that are proposed in TOP-001-2, TOP-002-2, and TOP-003-2. When comparing the already approved standards with those that are proposed, how would you assess the impact to reliability of the proposed standards are approved and the already approved standards are retired in accordance with the implementation plan?

   ☐ Reliability will be improved

   ☐ There will be no change to reliability

   ☐ There will be an adverse impact to reliability

   Comments:

Standards Announcement

Comment Period Open
August 4–September 3, 2010

Now available at: http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Project 2007-03: Real-time Operations

The Real-time Operations Standard Drafting Team has posted its consideration of comments from the third posting of its proposed modifications to the following standards and associated implementation plan and is seeking comments on the conforming changes made to those documents **until 8 p.m. Eastern on September 3, 2010:**

- TOP-001-2 — Coordination of Transmission Operations
- TOP-002-3 — Operations Planning
- TOP-003-2 — Operational Reliability Data
- Implementation Plan

Instructions

Please use this electronic form to submit comments. If you experience any difficulties in using the electronic form, please contact Courtney Camburn at Courtney.Camburn@nerc.net. An off-line, unofficial copy of the comment form is posted on the project page: http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

Next Steps

The drafting team will draft and post responses to comments received during this period. The drafting team will also determine whether to post the standard for an additional comment period or seek approval from the Standards Committee to proceed to balloting.

Project Background

The drafting team has attempted to eliminate redundancy in the Transmission Operations (TOP) family of standards. As part of this process, the drafting team has made an effort to reorganize the standards and requirements in a more logical manner. The drafting team has added requirements to TOP-001 to address some directives from Order 683 that were not previously addressed in this project.

Applicability of Standards in Project

Transmission Operator
Transmission Owner
Balancing Authority
Generator Owner
Generator Operator
Interchange Authority

We applaud the SDT of its positive response to our previous comments regarding the lack of monitoring of and requirement to operate within SOLs. Although the revisions do not go all the way to ensuring operating within all SOLs, and mitigating exceedances as they occur, the revised standard goes a long way in meeting that general intent. We agree with all the changes to the Time Horizons, Measures, data retention and compliance elements (VRFs and VSLs).
Yes
Again, we applaud the SDT of its positive response to our previous comments regarding the lack of consideration to SOLs in operational planning. Although the revisions do not go all the way to ensuring TOPs plan their operations to respect all SOLs, the revised standard goes a long way in meeting that general intent. We agree with all the changes to the Time Horizons, Measures, data retention and compliance elements (VRFs and VSLs).
No
M5: The last sentence added is in fact a requirement. Measures should not include requirement for “completeness” of the data provision, which is already implicit in R5. The extent to which the data is not fully provided should be assessed and reflected by the VSLs. Suggest to delete this sentence and as desired, expand the VSLs for R5 to make them graded according to the percentage of data not provided.
There will be no change to reliability
Our assessment that there should be no change to reliability is made on the assumption that the SOLs identified as a result of the Operational Planning Analysis by the Transmission Operator as supporting its local area reliability can ensure that all the existing SOLs that are being monitored and observed (for non-exceedance) by TOPs are identified through this process. Failure to identify any such SOLs will expose the system to unreliable operation.
Individual

No
R2 is ambiguous, must a BA inform its TO of an inability to perform a directive after the directive has been issued or at anytime its systems are down and it has temporarily lost its ability to perform some function. R12-14 appear to provide the TO with omnipotent information rights which may include the ability to create monitoring requirements of other entities and control over maintenance schedules of other entities telemetry and associated facilities. Furthermore reciprocal data rights are not provided.
No
The proposed standard which indicates the TO shall “notify” reliability entities as to “their role” appears to be bolstering the authority of the TO. During real time events the TO should have authority to issue directives, however on a planned basis TOs should coordinate, not dictate the role of the entities. On a planned basis, input from the involved entities will result in a more reliable system.
No

Poorly worded. According to the proposed standard the TO is supposed to “exchange” data, at its discretion, regarding equipment ratings at voltage levels below the BES. So when our TO demands HVD equipment ratings, what are we to exchange it with? Again, this standard appears to be bolstering the authority of the TO. If the TO can demand information from the DP, then the DP should have access to similar information regarding the TO’s system.
There will be an adverse impact to reliability

Yes
In R9, to clarify the requirement to operate below a System Operating Limit (SOL), “outside” should be replaced with the wording “at or above”.
Yes
Yes
There will be no change to reliability
No change to reliability assumes that the SOLs identified as a result of the Operational Planning Analysis by the Transmission Operator as supporting its local area reliability can ensure that all the existing SOLs that are being monitored and observed (for non-exceedance) by TOPs are identified through this process. Failure to identify any such SOLs will make the system vulnerable to unreliable operation.

“Operational Planning Analysis” is not a defined term in the NERC Glossary and a proposed definition is not included in the Draft Standard. TOP-001 and TOP-002 have capitalized the term indicating a definition. TOP-002 information box says “by definition Operational Planning Analysis includes Contingency Analysis.” TOP-001 R12 and R13 were added in this posting to address Order 693 paragraph 1660 and 1661 direction to include the minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the Bulk-Power System. The drafting team utilizes the phrase “shall monitor, or shall have access to information about, conditions and Facilities..” By offering an alternative to “monitor” the drafting team is implying there is a difference between “monitor” and “having access to information”. UI suggests retaining “monitor” and removing “access to information about” because the TOP needs the minimum capability of monitoring the Facilities in its area to perform its reliability functions.

R3. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis. Xcel Energy has concerns about the use of the term “affected”. This can be widely interpreted by the entity and compliance enforcement authority. We suggest that language limit the entity’s obligation to Adjacent entities and the Reliability Coordinator. The RC should be held responsible for making this assessment from a regional perspective and make notifications to other entities as it is required to or deems necessary. R13. Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities identified in its Operational Planning Analysis within any Transmission Operator Area. Xcel Energy has concerns as to whether this requirement indicates that a TOP must have monitoring capability for other TOP areas. This requirement should encompass only a TOP’s own area. R14. Each Transmission Operator shall provide approval rights for planned maintenance of its monitoring and analysis capabilities to its System Operators. Xcel Energy believes this requirement should be worded so that it covers only monitoring capabilities for its own area, and items that it is in control of. (e.g. not feeds from other entities that input into a TOPs own monitoring capability) M11 through M14 list incorrect associated requirements. This appears to be a mapping issue.
No
R2. Each Transmission Operator shall plan to preclude operating in excess of those Interconnection Reliability Operating Limits (IROLs) and each SOL which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability, identified as a result of the Operational Planning Analysis performed in Requirement R1. Xcel Energy believes this requirement is confusing as written. It appears to want to include all SOLs. If so, why not just state as such? It could be simply stated as “…IROLS and SOLS…” R3. Each Transmission Operator shall notify all reliability entities identified in the plan(s) cited in Requirement R2 as to their role in those plan(s). Xcel Energy believes this should be limited to just entities within the TOP’s own area.

R7: What does it mean to be “outside” an IROL? Vague. R8: Since any SOL is to “ensure operation within acceptable reliability criteria” this requirement requires that the TOP inform the RC of all SOLs. How can the Time Horizon be Real-Time Operations? Operational Planning Analysis is done at least day ahead? R9: What does it mean to be “outside” an SOL? Vague. R10: How do I correlate “within limits” to “inside/outside”?
No
Rationale for Requirement R1: Operational Planning Analysis does not include Contingency analysis “by definition”. “Contingency analysis” does not appear in the definition of Operational Planning Analysis. R2: Since any SOL is to “ensure operation within acceptable reliability criteria” this requirement requires that the TOP include all SOLs in their “plan”. R3: When is this notification to take place? Since this analysis starts taking place as much as 12 months in

advance, as the plan changes over time there could be multiple conflicting notifications.
No
TOP-003-2 R1: Nowhere in NERC Standards is a TOP or BA required to perform an Operational Planning Analysis. This requirement applies to data specifications. It does not require Operational Planning Analysis. R1.2: Who mutually agrees to the format? The TOP and BA? A TOP or BA may have scores of different entities with Facilities within their boundaries. Is this requiring data format agreements with scores of other entities? The TOP and BA should be allowed to specify the data format. R4: Please explain what is meant by "satisfy the obligations of the documented specifications for data". Please rephrase this to something more clearly understandable in the requirement. R5: Consider modifying this requirement so that the data is provided directly where possible. Data received indirectly through other entities is delayed, and there are increased chances of problems in receiving the data.

In R3 the language should be "...be affected by actual..." and not "...be affected of actual..." Measures M10-M14 are off by 1 in pointing back to their respective requirements (i.e. M10 is pointing back to R9, etc). It appears that there are a number of instances in the Implementation Plan where the 'Resolution' points to the incorrect requirement in the proposed standard. Many times it is off by 1 requirement.
No
In "Consideration of Comments on First Draft of Revised TOP Standards Real-Time Operations - Project 2007-03," p77, #6 response, March 26, 2009, it was stated that "reliability entities" is not a defined term. In addition, in "Consideration of Comments on Second Draft of Standards for Real-Time Operations (Project 2007-03)," pp 64-65, August 25, 2009, a response is given to Xcel Energy's comment that the phrase reliability entities needs definition that "reliability entities are the entities certified by NERC as such." SCE&G believes that it is unclear what is meant by "certified by NERC as such" and would appreciate that these entities be spelled out as it relates to these Standards. It appears that there are a number of instances in the Implementation Plan where the 'Resolution' points to the incorrect requirement in the proposed standard. Many times it is off by 1 requirement.
No

• What does the drafting team mean by "its inability" in R2 to perform a Reliability Directive? There clearly needs to be a distinct difference between the reasons in R1 and "inability" in R2. Duke wants to eliminate the possibility of double jeopardy for an entity to be assessed a possible violation for non-compliance to one action with it stated similarly in two requirements. • R3 typo – change the word "of" to "by". • R8 – the phrase "supporting its local area reliability" is unclear. Replace it with the phrase "having an Adverse Reliability Impact". This adds clarity and also recognizes that local area problems that don't rise to the level of Adverse Reliability Impact should not be treated as SOLs required to be reported to the RC under this standard. • R9 – insert the phrase "as having an Adverse Reliability Impact" after the phrase "Requirement R8", making R9 consistent with R8. • R13 – strike the phrase "shall monitor, or". The TOP doesn't need to directly monitor facilities in other TOP areas. • M1 – strike the word "either" and replace the phrase "or, (b) informed the Transmission Operator that" with the word "unless". This makes M1 consistent with the R1 revision above. • M3 typo – replace the word "of" with the word "by". • M5 typo – the word "operations" appears twice. Need to strike the first one. • M8 – replace the phrase "supporting its local area reliability" with the phrase "having an Adverse Reliability Impact", consistent with the R8 revision above. • M13 – strike the phrase "can monitor, or" consistent with the R13 revision above. • R1 VSL – replace the phrase "and the respective entity did not inform the Transmission Operator that such action would" with the phrase "and compliance with the Reliability Directive would not", consistent with the R1 revision above. • VSLs for R3, R5, R6 and R8 – The mixing of numbers with percentages and the phrase "whichever is less" in these VSLs is confusing. For example, if under R5 there are four affected entities, and the TOP does not coordinate operations with one of the four, then that is one

entity, or 25% of the total. What does “whichever is less” mean? Is that a Lower or Severe violation? Conversely, if there is only one affected entity and the TOP does not coordinate operations with that entity, then that is one entity or 100% of the total. Is that a Lower or Severe violation? • R8 VSLs – In each VSL, replace the phrase “supporting its local area reliability” with the phrase “having an Adverse Reliability Impact, consistent with the R8 revision above. • R13 VSL – Strike the phrase “monitor, or”, consistent with the R13 revision above.
No
• R2, M2 and R2 VSL – Replace the phrase “supporting its local area reliability” with the phrase “having an Adverse Reliability Impact”. This adds clarity regarding which SOLs must be addressed in the TOP’s plan. • R3 VSL - The mixing of numbers with percentages and the phrase “whichever is less” in these VSLs is confusing. For example, if there are four affected entities, and the TOP does not notify one of the four, then that is one entity, or 25% of the total. What does “whichever is less” mean? Is that a Lower or Severe violation? Conversely, if there is only one affected entity and the TOP does not notify that entity, then that is one entity or 100% of the total. Is that a Lower or Severe violation?
No
• R2 and R3 VSLs - The mixing of numbers with percentages and the phrase “whichever is less” in these VSLs is confusing. For example, if there are four entities, and the TOP or BA does not distribute its data specification to one of the four, then that is one entity, or 25% of the total. What does “whichever is less” mean? Is that a Lower or Severe violation? Conversely, if there is only one entity and the TOP does not notify that entity, then that is one entity or 100% of the total. Is that a Lower or Severe violation?
There will be no change to reliability
These revised standards (including our proposed changes), provide more clarity and will improve compliance documentation, but we don’t view that as a reliability improvement. Redline Posting for TOP-001-2 has a slight different definition than the Implementation Plan for Project 2007-03: Real-Time Operations Reliability Directive - A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency. Reliability Directive - A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected Emergency. Duke prefers the first definition. It is the one based on the definition of “Emergency” since it doesn’t mention “actual or expected”.

In R1 the word "identified" was added as an adjective to describe "Reliability Directive." While this is a step in the right direction, it needs further clarification. The requirement should be further modified to indicate that the Transmission Operator must indentify. i.e., state that "this is Reliability Directive" to ensure that the entities that must comply with this requirement know that what is being communicated by the TOP is a Reliability Directive and not some other less urgent communication.
No
The Rational to R1 should add language to clarify that in some circumstances the failure or unavailability of the usual tools may result in the inability to perform a complete and comprehensive analysis. Therefore the words "to the extent practicable" should be added (see below) in the last sentence after the word "able." Rationale for Requirement R1: By definition, Operational Planning Analysis includes Contingency analysis. By stating this Requirement in this manner, the SDT is stating that a Transmission Operator must have analysis tools or procedures to perform the Operational Planning Analysis (or has contracted the service). Since the Requirement does not mandate how the analysis is completed, if tools are used, the Transmission Operator must be able to the extent practicable to complete the analysis even if those tools are not available.

Requirement #1 Comments can not be developed for this requirement until we are able to see a final draft of the definition of Reliability Directive. It will have a significant impact on this requirement. Requirement #9 SOL's have not been defined clearly enough to require an identified time limit for exceedance. These durations could be set by the Transmission Owners or Operators based on the type of equipment, not dictated in the standard. Requirement #10 It is not clear when the RC should be informed, before, during or after actions have been taken to correct an overload. This needs to be discussed. Depending on the urgency of the situation, it may not be appropriate for the TOP to inform the RC prior to taking actions. It should simply be a requirement for the TOP to log or record actions taken for future review. Requirement #13 It is not clear what TOP area needs to be monitored. Language needs to be added to clearly state that a TOP should have access to information on other TOP areas that could impact the local area.

Northeast Utilities
No
Both Requirements R12 and R13 are considered vague and open to interpretation. For example, what type of information is to be monitored and what is meant by conditions? Language needs to be added to clearly state what a TOP needs to accomplish pursuant with these requirements. Various Measures appear to have incorrect Requirement references. For example, the text of Measure M14 refers to Requirement R13. Please verify / correct the Requirement references for all Measures. The term "Operational Planning Analysis", is capitalized to identify it as a defined term yet the NERC Glossary of Terms (updated 4/20/2010) indicates that the term has not been FERC approved. NU is concerned that the terms Operational Planning and Operational Planning Analysis are not FERC approved and may not be consistently applied throughout the industry. Suggest these terms be reviewed as part of this standard to ensure industry consensus on these terms and subsequently seek FERC approval, as required.
No
The rationale box for Requirement R1, indicates that TOP must be able to complete analysis even if the tools that are used are not available. It is not clear how contingency analysis would be performed if study tools are not available. What if day ahead study tools are part of an Energy Management System (EMS) which is a high reliability redundant system with an independent system at a back up facility? Is the rational box verbiage suggesting one would need to postulate the loss of a redundant EMS as well as its back up facility? Please clarify what is to be accomplished pursuant with R1. The term "Operational Planning Analysis", is capitalized to identify it as a defined term yet the NERC Glossary of Terms (updated 4/20/2010) indicates that the term has not been FERC approved. (See additional write up in Question 1 comment)

R5 - should refer to adjacent Transmission Operators. R8 - This daily documentation is burdensome. Reporting “all” SOL's to RC ahead of time as part of daily assessment in addition to the daily planned outage heads-up reporting. Suggest clarifying SOL as intended to be path loading limits and/or local area transmission service support limits, (the BES is a big system with lots of ratings, it can also mean voltage limits in addition to line and path limits). If there is a significant change to a limit, that would be important. R10 – Prefer having the RC call the TOP in 5 Minutes to ensure entity is aware of and acting on a limit excursion , rather than TOP interrupt system response to call RC to tell them the Operator is mitigating a SOL violation which is a already a NERC TOP standard to take immediate action. There's a typo in M12, M13, M14 when it refers to the wrong requirement due to renumbering R11 instead of R12, R12 vs R13, R13 vs R14).
No
R2 Although an entity does not plan to operate above the SOL, a contingency may cause an short SOL excursion until planned mitigation action is completed within the Tv (allowable violation time limit). Non-electrical people could get confused by this distinction. Suggest clarifying SOL as intended to be path loading limits and/or local area transmission service support limits, (the BES is a big system with lots of ratings, it can also mean voltage limits in addition to line and path limits).

In R2, it appears that an entity might be faced with double jeopardy if it fails to notify the entity issuing the directive. Doesn’t R1 also include this same requirement? In R3, the phrase “affected of actual’ should be “affected by actual”. In R8 and M8, what is the meaning of “local area reliability” and could that mean all SOLs? We believe the team intended to have a definite subset of SOLs. Perhaps the word “supporting’ could be replaced by the phrase “necessary for”. In R12 and R13, it doesn’t seem possible to measure “monitoring”. These also seem like requirements that are ideally suited for the certification process. It appears that the numbering of the requirements within each measure may have gotten out of synch due to a cut and paste insert. In M8, SOLs should be singular. The data retention periods are too long and do not appear to serve the purpose of improving reliability. Specifically, the three (3) year retention period for SOL and IROL violations is two (2) years too long.
No
In R2 and M2, what is the meaning of “local area reliability” and could that mean all SOLs? We believe the team intended to have a definite subset of SOLs. Perhaps the word “supporting’ could be replaced by the phrase “necessary for”.
No
We believe that R5 is redundant to R4 if the Transmission Operator is added to R4.

NorthWestern Energy
Yes
NorthWestern Energy appreciates this chance to comment. NorthWestern supports the definition of "Reliability Directive" as indicated in the Definitions section. R13 could be clarified to specify the exact types of information about conditions and facilities identified that the entity must have access to. Also, NorthWestern seeks clarification as to why the requirement mandates that the TOP shall have this information "within any Transmission Operator Area"? Perhaps the intent of the requirement is geared towards TOPs obtaining operating information pertaining to their own TOP area, regardless of which TOP area it is actually physically located in? NorthWestern requests that the drafting team consider flexibility in the implementation timelines of this standard. Compliance with this standard might require Transmission Operators to acquire/arrange for Operational Analysis and planning simulation tools not currently required by any FERC approved standards.

Southern's comments: Suggest modifying R3 language for additional clarity. Suggested alternatives might be “Each Transmission Operator shall inform its Reliability Coordinator of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis, and shall likewise inform any other Transmission Operators that are known or expected to be affected by those Emergencies” or “Each Transmission Operator shall inform its Reliability Coordinator and all other expectedly affected Transmission Operators of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.” In the first sentence of M5, the first usage of the word “operations” is redundant and can be struck. In R8, it is unclear what should be the treatment of SOLs that develop due to unanticipated system conditions that are not included in the Operation Planning analysis (i.e., real time system conditions deteriorate due to several unplanned outages). In R11, need to add “…within 30 minutes” after SOL. R14 can be mis-read to mean that the Transmission Operator grants approvals of outages, as opposed to granting the authority to grant approval to the System Operator. Also, it would be useful to clarify if the TOp still has the authority to also veto planned outages, in addition to the System Operator having that authority. M11 – M14 have references to incorrect Requirement numbers. In M8 and M14, the word “its” was incorrectly modified to “it’s.” SERC's comments: Southern participated in developing these comments and support them In R2, it appears that an entity might be faced with double jeopardy if it fails to notify the entity issuing the directive. Doesn’t R1 also include this same requirement? In R3, the phrase “affected of actual’ should be “affected by actual”. In R8 and M8, what is the meaning of “local area reliability” and could that mean all SOLs? We believe the team intended to have a definite subset of SOLs. Perhaps the word “supporting’ could be replaced by the phrase “necessary for”. In R12 and R13, it doesn’t seem possible to measure “monitoring”. These also seem like requirements that are ideally suited for the certification process. It appears that the numbering of the requirements within each measure may have gotten out of synch due to a cut and paste insert. In M8, SOLs should be singular. The data retention periods are too long and do not appear to serve the purpose of improving reliability. Specifically, the three (3) year retention period for SOL and IROL violations is two (2) years too long.
No
Southern's comments: The current NERC Glossary definition of Operations Planning Analysis does not explicitly include contingency analysis. Unless the SDT is modifying the definition of Operations Planning Analysis to include contingency analysis, we recommend that R1 be re-expanded to include the expectation of performing contingency analysis. Regarding R2 and M2, a TOp should not plan to operate beyond any SOL limit – regular or one that “is supporting local reliability.” Otherwise, why should it be classified as an SOL? SERC's comments: Southern participated in developing these comments and support them In R2 and M2, what is the meaning of “local area reliability” and could that mean all SOLs? We believe the team intended to have a definite subset of SOLs. Perhaps the word “supporting’ could be replaced by the phrase “necessary for”.
No

Southern's comments: M4 and M5, there should be allowance for outstanding requests that are still within the deadline as defined in R1.4. SERC's comments: Southern participated in developing these comments and support them We believe that R5 is redundant to R4 if the Transmission Operator is added to R4.
Reliability will be improved
Southern's comments none SERC's comments: Southern participated in developing these comments and support them Although we feel that reliability will be improved, we cannot determine whether the language that was inserted specifically in response to order 693 is not arbitrary, capricious or otherwise deleterious to reliability.

We agree with many of the changes the drafting team made to this standard. However, we have the following comments and suggestions: a. With respect to R7 and R11 in relationship to IROLs, R11 is inherent in R7. If an entity is not permitted to operate outside an IROL limit for longer than its Tv, then it needs to implement whatever actions are required to comply with Tv including directing "others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's Tv." R9 and R11 have the same issue with respect to SOL's. M3 is silent on evidence related to the Operational Planning Analysis. Did the drafting team intend for this data to be available for inspection as a means of proving or disproving the affect on a Neighboring Transmission Operator and thereby the need to contact them? If it is the intent of the drafting team to use the Operational Planning Analysis as evidence, then it should be specifically stated in M3. If it is the intent of the drafting team for an entity to be able to prove "conditions did not permit such coordination" then that evidence should be specified in the measures. b. R11 – We believe that requiring the TOP to mitigate IROLs is outside their scope per the functional model. The RC holds the authority over the tools needed to mitigate an IROL and is the appropriate entity responsible for this requirement. Also, it seems as though this requirement is duplicative of IRO-009-1 R4 which states "When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's Tv. (Violation Risk Factor: High) (Time Horizon: Realtime Operations)". c. R13 – We suggest the team remove the phrase "within any Transmission Operator Area" from the requirement. We believe this phrase is not necessary and adds confusion. d. R14 – The original SAR charged with addressing Order 693 directive 1660 required the standards to identify the minimum monitoring and analysis capabilities. The new requirement R14 does not fully address these minimum capabilities and will leave the requirement ambiguous from a compliance and enforcement standpoint. We suggest the team fully address the directive and clarify the requirement. e. Measures M10 through M14 make reference to the wrong requirements.
Yes
Yes
We commend the drafting team for attempting to manage the evidence in a way that does not require the TOP to get evidence to prove an absence of an issue, however, the following statement needs clarification to remove the double negative verbiage, "The evidence shall be that there are no Transmission Operators or Balancing Authorities with outstanding requests for data to the subject responsible entity that have been unfilled." This statement might be improved by stating "The evidence shall be the Transmission Operators and Balancing Authorities requests have been met." This will allow the entity to show the requests received from other entities and the evidence that they filled those requests.
There will be no change to reliability
We commend the hard work of the drafting team, but find it difficult to determine if these changes will affect the reliability of the BES.

R6 requires coordination which leads to questions regard who is non-compliant. It would be more proper to require reporting and approval requirements. RCs already are required to coordinate with each other. R9 sets a 30 minute limit on all identified SOLs (as opposed to allowing different times). This would require all facilities to have the same time limits for ratings. That should be addressed in FAC-008.

Agree with changes to most requirements and measures, but with exceptions as noted below: R2 – Is covered in R1. Do not agree with entity being subject to non-compliance for same shortcoming under 2 requirements. We suggest R2 be removed or that R1 and R2 be revised so that the requirement to inform the TOP not be included in both. R13 – Is the sentence meant imply that a TOP should monitor or have access to information/facilities in another TOP Area that could impact its TOP Area? If so, we believe the current draft language should be revised to improve clarity of intent. We suggest revising to read “Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities identified in its Operational Planning Analysis within external Transmission Operator Area(s) as necessary to perform such analysis” M1/M2 – revise measures so that entity is not subject to non-compliance for failure to notify TOP twice, pursuant to changes in R1/R2. M8 – change SOLs to SOL. M13 – revise pursuant to R13.
Yes
No
It is not clear how the data provision obligations of BAs under requirement R4 are different from their obligations under R5. We therefore suggest that TOP be added to R4 and that R5 be removed.
Reliability will be improved
While the changes remove potential ambiguity from the reliability requirements, we believe that BAs, TOPs and RCs, in almost all circumstances, understand the roles they play to insure reliable grid operations. We believe these changes are predominately the result of an increased focus on compliance related activities (audit) and industry requests for clarity. We do agree that the change in R8 is an improvement as it will allow TOP and RC to focus on the limited set of SOLs that could have an adverse impcat on the BES. Dominion would also like to make a general statement concerning the VSLs for all of these standards. We are unsure as to whether the correct threshold for Low, Moderate, High and Severe is correctly identified but have no basis for a denial or suggested change. We are curious as to how the various SDTs came up with these. In some draft standards, these thresholds seem to be developed around 25% quartiles, which makes it easier to accept the high and severe categories if you consider these equivalent to a pass/fail (D or F).

The proposed TOP-001-2 standard is a significant improvement, but there are still important items that need to be addressed including: Comments cannot be developed for this requirement until a final draft of the definition of Reliability Directive is presented as it will have a significant impact on TOP-001-2 and R1. When Reliability directive is defined, the definition of a Reliability Directive is too broad and should be limited to “Abnormal conditions that require operational actions to avoid instability, uncontrolled separation and cascading as defined in Section 215 of the Federal Power Act.” TOP-001-2-R9: SOL’s should not be part of the TOP-001-2 standard as there are not identified timeframes in the NERC standards today. However, if SOL’s must be included, a better subset must be defined excluding thermal limits with any time limits being clearly specified as a return time after the SOL limit was exceeded such as 30 minutes after exceeding the specified SOL limit. An example definition might be non-thermal SOL’s are those facilities limited below their maximum thermal capability as a proxy to maintain BES stability. TOP-001-2-R10: It isn’t clear when the RC should be informed, before, during, or after actions have been taken to correct an overload. Depending upon the urgency of the situation, it might not be important to notify the RC, therefore the requirement should be changed to the TOP should record actions taken for future review. For TOP-001-2-R6 replace “coordinate” with “notify the RC and negatively impacted adjacent interconnected NERC registered entities of” For TOP-001-2-R3, the words “and anticipated” needs to be dropped as an unmeasurable requirement. In TOP-001-2-R2 and R4, “expected to be affected” would include known. We asked the SDT to please strike known. The VSLs for R7 appear to assume that the sample set of SOLs that would be reported to the RC is a small number by using one, two, three and four in each successive VSL. What if the sample set is large (i.e. 1000 SOLs)? Should the VSLs be based on percentages? The measures for TOP-001-2-R5 and R8 need to be clear that these are event driven requirements and evidence is only required if an “event” has occurred. In R6, the word “telemetering” should be

capitalized as it is a defined term in the NERC Glossary. The terms “control equipment” and “associated communications channels” are not defined in the glossary at all. Recommend modifying the wording to ensure consistency between standards. R14 uses the term “monitoring and analysis capabilities”. This term is not defined in the NERC Glossary. R13 implies that a TO’s Operational Planning Analyses should be monitoring facilities external to its own operating area when they have no control or responsibility for said facilities. It is not a TO’s responsibility to monitor regional system conditions; therefore this requirement should be removed. FERC Order 693, paragraphs 1660 and 1661 do not specifically mention any of the verbiage in requirements R12, R13, & R14; therefore the preceding statement should be considered.
No
The rationale box needs to be clarified. If the drafting team meant for entities to have a primary set of tools / procedures and backup set as well, please clarify that. “By definition, Operation Planning Analysis includes Contingency analysis” is not accurate. The definition in the Glossary of Terms mentions nothing of contingency analysis. It mentions known transmission and generation facility outages, but that has nothing to do with contingency analysis, which includes a study of unknown events to occur on current system conditions. Therefore, the requirement should read “Each Transmission Operator shall have an Operational Planning Analysis that incorporates potential single contingency events.” Is “plan” in requirement R2 a noun or verb? It appears to read as if it is a verb, which implies no documented action would be necessary. If intended, it should read “Each Transmission Operator shall develop a plan….” This flows much better with what the intent of R2 is trying to say.
No
Remove “at the discretion of the Transmission Operator or Balancing Authority” in R1-1.1. The TO and BA are the entities creating the specification, which already implies that any needed parameters are at their discretion. Overall clarification seems necessary on this bullet as well (R1-1.1). Why specifically address equipment of voltage levels below BES levels? Does this exclude equipment rated 100 kV and above? Replace “Real-time monitoring” with “Real-time Assessment” as this is an actual term in the NERC Glossary of Terms. This would follow a similar format to the “Operational Planning Analyses”.
There will be no change to reliability
There seems to be a general lack of consistency in the use and meaning of terms relating to remote measurement and remote control of the BES in the TOP, COM and PRC standards. A better glossary would ensure consistent verbiage between the standards groups. The glossary term “Telemetering” is confusingly similar to the one for “SCADA”. It wrongfully includes remote control as part of the definition. We suggest it be removed from the glossary and this project.

R13 states that - Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities identified in its Operational Planning Analysis within any Transmission Operator Area. What does “Facilities” in R13 refer to? Is it any facilities that are included in the analysis or those that have the potential to cause violations? Suggest replacing “..Facilities identified in its Operational Planning Analysis” by text in R8 – “…identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis.” TOP-001 R13 also says "...within any Transmission Operator Area...", Does the drafting team mean within that particular TOP's area? It would be more clear if it said "...within its area...". If they really do mean another TOP's area, that is unrealistic. It could imply that we need to have info for TOP in Florida. TOP-001 R8 & TOP-002 R2 - When referencing SOLs both say something like "SOLs which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability...". National Grid suggests deleting “…which, while not IROLs…”.

There are several issues with Requirement 6: • The requirement assigns responsibility to 3 entities for one task. NERC standards are designed to clearly assign responsibility to provide a clear measurement and allocation of non-compliance. R 6 as worded requires “coordination” between and among each entity. • Coordination is not defined. Does coordination mean “informing” another party? Does it mean “directing a new solution”? Does it mean “asking permission” of a third party? • Who is non-compliant when two (or more) parties do not agree with a proposed solution? How many alternatives proposals must be considered? Suggest the requirement be rewritten as a series of independent requirements with sub-bullets to identify specific tasks. Example: Each TOP shall inform all affected reliabity entities of planned outages of active real-time communications channels: • Interpersonal channels • Data exchange channels for any BES elements or elements involved in identified IROL computations • Asset direct-control devices (reactive control equipment,…) Each TOP shall inform all affected parties of alternative means to be used for the duration of the proposed outage. Each BA shall inform all affected reliability entities of planned outages of active real-time communications channels: • Interpersonal channels • Data exchange channels for any BES elements or elements involved in identified IROL computations • Asset direct-control devices (regulation control signals; resource dispatch equipment,…) Each GOP shall inform all affected reliability entities of planned outages of active real-time communications channels: • Interpersonal channels • Data exchange channels for any BES elements or elements involved in identified IROL computations • Asset direct-control devices Each reliability entity inform by the TOP in Rx.x, (or by the BA in Ry.y or by the GOP in Rz.z) shall acknowledge the receipt of the information provided in Rx.x (or in Ry.y or Rz.z) to the respective TOP (BA or GOP). Requirement #13 Delete the phrase “…within ANY Transmission Operator Area”. The phrase has the potential to add confusion rather than clarity to the requirement.

Minnesota Power does not have any comments at this time.
No
Minnesota Power has the following comments for the individual requirements of the proposed Standard TOP-003-2. Requirement 1 • The time horizon doesn’t appear to match the requirement. • The tasks required to accomplish the items listed in sub-requirements R1.1 – R1.4 also fall under the responsibility of a Reliability Coordinator, in addition to the Transmission Operator and Balancing Authority functions that are already listed in this Requirement. • The term “mutually agreeable format” is confusing and needs more definition to eliminate any confusion regarding who is required to agree on the format in sub-requirement 1.2. Requirement 4 • The way this Requirement is currently worded could leave the door open for disparate specifications. As currently written, Registered Entities are obligated to abide by all specifications regardless of feasibility or ability to implement. Minnesota Power requests more clarification regarding what is meant by “satisfy the obligations of the documented specifications for data.” Requirement 5 • The way this Requirement is currently written it could open the door for a liberal interpretation of the Requirement and could result in excessive data requests in the name of “Operational Planning Analysis and Real-time monitoring.” Minnesota Power suggests revising the Requirement to state that the requesting Transmission Operator and/or Balancing Authority must demonstrate a reliability need in its request for data.
Minnesota Power does not have any comments at this time.

Requirement #1 Comments can not be developed for this requirement until we are able to see a final draft of the definition of Reliability Directive. It will have a significant impact on this requirement. Requirement #9 A 30-minute time limit has been identified in Requirement 9, but that may be an inappropriate time based upon the variability that exists with actual system operating limits. In the case of thermal limits, some may be 15 minutes others may be 4 hours for different facilities. The same facility may have a 4 hour loading limit, and a 2 hour limit at a higher magnitude, as well as, perhaps, a 30 minute limit at a higher magnitude yet. If the limits were allowed to only be set

at 30 minutes, how are longer limits incorporated? Of course it is imprudent to operate a facility at the magnitude corresponding to a four hour limit for greater than four hours. But how is that limit identified and communicated if the System Operating Limit must be mitigated within 30 minutes? Any such operating parameter will be recognized as an SOL, then requiring a 30 minute limit if Requirement 9 is left as is. Requirement 8 mandates that limits be set to support local area reliability. Operating a facility for five hours at its four hour limit is contrary to that requirement. Transmission Operators need SOLs to be described and communicated in terms of both magnitude and associated time, but that time need not be limited to 30 minutes. The duration and magnitude of the SOL should be set by the Transmission Owners or Operators based upon respecting the facility and equipment ratings as required by the FAC standards. Requirement 9 would better serve reliability to require SOLs (which are identified in Requirement 8) to be described in specific terms of both magnitude and associated time. If needed, a fallback position could be maintained that establishes 30 minutes as the default time limit if no other limit is specifically defined in the SOL. Requirement #13 It is not clear what TOP area needs to be monitored. Language needs to be added to clearly state that a TOP should have access to information on other TOP areas that could impact his local area.

R1 – The addition of the term “identified” does not completely answer the question of who needs to identify the communication as a Reliability Directive. Simply adding the term means that it might be interpreted to mean that that the entity receiving a communication from a Transmission Operator might need to identify the communication as a Reliability Directive from its content and context. The following formulation is more clear: “Each Balancing Authority … shall comply with each Reliability Directive that its Transmission Operator issues and identifies as a Reliability Directive, …” Given the importance of these requirements, clarity must not be sacrificed for brevity. R8 – The use of the phrase “have been identified” is unnecessary in this requirement. The Transmission Operator has an independent obligation to identify these SOLs under the FAC standards. In addition, the phrase “its local area reliability” is ambiguous. If the intent of this term is to address a certain set of SOLs that have more than a purely local effect, then the phrase should be modified to something like “regional reliability” or “that may affect its neighboring Transmission Operator Areas”. The requirement should read “Each Transmission Operator shall inform its Reliability Coordinator of all SOLs that, while not IROLs, support regional reliability based on its assessment of its Operational Planning Analysis” or “Each Transmission Operator shall inform its Reliability Coordinator of all SOLs that, while not IROLs, that may affect its neighboring Transmission Operator Areas based on its assessment of its Operational Planning Analysis.” M1 – To be consistent with the recommended revisions to R1, the measurement should be revised to read “Each Balancing Authority … (a) complied with each Reliability Directive that its Transmission Operator issued and identified as a Reliability Directive, …". Additionally we suggest that the measures provide guidance of how to prove a Reliability Directive was not issued in order to be complete in demonstrating compliance with the requirment. This same suggestion rings through all the measures. M2 – This measurement duplicates a portion of M1.
No
R1/R2 – The side-bar indicates that Contingency analysis is included Operational Planning Analysis by definition. The definition of Operational Planning Analysis, however, does not discuss or even mention Contingency analysis. Recommend a revision to the definition of Operational Planning Analysis to clarify that such an analysis does include Contingency analysis. R2 – See comments regarding identified SOLs under requirement R8 of TOP-001-2 above.

No
R1 – As indicated in the first full row on page 5 of the document "Resolution of Issues Assigned to Real-time Operations SDT (Project 2007-03)", FERC staff disagrees with the data specification approach. How does the SDT propose to deal with this disagreement? Given this disagreement and FERC's current concerns with NERC's standard approval process, what purpose does continuation of the current approach accomplish? R1.2 – The phrase "mutually agreeable format" may lead to disputes between the TOP and other entities subject to the TOP's data specification. In the event that the entities cannot agree, the TOP's reasonable requirements should trump. R1.4 - There should be language added that requires agreement to proposed deadline by the entity receiving the specification as there could be a need for programming work and it could be foreseen that the deadline indicated can not be reasonably met.

The proposed TOP-001-2 standard is a significant improvement, but there are still important items that need to be addressed including: Comments cannot be developed for this requirement until a final draft of the definition of Reliability Directive is presented as it will have a significant impact on TOP-001-2 and R1. When Reliability directive is defined, the definition of a Reliability Directive is too broad and should be limited to "Abnormal conditions that require operational actions to avoid instability, uncontrolled separation and cascading as defined in Section 215 of the Federal Power Act." TOP-001-2-R9: SOL's should not be part of the TOP-001-2 standard as there are not identified timeframes in the NERC standards today. However, if SOL's must be included, a better subset must be defined excluding thermal limits with any time limits being clearly specified as a return time after the SOL limit was exceeded such as 30 minutes after exceeding the specified SOL limit. An example definition might be non-thermal SOL's are those facilities limited below their maximum thermal capability as a proxy to maintain BES stability. Many times scheduled transmission outages coupled with weather (drought, wind front, heat wave, etc) and strong market moves can drive unexpected SOL exceedances where units and markets cannot move within 30 minutes to redispatch sufficient generation. Coupling SOLs with time frames and penalties will drive unforseen market impacts. TOP-001-2-R10: It isn't clear when the RC should be informed, before, during, or after actions have been taken to correct an overload. Depending upon the urgency of the situation, it might not be important to notify the RC, therefore the requirement should be changed to the TOP should record actions taken for future review. For TOP-001-2-R6 replace "coordinate" with "notify the RC and negatively impacted adjacent interconnected NERC registered entities of" For TOP-001-2-R3, the words "and anticipated" needs to be dropped as an unmeasurable requirement. In TOP-001-2-R2 and R4, "expected to be affected" would include known. We asked the SDT to please strike known. The VSLs for R7 appear to assume that the sample set of SOLs that would be reported to the RC is a small number by using one, two, three and four in each successive VSL. What if the sample set is large (i.e. 1000 SOLs)? Should the VSLs be based on percentages? The measures for TOP-001-2-R5 and R8 need to be clear that these are event driven requirements and evidence is only required if an "event" has occurred. In R6, the word "telemetering" should be capitalized as it is a defined term in the NERC Glossary. The terms "control equipment" and "associated communications channels" are not defined in the glossary at all. Recommend modifying the wording to ensure consistency between standards. R14 uses the term "monitoring and analysis capabilities". This term is not defined in the NERC Glossary. R13 implies that a TO's Operational Planning Analyses should be monitoring facilities external to its own operating area when they have no control or responsibility for said facilities. It is not a TO's responsibility to monitor regional system conditions; therefore this requirement should be removed. FERC Order 693, paragraphs 1660 and 1661 do not specifically mention any of the verbiage in requirements R12, R13, & R14; therefore the preceding statement should be considered.
No
The rationale box needs to be clarified. If the drafting team meant for entities to have a primary set of tools / procedures and backup set as well, please clarify that. "By definition, Operation Planning Analysis includes Contingency analysis" is not accurate. The definition in the Glossary of Terms mentions nothing of contingency analysis. It mentions known transmission and generation facility outages, but that has nothing to do with contingency analysis, which includes a study of unknown events to occur on current system conditions. Therefore, the requirement should read "Each Transmission Operator shall have an Operational Planning Analysis that incorporates potential single contingency events." Is "plan" in requirement R2 a noun or verb? It appears to read as if it is a verb, which implies no documented action would be necessary. If intended, it should read "Each Transmission Operator shall develop a plan…."
No
Remove "at the discretion of the Transmission Operator or Balancing Authority" in R1-1.1. The TO and BA are the

entities creating the specification, which already implies that any needed parameters are at their discretion. Overall clarification seems necessary on this bullet as well (R1-1.1). Why specifically address equipment of voltage levels below BES levels? Does this exclude equipment rated 100 kV and above? Replace “Real-time monitoring” with “Real-time Assessment” as this is an actual term in the NERC Glossary of Terms. This would follow a similar format to the “Operational Planning Analyses”.
There will be no change to reliability
Depending upon how SOLs are implemented and enforced there could be a negative impact to system reliability as transmission outages are further restricted reducing long-term maintenance to maximize short term risks to penalties.

Requirements #1 & 2 ATC supports Requirements 1 and 2 if the definition of Reliability Directive, as provided in TOP-001-2, is not modified. Any change to the proposed definition of Reliability Directive will require us to reevaluate our position. Requirement #3 Issue 1: ATC is concerned with the wording of Requirement 3 because it blends real time Emergencies situations with issues or concerns that are identified in Operational Planning Analysis for next day, week, month or year. Definitions: “Emergency” and “Operational Planning Analysis”: Emergency: “Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the BES” Operational Planning Analysis: “An analysis of the expected system condition for the next day’s operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generation outages, equipment limitations, etc.).” If an Emergency by definition requires automatic or immediate manual action then there would be few if ever a situation in which a next day study would require either automatic or immediate manual action. What reliability objective is the SDT attempting to achieve when combining these two distinct situations into one requirement? Because of this observation ATC believes that the language about anticipated Emergency and Operational Planning Analysis should be deleted. If the SDT does not believe that these deletions are necessary then we request that the SDT provide additional clarify for the phrase “anticipated Emergency”. Supporting TOP Standard: TOP-002-3 addresses the need for a TOP to perform an Operational Planning Analysis and when appropriate to develop a plan based on those results. That plan must be communication to Registered Entities that have to perform an action. (See ATC’s Comments to TOP-002) Because TOP addresses next day studies we believe that there is no need for this requirement to also cover Operational Planning Analysis. Clarifying questions: Does the Operational Planning Analysis have to be performed by the TOP itself? (Situation: Currently MISO does a next day study for its footprint. Could that qualify as an Operations Planning Analysis being performed, or does each TOP have to perform its own next day study.) Requirement 3: “… based on its assessment of its Operational Planning Analysis.” Issue 2: When is notification required to take place? ATC believes that the primary responsibility of the system operator is to address the actual (real-time) Emergency and then when appropriate follow up with the RC and other TOP’s. The only exception is when the TOP has to issue a Reliability Directive which would be issued in response to the situation. Requirement 5: ATC believes that the second sentence should be deleted because all it is attempting to do is provide examples. The first sentence provides enough clarity, so that the second sentence is not needed and may result in more confusion. Requirement 6: Issue 1: Who qualifies as an “affected entity”? If the entity is not registered with NERC how can NERC verify that coordination took place? Does this mean that a TOP, BA and GOP would have to contact customers if the planned outage could affect them? How affected does an entity have to be in order to trigger coordination? Measure 6 states that the TOP, BA and GOP must coordinated “among impacted reliability entities” but there does not exist a definition of “reliability entities”. This standard should clearly set the expectations as to who does the TOP, BA and GOP have to coordinate with and not make the requirement so broad to allow questions about who was involved in the coordination. Issue 2: It is not clear as to when a planned outage of telemetering and control equipment and associated communication channels has to be coordinated. Requirement 7: ATC believes that the term “outside” is not clear and that the SDT should either define the term or use a more appropriate term. Suggested Modification: Modification to R7: “Each TOP shall not “exceed” an identified IROL…” Requirement 8: ATC raised a question on Requirement 3 asking if each TOP has to perform its own Operations Planning Analysis. Based on the answer to that question this requirement may need to be deleted. If an Operations Planning Analysis can be performed by the RC then there would be no need for the TOP to contact the RC about the results of their own study. We believe that Requirement 2 of TOP-002-3 covers Operational Planning Analysis so there is no need to have a duplicate requirement. ATC is unclear as to what this requirement is attempting to achieve. Is this requirement simply saying that the TOP has to share their system operating limits with the RC? If that is the case we believe that the requirement should be rewritten to provide that specific clarity. Suggested Modification: The TOP shall inform the RC of all BES System Operating Limits (SOLs) that support local area reliability. Requirement 9: Issue 1: The proposed requirement is too restrictive because it prevents the TOP from applying loss of life assumption on its equipment. We believe that entities should be able to determine when

exceeding equipment limits is appropriate based on the situation and equipment. Suggested Modification: - The TOP may exceed (real-time) a SOL for a continuous duration of 30 minutes. In addition we believe that the TOP should be allowed to use the IROL Tv concept to allow an SOL to be exceeded for a continuous duration of greater then 30 minutes if they notify the RC of the longer SOL Tv. Requirement 10: It is not clear as to when the notifications must take place. Would notifying the RC following the exceedance of the IROL or SOL be okay, or, must the TOP contact the RC prior to taking action in order to be compliant with this requirement? Requirement 12: ATC believes that this requirement is unnecessary because it is only saying that a TOP has to know what is going on with its system. In order to be compliant with the other requirements in this standard a TOP understands that by default they must monitor as appropriate its system. The challenge this requirement introduces is that it is so broad that demonstration of compliance is overly burdensome. In addition this requirement is unclear as to what and how often the TOP has to monitor, or have access to information to demonstrate compliance. Questions: If a TOP has a 4 second scan rate for EMS data and if a single data scan is missed or an error occurs at a single point does this mean that the TOP is non-compliant? If an entity uses information on a RC website about planned outages and for some time that system is unavailable for any length of time will the TOP be non-compliant because they don't have access to information? What does the requirement mean by the phrase "conditions and Facilities"? Does this mean that the ROP has to monitor breaker statues, switch statues, transformer temperatures, wind conditions and ambient temperatures? Proposed suggestion: ATC believes that this requirement should be deleted. Requirement 13: This requirement will reduce reliability because it will force TOP's to use the smallest base case model to perform its Operational Planning Analysis. We believe our statement is accurate because it requires the TOP to have an EMS model that matches the Operational Planning Analysis model. So if an entity performs off-line studies (non EMS studies) that use the Eastern interconnection then they must also monitor or have accession to information for the Eastern Interconnection. Since access to all if information is highly unlike or unnecessary to gather the TOP will have to use the model contained in their EMS to perform Operational Planning Analysis. Although this may not necessary be a bad thing a TOP will loss the benefits of using the larger model to perform Operational Planning Analysis. If the RC performs the Operational Planning Analysis then by this requirement does the TOP have to monitor everything in the RC's Operational Planning Analysis model? Suggested Modification: ATC believes that this requirement should be deleted.
No
Rational Box: The SDT states that by definition Operational Planning Analysis includes Contingency Analysis. ATC does not agree with this statement and therefore we requests that the SDT removed this statement. Operation Planning Analysis: "An analysis of the expected system condition for the next day's operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generation outages, equipment limitations, etc.)." The definition does not specifically call out contingency analysis but is specific that an Operations Planning Analysis is a next day study which can be performed any time from a day ahead to as much as 12 months ahead. Time Horizon: In TOP-001-2 Requirement 2 the SDT calls on Operations Planning Analysis to be performed and identifies it as either a Same-Day Operations, Real-Time Operations Time Horizon requirement. In TOP-002-3 Requirement 1 the SDT is calling for Operations Planning Analysis to be performed and identifies it as a Operations Planning Time Horizon. ATC finds it very confusing that the SDT is using this defined term in multiple Time Horizons and believes that a single time horizon be used for this term. Requirement 1: If a TOP were to perform an Operations Planning Analysis for TOP-001-2 then what different Operations Planning Analysis would a TOP have to do be in compliance with Requirement 1 of TOP-002-3? Requirement 2: ATC believes that Requirement 2 (TOP-002-3) conflicts with TOP-001-2 Requirement 9. Requirement 9 in TOP-001-2 allows a TOP to exceed an SOL for a continuous duration of 30 minutes but that same allowance is not provided in requirement 2. (Note: see ATC's comment to Question 1 requirement 9.) ATC believes that the same continuous duration time provided in Requirement 9 of TOP-001-2 be allowed in Requirement 2. Requirement 3: ATC believes that additional clarity is needed around the use of the term "role". We believe that this requirement is calling for TOP's to contact other Registered Entities if they have an "action" to perform in the plan. Is ATC's understanding of the term "role" consistent with the SDT's understanding? ATC also believes that the phrase "reliability entities" should be replaced with Registered Entities.
No
Requirement 1.1: ATC believes that requirement 1.1 is unnecessary and opens up other issues and therefore should be deleted from this standard. Long-term outage information while important is not directly related to EMS data. In addition, information about facilities that operate below 100 kV is beyond FPA 215 and is beyond NERC's jurisdiction.
There will be an adverse impact to reliability
Operational Planning Analysis: ATC is concerned with the use of the term Operational Planning Analysis in both TOP-001 and TOP-002. Once something is called an Operational Planning Analysis all associated requirements apply. Although the SDT is attempting to draw a distiction between contengency analysis which typically runs off and EMS and more traditiional PSS/E or power flow studies those requirements that talk about monitor or access to information apply equally. Example: If an entity chooses to uses a Eastern Interconnection base model to satisfy

TOP-002 Requirement 1 that entity would have to also have to be in compliance with TOP-001 Requirement 13. Requirement 13 states that the TOP has to monitor or have access to information about condition and Facilities. By default a TOP would have to have access to information about every facility in the Eastern Interconnection model in order to be in compliance with calling the study a Operational Planning Analysis and By using the same term to represent different study time frames causes a number of compliance issues with this standard. We suggest that the team either determines a single meaning for the term Operational Planning Analysis or clarifies the compliance obligations around the different time frames for Operational Planning Analysis.
Individual

ERCOT ISO
No
R1 – ERCOT ISO does not agree with the addition of the word ‘identified’ because it implies each Reliability Directive needs to be preceded with an additional statement like “the following is a Reliability Directive”. In a true emergency, clear concise communication and an understanding of what action is required to mitigate the situation is necessary. The addition of another sentence before each required action delays communication. ERCOT ISO thinks a Reliability Directive should not have to be declared as such, prior to issuance. Compliance should not be measured by whether the System Operator remembered to state “this is a Reliability Directive”, but should be measured by whether the Reliability Directive was properly issued and three-part communication was utilized. NOTE: Requirements 1 and 2 are dependent upon the approval of the term Reliability Directive, which is being proposed by Project 2006-06 Reliability Coordination. R2 – Add Operations Planning to the Time Horizon because R1 includes Operations Planning in the Time Horizon. R1 and R2 occur in the same Time Horizons, since R1 requires an entity to comply to a Reliability Directive issued by a TOP and R2 requires an entity who cannot comply to notify the issuing TOP. NOTE: Requirements 1 and 2 are dependent upon the approval of the term Reliability Directive, which is being proposed by Project 2006-06 Reliability Coordination. R9 VSL – The TOP, when notifying the RC, should identify the appropriate Tv. The associated VSL should be high and not severe and should only be severe when multiple instances occur.
Yes
No
R1.1 – The phrase ‘to be exchanged’ seems to be unnecessary. M2 and M3 – These measures allude to evidence of information actually being distributed, yet some companies make information available to entities through website posting or other public forums. Please include showing proof of availability of information to an entity as an option in these measures. M4 – The last sentence should be revised to match the last sentence of M5. Consider rewording both M4 and M5 as follows: “The evidence shall be that there are no Transmission Operators or Balancing Authorities with outstanding requests for data to the subject responsible entity that have been unfilled.” The R2 and R3 VSLs have percentage approaches, but the R4 and R5 VSLs are binary, even though there are multiple elements to data specifications referred to in R4 and R5. All four of these requirements should have percentage approaches. Similarly, there are requirements for the RC (in IRO-010) to document data specifications. The associated IRO-010 R1 and R2 VSLs also have a percentage based approach. To be consistent, the TOP-003-2 R4 and R5 VSLs need to be changed to the percentage based approach for consistency.
There will be no change to reliability
Group
Western Electricity Coordinating Council
Steve Rueckert
Under R1 of the standard the word “identified” is used to describe a specific type of Reliability Directive issued by the Transmission Operator. Who performs the work or makes the identification of an “identified” reliability directive? Why under R2 is the classification not carried on to describe the RC directive such as “of its inability to perform an IDENTIFIED Reliability Directive”?
There will be no change to reliability
Individual
Michael Gammon
Kansas City Power & Light

No
Requirements R3 & R5 requires TOP's to notify all other "affected" or have an "adverse reliability impact" TOP's of an emergency condition. The terms "affected" and "adverse reliability impact" is a debatable condition and subject to interpretation. As proposed, this requirement will be difficult to audit and will cause uncertainty in the industry. Recommend the requirement be modified to alert other TOP's whenever a TOP in an emergency condition becomes aware of operating conditions that would result in exceeding an SOL or IROL operating limits under N-1 contingency conditions for other TOP facilities. Modifications for these two requirements will result in subsequent changes to the Measures and VSL's for requirements R3 & R5.
Yes
No
Requirement R4 may be troublesome for small Registered Entities to meet the data requirements dictated by larger Registered Entities. The is no recognition of the limitations of data exchange capability with an entity. Recommend requirement R4 be modified to include "within the data exchange capabilities of the recipient of the data specification". Modifications here would result in changes to the Measure and VSL for requirement R4.
There will be no change to reliability

Consideration of Comments on Real-Time Operations — Project 2007-03

The Real-Time Operations SAR Drafting Team thanks all commenters who submitted comments on the 4th draft of the standards for Real-Time Operations – Project 2007-03. These standards were posted for a 30-day public comment period from August 4, 2010 through September 3, 2010. Stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 34 sets of comments, including comments from more 34 companies representing 7 of the 10 Industry Segments as shown in the table on the following pages.

http://www.nerc.com/filez/standards/Real-time_Operations_Project_2007-03.html

The SDT made a number of changes to requirements and measures based on industry comments and additional changes based on observations of a Quality Review team. Where a changes was made to a requirement, conforming changes were made to the associated measure and VSLs.

TOP-001-2:

- Requirement R2– added the word 'identified' to make it clear that it is only "identified Reliability Directives" included in the scope of the requirement. Added "Operations Planning" as an additional possible time horizon.
- Requirement R3 – changed 'of' to 'by' to correct a typographical error.
- Requirement R5 – changed 'coordinate' to 'inform;' changed 'coordination' to 'communications;' and replaced 'with those Transmission Operators' with 'those respective' for simplification.
- Requirement R6 – changed 'coordination' to 'notify;' added a phrase to be more specific about what functional entity to notify; changed 'telemetering' to 'telemetry' for clarity.
- Requirement R8 – changed 'local' to 'internal' to clarify that the scope is limited to the TOP's own area.
- Requirement R9 – changed the VRF from "high" to "medium."
- Requirement R11 – added a 30 minute constraint on the time to respond to an SOL supporting the TOP's internal reliability.
- Deleted Requirements R12 – R14 as these requirements related to facility capabilities and will now be addressed in a separate project. (Project 2009-02 Real-time Monitoring and Analysis Capabilities
- Added an explanation to justify the VSLs for R5.

TOP-002-3:

- Purpose – updated to more closely align with the requirements in the standard
- Updated the text box associated with Requirement R1 to clarify the expectation that the Operational Planning Analysis is required under all conditions.
- Requirement R2 - changed 'local' to 'internal' to clarify that the scope is limited to the TOP's own area.
- Requirement R3 – changed 'reliability' entity to 'registered entity' for additional clarity.
- Added an explanation to justify the VSLs for R3.

TOP-003-2:

- Requirement R1 – changed ‘have’ to ‘create’ for clarity; changed ‘equipment’ to ‘facilities;’ removed the language specifying that the outage information comes from the Transmission Operator or Balancing Authority.
- Requirement R4 – added the Transmission Operator as one of the entities that must provide requested data.
- Requirement R5 – merged into Requirement R4.
- Measures M2 and M3 – added web postings with acknowledgment as additional examples of acceptable evidence.
- Eliminated redundancies in VSLs for R2.

The SDT recommends that this project be moved forward to the balloting stage.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Herb Schrayshuen, at 315-439-1390 or at herb.schrayshuen@nerc.net. In addition, there is a NERC Reliability Standards Appeals Process.[1]

[1] The appeals process is in the Reliability Standards Development Procedures: http://www.nerc.com/standards/newstandardsprocess.html.

1. TOP-001-2: Do you agree with the changes made to this standard? This includes all aspects of this standard – requirements, measures, data retention, VRF, Time Horizon, and VSL. If not, please supply specific reasons why you do not agree with the changes made.

Summary Consideration: As shown below, the SDT made a number of changes to requirements based on industry comments. All changes were semantic to provide additional clarity.

R2. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform an identified Reliability Directive issued by that Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations]*

R3. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected ~~of~~ by actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.

R5. Each Transmission Operator ~~and Generator Operator~~ shall ~~coordinate~~ inform other Transmission Operators of its ~~respective~~ operations known or expected ~~by the Transmission Operator~~ to ~~have~~result in ~~a reliability impact~~ an Adverse Reliability Impact on ~~the portion of the BES of other~~ those respective ~~reliability entities~~Transmission Operator Areas with those ~~entities~~ Transmission Operators unless conditions do not permit such ~~coordination~~communications. Such operations may include relay or equipment failures and changes in generation, Transmission, or Load,

R6. Each Transmission Operator, Balancing Authority, and Generator Operator shall ~~coordinate~~ notify the Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of ~~telemetering~~ telemetry, ~~and~~ control equipment and associated communication channels between the affected entities.

R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's T_v, or of an SOL identified in Requirement R8 within 30 minutes.

M5. Each Transmission Operator shall make available upon request, evidence that ~~operations~~ it ~~coordinated~~ informed other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on ~~other~~those respective Transmission Operator Areas ~~with those Transmission Operators~~ in accordance with Requirement R5 unless conditions did not permit such ~~coordination~~ communications. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

M8. Each Transmission Operator shall make available evidence that it has informed it~~'~~s Reliability Coordinator of each SOL~~s~~ which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis in accordance with Requirement R8. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

Organization	Yes or No	Question 1 Comment

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td>Public Service Enterprise Group Companies</td><td>No</td><td>In R1 the word "identified" was added as an adjective to describe "Reliability Directive." While this is a step in the right direction, it needs further clarification. The requirement should be further modified to indicate that the Transmission Operator must indentify. i.e., state that "this is Reliability Directive" to ensure that the entities that must comply with this requirement know that what is being communicated by the TOP is a Reliability Directive and not some other less urgent communication.</td></tr>
<tr><td colspan="3">Response: “Reliability Directive” is not meant to equate to the urgency of a situation; rather it is meant to equate to the authority placed on a particular action. An urgent situation can be handled without using a NERC Reliability Directive. However, an entity that is not following a Transmission Operator’s request or is debating the request can be “made to” cut off debate and respond as requested by the simple act of the Transmission Operator identifying the request as a Reliability Directive. The requirement views a Reliability Directive as a tool, not as a definition of a condition. The use of the Reliability Directive tool is left to the System Operator. The exact words needed to affect a Reliability Directive are viewed as an administrative detail not needed in the requirement. To mandate the phraseology would raise the text to the same level as an act to relieve the condition itself. No change made.</td></tr>
<tr><td>E.ON U.S.</td><td>No</td><td>E.ON U.S. suggests that in the definition of directive the adjective “mandated” should be added and placed in front of “action.”</td></tr>
<tr><td colspan="3">Response: Revision to the definition is not in the scope of this standard. The Definition of Terms for TOP-001-2 states the “…definition (of Reliability Directive) is included here for ease of reference…” and that the Reliability Coordination SDT (Project 2006-06) is writing the definition and will post that definition for vetting by the Industry. The SDT would note that Requirement R1 states that entities “shall comply” with identified Reliability Directives. Thus, by identifying the action as a Reliability Directive, the requirement is mandating the action. No change made.</td></tr>
<tr><td>Midwest ISO Standards Collaborators</td><td>No</td><td>Requirement #1 Comments cannot be developed for this requirement until we are able to see a final draft of the definition of Reliability Directive. It will have a significant impact on this requirement.

Requirement #9 SOL’s have not been defined clearly enough to require an identified time limit for exceedance. These durations could be set by the Transmission Owners or Operators based on the type of equipment, not dictated in the standard.

Requirement #10 It is not clear when the RC should be informed, before, during or after actions have been taken to correct an overload. This needs to be discussed. Depending on the urgency of the situation, it may not be appropriate for the TOP to inform the RC prior to taking actions. It should simply be a requirement for the TOP to log or record actions taken for future review.

Requirement #13 It is not clear what TOP area needs to be monitored. Language needs to be added to clearly state that a TOP should have access to information on other TOP areas that could impact the local area.</td></tr>
<tr><td colspan="3">Response: <u>Requirement 1 - </u>The SDT understands the perspective for the Requirement R1 comment, however, as pointed out in the Definition of Terms for TOP-</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
001-2, the "…definition (of Reliability Directive) is included here for ease of reference…" and the Reliability Coordination SDT (Project 2006-06) is writing the definition and will post that definition for vetting by the Industry. The SDT drafted the words such that the definition is secondary to the requirement. As written, the Transmission Operator would only "identify" an action as a Reliability Directive when the Transmission Operator "needs" an additional incentive to cut off discussion about whether or not the requested entity should carry out the action. If the entity carries out the action without the Transmission Operator identifying the action as a Reliability Directive, then the definition is not important. If the entity is not carrying out the requested action, then by identifying the requested action as a Reliability Directive, then the entity must comply – and again the definition is not critical to the requirement. Requirement R1 is designed to make clear that any request designated as a Reliability Directive must be carried out as stated (and repeated back). The definition only restricts the Transmission Operator in that the request must be necessary "to address an emergency." That allows the Transmission Operator to issue a Reliability Directive to respond to an Emergency and also during normal times, if needed, to preclude an Emergency condition from arising. Requirement 9 - The 30 minute limit is generally recognized as a time related to the risk of a second event occurring; thus 30 minutes is the maximum time. That does not preclude an operator from choosing a shorter duration (lesser restriction – e.g., higher MW) limit and using a shorter duration. No change made. Requirement 10 - The requirement does define an explicit time. It is the time after an action was taken ("…inform … of its actions…") and after the limit was exceeded ("…to return…when an IROL …has been exceeded…"). The communication therefore is not mandated prior to the action being taken. The fact that the communications are about "all of its actions" precludes communications "during" the action; thus leaving the communications to the post-action time period. No change made. Requirement 13 – This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.		
Bonneville Power Administration	No	R5 - should refer to adjacent Transmission Operators. R8 - This daily documentation is burdensome. Reporting "all" SOL's to RC ahead of time as part of daily assessment in addition to the daily planned outage heads-up reporting. Suggest clarifying SOL as intended to be path loading limits and/or local area transmission service support limits, (the BES is a big system with lots of ratings, it can also mean voltage limits in addition to line and path limits). If there is a significant change to a limit, that would be important. R10 - Prefer having the RC call the TOP in 5 Minutes to ensure entity is aware of and acting on a limit excursion , rather than TOP interrupt system response to call RC to tell them the Operator is mitigating a SOL violation which is a already a NERC TOP standard to take immediate action. There's a typo in M12, M13, M14 when it refers to the wrong requirement due to renumbering R11 instead of R12, R12 vs. R13, and R13 vs. R14).
Response: Requirement 5 - The requirement limits the coordination to those Transmission Operators that the former Transmission Operator "knows" are impacted. If a Transmission Operator "knows" it will impact a non-adjacent Transmission Operator, then that fact should be communicated per this requirement. The requirement does not mandate direct communication – it can be handled through third party Transmission Operators – but it must be communicated. No		

Organization	Yes or No	Question 1 Comment
change made. Requirement 8 - The requirement does not specify “daily”. The reference to “significant change to a limit” must be defined by BPA before the SDT can address the comment further. No change made. Requirement 10 - The requirement does define an explicit time. It is the time after an act was taken (“…inform … of its actions…”) and after the limit was exceeded (“…to return…when an IROL …has been exceeded…”). The communication therefore is not mandated prior to the action being taken. The fact that the communications is about all of its actions precludes communications “during” the action; thus leaving the communications to the post action time period. No change made. The SDT did not see a need to be prescriptive about the reporting time. The proper phrase would be “as soon as time permits” but that phrase does not provide the clarity that compliance enforcers desire. No change made. The SDT corrected the typos in the Measures.		
SERC OC Standards Review Group	No	In R2, it appears that an entity might be faced with double jeopardy if it fails to notify the entity issuing the directive. Doesn’t R1 also include this same requirement? In R3, the phrase “affected of actual’ should be “affected by actual”. In R8 and M8, what is the meaning of “local area reliability” and could that mean all SOLs? We believe the team intended to have a definite subset of SOLs. Perhaps the word “supporting’ could be replaced by the phrase “necessary for”. In R12 and R13, it doesn’t seem possible to measure “monitoring”. These also seem like requirements that are ideally suited for the certification process. It appears that the numbering of the requirements within each measure may have gotten out of synch due to a cut and paste insert. In M8, SOLs should be singular. The data retention periods are too long and do not appear to serve the purpose of improving reliability. Specifically, the three (3) year retention period for SOL and IROL violations is two (2) years too long.
Response: Requirements 1 & 2 - Requirement R1 is written to address a priori prohibitions. This would be communicated at the time the actions were first being communicated. Requirement R2 is written to address conditions that arise after the entity agreed to do the action but found out later that conditions preclude such actions. No change made. Requirement 3 - Requirement was revised as requested. **R3.** Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected ~~of~~ by actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis. Requirement 8 - Local area reliability is not a defined term but rather (as stated in the requirement) it is “based on its (the Transmission Operator’s own)		

Organization	Yes or No	Question 1 Comment
assessment." The industry has debated this issue for a long time. This standard is written to ensure BES reliability by defining IROLs and to supporting individual Transmission Operators parochial definitions. The loss of a capital city in a state may have no impact at all on the BES, but politically that city is critical (think Washington, DC). Requirement R8 allows a Transmission Operator to choose whatever parochial definition it desires, including no SOLs as well as all SOLs. However, the standard requires neither any SOL nor every SOL. Such an approach seems to ensure the integrity of the BES (since all IROLS are covered) as well as the local sensitivities of the Transmission Operator (i.e., identified SOLs). No change made. Requirements 12 & 13 – These requirements have been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities. The SDT revised the Measures for the editorial errors as noted.. An entity need only keep the exception cases where actual violations have occurred, which should be a minimal amount of data. No change made.		
Southern Company Transmission	No	Southern's comments: Suggest modifying R3 language for additional clarity. Suggested alternatives might be "Each Transmission Operator shall inform its Reliability Coordinator of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis, and shall likewise inform any other Transmission Operators that are known or expected to be affected by those Emergencies" or "Each Transmission Operator shall inform its Reliability Coordinator and all other expectedly affected Transmission Operators of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis." In the first sentence of M5, the first usage of the word "operations" is redundant and can be struck. In R8, it is unclear what should be the treatment of SOLs that develop due to unanticipated system conditions that are not included in the Operation Planning analysis (i.e., real time system conditions deteriorate due to several unplanned outages). In R11, need to add "...within 30 minutes" after SOL. R14 can be mis-read to mean that the Transmission Operator grants approvals of outages, as opposed to granting the authority to grant approval to the System Operator. Also, it would be useful to clarify if the TOP still has the authority to also veto planned outages, in addition to the System Operator having that authority. M11 - M14 have references to incorrect Requirement numbers. In M8 and M14, the word "its" was incorrectly modified to "it's." SERC's comments: Southern participated in developing these comments and support them In R2, it appears that an entity might be faced with double jeopardy if it fails to notify the entity issuing the directive. Doesn't R1 also include this same requirement?

Organization	Yes or No	Question 1 Comment
		In R3, the phrase “affected of actual’ should be “affected by actual”. In R8 and M8, what is the meaning of “local area reliability” and could that mean all SOLs? We believe the team intended to have a definite subset of SOLs. Perhaps the word “supporting’ could be replaced by the phrase “necessary for”. In R12 and R13, it doesn’t seem possible to measure “monitoring”. These also seem like requirements that are ideally suited for the certification process. It appears that the numbering of the requirements within each measure may have gotten out of synch due to a cut and paste insert. In M8, SOLs should be singular. The data retention periods are too long and do not appear to serve the purpose of improving reliability. Specifically, the three (3) year retention period for SOL and IROL violations is two (2) years too long.

Response: Requirement R3 - In the case of Requirement R3, clarity of the text is difficult. First, the SDT offers what the words were meant to state: A Transmission Operator is mandated to contact its Reliability Coordinator about System conditions that either have caused the Transmission Operator to initiate Emergency procedures, or may cause the Transmission Operator to initiate Emergency procedures. Requirement R3 extends that contact to other Transmission Operators that either were identified in the Operational Planning Analysis (OPA) as being affected or the Transmission Operator knows is being affected. The wording is crafted to eliminate the possibility that an auditor would find the Transmission Operator non-compliant when another Transmission Operator not previously identified in any study or any procedure was affected. The words state that if you ‘know or expect’ impacts on someone than you must contact them to prepare them for the conditions, but if you don’t know or expect an entity to be affected, then the requirement does not apply.

Discussion of alternatives: The known or expected is a modifier to “other Transmission Operators.” The idea was that the Operating Plan would define the expected; the “known’ was to address the fact that a condition could arise that was not expected, but the Transmission Operator now ‘knows’ (from some other means) that another Transmission Operator (not known from the OPA) was affected. This phraseology was meant to capture that situation where a Transmission Operator finds out a fact that is not in its study. The requirement does not excuse the Transmission Operator just because the other Transmission Operator was not in the analysis – if you ‘know’ then you are required to contact them. On the other hand, if another Transmission Operator is impacted but your OPA did not identify that impact and you don’t have any knowledge of the impact, then Requirement R3 does not apply.

Given the above discussion, alternative 2 would not add clarity – since the “known or expected” modifies Emergency. No change made.

Measure M5 – The SDT agrees and has revised the measure accordingly.

> **M5**. Each Transmission Operator shall make available upon request, evidence that ~~operations~~ it ~~coordinated~~ informed other Transmission Operators of its operations known or expected to result in an Adverse Reliability Impact on ~~other~~those respective Transmission Operator Areas ~~with those Transmission Operators~~ in accordance with Requirement R5 unless conditions did not permit such ~~coordination~~ communications. Such evidence could include, but is not limited to, dated operator logs, voice recordings or transcripts of voice recordings, electronic communications, or other equivalent evidence.

Requirement R8 - Requirement R8 is a pre-event reporting requirement. This requirement is strictly focused on what to do with the SOLs that are pre-assigned.

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td colspan="3">The requirement says if a Transmission Operator wants to address an SOL on the same level as an IROL, then it must inform the Reliability Coordinator of which SOLs are to be raised to that level. Thus, exceedances of SOLs that arise and were not identified in the Operational Planning Analysis will not be covered in Requirement R8. No change made.

Requirement R11 – The SDT agrees and has added “within 30 minutes”

R11. Each Transmission Operator shall act or direct others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL’s T_v, or of an SOL identified in Requirement R8 within 30 minutes.

Requirement R14 - This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.

The SDT corrected typos including Measure 8.

M8. Each Transmission Operator shall make available evidence that it has informed it~~'~~s Reliability Coordinator of each SOL~~s~~ which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis in accordance with Requirement R8. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

For SERC comments, see SERC response.</td></tr>
<tr><td>FirstEnergy</td><td>No</td><td>We agree with many of the changes the drafting team made to this standard. However, we have the following comments and suggestions: a. With respect to R7 and R11 in relationship to IROLs, R11 is inherent in R7. If an entity is not permitted to operate outside an IROL limit for longer than its Tv, then it needs to implement whatever actions are required to comply with Tv including directing "others to act, to mitigate both the magnitude and duration of exceeding an IROL within the IROL's Tv."

R9 and R11 have the same issue with respect to SOL's.

M3 is silent on evidence related to the Operational Planning Analysis. Did the drafting team intend for this data to be available for inspection as a means of proving or disproving the affect on a Neighboring Transmission Operator and thereby the need to contact them? If it is the intent of the drafting team to use the Operational Planning Analysis as evidence, then it should be specifically stated in M3. If it is the intent of the drafting team for an entity to be able to prove "conditions did not permit such coordination" then that evidence should be specified in the measures.

b. R11 - We believe that requiring the TOP to mitigate IROLs is outside their scope per the functional model. The RC holds the authority over the tools needed to mitigate an IROL and is the appropriate entity responsible for this requirement. Also, it seems as though this requirement is duplicative of IRO-009-1 R4 which states "When actual system conditions show that there is an instance of exceeding an IROL in its Reliability Coordinator Area, the Reliability Coordinator shall, without delay, act or direct others to act to</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
		mitigate the magnitude and duration of the instance of exceeding that IROL within the IROL's Tv. (Violation Risk Factor: High) (Time Horizon: Real-time Operations)". c. R13 - We suggest the team remove the phrase "within any Transmission Operator Area" from the requirement. We believe this phrase is not necessary and adds confusion. d. R14 - The original SAR charged with addressing Order 693 directive 1660 required the standards to identify the minimum monitoring and analysis capabilities. The new requirement R14 does not fully address these minimum capabilities and will leave the requirement ambiguous from a compliance and enforcement standpoint. We suggest the team fully address the directive and clarify the requirement. e. Measures M10 through M14 make reference to the wrong requirements.
Response: a. The industry has agreed that violations of IROLs must never occur – hence Requirement R7. Requirement R7 is meant as a flat-out prohibition on violating IROLs – the concept being that IROL violations will/may take down the BES. The industry also seems supportive of extending the IROL violation to some (some would even like to extend the prohibition to all) SOLs which the Transmission Operator decides are important at the local level, hence Requirement R9. Requirement R11 is an action requirement that mandates not just avoiding a violation (Requirements R7 & R9) but to reduce any and all exceedances. The SDT interpreted the industry as wanting to prohibit the Transmission Operator not just to stay within the MW and time margins, but also wanted the Transmission Operators to act when any magnitude limit is exceeded no matter how short a time. Requirement R11 mandates that once the magnitude is exceeded, the Transmission Operator must be taking action. Requirements R7 and R9 force the Transmission Operators to be concerned with any and all System conditions that "can" lead to going over the magnitude and duration limit. While not mandating a multiple Contingency standard, these two requirements force Transmission Operators to be sensitive to (i.e., not ignore) conditions that may result in common mode failures that would not occur during normal conditions. No change made. Measure M3 – The requirement is to 'inform' and the SDT believes that the measure correctly states what evidence is needed to prove that an entity 'informed'. No change made. b. The SDT believes that there are situations where the Transmission Operator must take actions or direct others to act over and above those situations where the Reliability Coordinator does same. No change made. c. This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities. d. This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities. e. The SDT has corrected the typos.		
Dominion	No	Agree with changes to most requirements and measures, but with exceptions as noted below: R2 - Is covered in R1. Do not agree with entity being subject to non-compliance for same shortcoming under 2 requirements. We suggest R2 be removed or that R1 and R2 be revised so that the requirement to inform the TOP not be included in both. R13 - Is the sentence meant imply that a TOP should monitor or have access to information/facilities in

Organization	Yes or No	Question 1 Comment
		another TOP Area that could impact its TOP Area? If so, we believe the current draft language should be revised to improve clarity of intent. We suggest revising to read “Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities identified in its Operational Planning Analysis within external Transmission Operator Area(s) as necessary to perform such analysis” M1/M2 - revise measures so that entity is not subject to non-compliance for failure to notify TOP twice, pursuant to changes in R1/R2. M8 - change SOLs to SOL. M13 - revise pursuant to R13.

Response: Requirements R1 & R2 (and Measures M1 & M2) - Requirement R1 is written to address a priori prohibitions. These would be communicated at the time the actions were first being communicated. Requirement R2 is written to address conditions that arise after the entity agreed to do the action but found out later that conditions preclude such actions. No change made.

Requirement R13 – This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.

M8 – The SDT made the indicated revision.

> **M8**. Each Transmission Operator shall make available evidence that it has informed it~~'~~s Reliability Coordinator of each SOL~~s~~ which, while not an IROL, has been identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis in accordance with Requirement R8. Such evidence could include but is not limited to dated operator logs, voice recordings or transcripts of voice recordings, or dated computer printouts.

Organization	Yes or No	Question 1 Comment
Terry Harbour	No	The proposed TOP-001-2 standard is a significant improvement, but there are still important items that need to be addressed including: Comments cannot be developed for this requirement until a final draft of the definition of Reliability Directive is presented as it will have a significant impact on TOP-001-2 and R1. When Reliability directive is defined, the definition of a Reliability Directive is too broad and should be limited to “Abnormal conditions that require operational actions to avoid instability, uncontrolled separation and cascading as defined in Section 215 of the Federal Power Act.” TOP-001-2-R9: SOL’s should not be part of the TOP-001-2 standard as there are not identified timeframes in the NERC standards today. However, if SOL’s must be included, a better subset must be defined excluding thermal limits with any time limits being clearly specified as a return time after the SOL limit was exceeded such as 30 minutes after exceeding the specified SOL limit. An example definition might be non-thermal SOL’s are those facilities limited below their maximum thermal capability as a proxy to maintain BES stability. Many times scheduled transmission outages coupled with weather (drought, wind front, heat wave, etc) and strong market moves can drive unexpected SOL exceedances where units and markets cannot move within

Organization	Yes or No	Question 1 Comment
		30 minutes to redispatch sufficient generation. Coupling SOLs with time frames and penalties will drive unforeseen market impacts. TOP-001-2-R10: It isn't clear when the RC should be informed, before, during, or after actions have been taken to correct an overload. Depending upon the urgency of the situation, it might not be important to notify the RC, therefore the requirement should be changed to the TOP should record actions taken for future review. For TOP-001-2-R6 replace "coordinate" with "notify the RC and negatively impacted adjacent interconnected NERC registered entities of " For TOP-001-2-R3, the words "and anticipated" needs to be dropped as an unmeasurable requirement. In TOP-001-2-R2 and R4, "expected to be affected" would include known. We asked the SDT to please strike known. The VSLs for R7 appear to assume that the sample set of SOLs that would be reported to the RC is a small number by using one, two, three and four in each successive VSL. What if the sample set is large (i.e. 1000 SOLs)? Should the VSLs be based on percentages? The measures for TOP-001-2-R5 and R8 need to be clear that these are event driven requirements and evidence is only required if an "event" has occurred. In R6, the word "telemetering" should be capitalized as it is a defined term in the NERC Glossary. The terms "control equipment" and "associated communications channels" are not defined in the glossary at all. Recommend modifying the wording to ensure consistency between standards. R14 uses the term "monitoring and analysis capabilities". This term is not defined in the NERC Glossary. R13 implies that a TO's Operational Planning Analyses should be monitoring facilities external to its own operating area when they have no control or responsibility for said facilities. It is not a TO's responsibility to monitor regional system conditions; therefore this requirement should be removed. FERC Order 693, paragraphs 1660 and 1661 do not specifically mention any of the verbiage in requirements R12, R13, & R14; therefore the preceding statement should be considered.

Response: "Reliability Directive" is not meant to equate to urgency of a situation; rather it is meant to equate to the authority placed on a particular action. An urgent situation can be handled without using a NERC Reliability Directive. However, an entity that is not following a Transmission Operator's request or is debating the request can be "made to" to cut off debate and respond as requested by the simple act of the Transmission Operator identifying the request as a Reliability Directive. The requirement views Reliability Directive as a tool, not as a definition of a condition. The use of the Reliability Directive tool is left to the System Operator. The exact words needed to effect a Reliability Directive are viewed as an administrative detail not needed in the requirement. To mandate the

Organization	Yes or No	Question 1 Comment

phraseology would raise the text to the same level as an act to relieve the condition itself. No change made.

Requirement R9 - The 30 minute limit is generally recognized as a time related to the risk of a second event occurring, thus 30 minutes is the maximum time. That does not preclude an operator from choosing a shorter duration (lesser restriction – e.g., higher MW) limit and using a shorter duration. No change made.

Requirement R10 - The requirement does define an explicit time. It is the time after an act was taken ("…inform … of its actions…") and after the limit was exceeded ("…to return…when an IROL …has been exceeded…" The communication therefore is not mandated prior to the action being taken. The fact that the communication is about all of its actions precludes communication "during" the action; thus leaving the communications to the post-action time period. The SDT did not see a need to be prescriptive about the reporting time. The proper phrase would be "as soon as time permits," but that phrase does not provide the clarity that compliance enforcer's desire. No change made.

Requirement R6 – The SDT agrees and has revised the wording accordingly.

> **R6**. Each Transmission Operator, Balancing Authority, and Generator Operator shall ~~coordinate~~ notify the Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of ~~telemetering~~ telemetry, ~~and~~ control equipment and associated communication channels between the affected entities.

Requirement R3 - From a compliance auditor's perspective, the auditor is constrained to depend on the Transmission Operator on whether or not an Emergency is "anticipated". The rationale for the language was to put the Transmission Operator on alert that even the expectation of an Emergency is enough to trigger communications.

Requirement R2 & R4 - Without the phrase "expected to be affected," the requirement would only apply in the case of actual Emergencies (which may be too late to make use of all available options). A real Emergency that is known to impact Transmission Operator X may not necessarily have been shown by the OPA to affect Transmission Operator X. This requirement is written in a way that it does not excuse a Transmission Operator that runs an OPA that has no problems, from its obligation to contact others that it knows are de facto affected. No change made.

Requirement R7 - The issue of percentages was discussed and was evaluated not to be strong enough for this situation. One violation is unacceptable. More than 4 violations of a requirement that addresses BES so directly cannot be mitigated by percentages. No matter how big or how small a Transmission Operator is, non-compliance with this requirement cannot be justified. No change made.

Requirements R5 & 8 – The SDT believes that the wording is correct as stated. No change made.

Requirement R6 – The SDT has changed the wording for clarity.

Requirement R14 - This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.

Requirement R13 – This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.

Requirements R12 & R13 - These requirements have been deleted from this project as they have been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.

Organization	Yes or No	Question 1 Comment
MRO's NERC Standards Review Subcommittee	No	The proposed TOP-001-2 standard is a significant improvement, but there are still important items that need to be addressed including: Comments cannot be developed for this requirement until a final draft of the definition of Reliability Directive is presented as it will have a significant impact on TOP-001-2 and R1. When Reliability directive is defined, the definition of a Reliability Directive is too broad and should be limited to "Abnormal conditions that require operational actions to avoid instability, uncontrolled separation and cascading as defined in Section 215 of the Federal Power Act." TOP-001-2-R9: SOL's should not be part of the TOP-001-2 standard as there are not identified timeframes in the NERC standards today. However, if SOL's must be included, a better subset must be defined excluding thermal limits with any time limits being clearly specified as a return time after the SOL limit was exceeded such as 30 minutes after exceeding the specified SOL limit. Requirement R6 – The SDT has changed the wording for clarity. Requirement R14 - This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities. Requirement R13 – This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities. Requirements R12 & R13 - These requirements have been deleted from this project as they have been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.		
PJM	No	There are several issues with Requirement 6: o The requirement assigns responsibility to 3 entities for one task. NERC standards are designed to clearly assign responsibility to provide a clear measurement and allocation of non-compliance. R 6 as worded requires “coordination” between and among each entity. • Coordination is not defined. Does coordination mean “informing” another party? Does it mean “directing a new solution”? Does it mean “asking permission” of a third party? Who is non-compliant when two (or more) parties do not agree with a proposed solution? How many alternatives proposals must be considered? Suggest the requirement be rewritten as a series of independent requirements with sub-bullets to identify specific tasks. Example: Each TOP shall inform all affected reliability entities of planned outages of active real-time communications channels: o Interpersonal channels • Data exchange channels for any BES elements or elements involved in identified IROL computations • Asset direct-control devices (reactive control equipment,...) Each TOP shall inform all affected parties of alternative means to be used for the duration of the proposed outage. Each BA shall inform all affected reliability entities of planned outages of active real-time communications channels: o Interpersonal channels o Data exchange channels for any BES elements or elements involved in identified IROL computations o Asset direct-control devices (regulation control signals; resource dispatch equipment,...)Each GOP shall inform all affected reliability entities of planned outages of active real-time communications channels: o Interpersonal channels o Data exchange channels for any BES elements or elements involved in identified IROL computations o Asset direct-control devices Each reliability entity inform by the TOP in Rx.x, (or by the BA in Ry.y or by the

Organization	Yes or No	Question 1 Comment
		GOP in Rz.z) shall acknowledge the receipt of the information provided in Rx.x (or in Ry.y or Rz.z) to the respective TOP (BA or GOP). Requirement #13Delete the phrase "...within ANY Transmission Operator Area". The phrase has the potential to add confusion rather than clarity to the requirement.
Response: Requirement R6 – The SDT has modified the requirement to address your concern. **R6**. Each Transmission Operator, Balancing Authority, and Generator Operator shall ~~coordinate~~ notify the Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of ~~telemetering~~ telemetry, ~~and~~ control equipment and associated communication channels between the affected entities. Requirement R13 - This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.		
IRC Standards Review Committee	No	Requirement #1 Comments cannot be developed for this requirement until we are able to see a final draft of the definition of Reliability Directive. It will have a significant impact on this requirement. Requirement #9 A 30-minute time limit has been identified in Requirement 9, but that may be an inappropriate time based upon the variability that exists with actual system operating limits. In the case of thermal limits, some may be 15 minutes others may be 4 hours for different facilities. The same facility may have a 4 hour loading limit, and a 2 hour limit at a higher magnitude, as well as, perhaps, a 30 minute limit at a higher magnitude yet. If the limits were allowed to only be set at 30 minutes, how are longer limits incorporated? Of course it is imprudent to operate a facility at the magnitude corresponding to a four hour limit for greater than four hours. But how is that limit identified and communicated if the System Operating Limit must be mitigated within 30 minutes? Any such operating parameter will be recognized as an SOL, then requiring a 30 minute limit if Requirement 9 is left as is. Requirement 8 mandates that limits be set to support local area reliability. Operating a facility for five hours at its four hour limit is contrary to that requirement. Transmission Operators need SOLs to be described and communicated in terms of both magnitude and associated time, but that time need not be limited to 30 minutes. The duration and magnitude of the SOL should be set by the Transmission Owners or Operators based upon respecting the facility and equipment ratings as required by the FAC standards. Requirement 9 would better serve reliability to require SOLs (which are identified in Requirement 8) to be described in specific terms of both magnitude and associated time. If needed, a fallback position could be maintained that establishes 30 minutes as the default time limit if no other limit is specifically defined in the SOL.

Organization	Yes or No	Question 1 Comment
		Requirement #13 It is not clear what TOP area needs to be monitored. Language needs to be added to clearly state that a TOP should have access to information on other TOP areas that could impact his local area.
Response: **“**Reliability Directive” is not meant to equate to urgency of a situation; rather, it is meant to equate to the authority placed on a particular action. An urgent situation can be handled without using a NERC Reliability Directive. However, an entity that is not following a Transmission Operator’s request or is debating the request can be “made to” to cut off debate and respond as requested by the simple act of the Transmission Operator identifying the request as a Reliability Directive. The requirement views Reliability Directive as a tool not as a definition of a condition. The use of the Reliability Directive tool is left to the System Operator. The exact words needed to effect a Reliability Directive are viewed as an administrative detail not needed in the requirement. To mandate the phraseology would raise the text to the same level as an act to relieve the condition itself. No change made. Requirements R8 & 9 - The issue posed by the IRC seems to be more academic than real. Requirement R8 does not mandate that any SOL be defined. Requirement R8 only requires that a Transmission Operator tell its Reliability Coordinator of those SOLs that the Transmission Operator has decided it wants the Reliability Coordinator to treat in the same fashion as the Reliability Coordinator would treat IROLs. IRC is using its definition for SOL not the Requirement R8 definition. Requirement R8 defines SOL as a limit that the Transmission Operator itself has designated for monitoring and control by the Reliability Coordinator. Every operating limit does not automatically come under that requirement. However, if a Transmission Operator wants every operating limit to be addressed by the Reliability Coordinator in the same way that the Reliability Coordinator addresses IROLs, then that is allowed under this requirement. If the Transmission Operator wants none of its operating limits handled like an IROL, that too is allowed under the requirement. The Transmission Operator requirements protect the BES under the IROL requirements; these non-IROL limits are optional. NERC has used a 30-minute time frame for several Contingency-related standards based on a review that showed the risk of a second Contingency is greatly increased after 30 minutes. While a 4-hour rating may be used, if a single Contingency were to occur, there would be no problem, but a second Contingency would be a problem. While the requirement does not mandate reserves for multiple Contingencies, the requirement does impose a time frame of 30 minutes. There is no one SOL for a Facility. Each Facility has an infinite number of magnitude vs. duration curves. No change made. Requirement R13 - This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.		
L Zotter, S Solis, C Frosch, JC Culberson, S Myers, S Jue, M Morais, C Thompson	No	R1 - ERCOT ISO does not agree with the addition of the word ‘identified’ because it implies each Reliability Directive needs to be preceded with an additional statement like “the following is a Reliability Directive”. In a true emergency, clear concise communication and an understanding of what action is required to mitigate the situation is necessary. The addition of another sentence before each required action delays communication. ERCOT ISO thinks a Reliability Directive should not have to be declared as such, prior to issuance. Compliance should not be measured by whether the System Operator remembered to state “this is a Reliability Directive”, but should be measured by whether the Reliability Directive was properly issued and three-part communication was utilized. NOTE: Requirements 1 and 2 are dependent upon the approval of the term Reliability Directive, which is being proposed by Project 2006-06 Reliability Coordination.

Organization	Yes or No	Question 1 Comment
		R2 - Add Operations Planning to the Time Horizon because R1 includes Operations Planning in the Time Horizon. R1 and R2 occur in the same Time Horizons, since R1 requires an entity to comply to a Reliability Directive issued by a TOP and R2 requires an entity who cannot comply to notify the issuing TOP.NOTE: Requirements 1 and 2 are dependent upon the approval of the term Reliability Directive, which is being proposed by Project 2006-06 Reliability Coordination. R9 VSL - The TOP, when notifying the RC, should identify the appropriate Tv. The associated VSL should be high and not severe and should only be severe when multiple instances occur.
Response: Reliability Directive is not meant to equate to urgency of a situation; rather, it is meant to equate to the authority placed on a particular action. An urgent situation can be handled without using a NERC Reliability Directive. However, an entity that is not following a Transmission Operator's request or is debating the request can be "made to" to cut off debate and respond as requested by the simple act of the Transmission Operator identifying the request as a Reliability Directive. The requirement views Reliability Directive as a tool, not as a definition of a condition. The use of the Reliability Directive tool is left to the System Operator. The exact words needed to effect a Reliability Directive are viewed as an administrative detail not needed in the requirement. To mandate the phraseology would raise the text to the same level as an act to relieve the condition itself. Communications between registered entities occur almost continuously. Within those communications are instructions from Reliability Coordinators and Transmission Operators. Those instructions are expected to be followed at all times. However, there are times when people question instructions. At those times, the recipient of an instruction that is identified as a Reliability Directive needs a clear understanding that it is a Reliability Directive. The requirement is consistent with the ERCOT position that added words should not be mandated; the difference is that the ERCOT proposal would mandate the repeating of actions, whereas the requirement does not. No change made.. Requirement R2 – The SDT has added the time horizon as requested. **R2**. Each Balancing Authority, Distribution Provider, Load-Serving Entity, and Generator Operator shall inform its Transmission Operator upon recognition of its inability to perform an identified Reliability Directive issued by that Transmission Operator. *[Violation Risk Factor: High] [Time Horizon: Operations Planning, Same Day Operations, Real-time Operations]* Requirement R9 – If a VSL is binary, and the SDT believes that this VSL should be binary, it must be Severe. No change made.		
Joylyn Faust	No	R2 is ambiguous, must a BA inform it's TO of an inability to perform a directive after the directive has been issued or at anytime its systems are down and it has temporarily lost its ability to perform some function. R12-14 appear to provide the TO with omnipotent information rights which may include the ability to create monitoring requirements of other entities and control over maintenance schedules of other entities telemetry and associated facilities. Furthermore reciprocal data rights are not provided.
Response: Requirement 2 - R2 is an after-the-request requirement. If, after being given a Reliability Directive, the entity finds out that its equipment cannot perform as expected, Requirement R2 mandates the entity tell the Reliability Coordinator so that the Reliability Coordinator may make other arrangements. If the		

Organization	Yes or No	Question 1 Comment
system were down, then other NERC requirements mandate that such conditions be communicated. This requirement is just designed for states when the entity expects to be able to do something but finds out that it cannot. No change made. Requirements 12-13 - These requirements have been deleted from this project as they have been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.		
Jonathan Appelbaum	No	“Operational Planning Analysis” is not a defined term in the NERC Glossary and a proposed definition is not included in the Draft Standard. TOP-001 and TOP-002 have capitalized the term indicating a definition. TOP-002 information box says “by definition Operational Planning Analysis includes Contingency Analysis.” TOP-001 R12 and R13 were added in this posting to address Order 693 paragraph 1660 and 1661 direction to include the minimum capabilities that are necessary to enable operators to deal with real-time situations and to ensure reliable operation of the Bulk-Power System. The drafting team utilizes the phrase “shall monitor, or shall have access to information about, conditions and Facilities...” By offering an alternative to “monitor” the drafting team is implying there is a difference between “monitor” and “having access to information”. UI suggests retaining “monitor” and removing “access to information about” because the TOP needs the minimum capability of monitoring the Facilities in its area to perform its reliability functions.
Response: Operational Planning Analysis is in the Glossary. No change made. Requirements 12 and 13 have been deleted from this project as they have been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.		
Jon Kapitz	No	R3. Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected of actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis. Xcel Energy has concerns about the use of the term “affected”. This can be widely interpreted by the entity and compliance enforcement authority. We suggest that language limit the entity’s obligation to Adjacent entities and the Reliability Coordinator. The RC should be held responsible for making this assessment from a regional perspective and make notifications to other entities as it is required to or deems necessary. R13. Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities identified in its Operational Planning Analysis within any Transmission Operator Area. Xcel Energy has concerns as to whether this requirement indicates that a TOP must have monitoring capability for other TOP areas. This requirement should encompass only a TOP’s own area. R14. Each Transmission Operator shall provide approval rights for planned maintenance of its monitoring and analysis capabilities to its System Operators. Xcel Energy believes this requirement should be worded so that it covers only monitoring capabilities for its own area, and items that it is in control of. (e.g. not feeds from other entities that input into a TOPs own monitoring capability)

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td></td><td></td><td>M11 through M14 list incorrect associated requirements. This appears to be a mapping issue.</td></tr>
<tr><td colspan="3">Response: <u>Requirement 3</u> - The SDT respects the sensitivity of regarding the term “affected.” The SDT perspective was to avoid the possibility that any and every ‘affect’ in Real-time would come under this requirement, and inserted the phrase “… expects to be affected…” This would mean that if the Transmission Operator “expected” to affect another entity, then Requirement R3 would require the Transmission Operator to communicate that expectation. However, if the Transmission Operator did not expect to impact a third-party, then there would be no obligation. As written, the requirement provides a common sense approach. To be found non-compliant, an auditor would have to show evidence that the Transmission Operator knew that there would be an impact and knowingly did not inform the impacted entity. This would require an auditor to peruse data and make a case. It is possible to show non-compliance, but it will be the auditor’s responsibility to prove that fact, as opposed to the Transmission Operator being subject to proving that. While the Reliability Coordinator is responsible for ensuring that every entity knows its role, this requirement recognizes that the Transmission Operator can have a role in analyses and information that may not be analyzed in the detail that the Transmission Operator can provide. No change made.

<u>Requirement 13</u> – This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.

<u>Requirement R14</u> – This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities.

The SDT has corrected the typos in the measures.</td></tr>
<tr><td>Howard Rulf</td><td>No</td><td>R7: What does it mean to be “outside” an IROL? Vague.

R8: Since any SOL is to “ensure operation within acceptable reliability criteria” this requirement requires that the TOP inform the RC of all SOLs. How can the Time Horizon be Real-Time Operations? Operational Planning Analysis is done at least day ahead?

R9: What does it mean to be “outside” an SOL? Vague.

R10: How do I correlate “within limits” to “inside/outside”?</td></tr>
<tr><td colspan="3">Response: <u>Requirements 7, 9, & 10 - </u>The term “outside” was used to recognize that there are both upper and lower limits. No change made.

<u>Requirement 8 – Requirement </u>R8 is an a priori requirement. All it is meant to say is “if a Transmission Operator wants its Reliability Coordinator to observe a given non-IROL limit in the same way as the Reliability Directive observes IROLs, then the Transmission Operator must tell that Reliability Coordinator which limits are in that category. This must be done ahead of time. It can be done in the OPA or in the Long-term planning horizon or any other advanced time – it cannot be done in Real-time (where Real-time is defined as ‘this instant’) or after-the-fact. No change made.</td></tr>
<tr><td>RoLynda Shumpert</td><td>No</td><td>In R3 the language should be "...be affected by actual..." and not "...be affected of actual..."

Measures M10-M14 are off by 1 in pointing back to their respective requirements (i.e. M10 is pointing back to</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
		R9, etc). It appears that there are a number of instances in the Implementation Plan where the 'Resolution' points to the incorrect requirement in the proposed standard. Many times it is off by 1 requirement.
Response: Requirement 3 – The SDT has revised Requirement R3 to address your comment and those of others. **R3.** Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected ~~of~~ by actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis. The SDT has corrected the typos.		
Greg Rowland	No	What does the drafting team mean by "its inability" in R2 to perform a Reliability Directive? There clearly needs to be a distinct difference between the reasons in R1 and "inability" in R2. Duke wants to eliminate the possibility of double jeopardy for an entity to be assessed a possible violation for non-compliance to one action with it stated similarly in two requirements. R3 typo - change the word "of" to "by". R8 - the phrase "supporting its local area reliability" is unclear. Replace it with the phrase "having an Adverse Reliability Impact". This adds clarity and also recognizes that local area problems that don't rise to the level of Adverse Reliability Impact should not be treated as SOLs required to be reported to the RC under this standard. R9 - insert the phrase "as having an Adverse Reliability Impact" after the phrase "Requirement R8", making R9 consistent with R8. R13 - strike the phrase "shall monitor, or". The TOP doesn't need to directly monitor facilities in other TOP areas. M1 - strike the word "either" and replace the phrase "or, (b) informed the Transmission Operator that" with the word "unless". This makes M1 consistent with the R1 revision above. M3 typo - replace the word "of" with the word "by". M5 typo - the word "operations" appears twice. Need to strike the first one. M8 - replace the phrase "supporting its local area reliability" with the phrase "having an Adverse Reliability Impact", consistent with the R8 revision above. M13 - strike the phrase "can monitor, or" consistent with the R13 revision above. R1 VSL - replace the phrase "and the respective entity did not inform the Transmission Operator that such

Organization	Yes or No	Question 1 Comment
		action would" with the phrase "and compliance with the Reliability Directive would not", consistent with the R1 revision above. VSLs for R3, R5, R6 and R8 - The mixing of numbers with percentages and the phrase "whichever is less" in these VSLs is confusing. For example, if under R5 there are four affected entities, and the TOP does not coordinate operations with one of the four, then that is one entity, or 25% of the total. What does "whichever is less" mean? Is that a Lower or Severe violation? Conversely, if there is only one affected entity and the TOP does not coordinate operations with that entity, then that is one entity or 100% of the total. Is that a Lower or Severe violation? R8 VSLs - In each VSL, replace the phrase "supporting its local area reliability" with the phrase "having an Adverse Reliability Impact, consistent with the R8 revision above. R13 VSL - Strike the phrase "monitor, or", consistent with the R13 revision above.

Response: Requirements 1 & 2 - Requirement R1 is written to address a priori prohibitions. These would be communicated at the time the actions were first being communicated. Requirement R2 is written to address conditions that arise after the entity agreed to do the action, but found out later that conditions preclude such actions. No change made.

Requirement 3 – The SDT revised the requirement to address your comment.

> **R3.** Each Transmission Operator shall inform its Reliability Coordinator and all other Transmission Operators that are known or expected to be affected ~~of~~ by actual and anticipated Emergencies based on its assessment of its Operational Planning Analysis.

Requirement 8 - Local area reliability is not a defined term but rather (as stated in the requirement) it is "based on its (the Transmission Operator's own) assessment." The industry has debated this issue for a long time. This standard is written to ensure BES reliability by defining IROLs and by supporting individual Transmission Operators parochial definitions. The loss of a capital city in a state may have no impact at all on the BES, but publicly that city is critical (think Washington, DC). Requirement R8 allows a Transmission Operator to choose whatever parochial definition it desires, including no SOLs as well as all SOLs. However, the standard requires neither any SOL nor every SOL. Such an approach seems to ensure the integrity of the BES (since all IROLS are covered) as well as the local sensitivities of the Transmission Operator (i.e., identified SOLs). Given that the requirement is for local concerns that could mean that the limit is not necessary for local reliability but rather "supports" local reliability. No change made.

Requirement 9 - An SOL that has adverse reliability impacts is, by definition, an IROL. Requirement R8 says that if it isn't an IROL and you want the limit to be controlled in the same way as an IROL, then tell the Reliability Coordinator which limits you want. [Note what all this means –when running its planning and or operating analysis, the Reliability Coordinator does not find the said limit as causing any BES problems – thus the Reliability Coordinator is not concerned with the said limit. The Transmission Operator however, wants, or is required by some other authority, to treat the said limit as if that limit had BES implications. Such information must be conveyed by the Transmission Operator to the Reliability Coordinator.] Thus, inserting the proposed text will not accomplish the intent of the requirement. No change made.

Requirement 13 – This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis

Organization	Yes or No	Question 1 Comment
Capabilities. The SDT reviewed the typos and made the changes where deemed appropriate. The mixing of numbers and percentages is standard for VSLs. It is designed to allow for size differences in applicable functional entities. 'Whichever is less' means simply that you use the option that is less numerically. No change made.		
Michael Lombardi	No	Both Requirements R12 and R13 are considered vague and open to interpretation. For example, what type of information is to be monitored and what is meant by conditions? Language needs to be added to clearly state what a TOP needs to accomplish pursuant with these requirements. Various Measures appear to have incorrect Requirement references. For example, the text of Measure M14 refers to Requirement R13. Please verify / correct the Requirement references for all Measures. The term "Operational Planning Analysis", is capitalized to identify it as a defined term yet the NERC Glossary of Terms (updated 4/20/2010) indicates that the term has not been FERC approved. NU is concerned that the terms Operational Planning and Operational Planning Analysis are not FERC approved and may not be consistently applied throughout the industry. Suggest these terms be reviewed as part of this standard to ensure industry consensus on these terms and subsequently seek FERC approval, as required.
Response: Requirements 12-13 - These requirements have been deleted from this project as they have been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities. The SDT has corrected the typos. Operational Planning Analysis is contained in the NERC Glossary. Once it is approved by the BOT, the SDT is required to use the term. No change made.		
Richard Kafka	No	R6 requires coordination which leads to questions regarding who is non-compliant. It would be more proper to require reporting and approval requirements. RCs already are required to coordinate with each other. R9 sets a 30 minute limit on all identified SOLs (as opposed to allowing different times). This would require all facilities to have the same time limits for ratings. That should be addressed in FAC-008.
Response: The SDT has revised Requirement R6 to address your concerns. **R6**. Each Transmission Operator, Balancing Authority, and Generator Operator shall ~~coordinate~~ notify the Reliability Coordinator and negatively impacted interconnected NERC registered entities of planned outages of ~~telemetering~~ telemetry, ~~and~~ control equipment and associated communication channels between the affected entities. NERC has used a 30-minute time frame for several Contingency-related standards based on a review that showed the risk of a second Contingency is greatly increased after 30 minutes. While a 4-hour rating may be being used, if a single Contingency were to occur, there would be no problem, but a second		

Organization	Yes or No	Question 1 Comment
Contingency would be a problem. While the requirement does not mandate reserves for multiple Contingencies, the requirement does impose a time frame of 30 minutes. There is no one SOL for a Facility. Each Facility has an infinite number of magnitudes vs. duration curves. No change made.		
Saurabh Saksena	No	R13 states that - Each Transmission Operator shall monitor, or shall have access to information about, conditions and Facilities identified in its Operational Planning Analysis within any Transmission Operator Area. What does "Facilities" in R13 refer to? Is it any facilities that are included in the analysis or those that have the potential to cause violations? Suggest replacing "...Facilities identified in its Operational Planning Analysis" by text in R8 - "...identified by the Transmission Operator as supporting its local area reliability based on its assessment of its Operational Planning Analysis." TOP-001 R13 also says "...within any Transmission Operator Area..." Does the drafting team mean within that particular TOP's area? It would be clearer if it said "...within its area..." If they really do mean another TOP's area, that is unrealistic. It could imply that we need to have info for TOP in Florida. TOP-001 R8 & TOP-002 R2 - When referencing SOLs both say something like "SOLs which, while not IROLs, have been identified by the Transmission Operator as supporting its local area reliability..." National Grid suggests deleting "...which, while not IROLs..."
Response: Requirement 13 – This requirement has been deleted from this project as it has been re-assigned to Project 2009-02 Real-time Monitoring and Analysis Capabilities. Requirement 8 - The wording "while not IROLs" was inserted to make clear that not all limits have adverse reliability impacts, but that some limits that do not have reliability impacts can still be held to a higher standard of operations - as long as those limits are identified. An SOL that has adverse reliability impacts is by definition an IROL. Requirement R8 says that if it isn't an IROL and you want the limit to be controlled in the same way as an IROL, then tell the Reliability Coordinator which limits you want. [Note what all this means –when running its planning and/or operating analysis, the Reliability Coordinator does not find the said limit as causing any BES problems – thus the Reliability Coordinator is not concerned with the said limit. The Transmission Operator however, wants, or is required by some other authority, to treat the said limit as if that limit had BES implications. Such information must be conveyed by the Transmission Operator to the Reliability Coordinator.] Thus, inserting the proposed text will not accomplish the intent of the requirement. No change made.		
Catherine Koch	No	R1 - The addition of the term "identified" does not completely answer the question of who needs to identify the communication as a Reliability Directive. Simply adding the term means that it might be interpreted to mean that that the entity receiving a communication from a Transmission Operator might need to identify the communication as a Reliability Directive from its content and context. The following formulation is more clear: "Each Balancing Authority ... shall comply with each Reliability Directive that its Transmission Operator issues and identifies as a Reliability Directive ..." Given the importance of these requirements, clarity must not be sacrificed for brevity. R8 - The use of the phrase "have been identified" is unnecessary in this requirement. The Transmission

<table>
<tr><th>Organization</th><th>Yes or No</th><th>Question 1 Comment</th></tr>
<tr><td></td><td></td><td>Operator has an independent obligation to identify these SOLs under the FAC standards. In addition, the phrase “its local area reliability” is ambiguous. If the intent of this term is to address a certain set of SOLs that have more than a purely local effect, then the phrase should be modified to something like “regional reliability” or “that may affect its neighboring Transmission Operator Areas”. The requirement should read “Each Transmission Operator shall inform its Reliability Coordinator of all SOLs that, while not IROLs, support regional reliability based on its assessment of its Operational Planning Analysis” or “Each Transmission Operator shall inform its Reliability Coordinator of all SOLs that, while not IROLs, that may affect its neighboring Transmission Operator Areas based on its assessment of its Operational Planning Analysis.”

M1 - To be consistent with the recommended revisions to R1, the measurement should be revised to read “Each Balancing Authority ... (a) complied with each Reliability Directive that its Transmission Operator issued and identified as a Reliability Directive, ...". Additionally we suggest that the measures provide guidance of how to prove a Reliability Directive was not issued in order to be complete in demonstrating compliance with the requirement. This same suggestion rings through all the measures.M2 - This measurement duplicates a portion of M1.</td></tr>
<tr><td colspan="3">Response: <u>Requirement 1 & Measure M1–</u> The SDT does not agree that the suggested change adds any clarity. No change made.

<u>Requirement 8 -</u> Technically you are correct that the phrase is not needed. However, in this transitional period when a term is being parsed in a special way, the added words are seen (in this case) to be helpful. The words were crafted to mean “local issues.” An outage affecting the White House would not be an impact on the BES but “locally” it would be unacceptable; thus a limit that impacted the White House would be identified by the DC Transmission Operator to the Reliability Coordinator as a special case SOL that must be respected in the same way an IROL is handled. Thus Requirement R8 does mean local and does not refer to impact on others. Note inter-area impacts would be more likely identified by the Reliability Coordinator than the Transmission Operator since the Reliability Coordinator has more intelligence on surrounding areas. No change made.</td></tr>
<tr><td>Jason Shaver</td><td>No</td><td>Requirements #1 & 2

ATC supports Requirements 1 and 2 if the definition of Reliability Directive, as provided in TOP-001-2, is not modified. Any change to the proposed definition of Reliability Directive will require us to reevaluate our position.

Requirement #3

Issue 1: ATC is concerned with the wording of Requirement 3 because it blends real time Emergencies situations with issues or concerns that are identified in Operational Planning Analysis for next day, week, month or year. Definitions: “Emergency” and “Operational Planning Analysis”: Emergency: “Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the BES” Operational Planning Analysis: “An analysis of the expected system condition for the next day’s</td></tr>
</table>

Organization	Yes or No	Question 1 Comment
		operation. (That analysis may be performed either a day ahead or as much as 12 months ahead.) Expected system conditions include things such as load forecast(s), generation output levels, and known system constraints (transmission facility outages, generation outages, equipment limitations, etc.).” If an Emergency by definition requires automatic or immediate manual action then there would be few if ever a situation in which a next day study would require either automatic or immediate manual action. What reliability objective is the SDT attempting to achieve when combining these two distinct situations into one requirement? Because of this observation ATC believes that the language about anticipated Emergency and Operational Planning Analysis should be deleted. If the SDT does not believe that these deletions are necessary then we request that the SDT provide additional clarify for the phrase “anticipated Emergency”. Supporting TOP Standard:TOP-002-3 addresses the need for a TOP to perform an Operational Planning Analysis and when appropriate to develop a plan based on those results. That plan must be communication to Registered Entities that have to perform an action. *(See ATC’s Comments to TOP-002)* Because TOP addresses next day studies we believe that there is no need for this requirement to also cover Operational Planning Analysis. Clarifying questions: Does the Operational Planning Analysis have to be performed by the TOP itself? (Situation: Currently MISO does a next day study for its footprint. Could that qualify as an Operations Planning Analysis being performed, or does each TOP have to perform its own next day study.) Requirement 3: “... based on its assessment of its Operational Planning Analysis. ”Issue 2: When is notification required to take place? ATC believes that the primary responsibility of the system operator is to address the actual (real-time) Emergency and then when appropriate follow up with the RC and other TOP’s. The only exception is when the TOP has to issue a Reliability Directive which would be issued in response to the situation. Requirement 5: ATC believes that the second sentence should be deleted because all it is attempting to do is provide examples. The first sentence provides enough clarity, so that the second sentence is not needed and may result in more confusion. Requirement 6: Issue 1: Who qualifies as an “affected entity”? If the entity is not registered with NERC how can NERC verify that coordination took place? Does this mean that a TOP, BA and GOP would have to contact customers if the planned outage could affect them? How affected does an entity have to be in order to trigger coordination? Measure 6 states that the TOP, BA and GOP must coordinated “among impacted reliability entities” but there does not exist a definition of “reliability entities”. This standard should clearly set the expectations as to who does the TOP, BA and GOP have to coordinate with and not

Organization	Yes or No	Question 1 Comment
		make the requirement so broad to allow questions about who was involved in the coordination. Issue 2: It is not clear as to when a planned outage of telemetering and control equipment and associated communication channels has to be coordinated. Requirement 7: ATC believes that the term “outside” is not clear and that the SDT should either define the term or use a more appropriate term. Suggested Modification: Modification to R7: “Each TOP shall not “exceed” an identified IROL...” Requirement 8: ATC raised a question on Requirement 3 asking if each TOP has to perform its own Operations Planning Analysis. Based on the answer to that question this requirement may need to be deleted. If an Operations Planning Analysis can be performed by the RC then there would be no need for the TOP to contact the RC about the results of their own study. We believe that Requirement 2 of TOP-002-3 covers Operational Planning Analysis so there is no need to have a duplicate requirement.ATC is unclear as to what this requirement is attempting to achieve. Is this requirement simply saying that the TOP has to share their system operating limits with the RC? If that is the case we believe that the requirement should be rewritten to provide that specific clarity. Suggested Modification: The TOP shall inform the RC of all BES System Operating Limits (SOLs) that support local area reliability. Requirement 9: Issue 1: The proposed requirement is too restrictive because it prevents the TOP from applying loss of life assumption on its equipment. We believe that entities should be able to determine when exceeding equipment limits is appropriate based on the situation and equipment. Suggested Modification:- The TOP may exceed (real-time) a SOL for a continuous duration of 30 minutes. In addition we believe that the TOP should be allowed to use the IROL Tv concept to allow an SOL to be exceeded for a continuous duration of greater than 30 minutes if they notify the RC of the longer SOL Tv. Requirement 10: It is not clear as to when the notifications must take place. Would notifying the RC following the exceedance of the IROL or SOL be okay, or, must the TOP contact the RC prior to taking action in order to be compliant with this requirement? Requirement 12:

Organization	Yes or No	Question 1 Comment
		ATC believes that this requirement is unnecessary because it is only saying that a TOP has to know what is going on with its system. In order to be compliant with the other requirements in this standard a TOP understands that by default they must monitor as appropriate its system. The challenge this requirement introduces is that it is so broad that demonstration of compliance is overly burdensome. In addition this requirement is unclear as to what and how often the TOP has to monitor, or have access to information to demonstrate compliance. Questions: • If a TOP has a 4 second scan rate for EMS data and if a single data scan is missed or an error occurs at a single point does this mean that the TOP is non-compliant? • If an entity uses information on a RC website about planned outages and for some time that system is unavailable for any length of time will the TOP be non-compliant because they don't have access to information? • What does the requirement mean by the phrase "conditions and Facilities"? • Does this mean that the ROP has to monitor breaker statues, switch statues, transformer temperatures, wind conditions and ambient temperatures? • Proposed suggestion: ATC believes that this requirement should be deleted. Requirement 13: This requirement will reduce reliability because it will force TOP's to use the smallest base case model to perform its Operational Planning Analysis. We believe our statement is accurate because it requires the TOP to have an EMS model that matches the Operational Planning Analysis model. So if an entity performs off-line studies (non EMS studies) that use the Eastern interconnection then they must also monitor or have accession to information for the Eastern Interconnection. Since access to all if information is highly unlike or unnecessary to gather the TOP will have to use the model contained in their EMS to perform Operational Planning Analysis. Although this may not necessary be a bad thing a TOP will loss the benefits of using the larger model to perform Operational Planning Analysis. If the RC performs the Operational Planning Analysis then by this requirement does the TOP have to monitor everything in the RC's Operational Planning Analysis model? Suggested Modification: ATC believes that this requirement should be deleted.
