<p><b>Response: The RC SDT thanks you for your comment.</b></p> <p>1) The Commission’s June 2008 stated a preference for as many as possible, however the SDT believes the essence of this statement was to write multiple VSLs only where appropriate, not to do so simply because it is possible. Further, the essence of R4 is written to require impacted RC’s to talk at least weekly and is singular in nature. VSL’s can not be written for conference calls that exceed the singular requirement.</p> <p>2) Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSLs to represent both the large and small scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC’s. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC’s. The SDT felt the VSL’s appropriately addressed the large and small scenarios.</p>		
Midwest ISO Standards Collaborators	No	<p>In the Commission’s June 2008 order on VSLs, they expressed their preference for having as many VSLs as possible. We believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. We also believe this would be consistent with the Commission’s guideline 4 because the requirement is written in the plural, that is conference calls, so all conference calls must be considered in aggregate. Thus, failure to participate in more than one conference call does not represent distinct violations but a single violation.</p> <p>Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any.</p>
<p><b>Response: The RC SDT thanks you for your comment. Southern Company	No	<p>Reliability problems identified in other reliability areas are based on modeling information obtained from another reliability region. The fact that one RC will not agree that the model of an adjacent RC’s reliability area may be more accurate than their model of the adjacent reliability area is no reason to impose a severe violation on the RC with the more accurate</p>

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Yes or No	Question 13 Comment
		<p>model of their own reliability region.</p> <p>Example: RC1 identifies a contingency overload of a transformer bank in an adjacent reliability area. The transformer bank was replaced the week before with a larger bank. When RC1 contacts RC2, RC2 explains that the bank overload is not valid because of the replacement. RC2 does not identify a problem due to the fact that the model RC2 is using has been updated with the new transformer bank. RC1 will not agree and requires RC2 to open a tie line with another reliability area to relieve the contingency overload. If RC2 does not follow the instructions of RC1, making the interconnection weaker to relieve a problem that does not exist, RC2 is out of compliance and a severe violation will be imposed.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. The scenario you describe is essentially a modeling problem, as such the discrepancy would be vetted and corrected during the discovery phase. Further, an RC1 cannot tell RC2 how to rate facilities owned by entities within the RC2 area. The SDT believes that your scenario would play out like this: RC1 calls RC2 and says, “we show an overload on transformer bank X.” RC2 says, “we do not, what rating are you using?” RC1 replies with the old rating, RC2 states that it is wrong, and here is the correct rating, which RC1 implements, problem solved. RC1 cannot come back and say the rating that you have for transformer bank X is incorrect. Each entity within the RC Area (TO or GO) is responsible for the rating of the facilities it owns. (Taking the scenario even farther, if RC1 believes that the TO or GO has an incorrect rating, then RC1 can challenge the rating methodology of that TO or GO under the FAC standards.)</p>		
Manitoba Hydro	No	<p>Believe that four VSLs could be written for R4 based on the number of conference calls that are participated in. Four VSLs should be written for R5 based on the number of RCs notified. Furthermore, the current Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSL since Severe uses the word any.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. In regards to R4: The essence of R4 is that it is written to require impacted RC’s to talk at least weekly and is singular in nature. VSL’s can not be written for conference calls that exceed the singular requirement.</p> <p>In regards to R5: Typically, in the course of BES operations, impacted Reliability Coordinators will be a small number. The SDT effort in this regard, was to write the VSL to represent a typical scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC’s. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC’s.</p>		
Hydro-Québec TransÉnergie (HQT)	No	<p>(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more.</p> <p>(ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT’s response to our comments under Q11.</p>
<p><b>Response:</b> The RC SDT thanks you for your comment. Typically, in the course of BES operations, impacted Reliability Coordinators will be a</p>		

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Yes or No	Question 13 Comment
<p>small number. The SDT effort in this regard, was to write the VSL to represent both the large and small scenario containing an Adverse Reliability Impact. The essence of the severe VSL is that the RC did not notify any (as in no one) impacted RC's. As such, it should be severe. The essence of the moderate VSL is that the RC notified one other RC, however did not notify the remaining impacted RC's. The SDT felt the VSL's appropriately addressed the large and small scenarios.</p> <p>The RC SDT developed R5-R8 of IRO-014 from original IRO-016, R1. This was done to eliminate a compound requirement (a single requirement that contained multiple requirements). Each requirement is different and requires different specific actions. Please see the posted implementation plan for IRO-014 for details; as such, the VSL's remain.</p>		
Duke Energy	No	Need to revise the VSLs to coincide with recommended changes to the requirements in #11 above.
<p><b>Response:</b> The RC SDT thanks you for your comment. The VSLs were modified to align with changes made to the requirements. Please see the response to #11. The SDT adopted several, but not all of your suggestions.</p>		
Northeast Utilities	No	<p>(i) Arguably, all four VSLs could be developed as opposed to just having the Moderate and Severe, if the VSLs are graded according to the number of impacted RCs that need to be notified. For example, Low for missing one, Moderate for missing two, High for missing three, Severe for missing four or more.(ii) We do not have any issue with the binary nature of the VSLs for R6, R7 and R8, but they may need to be revised (wording change and/or removal) depending on the SDT's response to our comments under Q11.</p>

SERC OC Standards Review Group	Yes	
Bonneville Power Administration	Yes	
FirstEnergy	Yes	

**Consideration of Comments on Project 2006-06 Reliability Coordination**

---

Organization	Yes or No	Question 13 Comment
Liberty Electric Power LLC	Yes	
WECC Reliability Coordinator	Yes	
PacifiCorp	Yes	
Calpine Corporation	Yes	
Western Area Power Administration	Yes	
ReliabilityFirst Corporation	Yes	
American Electric Power		Not applicable.
Georgia Transmission Corporation		N/A

**14.If you have any other comments, not expressed in questions above, for the RC SDT on any of the other changes made to this set of standards and their associated implementation plans, please provide them here.**

**Summary Consideration:** Stakeholders suggested removing the Distribution provider and Generator Operator from the Data Retention section for R1 of COM-001. Since these are not applicable entities in R1, they were removed from Data Retention for the requirement.

Organization	Question 14 Comment
Northeast Power Coordinating Council	NPCC appreciates the work of the Drafting Team. No additional comments.
<b>Response: The RC SDT thanks you for your comment.</b>	
SERC OC Standards Review Group	"The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers."
<b>Response: The RC SDT thanks you for your comment.</b>	
Bonneville Power Administration	<p>Issue #2: Data Retention Why would the Distribution Provider and Generator Operator be required to store historical data (three years in the case of Requirement R1 and Measure M1; twelve months in the case of Requirement R2 and Measure M2) to show that these requirements and measures have been successfully implemented when these two entities (Distribution Provider and Generator Operator) aren't even included either in Requirements R1 and R2 or in Measure M1 and M2?It would appear that they should only have to provide historical data for three months as required by the data retention time for Requirement 3 and Measure 3.</p> <p>Issue #1: Data Retention: The first bullet in this section states that all entities are responsible for retaining documents associated with all Requirements and Measures associated with this standard. In reality, Requirements R1, R4, R5 and R6 and the corresponding Measures are the responsibility of the Reliability Coordinator. Requirements R2 and R3 and their corresponding Measures are implemented by the Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity and the Load Serving Entity. The Data Retention section should be rewritten to reflect this so that entities are not required to maintain documents that they aren't suppose to even possess in some cases.</p>
<b>Response: The RC SDT thanks you for your comment. COM-001 removed DP and GOP from the data retention section regarding R1 and R2. IRO-001-2 changed "all" to "applicable."</b>	

**Consideration of Comments on Project 2006-06 Reliability Coordination**

Organization	Question 14 Comment
IRC Standards Review Committee	AESO abstains from commenting on VSLs. VSLs for Alberta will be developed by provincial authorities.
<b>Response: The RC SDT thanks you for your comment.</b>	
E.ON U.S.	COM-001-2 R1 and R2 and the associated M1 and M2 are only applicable to the RC, TOP and BA but the “Data Retention” for R1/R2 and M1/M2 require the DP and GOP to retain data for the Requirements and Measures. E.ON U.S. suggests that the requirement for data retention of the DP and GOP be eliminated from the standard.
<b>Response: The RC SDT thanks you for your comment. COM-001 removed DP and GOP from the data retention section regarding R1 and R2.</b>	
Illinois Municipal Electric Agency	In order to minimize the number of reliability standards and the details covered in requirements - particularly those dealing with communications - it is recommended that an up-front provision/requirement be included as part of the compliance registration process that certain functional entities (e.g., DP, LSE, PSE, etc.) shall be responsible for providing the necessary information to transact services and for complying with the directives/requests of certain functional authorities (e.g., BA, PC, RC, etc.) in order to maintain/enhance reliability of the BES.
<b>Response: The RC SDT thanks you for your comment. The registration process is not in the scope of this SDT project</b>	
Northeast Utilities	Northeast Utilities appreciates the work of the Drafting Team. No additional comments.
<b>Response: The RC SDT thanks you for your comment.</b>	
Independent Electricity System Operator	In our comments on the previous posting, we expressed a disagreement with a proposed to remove IRO-005, in particular the latter part of R13, which stipulated that: In instances where there is a difference in derived limits, the Reliability Coordinator and its Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities shall always operate the Bulk Electric System to the most limiting parameter. Our rationale was that The FAC standards cover the methodology used in calculating SOLs and IROLs. Regardless of how these limits are calculated, in practice there always exists the possibility that different entities may come up with SOLs/IROLs, especially of the inter-ties, that could be different. Operating to the lowest SOLs/IROLs when more than one set exists is a necessary requirement for reliable operation. The SDT responded by suggesting that this requirement is redundant with FAC-014 which -014 states the requirement for developing and sharing SOL and IROL between the RC, PA, TP and TOP in both the planning and operating time frames. However, this response fails to address the situation where during operation, the situation of disagreeing SOLs or IROLs does arise. FAC-014 or any other standards do not currently have a requirement to ensure that all entities operate to the lower limit before the difference is resolved. This leaves room for unreliable operation. We suggest the SDT to consider restating this requirement somewhere. Note that this requirement is similar to R6 of IRO-014

Consideration of Comments on Project 2006-06 Reliability Coordination

Organization	Question 14 Comment
	that when in doubt, the more conservative approach should be taken. If it is necessary to have an R6 to deal with an uncertain identification/notification of an Adverse Reliability Impact, we don't see why it is not necessary to operate to a lower SOL or IROL when there is an unresolved difference.
<b>Response: The RC SDT thanks you for your comment. The SDT team still feels this is covered in FAC-010, 011, and 14. For real-time operations, as you mention, this is covered with IRO-014, R6</b>	

### **Standard Development Roadmap**

*This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.*

#### **Development Steps Completed:**

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.

#### **Proposed Action Plan and Description of Current Draft:**

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the first draft. The team is seeking comments on the revised standards.

#### **Future Development Plan:**

<b>Anticipated Actions</b>	<b>Anticipated Date</b>
1. Respond to comments on third posting	March 2010
2. Post Standards for pre-ballot period.	April 2010
3. Standards posted for initial and recirculation ballots.	May 2010
4. Standards sent to BOT for approval.	July 2010
5. Standards filed with regulatory authorities.	September 2010

### Definitions of Terms Used in Standard

*This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.*

**Interpersonal Communication:** Any method that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

## A. Introduction

1. **Title:** Communications
2. **Number:** COM-001-2
3. **Purpose:** To ensure that operating entities have adequate Interpersonal Communication capabilities.
4. **Applicability:**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.
  - 4.3. Reliability Coordinators.
  - 4.4. Distribution Providers.
  - 4.5. Generator Operators.
  - 4.6. Transmission Service Providers.
  - 4.7. Load-Serving Entities.
  - 4.8. Purchasing-Selling Entities.
5. **Effective Date:** The first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

## B. Requirements

- R1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]
- R2.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal Interpersonal Communications capabilities that lasts 30 minutes or longer. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations*]
- R3.** Unless dictated by law or otherwise agreed to, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES. [*Violation Risk Factor: Medium*] [*Time Horizon: Real-time Operations*]
- R4.** Each Distribution Provider and Generator Operator shall have Interpersonal Communications capability with its Transmission Operator and Balancing Authority

for the exchange of Interconnection and operating information. *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*

**C. Measures**

- M1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that it identified and tested, on a quarterly basis, alternative Interpersonal Communications capabilities used for communicating real-time operating information. If the test was unsuccessful, the entity shall have and provide upon request evidence that it took action within 60 minutes to restore the identified alternative or identified a substitute Interpersonal Communications capability. (R1.)
- M2.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, it notified impacted entities within 60 minutes of the detection of a failure of its normal communications capabilities that lasted 30 minutes or longer. (R2.)
- M3.** Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that its personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language. (R3.)
- M4.** Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)

**D. Compliance**

- 1. Compliance Monitoring Process**
  - 1.1. Compliance Enforcement Authority**
    - Regional Entity
  - 1.2. Compliance Monitoring and Enforcement Processes**
    - Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

### **1.3. Data Retention**

The Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall keep the most recent three years of historical data (evidence) for Requirement R1, Measure M1.

Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall keep the most recent twelve months of historical data (evidence) for Requirement R2, Measure M2.

Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall keep evidence for Requirement R3, Measure M3 for the most recent 3 months. If a Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator is found non-compliant with a requirement, it shall keep information related to the noncompliance until the Compliance Enforcement Authority finds it compliant.

Each Distribution Provider and Generator Operator shall keep the most recent three years of historical data (evidence) for Requirement R4, Measure M4.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

### **1.4. Additional Compliance Information**

None

2. Violation Severity Levels

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	<p>The responsible entity tested Alternative Interpersonal Communications capability but failed to take action within 60 minutes to restore the identified alternative</p> <p>OR</p> <p>Failed to identify a substitute Alternative Interpersonal Communications capability</p>	N/A	N/A	<p>The responsible entity failed to test its Alternative Interpersonal Communications capability on a quarterly basis.</p>
R2	<p>The responsible entity failed to notify the impacted entities in more than 60 minutes but less than or equal to 70 minutes.</p>	<p>The responsible entity notified at least one, but not all, impacted entities of the failure of its normal Interpersonal Communications capabilities within 60 minutes.</p> <p>OR</p> <p>The responsible entity failed to notify the impacted entities in more than 70 minutes but less than or equal to 80 minutes.</p>	<p>The responsible entity failed to notify the impacted entities in more than 80 minutes but less than or equal to 90 minutes.</p>	<p>The responsible entity failed to notify any impacted entities of the failure of its normal Interpersonal Communications capabilities within 60 minutes.</p> <p>OR</p> <p>The responsible entity failed to notify the impacted entities in more than 90 minutes.</p>
R3	N/A	N/A	N/A	<p>The responsible entity failed to provide evidence of legal requirements or concurrence to use a language other than English for communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES when a language other than English was used.</p>

Standard COM-001-2 — Communications

---

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4	N/A	N/A	The responsible entity failed to have Interpersonal Communications capability with its Transmission Operator <b>or</b> Balancing Authority.	The responsible entity failed to have Interpersonal Communications capability with its Transmission Operator <b>and</b> Balancing Authority.

**E. Regional Differences**

None identified.

**F. Associated Documents**

**Version History**

<b>Version</b>	<b>Date</b>	<b>Action</b>	<b>Change Tracking</b>
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
1	April 6, 2007	Requirement 1, added the word “for” between “facilities” and “the exchange.”	Errata
2	TBD	Revised per SAR for Project 2006-06, RC SDT	Revised

### Standard Development Roadmap

*This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.*

#### Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008 – May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC\_SDT coordinated with OPCP\_SDT and RTO\_SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9 – November 20, 2009.

#### Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the first draft. The team is seeking comments on the revised standards.

#### Future Development Plan:

Anticipated Actions	Anticipated Date
1. Respond to comments on third posting	March 2010
2. Post Standards for pre-ballot period.	April 2010
3. Standards posted for initial and recirculation ballots.	May 2010
4. Standards sent to BOT for approval.	July 2010
5. Standards filed with regulatory authorities.	September 2010

### Definitions of Terms Used in Standard

*This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.*

**Interpersonal Communication:** Any method that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

**None**

## A. Introduction

1. **Title:** Communications
2. **Number:** COM-001-2
3. **Purpose:** To ensure that operating entities have adequate ~~i~~Interpersonal ~~C~~ommunication capabilities.
4. **Applicability:**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.
  - 4.3. Reliability Coordinators.
  - 4.4. Distribution Providers.
  - 4.5. Generator Operators.
  - 4.6. Transmission Service Providers.
  - 4.7. Load-Serving Entities.
  - 4.8. Purchasing-Selling Entities.
5. **Effective Date:** The first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

## B. Requirements

- R1. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Aalternative ~~i~~Interpersonal ~~C~~ommunications capability~~y~~~~ies~~ used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes ~~develop a mitigation plan~~ to restore the identified alternative or identify -a substitute Alternative ~~its i~~Interpersonal ~~C~~ommunications capability~~y~~~~ies~~. [*Violation Risk Factor: ~~Lower~~High*][*Time Horizon: Real-time Operations*]
- R2. Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure (~~30 minutes or longer~~) of its normal ~~i~~Interpersonal ~~C~~ommunications capabilities that lasts 30 minutes or longer. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations*]
- R3. Unless dictated by law or otherwise agreed to ~~otherwise~~, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control ~~and or~~ operation of the interconnected BES. [*Violation Risk Factor: Medium*] [*Time Horizon: Real-time Operations*]

- R4.** Each Distribution Provider and Generation Operator shall have Interpersonal eCommunications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]

### C. Measures

- M1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that it identified and tested, on a quarterly basis, alternative Interpersonal eCommunications capabilities used for communicating real-time operating information. If the test was unsuccessful, the entity shall have and provide upon request evidence that it took action within 60 minutes developed a mitigation plan to restore the identified alternative or identified a substitute Interpersonal eCommunications capabilities. (R1.)
- M2.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, it notified impacted entities within 60 minutes of the detection of a failure (30 minutes or longer) of their-its normal communications capabilities that lasted 30 minutes or longer. (R2.)
- M3.** Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that its personnel used English as the language for all inter-entity Bulk Electric SystemBES reliability communications between and among operating personnel responsible for the real-time generation control and-or operation of the interconnected Bulk Electric SystemBES. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language. (R3.)
- M4.** Each Distribution Provider and Generation Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had demonstrate the existence of its Interpersonal eCommunications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)

### D. Compliance

1. **Compliance Monitoring Process**
  - 1.1. **Compliance Enforcement Authority**

Regional Entity

## 1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits  
Self-Certifications  
Spot Checking  
Compliance Violation Investigations  
Self-Reporting  
Complaints

## 1.3. Data Retention

The Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

Each Reliability Coordinator, Transmission Operator, and Balancing Authority, ~~Distribution Provider, and Generator Operator~~ shall keep the most recent three years of historical data (evidence) for Requirement R1, Measure M1.

Each Reliability Coordinator, Transmission Operator, and Balancing Authority, ~~Distribution Provider, and Generator Operator~~ shall keep the most recent twelve months of historical data (evidence) for Requirement R2, Measure M2.

Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall keep evidence for Requirement R3, Measure M3 for the most recent 3 months. If a Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator is found non-compliant with a requirement, it shall keep information related to the noncompliance until the Compliance Enforcement Authority finds it compliant.

Each Distribution Provider and Generator Operator shall keep the most recent three years of historical data (evidence) for Requirement R4, Measure M4.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

## 1.4. Additional Compliance Information

None

2. Violation Severity Levels

Requirement	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	<p>The responsible entity tested <del>A</del>alternative <del>i</del>nterpersonal <del>C</del>ommunications capability<del>ies</del> but failed to <u>take action within 60 minutes to restore the identified alternative</u></p> <p><u>OR</u></p> <p><u>Failed to identify a substitute Alternative Interpersonal Communications capability</u><del>develop a mitigation plan when the test failed.</del></p>	N/A	N/A	<p>The responsible entity failed to test <del>the-its A</del>alternative <del>i</del>nterpersonal <del>e</del>Communications capability<del>ies</del> on a quarterly basis.</p>
R2	<p><u>The responsible entity failed to notify the impacted entities in more than 60 minutes but less than or equal to 70 minutes.</u><del>N/A</del></p>	<p>The responsible entity notified at least one, but not all, impacted entities of the failure of its normal <del>I</del>nterpersonal <del>C</del>ommunications capabilities within 60 minutes.</p> <p><u>OR</u></p> <p><u>The responsible entity failed to notify the impacted entities in more than 70 minutes but less than or equal to 80 minutes.</u></p>	<p><u>The responsible entity failed to notify the impacted entities in more than 80 minutes but less than or equal to 90 minutes.</u><del>N/A</del></p>	<p>The responsible entity failed to notify any impacted entities of the failure of <del>their</del> its normal <del>I</del>nterpersonal <del>C</del>ommunications capabilities within 60 minutes.</p> <p><u>OR</u></p> <p><u>The responsible entity failed to notify the impacted entities in more than 90 minutes.</u></p>
R3	N/A	N/A	N/A	<p>The responsible entity failed to provide evidence of <u>legal requirements or</u> concurrence to use a language other than English for communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES when a language other than English was used.</p>

R4	N/A	N/A	The responsible entity failed to have <b>I</b> nterpersonal <b>C</b> ommunications capability <del>ies</del> with its Transmission Operator <b>or</b> Balancing Authority.	The responsible entity failed to have <b>I</b> nterpersonal <b>C</b> ommunications capability <del>ies</del> with its Transmission Operator <b>and</b> Balancing Authority.
----	-----	-----	--	---

**E. Regional Differences**

None identified.

**F. Associated Documents**

**Version History**

<b>Version</b>	<b>Date</b>	<b>Action</b>	<b>Change Tracking</b>
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
1	April 6, 2007	Requirement 1, added the word “for” between “facilities” and “the exchange.”	Errata
2	TBD	Revised per SAR for Project 2006-06, RC SDT	Revised

## Implementation Plan for COM-001-2 — Communications

### Defined Terms in the NERC Glossary:

The Reliability Coordination Standard Drafting Team proposes the following new definitions:

- **Interpersonal Communication:** Any method that allows two or more individuals to interact, consult, or exchange information.
- **Alternative Interpersonal Communication:** Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

### Prerequisite Approvals:

- None

### Conforming Changes to Requirements in Already Approved Standards:

- None

### Revision Summary:

The RC SDT revised the standard and is proposing retiring three requirements (R1, R5 and R6). Changes were made to eliminate redundancies between standards (existing and proposed), to align with the ERO Rules of Procedure and to address issues in FERC Order 693.

### Effective Dates:

The first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

**Revisions or Retirements to Already Approved Standards**

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> <b>Where applicable, these facilities shall be redundant and diversely routed.</b> <i>[Violation Risk Factor: High]</i></p>	<p>The RC SDT contends that COM-001-1, R1 and its subrequirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. Examples include:</p> <p>IRO-001-1, R3 requires adequate telecommunication for the Reliability Coordinator to direct actions of multiple entities, including TOPs and BAs.</p> <p>TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC.</p> <p>TOP-001-1, R3 requires adequate telecommunications facilities for the TOP, BA, and GOP to be able to receive directives from the RC.</p> <p>TOP-006-1, R1 requires adequate telecommunications for the GOP to inform the BA and TOP of resources. The BA and TOP will then inform the RC, other TOP and BAs of all transmission and generation available for use.</p> <p>The retirement of this requirement also facilitates one of the FERC Order 693 directives for COM-001-1 to “includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions”.</p>
<p><b>Notes:</b> Based on the above information, the RC SDT recommends retiring R1 and its subrequirements.</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
---------------------------	-------------------------------------

## Implementation Plan for COM-001-2 — Communications

---

<p><b>COM-001-1</b></p> <p><b>R2.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall manage, alarm, test and/or actively monitor vital telecommunications facilities. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications. <i>[Violation Risk Factor: Medium]</i></p>	<p><b>COM-001-2:</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p>
<p><b>Notes:</b> The RC SDT contends that the first sentence of COM-001-1, R2 is a low level facilitating requirements that is more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards as described in R1 above. We propose revising R2 as shown above to focus on the testing of capabilities that are not used on a routine basis.</p>	

**Implementation Plan for COM-001-2 — Communications**

---

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R3.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide a means to coordinate telecommunications among their respective areas. This coordination shall include the ability to investigate and recommend solutions to telecommunications problems within the area and with other areas.  <i>[Violation Risk Factor: Lower]</i></p>	<p><b>COM-001-2</b></p> <p><b>R2.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify impacted entities within 60 minutes of the detection of a failure of its normal Interpersonal Communications capabilities that lasts 30 minutes or longer.  <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>

**Implementation Plan for COM-001-2 — Communications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R4.</b> Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations. <i>[Violation Risk Factor: Medium]</i></p>	<p><b>COM-001-2</b></p> <p><b>R3.</b> Unless dictated by law or otherwise agreed to, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall use English as the language for all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected BES. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]</i></p>
<p><b>Notes:</b> COM-001 Requirement R3 is being incorporated into COM-003-1 by the Operations Personnel Communications Protocols SDT (Project 2007-02). It will be retired from this standard upon approval of COM-003-1. The RC SDT expanded the list of applicable entities to include the TSP, LSE and PSE and to delete the explanatory sentence at the end of the requirement.</p>	

**Implementation Plan for COM-001-2 — Communications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R5.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities. <i>[Violation Risk Factor: Lower]</i></p>	<p><b>EOP-008-0</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have a plan to continue reliability operations in the event its control center becomes inoperable. The contingency plan must meet the following requirements:</p> <p><b>R1.1.</b> The contingency plan shall not rely on data or voice communication from the primary control facility to be viable.</p> <p><b>R1.2.</b> The plan shall include procedures and responsibilities for providing basic tie line control and procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.</p> <p><b>R1.3.</b> The contingency plan must address monitoring and control of critical transmission facilities, generation control, voltage control, time and frequency control, control of critical substation devices, and logging of significant power system events. The plan shall list the critical facilities.</p> <p><b>R1.4.</b> The plan shall include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.</p> <p><b>R1.5.</b> The plan shall include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.</p> <p><b>R1.6.</b> The plan shall include procedures and responsibilities for providing annual training to ensure that operating personnel are able to implement the contingency plans.</p> <p><b>R1.7.</b> The plan shall be reviewed and updated annually.</p> <p><b>R1.8.</b> Interim provisions must be included if it is expected to take more than one hour to implement the contingency plan for loss of primary control facility.</p>
<p><b>Notes:</b> The RC SDT proposes retiring COM-001-1 R5 as it is redundant with EOP-008-0 Requirement R1.</p>	

**Implementation Plan for COM-001-2 — Communications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R6.</b> Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001, “NERCNet Security Policy.” <i>[Violation Risk Factor: Lower]</i></p>	<p><b>None - retire</b></p>
<p><b>Notes:</b> The RC SDT is recommending that R6 be retired. This is an ERO procedural issue and should not be in a reliability standard. It should be included in the ERO Rules of Procedure.</p>	

Already Approved Standard	Proposed Replacement Requirement(s)
	<p><b>COM-001-2</b></p> <p><b>R4.</b> Each Distribution Provider and Generation Operator shall have Interpersonal Communications capability with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Operations Planning]</i></p>
<p>Notes: This is a new requirement based on the following FERC Order 693 directive:</p> <p>“expands the applicability to include generator operators and distribution providers and includes Requirements for their telecommunications facilities”</p>	

**Implementation Plan for COM-001-2 — Communications**

## Implementation Plan for COM-001-2

### Defined Terms in the NERC Glossary

The RC SDT proposes the following new definitions:

- **Interpersonal Communication:** Any method that allows two or more individuals to interact, consult, or exchange information.
- **Alternative Interpersonal Communication:** Any method that is able to serve as a substitute for and is redundant to normal Interpersonal Communication and does not utilize the same infrastructure (medium) as normal Interpersonal Communications.

### **Prerequisite Approvals**

- None

### **Conforming Changes to Requirements in Already Approved Standards**

- None

### **Revision Summary**

- The RC SDT revised the standard and is proposing retiring three requirements (R1, R5 and R6). Changes were made to eliminate redundancies between standards (existing and proposed), to align with the ERO Rules of Procedure and to address issues in FERC Order 693.

### **Effective Dates**

The first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption. ~~To be determined.~~

**Revisions or Retirements to Already Approved Standards**

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p>The RC SDT contends that COM-001-1, R1 and its subrequirements are low level facilitating requirements that are more appropriately and inherently monitored under various higher level performance-based reliability requirements for each entity throughout the body of standards. Examples include:</p> <p>IRO-001-1, R3 requires adequate telecommunication for the Reliability Coordinator to direct actions of multiple entities, including TOPs and BAs.</p> <p>TOP-005-1, R1 and R3 require adequate telecommunications for BAs and TOPs to provide each other with operating data as well as providing data to the RC.</p> <p>TOP-001-1, R3 requires adequate telecommunications facilities for the TOP, BA, and GOP to be able to receive directives from the RC.</p> <p>TOP-006-1, R1 requires adequate telecommunications for the GOP to inform the BA and TOP of resources. The BA and TOP will then inform the RC, other TOP and BAs of all transmission and generation available for use.</p> <p>The retirement of this requirement also facilitates one of the FERC Order 693 directives for COM-001-1 to “includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions”.</p>
<p><b>Notes:</b> Based on the above information, the RC SDT recommends retiring R1 and its subrequirements.</p>	

**Implementation Plan for COM-001-2**  
**Telecommunications Communications**

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R2.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall <u>manage, alarm, test and/or actively monitor vital telecommunications facilities. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications. [Violation Risk Factor: Medium]</u></p>	<p><b>COM-001-2:</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall <u>identify and operationally</u> test, on a quarterly basis <u>its</u> <del>At a minimum, alternative</del> <u>Interpersonal C</u>telecommunications <del>facilities capability ies used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes develop a mitigation plan to restore the identified alternative or identify a substitute its</del> <u>Alternative i</u>Interpersonal <u>C</u>ommunications <del>capability ies. to ensure the availability of their use when normal telecommunications facilities fail. manage, alarm, test and/or actively monitor vital telecommunications facilities. ## Unofficial Comment Form for Reliability Coordination – Project 2006-06

Please **DO NOT** use this form. Please use the [electronic comment form](#) at the link below to submit comments on the proposed revisions to the standards for Project 2006-06 — Reliability Coordination. Comments must be submitted by **February 3, 2010**. If you have questions please contact Stephen Crutchfield at [stephen.crutchfield@nerc.net](mailto:stephen.crutchfield@nerc.net) or by telephone at 609-651-9455.

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

### Background Information:

The Reliability Coordination Standards Drafting Team (RC SDT) was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of the project, the NERC standards staff revised the Reliability Standards Development Plan and noted several areas of overlapping scope between certain projects. The original SAR for Project 2006-06 called for revisions to PER-004 — Reliability Coordination – Staffing and PRC-001 — System Protection Coordination. Based on scope overlap, it was determined that PER-004 and PRC-001 would best be served by moving the proposed work to Project 2006-01: System Personnel Training and Project 2007-06: System Protection, respectively.

The RC SDT proposed revisions to the set of standards under the project in August and September 2008. The RC SDT made revisions to the set of standards based on stakeholder feedback and the results of the IROL Standards Drafting Team work. Since the inception of this project, the IROL Standards Drafting Team has proposed, successfully balloted and obtained NERC Board of Trustees approval for three new Standards which included revisions to other IRO standards. With the approval of the IROL set of standards, certain requirements were retired from other IRO standards (see below summaries for specific examples under the RC SDT project).

## Standards Announcement

Comment Period Open

January 4–February 3, 2010

Now available at: [http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

### Project 2006-06: Reliability Coordination

The Reliability Coordination Standards Drafting Team is seeking comments on the following standards and associated implementation plans **until 8 p.m. EST on February 3, 2010**:

- COM-001-2 — Communications
- COM-002-3 — Communications and Coordination
- IRO-001-2 — Reliability Coordination – Responsibilities and Authorities
- IRO-014-2 — Coordination Among Reliability Coordinators

This is the third comment period for the proposed standards and implementation plans. The drafting team has made revisions to the documents based on stakeholder feedback. Explanations of the changes are included in the comment form. The drafting team has also posted its consideration of industry comments received during the previous comment period.

### Instructions

Please use this [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, please contact Lauren Koller at [Lauren.Koller@nerc.net](mailto:Lauren.Koller@nerc.net). An off-line, unofficial copy of the comment form is posted on the project page:

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

### Next Steps

The drafting team will draft and post responses to comments received during this period. The drafting team will also determine whether to post the standards for an additional comment period or seek approval from the Standards Committee to proceed to balloting.

### Project Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team, and two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap.

### Applicability of Standards in Project

Reliability Coordinator  
Balancing Authority

Purchasing Selling Entity  
Transmission Service Provider  
Transmission Operator  
Distribution Provider  
Generator Operator  
Load Serving Entity

### **Proposed Glossary of Terms Changes**

#### **New terms:**

Reliability Directive  
Interpersonal Communication  
Alternative Interpersonal Communication

#### **Modified term:**

Adverse Reliability Impact

### **Standards Development Process**

The [Reliability Standards Development Procedure](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

## Standards Announcement

### Comment Period Extension

#### **Project 2006-06: Reliability Coordination**

The comment period for this project has been extended **until 8 p.m. EDT on February 18, 2010**. The extension provides a 45-day period to review the definition of Reliability Directive, which was not part of the previous comment periods for this project.

Project page: [http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

TPL-001-2 Draft 5 is much better than Draft 4. There is still one significant concern, that I do not believe the drafting team adequately addressed. It is unclear as to what "Planning Assessment results" and "results of its Planning Assessment" entail. The Draft 5 response that "Planning Assessment" is a defined term does not fully address this concern. "Planning Assessment results" or "results of its Planning Assessment" is not necessarily the same thing as "Planning Assessment". As written, "Planning Assessment results" or "results of its Planning Assessment" could be anything from a single sentence, to a few brief high level

paragraphs, to a detailed and technically complete Planning Assessment. The Standard needs to more clearly state what is required in the report to other entities. Based on the drafting team response in Draft 4, it seems that replacement of "Planning Assessment results" or "results of its Planning Assessment" with the term "Planning Assessment" or "its Planning Assessment" would be appropriate. Violation Severity Levels: R8 The failure to provide documented responses to documented comments to "Planning Assessment results" is deemed to be a higher severity level than failing to distribute "results of its Planning Assessment". Failure to distribute denies functional entities an opportunity to comment, and could prevent coordinated planning, and thus should be deemed to be more severe than failing to provide documented responses to documented comments.

<p>Table 1, P5 currently requires the study of “[d]elayed Fault Clearing due to the failure of a relay13 protecting the Faulted element to operate as designed”. As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: “Single failure of a protection relay13 protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following”. In Table 1, P2 and P3, the last column “Non-Consequential Load Loss Allowed” where the requirement “No12” appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote “b”. This will require immediate redesigns to meet this particular requirement. The unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the proposed footnote 12 include a provision to default to the existing footnote “b” in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, “Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers.”</p>
No
<p>Measure M6 is too vague. It is unclear how to identify the conditions of Cascading, voltage instability, or uncontrolled islanding. The Glossary of Terms defines Cascading as “The uncontrolled successive loss of system elements triggered by an incident at any location. Cascading results in widespread electric service interruption that cannot be restrained from sequentially spreading beyond an area predetermined by studies.” Does the loss of system elements have to extend beyond the Control Area to be considered “Cascading”? Is there a Megawatt threshold that must be satisfied? Is there a time duration involved? Also, “cascading outages” needs to be defined. In addition, “voltage instability” and “uncontrolled islanding” should both be defined.</p>

Yes
Shouldn't the "Implementation Plan for TPL-001-1" document be for TPL-001-2? Also, "TPL-001-1" is referenced throughout the document.
No
"the latest" is not needed from the second sentence of R1, since the sentence already ended with "...shall represent projected System conditions". R1 Part 1.1.2 Suggest adding this clarification at the end "... six months during the period under study". This language addition helps clarify the point that if an outage occurs during the summer and the entity's system peak occurs in the winter, then the system peak Load study case (model) does not have to include this particular outage.
No
Please consider removing R.2.6.2
No
A "measurable change in performance" can be interpreted as not meeting one of the performance requirements as specified in Table 1 in order for the condition to be selected as a sensitivity. This will cause utilities to perform sensitivity analysis for all system conditions listed in R2.1.4 to determine which one fails to meet one of the performance requirements in Table 1, as one may not be able to tell performance impact until after the studies are performed. Suggested change: "...one of the following conditions by a sufficient amount...system conditions that may demonstrate a measurable change in system response."
Yes
No
Please consider removing R2.6.2. The "any material change" language can cause utilities perform studies due to material changes outside of and remote to its system.
Yes
The performance requirements of Table 1 do not allow the loss of non-consequential load for single and multiple contingency events. The disallowance of load loss does not provide any real benefit to the reliability of the BES and is an unnecessary overreach into local quality of service issues that are best addressed by State, Provincial or Municipal authorities. There may be circumstances such as high local transmission costs or local opposition to transmission construction where prohibition of non-consequential load loss represents a poor cost/benefit or quality of life tradeoff. Having a provision at the regional level that a PA or TP can have a certain amount of non-consequential load loss designed or planned in to its system that would be reasonable if it is acceptable to the RE and does not have an adverse impact on the remaining BES. In lieu of such a RE provision, providing a quantitative cap in non-consequential load loss such as 100 MW may be rationale compromise in the goal of limiting load loss for the more probable outage events. Our preference would be to retain the capability of limited non-consequential load loss. It is our understanding that footnote 9 is under consideration as part of Project 2010-11 and should be noted as such for clarification.
No
please consider remove "the latest" from M1
No
The requirement to distribute the Planning Assessment should be more flexible and allow for making the Planning Assessment available, such that those entities that desire the

information can have it readily available. R8 should be modified as follows: Each Planning Coordinator and Transmission Planner shall make available its Planning Assessment results to adjacent Planning Coordinators and Transmission Planners and to any functional entity that indicates a reliability related need for the Planning Assessment results.

Yes

We commend the SDT for its work to continue the improvement on the proposed TPL-001-1. We were not able to find a place to include comment on Requirement R4; therefore, we have included our comments here: Section R4.3.1, bullet point 3 requires the stability analyses to include the impact of subsequent "[t]ripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models". As written, this bullet could be interpreted as requiring the inclusion of these relay models in stability data bases. We do not have generic or actual relay models in our dynamics data bases for tripping line faults on lines and transformers represented. We represent actual relay response and tripping times of relays, communications, and breakers to faults in tripping transmission lines and transformers. Requiring the inclusion of generic or actual relay models for all relays that can trip lines and transformers would add a large burden to the development and maintenance of accurate dynamics model files that would add little or no benefit. Please change this bullet to read: "Tripping of Transmission lines and transformers where transient swings cause Protection System operation based on known Protection System response".

Table 1, P5 currently requires the study of "[d]elayed Fault Clearing due to the failure of a relay13 protecting the Faulted element to operate as designed". As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: "Single failure of a protection relay13 protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following". In Table 1, P2 and P3, the last column "Non-Consequential Load Loss Allowed" where the requirement "No12" appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet

this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote "b". This will require immediate redesigns to meet this particular requirement. The unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the proposed footnote 12 include a provision to default to the existing footnote "b" in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, "Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers." Timing of this project and project 2010-11 is critical. It would be very difficult to vote to approve the proposed TPL-001-2 prior to knowing the outcome of Project 2010-11 (footnote b issue).

Group

NERC Staff

Mallory Huggins

Yes

NERC staff supports the change to allow Corrective Action Plans to include tripping of Non-Consequential Load and curtailment of Firm Transmission Service for 7 years. This seems long, but staff understands the stakeholder concern that it could take that long to plan, site, and construct facilities required for compliance with the standard.

Yes

NERC staff supports the revisions to the definition of Year One. However, we believe an associated change should be made where this term is used in part 2.1.1 of Requirement 2 which requires modeling of "System peak Load for either Year One or year two, and for year five." It seems the new definition of Year One would negate the need to refer to year two. NERC staff recommends that part 2.1.1 be changed to "System peak Load for Year One and for year five."

No

NERC staff suggests that the added sentence in R1 be deleted and "Normal System" in Table 1 be replaced with "No unplanned Element outages." We have a problem with R1 establishing "normal system condition." "Normal" is not defined, but the system condition that most people would define as "normal" is the System operating within its limits. There are no checks required on the projected system conditions to guarantee "operation within limits." Staff realizes that if this were the case, the categories tested would all pass their respective tests. (In other words, the category tests may define operating limits that in turn define "normal" from a planning perspective.) Thus, the added sentence in R1 should be deleted. In Table 1, the use of the term "Normal System" in the column "Initial System Condition" really means "No unplanned Element outages." All Elements that do not have a planned outage are assumed in-service (for transmission Elements) or available for dispatch (for generators). Contrast the term "Normal System" with categories P3 and P6, which have the loss of an Element (which is unplanned) followed by the loss of a second Element (also unplanned). "Normal System" should be replaced with "No unplanned Element outages."

Yes

NERC staff supports the use of qualified past studies for the Near Term horizon.
Yes
NERC staff supports removing the phrase "not already included in the studies" from the parts 2.1.4 and 2.4.3 of Requirement R2. We believe that the requirement is more clear and less subject to interpretation without this phrase.
No
NERC staff understands why the SDT has inserted the word "expected" before "dynamic behavior of Loads," but we have concerns with this addition. We understand that a PC or TP that models the best current industry understanding of load behavior should not need to worry about compliance if that model does not match actual load response for all possible system conditions. However, we are concerned that this change to part 2.4.1 of Requirement R2 may be too accommodating. If a PC or TP has unrealistic expectations about load behavior, would this permit the use of unrealistic models? While we have struggled to develop an alternative proposal, we hope that the SDT will identify a way to address this concern.
Yes
NERC staff supports inserting the word "material" in the reference to assessing the impact of proposed generation. We have some concern that this change leaves this part of the requirement open to interpretation, but we also understand the need to permit some degree of engineering judgment to be applied. It would not be appropriate to require that every potential generation addition be included in the assessment where some proposed additions may by inspection be deemed to be immaterial due to size and/or interconnection location.
Yes
NERC staff supports the changes to the header notes in Table 1.
NERC staff is concerned with P5 and footnote 9 and thus cannot support these changes in their entirety. First, a revision to the Draft 4 definition of P5 should be used in lieu of the current Draft 5 version: "Loss of multiple elements caused by the Fault clearing consistent with failure of a single Protection System while clearing a fault on one of the following: . . ." After reviewing the P5 contingency throughout various drafts of this standard, along with existing Table 1 for TPL-001 through TPL-004, NERC staff's primary concern is that this most recent version is going in the wrong direction by becoming too limiting regarding which Protection System component failures are covered. Draft 5 is an improvement because it removes the reference to loss of multiple elements in Draft 4 (which defined P5 as "Loss of multiple elements caused by the failure of a single Protection System while clearing a fault on one of the following: . . ."). Draft 5 takes a step backward, however, by referring to Delayed Fault Clearing. The advantage of not referring to Delayed Fault Clearing is that for cases where redundant protection systems are provided, the fault clearing may not be delayed even when a single Protection System failure occurs. Ideally, NERC staff believes that P5 should refer to "failure of any component of a Protection System," but NERC staff recognizes that we cannot get there until the term Protection System is redefined and Project 2009-07—Reliability of Protection Systems is underway. Until that change is possible, NERC staff encourages the SDT to use the revised version of P5 proposed above. A second concern is with footnote 9, which is used numerous times in Table 1. System adjustments may be used in two different settings: the first is to address the aftermath of a particular Contingency; the second is to prepare for the next Contingency. Staff suggests that the current footnote 9 have this language added: "Post-Contingency Ccurtailment of Firm Transmission Service to address the simulated contingency, when coupled with ...." Footnote 9 is used in the column labeled "Interruption of Firm Transmission Service Allowed" whenever a "No" is provided. The footnote 9 in this column has to do with System adjustments that address the aftermath of the Contingency

that is being simulated. Therefore, no footnote 9 appears appropriate for category P0 (No Contingency). The reference in footnote 9 to no load loss and staying within applicable Facility rating, including those on a neighboring system, is sufficient for addressing the aftermath of the Contingency being simulated. To address next Contingency, an additional footnote is needed in the "Initial System Condition" column for category P3 and category P6. The following is suggested: "System adjustments to prepare for the next Contingency must be completed within 30 minutes." Footnote 9 is used in the column labeled "Initial System Condition" for category P3 and category P6, and these two categories define the loss of an Element "followed by System adjustments" and then followed by the loss of a second Element. It is unclear whether the intent in footnote 9 in these two cases is meant to address the same issue referenced above (i.e. the aftermath of the Contingency being simulated) or whether it is intended to address the next Contingency. Thus, both situations need to be addressed using the suggestions indicated above.

Yes

NERC staff supports the changes to the Measures.

Yes

NERC staff supports the changes to the VSL for Requirement R8.

We appreciate the effort of the standard drafting team and the changes reflected in the current draft of the TPL-001-1 standard. The changes are improvements that should move the standard towards greater industry consensus. The extended Implementation Plan aligns with suggestions in FE's prior ballot comments. We support the Implementation Plan change made by the team.

Yes

The change in the Year One definition provides greater flexibility for the industry and also addresses a prior FE comment during the 1st ballot. We appreciate the team's careful consideration of the industry feedback and support the change.

Yes

Yes

Yes

Yes

Yes

Yes

Table 1, P5 currently requires the study of "[d]elayed Fault Clearing due to the failure of a relay (footnote 13) protecting the Faulted element to operate as designed". To the extent fully redundant relaying exists with no expected delay in Fault Clearing its understood that the P5 event would not be a concern for the redundant system design. The drafting team has taken appropriate steps within the TPL standard to focus on relaying failures to provide clarity in what is required for P5 planning event.

Platte River Power Authority
Yes
We commend the SDT for its work to continue the improvement on the proposed TPL-001-1. We were not able to find a place to include comment on Requirement R4; therefore, we have included our comments here: Section R4.3.1, bullet point 3 requires the stability analyses to include the impact of subsequent “[t]ripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models”. As written, this bullet could be interpreted as requiring the inclusion of these relay models in stability data bases. We do not have generic or actual relay models in our dynamics data bases for tripping line faults on lines and transformers represented. We represent actual relay response and tripping times of relays, communications, and breakers to faults in tripping transmission lines and transformers. Requiring the inclusion of generic or actual relay models for all relays that can trip lines and transformers would add a large burden to the development and maintenance of accurate dynamics model files that would add little or no benefit. Please change this bullet to read: “Tripping of Transmission lines and transformers where transient swings cause Protection System operation based on known Protection System response”.
Yes
Yes
No
I like that you have requirements for qualifying past studies, but Part 2.6.2 is confusing. Please change Part 2.6.2 to read something like: “For steady state, short circuit or Stability analysis: no material changes have occurred to the System represented in the study or, if material changes have occurred, a technical rationale can be provided to explain that the changes do not impact the performance results in the study area.”
Yes
Yes
For consistency, use the qualifier “expected” in the second sentence of Part 2.4.1 also, such that it reads “...represents the overall expected dynamic behavior...”
Yes
I like the flexibility you give the PC and TP to define what ‘material’ means in their ‘documentation to support the technical rationale for determining material changes.’ In Part 2.5 this rationale will decide whether or not any Long-Term Stability studies are required for the Planning Assessment. And in Part 2.6.2 this rationale will be a factor in qualifying a past study.
Yes
I like the flexibility you give the PC and TP in Requirements R3 and R4 to develop their rationale for the Contingencies they select for evaluation.
No. Table 1, P5 currently requires the study of “[d]elayed Fault Clearing due to the failure

of a relay13 protecting the Faulted element to operate as designed". As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: "Single failure of a protection relay13 protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following". In Table 1, P2 and P3, the last column "Non-Consequential Load Loss Allowed" where the requirement "No12" appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote "b". This will require immediate redesigns to meet this particular requirement. The unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the proposed footnote 12 include a provision to default to the existing footnote "b" in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, "Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers." Timing of this project and project 2010-11 is critical. It would be very difficult to vote to approve the proposed TPL-001-2 prior to knowing the outcome of Project 2010-11 (footnote b issue). In Table 1 - Planning Events - Suggest changing the description for Events P2-3, P2-4, P4 and P4-6 to use the term 'Bus-tie Breaker' or 'non-Bus-tie Breaker' as applicable. In Table 1 - Extreme Events - Stability - Items 2a-2d, do you mean 'Protection System failure' here, or do you want to change to 'relay failure' to be consistent with changes in P5?

Comments: We wish to make a comment on R4.3.1: it appears that this requires stability simulations of both successful and unsuccessful high-speed reclosing for all contingency simulations regardless of whether high-speed reclosing is used on the faulted line. We suggest the following wording be used to replace the first bullet: "Successful high-speed reclosing and unsuccessful high-speed reclosing onto a fault, where such reclosing is applied, and where such additional simulations are deemed appropriate by the PC or TP." We wish to make a comment on the stability extreme event table: Changes were made in planning event P5 to narrow the focus to specific relay failures. The same changes are needed for stability extreme event 2a, 2b, 2c, and 2d.

Allowing the use of past studies in lieu of new studies for part or all of an assessment when the underlying system hasn't changed in a significant change if very prudent. However the wording in 2.6.2 of "unless a technical rationale can be provided to demonstrate that System changes do not impact the performance results in the study area" is of concern. By this wording is it intended that the planner must demonstrate that every material change has no impact? In essence doing more work to prove that a study isn't required then the study would take? Or that the planner must essentially have a technical rationale (overarching) for determining when a material change is "material enough" to impact system performance?
No
What is meant by "measurable change in performance"? Is this a measure that the sensitivty should move the system from meeting the performance requirements to not meeting the performance requirements? Or just a measurable change in system response, IE the loading was 45% on this corridor but is now 76%.
Yes

No
I agree with what I think is the intent. The word "Material" is meant to allow for changes in model to occur that are "small" relative to the TP/PC. For example the 400 MW generator that might be built in 10 years by another utility over a hundred miles, several dozen buses and generators away to not force new study work. However as written in 2.5 it requires you to define what a material change is, and could be applied to mean every change must be identified and explained rather than an overarching rationale that would only have you looking for changes that meet the material criteria. But then in 2.6.2 the word material is used with no obligation to explain what material is, only to explain if a material change would not impact the results in a study area. I recommend leaving the term material, but setting a requirement, measure, or definition that requires the TP/PC to define what they consider material specific to their system and circumstance. Since this will by the hetroegenous nature of the grid be different for each it may not be reasonable to pre-define what is realibale. Just as was done with many items in the ATC (MOD) standards, require that it be documented and questions on that rationale be answered. If a specific level of technical oversight is desired, consider requiring that description to be on file with the regional entity and approved by their planning committee. I think the team is heading in a good direction, it's just how the words will be applied that concern me. This may be a case where an Example or two would go a long way towards providing guidance to entities and auditors.
Yes
I am assuming you mean the header notes on the performance table
I generally agree with the direction the team has gone. Footnote 9 should also be highlighted as being part of the project 2010-11 discussion just as footnote 12 is.
Yes
No
R8 should require that the PC and TP make available it's planning assessment results when requested, rather than requiring the preemptive transmittal. There is no reliablity purpose served by providing unsolicited information.

The last two sentences "System peak Load levels shall include a Load model which represents the expected dynamic behavior of Loads that could impact the study area, considering the behavior of induction motor Loads. An aqgreqate System Load model which

represents the overall dynamic behavior of the Load is acceptable." belong in the MOD standards. They are not required in TPL-001-2.

No

Adding the word "material" does not clarify Part 2.5. The word "material" can be interpreted in many ways and is subjective. In order to have a consistent approach by all TPs, the drafting team should add a definition of the term "material". One TP may consider a new 200 MW unit as not being material because there are several larger units in the TPs system.

Yes

In point g, violations are noted in terms of post-Contingency voltage deviations rather than post-Contingency voltage limits. This may lead to confusion, as some utilities evaluate performance based on a post-Contingency voltage deviation criterion while other utilities evaluate performance based on post-Contingency voltage limits. This same comment applies to Requirement R5. Suggested rewording for point g: System steady state voltages and post-Contingency voltages or voltage deviations shall be within acceptable limits as established by the Planning Coordinator and the Transmission Planner. Suggested rewording for the first sentence in Requirement R5: Each Transmission Planner and Planning Coordinator shall have criteria for acceptable System steady state voltage limits, post-Contingency voltages or voltage deviations, and the transient voltage response for its System. Note 12 states that an outstanding issue related to non-consequential load loss is being discussed. This will create a lot of uncertainty. Manitoba Hydro could not support this standard unless the resolution of Note B is known.

Requirement R1 Part 1.1 and following states "System models shall represent:... 1.1.5. Known commitments for firm Transmission Service and Interchange. It was commented during a previous posting that 1.1.5 should be reworded to read: Known commitments for Firm Transmission Service, and, additionally, other types of transactions provided they have been demonstrated to not violate existing reliability constraints. The response was that "The SDT believes that the defined term 'Interchange' covers other transfers as described in your comment. No change made." It is agreed that known Interchanges should be modeled. However, it is imperative that existing reliability constraints not be violated in the process. That is, Interchange relating to economic transactions should not drive planning studies. Reliability related investments should not be driven by congestion related to economic transactions incorporated into planning models. Following is a preferred/revised wording: • 1.1.5. Known commitments for firm Transmission Service and Interchange. Interchange is meant to refer to energy transactions other than firm Transmission Service. While rigorous planning studies have been conducted to permit the uninterrupted implementation of firm Transmission Service without jeopardizing the reliable operation of the Interconnected System, other types of energy transaction only take place whenever system conditions permit them. They are usually of very short duration relative to planning assessment periods (usually spanning for a few hours to a few days) and deemed highly interruptible subject to reliability issues that may arise during operation of the system. In other words, the term Interchange refers to economic transactions that are permitted when the system is secure and there are reasonable reliability margins to effect dispatch changes to lower operating costs. As such, Interchange should not be reflected in system representation meant to assess system reliability in adherence to reliability criteria delineated in documents such as TPL-001.
No
The definition of Year One could be eliminated, and its wording used in place of Year One within the text of the requirement. The proposed definition has now added ambiguity with respect to "year two" and "year five" which are not defined. Year two could be deleted and R.2.1.1 modified as follows: System peak Load representing a point in time 12-24 months and another point in time 48-65 months into the future from the time the study is initiated. Define Year Five as the twelve month period 4 to 6 calendar years from the date of the Planning Assessment.
Yes
No
The revisions made to Requirement R2 Part 2.1 appear to resolve the concern that past studies could not be used to comply with the short-term steady state study requirements. This revision must be carried through to other sections (R2.2, 2.2.1). However, the

language of Requirement R2 Part 2.2 still seems to suggest that current annual studies are always required for the long-term steady state assessment to be compliant. This may have been an oversight, for consistency Requirement R2 Part 2.2 should be modified to similarly read as Requirement R2, Part 2.1. Regarding R2.2, the language should be consistent with 2.1. For example, use "current or qualified past studies" instead of "the following annual current study". Revisions made to Requirement R2.1.5 have made it worse than was originally drafted. This would require the PC & TP to study (meaning performing a technical analysis) of the impact and probability of the possible unavailability of any piece of equipment with a lead time of one year or more. Such an evaluation of spare equipment strategies would require significant additional resources and data, but provide no benefit to system reliability, as it is redundant to the existing N-1-1 contingency requirement (P6). R2.7 requires that Corrective Action Plans are included in each Planning Assessment and states "Such actions may include..." followed by a list of actions. Restricting allowable actions, and excluding runback/tripping of HVDC would have a direct impact on multiple existing facilities in New York and would adversely impact the reliability planning of the NYCA. Runback/tripping of HVDC must be added to the list, and also suggest revising to "Such actions may include but not be limited to:".

No

Part 2.1.4, requires an entity to vary one or more conditions to demonstrate a change in performance. If the cases were initially stressed, this may force an entity to simulate conditions with less severe stresses. At this point, there is limited to no value to this additional workload. Having a requirement to test at least one sensitivity as a blanket requirement may not be informative by itself and is more unclear since sensitivities are being required on an undefined base set of conditions. If an entity does a case with a stressed set of assumptions, is it necessary to do a non-stressed case? Additionally, our concern involves wording under 2.1.4 and 2.4.3 that sensitivities are required varying one or more conditions. Subsequently, in requirement 2.7.2 corrective action plans need to be developed to resolve performance deficiencies "only" if identified in multiple conditions or require a rationalization why no corrective action plan is necessary. Multiple conditions sensitivities under 2.1.4 and 2.4.3 are necessary to satisfy requirement 2.7.2. Requirement 2.7.2 adds ambiguity and should be removed. If not, a suggested revision to Requirement 2.7.2 as follows: 2.7.2. Corrective Action Plans are not required for performance deficiencies identified in a sensitivity analysis. In general, the scope of this requirement is too broad and non-specific, and only results in undue study burden. Is it necessary for sensitivity analysis to be included in requirements since in accordance with good engineering practices a conservative approach should be used in studies? The standard is referring to requirements for sensitivity and other issues without a reference to base assumptions as commented in issue #3. The standard must describe base assumptions. To define a sensitivity condition, NERC must define base assumptions.

No

There is insufficient information and experience regarding dynamic load modeling. It may also be included as a "sensitivity" analysis in 3.2, rather than requiring and expecting accurate representation of a dynamic load model. If this requirement is kept, a modeling standard must be written that is specific to dynamic loads. Change belongs in a modeling standard, not in TPL-001.

Yes

No

Header note (i) in the first Table 1 (p. 10) could imply that voltage-varying load shall not be used to meet steady state performance requirements. Steady state load models in use include voltage-varying loads. The explicit representation of (voltage-dependent) load

models is perfectly consistent with the requirements defined in R1 (which calls for a comprehensive representation of system components and their expected operating status in the planning assessment period) and the impetus to the creation of more specific load models in dynamic assessments found Requirement 2.4 of this draft of TPL-001-2. It is a known that depressed voltage conditions cause certain system elements to perform below their rated capacity. For example, capacitors provide less voltage support and voltage controlling transformers are impeded by their finite tap range to direct VAR flow into areas affected by low voltage conditions. Certain load types, on the other hand, provide a self-compensating relief to depressed voltage by naturally decreasing demand in a manner proportional to their characteristics, without operator intervention. Choosing to negate the voltage-dependence of one of these system elements (load, in our case) results in an inaccurate system representation that, in turn, may lead to erroneous assessments of the reliability state of the interconnected system and, potentially, to the implementation of unwarranted system upgrades. This note should be revised to only reference loads which are disconnected due to voltage.

To support the change to P5, other items need to also be modified. In Table 1 - Steady State & Stability Performance Extreme Events (p. 12), in the Stability Section, the language should be made similar to wording in P5. Protection System should be removed and replaced with the words "relay failure". This change should be made for 2a through 2d: 2. Local or wide area events affecting the Transmission System such as: a. 3Ø fault on generator with stuck breaker<sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. b. 3Ø fault on Transmission circuit with stuck breaker<sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. c. 3Ø fault on transformer with stuck breaker<sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. d. 3Ø fault on bus section with stuck breaker<sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. Note 11 (p. 14) needs clarification as shown: Excludes circuits that share a common structure (Planning event P7, Extreme event steady state 2a) or common Right-of-Way (Extreme event, steady state 2b) for a total of 1 mile or less. There are two tables labeled "Table 1". Suggest that the extreme events table be renamed "Table 2".

Yes

No

Requirement 8 is an administrative burden to TPs and PCs that adds no value to Bulk Power System reliability. PCs should be including TPs, neighboring PCs and interested parties in its planning processes when developing the Planning Assessments. Therefore, the inclusion of a set of VSLs for Requirement 8 is unnecessary. Should the VSLs for Requirement 8 remain, Requirement 8.1 should be revised to reflect that comments only to the final Assessment (not drafts developed during a process) need a response as follows: If a recipient of the planning assessment final results provides documented comments on the results, the respective Planning Coordinator or Transmission Planner shall provide a documented response to such recipient within 90 calendar days of receipt of those comments. If Requirement 8 and 8.1 are retained, they should be revised to reflect that comments only to the final Assessment (not drafts developed during a process) need a response and there should be a limit on the comment period as follows: If a recipient of the planning assessment final results provides documented comments on the results within 90 days of receipt, the respective Planning Coordinator or Transmission Planner shall provide a documented response to such recipient within 90 calendar days of receipt of those comments. Other comments not addressed by this Comment Form as follows: Section 3.3 - The last sentence of 3.3.1 should be removed. This is addressed in PRC-023. Line ratings are addressed in PRC-023. PRC-023 requires coordination with the Reliability Coordinator. Remove "Tripping of Transmission elements where relay loadability limits are exceeded."

Section 4.3 - High speed reclosing is not defined, and to help eliminate any confusion that it may introduce into the standard it will be worthwhile for the SDT to define this term. Several specific examples from previous comments on sensitivity analysis and guidance for base case assumptions: The requirements for sensitivity analysis already address issues going beyond what is expected to meet reliability requirements. Requiring extreme event analysis is requiring two layers of event analysis beyond what is required and there is no requirement for corrective action if anything is identified. The standard is referring to requirements for sensitivity and other issues without a reference to base assumptions. The standard must describe base assumptions. To define a sensitivity condition, NERC must define base assumptions. As for allowing con-consequential load loss for Categories P1 through P5, suggest approval at the Regional level, with a concept of allowing it in a "local area" that does not impact BPS reliability. All references to 300 kV in document should be replaced with EHV (for example in the Introduction, Section 5). The first phrase of Note 3 on p. 14 should be revised as follows: "Bulk Electric System (BES) level references include extra-high voltage (EHV) Facilities defined as those representing the backbone of the System, generally at voltage greater than 300 kV, and high voltage (HV) Facilities defined as those not representing the backbone of the System, as determined by the Planning Coordinator and approved by Regional Entity."

Individual

US Bureau of Reclamation

Yes

With exception of the definitions.

No

The language implies a requirement. The language "Year One must include the forecasted peak Load period for one of the following two calendar years" is a requirement and not a statement of clarification. If the definition is that "Year One" can also be the period used for forecast peak load, then it should be stated so. It is suggested that either the language in the definition is modified or the language is deleted from the definition and moved to the body of the standard.

Yes

No

The question is misleading in that R2 also include current studies. The overall structure of the standard could be greatly improved if the standard were segmented into Near Term and Long Term with sub segments for each specific type of analysis to be performed. Second, the standard does not use consistent terms. The Planning Assessment is to include Near Term and Long Term portions which must have steady state analysis, short circuit analysis, and stability analysis (ref. R2). Requirement R 2.1 introduces sensitivity analysis for the Near Term portion, and then refers to the Planning Analysis which is in reality both Near Term and Long Term portions. That implies that sensitivity analysis must be required for both? The standard repeats the requirement for annual stability studies in 2.4 which was already a requirement for Planning Assessments. The requirement 2.1.5 is one the most problematic requirements in this standard. This requirement implies that an entity must have spare equipment and a strategy to employ it. That is beyond the scope of the Energy Policy Act 2005. Spare equipment is not on-line and does not contribute to the reliability of the existing system. The Energy Policy Act of 2005 specifically prohibits the requirement to enhance or modify the system. The use, application, or requirement to have spare equipment violates that prohibition. This section should be removed. In addition, this requirement suffers from an ability to implement. In the first case, the requirement is

invoked if the spare equipment strategy could result in unavailability of transmission equipment. How is that determined? There is no nexus to that determination. The unavailability may have already occurred once the transmission equipment has failed. The only way to avoid unavailability if the transmission equipment that fails has a hot stand-by with automatic fail-over. The presence or not of a suitable replacement will still result in unavailability by virtue of the failure of the first piece of transmission equipment. Next problem, who will second guess the owner of the replacement. Where is the requirement to make the replacement strategy available? The standard should focus on system performance with existing equipment to meet current and future loads.

No

Sensitivity analysis is not included in R2. This gets back to the structure of the standard. There should a clear indication of the studies that are to be included in the Near-Term and Long-Term portions of the Planning Assessments.

No

Not included in R2. See response to Question 3.2

No

The term "material" is arbitrary. It is suggested that a specific value be used to trigger the assessment.

No

The language implies that the responsible entity may choose to not distribute it if it feels the entity making the request does not have a "reliability related need". It is not clear why that distinction is being made?

Group

Exelon Transmission Planning

Eric Mortenson

Yes

Yes

Yes

Yes

No

No

The term 'material changes' is subjective. It is very difficult to determine a base case to study combinations of generator additions on a changing transmission network in the 6 to 10 year time period to be used for dynamic simulations. Dynamic studies should be performed whenever new generator interconnections are proposed and it is at that time

where meaningful calculations can be performed. The long term six to ten year out dynamic studies for groupings of potential units should be done at a high level, if at all.

Yes

Comments: The term 'HV' in the performance table should be defined as 'Bulk Electric System elements up to 300 kV, not simply all elements 'below 300 kV'. Footnote 12 should be clarified to specifically state the requirements before voting takes place. The performance criteria should be based on the voltage level of the element experiencing stress due to the contingency, not based on the voltage level of the outaged element. It does not seem to make sense that the loss of a 500 kV bus would not allow for any non-consequential load shedding unless the bus contained a 500 to 230 kV transformer, in which case additional load shedding would be allowed. If outages on a 230 kV system, such as bus fault with stuck breaker, were to cause overloads on a 500 kV network it is acceptable to shed load, but if the outages were on the 500 kV system originally it would not be acceptable to shed additional load. It seems as if it should be the severity of the situation and the elements involved that would dictate allowable remedial actions and not the initial cause of the disturbance. If, for example, there was a 500 kV contingency outage that caused problems on the 230 kV system there would be a problem that may require load shedding on the 230 kV system. If there were a 230 kV contingency or series of contingencies that caused overloads on the 500 kV system, it would be more difficult to find enough lower voltage load to shed to bring the 500 kV system back to applicable ratings or conditions. The inability to shed non-consequential load could theoretically be resolved by hanging a small EHV / HV transformer on a particular bus, or by tapping a EHV line with an auto transformer.

Tim Ponseti, VP
TVA Transmission Planning & Compliance
Yes
TVA supports the change from five years to seven years for the implementation plan period.
Yes
TVA supports the change in the Year One definition - but would suggest that the word "started" should be changed to "completed" since a Planning Assessment may be started in one calendar year and finished in the next calendar year.
Yes
Yes
Yes
Yes
Yes
Yes
Yes
TVA is concerned about footnote 12 (known as footnote b in existing TPL standards). TVA believes that utilities should be given some freedom in dropping local load in response to N-1 events as long as overall BES reliability is not impacted. Otherwise significant capital improvements will be required that will have no overall reliability gain for the Bulk Electric System. TVA does agree with the revisions made specifically to the P5 event. TVA wishes to make a comment on the stability extreme event table: Changes were made in planning event P5 to narrow the focus to specific relay failures. The same changes are needed for stability extreme event 2a, 2b, 2c, and 2d.
Yes
Yes
Additional TVA comments: TVA wishes to make a comment on R4.3.1: it appears that this requires stability simulations of both successful and unsuccessful high-speed reclosing for all contingency simulations. Does high speed reclosing occur in less than 60 cycles or 60 seconds? If a utility does not have reclosing on a transmission line - then must the utility still perform stability studies assuming that there is reclosing? TVA suggests the following wording be used to replace the first bullet: "Successful high-speed reclosing and unsuccessful high-speed reclosing onto a fault, where such reclosing is applied, and where such additional simulations are deemed appropriate by the PC or TP." In R4.1.1, TVA is concerned that no generating unit shall pull out of synchronism in a local area only (thus

not impacting the overall reliability of the BES) for Planning Event P1, while the standard does allow generator runback/tripping for the same event. Thus the generating unit may be tripped by a special protection scheme - but may not be tripped by an out of step relay. TVA believes that out of step relaying should be allowed for this unit tripping as long as this does not affect the overall reliability of the BES.

Steve Rueckert
Yes
<p>We commend the SDT for its work to continue the improvement on the proposed TPL-001-1. We were not able to find a place to include comment on various requirements not identified in the questions below; therefore, we have included our comments here:</p> <p>Requirement and 2.6 and 2.6.1: A study that is five years old is very likely to be out of date. The entity's BES may have not changed much in five years but the entity cannot be certain whether or not their neighbor's system may have changed. Changes outside the immediate entity's system can impact results of studies within their system. Suggest that two years is a maximum that past studies should be allowed. Requirement 3.4.1 and 4.4.1 require PCs and TPs to coordinate with adjacent PCs and TPs to ensure that Contingencies on adjacent Systems which may impact their Systems are included in the Contingency list. Please clarify whether this means that a PC or TP must coordinate with others to identify contingencies on other Systems that the PC or TP must now include on their Contingency list to simulate and address any performance violations on their own System, or does it mean that the PC or TP must coordinate with others to identify contingencies on their System that the PC or TP must now include on their Contingency list to simulate and address any performance violations on other Systems. In either case, the standard does not seem to clearly state what must be done, or whose responsibility it is to mitigate, if a contingency in one System causes a performance violation in another System. Requirement R4.3.1, bullet point 3 requires the stability analyses to include the impact of subsequent "[t]ripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models". As written, this bullet could be interpreted as requiring the inclusion of these relay models in stability data bases. We do not have generic or actual relay models in our dynamics data bases for tripping line faults on lines and transformers represented. We represent actual relay response and tripping times of relays, communications, and breakers to faults in tripping transmission lines and transformers. Requiring the inclusion of generic or actual relay models for all relays that can trip lines and transformers would add a large burden to the development and maintenance of accurate dynamics model files that would add little or no benefit. Please change this bullet to read: "Tripping of Transmission lines and transformers where transient swings cause Protection System operation based on known Protection System response".</p>
No
<p>We recognize that the drafting team made changes to the definition of Year One based on industry comments. However, we believe that the revised language could allow for a situation where an entity could use its next season's operating study as its Year One planning study. For example, if the entity does its study in the fall of 2011, the proposed definition would allow the entity to use its summer 2012 operating study as its Year One study. This is a very short period to address any issued identified. Suggest working into the requirement that Planning Studies must look out at least 12 months beyond when the study is performed. This would still allow for the provision in the current definition example ("if a</p>

Planning Assessment was started in 2011, then Year One must include the forecasted peak Load period for either 2012 or 2013) because the entity would be able to use their 2013 Load period, but it would prevent the entity from using the 2012 Load period if they started the assessment late in 2011.

Yes

Yes

Yes

Yes

Yes

Table 1, P5 currently requires the study of “[d]elayed Fault Clearing due to the failure of a relay<sup>13</sup> protecting the Faulted element to operate as designed”. As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: “Single failure of a protection relay<sup>13</sup> protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following”. In Table 1, P2 and P3, the last column “Non-Consequential Load Loss Allowed” where the requirement “No<sup>12</sup>” appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote “b”. This will require immediate redesigns to meet this particular requirement. The unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the proposed footnote 12 include a provision to default to the existing footnote “b” in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, “Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers.” Timing of this project and project 2010-11 is critical. It would be very difficult to vote to approve the proposed TPL-001-2 prior to knowing the outcome of Project 2010-11 (footnote b issue).

R2.7.1, last bullet: Please provide specifics on the types of acceptable 'Corrective Actions' covered by 'rate applications and DSM' and the planning horizon for which they are considered acceptable. As an alternative, NERC should develop a process by which what is considered acceptable is published and continuously updated. (With due apologies for not raising this point earlier).

What is the significance of changing the wording for section R2.1.5 from 'assessed' to 'studied' and 'Planning Assessments' to 'studies'?

For the Western Interconnection, the performance level for a Bus-tie breaker fault under TPL-001-2, Table 1, Item P2-4, Notes (a) and (f), requires no thermal overloads and no cascading. While, FAC-010-2.1, R1.2, R2.5-R2.6, as modified by E1.1, E1.1.7, E1.3, and E1.3.1 requires a different performance level of no cascading. Please explain why this regional variance is not included under TPL-001-2, Item E.

Yes

We commend the SDT for its work to continue the improvement on the proposed TPL-001-1. We were not able to find a place to include comment on Requirement R4; therefore, we have included our comments here: Section R4.3.1, bullet point 3 requires the stability analyses to include the impact of subsequent "[t]ripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models". As written, this bullet could be interpreted as requiring the inclusion of these relay models in stability data bases. We do not have generic or actual relay models in our dynamics data bases for tripping line faults on lines and transformers represented. We represent actual relay response and tripping times of relays, communications, and breakers to faults in tripping transmission lines and transformers. Requiring the inclusion of generic or actual relay models for all relays that can trip lines and transformers would add a large burden to the development and maintenance of accurate dynamics model files that would add little or no benefit. Please change this bullet to read: "Tripping of Transmission lines and transformers where transient swings cause Protection System operation based on known Protection System response".

Yes
No
Requirement 8 is an administrative burden to TPs and PCs that adds no value to reliability. PCs should be including TPs, neighboring PCs and interested parties in its planning processes when developing the Planning Assessments. Therefore, the inclusion of a set of VSLs for Requirement 8 is unnecessary. Should the SDT decide to leave the VSLs for Requirement 8, Requirement 8.1 should be revised to reflect that comments only to the final Assessment (not drafts developed during a process) need a response as follows: 8.1 If a recipient of the planning assessment final results provides documented comments on the results, the respective Planning Coordinator or Transmission Planner shall provide a documented response to such recipient within 90 calendar days of receipt of those comments. For a Planning Coordinator (PC) who distributes the Planning Assessment to many different entities (to adjacent PCs, TPs, and other functional entities), a concern regarding the Requirement R8 VSL is that it is overly restrictive to apply a violation for failing to distribute the results of its Planning Assessment to only one PC, TP, or functional entity (and to apply a High VSL for failing to distribute to more than one entity), particularly since an entity's contact is subject to change over time, and since Measure M8 allows for publicly posting the results of its Planning Assessment to its website. Should the SDT decide to include the VSLs for Requirement 8, would recommend revising to use a percentage approach rather than applying a violation to a Planning Coordinator who fails to provide the results of its Planning Assessment to one PC, TP, or other functional entity (or applying a High VSL for failing to distribute to more than one entity.) Recommend applying a similar percentage approach to the VSLs drafted by NERC Staff for Project #2007-23 VSLs (e.g., for FAC-013-1) to be considered for the TPL-001-2 R8 VSLs. For example, • Lower VSL: The responsible entity failed to provide the Planning Assessment final results to 5% or less of the required entities. • Moderate VSL: The responsible entity failed to provide the Planning Assessment final results to more than 5% up to (and including) 10% of the required entities. • High VSL: The responsible entity failed to provide the Planning Assessment final results to more than 10% up to (and including) 15% of the required entities. • Severe VSL: The responsible entity failed to provide the Planning Assessment final results to more than 15% of the required entities OR [the existing language for the Severe VSL]. Explanation: The VSLs were modified for consistency with other standards and VSLs. Reference: Link to VSLs drafted by NERC Staff for Project #2007-23 VSLs (e.g., for FAC-013-1): <a href="http://www.nerc.com/docs/standards/sar/Staff_Proposed_VSLs_2010July27.pdf">http://www.nerc.com/docs/standards/sar/Staff_Proposed_VSLs_2010July27.pdf</a>

The definition of Year One is now too flexible and does not meet the intent of the standard. For example, our system peak is generally in January of the year. If I perform TPL studies in November 2011, studying the peak in January 2012 is acceptable according to the new definition. This is only two months from the date of the study. The intent of the TPL standard should be that entities must study and plan for inadequacies found in the studies. A one- or two-month lead time is not adequate to address any problems identified. Year One should be the year containing the first peak 12 months or more from the current date. Otherwise, TPL studies become merely seasonal operational studies, not planning studies. Alternative Language: "For the Planning Assessment started in a given year, Year One should contain the first system peak that occurs twelve months or more after the date of the Planning Assessment."

Table 1, P5 does not recognize the existence of redundant (or backup) relays. These are an integral part of the protection system design and should be considered in analysis of SLG faults. The TPL standard should encourage redundant, fail-safe systems, not ignore them. In Table 1, P2 and P3, we have a concern about not allowing non-consequential load loss. Project 2010-11 is deciding on this issue, but is not completed (see footnote 12). Should the standard become effective before this project is completed, no non-consequential load loss would be allowed, requiring many transmission additions and reconfigurations. Please change the "NO" in the last column to "YES" until the completion of Project 2010-11.

Yes

No

The definition of Year One could be deleted and used in place of Year One within the text of the requirement. The proposed definition has now added ambiguity with respect to "year two" and "year five" which are not defined. Year two could be deleted and R.2.1.1 modified as follows: System peak Load representing a point in time 12-24 months and another point in time 48-65 months into the future from the time the study is initiated.

No

R1.1 Part 1.1.2. With respect to known outages, there needs to be greater flexibility in the standards (e.g. more tolerance to non-consequential load shedding or limitations to the contingencies that need to be considered (e.g. P0, P1, & P2)). Regional allowances for load shedding under this condition should be approved. Duration of known outages should be increased from six months to one year; R1.1 Part 1.1.6 Delete "required for Load". Resources may also be used for export to other areas, not just internal load.

No

We can agree with R2.1 however with respect to R2.2 Language should be consistent with 2.1 for example - use "current or qualified past studies" instead of "the following annual current study."

No

Part 2.1.4, requires an entity to vary one or more conditions to demonstrate a change in performance. If the cases were initially stressed, this may force an entity to simulate conditions with less severe stresses. At this point, there is limited to no value to this additional workload. Having a requirement to test at least one sensitivity as a blanket requirement may not be informative by itself and is more unclear since sensitivities are being required on an undefined base set of conditions. Additionally, our concern involves wording under 2.1.4 and 2.4.3 that sensitivities are required varying one or more conditions. Subsequently, in requirement 2.7.2 corrective action plans need to be developed to resolve performance deficiencies "only" if identified in multiple conditions or require a rationalization why no corrective action plan is necessary. Multiple conditions sensitivities under 2.1.4 and 2.4.3 are necessary to satisfy requirement 2.7.2. Requirement 2.7.2 adds ambiguity and should be removed. Requirement 2.7.2 should be revised as follows: 2.7.2. Corrective Action Plans are not required for performance deficiencies identified in a sensitivity analysis.

Yes

Yes

Yes
We are supportive of the change to P5. However, in making this modification, other items need to also be changed. In Table 1 – Stability, the language should be made similar to wording in P5. Protection System should be removed and replaced with the words “relay failure”. This change should be made for 2a through 2d: 2. Local or wide area events affecting the Transmission System such as: a. 3Ø fault on generator with stuck breaker10 or a relay failure resulting in Delayed Fault Clearing. b. 3Ø fault on Transmission circuit with stuck breaker10 or a relay failure resulting in Delayed Fault Clearing. c. 3Ø fault on transformer with stuck breaker10 or a relay failure resulting in Delayed Fault Clearing. d. 3Ø fault on bus section with stuck breaker10 or a relay failure resulting in Delayed Fault Clearing. We also believe that Note 11 needs clarifying wording as shown below: "Excludes circuits that share a common structure (Planning event P7, Extreme event steady state 2a) or common Right-of-Way (Extreme event, steady state 2b) for a total of 1 mile or less"
Yes
Yes
Requirement 8 and 8.1, should be revised to reflect that comments only to the final Assessment (not drafts developed during a process) need a response and there should be a limit on the comment period as follows: If a recipient of the planning assessment final results provides documented comments on the results within 90 days of receipt, the respective Planning Coordinator or Transmission Planner shall provide a documented response to such recipient within 90 calendar days of receipt of those comments. We have other comments not addressed by this Comment Form as follows - Sections 2.7, 3.3, 4.3 and overall. R2.7 requires that Corrective Action Plans are included in each Planning Assessment and states “Such actions may include...” followed by a list of actions. Runback/tripping of HVDC should be added to the list. Section 3.3 - We feel that the last sentence of 3.3.1 should be removed. This is handled by PRC-023. Line ratings are addressed by PRC-023. PRC-023 requires coordination with the Reliability Coordinator. Remove “Tripping of Transmission elements where relay loadability limits are exceeded.” Section 4.3 - High speed reclosing needs to be defined.

If an entity does a stressed set of assumptions do they always need to do a non-stressed case?

Yes

Yes

Yes

In Table 1 – Stability, Make language similar to wording in P5. "Protection System" should be removed and replaced with the words "relay failure". This would avoid future interpretation issues about the intent of this requirement (as we understand it) to exclude more severe though less likely failures such as battery systems. This change should be made for 2a through 2d on page 12). In Note 11 (page 14) ADD the wording shown in

"quotes" below: Excludes circuits that share a common structure (Planning event P7, Extreme event steady state 2a) or common Right-of-Way (Extreme event, steady state 2b) for "a total of" 1 mile or less.

Yes

Yes

General Comment: We have other comments not addressed by this Comment Form as follows - Section 3.3, Section 4.3 and overall Section 3.3 - We feel that the last sentence of 3.3.1 should be removed. This is handled by PRC-023. Line ratings are addressed by PRC-023. PRC-023 requires coordination with the Reliability Coordinator. Remove "Tripping of Transmission elements where relay loadability limits are exceeded." Section 4.3 - High speed reclosing is not defined. Overall - ISO New England and New England Transmission Owners have previously made comments which have not been addressed in the current version of the proposed standard. Support for the standard can at most be limited without addressing comments. We have previously commented on sensitivity analysis and guidance for base case assumptions. Also, extreme event analysis should not be mandated in this standard as no corrective action is required.

Yes
We wish to make a comment on R4.3.1: it appears that this requires stability simulations of both successful and unsuccessful high-speed reclosing for all contingency simulations regardless of whether high-speed reclosing is used on the faulted line. We suggest the following wording be used to replace the first bullet: "Successful high-speed reclosing and unsuccessful high-speed reclosing onto a fault, where such reclosing is applied." We wish to make a comment on the stability extreme event table: Changes were made in planning event P5 to narrow the focus to specific relay failures. The same changes are needed for stability extreme event 2a, 2b, 2c, and 2d.

For measurements M3 and M4, there is some question as to what is to be provided as evidence of a study. Would the study results alone provide sufficient evidence, or does the entire powerflow, stability, or short circuit effort need to be documented in a formal study report? There are no measures for the creation and coordination of contingency lists that are to be developed in R3.4, R3.5, R4.4, and R4.5. Are these contingency lists required to be a documented part of the study?
No
The sharing issues of requirement R8 are still not clear, therefore the R8 VSL is not clear. It is not clear if the intent of the SDT is for the PC to share the assessments with PCs and TPs are to share the assessments with TPs, or whether the intent is for the TP to share its assessments with its PC. Will posting the assessment to a secure web-site meet the intent of the requirement? Although the comment form is not designed to allow for such, we need to comment on R4.3.1: As written, it appears that this requires stability simulations of both successful and unsuccessful high-speed reclosing for all contingency simulations, regardless of whether high-speed reclosing is actually implemented. A suggested wording change for the first bullet: "Successful high-speed reclosing and unsuccessful high-speed reclosing onto a fault, where such reclosing is applied, and where such additional simulations are deemed appropriate by the PC or TP." Another comment needs to be made regarding the stability extreme event table: Changes were made in planning event P5 to concentrate on specific relay failures. The same changes need to be made for stability extreme events 2a, 2b, 2c, and 2d. The proposed standard will significantly increase the amount of work required to develop more detailed and complex system models, to perform and document the engineering studies to meet the performance requirements, and to develop the assessments necessary for compliance. All of these increased engineering activities are perceived to provide marginal benefit to the reliability of the bulk electric system, but will require significant increases in manpower across the industry. Further, the manpower is presently not available to develop these more detailed models and to perform these studies with any reasonable assuredness. It will be a continuing challenge to the industry to obtain and keep the engineering talent needed to perform these compliance activities for such marginal benefits.

We propose the following changes and questions: R1 – We offer the minor suggestion of replacing the wording of "maintain System models within their respective areas" with "maintain System models of elements that are interconnected to any portion of the BES that is owned or operated by the TP or PC". This wording would avoid the ambiguity that can occur when a BA that is associated primarily with one TP declares ownership of a bus in another TP's geographic area, but expects its primary TP to maintain the BA's model data for the remote generation or load. R1.1.2 – We request the SDT opinion on how two individual outages should be modeled if they are both in excess of six months duration and they overlap by less than six months. Should the overlapping condition only be modeled if the condition is expected to last more than six months?
Yes
R2.1.3 – We offer the minor suggestion of revising R2.1.3 to state, "Known outages of generation or Transmission Facilities with a duration of at least six months be simulated along with P1 events for the System peak or Off-Peak conditions when the outages are scheduled to occur." We interpret that the requirement should only call for the simulation of individual outages with duration of six months or more and not imply the simulation of sequential (back-to-back) outages where each individual outage is less than six months, but the composite duration of the back-to-back outages is more than six months. We also interpret that if two or more known outages with duration of at least six months are overlapping, then the overlapping outage condition would only be simulated for the conditions when the overlapping outages are scheduled to occur if the duration of the overlapping condition is at least six months. R2.1.5 – We offer a major suggestion regarding the phrase "could result in the unavailability of major transmission equipment" because this phrase is ambiguous and not defined. So, there is a significant risk of different and possibly contradictory interpretations by TPs, PCs, and auditors. We proposed adding that the TP and PC "shall provide documentation to support the technical rationale for defining unavailability of major transmission equipment" similar to R2.5.

No
<p>R2.1.4 &amp; R2.4.3 – We offer a major suggestion regarding the terms of ‘credible’ and ‘measurable change’ because these terms are ambiguous and not defined. So, there is a significant risk of different and possibly contradictory interpretations by TPs, PCs, and auditors. We proposed adding that the TP and PC “shall provide documentation to support the technical rationale for determining the range of credible conditions and measurable change in performance” similar to R2.5. R2.1.4 &amp; R2.4.3 bullet items – We offer the minor suggestion that the number and description of the bullet items in R2.1.4 match the bullet points in R2.4.3. Otherwise, please explain the reasons for any differences between the bullet items in R2.1.4 and R2.4.3. R2.1.4 bullet #2 &amp; # 5 – We suggest that the wording in bullet #2 be changed to “Expected transfers and other generation dispatch scenarios”. This modification would put the transfer and dispatch element, which are complementary, together in the same bullet item, rather than grouping the ‘generation dispatch’ (operating level) element together with the generation capacity elements in bullet item #5. R2.1.4 bullet #7 – We offer the minor suggestion that the term “planned” be replaced with “known” to be consistent with R1.1.2 and R2.1.3. Besides the term “planned outage” has a specific meaning in the Reliability Standards that are specific to the Operating horizon. R2.7.2 – With regard to “include actions to resolve performance deficiencies identified in multiple sensitivity studies”, we do not think that mitigation plans should be required for deficiencies found in multiple sensitivity studies because the conditions in some sensitivity studies are more extreme and less likely than base case conditions. It’s impractical to require corrective actions for longer term horizon sensitivities due to how fast the electric grid changes. We believe sensitivity analyses are valuable to improving the development of mitigation plans to address base case performance limit concerns. Some of the sensitivity study conditions are not credible or plausible enough to warrant the implementation of mitigation measures. What is the interpretation of multiple sensitivity studies - more than one or a majority of the number that were studied?</p>
Yes
Yes
Yes
<p>We offer the major suggestion that Requirements not be created in the Performance Table and be absent from the Requirement section. Requirements should only be referred to in the Performance Table after they already exist in the Requirement section. a. Notes “f” and “g” under “Steady State Only” section in the Table 1 header create requirements (e.g. use the verb, “shall”) that do not appear in the Requirements section. We suggest adding R3.3.5, which could read, “Applicable System Operating Limits for the planning horizon shall not be exceeded.” [After R3.3.5 is added, Notes “f” and “g” should be revised and refer to R3.3.5.]. b. Note “i” under “Steady State Only” section in the Table 1 header creates a requirement (e.g. use the verb, “shall”) that does not appear in the Requirements section. We suggest adding R3.3.6, which could read, “The response of voltage sensitive Load including Load that is disconnected from the System by end-user equipment associated with an event shall not be used to meet steady state voltage requirements.” [After R3.3.6 is added, Note “d” should be revised to refer to R3.3.6. c. Note “j” under the “Stability Only” section in the Table 1 header creates a requirement (e.g. use the verb, “shall”) that does not appear in the Requirements section. We suggest adding R4.1.4, which could read, “Transient voltage response shall be within acceptable limits established by the Planning Coordinator and the Transmission Planner”. [After R4.1.4 is added, Note “j” should be revised to refer to R4.1.4.]</p>
We offer the major suggestion that the P3 Category performance criteria be modified to

apply only to the loss of two generators. The SDT properly recognizes that generator outages are significantly more probable than line or transformer outages and should be "higher" in the category list. However given the clearly higher probability of generator outages, the probability of the loss of two generators is clearly higher than the loss of a generator and line or the loss of a generator and transformer. Therefore, if the loss of two generators is in the P3 category, then the loss of a generator and line or transformer should be clearly "lower" in the category list. We suggest the listing of: the loss of a generator and some other element (e.g. transmission circuit, transformer, shunt device, and single pole of DC line) be moved to a lower event category, such as the P6 Category by adding "1. Generator" to the listing in the Initial System Condition (Loss of . . .) column. Item 2.a in the Extreme Events, Steady State section – Clarify the meaning of the loss of multiple circuits in Item 2.a by using wording similar to P7. We suggest this text: "a. Loss of three or more circuits that share a common structure." Footnote 6 – Further clarify the applicable shunt devices in Footnote 6 with this suggested text: "6. Requirements which are applicable to shunt devices, also apply to FACTS devices that are connected to ground, but not instrument voltage transformers or surge arresters."

Yes

Yes

Other Comments: 1. How are backup relays handled (TPL-002-0, R1.3.10 & TPL-001-2 R1 & P5)? What does FERC construe as normal system for a protection system. The TPL-001-2 R1 & P5, this standard doesn't appear to address primary protection and how this handled. 2. Revise the Planning Assessment definition to more explicitly apply to the BES and the TPL-001 requirements. We suggest text of: "Planning Assessment: Documented evaluation of future Transmission System performance and Corrective Action Plans to remedy identified deficiencies in the BES from the steady state and stability performance requirements set forth in the TPL-001 standard." 3. R2.1.5 – We propose replacing the term 'major Transmission' with "BES" because BES is a well defined term, while the term, 'major Transmission', is not. 4. Add R2.3.1 – We suggest the addition of a R2.3.1 requirement to emulate the distinction between the requirement to perform a short circuit assessment and conduct required studies or analysis to support the assessment (e.g. R2.1/R2.1.1 and R2.2/R2.2.1). We propose wording such as, "Perform an analysis for at least one year in the Near Term Transmission Planning Horizon." This requirement would set an expectation that an analysis should be conducted to at least one or more years in the near-term planning horizon, rather than imply that an analysis of all five years in the near-term planning horizon must be conducted. 5. R2.7.4 – We suggest that the wording of R2.7.4 be the same as R.2.8.2. Otherwise, we propose that R2.7.4 and R2.8.2 be revised with wording like, ". . . implementation status of identified Corrective Action Plans for System Facilities and Operating Procedures." to clarify that the identified system facilities and operating procedures refer only to those that were in the previous year's Corrective Action Plans. 6. R3.3.1 – The term of 'controls' is ambiguous and not defined, unlike the term, 'Protection Systems', which is defined. Therefore, we suggest that this item be defined or more clearly described to avoid the risk of different and possibly contradictory interpretations by TPs, PCs, and auditors. 7. R3.3.1, bullet #1 - We suggest qualifying which generating units to consider and which voltage limits to simulate with revised wording like, "Trip generating units that are connected to the BES when actual or assumed minimum generator steady state or ride through voltage limits are known and simulations show voltages may fall below the voltage limit. If assumed voltage limits are used, then they should be included in the assessment". The requirement should not apply to all relevant generating units until one of the MOD standards requires all Generator Owners to provide their minimum generating unit voltage limits to the TP and PC. If the wording of

R3.3.1 bullet #1 must be different from its counterpart, R4.3.1 bullet #2, then please explain the reasons for any differences. 8. R3.4.1 – Compliance with the requirement “to coordinate” is problematic and non-measurable We suggest replacing it with the requirement “to communicate”. 9. R3.5 - We interpret that R3.5 requires the TP and PC to conduct an evaluation of possible actions to reduce the likelihood or impact of extreme events, which produce the more severe impacts, if cascading outages may occur. Does the drafting team intend for the TP and PC to fulfill this requirement for at least one event in each of the five categories (i.e. 3 steady state and 2 stability) or in each of the 21 categories/sub-categories (i.e. 14 steady state and 7 stability). Also, if the resulting cascading outages do not result in any overloads, under-voltages, voltage collapse, or loss of generator synchronization, then should the evaluation of possible actions to reduce likelihood or impact be required? 10. R4.1.1 – We suggest that there should be some qualification of which generating units are referred to in this requirement. We propose that the requirement say, “No generating unit connected to the BES shall pull out of synchronism.” For example, some utilities include smaller generation units that are connected at voltages below 100 kV and even down to distribution voltage in their base cases. 11. R4.1.2 – We propose that the wording of this requirement be revised to reflect the same BES qualification of the generating unit that we noted in R4.1.1 above. 12. R4.3.1 – This requirement refers to high speed reclosing and we presume that this is special high speed reclosing that is completed in several cycles, rather than the normal high speed reclosing that is completed in a number of seconds. We recommend that the term high speed reclosing be more clearly defined for this sub-requirement. 13. R5 – This requirement should remove the criterion item, “post-Contingency voltage deviation”, because this criterion is not used widely enough in the industry to be well established criterion. 14. R8 – This requirement should be revised to limit the need to provide the Planning Assessment as follows “adjacent Planning Coordinators and adjacent Transmission Planners and to any registered functional entity...” This suggestion is added to the requirement to clarify that the word adjacent also applies to Transmission Planners and to clarify that the functional entity must be registered in order for the entity to be applicable to the requirement.

The first bullet item in Section 3.3.1 should be the same as the second bullet in Section 4.3.1. The wording is somewhat confusing in both. Also, the wording as proposed does not recognize that a high voltage limit could also be violated. Edits to the item as shown below are suggested. Tripping of generators where simulations show generation bus voltages or high side generation step up (GSU) voltages are outside known limits, or assumed to be outside generator steady state limits, or have reached the generator ride through voltage limit. Include in the assessment any assumptions made.

Yes
No
<p>The third bullet of 4.3.1 requires the addition of relay models for stability studies. This type of analysis is performed today by scripting the tripping of multiple lines due to breaker failure events. The inclusion of relay models into the stability study will result in added complexity and an over reliance on relay models for system stability assessment. The stability assessment should assess stability resulting from the operation of relays as opposed to reliance on a relay model for proper system representations. Assurance of the proper operation of relays results from the analysis performed to set relays not from stability studies. From Section 4.3.1: "Tripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models." Section 4.5 requires that "The rationale for those Contingencies selected for evaluation shall be available as supporting information." This will have to be developed. Requirement R5 requires the establishment of criteria for transient voltage response of the system. This seems unnecessary given the proposed changes to Table 1. The proposed changes to table 1 seem to make clear the type of system response that is allowable through its specification of what is allowable in terms of interruptions to Firm Transmission and Non-Consequential loads. R5 states: "Each Transmission Planner and Planning Coordinator shall have criteria for acceptable System steady state voltage limits, post-Contingency voltage deviations, and the transient voltage response for its System. For transient voltage response, the criteria shall at a minimum, specify a low voltage level and a maximum length of time that transient voltages may remain below that level."</p>
<p>An important footnote to Table 1 is omitted from this proposed revision. This omission prevents adequate evaluation of the footnote. Footnote 12 in Table 1 is no longer applied to P2.1, P2.2, P2.3, P4, and P5. The footnote states: "Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here." The footnote should be removed from the proposed revision until Project 2010-11 is concluded.</p>

<p>Year One should be used within the text of the requirement. Do not have a definition for Year One. Year two could be deleted and R.2.1.1 modified as follows: For the Planning Assessment started in a given calendar year, the first year that is studied must include the forecasted peak Load period for one of the following two calendar years. An additional Near-term study must be performed that is four calendar years beyond the first year that is studied.</p>
No
<p>For R1: Ambiguity regarding base case assumptions, in combination with lack of clarity and clear direction of purpose regarding the sensitivity analysis, undermines the objectives of the standard; R1.1 Part 1.1.2. With respect to known outages, there needs to be greater flexibility in the standards (e.g. more tolerance to non-consequential load shedding or limitations to the contingencies that need to be considered (e.g. P0, P1, &amp; P2)). Regional</p>

allowances for load shedding under this condition should be approved. Duration of known outages should be increased from six months to one year; R1.1 Part 1.1.6 Delete "required for Load". Resources may also be used for export to other areas, not just internal load.

No

We can agree with R2.1 however with respect to R2.2 Language should be consistent with 2.1 for example - use "current or qualified past studies" instead of "the following annual current study".

No

If an entity does a stressed set of assumptions do they always need to do a non-stressed case?

Yes

Yes

Yes

In Table 1 – Stability, Make language similar to wording in P5. Protection System should be removed and replaced with the words relay failure. This change should be made for 2a through 2d: 2. Local or wide area events affecting the Transmission System such as: a. 3Ø fault on generator with stuck breaker10 or a relay failure resulting in Delayed Fault Clearing. b. 3Ø fault on Transmission circuit with stuck breaker10 or a relay failure resulting in Delayed Fault Clearing. c. 3Ø fault on transformer with stuck breaker10 or a relay failure resulting in Delayed Fault Clearing. d. 3Ø fault on bus section with stuck breaker10 or a relay failure resulting in Delayed Fault Clearing. In Note 11 change wording as shown below: Excludes circuits that share a common structure (Planning event P7, Extreme event steady state 2a) or common Right-of-Way (Extreme event, steady state 2b) for a total of 1 mile or less

Yes

Yes

Other Comments: Section 3.3 - We feel that the last sentence of 3.3.1 should be removed. This is handled by PRC-023. Line ratings are addressed by PRC-023. PRC-023 requires coordination with the Reliability Coordinator. Remove "Tripping of Transmission elements where relay loadability limits are exceeded." Section 4.3 - High speed reclosing is not defined. We have previously commented on sensitivity analysis and guidance for base case assumptions. Also, extreme event analysis should not be mandated in this standard as no corrective action is required.

We offer the major suggestion that Requirements not be created in the Performance Table and be absent from the Requirement section. Requirements should only be referred to in the Performance Table after they already exist in the Requirement section. (a.) Notes "f" and "g" under "Steady State Only" section in the Table 1 header create requirements (e.g. use the verb, "shall") that do not appear in the Requirements section. We suggest adding R3.3.5, which could read, "Applicable System Operating Limits for the planning horizon shall not be exceeded." [After R3.3.5 is added, Note "a" should be revised and refer to

R3.3.5.]. (b.) Note "i" under "Steady State Only" section in the Table 1 header creates a requirement (e.g. use the verb, "shall") that does not appear in the Requirements section. We suggest adding R3.3.6, which could read, "The response of voltage sensitive Load including Load that is disconnected from the System by end-user equipment associated with an event shall not be used to steady state voltage requirements." [After R3.3.6 is added, Note "i" should be revised to refer to R3.3.6.]. (c.) Note "j" under the "Stability Only" section in the Table 1 header creates a requirement (e.g. use the verb, "shall") that does not appear in the Requirements section. We suggest adding R4.1.4, which could read, "Transient voltage response shall be within acceptable limits established by the Planning Coordinator and the Transmission Planner". [After R4.1.4 is added, Note "j" should be revised to refer to R4.1.4.]

We offer the major suggestion that the P3 Category performance criteria be modified to apply only to the loss of two generators. The SDT properly recognizes that generator outages are significantly more probable than line or transformer outages and should be "higher" in the category list. However given the clearly higher probability of generator outages, the probability of the loss of two generators is clearly higher than the loss of a generator and line or the loss of a generator and transformer. Therefore, if the loss of two generators is in the P3 category, then the loss of a generator and line or transformer should be clearly "lower" in the category list. We suggest the listing of: the loss of a generator and some other element (e.g. transmission circuit, transformer, shunt device, and single pole of DC line) be moved to a lower event category, such as the P6 Category by adding "1. Generator" to the listing in the Initial System Condition (Loss of . . .) column. We offer the minor suggestion that Item 2.a in the Extreme Events, Steady State section – Clarify the meaning of the loss of multiple circuits in Item 2.a by using wording similar to P7. We suggest this text: "a. Loss of three or more circuits that share a common structure." We offer the minor suggestion that Footnote 6 – Further clarify the applicable shunt devices in Footnote 6 with this suggested text: "6. Requirements which are applicable to shunt devices, also apply to FACTS devices that are connected to ground, but not instrument voltage transformers or surge arresters." ATC has significant concerns with Q3.2 (R2.1.4 & R2.4.3), Q4 (Table requirements) and Q5 (P3 scope), as noted above. In addition, ATC offers the following suggestions to promote proper Reliability Standard quality and content. (1.) Revise the Planning Assessment definition to more explicitly apply to the BES and the TPL-001 requirements. We suggest text of: "Planning Assessment: Documented evaluation of future Transmission System performance and Corrective Action Plans to remedy identified deficiencies in the BES from the steady state and stability performance requirements set forth in the TPL-001 standard." (2.) R2.1.5 – We propose replacing the term 'major Transmission' with "BES" because BES is a well defined term, while the term 'major Transmission' is not. (3.) Add R2.3.1 – We suggest the addition of a R2.3.1 requirement to emulate the distinction between the requirement to perform a short circuit assessment and conduct required studies or analysis to support the assessment (e.g. R2.1/R2.1.1 and R2.2/R2.2.1). We propose wording such as, "Perform an analysis for at least one year in the Near Term Transmission Planning Horizon." This requirement would set an expectation that an analysis should be conducted to at least one or more years in the near-term planning horizon, rather than imply that an analysis of all five years in the near-term planning horizon must be conducted. (4.) R2.7.4 – We suggest that the wording of R2.7.4 be the same as R.2.8.2. Otherwise, we propose that R2.7.4 and R2.8.2 be revised with wording like, ". . . implementation status of identified Corrective Action Plans for System Facilities and Operating Procedures." to clarify that the identified system facilities and operating procedures refer only to those that were in the previous year's Corrective Action Plans. (5.) R3.3.1 – The term of 'controls' is ambiguous and not defined, unlike the term, 'Protection Systems', which is defined. Therefore, we suggest that this item be defined or more clearly described to avoid the risk of different and possibly contradictory

interpretations by TPs, PCs, and auditors. (6.) R3.3., bullet #1 - We suggest qualifying which generating units to consider and which voltage limits to simulate with revised wording like, "Trip generating units that are connected to the BES when actual or assumed minimum generator steady state or ride through voltage limits are known and simulations show voltages may fall below the voltage limit. If assumed voltage limits are used, then they should be included in the assessment". The requirement should not apply to all relevant generating units until one of the MOD standards requires all Generator Owners to provide their minimum generating unit voltage limits to the TP and PC. If the wording of R3.3.1, bullet #1 must be different from its counterpart, R4.3.1, then please explain the reasons for any differences. (7.) R3.4.1 - Compliance with the requirement "to coordinate" is problematic and non-measurable. We suggest replacing it with the requirement "to communicate". (8.) R3.5 - We interpret that R3.5 requires the TP and PC to conduct an evaluation of possible actions to reduce the likelihood or impact of extreme events, which produce the more severe impacts, if cascading outages may occur. Does the drafting team intend for the TP and PC to fulfill this requirement for at least one event in each of the five categories (i.e. 3 steady state and 2 stability) or in each of the 21 categories/sub-categories (i.e. 14 steady state and 7 stability). Also, if the resulting cascading outages do not result in any overloads, under-voltages, voltage collapse, or loss of generator synchronization, then should the evaluation of possible actions to reduce likelihood or impact be required? (9.) R4.1.1 - We suggest that there should be some qualification of which generating units are referred to in this requirement. We propose that the requirement say, "No generating unit connected to the BES shall pull out of synchronism." For example, some utilities include smaller generation units that are connected at voltages below 100 kV and even down to distribution voltage in their base cases. (10.) R4.1.2 - We propose that the wording of this requirement be revised to reflect the same BES qualification of the generating unit that we noted in R4.1.1 above. (11.) R4.3.1 - This requirement refers to high speed reclosing and we presume that this is special high speed reclosing that is completed in several cycles, rather than the normal high speed reclosing that is completed in a number of seconds. We recommend that the term high speed reclosing be more clearly defined for this sub-requirement. (12.) R5 - We propose removing the criteria item, "post-Contingency voltage deviation", because this criterion has not been developed and used widely enough in the industry to be introduced into the standards. (13.) R7 - Revise part of the requirement text to read, ". . . identify each entity's individual and joint responsibilities . . ." to provide better clarity. Perhaps this requirement should be listed at the beginning of the Requirements section, instead being mentioned near the end of this section. (14.) Change the forward referencing to backward referencing. We agree with R2.6, R3.1, R3.5, R4.1, and 4.2. However, we suggest that the requirements be ordered so that all of the references refer back to earlier text, rather later text to be consistent with the rest of this standard and other referencing in this standard (e.g. R2.1.3, R2.1.4, R2.4.3, R3, R3.3, R3.5, R4, R4.3, R4.4, R4.5), as well as other standards.

Comments: The Year One definition is somewhat clearer now, but there is still some ambiguity. We recommend the removal of the term "Year One, year two, and year five" from R2.1.1. and deletion of the Year One definition (definitions are not required for year two and year five, for instance). The Year One concept can be integrated into the definition of Near-Term Transmission Planning Horizon, which we suggest changing to "The period beginning with the first year following the operating horizon, as determined by the Transmission Planner or Planning Coordinator, through the fifth year." Then, rather than say "Year One, year two, and year five", we can use the phrase "at least one of the first two years of the Near-Term Transmission Planning Horizon, and the fifth year". This will require corresponding changes in R2.1.1 and R2.1.2.
No
We suggest changing the added sentence to "This establishes the Category P0, No Contingency, Initial System Conditions in Table 1."
No
2.1.5 – Change "shall be performed for" to "shall have been performed for."
Yes
No
Rather than specifically call out induction motor loads, we recommend changing the second sentence to "Stability analysis shall include models that represent the expected dynamic

behavior of system elements that could impact the study area.”

Yes

Yes

Table 1, P5 does not seem to account for redundant relays in the Protection System to mitigate potential relay failure. We recommend changing the “Event” to “Delayed Fault Clearing due to the failure of a relay to operate as designed, if that is the only relay protecting the Faulted element, for one of the following:” In Table 1, P2 and P3, the last column “Non-Consequential Load Loss Allowed” where the requirement “No12” appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote “b”. This will require immediate redesigns to meet this particular requirement. The unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the proposed footnote 12 include a provision to default to the existing footnote “b” in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, “Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers.” Timing of this project and project 2010-11 is critical. It would be very difficult to vote to approve the proposed TPL-001-2 prior to knowing the outcome of Project 2010-11 (footnote b issue). Second, we are unclear why voltage relays are included in footnote 13 and think they can be removed. Third, in the Extreme Events – Stability section of Table 1, items 2a-2d “Protection System failure” should be changed to “relay failure” to be consistent with Table 1, Category P5.

Yes

Yes

None regarding R8. The following comments refer to parts of the proposed standard for which no questions are asked. R4, Part 4.1.2: The response to our previous comment indicated that our description was for a system Stability issue. R4 is addressing system Stability and we believe the comment still applies and that it was not answered in the response. We have two issues with 4.1.2: Sometimes out-of-step (loss of generator synchronism) is better mitigated through islanding by tripping transmission rather than by tripping generators; the second point is that the ability of present modeling programs does not include the capability to model all types of impedance relays and their associated OOS blocking and tripping capabilities that are available. R4, Part 4.3.1: The third bullet implies that all impedance relays (and perhaps others) will need to be modeled in the stability databases. We question whether the existing simulation programs can accommodate this large magnitude of data inclusion and whether there is any benefit to BES reliability. Certainly using generic models rather than actual models would be of no benefit. We recommend changing the third bullet to “Evaluation of Protection System behavior when transient power swings are detected or predicted to have impedance characteristics that

may approach relay operating characteristics.”

While the definition of Year One addresses the time span this year occupies, it does not address when that time span begins. The example which was added to the definition suggests that Year One begins twelve months from the start of the Planning Assessment, but it does not appear to be specifically stated. The following language is recommended: "The first twelve month period that a Planning Coordinator or a Transmission Planner is responsible for assessing, beginning twelve months from the planned completion date of the Planning Assessment."
No
Consider removing "...the latest..." from R1 and changing R1.1.2 to state "...six months during the period of study."
No
No, the phrase any material changes used in requirement R.2.6.2 will effectively cause all Planning Authorities to run all studies every year regardless of minor changes in the model. The overwhelming majority of PAs use a 10 year set of planning models developed annually by Regions or Subregions. These annual sets of planning models will always have some changes. The annual study requirement is especially problematic for Stability and Short circuit studies that require much more engineering time to complete and are much less likely to have results impacted by minor model changes such as different load forecasts. Uncertainty with audit review of technical rationale documentation will serve to focus Transmission Planning engineering resources on short term compliance to an extent that is counter productive. Please consider removing R.2.6.2
No
It is recommended that the phrase "...measureable change in performance..." be changed to "...measurable change in system response..." A change in performance is unclear, and could suggest that a sensitivity study is valid only if the System is stressed to the point that it no longer performs within the criteria established by Table 1. In addition, it is recommended that the following text appear after the last sentence of 2.4.3: "The condition or conditions to be varied shall be left to the discretion of the Transmission Planner or Planning Coordinator, provided they are selected from the list below."
Yes
Yes
Yes
The performance requirements of Table 1 do not allow the loss of non-consequential load for single and multiple contingency events. The disallowance of load loss does not provide any real benefit to the reliability of the BES and is an unnecessary overreach into local quality of service issues that are best addressed by State, Provincial or Municipal authorities. There may be circumstances such as high local transmission costs or local opposition to transmission construction where prohibition of non-consequential load loss

represents a poor cost/benefit or quality of life tradeoff. Having a provision at the regional level that a PA or TP can have a certain amount of non-consequential load loss designed or planned in to its system that would be reasonable if it is acceptable to the RE and does not have an adverse impact on the remaining BES. In lieu of such a RE provision, providing a quantitative cap in non-consequential load loss such as 100 MW may be rationale compromise in the goal of limiting load loss for the more probable outage events. Our preference would be to retain the capability of limited non-consequential load loss. It is our understanding that footnote 9 is under consideration as part of Project 2010-11 and should be noted as such for clarification.

No

Consider removing "the latest" from M1.

No

The requirement to distribute the Planning Assessment should be more flexible and allow for making the Planning Assessment available, such that those entities that desire the information can have it readily available. R8 should be modified as follows: Each Planning Coordinator and Transmission Planner shall make available its Planning Assessment results to adjacent Planning Coordinators and Transmission Planners and to any functional entity that indicates a reliability related need for the Planning Assessment results.

Group

E.ON U.S.

Brent.Ingebrigtsen@eon-us.com

Comments: 2.2.1. A current study assessing expected System peak Load conditions for one of the years in the Long-Term Transmission Planning Horizon and the rationale for why that year was selected. E.ON U.S. believes the scope of the 'current study' should be defined. It is not clear whether the scope is the same as outlined in section 2.1.

No

In the statement: "the Planning Coordinator and Transmission Planner shall coordinate with adjacent Planning Coordinators and Transmission Planners to ensure that Contingencies on adjacent Systems which may impact their Systems are included in the Contingency list." E.ON U.S. believes that the use of the pronoun "their" in the quoted section above is confusing. "Their" could be read as applying to the adjacent Planning Coordinators and not to the Planning Coordinator to whom the standard applies. E.ON U.S. recommends that the word "their" should be changed to "the Planning Coordinator's and Transmission Planner's" in order to make it clear.

E.ON U.S. believes that Table 1 should be formatted to avoid having the tables split by page breakers. In addition, tables spanning across multiple pages should have headers at the top of each page.

We have concerns for including induction motor representations in the load models without any study or bench-marking activities to meet the requirements of R2.4.1. This information should be supplied by the LSE as part of the MOD standard. We understand that the proposed standard will accept an aggregate system load model which represents the overall dynamic behavior of the load to relieve the burden of trying to develop specific induction motor load representation at each load bus. However this modeled system response will be considerably different compared to the actual system response which will open up the industry to unwarranted scrutiny and possible compliance violation investigations.

We commend the SDT for its work to continue the improvement on the proposed TPL-001-1. We were not able to find a place to include comment on Requirement R3 or R4; therefore, we have included our comments here: Section R4.3.1, bullet point 3 requires the stability analyses to include the impact of subsequent "[t]ripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models". As written, this bullet could be interpreted as requiring the inclusion of these relay models in stability data bases. We do not have generic or actual relay models in our dynamics data bases for tripping line faults on lines and transformers represented. We represent actual relay response and tripping times of relays, communications, and breakers to faults in tripping transmission lines and transformers. Requiring the inclusion of generic or actual relay models for all relays that can trip lines and transformers would add a large burden to the development and maintenance of accurate dynamics model files that would add little or no benefit. Please change this bullet to read: "Tripping of Transmission lines and transformers where transient swings cause Protection

System operation based on known Protection System response". Section 3.4.1 and 4.4.1 require PCs and TPs to coordinate with adjacent PCs and TPs to ensure that Contingencies on adjacent Systems which may impact their Systems are included in the Contingency list. Please clarify whether this means 1) that a PC or TP must coordinate with others to identify contingencies on other Systems that the PC or TP must now include on their Contingency list to simulate and address any performance violations on their own System, or 2) that the PC or TP must coordinate with others to identify contingencies on their System that this PC or TP must now include on their Contingency list to simulate and address any performance violations on the other Systems. In either case, the standard does not seem to clearly state what must be done, or whose responsibility it is to develop the corrective action plan, if a contingency in one System causes a performance violation in another System.

We recognize that the drafting team made changes to the definition of Year One based on industry comments. However, we believe that the revised language could allow for a situation where an entity could use its next season's operating study as its Year One planning study. For example, if the entity does its study in the fall of 2011, the proposed definition would allow the entity to use its summer 2012 operating study as its Year One study. This is a very short period to address any issued identified. Suggest working into the requirement that Planning Studies must look out at least 12 months beyond when the study is performed. This would still allow for the provision in the current definition example ("if a Planning Assessment was started in 2011, then Year One must include the forecasted peak Load period for either 2012 or 2013) because the entity would be able to use their 2013 Load period, but it would prevent the entity from using the 2012 Load period if they started the assessment late in 2011.

Yes

Yes

Yes

Yes

Yes

PG&E does not support the performance table, as currently revised. Table 1, P5 currently requires the study of "[d]elayed Fault Clearing due to the failure of a relay<sup>13</sup> protecting the Faulted element to operate as designed". As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: "Single failure of a protection relay<sup>13</sup> protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following". In Table 1, P2 and P3, the last column "Non-Consequential Load Loss Allowed" where the requirement "No<sup>12</sup>" appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote "b". This will require immediate redesigns to meet this particular requirement. The

unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the proposed footnote 12 include a provision to default to the existing footnote "b" in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, "Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers." Timing of this project and project 2010-11 is critical. It would be very difficult to vote to approve the proposed TPL-001-2 prior to knowing the outcome of Project 2010-11 (footnote b issue).

Yes

Yes

Group

Florida Reliability Coordinating Council, Inc - Transmission Working Group

Richard BEcker

Yes

No

No, because it is worded to be dependent upon when an assessment is started rather than when the assessment is completed and valid. Assessments don't typically include a "start date". An assessment completed on a calendar date should include (be valid for) the forecasted peak load for a timeframe that begins no more than 24 months from the date that the assessment was completed.

No

No, Since "the latest" data may become available after the study is complete, a planner may not be able to ever complete a study. Please consider removing "the latest" from the second sentence.

No

No, Please consider removing R.2.6.2. The overwhelming majority of PAs use a 10 year set of planning models developed annually by Regions or Subregions. These annual sets of planning models will always have some changes. The annual study requirement is especially problematic for Stability and Short circuit studies that require much more engineering time to complete and are much less likely to have results impacted by minor model changes such as different load forecasts. Uncertainty with audit review of technical rationale documentation will serve to focus Transmission Planning engineering resources on short term compliance to an extent that is counter productive.

No

This change does not clarify the required sensitivity analysis. A measureable change in performance is unclear? Instead of a measurable change in performance, a measureable change in contingency response of the Bulk Electric System would be more appropriate. A change in performance implies not meeting one of the performance requirements as specified in Table 1.

Yes

No
This change does not clarify material. Material should be quantified somehow. We recommend changing the phrase "material generation additions or changes" to "generation in the vicinity with additions of changes larger than 200 MW".
Yes
We support the changes to the performance tables.
Footnote 12 performance requirements of Table 1 should allow the loss of non-consequential load for all contingency categories except for P0. The disallowance of load loss does not provide any real benefit to the reliability of the BES and is an unnecessary overreach into local quality of service issues that are best addressed by State, Provincial or Municipal authorities. There may be circumstances such as high local transmission costs or local opposition to transmission construction where prohibition of non-consequential load loss represents a poor cost/benefit or quality of life tradeoff. Having a provision at the regional level that a PA or TP can have a certain amount of non-consequential load loss designed or planned in to its system that would be reasonable if it is acceptable to the RE and does not have an adverse impact on the remaining BES. In lieu of such a RE provision, providing a quantitative cap in non-consequential load loss such as 100 MW may be rationale compromise in the goal of limiting load loss for the more probable outage events. Our preference would be to retain the capability of limited non-consequential load loss. Footnote 9 should also be under consideration as part of Project 2010-11 and should be noted as such for clarification.
No
It appears that there is a disagreement between R8 and M8, regarding public posting. We Agree with M8 posting option.
No
The requirement to distribute the Planning Assessment should be more flexible and allow for making the Planning Assessment available, such that those entities that desire the information can have it readily available. R8 should be modified to replace distribute with "make available:", so the new requirement would read as follows: Each Planning Coordinator and Transmission Planner shall make available its Planning Assessment results to adjacent Planning Coordinators and Transmission Planners and to any functional entity that indicates a reliability related need for the Planning Assessment results.
Individual
Michael R. Lombardi
Northeast Utilities
Yes
No
NU does not support the revised definition of Year One as we believe it leads to confusion. Our suggestion is that Year One should be the Peak Load Year after the study is initiated. The subsequent years should be counted from Year One (e.g., a study that is started in year 2010 with peak load in 2011 will have Year One as 2011 and Year Two as 2012, etc.).
No
NU believes that the Normal System Conditions as stated in Requirement R1 should establish the base case conditions to be used for the assessment studies. More guidelines for developing base cases should be addressed in the requirements. What the statement in Requirement R1 lacks is the manner of creating generation dispatches and the level of interface flows (level of stress), which are central to any base case to be used to assess the

reliability of the electric power network. Depending upon how the base case dispatches and the level of interface flows are created, a study may reveal reliability violations in the power system. This is a weakness of the existing TPL standards. NU, however, will support the idea of developing regional guidelines in regard to the nature of the base cases to be used for the NERC reliability studies. Comment on Requirement R1.1, Part 1.1.2: With respect to known outages NU requests that the six month duration listed by the requirement should be changed to one year duration. Requirement R1.1 Part 1.1.6: The phrase "required for Load" should be deleted as this confuses the issue [since resources may also be used for export to other areas and not just internal load].

No

The revisions made to Requirement R2 Part 2.1 appear to resolve the concern that past studies could not be used to comply with the short-term steady state study requirements. However, the language of Requirement R2 Part 2.2 still seems to suggest that current annual studies are always required for the long-term steady state assessment to be compliant. This may have been an oversight, for consistency Requirement R2 Part 2.2 should be modified to similarly read as Requirement R2, Part 2.1.

No

The standard is referring to requirements for sensitivity and other issues without a reference to base assumptions as commented in Question #3. The standard must describe base assumptions. To define a sensitivity condition, NERC must define base assumptions.

Yes

Yes

Yes

Checked "No" NU agrees with the changes that have been made to the language of P5. However, for Table 1 (Steady State and Stability Performance Extreme Events) – Stability, the wording "Protection Systems failure" should be changed to "relay failure" similarly to the change in P5. This change should be made for items 2a through 2d.

Yes

Yes

No comments on Question 7. Other Comments: As detailed below, NU has other comments that are not addressed by this Comment Form as follows – Section 3.3, Section 4.3, Non-Consequential Load Loss as referenced in the events Table 1 and studies using extreme event contingencies. Section 3.3 – NU believes that the last sentence of Part 3.3.1 should be removed since this is handled by PRC-023. Line ratings are addressed by PRC-023 which requires coordination with the Reliability Coordinator. NU suggests the removal of the following sentence: "Tripping of Transmission elements where relay loadability limits are exceeded." Section 4.3 - High speed reclosing is not defined and to help eliminate any confusion that it may introduce into the standard it will be worthwhile for the SDT to define this term. Non-Consequential Load Loss – Depending upon the resolution of "Project 2010-11, TPL Table 1, Footnote b" NU may have additional comments regarding this issue. Studies Using Extreme Event Contingencies: The requirements for sensitivity analysis already address issues going beyond what is expected to meet the reliability requirements of the standard. Therefore, requiring extreme event analysis is requiring two layers of event analysis beyond what is required and there is no requirement for corrective action if a concern is identified.

Requirement R1 Part 1.1 and following states "System models shall represent:... 1.1.5. Known commitments for firm Transmission Service and Interchange. It was commented during a previous posting that 1.1.5 should be reworded to read: Known commitments for Firm Transmission Service, and, additionally, other types of transactions provided they have been demonstrated to not violate existing reliability constraints. The response was that "The SDT believes that the defined term 'Interchange' covers other transfers as described in your comment. No change made." It is agreed that known Interchange should be modeled. However, it is imperative that existing reliability constraints not be violated in the process. That is, Interchange relating to economic transactions should not drive planning studies. Reliability-related investments should not be driven by congestion related to economic transactions incorporated into planning models. Con Edison's Preferred approach: • 1.1.5. Known commitments for firm Transmission Service and Interchange. Interchange is meant to refer to energy transactions other than firm Transmission Service. While rigorous planning studies have been conducted to permit the uninterrupted implementation of firm Transmission Service without jeopardizing the reliable operation of the Interconnected System, other types of energy transaction only take place whenever system conditions permit them. They are usually of very short duration relative to planning assessment periods (usually spanning for a few hours to a few days) and deemed highly interruptible subject to reliability issues that may arise during operation of the system. In other words, the term Interchange refers to economic transactions that are permitted when the system is secure and there are reasonable reliability margins to effect dispatch changes to lower operating costs. As such, Interchange should not be reflected in system representation meant to assess system reliability in adherence to reliability criteria delineated in documents such as TPL-001.

There is insufficient information and experience regarding dynamic load modeling. It may also be included as a "sensitivity" analysis in 3.2, rather than requiring and expecting accurate representation of a dynamic load model. If this requirement is kept, a modeling standard should be written that is specific to dynamic loads. This change belongs in a modeling standard, not in TPL-001.
Yes
No
• Header note (i) in the first Table 1 (p. 10) The explicit representation of (voltage-dependent) load models is perfectly consistent with the requirements defined in R1 (which calls for a comprehensive representation of system components and their expected operating status in the planning assessment period) and the impetus to the creation of

more specific load models in dynamic assessments found Requirement 2.4 of this draft of TPL-001-2. It is a known that depressed voltage conditions cause certain system elements to perform below their rated capacity. For example, capacitors provide less voltage support and voltage controlling transformers are impeded by their finite tap range to direct VAR flow into areas affected by low voltage conditions. Certain load types, on the other hand, provide a self-compensating relief to depressed voltage by naturally decreasing demand in a manner proportional to their characteristics, without operator intervention. Choosing to negate the voltage-dependence of one of these system elements (load, in this case) results in an inaccurate system representation that, in turn, may lead to erroneous assessments of the reliability state of the interconnected system and, potentially, to the implementation of unwarranted system upgrades.

Yes

We commend the SDT for its work to continue the improvement on the proposed TPL-001-1. We were not able to find a place to include comment on Requirement R4; therefore, we have included our comments here: Section R4.3.1, bullet point 3 requires the stability analyses to include the impact of subsequent “[t]ripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models”. As written, this bullet could be interpreted as requiring the inclusion of these relay models in stability data bases. We do not have generic or actual relay models in our dynamics data bases for tripping line faults on lines and transformers represented. We represent actual relay response and tripping times of relays, communications, and breakers to faults in tripping transmission lines and transformers. Requiring the inclusion of generic or actual relay models for all relays that can trip lines and transformers would add a large burden to the development and maintenance of accurate dynamics model files that would add little or no benefit. Please change this bullet to read: “Tripping of Transmission lines and transformers where transient swings cause Protection System operation based on known Protection System response”.

No

The definition as it is in the current standards is fine. The new proposed definition is unclear.

Yes

Yes

No

This new requirement will expand the scope of the study work beyond a reasonable extent.

Yes

Yes

Table 1, P5 currently requires the study of “[d]elayed Fault Clearing due to the failure of a relay13 protecting the Faulted element to operate as designed”. As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: “Single failure of a protection relay13 protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following”. In Table 1, P2 and P3, the last column “Non-Consequential Load Loss Allowed” where the requirement “No12” appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote “b”. This will require immediate redesigns to meet this particular requirement. The unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the proposed footnote 12 include a provision to default to the existing footnote “b” in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, “Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers.” Timing of this project and project 2010-11 is critical. It would be very difficult to vote to approve the proposed TPL-001-2 prior to knowing the outcome of Project 2010-11 (footnote b issue).

NBSO
Yes
No
To avoid confusion, the formal definition for Year One should be eliminated and wording used to describe Year One be placed within the appropriate requirement. For example, R2.1.1 could be re-written to state: System peak Load representing a point in time 12-24 months and another point in time 48-65 months into the future from the time the study is initiated.
No
R1 should have some language to state that base case assumptions should be made such that they appropriately stress the system to be tested and are in accordance with good engineering practice.
No
NBSO agrees with the language for R2.1, but the language with R2.2 should be changed to be consistent with R2.1. NBSO disagrees with the revisions to R2.1.5. Requiring PAs to study instead of assess the possible unavailability of equipment with a lead time of a year or more will result in significant demand on resources with little impact on system reliability. NBSO also questions what additional value such studies will bring in addition to the N-1-1 requirements (P6).
No
Base case assumptions should be made such that they appropriately stress the system to be tested and are in accordance with good engineering practice. If the base cases are already stressed, the requirement to study sensitivity cases may result in the study of less severe conditions, and thus require additional time and resources while providing little additional value to the overall assessment.
No
By implication, the response of induction motor load would need to be considered when modeling the expected dynamic behaviour of loads that could impact the study area. NBSO suggests re-wording parts of R2.4.1 as follows: System peak load levels shall include a model which represents the expected dynamic behaviour of loads that could impact the study area. An aggregate system load model which represents the overall expected dynamic behaviour of load is acceptable.
Yes
Yes

For consistency, 'Protection System' should be replaced with 'relay' on Table 1 (p12) Stability Section, items 2a-2d.
Yes
Yes
NBSO suggests considering rewording the VSL so that they address the failure to distribute the final results of planning assessments.

No
The added clarification to the definition of Year One serves to remove most ambiguity with respect to Year One. However, the revision has added further ambiguity to the terms "year two" and "year five" which are not defined. For the Planning Assessment started in a given calendar year, the first year that is studied must include the forecasted peak Load period for one of the following two calendar years. An additional Near-term study must be performed that is four calendar years beyond the first year that is studied. We recommend defining Year Five as the twelve month period 4 to 6 calendar years from the date of the Planning Assessment. We further recommend revising R2.1.1 as follows: "System peak Load for Year One and for Year Five." Alternatively, the definition of Year One could be eliminated and described within the text of the requirements.
No
For R1 Ambiguity regarding base case assumptions, in combination with lack of clarity and clear direction of purpose regarding the sensitivity analysis, undermines the objectives of the standard; R1.1 Part 1.1.2. With respect to known outages, there needs to be greater flexibility in the standards (e.g. more tolerance to non-consequential load shedding or limitations to the contingencies that need to be considered (e.g. P0, P1, & P2)). Regional allowances for load shedding under this condition should be approved. Duration of known outages should be increased from six months to one year; R1.1 Part 1.1.6 Delete "required for Load". Resources may also be used for export to other areas, not just internal load.
No
We completely agree with the revision to R2.1, but this revision must be carried through to other sections (R2.2, 2.2.1) and R2.2 language should be consistent with 2.1 for example - use "current or qualified past studies" instead of "the following annual current study". Revisions made to Requirement R2.1.5 have made it worse than as originally drafted. This would require the PC & TP to study, or in other words perform technical analysis of, the impact and probability of the possible unavailability of any piece of equipment with a lead time of one year or more. Such an evaluation of spare equipment strategies would require significant additional resources and data, but provide no benefit to system reliability, as it is redundant to the existing N-1-1 contingency requirement (P6).
No
These sensitivities need to be considered if not already included in the base case assumptions.
No
We have not determined a need to model dynamic loads, and therefore have not benchmarked any such models. We recommend that prior to this requirement being in place, a modeling standard should exist that is specific to dynamic loads.

Yes
No
Header note (i) in the first Table 1 could imply that voltage-varying load shall not be used to meet steady state performance requirements. NYISO steady state load models include voltage-varying loads. This note should be revised to only reference loads which are disconnected due to voltage.
In Table 1 – Stability, Make language similar to wording in P5. Protection System should be removed and replaced with the words relay failure. This change should be made for 2a through 2d: 2. Local or wide area events affecting the Transmission System such as: a. 3Ø fault on generator with stuck breaker <sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. b. 3Ø fault on Transmission circuit with stuck breaker <sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. c. 3Ø fault on transformer with stuck breaker <sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. d. 3Ø fault on bus section with stuck breaker <sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. In Note 11 change wording as shown below to include the words “a total of”: Excludes circuits that share a common structure (Planning event P7, Extreme event steady state 2a) or common Right-of-Way (Extreme event, steady state 2b) for a total of 1 mile or less
Yes
No
Requirement 8 is an administrative burden to TPs and PCs that adds no value to reliability. PCs should be including TPs, neighboring PCs and interested parties in its planning processes when developing the Planning Assessments. Therefore, the inclusion of a set of VSLs for Requirement 8 is unnecessary. Furthermore, the requirement lacks a specified time frame to receive comments, thereby implying that TPs and PCs would be required to reply to comments forever following the finalization of a Planning Assessment. The NYISO proposes a limit of six months. Should the SDT decide to leave the VSLs for Requirement 8, Requirement 8.1 should be revised to reflect that comments only to the final Assessment (not drafts developed during a process) need a response as follows: If a recipient of the planning assessment final results provides documented comments on the results within 180 calendar days of the issuance of those final results, the respective Planning Coordinator or Transmission Planner shall provide a documented response to such recipient within 90 calendar days of receipt of those comments. We also have other comments not addressed by this Comment Form as follows – Section 2.7, Section 3.3, Section 4.3, and overall: Section 2.7 requires that Corrective Action Plans are included in each Planning Assessment and states “Such actions may include...” followed by a list of actions. Restricting allowable actions, and excluding runback/tripping of HVDC would have a direct impact on multiple existing facilities in New York and would adversely impact the reliability planning of the NYCA. Runback/tripping of HVDC must be added to the list. Section 3.3 - We feel that the last sentence of 3.3.1 should be removed. This is handled by PRC-023. Line ratings are addressed by PRC-023. PRC-023 requires coordination with the Reliability Coordinator. Remove “Tripping of Transmission elements where relay loadability limits are exceeded.” Section 4.3 - High speed reclosing is not defined. Overall – We have previously made comments which have not been addressed in the current version of the proposed standard. Support for the standard can at most be limited without addressing comments. We have previously commented on sensitivity analysis and guidance for base case assumptions. Also, extreme event analysis should not be mandated in this standard as no corrective action is required. The requirements for sensitivity analysis already address issues going beyond what is expected to meet reliability requirements. Requiring extreme event analysis is requiring two layers of event analysis beyond what is required, and there is no

requirement for corrective action if anything is identified. The standard is referring to requirements for sensitivity and other issues without a reference to base assumptions. The standard must describe base assumptions. To define a sensitivity condition, NERC must define base assumptions.

Western Area Power Administration

Brandy A. Dunn

Yes

The whole bullet point section in the Effective Date section referring to Corrective Action Plans could be deleted and instead captured by Requirement R2.7.3. A seven year grace period is probably not favorable to FERC, and a better solution could be developed to meet industry needs. In R2.7.3, a possible example of "beyond the control of the Transmission Planner" could be that the physics of a significant percentage of induction motors in low inertia air-conditioning loads would tend to pull out for certain N-1 events. This may in significant part occur because such motors may have nearly no dynamic stability margin to withstand such N-1 events as close-in 3-phase faults with normal clearing during peak load conditions. So until the Transmission Planner has been able to institute changes in the industry to address the basic physics of such loads, this Requirement 2.7.3 would permit the use of such "Non-Consequential" Load Loss and curtailment of Firm Transmission Service. In this example, it may take longer than a seven year time period to fix the problem. On the other hand, some examples of Non-Consequential Load Loss could perhaps be mitigated in a shorter timeframe. Provided that an entity has a good technical justification and defined margin for "Non-Consequential" Load Loss or curtailment of Firm Transfers, then it may be acceptable. Requirement R2.7.3 seems to move in this direction. Section R4.3.1, bullet point 3 requires the stability analyses to include the impact of subsequent "[t]ripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models". As written, this bullet could be interpreted as requiring the inclusion of these relay models in stability data bases. We do not have generic or actual relay models in our dynamics data bases for tripping line faults on lines and transformers represented. We represent actual relay response and tripping times of relays, communications, and breakers to faults in tripping transmission lines and transformers. Requiring the inclusion of generic or actual relay models for all relays that can trip lines and transformers would add a large burden to the development and maintenance of accurate dynamics model files that would add little or no benefit. Please change this bullet to read: "Tripping of Transmission lines and transformers where transient swings cause Protection System operation based on known Protection System response".

Yes

Yes, this clarification helps. The drafting team could also define "year five".

No

It's difficult to tell whether Requirement R1 is intended to require only one base case or whether it was intended to require creation of separate models for each possible N-0 condition ("normal system condition") under a variety of stressing scenarios. The inserted language does not seem to provide additional clarity. Suggested language may be "This establishes the initial 'Normal System' condition corresponding to category P0 in Table 1." Also, in Requirement R1.1.5, how are the Firm Transmission Service commitments supposed to be modeled in Power Flow Cases? Are they just to be modeled as loads, generation, and control area interchanges? Suppose a POR or POD is not at a generator or load bus. What selection of generation and load would represent the projected system conditions for this Firm Transmission Service commitment?

No

R 2.1.5: The issue in this Requirement is studied in the Operations next-day; next-week; next-month studies required under the TOP Standards; and are also covered by processes such as the Operational Transfer Capability Policy Committee (OTCPC) seasonal study process within the WECC. It would be quite onerous to run a complete power flow simulation on separate base cases for each transformer (or other equipment with long lead time) initially out of service. The revision in language from "Planning Assessment" to "studies" does not clarify that a power flow simulation is not necessarily required for each situation. A valid assessment could include other methods such as using sound technical reasoning to relate the initial out-of-service condition to a condition that has already been studied. This condition may have taken place in previous operational studies. The language in the standard could be improved to make this clarification – perhaps reference R2.6. Additionally, this Requirement still needs further clarification. Currently the scope of equipment applicable to the requirement could be misinterpreted as larger than that contemplated by FERC. The standard as written seems to say that the responsible entity needs to study the spare equipment strategy for all "major transmission equipment" with long lead times. In the directive to include this requirement, FERC used the term "critical facilities". In the NOPR to Order No. 693 they stated, "Critical facilities are those facilities that impact IROLs and deliverability of generation to firm load" (P1081). In Order No. 693 FERC also said, "if an entity's spare equipment strategy for the permanent loss of a transformer is to use a 'hot spare' or to relocate a transformer from another location in a timely manner, the outage of the transformer need not be assessed under peak system conditions" (P1725). Finally, the drafting team could clarify if this requirement applies to radial branches (such as generator step-ups or step-down to load). Such branches may be construed as "critical facilities" but the impediment to deliverability of generation to firm load is consequential to the initial outage.

Yes

In Requirement 2.1.4, "Sensitivity Analysis". How much change does it take in any of the modeling assumptions (load, generation, voltage support, topology, etc.) to significantly stress the system within a range of credible condition? As this Requirement relates to R2.7, Would it be necessary to have Corrective Action Plan(s) if needed to meet all the Sensitivity Cases? How many Sensitivities before must have Corrective Action Plan? Also – why is it essential to use the qualifier "annual" for "current studies" in Part 2.1? Can a study be considered current if it is conducted less frequently than once per year? Note that Parts 2.3, 2.4 and 2.5 do not use the "annual" qualifier, nor does Requirement R2. Recommend deleting this apparently non-essential qualifier in both R2.1 and R2.2. We are unable to appreciate why the wording in Part 2.3 is not consistent with that in Part 2.1, 2.2, 2.4 or 2.5. Note that the semantics of the wording "... (steady state / stability) analysis shall be assessed annually..." can be interpreted to be much different than the semantics of the Part 2.3 wording "The short circuit analysis... shall be conducted annually ...". The former requires the analysis to be \*assessed\* annually but 2.3 requires the analysis to be \*conducted\* annually without explicitly requiring it be assessed -- is the usage of "conducted" instead of "assessed" consistent with the intent? In Part 2.6.2, the intent is awkwardly conveyed within the phrase "...the System represented in the study shall not include any material changes unless...". In the context of a \*past\* study, how can the System represented possibly include any material changes (that would have presumably occurred after the study)? Suggest modifying Part 2.6.2 to read "For steady state, short circuit or Stability analysis: no material changes have occurred in the System represented in the study or, if material changes have occurred, a technical rationale shall be provided to explain why they do not significantly impact the study results."

Yes

Yes
The drafting team could provide guidance on what is "material". In Part 2.5, should "annually" be inserted after "shall be assessed" to make it consistent with Parts 2.1, 2.2, 2.3 and 2.4? If the omission is intentional in 2.5, please explain why.
Yes
Following is a suggested re-ordering of header notes to replace of the three categories concept – same information: a. Applicable Facility Ratings shall not be exceeded. The System shall remain stable. Cascading and uncontrolled islanding shall not occur. b. Planning event P0 is applicable to steady state only. c. Consequential Load Loss as well as generation loss is acceptable as a consequence of any event except P0. d. The response of voltage sensitive Load including Load that is disconnected from the System by end-user equipment as a consequence of any event shall not be used to meet steady state performance requirements. e. System steady state voltages and post-Contingency voltage deviations shall be within acceptable limits established by the Planning Coordinator and Transmission Planner. f. Transient voltage response shall be within acceptable limits as established by the Planning Coordinator and Transmission Planner. g. Planned System adjustments such as Transmission configuration changes and re-dispatch of generation are allowed if such adjustments are executable within the time duration applicable to the Facility Ratings. h. Simulate the removal of all elements that Protection Systems and other controls are expected to automatically disconnect for each event. Simulate Normal Clearing unless otherwise specified.
In footnotes 9 and 12, two critical issues are being addressed in large part via these "clarifying" footnotes. These are curtailment of "Firm Transmission Service" (which seems primarily to be a contract/scheduling issue) and the loss of "Non-Consequential Load." Perhaps these issues should receive more attention in the actual requirements. In P5 the term "Protection System" was removed and replaced with "relay". How are protection system elements other than relays accounted for? In studying a multiple contingency event with a communication system or control circuitry failure would it be necessary demonstrate P1 performance levels? These details could become critical as industry deals with issues such as FERC's interpretation of TPL-002-0 Requirement R1.3.10 (RM10-6-000). In Table 1 – Extreme Events – Stability – Items 2a-2d, change "Protection System failure" to "relay failure" to be consistent with changes in P5. Table 1, P5 currently requires the study of "[d]elayed Fault Clearing due to the failure of a relay <sup>13</sup> protecting the Faulted element to operate as designed". As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: "Single failure of a protection relay <sup>13</sup> protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following". Footnote 13 – Delete "voltage (#27, #59)" since the under/over voltage relays are not called upon to provide the primary protection for fault clearing on Transmission elements. Suggest modifying Event P4 description to be more consistent with Event P5 description by including Delayed Fault Clearing in the description in lieu of "Loss of multiple elements". Suggested Event P4 description is: "Delayed Fault Clearing caused by a stuck non Bus-tie Breaker attempting to clear a fault on one of the following:" In Table 1, P2 and P3, the last column "Non-Consequential Load Loss Allowed" where the requirement "No12" appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet

this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote "b". This will require immediate redesigns to meet this particular requirement. The unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the proposed footnote 12 include a provision to default to the existing footnote "b" in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, "Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers." Timing of this project and project 2010-11 is critical. It would be very difficult to vote to approve the proposed TPL-001-2 prior to knowing the outcome of Project 2010-11 (footnote b issue).

The primary concern involves wording under 2.1.4 and 2.4.3 that sensitivities are required by varying one or more conditions. Subsequently, in requirement 2.7.2 corrective action plans need to be developed to resolve performance deficiencies "only" if identified in multiple conditions or require a rationalization why no corrective action plan is necessary. Multiple conditions sensitivities under 2.1.4 and 2.4.3 are necessary to satisfy requirement 2.7.2. Requirement 2.7.2 adds ambiguity and should be removed. Alternatively, Requirement 2.7.2 could be revised as follows: 2.7.2. Corrective Action Plans are not required for performance deficiencies identified in a sensitivity analysis. If a Planning Coordinator includes Corrective Action Plans to resolve performance deficiencies identified in multiple sensitivity analysis, the Planning Coordinator shall provide documentation to support those Plans.
Yes
Yes
However, the requirement infers that a subjective judgment from a compliance auditor will be required.
Yes
Yes
No
(AESO is not a party to the following comments since its VSLs are set by the Alberta regulatory authority.) Requirement 8 is an administrative burden to TPs and PCs that adds no value to reliability. PCs should be including TPs, neighboring PCs and interested parties in its planning processes when developing the Planning Assessments. Therefore, the inclusion of a set of VSLs for Requirement 8 is unnecessary. Should the SDT decide to leave the VSLs for Requirement 8, Requirement 8.1 should be revised to reflect that comments only to the final Assessment (not drafts developed during a process) need a response as follows: 8.1 If a recipient of the planning assessment final results provides documented comments on the results, the respective Planning Coordinator or Transmission Planner shall provide a documented response to such recipient within 90 calendar days of receipt of those comments. For a Planning Coordinator (PC) who distributes the Planning Assessment to many different entities (to adjacent PCs, TPs, and other functional entities), a concern regarding the Requirement R8 VSL is that it is overly restrictive to apply a violation for failing to distribute the results of its Planning Assessment to only one PC, TP, or functional entity (and to apply a High VSL for failing to distribute to more than one entity), particularly since an entity's contact is subject to change over time, and since Measure M8 allows for

publicly posting the results of its Planning Assessment to its website. Should the SDT decide to include the VSLs for Requirement 8, we would recommend revising to use a percentage approach rather than applying a violation to a Planning Coordinator who fails to provide the results of its Planning Assessment to one PC, TP, or other functional entity (or applying a High VSL for failing to distribute to more than one entity.) Recommend applying a similar percentage approach to the VSLs drafted by NERC Staff for Project #2007-23 VSLs (e.g., for FAC-013-1) to be considered for the TPL-001-2 R8 VSLs. For example, • Lower VSL: The responsible entity failed to provide the Planning Assessment final results to 5% or less of the required entities. • Moderate VSL: The responsible entity failed to provide the Planning Assessment final results to more than 5% up to (and including) 10% of the required entities. • High VSL: The responsible entity failed to provide the Planning Assessment final results to more than 10% up to (and including) 15% of the required entities. • Severe VSL: The responsible entity failed to provide the Planning Assessment final results to more than 15% of the required entities OR [the existing language for the Severe VSL]. Explanation: The VSLs were modified for consistency with other standards and VSLs. Reference: Link to VSLs drafted by NERC Staff for Project #2007-23 VSLs (e.g., for FAC-013-1): [http://www.nerc.com/docs/standards/sar/Staff\\_Proposed\\_VSLs\\_2010July27.pdf](http://www.nerc.com/docs/standards/sar/Staff_Proposed_VSLs_2010July27.pdf)

The added clarification to the definition of Year One serves to remove most ambiguity with respect to Year One. However, the revision has added further ambiguity to the terms "year two" and "year five" which are not defined. For the Planning Assessment started in a given calendar year, the first year that is studied must include the forecasted peak Load period for one of the following two calendar years. An additional Near-term study must be performed that is four calendar years beyond the first year that is studied. We recommend defining Year Five as the twelve month period 4 to 6 calendar years from the date of the Planning Assessment. We further recommend revising R2.1.1 as follows: "System peak Load for Year One and for Year Five." Alternatively, the definition of Year One could be eliminated and described within the text of the requirements.

No

For R1 Ambiguity regarding base case assumptions, in combination with lack of clarity and clear direction of purpose regarding the sensitivity analysis, undermines the objectives of the standard; R1.1 Part 1.1.2. With respect to known outages, there needs to be greater flexibility in the standards (e.g. more tolerance to non-consequential load shedding or limitations to the contingencies that need to be considered (e.g. P0, P1, & P2)). Regional allowances for load shedding under this condition should be approved. Duration of known outages should be increased from six months to one year; R1.1 Part 1.1.6 Delete "required for Load". Resources may also be used for export to other areas, not just internal load.

No

We completely agree with the revision to R2.1, but this revision must be carried through to other sections (R2.2, 2.2.1) and R2.2 language should be consistent with 2.1 for example - use "current or qualified past studies" instead of "the following annual current study". Revisions made to Requirement R2.1.5 have made it worse than as originally drafted. This would require the PC & TP to study, or in other words perform technical analysis of, the impact and probability of the possible unavailability of any piece of equipment with a lead time of one year or more. Such an evaluation of spare equipment strategies would require

significant additional resources and data, but provide no benefit to system reliability, as it is redundant to the existing N-1-1 contingency requirement (P6).

No

These sensitivities need to be considered if not already included in the base case assumptions.

No

We have not determined a need to model dynamic loads, and therefore have not benchmarked any such models. We recommend that prior to this requirement being in place, a modeling standard should exist that is specific to dynamic loads.

Yes

No

Header note (i) in the first Table 1 could imply that voltage-varying load shall not be used to meet steady state performance requirements. NYISO steady state load models include voltage-varying loads. This note should be revised to only reference loads which are disconnected due to voltage.

In Table 1 – Stability, Make language similar to wording in P5. Protection System should be removed and replaced with the words relay failure. This change should be made for 2a through 2d: 2. Local or wide area events affecting the Transmission System such as: a. 3Ø fault on generator with stuck breaker<sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. b. 3Ø fault on Transmission circuit with stuck breaker<sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. c. 3Ø fault on transformer with stuck breaker<sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. d. 3Ø fault on bus section with stuck breaker<sup>10</sup> or a relay failure resulting in Delayed Fault Clearing. In Note 11 change wording as shown below to include the words “a total of”: Excludes circuits that share a common structure (Planning event P7, Extreme event steady state 2a) or common Right-of-Way (Extreme event, steady state 2b) for a total of 1 mile or less

Yes

No

Requirement 8 is an administrative burden to TPs and PCs that adds no value to reliability. PCs should be including TPs, neighboring PCs and interested parties in its planning processes when developing the Planning Assessments. Therefore, the inclusion of a set of VSLs for Requirement 8 is unnecessary. Furthermore, the requirement lacks a specified time frame to receive comments, thereby implying that TPs and PCs would be required to reply to comments forever following the finalization of a Planning Assessment. The NYISO proposes a limit of six months. Should the SDT decide to leave the VSLs for Requirement 8, Requirement 8.1 should be revised to reflect that comments only to the final Assessment (not drafts developed during a process) need a response as follows: If a recipient of the planning assessment final results provides documented comments on the results within 180 calendar days of the issuance of those final results, the respective Planning Coordinator or Transmission Planner shall provide a documented response to such recipient within 90 calendar days of receipt of those comments. We also have other comments not addressed by this Comment Form as follows – Section 2.7, Section 3.3, Section 4.3, and overall: Section 2.7 requires that Corrective Action Plans are included in each Planning Assessment and states “Such actions may include...” followed by a list of actions. Restricting allowable actions, and excluding runback/tripping of HVDC would have a direct impact on multiple existing facilities in New York and would adversely impact the reliability planning of the NYCA. Runback/tripping of HVDC must be added to the list. Section 3.3 - We feel that the last sentence of 3.3.1 should be removed. This is handled by PRC-023. Line ratings are

addressed by PRC-023. PRC-023 requires coordination with the Reliability Coordinator. Remove "Tripping of Transmission elements where relay loadability limits are exceeded." Section 4.3 - High speed reclosing is not defined. Overall - We have previously made comments which have not been addressed in the current version of the proposed standard. Support for the standard can at most be limited without addressing comments. We have previously commented on sensitivity analysis and guidance for base case assumptions. Also, extreme event analysis should not be mandated in this standard as no corrective action is required. The requirements for sensitivity analysis already address issues going beyond what is expected to meet reliability requirements. Requiring extreme event analysis is requiring two layers of event analysis beyond what is required, and there is no requirement for corrective action if anything is identified. The standard is referring to requirements for sensitivity and other issues without a reference to base assumptions. The standard must describe base assumptions. To define a sensitivity condition, NERC must define base assumptions.

Progress Energy

Yes

Yes

Yes

No

While PE does not disagree with the basic premise of 2.1, PE disagrees with the language to the extent that 2.1 is qualified by language in 2.6 and 2.6.2. The issue of managing modeling of case data is already adequately handled in MOD Standards. Furthermore, PE does not feel that the term "material" can be defined with any mutually agreed-upon boundaries, and could be construed to require any and all Transmission Planners and/or Planning Authorities to make multiple revisions of base cases each year. PE therefore appeals to the SDT to remove the language referring to R2 Part 2.6.2 and furthermore appeals for the deletion of R2.6.2. Furthermore, PE appeals to the SDT to modify R2.6.1 to say "For steady state, short circuit, or Stability analysis: the study shall be five calendar years old or less, unless a technical rationale can be provided to demonstrate the validity of the results of any studies older than five years or any studies using cases containing major modeling differences from other submitted studies."

No

PE does not have concerns in general with either 2.1.4 or 2.4.3. PE does, however, disagree with the wording at the end of the main paragraph of 2.4.3. Whether or not analysis qualifies as sensitivity analysis should not be predicated upon the end results; rather, it should be based upon major case modeling differences. PE therefore recommends that the phrase "...that demonstrate a measurable change in performance" be removed so that the last sentence in the main paragraph read "...by a sufficient amount to stress the System within a range of credible conditions."

Yes

No

PE agrees in general with the changes made to R2.5. PE disagrees, however, with the language stipulating that current and past studies be qualified by the language in R2.6 Part

2.6.2 (see notes for Question 3.1 regarding recommending changes with regard to R2.6.2).

Yes

PE assumes the term "header notes" is referring to the "Planning Performance Events" at the top of Table 1. If this is the case, PE has no concerns with the present language.

PE remains concerned with the present draft of TPL-001-2 regarding the presence or absence of footnotes in particular events. PE believes that, for all events in Table 1 except P0, any "No" designation in the "Non-Consequential Load Loss allowed" column should have Footnote 12 appended to it. Several events do append footnote 12 to a "No" answer, but several do not. PE does not see why certain events should be denied the use of Footnote 12 as long as Footnote 12 is worded in a manner such that the BES will not be adversely affected. PE has additional concerns regarding two Footnotes. Footnote 9 contains language regarding firm transmission service that is very similar to language presently under review in NERC Project 2010-11. PE feels that Footnote 9 should have had a statement at the end similar to that of Footnote 12, such as "Note: Firm Transmission Service is being decided in Project 2010-11. When that project is finalized, the resolution will be copied into Footnote 9." Without such a statement, PE cannot understand why the Firm Transmission language in footnote (b) under Project 2010-11 is being reviewed, while it is apparently no longer being reviewed in Project 2006-02. Footnote 12 contains the following language as a place holder: "Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here." PE has filed substantial comments on the footnote (b) issue in previous drafts, pointing out that disallowance of curtailment of non-consequential load is a local load issue and not a BES concern. PE therefore cannot make any positive determination as to whether the draft Standard, TPL-001-2, and its associated Table 1, will be a viable Standard until the language in Footnote 12 is resolved via Project 2010-11. Given the potential for unresolved and confusing issues regarding the parallel development of Project 2006-02 and 2010-11, PE encourages NERC to resolve all issues within Project 2010-11 before taking the draft Standard TPL-001-2 to ballot in Project 2006-02.

Please clarify R1.1.2 to state "Known outage(s) of generation or Transmission Facility(ies) during the Planning Horizon with a duration of of at least six months."

Yes

Yes

Yes

Yes
It should be noted that if there is more generation proposed in an area than there load and export capability, all proposed material generation additions would not be represented. Determining what future generation additions to include in the Long-Term Transmission Planning Horizon may be based on a non-technical rationale rather than a technical rationale.
Yes
Table 1, P5 currently requires the study of “[d]elayed Fault Clearing due to the failure of a relay <sup>13</sup> protecting the Faulted element to operate as designed”. As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: “Single failure of a protection relay <sup>13</sup> protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following”. In Table 1, P2 and P3, the last column “Non-Consequential Load Loss Allowed” where the requirement “No <sup>12</sup> ” appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore the proposed footnote 12 should include a provision to default to the existing footnote “b” in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, “Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers.”

Previous Comment unaddressed: Requirement 2.1.5: Including the spare equipment strategy will be difficult for a PC that doesn’t own or manage the transmission equipment or the strategies. This requirement should only be applicable to TP. Furthermore, R7 should be deleted and the responsibilities of each entity should be explicitly stated within the specific requirements.
No
The stress test requirements should be deleted. The purpose of this proposed Standard is to establish planning performance standards that support reliable operation. This is

achieved by imposing performance requirements relative to specific conditions and contingencies. Compliance with the performance metrics within these boundaries is presumably indicative of a reliable system. It is unclear what value is added by stress testing the system in accordance with undefined, vague parameters, as required by Requirements 2.1.4 and 2.4.3. The criteria in the relevant requirements that govern the stress testing are defined by the following ambiguous phrase: 1) "by a sufficient amount"; 2) "range of credible conditions"; and 3) "measurable change of performance". Application of these criteria introduces uncertainty for both the regulated community and the relevant compliance enforcement authorities, which, in turn, creates audit risks for regulated entities. Furthermore, there is no reliability value because the stress test requirements do not establish objective criteria and do not prescribe any actions based on the stress test results. Reliability Standards should set specific obligations that are readily discernible and achievable on a consistent basis. The existing Standard does this by setting specific performance obligations relative to specific conditions and contingencies. Conversely, the stress test requirements introduce ambiguity and uncertainty with no reliability benefit; the only apparent effect is unnecessary audit liability risk for regulated entities. Accordingly, ERCOT believes that these requirements should be deleted.

No

ERCOT ISO suggests adding "best available" as a descriptor to load models. Distribution Providers (DPs)/Load Serving Entities (LSEs) are the appropriate NERC functional entities to provide dynamic load data. Accordingly, Planning Coordinators (PCs) and Transmission Planners (TPs) must rely on those entities for that data. Despite reliance on DPs/LSEs for this data, the Standard proposes to impose an obligation on PCs and TPs to include a load model representative of "expected" dynamic behavior. Simply put, PCs and TPs do not have this information and should not be subject to compliance liability risk for an issue that is beyond their control. This change will still accomplish the goal of reflecting dynamic data in the relevant models, while mitigating PC/TP compliance risk by basing their compliance on information that is within their control – i.e. the "best available" information. Based on this change, the language should read - "System peak Load levels shall include best available Load models which represent the expected dynamic behavior of Loads that could impact the study area, considering the behavior of induction motor Loads". This language is also a more accurate reflection of the Consideration of Comments by the Standard Drafting Team after the March 2010 comment period. To address this issue in the most appropriate manner, the Standard should be revised to establish an appropriate process for collection, reporting and use of dynamic data based on assigning obligations to the appropriate functional entities. In essence, DPs/LSEs should be required to collect the data and report it to TPs. Because TP models are the basis for PC models, the dynamic data will be included in PC models as part of the process. However, DPs and TPs should still only be required to use the "best available" data. Continued use of this language will mitigate the liability risk associated with a requirement related to data that is within the control of a third party. Even under a construct where DPs/LSEs are required to collect and report dynamic data, there is no guarantee they will do so and PCs/TPs should not be held accountable in those circumstances. Accordingly, PC/TP compliance risk will be mitigated by use of a "best available" standard.

Yes

Yes

Yes

Yes

ADDITIONAL COMMENTS: Short circuit analysis (R2.3 and R2.8) should only be applicable to TPs. Fault duty issues are typically local in nature and it would be an overlap for PCs to perform this same analysis done by the local Transmission Planner. Furthermore, R7 should be deleted and the responsibilities of each entity should be explicitly stated within the specific requirements. Previous Comment Unaddressed : Requirement 2.6.2: Reads as if a change is being made to an existing study. It is confusing. Possibly restate: "2.6.2 For steady state, short circuit, or stability analysis: previous studies can be used only if a material change to the system has not occurred or if a change that did occur does not impact the study area." R4.1.2 – Planning Coordinators do not perform protection coordination nor do they have access to the relay settings information required to do this analysis. This requirement should apply to Transmission Planners only because they perform system protection. The substantive scope of the standard is relative to Long-Term Transmission Planning Horizon and Near-Term Transmission Planning Horizon. The Purpose section is described in terms of the “planning horizon” generally. It may be worthwhile aligning the two to mitigate the potential for any confusion. ERCOT proposes the following revisions to the Purpose section: 3.Purpose: Establish Transmission system planning performance requirements within the relevant planning horizon (i.e. Long-Term or Near-Term) to develop a Bulk Electric System (BES) that will operate reliably over a broad spectrum of System conditions and following a wide range of probable Contingencies. In addition, the “Time Horizon” for the Standard is “Long-Term Planning”. Obviously, this necessarily encompasses both Long-Term and Near-Term Transmission Planning Horizons. However, the scope of the Long-Term Planning time horizon is not readily apparent. ERCOT recommends appropriate revisions that clearly define the applicable time horizons.

Yes

We commend the SDT for its work to continue the improvement on the proposed TPL-001-1. We have included additional comments here since we were not able to find a place to include comments on the following: Requirement R4; Requirement, Parts 2.1.5, 2.3, and 2.8; Requirement 3, Part 3.3.2; and Requirement 4, Parts 4.3.1 and Part 4.3.2 Requirement 2, Part 2.1.5: The spare equipment strategy does not improve reliability performance. If an outage of a long lead time piece of equipment occurs, the system should still be able to operate in a reliable manner that meets the performance measures of Categories P3 and P6. If an entity cannot meet its performance requirements under this standard, a capital project is indicated. Spare equipment being available would not mitigate this need it only increases expenses until the item is needed. Requirement 2, Parts 2.3 and 2.8: Short circuit fault duty is a localized phenomena that is mainly impacted by the addition of new generation or transmission facilities. Due to proprietary concerns of generation and transmission interconnection requests, short circuit studies are performed in forums outside the annual Planning Assessment. Normally, these studies will be conducted before the projects can be included in regional base cases. As such, short circuit analysis should not be included in this Standard since it would provided limited benefit. Requirement 3, Part 3.3.2 and Requirement 4, Part 4.3.2 Steady state response of dynamic control devices should also be included in the Part 3.3.2. and the list of possible devices included should be removed from Part 3.3.2 and 4.3.2. Section R4.3.1, bullet point 3 requires the stability analyses to include the impact of subsequent “[t]ripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models”. As written, this bullet could be interpreted as requiring the inclusion of these relay models in stability data bases. We do not have generic or actual

relay models in our dynamics data bases for tripping line faults on lines and transformers represented. We represent actual relay response and tripping times of relays, communications, and breakers to faults in tripping transmission lines and transformers. Requiring the inclusion of generic or actual relay models for all relays that can trip lines and transformers would add a large burden to the development and maintenance of accurate dynamics model files that would add little or no benefit. Please change this bullet to read: "Tripping of Transmission lines and transformers where transient swings cause Protection System operation based on known Protection System response".

No

A seasonal reference should be included in the example. Alternative language beginning with the second sentence: For the Planning Assessment started in a given calendar year, Year One must include the forecasted peak load period for the forecasted peak load season that is between 12 and 24 months into the future from the current season. For example, if a Planning Assessment was started in 2011 prior to the forecasted peak season, then Year One must include the forecasted peak load for 2012. If the Planning Assessment was started in 2011 during or after the forecasted peak season, then Year One must include the forecasted peak load for 2013.

No

Proposed changes 1.1.1 Existing Facilities that will not be changed before the study year 1.1.3 New planned Facilities and planned changes to existing facilities

Yes

No

TEP agrees with removing the phrase "not already included in the studies." However, TEP does not understand the purpose of sensitivity studies. TEP is concerned that imposing additional sensitivity studies could lead to requirements that exceed the proposed standards. TEP recommends removing sensitivity analysis from the standard.

Yes

No

If a material change (generator addition/retirement, new generator models based on unit testing, or transmission line or non-distribution transformer addition) is not planned for the longer-term planning horizon, do the longer-term stability studies need to be performed? TEP's agreement/disagreement with Part 2.4.1 is dependent on the response to this question. If the answer is the studies do not need to be performed, then TEP supports these changes.

Yes

Table 1, P5 currently requires the study of "[d]elayed Fault Clearing due to the failure of a relay13 protecting the Faulted element to operate as designed". As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: "Single failure of a protection relay13 protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following". In Table 1, P2 and P3, the last column "Non-Consequential Load Loss Allowed" where the requirement "No12" appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is

clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote "b". This will require immediate redesigns to meet this particular requirement. The unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the proposed footnote 12 include a provision to default to the existing footnote "b" in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, "Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers." Timing of this project and project 2010-11 is critical. It would be very difficult to vote to approve the proposed TPL-001-2 prior to knowing the outcome of Project 2010-11 (footnote b issue). Non-Consequential Load Loss and curtailment of Firm Transmission Service should be allowed for loss of EHV BES elements for Category P4 and P5 events.

Gregory Campoli

New York Independent System Operator

Yes

No

The added clarification to the definition of Year One serves to remove most ambiguity with respect to Year One. However, the revision has added further ambiguity to the terms "year two" and "year five" which are not defined. NYISO recommends defining Year Five as the twelve month period 4 to 6 calendar years from the date of the Planning Assessment. NYISO further recommends revising R2.1.1 as follows: "System peak Load for Year One and for Year Five." Alternatively, the definition of Year One could be eliminated and described within the text of the requirements.

Yes

No

NYISO completely agrees with the revision to R2.1, but this revision must be carried through to other sections (R2.2, 2.2.1). Revisions made to Requirement R2.1.5 have made it worse than as originally drafted. This would require the PC & TP to study, or in other words perform technical analysis of, the impact and probability of the possible unavailability of any piece of equipment with a lead time of one year or more. Such an evaluation of spare equipment strategies would require significant additional resources and data, but provide no benefit to system reliability, as it is redundant to the existing N-1-1 contingency requirement (P6). R2.7 requires that Corrective Action Plans are included in each Planning Assessment and states "Such actions may include..." followed by a list of actions. Restricting

allowable actions, and excluding runback/tripping of HVDC would have a direct impact on multiple existing facilities in New York and would adversely impact the reliability planning of the NYCA. Runback/tripping of HVDC must be added to the list.

No

Our concern involves wording under 2.1.4 and 2.4.3 that sensitivities are required varying one or more conditions. Subsequently, in requirement 2.7.2 corrective action plans need to be developed to resolve performance deficiencies "only" if identified in multiple conditions or require a rationalization why no corrective action plan is necessary. Multiple conditions sensitivities under 2.1.4 and 2.4.3 are necessary to satisfy requirement 2.7.2. Requirement 2.7.2 adds ambiguity and should be removed. Requirement 2.7.2 should be revised as follows: 2.7.2. Corrective Action Plans are not required for performance deficiencies identified in a sensitivity analysis.

No

The NYISO, along with many other systems, has not determined a need to model dynamic loads, and therefore has not benchmarked any such models. The NYISO recommends that prior to this requirement being in place, a modeling standard should exist that is specific to dynamic loads.

Yes

No

Header note (i) in the first Table 1 could imply that voltage-varying load shall not be used to meet steady state performance requirements. NYISO steady state load models include voltage-varying loads. This note should be revised to only reference loads which are disconnected due to voltage.

There are two tables labeled "Table 1". The extreme events table should be renamed "Table 2".

Yes

No

Requirement 8 is an administrative burden to TPs and PCs that adds no value to reliability. PCs should be including TPs, neighboring PCs and interested parties in its planning processes when developing the Planning Assessments. Therefore, the inclusion of a set of VSLs for Requirement 8 is unnecessary. Furthermore, the requirement lacks a specified time frame to receive comments, thereby implying that TPs and PCs would be required to reply to comments forever following the finalization of a Planning Assessment. The NYISO proposes a limit of six months. Should the SDT decide to leave the VSLs for Requirement 8, Requirement 8.1 should be revised to reflect that comments only to the final Assessment (not drafts developed during a process) need a response as follows: If a recipient of the planning assessment final results provides documented comments on the results within 180 calendar days of the issuance of those final results, the respective Planning Coordinator or Transmission Planner shall provide a documented response to such recipient within 90 calendar days of receipt of those comments.

Yes
Under Category P2 (Single Contingency) and Normal System Conditions, the performance table indicates that, for both HV and EHV, interruption of firm transmission service and non-consequential load loss are not allowed following the opening of a line section without a fault. This section of the performance table should distinguish between EHV and HV – performance requirements following the opening of a line section without a fault should be the same as those for a bus section fault. As with the bus section fault, interruption of firm transmission service and non-consequential load loss should be allowed for HV.
Yes
No
The language for Requirement R8 is ambiguous with regard to which adjacent entities must request in writing the results of the Planning Assessment. The language should be clarified to read: "Upon request made in writing, each Planning Coordinator and Transmission Planner shall distribute its Planning Assessment results to adjacent Planning Coordinators, adjacent Transmission Planners, and any other functional entity that has a reliability related need." The Requirement R8 VSL language should also be revised accordingly.

We disagree with the Implementation Plan and we suggest changes as follows: - The title should read "Implementation Plan for TPL-001-2" - With regards to the Prerequisite Approvals, NERC project #2010-11 still in progress (Table 1, Footnote 'b') must be implemented before this current TPL-001-2 standard gets implemented. However, while the 2010-11 NERC project does not define any of the new terms such as consequential / non-consequential load, the footnote 'b' cannot be just copied into the new standard (see TPL-001-2 standard Table 1, note 12). Note 'b' may further change to reflect the verbiage in the TPL-001-2 standard. - Not sure what is the intent of the last paragraph. While the proposed changes to Table 1, footnote 'b' are quite precise, are we still open a door to those entities that will continue to trip Non-Consequential Load and curtail Firm Transmission Service? If no penalties for such practices while the proposed standard allows a sufficient time frame to correct any deficiencies, then what is the point to all the effort behind the development of a new TPL standard?
No
The definition it seem both incomplete and exhaustive: - If taken out of the planning

assessment context, the definition is missing the matter that is supposed to identify. We suggest changing the first sentence such as "The first twelve month period to which the functional entity is responsible for the assessment of Transmission System Planning performance." - While it will be a burdensome task to define each year that follows Year One, the definition of Year One may include a sentence that define the rule for the following years such as "All of the twelve months period following Year One shall commence immediately after the end of the preceding twelve months period." - The definition should not include examples.

No

The Time Horizon should be for both Near-Term and Long-Term Planning.

Yes

No

The requirements are extremely burdensome. We recommend changing the last sentence of 2.1.4 requirement by removing "by a sufficient amount to stress the System within a range of credible conditions that demonstrate a measurable change in performance:" because there are instances where listed conditions may not result in measurable changes in performance (Ex. An increase in load in a well built system may not cause any measurable changes in performance because there is sufficient transmission capacity to serve the load).

No

We disagree with the content of this requirement based on several facts: - We believe that the dynamic behavior of the load cannot be accurately estimated beyond current time. We are concern about the effort required to ascertain the dynamic response of the load - The requirement references "Loads that could impact the study area" without specifying how an entity will identify these loads. Perhaps the standard should provide guidelines to determine which loads would impact the study area.

No

We are not sure what will be included in these "material generation additions or changes". Perhaps the standard should provide guidelines to determine what are these material changes or additions?

Yes

Individual

Terry Harbour

MidAmerican Energy

Yes

Yes

No

There are concerns over the FERC outstanding March order on TPL and how FERC interprets "normal" or base case conditions and "assuming" an entities primary protection system is out of service and must rely on its backup protection system to operate. This concept combined with the new tables cannot be perpetuated.

Yes
Yes
R2.1.4 bullet #7 – Replace the adjective “planned” with “known” for consistency with R1.1.2 and R2.1.3. R2.3 Replace “conducted” with “assess” for consistency with R1.1.2 and R2.1.3. R2.4 Replace “current or past studies as qualified” with “current or qualified past studies as indicated” for consistency with R2
No
MidAmerican questions if the widespread use of composite load models really provides significant benefits to additional dynamic analyses over generic load conversion assumptions which have been historically used. The use of composite load models may result in more precise individual load models, but no more accurate dynamic simulations. This poorly worded requirement should be deleted in its entirety as providing additional burden without any additional reliability benefits. If the composite load model requirement must be kept, it should be modified to include the following bolded text: “...System peak Load levels shall include a Load model which represents the expected dynamic behavior of Loads that could impact the study area, considering the behavior of induction motor Loads, but without requiring a detailed load survey be conducted...”
Yes
No
The reference to BES should be placed back into Note a in the header above table 1.
Voting "no" - Footnote 6 – Further clarify the applicable shunt devices in Footnote 6 with this suggested text: 6. Requirements which are applicable to shunt devices, also apply to FACTS devices that are connected to ground, but not instrument voltage transformers or surge arresters
No
Revise measures to be consistent with requirements. 1. R6 Delete “any”. The use of the word any in standards should not be allowed. 2. Revise the Planning Assessment definition to more explicitly apply to the BES and the TPL-001 requirements. We suggest text of: “Planning Assessment: Documented evaluation of future Transmission System performance and Corrective Action Plans to remedy identified deficiencies in the BES from the steady state and stability performance requirements set forth in the TPL-001 standard.” 3. R2.1.5 – We propose replacing the term ‘major Transmission’ with “BES” because BES is a well defined term, while the term, ‘major Transmission’, is not. 4. Add R2.3.1 – We suggest the addition of a R2.3.1 requirement to emulate the distinction between the requirement to perform a short circuit assessment and conduct required studies or analysis to support the assessment (e.g. R2.1/R2.1.1 and R2.2/R2.2.1). We propose wording such as, “Perform an analysis for at least one year in the Near Term Transmission Planning Horizon.” This requirement would set an expectation that an analysis should be conducted to at least one or more years in the near-term planning horizon, rather than imply that an analysis of all five years in the near-term planning horizon must be conducted. 5. R2.7.2 – Delete 2.7.2. With regard to “include actions to resolve performance deficiencies identified in multiple sensitivity studies”, mitigation plans should not be required for deficiencies found in multiple sensitivity studies because the conditions in some sensitivity studies are more extreme and less likely than base case conditions. Some of the sensitivity study conditions are not credible. 6. R2.7.4 – We suggest that the wording of R2.7.4 be the same as R.2.8.2. 7. R3.5 - We interpret that R3.5 requires the TP and PC to conduct an evaluation of possible actions to reduce the likelihood or impact of extreme events, which produce the more severe impacts, if cascading outages may occur. Does the drafting team intend for

the TP and PC to fulfill this requirement for at least one event in each of the five categories (i.e. 3 steady state and 2 stability) or in each of the 21 categories/sub-categories (i.e. 14 steady state and 7 stability). Also, if the resulting cascading outages do not result in any overloads, under-voltages, voltage collapse, or loss of generator synchronization, then should the evaluation of possible actions to reduce likelihood or impact be required? 8. R4.1.1 – We suggest that there should be some qualification of which generating units are referred to in this requirement. We propose that the requirement say, “No generating unit with a Point of Interconnection connected to the BES shall pull out of synchronism.” For example, some utilities include smaller generation units that are connected at voltages below 100 kV and even down to distribution voltage in their base cases. 9. R4.1.2 – We propose that the wording of this requirement be revised to reflect the same BES qualification of the generating unit that we noted in R4.1.1 above. 10. R4.3.1 – This requirement refers to high speed reclosing and we presume that this is special high speed reclosing that is completed in several cycles, rather than the normal high speed reclosing that is completed in a number of seconds. We recommend that the term high speed reclosing be more clearly defined for this sub-requirement. 11. R.4.3.2 – We suggest qualifying which generating units to consider and which voltage limits to simulate with revised wording like, “Trip generating units that are connected to the BES when actual or assumed minimum generator transient voltage limits are known and simulations show voltages may fall below the voltage limit. If assumed voltage limits are used, then they should be included in the assessment”. The requirement should not apply to all relevant generating units until one of the MOD standards requires all Generator Owners to provide their minimum generating unit voltage limits to the TP and PC. If the wording of R4.3.2 must be different from its counterpart, R3.3.2, then please explain the reasons for any differences. 12. R5 – This requirement should allow the applicable entity (such as the TOP / TO) to define a “Post-Contingency Voltage Deviation” as this criteria is not used widely enough in the industry to be a well established criteria. 13. Revise R8 to limit the need to provide the Planning Assessment as follows “adjacent Planning Coordinators and adjacent Transmission Planners and to any registered functional entity...” 14. Data Retention for R3, R5, R6, & R7 - The MRO NSRS proposes that the wording in these elements be revised to change “All” to “The”. The word “All” is unnecessary and could encourage over-the-top compliance monitoring and enforcement. The revised data retention would read as follows: “The studies performed in support....”

We commend the SDT for its work to continue the improvement on the proposed TPL-001-1. We were not able to find a place to include comment on Requirement R4; therefore, we have included our comments here: Section R4.3.1, bullet point 3 requires the stability analyses to include the impact of subsequent “[t]ripping of Transmission lines and transformers where transient swings cause Protection System operation based on generic or actual relay models”. As written, this bullet could be interpreted as requiring the inclusion of these relay models in stability data bases. We do not have generic or actual relay models in our dynamics data bases for tripping line faults on lines and transformers represented. We represent actual relay response and tripping times of relays, communications, and breakers to faults in tripping transmission lines and transformers. Requiring the inclusion of generic or actual relay models for all relays that can trip lines and transformers would add a large burden to the development and maintenance of accurate dynamics model files that would add little or no benefit. Please change this bullet to read: “Tripping of Transmission lines and transformers where transient swings cause Protection System operation based on known Protection System response”.
Yes
Yes
Yes
Yes
Yes
Yes
Yes
Table 1, P5 currently requires the study of “[d]elayed Fault Clearing due to the failure of a relay <sup>13</sup> protecting the Faulted element to operate as designed”. As written, this requirement does not recognize the use of redundant relays for primary protection. In some cases side by side relays are used to provide primary fault tripping if one relay fails to operate. Per the requirement as stated, the redundant relay would provide no value in meeting this requirement. Please revise to acknowledge backup relays: “Single failure of a protection relay <sup>13</sup> protecting the Faulted element to operate as designed, resulting in backup relay actions or Delayed Fault Clearing, for one of the following”. In Table 1, P2 and P3, the last column “Non-Consequential Load Loss Allowed” where the requirement “No <sup>12</sup> ” appears, and in footnote 12, the standard as proposed does not allow for any Non-Consequential Load Loss. When the Non-Consequential Load Loss (footnote b) issue is clarified in Project 2010-11 this requirement may be changed. Therefore, if this proposed Standard is enforced before Project 2010-11 is completed, entities will be required to meet this No Non-Consequential Load Loss requirement without the exception allowed in the existing TPL-002-0, footnote “b”. This will require immediate redesigns to meet this particular requirement. The unintended consequence could be that operators of local systems that are currently networked may opt to begin operation as radial systems, and future designs for local systems may be radial, at any voltage level. We suggest that the

proposed footnote 12 include a provision to default to the existing footnote "b" in TPL-002-0 until Project 2010-11 is decided. Please revise footnote 12 to read, "Note: Non-Consequential Load Loss is being decided in Project 2010-11. When that project is finalized, the resolution will be copied here. In the interim, planned or controlled interruption of electric supply to radial customers or some local Network customers, connected to or supplied by the Faulted element or by the affected area, may occur in certain areas without impacting the overall reliability of the interconnected transmission systems. To prepare for the next contingency, system adjustments are permitted, including curtailments of contracted Firm (non-recallable reserved) electric power Transfers." Timing of this project and project 2010-11 is critical. It would be very difficult to vote to approve the proposed TPL-001-2 prior to knowing the outcome of Project 2010-11 (footnote b issue).

Why is Footnote 12 used for some occurrences of the word "No" in the last column of Table 1 but not other occurrences of the word "No"?

## Consideration of Comments on Reliability Coordination (Project 2006-06)

The Reliability Coordination Standard Drafting Team thanks all commenters who submitted comments on the proposed revisions to the standards for Project 2006-06 — Reliability Coordination. These standards were posted for a 45-day public comment period from January 4, 2010 through February 18, 2010. The stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 42 sets of comments, including comments from more than 150 different people from over 50 companies representing all of the 10 Industry Segments as shown in the table on the following pages.

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

### Summary Consideration:

Stakeholders had three general concerns with the definition of Interpersonal Communications.

- 1) The definition of Interpersonal Communication to be ambiguous in terms of distinguishing between verbal communications and data transfers; The SDT believes that Webster's definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.

The RCSDT believes that data communication is covered under IRO-010, R3 which states:

Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)

- 2) The definition should also clarify that the communication is between individuals in different entities or physical locations; The SDT believes that the revised Requirements of COM-001-2 satisfy this concern.

- 3) Use of the term "method" may imply a communication style; The RCSDT changed "method" to "medium" in definition.

Several stakeholders indicated that a definition of Alternative Interpersonal Communications was not needed. The RCSDT disagrees because there is an important part of the definition of "Alternative Interpersonal Communications" that distinguishes it from simply being an alternative "Interpersonal Communications". The proposed definition contains the words: "which does not utilize the same infrastructure (medium)". Also, some stakeholders had concerns with the usage of "normal". The RCSDT does not propose defining "Normal" Interpersonal Communications and has removed it from the definition. Based on the consensus of stakeholders, we have revised the two definitions to:

**Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.**

**Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.**

**Stakeholders pointed out that COM-001, R1 was a compound requirement and suggested creating separate requirements. Stakeholders also suggested revising the VRF to "Medium" as it does not meet the guidelines for a "High" VRF. The intent of R1 was three-fold.**

- 1 Identify (have) an Alternative Interpersonal Communication capability**
- 2 Test that capability periodically and**
- 3 If the test failed, fix it or identify another Alternative Communications Capability.**

**Based on comments received, we have revised R1 (now R9) to eliminate the compound requirement and therefore created more specific requirements to delineate Interpersonal and Alternative Interpersonal Communication, and applicable entity responsibility. The VRF is changed to "Medium."**

**The RCSDT also made extensive revisions to COM-001 to provide explicit Interpersonal Communications and Alternative Interpersonal Communications capabilities based on the relationships between various entities. The RCSDT believes that the proposed requirements meet the reliability objectives of the standard as well as the FERC Order 693 directives.**

**The comments received regarding the definition of Reliability Directive (for COM-002 and IRO-001) ranged from the being "too open-ended" (PPL) to not "flexible" enough (Public Service Enterprise Group Companies). The SDT expected and viewed these as attempting to reach middle ground.**

**There were also value added comments such as removing the unnecessary and redundant terms "actual or expected" from the definition, which the SDT agrees with. The definition was revised to:**

**A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency.**

**A number of commenter's expressed a concern about the definition not including three-part communication, clearly identifying a Reliability Directive at the time of issue, and applying to verbal communications. The SDT believes responsibilities should not be imbedded in a definition and, as drafted, the requirements of COM-002 with the proposed definition of Reliability Directive fully address the identification and verbal concerns.**

**The bulk of the comments received on COM-002 regarded the VSL for R3. The SDT agreed with suggestions for the VSLs and has deleted the Severe VSL and moved the High VSL to Severe. We believe that there are two possible actions within the requirement and failure to perform either warrants a Severe VSL.**

**Several commenter's expressed concern about three-part communication. The SDT believes that the requirements as drafted, with the issue, repeat back, and acknowledgement of a Reliability Directive, three-part communication is covered.**

There was one commenter suggesting the addition of the DP to the applicability. The RCSDT notes that, per the Functional Model, a DP may “direct” an LSE to communicate requests for voluntary load curtailment and not reliability situations: Item 9 on page 47 of version 5 of the Functional Model: “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.” Furthermore, The RCSDT will forward this comment to the FMWG for their consideration in revising the language.

The comments regarding the use of Reliability Directive in IRO-001 ranged from small entities being excluded to whether regulatory or statutory requirements covers NERC standards. The SDT addressed these by noting registration is not in the SDT scope and NERC’s general council should be contacted for regulatory issues.

A few commenter’s expressed concern with the VSL for R2 and one suggested the words “per Requirement 2,” should be added. The SDT believes the phrase “per Requirement 2” is not necessary as a VSL is only applied AFTER a compliance violation is determined.

Value added comments such as a concern of the use of the word “threat” as it can be defined as cyber-related and suggested replacing “Operating Personnel” with “System Operator” were also made. The SDT concurred and removed the word “threat” and replaced it with “condition” and also made the revision to System Operator.

There were numerous comments regarding the definition of Reliability Directive with multiple wording suggestions. While slightly out of scope for question six, the SDT expected and viewed these as attempting to reach middle ground.

Some commenter’s expressed concern over clarify that the RC has three separate actions. The RC can act, direct others to act, or issue Reliability Directives. The SDT modified R1 to read: “Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts”

Note: Based on discussions with FERC Staff, the SDT agreed to make the following changes:

IRO-001-2 Requirements R4, R5 and associated Measures and VSLs are moved to IRO-005-4

IRO-001-2 Requirements R6, R7 and associated Measures and VSLs are moved to IRO-002-2

Several commenters made suggestions regarding IRO-014, R2. The original requirement was designed to accomplish in one requirement what is proposed by the commenters as three procedural requirements. R2 is worded to focus on defining what a “compliant plan” is. In the current requirement a “proposed plan” is not the same as a “compliant plan”.

The SDT viewed what the commenters are suggesting as follows:

- The initiating RC would submit its “proposed plan” to the other RCs
- The receiving RCs would provide the initiating RC with their responses indicating whether or not they agree with the proposed roles/actions offered by the initiating RC

- If one or more RCs do not agree with the roles/actions, then the initiating RC would be required to offer an alternative proposal (and go back to the first bullet)
- When all RCs acknowledge that the proposed roles/actions in the revised "proposed plan" are acceptable, then and only then would the "proposed plan" become a "compliant plan"

A closer reading of the current R2 would show the current R2 accomplishes the exact same result but does so without interjecting the need for documenting the intervening processes. The SDT does not see the need to document why each proposal was or was not accepted; nor does the SDT see the need to document the negotiations that are involved in getting to "an agreed to plan". For example the comments' subrequirement to show the RC submitted its plan would require a paper trail for the request; followed by a paper trail for the responses, followed by more paperwork if the RCs are not in agreement. In the end, the only action that matters (in both the SDT version and in the commenters alternative version) is a plan that works, and a plan that if others are involved must have their concurrence that those others will participate.

R2 does not impose a requirement to get agreements; what R2 does is to require that a "compliant plan" be developed. A proposed plan does not solve problems. That proposed plan is NOT compliant with R2 if it only assumes that other RC will effect the actions in the proposal; neither is it compliant if the proposed actions are not acceptable to the other RCs who are required to act. To be compliant the initiating RC must either have the concurrence (i.e. agreement) of the other RCs for their respective part(s) in the proposed plans OR the plan must not include those RCs.

R2 says to be compliant the other RC must agree with the "proposed plan" before that "proposed plan" is acceptable as a "compliant plan". Having a plan that requires someone else to do an action, but that other entity will not effect that action, will not resolve the problem at hand. Further having documentation that someone refuses to participate in the proposed plan does nothing to solve the problem at hand.

In general, the RC SDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with the applicable parts of the directives in FERC Order 693. The work of the RC SDT along with the OCPD SDT and the RTO SDT, as currently recognized, will cover the original intent of COM-002 and still provide a "defense in depth strategy" as suggested by commenters. Consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RC SDT have developed for COM-002. This will further the efforts of the OCPD SDT in achieving stakeholder consensus for their proposed requirements in COM-003. The intent of this DT is to preserve a method for RCs, BAs and TOPs to make the determination of "what actions are required" and clearly communicate the importance to the receiver at a heightened method to normal day-to-day operational communications. The trigger of "Reliability Directive" by the issuer highlights these actions as needed to maintain BES reliability and shall be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement per the language of the requirement) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can

support and enhance the development of the OPCP SDT. The RCSDT has also attempted to eliminate redundancy and ambiguity while not creating any reliability gaps. Several comments were received on the RC's ability to "act". The RC must "act" (ie. do something, "to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts". This may include analysis, coordination of cooperative actions or the issuance of "Reliability Directives". "Act" does not imply solely the manipulation of BES elements.

RC control of "analysis tools" is critical to maintaining the wide area view. Control by the RC over the tools is imperative and beyond administrative, since it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication are a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES. Failure of the RC to control outages of analysis tools was mentioned as a contributing factor in the 2003 blackout.

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Gerry Adamski, at 609-452-8060 or at [gerry.adamski@nerc.net](mailto:gerry.adamski@nerc.net). In addition, there is a NERC Reliability Standards Appeals Process.<sup>1</sup>

---

<sup>1</sup> The appeals process is in the Reliability Standards Development Procedures: <http://www.nerc.com/standards/newstandardsprocess.html>.

## Index to Questions, Comments, and Responses

1. Do you agree with the proposed definition of Interpersonal Communication (COM-001-2)? If not, please explain in the comment area. ....	15
2. Do you agree with the proposed definition of Alternative Interpersonal Communication (COM-001-2)? If not, please explain in the comment area. ...	25
3. Do you agree with the revisions made to Requirement 1 in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area. ....	34
4. Do you agree with the definition of Reliability Directive (COM-002-2)? If not, please explain in the comment area. ....	46
5. Do you agree with the revisions to the Requirements in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area. ....	56
6. Do you agree with the use of the defined term “Reliability Directive” in revisions to the Requirements in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area. ....	67
7. Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area. ....	77
8. Do you have any other comment, not expressed in questions above, for the RC SDT? .....	89

**Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06**

The Industry Segments are:

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities
- 4 — Transmission-dependent Utilities
- 5 — Electric Generators
- 6 — Electricity Brokers, Aggregators, and Marketers
- 7 — Large Electricity End Users
- 8 — Small Electricity End Users
- 9 — Federal, State, Provincial Regulatory or other Government Entities
- 10 — Regional Reliability Organizations, Regional Entities

- 1 Do you agree with the proposed definition of Interpersonal Communication (COM-001-2)? If not, please explain in the comment area.

**Summary Consideration: Stakeholders had three general concerns with the definition of Interpersonal Communications.**

- 1) The definition of Interpersonal Communication to be ambiguous in terms of distinguishing between verbal communications and data transfers; The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.

**The RCSDT believes that data communication is covered under IRO-010, R3 which states:**

Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)

- 2) The definition should also clarify that the communication is between individuals in different entities or physical locations; The SDT believes that the revised Requirements of COM-001-2 satisfy this concern.
- 3) Use of the term “method” may imply a communication style; changed “method” to “medium” in definition.

Organization	Yes or No	Question 1 Comment
Calpine Corporation		
North Carolina Municipal Power Agency #1		
Public Service Enterprise Group Companies		
We Energies		

Organization	Yes or No	Question 1 Comment
Operating Personnel Communications Protocols SDT		No comment
CECD	No	CECD agrees that the term should be very broad and allow a registered entity to establish appropriate communication tools, devices, processes or systems to suit their operation. However, there is a need to include the term "normal" interpersonal communication methods based on the definition of alternative interpersonal communication.
<p><b>Response: The RCSDT thanks you for your comment. RCSDT does not propose defining “Normal” Interpersonal Communications and has removed it from the alternative definition and included “...used for day-to-day operation.” Based on the consensus of stakeholders, we have revised the two definitions to:</b></p> <p><b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b></p> <p><b>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</b></p>		
ITC Holdings	No	Comments: As written, the definition could be interpreted to include data communications. Suggest modifying the definition to “Any method that allows two or more individuals to verbally interact, consult, or exchange information.” Interpersonal Communication to operate the BES must be timely and non voice communication cannot be relied upon to be timely in all situations.
<p><b>Response: The RCSDT thanks you for your comment. The intent of this definition is to exclude data, but not preclude e-mail, text, etc.</b></p> <p><b>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</b></p> <p><b>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</b></p>		
NERC	No	Comments: NERC staff believes the definition is unnecessary. “Interpersonal” is a common term and this definition provides no additional clarity. In addition, COM-001 should maintain the current coverage of voice and data. The requirements should address both primary and alternative/backup capabilities for voice and data. Approved standards including TOP-005-1.1 and IRO-010-1, as well as several others under development rely on the communication capabilities specified in COM-001. By limiting the focus of COM-001-

Organization	Yes or No	Question 1 Comment
		2 to this definition of Interpersonal Communication, there will no longer be an obligation to ensure that data telecommunication paths between entities are adequate and reliable.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT and the industry disagree with NERC staff’s assessment. A strong industry request to clarify “facilities” led to the definition of interpersonal communication which has been modified to:</b></p> <p><b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b></p> <p><b>Primary communication is inferred when reference to alternative is made. Moreover, the primary capability is used/tested on a daily basis.</b></p> <p><b>The RCSDT contends that IRO-010 covers the requirement for data and information that includes a requirement for providing specified data when automated Real-Time system operating data is unavailable.</b></p>		
Exelon	No	Definition is vague and subject to interpretation. Requirement should be to have primary and backup capabilities. Disagree that a definition is required.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT and the industry disagree. A strong industry demand to clarify “facilities” led to the definition of interpersonal communication which has been modified to:</b></p> <p><b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b></p> <p><b>Primary communication is inferred when reference to alternative is made. Moreover, the primary capability is used/tested on a daily basis.</b></p>		
Southern Company Services	No	If there is going to be an alternative definition, than this should be a definition for Normal Interpersonal Communication.
<p><b>Response: The RCSDT thanks you for your comment. Primary communication is inferred when reference to alternative is made. Moreover, the primary capability is used/tested on a daily basis.</b></p>		
Ameren	No	In previous postings, the drafting team confirmed that they intended for COM-001-2 to apply only to verbal communication systems and not data. However, the phrase “or exchange information.” could still imply data (information). We suggest that the team should explicitly exclude data in definition.
Midwest ISO Standards Collaborators	No	In previous postings, the drafting team confirmed that they intended for COM-001-2 to apply only to verbal communication systems. We believe this definition had inadvertently brought data back into the standard. Specifically, we are concerned about “or exchange information.” Data can be considered information and thus some may now interpret SCADA and ICCP being included. We suggest the definition would be sufficient with the “or exchange information” redacted and would avoid this confusion.

Organization	Yes or No	Question 1 Comment
<p><b>Response: The RCSDT thanks you for your comment. The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</b></p> <p><b>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</b></p> <p><b>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</b></p>		
<p>NERC Standards Review Subcommittee</p>	<p>No</p>	<p>In previous postings, the drafting team confirmed that they intended for COM-001-2 to apply only to verbal communication systems. We believe this definition had inadvertently brought data back into the standard. Specifically, we are concerned about “or exchange information.” Data can be considered information and thus some may now interpret SCADA and ICCP being included. To avoid this confusion, we suggest the definition would be sufficient with the “or exchange information” redacted.</p> <p>We believe the proposed definition for the term “Interpersonal Communication” is too broad and ambiguous. We recommend the following instead: “Verbal Communication between two or more registered entities (not within the same organization) to exchange reliability-related information.” The inclusion of this term “registered entities” removes the ambiguity which we believe is contained in the proposed definition. In addition, the inclusion of the phrase “not within the same organization” clarifies that the focus of definition is to address communication between different registered entities.</p>
<p><b>Response: The RCSDT thanks you for your comment. The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</b></p> <p><b>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</b></p> <p><b>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</b></p> <p><b>Also, the SDT believes that the revised Requirements of COM-001-2 satisfy your ambiguity concern.</b></p>		
<p>Southwest Power Pool</p>	<p>No</p>	<p>It appears as if the following two definitions have the same meaning: COM-001-2 Interpersonal Communication: Any method that allows two or more individuals to interact, consult, or exchange information. COM-003 -1 Interoperability Communication - Communication between two or more entities to exchange reliability-related information to be used by the entities to change the state or status of an element or facility of</p>

Organization	Yes or No	Question 1 Comment
		<p>the Bulk Electric System. SPP recommends changing the word “method” to medium in Interpersonal Communication. For Alternative Interpersonal Communication, that definition uses the term “infrastructure (medium)” as in type of equipment used. These terms should use consistent words if they are referring to the same thing.</p>
<p><b>Response: The RCSDT thanks you for your comment. We concur and have revised the two definitions to:</b>  <b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b>  <b>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</b></p>		
Duke Energy	No	<p>Need to revise this definition to clarify that Interpersonal Communication is the primary method of communication, and that it is limited to verbal or written communications (not data such as SCADA data), and that it is limited to real-time operations (time horizon is Real-time Operations). Suggested wording:                      Interpersonal Communication: The primary verbal or written method that allows two or more individuals to interact, consult, or exchange information for real-time operations.</p>
<p><b>Response: The RCSDT thanks you for your comment. . The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</b></p> <p><b>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</b></p> <p><b>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</b></p> <p><b>The RCSDT does not believe “primary” is needed because “primary” communication is inferred when reference to “alternative” is made.</b></p>		
PPL	No	<p>The definition should be clarified to state that it is interpersonal communications between functional entities and not interpersonal communications within the functional entity that the standard is addressing.</p>
<p><b>Response: The RCSDT thanks you for your comment. The SDT believes that the revised Requirements of COM-001-2 satisfy your concern</b></p>		
Hydro-Québec TransEnergie (HQT)	No	<p>The definition should be worded to be more explicit, such as: When two or more individuals interact, consult, or exchange information.</p>

Organization	Yes or No	Question 1 Comment
Northeast Power Coordinating Council	No	The definition should be worded to be more explicit, such as: When two or more individuals interact, consult, or exchange information.
<p><b>Response: The RCSDT thanks you for your comment. We concur and have revised the definition to:</b>  <b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b></p>		
Electric Market Policy	No	The SDT has proposed a definition that is meant to limit the standard to two-way person-to-person communication between functional entities. However, as written the definition can also be viewed as so open-ended as to apply to pens and papers used by system operators to show another system operator in the same control room some operational data. The proposed standard does further constrain the application to “real-time operation information”, but may be better served to explicitly constrain the definition to functional-entity-to-functional entity. It is these media that the standard means to address.
<p><b>Response: The RCSDT thanks you for your comment. The SDT believes that the revised Requirements of COM-001-2 satisfy your concern</b></p>		
Bonneville Power Administration	No	The term, ‘interpersonal communication’ as defined by common usage and Webster’s Dictionary is sufficient for the work at hand. To provide an additional definition via the NERC Standards Development Process unnecessarily adds to an already convoluted task and provides no further benefit to the user of this proposed standard.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT and the industry disagree. A strong industry request to clarify “facilities” led to the definition of interpersonal communication which has been modified to:</b>  <b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b></p>		
Northeast Utilities	No	The use of “Any method” as the start of the definition of Interpersonal Communication is too board a qualifier. In normal interpersonal communications only 5 to 10% of the total communication is verbal while 90 to 95% is non-verbal. As it is not the intent of this standard to address non-verbal communications the use of “Any method” should be eliminated from the definition and more specific terms that clearly convey the intent of the standard should be used.

Organization	Yes or No	Question 1 Comment
<p><b>Response:</b> The RCSDT thanks you for your comment. We concur and have modified the definition to:  <b>Interpersonal Communication:</b> Any medium that allows two or more individuals to interact, consult, or exchange information.</p>		
FirstEnergy	No	<p>This definition should be revised as follows to ensure clarity of scope by excluding electronic data exchange and for consistency with the proposed requirements: "Interpersonal Communication Capability: Any method that allows two or more individuals to interact, consult, or exchange real-time Bulk Electric System operating information using verbal communication equipment."</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. We agree in principle; however, the SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</p> <p>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</p> <p><b>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</b></p>		
Manitoba Hydro	No	<p>When “Interpersonal Communication” is added to the NERC Glossary without the obvious reference to COM-001-2 which is “To ensure that operating entities have adequate Interpersonal capabilities” could and does infer that the definition means “protocol or forum of speaking, interacting or exchanging” information. The suggested definition does not immediately indicate the normal medium of communications, such a land line, mobile, radio, electronic, etc. A suggested definition: Interpersonal Communication: The normal mediums that carry messages, verbal or electronic, between two or more entities, internal or external, for the operation of the Interconnected Bulk Electric System.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. We agree in principle and have modified the definition to:  <b>Interpersonal Communication:</b> Any medium that allows two or more individuals to interact, consult, or exchange information.  The SDT believes that the revised Requirements of COM-001-2 satisfy your concern of communication between entities.</p>

The SDT believes that the revised Requirements of COM-001-2 satisfy your concern of communication in different physical locations.</li> <li>3. The RCSDT concurs and revised the definition, Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</li> </ol>

**2 Do you agree with the proposed definition of Alternative Interpersonal Communication (COM-001-2)? If not, please explain in the comment area.**

**Summary Consideration:** Several stakeholders indicated that a definition of Alternative Interpersonal Communications was not needed. The RCSDT disagrees because there is an important part of the definition of “Alternative Interpersonal Communications” that distinguishes it from simply being an alternative “Interpersonal Communications”. The proposed definition contains the words: “which does not utilize the same infrastructure (medium)”. Also, some stakeholders had concerns with the usage of “normal”. The RCSDT does not propose defining “Normal” Interpersonal Communications and has removed it from the definition. Based on the consensus of stakeholders, we have revised the two definitions to:

**Interpersonal Communication:** Any medium that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.

Western Electricity Coordinating Council	No	Do not need an alternate definition
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT disagrees because there is an important part of the definition of “Alternative Interpersonal Communications” that distinguishes it from simply being an alternative “Interpersonal Communications”. The proposed definition contains the words: “which does not utilize the same infrastructure (medium)”.</b></p>		
Southern Company Services	No	Interpersonal Communication includes any method. If this includes all possibilities why is an additional definition needed?
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT revised the definition as:</b>  <b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b>  <b>The RCSDT believes that an important part of the definition of “Alternative Interpersonal Communications” that distinguishes it from simply being an</b></p>		

Organization	Yes or No	Question 2 Comment
<p>alternative “Interpersonal Communications” are the words: “which does not utilize the same infrastructure (medium)”.</p>		
Duke Energy	No	<p>Need to revise this definition to clarify that Alternative Interpersonal Communication is the identified substitute method for the Interpersonal Communication method. Suggested wording: Alternative Interpersonal Communication: The identified verbal or written method that is able to serve as the substitute for and is redundant to Interpersonal Communication and does not utilize the same infrastructure (medium) as Interpersonal Communication.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT does not believe that the definition should be revised as suggested as “Alternative” is clear when the requirements are viewed.</b></p>		
Southwest Power Pool	No	<p>Replace Alternative Interpersonal Communication definition with: Backup Interpersonal Communication: Any method that is able to serve as a substitute for and is redundant to the primary normal Interpersonal Communication and does not utilize the same infrastructure (medium) as the primary normal Interpersonal Communications. Consistent terms should be used across standards if they are referring to the same thing.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT feels that the use of “Alternative” is appropriate and provides flexibility within this standard. The RCSDT does not believe that the definition should be revised as suggested as “Alternative” is clear when the requirements are viewed. There is sufficient stakeholder support to retain “Alternative”.</b></p>		
NERC	No	<p>See response to Question 1.</p>
<p><b>Response: The RCSDT thanks you for your comment. Please see response to Question 1.</b></p>		
E.ON U.S.	No	<p>Suggested edit to definition: Alternative Interpersonal Communication: A Interpersonal Communication method that is able to serve as a substitute for and is functionally redundant to the normal Interpersonal Communication method but does not utilize the same infrastructure (medium) as the normal Interpersonal Communication method. The intent of the edit is to clarify that the entity must to have identified one (1) normal Interpersonal Communication and one (1) Alternative Intercommunication method.</p>
<p><b>Response: The RCSDT thanks you for your comment. A definition can not impose requirements that are not explicitly stated in the standard. The suggested edit is not necessary as the requirements define what an entity must do to be compliant. The RCSDT has also removed the words “and is redundant to” from the definition based on other stakeholders comments.</b></p>		

**Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06**

Organization	Yes or No	Question 2 Comment
Bonneville Power Administration	No	The proposed definition adds value for the user of this proposed standard by adding the ideas of the alternate mode of communications being both independent and redundant to normal communications. However, this having been said, the term chosen by the SDT, the term ‘Alternative Interpersonal Communication’ appears to focus attention on the wrong aspect of what’s being discussed. Since the definition focuses on an alternative mode or ‘method’ of communicating, clarity would be added if the SDT changed the term to be defined to either ‘Alternative Mode of Communication’ or ‘Alternative Method of Communication.’ The use of the word ‘interpersonal’ would be optional, but not necessary.
<p><b>Response: The RCSDT thanks you for your comment. To clarify our intent, the RCSDT changed “method” to “medium” in the definition. The proposed definition is:</b></p> <p><b>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</b></p>		
Hydro-Québec TransEnergie (HQT)	No	The proposed definition of Alternative Interpersonal Communication is equally ambiguous as the aforementioned definition of Interpersonal Communication. A precise definition of Interpersonal Communication and “Normal” Interpersonal Communication is required before an agreed upon definition of Alternative Interpersonal Communication can be reached.
Northeast Power Coordinating Council	No	The proposed definition of Alternative Interpersonal Communication is equally ambiguous as the aforementioned definition of Interpersonal Communication. A precise definition of Interpersonal Communication and “Normal” Interpersonal Communication is required before an agreed upon definition of Alternative Interpersonal Communication can be reached.
Northeast Utilities	No	The proposed definition of Alternative Interpersonal Communication is equally ambiguous as the aforementioned definition of Interpersonal Communication. A precise definition of Interpersonal Communication and “Normal” Interpersonal Communication is required before an agreed upon definition of Alternative Interpersonal Communication can be reached.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT does not propose defining “Normal” Interpersonal Communications and has removed it from the definition. Based on the consensus of stakeholders, we have revised the two definitions to:</b></p> <p><b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b></p> <p><b>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same</b></p>		

Organization	Yes or No	Question 2 Comment
<b>infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</b>		
FirstEnergy	No	The word "normal" in the proposed definition adds some ambiguity to the definition. This definition should be revised as follows to ensure clarity of scope by excluding electronic data exchange and for consistency with the proposed requirements: Alternative Interpersonal Communication Capability: Any verbal communication equipment that is able to serve as a substitute for and is redundant to Interpersonal Communication equipment used during day-to-day operations and does not utilize the same infrastructure as the Interpersonal Communication equipment.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT does not propose defining “Normal” Interpersonal Communications and have removed it from the definition. Based on the consensus of stakeholders, we have revised the two definitions to:</b></p> <p><b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b></p> <p><b>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</b></p>

<p><b>Response: The RCSDT thanks you for your comment. The RCSDT agrees that the types of communication that you list are all different media which could be used as a form of Alternative Interpersonal Communications.</b></p>		
ITC Holdings	Yes	None
NERC Standards Review Subcommittee	Yes	Please clarify. We believe the proposed definition for the term “Interpersonal Communication” is too broad and ambiguous. We recommend the following instead: “Verbal Communication between two or more registered entities (not within the same organization) to exchange reliability-related information.” The inclusion of this term “registered entities” removes the ambiguity which we believe is contained in the proposed definition. In addition, the inclusion of the phrase “not within the same organization” clarifies that the focus of definition is to address communication between different registered entities.
<p><b>Response: The RCSDT thanks you for your comment. The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</b></p> <p><b>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</b></p> <p><b>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</b></p> <p><b>The SDT believes that the revised Requirements of COM-001-2 satisfy your concern of communication in different physical locations.</b></p>		
Electric Market Policy	Yes	Subject to adequate resolution of comments provided for Question 1
<p><b>Response: The RCSDT thanks you for your comment. Please see response to question 1 comments.</b></p>		
ERCOT ISO	No	Although this definition indirectly clarifies the intent of the definition of Interpersonal Communication by noting that communication mediums/infrastructure are at issue, it does not specify verbal or data communication, and needs to be clarified accordingly; ERCOT notes clarification of Interpersonal Communication (IC) on this issue will indirectly clarify this point with respect to the Alternative IC definition.

Organization	Yes or No	Question 2 Comment
		<p>Furthermore, ERCOT ISO considers the definition of Alternative Interpersonal Communication unnecessary. The Standard could simply say an entity must have multiple (at least two) ICs, one of which is primary and others that serve as back-ups. This would eliminate the need for yet another defined term susceptible to conflicting interpretations.</p> <p>In additions, calling the Alternative Interpersonal Communication a substitute and redundant also seems contradictory, or at least confusing in terms of timing. Redundant implies that the entity has two means that are applied at the same time. Substitute seems to mean that the entity have a back-up that only has to be used when the primary isn't used.</p> <p>Also, if Interpersonal Communication is intended to be verbal communication, what are considered acceptable alternates (i.e.: fax, email, etc)? Examples here would be helpful. Is it sufficient to have redundant/substitute means of verbal communication (i.e.: satellite phones, cell phones, etc.). ERCOT ISO believes non-verbal proxies for verbal communications should be eligible ICs – e.g. email.</p> <p>As noted above, ERCOT ISO believes the most efficient way to approach this is to eliminate the use of Alternative Interpersonal Communication and have the standard require that entities have to have at least two means of Interpersonal Communication.</p>
<p><b>Response: The RCSDT thanks you for your comment.</b></p> <p><b>. The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange.</b></p> <p><b>The RCSDT believes that data communication is covered under IRO-010, R3 which states:</b></p> <p><b>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</b></p> <p><b>The RCSDT disagrees that the definition is not needed because there is an important part of the definition of “Alternative Interpersonal Communications” that distinguishes it from simply being an alternative “Interpersonal Communications”. The proposed definition contains the words: “which does not utilize the same infrastructure (medium)”.</b></p> <p><b>We concur and have removed the “redundant” portion of the definition.</b></p> <p><b>Interpersonal Communication can include voice and text; examples are satellite phones, cell phones, radio and land lines. We have revised the proposed definitions to add clarity:</b></p> <p><b>Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information.</b></p>		

Organization	Yes or No	Question 2 Comment
<b>Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communication used for day-to-day operation.</b>		

**3 Do you agree with the revisions made to Requirement 1 in COM-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.**

**Summary Consideration: Stakeholders pointed out that R1 was a compound requirement and suggested creating separate requirements. Stakeholders also suggested revising the VRF to “Medium” as it does not meet the guidelines for a “High” VRF. The intent of R1 was three-fold.**

- 4 Identify (have) an Alternative Interpersonal Communication capability**
- 5 Test that capability periodically and**
- 6 If the test failed, fix it or identify another Alternative Communications Capability.**

**Based on comments received, we have revised R1, now R9, to eliminate the compound requirement and therefore created more specific requirements to delineate Interpersonal and Alternative Interpersonal Communication, and applicable entity responsibility. The VRF is changed to “Medium.”**

**Requirement R1 is now R9; R2 is now R10; R3 is now R11; R4 is now R7 and R8.**

Organization	Yes or No	Question 3 Comment
Calpine Corporation		
North Carolina Municipal Power Agency #1		
Operating Personnel Communications Protocols SDT		No Comment
American Electric Power	No	AEP is concerned with the use of a sixty minute window without having a broadcast methodology in place to support the required notifications. As mentioned in other comments, perhaps RCIS could be modified to help support communications and the confirmation of such communications.
<p><b>Response: The RCSDT thanks you for your comment. Having a failure of the Alternative Interpersonal Communications per R1 does not indicate that the Interpersonal Communications used in day-to-day operations is out of service. It is expected that the Interpersonal Communications used in day-to-day operations is indeed operational to make the notifications required in R3 regarding alternative failure.</b></p>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 3 Comment
We Energies	No	An Alternative Personnel Communications (APC) is intended for use at a Primary Control Center for real-time voice communications. That needs to be clear in the definitions and standards. The time to either restore or recognize that the Alternative Communications cannot be re-established should be aligned with proposed EOP-008 which allows 2 hours. This should also apply to COM-001 R2 which would give an hour past the 2 hours that the APC is unavailable to contact impacted parties. Along with conforming changes to measures and the like...
<p><b>Response: The RCSDT thanks you for your comment. The Alternative Interpersonal Communications capability is intended for use as an alternative for the Interpersonal Communications capability, regardless of whether the normal capability continues to be available or regardless of the location, be it a primary control center or a back-up facility. R1, now R9, includes “...If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.”</b></p>		
ITC Holdings	No	Comments: The intent of the 60 minute requirement is unclear. As written, the 60 minute requirement could be interpreted to apply to the initiation of restoration or, alternatively, to the completion of restoration. If the latter is the intent, then effectively 3 voice communication mediums would be required to ensure compliance which we believe is not warranted. Suggest modifying the requirement to “If the test is unsuccessful, the entity shall take action within 60 minutes to initiate restoration of the identified alternative or...”. In addition, we would suggest separating R1 into two requirements. From an audit perspective, there are two discrete actions being identified: quarterly testing and initiating repairs.
<p><b>Response: The RCSDT thanks you for your comment. We concur with your comment and have changed the requirement R1, now R9, to state “...If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.” The SDT believes that R1, now R9, has a discreet relationship with successful and unsuccessful tests and therefore should remain as one requirement for clarity.</b></p>		
Public Service Enterprise Group Companies	No	Initiating actions within the hour should be specified, rather than taking action. It could take longer than an hour to take (complete) action that resolves the issue.
<p><b>Response: The RCSDT thanks you for your comment. We concur with your comment and have changed the requirement to state “...If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.”</b></p>		
Southern Company Services	No	It is quite possible for entities to interpret this requirement as not applicable if they include all of there communications as interpersonal communication.
<p><b>Response: The RCSDT thanks you for your comment. The requirement states that an entity will “designate” an Alternative Interpersonal</b></p>		

Organization	Yes or No	Question 3 Comment
<p><b>Communications capability. To do so, the entity would not be able to declare all communications as Interpersonal Communications.</b></p>		
FirstEnergy	No	<p>It should be clear that this requirement applies only to BES information. The requirement should be revised as follows to improve clarity: Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time Bulk Electric System operating information.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT does not believe that adding BES to the requirement adds any clarity as NERC standards apply to the BES.</b></p>		
Duke Energy	No	<ul style="list-style-type: none"> <li>o Need to clarify who the RC, TOP and BA are required to have Interpersonal Communications and Alternative Interpersonal Communications capability with (i.e., each other and the DP and GOP). We believe that R4 is redundant to R1, and the entities in R4 could be added to R1, and R4 deleted. Also make conforming changes to the Measures, Data Retention and VSLs.</li> <li>o Need to clarify that that the requirement is to take action to restore the Alternative Interpersonal Communications capability, or take action to identify a substitute within 60 minutes, (not actually restore or identify a substitute within 60 minutes - which may not be possible). Also need to revise the Measure and the Lower VSL to conform with this clarification to the requirement</li> <li>o Need to strike the phrase “used for communicating real-time operating information”, because this should be included in the definition of Interpersonal Communication, as we propose in Comment #1 above, and it would be redundant to also include it in R1.</li> <li>o The VRF for R1 should be Medium instead of High, because this is a quarterly test of the alternative capability - doesn’t meet the criteria for a High VRF.</li> <li>o Need to clarify in Requirement R2 that the 60 minute clock for notifications BEGINS when you KNOW you have a failure that has lasted for 30 or more minutes.</li> <li>o Strike the word “normal” in Requirement R2, because the definition of Interpersonal Communications as proposed above already includes the word “primary”.</li> </ul>
<p><b>Response: The RCSDT thanks you for your comment.</b></p> <ul style="list-style-type: none"> <li>o <b>To provide better clarity the SDT created more specific requirements to delineate Interpersonal and Alternative Interpersonal Communication, and applicable entity responsibility.</b></li> <li>o <b>The RCSDT has revised the requirement R1, now R9, to state “...If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.” The Measure and VSL for R1, now R9, reflect the revision</b></li> </ul>		

Organization	Yes or No	Question 3 Comment
		<ul style="list-style-type: none"> <li>○ The definition was not revised to include the phrase “used for communicating real-time operating information” since the Time Horizon is designated as Real-time Operations.</li> <li>○ VRF: The RCSDT agrees and has revised the VRF to “Medium.”</li> <li>○ R2 now R10: The RCSDT believes the requirement as written satisfies your request. The “detection” of failure is the beginning.</li> <li>○ “Normal”: The RCSDT revised R2, now R10, and deleted “normal.”</li> </ul>
Exelon	No	<p>R1. It is not possible to test without identifying, “identify and” is not required. Suggest the requirement say: The applicable entities shall have primary and backup communication capabilities used for communicating real-time operating information. The entities shall test and demonstrate system capabilities on a quarterly basis. Telling someone to “take action” if they identify a failure in their systems is unnecessary. It must be presumed that an entity will “take action”; otherwise they will be non-compliant with the standard. Allowing an entity to “identify a substitute” in lieu of taking action to restore within 60 minutes points to the difficulties inherent in writing prescriptive requirements. The drafting team recognizes all entities may not be able to restore their capabilities within 60 minutes and therefore provides an alternative. The 60 minute requirement becomes a guideline, not a requirement under these conditions it is left to auditors to evaluate the technical and business case that an entity makes for why they can not make the 60 minute deadline.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT has revised requirements of COM-001, R1 is now R9, to require an entity to “designate” an Alternative Interpersonal Communication capability rather than to “identify”. The RCSDT agrees with you that an entity must identify something in order to be able to designate it or to test it. An Alternative Interpersonal Communication capability is an alternative regardless of whether one is considering the primary location or a back-up facility. Back-up tends to indicate that it would only be used in the case of the loss of some other primary capability; that is not the intent. The intent is that an alternative is to be designated and periodically tested to verify its continued availability and functionality. The alternative capability may or may not be used in normal operations activities. The SDT changed “take action” to “initiate action” in the requirement and believes the verbiage is needed to identify the start of timing to satisfy “...repair or designate a replacement Alternative Interpersonal Communications within 2 hours.</b></p>		
Manitoba Hydro	No	<p>R1. Removal of “develop a mitigation plan” and replacing with “take action within 60 minutes” has been done, this improves the Requirement.</p> <p>R2. As suggested in a previous SAR, the time line should be delineated further, “if the ICC will not be in service within 30 minutes, the impacted entities shall be notified within 60 minutes of the detection of the failure”.</p> <p>R3. The addition of “dictated by law or otherwise” disclaimers defogs the requirement for Canadian entities that have varying laws, mandates and obligations: Canada’s basic definition of “Official bilingualism” was</p>

Organization	Yes or No	Question 3 Comment
		found as follows: <ul style="list-style-type: none"> <li>o The federal government must conduct its business and provide services in both official languages English and French.</li> <li>o The law encourages or mandates lower tiers of government such as provinces, territories and municipalities to provide services in both official languages.</li> <li>o The law places obligations on private sectors to provide access to services in both official languages, including that products be labeled in both English and French.</li> <li>o The government provides support to sectors to encourage and promote the use of one or the other of the two official languages, for instance English speaking minorities in Quebec and French Speaking minorities in other provinces.</li> <li>o New Brunswick is the only official bilingual province and Quebec is officially unilingual (French only).</li> </ul>
<p><b>Response: The RCSDT thanks you for your comment. Thank you for your affirmations with respect to R1 and R3. With respect to R2 (now R10), it is the intent of the RCSDT to have notifications performed for outages of 30 minutes or longer within 60 minutes</b></p>		
E.ON U.S.	No	Requiring a 60 minute response to a problem with the Alternative Interpersonal Communication method which is only tested quarterly doesn't seem reasonable. One (or more) entities may need to involve IT/telecom personnel or order parts or material to resolve the problem or agree to the substitute Alternative Interpersonal Communication method. A 48 hour response requirement would be more appropriate.
<p><b>Response: The RCSDT thanks you for your comment. Requirement R1, now R9, has been revised to clarify the intent for the entity to "initiate actions to repair or designate a replacement Alternative Interpersonal Communications within 2 hours."</b></p>		
Puget Sound Energy	Yes	
CECD	No	The requirement to identify an alternative interpersonal communication method within 60 minutes should only apply if the registered entity only has a single alternative interpersonal communication method in place.
<p><b>Response: The RCSDT thanks you for your comment. Requirement R1, now R9, has been revised to clarify the intent for the entity to "initiate actions to repair or designate a replacement Alternative Interpersonal Communications within 2 hours."</b></p>		
NERC	No	There is a disparity in the timing requirements listed in COM-001. If it is important that a known communication path interruption be restored in 60 minutes, why would it be necessary to check a path quarterly only? The drafting team should consider proposing that no concurrent outage of primary and alternative/backup paths can exceed 5 minutes for voice paths. Additionally, NERC staff believes that data path concerns still need to be addressed. As written, there is no requirement coverage for ensuring that data telecommunication paths between entities are adequate and reliable.
<p><b>Response: The RCSDT thanks you for your comment. The requirement R1, now R9, does not state that a communication path be restored in 60</b></p>		

Organization	Yes or No	Question 3 Comment
<p>minutes but “...shall initiate action to repair or designate a replacement Alternative Interpersonal Communication within 2 hours.” The SDT believes that it is not feasible to propose that concurrent outages of a primary or backup communication cannot exceed 5 minutes. The SDT believes that IRO-010-1 Requirement R1 and specifically R1.4, adopted by the NERC BOT, address your concerns regarding data paths.</p>		
Southwest Power Pool	No	<p>This standard does want the RC, TOP, and BA to report in R2 if Interpersonal Communication goes down within 60mins to report it. However, we cannot find a specific requirement that subjects the RC, TOP, and BA to have Interpersonal Communication in the first place.</p>
<p>○ <b>Response: The RCSDT thanks you for your comment. To provide better clarity the SDT created more specific requirements to delineate Interpersonal and Alternative Interpersonal Communication, and applicable entity responsibility.</b></p>		
Hydro-Québec TransEnergie (HQT)	No	<p>We agree with the revisions made to R1 to remove the requirement for developing a mitigation plan but have a concern with “...shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communication Capability”. This can be interpreted to mean completing the repair within 60 minutes, and hence can present a difficulty for the responsible entity if the spare parts to facilitate a repair or if a new piece of equipment cannot be obtained within that time frame. More time is needed to fully repair or replace the lost capability. A suggested rewording is “shall initiate action within 60 minutes to restore....” Alternatively, the requirement can be revised to require the identification of a substitute Alternative Interpersonal Communication means within the 60 minute time frame.</p>
Independent Electricity System Operator	No	<p>We agree with the revisions made to R1 to remove the requirement for developing a mitigation plan but have a concern with “...shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communication Capability”. This can be interpreted to mean completing the repair within 60 minutes, and hence can present a difficulty for the responsible entity if the spare parts to facilitate a repair or if a new piece of equipment cannot be obtained within that time frame. More time is needed to fully repair or replace the lost capability. We suggest the wording be revised to “shall initiate action within 60 minutes to restore....” Alternatively, the requirement can be revised to require the identification of a substitute Alternative Interpersonal Communication means within the 60 minute time frame.</p>
Northeast Power Coordinating Council	No	<p>We agree with the revisions made to R1 to remove the requirement for developing a mitigation plan but have a concern with “...shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communication Capability”. 		restore..." Alternatively, the requirement can be revised to require the identification of a substitute Alternative Interpersonal Communication means within the 60 minute time frame.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT agrees and has revised R1, now R9, to clarify the intent for the entity to “initiate actions to repair or designate a replacement Alternative Interpersonal Communications within 2 hours.”</b></p>		
Western Electricity Coordinating Council	No	We do not need the definition for alternate, when the definition for interpersonal communication states all methods of communications. What we think the drafting team is getting at is that we need to test our back up communication systems.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT has revised R1, now R9, and R2, now R10, to clarify that an Alternative Interpersonal Communication capability be designated and that alternative capability to be tested at least monthly to verify an alternative is available should the capability normally used be lost. If the test of the Alternative Interpersonal Communication capability is failed, then the entity must initiate actions within 60 minutes. The RCSDT has intentionally avoided the concept of back-up because back-up could be mistakenly believed to apply only in back-up facilities or in the case of loss of some unnecessarily designated primary capability.</b></p>		
Midwest ISO Standards Collaborators	No	We mostly agree with the revisions and thank the drafting team for modifying the requirement to remove the need for a mitigation plan per our comments from the last posting. However, we do believe that introduction of a requirement to fix the Alternate Interpersonal Communication within 60 minutes could be a compliance problem. Our issue is with the time requirement. For example, our stakeholders have experienced situations with certain communications systems in which a part had to be shipped overnight to fix the communication system. While we still don’t believe a mitigation plan is necessary in this case, we are concerned that ordering the part may not be viewed as taking action. Please confirm that SDT believes that the 60 minutes applies to beginning to repair the Alternative Interpersonal Communication and not to full restoration of the Alternative Interpersonal Communication. Further, please confirm that identification of a substitute Alternative Interpersonal Communication could simply mean relying on an already existing and identified secondary or tertiary Alternative Interpersonal Communication? Similar to our concern identified in Q1, we are concerned about the clause “used for communicating real-time operating information.” We believe data could be drawn into the requirement with this clause. Redacting the clause from the requirement will clarify that the requirement applies to only verbal communications.
NERC Standards Review Subcommittee	No	We mostly agree with the revisions and thank the drafting team for modifying the requirement to remove the need for a mitigation plan per our comments from the last posting. However, we do believe that introduction of a requirement to fix the Alternate Interpersonal Communication within 60 minutes could be a compliance problem. Our issue is with the time requirement. American Transmission Company	Yes	If the “infrastructure” is defined as we have noted in question 2, then we support the revisions to this Requirement.
<b>Response: The RCSDT thanks you for your comment.</b>		
Electric Market Policy	Yes	Subject to adequate resolution of comments provided for Question 1
<b>Response: The RCSDT thanks you for your comment. Please see response to question1.</b>		
ERCOT ISO	No	To follow on the concern noted in Question 1, ERCOT ISO requests that the scope of Interpersonal Communication be clarified. Without specifically limiting Alternative Interpersonal Communication to verbal communications, ERCOT ISO considers this requirement to be too broad in that it could potentially encompass all types of data exchanges and the means for such exchanges.

Organization	Yes or No	Question 3 Comment
		<p>ERCOT ISO also has concerns regarding the intent of the 60 minute requirement. Is noting the failure and identified remedy within 60 minutes sufficient? If not, it may take significantly longer to acquire new equipment or parts to address a problem thereby making compliance with the 60-minute timeframe practically impossible. ERCOT ISO recommends that the 60 minute requirement be replaced with “as soon as practical/possible” to provide the flexibility necessary to cover those types of situations. ERCOT recognizes that the requirement gives the entity the option of restoring the means within 60-minutes <b>or</b> identifying another alternative, but to the extent an entity only has two options available and/or identified, the 60-minute restoration option would practically be the only option. With respect to the third option (i.e. the option if the first “alternative” fails), the requirement does not state any need to test that communication option. It only requires the entity to identify the additional alternative. If the intent is that the second alternative needs to be tested, that should be clarified. If the intent is merely to identify it and then test it on the next quarterly schedule, that should also be clarified./</p> <p>Also, the need to “identify” the Alternative ICs for the quarterly test seems pointless. The Alternative ICs would already be identified; presumably the entity would have established these means in advance of having to test them. It seems like a pointless exercise to “identify” means already identified. The requirement should impose an obligation to establish ICs and Alternative ICs, and the testing of those should be an independent requirement.</p> <p>With respect to R2, ERCOT recommends clarifying the scope of “impacted entities”. ERCOT ISO believes that the scope should be left to the discretion of the RC/TOP/BA, or that it should be expressly limited to the entities that were the subject of the failed communication.</p> <p>For R3, ERCOT ISO recommends deleting the pre-condition language related to “inter entity” BES “reliability communications”. This introduces confusion as to the scope and timing of communications under this requirement, especially where other standards are subject to Reliability Directives. For example, is a reliability communication a Reliability Directive? If not, what constitutes a reliability communication? The requirement should simply state that English is required for communications from the relevant functional entities.</p> <p>Finally, the risk factor seems inappropriate for the requirement. This is a testing requirement, not real time. The entity has 60 minutes to correct any issues or have a third option already identified and ready to deploy. This requirement does not seem to indicate the need for a high risk factor.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. R1 is now R9; R2 is now R10; R3 is now R11; R4 is now R7 and R8.</p> <p>The SDT believes that Webster’s definition of Interpersonal: (being, relating to, or involving relations between persons) clarifies the exclusion of media dedicated to Telemetry or other data exchange and, SDT believes that data communication is covered under IRO-010, R3 which states:</p> <p><b>Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission</b></p>		

Organization	Yes or No	Question 3 Comment
		<p>Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</p> <p>The SDT believes that the revised Requirements of COM-001-2 now satisfy your concern regarding R1, R2 and R3.</p>

4 Do you agree with the definition of Reliability Directive (COM-002-2)? If not, please explain in the comment area.

**Summary Consideration:**

The comments received regarding the definition of Reliability Directive ranged from the being “to open-ended” (PPL) to not “flexible” enough (Public Service Enterprise Group Companies). The SDT expected and viewed these as attempting to reach middle ground.

There were also value added comments such as removing the unnecessary and redundant terms “actual or expected” from the definition, which the SDT agrees with.

A number of commenter’s expressed a concern about the definition not including three-part communication, clearly identifying a Reliability Directive at the time of issue, and applying to verbal communications. While valid concerns, the SDT believes responsibilities should not be imbedded in a definition and, as drafted, the requirements of COM-002 fully address the identification and verbal concerns.

While outside of the scope of question four, one commenter suggested assigning the COM standard project to either the OPCPRC or RCSDT projects. The SDT explained the close coordination and collaboration between the two projects.

Organization	Yes or No	Question 4 Comment
Calpine Corporation		
North Carolina Municipal Power Agency #1		
Operating Personnel Communications Protocols SDT		The OPCP SDT received NERC staff comments to our proposed draft of COM-003-1. In those comments NERC staff proposed the term “Operating Communication”, defined as “communication with the intent to change or maintain the state, status, output, or input of an Element or Facility of the Bulk Electric System.” The OPCP SDT is accepting this proposed term in the next version of COM-003-1 for posting. Per agreement reached during the November 17, 2009 joint meeting of the OPCP, RC and RTO SDTs in Charlotte, NC,

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 4 Comment
		<p>pending the outcome of the industry evaluation of your proposed “Reliability Directive” term, the OPCP SDT will incorporate the term into COM-003-1 Requirement R?. The OPCP SDT recommends adding the Transmission Owner to the entities that may issue a Reliability Directive because in many cases (e.g., PJM) Transmission Owners “operate” the transmission system from local control centers.</p> <p>The OPCP SDT points out however that the RC SDT have not adhered to scope coordination efforts between our projects. At the outset of both SDT’s work, the OPCP project would focus upon Requirement R2 of COM-002-2 and the RC SDT would focus on Requirement R1 of COM-002-2.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT does not believe that the Transmission Owner should be added to the definition as this would be inconsistent with the Functional Model and the registration process.</b></p> <p><b>Regarding the scope issue: The RCSDT received strong consensus comments on our first posting to make revisions to the original R2. The RCSDT began making these revisions in response to stakeholder comments.</b></p>		
American Electric Power	No	<p>AEP would recommend that the words "actual or expected" be removed from the definition as unnecessary and redundant. Since, Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System, then an "expected emergency" is by definition the same as an emergency. If you already have an 'expected' emergency that causes intervention of some sort, then you are already in and "emergency." Therefore, you are either in an emergency condition or not in an emergency condition.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT agrees with your comment and we have struck “actual or expected” from the proposed definition.</b></p>		
Southwest Power Pool	No	<p>By NERC’s Functional Model the RC, BA, TOP, and DP issues directives. (DP to LSE)Reliability Directive - A communication initiated by a RC, TOP, BA or DP where action by the recipient is necessary to address an actual or expected Emergency.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT notes that, per the Functional Model, a DP may “direct” an LSE to communicate requests for voluntary load curtailment and not reliability situations:</b></p> <p><b>Item 9 on page 47 of version 5 of the Functional Model: “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.”</b></p> <p><b>The RCSDT will forward this comment to the FMWG for their consideration in revising the language.</b></p>		
Public Service Enterprise Group	No	<p>It is reasonable to require the directing entity to identify which of its communications is a Reliability Directive</p>

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 4 Comment
Companies		either when first communicated or if questioned by the recipient. Flexibility is the key.
<p><b>Response:</b> The RCSDT thanks you for your comment. <b>The SDT agrees it might be reasonable however, it is not appropriate to imbed requirements in definitions.</b></p>		
<p><b>Also please see Requirement R1 of COM-002-3 (When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient.) If the RC, BA, and TOP comply with R1 there is no need for the recipient to question if it is Reliability Directive.</b></p>		
NERC	No	<p>NERC staff proposed the term “Operating Communication” in our comments to Project 2007-02 Operating Personnel Communications Protocols. Operating Communication would be defined as “communication with the intent to change or maintain the state, status, output, or input of an Element or Facility of the Bulk Electric System.” This captures all communication that affects BES reliability, not just communication between function entities and Reliability Coordinators. If the proposed COM-003 is adopted with the definition of “Operating Communication” and the corresponding three-part communication requirements, this term “Reliability Directive” is not needed in the COM standard family. However because we cannot pre-judge the outcome of the changes proposed in Project 2007-02, we must view the proposal here on its own merits. The proposal herein limits the scope of coverage to emergency situations, a regression from the current coverage in FERC-approved COM-002 and eliminates a key component of the defense in depth strategy the standards as a body attempt to provide.</p> <p>Furthermore, we believe that COM-002 is outside the scope of Project 2006-06 Reliability Coordination and should properly be addressed by Project 2007-02 Operating Personnel Communications Protocols. The fact that two teams are addressing aspects of the same standard and requirements is confusing and because the projects are not linked, there is a real potential to be disjointed if one or the other project modifies its approach. This could create a gap in reliability coverage. One team should be the primary “owner” of this issue. Analysis of past Bulk Electric System reliability events has shown that the lack of three-part communication has been a contributing factor to adverse reliability issues. We believe it is absolutely imperative that standards concerning all verbal instructions to change or maintain the state of a BES element must involve three-part communication in order to provide defense-in-depth and reduce human error in these events.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. <b>The RCSDT believes that we are addressing the Blackout Recommendation #26 regarding “tighten communications protocols, especially during alert and emergency situations”. Our contention is that we have made a good faith effort at addressing the scope of our SAR and feel that this current position has been validated by stakeholder comments and the NERC Standards Committee (see November 17, 2009 meeting of RCSDT, OPCPSDT and RTOSDT concerning this issue). We understand the concerns expressed above and fully support proceeding with the efforts of the OPCP SDT at improving all communications protocols.</b></p> <p><b>However, the RCSDT recognizes that the scope of our proposed revisions to COM-002 is limited to Emergency situations only. The RCSDT feels that</b></p>		

Organization	Yes or No	Question 4 Comment
<p>the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RCSDT along with the OPCPSDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy”. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RCSDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003.</p>		
Western Electricity Coordinating Council	No	<p>No, we think IRO 001 R3 covers this more effectively and may be expanded to include transmission operators and balancing authorities. “The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes.”</p>
<p><b>Response: The RCSDT thanks you for your comment. The revised IRO-001, R3 is to establish the authority of the RC to act or issue Reliability Directives. It does not identify the protocols under which a Reliability Directive needs to be issued, acknowledged and carried out. This is handled through the proposed definition as well as the requirements of COM-002.</b></p>		
Manitoba Hydro	No	<p>Reliability Directive is more clearly defined in the FRCC website: “Reliability Directives are used during times of emergency or in situations where reliability may be an issue. A Reliability Directive is usually issued to control or prevent emergency situations. ”Extrapolated from proposed and FRCC: Reliability Directive: An instruction initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority that is used during emergencies or reliability issue which will be used to prevent, control or resolve the situation. This definition makes it clear that it is for reliability issues (Thus Reliability Directive) and clarifies better that this is to be used to control or prevent emergency situations. The existing proposed definition doesn’t fully infer this. With the addition of this glossary term, so should the addition of a definition for Operational Directive (though not used in this requirement). The new items would further compliment and assist each other in the understanding of the two new Glossary terms. From the FRCC website: “Operational Directives are issued by System Operators when it is necessary to perform a critical function on the BPS, i.e., to manipulate or change the status of a BES element such as a circuit breaker or substation disconnects. For example, Balancing Authorities often issue Operational Directives to Generator Operators to raise or lower the MW or MVAR output of generators during the course of balancing load and generation on the BPS. Transmission Operators often issue Operational Directives to substation operators to change the status of voltage control devices or clearing BPS substation equipment or transmission lines for routine maintenance, etc”. Extrapolated from proposed and FRCC: Operational Directive: An instruction initiated by a Transmission Operator or Balancing Authority that is used to perform planned or routine critical functions on the Bulk Power System.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT believes that our proposed definition of Reliability Directive along with the existing</b></p>		

Organization	Yes or No	Question 4 Comment
<p>definition of Emergency address all of the concepts that you suggest.</p> <p>The comments regarding Operational Directive are more suited to the work of the OPCP SDT as they are developing requirements along this line. We will forward your comment to that team for their consideration.</p>		
Midwest ISO Standards Collaborators	No	<p>The combination of the COM-002-3 standard and the definition of Reliability directive do not clearly specify that the communication is verbal and between only two responsible entities. Otherwise, the communication could be considered a blast call, written correspondence or conversation between operators within the same responsible entity. We believe that the Reliability Directive definition should be: “A verbal communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority to another responsible entity where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”</p>
NERC Standards Review Subcommittee	No	<p>The combination of the COM-002-3 standard and the definition of Reliability directive do not clearly specify that the communication is verbal and between only two responsible entities. Otherwise, the communication could be considered a blast call, written correspondence or conversation between operators within the same responsible entity. We believe that the Reliability Directive definition should be: “A verbal communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority to another registered entity where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”</p>
<p><b>Response: The RCSDT thanks you for your comment. First issue: verbal communication: The intent of the definition is to not preclude text or other forms of communication for issuing Reliability Directives. However, entities are still obligated to comply with the requirements of COM-002.</b></p> <p><b>Second issue: “to another registered entity”:</b> The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Adding this verbiage is not appropriate.</p> <p><b>Third issue: By adding “clearly identifies in the communication that this is a Reliability Directive”, we would have added a requirement to the definition. This is better included in the requirements rather than the definition.</b></p>		
We Energies	No	<p>The measures of COM-002-3 imply verbal one-to one communication which needs to be clear within the definition. Recommend replacing “A communication” with the draft defined term “Interpersonal Communication” assuming it gets approved.</p>
<p><b>Response: The RCSDT thanks you for your comment. The intent of the definition and requirements of COM-002 is to not preclude text or other forms of communication to issue Reliability Directives. However, entities are still obligated to comply with the requirements of COM-002. Interpersonal Communications is a medium rather than a protocol or message.</b></p>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 4 Comment
PPL	No	The proposed definition is too open-ended especially since this definition will be used in other standards. Limiting the application of the standard to announced Reliability Directives in the definition itself will ensure only announced Reliability Directives are covered by this standard and other standards.
<p><b>Response: The RCSDT thanks you for your comment. Including the language that you suggest would impose a requirement within the definition. Potential use of the definition in other requirements would have to be reconciled with COM-002 requirements through the standard development process.</b></p>		
E.ON U.S.	No	The term “Interoperability Communication” has been proposed and defined in COM-003 (Project 2007-02), but, the term and definition have not been finalized. Is a “Reliability Directive” communication different from, a subset of, or related to Interoperability Communication? The definition of Reliability Directive should recognize and clarify the linkage to Interoperability Communication.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT believes that we are addressing the Blackout Recommendation #26 regarding “tighten communications protocols, especially during alert and emergency situations” in our proposed definition and requirements for COM-002. The RCSDT feels that the concept of a Reliability Directive is unique and an important tool for the RC, BA and TOP to maintain reliability. The proposed definition and revisions to COM-002 are consistent with parts of the directives in FERC Order 693. The work of the RCSDT and the OPCPSDT (Project 2007-02) compliment each other and will be coordinated.</b></p>		
Southern Company Services	No	This definition is not needed with the way that the requirements of the standard are written. This definition used with the definition of Emergency could be interpreted to include such routine operations as turning on capacitor banks and next day planning. Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority to an entity inside their Reliability, Transmission, or Balancing Areas where action outside of normal operating practices by the recipient is necessary to address an actual or expected Emergency or when an action is identified as a reliability directive.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT believes that the proposed definition of Reliability Directive, along with the existing definition of Emergency, provides the heightened awareness that is the goal of the standard and it comports with the directives of Order 693.</b></p>		
Ameren	No	We believe that a reference in the question is to COM-002-3 and not -2. The definition of Reliability directive is not clear to indicate that it only applies to verbal communications. We suggest the definition should be: “A verbal communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority to another responsible entity where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”

Organization	Yes or No	Question 4 Comment
<p><b>Response: The RCSDT thanks you for your comment. The question does reference COM-002-3 as suggested. First issue: verbal communication: The intent of the definition is to not preclude text or other forms of communication for issuing Reliability Directives. However, entities are still obligated to comply with the requirements of COM-002.</b></p> <p><b>Second issue: “to another registered entity”:</b> The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Adding this verbiage is not appropriate.</p> <p><b>Third issue: By adding “clearly identifies in the communication that this is a Reliability Directive”, we would have added a requirement to the definition. This is better included in the requirements rather than the definition.</b></p>		
Hydro-Québec TransEnergie (HQT)	No	We believe that the Reliability Directive definition as defined in COM-002-3 should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
Northeast Power Coordinating Council	No	We believe that the Reliability Directive definition as defined in COM-002-3 should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
IRC Standards Review Committee	No	We believe that the Reliability Directive definition should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
ISO New England Inc	No	We believe that the Reliability Directive definition should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
<p><b>Response: The RCSDT thanks you for your comment. First issue: verbal communication: The intent of the definition is to not preclude text or other forms of communication for issuing Reliability Directives. However, entities are still obligated to comply with the requirements of COM-002.</b></p> <p><b>Second issue: “to another registered entity”:</b> The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Adding this verbiage is not appropriate.</p> <p><b>Third issue: By adding “clearly identifies in the communication that this is a Reliability Directive”, we would have added a requirement to the</b></p>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 4 Comment
<p><b>definition. This is better included in the requirements rather than the definition.</b></p>		
FirstEnergy	No	<p>We believe that this standard should be either handed to the OPCPSDT (Project 2007-02) or the OPCPSDT should hand over the COM-003-1 standard to this RCSDT (Project 2006-06); and then COM-002 and COM-003 should be merged. For further explanation of our suggestions, <b>see our comments in Question #8.</b></p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RCSDT along with the OPCPSDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RCSDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003. Merging of the two standards is a work in progress and will ultimately be decided by stakeholder consensus.</b></p>		
Independent Electricity System Operator	No	<p>We suggest the Reliability Directive definition be modified as follows to further clarify the communication protocol: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority and made clear by the initiating entity that this is a Reliability Directive which requires action by the recipient to address an actual or expected Emergency.”</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT believes that your suggested revision would impose a requirement within the definition.</b></p>		
Duke Energy	No	<p>We think that Requirement R1 should be folded into the definition, and R1 deleted. Also delete the Measure and VSL. Suggested rewording of the definition: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority, and identified as a Reliability Directive to the recipient, where action by the recipient is necessary to address an actual or expected Emergency.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT believes that your suggested revision would impose a requirement within the definition.</b></p>

Organization	Yes or No	Question 4 Comment
Administration		Emergency.”
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT believes that your proposed revision does not materially add clarity to the proposed definition. Stakeholders generally concur with our proposed definition.</b></p>		
Electric Market Policy	Yes	<p>While I technically agree with the definition, I think it should be expanded to state that a directive that meets this definition must be clearly identified as such by the issuing BA, RC or TOP. In other words, action is mandatory on the recipient’s part only if the issuing party clearly states “this is a Reliability Directive”. In many organized markets, participants (particularly LSE, GOP and PSE) are required to follow instructions only if an Emergency is declared. This concept has historically been used throughout this industry although such use may have been implicit.</p>
<p><b>Response: The RCSDT thanks you for your comment. Your concerns are covered by the requirement R1 of COM-002 which states:</b></p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient.</p> <p><b>A requirement can not be imposed by a definition.</b></p>		
ERCOT ISO	No	<p>ERCOT ISO is concerned about defining Reliability Directive in terms of “expected” emergencies. Obviously all relevant entities will operate to avoid emergency situations. However, the term “expected” is vague and ambiguous, and, as such, is open to subjective interpretation thereby creating uncertainty for regulated entities. The definition should put entities on clear notice as to when they have to comply with the relevant requirements. The only way to provide that certainty is to establish a clear, identifiable trigger. To accomplish this, the definition should be limited to actual emergencies. Actual emergencies are specifically defined, not subjective, and lend themselves to demonstration of compliance in an audit. The definition of Emergency lends itself to alignment with specific circumstances that clearly indicate to a regulated entity that it must use Reliability Directives and follow the rules that apply to such directives – “expected emergencies” do not.</p> <p>The requirement should also be revised to clarify that Reliability Directives only apply to communications between separate entities in distinct locations and do not apply to employees of the same company communicating in person in the same location – e.g. a control center.</p>
<p><b>Response: The RCSDT thanks you for your comment. We have removed the words “actual or expected” from the definition. The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance.</b></p>		

**5 Do you agree with the revisions to the Requirements in COM-002-3 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.**

**Summary Consideration:** The bulk of the comments were about the VSL. The SDT agreed and has deleted the Severe VSL and moved the High VSL to Severe. We believe that there are two possible actions within the requirement and failure to perform either warrants a Severe VSL

Several commenters’s expressed concern about three-part communication. The SDT believes that as drafted with the issue, repeat back, and acknowledgement three-part communication is covered.

There was one commenter suggesting the addition of the DP to the applicability The RCSDT notes that, per the Functional Model, a DP may “direct” an LSE to communicate requests for voluntary load curtailment and not reliability situations: Item 9 on page 47 of version 5 of the Functional Model: “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.” Furthermore, The RCSDT will forward this comment to the FMWG for their consideration in revising the language.

While outside of the scope of question five, one commenter suggested assigning the COM standard project to either the OPCPRC or RCSDT projects. The SDT explained the close coordination and collaboration between the two projects.

Xcel Energy		

Organization	Yes or No	Question 5 Comment
Operating Personnel Communications Protocols SDT		<p>The OPCP SDT offers the following Requirements language that addresses a Three-Part Communication Protocol. (It is comprised of two primary Requirements and contains a footnote):</p> <p>R_. Each Reliability Coordinator, Balancing Authority, Transmission Operator, and Transmission Owner that issues a Reliability Directive during verbal Operating Communications shall employ three-part Communication Protocol to ensure that the receiving party has repeated the communication, and shall verbally confirm the communication to be correct or reinitiate the communication until a correct response is given by the recipient. An exception is allowed for Reliability Directives that are issued via “All-Call”, during which the initiator shall ensure that all the receiving parties have positively acknowledged receipt of message rather than verbally repeating the message. [Violation Risk Factor: High][Time Horizon: Real-time Operations]</p> <p>R_. Each Reliability Coordinator, Balancing Authority, Transmission Owner, Transmission Operator, Generator Operator, Transmission Service Provider, Load Serving Entity, Distribution Provider and Purchasing-Selling Entity that receives a Reliability Directive during verbal Operating Communications shall employ three-part communication protocol [footnote 1] to repeat the communication back to the initiator and await verbal confirmation from the initiator. An exception is allowed for the recipient of an “All-Call” Reliability Directive to acknowledge receipt of the message and is responsible to contact initiator if message is not understood rather than verbally repeating the message. [Violation Risk Factor: High][Time Horizon: Real time]</p> <p>Footnote 1: A Communication Protocol where information is verbally stated by a party initiating a communication, the information is repeated back correctly (not necessarily verbatim) to the party that initiated the communication by the second party that received the communication, and the same information is verbally confirmed to be correct by the party who initiated the communication.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. The RCSDT believes that we are addressing the Blackout Recommendation #26 regarding “tighten communications protocols, especially during alert and emergency situations” in our proposed definition and requirements for COM-002. We have not precluded issuance of Reliability Directives by non-verbal means and the requirements of proposed COM-002 would apply. Respecting the importance of Reliability Directives during Emergency situations, the RCSDT does not believe that exceptions to the clear, concise three part communications indicated in COM-002 are appropriate regardless of the medium used to communicate. In addition, the current format of the requirements provides more effective way to measure compliance.</p>		
Ameren	No	(1) As stated in #4 above, the definition of Reliability Directive is not clear. (2) The VSLs for R3 appear to have some redundancy. (3) Also in R3, the phrase regarding R2 should be changed to “(as described in R2, above)”
<p><b>Response:</b> The RCSDT thanks you for your comment.</p> <p>1) Please see response to question 4.</p>		

Organization	Yes or No	Question 5 Comment
<p>2) The RCSDT concurs. We have deleted the Severe VSL and moved the High VSL to the Severe category.</p> <p>3) We have revised the phrase to be consistent with the verbiage in R2 as follows: “per Requirement R2” which meets the intent of your comment “as described”.</p>		
Southwest Power Pool	No	<p>1) By NERC’s Functional Model the RC, BA, TOP, and DP issues directives. (DP to LSE)COM-002-3 R2... the recipient of a Reliability Directive issued per Requirement R1, shall repeat the intent of the Reliability Directive back to the issuer of the Reliability Directive.</p> <p>2) COM-003-1 R5... shall use Three-part Communications when issuing a directive during verbal Interoperability Communications. Implementation Plan for COM-002-3 states R2 will stay, for COM-003-1 states that COM_002-3 R2 will go away. The two requirements don’t agree with each other, COM-002-3 R2 wants the Intent repeated back, where COM-003-1 R5 per the Three-part Communication definition “...the information is repeated back correctly to the party that initiated the communication”.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. 1) The RCSDT notes that, per the Functional Model, a DP may “direct” an LSE to communicate requests for voluntary load curtailment and not reliability situations:</p> <p><b>Item 9 on page 47 of version 5 of the Functional Model:</b> “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.”</p> <p>The RCSDT will forward this comment to the FMWG for their consideration in revising the language.</p> <p>2) The RCSDT believes that we are addressing the Blackout Recommendation #26 regarding “tighten communications protocols, especially during alert and emergency situations” in our proposed definition and requirements for COM-002. The RCSDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RCSDT along with the OPCPSDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RCSDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003. Merging of the two standards is a work in progress and will ultimately be decided by stakeholder consensus.</p>		
Central Lincoln	No	<p>Consider the following example. Director calls Directee. Telephone is answered by the Directee’s receptionist. Director states that he has a Reliability Directive, and proceeds to deliver it. Receptionist manages to parrot the directive, but has no clue what is being asked. Director confirms receptionist has parroted the directive accurately. Both parties have met the requirements (avoiding a high risk, severe violation), but the three way conversation only wasted the time of both parties and delayed the performance of the directive. The Director should be required to attempt to reach someone with the authority and understanding needed to carry out the</p>

Organization	Yes or No	Question 5 Comment
		directive.
<p><b>Response: The RCSDT thanks you for your comment. The requirements of the standard do not consider how staffing at a particular functional entity is achieved. This is covered in the PER standards. It is incumbent on the registered entity to comply with the requirements of the COM-002 standard as well as all other requirements, some of which will likely be violated in the example above.</b></p>		
CECD	No	<p>For R3, the drafting team should clarify that if a directive is reissued due to a misunderstanding the receiving party should repeat the reissued directive so that the RC, BA or TOP can verify that the directive is understood correctly.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT believes that this situation is covered by R2.</b></p>		
Duke Energy	No	<ul style="list-style-type: none"> <li>o It is not clear whether Requirements R2 and R3 are intended to apply to other than verbal Reliability Directives. We have difficulty envisioning how “repeat back” and “acknowledge the response” would be expected to work with electronic communications.</li> <li>o Delete the phrase “issued per Requirement R1” from R2, since R1 should be deleted per our Comment #4 above.</li> <li>o Revise R3 as follows, to conform to our proposed revised definition in Comment #4 above: “Each Reliability Coordinator, Transmission Operator, and Balancing Authority that initiates a Reliability Directive shall acknowledge the response from the recipient as correct, or reissue the Reliability Directive to resolve any misunderstandings.”</li> <li>o We believe that only 2 VSLs are appropriate for R3.                             <ul style="list-style-type: none"> <li>o Lower - The responsible entity issued a Reliability Directive, but did not acknowledge that the recipient repeated the intent of the Reliability Directive correctly.</li> <li>o Severe - The responsible entity issued a Reliability Directive and failed to reissue the Reliability Directive to resolve any misunderstandings when the intent of the Reliability Directive was not repeated correctly by the recipient.</li> </ul> </li> </ul>
<p><b>Response: The RCSDT thanks you for your comment. The requirements of COM-002 do not preclude non-verbal issuance of directives. It is incumbent on the entity to ensure compliance with the requirements</b></p> <p><b>R2: We have not retired R1 (see response to Q4) and therefore do not feel this is an appropriate revision.</b></p> <p><b>R3: See response to question 4. The RCSDT believes that R3 is appropriate as written.</b></p> <p><b>VSL: The RCSDT has deleted the Severe VSL and moved the High VSL to Severe. We believe that there are two possible actions within the</b></p>		

Organization	Yes or No	Question 5 Comment
<b>requirement and failure to perform either warrants a Severe VSL.</b>		
Exelon	No	Please clarify R2 to 'repeat back' a Directive; the definition of Directive does not distinguish between verbal and other methods of communication. Is an electronic response to a verbal or non-verbal Directive allowed?
<b>Response: The RCSDT thanks you for your comment. The requirements of COM-002 do not preclude non-verbal issuance of directives. It is incumbent on the entity to ensure compliance with the requirements.</b>		
Manitoba Hydro	No	R2 requires “recipient to repeat back” and R3 requires “RC, TOP, BA to acknowledge”. This procedure is NOT identified as Three Part Communication which in fact is. Three Part Communication should be a common theme for all entities, including RC’s. So why not use the same or similar Requirement as used in COM-002-2 R2 Three-Part Communication.
<b>Response: The RCSDT thanks you for your comment. The concept of three part communication is in existing COM-002-2, R2 and a definition for the term is being proposed by the OCPD SDT. The RCSDT feels that the concept of a Reliability Directive is a unique and important tool for RC, BA and TOP to maintain reliability that is separate from that effort. The requirements of COM-002 are explicit for Reliability Directives and are consistent with parts of the directives in FERC Order 693. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RCSDT have developed for COM-002. This will further the efforts of the OCPD SDT in achieving stakeholder consensus for their proposed requirements in COM-003. Merging of the two standards is a work in progress and will ultimately be decided by stakeholder consensus.</b>		
E.ON U.S.	No	See comment to question 8.
<b>Response: The RCSDT thanks you for your comment. Please see response to question 8.</b>		
NERC	No	See response to Question 4.
<b>Response: The RCSDT thanks you for your comment. Please see response to question 4.</b>		
PPL	No	Suggest removing Purchasing-Selling Entity from the standard as a PSE does not receive Reliability Directives from a BA, RC, or TOP.
<b>Response: The RCSDT thanks you for your comment. Prior stakeholder comments (during previous postings of this standard) indicated that PSE should be an applicable entity.</b>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 5 Comment
Independent Electricity System Operator	No	The High and Severe VSLs for R3 appear to be the same. We suggest to remove the High VSL and change the Severe VSL to: "The responsible entity issued a Reliability Directive, but did not acknowledge that the recipient in R2 repeated the intent of the Reliability Directive correctly OR resolve any misunderstandings when the intent of the Reliability Directive was not repeated correctly by the recipient."
<p><b>Response: The RCSDT thanks you for your comment. We have deleted the Severe VSL and moved the High VSL to the Severe category. We believe this meets the intent of your comment.</b></p>		
South Carolina Electric and Gas	No	The SDT needs to evaluate the redundancy associated with COM-003-1 Req 5 and COM-002-3 Req 2&3.
<p><b>Response: The RCSDT thanks you for your comment. The RSDT does not believe that there is redundancy between the standards. COM-002 relates only to Reliability Directives while COM-003 deals with other forms of communication.</b></p>		
Hydro-Québec TransEnergie (HQT)	No	The VSLs for R3 appear to have some redundancy. The Severe VSL and the second condition in the High VSL appear to be similar or the same. We suggest remove the High VSL, and revise the Severe VSL to:"The responsible entity issued a Reliability Directive, but did not acknowledge that the recipient in R2 repeated the intent of the Reliability Directive correctly OR resolve any misunderstandings when the intent of the Reliability Directive was not repeated correctly by the recipient."
Northeast Power Coordinating Council	No	The VSLs for R3 appear to have some redundancy. The Severe VSL and the second condition in the High VSL appear to be similar or the same. Suggest removing the High VSL, and revise the Severe VSL to:"The responsible entity issued a Reliability Directive, but did not acknowledge that the recipient in R2 repeated the intent of the Reliability Directive correctly OR resolve any misunderstandings when the intent of the Reliability Directive was not repeated correctly by the recipient."
<p><b>Response: The RCSDT thanks you for your comment. We have deleted the Severe VSL and moved the High VSL to the Severe category. We believe this meets the intent of your comment.</b></p>		
PNGC Power (15 member utilities)	No	There is a chance that a reliability directive given to a smaller entity will be taken by a receptionist or answering service. Requirement R2 should be more specific about contacting an operational authority directly to relay reliability directives.
<p><b>Response: The RCSDT thanks you for your comment. The requirements of the standard do not consider how staffing at a particular functional entity is achieved. This is covered in the PER standards. It is incumbent on the registered entity to comply with the requirements of the COM-002 standard as well as all other requirements, some of which will likely be violated in the example above.</b></p>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 5 Comment
Midwest ISO Standards Collaborators	No	<p>We agree with most of this standard and the apparent intent. However, there are some specific issues. For instance, measurement of compliance to R1 could be challenging. As the VSL is written, it would appear the compliance auditor could judge if a Reliability Directive should have been issued. The VSL language that is problematic is “The responsible entity that required actions to be executed”. Who determines that actions were required? One could argue that failure to identify a communication as a Reliability Directive means that actions weren’t required but it is doubtful the compliance authorities would take this approach. Thus, there would appear to be great judgment left to the compliance auditor in determining if a Reliability Directive should have been issued. The combination of the COM-002-3 standard and the definition of Reliability directive do not clearly specify that the communication is verbal and between only two responsible entities. Otherwise, the communication could be considered a blast call, written correspondence or conversation between operators within the same responsible entity. We have offered proposed modifications to the definition of Reliability Directive in Q5 to solve this issue. Alternatively, the issue could be addressed by modifying the requirements. The VSLs for R3 appear to have some redundancy. The Severe VSL and the second condition in the High VSL appear to be similar or the same.</p>
NERC Standards Review Subcommittee	No	<p>We agree with most of this standard and the apparent intent. However, there are some specific issues. For instance, measurement of compliance to R1 could be challenging. As the VSL is written, it would appear the compliance auditor could judge if a Reliability Directive should have been issued. The VSL language that is problematic is “The responsible entity that required actions to be executed”. Who determines that actions were required? Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 5 Comment
Pepco Holdings, Inc	Yes	
Southern Company Services	Yes	
US Bureau of Reclamation	Yes	
Western Area Power Administration	Yes	
Western Electricity Coordinating Council	Yes	
Puget Sound Energy	No	Under the current proposed language of R2, it appears possible that a recipient of a Reliability Directive not identified as such may still be held responsible for failing to comply with R2, because the word “per” has several meanings. While those meanings do include “in accordance with”, it would be clearer to simply use that phrase. As a result, recommend the replacement of the phrase “issued per” with “identified as such in accordance with”.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT believes that the suggested revision does not provide additional clarity to the requirements.</b></p>		
ITC Holdings	Yes	None
Northeast Utilities	Yes	Support the intent of the changes. However, it is unclear if the mechanics of R1 require the initiator to actually state “This is a Reliability Directive ...”.
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT intends for such a statement to be made. Using that exact verbiage in a requirement is too prescriptive and we leave the exact language up to the issuer as long as they identify it as a Reliability Directive.</b></p>		
American Electric Power	Yes	Why is the term “three part communications” not used in this set of requirements?
<p><b>Response: The RCSDT thanks you for your comment. While the requirements embody three part communications, the RCSDT believes it is clearer to have explicit requirements for each part of the process that requires a specific action.</b></p>		
ERCOT ISO	No	R1: ERCOT ISO recommends that the requirement be revised to simply state that the entity has to identify

Organization	Yes or No	Question 5 Comment
		<p>when it is a reliability directive, such that it reads as follows:</p> <p><b>R1.</b> When applicable, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>The deleted language introduces subjectivity and is unnecessary. The use of the defined term implicitly determines when Reliability Directives are issued and it is unnecessary to impose the condition precedent of identifying an action as Reliability Directive. This is unnecessary and just creates confusion.</p> <p>R2: ERCOT ISO recommends removal of “the intent” such that it reads as follows:</p> <p><b>R2.</b> Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat the Reliability Directive back to the issuer of the Reliability Directive. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>ERCOT ISO believes using “intent” in this requirement was intended to mitigate the practical fact that it is difficult to repeat, verbatim, a directive. However, use of the word intent could introduce confusion. A directive will require certain actions to accomplish a specific purpose or to solve a specific problem. Thus, the intent of a directive has two components to the intent; the first is the specific actions to be taken and the second is the underlying reason for those actions. The recipient will obviously be privy to the former, but perhaps not the latter. To remove any ambiguity as to whether intent means the actions or the issue to be solved by such actions, the word should be removed. ERCOT believes there is little risk that an auditor will issue a violation if a repeated directive is not verbatim, but reflects the actions to be taken pursuant to the directive.</p> <p>Further, ERCOT ISO recommends working closely with the Operating Personnel Communication Protocol SDT to address all-calls as exceptions. It is practically unreasonable to require multiple recipients on the same communication to repeat the directive back. In fact, it is counterproductive because the time it takes to do that would delay the recipients from taking the needed reliability action(s). ERCOT recommends the following language to address “all-calls”:</p> <p><b>(COM-003) R2.</b> Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive shall repeat the Reliability Directive back to the issuer of the Reliability Directive. An exception is allowed for Reliability Directives that are issued via “All-Call” communications. For All-Calls, the entity issuing the directive shall require recipients to acknowledge receipt of message.</p>

Organization	Yes or No	Question 5 Comment
		<p>R3: ERCOT ISO recommends that R3 be combined with R2. Regardless of whether it is combined with R2, the identification precondition should be removed such that the requirement reads as follows:</p> <p><b>R3.</b> Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive shall acknowledge the response from the recipient of the Reliability Directive in R2 as correct or reissue the Reliability Directive to resolve any misunderstandings. <i>[Violation Risk Factor: High][Time Horizon: Real-Time]</i></p> <p>The identification pre-condition is unnecessary – again, the defined term is self-executing in terms of situational application. Imposition of this superfluous language merely creates the potential for confusion.</p> <p>M1: ERCOT ISO recommends removing “required actions to be taken” language for the same reason this pre-condition does not make sense in the requirement, as described above.</p> <p>M3: ERCOT ISO recommends that “Directive” be replaced with “Reliability Directive” because Directive is not the full defined term.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment.</p> <p><b>R1:</b> The RCSDT believes that the requirement, as written is clear and disagrees that it introduces subjectivity. COM-002 does not provide guidance on when to issue a Reliability Directive, only that, when they issue Reliability Directives, they comply with the requirements of COM-002. We feel that adding the phrase “When applicable” adds subjectivity to the requirement.</p> <p><b>R2:</b> Without the words “the intent”, the requirement could be interpreted to mean a verbatim repeat of the Reliability Directive. The RCSDT does not intend for this to be the case and believes that the requirement, as written, is clear and provides sufficient flexibility to meet the requirement. The requirements of COM-002 do not preclude non-verbal (e.g. “all calls”) issuance of directives regardless of the medium. It is incumbent on the entity to ensure compliance with the requirements. The RCSDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RCSDT along with the OPCPSDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment.</p> <p><b>R3:</b> The RCSDT believes that the steps in R2 and R3 are separate and distinct actions that require separate requirements. Otherwise, we would have compound requirements. We concur with your suggested edit to R3.</p> <p><b>M1;</b> We did not make the revision to R1 and therefore M1 is sufficient as written.</p> <p><b>M3:</b> We have revised M3 as suggested and to conform to revised R3.</p>		

6 Do you agree with the use of the defined term “Reliability Directive” in revisions to the Requirements in IRO-001-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

Summary Consideration: The comments regarding question six ranged from small entities being excluded to if regulatory or statutory requirements covers NERC standards. The SDT addressed these by noting registration is not in the SDT scope and NERC’s general council should be contacted for regulatory issues.

A few commenter’s expressed concern with the VSL for R2 and one suggested the words “per Requirement 2,” should be added. The SDT believes the phrase “per Requirement 2” is not necessary as a VSL is only applied AFTER a compliance violation is determined.

Value added comments such as a concern of the use of the word “threat” as it can be defined as cyber-related and suggested replacing “Operating Personnel” with “System Operator” were also made. The SDT concurred and removed the word “threat” and replaced it with “condition” and also made the revision to System Operator.

There were numerous comments regarding the definition of Reliability Directive with multiple wording suggestions. While slightly out of scope for question six, the SDT expected and viewed these as attempting to reach middle ground.

Some commenter’s expressed concern over clarify that the RC has three separate actions. The RC can act, direct others to act, or issue Reliability Directives. The SDT modified R1 to read: “ Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.”

Note: Based on discussions with FERC staff, the SDT agreed to make the following changes:

IRO-001-2 Requirements R4, R5 and associated Measures and VSLs are moved to IRO-005-4

IRO-001-2 Requirements R6, R7 and associated Measures and VSLs are moved to IRO-002-2

Organization	Yes or No	Question 6 Comment
Calpine Corporation		

Organization	Yes or No	Question 6 Comment
Public Service Enterprise Group Companies		
Operating Personnel Communications Protocols SDT		No Comment
FirstEnergy	No	Although we agree that a clear definition of Reliability Directive should be included in IRO-001-2, the definition should be revised per our comments in Question #8.
<b>Response: The RCSDT thanks you for your comment. Please see response to question 8.</b>		
North Carolina Municipal Power Agency #1	No	For IRO-001-2, the VSL for R2 should retain the words "per Requirement 2," because the requirement itself provides for exceptions to when it is permissible for a directive not to be followed. Requirement 3 then addresses the required action an entity must take in a case where these exceptions apply. Without these words, it appears that a VSL of "Severe" may be assigned if a directive isn't followed under any circumstances.
<b>Response: The RCSDT thanks you for your comment. The phrase “per Requirement 2” is not necessary as a VSL is only applied AFTER a compliance violation is determined. The requirement provides the exceptions and compliance will be judged based on this.</b>		
NERC	No	<p>In principle, NERC staff disagrees with the necessity of defining a term “Reliability Directive.” However, the principle involved in the standard is valid. The standard needs to ensure that if the Reliability Coordinator directs an entity to take action that results in an adverse reliability impact, that entity has a chance to raise valid objection to that action.</p> <p>Additional clarification is needed to determine if regulatory or statutory requirements covers NERC standards. One possible solution would be to modify R3 from “its inability to perform” to “its inability or concern to perform.”</p> <p>Furthermore, in R4 and R5 the RC is expected to identify “threats” and notify all impacted parties. We have concerns that “threat” can be defined as cyber-related. Was the standard intended to cover all anticipated threats, or just transmission/operating issues?</p> <p>R6 Since Operating Personnel is not a NERC defined term, we suggest replacing “Operating Personnel” with “System Operator.”</p>
<b>Response: The RCSDT thanks you for your comment.</b>		

Organization	Yes or No	Question 6 Comment
<p><b>“Concern”:</b> We believe that your concern is covered by the “unless such actions would violate safety, equipment, or regulatory or statutory requirements” statement in R2.</p> <p><b>Regulatory:</b> The RCSDT suggests that NERC staff seek input from NERC’s General Counsel in regards to this issue.</p> <p><b>R4 and R5:</b> The word threat was not intended to be cyber related. The CIP standards cover cyber “threats”. To that end, we have removed the word “threat” and replaced it with “condition”. R4, R5 and associated Measures and VSLs are moved to IRO-005-4.</p> <p><b>R6:</b> We concur and have made this revision.</p>		
OC Standards Review Group	No	<p>In R1, we suggest adding “direct” in the sentence to read: “Each Reliability Coordinator shall act, “direct” or issue Reliability Directives....” During adverse reliability impact events, system operators should not be bound by a cumbersome three part communications regime that could prevent prompt responses to the event. The suggested change would allow for non reliability directives to be issued to correct adverse reliability impacts.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. The RCSDT agrees in principle with adding “direct” to the requirement. In addition, the requirements of COM-002 should be complied with, especially in such situations. We have revised R1 to state: Each Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. <b>To address comments received on R1, we have also revised the Purpose Statement to:</b> To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <p><b>Conforming revisions to M1 and the VSLs for R1 were also made.</b></p>		
Southern Company Services	No	<p>Including the requirement of issuing directives every time an action is required by an entity assumes that entities cannot work in a spirit of cooperation to maintain the reliability of the Bulk Electric System.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. <b>To address your concern, we have revised R1 to state:</b> “Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p><b>To address comments received on R1, we have also revised the Purpose Statement to:</b> To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p>		

Organization	Yes or No	Question 6 Comment
We Energies	No	<p>IRO-001-2 R1 opens the door for determining if the RC should have issued a Reliability Directive to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts which goes beyond the intention of Emergency. The RC should have any and all options to achieve the required actions, one of which is a Reliability Directive. Agreed if the RC issues a Reliability Directive it needs to be followed or notified why it can't be followed. In IRO-009 ...."the Reliability Coordinator shall have one or more Operating Processes, Procedures, or Plans that identify actions it shall take or actions it shall direct others to take (up to and including load shedding) to mitigate the magnitude and duration of" .... Recommend "Each Reliability Coordinator, in it's sole discretion, shall take action independently or by others or issue Reliability Directives for actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. "In addition the measures assume the RC only works through others, and others only act under Directive from the RC and do not allow for operational data to be used to show action was taken like SCADA logs, or system parameter records for any entity.</p> <p>The Data Retention is excessive, RC, BA, TOP are on a 3 yr audit cycle, others on a 6yr cycle this is way too long, recommend one full calendar year plus the current year.</p>
<p><b>Response: The RCSDT thanks you for your comment. To address your concern, we have revised R1 to state:</b> Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p><b>To address comments received on R1, we have also revised the Purpose Statement to:</b> To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <ul style="list-style-type: none"> <li>o <b>We have revised the data retention section to:</b> The Reliability Coordinator shall retain its evidence for 90 days for Requirements R1 and Measures M1.</li> <li>o The Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider, Transmission Service Provider, Purchasing-Selling Entity or Load Serving Entity shall retain its evidence for 90 days for Requirements R2 and R3, Measures M2 and M3.</li> </ul>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 6 Comment
American Electric Power	No	Please refer to our response to question #4.
Hydro-Québec TransEnergie (HQT)	No	Please see our proposed wording change under Q4.
Independent Electricity System Operator	No	Please see our proposed wording change under Q4.
IRC Standards Review Committee	No	Please see our proposed wording change under Q4.
Northeast Power Coordinating Council	No	Please see our proposed wording change under Question 4.
<b>Response: The RCSDT thanks you for your comment. Please see response to Question 4.</b>		
E.ON U.S.	No	See comments to question 4 and question 8.
<b>Response: The RCSDT thanks you for your comment. Please see response to Question 4 and Question 8.</b>		
Ameren	No	See response to #4.
Electric Market Policy	No	See response to Q4
<b>Response: The RCSDT thanks you for your comment. Please see response to Question 4.</b>		
PNGC Power (15 member utilities)	No	Small non 24/7 entities in WECC should be excluded from these requirements. Not doing so will create a financial burden for little discernable effect.
<b>Response: The RCSDT thanks you for your comment. It is beyond the scope of the RCSDT to determine registration or compliance issues.</b>		
Manitoba Hydro	No	The use of this definition in this requirement appears appropriate at this time, but the definition of Reliability Directive issue remain the same as identified on Question 4 of this document.

Organization	Yes or No	Question 6 Comment
<b>Response: The RCSDT thanks you for your comment. Please see response to question 4.</b>		
Central Lincoln	No	These requirements should be waived in the WECC region, where the RC has stated they will not be interacting with most of the registered entities. <a href="http://www.bpa.gov/corporate/business/reliability/Docs/2007/PNSC_RE_Data_Letter_2_070723.pdf">http://www.bpa.gov/corporate/business/reliability/Docs/2007/PNSC_RE_Data_Letter_2_070723.pdf</a>
<b>Response: The RCSDT thanks you for your comment. It is beyond the scope of the RCSDT to determine registration or compliance issues.</b>		
US Bureau of Reclamation	No	This change is problematic in that any automatic protective element operation that trips a BES element could be construed to be an Adverse Reliability Impact. The modification eliminated the phrase “that affects a widespread area of the Interconnection” which clarified the scope of “uncontrolled separation”. We would need the definition to be adjusted to delete “uncontrolled separation” as it is included in the definition of Cascading.
<b>Response: The RCSDT thanks you for your comment. We concur with your comment and have removed “uncontrolled separation” from the proposed definition revision.</b>		
ISO New England Inc	No	We believe that the Reliability Directive definition should be: “A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an actual or expected emergency and the RC, TOP or BA operator clearly identifies in the communication that this is a Reliability Directive.”
<b>Response: The RCSDT thanks you for your comment. The RCSDT believes that your suggested revision would impose a requirement within the definition.</b>		
Western Electricity Coordinating Council	No	We do not agree with the definition (see above question 4) but it does clear up when a directive is required.
<b>Response: The RCSDT thanks you for your comment. Please see response to question 4.</b>		
Midwest ISO Standards Collaborators	No	We largely agree with the use of the Reliability Directive term but have some suggested some refinements in the previous questions to the definition and requirements.
NERC Standards Review Subcommittee	No	We largely agree with the use of the Reliability Directive term but have some suggested some refinements in the previous questions to the definition and requirements.

Organization	Yes or No	Question 6 Comment
<p><b>Response: The RCSDT thanks you for your comment. Please see responses to questions 4 and 5.</b></p>		
<p>Duke Energy</p>	<p>No</p>	<p>We propose a revised definition of the term “Reliability Directive” in our Comment #4 above.                      Requirement R1 should be reworded to clarify that the RC has three separate actions. The RC can act, direct others to act, or issue Reliability Directives.                      Requirements R2 and R3 should be revised to include the fact that the listed entities must comply with RC directions as well as Reliability Directives, or inform the RC of their inability to comply.                      Measures and VSLs should also be revised accordingly.</p>
<p><b>Response: The RCSDT thanks you for your comment.</b></p> <p><b>Definition: Please see response to question 4 with respect to the definition.</b></p> <p><b>R1: To address your comment as well as the comments of other stakeholders, we have revised R1 to state:</b> Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts..</p> <p><b>We have also revised the Purpose Statement to:</b> To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <p><b>Conforming revisions to M1 and the VSLs for R1 were also made.</b></p> <p><b>R2 and R3: The RCSDT believes that revised R2 and R3 now satisfy your requested revision.</b></p>

Pepco Holdings, Inc	Yes	Requirement R1 should recognize the RC's option to "direct others to act"
<p><b>Response: The RCSDT thanks you for your comment. R1: To address your comment as well as the comments of other stakeholders, we have revised R1 to state:</b> Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p><b>We have also revised the Purpose Statement to:</b> To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <p><b>Conforming revisions to M1 and the VSLs for R1 were also made.</b></p>		
ERCOT ISO	No	As an initial matter, ERCOT ISO disagrees with the definition of Reliability Directive - See response to Question 4.

Organization	Yes or No	Question 6 Comment
		<p>With respect to the use of Reliability Directive in IRO-001-2, ERCOT ISO does not necessarily take issue with using the term in this context. However, by doing so, the Drafting Team should consider whether doing so effectively defines Emergency in terms of the specific conditions that define Adverse Reliability Impact (i.e. instability, uncontrolled separation or cascading), because Reliability Directives, by definition, are only issued during emergencies, and pursuant to R1 of IRO-001-2, the relevant entities issue a Reliability Directive for instances that result in Adverse Reliability Impacts. Accordingly, use of Reliability Directive in this Standard may effectively revise the definition of Emergency (although it is arguable that the relevant specific conditions are clearly Emergency conditions), and ERCOT ISO questions whether this is appropriate. It may be advisable to not use the term here or to revise the definition to explicitly include these conditions.</p> <p>In addition, ERCOT ISO recommends the following non-substantive revisions to R1, R2 and R3.</p> <p style="text-align: center;"><b><u>R1</u></b></p> <p style="text-align: center;"><b>SDT PROPOSED LANGUAGE</b></p> <p><b>R1.</b> Each Reliability Coordinator shall act or issue Reliability Directives for actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p style="text-align: center;"><b>ERCOT PROPOSED LANGUAGE</b></p> <p><b>R1.</b> Each Reliability Coordinator shall act to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts. RC actions pursuant to this requirement may include the issuance of Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, Distribution Providers and Purchasing-Selling Entities within its Reliability Coordinator Area. <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p style="text-align: center;"><b><u>R2</u></b></p> <p style="text-align: center;"><b>SDT PROPOSED LANGUAGE</b></p> <p><b>R2.</b> Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with its Reliability Coordinator's Reliability Directives unless such actions would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p>

Organization	Yes or No	Question 6 Comment
		<p style="text-align: center;"><b>ERCOT PROPOSED LANGUAGE</b></p> <p><b>R2.</b> Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall comply with Reliability Directives issued pursuant to R1 unless such actions would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p style="text-align: center;"><b><u>R3</u></b></p> <p style="text-align: center;"><b>SDT PROPOSED LANGUAGE</b></p> <p><b>R3.</b> Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator upon recognition of its inability to perform an issued Reliability Directive. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p> <p style="text-align: center;"><b>ERCOT PROPOSED LANGUAGE</b></p> <p><b>R3.</b> Each Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall inform its Reliability Coordinator if it cannot perform a Reliability Directive because it would violate safety, equipment, or regulatory or statutory requirements. <i>[Violation Risk Factor: High] [Time Horizon: Real-time Operations and Same Day Operations]</i></p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses to your comments on questions 4 and 5.</p> <p><b>Definitions:</b> An Emergency is a system condition or event. Adverse Reliability Impact is the result of an Emergency or some other condition or event.</p> <p><b>To address your comment as well as the comments of other stakeholders, we have revised R1 to state:</b> Each Reliability Coordinator shall take actions or direct actions, which could include issuing Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p><b>We have also revised the Purpose Statement to:</b> To establish the capability and authority of Reliability Coordinators to direct other entities to prevent Adverse Reliability Impacts to the Bulk Electric System</p> <p><b>Conforming revisions to M1 and the VSLs for R1 were also made.</b></p> <p><b>R1, R2, R3:</b> The RCSDT thanks you for your suggested revisions to R1, R2 and R3. Revised wording best reflects stakeholder consensus. The RCSDT developed wording of the requirements provides clear direction for actions of applicable entities and to provide clarity regarding compliance.</p>		

Do you agree with the revisions to the Requirements in IRO-014-2 as shown in the posted Standard and Implementation Plan? If not, please explain in the comment area.

**Summary Consideration:** Several commenters made suggestions regarding R2. The original requirement was designed to accomplish in one requirement what is proposed by the commenters as three procedural requirements. R2 is worded to focus on defining what a “compliant plan” is. In the current requirement a “proposed plan” is not the same as a “compliant plan”.

The SDT viewed what the commenters are suggesting as follows:

- The initiating RC would submit its “proposed plan” to the other RCs
- The receiving RCs would provide the initiating RC with their responses indicating whether or not they agree with the proposed roles/actions offered by the initiating RC
- If one or more RCs do not agree with the roles/actions, then the initiating RC would be required to offer an alternative proposal (and go back to the first bullet)
- When all RCs acknowledge that the proposed roles/actions in the revised “proposed plan” are acceptable, then and only then would the “proposed plan” become a “compliant plan”

A closer reading of the current R2 would show the current R2 accomplishes the exact same result but does so without interjecting the need for documenting the intervening processes. The SDT does not see the need to document why each proposal was or was not accepted; nor does the SDT see the need to document the negotiations that are involved in getting to “an agreed to plan”. For example the comments’ subrequirement to show the RC submitted its plan would require a paper trail for the request; followed by a paper trail for the responses, followed by more paperwork if the RCs are not in agreement. In the end, the only action that matters (in both the SDT version and in the commenters alternative version) is a plan that works, and a plan that if others are involved must have their concurrence that those others will participate.

R2 does not impose a requirement to get agreements; what R2 does is to require that a “compliant plan” be developed. A proposed plan does not solve problems. That proposed plan is NOT compliant with R2 if it only assumes that other RC will effect the actions in the proposal; neither is it compliant if the proposed actions are not acceptable to the other RCs who are required to act. To be compliant the initiating RC must either have the concurrence (i.e. agreement) of the other RCs for their respective part(s) in the proposed plans OR the plan must not include those RCs.

R2 says to be compliant the other RC must agree with the “proposed plan” before that “proposed plan” is acceptable as a “compliant plan”. Having a plan that requires someone else to do an action, but that other entity will not effect that action, will not resolve the problem at hand. Further having documentation that someone refuses to participate in the proposed plan does nothing to solve the problem at hand.

Organization	Yes or No	Question 7 Comment
documentation that someone refuses to participate in the proposed plan does nothing to solve the problem at hand.		
Midwest ISO Standards Collaborators	No	<p>R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable. There is an extra “or” in the R8 clause: “unless such actions would violate safety, equipment, or regulatory or statutory requirements”.</p> <p>IRO-014-2 R2 VSLs differentiate violations based on whether the plans, processes, and procedures were distributed or agreed to. How can another RC agree to them if it has not received them? Because it is unlikely that an RC will make notifications without exchanging reliability information or vice versa for IRO-014-2 R3, we suggest a more appropriate delineation for the VSLs would be based on the number of other impacted RCs that were not informed. IRO-014-2 R4 VSLs should be defined based upon the number of conference calls the RC does not participate in. R4 requires each RC to participate in “agreed upon conference calls”. Because the statement “conference calls” is plural, VSLs need to be set based on the aggregate of calls not participated in. Failure to assign VSLs in this way is equivalent to setting the requirement to “agreed upon conference call” and causes the VSLs to be in violation guideline 3 that the Commission established in their June 2008 Order on VSLs. Guideline 3 states that the VSL must be consistent with the requirement and cannot “redefine or undermine the requirement”. Clearly, these VSLs do. R5’s Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSLs since Severe uses the word any. Based on the SDT’s response to our comment from the last time, we believe instead of any they mean “no impacted”. Unfortunately, “any impacted” could be one or two or higher. If it is one, it matches the Moderate VSL. The VSL for R8 needs to include the “unless such actions would violate safety, equipment, regulatory or statutory requirement” clause.</p> <p>In R1, should “Operating Procedures, Processes, or Plans” be “Operating Procedures, Operating Processes, or Operating Plans” to comport with the definitions in the NERC Glossary of Terms. We believe “Operating” is implied on “Processes” and “Plans” but believe it is more appropriate to make the meaning explicit with this modification since we are dealing with formal definitions.</p>

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 7 Comment
NERC Standards Review Subcommittee	No	<p>R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, it inappropriately places the burden on the same RC to obtain the agreement of impacted RCs. No RC can be forced to agree. Rather R2 should remove the bullet to require agreement from the impacted RC and a new requirement should be written to require the impacted RC to acknowledge the Operating Procedure, Process or Plan with agreement or disagreement. In the event of disagreement, a reliability or legal reason or failure to implement comparable actions should be given as the reason for not agreeing with the Operating Process, Procedure or Plan. This contributes to reliability by forcing the impacted RC to take action if the action is reasonable. There is an extra “or” in the R8 clause: “unless such actions would violate safety, equipment, or regulatory or statutory requirements”.</p> <p>IRO-014-2 R2 VSLs differentiate violations based on whether the plans, processes, and procedures were distributed or agreed to. How can another RC agree to them if it has not received them? Because it is unlikely that an RC will make notifications without exchanging reliability information or vice versa for IRO-014-2 R3, we suggest a more appropriate delineation for the VSLs would be based on the number of other impacted RCs that were not informed. IRO-014-2 R4 VSLs should be defined based upon the number of conference calls the RC does not participate in. R4 requires each RC to participate in “agreed upon conference calls”. Because the statement “conference calls” is plural, VSLs need to be set based on the aggregate of calls not participated in. Failure to assign VSLs in this way is equivalent to setting the requirement to “agreed upon conference call” and causes the VSLs to be in violation guideline 3 that the Commission established in their June 2008 Order on VSLs. Guideline 3 states that the VSL must be consistent with the requirement and cannot “redefine or undermine the requirement”. Clearly, these VSLs do. R5’s Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSLs since Severe uses the word any. Based on the SDT’s response to our comment from the last time, we believe instead of any they mean “no impacted”. Unfortunately, “any impacted” could be one or two or higher. If it is one, it matches the Moderate VSL. The VSL for R8 needs to include the “unless such actions would violate safety, equipment, regulatory or statutory requirement” clause.</p>
Independent Electricity System Operator	No	<p>R2 appropriately requires the RC experiencing the Adverse Reliability Impact to distribute its Operating Procedure, Process or Plan to other RCs required to take action. However, Subrequirements R2.1 places a burden to the initiating RC for actions over which it may not have any control, viz. agreeing to the procedures, process or plan by the receiving RCs that are required to take actions. We believe there should be requirements for: a. The initiating RC to seek agreements by the other RCs that are required to take actions; b. The receiving RCs to indicate agreement, or otherwise with a reason; and; c. The initiating RC to revise the procedures, process or plan. These requirements would place the needed responsibilities to the appropriate entities. If the SDT agrees with revising R2 as suggested, then other requirements that may be affected by this change may need to be revised accordingly. There is an extra “or” in the R8 clause: “unless such</p>

Organization	Yes or No	Question 7 Comment
		<p>actions would violate safety, equipment, or regulatory or statutory requirements”.</p> <p>IRO-014-2 R2 VSLs differentiate violations based on whether the plans, processes, and procedures were distributed or agreed to. If an intended RC never received the plans, processes and procedures, it would not be aware of the need to agree to them. Hence, if the plans, etc. were not distributed, then the initiating RC will be assigned a Moderate VSL but never any higher VSLs even if no agreements were received (since no other RCs had received the plans to begin with). We suggest the SDT to consider rearranging the VSLs and in accordance with any changes to R2 reflecting our suggested changes summarized under Q7. Because it is unlikely that an RC will make notifications without exchanging reliability information or vice versa for IRO-014-2 R3, we suggest a more appropriate delineation for the VSLs would be based on the number of other impacted RCs that were not informed.</p> <p>IRO-014-2 R4 VSLs should be defined based upon the number of conference calls the RC does not participate in. R4 requires each RC to participate in “agreed upon conference calls”. Because the statement “conference calls” is plural, VSLs need to be set based on the aggregate of calls not participated in. Further having documentation that someone refuses to participate in the proposed plan does nothing to solve the problem at hand.</p> <p>IRO-014 VSLs: R2: The VSLs are differentiated as you suggest.</p> <p>R3: The RCSDT does not believe that is the correct delineation of the requirement which requires notification of each impacted RC. What if there is only one and there was no notification?</p> <p>R4: The RCSDT contends that the requirement specifies participation in all agreed upon calls. If the RC misses an agreed upon call, it has failed to meet the requirement.</p> <p>R5: The RCSDT disagrees. If there is only one impacted RC and no notification is made, it should be a Severe violation.</p> <p>R8: The phrase does not need to be in the VSL. If a plan was not implemented due to safety reasons, then the requirement was not violated and the VSL would not be considered.</p> <p>R1: We have revised the requirement per your suggestion to R1, R2 and R3.</p>
Electric Market Policy	No	<p>Agree with most. However, the language proposed for use in IRO-014-2 @ R5 and R6 needs clarity. There needs to be a way to determine who is required to do what depending upon whether the party is a) Reliability Coordinator who has the identified Adverse Reliability Impact) An impacted affected Reliability Coordinator. Suggest revising so that these read similar to R7 and R8.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. The RCSDT does not understand your comment. We believe that the requirements are clear as written as to what each entity must do.</p>		

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 7 Comment
Western Area Power Administration	No	Comments: In R1 & R2, the first sentence is redundant. The phrase which was added “For conditions or activities that impact other RC Areas...” should be removed.
<b>Response: The RCSDT thanks you for your comment.</b> The SDT agrees and has made the suggested revision.		
OC Standards Review Group	No	In R1.6, we suggest adding “BES” before “conditions” such that the sentence reads: “Authority to act to prevent and mitigate “BES” conditions.....”
<p><b>Response: The RCSDT thanks you for your comment.</b> The SDT disagrees. Adverse Reliability Impact is defined as follows:</p> <p><i>The impact of an event that results in frequency-related instability; unplanned tripping of load or generation; or uncontrolled separation or cascading outages that affects a widespread area of the Interconnection.</i></p> <p>If a condition will cause interconnection “cascading, instability, ...” the RC should be mandated to act whether or not the initiating condition is part of the BES.</p>		
Florida Municipal Power Agency and Some Members	No	In requirements R7 and R8, the term mitigation plan is used. Since mitigation plan has another specific meaning (e.g., a mitigation plan for non-compliance with a standard), FMPA suggests using a different term with the same meaning, e.g., ameliorative plan, alleviation plan, abatement plan, to help avoid confusion.
<b>Response: The RCSDT thanks you for your comment.</b> The SDT disagrees. Lower case “mitigation” is a proper English word		
NERC	No	NERC staff believes that the original language in IRO-016-1 was clearer than the proposed requirements R5 through R8. Additionally, we believe that this standard is already covered in the certification process. We recommend that this standard, with the exception of R4, be retired and the certification process be revisited to ensure that IRO-016-1 R1 is covered. Furthermore, operating guidelines should be developed to address the content of R5 through R8.
<p><b>Response: The RCSDT thanks you for your comment.</b> The RCSDT is not clear how requirements to make notifications, develop and implement mitigations plans belong in the certification process. We are also unclear what constitutes an operating guideline. Based on this, we will retain the requirements in IRO-014 as supported through the stakeholder process. Requirements R5 through R8 were brought into IRO-014 from IRO-016 as you state. These requirements were revised to eliminate compound requirements. The RCSDT feels that requirements are clear as written and stakeholder comments indicate consensus has been achieved.</p>		
Duke Energy	No	R1.6 - We believe that the word “system” should be added before the word “conditions” to provide additional

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 7 Comment
		clarity.
<b>Response: The RCSDT thanks you for your comment. We agree and have made the suggested edit.</b>		
US Bureau of Reclamation	No	We would suggest that the language should indicate the plans need to address “neighboring RC areas” to limit the scope of the plans for "other RC areas" and not try to cover the whole NERC footprint.
<b>Response: The RCSDT thanks you for your comment. The requirements deal with those RC that are seen to have an impact on a problem. To the extent that one RC expects another RC to be part of a solution, the requirement allows the initiating RC to “propose” a plan of actions and to seek help. If the other RC disagrees with the proposal, the latter RC would not give agreement.</b>

<b>Response: The RCSDT thanks you for your comment.</b>		
ERCOT ISO	No	<p>ERCOT ISO would like to add clarification to the Purpose statement and the following requirements (1-4) to alleviate potential interpretation issues. The remaining requirements in IRO-014 are adequately addressed with respect to “within the Interconnection” if the Adverse Reliability Impact term is modified as identified above in response to Question All the recommendations tie together.</p> <p><b>Purpose:</b> To ensure that each Reliability Coordinator’s operations are coordinated such that they will not have an Adverse Reliability Impact on other Reliability Coordinator Areas “<b>within its Interconnection</b>” and to preserve the reliability benefits of interconnected operations.</p> <p><b>R1.</b> For conditions or activities that impact other Reliability Coordinator Areas “<b>within its Interconnection</b>”, each Reliability Coordinator shall have Operating Procedures, Processes, or Plans for activities that require notification, exchange of information or coordination of actions with impacted Reliability Coordinators to support Interconnection reliability. These Operating Procedures, Processes, or Plans shall collectively address the following:</p> <p><b>R2.</b> Each Reliability Coordinator’s Operating Procedure, Process, or Plan that requires one or more other Reliability Coordinators “<b>within its Interconnection</b>” to take action (e.g., make notifications, exchange information, or coordinate actions) shall be:</p> <p><b>R3.</b> For conditions or activities that impact other Reliability Coordinator Areas “<b>within its Interconnection</b>”, each Reliability Coordinator shall make notifications and exchange reliability-related information with impacted Reliability Coordinators using its predefined Operating Procedures, Processes, or Plans for conditions that may impact other Reliability Coordinator Areas or other means to accomplish the notifications and exchange of reliability-related information.</p> <p><b>R4.</b> Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly, and other communication forums with impacted Reliability Coordinators “<b>within its Interconnection</b>”.</p> <p>Additionally, ERCOT ISO recommends that the weekly minimum be eliminated and such meeting should be pursuant to an “agreed upon schedule” at the discretion of the Reliability Coordinators. The language notes “impacted” Reliability Coordinators. The “impacted” implies that it is relative to a discrete incident or time period, which is consistent with the purpose of the standard. Accordingly, it is unclear on the need for and</p>

Organization	Yes or No	Question 7 Comment
		<p>unbounded ongoing meeting obligation.</p> <p>ERCOT ISO also suggests changing the R4 VSL to allow lower VSL for missing an occasional meeting. The VSL can be elevated based on the number of missed calls or meetings. Severe would seem to be more appropriate if the entity refused to participate or calls were not initiated at all.</p> <p>Furthermore, with respect to R4, It is not clear what value this requirement adds generally. The requirement is related to “impacted” RCs. This implies that the meetings are relative to discrete incidents/time periods, which is consistent with the purpose of the standard. Accordingly, given the apparent temporary, incident specific nature of an “impacted” entity, it doesn’t make sense to impose an unbounded ongoing meeting obligation. Furthermore, the establishment of the general procedures governs the objective actions impacted RCs will take for all situations. If there is an incident where an RC is “impacted”, it will manage the situation by application of the established objective procedures – that is the intent of having those procedures in place under the standard. Accordingly, it is questionable whether the weekly meeting obligation is necessary or serves any purpose. At a minimum, the weekly meeting obligation should be eliminated and such meeting should be pursuant to an “agreed upon schedule” to give discretion to the RCs.</p> <p>Finally, with respect to R1 – 1.6, in order to provide certainty to the regulated community, ERCOT ISO does not support the change to the condition precedent for action under the requirement from actual to potential Adverse Reliability Impacts. Defining an obligation in terms of “potential” situations is vague and ambiguous. This should generally be avoided because it creates ambiguity and uncertainty for both the regulated entity and regulator.</p>
<p><b>Response: The RCSDT thanks you for your comment.</b></p> <p><b>R1-R3: The SDT disagrees. If an RC does not have any other impacted RCs, then no operating processes, procedures or plans would be necessary. This would mean the R1-R3 would not apply to that RC.</b></p> <p><b>R4 and VSL- The RCSDT has revised R4 to add the words “within the same Interconnection” to the end of R4. We have revised the VSL accordingly. The RCSDT contends that the requirement specifies participation in all agreed upon calls. If the RC misses an agreed upon call, it has failed to meet the requirement.</b></p> <p><b>R1.6 – This refers to studying various system conditions and developing operating processes, plans or procedures to address them. If an entity has run a study and determined that there is an impact on another RC, then a process/plan/procedure should be developed and agree to in order to address the issue.</b></p>		

7 Do you have any other comment, not expressed in questions above, for the RC SDT?

Summary Consideration: The RC SDT thanks all commenters for their review of these proposed revisions and has incorporated many of the comments in the next revision of these requirements. In general, the RC SDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with the applicable parts of the directives in FERC Order 693. The work of the RC SDT along with the OCPD SDT and the RTO SDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by commenters. Consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RC SDT have developed for COM-002. This will further the efforts of the OCPD SDT in achieving stakeholder consensus for their proposed requirements in COM-003. The intent of this DT is to preserve a method for RCs, BAs and TOPs to make the determination of “what actions are required” and clearly communicate the importance to the receiver at a heightened method to normal day-to-day operational communications. The trigger of “Reliability Directive” by the issuer highlights these actions as needed to maintain BES reliability and shall be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement per the language of the requirement) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can support and enhance the development of the OCPD SDT. The DT has also attempted to eliminate redundancy and ambiguity while not creating any reliability gaps. Several comments were received on the RC’s ability to “act”. The RC must “act” (ie. do something, “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordination of cooperative actions or the issuance of “Reliability Directives”. “Act” does not imply solely the manipulation of BES elements.

Several comments on VSL language were received. We have attempted to clarify intent and have revised some in response to comments.

Several comments were received that reference a “performance based initiative” endorsed by the NERC BOT. The DT appreciates this new initiative, and to the extent possible, requirements proposed by this DT reflect that desire. [We have had no official instruction nor direction regarding this initiative in relation to this project.]

RC control of “analysis tools” is critical to maintaining the wide area view. Control by the RC over the tools is imperative and beyond administrative, since it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication are a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they

impact the BES. Failure of the RC to control outages of analysis tools was mentioned as a contributing factor in the 2003 blackout.

Overall, it is the intent of the DT to make the requirements flexible and adaptive to new technologies and methods as directed in order 693 and ensure that no matter how many forms of interpersonal communications are available. An entity can select a functional alternative to meet the intent of the requirement. The 60 minute timeframe appears reasonable based on industry comments. The term Interconnection is appropriate as it is.

Effective communications rely on an effective hierarchy. It is crucial for a host TOP or BA to have effective communications with GOs attached to their systems so that BES operations can be coordinated. Much like RCs must be able to communicate effectively with the systems within its footprint, effective communications allows BAs/TOPs to disseminate Interconnection information to DPs/GOPs that are impacted by system conditions outside of their operating visibility. The RCS DT has relied on the authority hierarchy (RC/ BA/ TOP / DP) to ensure accountability with the current performance type requirements, while not over-burdening the standards with prescriptive administrative-type requirements.

Western Electricity Coordinating Council	
CECD	<p>(1). The 60 minute timeframe should be lengthened if normal interpersonal communication paths are in service. Furthermore, the requirement to take corrective action or identify an alternative interpersonal communication method within 60 minutes should only apply if the registered entity only has a single alternative interpersonal communication method in place.</p> <p>(2). For COM-001 Requirement 4: The use of the term "Interconnection" seems inappropriate when describing communications between the DP/GOP and its BA/TOP and should be deleted. The NERC glossary of terms defines this as any one of the three major electric system networks in North America: Eastern, Western, and ERCOT. The requirement to be able to exchange operating information should be subject to the limitation as requested by the BA or TOP.</p>
<p><b>Response: The RCSDT thanks you for your comment. 1) It is the intent of the DT to make the requirement flexible and adaptive to new technologies and methods as directed in order 693 and ensure that no matter how many forms of interpersonal communications are available. An entity can select a functional alternative to meet the intent of the requirement. The timeframe has been revised to 2 hours. 2) We concur and have removed "Interconnection" from the requirement.</b></p>	
Hydro-Québec TransEnergie (HQT)	<p>(i) For IRO-001-2 R1, "act" should be removed. The RC can't act but can only issue Reliability Directives per the functional model.</p> <p>(ii) The NERC BOT recently approved pursuing the Results/Performance Based standards development activity. Based on this recent decision, the BOT has signaled their intent to remove administrative types of requirements from all standards. The IRO-001-2 R6 for the RC to have the authority to veto outages of their analysis tools and the COM-001-2 R3 requirement to use the English language are clearly not results or performance based, but rather administrative. If an operator used non-English, where it has not been agreed to or subject to law, to issue a Reliability Directive they will not be able to satisfy three-part communications in COM-002-3 in addition to many other standards and requirements they could not comply with. Even if an RC has veto authority over analysis tools, failure to exercise it would render the authority meaningless. Furthermore, the RC would not be able to meet other requirements and standards such as operating within IROL because they would not be able to assess the system appropriately.</p>
<p><b>Response: The RCSDT thanks you for your comments.</b></p> <p><b>a. The RC must "act" (ie. do something "to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts". This may include analysis, coordinate cooperative actions or issue "Reliability Directives".</b></p>	

Organization	Question 8 Comment
	<p>b. R6 is beyond administrative; it is intended to prevent planned reliability tool outages with the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication is a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES.</p>
<p>Midwest ISO Standards Collaborators</p>	<p>1) For IRO-001-2 R1, “act” should be removed. The RC can’t act but can only issue Reliability Directives per the functional model.</p> <p>2) IRO-001-2 R4 and R5 Severe VSLs need to have “any or” removed. The VSL should only apply for three or more and “any or” conflicts with this.COM-001-2 R2 Severe VSL conflicts with other VSLs. Specifically, the use of the word “any” in the Severe VSL is problematic. Notifying one entity at 65 minutes fits both the Lower VSL and Severe VSL as well. We suggest deleting the first portion of the Severe VSL that reads, “The responsible entity failed to notify any impacted entities of the failure of its normal Interpersonal Communications capabilities within 60 minutes.”</p> <p>3) The NERC BOT recently approved the pursuing the Results/Performance Based standards development activity. Based on this recent decision, we believe the BOT has signaled their intent to remove administrative types of requirements from all standards. The IRO-001-2 R6 for the RC to have the authority to veto outages of their analysis tools and the COM-001-2 R3 requirement to use the English language are clearly not result or performance based but rather administrative. If an operator used Portuguese to issue a Reliability Directive they will not be able to satisfy three-part communications in COM-002-3 in addition to many other standards and requirements they could not comply with. Even if an RC has veto authority over analysis tools, failure to exercise it would render the authority meaningless. Furthermore, the RC would not be able to meet a host of other requirements and standards such as operating within IROL because they would not be able to assess the system appropriately.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p> <p>1) The RC must “act” (ie. do something “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. Organization	Question 8 Comment
	<p>(iii) COM-001-2 R2 Severe VSL conflicts with other VSLs. Specifically, the condition of failing to notify any impacted entities within 60 minutes means that no entities received a notification within 60 minutes. But how about they all received this in 65 minutes? Would this be the same condition as the Low VSL? And if they all received this in 75 minutes, the condition would be the same as the Moderate VSL. We suggest the SDT to review and revise these VSLs to eliminate the duplication/ambiguity.</p>
<p><b>Response: The RCSDT thanks you for your comments.</b></p> <ul style="list-style-type: none"> <li>I) The RC must “act” (ie. do something “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordinate cooperative actions or issue “Reliability Directives”.</li> <li>II) R6 is beyond administrative; it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity. Effective communication is a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES.</li> <li>III) The DT did not consider R1 and R2 to be parallel requirements, and consequently did not attempt to force parallelism between the VSLs for R1 and R2. The only failure that is severe in this context is the failure to test the Alternative Interpersonal Communications capability on at least a quarterly basis.</li> </ul>	
<p>IRC Standards Review Committee</p>	<p>(i) IRO-001-2 R4 and R5 Severe VSLs need to have “any or” removed. The VSL should only apply for three or more and “any or” conflicts with this.</p> <p>(ii) For IRO-001-2 R1, “act” should be removed. The RC can’t act but can only issue Reliability Directives per the functional model.</p> <p>(iii) COM-001-2 R2 Severe VSL conflicts with other VSLs. Specifically, the condition of failing to notify any impacted entities within 60 minutes means that no entities received a notification within 60 minutes. Organization	Question 8 Comment
	<p>be able to meet a host of other requirements and standards such as operating within IROL because they would not be able to assess the system appropriately.</p> <p>(v) The VSLs for COM-002-3 R3 appear to have some redundancy. The Severe VSL and the second condition in the High VSL appear to be similar or the same.</p> <p>(vi) Measurement of compliance to COM-002-3 R1 could be challenging. As the VSL is written, it would appear the compliance auditor could judge if a Reliability Directive should have been issued. The VSL language that is problematic is “The responsible entity that required actions to be executed”. Please remove: “required actions to be executed as...”. Who determines that actions were required? One could argue that failure to identify a communication as a Reliability Directive means that actions weren’t required but it is doubtful the compliance authorities would take this approach. Thus, there would appear to be great judgment left to the compliance auditor in determining if a Reliability Directive should have been issued.</p> <p>(vii) IRO-014-2 R2 VSLs differentiate violations based on whether the plans, processes, and procedures were distributed or agreed to. If an intended RC never received the plans, processes and procedures, it would be aware of the need to agree to them. Hence, if the plans, etc. were not distributed, then the initiating RC will be assigned a Moderate VSL but never any higher VSLs even if no agreements were received (since no other RCs had received the plans to begin with). We suggest the SDT to consider rearranging the VSLs and in accordance with any changes to R2 reflecting our suggested changes summarized under Q7.</p> <p>(viii) Because it is unlikely that an RC will make notifications without exchanging reliability information or vice versa for IRO-014-2 R3, we suggest a more appropriate delineation for the VSLs would be based on the number of other impacted RCs that were not informed.</p> <p>(ix) IRO-014-2 R4 VSLs should be defined based upon the number of conference calls the RC does not participate in. R4 requires each RC to participate in “agreed upon conference calls”. Because the statement “conference calls” is plural, VSLs need to be set based on the aggregate of calls not participated in. Failure to assign VSLs in this way is equivalent to setting the requirement to “agreed upon conference call” and causes the VSLs to be in violation guideline 3 that the Commission established in their June 2008 Order on VSLs. Guideline 3 states that the VSL must be consistent with the requirement and cannot “redefine or undermine the requirement”. Clearly, these VSLs do.</p> <p>(x) IRO-014-2 R5’s Severe VSL is redundant with the Moderate VSL. Failure to notify one RC meets both VSLs since Severe uses the word any. Based on the SDT’s response to our comment from the last time, we believe instead of any they mean “no impacted”. Unfortunately, “any impacted” could be one or two or higher. If it is one, it matches the Moderate VSL.</p> <p>(xi) The VSL for IRO-014-2 R8 needs to include the “unless such actions would violate safety, equipment, regulatory or statutory requirement” clause.</p>

Organization	Question 8 Comment
	<p><b>Response:</b> The RCS DT thanks you for your comments.</p> <p>I) The VSL language is intended to accommodate scenarios where only one entity is impacted or several entities are impacted. “The Reliability Coordinator failed to notify any or more than three impacted Transmission Operators, Balancing Authorities...” and provide the same measurability level.</p> <p>II) The RC must “act” (ie. do something “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordinate cooperative actions or issue “Reliability Directives”.</p> <p>III) The DT does not agree. The Severe VSL has “any impacted entities”, meaning that no entity was notified within 60 minutes. This is intentional. The Lower, Moderate and High VSLs address individual entities that may not have met the standard of 60 minutes.</p> <p>IV) R6 is beyond administrative, it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication are a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES.</p> <p>V) The VSLs were set to be flexible in measuring cases where an 1) acknowledgement is not made at all to a correctly repeated directive and 2) an acknowledgement is not made at all AND a directive repeated incorrectly was not corrected.</p> <p>VI) The intent of the DT is to allow the issuing entity to make the determination of “what actions are required” to clearly communicate the importance to the receiver. The word “required actions to be executed” are integral to the requirement and cannot be removed to meet the intent. In other words, the trigger of “Reliability Directive” by the issuer highlights these actions as needed to maintain BES reliability and should be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement etc ) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and cannot pre-judge the behaviors of compliance auditors.</p> <p>VII) The DT agrees and will make clarifying changes.</p> <p>VIII) The DT agrees and will make clarifying changes.</p> <p>IX) The DT feels this is a core RC responsibility and therefore treated this requirement as binary. RCs must be responsive to other RCs that need to discuss BES reliability. However, we agree to change “calls” to “call(s)” in R4, to read as follows:</p> <p><b>R4.</b> Each Reliability Coordinator shall participate in agreed upon conference calls, at least weekly (per Requirement 1, Part 1.7) with other Reliability Coordinators within the same Interconnection. [<i>Violation Risk Factor: Lower</i>][<i>Time Horizon: Real-time Operations</i>]</p> <p>X) The DT disagrees. “Failure to notify any” means that none were notified. If there is only a total of one impacted RC, then the VSL would be Severe.</p> <p>XI) If the action plan could not be implemented for such instances, then there would be no violation of the requirement and the VSL would not apply.</p>
OC Standards Review Group	“The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or

Organization	Question 8 Comment
	its officers.”
<b>Response: The RCSDT thanks you for your comments.</b>	
FirstEnergy	<p>1. We believe that this standard should be either handed to the OPCPSDT (Project 2007-02) or the OPCPSDT should hand over the COM-003-1 standard to this RCSDT (Project 2006-06); and then COM-002 and COM-003 should be merged. Per our comments in Draft 1 of COM-003-1 (OPCPSDT Project 2007-02) we believe that the Reliability Directive definition should be broadened to include communications associated with BES related information (similar to the proposed definition of Interoperability Communication from the OPCPSDT). The following are specifics: a. For better project coordination, since the plan of the OPCPSDT (2007-02) is to eventually incorporate the COM-002-3 requirements into the new COM-003-1 standard, we believe this should be done now by one SDT. b. The definition of Reliability Directive should be broadened to include any actions that affect the BES reliability. We suggest the following change to the term Reliability Directive: "A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where the recipient is directed to change the state or report the status of an Element or Facility of the Bulk Electric System." c. Per our suggestion to broaden the definition of Reliability Directive in "b" above, the proposed definition of Interoperability Communication proposed by the OPCPSDT can be eliminated. d. With respect to the proposed R2 and R3 of COM-002-3 and requirement R5 of COM-003-1 which all which essentially discuss three-part communication, could be combined and covered by COM-002-3. e. R1 of COM-003-1 that requires communication protocols procedures can be covered in COM-002-3.2.</p> <p>Implementation Plan - The proposed timeline for implementing these standards changes is the 1st day of the 1st quarter after applicable regulatory approvals. We believe that since there are numerous changes to and retirement of requirements, this will place a significant compliance burden on industry and warrants more time to adjust compliance evidence and tracking. Furthermore, standard COM-001-2 is adding the Distribution Provider and Generator Operator as applicable entities which will cause these entities to show compliance with a requirement they previously were not responsible for. Therefore, we believe that a minimum of two calendar quarters for implementing these changes is appropriate.</p>
<p><b>Response: The RC SDT thanks you for your comment. The RC SDT feels that the Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RC SDT along with the OPCP SDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment. Consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RC SDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003. The intent of the DT is to preserve a method for RCs, BAs and TOP to make the determination of “what actions are required” and clearly communicate the importance to the receiver above normal day-to-day operational communications. The trigger of “Reliability Directive” by the issuer highlights these actions as needed to maintain BES reliability and should be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement per the language of the requirement) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can support and enhance the development of the OPCP SDT.</b></p>	

Organization	Question 8 Comment
Ameren	<p>1.In COM-001 R2, this “impacted entities’ language is unworkable. Some entities might be impacted because they get information from the RC, i.e indirectly from the entity with the loss. Team should address direct relationships somehow.2.In COM-001,R4, does the team consider the need for this for the AIC?3.The team should note that there is no requirement to even have AIC. Thus R1 would only apply if you have one.</p>
<p><b>Response: The RCSDT thanks you for your comment. The DT feels that impacted adds clarity to the requirement by limiting the obligation appropriately. Industry consensus appears to support that “impacted” is a reasonable clarification.</b></p>	
NERC	<p>As stated in the response to Question 1, the scope of COM-001-2 is unclear as to whether it applies to both verbal and data communication. We believe that it should.</p>
<p><b>Response: The RCSDT thanks you for your comment. The RCSDT believes that data communication is covered under IRO-010, R3 which states: Each Balancing Authority, Generator Owner, Generator Operator, Interchange Authority, Load-serving Entity, Reliability Coordinator, Transmission Operator, and Transmission Owner shall provide data and information, as specified, to the Reliability Coordinator(s) with which it has a reliability relationship. (Violation Risk Factor: Medium) (Time Horizon: Operations Planning; Same-day Operations; Real-time Operations)</b></p>	
Central Lincoln	<p>COM-001 M3, M4, COM-002 M2, and IRO-001 M1, and M2 all require evidence of DPs and/or LSEs “which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation. ”While we appreciate the inclusion of “equivalent documentation”, we are unsure what might qualify and who determines what qualifies as equivalent. We still believe COM-001 should not apply to DPs and LSEs, since these entities do not own or operate BES assets. Please consider this stakeholder input as well. While CIP-001 M4 can show that documented communication proves capability for R4, an entity has no way of proving capability if such communications did not take place during the audit period. We are unsure if the SDT realizes that not all of the entities subject to these standards maintain 24/7 dispatch desks. Much effort will go into complying with standards dealing with afterhour’s directives that will never come, because the issuing entity will realize any action requested will not be timely enough and plan accordingly.</p>
<p><b>Response: The RCSDT thanks you for your comment. DP and LSE were included in this standard per FERC Order 693 Directive. “Equivalent” documentation is included to provide potential alternatives for entities to provide to prove compliance with the requirement. Compliance audit personnel will review all documentation to determine compliance with a requirement.</b></p>	
Exelon	<p>COM-001-2 R2. Please consider in place of “impacted entities”, substitute “all applicable entities”.</p>
<p><b>Response: The RCSDT thanks you for your comment. The proposed substitute language has the same net effect as the current language and</b></p>	

Organization	Question 8 Comment
<p>therefore no change was made.</p>	
<p>ITC Holdings</p>	<p>Comments: IRO-001-2 R4 has an errant comma after the first occurrence of the word “Impacts”. IRO-014-2 R8 should have the first occurrence of the word “or” removed. Also, a new R9 (and associated M9) should be added requiring the RC who cannot agree on the mitigation plan due to safety, equipment, regulatory, or statutory requirements to notify the RC experiencing the Adverse Reliability Impact of the reason for the inability to implement the mitigation plan.</p>
<p><b>Response: The RCSDT thanks you for your comment. The comma in IRO-001-2 R4 has been removed.</b></p> <p><b>The first “or” in IRO-014-2 R8 has been removed.</b></p> <p><b>The suggested R9/M9 are unnecessary. Any RC that claims that a mitigation plan would violate safety, equipment, regulatory or statutory requirements would have to document that as part of complying with R8.</b></p>	
<p>Northeast Utilities</p>	<p>For IRO-001-2, the VSL language for R1, R4, and R5 is not clear. Specifically, for the R1 VSL the text appears to be reversed between High and Severe; and for R4 and R5, please clarify what is meant by “any or more than three”.</p>
<p><b>Response: The RCSDT thanks you for your comment. The High VSL and Severe VSL language is not reversed. The failure to act to mitigate existing Adverse Reliability Impacts is more negatively-impactful to BES reliability than the failure to prevent future Adverse Reliability Impacts.</b></p> <p><b>“Any or more than three” means that if no TOPs or BAs were notified or, in the case of an RC having four or more TOPs and BAs in its area, more than 3 of them were not notified.</b></p>	
<p>Bonneville Power Administration</p>	<p>In most proposed NERC standards, it seems the tried and true method of writing a requirement is to list the entities required to implement the action, list the required action, and then list any exceptions to the required action. In proposed standard COM-001-2, Requirement R3, the SDT lists the exceptions before the rule. In proposed standard COM-001-2, Measure M1, when it is discussing quarterly testing, it uses the term, “alternative Interpersonal Communications.” The word “alternative” should be capitalized. (Please see our comment on question #2 regarding the overall use of the term ‘Alternative Interpersonal Communications.’) <b>we agree and made the change</b></p> <p>In proposed standard COM-001-2, Measure M1, after the word, “substitute,” the word “Alternative” should be added in order to use similar language in both Requirement R1 and in Measure M1. (Again, please see my comment on question #2 regarding the overall use of the term ‘Alternative Interpersonal Communications.’) <b>we agree and made the change</b></p> <p>In proposed standard COM-001-2, Measure M2, it uses the wording “normal communications capabilities.” If our comment on question #1 is acceptable in its entirety, and the SDT decides not to use the term, ‘Interpersonal Communication,’ then the wording of Measure M2 is also acceptable. However, if the SDT decides to continue with their use of that term, then this phrase should be replaced with “normal Interpersonal Communications capabilities” in order to use similar language in both</p>

Organization	Question 8 Comment
	<p>Requirement R2 and in Measure M2. <b>we agree and made the change</b></p> <p>In proposed standard COM-001-2, VSL for R2, the Lower VSL uses the word “failed” to describe notifying the impacted entities within the tight bounds of a time frame, in this case, “more than 60 minutes but less than or equal to 70 minutes”. According to the given wording, every entity that is fully compliant with this standard would have “failed” to notify the impacted entities within the narrow bounds of the Lower VSL’s time constraint! A similar comment could be made for the Moderate, High and Severe VSL descriptions also. The wording “failed to notify” needs to be taken out and replaced with “notified.” Related to this, in the Moderate VSL, the description of a responsible entity notifying at least one, but not all impacted entities within 60-minutes would tend to negate the Lower VSL. If the SDT were trying to force a responsible entity into making at least one phone call of notification to one of the impacted entities within 60-minutes, the Severe VSL’s description accomplishes this feat all by itself. However, if the SDT were insistent on all impacted entities being notified within 60-minutes or a Moderate VSL will result, then that action makes the Lower VSL rather useless. <b>VSLs are only applied when there is a violation. The time bounds are appropriate for a violation of the requirement</b></p> <p>In proposed standard COM-002-3, Measure M3, it uses the term “Directive” by itself. It seems appropriate for what is being discussed that the term “Reliability Directive” should have been used. <b>We added Reliability</b></p> <p>In proposed standard COM-002-3, VSL for R3, the High VSL describes the responsible entity failing to respond appropriately, either by acknowledging the recipient when they repeated the intent correctly or by failing to reissue when the recipient did not repeat the intent correctly. This would seem to take care of the options...either the recipient was correct or they were incorrect, but not both. However, the Severe VSL, by using the word “AND” connects the two thoughts and provides for the recipient to be both correct and incorrect at the same time. Therefore, the Severe VSL seems to contradict itself, while the spirit of the VSL seems to be handled quite nicely by the High VSL by itself. It is therefore suggested that the SDT consider replacing the Severe VSL with the High VSL. <b>The rcsdt believes that the VSLs are appropriate as written</b></p> <p>In proposed standard IRO-001-2, Measure M3, on the second to the last line, the measure repeats the wording “that it,” making it redundant. <b>We have made the edit</b></p> <p>In proposed standard IRO-001-2, Data Retention (Part D, Section 1.3), on the first bullet, the word “operator” (following “Generator”) should be capitalized. <b>We have made the edit</b></p> <p>In proposed standard IRO-001-2, High and Severe VSLs for Requirement R1, we don’t really see the utility of separating the parts of failing to prevent Adverse Reliability Impacts and failing to mitigate the magnitude or duration of such impacts. Maybe the SDT could give some examples, because we would be just as fine combining the two into one VSL and therefore simplifying the VSL part of the standard. <b>VSL drafting guidelines indicate that multiple VSLs should be written for a requirement when feasible. It is feasible for this requirement.</b></p> <p>In proposed standard IRO-001-2, Severe VSL for Requirement R2, the VSL should include wording to indicate that an</p>

Organization	Question 8 Comment
	<p>exception can be granted to the responsible entity failing to comply with the given Reliability Directive due to safety, equipment, or regulatory or statutory requirements. Otherwise, the responsible entity will be given a Severe VSL every time one of these exceptions comes up. <b>If an entity did not comply with a directive for a safety issue, then the entity did not violate the requirement. The VSL only applies when a requirement is violated.</b></p> <p>In proposed standard IRO-001-2, Severe VSL for Requirement R4, we are not entirely sure what the SDT was trying to say, but the spirit of the VSL would seem to be captured if the SDT removed the wording “any or” and left the VSL to say in part, “...failed to issue an alert to more than three...”In a related way, for the Severe VSL for Requirement R5, the spirit of the VSL would seem to be captured if the SDT removed the wording “any or” and left the VSL to say in part “...failed to notify more than three...” <b>The intent of the wording is to allow multiple VSLs for the requirement. The word “any” indicates that there were no notifications made when there were less than three notifications to be made.</b></p>
<p><b>Response: The RCSDT thanks you for your comment. See responses above.</b></p>	
<p>Florida Municipal Power Agency and Some Members</p>	<p>IRO-001-2, R5 refers to only transmission problems being mitigated and not to other types of issues that could result in a threat of an Adverse Reliability Impacts, such as a large supply / demand imbalance (capacity or energy Emergency). IRO-001-2, R6 FMPA does not quite understand the requirement, is the intent to allow Operating Personnel the authority to veto planned outages "in" its own analysis tools, rather than "to"?</p>
<p><b>Response: The RCSDT thanks you for your comment. We have removed the word “transmission” from the requirement.</b></p> <p><b>R5:</b> Each Reliability Coordinator that identifies an expected or actual threat with Adverse Reliability Impacts, within its Reliability Coordinator Area shall notify all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area when the problem has been mitigated. <i>[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>Regarding IRO-001-2, R6, the planned outages mentioned are actual outages of the analysis tools themselves, not planned outages of transmission elements. No changes made.</p>	
<p>PPL</p>	<p>No additional comments.</p>
<p>Operating Personnel Communications Protocols SDT</p>	<p>No Comment</p>

Consideration of Comments on Draft Standards for Reliability Coordination — Project 2006-06

Organization	Question 8 Comment
PacifiCorp	No comment.
American Electric Power	Nothing additional at this time.
PNGC Power (15 member utilities)	<p>PNGC (15 members) would like to associate itself with Steve Alexanderson's (Central Lincoln PUD) comments re 2006-06:"COM-001 M3, M4, COM-002 M2, and IRO-001 M1, and M2 all require evidence of DPs and/or LSEs "which may include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent documentation. "While we appreciate the inclusion of "equivalent documentation", we are unsure what might qualify and who determines what qualifies as equivalent. We still believe COM-001 should not apply to DPs and LSEs, since these entities do not own or operate BES assets. Please consider this stakeholder input as well. While CIP-001 M4 can show that documented communication proves capability for R4, an entity has no way of proving capability if such communications did not take place during the audit period. We are unsure if the SDT realizes that not all of the entities subject to these standards maintain 24/7 dispatch desks. Much effort will go into complying with standards dealing with afterhour's directives that will never come, because the issuing entity will realize any action requested will not be timely enough and plan accordingly."</p>
<p><b>Response: The RCSDT thanks you for your comment. The DT included DPs and LSEs per FERC Order 693.</b></p> <p><b>The DT believes your comment regarding "CIP-001 M4" is actually in reference to COM-001-2 M4". While the DT is concerned that any proposed requirements must be clear and reasonably simple for which to document compliance, in this instance, a simple test phone call at a regular interval would prove capability (assuming it were recorded.)</b></p>	
Manitoba Hydro	<p>R2 2.1 If these actions are required as real time action, "Agreed to" should be opened up to "Acknowledged by". "Agreed to" in this requirement would be acceptable when there is time for impacted RC to study the other RC plans to determine impact on their system. To further justify this suggestion, R3 says "make notifications . . . with impacted RC". This statement indicates no commitment to the notifications and therefore presumes "acknowledgement".R7. Move this requirement to R2 and label as R2.3. R2 is "Agreed to" and R7 is "Not Agreed to". R8 covers the action required when "Not agreed to"R8. The only suggested addition to this is "When an RC with the identified Adverse Reliability Impact has created and implemented a plan with other affected RC", there should be an R8.1 stating "No RC shall place a burden on other RC's" and or/and an R8.2 stating, that "Reliability will override economics". The addition of these two sub requirements would also enhance R7 by removing all other reasoning that an impacted RC may dwell on to "not agree to".</p>
<p><b>Response: The RCSDT thanks you for your comment. We assume that this comment is in reference to IRO-014-2. The RCSDT does not agree with your proposed revision. The intent of the requirements is to have the parties agree to the course of action required to maintain reliability.</b></p>	
Calpine Corporation	Regarding COM-001-2 R4. Many PURPA Qualifying Facilities and tolled Facilities communicate only with a scheduling

Organization	Question 8 Comment
	<p>coordinator or similar entity, not necessarily directly with the Transmission Operator and/or Host Balancing Authority. The standard should be rewritten to clarify that direct communications between these Generator Operators and their Transmission Operator and/or Host Balancing Authority is either not required or that communications through their established paths of communication meets the requirement.</p>
<p><b>Response: The RCSDT thanks you for your comments. Effective communications rely on an effective hierarchy. It is crucial for a host TOP or BA to have effective communications with GOs attached to their systems so that BES operations can be coordinated, much like RCs must be able to communicate effectively with the system within its footprint. PURPA qualifying facilities can impact BES reliability, and, as such, are included here.</b></p>	
<p>Duke Energy</p>	<p>Requirement R6 of IRO-001-2 contains the capitalized term “Operating Personnel”. This is not a NERC-defined term and should not be capitalized. As a general comment on new and revised NERC-defined terms, we believe that when such terms are introduced in a project with multiple standards, the terms should be included in the “Definitions of Terms Used in Standard” section of each standard. For example, in this project the term “Adverse Reliability Impact” is revised in IRO-001-2, but while it is also used in IRO-014-2, it no longer appears in the “Definitions of Terms Used in Standard” section of IRO-014-2.</p>
<p><b>Response: The RCSDT thanks you for your comment and has changed “Operating Personnel” to “System Operator”.</b></p>	
<p>Southwest Power Pool</p>	<p>SPP has also worked collaboratively with the IRC SRC on the comments submitted by that group on this standard and we fully support those. However, SPP found additional concerns at the last minute which could not be included in the SRC set due to the submittal deadline and has chosen to submit these separately. There are 10 other standards where the word “Directive” is used. Will the term Reliability Directive replace them, or will we get a different definition for Directive, or will both terms be the same?</p>
<p><b>The RC SDT believes that “directive” is lowercase in the other instances in NERC standards. The RTO SDT, OPCP SDT and RC SDT have attempted to move toward “Reliability Directive” in concert so as to remove the remaining ambiguity from NERC standards.</b></p> <p><b>The intent of the DT is to preserve a method for RCs, BAs and TOP to make the determination of “what actions are required” and clearly communicate the importance to the receiver above normal day-to-day operational communications. The trigger of “Reliability Directive” by the issuer highlights these actions as needed to maintain BES reliability and should be carried out as directed (unless such actions would violate safety, equipment, regulatory or statutory requirement per the language of the requirement) and all parties to the conversation need to be very cognizant of the system conditions that are requiring actions. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can support and enhance the development of the OPCP SDT and subsequent expansion of the term “Reliability Directive”.</b></p>	
<p>E.ON U.S.</p>	<p>The definition of Reliability Directive should be incorporated into COM-003-1 with an associated single requirement that requires the use of Three-part Communication during the communication of a Reliability Directive.</p>

Organization	Question 8 Comment
<p><b>Response: The RCSDT thanks you for your comment. The DT has attempted to craft clear and specific language that support BES reliability and hopes that this work can support and enhance the development of the OPCSDT and subsequent expansion of the term “Reliability Directive”.COM-003 is outside the scope of the RCSDT project.</b></p>	
Public Service Enterprise Group Companies	The PSEG Companies are generally in agreement with the proposal.
<p><b>Response: The RCSDT thanks you for your comment.</b></p>	
Southern Company Services	These standards are more restrictive and prescriptive each time that a revision is issued for comments. It appears that the SDT does not believe that entities operating the Bulk Electric System cannot operate the system in a reliable manner using cooperation between parties.
<p><b>Response: The RCSDT thanks you for your comment. The DT feels that these standard requirements have been improved to benefit reliability and act as a “backstop” to prevent the breakdown of cooperation between parties and incent effective communications between operators of the BES.</b></p>	
NERC Standards Review Subcommittee	<ol style="list-style-type: none"> <li>1) This standard could be boiled down to one requirement and that is to maintain the continuous ability to communicate with other appropriate registered entities regardless of the need for a backup system.</li> <li>2) For IRO-001-2 R1, “act” should be removed. The RC can’t act but can only issue Reliability Directives per the functional model.</li> <li>3) IRO-001-2 R4 and R5 Severe VSLs need to have “any or” removed. The VSL should only apply for three or more and “any or” conflicts with this.COM-001-2 R2 Severe VSL conflicts with other VSLs. Specifically, the use of the word “any” in the Severe VSL is problematic. Notifying one entity at 65 minutes fits both the Lower VSL and Severe VSL as well. We suggest deleting the first portion of the Severe VSL that reads, “The responsible entity failed to notify any impacted entities of the failure of its normal Interpersonal Communications capabilities within 60 minutes.”</li> <li>4) COM-001-2 R2 needs to be coordinated with EOP-008-1 since EOP-008-1 R1.5 is requiring 2 hours. COM-001-2 R1 should be clarified to remove 60 minutes. Perhaps the specific time frame is too administrative and too dependent on the circumstances and doesn’t purport to directly impact reliability of the backup functionality. If a time frame is desired perhaps the registered entity which knows their backup functionality capabilities and their plan to actuate these capabilities could be the best entity to define a reasonable immediate time frame.</li> <li>5) The NERC BOT recently approved the pursuing the Results/Performance Based standards development activity. Based on this recent decision, we believe the BOT has signaled their intent to remove administrative types of requirements from all standards. The IRO-001-2 R6 for the RC to have the authority to veto outages of their analysis tools and the COM-001-2 R3 requirement to use the English language are clearly not result or performance based but</li> </ol>

Organization	Question 8 Comment
	<p>rather administrative. If an operator used Portuguese to issue a Reliability Directive they will not be able to satisfy three-part communications in COM-002-3 in addition to many other standards and requirements they could not comply with. Even if an RC has veto authority over analysis tools, failure to exercise it would render the authority meaningless. Furthermore, the RC would not be able to meet a host of other requirements and standards such as operating within IROL because they would not be able to assess the system appropriately.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p> <ol style="list-style-type: none"> <li>1. The DT has attempted to eliminate redundancy and ambiguity while not creating any reliability gaps. As written, the requirements are geared to incent folks to have effective communications in-place at all times while flexible enough to accommodate technology changes and process improvements by the industry.</li> <li>2. The RC must “act” (ie. do something “to prevent or mitigate the magnitude or duration of events that result in Adverse Reliability Impacts”. This may include analysis, coordinate cooperative actions or issue “Reliability Directives”. “Act” does not imply solely the manipulation of BES elements.</li> <li>3. The VSL language is intended to accommodate scenarios where only one entity is impacted or several entities are impacted. “The Reliability Coordinator failed to notify any or more than three impacted Transmission Operators, Balancing Authorities...” and provide the same measurability level.</li> <li>4. The RCSDT notes that EOP-008-1 is a proposed standard that has not been approved for enforcement. Also, EOP-008-1 deals with an entire control center where COM-001 deals with Interpersonal Communications capability with another entity. We will retain the original 60 minute timeframe.</li> <li>5. R6 is beyond administrative, it is intended to prevent planned reliability tool outages without the consent or knowledge of operating personnel. Although the DT agrees with the premise that many other requirements may be violated by ineffective communications, the intent of the requirement is to ensure there are effective communications methods in place for communicating BES activity across entities. Effective communication are a cornerstone of BES reliability and the intent of the requirement is to prevent the violation of other more significant performance type standard requirements due to ineffective communications before they impact the BES.</li> </ol>	
<p>Xcel Energy</p>	<p>We would like to restate our belief that the Standard should explicitly state the requirement for RCs, TOPs and BAs to have both primary and alternate means of communication. To “imply” a required element within a Standard is inconsistent with the NERC Reliability Standards Development Procedure, which states “All mandatory requirements of a reliability standard shall be within an element of the standard.” We would suggest a requirement language that simply states “Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall maintain a means for both primary Interpersonal Communication as well as Alternative Interpersonal Communication used to communication real-time operating information.”</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. The RCSDT has crafted the latest versions (as supported by stakeholder comments) to support reliable communications by better describing how industry communicates and providing flexibility for the adoption of alternative communication media. The RCSDT also tried to minimize over-prescriptive requirements that result in no value to reliability and impose an</p>	

Organization	Question 8 Comment
administrative burden.	
Electric Market Policy	<p>We would like to thank, AND highly commend this SDT for their effort. This is the type of effort that every SDT should strive for. Elimination of requirements that are either redundant or unnecessary, and therefore distract entities, is every bit as important to the standards process as is the creation of new standards where reliability gaps are found. The proliferation of new and revised standards is becoming a concern for many in this industry and many of us feel the effort going into the review and compliance documentation is reducing the focus on monitoring and otherwise insuring that reliable operations can be maintained.</p>
<p><b>Response: The RCSDT thanks you for your comments and agrees reducing redundancy and ambiguity in the standards improves industry focus and therefore reliability of the BES.</b></p>	
ERCOT ISO	<p>ERCOT ISO offers the following additional comments:</p> <p><b><u>COM-001-2</u></b></p> <ol style="list-style-type: none"> <li>1) The SDT should consider coordinating their efforts with the OPCP drafting team efforts (COM-003) to ensure consistency across the standards.</li> <li>2) For R4 – ERCOT ISO recommends considering adding Load-Serving Entity to the applicability due to their role in capacity and energy emergencies.</li> <li>3) With respect to the Measures, “alternative” needs to be capitalized in M1. Also, if the intent is to include items such as regular phones or data links that are daily use items then Measures should reflect this.</li> <li>4) ERCOT ISO suggests the following change to the terms Adverse Reliability Impact and Emergency. We think these simple changes will tie all the terms together.</li> </ol>
<p><b>Response: The RC SDT thanks you for your comments.</b></p> <p>1) The RC SDT feels that the concept of a Reliability Directive is an important tool for RC, BA and TOP to maintain reliability and that the revisions are consistent with parts of the directives in FERC Order 693. The work of the RC SDT along with the OPCP SDT, as currently recognized, will cover the original intent of COM-002 and still provide a “defense in depth strategy” as suggested by the NERC comment. Stakeholder requests and consensus appears to have been achieved with respect to the definition of Reliability Directive and the requirements that the RC SDT have developed for COM-002. This will further the efforts of the OCPC SDT in achieving stakeholder consensus for their proposed requirements in COM-003. 2) The RCSDT has relied on the authority hierarchy (RC/ BA/ TOP / DP) to ensure accountability with the current FM, while not over-prescribing requirements. The RC SDT notes that, per the Functional Model, a DP may “direct” an LSE to communicate <i>requests</i> for voluntary load curtailment and not reliability situations:</p> <p><b>Item 9 on page 47 of version 5 of the Functional Model: “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.”</b></p>	

Organization	Question 8 Comment
	<p>The RCSDT will forward this comment to the FMWG for their consideration in revising the language.</p> <p>3) &amp; 4) Please see previous responses to your comments assuming those are the referenced comments.</p>

### Standard Development Roadmap

*This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.*

#### Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.
10. Third posting of revised standards on January 4, 2010 with comment period closed on February 3, 2010.

#### Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the third draft. The team is posting for a 30 day pre-ballot review.

#### Future Development Plan:

Anticipated Actions	Anticipated Date
1. Respond to comments on third posting	March 2010
2. Post Standards for pre-ballot period.	January 2011
3. Standards posted for initial and recirculation ballots.	February 2011
4. Standards sent to BOT for approval.	March 2011
5. Standards filed with regulatory authorities.	June 2011

### **Definitions of Terms Used in Standard**

*This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved.*

*When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.*

**Interpersonal Communication:** Any medium that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communications used for day-to-day operation.

**A. Introduction**

- 1. Title:** Communications
- 2. Number:** COM-001-2
- 3. Purpose:** To ensure that operating entities have adequate Interpersonal Communication capabilities for the exchange of Interconnection and operating information necessary to maintain reliability.
- 4. Applicability:**
  - 4.1.** Transmission Operators.
  - 4.2.** Balancing Authorities.
  - 4.3.** Reliability Coordinators.
  - 4.4.** Distribution Providers.
  - 4.5.** Generator Operators..
- 5. Effective Date:** The first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

**B. Requirements**

- R1.** Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]:
  - R1.1.** All Transmission Operators, Balancing Authorities and Interchange Coordinators within its Reliability Coordinator Area
  - R1.2.** Adjacent Reliability Coordinators within the same Interconnection.
- R2.** Each Reliability Coordinator shall designate an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]:
  - R2.1.** All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area
  - R2.2.** Adjacent Reliability Coordinators within the same Interconnection.
- R3.** Each Transmission Operator shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]:
  - R3.1.** Its Reliability Coordinator
  - R3.2.** Each Balancing Authority within its Transmission Operator Area.
  - R3.3.** Each Distribution Provider within its Transmission Operator Area.
  - R3.4.** Each Generator Operator within its Transmission Operator Area.

- R4.** Each Transmission Operator shall designate an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*):
  - R4.1.** Its Reliability Coordinator
  - R4.2.** Each Balancing Authority within its Transmission Operator Area.
- R5.** Each Balancing Authority shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*):
  - R5.1.** Its Reliability Coordinator
  - R5.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area
  - R5.3.** Each Distribution Provider within its Balancing Authority Area
  - R5.4.** Each Generator Operator that operates Facilities within its Balancing Authority Area
  - R5.5.** Each Interchange Coordinator within its Balancing Authority area as well as adjacent Interchange Coordinators.
- R6.** Each Balancing Authority shall designate an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*):
  - R6.1.** Its Reliability Coordinator
  - R6.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area)
- R7.** Each Distribution Provider shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*):
  - R7.1.** Its Transmission Operator
  - R7.2.** Its Balancing Authority.
- R8.** Each Generator Operator shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*):
  - R8.1.** Its Balancing Authority
  - R8.2.** Its Transmission Operator.
- R9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall, on at least a monthly basis, test its Alternative Interpersonal Communications capability. If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations*]

**R10.** Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*

~~**R11.** Unless dictated by law or otherwise agreed to, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load Serving Entity, Purchasing Selling Entity and Distribution Provider shall use English as the language for communications between functional entities. *[Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]*~~

**Comment [SC1]:** This requirement is being vetted by the OPCPSDT in COM-003. This requirement and measure will be removed from COM-001.

### C. Measures

- M1.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated and timestamped voice recordings or dated and timestamped transcripts of voice recordings, electronic communications, or equivalent, that it has Interpersonal Communications capability with all Transmission Operators, Balancing Authorities and Interchange Coordinators within its Reliability Coordinator Area and with adjacent Reliability Coordinators within the same Interconnection. (R1.)
- M2.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated and timestamped voice recordings or dated and timestamped transcripts of voice recordings, electronic communications, or equivalent, that it designated an Alternative Interpersonal Communications capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with adjacent Reliability Coordinators within the same Interconnection. (R2.)
- M3.** Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated and timestamped voice recordings or dated and timestamped transcripts of voice recordings, electronic communications, or equivalent, that it has a Interpersonal Communications capability with its Reliability Coordinator, with each Balancing Authority and each Distribution Provider and each Generator Operator within its Transmission Operator Area. (R3.)
- M4.** Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it designated an Alternative Interpersonal Communications capability with its Reliability Coordinator, and with each Balancing Authority within its Transmission Operator Area. (R4.)

- M5.** Each Balancing Authority shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it has Interpersonal Communications capability with its Reliability Coordinator, each Transmission Operator that operates Facilities within its Balancing Authority Area, and each Generator Operator that operates Facilities within its Balancing Authority Area and each Distribution Provider within its Balancing Authority Area, and each Interchange Coordinator within its Balancing Authority area as well as adjacent Interchange Coordinators. (R5)
- M6.** Each Balancing Authority shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it designated an Alternative Interpersonal Communications capability with its Reliability Coordinator and each Transmission Operator that operates Facilities within its Balancing Authority Area. (R6)
- M7.** Each Distribution Provider shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it has Interpersonal Communications capability with its Transmission Operator and its Balancing Authority. (R7)
- M8.** Each Generator Operator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it has Interpersonal Communications capability with its Balancing Authority and its Transmission Operator. (R8)
- M9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it tested, at least on a monthly basis, its Alternative Interpersonal Communications capabilities designated in R2, R4 or R6. If the test was unsuccessful, the entity shall have and provide upon request evidence that it initiated action to repair or designated a replacement Alternative Interpersonal Communications within 2 hours. (R9.)
- M10.** Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, it notified impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. (R10.)

## D. Compliance

### 1. Compliance Monitoring Process

#### 1.1. Compliance Enforcement Authority

Regional Entity

#### 1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

#### 1.3. Data Retention

The Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall keep the most recent twelve months of historical data (evidence) for Requirements R1, R2, R3, R4, R5, R6, R9 and R10, Measures M1, M2, M3, M4, M5, M6, M9 and M10 as applicable..

Each Distribution Provider shall keep the most recent twelve months of historical data (evidence) for Requirements R7 and R10, Measures M7 and M10.

Each Generator Operator shall keep the most recent twelve months of historical data (evidence) for Requirements R8 and R10, Measures M8 and M10.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator is found non-compliant with a requirement, it shall keep information related to the noncompliance until the Compliance Enforcement Authority finds it compliant or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

#### 1.4. Additional Compliance Information

None

**2. Violation Severity Levels**

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	The Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 or 1.2.
R2	N/A	N/A	N/A	The Reliability Coordinator failed to designate Alternative Interpersonal Communications capability with one or more of the entities listed in Parts 2.1 or 2.2.
R3	N/A	N/A	N/A	The Transmission Operator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 3.1, 3.2, 3.3 or 3.4.
R4	N/A	N/A	N/A	The Transmission Operator failed to designate Alternative Interpersonal Communications capability with one or more of the entities listed in Parts 4.1 or 4.2.
R5	N/A	N/A	N/A	The Balancing Authority failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 5.1, 5.2, 5.3, 5.4 or 5.5.
R6	N/A	N/A	N/A	The Balancing Authority failed to designate Alternative Interpersonal Communications capability with one or more of the entities listed in Parts

Standard COM-001-2 — Communications

<b>Version</b>	<b>Date</b>	<b>Action</b>	<b>Change Tracking</b>
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
1	April 6, 2007	Requirement 1, added the word “for” between “facilities” and “the exchange.”	Errata
2	TBD	Revised per SAR for Project 2006-06, RC SDT	Revised

### Standard Development Roadmap

*This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.*

#### Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.

10. Third posting of revised standards on January 4, 2010 with comment period closed on February 3, 2010.

#### Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the ~~first~~third draft. The team is ~~seeking comments on the revised standards~~posting for a 30 day pre-ballot review.

#### Future Development Plan:

Anticipated Actions	Anticipated Date
1. Respond to comments on third posting	March 2010
2. Post Standards for pre-ballot period.	<del>April 2010</del> <u>January 2011</u>
3. Standards posted for initial and recirculation ballots.	<del>May 2010</del> <u>February 2011</u>
4. Standards sent to BOT for approval.	<del>July 2010</del> <u>March</u>

Standard COM-001-2 — Communications

	<u>2011</u>
5. Standards filed with regulatory authorities.	<del>September 2010</del> <u>June 2011</u>

### Definitions of Terms Used in Standard

*This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.*

**Interpersonal Communication:** Any ~~method~~medium~~the~~ that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any ~~method~~ Interpersonal Communication that is able to serve as a substitute for ~~and is redundant to normal Interpersonal Communication~~ and does not utilize the same infrastructure (medium) as ~~normal~~ Interpersonal Communications used for day-to-day operation.

**A. Introduction**

1. **Title:** Communications
2. **Number:** COM-001-2
3. **Purpose:** To ensure that operating entities have adequate Interpersonal Communication capabilities for the exchange of Interconnection and operating information necessary to maintain reliability.
4. **Applicability:**
  - 4.1. Transmission Operators.
  - 4.2. Balancing Authorities.
  - 4.3. Reliability Coordinators.
  - 4.4. Distribution Providers.
  - 4.5. Generator Operators.
  - ~~4.6. Transmission Service Providers.~~
  - ~~4.7. Load Serving Entities.~~
  - ~~4.8. Purchasing Selling Entities.~~
5. **Effective Date:** The first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

**B. Requirements**

- ~~**R1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. [Violation Risk Factor: High][Time Horizon: Real-time Operations]~~
- R1.** Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [Violation Risk Factor: High][Time Horizon: Real-time Operations]:
- R1.1.** All Transmission Operators, Balancing Authorities and Interchange Coordinators within its Reliability Coordinator Area
- R1.2.** Adjacent Reliability Coordinators within the same Interconnection.
- R2.** Each Reliability Coordinator shall designate an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [Violation Risk Factor: High][Time Horizon: Real-time Operations]:
- R2.1.** All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area

- R2.2.** Adjacent Reliability Coordinators within the same Interconnection.
- R3.** Each Transmission Operator ~~and~~ shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [Violation Risk Factor: High][Time Horizon: Real-time Operations]:
- R3.1.** Its Reliability Coordinator
- R3.2.** Each Balancing Authority within its Transmission Operator Area.
- R3.3.** Each Distribution Provider within its Transmission Operator Area.
- R3.4.** Each Generator Operator within its Transmission Operator Area.
- R4.** Each Transmission Operator shall designate an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [Violation Risk Factor: High][Time Horizon: Real-time Operations]:
- R4.1.** Its Reliability Coordinator
- R4.2.** Each Balancing Authority within its Transmission Operator Area.
- R5.** Each Balancing Authority shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [Violation Risk Factor: High][Time Horizon: Real-time Operations]:
- R5.1.** Its Reliability Coordinator
- R5.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area
- R5.3.** Each Distribution Provider within its Balancing Authority Area
- R5.4.** Each Generator Operator that operates Facilities within its Balancing Authority Area
- R5.5.** Each Interchange Coordinator within its Balancing Authority area as well as adjacent Interchange Coordinators.
- R6.** Each Balancing Authority shall designate an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [Violation Risk Factor: High][Time Horizon: Real-time Operations]:
- R6.1.** Its Reliability Coordinator
- R6.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area)
- R7.** Each Distribution Provider shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [Violation Risk Factor: High][Time Horizon: Real-time Operations]
- R7.1.** Its Transmission Operator
- R7.2.** Its Balancing Authority.

**R8.** Each Generator Operator shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information [Violation Risk Factor: High][Time Horizon: Real-time Operations]

**R8.1.** Its Balancing Authority

**R8.2.** Its Transmission Operator.

**R9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall, on at least a monthly basis, test its Alternative Interpersonal Communications capability. If the test is unsuccessful, the entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications within 2 hours. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]

**R2,R10.** Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall notify impacted entities within 60 minutes of the detection of a failure of its ~~normal~~ Interpersonal Communications capabilities that lasts 30 minutes or longer. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]

**R3,R11.** Unless dictated by law or otherwise agreed to, each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load Serving Entity, Purchasing-Selling Entity and Distribution Provider shall use English as the language for ~~all inter-entity Bulk Electric System (BES) reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES functional entities.~~ [Violation Risk Factor: Medium] [Time Horizon: Real-time Operations]

**R4.** Each Distribution Provider and Generator Operator shall have Interpersonal Communications capability with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. [Violation Risk Factor: High][Time Horizon: Real-time Operations]

**Comment [SC1]:** This requirement is being vetted by the OPCPSDT in COM-003. This requirement and measure will be removed from COM-001.

### C. Measures

**M1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to dated test records, operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that it identified and tested, on a quarterly basis, alternative Interpersonal Communications capabilities used for communicating real-time operating information. If the test was unsuccessful, the entity shall have and provide upon request evidence that it took action within 60 minutes to restore the identified alternative or identified a substitute Interpersonal Communications capability. (R1.)

**M1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated and timestamped voice recordings or dated and timestamped transcripts of voice recordings, electronic communications, or equivalent, that it has Interpersonal Communications capability with all Transmission Operators,

- Balancing Authorities and Interchange Coordinators within its Reliability Coordinator Area and with adjacent Reliability Coordinators within the same Interconnection. (R1.)
- M2.** Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated and timestamped voice recordings or dated and timestamped transcripts of voice recordings, electronic communications, or equivalent, that it designated an Alternative Interpersonal Communications capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with adjacent Reliability Coordinators within the same Interconnection. (R2.)
- M3.** Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated and timestamped voice recordings or dated and timestamped transcripts of voice recordings, electronic communications, or equivalent, that it has a Interpersonal Communications capability with its Reliability Coordinator, with each Balancing Authority and each Distribution Provider and each Generator Operator within its Transmission Operator Area. (R3.)
- M4.** Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it designated an Alternative Interpersonal Communications capability with its Reliability Coordinator, and with each Balancing Authority within its Transmission Operator Area. (R4.)
- M5.** Each Balancing Authority shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it has Interpersonal Communications capability with its Reliability Coordinator, each Transmission Operator that operates Facilities within its Balancing Authority Area, and each Generator Operator that operates Facilities within its Balancing Authority Area and each Distribution Provider within its Balancing Authority Area, and each Interchange Coordinator within its Balancing Authority area as well as adjacent Interchange Coordinators. (R5)
- M6.** Each Balancing Authority shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it designated an Alternative Interpersonal Communications capability with its Reliability Coordinator and each Transmission Operator that operates Facilities within its Balancing Authority Area. (R6)
- M7.** Each Distribution Provider shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and

installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it has Interpersonal Communications capability with its Transmission Operator and its Balancing Authority. (R7)

**M8.** Each Generator Operator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it has Interpersonal Communications capability with its Balancing Authority and its Transmission Operator. (R8)

**M9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, that it tested, at least on a monthly basis, its Alternative Interpersonal Communications capabilities designated in R2, R4 or R6. If the test was unsuccessful, the entity shall have and provide upon request evidence that it initiated action to repair or designated a replacement Alternative Interpersonal Communications within 2 hours. (R9.)

**M2-M10.** Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, it notified impacted entities within 60 minutes of the detection of a failure of its ~~normal~~ Interpersonal Communications capabilities that lasted 30 minutes or longer. (R2R10.)

~~**M3.** Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load Serving Entity, Purchasing Selling Entity, and Distribution Provider shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine that its personnel used English as the language for all inter-entity BES reliability communications between and among operating personnel responsible for the real-time generation control or operation of the interconnected BES. If a language other than English is used, each party shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, of agreement to use the alternate language or the law that requires the use of an alternate language. (R3.)~~

~~**M4.** Each Distribution Provider and Generator Operator shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent that it had Interpersonal Communications capabilities with its Transmission Operator and Balancing Authority for the exchange of Interconnection and operating information. (R4.)~~

## D. Compliance

### 1. Compliance Monitoring Process

#### 1.1. Compliance Enforcement Authority

Regional Entity

#### 1.2. Compliance Monitoring and Enforcement Processes

Compliance Audits

Self-Certifications

Spot Checking

Compliance Violation Investigations

Self-Reporting

Complaints

#### 1.3. Data Retention

The Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

~~Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall keep the most recent three years of historical data (evidence) for Requirement R1, Measure M1.~~

Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall keep the most recent twelve months of historical data (evidence) for ~~Requirement R2, Measure M2,~~ Requirements R1, R2, R3, R4, R5, R6, R9 and R10, Measures M1, M2, M3, M4, M5, M6, M9 and M10 as applicable..

~~Each Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, Transmission Service Provider, Load Serving Entity, Purchasing-Selling Entity, and Distribution Provider shall keep evidence for Requirement R3, Measure M3 for the most recent 3twelve months- of historical data (evidence) for Requirements R7 and R10, Measures M7 and M10.~~

Each Generator Operator shall keep the most recent twelve months of historical data (evidence) for Requirements R8 and R10, Measures M8 and M10.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator is found non-compliant with a requirement, it shall keep information related to the noncompliance until the Compliance Enforcement Authority finds it compliant- or for the time period specified above, whichever is longer.

~~Each Distribution Provider and Generator Operator shall keep the most recent three years of historical data (evidence) for Requirement R4, Measure M4.~~

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

**1.4. Additional Compliance Information**

None

2	TBD	Revised per SAR for Project 2006-06, RC SDT	Revised

## Implementation Plan for COM-001-2

### Defined Terms in the NERC Glossary

The RC SDT proposes the following new definitions:

- **Interpersonal Communication:** Any medium that allows two or more individuals interact, consult, or exchange information.
- **Alternative Interpersonal Communication:** Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communications used for day-to-day operation.

### Prerequisite Approvals

- None

### Conforming Changes to Requirements in Already Approved Standards

- None

### Revision Summary

- The RC SDT revised the standard and is proposing retiring three requirements (R1, R5 and R6). Changes were made to eliminate redundancies between standards (existing and proposed), to align with the ERO Rules of Procedure and to address issues in FERC Order 693.

### Effective Dates

The first day of the first calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption. ~~To be determined.~~

## Implementation Plan for COM-001-2 Communications

### Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<p><b>COM-001-1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p>R1. Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information: [Violation Risk Factor: High][Time Horizon: Real-time Operations]:</p> <p>R1.1. All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area</p> <p>R1.2. Adjacent Reliability Coordinators within the same interconnection.</p> <p>R2. Each Reliability Coordinator shall designate an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information: [Violation Risk Factor: High][Time Horizon: Real-time Operations]:</p> <p>R2.1. All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area</p> <p>R2.2. Adjacent Reliability Coordinators within the same interconnection.</p> <p>R3. Each Transmission Operator shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information: [Violation Risk Factor: High][Time Horizon: Real-time Operations]:</p> <p>R3.1. Its Reliability Coordinator</p> <p>R3.2. Each Balancing Authority within its Transmission Operator Area.</p> <p>R3.3. Each Distribution Provider within its Transmission Operator Area.</p> <p>R3.4. Each Generator Operator within its Transmission Operator Area.</p> <p>R4. Each Transmission Operator shall designate an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information: [Violation Risk Factor: High][Time Horizon: Real-time Operations]:</p> <p>R4.1. Its Reliability Coordinator</p> <p>R4.2. Each Balancing Authority within its Transmission Operator Area.</p>
<p><b>Notes:</b> The requirements we made clearer as to which capabilities specific entities were required to have to reliability.</p>	

**Implementation Plan for COM-001-2 Communications**

<p><b>Already Approved Standard</b></p>	<p><b>Proposed Replacement Requirement(s)</b></p>
<p><b>COM-001-1</b></p> <p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p>R5. Each Balancing Authority shall have Interpersonal Communications capability with the following entities to exchange Interconnection and operating information: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i>:</p> <p>R5.1. Its Reliability Coordinator</p> <p>R5.2. Each Transmission Operator that operates Facilities within its Balancing Authority Area</p> <p>R5.3. Each Generator Operator that operates Facilities within its Balancing Authority Area</p> <p>R5.4. Each Distribution Provider within its Balancing Authority Area</p> <p>R6. Each Balancing Authority shall designate an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i>:</p> <p>R6.1. Its Reliability Coordinator</p> <p>R6.2. Each Transmission Operator that operates Facilities within its Balancing Authority Area)</p> <p>R7. ## Standards Announcement

Ballot Window Open February 25 – March 7, 2011

Project 2006-06 – Reliability Coordination

Available Friday, February 25<sup>th</sup> at: <https://standards.nerc.net/CurrentBallots.aspx>

### **Initial Ballot Window Open February 25<sup>th</sup> through 8 p.m. on March 7, 2011**

An initial ballot for the following standards and associated implementation plans will be **open from 8:00 a.m. on Friday, February 25 through 8:00 p.m. on Monday, March 7, 2011.**

- COM-001-2 – Communications
- COM-002-3 – Communication and Coordination
- IRO-001-2 – Reliability Coordination – Responsibilities and Authorities
- IRO-002-2 – Reliability Coordination – Analysis Tools
- IRO-005-4 – Reliability Coordination – Current Day Operations
- IRO-014-2 – Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators
- IRO-015-1 – Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 – Coordination of Real-time Activities Between Reliability Coordinators

During the initial ballot window, members of the ballot pool associated with this project may log in and submit their votes from the following page: <https://standards.nerc.net/CurrentBallots.aspx>

### **Background**

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standards IRO-003-2.

For more information review the project Web page:

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

## Next Steps

The comments submitted during the formal comment period and the ballot results will be posted.

## Standards Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

*For more information or assistance, please contact Monica Benson,  
Standards Process Administrator, at [monica.benson@nerc.net](mailto:monica.benson@nerc.net) or at 609.452.8060.*

## Standards Announcement

### Ballot Pool Open January 25–February 25, 2011

### Formal Comment Period Extended to March 7, 2011

### Project 2006-06 – Reliability Coordination

Now available at: <https://standards.nerc.net/BallotPool.aspx>

#### **Ballot Pool Open through 8 a.m. on February 25, 2011**

A ballot pool is being formed during the next 30 days. The 45-day formal comment period is open from January 18 – March 7, 2011 with an initial ballot being conducted during the last 10 days of the comment period. Please review the Standards Under Development page for updated dates at:

[http://www.nerc.com/filez/standards/Reliability\\_Standards\\_Under\\_Development.html](http://www.nerc.com/filez/standards/Reliability_Standards_Under_Development.html)

Registered Ballot Body members may join the ballot pool to be eligible to vote in the upcoming ballot at the following page: <https://standards.nerc.net/BallotPool.aspx>

During the pre-ballot window, members of the ballot pool may communicate with one another by using their “ballot pool list server.” (Once the balloting begins, ballot pool members are prohibited from using the ballot pool list servers.) The list server for this ballot pool is: [bp-2006-06\\_RC\\_in@nerc.com](mailto:bp-2006-06_RC_in@nerc.com)

#### **Formal 45-day Comment Period Extended through 8 p.m. Eastern on Monday, March 7, 2011 and Additional Documents Posted**

Last week the Reliability Coordination drafting team posted its Consideration of Comments and revised drafts of the following standards to incorporate input from comments submitted during the January 4-February 18, 2010 comment period and comments provided by a Quality Review team:

- COM-001-2 – Communications
- COM-002-3 – Communication and Coordination
- IRO-001-2 – Reliability Coordination – Responsibilities and Authorities
- IRO-005-4 – Reliability Coordination – Current Day Operations
- IRO-014-2 – Procedures, Processes, or Plans to Support Coordination Between Reliability Coordinators

**Three additional standards were inadvertently omitted from last week’s posting and have now been posted:**

- IRO-002-2 – Reliability Coordination – Analysis Tools
- IRO-015-1 – Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 – Coordination of Real-time Activities Between Reliability Coordinators

The Standards Committee has authorized posting the standards and associated implementation plan for a 45-day comment period, with a parallel ballot during the last 10 days of the comment period. **To provide sufficient time for review of the newly posted standards, the comment period has been extended through 8 p.m. Eastern on Monday, March 7, 2011.**

## Instructions

Please use this [electronic form](#) to submit comments. For convenience, a Word version of the comment form has been posted on the project page.

## Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standards IRO-003-2.

## Next Steps

An initial ballot will be conducted during the last 10 days of the comment period. After the ballot, the drafting team will consider all comments (those submitted with a comment form and those submitted with a ballot) and determine whether further revisions to the standards and supporting documents are needed.

## Standards Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

## Standards Announcement

### Project 2006-06 – Reliability Coordination Initial Ballot Results

Now available at: <https://standards.nerc.net/Ballots.aspx>

An initial ballot of the following standards and their associated implementation plans ended on March 7, 2011:

- COM-001-2 – Communications
- COM-002-3 – Communication and Coordination
- IRO-001-2 – Reliability Coordination – Responsibilities and Authorities
- IRO-002-2 – Reliability Coordination – Analysis Tools
- IRO-005-4 – Reliability Coordination – Current Day Operations
- IRO-014-2 – Coordination Among Reliability Coordinators
- IRO-015-1 – Notifications and Information Exchange Between Reliability Coordinators
- IRO-016-1 – Coordination of Real-time Activities Between Reliability Coordinators

Voting statistics are listed below, and the [Ballot Results](#) Web page provides a link to the detailed results:

Quorum: 87.10%

Approval: 49.54%

#### **Background:**

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standards IRO-003-2.

For more information review the project Web page:

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

## Next Steps

The drafting team will consider all comments (those submitted with a comment form and those submitted with a ballot. Once the team has prepared its response to comments and made any changes to the standards and supporting documents, they will submit the revised documents for quality review prior to a successive ballot. Since a non-binding poll of VRFs and VSLs was not conducted concurrent with the initial ballot that concluded on March 7, 2011, a non-binding poll will be conducted in conjunction with the successive ballot.

## Ballot Criteria

Approval requires both (1) a quorum, which is established by at least 75% of the members of the ballot pool submitting either an affirmative vote, a negative vote, or an abstention, and (2) a two-thirds majority of the weighted segment votes cast must be affirmative; the number of votes cast is the sum of affirmative and negative votes, excluding abstentions and non-responses.

## Standards Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate.

<p>It was expressed in the last posting that the definition of Interpersonal Communications might inadvertently include data. The SDT responded that it does not by referring to Interpersonal in the wording of the definition. The word being defined shouldn't be in the definition. However, incorporating "allows two or more individuals to ..." is an option that may solve this problem. The next posting should clarify this. This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. The sub-requirements should be modified into bulleted lists. Consider striking "to exchange Interconnection and operating information" in R1, R3, R5, R7, and R8. It is redundant to the use of Interpersonal Communications "to interact, consult, or exchange information" in the definition. Consider striking "to exchange Interconnection and operating information" in R2, R4, R6. It is redundant to the use of Alternative Interpersonal Communications which uses Interpersonal Communications in its definition. Interpersonal Communications includes "to interact, consult, or exchange information" in its definition. For R2, why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications. For R3, affected neighboring Transmission Operators should be included. For R4 and R6, the sub-requirement list is different from the associated Interpersonal Communications requirements R3 and R5 respectively. These should be duplicate. The sub-requirement list for R4 should match R3, and the sub-requirement list for R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications. The sub-requirements should be bulleted lists. For R5, why are neighboring Balancing Authorities not included? Additionally, R5 should only read Contact with Interchange Coordinator within the same Interconnection. They need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE. Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is "shall have" while in R2, R4, and R6, the requirement is "shall designate". Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, the same wording should be used. R2.2 and R1.2 should not be limited to Reliability Coordinators in the same Interconnection only. Modify "within the same Interconnection" to "within the same Interconnection, and, as appropriate, between asynchronously connected RCs which are not precluded by law from scheduling interchange energy (for schedule changes, curtailments, etc.)" since reliability coordination may be required among the RCs on both sides of an Interconnection boundary. The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal Communications with. FERC specified their general preference for graduated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost a duplicate of the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p>
No
If the requirement were going to remain. but the Project 2007-03 Real-Time Operations SDT proposed to retire that

requirement during their last posting. There needs to be better coordination with that SDT.
No
The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be. The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES are covered under a Reliability Coordinator. In R2, should “of” be “to”? Reliability Directives are issued to TOPs, BA, etc. The VSL for R1 is not consistent with the requirement. The requirement applies to the ERO but the VSL applies to the Regional Entity.
Yes
No
R1 states “When the results of an Operational Planning Analysis or Real-time Assessment indicate an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.” The word “notify” should be stuck.
The SDT did not address all concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving as the Transmission Operator or Balancing Authority. It should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, standards should be made clear that the Reliability Directive is directed to another company. In place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations for three-part communications to their sub-operating entities. Therefore, we suggest modifying R1 to be “When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]” Also, the definition of Emergency as currently cited in these draft Standards and included in the existing NERC Glossary should be modified to include the NERC Glossary term Adverse Reliability Impact to make the Standards more crisp, clear and enforceable. Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team. There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation that indicates requirements are being move to this standard. Delete the text box. Strike IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update. Requirement R2 in IRO-001 contains the words “which could include issuing Reliability Directives”, but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. These words should be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.

COM-001 General question/comment. The reference to infrastructure should be removed and just keep the word “medium”. Here's why What communication medium (infrastructure) does not use satellite at some point unless entities are within a close geographical proximity? How likely is it to have 2 different mediums? • Local phone and fax hard-wire likely. • Long distance phone and fax – satellite • Cell phone – satellite • Internet – satellite • Radio – antenna The reason for mentioning this is, if all we have is satellite then the reference to infrastructure should be removed and just keep the word “medium”.

IRO-001-2 as proposed does not include the PSE in the applicability, nor does it require the PSE to respond to a directive. However, COM-002 requires them to repeat the directive back... If the directive is that important to repeat back should they not have to act upon the directive? I think the PSE should be included in IRO-001-2 this standard as they represent and direct generation facility deployment in many cases. Including the PSE in COM-001 may be a good idea too, just for the situations listed above.

No
See Q 6 below.
The stated purpose of COM-002 is: "To ensure emergency communications between operating personnel are effective." As written, the standard fails to meet this purpose because the three requirements only deal with communications at the entity level. There is no requirement for the directing entity to even try to reach operating personnel at the receiving entity. The directing entity may follow all the requirements of this standard by following R1 and R3 with the receiving entity's receptionist, answering service, janitor, night watchman, etc. The receiving entity only needs to meet R2, parroting the directive. Again this could be accomplished by anyone with no assurance the directive reaches the operating personnel who can implement it. When we stated a similar objection during the last comment period, The SDT's answer suggested this was a PER staffing issue, but none of the PER requirements even apply to DP/LSE directive recipients. We suggest the entity issuing the directive should be required to make an attempt to get it to those who are competent to understand and implement the directive. This is not a staffing, training, or credentials issue; it is a performance issue that falls squarely within the stated purpose of this standard. COM-001 R10 presents a paradoxical situation to an entity attempting to comply. Consider an interpersonal communication capability failure that lasts longer than 60 minutes past initial detection. At or before 60 minutes, the affected entity is expected to notify impacted entities. If it has no interpersonal communication capability, how shall it make this notification? And if the entity does manage to make such a notification, it has thereby proven that it does have interpersonal communication capability making such notification unnecessary. We again ask the SDT to consider that not all the entities in the applicability sections of COM-001 and 002 have 24/7 dispatch centers. These are typically smaller entities that were required to register because they exceed 25 MW or were asked in the past to voluntarily provide UFLS. They do not and do not need to continuously communicate with TOPs, BAs, RCs, etc; and a "reliability directive" is a theoretical thing that has never happened during the memories of thirty year employees. The directive issuing entities simply realize the limitations around the receiving entities and work around them. The financial burden on these small entities and their customers to go to 24/7 dispatch will not have a corresponding reliability benefit. And while the two COM standards do not explicitly state that entities must maintain 24/7 dispatch, when all the requirements and definitions and time horizons are taken together 24/7 continuous competent communication is implied. During the last comment period, the SDT suggested this was a registration issue beyond their control. We submit instead that this is a standard applicability question that the SDT does have control over, since it is right there in Section A.4 of the two COM standards. While we appreciate that the SDT is responding to FERC order 693 to include DPs, we note that FERC also stated: Paragraph 487: "We expect the telecommunication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process." Paragraph 6: "A Reliability Standard may take into account the size of the entity that must comply and the costs of implementation" Paragraph 141: "...the Commission clarifies that it did not intend to ... impose new organizational structures..." Paragraph 31: "We emphasize that we are not, at this time, mandating a particular outcome by way of these directives, but we do expect the ERO to respond with an equivalent alternative and adequate support that fully explains how the alternative produces a result that is as effective as or more effective than the Commission's example or directive. We ask the SDT to exclude DPs, LSEs, and PSEs that do not have 24/7 dispatch centers from the applicability of these two standards in order to meet FERC order 693.
Group
Competitive Suppliers
Jack Cashin

<p>EPSA is the trade association for competitive suppliers including both generators and marketers that represent over 700 entities in the NERC compliance registry. As such, the EPSA membership includes members registered as Purchasing Selling Entities (PSE) in each NERC region. Moreover, many of EPSA's members are also registered as LSEs in several regions. In general, EPSA supports the progress made in revising COM-001, COM-002 and IRO-001 in Project 2006-06, particularly the improvements made to the definition of Reliability Directive. However, EPSA also has concerns with some proposed changes to the applicability sections of the revised standards. In addition, EPSA requests that the implementation plans be changed so that they are consistent with the standard. Regarding applicability, EPSA agrees that COM-001 should continue to not apply to Purchasing Selling Entity (PSE) and Load Serving Entity (LSE) functions. However, the implementation plan for COM-001-2 still includes a reference that PSEs and LSEs must comply (page 11 of the implementation plan). Additionally, EPSA supports the removal of LSEs and PSEs from IRO-001-2. Much like the situation with COM-001-2, the implementation plan for IRO-001-2 still includes a reference that LSEs and PSEs must comply (page 11 of the implementation plan). In both the implementation plans for COM-001-2 and IRO-001-2 these references should be removed. For reasons similar to those underlying why COM-001-2 and IRO-001-2 do not apply to PSEs and LSEs, EPSA opposes the addition of PSEs to the COM-002-3 applicability. The purpose of the emergency communications in these standards is "To ensure emergency communications between operating personnel are effective." The removal would recognize that PSEs and LSEs do not play an active role in reliability coordination under this standard since they have no authority, nor ability to assume or perform responsibilities associated with reliability coordination. When a RC, TOP, or BA needs to address an Emergency they do not contact, consult, or direct a PSE to take action to address the Emergency. Reliability is neither improved nor degraded by having these Standards applicable to PSEs or LSEs; therefore, COM-001, COM-002 and IRO-001 need not be applicable to PSEs or LSEs. Thanks to the drafting team members for their effort on revising the Project 2006-06 standards.</p>

Yes
COM-002-3 R2. Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message can be confirmed by the originator. (Replace 'has been' with 'can be' and add 'by the originator' to better fit into the sequence with R3.)
Group
Exelon
John Bee
No
1. COM-001-2, 4.4 - Distribution Providers and 4.5, Generation Operators should be highlighted and communicated as a substantive change since entities may not be aware that they are being added to the applicability section of the standard. 2. COM-001-2, R10 - should have the following underlined clarifying text added, shall notify impacted entities within 60 minutes of the detection of a failure "of all primary and alternative " Interpersonal Communications capabilities that lasts 30 minutes or longer. Exelon believes that the intent of R10 is for complete loss of communication ability and should not be applied to facilities that have multiple backups. 3. COM-001-2, M1 thru 9 – Suggest that network diagrams and / or communications schematics be added as suggested evidence. 4. COM-001-2, VSL for R9 – Regarding failure to test the Alternative Interpersonal Communication, the Severity Level does not align with the potential impact to the BES. The Severity Level for simply missing a test should be revised to a High VSL.
Yes
No comment - only applicable to RC
Comments: No comment – only applicable to RC
Comments: No comment - only applicable to RC
1. COM-002-2, R2 – Remove the word "recapitulate", feel that "restate or rephrase" is adequate. The word "recapitulate" is not commonly used and is somewhat obscure. 2. COM-002-2, R3 – Suggest using the words "repeat back" rather than "state or respond that" to more clearly identify the expectation with more commonly used language. 3. IRO-001-2, R3 – While we appreciate that the SDT has defined the term "directive" as a much needed definition, IRC-001-2 R.3 now introduces a new term "direction". what is a "direction" and how does it differ from "directive"? If a new

term is going to be introduced it needs to be defined, if the intent was to use the word "directive" then "direction" should be replaced with "directive." 4. IRO-001-2, R4 – Again the term "as directed" is confusing, recommend that the text be changed to align with the term directive, "unable to perform the directive per Requirement R3."

Yes

-The current data retention requirement of 90 days is more than adequate. Increasing this period to 12 months would result in a significant amount of work with no benefit to reliability. -Clarification required on the VSL for R9 - there appears to be no difference in the description of the Lower VSL and second part of the Severe VSL following "or". - Clarification required - The existing version of COM-001 M1 indicates that maintenance records for communication facilities may be required but the proposed revision makes no mention of maintenance records. So evidence of maintenance is no longer required?

Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.

As drafted, COM-001 is not clear or complete. At this stage in the evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. Thus, NextEra Energy Inc. (NextEra) has numerous recommended corrections to provide clarity and completeness to COM-001. For example, the requirement to designate an Alternative Interpersonal Communication capability is not clear. Does the designator solely designate for the designator's knowledge or does the designator need to inform the entity on the other end of the connection. In R2, for instance, the Reliability Coordinator must designate, but it is also not clear whether the Reliability Coordinator must inform the Balancing Authorities or Transmission Operators. It is further unclear whether the designation must be documented, or if any informing of the Balancing Authorities or Transmission Operators must be documented. Thus, it is recommended that the drafters decide what was intended regarding the designation and clearly state the requirements. In R9 it states that ". . . on at least a monthly basis." There are two issues to consider here. If the sentence stays, grammatically it should read ". . . on, at least, a monthly basis. . ." However, from a compliance and technical perspective, the term "at least" has no significance and should be deleted. The requirement is to test on a monthly basis – the phrase "at least" only introduces ambiguity and implies that the party should consider every two or three weeks. If the drafting team believes a best practice is less than a month, there are other NERC educational tools to explain a best practice. In R10, it states ". . . shall notify the impacted entity . . ." It would be clearer to state: ". . . shall notify the impacted Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator . . ."
No
As stated in response to number 1, Reliability Standards are to be clear and complete. If a Transmission Operator is not responsible for a delay caused by a Reliability Coordinator, the Standard should specifically state that the Transmission Operator does not need to wait for an assessment or approval of a Reliability Coordinator to take actions pursuant to TOP-001-1 R3. Since the Reliability Coordinator is atop the reliability higherachy, such a statement provides clarity and completeness to understanding a Transmission Operators rights. Thus, TOP-001-1 R3 should be revised to lead with: "Without any obligation to first seek and obtain an assessment or approval from its Reliability Coordinator, each Transmission Operator . . ."
At this stage in evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. COM-002, IRO-001, IRO-002 and IRO-014 do not meet this threshold. Thus, NextEra has numerous recommended corrections to provide clarity and completeness to these Reliability Standards. COM-002 R1 The addition of defined terms for Reliability Directive and Emergency is a very good approach that helps provides clarity. Hence, it is also be appropriate to make the language in the requirement as clear as possible, and not add other implied or unexplained notions. Also, at times, in those regions with markets, it is not always clear whether a requirement to curtail for reliability reasons is being issued pursuant to market rules or from the Reliability Coordinator or Transmission Operator under the Reliability Standards. Therefore, it is also appropriate that the Reliability Coordinator, Transmission Operator, Balancing Authority be required to identify themselves; and if they fail to identify themselves or fail to use the term Reliability Directive, the registered entity receiving the flawed issuance should not be consider in violation of a Reliability Standard for failing to act. Accordingly, R1 would be clearer and have the same intent, if it stated as follows: "A Reliability Coordinator, Transmission Operator or Balancing Authority have the authority to issue an oral or written Reliability Directive as authorized in [list the specific Reliability Standard requirements such as IRO-001 R8 and TOP-001 R3]. The issuance of an oral of written Reliability Directive, by a Reliability Coordinator, Transmission Operator or Balancing Authority shall: (1) use the term 'Reliability Directive;' and (2) identify the issuer of the Reliability Directive as a Reliability Coordinator, Transmission Operator or Balancing Authority. If a Reliability Coordinator, Transmission Operator or Balancing Authority issues an oral or writtern directive without using the term "Reliability Directive" or failing to indentify itself as a Reliability Coordinator, Transmission Operator or Balancing Authority, the registered entity receiving the directive cannot be considered in violation for its failure to act." IRO-001 The definition of Adverse Reliability Impacts uses the term "instability." It is important that this term be technically defined in the same way "Cascading" is defined, otherwise the new requirement is not adding clarity; rather, it is maintaining the ambiguous term "instability" that will likely lead to confusion and debate. R1 Similar to the comments set forth with respect to COM-001 (question #1), the term "at least" should be deleted from R1 – it serves no useful purpose from a technical or compliance perspective; instead, it will add unnecessary ambiguity to the requirement. R2, as drafted, states: "Each Reliability Coordinator shall take actions or direct actions, which could include issuing oral or written Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. " This long sentence has several significant grammatical errors that result in the reader not being able to discern the meaning of the requirement. It also

unnecessarily adds verbiage that detracts from its primary focus. It is, therefore, recommended that R2 be revised as follows: "Each Reliability Coordinator shall take all necessary actions to prevent identified Emergencies or Adverse Reliability Impacts. These Reliability Coordinator actions shall include, to the extent necessary, the issuing of oral or written Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers located within its Reliability Coordinator Area. " R3, as drafted, is confusing and inconsistent with R2, and, thus, R3 should be revised to read as follows: "Upon receipt of a Reliability Directive issued pursuant to R2, a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with the Reliability Directive, unless compliance would violate safety, equipment, regulatory or statutory requirements. In the event that a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider determines that compliance with a Reliability Directive would violate safety, equipment, regulatory or statutory requirements, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall, within 10 minutes after the determination, inform the Reliability Coordinator of its inability to comply." IRO-002 R1 and R2, as written, are confusing. It is recommended that R1 and R2 be combined to read as follows: "Pursuant to a written procedure to mitigate the impact of a Reliability Coordinator's analysis tool outage, a Reliability Coordinator's System Operator shall also have the authority to approve, deny or cancel a planned outage for its analysis tool." IRO-014 It is unclear why the terms Operating Procedure, Operating Process or Operating Plan needs to be plural, as currently written in the Standard. Hence, it is recommended that these terms be made singular, otherwise a violation may be inferred for not having more than one Procedure, Process or Plan. 1.1 Insert the word "applicable" before "Reliability Coordinator." 2.1, as written, is confusing. Recommend that 2.1 read as follows: "Review and update, if an update is necessary, on an annual basis. Annual basis means the review shall be within one month plus or minus that date of the last review." R3 This requirement uses a very vague term "reliability-related information," which, also, does not track the language used in R1 -- "information." It is recommended that R1 and R3 use the same terms and read " . . . information, as defined by the Reliability Coordinator, . . ." R4 As stated above, "at least" does not add value, and, therefore, should be deleted. R5, as written, is confusing. The recommended fix is to delete "all other" and replace with "impacted".

COM-001-2 does not specify the amount of time a DP has to reestablish the Interpersonal Communication Capability after the capability fails before it is assessed non-compliance for not having the communication. Is an entity non-compliant the minute the communication capability is unavailable If so, then to be compliant a tertiary (or secondary capability for DP) must be installed by the entity. Something similar was discussed with EOP-008 R3: "To avoid requiring a tertiary facility, a backup facility is not required during: • Planned outages of the primary or backup facilities of two weeks or less • Unplanned outages of the primary or backup facilities" UI suggests the drafting team incorporate something similar. The VSL for R7 is severe only and states: "The Distribution Provider failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 7.1 or 7.2." I believe there should be a time component to the VSL and the VSL staged. For example, failure to have communication established for less than 60 minutes would be Lower, anything over 1 hour severe Also needed is a phrase to state when the violation begins. Does the violation begin when the loss of Communication Capability is detected or when it occurred? In other words, does the violation start when the operator attempts to use the phone and it is not functional, or did it occur when the phone line functionality failed but was not yet detected because no attempt to use the phone was made. So the VSL for R7 would follow a format of: "The Distribution Provider failed to have Interpersonal Communication Capability with one or more entities listed in Parts 7.1 or 7.2 for a continual 60 minutes period as measured from the time the ICC failure was detected". An alternative remedy is to alter the language of R7 to allow for unplanned outage. NERC does not have a Reliability Requirement for a DP to staff a control room 24/7. COM-0001 can be interpreted to imply that a DP needs to be staffed 24/7 to facilitate interpersonal communications. If NERC wants to extend the requirement for a 24/7 staffed

operating position at the DP then the appropriate method is thru a SAR to PER-002. COM-001 R7 should have a sub-requirement added recognizing that DP's are not required to staff 24/7 and many do not staff overnight. UI suggests adding R7.3: DP's will notify their TOP and/or BA when it is not staffing an operating desk. R7: Should address the instance if the DP is not required to have communication with the BA, because the BA communicates thru the TOP.

Yes

Yes

Comments: 1. COM-002 R2 seems awkwardly worded. R2. Each [Entity] that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message has been confirmed. " R2 as it is written says the repeat is confirming the accuracy of the message itself. I think it is agreed that the repeat back in R2 is to allow the issuer of the Directive to confirm that the message was received accurately understood by the recipient. I suggest: R2. Each [Entity] that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to allow the Issuer to confirm that the directive recipient accurately understands the Directive" 2. The VSL for R2 is severe and states "The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message was confirmed." The purpose of the R2 repeat-back is to allow the Issuer verify the message was accurately received. This VSL penalizes the responsible entity for not accurately receiving the message. The VSL should penalize the refusal of the registered entity to repeat back the message not for receiving the message incorrectly. Suggested rewording: "The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message can be evaluated by the entity issuing the Reliability Directive" 3. United Illuminating does agree with the definition of Reliability Directive and Emergency.

We are providing the following comments for the Standards Drafting Team to consider. 1) Consider changing R1 to 'Each RC shall have the capability for Interpersonal Communications with the following entities to exchange

Interconnection and operating information...’ for clarity as Interpersonal Communications and capability are both nouns. 2) We feel changing the applicability of the standard is important to the accuracy of the standard. The purpose of COM-002 is ‘To ensure emergency communications between operating personnel are effective’. Since operating personnel are covered by the applicability of RC, BA, TOP and GOP, we suggest the applicability to TSP, LSE, and PSE be removed from COM-002-3. 3) Additionally, we would like to bring to the attention of the Standards Drafting Team, that the implementation plan for COM-001-2 and IRO-001-2 still includes TSP, LSE, and PSE although the revised standard does not include these entities in the Applicability Section. For COM-001-2 refer to the implementation plan, page 1. For IRO-001-2 refer to the implementation plan for new R2, new R3, new R4 and the chart on the last page. Thank you for your consideration in addressing these comments.

Paul Kerr  
Shell Energy North America (US), L.P.

The introduction of the definition of “Reliability Directive” and its connection to the definition of “Emergency” within this Project brings much needed clarity for the sector and will promote consistency between Regional Entities and within the audits of Registered Entities. Shell Energy supports the removal of Purchasing Selling Entities as a function to which IRO-001 applies. This removal recognizes that PSEs do not play a role in reliability coordination under this standard since they have no authorities and no abilities to assume or perform responsibilities associated with reliability coordination. This conclusion is reinforced by the adoption of the defined term “Reliability Directive”. Where a RC, TOP, or BA needs to address an Emergency they do not contact, consult, or direct a PSE to take action that would address the Emergency. Rather, where the PSE is a user of the grid to perform or execute transactions, it is subject to the actions of these other entities that have the authority to stop, curtail, or alter the submitted transactions of the PSE in a way that aids in resolving the problem. With the fitting adoption of “Reliability Directive” into COM-002 as well, Shell Energy does not believe it is necessary or appropriate for the applicability of this standard to include Purchasing Selling Entities, as is contained in the current draft proposal. This standard does not apply to PSEs today, however, during the progression of Project 2006-06 this applicability was added to an early draft version that preceded the discussions and clarification that comes from the definition of a Reliability Directive in the standard. Shell Energy does not support the inclusion of PSEs in the current draft version of COM-002, and feels that it should be removed. The purpose of this standard is, “To ensure Emergency communications between operating personnel are effective” and relates directly to the capabilities and authorities established for the RC, TOP, or BA that requires actions to be taken by a recipient of a Reliability Directive. As noted previously, PSEs are acted upon by the entities with the necessary authority, and are not in a role that would initiate or fulfil the required actions. As additional matters related to the clarification and cleanup of the standards in this project, the implementation plans for both IRO-001 and COM-001 erroneously contain references to PSEs in the sections “Functions that Must Comply with the Requirements”. These references need to be removed.

The applicability of COM-001 and COM-002 appear to be at odds with each other. The requirements may need to be re-written so that they are in sync.  
Yes  
No

This is out of scope with the standard, as it is currently addressed through the NERC certification process that the NERC reliability coordinators are subject to.

The language used in COM-002-3 R2 including “with enough details that the accuracy of the message has been confirmed” is subjective and ambiguous. IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (eg Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling.

Com-001-2 implementation plan lists that this is applicable to PSE's and LSE's however, PSE's and LSE's were removed from the actual standard. The implementation plan should be revised.
IRO Com-002-3 standard continues to include PSE. PSE's do not play an active role and have no authority or ability to perform reliability coordination. PSE's should be removed from the standard. -001-2 references PSE's in the implementation for R2, R3, R4 and "Functions that must comply with the requirements in this standard" table. PSE's were removed from the standard and should be removed from the implementation plan.

The monthly testing requirement for Alternative Interpersonal Communications is overly burdensome without any evidence to support that it is necessary to insure reliability. We believe that an entity will take necessary steps to insure the Alternative Interpersonal Communications is functioning properly, especially if it experiences problems with its Interpersonal Communications, it. We can support quarterly testing as we believe it strikes a reasonable balance.
Yes
We do not agree with the addition of weekly conference calls as required in R4. We believe that RCs should schedule calls as needed but do not agree that a weekly scheduled call improves reliability.

Each sub-requirement should not have an "R" in front of the number in order to be consistent with NERC's August 10, 2009 filing at FERC on this subject. Requirement R3 and R4 should include adjacent TOPs as a sub-requirement. Requirements R5 and R6 should include adjacent BAs as a sub-requirement. "to exchange Interconnection and operating information" should be deleted from requirements R1 through R8 as it is redundant with the definition of Interpersonal Communications The last page of the Implementation Plan includes LSEs, PSE, and TSPs as being responsible entities under this standard, yet the standard does not include them. Please correct the implementation plan.
No
Top-001-1, Requirement R3, which is what the SDT appears to be using as its justification for not adding a requirement here is proposed to be deleted by the RTO-SDT on Project 2007-03.

No
We think you are attempting to create a requirement similar to BAL-005, R1. That language copied here is clear and concise - All generation, transmission, and load operating within an Interconnection must be included within the metered boundaries of a Balancing Authority Area.
Yes
Yes
Please remove the yellow box on page 1 indicating this standard will be retired.
Reliability Directives may be issued by blast calls from Reliability Coordinators. It is inefficient and may be a hindrance to reliability to require 3-part communications in these instances. There are several organizations registered as BAs, RCs and TOPs. It is not uncommon for those entities to be distributed across multiple desks in the same control room without regard to how an entity is registered. Thus, a single System Operator may perform functions that are categorized under two or more of those functional entities. The drafting team should clarify that under no circumstances should that System Operator be required to issue a Reliability Directive to himself. This is a corporate governance issue. In IRO-014, R1, delete sub-requirement 1.7. The requirement for weekly conference calls related to operating procedures is duplicative to R4 and could be burdensome while adding very little value under certain circumstances. In IRO-014, R4, delete the phrase "(per Requirement 1, Part 1.7)" as a conforming change. In IRO-014, Requirements R6-R8 allow at least the theoretical possibility that an RC may determine an Adverse Reliability Impact in another RC's area that the other RC neither can see nor believes that any action should be taken. R7 puts the burden on the first RC to develop a plan that it cannot implement because it has no agreement with the BAs and TOPs in the other RC area. As such, this requirement is unenforceable. Please review all the implementation plans to be sure the applicable entities match those in the standards. "The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers."

LG&E and KU Energy
Brent Ingebrigtson

<p>1) LG&amp;E/KU suggests that the definitions and related Reliability Standards be edited to provide a clearer understanding of what is required. When used in the requirements of COM-001, the proposed definitions for Interpersonal Communication and Alternative Interpersonal Communication read improperly (i.e., a “medium capability”). This may cause confusion as to what is required by the Applicable entities. Any further use of these terms may cause greater confusion. Suggested Alternative: Interpersonal Communication: Any instance where two or more individuals interact, consult, or exchange information. The definition of “Alternative Interpersonal Communication” would not have to be changed since it is dependent upon the definition of “Interpersonal Communication.” The change of the definitions of Interpersonal Communication and Alternative Interpersonal Communication shifts their focus to the communication itself—the event. This makes the Requirements themselves much clearer since the Requirements focus on the need that entities have the capabilities—the medium. It appears the SDT’s intent is to ensure that the event takes place by requiring that the medium for those events are in place. This is much clearer if there is a distinction between the two (the event and the medium) than if they have similar definitions (a medium and a “medium capability”). 2) LG&amp;E/KU question the consistency of the Applicability sections as they pertain to the TSP, LSE and PSE functions between COM-001 and COM-002. The deletion of the TSP, LSE and PSE from COM-001 is supported, but if these entities are not required to establish Interpersonal Communication (or Alternative Interpersonal Communication) capability with reliability entities (RC, BA, TOP), should they still be required to follow the reliability directive process of COM-002? If the probability of issuing a Reliability Directive to a TSP, LSE or PSE is so low that Interpersonal Communications capabilities with reliability entities is not justified under COM-001, why are the TSP, LSE and PSE still held to the 3 way communication requirements of COM-002? Suggest the Applicability of COM-002 to TSP, LSE and PSE and associated requirements be deleted.</p>

No
<p>We expressed in the last posting that we felt the definition of Interpersonal Communications might inadvertently include data. The SDT responded that it does not by referring to Interpersonal in the name of the definition. Clearly, you can’t refer to the word you are defining in order to define it. However, it is possible “allows two or more individuals to ...” may solve this problem. Clarity should be sought in the next posting, if possible. This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. We request the sub-requirements be modified into bulleted lists. Consider striking “to exchange Interconnection and operating information” in R1, R3, R5, R7, and R8. It is redundant to the use of Interpersonal Communications “to interact, consult, or exchange information” in the definition. Consider striking “to exchange Interconnection and operating information” in R2, R4, R6. It is redundant to the use of Alternative Interpersonal Communications which uses Interpersonal Communications in its definition. Interpersonal Communications includes “to interact, consult, or exchange information” in its definition. For R2, why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications. For R3, affected neighboring Transmission Operators should be included. For R4 and R6, the sub-requirement list is different than for than for the associated Interpersonal Communications requirements R3 and R5 respectively. We believe these should be duplicate. That is the sub-requirement list for R4 should match R3 and the R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications. Again, we would suggest replacing sub-requirements with bulleted lists. For R5, why are neighboring Balancing Authorities not included? Additionally R5 should only read Contact with Interchange Coordinator within same Interconnection. They certainly need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE. Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is “shall have” while in R2, R4, and R6, the requirement is “shall designate”. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, it seems the same wording should be used. We do not believe R2.2 and R1.2 should be limited to Reliability Coordinators in the same Interconnection only. We suggest modifying “within the same Interconnection” to “within the same Interconnection, and, as appropriate, between a-synchronously connected RCs which are not precluded by law from scheduling interchange energy (for schedule changes, curtailments, etc.)” since reliability coordination may be required among the RCs on both sides of an Interconnection boundary. The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal Communications. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost a duplicate to the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p>
No

It might if the requirement were going to remain but the Project 2007-03 Real-Time Operations SDT proposed to retire that requirement during their last posting. We believe there needs to be better coordination with that SDT.
No
The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be. The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES is covered under a Reliability Coordinator. In R2, should “of” be “to”? Reliability Directives are issued to TOPs, BA, etc. The VSL for R1 is not consistent with the requirement. The requirement applies to the ERO but the VSL applies to the Regional Entity.
Yes
Yes
R1 states “When the results of an Operational Planning Analysis or Real-time Assessment indicate an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.” The word “notify” should be stuck.
The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company. We believe that, in place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations of three-part to their sub-operating entities. Therefore, we suggest modifying R1 to be “When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]” Also, we believe that the definition of Emergency, as currently cited in these draft Standards and included in the existing NERC Glossary should be modified to include the NERC Glossary term Adverse Reliability Impact to make the Standards more crisp, clear and enforceable. Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team. There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box. IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update. In the definition of Reliability Directive, we suggest changing “to address an Emergency” to “to address a reliability constraint or a declared Emergency”. Further, Requirement R2 in IRO-001 contains the words “which could include issuing Reliability Directives” but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest that these words be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.

We expressed in the last posting that we felt the definition of Interpersonal Communications might inadvertently include data. The SDT responded that it does not by referring to Interpersonal in the name of the definition. Clearly, you can't refer to the word you are defining in order to define it. However, it is possible “allows two or more individuals to ...” may solve this problem. Clarity should be sought in the next posting, if possible. This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. We request the sub-requirements be modified into bulleted lists. Consider striking “to exchange Interconnection and operating information” in R1. R3. R5. R7. and R8. It is redundant to

the use of Interpersonal Communications “to interact, consult, or exchange information” in the definition. Consider striking “to exchange Interconnection and operating information” in R2, R4, R6. It is redundant to the use of Alternative Interpersonal Communications which uses Interpersonal Communications in its definition. Interpersonal Communications includes “to interact, consult, or exchange information” in its definition. For R2, why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications. For R3, affected neighboring Transmission Operators should be included. For R4 and R6, the sub-requirement list is different than for the associated Interpersonal Communications requirements R3 and R5 respectively. We believe these should be duplicate. That is the sub-requirement list for R4 should match R3 and the R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications. Again, we would suggest replacing sub-requirements with bulleted lists. For R5, why are neighboring Balancing Authorities not included? Additionally R5 should only read Contact with Interchange Coordinator within same Interconnection. They certainly need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE. Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is “shall have” while in R2, R4, and R6, the requirement is “shall designate”. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, it seems the same wording should be used. We do not believe R2.2 and R1.2 should be limited to Reliability Coordinators in the same Interconnection only. We suggest modifying “within the same Interconnection” to “within the same Interconnection, and, as appropriate, between a-synchronously connected RCs which are not precluded by law from scheduling interchange energy (for schedule changes, curtailments, etc.)” since reliability coordination may be required among the RCs on both sides of an Interconnection boundary. The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal Communications. FERC specified their general preference for graduated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost a duplicate to the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.

No

It might if the requirement were going to remain but the Project 2007-03 Real-Time Operations SDT proposed to retire that requirement during their last posting. We believe there needs to be better coordination with that SDT.

No

The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be. The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES is covered under a Reliability Coordinator. In R2, should “of” be “to”? Reliability Directives are issued to TOPs, BA, etc. The VSL for R1 is not consistent with the requirement. The requirement applies to the ERO but the VSL applies to the Regional Entity.

Yes

Yes

R1 states “When the results of an Operational Planning Analysis or Real-time Assessment indicate an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify issue an alert to all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area.” The word “notify” should be struck.

The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company. We believe that, in place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations of three-part to their sub-operating entities. Therefore, we suggest modifying R1 to be “When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High] [Time Horizon:

Real-Time.]" Also, we believe that the definition of Emergency, as currently cited in these draft Standards and included in the existing NERC Glossary should be modified to include the NERC Glossary term Adverse Reliability Impact to make the Standards more crisp, clear and enforceable. Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team. There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box. IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update. In the definition of Reliability Directive, we suggest changing "to address an Emergency" to "to address a reliability constraint or a declared Emergency". Further, Requirement R2 in IRO-001 contains the words "which could include issuing Reliability Directives" but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest that these words be removed. Suggested minor revision to the definition of Reliability Directive as follows (change in caps) A communication, IDENTIFIED AS A RELIABILITY DIRECTIVE, initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency. Clearly identifying a

communication as a Reliability Directive provides immediate information to the recipient as the the nature of the communications.

MRO's NERC Standards Review Subcommittee
Carol Gerou
No
A. R5.5 states a BA shall have Interpersonal Communications with each Interchange Coordinator within its BA area and adjacent Interchange Coordinators. NERC Registry Criteria (v5) uses the term "Interchange Authority" not Interchange Coordinator, please clarify. B. Upon review of the NERC Compliance Registry, there are only 56 BA's that are also registered as an IA but 138 total BA's within the registry. R5.5 is not clearly written because many BA's do not have an IA within their BA area. Though a BA will use an IA to schedule interchange, a possible rewrite of R5.5 may be "Each Interchange Authority that the BA actively uses to arrange Interchange". C. R10 states that the RC, TOP, BA, DP and GOP shall notify "impacted entities" within 60 minutes... Please clarify if the SDT means the entities within the applicability section or is this to be determined by the entity. A possible rewrite may be; "Each RC shall notify TOP's, BA's, and IA's within its RC area along with adjacent RC's within the same Interconnection". This break down would need to be required for each affected entity and would provide clarity to the industry. D. We do not agree with a DP and GOP need to be held to the same level of compliance as a RC, BA or TOP. FERC Order 693 (paragraph 487) directed the DP and GOP to be included in this standard by stating;" We expect the telecommunication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process". A DP and GOP may not be staffed 24 hours a day like a BA or TOP and the SDT did not take this into consideration. E. We understand that the DP and GOP need a means of communicating with their BA and TOP (R7 and R8) but would this not be the same Interpersonal Communications capability that as stated in R3 and R5 for the TOP and BA? Example: If the BA uses a phone line as their Interpersonal Communication medium to contact the DP wouldn't the DP also use the same medium to communicate with their BA? Yes, there could be different mediums but 99% of the time it will be the same medium. F. R10 could mean that if there is a logging system that detects an Interpersonal Communication failure, then all applicable entities will need to monitor that monitoring device. Since this requirement applies to all applicable entities, and Interpersonal Communication mediums will most likely be the same, there will always be two entities found non compliant if the 60 minute threshold is passed.
No
A. Agree that a receiving entity should not be held accountable until such time that they are required to take such action. B. It might if the requirement were going to remain but the Project 2007-03 ("Real-Time Operations SDT") proposed to retire that requirement during their last posting. This needs to be coordinated with that SDT.
No
A. R1, As written it is unclear what level of certification this will entail? Presently written within the NERC Reliability Standards, responsibility is given to RC's to manage the reliability of their areas. Recommend deleting this requirement. The ERO has pushed back in other Standards to having a responsibility for any NERC Requirements, since they are not a user, owner, or operator of the BES (see EOP-004-2). If this does move forward and an RC is certified by the ERO and then the RC is found non-compliant by a Regional Entity, for an associated certified item, will the ERO be held responsible, too? If the SDT selects to keep R1, there are some issues with how the requirement is written. The requirement places emphasis on regions and regional boundaries when no emphasis should be placed there. There are multiple Reliability Coordinators the span multiple regions. The language "to continuously assess transmission reliability" should be changed to "to continuously assess Bulk Electric System reliability" to reflect on what the standards are enforceable. The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES is covered under a Reliability Coordinator. B. In R2, should "of" be "to". Reliability Directives are issued to TOPs, BA, etc. C. The VSL for R1 is not consistent with the requirement. The requirement applies to the ERO but the VSL applies to the Regional Entity.

Yes
Yes
<p>A. COM-002-3, R2 As stated in FERC Order 693, section 512, it is essential that RCs, BA's and TOP's have communications with DPs. R2 also applies to TSPs, LSEs and PSEs. There is no directive for this and it is going to be almost impossible to communicate with a DP since DPs are usually not operated 24 hours per day as like a RC, TOP, or BA. Many DPs have answering services that will relay a message once they receive it and then pass it along to someone. An answering company could repeat the directive word for word but this will not add to any reliability level. The SDT should reconsider the applicability section of this Standard to only apply to a RC, TOP and BA for the issuance of a Reliability Directive. BA's should have the responsibility to have an Interpersonal Communication medium with DPs in their BA area per COM-001-2. B. IRO-002-2, R1, Recommend that "System Operators" be replaced with "system operators" since NERC has defined System Operator to be an individual at a control center (BA, TOP, GOP, or RC). The lower cased system operator will only point to the RC system operator that will have this R1 authority. C. The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company. D. We also are concerned about the need to conduct three-part communications for a Reliability Directive issued through a blast call. Under these circumstances, the need for immediate action of multiple parties may require a blast call and there may not be time for all parties to complete three-part communications before initiating actions. Thus, we believe blast calls should be treated separately and that should be made clear. E. COM-002-3 R2 needs to be rewritten as it is too verbose. The point is for the recipient of the original message to get the issuer to confirm that the message was understood. We suggest rewording R2 to "Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive." Once the receiver has completed this requirement, the ball is in the issuer's court per Requirement R3. No additional words are necessary in the requirement. F. Per COM-002-3 R1, who decides that actions need to be issued as a Reliability Directive? Shouldn't it be the responsible entity? Thus, can we assume that if the responsible entity does not identify a communication as a Reliability Directive that it is not a Reliability Directive per the requirement? After all, why would an entity require actions but not issue a Reliability Directive. Following this logic, the VSL for R1 would never apply. Would a compliance auditor second guess if an action required a Reliability Directive? G. Because the Project 2007-03 ("Real-Time Operations SDT") proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team. H. There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box. I. Please strike part IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update. J. IRO-014-2 R4 is overly broad and would require Reliability Coordinators that will not impact one another to participate on conference calls with one another without any reliability benefit. The issue is created by the addition of the clause "within the same Interconnection" to the requirement. ISO-NE, FRCC, Midwest ISO, and SPP are all in the same Interconnection. It is hard to fathom there being reliability benefit to SPP and ISO-NE conversing weekly or Midwest ISO and FRCC conversing weekly. We suggest limiting the requirement to adjacent Reliability Coordinators. K. For IRO-014-2 R5, we suggest replacing "other" with "impacted" to limit the notification of Adverse Reliability Impacts to only those Reliability Coordinators that need to know. Because the definition of Adverse Reliability Impact includes "Bulk Electric System instability or Cascading", it is possible that the cascading of 138 kV lines serving a load pocket or generator outlet stability issues could require a Reliability Coordinator to notify all other Reliability Coordinators regardless of impact. This would include Reliability Coordinators outside of the Interconnection with the problem. It would also include Reliability Coordinators that are not impacted. For instance, an issue in New England that would not pose a threat outside the northeast would require ISO-NE to notify SPP and FRCC and Reliability Coordinators in the Western Interconnection. There is no reliability benefit to this notification. L. IRO-014-2 R6-R8 are problematic and need to be refined to make clear that the Reliability Coordinators shall operate to the most conservative limit. It should not require a Reliability Coordinator that disagrees with an action plan to implement the action plan. The Reliability Coordinator will</p>

be disagreeing with the action plan for a reliability reasons. Assuming they are correct, the requirement to implement said action plan will actually put the Interconnection at greater risk. These requirements inappropriately attempt to codify the debate and analysis that occurs between and within Reliability Coordinators when there are differing results in reliability analysis. This is part of the problem with having a Wide Area view that results in Reliability Coordinators having a view into other Reliability Coordinator Area. Their results and conclusions may be different. There should be a hierarchical structure for whose results should be used. It should be the Reliability Coordinator with primary responsibility unless the other Reliability Coordinator has evidence to demonstrate that the Reliability Coordinator with primary responsibility is incorrect. What this should do is, to trigger both to review their models and data to assess the problem. None of this needs to be codified in the standards though. M. In the definition of Reliability Directive, we suggest changing "to address an Emergency" to "to address a declared Emergency". This would help limit second guessing for a situation where a System Operator took action because he truly believed he was in an Emergency but after the fact analysis demonstrates there really was not an Emergency. N. The drafting team should expand its rationale for deleting IRO-002-1 R3. Currently, TOP-005 R1 is referenced. The project 2007-03 ("Real-Time Operations SDT") proposed to retire TOP-005-2 R1 in its most recent posting. O. We disagree with deleting IRO-002-1 R5 and R7 which establishes tools and monitoring capabilities. There should be basic tool requirements established for Reliability Coordinators. The project 2009-02 ("Real-time Reliability Monitoring and Analysis Capabilities") will be addressing these issues in more detail. Thus, it does not make sense to delete these requirements until that drafting team completes its task.

Group

FirstEnergy

Sam Ciccone

No

It is not clear from the definition of Interpersonal Communications if certain communications "mediums" such as email, instant messaging, etc. are included. Furthermore, the Measures for these requirements all include "electronic communications" as acceptable evidence. If the drafting team does not intend these mediums be included, then it should be clarified in the definition. We suggest the following wording of the definition: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information. This interaction consists of verbal, spoken words exchanged in Real-time.

Yes

Yes

Yes

Yes

FirstEnergy offers the following additional comments: 1. The effective dates of the standards indicate an effective date of the first day of the first calendar quarter following regulatory approval. The changes to these standards will require changes to existing compliance evidence, as well as the creation of compliance evidence for some entities such as the Generator Operator which is a new applicable entity in COM-001. Therefore, to give entities ample time to get their compliance evidence in place, we suggest the effective state "the first day of the second quarter after regulatory approval". 2. With regard to the requirements for Alternative Interpersonal Communications, we question why the Generator Operator or Distribution Provider is not required to have backup communication. It would be difficult for a Reliability Coordinator, for instance, to contact a Generator Operator whose primary communications have been disabled if that entity does not have a backup. We suggest that the drafting team consider adding the GOP and DP as applicable entities requiring alternative communications.

No

We expressed in the last posting that we felt the definition of Interpersonal Communications might inadvertently include data. The drafting team responded that it does not by referring to Interpersonal in the name of the definition. Clearly, you can't refer the word you are defining to define it. However, it is possible "allows two or more individuals to ..." may solve this problem. What are the drafting team's thoughts on this issue? This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. Consider striking "to exchange Interconnection and operating information" in R1, R3, R5, R7, and R8. It is redundant to the use of Interpersonal Communications "to interact, consult, or exchange information" in the definition. Consider striking "to exchange Interconnection and operating information" in R2, R4, R6. It is redundant to the use of Alternative Interpersonal Communications which uses Interpersonal Communications in its definition. Interpersonal Communications includes "to interact, consult, or exchange information" in its definition. For R2. why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals

with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications. For R3, neighboring Transmission Operators should be included. For R4 and R6, the sub-requirement list is different than for than for the associated Interpersonal Communications requirements R3 and R5 respectively. They should be duplicate. That is the sub-requirement list for R4 should match R3 and the R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications. For R5, why are neighboring Balancing Authorities not included? They certainly need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE. Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is "shall have" while in R2, R4, and R6, the requirement is "shall designate". Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, it seems the same wording should be used. Should R2.2 and R1.2 be limited to Reliability Coordinators in the same Interconnection only? The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal Communications. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost duplicate to the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.

No

It might if the requirement were going to remain but the Project 2007-03 Real-Time Operations SDT proposed to retire that requirement during their last posting. This needs to be coordinated with that SDT.

No

In general, we are not opposed to the concept of the ERO certifying the Reliability Coordinators; however, there are some issues with how the requirement is written. The requirement places emphasis on regions and regional boundaries when no emphasis should be placed there. There are multiple Reliability Coordinators that span multiple regions. The language "to continuously assess transmission reliability" should be changed to "to continuously assess Bulk Electric System reliability" to reflect on what the standards are enforceable. The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES is covered under a Reliability Coordinator Area. In R2, should "of" be "to". Reliability Directives are issued to TOPs, BA, etc. The VSL for R1 is not consistent with the requirement. The requirement applies to the ERO but the VSL applies to the Regional Entity.

Yes

Yes

The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company. We also are concerned about the need to conduct three-part communications for a Reliability Directive issued through a blast call. Under these circumstances, the need for immediate action of multiple parties may require a blast call and there may not be time for all parties to complete three-part communications before initiating actions. Thus, we believe blast calls should be treated separately and that should be made clear. COM-002-3 R2 needs to be rewritten as it is too verbose. The point is for the recipient of the original message to get the issuer to confirm that the message was understood. We suggest rewording R2 to "Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive." Once the receiver has completed this requirement, the ball is in the issuer's court per Requirement R3. No additional words are necessary in the requirement. Per COM-002-3 R1, who decides that actions need to be issued as a Reliability Directive? Shouldn't it be the responsible entity? Thus, can we assume that if the responsible entity does not identify a communication as a Reliability Directive that it is not a Reliability Directive per the requirement? After all, why would an entity require actions but not issue a Reliability Directive. Following this logic, the VSL for R1 would never apply. Would a compliance auditor second guess if an action required a Reliability Directive? Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team. There is a

text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box. Please strike part IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update. IRO-014-2 R4 is overly broad and would require Reliability Coordinators that will not impact one another to participate on conference calls with one another without any reliability benefit. The issue is created by the addition of the clause "within the same Interconnection" to the requirement. ISO-NE, FRCC, Midwest ISO, and SPP are all in the same Interconnection. It is hard to fathom there being reliability benefit to SPP and ISO-NE conversing weekly or Midwest ISO and FRCC conversing weekly. We suggest limiting the requirement to adjacent Reliability Coordinators. For IRO-014-2 R5, we suggest replacing "other" with "impacted" to limit the notification of Adverse Reliability Impacts to only those Reliability Coordinators that need to know. Because the definition of Adverse Reliability Impact includes "Bulk Electric System instability or Cascading", it is possible that the cascading of 138 kV lines serving a load pocket or generator outlet stability issues could require a Reliability Coordinator to notify all other Reliability Coordinators regardless of impact. This would include Reliability Coordinators outside of the Interconnection with the problem. It would also include Reliability Coordinators that are not impacted. For instance, an issue in New England that would not pose a threat outside the northeast would require ISO-NE to notify SPP and FRCC and Reliability Coordinators in the Western Interconnection. There is no reliability benefit to this notification. IRO-014-2 R6-R8 are problematic and need to be refined to make clear that the Reliability Coordinators shall operate to the most conservative limit. It should not require a Reliability Coordinator that disagrees with an action plan to implement the action plan. The Reliability Coordinator will be disagreeing with the action plan for reliability reasons. Assuming they are correct, the requirement to implement said action plan will actually put the Interconnection at greater risk. These requirements inappropriately attempt to codify the debate and analysis that occurs between and within Reliability Coordinators when there are differing results in reliability analysis. This is part of the problem with having a Wide Area view that results in Reliability Coordinators having a view into other Reliability Coordinator Areas. Their results and conclusions may be different. There should be a hierarchical structure for whose results should be used. It should be the Reliability Coordinator with primary responsibility unless the other Reliability Coordinator has evidence to demonstrate that the Reliability Coordinator with primary responsibility is incorrect. What this should do is to trigger both to review their models and data to assess the problem. None of this needs to be codified in the standards though. In the definition of Reliability Directive, we suggest changing "to address an Emergency" to "to address a declared Emergency". This would help limit second guessing for a situation where a System Operator took action because he truly believed he was an Emergency but after the fact analysis demonstrates there really was not an Emergency. The drafting team should expand its rationale for deleting IRO-002-1 R3. Currently, TOP-005 R1 is referenced. The Real-Time Operations drafting team proposed to retire TOP-005-2 R1 in its most recent posting. We disagree with deleting IRO-002-1 R5 and R7 which establish tools and monitoring capabilities. There should be basic tools requirements established for Reliability Coordinators. Project 2009-02 Real-time Reliability Monitoring and Analysis Capabilities will be addressing these issues in more detail. Thus, it does not make sense to delete these requirements until that drafting team completes its task.

Comments: Standard COM-001-2 R10. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer. Comment: It is not clear whether the notification requirements identified in R10 apply to failure of ALL available Interpersonal Communications

or ANY Interpersonal Communications. We suggest that the existence of functioning Alternative Interpersonal Communications precludes the requirement for notification of impacted entities. D. Compliance 1. Compliance Monitoring Process 1.3 Data Retention Each Generator Operator shall keep the most recent twelve months of historical data (evidence) for Requirements R8 and R10, Measures M8 and M10. Comment: The data retention requirements specified for the Generator Operator in Para. 1.3 (above) are not consistent with the 3-year audit interval for the GOP. Question: When audited on this Standard is the expectation that the GOP will have 12 months of evidence or 36 months of evidence? Standard COM-002-3 R2. Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message has been confirmed. Comment: The term "Reliability Directive" is currently not defined in the NERC Glossary of Terms. However, in the Implementation Plan for COM-002-3 the RC SDT proposes a definition for Reliability Directive. It is implied in the standard that the Reliability Directive is issued as a voice command which precludes the use of our preferred method of Interpersonal Communication. However, this is not definitively stated in either the standard or the proposed definition. I think this needs to be made clearer if the Reliability Directive must be issued as a voice command. D. Compliance 1. Compliance Monitoring Process 1.3 Data Retention The Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity shall retain evidence of Requirement 2, Measure 2 for the most recent 3 months. Comment: The data retention requirements specified for the Generator Operator in Para. 1.3 (above) are not consistent with the 3-year audit interval for the GOP/PSE. Question: When audited on this Standard is the expectation that the GOP and PSE will have 3 months of evidence or 36 months of evidence?

No

Comments: I see no connection between XCEL's comment on COM-001-1. The requirements of COM-001-1 require the RCs, TOPs, and BAs to have a primary interpersonal communications method and to designate an alternative. I believe that if the requirements for the entity to have both primary and alternative methods of interpersonal communications this objection could be cleared. For example, R2 Each Reliability Coordinator shall designate have an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information

No

Comments: This would allow NERC to designate one entity to be the Reliability Coordinator for an entire interconnection or the entire continent. This would reduce the Regional Reliability Organizations to compliance entities.

Yes

Yes

Comments: It appears that the requirements for entities designated in the IRO standards to have tools to access and/or monitor the system have been moved to pending standards that are not enforceable. It seems that if the newest revisions of the IRO standards are not implemented as a group there will be either missing requirements or duplicate requirements in the IRO standards.

- We question how far the definition of Alternative Interpersonal Communication goes in requiring separate infrastructure from Interpersonal Communication. For example, wireless communications sometime utilize fiber optic networks.
- We question why the requirements state that entities must "have" Interpersonal Communications capability, but must "designate" Alternative Interpersonal Communications capability?
- R1.2 and R2.2 – Why is this limited to the same interconnection?
- R3 – need to add neighboring TOPs.
- R5 – need to add adjacent BAs.
- Interchange Coordinator – Add IC to the Applicability Section, and add a requirement that the IC have Interpersonal Communication capability with its BA and adjacent BAs.
- Requirements to "designate" Alternative Interpersonal Communication should carry a "Medium" VRF instead of "High", because they are a backup capability. The word "designate" carries the connotation that these are documentation requirements.
- R9 requires a monthly test of Alternative Interpersonal Communications capability. This was quarterly in the last draft. We question how these requirements for "Alternative Interpersonal Communications" capability are related to requirements for "backup functionality" in EOP-008-1, which requires an annual test of backup functionality. Clarity on the relationship between "Interpersonal Communications", "Alternative Interpersonal Communications", "primary control center functionality" and "backup control center functionality" would be appreciated.
- R11 – is this requirement being moved to COM-003?
- Data Retention – Is data retention really going to be just 12 months? Most auditors seem to be asking for everything since the last audit.

No

Requirements of TOP-001-1 are being revised under Project 2007-03, which may not continue to adequately address Xcel's concern.

No
How is NERC going to certify the RCs? Also, we believe the word "all" should be inserted after the word "among", so that it's clear that all generation, transmission and load must be included.
Yes
Yes
<p>• COM-002-3 contains the proposed definition "Reliability Directive". We continue to believe Requirement R1 should be deleted and that this definition should contain the phrase "identified as a Reliability Directive to the recipient". Otherwise, compliance controversies will arise when auditors second-guess the RC, TOP or BA's judgment regarding whether or not an abnormal system condition met the definition of "Emergency", and warranted a "Reliability Directive" with 3-part communication. A conforming change will need to be made to R2, since it refers to R1. This change in the definition of "Reliability Directive" is also needed because this term is used in other standards such as IRO-001-2, and without repeating a similar requirement to COM-002-3 requirement R1 in IRO-001-2, there is potential for confusion. • We disagree with the VSL for COM-002-3. This is clearly a requirement with two possible compliance failures: Failure to acknowledge a correct repeat-back, and failure to resolve an incorrect repeat-back. These failures have dramatically different consequences, which the drafting team should recognize via a graduated VSL. We think that the failure to acknowledge should either be "Lower" or "Medium". • Requirement R2 of IRO-001-2 is unclear and should be reworded as follows: "Each Reliability Coordinator shall take actions or direct actions (which could include issuing Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area) to either prevent identified events that could result in an Adverse Reliability Impact, or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts." • Various changes have been made to the defined term "Adverse Reliability Impact" as this project has progressed. We believe the latest change should not be made, and the Phrase "uncontrolled separation" should be reinserted in the definition, because that phrase is part of the Epect 2005 legislation definition of "reliable operation". Here is the text from the legislation: "The term 'reliable operation' means operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance, including a cybersecurity incident, or unanticipated failure of system elements."</p>

No
We would suggest that the applicability of COM-001-2 be expanded to that listed in COM-002-3. How can the directives to be issued in COM-002 be delivered and confirmed without having Interpersonal Communications capability? All of the functional entities listed in R1.1 should also be listed in R2.1. Similarly the sub-requirements of R3 should also be applied to R4. The same holds true for R5 and R6. If the SDT intends to exclude data communications from Interpersonal Communications and Alternative Interpersonal Communications, we suggest the SDT be more specific in the definition to specifically exclude data communications in the definition. It is not readily apparent that these terms do not apply to data communications and without a clarification, confusion exists.
Yes
In fact, we believe that R1, R2 and R5 more specifically put that requirement on the TOP. The TOP doesn't have to wait for the RC and any directive that may be associated with R3 prior to taking action to mitigate an emergency condition.
No
Is this more of a registry question than a standards issue? While we agree that there needs to be a requirement somewhere that establishes the need for Reliability Coordinators, isn't there also a similar need for other functional entities such as Transmission Operators, Balancing Authorities, etc? Should these be captured in standards or in the certification/registration process?
Yes
Yes
IRO-001-2, R2 implies that the RC could interrupt the normal chain of command from the TOP and/or BA to their respective GOPs, ICs and DPs thereby circumventing the coordinating process that currently exists. In fact, these entities may not even know their RCs nor be able to identify them and as such any directive from the RC may not be implemented in a timely manner. We would like to see a qualifier on this requirement that does not remove the normal coordination role from the TOP with his DP, etc. We would suggest that "with enough details that the accuracy of the message has been confirmed" be deleted from COM-002-3, R2. We would suggest the use of the term "instruction" and its derivatives rather than 'direct' in IRO-001-2. R2. R3 and R4. Delete 'issue an alert to' in IRO-005-4. R1. There are

yellow boxes in IRO-005-4, redline versions, which indicate that this standard is being retired, but it isn't because two requirements from IRO-001 are being returned to this standard.

No

Based on the drafting teams response that the definition of Interpersonal"clarifies the exclusion of media dedicated to Telemetry or other data exchange,the term Interpersonal Communication should be replaced with verbal communication capabilities. The term Alternative Interpersonal Communication should be replaced with alternative verbal communication capability that is able to serve as a substitute for and does not utilize the same infrastructure (medium) as verbal communications capabilities used for day-to-day operations.

Yes

Yes

Yes

1. COM-002 R2 states that "the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message has been confirmed." Recommend a change to "the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the desired outcome of the message is clear". 2. IRO-001 R2 states "Each Reliability Coordinator shall take actions or direct actions which could include issuing Reliability Directives of Transmission Operators, ...." Recommend a change to "Each Reliability Coordinator shall take actions or direct actions which could include issuing Reliability Directives [See COM-002] to Transmission Operators, ..." 3. IRO-001 R4 states entities "shall inform its Reliability Coordinator upon recognition of its inability to perform as directed per Requirement R3." Recommend a change to, entities "shall inform its Reliability Coordinator upon recognition of its inability to perform as directed."

The definition of "Interpersonal Communications" is overly broad and does not address the functional needs of reliability coordination. The definition should be limited to systems utilized for essential reliability functions. While the Purpose statement in the standard does address this intent, the explicit inclusion in the definition removes all ambiguity. Further, the definition of "Alternative Interpersonal Communications" without corresponding explicit definition of Primary Interpersonal Communications may lead to confusion and unnecessary duplication of efforts in testing and maintenance.

No

TOP-001 is in the process of being substantially modified by Project 2007-03. These changes may conflict with the matter addressed by Xcel's comment. Thus, Xcel's concern should be addressed independently but in the context of the TOP-001-2 revisions proposed by Project 2007-03.

Yes

CWLP generally concurs with and supports comments previously submitted by the SERC Operating Committee where those comments are not in conflict with the specific comments above.

Each sub-requirement should not have an "R" in front of the number in order to be consistent with NERC's August 10, 2009 filing at FERC on this subject. Requirement R3 and R4 should include adjacent TOPs as a sub-requirement. Requirements R5 and R6 should include adjacent BAs as a sub-requirement. "to exchange Interconnection and operating information" should be deleted from requirements R1 through R8 as it is redundant with the definition of Interpersonal Communications. The last page of the Implementation Plan includes LSEs, PSE, and TSPs as being responsible entities under this standard, yet the standard does not include them. Please correct the implementation plan.
No
Top-001-1, Requirement R3, which is what the SDT appears to be using as its justification for not adding a requirement here is proposed to be deleted by the RTO-SDT on Project 2007-03.
No
We think you are attempting to create a requirement similar to BAL-005, R1. That language copied here is clear and concise - All generation, transmission, and load operating within an Interconnection must be included within the metered boundaries of a Balancing Authority Area.
Yes
Yes
Reliability Directives may be issued by blast calls from Reliability Coordinators. It is inefficient and may be a hindrance to reliability to require 3-part communications in these instances. There are several organizations registered as BAs, RCs and TOPs. It is not uncommon for those entities to be distributed across multiple desks in the same control room without regard to how an entity is registered. Thus, a single System Operator may perform functions that are categorized under two or more of those functional entities. The drafting team should clarify that under no circumstances should that System Operator be required to issue a Reliability Directive to himself. This is a corporate governance issue. In IRO-014, R1, delete sub-requirement 1.7. The requirement for weekly conference calls related to operating procedures is duplicative to R4 and could be burdensome while adding very little value under certain circumstances. In IRO-014, R4, delete the phrase "(per Requirement 1, Part 1.7)" as a conforming change. In IRO-014, Requirements R6-R8 allow at least the theoretical possibility that an RC may determine an Adverse Reliability Impact in another RC's area that the other RC neither can see nor believes that any action should be taken. R7 puts the burden on the first RC to develop a plan that it cannot implement because it has no agreement with the BAs and TOPs in the other RC area. As such, this requirement is unenforceable. Please review all the implementation plans to be sure the applicable entities match those in the standards.

(1) NERC filed with FERC on August 10, 2009 indicating that it would discontinue the use of sub-requirements in standards. All draft standards posted since have the format of Part Numbers within each main Requirement. Please revise the standards in this project accordingly. (2) Having defined the terms Interpersonal Communication and Alternative Interpersonal Communication, the phrase "to exchange Interconnection and operating information" in a number of requirements is redundant and can be removed. Further, for R1, we suggest removing the phrase "within the same Interconnection since there RCs between two Interconnections still need to communication with each other for reliability coordination (e.g. curtailment of interchange transactions crossing Interconnection boundary, as stipulated in IRO-006). (3) R2: Suggest to add Purchasing-Selling Entity and Interchange Authority (INT-004 and INT-005 have requirements for communication between the RC and the PSE and IA), and remove the phrase "within the same Interconnection since there RCs between two Interconnections still need to communication with each other for reliability coordination (e.g. curtailment of interchange transactions crossing Interconnection boundary, as stipulated in IRO-006). (4) R3: Suggest to add adjacent Transmission Operator and Purchasing-Selling Entity (the latter needed for meeting INT-004 requirements). (5) The list of entities in R4 and R6 is different from those in R3 and R5. They should be the same for having Alternative Interpersonal Communication capability. (6) R5: Suggest to add adjacent Balancing Authority as adjoining BAs need to communication with each to check schedules and other balancing information. (7)

There are a number of parts in Requirements R1 to R8 each of which must be complied with. However, the VSLs for R1 to R8 are binary which do not provide any distinction in partial failure of each of these requirements. We suggest the SDT to apply the VSL guideline and re-establish the various levels of violation severity for these requirements.

No

TOP-001 is being revised and some of the requirements that fulfill this need may have been removed. We suggest the SDT check with the latest draft version of TOP-001 and coordinate with the Real-time Operation SDT to ensure there are not gaps.

No

1. R2: The word "of" before Transmission Operators should be "to". 2. The VSL for R1 should be revised to replace Regional Entities with ERO.

Yes

Yes

1. IRO-001: Reliability Directive: We do not agree with the proposed definition since it addresses Emergencies only. There are situations where a Reliability Directive is issued such that the directed action must be taken by the receiving entity to address a reliability constraint or any condition on the BES which if left unattended could, in the judgment of the issuing entity, lead to an Emergency. These conditions themselves do not constitute an Emergency which is defined as "Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System." There could be no abnormal condition but the actions must nevertheless be taken promptly to prevent the bulk electric system from entering into an abnormal condition. We therefore suggest the term Reliability Directive be revised to: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address a reliability constraint or an Emergency. 2. IRO-001, Requirement R2: This requirement contains the words "which could include issuing Reliability Directives" which is not referenced anywhere else in the standard. We do not think this inclusion is necessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest to remove these words. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of "which could include issuing Reliability Directives" in IRO-001 is unnecessary. We suggest replacing "identified events" with "anticipated events". This requirement also lists Interchange Coordinators as one of the recipients of Reliability Directives which is not consistent with the implementation plan. 3. IRO-014: R4 as written creates unnecessary requirements for an RC to participate in conference calls for issues that may not affect the RC itself. We suggest to reinstate the original word "impacted" as opposed to "other", and remove the words "within the same Interconnection" since such calls and coordination may be required for RCs on both side of the Interconnection boundary. Same change suggested for R5, i.e. replace "other" with "impacted". 4. If an entity provides Interpersonal Communication for day-to-day communication using two different media, e.g. radio and telephone, the proposed definition of Alternative Interpersonal Communication suggests that it would not be possible for one medium to be used as the Alternative Interpersonal Communication for the other since the two media are both used every day. 5. COM-001-2 R10 suggests that the responsible entity must wait for at least 30 minutes before notifying other entities of the failure of its Interpersonal Communication capability. We recommend changing "that lasts 30 minutes" to "that lasts or is expected to last 30 minutes". This allows responsible entities to start notifying other entities earlier. 6. In IRO-005-4 R1: Delete "notify".

Individual

Alice Ireland

Xcel Energy

No

We feel that either the definitions, or the requirements, should make it clear whether data is included.

No

We are concerned that the drafting team may not have understood Xcel Energy's comments and FERC's directive in Order 693. FERC had asked that NERC consider Xcel Energy's suggestion. This consideration does not necessarily equate to the development of additional requirements, however that may be the solution. We recognize that R1 and R2 of TOP-001-1 give the TOP authority to take immediate actions necessary to alleviate operating emergencies. We were concerned with the potential situation where the RC's directive (R3 of IRO-001-2) may conflict with actions the TOP has ALREADY taken. In this situation, we do not feel the TOP should be held at fault for the actions it took prior to the RC's directive. (R3 of IRO-001-2 is currently in effect under TOP-001-1 R3.) Additionally, R1 and R2 of TOP-001-1 have been removed from the latest draft of version 2. So, if TOP-001-2 and IRO-001-2 are approved as drafted, it would appear that all rights and protections of the TOP to take immediate actions will be removed and our initial issue, as detailed in Order 693, still exists.

Group
Kansas City Power & Light
Michael Gammon
No
These requirements require TOP's, BA's, and GOP's to establish alternative means of "interpersonal" communications with other BA's, GOP's, and BA's respectively without regard to the reliability impact each TOP, BA or GOP has on the interconnection. Why would it be necessary for a TOP with one 161kv transmission line or a BA with 100 MW of total load, or one GOP with a 30MW unit to realize additional costs when the facilities they operate have little reliability impact? In addition, most RC's have established satellite telephone systems as back-up communication with TOP's. RC's may have to establish additional communication systems with BA's as these requirements impose to avoid Standards of Conduct issues. R9 – considering the reliability of communication systems, a 2 hour response to a problem with the alternative means of communication is over sensitive. Allowing for sometime in an operating shift would be more in line, such as 8 hours.
Yes
Yes
Yes
Yes
There are more requirements that are being removed in the IRO standards than are currently proposed. It would be helpful if the SDT would consider a mapping of each requirement that is being eliminated and whether the requirement is duplicated elsewhere, moved elsewhere and where, or is deemed not needed would be helpful in judging if the changes are appropriate. Without this mapping it is difficult to fully support all the proposed changes to all these Standards.

**Consideration of Comments on Initial Ballot — Reliability Coordination (Project 2006-06)**  
**Date of Initial Ballot: February 25 – March 7, 2011**

If you feel that the drafting team overlooked your comments, please let us know immediately. Our goal is to give every comment serious consideration in this process. If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Herb Schrayshuen, at 609-452-8060 or at [herb.schrayshuen@nerc.net](mailto:herb.schrayshuen@nerc.net). In addition, there is a NERC Reliability Standards Appeals Process.<sup>1</sup>

**Summary Consideration:**

The RCSDT thanks all stakeholders for their comments. Many stakeholders provided comments suggesting revisions to the standards. Many of these suggestions were incorporated into the standards. As a result of the revisions, the RCSDT is moving COM-001-2, COM-002-3 and IRO-001-2 to a successive ballot. The RCSDT made a few clarifying edits to the remaining standards based on stakeholder comments. Therefore, IRO-002-3, IRO-005-4 and IRO-014-2 are being moved to recirculation ballot. Because of this approach, the SDT will be proposing an interim change to IRO-001: the elimination of Requirement R7, as it is duplicative of one of the requirements in IRO-014-2.

For the COM-001 standard, several commenters had suggestions for improvements to the requirement language and applicability. The RCSDT believes the standard correctly and adequately requires each applicable entity that would have capability to receive Interconnection and operating information to have Interpersonal Communications and Alternative Interpersonal Communications to be used when the Interpersonal Communication is not available. The RCSDT has addressed the applicability of the standards and implementation plans by aligning COM-001-2, and COM-002-3 to include the same entities and by removing LSE, PSE and TSP from the COM standards.

Many comments were concerned about both the medium (e.g. cellular, satellite, etc.) and media (e.g. voice, email, etc.) used for Interpersonal Communications. The current language avoids being prescriptive and allows each entity to determine what is suitable. Interpersonal Communication and Alternative Interpersonal Communication is between the applicable entities which may include multiple locations (e.g. a primary and back-up control center).

The RCSDT added the following Requirement Parts at the suggestion of stakeholders:

- 3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection
- 4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection
- 5.6 Adjacent Balancing Authorities
- 6.3 Adjacent Balancing Authorities

The RCSDT agrees with the many industry comments and removed the phrase "to exchange Interconnection and operating information" in requirements R1 through R8. This removal clarifies that the intent of this capability is NOT for the exchange of data.

A few commenters also expressed concerns about the frequency of testing Alternative Interpersonal Communications capability. The RCSDT believes that the proposed testing frequency is supported by the majority of stakeholders and is not overly burdensome.

<sup>1</sup> The appeals process is in the Reliability Standards Development Procedure: [http://www.nerc.com/files/RSDP\\_V6\\_1\\_12Mar07.pdf](http://www.nerc.com/files/RSDP_V6_1_12Mar07.pdf).

Several commenters suggested that VSLs should be written based on the percent of entities rather than by an occurrence of a violation. VSLs must be written on a violation occurrence basis in accordance with FERC guidelines. The requirements specify which entities must be included in communications capabilities. If a single entity is missing, this is a violation of the requirement. According to VSL guidelines, if missing any part of the requirement could have the same reliability outcome as missing the entire requirement, the requirement is binary and the VSL must be severe.

A new requirement was added to COM-001 for clarity regarding responsibilities of the Distribution Provider and the Generator Operator when either entity experiences a failure of its Interpersonal Communication capability:

R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with its Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]

This requirement requires collaboration between entities to restore a failed communications capability.

The RCSDT asked stakeholders if they believed that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel's comment as directed in FERC Order 693. The original justification that the RCSDT posited for not adding a requirement to directly address Xcel Energy's comments in paragraph 516 and FERC's related recommendation in paragraph 523 was that TOP-001-1 R3 was considered to address this concern. Since that time, the RTO SDT has proposed to retire TOP-001-1 R3. However, NERC has since retired IRO-004-1 R3 and R5 along with IRO-005-3 R5. Because these are retired, there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency. Therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirements," the TOP may respond to the RC that it cannot comply.

Stakeholders were asked if they agree with the revision to IRO-001, R1 for certifying Reliability Coordinators. Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.

A significant revision to IRO-001-2 was made by removing the Interchange Coordinator from the standard. The RCSDT made this revision because the Balancing Function is responsible for implementing interchange (see NERC Reliability Functional Model, version 5, page 32, item 7) and to operate the Balancing Authority Area to maintain load-interchange-generation balance (item 3). The RCSDT asked stakeholders if they agree with moving two requirements from IRO-001 back to IRO-002 relating to Analysis Tool outages. All stakeholders that responded agreed and there were no comments received.

The RCSDT asked stakeholders if they agree with moving two requirements from IRO-001 back to IRO-005 relating to Reliability Coordinator notifications. Several commenters noted a typographical error in R1 which was corrected to read:

When the results of an Operational Planning Analysis or Real-time Assessment indicate an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify ~~issue an alert to~~ all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]"

One commenter also asked that an errant yellow text box be removed from Page 1, which was also done.

The RCSDT received a number of comments regarding the applicability of COM-001, and COM-002. The RCSDT agrees with these comments and has removed PSE and LSE from the COM-001-2 implementation plan. The RCSDT also addressed minor issues involving typos, formatting and style.

The RCSDT received comments suggesting clarification of COM-002-3. The RCSDT intends the communication of Reliability Directives to be person-to-person and in such a manner that the Reliability Directive is understood and not necessarily repeated verbatim. COM-002-3 is not intended to be prescriptive on how the Reliability Directive is issued. Spoken or written communications are valid methods (i.e. using the telephone, radio, electronic texting, email, etc.). The purpose of COM-002-3 is to ensure emergency communications between operating personnel are effective. There is no proxy requirement for 24/7 operating personnel regarding small entities. Only “capability” as provided for in COM-001-2 is applicable. The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols would be addressed in the COM-003 standard being developed in Project 2007-02.

Some commenters suggested revisions to IRO-014, requirement R8 to conform to similar requirements R6 and R7. The RCSDT made the suggested revision by re-ordering R8:

R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

IRO-014-2, requirement R4 is applicable to those Reliability Coordinators engaged in activities related to requirement R1 and part 1.7. It is unlikely that Reliability Coordinators geographically and electrically distant from one another will have mutually agreed upon operating procedures (per requirement R1), and therefore requirement R4 would not be applicable. The RCSDT believes IRO-014-2, requirement R4 (which requires weekly communication) provides reasonable contact and flexibility – and this requirement is in effect today.

The RCSDT coordinated the use of the NERC Glossary term “Adverse Reliability Impact” with the Real-Time Operations team and continues the practice of informing all RCs of Adverse Reliability Impacts in requirement R5.

The RCSDT has revised IRO-014-2, requirements R6-R8 to clarify that when one RC identified a problem and presents an action plan for another RC, the second RC is obligated to implement the action plan. The RCSDT will forward the concern about RC's identifying themselves and the receiver to establish authority to the Project 2007-02, Operating Personnel Communications Protocols SDT. The Project 2007-02 team is developing a standard that includes requirements for use of specific communications protocols.

Kenneth Goldsmith	Alliant Energy Corp. Services, Inc.	4	Negative	<p>While most of the changes recommended in the standards are acceptable to us, we do not believe multiple standards should be included in one ballot. You might ask for comments as a group, but each standard should be balloted separately.</p> <p><b>Response:</b> The SDT has discussed this recommendation and has changed the way that these standards are being posting for ballot. Thank you for your suggestion.</p> <p>COM-001 R10 needs to be clarified that the "impacted entities" are within the same interconnection/area. It is not necessary to contact all entities as could be interpreted by the standard as currently written. We believe there may be differing levels of communication requirements, especially as it relates to smaller entities registered as DP's or LSE's that are not staffed 24 hours per day. We agree there is some responsibility of everyone to have some level of communications, the question is to what level.</p> <p><b>Response:</b> R10 specifies only “impacted entities.” That phrase is used to limit the scope of the requirement. If an entity has a failure of its Interpersonal Communications capability with only one entity, then <i>that</i> entity is the “impacted entity” and they should be notified of the failure.</p>

Joseph S. Stonecipher	Beaches Energy Services	1	Negative	<p>From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. "Accuracy" is not the correct term here. "Understanding" is a better term. It would seem that "accuracy" is a term to be used in R3, the third part of the 3-part communication so that the issuer of the directive ensures the accuracy of the recipients understanding.</p> <p>I suggest changing COM-002-3 R2 to read:</p> <p>Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to clearly communicate the recipient's understanding of the Reliability Directive.</p> <p>The term "accuracy" can be interpreted as requiring the recipient to second-guess the Reliability Directive of the RC to ensure the accuracy of the RC's directive in the first place. Under tight time constraints of Emergencies, this is not practical. We are sure that was not the intent of the drafting team.</p> <p><b>Response:</b> The SDT, in drafting the proposed language, did indeed discuss using the word "understanding" rather than accuracy. However, the SDT was not able to identify a feasible measure for "understanding". A recipient can judge whether the response is accurate when compared with the communications issued, but cannot judge the understanding of anyone, even though the responder may have accurately responded.</p> <p>For IRO-001-2, I don't see a need for R1. Doesn't the ERO already have that authority to establish RC's through the registration process, and to certify system operators through the PER standards?</p> <p><b>Response:</b> Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>IRO-014-2 R5, "impacted" was replaced with "other". Wouldn't it be better to at</p>

Voter	Entity	Segment	Vote	Comment
				<p>least limit the notification to within the same interconnection? Or is R5 truly to identify all NERC registered RC's?</p> <p><b>Response:</b> This requirement continues the current practice of informing all RCs of Adverse Reliability Impacts (ARIs). Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RCs. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>More minor comments / suggestions for improvement: IRO-002 R2 can be improved by replacing "prevent identified events" with "prevent anticipated events". "Anticipated" aligns better with contingency analysis than "identified"</p> <p><b>Response:</b> The SDT believes the commenter intended to be commenting upon IRO-001-2 R2 rather than IRO-002-2 R2. The SDT did indeed consider using the word "anticipated" rather than identified. However, the SDT believes that a decision cannot be made regarding whether to anticipate an event unless it is first identified through some method of assessment. Contingency analysis certainly can be one valid form useful in assessment. Since anything identified by such an assessment must be considered, the SDT believes the requirement should apply to what is identified, rather than the subjective decision of whether to expect or anticipate that which has been identified</p> <p>IRO-005-4 R1 and R2 can be improved by replacing "expected" with "anticipated". Contingencies are not necessarily "expected"; however, we do "anticipate" them.</p> <p><b>Response:</b> The SDT agrees, and has revised the requirements per your suggestion.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment.</p>				
Bud Tracy	Blachly-Lane Electric Co-op	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a</p>

Voter	Entity	Segment	Vote	Comment
				<p>small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window."</p> <p>Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>

**Response:** The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are effective." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this

Voter	Entity	Segment	Vote	Comment
return call would not be timely enough, then the issuer would determine a different mitigation plan.

<p><b>Response:</b> The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				
Steve Alexanderson	Central Lincoln PUD	3	Negative	<p>The stated purpose of COM-002 is: "To ensure emergency communications between operating personnel are effective." As written, the standard fails to meet this purpose because the three requirements only deal with communications at the entity level. There is no requirement for the directing entity to even try to reach operating personnel at the receiving entity. The directing entity may follow all the requirements of this standard by following R1 and R3 with the receiving entity's receptionist, answering service, janitor, night watchman, etc. The receiving entity only needs to meet R2, parroting the directive. Again this could be accomplished by anyone with no assurance the directive reaches the operating personnel who can implement it. When we stated a similar objection during the last comment period, The SDT's answer suggested this was a PER staffing issue, but none of the PER requirements even apply to DP/LSE directive recipients. We suggest the entity issuing the directive should be required to make an attempt to get it to those who are competent to understand and implement the directive. This is not a staffing, training, or credentials issue; it is a performance issue that falls squarely within the stated purpose of this standard. COM-001 R10 presents a paradoxical situation to an entity attempting to comply. Consider an interpersonal communication capability</p>

Voter	Entity	Segment	Vote	Comment
				<p>failure that lasts longer than 60 minutes past initial detection. At or before 60 minutes, the affected entity is expected to notify impacted entities. If it has no interpersonal communication capability, how shall it make this notification? And if the entity does manage to make such a notification, it has thereby proven that it does have interpersonal communication capability making such notification unnecessary. We again ask the SDT to consider that not all the entities in the applicability sections of COM-001 and 002 have 24/7 dispatch centers. These are typically smaller entities that were required to register because they exceed 25 MW or were asked in the past to voluntarily provide UFLS. They do not and do not need to continuously communicate with TOPs, BAs, RCs, etc; and a “reliability directive” is a theoretical thing that has never happened during the memories of thirty year employees. The directive issuing entities simply realize the limitations around the receiving entities and work around them. The financial burden on these small entities and their customers to go to 24/7 dispatch will not have a corresponding reliability benefit. And while the two COM standards do not explicitly state that entities must maintain 24/7 dispatch, when all the requirements and definitions and time horizons are taken together 24/7 continuous competent communication is implied. During the last comment period, the SDT suggested this was a registration issue beyond their control. We submit instead that this is a standard applicability question that the SDT does have control over, since it is right there in Section A.4 of the two COM standards. While we appreciate that the SDT is responding to FERC order 693 to include DPs, we note that FERC also stated: Paragraph 487: “We expect the telecommunication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process.” Paragraph 6: “A Reliability Standard may take into account the size of the entity that must comply and the costs of implementation” Paragraph 141: “...the Commission clarifies that it did not intend to ... impose new organizational structures...” Paragraph 31: “We emphasize that we are not, at this time, mandating a particular outcome by way of these directives, but we do expect the ERO to respond with an equivalent alternative and adequate support that fully explains how the alternative produces a result that is as effective as or more effective that the Commission’s example or directive. We ask the SDT to exclude DPs, LSEs, and PSEs that do not have 24/7 dispatch centers from the applicability of these two standards in order to meet FERC order 693.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, “to ensure emergency communications between operating personnel are <u>effective</u>.” It’s not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of</p>

<p>communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				
Shamus J Gamache	Central Lincoln PUD	4	Negative	<p>The stated purpose of COM-002 is: "To ensure emergency communications between operating personnel are effective." As written, the standard fails to meet this purpose because the three requirements only deal with communications at the entity level. There is no requirement for the directing entity to even try to reach operating personnel at the receiving entity. The directing entity may follow all the requirements of this standard by following R1 and R3 with the receiving entity's receptionist, answering service, janitor, night watchman, etc. The receiving entity only needs to meet R2, parroting the directive. Again this could be accomplished by anyone with no assurance the directive reaches the operating personnel who can implement it. When we stated a similar objection during the last comment period, The SDT's answer suggested this was a PER staffing issue, but none of the PER requirements even apply to DP/LSE directive recipients. We suggest the entity issuing the directive should be required to make an attempt to get it to those who are competent to understand and implement the directive. This is not a staffing, training, or credentials issue; it is a performance issue that falls squarely within the stated purpose of this standard. COM-001 R10 presents a paradoxical situation to an entity attempting to comply. Consider an interpersonal communication capability failure that lasts longer than 60 minutes past initial detection. At or before 60 minutes, the affected entity is expected to notify impacted entities. If it has no interpersonal communication capability, how shall it make this notification? And if the entity does manage to make such a notification, it has thereby proven that it does have interpersonal communication capability making such notification unnecessary. We again ask the SDT to consider that not all the entities in the applicability sections of COM-001 and 002 have 24/7 dispatch centers. These are typically smaller entities that were required to register because they exceed 25 MW or were asked in the past to voluntarily provide UFLS. They do not and do not need to continuously communicate with TOPs, BAs, RCs, etc; and a "reliability directive" is a theoretical thing that has never happened during the memories of thirty year employees. The directive issuing entities simply realize the limitations around the receiving entities and work around them. The financial burden on these small entities and their customers to go to 24/7 dispatch will not have a corresponding reliability benefit. And while the two COM standards do not explicitly state that entities must maintain 24/7 dispatch, when all the requirements and definitions and time horizons are taken together 24/7 continuous competent communication is</p>

John Allen	City Utilities of Springfield, Missouri	4	Negative	See comments from the SPP Standards Development group.
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see response to those comments.</p>				
Shaun Anders	City Water, Light & Power of Springfield	1	Negative	The definition of "Interpersonal Communications" is overly broad and does not address the functional needs of reliability coordination. The definition should be limited to systems utilized for essential reliability functions. While the Purpose statement in the standard does address this intent, the explicit inclusion in the definition removes all ambiguity. Further, the definition of "Alternative Interpersonal Communications" without corresponding explicit definition of Primary Interpersonal Communications may lead to confusion and unnecessary duplication of efforts in

				testing and maintenance.
<p><b>Response:</b> The RCSDT thanks you for your comment. The certification of an entity as a functional entity by the ERO through its certification process will not take place unless the entity has the needed communications capabilities. If the entity cannot perform, it will not be registered. Once an entity is certified as a functional entity, then that entity must comply with all requirements applicable to that functional entity. These standard revisions establish clear requirements for alternative interpersonal communications capability which may or may not be part of the entity certification process. Taken together, the certification process and the Reliability Standards clearly establish the requirements for both normal interpersonal communications capability and alternative interpersonal communications capability.</p> <p>The RCSDT has revised the applicability of COM-001, and COM-002 such that they contain the same functional entities. These are: RC, TOP, BA, GOP, and DP.</p>				
Dave Hagen	Clearwater Power Co.	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities</p>

				that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.
<p><b>Response:</b> The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." Bruce Krawczyk	ComEd	3	Negative	Exelon is voting negative based on our previously submitted comments.
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see the response to those comments.</p>				
Christopher L de Graffenried	Consolidated Edison Co. of New York	1	Abstain	<p>o COM-002 assumes, but does not require, voice logs. This needs to be fixed. Otherwise the documentation could just be a paper log 'check box' entry which says "Yes, we used 3-part." This is not adequate, verifiable documentation for entity audits.</p> <p><b>Response:</b> The standards establish "what" is required, not "how" to do it. The Measures identify methods which are examples of evidence that may be provided to demonstrate compliance, but requirements cannot be established in the measures. Further, valid requirements should not be established that preclude improvements that may arise through technological innovations or other equally effective alternatives. The state of the art at present would seem to indicate that the most prevalent evidence would likely come from a form of voice recordings or transcripts.</p>

				<p>o COM-002 only requires the entity maintain this documentation 3 months. This short retention time period expires long before most auditors check on the entity. So, why bother? This also needs to be fixed or clarified.</p> <p><b>Response:</b> The retention time was established using the NERC Data Retention Guidelines and to recognize that vast amount of data which would have to be retained to present evidence. In addition, any event under investigation has likely been accompanied by a requirement to “freeze” data retention and keep all relevant information and date for a specified timeframe surrounding the event.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment.</p>

Bob Essex	Cowlitz County PUD	5	Negative	COM-001 presents problems for smaller entities that do not have any other option for communications other than the failed communication line. The SDT should consider exempting such entities, requiring them to contact others to inform of their failed one and only communication option is a catch-22. COM-002 does not adequately provide for effective communication with smaller entities that do not have 24-7 control/dispatch functions. The directing entity issuing Reliability Directives must contact competent personnel. The SDT’s reference to the PER requirements falls very short in addressing this problem as the DPs and LSEs are not even applicable to the suggested standards. Again, the SDT should consider certain exemptions for such entities. Please note that FERC itself noted that “a Reliability Standard may take into account the size of the entity that must comply and the costs of implementation...” “...the Commission clarifies that it did not intend to ... impose new organizational structures...” and also “[w]e expect the communication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process.” Although the STD did not include all applicable entities to have backup communications, it failed to see the limitations of such entities without backup communications impeding their ability to comply with other requirements.
-----------	--------------------	---	----------	---

**Response:** The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, “to ensure emergency communications between operating personnel are effective.” It’s not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.

Dave Sabala	Douglas Electric Cooperative	3	Negative	Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability
-------------	------------------------------	---	----------	---

				<p>directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>

It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.

Henry Ernst-Jr	Duke Energy Carolina	3	Negative	<p>o We question how far the definition of Alternative Interpersonal Communication goes in requiring separate infrastructure from Interpersonal Communication. For example, wireless communications sometime utilize fiber optic networks.</p> <p><b>Response:</b> The definition requires the use of different infrastructure (medium) than the Interpersonal Communication used for day to day operations. The RCSDT does not believe it is appropriate to be prescriptive with respect to the specific medium employed. This is intended to apply to assets and access to media that is under your control. For example, the way cell phone signals are routed are not under your control.</p> <p>o We question why the requirements state that entities must “have” Interpersonal Communications capability, but must “designate” Alternative Interpersonal Communications capability?</p> <p><b>Response:</b> Many entities have multiple Alternative Interpersonal Communication capabilities. Large entities may have a second land line, cell phone, satellite phone, etc. The purpose of “designating” the Alternative is so that other entities know which one is in use and is a reliable means of communications. Allowing them to designate which one they want to employ allows for flexibility in which one they use for AIC.</p> <p>o R1.2 and R2.2 - Why is this limited to the same interconnection?</p> <p><b>Response:</b> The phrase “within the same interconnection” is added for the case of ERCOT which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>o R3 - need to add neighboring TOPs.</p> <p><b>Response:</b> Agreed. The standard has been modified as suggested.</p> <p>o R5 - need to add adjacent BAs.</p> <p><b>Response:</b> Agreed. The standard has been modified as suggested.</p> <p>o Interchange Coordinator - Add IC to the Applicability Section, and add a requirement that the IC have Interpersonal Communication capability with its BA and adjacent BAs.</p> <p><b>Response:</b> We eliminated the Interchange Coordinator from COM-001-2 based</p>
----------------	----------------------	---	----------	---

				<p>on stakeholder feedback.</p> <p>o Requirements to “designate” Alternative Interpersonal Communication should carry a “Medium” VRF instead of “High”, because they are a backup capability. The word “designate” carries the connotation that these are documentation requirements.</p> <p><b>Response:</b> While the requirement is phrased to focus on the documentation, the reliability objective is that the entity has an alternative communication capability with those functional entities most critical to its real-time operations.</p> <p>o R9 requires a monthly test of Alternative Interpersonal Communications capability. This was quarterly in the last draft. We question how these requirements for “Alternative Interpersonal Communications” capability are related to requirements for “backup functionality” in EOP-008-1, which requires an annual test of backup functionality. Clarity on the relationship between “Interpersonal Communications”, “Alternative Interpersonal Communications”, “primary control center functionality” and “backup control center functionality” would be appreciated.</p> <p><b>Response:</b> Interpersonal Communication and Alternative Interpersonal Communication are not related to EOP-008. The provision to test may be performed through day to day use of the capability.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>				
George S. Carruba	East Kentucky Power Coop.	1	Negative	As currently written, IRO-014 could be interpreted that if a RC identifies an adverse reliability impact in another RC and the other RC does not agree with the findings, the RC who identified the adverse reliability impact would be responsible for creating a mitigation plan to address the issue. This may not be possible if the identifying RC does not have agreements in place with the TOPs/BAs in the other RC area.
<p><b>Response:</b> The RCSDT thanks you for your comment. IRO-014-2 requirement R6, requires all RCs to operate as if the problem exists even when they disagree with the RC that identified the problem. Even if there is a disagreement between RCs, R8 still requires that all RCs comply with the action plan developed by the RC that identified the adverse reliability impact unless compliance with the action plan would violate safety, equipment, regulatory or statutory requirements. As envisioned, the TOPs and BAs would receive operating instructions from their own RC, not from the RC in another Reliability Coordinator Area.</p>				
Sally Witt	East Kentucky Power Coop.	3	Negative	As currently written it could be interpreted that if an RC identifies an Adverse reliability Impact in another RC Area and they do not agree with the findings, the

				RC who identified the adverse reliability Impact would be responsible for creating a mitigation plan to address the issue. This may not be feasible if the identifying RC does not have agreements in place with TOPs/BAs in the other RC Area.
<p><b>Response:</b> The RCSDT thanks you for your comment. IRO-014-2 requirement R6, requires all RCs to operate as if the problem exists even when they disagree with the RC that identified the problem. Even if there is a disagreement between RCs, R8 still requires that all RCs comply with the action plan developed by the RC that identified the adverse reliability impact unless compliance with the action plan would violate safety, equipment, regulatory or statutory requirements. John R Cashin	Electric Power Supply Association	5	Affirmative	I will be submitting comments in the regular form tomorrow.
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see response to those comments.</p>				
Chuck B Manning	Electric Reliability Council of Texas, Inc.	2	Negative	We agree with the comments submitted by the IRC SRC and we have submitted those same comments.
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see response to those comments.</p>				
Martin Kaufman	ExxonMobil Research and Engineering	5	Negative	The Measurement 2 of COM-002-3 has the potential to create numerous violations without any reliability impact to the Bulk Electric System. Specifically, for those facilities without voice recording equipment, the requirement to record in an operator log that the BA/GOP/TOP/TSP repeated the intent of a directive back to the RC provides no benefit to the reliability of the BES and adds a situation where an entity can be found non-compliant by an RE with zero impact to the reliability of the BES. In response to a directive from an RC, it's important for the reliability of the BES for a facility to identify an instruction as a directive, resolve whether the facility can comply with the directive, and inform the RC when it could not comply with the directive. Documentation requirements should reflect these three items.
<p><b>Response:</b> The RCSDT thanks you for your comment. Based on comments from other stakeholders, the SDT has removed the TSP, LSE and PSE from responsibility for any of the requirements in COM-002. As envisioned, in an emergency the RC would issue most Reliability Directives to its BAs and TOPs, and there may be times when the RC bypasses its TOPs and BAs and issues a Reliability Directive to its DPs</p>				

and GOPS. The RC would not, however, issue a Reliability Directive to TSPs, LSEs, or PSEs.

Note that M2 only requires that the recipient document that it repeated the reliability directive. Collectively, the three measures do what you have proposed – they require that the applicable entities document that the three parts of the communication took place – original issuance; accurate repeat; confirmation. Operating logs are offered as one form of acceptable evidence – but other types of evidence could also be used to demonstrate compliance.

Bryan Case	Fall River Rural Electric Cooperative	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. Frank Gaffney	Florida Municipal	4	Negative	From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part

	Power Agency		<p>communication. "Accuracy" is not the correct term here. "Understanding" is a better term. It would seem that "accuracy" is a term to be used in R3, the third part of the 3-part communication so that the issuer of the directive ensures the accuracy of the recipients understanding. FMPA suggests changing COM-002-3 R2 to read: Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to clearly communicate the recipient's understanding of the Reliability Directive. The term "accuracy" can be interpreted as requiring the recipient to second-guess the Reliability Directive of the RC to ensure the accuracy of the RC's directive in the first place. Under tight time constraints of Emergencies, this is not practical. We assume that was not the intent of the drafting team.</p> <p><b>Response:</b> The SDT, in drafting the proposed language, did indeed discuss using the word "understanding" rather than accuracy. However, the SDT was not able to identify a feasible measure for "understanding". A recipient can judge whether the response is accurate when compared with the communications issued, but cannot judge the understanding of anyone, even though the responder may have accurately responded.</p> <p>For IRO-001-2, FMPA does not see a need for R1. Doesn't the ERO already have that authority to establish RC's through the registration process, and to certify system operators through the PER standards?</p> <p><b>Response:</b> Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>IRO-014-2 R5, "impacted" was replaced with "other". Wouldn't it be better to at least limit the notification to within the same interconnection? Or is R5 truly to identify all NERC registered RC's?</p> <p><b>Response:</b> This requirement continues the current practice of informing all RCs of Adverse Reliability Impacts (ARIs). Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC's. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>More minor comments / suggestions for improvement: IRO-002 R2 can be</p>
--	--------------	--	--

				<p>improved by replacing "prevent identified events" with "prevent anticipated events". "Anticipated" aligns better with contingency analysis than "identified"</p> <p><b>Response:</b> The SDT believes the commenter intended to be commenting upon IRO-001-2 R2 rather than IRO-002-2 R2. The SDT did indeed consider using the word "anticipated" rather than identified. However, the SDT believes that a decision cannot be made regarding whether to anticipate an event unless it is first identified through some method of assessment. Contingency analysis certainly can be one valid form useful in assessment. Since anything identified by such an assessment must be considered, the SDT believes the requirement should apply to what is identified, rather than the subjective decision of whether to expect or anticipate that which has been identified.</p> <p>IRO-005-4 R1 and R2 can be improved by replacing "expected" with "anticipated". Contingencies are not necessarily "expected"; however, we do "anticipate" them.</p> <p><b>Response:</b> The SDT agrees and have revised the requirements per your suggestion.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment.</p>				
Thomas E Washburn	Florida Municipal Power Pool	6	Negative	<p>From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. 				suggestion.
<b>Response:</b> The RCSDT thanks you for your comment.				
Silvia P. Mitchell	Florida Power & Light Co.	6	Negative	<p>8) Question 1</p> <p>1. Do you agree with COM-001 requirements for Interpersonal Communications capability and Alternative Interpersonal Communications capability (R1-R8)? If not, please explain in the comment area below. No</p> <p>9) Question 1 Comments: As drafted, COM-001 is not clear or complete. At this stage in the evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. Thus, NextEra Energy Inc. (NextEra) has numerous recommended corrections to provide clarity and completeness to COM-001. For example, the requirement to designate an Alternative Interpersonal Communication capability is not clear. Does the designator solely designate for the designator's knowledge or does the designator need to inform the entity on the other end of the connection.</p> <p>In R2, for instance, the Reliability Coordinator must designate, but it is also not clear whether the Reliability Coordinator must inform the Balancing Authorities or Transmission Operators. It is further unclear whether the designation must be documented, or if any informing of the Balancing Authorities or Transmission Operators must be documented. Thus, it is recommended that the drafters decide what was intended regarding the designation and clearly state the requirements.</p> <p>In R9 it states that “. . . on at least a monthly basis.” There are two issues to consider here. If the sentence stays, grammatically it should read “. . . on, at least, a monthly basis. . .” However, from a compliance and technical perspective, the term “at least” has no significance and should be deleted. The requirement is to test on a monthly basis - the phrase “at least” only introduces ambiguity and implies that the party should consider every two or three weeks. If the drafting team believes a best practice is less than a month, there are other NERC educational tools to explain a best practice.</p> <p>In R10, it states “. . . shall notify the impacted entity . . .” It would be clearer to state: “. . . shall notify the impacted Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator . . .” Page 6</p>

			<p><b>Response:</b> The Requirement R2 is for the RC to designate an AIC and inform the other entity (BA, TOP, etc.) as to what that AIC is. The Measure M2 provides examples of the types of evidence which may be used to prove compliance with the requirement.</p> <p>The RCSDT believes that stakeholders are satisfied with the wording of the requirements of this standard. The phrase “at least” was included to relay the intent – that the monthly requirement is a minimum, and some entities may wish to perform this more frequently. It does not add any compliance obligation to perform this activity more frequently than specified.</p> <p>For R10, the RCSDT believes that the existing language is sufficiently clear.</p> <p>10) Question 2 2. The RCSDT believes that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel’s comment. Do you agree? If not, please explain in the comment area below. No</p> <p>11) Question 2 Comments: As stated in response to number 1, Reliability Standards are to be clear and complete. If a Transmission Operator is not responsible for a delay caused by a Reliability Coordinator, the Standard should specifically state that the Transmission Operator does not need to wait for an assessment or approval of a Reliability Coordinator to take actions pursuant to TOP-001-1 R3. Since the Reliability Coordinator is atop the reliability higherachy, such a statement provides clarity and completeness to understanding a Transmission Operators rights. Thus, TOP-001-1 R3 should be revised to lead with: “Without any obligation to first seek and obtain an assessment or approval from its Reliability Coordinator, each Transmission Operator . . . .” Page 10</p> <p><b>Response:</b> The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirements”, the TOP may respond to the RC that it cannot comply.</p> <p>12) Question 6 Comments: At this stage in evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. COM-002, IRO-001, IRO-002 and IRO-014 do not meet this threshold. Thus, NextEra has numerous recommended corrections to provide clarity and completeness to these Reliability</p>
--	--	--	--

			<p>Standards. COM-002 R1 The addition of defined terms for Reliability Directive and Emergency is a very good approach that helps provides clarity. Hence, it is also be appropriate to make the language in the requirement as clear as possible, and not add other implied or unexplained notions. Also, at times, in those regions with markets, it is not always clear whether a requirement to curtail for reliability reasons is being issued pursuant to market rules or from the Reliability Coordinator or Transmission Operator under the Reliability Standards. Therefore, it is also appropriate that the Reliability Coordinator, Transmission Operator, Balancing Authority be required to identify themselves;, and if they fail to identify themselves or fail to use the term Reliability Directive, the registered entity receiving the flawed issuance should not be consider in violation of a Reliability Standard for failing to act. Accordingly, R1 would be clearer and have the same intent, if it stated as follows: “A Reliability Coordinator, Transmission Operator or Balancing Authority have the authority to issue an oral or written Reliability Directive as authorized in [list the specific Reliability Standard requirements such as IRO-001 R8 and TOP-001 R3]. The issuance of an oral of written Reliability Directive, by a Reliability Coordinator, Transmission Operator or Balancing Authority shall: (1) use the term ‘Reliability Directive;’ and (2) identify the issuer of the Reliability Directive as a Reliability Coordinator, Transmission Operator or Balancing Authority. If a Reliability Coordinator, Transmission Operator or Balancing Authority issues an oral or writtern directive without using the term “Reliability Directive” or failing to indentify itself as a Reliability Coordinator, Transmission Operator or Balancing Authority, the registered entity receiving the directive cannot be considered in violation for its failure to act.”</p> <p><b>Response:</b> There is a new standard under development (COM-003) that is addressing a broader range of communications protocols, and has proposed a requirement for the Reliability Coordinator to announce his/her title when issuing alerts and other types of announcements.</p> <p>IRO-001 The definition of Adverse Reliability Impacts uses the term “instability.” It is important that this term be technically defined in the same way “Cascading” is defined, otherwise the new requirement is not adding clarity; rather, it is maintaining the ambiguous term “instability” that will likely lead to confusion and debate.</p> <p><b>Response:</b> The term, ‘instability’ is already used in many reliability standards.</p> <p>R1 Similar to the comments set forth with respect to COM-001 (question #1), the term “at least” should be deleted from R1 - it serves no useful purpose from a technical or compliance perspective; instead, it will add unnecessary ambiguity to the requirement.</p> <p><b>Response:</b> The phrase, “at least” was included to relay the intent – that the monthly requirement is a minimum, and some entities may wish to perform this</p>
--	--	--	--

				<p>more frequently. It does not add any compliance obligation to perform this activity more frequently than specified.</p> <p>R2, as drafted, states: “Each Reliability Coordinator shall take actions or direct actions, which could include issuing oral or written Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. “ This long sentence has several significant grammatical errors that result in the reader not being able to discern the meaning of the requirement. It also unnecessarily adds verbiage that detracts from its primary focus. It is, therefore, recommended that R2 be revised as follows: “Each Reliability Coordinator shall take all necessary actions to prevent identified Emergencies or Adverse Reliability Impacts. These Reliability Coordinator actions shall include, to the extent necessary, the issuing of oral or written Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers located within its Reliability Coordinator Area. “</p> <p><b>Response:</b> The SDT has considered the alternative language proposed and finds that the— the phrase, ‘all necessary action’ is ambiguous. Who would decide that ‘all necessary action’ had been taken?</p> <p>R3, as drafted, is confusing and inconsistent with R2, and, thus, R3 should be revised to read as follows: “Upon receipt of a Reliability Directive issued pursuant to R2, a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with the Reliability Directive, unless compliance would violate safety, equipment, regulatory or statutory requirements. In the event that a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider determines that compliance with a Reliability Directive would violate safety, equipment, regulatory or statutory requirements, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall, within 10 minutes after the determination, inform the Reliability Coordinator of its inability to comply.”</p> <p><b>Response:</b> The team adopted the intent of part of this suggestion by replacing the word, ‘per’ with, ‘in accordance with’. The team elected not to add a time constraint because the proposed time constraint implies that it would be acceptable to delay up to 10 minutes before notifying the RC – and in some instances this time delay</p>
--	--	--	--	---

				<p>could result in and adverse impact to reliability.</p> <p>IRO-002R1 and R2, as written, are confusing. It is recommended that R1 and R2 be combined to read as follows: “Pursuant to a written procedure to mitigate the impact of a Reliability Coordinator’s analysis tool outage, a Reliability Coordinator’s System Operator shall also have the authority to approve, deny or cancel a planned outage for its analysis tool.”</p> <p><b>Response:</b> The drafting team believes that the language in the proposed standard is clear as written. No reason has been provided for merging the two requirements, and the benefit of merging the requirements is not clear.</p> <p>IRO-014 It is unclear why the terms Operating Procedure, Operating Process or Operating Plan needs to be plural, as currently written in the Standard. Hence, it is recommended that these terms be made singular, otherwise a violation may be inferred for not having more than one Procedure, Process or Plan.</p> <p><b>Response:</b> The range of activities that must be addressed by the documents is expected to require more than one document, thus the use of the plural versions of these terms.</p> <p>Insert the word “applicable” before “Reliability Coordinator.”</p> <p><b>Response:</b> The benefit of adding the word ‘applicable’ is not clear.</p> <p>2.1, as written, is confusing. Recommend that 2.1 read as follows:”Review and update, if an update is necessary, on an annual basis. Annual basis means the review shall be within one month plus or minus that date of the last review.”</p> <p><b>Response:</b> The 15 month interval was recommended by the compliance program as the outer bound to recommend in standards that use the term, “annual” or “annually.”</p> <p>There is a compliance bulletin on this issue.</p> <p>R3 This requirement uses a very vague term “reliability-related information,” which, also, does not track the language used in R1 -- “information.” It is recommended that R1 and R3 use the same terms and read “ . . . information, as defined by the Reliability Coordinator, . . . “</p> <p><b>Response:</b> Requirement R1 is not open-ended – it identifies information needed for Interconnection reliability. R3 points to the information identified by complying with R1. The intent was to limit the scope to areas needed for reliability. RCs may want other information for reasons not related to reliability, and that information is outside the scope of this standard.</p> <p>R4 As stated above, “at least” does not add value, and, therefore, should be</p>
--	--	--	--	---

				<p>deleted.</p> <p><b>Response:</b> The phrase, “at least” was included to relay the intent – that the monthly requirement is a minimum, and some entities may wish to perform this more frequently. It does not add any compliance obligation to perform this activity more frequently than specified.</p> <p>R5, as written, is confusing. The recommended fix is to delete “all other” and replace with “impacted”.</p> <p><b>Response:</b> The SDT did intend that all other RCs be notified. This requirement continues the current practice of informing all RCs of Adverse Reliability Impacts (ARIs). Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>				
Thomas W. Richards	Fort Pierce Utilities Authority	4	Negative	<p>From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. "Accuracy" is not the correct term here. "Understanding" is a better term. It would seem that "accuracy" is a term to be used in R3, the third part of the 3-part communication so that the issuer of the directive ensures the accuracy of the recipients understanding. FPUA suggests changing COM-002-3 R2 to read: Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to clearly communicate the recipient's understanding of the Reliability Directive.. The term "accuracy" can be interpreted as requiring the recipient to second-guess the Reliability Directive of the RC to enure the accuracy of the RC's directive in the first place. Under tight time constraints of Emergencies, this is not practical. We are sure that was not the intent of the drafting team.</p> <p><b>Response:</b> The RCSDT revised the requirement as follows to remove the “accuracy’ language:</p> <p><b>R2. Each Balancing Authority, Transmission Operator, Generator</b></p>

				<p>Operator, and Distribution Provider that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.</p> <p>For IRO-001-2, FPUA does not see a need for R1. Doesn't the ERO already have that authority to establish RC's through the registration process, and to certify system operators through the PER standards?</p> <p><b>Response:</b> Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>IRO-014-2 R5, "impacted" was replaced with "other". Wouldn't it be better to at least limit the notification to within the same interconnection? Or is R5 truly to identify all NERC registered RC's?</p> <p><b>Response:</b> This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC's. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>More minor comments / suggestions for improvement: IRO-002 R2 can be improved by replacing "prevent identified events" with "prevent anticipated events". "Anticipated" aligns better with contingency analysis than "identified"</p> <p>IRO-005-4 R1 and R2 can be improved by replacing "expected" with "anticipated". Contingencies are not necessarily "expected"; however, we do "anticipate" them.</p> <p><b>Response:</b> The SDT believes the commenter intended to be commenting upon IRO-001-2 R2 rather than IRO-002-2 R2. The SDT has revised the requirements per your suggestion.</p>
<p><b>Response:</b> Thank you for your comments. Please see responses above.</p>				
Anthony L Wilson	Georgia Power Company	3	Affirmative	Please see comments
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see response to posting comments for the SERC OC Standards Review Group; the RCSDT did not specifically find comments from Georgia Power Company and believes comments were included within this group.</p>				

Gordon Pietsch	Great River Energy	1	Negative	<p>Reliability Directive: It is our opinion the definition as currently written is too subjective and may cause a compliance auditor to question the grounds under which one of applicable entities declared the directive. We believe that revising the definition to state “to address a declared emergency...” will remove the subjectivity.</p> <p>Requirements for using three-part communication: It is our opinion that the standard needs language that clearly states that during a Blast Call three-part communication is not required. Blast Calls are used when information needs to be disseminated quickly to a large number of entities. Strictly enforcing the use of three-part communication under these circumstances has the potential to be more harmful to reliability than helpful.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment.</p> <p>Reliability Directive: The RCSDT believes the proposed standard requirement addresses your requested revision. “R1...<u>shall identify the action as a Reliability Directive...</u>” is addressing a declared emergency.</p> <p>R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority <u>shall identify the action as a Reliability Directive</u> to the recipient.</p> <p>As a reference, we have included the existing definition of Emergency:</p> <p>Emergency: Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.</p> <p>The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols would be addressed in the COM-003 standard being developed in Project 2007-02.</p>				
Shaun Jensen	Idaho Power Company	3	Negative	<p>It appears there is much concern with the wording, particularly in R2, as well as parties having issues with intermingled definitions. It is recommended to reword this, and ensure the VSL accurately reflects a direct definition that all entities all clear and certain on.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. The RCSDT is not sure of which standard requirement is being referenced.</p>				
Bob C. Thomas	Illinois Municipal Electric Agency	4	Negative	<p>IMEA appreciates the SDT's efforts to date. We are basing our negative vote on ballot pool communications that have addressed points that need further refinement before the proposed revisions to these reliability standards are affirmed. IMEA supports, in particular, comments submitted by the Midwest ISO and the SERC OC</p>

				Standards Review Group.
<p><b>Response:</b> The RCSDT thanks you for your comments. Please see responses to Midwest ISO and SERC OC Standards Review Group.</p>				
Kim Warren	Independent Electricity System Operator	2	Negative	<p>While we support the general direction of these standards development actions, we do have a number of concerns which cumulatively lead us to advocate a NEGATIVE vote. These include:</p> <p>(1) The phrase “within the same Interconnection” in COM-001-2 R1, limits the coordination activities to RCs, TOPs and BAs that can be detrimental to reliability. We recommend removing this phrase.</p> <p><b>Response:</b> The RCSDT does not agree that the phrase “within the same interconnection” limits coordination between entities. The purpose of the phrase is to place a bound on which adjacent entity an RC must have Interpersonal Communication (e.g., an EI RC does not need communication with WI RCs). The phrase “within the same interconnection” is added for the case of ERCOT which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>(2) We believe the Interchange Coordinator and Purchasing-Selling Entity also need to have adequate communication capabilities with other entities but they are not included in the applicability section of COM-001-2.</p> <p><b>Response:</b> We disagree that the IC and PSE need to be an applicable entity. To maintain reliability does not require communication with these entities. The applicability of COM-001, COM-002 and IRO-001 were revised to include the same reliability entities: RC, TOP, BA, DP and GOP. LSE, PSE and TSP were removed from the applicability of these standards per stakeholder suggestion.</p> <p>(3) The proposed definition of Reliability Directive addresses Emergency condition only. There are situations where a Reliability Directive is issued such that the directed action must be taken by the receiving entity to address a reliability constraint, which by itself does not constitute an Emergency. We suggest the term Reliability Directive be revised to: “A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address a reliability constraint or an Emergency.”</p> <p><b>Response:</b> The RCSDT believes that your comment concerns “directives” or “instructions” for normal operational activities rather than a Reliability Directive. There is no requirement preventing an entity from issuing either directives or</p>

				<p>instructions for the situations you mention. The intent of creating a Reliability Directive definition is to ensure that communications is tightened during Emergencies (per blackout report). When an RC issues a Reliability Directive, the RC has made a deliberate decision to formally end collaboration and require specific action(s). In addition, the Operating Personnel Communication Protocols SDT is addressing your concern about instances that are not considered an emergency. As envisioned, communications protocols requiring additional applications for use of three-part communications would be addressed in the COM-003 standard being developed in Project 2007-02.</p> <p>(4) Requirement R9 of COM-001-2 needs to be clarified. As written the requirement seems open ended once action to repair of a failed Alternative Interpersonal Communication is initiated within 2 hours but not completed within that time. It is not clear whether there is an expectation on the responsible entity to designate a replacement Alternative Interpersonal Communication if repairs cannot be completed within that period.</p> <p><b>Response:</b> The requirement is saying that if the test fails you must initiate action for repair or designate a replacement alternative within two hours. There is no requirement for a tertiary capability nor is there a requirement for a repair deadline.</p> <p>We have also submitted additional comments in response to the request for comments.</p> <p><b>Response:</b> Please see responses to other comments</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>				
Michael Moltane	International Transmission Company Holdings Corp	1	Negative	<p>ITC votes negative for the reasons detailed in the MISO-submitted comment form related to this Project (ITC signed onto the MISO comments). While this standard revision moves in the right direction, we believe at least one additional iteration will be needed to correct the concerns indicated in the comment form.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. Please see responses to Midwest ISO.</p>				
Kathleen Goodman	ISO New England, Inc.	2	Negative	<p>Although ISO-NE believes these Standard represent a great improvement, we are voting against because we believe they would be improved by the comments that we have offered. We would gladly modify our vote in the Affirmative if our comments are considered in the next ballot.</p>

<b>Response:</b> The RCSDT thanks you for your comment. Please see response to those comments.				
Charles Locke	Kansas City Power & Light Co.	3	Negative	These requirements impose alternative means of communication on TOP's, BA's and GOP's regardless of the impact the entity may have on maintaining interconnection reliability. In addition, there are many IRO requirements that are proposed to be eliminated that do not appear to be considered in other places.
<b>Response:</b> The RCSDT thanks you for your comments. We cannot delineate entity impact on reliability and respond only regarding entity registration with NERC.				
Scott Heidtbrink	Kansas City Power & Light Co.	5	Negative	These requirements impose alternative means of communication on TOP's, BA's and GOP's regardless of the impact the entity may have on maintaining interconnection reliability. In addition, there are many IRO requirements that are proposed to be eliminated that do not appear to be considered in other places.
<b>Response:</b> The RCSDT thanks you for your comments. We cannot delineate entity impact on reliability and respond only regarding entity registration with NERC.				
Jessica L Klinghoffer	Kansas City Power & Light Co.	6	Negative	These requirements impose alternative means of communication on TOP's, BA's and GOP's regardless of the impact the entity may have on maintaining interconnection reliability. In addition, there are many IRO requirements that are proposed to be eliminated that do not appear to be considered in other places.
<b>Response:</b> The RCSDT thanks you for your comments. We cannot delineate entity impact on reliability and respond only regarding entity registration with NERC.				
Jim M Howard	Lakeland Electric	5	Negative	<p>From the last posting to this posting, for COM-002-3 R2, the phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. Why was this added? - "Accuracy" is not the correct term here. Suggest changing COM-002-3 R2 to read: Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to clearly communicate the recipient's understanding of the Reliability Directive.</p> <p><b>Response:</b> The SDT, in drafting the proposed language, did indeed discuss using the word "understanding" rather than accuracy. However, the SDT was not able to</p>

				<p>identify a feasible measure for “understanding”. A recipient can judge whether the response is accurate when compared with the communications issued, but cannot judge the understanding of anyone, even though the responder may have accurately responded.</p> <p>The term "accuracy" can be interpreted as requiring the recipient to second-guess the Reliability Directive of the RC to ensure the accuracy of the RC's directive in the first place. Under tight time constraints of Emergencies, this is not practical. We are sure that was not the intent of the drafting team.</p> <p><b>Response:</b> Several commenters expressed concern about the use of the word, ‘accuracy’ and the team revised the requirement to remove this word.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment.</p>				
Paul Shipps	Lakeland Electric	6	Negative	<p>The phrase "the accuracy of the message has been confirmed" was added to the second step of three part communication. "Accuracy" is not the correct term here. "Understanding" is a better term. The term "accuracy" is a term to be used in R3, the third part of the 3-part communication, so that the issuer of the directive ensures the accuracy of the recipients understanding.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. The RCSDT has removed that phrase from the requirement as it was difficult to measure and many stakeholders had concerns with the language.</p>				
Rick Crinklaw	Lane Electric Cooperative, Inc.	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the</p>

				<p>language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				
Michael Henry	Lincoln Electric Cooperative, Inc.	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. --	--	--	--	---

**Response:** The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are effective." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this

return call would not be timely enough, then the issuer would determine a different mitigation plan.

Bruce Merrill	Lincoln Electric System	3	Negative	For NERC Reliability Standard COM-001-2, LES believes that interpersonal communication is the act of communicating and that the requirements specify normal and redundant facilities for Interpersonal Communication. As such, LES recommends the definition for “Interpersonal Communication” be changed to “Any act where two or more individuals communicate, interact, consult or exchange information, including listening or reading”. Additionally, for NERC Reliability Standard IRO-001-2, LES recommends replacing the word “certify” in R1 and M1 with “assign”. As currently written it is unclear what the certification of the Reliability Coordinator will entail and how it will be established by the ERO.
---------------	-------------------------	---	----------	---

**Response:** The RCSDT thanks you for your comment. We specifically included “medium” to distinguish a source or vehicle of communication instead of a “personal” reference.

NERC has an established certification procedure for all registered entities and “certify” is in line with NERC’s process.

Dennis Florum	Lincoln Electric System	5	Negative	For NERC Reliability Standard COM-001-2, LES believes that interpersonal communication is the act of communicating and that the requirements specify normal and redundant facilities for Interpersonal Communication. As such, LES recommends the definition for “Interpersonal Communication” be changed to “Any act where two or more individuals communicate, interact, consult or exchange information, including listening or reading”. Additionally, for NERC Reliability Standard IRO-001-2, LES recommends replacing the word “certify” in R1 and M1 with “assign”. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.

Charles A. Freibert	Louisville Gas and Electric Co.	3	Negative	Refer to the comment form.
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see response to posting comments for LGE/KE; the RCSDT did not specifically find comments from Louisville Gas and Electric Co.</p>				
Joseph G. DePoorter	Madison Gas and Electric Co.	4	Negative	MGE is voting negative for several reasons. Please see the MRO NSRS comments for a full description. Plus, whenever there are multiple Standards within a Project, registered entities will be forced to vote negative when there is at least one negative aspect.
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see response to MRO NSRS comments. The NERC SC approved the SAR and the RCSDT only drafts requirements within the scope of the SAR. The RCSDT will move to a successive ballot with each standard balloted separately.</p>				
Joe D Petaski	Manitoba Hydro	1	Negative	The current data retention requirement of 90 days is more than adequate. Increasing this period to 12 months would result in a significant amount of work with no benefit to reliability. For additional comments, please see Manitoba Hydro's comments provided during formal comment period.
<p><b>Response:</b> The RCSDT thanks you for your comment. However, the comment submitted is incomplete and does not reference specific standard(s) or requirement(s). The data retention periods for the set of standards proposed is consistent with the guidelines provided in the NERC Drafting team Guidelines. Note that with recent changes to the Rules of Procedure, entities must be prepared to demonstrate that they were compliant for the full time period since the last audit.</p>				
Greg C. Parent	Manitoba Hydro	3	Negative	The current data retention requirement of 90 days is more than adequate. Increasing this period to 12 months would result in a significant amount of work with no benefit to reliability. For additional comments, please see Manitoba Hydro's comments provided during formal comment period.

Jason L Marshall	Midwest ISO, Inc.	2	Negative	<p>We thank the drafting team for their efforts on this project to improve the reliability coordination standards. The quality of the standards continues to improve over previous postings. While the drafting team is definitely moving the standards in the right direction, we believe we have not reached the point of diminishing returns and that there are several issues that the drafting team still needs to address.</p> <p>1 This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities.</p> <p><b>Response:</b> The sub-requirements are an old format. The standard was updated to the new template, and sub-requirements are now Parts.</p> <p>2 In general, we are not opposed to the concept of the ERO certifying the Reliability Coordinators; however, there are some issues with how the requirement IRO-001-2 R1 is written. The requirement places emphasis on regions and regional boundaries when no emphasis should be placed there. There are multiple Reliability Coordinators that span multiple regions. The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect on what the standards are enforceable. The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES are covered under a Reliability Coordinator Area.</p>

				<p><b>Response:</b> Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>3 The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company.</p> <p><b>Response:</b> COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p>“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is applicable to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability</p>
--	--	--	--	--

			<p>Directive was correctly received.</p> <p>4 We also are concerned about the need to conduct three-part communications for a Reliability Directive issued through a blast call. Under these circumstances, the need for immediate action of multiple parties may require a blast call and there may not be time for all parties to complete three-part communications before initiating actions. Thus, we believe blast calls should be treated separately and that should be made clear.</p> <p><b>Response:</b> The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. However the essence of accurately implementing Reliability Directives is accomplished by use of 3-part communications. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols requiring for issuing alerts will be addressed in the COM-003 standard being developed in Project 2007-02.</p> <p>5 COM-002-3 R2 needs to be rewritten as it is too verbose. The point is for the recipient of the original message to get the issuer to confirm that the message was understood. We suggest rewording R2 to “Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.” Once the receiver has completed this requirement, the ball is in the issuer’s court per Requirement R3. No additional words are necessary in the requirement.</p> <p><b>Response:</b> The RCSDT agrees and has revised the requirement as you suggest.</p> <p>6 Please strike part IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p><b>Response:</b> The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators. These activities are listed as Parts. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes. The relation of IRO-14-2 PART 1.7 to R4 is that PART 1.7 requires</p>
--	--	--	--

			<p>having a conference call, R4 requires participation by all impacted Reliability Coordinators. As such, neither replaces the other.</p> <p>7 IRO-014-2 R4 is overly broad and would require Reliability Coordinators that will not impact one another to participate on conference calls with one another without any reliability benefit. The issue is created by the addition of the clause “within the same Interconnection” to the requirement. ISO-NE, FRCC, Midwest ISO, and SPP are all in the same Interconnection. It is hard to fathom there being reliability benefit to SPP and ISO-NE conversing weekly or Midwest ISO and FRCC conversing weekly. We suggest limiting the requirement to adjacent Reliability Coordinators.</p> <p><b>Response:</b> IRO-14-2 R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently PART 1.7. It is unlikely that Reliability Coordinators whom are geographically and electrically distant will have mutually agreed upon operating procedures; therefore requirement R4 would not apply.</p> <p>8 For IRO-014-2 R5, we suggest replacing “other” with “impacted” to limit the notification of Adverse Reliability Impacts to only those Reliability Coordinators that need to know. Because the definition of Adverse Reliability Impact includes “Bulk Electric System instability or Cascading”, it is possible that the cascading of 138 kV lines serving a load pocket or generator outlet stability issues could require a Reliability Coordinator to notify all other Reliability Coordinators regardless of impact. This would include Reliability Coordinators outside of the Interconnection with the problem. It would also include Reliability Coordinators that are not impacted. For instance, an issue in New England that would not pose a threat outside the northeast would require ISO-NE to notify SPP and FRCC and Reliability Coordinators in the Western Interconnection. There is no reliability benefit to this notification.</p> <p><b>Response:</b> This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>9 IRO-014-2 R6-R8 are problematic and need to be refined to make clear that the Reliability Coordinators shall operate to the most conservative limit. It should not require a Reliability Coordinator that disagrees with an action plan to implement the action plan. The Reliability Coordinator will be disagreeing with the action plan for reliability reasons. Assuming they are correct, the requirement to implement said action plan will actually put the Interconnection at greater risk. These requirements inappropriately attempt to codify the debate and analysis that occurs between and within Reliability Coordinators when there are differing results in reliability analysis. This is part of the problem with having a Wide Area view that results in Reliability Coordinators having a view into other Reliability Coordinator Areas. Their results</p>
--	--	--	---

			<p>and conclusions may be different. There should be a hierarchical structure for whose results should be used. It should be the Reliability Coordinator with primary responsibility unless the other Reliability Coordinator has evidence to demonstrate that the Reliability Coordinator with primary responsibility is incorrect. What this should do is to trigger both to review their models and data to assess the problem. None of this needs to be codified in the standards though.</p> <p><b>Response:</b> Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone's model or processes or procedures. The RC's are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p style="padding-left: 40px;">IRO-014-2, Revised R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p> <p>10 In the definition of Reliability Directive, we suggest changing "to address an Emergency" to "to address a declared Emergency". This would help limit second guessing for a situation where a System Operator took action because he truly believed he was in an Emergency but after the fact analysis demonstrates there really was not an Emergency.</p> <p><b>Response:</b> The RCS DT believes that modifying Reliability Directive by including "declared Emergency" would add an unnecessary step in mitigation of the Emergency.</p> <p>11 We disagree with deleting IRO-002-1 R5 and R7 which establish tools and monitoring capabilities. There should be basic tools requirements established for Reliability Coordinators. Project 2009-02 Real-time Reliability Monitoring and Analysis Capabilities will be addressing these issues in more detail. Thus, it does not make sense to delete these requirements until that dra</p> <p><b>Response:</b> Each RC has been certified to continue operations as an RC or been certified prior to beginning operations as an RC. The minimum set of tools and capabilities for an RC are "checked off" during the certification process. The</p>
--	--	--	---

				reliability objective of R5 and R7 is to perform analyses to ensure reliability of the BES by specifying capability rather than mandating specific tools. The analysis provisions of R5 and R7 are covered under IRO-008-1, Requirements R1 (perform Operational Planning Analysis) and R2 (perform Real-time Analysis). It is anticipated that Project 2009-02 team will address this issue more fully.
<b>Response:</b> The RCSDT thanks you for your comments.				
Richard Burt	Minnkota Power Coop. Inc.	1	Negative	Minnkota is in agreement with the comments submitted by the MRO NSRS.
<b>Response:</b> The RCSDT thanks you for your comment. Please see MRO NSRS response to comments.				
Don Horsley	Mississippi Power	3	Affirmative	Please see comments
<b>Response:</b> The RCSDT thanks you for your comment. Please see response to those comments.				
John S Bos	Muscatine Power & Water	3	Negative	<p>1 In the COM-001 requirements, MP&amp;W does not agree that a Distribution Provider and a Generator Operator need to be held to the same level of responsibility as a Reliability Coordinator, Balancing Authority, or Transmission Operator. In FERC Order 693 (paragraph 487), FERC directed the Distribution Provider and Generator Operator to be incorporated in this standard by stating:” We expect the telecommunication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process.” A Distribution Provider and Generator Operator may not be staffed 24 hours a day like a Balancing Authority or Transmission Operator; nevertheless, the Standards Drafting Team did not consider this.</p> <p><b>Response:</b> There is no requirement that requires identical communications systems. The requirement is to have “a” communication capability. Regarding 24/7 support, the requirement is to have communications capability. The type of media used is not specified. For a small DP, an on-call system could suffice. The RCSDT also recognizes the FERC directive and has not included GOPs and DPs in the requirements for Alternative Interpersonal Communications capability.</p> <p>2 MP&amp;W does not agree with the revision of IRO-001 with the statement included</p>

				<p>for certifying Reliability Coordinators. As written, it is ambiguous as far as what level of certification this would involve.</p> <p><b>Response:</b> Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>3 MP&amp;W disagrees with COM-002-3 R2. As stated in FERC Order 693 (paragraph 512) it is essential that Reliability Coordinators, Balancing Authorities, and Transmission Operators have communications with Distribution Providers. Requirement 2 also applies to Transmission Service Providers, Load-Serving Entities and Purchasing and Selling Entities. As stated above, it is going to be unattainable to communicate with a Distribution Provider since most Distribution Providers are usually not operated 24 hours per day like Reliability Coordinators, Balancing Authorities, and Transmission Operators. Many Distribution Providers have answering services that will relay a message once they receive it and then pass it along to someone. An answering service could repeat the directive back, word for word, but this would not add any level of reliability. The Standards Drafting Team should reconsider the applicability section of this Standard to apply to only Reliability Coordinators, Balancing Authorities, and Transmission Operators for the issuance of a Reliability Directive.</p> <p><b>Response:</b> There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. Please see responses above.</p>

Gregory Campoli	New York Independent System Operator	2	Abstain	<p>The NYISO agrees that these revised standards are an improvement from the current version. However we believe that the comments submitted by the IRC and NPCC are required to make them acceptable as the new set of standards. We will have an opportunity to revise our vote on the second ballot based on the consideration given to the comments submitted.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. See IRC and NPCC comments.</p>				
Michael Schiavone	Niagara Mohawk (National Grid Company)	3	Affirmative	<p>IRO-001 R1 The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be.</p> <p><b>Response:</b> Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>IRO-001 R2 Should “of” be “to”? Reliability Directives are issued to TOPs, BA, etc.</p> <p><b>Response:</b> The requirement was rewritten for clarity as follows:</p> <p>R2. Each Reliability Coordinator shall take actions or direct actions (which could include issuing Reliability Directives) by Transmission Operators, Balancing Authorities, Generator Operators, and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.</p> <p>IRO-001 R2 Contains the words “which could include issuing Reliability Directives”, but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the</p>

				<p>magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. These words should be removed. Note that COM-002 will stipulate the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.</p> <p><b>Response:</b> R2 requires the Reliability Coordinator to act. These actions could include Reliability Directives in the case of an Emergency. However, issuing Reliability Directives might not always be necessary, as the Reliability Coordinator may be acting proactively well in advance of an emergency. R2 promotes this proactive approach, but reserves the use of Reliability Directives for circumstances that require its use. During the vetting of the prior version of this requirement, some stakeholders expressed concern that the word, “action,” if not clarified, could lead some people to believe that the Reliability Coordinator must be the entity to perform the actual operation.</p> <p>COM-002 In place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations of three-part to their sub-operating entities. Modify R1 to be “When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]”</p> <p><b>Response:</b> Your proposed edit does not meet the reliability intent of the requirement. The RCSDT believes that it is important to state that the Reliability Directive is being issued to convey that action by the recipient is required. An RC could issue a Reliability Directive to implement an agreed upon procedure whereby the three part communication would not list each step of the procedure individually, but would include implementation of the entire procedure. As envisioned, communications protocols such as the procedure you’ve proposed will be addressed in the COM-003 standard being developed in Project 2007-02.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>				
Jon Shelby	Northern Lights Inc.	3	Negative	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability</p>

				<p>directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
--	--	--	--	--

**Response:** The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are effective." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical

that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.

Douglas Hohlbaugh	Ohio Edison Company	4	Affirmative	FirstEnergy supports the proposed standards and would appreciate consideration of our comments submitted through the formal comment period.
-------------------	---------------------	---	-------------	---

**Response:** The RCSDT thanks you for your comment. Your comments have been considered, Please see the Consideration of Comments document for FirstEnergy.

Brenda L Truhe	PPL Electric Utilities Corp.	1	Negative	Comments were submitted as part of a group via the comment form. Thank you for your work on the standard.
<p><b>Response:</b> The RCSDT thanks you for your comment. Your other comments have been considered. Please see the Consideration of Comments document.</p>				
Mark A Heimbach	PPL EnergyPlus LLC	6	Negative	<p>Comments: We thank the Standards Drafting Team for the improvements made in the revisions to COM-001 and COM-002. The revision appropriately clarifies the standard. We are providing the following comments for the Standards Drafting Team to consider.</p> <p>1) Consider changing R1 to 'Each RC shall have the capability for Interpersonal Communications with the following entities to exchange Interconnection and</p>

				<p>operating information...' for clarity as Interpersonal Communications and capability are both nouns.</p> <p><b>Response:</b> Thank you for your suggestion to modify the sentence structure into a noun phrase. However the RCSDT believes the current form is unambiguous.</p> <p>2) We feel changing the applicability of the standard is important to the accuracy of the standard. The purpose of COM-002 is 'To ensure emergency communications between operating personnel are effective'. Since operating personnel are covered by the applicability of RC, BA, TOP and GOP, we suggest the applicability to TSP, LSE, and PSE be removed from COM-002-3.</p> <p><b>Response:</b> The SDT agrees. The applicability of COM-002 has been revised. COM-001, and COM-002 are now applicable to the RC, TOP, BA, GOP and DP only.</p> <p>3) Additionally, we would like to bring to the attention of the Standards Drafting Team, that the implementation plan for COM-001-2 and IRO-001-2 still includes TSP, LSE, and PSE although the revised standard does not include these entities in the Applicability Section. For COM-001-2 refer to the implementation plan, page 11. For IRO-001-2 refer to the implementation plan for new R2, new R3, new R4 and the chart on the last page. Thank you for your consideration in addressing these comments.</p> <p><b>Response:</b> The RCSDT has revised the implementation plans appropriately to address your comment.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. .</p>

<p><b>Response:</b> The RCSDT thanks you for your comments.</p>				
John T Sturgeon	Progress Energy	6	Negative	<p>COM-001-2 R10 states that "Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that last 30 minutes or longer". The standard states that the RC, TOP, BA shall designate an Alternative Interpersonal Communication capability but does not require the same of the DP and GOP. Compliance by the DP and GOP with R10 would be jeopardized while still being compliant with the rest of the standard by having only the Interpersonal Communications capability.</p> <p><b>Response:</b> The DP or GOP has access to additional Interpersonal Communications, in all likelihood, to make notifications for failure. There is not a requirement for an alternative, but it is likely that someone could use a cell phone to make the notification. The RCSDT is proposing to add Part 7.3 and 8.3 to the requirements as follows:</p> <p>7.3 Each Distribution Provider that experiences a failure of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority to determine a mutually agreeable time to restore its Interpersonal Communication capability.</p> <p>8.3 Each Generator Operator that experiences a failure of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority to determine a mutually</p>

				<p>agreeable time to restore its Interpersonal Communication capability.</p> <p>The phrase “within” used in R3-R6 does not take into account that there are electrically adjacent BAs/TOPs who are not “within” each other’s area.</p> <p><b>Response:</b> The requirements are dealing with entities within the Area or entities that operate Facilities located within the Area. We have also added the following to R3:</p> <p style="padding-left: 40px;">Adjacent Transmission Operators synchronously connected within the same Interconnection.</p> <p>The SDT also added, ‘adjacent Balancing Authorities’ to Requirements R4, R5 and R6.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment.</p>				
Peter Dolan	PSEG Energy Resources & Trade LLC	6	Negative	<p>Com-001-2 implementation plan lists that this is applicable to PSE’s and LSE’s however, PSE’s and LSE’s were removed from the actual standard. The implementation plan should be revised. Com-002-3 standard continues to include PSE. The RCSDT has revised the implementation plans appropriately to address your comment.

Steven Grega	Public Utility District No. 1 of Lewis County	5	Negative	These changes do not recognize that many small utilities do not have 24-hour dispatch, do not have SCADA systems or do not man generation plants 24-hours a day. Specific exception should be written into the standards to provide relief for small GO, GOP, LSE and DP. The standard changes need to address notifications if personnel are only available on a on-call basis.
--------------	---	---	----------	--

**Response:** The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are effective." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a method of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.

Heber Carpenter	Raft River Rural Electric Cooperative	3	Negative	Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of</p>

				<p>Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				

Carter B. Edge	SERC Reliability Corporation	10	Negative	<p>If the following issues are addressed in the standards revisions I should be able to cast an affirmative vote:</p> <p>COM-001-2</p> <ul style="list-style-type: none"> <li>o Each sub-requirement should not have an “R” in front of the number in order to be consistent with NERC’s August 10, 2009 filing at FERC on this subject. <b>Response:</b> The SDT agrees. This has been corrected.</li> <li>o Requirement R3 and R4 should include adjacent TOPs as a sub-requirement. <b>Response:</b> The SDT agrees. The SDT modified R3 and R4 to add adjacent TOPs</li> <li>o Requirements R5 and R6 should include adjacent BAs as a sub-requirement. <b>Response:</b> The SDT added adjacent Balancing Authorities to Requirements R4, R5 and R6.</li> <li>o “to exchange Interconnection and operating information” should be deleted from requirements R1 through R8 as it is redundant with the definition of Interpersonal Communications <b>Response:</b> The SDT agrees. The SDT adopted this suggestion and deleted this phrase.</li> <li>o The last page of the Implementation Plan includes LSEs, PSE, and TSPs as being responsible entities under this standard, yet the standard does not include them. Please correct the implementation plan. <b>Response:</b> The implementation plan was corrected as proposed.</li> </ul> <p>TOP-001-1,</p> <ul style="list-style-type: none"> <li>o Requirement R3, which is what the SDT appears to be using as its justification for not adding a requirement here is proposed to be deleted by the RTO-SDT on Project 2007-03. <b>IRO-001-2 R2-R4 deal with complying with directives or instruction and is the justification for retiring TOP-001, R3.</b></li> </ul> <p>IRO-001-2</p> <ul style="list-style-type: none"> <li>o I’m unclear on the language of R1. I think you are attempting to create a</li> </ul>
----------------	------------------------------	----	----------	---

			<p>requirement similar to BAL-005, R1 where all generation, transmission, and load operating within an Interconnection must be included within the metered boundaries of a Balancing Authority Area. If that is the case, suggested language could be "All Balancing Areas and Transmission Operators must be under the authority of a Reliability Coordinator certified by the ERO to continuously assess transmission reliability and coordinate emergency operations within each region and across the regional boundaries"</p> <p><b>Response:</b> Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.</p> <p>o Please remove the yellow box on page 1 indicating this standard will be retired.</p> <p><b>Response:</b> The SDT agrees, and has made the change.</p> <p>Additional comments:</p> <p>o Reliability Directives may be issued by blast calls from Reliability Coordinators. It is inefficient and may be a hindrance to reliability to require 3-part communications in these instances.</p> <p><b>Response:</b> The RCSDT agrees that the use of Blast Call's to issue Reliability Directives, in mass, is efficient and effective. However the essence of accurately implementing Reliability Directives is accomplished by use of 3-part communications. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols such as the procedure you've proposed will be addressed in the COM-003 standard being developed in Project 2007-02.</p> <p>o There are several organizations registered as BAs, RCs and TOPs. It is not uncommon for those entities to be distributed across multiple desks in the same control room without regard to how an entity is registered. Thus, a single System Operator may perform functions that are categorized under two or more of those functional entities. The drafting team should clarify that under no circumstances should that System Operator be required to issue a Reliability Directive to himself. This is a corporate governance issue.</p> <p><b>Response:</b> COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue</p>
--	--	--	---

			<p>Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p style="padding-left: 40px;">“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance.”</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>o In IRO-014, R1, delete sub-requirement 1.7. The requirement for weekly conference calls related to operating procedures is duplicative to R4 and could be burdensome while adding very little value under certain circumstances.</p> <p>R1, Part 1.7 indicates that the Operating Plan, process or Procedure is to include how the entity will accomplish these calls. R4 requires the entity to actually perform them.</p> <p><b>Response:</b> The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators. These activities are listed as Parts. Part 1.7 is requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>o In IRO-014, R4, delete the phrase “(per Requirement 1, Part 1.7)” as a conforming change.</p> <p><b>Response:</b> The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators, these activities are listed as sub requirements. Part 1.7 is requires you to have a procedure relating to weekly</p>
--	--	--	--

				<p>conference calls while R4 requires participation in weekly calls. Further the RCSdT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>o I believe that the intent of IRO-014, Requirements R6-R8 is to require conservative operation by all affected Reliability Coordinators if any Reliability Coordinator detects an Adverse Reliability Impact. It could be read to allow at least the theoretical possibility that an RC may determine an Adverse Reliability Impact in another RC's area that the other RC neither can see nor believes that any action should be taken. R7 puts the burden on the first RC to develop a plan that it cannot implement because it has no agreement with the BAs and TOPs in the other RC area and thus could be ineffective. Alternately, it could be read that the identifying RC must take action in its own area to mitigate the Adverse Reliability Impact identified in another area much like the "general prudential rule" in the Coast Guard's Rules of the Road where regardless of what the rules state if action can be taken to avoid a collision at sea, that action must be taken. Please clarify.</p> <p><b>Response:</b> Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone's model or processes or procedures. The RC's are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p>IRO-014-2, Revised R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact , each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p> <p>o Please review all the implementation plans to be sure the applicable entities match those in the standards.</p> <p><b>Response:</b> The Implementation Plans have been modified to address this concern.</p>

**Response:** The RCSDT thanks you for your comment. Please see responses above.

Paul Benjamin Kerr	Shell Energy North America (US), L.P.	6	Affirmative	<p>The introduction of the definition of “Reliability Directive” and its connection to the definition of “Emergency” within this Project brings much needed clarity for the sector and will promote consistency between Regional Entities and within the audits of Registered Entities. Shell Energy supports the removal of Purchasing Selling Entities as a function to which IRO-001 applies. This removal recognizes that PSEs do not play a role in reliability coordination under this standard since they have no authorities and no abilities to assume or perform responsibilities associated with reliability coordination. This conclusion is reinforced by the adoption of the defined term “Reliability Directive”. Where a RC, TOP, or BA needs to address an Emergency they do not contact, consult, or direct a PSE to take action that would address the Emergency. Rather, where the PSE is a user of the grid to perform or execute transactions, it is subject to the actions of these other entities that have the authority to stop, curtail, or alter the submitted transactions of the PSE in a way that aids in resolving the problem. With the fitting adoption of “Reliability Directive” into COM-002 as well, Shell Energy does not believe it is necessary or appropriate for the applicability of this standard to include Purchasing Selling Entities, as is contained in the current draft proposal. This standard does not apply to PSEs today, however, during the progression of Project 2006-06 this applicability was added to an early draft version that preceded the discussions and clarification that comes from the definition of a Reliability Directive in the standard. Shell Energy does not support the inclusion of PSEs in the current draft version of COM-002, and feels that it should be removed. The purpose of this standard is, “To ensure Emergency communications between operating personnel are effective” and relates directly to the capabilities and authorities established for the RC, TOP, or BA that requires actions to be taken by a recipient of a Reliability Directive. As noted previously, PSEs are acted upon by the entities with the necessary authority, and are not in a role that would initiate or fulfil the required actions. As additional matters related to the clarification and cleanup of the standards in this project, the implementation plans for both IRO-001 and COM-001 erroneously contain references to PSEs in the sections “Functions that Must Comply with the Requirements”. These references need to be removed.</p>
--------------------	---------------------------------------	---	-------------	---

**Response:** The RCSDT thanks you for your comment. The applicability of COM-001, and COM-002 were revised to be consistent and only include the RC, TOP, BA, DP and GOP. The Implementation Plans have been corrected.

Robert A Schaffeld	Southern Company	1	Affirmative	Please see comments

	Services, Inc.			
<b>Response:</b> The RCSDT thanks you for your comment. Please see response to those comments.				
Ronald L Donahey	Tampa Electric Co.	3	Negative	Our only disagreement is with the use of the term "Reliability" in defining a directive.
<b>Response:</b> The RCSDT thanks you for your comment. The term "Reliability Directive" was chosen to specifically delineate between other types of directives, such as market directives. It is imperative that reliability standards relate to reliability concerns.				
Steve Eldrige	Umatilla Electric Cooperative	3	Negative	Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window." Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities

				that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication." We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.
<p><b>Response:</b> The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is, "to ensure emergency communications between operating personnel are <u>effective</u>." It's not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication - in many cases this may be via a receptionist or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>				
Jonathan Appelbaum	United Illuminating Co.	1	Negative	<p>See UI Comment form, In General:</p> <p>1. COM-001-2 does not specify the amount of time a DP has to reestablish the Interpersonal Communication Capability after the capability fails before it is assessed non-compliance for not having the communication.</p> <p><b>Response:</b> The DP or GOP has access to additional Interpersonal Communications, in all likelihood, to make notifications for failure. There is not a requirement for an alternative, but it is highly unlikely that someone couldn't use their cell phone to make the notification. The RCSDT is proposing to add Part 7.3 and 8.3 to the requirements as follows:</p> <p>7.3 Each Distribution Provider that experiences a failure of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority to determine a mutually agreeable time to restore its Interpersonal Communication capability.</p> <p>8.3 Each Generator Operator that experiences a failure of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority to determine a mutually agreeable time to restore its Interpersonal Communication capability.</p>

				<p>2. VSL for R7 should have a time component</p> <p><b>Response:</b> The VSL represents a single violation of the requirement. For this requirement, the DP must have Interpersonal Communication with its TOP and BA. The VSL was revised to remove “or more” to conform to the requirement. Because the Requirement does not have a time component, the SDT cannot add a time component to the VSL – this would violate one of the FERC Guidelines for setting VSLs.</p> <p>3. R7 should address the instance if the DP is not required to have communication with the BA, because the BA communicates thru the TOP.</p> <p><b>Response:</b> The RCSDT believes that Interpersonal Communication between the DP and its BA and the TOP is required for reliability.</p> <p>4. COM-002 R2 seems awkwardly worded. R2 as it is written says the repeat is confirming the accuracy of the message itself. I think it is agreed that the repeat back in R2 is to allow the issuer of the Directive to confirm that the message was received accurately understood by the recipient.</p> <p><b>Response:</b> The RCSDT has revised the requirement and has removed “with enough details that the accuracy of the message was confirmed” from the requirement.</p> <p>5. The VSL for Com-002 R2 is severe and states "The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message was confirmed." The purpose of the R2 repeat-back is to allow the Issuer verify the message was accurately received. This VSL penalizes the responsible entity for not accurately receiving the message. The VSL should penalize the refusal of the registered entity to repeat back the message not for receiving the message incorrectly.</p> <p><b>Response:</b> The RCSDT agrees and has removed “with enough details that the accuracy of the message was confirmed” from the VSL.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>				
Allen Klassen	Westar Energy	1	Negative	The new definition of Alternative Interpersonal Communication in COM-001 appears to rule out the use of redundant systems that happen to be used daily, which might be done to ensure that they function when needed.

**Response:** The RCSDT thanks you for your comment. The intent of Alternative Interpersonal Communication (AIC) is to make sure there is an alternative in case the Interpersonal Communication fails. If you have two, you may designate one as the AIC regardless of how often you use it.

Forrest Brock	Western Farmers Electric Coop.	1	Negative	<p>COM-001 - Definition of Interpersonal Communication needs more clarification. For example, would this include data exchanged via ICCP? Examples of what constitutes "Interconnection and operating information" would help as much "information" can be interpreted as fitting into this - or not.</p> <p><b>Response:</b> Interpersonal Communication does not include data exchange.</p> <p>Severe VSL for R9 - second part after the "OR" is a virtual repetition of the wording in the Lower VSL for R9.</p> <p><b>Response:</b> The Severe VSL was revised to remove "within 2 hours". It now reads:</p> <p style="padding-left: 40px;">"The responsible entity tested the Alternative Interpersonal Communications capability and identified a problem but didn't initiate action to repair or designate a replacement Alternative Interpersonal Communications."</p> <p>COM-003 - R3 contains a typographical or grammar error. "...Reliability Directive as per Requirement R2 IS correct..." not AS correct...</p> <p><b>Response:</b> Assuming you meant COM-002-3, the SDT agrees and has made the correction.</p>
---------------	--------------------------------	---	----------	--

**Response:** The RCSDT thanks you for your comment. Please see responses above.

Anthony Jankowski	Wisconsin Energy Corp.	4	Affirmative	Please correct the clean version of IRO-005 R1 to match the red-line.
-------------------	------------------------	---	-------------	---

**Response:** The RCSDT thanks you for your comment. We have made the corrections.

Michael Ibold	Xcel Energy, Inc.	3	Affirmative	While we appreciate the drafting team's efforts to clarify the multiple effective dates, we feel it is still daunting and complex, which leaves too much room for miscalculation. We recommend that NERC and/or the drafting team publish what the actual effective dates are, as soon as FERC (and again when the other regulatory authorities) have approved it. This could either be done in the effective
---------------	-------------------	---	-------------	---

				date section of the standard itself, or as a stand-alone reference document posted along with the standard on NERC's website.
<b>Response:</b> The RCSDT thanks you for your comment. We will pass your comment on the NERC Standards Process Manager for consideration.				
James A Maenner		8	Negative	In comments (Reliability Coordination - Project 2006-06) Midwest ISO raised a number of issues that need to be addressed prior to passage of these standards.
<b>Response:</b> The RCSDT thanks you for your comment. Please see responses to comments made by MISO on the initial ballot as well as the regular comment form.				

END OF REPORT

## Consideration of Comments on Reliability Coordination — Project 2006-06

The Reliability Coordination Drafting Team thanks all commenters who submitted comments on the proposed revisions to COM-001-2, IRO-001-2, IRO-002-2 and IRO-005-4. These standards were posted for a 30-day public comment period from February 25, 2011 through March 7, 2011. The stakeholders were asked to provide feedback on the standards through a special Electronic Comment Form. There were 41 sets of comments, including comments from more than 168 different people from approximately 112 companies representing 9 of the 10 Industry Segments as shown in the table on the following pages.

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President and Director of Standards, Herb Schrayshuen, at 609-452-8060 or at [herb.schrayshuen@nerc.net](mailto:herb.schrayshuen@nerc.net). In addition, there is a NERC Reliability Standards Appeals Process.<sup>1</sup>

### Summary Consideration:

The RCSDT thanks all stakeholders for their comments. Many stakeholders provided comments suggesting revisions to the standards. Many of these suggestions were incorporated into the standards. As a result of the revisions, the RCSDT is moving COM-001-2, COM-002-3 and IRO-001-2 to a successive ballot. The RCSDT made a few clarifying edits to the remaining standards based on stakeholder comments. Therefore, IRO-002-3, IRO-005-4 and IRO-014-2 are being moved to recirculation ballot. Because of this approach, the SDT will be proposing an interim change to IRO-001: the elimination of Requirement R7, as it is duplicative of one of the requirements in IRO-014-2.

For the COM-001 standard, several commenters had suggestions for improvements to the requirement language and applicability. The RCSDT believes the standard correctly and adequately requires each applicable entity that would have capability to receive Interconnection and operating information to have Interpersonal Communications and Alternative Interpersonal Communications to be used when the Interpersonal Communication is not available. The RCSDT has addressed the applicability of the standards and implementation plans by aligning COM-001-2, and COM-002-3 to include the same entities and by removing LSE, PSE and TSP from the COM standards.

Many comments were concerned about both the medium (e.g. cellular, satellite, etc.) and media (e.g. voice, email, etc.) used for Interpersonal Communications. The current language avoids being prescriptive and allows each entity to determine what is suitable. Interpersonal Communication and Alternative Interpersonal Communication is between the applicable entities which may include multiple locations (e.g. a primary and back-up control center).

The RCSDT added the following Requirement Parts at the suggestion of stakeholders:

- 3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection
- 4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection
- 5.6 Adjacent Balancing Authorities
- 6.3 Adjacent Balancing Authorities

The RCSDT agrees with the many industry comments and removed the phrase "to exchange Interconnection and operating information" in requirements R1 through R8. This removal clarifies that the intent of this capability is NOT for the exchange of data.

---

<sup>1</sup> The appeals process is in the Reliability Standards Development Procedures:  
<http://www.nerc.com/standards/newstandardsprocess.html>.

A few commenters also expressed concerns about the frequency of testing Alternative Interpersonal Communications capability. The RCSDT believes that the proposed testing frequency is supported by the majority of stakeholders and is not overly burdensome.

Several commenters suggested that VSLs should be written based on the percent of entities rather than by an occurrence of a violation. VSLs must be written on a violation occurrence basis in accordance with FERC guidelines. The requirements specify which entities must be included in communications capabilities. If a single entity is missing, this is a violation of the requirement. According to VSL guidelines, if missing any part of the requirement could have the same reliability outcome as missing the entire requirement, the requirement is binary and the VSL must be severe.

A new requirement was added to COM-001 for clarity regarding responsibilities of the Distribution Provider and the Generator Operator when either entity experiences a failure of its Interpersonal Communication capability:

R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with its Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*

This requirement requires collaboration between entities to restore a failed communications capability.

The RCSDT asked stakeholders if they believed that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel's comment as directed in FERC Order 693. The original justification that the RCSDT posited for not adding a requirement to directly address Xcel Energy's comments in paragraph 516 and FERC's related recommendation in paragraph 523 was that TOP-001-1 R3 was considered to address this concern. Since that time, the RTO SDT has proposed to retire TOP-001-1 R3. However, NERC has since retired IRO-004-1 R3 and R5 along with IRO-005-3 R5. Because these are retired, there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency. Therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirements," the TOP may respond to the RC that it cannot comply.

Stakeholders were asked if they agree with the revision to IRO-001, R1 for certifying Reliability Coordinators. Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.

A significant revision to IRO-001-2 was made by removing the Interchange Coordinator from the standard. The RCSDT made this revision because the Balancing Function is responsible for implementing interchange (see NERC Reliability Functional Model, version 5, page 32, item 7) and to operate the Balancing Authority Area to maintain load-interchange-generation balance (item 3).

The RCSDT asked stakeholders if they agree with moving two requirements from IRO-001 back to IRO-002 relating to Analysis Tool outages. All stakeholders that responded agreed and there were no comments received.

The RCSDT asked stakeholders if they agree with moving two requirements from IRO-001 back to IRO-005 relating to Reliability Coordinator notifications. Several commenters noted a typographical error in R1 which was corrected to read:

When the results of an Operational Planning Analysis or Real-time Assessment indicate an expected or actual condition with Adverse Reliability Impacts within its Reliability Coordinator Area, each Reliability Coordinator shall notify ~~issue an alert to~~ all impacted Transmission Operators and Balancing Authorities in its Reliability Coordinator Area. *[Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]*

One commenter also asked that an errant yellow text box be removed from Page 1, which was also done.

The RCSDT received a number of comments regarding the applicability of COM-001, and COM-002. The RCSDT agrees with these comments and has removed PSE and LSE from the COM-001-2 implementation plan. The RCSDT also addressed minor issues involving typos, formatting and style.

The RCSDT received comments suggesting clarification of COM-002-3. The RCSDT intends the communication of Reliability Directives to be person-to-person and in such a manner that the Reliability Directive is understood and not necessarily repeated verbatim. COM-002-3 is not intended to be prescriptive on how the Reliability Directive is issued. Spoken or written communications are valid methods (i.e. using the telephone, radio, electronic texting, email, etc.). The purpose of COM-002-3 is to ensure emergency communications between operating personnel are effective. There is no proxy requirement for 24/7 operating personnel regarding small entities. Only “capability” as provided for in COM-001-2 is applicable. The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols would be addressed in the COM-003 standard being developed in Project 2007-02.

Some commenters suggested revisions to IRO-014, requirement R8 to conform to similar requirements R6 and R7. The RCSDT made the suggested revision by re-ordering R8:

R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

IRO-014-2, requirement R4 is applicable to those Reliability Coordinators engaged in activities related to requirement R1 and part 1.7. It is unlikely that Reliability Coordinators geographically and electrically distant from one another will have mutually agreed upon operating procedures (per requirement R1), and therefore requirement R4 would not be applicable. The RCSDT believes IRO-014-2, requirement R4 (which requires weekly communication) provides reasonable contact and flexibility – and this requirement is in effect today.

The RCSDT coordinated the use of the NERC Glossary term “Adverse Reliability Impact” with the Real-Time Operations team and continues the practice of informing all RCs of Adverse Reliability Impacts in requirement R5.

The RCSDT has revised IRO-014-2, requirements R6-R8 to clarify that when one RC identified a problem and presents an action plan for another RC, the second RC is obligated to implement the action plan. The RCSDT will forward the concern about RC's identifying themselves and the receiver to establish authority to the Project 2007-02, Operating Personnel Communications Protocols SDT. The Project 2007-02 team is developing a standard that includes requirements for use of specific communications protocols.

## Index to Questions, Comments, and Responses

1. Do you agree with COM-001 requirements for Interpersonal Communications capability and Alternative Interpersonal Communications capability (R1-R8)? If not, please explain in the comment area below. ....	14
2. The RCSDT believes that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel’s comment. Do you agree? If not, please explain in the comment area below.....	39
3. Do you agree with the revision to IRO-001, R1 for certifying Reliability Coordinators? If not, please explain in the comment area below. ....	45
4. Do you agree with moving two requirements from IRO-001 back to IRO-002 relating to Analysis Tool outages? If not, please explain in the comment area below. ....	51
5. Do you agree with moving two requirements from IRO-001 back to IRO-005 relating to Reliability Coordinator notifications? If not, please explain in the comment area below. ....	55
6. Do you have any other comment, not expressed in questions above, for the RC SDT? .....	58

**Consideration of Comments on Reliability Coordination — Project 2006-06**

The Industry Segments are:

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities
- 4 — Transmission-dependent Utilities
- 5 — Electric Generators
- 6 — Electricity Brokers, Aggregators, and Marketers
- 7 — Large Electricity End Users
- 8 — Small Electricity End Users
- 9 — Federal, State, Provincial Regulatory or other Government Entities
- 10 — Regional Reliability Organizations, Regional Entities

**1. Do you agree with COM-001 requirements for Interpersonal Communications capability and Alternative Interpersonal Communications capability (R1-R8)? If not, please explain in the comment area below.**

**Summary Consideration:**

For the COM-001 standard, several commenters had suggestions for improvements to the requirement language and applicability. The RCSDT believes the standard correctly and adequately requires each applicable entity that would have capability to receive Interconnection and operating information to have Interpersonal Communications and Alternative Interpersonal Communications to be used when the Interpersonal Communication is not available. The RCSDT has addressed the applicability of the standards and implementation plans by aligning COM-001-2, and COM-002-3 to include the same entities and by removing LSE, PSE and TSP from the COM standards.

Many comments were concerned about both the medium (e.g. cellular, satellite, etc.) and media (e.g. voice, email, etc.) used for Interpersonal Communications. The current language avoids being prescriptive and allows each entity to determine what is suitable. Interpersonal Communication and Alternative Interpersonal Communication is between the applicable entities which may include multiple locations (e.g. a primary and back-up control center).

The RCSDT added the following Requirement Parts at the suggestion of stakeholders:

3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection

4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection

5.6 Adjacent Balancing Authorities

6.3 Adjacent Balancing Authorities

The RCSDT agrees with the many industry comments and removed the phrase "to exchange Interconnection and operating information" in requirements R1 through R8. This removal clarifies that the intent of this capability is NOT for the exchange of data.

A few commenters also expressed concerns about the frequency of testing Alternative Interpersonal Communications capability. The RCSDT believes that the proposed testing frequency is supported by the majority of stakeholders and is not overly burdensome.

Several commenters suggested that VSLs should be written based on the percent of entities rather than by an occurrence of a violation. VSLs must be written on a violation occurrence basis in accordance with FERC guidelines. The requirements specify which entities must be included in communications capabilities. If a single entity is missing, this is a violation of the requirement. According to VSL guidelines, if missing any part of the requirement could have the same reliability outcome as missing the entire requirement, the requirement is binary and the VSL must be severe.

A new requirement was added for clarity regarding responsibilities of the Distribution Provider and the Generator Operator when either entity experiences a failure of its Interpersonal Communication capability:

R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with its Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [*Violation Risk Factor: Medium*][*Time Horizon: Real-time Operations*]

This requirement requires collaboration between entities to restore a failed communications capability.

Organization	Yes or No	Question 1 Comment
ERCOT ISO	No	<p>We expressed in the last posting that we felt the definition of Interpersonal Communications might inadvertently include data. The SDT responded that it does not by referring to Interpersonal in the name of the definition. Clearly, you cannot refer to the word you are defining in order to define it. However, it is possible “allows two or more individuals to ...” may solve this problem. Clarity should be sought in the next posting, if possible. This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. We request the sub-requirements be modified into bulleted lists. Consider striking “to exchange Interconnection and operating information” in R1, R3, R5, R7, and R8. It is redundant to the use of Interpersonal Communications “to interact, consult, or exchange information” in the definition. Consider striking “to exchange Interconnection and operating information” in R2, R4, R6. It is redundant to the use of Alternative Interpersonal Communications which uses Interpersonal Communications in its definition. Interpersonal Communications includes “to interact, consult, or exchange information” in its definition. For R2, why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications. For R3, affected neighboring Transmission Operators should be included. For R4 and R6, the sub-requirement list is different than for than for the associated Interpersonal Communications requirements R3 and R5 respectively. We believe these should be duplicate. That is the sub-requirement list for R4 should match R3 and the R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications. Again, we would suggest replacing sub-requirements with bulleted lists. For R5, why are neighboring Balancing Authorities not included? Additionally R5 should only read Contact with Interchange Coordinator within same Interconnection. They certainly need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE. Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is “shall have” while in R2, R4, and R6, the requirement is “shall designate”. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, it seems the same wording should be used. We do not believe R2.2 and R1.2 should be limited to Reliability Coordinators in the same Interconnection only. We suggest modifying “within the same Interconnection” to “within the same Interconnection, and, as appropriate, between a-synchronously connected RCs which are not precluded by law from scheduling interchange energy (for schedule changes, curtailments, etc.)” since reliability coordination may be required among the RCs on both sides of an Interconnection boundary. The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal</p>

Organization	Yes or No	Question 1 Comment
		<p>Communications. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost a duplicate to the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p>
ISO New England	No	<p>We expressed in the last posting that we felt the definition of Interpersonal Communications might inadvertently include data. Additionally R5 should only read Contact with Interchange Coordinator within same Interconnection. They certainly need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE. Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is “shall have” while in R2, R4, and R6, the requirement is “shall designate”. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, it seems the same wording should be used. We do not believe R2.2 and R1.2 should be limited to Reliability Coordinators in the same Interconnection only. We suggest modifying “within the same Interconnection” to “within the same</p>

Organization	Yes or No	Question 1 Comment
		<p>Interconnection, and, as appropriate, between a-synchronously connected RCs which are not precluded by law from scheduling interchange energy (for schedule changes, curtailments, etc.)” since reliability coordination may be required among the RCs on both sides of an Interconnection boundary. The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal Communications. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost a duplicate to the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p>
<p>Midwest ISO Standards Collaborators</p>	<p>No</p>	<p>We expressed in the last posting that we felt the definition of Interpersonal Communications might inadvertently include data. The drafting team responded that it does not by referring to Interpersonal in the name of the definition. Clearly, you cannot refer the word you are defining to define it. However, it is possible “allows two or more individuals to ...” may solve this problem. What are the drafting team’s thoughts on this issue? This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. Consider striking “to exchange Interconnection and operating information” in R1, R3, R5, R7, and R8. It is redundant to the use of Interpersonal Communications “to interact, consult, or exchange information” in the definition. Consider striking “to exchange Interconnection and operating information” in R2, R4, R6. It is redundant to the use of Alternative Interpersonal Communications which uses Interpersonal Communications in its definition. Interpersonal Communications includes “to interact, consult, or exchange information” in its definition. For R2, why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications. For R3, neighboring Transmission Operators should be included. For R4 and R6, the sub-requirement list is different than for than for the associated Interpersonal Communications requirements R3 and R5 respectively. They should be duplicate. That is the sub-requirement list for R4 should match R3 and the R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications. For R5, why are neighboring Balancing Authorities not included? They certainly need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE. Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is “shall have” while in R2, R4, and R6, the requirement is “shall designate”. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, it seems the same wording should be used. Should R2.2 and R1.2 be limited to Reliability Coordinators in the same Interconnection only? 		<p>Alternative Interpersonal Communications. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs. The second half of the Severe VSL for R9 is almost duplicate to the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p>
<p>Northeast Power Coordinating Council</p>	<p>No</p>	<p>It was expressed in the last posting that the definition of Interpersonal Communications might inadvertently include data. The SDT responded that it does not by referring to Interpersonal in the wording of the definition. The word being defined shouldn't be in the definition. However, incorporating "allows two or more individuals to ..." is an option that may solve this problem. The next posting should clarify this.</p> <p><b>Response:</b> The RCSDT has clarified in previous responses to comments that the requirements of COM-001 do not apply to data. The current proposed definition of Interpersonal Communications includes the phrase "allows two or more individuals to...". In an effort to make this more clear, the RCSDT has revised Requirements R1-R8 to remove the phrase "to exchange Interconnection and operating information" as you and others have suggested. This will provide the needed clarity for stakeholders that COM-001 does not include "data exchange."</p> <p>This standard does not comport with the informational filing that NERC submitted to FERC on August 10, 2009 regarding its discontinued use of sub-requirements in standards development activities. The sub-requirements should be modified into bulleted lists.</p> <p><b>Response:</b> The information filing did not propose to eliminate the use of numbered items altogether, but proposed changing the manner in which they were numbered. Bulleted lists are used to indicate sets of options; numbered lists are used when each of the listed items are required.</p> <p>Consider striking "to exchange Interconnection and operating information" in R1, R3, R5, R7, and R8. It is redundant to the use of Interpersonal Communications "to interact, consult, or exchange information" in the definition.</p> <p><b>Response:</b> The RCSDT agrees and we have removed the phrase "to exchange Interconnection and operating information" from R1-R8. This helps clarify the intent that the capability is NOT for data exchange as data is covered under the provisions of the recently approved IRO-010-1a.</p> <p>Consider striking "to exchange Interconnection and operating information" in R2, R4, R6. 		<p>operating information from R1-R8. This helps clarify the intent that the capability is NOT for data exchange as data is covered under the provisions of the recently approved IRO-010-1a.</p> <p>For R2, why is Interchange Coordinator excluded? It is included in the Requirement R1 which deals with the Interpersonal Communications. Communications would need to be maintained with the Interchange Coordinator in the event of a failure of the Interpersonal Communications.</p> <p><b>Response:</b> R1 is dealing with the “normal” communications. R2 deals with the default reliability needs. The normal communications include Interchange Coordinators because they are part of the administration of Interchange. The SDT predicated R2 on being in an unusual situation in which only the basic reliability functions were needed. In such times, the Interchange Function is seen as sacrificial because the BA itself could operate reliably (not necessarily efficiently) by simply dealing with it is adjacent BAs and “scheduling” interchange on a BA to BA basis (as opposed to a PSE to PSE basis). The Interchange Coordinator is only needed to ensure all of the commercial arrangements are validated by all parties. In stressed conditions those checkouts can be by-passed and dealt with after-the-fact. That <u>does not mean</u> that when an entity goes to backup is expected to bypass the Interchange Coordinator. The requirement R2 merely focused on the worst case situation.</p> <p>This requirement is not meant to define the alternate backup system; it is merely mandating the lowest mandatory requirements on the backup system. For example during the Y2K operations backup systems included satellite phones which did not cover all entities involved in normal operations. The SDT wrote the requirements to assure that such an event would not cause all RCs, BAs and TOPs to be non-compliant.</p> <p>For R3, affected neighboring Transmission Operators should be included.</p> <p><b>Response:</b> The SDT has included the following Part 3.5 of Requirement R3:</p> <p style="padding-left: 40px;">3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection</p> <p>For R4 and R6, the sub-requirement list is different from the associated Interpersonal Communications requirements R3 and R5 respectively. These should be duplicate. The sub-requirement list for R4 should match R3, and the sub-requirement list for R6 should match R5. In the event of a failure of the Interpersonal Communications, the Transmission Operator and Balancing Authority both would need to maintain communications to the same entities as in the requirement to have Interpersonal Communications.</p> <p><b>Response:</b> The SDT has included the following Part 4.3 of Requirement R4:</p> <p style="padding-left: 40px;">4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection</p> <p>The SDT has included the following Part 6.3 of Requirement R6:</p> <p style="padding-left: 40px;">6.3 Adjacent Balancing Authorities</p>

Organization	Yes or No	Question 1 Comment
		<p>The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Not requiring DP and GOP entities to have Alternative Interpersonal Communication capability meets FERC’s intention as stated here: “We (FERC) clarify that the NOPR did not propose to require redundancy on generator operators’ or distribution providers’ telecommunication facilities...” (Order 693, RM06-16-000, Paragraph 487).</p> <p>The sub-requirements should be bulleted lists.</p> <p><b>Response:</b> Bulleted lists are used to indicate sets of options; numbered lists are used when each of the listed items are required.</p> <p>For R5, why are neighboring Balancing Authorities not included?</p> <p><b>Response:</b> The SDT has included the following Part 5.6 of Requirement R5:</p> <p style="padding-left: 40px;">5.6 Adjacent Balancing Authorities</p> <p>Note that this is a defined term in the glossary: “A Balancing Authority Area that is interconnected (to) another Balancing Authority Area either directly or via a multi-party agreement or transmission tariff.”</p> <p>Additionally, R5 should only read Contact with Interchange Coordinator within the same Interconnection. They need to be able to contact one another to identify discrepancies in scheduling and sources of meter error that could lead to deviations in ACE.</p> <p><b>Response:</b> The RCSDT has removed the Interchange Coordinator from the standard (R1 and R5) as the BA is responsible for the reliability implications of Interchange. The reliability relationship lies between BA’s.</p> <p>Should R2, R4 and R6 be constructed parallel to R1, R3, and R5? In R1, R3 and R5, the requirement is “shall have” while in R2, R4, and R6, the requirement is “shall designate”. Since one is for the Interpersonal Communications and the other is for the Alternative Interpersonal Communications, the same wording should be used.</p> <p><b>Response:</b> The SDT inserted the different terminology because there may be more than one type backup system, Some entities have land lines; cell phones; satellite phones; voice over internet; and/or teleconferencing. The language is intended to provide flexibility to allow entities to have one or more types of backup while designating one for Alternative Interpersonal Communications.</p> <p>R2.2 and R1.2 should not be limited to Reliability Coordinators in the same Interconnection only. Modify “within the same Interconnection” to “within the same Interconnection, and, as appropriate, between a-synchronously connected RCs which are not precluded by law from scheduling interchange energy (for schedule changes, curtailments, etc.)” since reliability coordination may be required among the RCs on both sides of an Interconnection boundary.</p>

Organization	Yes or No	Question 1 Comment
		<p><b>Response:</b> The requirement proposed by NPCC is predicated on “as appropriate.” Such subjective phrases cannot be used in a standard. The issue of asynchronous entities is not germane to the requirement but the requirement does not preclude additional coordination to meet the specifics of ERCOT, HQ and WECC. A regional variance may be an option for you to consider.</p> <p>The VSLs for R1 through R8 should be expanded to include multiple levels based on the number of entities that the functional entity does not have Interpersonal Communications or Alternative Interpersonal Communications with. FERC specified their general preference for gradated in paragraph 27 of their June 19, 2008 order on VSLs.</p> <p><b>Response:</b> Each entity listed in Requirements R1-R8 is required to meet the contents with respect to each other entity listed in the requirement. Failure to have the capability with a single entity is a single violation of the requirement. For example, if an RC has 5 BA’s within it Area and fails to have Interpersonal Communications with two of them, then the RC has violated the requirement twice. The VSLs are written to address each violation of the Requirement. We have removed the words “or more” from the VSLs.</p> <p>The second half of the Severe VSL for R9 is almost a duplicate of the Lower VSL. There are some small changes in the wording but both situations deal with the case where there is a problem that has been identified with the Interpersonal Communications system and it takes more than two hours to initiate repair.</p> <p><b>Response:</b> The R9 Severe VSL was revised to remove “within 2 hours”. It now reads:</p> <p style="padding-left: 40px;">“The responsible entity tested the Alternative Interpersonal Communications capability and identified a problem but didn’t initiate action to repair or designate a replacement Alternative Interpersonal Communications.”</p>
<p><b>Response:</b> The RCS DT thanks you for your comment. Please see responses embedded above.</p>		
PNGC Power member owners	No	<p>Thank you for the opportunity to comment and for your hard work on this project: While we agree that effective Interpersonal Communications capability are integral to reliability, many Distribution Providers (DP) are small entities that do not maintain a 24-7 dispatch desk capable of receiving or responding to emergency reliability directives in a timely manner. It is our belief that some of the proposals in this project could unnecessarily force small entities to make investments that will not enhance reliability. Many DPs rely on answering services to address customer-service issues during non-business hours. On-call personnel are contacted in the event of an outage or emergency and crews are dispatched as appropriate. It is difficult to envision a BA or TOP issuing an Emergency Reliability Directive to a small entity (25 MW or so) which would require these smaller entities to comply with COM-001. Order 693 directs the inclusions of DPs in the COM-001-2 standard but it is our belief that the Commission offered language that GOs and DPs need not have redundant communications, training unrelated to normal/emergency operations, and that telecommunications</p>

Organization	Yes or No	Question 1 Comment
		<p>requirements for entities will vary according to their function. We believe those intentions should be reflected in the language of this standard. We would suggest adding wording such as in the applicability section, "Distribution Providers who maintain a 24-7 control centers with the ability to manually shed load of at least 100 MW within a 15-minute operational window."Also, a note that smaller, rural entities can be dependent on a phone system provider that will not allow for backup communications. Should the communication line(s) be dependent on one main phone trunk line, the failure due to an issue on this main line will make it impossible to notify anyone of its failure short of physically traveling to an area where phone service is available. For some rural areas, this will exceed the one hour time limit to report the communication outage. Forcing smaller entities to acquire satellite phone service to mitigate for a phone outage is a high price to pay when no reliability improvement will be achieved. Suggested change could be: "... shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer where alternate forms of communication are available within a 15 minute access time. Should alternate forms of communication not be available within the 15 minute access time, then upon reestablishment of Communication capabilities impacted entities will be notified of the past loss and current status of Communication."We've heard many representatives from FERC and NERC indicate that the standards development process has led the industry to take action in many cases for the sake of compliance while not necessarily enhancing reliability. As has been stated many times, the process should be about improving reliability, not about complying with standards. Unnecessarily including smaller entities that will NEVER receive an emergency reliability directive might be an example of the former.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. There is no requirement for 24/7 support, the requirement is to have communications capability. The type of system (i.e. On-Call) is not prescribed in the standard and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is "To ensure emergency communications between operating personnel are <u>effective</u>." It is not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication, in many cases this may be via a receptionist, or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>		
PPL	Yes	
PSEG	No	Com-001-2 implementation plan lists that this is applicable to PSE's and LSE's however, PSE's and LSE's were removed from the actual standard. The implementation plan should be revised.
<p><b>Response:</b> The RCSDT thanks you for your comment. We have revised as you suggested.</p>		
Dominion	No	The monthly testing requirement for Alternative Interpersonal Communications is overly burdensome without any evidence to support that it is necessary to insure reliability. We believe that an entity will take necessary

Organization	Yes or No	Question 1 Comment
		<p>steps to insure the Alternative Interpersonal Communications is functioning properly, especially if it experiences problems with its Interpersonal Communications, it. We can support quarterly testing as we believe it strikes a reasonable balance.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. The drafting team has not received a large number of comments that suggest that the frequency of the testing is burdensome and believes that the testing could occur in the normal course of daily activities. Therefore, the SDT believes the frequency of testing will not be burdensome.</p>		
<p>South Carolina Electric and Gas</p>	<p>No</p>	<p>Each sub-requirement should not have an “R” in front of the number in order to be consistent with NERC’s August 10, 2009 filing at FERC on this subject. Requirement R3 and R4 should include adjacent TOPs as a sub-requirement. Requirements R5 and R6 should include adjacent BAs as a sub-requirement. ”to exchange Interconnection and operating information” should be deleted from requirements R1 through R8 as it is redundant with the definition of Interpersonal Communications. The last page of the Implementation Plan includes LSEs, PSE, and TSPs as being responsible entities under this standard, yet the standard does not include them. Please correct the implementation plan.</p>
<p>SERC OC Standards Review Group</p>	<p>No</p>	<p>Each sub-requirement should not have an “R” in front of the number in order to be consistent with NERC’s August 10, 2009 filing at FERC on this subject.</p> <p><b>Response:</b> The RCSDT agrees and this change has been made.</p> <p>Requirement R3 and R4 should include adjacent TOPs as a sub-requirement.</p> <p><b>Response:</b> The SDT has included the following Part 3.5 of Requirement R3 and 4.3 of R4:                      Adjacent Transmission Operators synchronously connected within the same Interconnection</p> <p>Requirements R5 and R6 should include adjacent BAs as a sub-requirement.</p> <p><b>Response:</b> The SDT has included the following Part 5.6 of Requirement R5 and Part 6.3 of R6:                      Adjacent Balancing Authorities</p> <p>Note that this is a defined term in the glossary: “A Balancing Authority Area that is interconnected to another Balancing Authority Area either directly or via a multi-party agreement or transmission tariff.”</p> <p>”to exchange Interconnection and operating information” should be deleted from requirements R1 through R8 as it is redundant with the definition of Interpersonal Communications.</p> <p><b>Response:</b> The RCSDT agrees and we have removed the phrase “to exchange Interconnection and operating information from R1-R8.</p>

Organization	Yes or No	Question 1 Comment
		<p>The last page of the Implementation Plan includes LSEs, PSE, and TSPs as being responsible entities under this standard, yet the standard does not include them. Please correct the implementation plan.</p> <p><b>Response:</b> The RCSDT agrees and we have made the revision.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
<p>MRO's NERC Standards Review Subcommittee</p>	<p>No</p>	<p>A. R5.5 states a BA shall have Interpersonal Communications with each Interchange Coordinator within its BA area and adjacent Interchange Coordinators. NERC Registry Criteria (v5) uses the term “Interchange Authority” not Interchange Coordinator, please clarify.</p> <p><b>Response:</b> The RCSDT has removed the Interchange Coordinator from the standard based on stakeholder feedback.</p> <p>B. Upon review of the NERC Compliance Registry, there are only 56 BA’s that are also registered as an IA but 138 total BA’s within the registry. R5.5 is not clearly written because many BA’s do not have an IA within their BA area. Though a BA will use an IA to schedule interchange, a possible rewrite of R5.5 may be “Each Interchange Authority that the BA actively uses to arrange Interchange”.</p> <p><b>Response:</b> The RCSDT has removed the Interchange Coordinator from the standard based on stakeholder feedback.</p> <p>C. R10 states that the RC, TOP, BA, DP and GOP shall notify “impacted entities” within 60 minutes... Please clarify if the SDT means the entities within the applicability section or is this to be determined by the entity. A possible rewrite may be; “Each RC shall notify TOP’s, BA’s, and IA’s within its RC area along with adjacent RC’s within the same Interconnection”. This break down would need to be required for each affected entity and would provide clarity to the industry.</p> <p><b>Response:</b> R10 specifies only “impacted entities”. That phrase is used to limit the scope of the requirement. If an entity has a failure of its Interpersonal Communications capability with only one entity, then <i>that</i> entity is the “impacted entity” and they should be notified of the failure.</p> <p>D. We do not agree with a DP and GOP need to be held to the same level of compliance as a RC, BA or TOP. FERC Order 693 (paragraph 487) directed the DP and GOP to be included in this standard by stating:” We expect the telecommunication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process”. A DP and GOP may not be staffed 24 hours a day like a BA or TOP and the SDT did not take this into consideration.</p> <p><b>Response:</b> There is no requirement that requires identical communications systems. The requirement is to have “a” communication capability. The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Not requiring DP</p>

Organization	Yes or No	Question 1 Comment
		<p>and GOP entities to have Alternative Interpersonal Communication capability meets FERC's intention as stated here: "We (FERC) clarify that the NOPR did not propose to require redundancy on generator operators' or distribution providers' telecommunication facilities..." (Order 693, RM06-16-000, Paragraph 487). A new requirement was also added concerning the failure of a DP or GOP Interpersonal Communications capability:</p> <p style="text-align: center;">R11 Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with its Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>E. We understand that the DP and GOP need a means of communicating with their BA and TOP (R7 and R8) but would this not be the same Interpersonal Communications capability that as stated in R3 and R5 for the TOP and BA? Example: If the BA uses a phone line as their Interpersonal Communication medium to contact the DP wouldn't the DP also use the same medium to communicate with their BA? Yes, there could be different mediums but 99% of the time it will be the same medium.</p> <p><b>Response:</b> The RCSDT agrees with your assumption; however a reciprocal requirement is necessary. Without R7 and R8, there would be no requirement for the DP or GOP.</p> <p>F. R10 could mean that if there is a logging system that detects an Interpersonal Communication failure, then all applicable entities will need to monitor that monitoring device. Since this requirement applies to all applicable entities, and Interpersonal Communication mediums will most likely be the same, there will always be two entities found non compliant if the 60 minute threshold is passed.</p> <p><b>Response:</b> There is no requirement to monitor or log Interpersonal Communications capability, only to test. R10 requires the entity to notify the impacted entities upon a failed test or the detection of a failure.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
FirstEnergy	No	<p>It is not clear from the definition of Interpersonal Communications if certain communications "mediums" such as email, instant messaging, etc. are included.</p> <p><b>Response:</b> The requirements are for communications between two or more persons. Mediums are not listed to avoid being prescriptive in the requirement. The measures provide examples of mediums.</p> <p>Furthermore, the Measures for these requirements all include "electronic communications" as acceptable evidence. If the drafting team does not intend these mediums be included, then it should be clarified in the</p>

Organization	Yes or No	Question 1 Comment
		<p>definition. We suggest the following wording of the definition: Interpersonal Communication: Any medium that allows two or more individuals to interact, consult, or exchange information. This interaction consists of verbal, spoken words exchanged in Real-time.</p> <p><b>Response:</b> The use of verbal communication only is not the intent of the requirement. Written communication is also an acceptable form of Interpersonal Communication.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
SPP Standards Development	No	<p>We would suggest that the applicability of COM-001-2 be expanded to that listed in COM-002-3. How can the directives to be issued in COM-002 be delivered and confirmed without having Interpersonal Communications capability?</p> <p><b>Response:</b> The RCSDT has revised the applicability of COM-001 and COM-002 such that they contain the same functional entities. These are: RC, TOP, BA, GOP, and DP.</p> <p>All of the functional entities listed in R1.1 should also be listed in R2.1. Similarly the sub-requirements of R3 should also be applied to R4. The same holds true for R5 and R6.</p> <p><b>Response:</b> The requirements for Alternative Interpersonal Communications are different than for Interpersonal Communications. There is not necessarily a reliability need to have redundant capability with each and every entity such as DP and GOP.</p> <p>If the SDT intends to exclude data communications from Interpersonal Communications and Alternative Interpersonal Communications, we suggest the SDT be more specific in the definition to specifically exclude data communications in the definition. It is not readily apparent that these terms do not apply to data communications and without a clarification, confusion exists.</p> <p>Consider</p> <p><b>Response:</b> The RCSDT agrees and have removed the phrase “to exchange Interconnection and operating information from R1-R8. This helps clarify the intent that the capability is NOT for data exchange, as data is covered under the provisions of the recently approved IRO-010-1a.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
Kansas City Power & Light	No	<p>These requirements require TOP’s, BA’s, and GOP’s to establish alternative means of “interpersonal” communications with other BA’s, GOP’s, and BA’s respectively without regard to the reliability impact each TOP, BA or GOP has on the interconnection. Why would it be necessary for a TOP with one 161kv transmission line or a BA with 100 MW of total load, or one GOP with a 30MW unit to realize additional costs</p>

Organization	Yes or No	Question 1 Comment
		<p>when the facilities they operate have little reliability impact?</p> <p><b>Response:</b> The RCSDT believes that any NERC Registered Entity capable of issuing or receiving a directive is an applicable party to COM-001.</p> <p>In addition, most RC's have established satellite telephone systems as back-up communication with TOP's. RC's may have to establish additional communication systems with BA's as these requirements impose to avoid Standards of Conduct issues.</p> <p><b>Response:</b> It is unclear how this scenario would present Standards of Conduct issues for communication between reliability entities. The requirements pertain to reliability functions, not commercial functions or the way in which entities are structured internally.</p> <p>R9 - considering the reliability of communication systems, a 2 hour response to a problem with the alternative means of communication is over sensitive. Allowing for sometime in an operating shift would be more in line, such as 8 hours.</p> <p><b>Response:</b> The requirement is to initiate action within 2 hours, not complete it. The two hour time reference aligns with the timing shown in EOP-008 for back-up facilities.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
Competitive Suppliers		
Exelon	No	<p>1. COM-001-2, 4.4 - Distribution Providers and 4.5, Generation Operators should be highlighted and communicated as a substantive change since entities may not be aware that they are being added to the applicability section of the standard.</p> <p><b>Response:</b> These revisions were done based on FERC Order 693 directives. They have been widely distributed in redline form. NERC will ensure that the change in applicability is highlighted in the announcement of the next posting.</p> <p>2. COM-001-2, R10 - should have the following underlined clarifying text added, shall notify impacted entities within 60 minutes of the detection of a failure “of all primary and alternative “ Interpersonal Communications capabilities that lasts 30 minutes or longer. Exelon believes that the intent of R10 is for complete loss of communication ability and should not be applied to facilities that have multiple backups.</p> <p><b>Response:</b> The RCSDT developed R10 based on R3 of COM-001-1. The intent is to ensure that entities know not to use the primary and to use the alternative.</p> <p>3. COM-001-2, M1 thru 9 - Suggest that network diagrams and / or communications schematics be added as</p>

Organization	Yes or No	Question 1 Comment
		<p>suggested evidence.</p> <p><b>Response:</b> The measure only provides examples of the types of evidence that may be used for compliance and the list is not all inclusive. The term "...evidence that could include, but is not limited to..." addresses your suggestion.</p> <p>4. COM-001-2, VSL for R9 - Regarding failure to test the Alternative Interpersonal Communication, the Severity Level does not align with the potential impact to the BES. The Severity Level for simply missing a test should be revised to a High VSL.</p> <p><b>Response:</b> The VSL does not relate to risk to the BES (this is covered in the Violation Risk Factor). The VSL only indicates how badly an entity missed the mark with respect to the requirement. A Severe VSL is appropriate.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
PacifiCorp	Yes	
Arizona Public Service Company	Yes	
Southern Company	No	<p>Comments: Standard COM-001-2R10. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider, and Generator Operator shall notify impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer. Comment: It is not clear whether the notification requirements identified in R10 apply to failure of ALL available Interpersonal Communications or ANY Interpersonal Communications. We suggest that the existence of functioning Alternative Interpersonal Communications precludes the requirement for notification of impacted entities.</p> <p><b>Response:</b> The intent of R10 is to ensure that entities know not to use the primary and to use the alternative. Notification is required for the failure of the primary capability.</p> <p>D. Compliance 1. Compliance Monitoring Process 1.3 Data Retention Each Generator Operator shall keep the most recent twelve months of historical data (evidence) for Requirements R8 and R10, Measures M8 and M10. Comment: The data retention requirements specified for the Generator Operator in Para. 1.3 (above) are not consistent with the 3-year audit interval for the GOP. Question: When audited on this Standard is the expectation that the GOP will have 12 months of evidence or 36 months of evidence?</p> <p><b>Response:</b> The Data Retention section of the standard conforms to the NERC guidelines. The RCSDT has also added the following to the data retention section:</p>

Organization	Yes or No	Question 1 Comment
		<p>The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.</p> <p>Standard COM-002-3R2. Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message has been confirmed. Comment: The term “Reliability Directive” is currently not defined in the NERC Glossary of Terms. However, in the Implementation Plan for COM-002-3 the RC SDT proposes a definition for Reliability Directive. It is implied in the standard that the Reliability Directive is issued as a voice command which precludes the use of our preferred method of Interpersonal Communication. However, this is not definitively stated in either the standard or the proposed definition. I think this needs to be made clearer if the Reliability Directive must be issued as a voice command.</p> <p><b>Response:</b> The RCSDT disagrees with your assumption that the requirement implies that a Reliability Directive must be issued verbally. In a previous version of the draft standard, the RCSDT had included “verbal” issuance of directives. This was removed to allow the use of other than voice capability to issue a Reliability Directive.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
Green Country Energy, Green Country Operating Services	No	<p>COM-001 General question/comment. The reference to infrastructure should be removed and just keep the word “medium”. Here's why: What communication medium (infrastructure) does not use satellite at some point unless entities are within a close geographical proximity? How likely is it to have 2 different mediums? o Local phone and fax hard-wire likely. o Long distance phone and fax - satellite o Cell phone - satellite o Internet - satellite o Radio - antenna The reason for mentioning this is, if all we have is satellite then the reference to infrastructure should be removed and just keep the word “medium”.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. The RCSDT believes that the language of the definition is clearer with the existing verbiage.</p>		
Central Lincoln	No	See Q 6 below.
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses to Q6.</p>		

Organization	Yes or No	Question 1 Comment
Lakeland Electric	Yes	
Manitoba Hydro	Yes	
NextEra Energy, Inc.	No	<p>As drafted, COM-001 is not clear or complete. At this stage in the evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. Thus, NextEra Energy Inc. (NextEra) has numerous recommended corrections to provide clarity and completeness to COM-001. For example, the requirement to designate an Alternative Interpersonal Communication capability is not clear. Does the designator solely designate for the designator’s knowledge or does the designator need to inform the entity on the other end of the connection. In R2, for instance, the Reliability Coordinator must designate, but it is also not clear whether the Reliability Coordinator must inform the Balancing Authorities or Transmission Operators. It is further unclear whether the designation must be documented, or if any informing of the Balancing Authorities or Transmission Operators must be documented. Thus, it is recommended that the drafters decide what was intended regarding the designation and clearly state the requirements.</p> <p><b>Response:</b> The Requirement R2 is for the RC to designate an Alternative Interpersonal Communication and inform the other entity (BA, TOP, etc.) as to what that Alternative Interpersonal Communication is. The Measure M2 provides examples of the types of evidence which may be used to prove compliance with the requirement.</p> <p>In R9 it states that “. . . on at least a monthly basis.” There are two issues to consider here. If the sentence stays, grammatically it should read “. . . on, at least, a monthly basis. . . However, from a compliance and technical perspective, the term “at least” has no significance and should be deleted. The requirement is to test on a monthly basis - the phrase “at least” only introduces ambiguity and implies that the party should consider every two or three weeks. If the drafting team believes a best practice is less than a month, there are other NERC educational tools to explain a best practice.</p> <p><b>Response:</b> The RCSDT used this term to allow more frequent testing to be performed.</p> <p>In R10, it states “. . . shall notify the impacted entity . . .” It would be clearer to state: “. . . shall notify the impacted Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator . . .”</p> <p><b>Response:</b> The RCSDT believes your suggestion adds unnecessary verbiage to the requirement and does not provide additional clarity.</p>

Organization	Yes or No	Question 1 Comment
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
<p>United Illuminating Company</p>	<p>No</p>	<p>COM-001-2 does not specify the amount of time a DP has to reestablish the Interpersonal Communication Capability after the capability fails before it is assessed non-compliance for not having the communication. Is an entity non-compliant the minute the communication capability is unavailable? If so, then to be compliant a tertiary (or secondary capability for DP) must be installed by the entity. Something similar was discussed with EOP-008 R3: "To avoid requiring a tertiary facility, a backup facility is not required during: o Planned outages of the primary or backup facilities of two weeks or less o Unplanned outages of the primary or backup facilities". UI suggests the drafting team incorporate something similar.</p> <p><b>Response:</b> The RCSDT is proposing a new requirement to address your concerns for the DP. We have included the GOP as well:</p> <p style="padding-left: 40px;">R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. <i>[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p> <p>The VSL for R7 is severe only and states: "The Distribution Provider failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 7.1 or 7.2". I believe there should be a time component to the VSL and the VSL staged. For example, failure to have communication established for less than 60 minutes would be Lower, anything over 1 hour severe. Also needed is a phrase to state when the violation begins. Does the violation begin when the loss of Communication Capability is detected or when it occurred? In other words, does the violation start when the operator attempts to use the phone and it is not functional, or did it occur when the phone line functionality failed but was not yet detected because no attempt to use the phone was made. So the VSL for R7 would follow a format of: "The Distribution Provider failed to have Interpersonal Communication Capability with one or more entities listed in Parts 7.1 or 7.2 for a continual 60 minutes period as measured from the time the ICC failure was detected". An alternative remedy is to alter the language of R7 to allow for unplanned outage.</p> <p><b>Response:</b> The VSL represents a single violation of the requirement. For this requirement, the DP must have Interpersonal Communication with its TOP and BA. The VSL was revised to remove "or more" to conform to the requirement.</p> <p>NERC does not have a Reliability Requirement for a DP to staff a control room 24/7. COM-0001 can be interpreted to imply that a DP needs to be staffed 24/7 to facilitate interpersonal communications. If NERC wants to extend the requirement for a 24/7 staffed operating position at the DP then the appropriate method is</p>

Organization	Yes or No	Question 1 Comment
		<p>thru a SAR to PER-002.</p> <p><b>Response:</b> COM-001 is not intended to imply a 24/7 requirement.</p> <p>COM-001 R7 should have a sub-requirement added recognizing that DP's are not required to staff 24/7 and many do not staff overnight. UI suggests adding R7.3: DP's will notify their TOP and/or BA when it is not staffing an operating desk.</p> <p><b>Response:</b> While the SDT does not disagree this would be good practice, other methods of addressing this situation (e.g., having an answering service, an on –call staff, or something similar) would be valid as well. The SDT does not believe it would be appropriate to limit this to only one method.</p> <p>R7: Should address the instance if the DP is not required to have communication with the BA, because the BA communicates thru the TOP.</p> <p><b>Response:</b> The intent of the standard is that the DP will have communication with their BA. Ti is not prescriptive as to how that communication will be implemented.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
American Electric Power	No	The applicability of COM-001 and COM-002 appear to be at odds with each other. The requirements may need to be re-written so that they are in sync.
<p><b>Response:</b> The RCSDT thanks you for your comment. The RCSDT has made revisions to COM-001 and COM-002 such that the applicability is compatible.</p>		
Pepco Holdings Inc	Yes	
American Transmission Company	Yes	ATC agrees with the understanding that the line of demarcation is up to the point where ATC owns the equipment.
<p><b>Response:</b> The RCSDT thanks you for your comment.</p>		
WECC	Yes	
BGE	Yes	BGE has no additional comments.
Constellation Energy Commodities Group	Yes	

Organization	Yes or No	Question 1 Comment
Duke Energy	No	<p>o We question how far the definition of Alternative Interpersonal Communication goes in requiring separate infrastructure from Interpersonal Communication. For example, wireless communications sometime utilize fiber optic networks.</p> <p><b>Response:</b> The definition requires the use of different infrastructure (medium) than the Interpersonal Communication used for day to day ops. The RCSDT cannot be prescriptive regarding the specific medium to be employed. This is intended to apply to assets and access to media that is within the control of the entity responsible for complying with the Requirement. For example, the way cell phone signals are routed is not within your control.</p> <p>o We question why the requirements state that entities must “have” Interpersonal Communications capability, but must “designate” Alternative Interpersonal Communications capability?</p> <p><b>Response:</b> Many entities have multiple Alternative Interpersonal Communication capabilities. Allowing them to designate which one they want to employ allows for flexibility in which one they use for AIC.</p> <p>o R1.2 and R2.2 - Why is this limited to the same interconnection?</p> <p><b>Response:</b> The phrase “within the same interconnection” is added for the case of ERCOT, which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>o R3 - need to add neighboring TOPs.</p> <p><b>Response:</b> Agreed.</p> <p>o R5 - need to add adjacent BAs.</p> <p><b>Response:</b> Agreed.</p> <p>o Interchange Coordinator - Add IC to the Applicability Section, and add a requirement that the IC have Interpersonal Communication capability with its BA and adjacent BAs.</p> <p><b>Response:</b> The RCSDT has eliminated the Interchange Coordinator from COM-001-2 based on other stakeholder comments..</p> <p>o Requirements to “designate” Alternative Interpersonal Communication should carry a “Medium” VRF instead of “High”, because they are a backup capability. The word “designate” carries the connotation that these are documentation requirements.</p> <p><b>Response:</b> The requirement to designate is for the entity to have an Alternative Interpersonal Communications capability and to designate what that is. In many cases, an entity will have multiple</p>

Organization	Yes or No	Question 1 Comment
		<p>alternatives and neighboring entities need to know how to contact them in case of a failure of the primary. If an entity does not designate its AIC, in an emergency it may not be able to issue or comply with directions or instructions which could directly contribute to BES instability, separation, or cascading failure.” The VRF should remain as high.</p> <p>o R9 requires a monthly test of Alternative Interpersonal Communications capability. This was quarterly in the last draft. We question how these requirements for “Alternative Interpersonal Communications” capability are related to requirements for “backup functionality” in EOP-008-1, which requires an annual test of backup functionality. Clarity on the relationship between “Interpersonal Communications”, “Alternative Interpersonal Communications”, “primary control center functionality” and “backup control center functionality” would be appreciated.</p> <p><b>Response:</b> Interpersonal Communication and Alternative Interpersonal Communication should be in both the primary and back up control center. IC and AIC are between entities as well. These capabilities are in the primary and back up control centers. The requirement applies to the primary control center. EOP-008 applies to the back up control center. An entity may test its AIC in the normal course of daily activities.</p> <p>o R11 - is this requirement being moved to COM-003?</p> <p><b>Response:</b> The OPCP SDT is vetting this requirement and it will be in COM-003.</p> <p>o Data Retention - Is data retention really going to be just 12 months? Most auditors seem to be asking for everything since the last audit.</p> <p><b>Response:</b> The Data Retention section of the standard conforms to the NERC guidelines. The RCSDT has also added the following to the data retention section:</p> <p style="padding-left: 40px;">The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.</p>		
CECD	No	<p>Based on the drafting teams response that the definition of Interpersonal" clarifies the exclusion of media dedicated to Telemetry or other data exchange, the term Interpersonal Communication should be replaced with verbal communication capabilities. The term Alternative Interpersonal Communication should be replaced with alternative verbal communication capability that is able to serve as a substitute for and does not</p>

Organization	Yes or No	Question 1 Comment
		utilize the same infrastructure (medium) as verbal communications capabilities used for day-to-day operations.
<p><b>Response:</b> The RCSDT thanks you for your comment. The RCSDT wrote the definitions to include verbal as well as written communication, and the Measures provide examples of person to person communications.</p>		
Indeck Energy Services	No	
City of Springfield, IL - City Water Light and Power (CWLP)	No	<p>The definition of “Interpersonal Communications” is overly broad and does not address the functional needs of reliability coordination. The definition should be limited to systems utilized for essential reliability functions. While the Purpose statement in the standard does address this intent, the explicit inclusion in the definition removes all ambiguity. Further, the definition of “Alternative Interpersonal Communications” without corresponding explicit definition of Primary Interpersonal Communications may lead to confusion and unnecessary duplication of efforts in testing and maintenance.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. The overall mission of reliability standards is for entities to address essential reliability functions.</p>		
Independent Electricity System Operator	No	<p>(1) NERC filed with FERC on August 10, 2009 indicating that it would discontinue the use of sub-requirements in standards. All draft standards posted since have the format of Part Numbers within each main Requirement. Please revise the standards in this project accordingly.</p> <p><b>Response:</b> The RCSDT agrees and this revision will be made.</p> <p>(2) Having defined the terms Interpersonal Communication and Alternative Interpersonal Communication, the phrase “to exchange Interconnection and operating information” in a number of requirements is redundant and can be removed. Further, for R1, we suggest removing the phrase “within the same Interconnection since there RCs between two Interconnections still need to communication with each other for reliability coordination (e.g. curtailment of interchange transactions crossing Interconnection boundary, as stipulated in IRO-006).</p> <p><b>Response:</b> The RCSDT agrees and have removed the phrase “to exchange Interconnection and operating information” from R1-R8. This helps clarify the intent that the capability is NOT for data exchange, as data is covered under the provisions of the recently approved IRO-010-1a.</p> <p>The phrase “within the same interconnection” is added for the case of ERCOT which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>(3) R2: Suggest to add Purchasing-Selling Entity and Interchange Authority (INT-004 and INT-005 have requirements for communication between the RC and the PSE and IA), and remove the phrase “within the</p>

Organization	Yes or No	Question 1 Comment
		<p>same Interconnection since there RCs between two Interconnections still need to communication with each other for reliability coordination (e.g. curtailment of interchange transactions crossing Interconnection boundary, as stipulated in IRO-006).</p> <p><b>Response:</b> The applicability of COM-001 and COM-002 were revised to include the same reliability entities: RC, TOP, BA, DP and GOP. LSE, PSE and TSP were removed from the applicability of these standards per stakeholder suggestion.</p> <p>The phrase “within the same interconnection” is added for the case of ERCOT which has only DC tie lines with the Eastern Interconnection and has minimal interchange.</p> <p>(4) R3: Suggest to add adjacent Transmission Operator and Purchasing-Selling Entity (the latter needed for meeting INT-004 requirements).</p> <p><b>Response:</b> The SDT has included the following Part 3.5 of Requirement R3:</p> <p style="padding-left: 40px;">3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection</p> <p>The applicability of COM-001 and COM-002 were revised to include the same reliability entities: RC, TOP, BA, DP and GOP. LSE, PSE and TSP were removed from the applicability of these standards per stakeholder suggestion.</p> <p>(5) The list of entities in R4 and R6 is different from those in R3 and R5. They should be the same for having Alternative Interpersonal Communication capability.</p> <p><b>Response:</b> The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Additionally requiring DP and GOP entities to have Alternative Interpersonal Communication capability only imposes more cost on smaller DP and GOP entities that have little or no risk impact to the bulk electric system.</p> <p>(6) R5: Suggest to add adjacent Balancing Authority as adjoining BAs need to communication with each to check schedules and other balancing information.</p> <p><b>Response:</b> The SDT has included the following Part 5.6 of Requirement R5:</p> <p style="padding-left: 40px;">5.6 Adjacent Balancing Authorities</p> <p>Note that this is a defined term in the glossary: “A Balancing Authority Area that is interconnected (to) another Balancing Authority Area either directly or via a multi-party agreement or transmission tariff.”</p> <p>(7) There are a number of parts in Requirements R1 to R8 each of which must be complied with. However, the VSLs for R1 to R8 are binary which do not provide any distinction in partial failure of each of these requirements. We suggest the SDT to apply the VSL guideline and re-establish the various levels of violation</p>

Organization	Yes or No	Question 1 Comment
		severity for these requirements. <b>Response:</b> Each entity listed in Requirements R1-R8 is required to meet the contents with respect to each other entity listed in the requirement. Failure to have the capability with a single entity is a single violation of the requirement. For example, if an RC has 5 BA's within it Area and fails to have Interpersonal Communications with two of them, then the RC has violated the requirement twice. The VSLs are written to address each violation of the Requirement. We have removed the words "or more" from the VSLs.
<b>Response:</b> The RCSDT thanks you for your comment. Please see responses above.		
Bonneville Power Administration	Yes	
Xcel Energy	No	We feel that either the definitions, or the requirements, should make it clear whether data is included.
<b>Response:</b> The RCSDT thanks you for your comment. The SDT has made modifications to attempt to make this as clear as possible.		

2. The RCSDT believes that the requirements of TOP-001-1 obviate the need to develop additional requirements to address Xcel’s comment. Do you agree? If not, please explain in the comment area below.

**Summary Consideration:**

The original justification that the RCSDT posited for not adding a requirement to directly address Xcel Energy’s comments in paragraph 516 and FERC’s related recommendation in paragraph 523 was that TOP-001-1 R3 was considered to address this concern. Since that time, the RTO SDT has proposed to retire TOP-001-1 R3. However, FERC has since retired IRO-004-1 R3 and R5 along with IRO-005-3 R5. Because these are retired, there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirements,” the TOP may respond to the RC that it cannot comply.

Organization	Yes or No	Question 2 Comment
Northeast Power Coordinating Council	No	If the requirement were going to remain, but the Project 2007-03 Real-Time Operations SDT proposed to retire that requirement during their last posting. There needs to be better coordination with that SDT.
<p><b>Response:</b> The RCSDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirement,” the TOP may respond to the RC that it cannot comply.</p>		
Bonneville Power Administration	Yes	
PPL	Yes	
Dominion	Yes	
SERC OC Standards Review Group	No	Top-001-1, Requirement R3, which is what the SDT appears to be using as its justification for not adding a requirement here is proposed to be deleted by the RTO-SDT on Project 2007-03.
<p><b>Response:</b> The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. FirstEnergy	Yes	
Midwest ISO Standards Collaborators	No	It might if the requirement were going to remain but the Project 2007-03 Real-Time Operations SDT proposed to retire that requirement during their last posting. This needs to be coordinated with that SDT.
<p><b>Response:</b> The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirement,” the TOP may respond to the RC that it cannot comply.</p>		
SPP Standards Development	Yes	In fact, we believe that R1, R2 and R5 more specifically put that requirement on the TOP. The TOP doesn't have to wait for the RC and any directive that may be associated with R3 prior to taking action to mitigate an emergency condition.
<p><b>Response:</b> The SDT thanks you for your comment.</p>		

Consideration of Comments on Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 2 Comment
Kansas City Power & Light	Yes	
Exelon	Yes	
PacifiCorp	Yes	
Arizona Public Service Company	Yes	
Southern Company	No	<p>Comments: I see no connection between XCEL's comment on COM-001-1. The requirements of COM-001-1 require the RCs, TOPs, and BAs to have a primary interpersonal communications method and to designate an alternative. I believe that if the requirements for the entity to have both primary and alternative methods of interpersonal communications this objection could be cleared. For example, R2 Each Reliability Coordinator shall designate have an Alternative Interpersonal Communications capability with the following entities to exchange Interconnection and operating information</p>
<p><b>Response:</b> Thank you for your comment. We agree that there is no connection between Xcel's concern and COM-001-1.</p>		
Green Country Energy, Green Country Operating Services		No Comment
Manitoba Hydro	Yes	
NextEra Energy, Inc.	No	<p>As stated in response to number 1, Reliability Standards are to be clear and complete. If a Transmission Operator is not responsible for a delay caused by a Reliability Coordinator, the Standard should specifically state that the Transmission Operator does not need to wait for an assessment or approval of a Reliability Coordinator to take actions pursuant to TOP-001-1 R3. Since the Reliability Coordinator is atop the reliability hierarchy, such a statement provides clarity and completeness to understanding a Transmission Operators rights. Thus, TOP-001-1 R3 should be revised to lead with: "Without any obligation to first seek and obtain an assessment or approval from its Reliability Coordinator, each Transmission Operator . . . ."</p>
<p><b>Response:</b> The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirement," the TOP may respond to the RC that it cannot comply.</p>

Duke Energy	No	Requirements of TOP-001-1 are being revised under Project 2007-03, which may not continue to adequately address Xcel's concern.
<p><b>Response:</b> The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirement," the TOP may respond to the RC that it cannot comply.</p>		
Indeck Energy Services	Yes	
City of Springfield, IL - City Water Light and Power (CWLP)	No	TOP-001 is in the process of being substantially modified by Project 2007-03. These changes may conflict with the matter addressed by Xcel's comment. Thus, Xcel's concern should be addressed independently but in the context of the TOP-001-2 revisions proposed by Project 2007-03.
<p><b>Response:</b> The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirement," the TOP may respond to the RC that it cannot comply.</p>		
South Carolina Electric and Gas	No	Top-001-1, Requirement R3, which is what the SDT appears to be using as its justification for not adding a requirement here is proposed to be deleted by the RTO-SDT on Project 2007-03.
<p><b>Response:</b> The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirement," the TOP may respond to the RC that it cannot comply.</p>		
Independent Electricity System Operator	No	TOP-001 is being revised and some of the requirements that fulfill this need may have been removed. We suggest the SDT check with the latest draft version of TOP-001 and coordinate with the Real-time Operation SDT to ensure there are not gaps.
<p><b>Response:</b> The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered "would violate safety, equipment, regulatory, or statutory requirement," the TOP may respond to the RC that it cannot comply.</p>		

Organization	Yes or No	Question 2 Comment
Xcel Energy	No	<p>We are concerned that the drafting team may not have understood Xcel Energy’s comments and FERC’s directive in Order 693. FERC had asked that NERC consider Xcel Energy’s suggestion. This consideration does not necessarily equate to the development of additional requirements, however that may be the solution. We recognize that R1 and R2 of TOP-001-1 give the TOP authority to take immediate actions necessary to alleviate operating emergencies. We were concerned with the potential situation where the RC’s directive (R3 of IRO-001-2) may conflict with actions the TOP has ALREADY taken. In this situation, we do not feel the TOP should be held at fault for the actions it took prior to the RC’s directive. (R3 of IRO-001-2 is currently in effect under TOP-001-1 R3.) Additionally, R1 and R2 of TOP-001-1 have been removed from the latest draft of version 2. So, if TOP-001-2 and IRO-001-2 are approved as drafted, it would appear that all rights and protections of the TOP to take immediate actions will be removed and our initial issue, as detailed in Order 693, still exists.</p>
<p><b>Response:</b> The SDT thanks you for your comment. The RTO SDT proposes to retire TOP-001-1 R3. However, since NERC has retired IRO-004-1 R3 and R5 along with IRO-005-3 R5 , there are no longer any requirements that would force a TOP to wait for a delayed RC response during an emergency, therefore the question is resolved, albeit differently than it was proposed to be resolved in this posting. If an RC were to give a Reliability Directive to a TOP that the TOP considered “would violate safety, equipment, regulatory, or statutory requirement,” the TOP may respond to the RC that it cannot comply.</p> <p>The SDT appreciates this clarification by Xcel Energy. At any time in the future, Reliability Directives may be received that, based on the best available information at the time, change or reverse operating actions taken in the past, even the immediate past. The TOP is not held at fault for past actions that it took to protect the BES by any current or proposed NERC requirements. As written in TOP-001-2 R1, R3 and R4 as proposed by the RTO SDT, the TOP is not prevented from acting or telling the RC that for specific safety, equipment, regulatory or statutory reasons, it cannot comply.</p>		

3. Do you agree with the revision to IRO-001, R1 for certifying Reliability Coordinators? If not, please explain in the comment area below.

**Summary Consideration:** Stakeholders were asked if they agree with the revision to IRO-001, R1 for certifying Reliability Coordinators. Many commenters suggested removing the requirement because it is addressed in the NERC Rules of Procedure. The RCSDT concurs and has removed R1 from IRO-001-2.

Organization	Yes or No	Question 3 Comment
ERCOT ISO	No	<p>The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be.</p> <p>The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES is covered under a Reliability Coordinator.</p> <p>In R2, should “of” be “to”? Reliability Directives are issued to TOPs, BA, etc.</p> <p>The VSL for R1 is not consistent with the requirement. The requirement applies to the ERO but the VSL applies to the Regional Entity.</p>
ISO New England	No	<p>The language “to continuously assess transmission reliability” should be changed to “to continuously assess Bulk Electric System reliability” to reflect what the enforceability of the standards are meant to be.</p> <p>The requirement on the ERO should also be expanded similar to BAL-005-0.1b R1 to ensure that all operating entities and the entire BES is covered under a Reliability Coordinator.</p> <p>In R2, should “of” be “to”? 6. Do you have any other comment, not expressed in questions above, for the RC SDT?

**Summary Consideration:**

The RCSDT received comments suggesting clarification of COM-002-3. The RCSDT intends the communication of Reliability Directives to be person-to-person and in such a manner that the Reliability Directive is understood and not necessarily repeated verbatim. COM-002-3 is not intended to be prescriptive on how the Reliability Directive is issued. Spoken or written communications are valid methods (i.e. using the telephone, radio, electronic texting, email, etc.). The purpose of COM-002-3 is to ensure emergency communications between operating personnel are effective. There is no proxy requirement for 24/7 operating personnel regarding small entities. Only “capability” as provided for in COM-001-2 is applicable. The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation. As envisioned, communications protocols would be addressed in the COM-003 standard being developed in Project 2007-02.

Some commenters suggested revisions to IRO-014, requirement R8 to conform to similar requirements R6 and R7. The RCSDT made the suggested revision by re-ordering R8:

R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High][Time Horizon: Operations Planning, Same Day Operations and Real-time Operations]

IRO-014-2, requirement R4 is applicable to those Reliability Coordinators engaged in activities related to requirement R1 and part 1.7, it is unlikely that Reliability Coordinators geographically and electrically distant from one another will have mutually agreed upon operating procedures (per requirement R1), and therefore requirement R4 would not be applicable. The RCSDT believes IRO-014-2, requirement R4 which requires weekly communication provides reasonable contact and flexibility – and this requirement is in effect today. The RCSDT coordinated the use of the NERC Glossary term “Adverse Reliability Impact” with the Real-Time Operations team and continues the practice of informing all RCs of Adverse Reliability Impacts in requirement R5. The RCSDT has revised IRO-014-2, requirements R6-R8 to clarify that when one RC identified a problem and presents an action plan for another RC, the second RC is obligated to implement the action plan. The RCSDT will forward the concern about RC's identifying themselves and the receiver to establish authority to the Project 2007-02, Operating Personnel Communications Protocols SDT. The Project 2007-02 team is developing a standard that includes requirements for use of specific communications protocols.

Organization	Yes or No	Question 6 Comment
Northeast Power Coordinating		The SDT did not address all concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be

Organization	Yes or No	Question 6 Comment
Council		<p>confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving as the Transmission Operator or Balancing Authority. It should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, standards should be made clear that the Reliability Directive is directed to another company. In place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations for three-part communications to their sub-operating entities.</p> <p>Therefore, we suggest modifying R1 to be</p> <p>“When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]”</p> <p><b>Response:</b> COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p style="padding-left: 40px;">“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be</p>

Organization	Yes or No	Question 6 Comment
		<p>required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>Also, the definition of Emergency as currently cited in these draft Standards and included in the existing NERC Glossary should be modified to include the NERC Glossary term Adverse Reliability Impact to make the Standards more crisp, clear and enforceable. Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team.</p> <p><b>Response:</b> With respect to the suggestion of modifying the definition of Emergency. The RCSDT believes that the term Emergency relates to the actual state of the system, including local and wide area, while an Adverse Reliability Impact is the impact resulting from an event resulting in instability or cascading that affects a widespread area of an Interconnection. There could be an Emergency that is local, or that threatens equipment but which does not necessarily result in cascading or instability; it is in this regard that the RCSDT believes that the definition of Emergency should not be dependent upon or pertain only to Adverse Reliability Impact events. The RCSDT coordinated the use of Adverse Reliability Impacts with the Real-Time Operations team.</p> <p>There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation that indicates requirements are being move to this standard. Delete the text box.</p> <p><b>Response:</b> We have deleted the text box.</p> <p>Strike IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p><b>Response:</b> The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators. These activities are listed as sub requirements. R1.7 requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further, the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>With respect to the relation of IRO-14-2 R1.7 and R4. R1.7 is requires you to have a procedure relating to</p>

Organization	Yes or No	Question 6 Comment
		<p>weekly conference calls while R4 requires participation in weekly calls.</p> <p>Requirement R2 in IRO-001 contains the words “which could include issuing Reliability Directives”, but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. These words should be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.</p> <p><b>Response:</b> R2 requires the Reliability Coordinator to act. These actions could include Reliability Directives in the case of an Emergency; however, issuing Reliability Directives might not always be necessary, as the Reliability Coordinator may be acting proactively well in advance of an emergency. R2 promotes this proactive approach, but reserves the use of Reliability Directives for circumstances that require its use.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
PPL		<p>We are providing the following comments for the Standards Drafting Team to consider.</p> <p>1) Consider changing R1 to ‘Each RC shall have the capability for Interpersonal Communications with the following entities to exchange Interconnection and operating information...’ for clarity as Interpersonal Communications and capability are both nouns.</p> <p><b>Response:</b> Thank you for your suggestion to modify the sentence structure into a noun phrase, however the RCSDT believes the current form is unambiguous.</p> <p>2) We feel changing the applicability of the standard is important to the accuracy of the standard. The purpose of COM-002 is ‘To ensure emergency communications between operating personnel are effective’. Since operating personnel are covered by the applicability of RC, BA, TOP and GOP, we suggest the applicability to TSP, LSE, and PSE be removed from COM-002-3.</p> <p><b>Response:</b> We agree and have removed those entities</p> <p>3) Additionally, we would like to bring to the attention of the Standards Drafting Team, that the implementation plan for COM-001-2 and IRO-001-2 still includes TSP, LSE, and PSE although the revised standard does not include these entities in the Applicability Section. For COM-001-2 refer to the implementation plan, page 1. For IRO-001-2 refer to the implementation plan for new R2, new R3, new R4</p>

Organization	Yes or No	Question 6 Comment
		<p>and the chart on the last page. Thank you for your consideration in addressing these comments.</p> <p><b>Response:</b> The RCSDT has revised the applicability of COM-001, COM-002 and IRO-001 to align with each other. TSP, LSE and PSE are no longer in either standard.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
PSEG		<p>IRO COM-002-3 standard continues to include PSE. PSE's do not play an active role and have no authority or ability to perform reliability coordination. PSE's should be removed from the standard.-001-2 references PSE's in the implementation for R2, R3, R4 and "Functions that must comply with the requirements in this standard" table. PSE's were removed from the standard and should be removed from the implementation plan.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. The RCSDT has revised the applicability of COM-001 and COM-002 to align with each other. TSP, LSE and PSE are no longer in either standard.</p>		
Dominion		<p>We do not agree with the addition of weekly conference calls as required in R4. We believe that RCs should schedule calls as needed but do not agree that a weekly scheduled call improves reliability.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. The requirement for weekly conference calls exists in IRO-015-1. The RCSDT has revised the requirement and incorporated it into proposed IRO-014-2.</p> <p>R2. The Reliability Coordinator shall participate in agreed upon conference calls and other communication forums with adjacent Reliability Coordinators.</p> <p>R2.1. The frequency of these conference calls shall be agreed upon by all involved Reliability Coordinators and shall be at least weekly.</p>		
SERC OC Standards Review Group		<p>Reliability Directives may be issued by blast calls from Reliability Coordinators. It is inefficient and may be a hindrance to reliability to require 3-part communications in these instances.</p> <p><b>Response:</b> The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. However the essence of accurately implementing Reliability Directives is accomplished by use of 3-part communications. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation.</p> <p>There are several organizations registered as BAs, RCs and TOPs. It is not uncommon for those entities to be distributed across multiple desks in the same control room without regard to how an entity is registered.</p>

Organization	Yes or No	Question 6 Comment
		<p>Thus, a single System Operator may perform functions that are categorized under two or more of those functional entities. The drafting team should clarify that under no circumstances should that System Operator be required to issue a Reliability Directive to himself. This is a corporate governance issue.</p> <p><b>Response:</b> COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p style="padding-left: 40px;">“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>In IRO-014, R1, delete sub-requirement 1.7. The requirement for weekly conference calls related to operating procedures is duplicative to R4 and could be burdensome while adding very little value under certain circumstances. In IRO-014, R4, delete the phrase “(per Requirement 1, Part 1.7)” as a conforming change.</p> <p><b>Response:</b> The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators. These activities are listed as sub requirements. R1.7 requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further, the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>In IRO-014, Requirements R6-R8 allow at least the theoretical possibility that an RC may determine an Adverse Reliability Impact in another RC’s area that the other RC neither can see nor believes that any</p>

Organization	Yes or No	Question 6 Comment
		<p>action should be taken. R7 puts the burden on the first RC to develop a plan that it cannot implement because it has no agreement with the BAs and TOPs in the other RC area. As such, this requirement is unenforceable.</p> <p><b>Response:</b> Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone's model or processes or procedures. The RC's are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent. R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p> <p>IRO-014-2, Revised R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p> <p>Please review all the implementation plans to be sure the applicable entities match those in the standards.</p> <p><b>Response:</b> These have been updated.</p> <p>"The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers."</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
<p>IRC Standards Review Committee</p>		<p>The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to</p>

Organization	Yes or No	Question 6 Comment
		<p>their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company.</p> <p><b>Response:</b> COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p style="padding-left: 40px;">“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>We believe that, in place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations of three-part to their sub-operating entities. Therefore, we suggest modifying R1 to be</p> <p>“When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]”</p> <p><b>Response:</b> In regards to your suggested modification of R1 to include “or in advance through documented</p>

Organization	Yes or No	Question 6 Comment
		<p>procedures”, the intent of R1 in its current form is to provide that ability, as such any documented procedure would require stating such implemented action is considered a response to a Reliability Directive. And would follow acknowledge and confirmation requirements.</p> <p>Also, we believe that the definition of Emergency, as currently cited in these draft Standards and included in the existing NERC Glossary should be modified to include the NERC Glossary term Adverse Reliability Impact to make the Standards more crisp, clear and enforceable. Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team.</p> <p><b>Response:</b> The RCSDT believes that the term Emergency relates to the actual state of the system, including local and wide area, while an Adverse Reliability Impact is the impact resulting from an event resulting in instability or cascading that affects a widespread area of an Interconnection. There could be an Emergency that is local, or that threatens equipment but which does not necessarily result in cascading or instability; it is in this regard that the RCSDT believes that the definition of Emergency should not be dependent upon or pertain only to Adverse Reliability Impact events. The RCSDT coordinated the use of Adverse Reliability Impacts with the Real-Time Operations team.</p> <p>There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard.</p> <p><b>Response:</b> The text box was removed.</p> <p>Please delete the text box. IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p><b>Response:</b> The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators, these activities are listed as sub requirements. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes. The relation of IRO-14-2 R1.7 to R4 is that R1.7 requires having a conference call, R4 requires participation by all impacted Reliability Coordinators, as such, neither replaces the other.</p> <p>In the definition of Reliability Directive, we suggest changing “to address an Emergency” to “to address a reliability constraint or a declared Emergency”. The RCSDT believes that reliability constraint is ambiguous and undefined, thus introducing confusion. Further modifying Reliability Directive by including “declared Emergency” would add unnecessary step in mitigation of the Emergency</p>

Organization	Yes or No	Question 6 Comment
		<p>Further, Requirement R2 in IRO-001 contains the words “which could include issuing Reliability Directives” but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest that these words be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.</p> <p><b>Response:</b> R2 requires the Reliability Coordinator to act, these actions could in include Reliability Directives in the case of an Emergency, however issuing Reliability Directives it might not always be necessary, as the Reliability Coordinator may be acting pro-active well in advance of an emergency. R2 promotes this pro-active approach, but reserves the use of Reliability Directives for circumstances that require its use.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
<p>Midwest ISO Standards Collaborators</p>		<p>The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company.</p> <p><b>Response:</b> COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p>“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-</p>

Organization	Yes or No	Question 6 Comment
		<p>002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>We also are concerned about the need to conduct three-part communications for a Reliability Directive issued through a blast call. Under these circumstances, the need for immediate action of multiple parties may require a blast call and there may not be time for all parties to complete three-part communications before initiating actions. Thus, we believe blast calls should be treated separately and that should be made clear.</p> <p><b>Response:</b> The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. However the essence of accurately implementing Reliability Directives is accomplished by use of 3-part communications. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation.</p> <p>COM-002-3 R2 needs to be rewritten as it is too verbose. The point is for the recipient of the original message to get the issuer to confirm that the message was understood. We suggest rewording R2 to “Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.” Once the receiver has completed this requirement, the ball is in the issuer’s court per Requirement R3. No additional words are necessary in the requirement.</p> <p><b>Response:</b> The RCSDT believes that the additional verbiage is necessary to ensure that an entity understands the Reliability Directive and is able to communicate that understanding back to the Reliability</p>

Organization	Yes or No	Question 6 Comment
		<p>Coordinator. It is not necessary to repeat the exact same verbiage of the Reliability Directive, but rather the intent of the actions required. Having to repeat verbiage of the Reliability Directive word-for-word could be an impediment to achieving the reliability intent of the Reliability Directive when the focus is on repeating verbatim.</p> <p>Per COM-002-3 R1, who decides that actions need to be issued as a Reliability Directive? Shouldn't it be the responsible entity? Thus, can we assume that if the responsible entity does not identify a communication as a Reliability Directive that it is not a Reliability Directive per the requirement? After all, why would an entity require actions but not issue a Reliability Directive. Following this logic, the VSL for R1 would never apply. Would a compliance auditor second guess if an action required a Reliability Directive?</p> <p><b>Response:</b> Those orders issued as a Reliability Directive, and identified as such, will heighten awareness, tighten communications and require the receiver of the Reliability Directive to prioritize its response. Moreover, linking Reliability Directives to Emergencies establishes that normal non-Emergency operating communications or actions are not applicable to COM-002.</p> <p>Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team.</p> <p><b>Response:</b> The RCSDT coordinated the use of Adverse Reliability Impacts with the Real-Time Operations team</p> <p>There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box.</p> <p><b>Response:</b> The text box has been removed.</p> <p>Please strike part IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p><b>Response:</b> The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted</p>

Organization	Yes or No	Question 6 Comment
		<p>Reliability Coordinators, these activities are listed as sub requirements. R1.7 is requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>IRO-014-2 R4 is overly broad and would require Reliability Coordinators that will not impact one another to participate on conference calls with one another without any reliability benefit. The issue is created by the addition of the clause “within the same Interconnection” to the requirement. ISO-NE, FRCC, Midwest ISO, and SPP are all in the same Interconnection. It is hard to fathom there being reliability benefit to SPP and ISO-NE conversing weekly or Midwest ISO and FRCC conversing weekly. We suggest limiting the requirement to adjacent Reliability Coordinators.</p> <p><b>Response:</b> IRO-14-2 R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently R1.7, it is unlikely that Reliability Coordinators whom are geographically and electrically distant will have <i>mutually agreed upon</i> operating procedures (per R1), and as such they are not applicable to R4.</p> <p>For IRO-014-2 R5, we suggest replacing “other” with “impacted” to limit the notification of Adverse Reliability Impacts to only those Reliability Coordinators that need to know. Because the definition of Adverse Reliability Impact includes “Bulk Electric System instability or Cascading”, it is possible that the cascading of 138 kV lines serving a load pocket or generator outlet stability issues could require a Reliability Coordinator to notify all other Reliability Coordinators regardless of impact. This would include Reliability Coordinators outside of the Interconnection with the problem. It would also include Reliability Coordinators that are not impacted. For instance, an issue in New England that would not pose a threat outside the northeast would require ISO-NE to notify SPP and FRCC and Reliability Coordinators in the Western Interconnection. There is no reliability benefit to this notification.</p> <p><b>Response:</b> This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>IRO-014-2 R6-R8 are problematic and need to be refined to make clear that the Reliability Coordinators shall operate to the most conservative limit. It should not require a Reliability Coordinator that disagrees with an action plan to implement the action plan. The Reliability Coordinator will be disagreeing with the action plan for reliability reasons. Assuming they are correct, the requirement to implement said action plan will actually put the Interconnection at greater risk. These requirements inappropriately attempt to codify the debate and analysis that occurs between and within Reliability Coordinators when there are differing results in reliability</p>

Organization	Yes or No	Question 6 Comment
		<p>analysis. This is part of the problem with having a Wide Area view that results in Reliability Coordinators having a view into other Reliability Coordinator Areas. Their results and conclusions may be different. There should be a hierarchical structure for whose results should be used. It should be the Reliability Coordinator with primary responsibility unless the other Reliability Coordinator has evidence to demonstrate that the Reliability Coordinator with primary responsibility is incorrect. What this should do is to trigger both to review their models and data to assess the problem. None of this needs to be codified in the standards though.</p> <p><b>Response:</b> Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone's model or processes or procedures. The RC's are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p>In the definition of Reliability Directive, we suggest changing "to address an Emergency" to "to address a declared Emergency". This would help limit second guessing for a situation where a System Operator took action because he truly believed he was an Emergency but after the fact analysis demonstrates there really was not an Emergency.</p> <p><b>Response:</b> Modifying Reliability Directive by including "declared Emergency" would add an unnecessary step in mitigation of the Emergency. The act of issuing a Reliability Directive to address an Emergency (per the proposed definition) is sufficient.</p> <p>The drafting team should expand its rationale for deleting IRO-002-1 R3. Currently, TOP-005 R1 is referenced. The Real-Time Operations drafting team proposed to retire TOP-005-2 R1 in its most recent posting.</p> <p><b>Response:</b> The data provisions are covered in recently approved IRO-010-1, R1-R3 which replaced TOP-005-1, R1. The secure network provisions are covered in the CIP body of standards.</p> <p>We disagree with deleting IRO-002-1 R5 and R7 which establish tools and monitoring capabilities. There should be basic tools requirements established for Reliability Coordinators. Project 2009-02 Real-time Reliability Monitoring and Analysis Capabilities will be addressing these issues in more detail. Thus, it does not make sense to delete these requirements until that drafting team completes its task.</p> <p><b>Response:</b> Each RC has been certified to continue operations as an RC or been certified prior to beginning operations as an RC. The minimum set of tools and capabilities for an RC are "checked off" during the certification process. The reliability objective of R5 and R7 is to perform analyses to ensure reliability of the</p>

Organization	Yes or No	Question 6 Comment
		<p>BES by specifying capability rather than mandating specific tools. The analysis provisions of R5 and R7 are covered under IRO-008-1, Requirements R1 (perform Operational Planning Analysis) and R2 (perform Real-time Analysis). It is anticipated that Project 2009-02 team will address this issue more fully.</p>
<p>MRO's NERC Standards Review Subcommittee</p>		<p>A. COM-002-3, R2 As stated in FERC Order 693, section 512, it is essential that RCs, BA's and TOP's have communications with DPs. R2 also applies to TSPs, LSEs and PSEs. There is no directive for this and it is going to be almost impossible to communicate with a DP since DPs are usually not operated 24 hours per day as like a RC, TOP, or BA. Many DPs have answering services that will relay a message once they receive it and then pass it along to someone. An answering company could repeat the directive word for word but this will not add to any reliability level. The SDT should reconsider the applicability section of this Standard to only apply to a RC, TOP and BA for the issuance of a Reliability Directive. BA's should have the responsibility to have an Interpersonal Communication medium with DPs in their BA area per COM-001-2.</p> <p><b>Response:</b> The purpose of COM-002 is "To ensure emergency communications between operating personnel are effective." It is not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication, in many cases this may be via a receptionist, or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p> <p>B. IRO-002-2, R1, Recommend that "System Operators" be replaced with "system operators" since NERC has defined System Operator to be an individual at a control center (BA, TOP, GOP, or RC). The lower cased system operator will only point to the RC system operator that will have this R1 authority.</p> <p><b>Response:</b> IRO-002-2 is applicable only to Reliability Coordinators, as such the using System Operator as it defined by the NERC Glossary of terms is appropriate.</p> <p>C. The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity</p>

Organization	Yes or No	Question 6 Comment
		<p>coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company.</p> <p><b>Response:</b> COM-002 does not preclude text or other forms of communication for issuing Reliability Directives. However, entities still must comply with the requirements of COM-002. Further, the RCSDT believes it to be equally imperative that each NERC registered function hold the authority to issue Reliability Directives, and the ability to receive Reliability Directives, whether those Reliability Directives are issued to subordinate registered functions within a vertically integrated utility, or to registered entities that are corporately separate. The RCSDT believes the following response to draft 3 comments still holds true:</p> <p style="padding-left: 40px;">“The way that COM-002 is crafted, it focuses on functional entity communication between and among functions. Face-to-face communication of Reliability Directives are subject to the requirements of COM-002 and can be measured for COM-002 by allowing Operator Logs as possible evidence to support compliance”.</p> <p>The use of operator logs to memorialize and provide evidence of compliance is directly specific to those Reliability Directives issued and received within the same control room or operations center. The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities.</p> <p>D. We also are concerned about the need to conduct three-part communications for a Reliability Directive issued through a blast call. Under these circumstances, the need for immediate action of multiple parties may require a blast call and there may not be time for all parties to complete three-part communications before initiating actions. Thus, we believe blast calls should be treated separately and that should be made clear.</p> <p><b>Response:</b> The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation.</p> <p>E. COM-002-3 R2 needs to be rewritten as it is too verbose. The point is for the recipient of the original message to get the issuer to confirm that the message was understood. We suggest rewording R2 to</p> <p>“Each Reliability Coordinator, Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient</p>

Organization	Yes or No	Question 6 Comment
		<p>of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.”</p> <p>Once the receiver has completed this requirement, the ball is in the issuer’s court per Requirement R3. No additional words are necessary in the requirement.</p> <p><b>Response:</b> The RCSDT believes that the additional verbiage is necessary to ensure that an entity understands the Reliability Directive and is able to communicate that understanding back to the Reliability Coordinator. It is not necessary to repeat the exact same verbiage of the Reliability Directive, but rather the intent of the actions required. Having to repeat verbiage of the Reliability Directive word-for-word could be an impediment to achieving the reliability intent of the Reliability Directive when the focus is on repeating verbatim.</p> <p>F. Per COM-002-3 R1, who decides that actions need to be issued as a Reliability Directive? Shouldn’t it be the responsible entity? Thus, can we assume that if the responsible entity does not identify a communication as a Reliability Directive that it is not a Reliability Directive per the requirement? After all, why would an entity require actions but not issue a Reliability Directive. Following this logic, the VSL for R1 would never apply. Would a compliance auditor second guess if an action required a Reliability Directive?</p> <p><b>Response:</b> Those orders issued as a Reliability Directive, and identified as such, will heighten awareness, tighten communications and require the receiver of the Reliability Directive to prioritize its response. Moreover, linking Reliability Directives to Emergencies establishes that normal non-Emergency operating communications or actions are not applicable to COM-002.</p> <p>G. Because the Project 2007-03 (“Real-Time Operations SDT”) proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team.</p> <p><b>Response:</b> The RCSDT coordinated the use of Adverse Reliability Impacts with the Real-Time Operations team</p> <p>H. There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box.</p> <p><b>Response:</b> The text box has been removed.</p> <p>I. Please strike part IRO-014-2 Part 1.7. There is no need to have a weekly conference to discuss every Operating Procedure, Operating Process and Operating Plan. As this requirement is written, a conference call would be necessary for each. Furthermore, IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures,</p>

Organization	Yes or No	Question 6 Comment
		<p>Processes and Plans likely will not need to be discussed weekly as it only requires an annual update.</p> <p><b>Response:</b> The intent of R1 is for Reliability Coordinators to coordinate specific activities with other impacted Reliability Coordinators, these activities are listed as sub requirements. R1.7 is requires you to have a procedure relating to weekly conference calls while R4 requires participation in weekly calls. Further the RCSDT believes that it is prudent that Reliability Coordinators talk at least once a week to verify viability of mutual plans, procedures or processes.</p> <p>J. IRO-014-2 R4 is overly broad and would require Reliability Coordinators that will not impact one another to participate on conference calls with one another without any reliability benefit. The issue is created by the addition of the clause “within the same Interconnection” to the requirement. ISO-NE, FRCC, Midwest ISO, and SPP are all in the same Interconnection. It is hard to fathom there being reliability benefit to SPP and ISO-NE conversing weekly or Midwest ISO and FRCC conversing weekly. We suggest limiting the requirement to adjacent Reliability Coordinators.</p> <p><b>Response:</b> IRO-14-2 R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently R1.7, it is unlikely that Reliability Coordinators whom are geographically and electrically distant will have <i>mutually agreed upon</i> operating procedures (per R1), and as such they are not applicable to R4.</p> <p>K. For IRO-014-2 R5, we suggest replacing “other” with “impacted” to limit the notification of Adverse Reliability Impacts to only those Reliability Coordinators that need to know. Because the definition of Adverse Reliability Impact includes “Bulk Electric System instability or Cascading”, it is possible that the cascading of 138 kV lines serving a load pocket or generator outlet stability issues could require a Reliability Coordinator to notify all other Reliability Coordinators regardless of impact. This would include Reliability Coordinators outside of the Interconnection with the problem. It would also include Reliability Coordinators that are not impacted. For instance, an issue in New England that would not pose a threat outside the northeast would require ISO-NE to notify SPP and FRCC and Reliability Coordinators in the Western Interconnection. There is no reliability benefit to this notification.</p> <p><b>Response:</b> This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p> <p>L. IRO-014-2 R6-R8 are problematic and need to be refined to make clear that the Reliability Coordinators shall operate to the most conservative limit. It should not require a Reliability Coordinator that disagrees with an action plan to implement the action plan. The Reliability Coordinator will be disagreeing with the action plan for a reliability reasons. Assuming they are correct, the requirement to implement said action plan will actually put the Interconnection at greater risk. These requirements inappropriately attempt to codify the debate and analysis that occurs between and within Reliability Coordinators when there are differing results in reliability analysis. This is part of the problem with having a Wide Area view that results in Reliability Coordinators</p>

Organization	Yes or No	Question 6 Comment
		<p>having a view into other Reliability Coordinator Area. Their results and conclusions may be different. There should be a hierarchical structure for whose results should be used. It should be the Reliability Coordinator with primary responsibility unless the other Reliability Coordinator has evidence to demonstrate that the Reliability Coordinator with primary responsibility is incorrect. What this should do is, to trigger both to review their models and data to assess the problem. None of this needs to be codified in the standards though.</p> <p><b>Response:</b> Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone’s model or processes or procedures. The RC’s are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p>M. In the definition of Reliability Directive, we suggest changing “to address an Emergency” to “to address a declared Emergency”. This would help limit second guessing for a situation where a System Operator took action because he truly believed he was in an Emergency but after the fact analysis demonstrates there really was not an Emergency.</p> <p><b>Response:</b> Modifying Reliability Directive by including “declared Emergency” would add an unnecessary step in mitigation of the Emergency. The act of issuing a Reliability Directive to address an Emergency (per the proposed definition) is sufficient.</p> <p>N. The drafting team should expand its rationale for deleting IRO-002-1 R3. Currently, TOP-005 R1 is referenced. The project 2007-03 (“Real-Time Operations SDT”) proposed to retire TOP-005-2 R1 in its most recent posting.</p> <p><b>Response:</b> The data provisions are covered in recently approved IRO-010-1, R1-R3 which replaced TOP-005-1, R1. The secure network provisions are covered in the CIP body of standards.</p> <p>O. We disagree with deleting IRO-002-1 R5 and R7 which establishes tools and monitoring capabilities. There should be basic tool requirements established for Reliability Coordinators. The project 2009-02 (“Real-time Reliability Monitoring and Analysis Capabilities”) will be addressing these issues in more detail. Thus, it does not make sense to delete these requirements until that drafting team completes its task.</p> <p><b>Response:</b> Each RC has been certified to continue operations as an RC or been certified prior to beginning</p>

Organization	Yes or No	Question 6 Comment
		<p>operations as an RC. The minimum set of tools and capabilities for an RC are “checked off” during the certification process. The reliability objective of R5 and R7 is to perform analyses to ensure reliability of the BES by specifying capability rather than mandating specific tools. The analysis provisions of R5 and R7 are covered under IRO-008-1, Requirements R1 (perform Operational Planning Analysis) and R2 (perform Real-time Analysis). It is anticipated that Project 2009-02 team will address this issue more fully.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
FirstEnergy		<p>FirstEnergy offers the following additional comments:</p> <ol style="list-style-type: none"> <li data-bbox="709 521 1965 703">1. The effective dates of the standards indicate an effective date of the first day of the first calendar quarter following regulatory approval. The changes to these standards will require changes to existing compliance evidence, as well as the creation of compliance evidence for some entities such as the Generator Operator which is a new applicable entity in COM-001. Therefore, to give entities ample time to get their compliance evidence in place, we suggest the effective state “the first day of the second quarter after regulatory approval”.</li> </ol> <p><b>Response:</b> The RCSDT agrees and will change the implementation plan to reflect the “first day of the second quarter after regulatory approval.”</p> <ol style="list-style-type: none"> <li data-bbox="709 846 1965 995">3. With regard to the requirements for Alternative Interpersonal Communications, we question why the Generator Operator or Distribution Provider is not required to have backup communication. It would be difficult for a Reliability Coordinator, for instance, to contact a Generator Operator whose primary communications have been disabled if that entity does not have a backup. We suggest that the drafting team consider adding the GOP and DP as applicable entities requiring alternative communications.</li> </ol> <p><b>Response:</b> The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Not requiring DP and GOP entities to have Alternative Interpersonal Communication capability meets FERC’s intention as stated here: “We (FERC) clarify that the NOPR did not propose to require redundancy on generator operators’ or distribution providers’ telecommunication facilities...” (Order 693, RM06-16-000, Paragraph 487).</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
SPP Standards Development		<p>IRO-001-2, R2 implies that the RC could interrupt the normal chain of command from the TOP and/or BA to their respective GOPs, ICs and DPs thereby circumventing the coordinating process that currently exists. In fact, these entities may not even know their RCs nor be able to identify them and as such any directive from</p>

Organization	Yes or No	Question 6 Comment
		<p>the RC may not be implemented in a timely manner. We would like to see a qualifier on this requirement that does not remove the normal coordination role from the TOP with his DP, etc.</p> <p><b>Response:</b> There may be unusual circumstances whereby the requirement may indeed circumvent the normal coordinating process in the interest of time / reliability. The RC has the ultimate authority with respect to BES reliability.</p> <p>We would suggest that "with enough details that the accuracy of the message has been confirmed" be deleted from COM-002-3, R2.</p> <p><b>Response:</b> The RCSDT believes that the additional verbiage is necessary to ensure that an entity understands the Reliability Directive and is able to communicate that understanding back to the Reliability Coordinator. It is not necessary to repeat the exact same verbiage of the Reliability Directive, but rather the intent of the actions required. Having to repeat verbiage of the Reliability Directive word-for-word could be an impediment to achieving the reliability intent of the Reliability Directive when the focus is on repeating verbatim.</p> <p>We would suggest the use of the term 'instruction" and its derivatives rather than 'direct' in IRO-001-2, R2, R3 and R4.</p> <p><b>Response:</b> This proposed change is stylistic in nature. Stakeholder consensus indicates that this is not an issue for the overwhelming majority of commenters.</p> <p>Delete 'issue an alert to' in IRO-005-4, R1. There are yellow boxes in IRO-005-4, redline versions, which indicate that this standard is being retired, but it isn't because two requirements from IRO-001 are being returned to this standard.</p> <p><b>Response:</b> These are typos and have been corrected as noted.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
Kansas City Power & Light		<p>There are more requirements that are being removed in the IRO standards than are currently proposed. It would be helpful if the SDT would consider a mapping of each requirement that is being eliminated and whether the requirement is duplicated elsewhere, moved elsewhere and where, or is deemed not needed would be helpful in judging if the changes are appropriate. Without this mapping it is difficult to fully support all the proposed changes to all these Standards.</p>

Organization	Yes or No	Question 6 Comment
<p><b>Response:</b> The RCSDT thanks you for your comments. The implementation plan contains the requested mapping.</p>		
<p>Competitive Suppliers</p>		<p>EPSA is the trade association for competitive suppliers including both generators and marketers that represent over 700 entities in the NERC compliance registry. As such, the EPSA membership includes members registered as Purchasing Selling Entities (PSE) in each NERC region. Moreover, many of EPSA's members are also registered as LSEs in several regions. In general, EPSA supports the progress made in revising COM-001, COM-002 and IRO-001 in Project 2006-06, particularly the improvements made to the definition of Reliability Directive.</p> <p>However, EPSA also has concerns with some proposed changes to the applicability sections of the revised standards. In addition, EPSA requests that the implementation plans be changed so that they are consistent with the standard.</p> <p>Regarding applicability, EPSA agrees that COM-001 should continue to not apply to Purchasing Selling Entity (PSE) and Load Serving Entity (LSE) functions.</p> <p>However, the implementation plan for COM-001-2 still includes a reference that PSEs and LSEs must comply (page 11 of the implementation plan). Additionally, EPSA supports the removal of LSEs and PSEs from IRO-001-2. Much like the situation with COM-001-2, the implementation plan for IRO-001-2 still includes a reference that LSEs and PSEs must comply (page 11 of the implementation plan). In both the implementation plans for COM-001-2 and IRO-001-2 these references should be removed. For reasons similar to those underlying why COM-001-2 and IRO-001-2 do not apply to PSEs and LSEs, EPSA opposes the addition of PSEs to the COM-002-3 applicability. The purpose of the emergency communications in these standards is "To ensure emergency communications between operating personnel are effective." The removal would recognize that PSEs and LSEs do not play an active role in reliability coordination under this standard since they have no authority, nor ability to assume or perform responsibilities associated with reliability coordination. When a RC, TOP, or BA needs to address an Emergency they do not contact, consult, or direct a PSE to take action to address the Emergency. Reliability is neither improved nor degraded by having these Standards applicable to PSEs or LSEs; therefore, COM-001, COM-002 and IRO-001 need not be applicable to PSEs or LSEs. Thanks to the drafting team members for their effort on revising the Project 2006-06 standards.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p> <p>The RCSDT has removed the PSE and LSE from the COM-001-2 and IRO-001-2 implementation plans.</p> <p>For COM-002, the RCSDT believes that all registered NERC entities engaged in daily operational activities must adhere to requirements related to Reliability</p>		

Organization	Yes or No	Question 6 Comment
<p>Directives. While LSE and PSE's are not engaged in coordination activities, they are engaged in load serving, as well as purchasing and selling activities on a daily basis. These activities could be subject to Reliability Directives, either in the form of load reduction, or schedule curtailments.</p>		
<p>Exelon</p>		<ol style="list-style-type: none"> <li>1. COM-002-2, R2 - Remove the word "recapitulate", feel that "restate or rephrase" is adequate. The word "recapitulate" is not commonly used and is somewhat obscure. <b>Response:</b> The proposed changes are stylistic in nature. The RCSDT included the phrase including "recapitulate" at the suggestion of another stakeholder, and has decided to leave the phrase "restate, rephrase, or recapitulate" intact as suggested by the other stakeholder.</li> <li>2. COM-002-2, R3 - Suggest using the words "repeat back" rather than "state or respond that" to more clearly identify the expectation with more commonly used language. <b>Response:</b> The proposed changes are stylistic in nature. The RCSDT included the phrase including "recapitulate" at the suggestion of another stakeholder, and has decided to leave the phrase "restate, rephrase, or recapitulate" intact as suggested by the other stakeholder.</li> <li>3. IRO-001-2, R3 - While we appreciate that the SDT has defined the term "directive" as a much needed definition, IRC-001-2 R.3 now introduces a new term "direction", what is a "direction" and how does it differ from "directive"? If a new term is going to be introduced it needs to be defined, if the intent was to use the word "directive" then "direction" should be replaced with "directive." <b>Response:</b> The requirement language specifically ties back to Requirement R2 which states that the RC "shall take actions or direct actions, which could include issuing Reliability Directives, ". This is the "direction in accordance with Requirement R2" stated in R3 and the "direction in accordance with Requirement R3" stated in R4.</li> <li>3. IRO-001-2, R4 - Again the term "as directed" is confusing, recommend that the text be changed to align with the term directive, "unable to perform the directive per Requirement R3." <b>Response:</b> The requirement language specifically ties back to Requirement R2 which states that the RC "shall take actions or direct actions, which could include issuing Reliability Directives, ". This is the "direction in accordance with Requirement R2" stated in R3 and the "direction in accordance with Requirement R3" stated in R4.</li> </ol>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
<p>PacifiCorp</p>		

Organization	Yes or No	Question 6 Comment
Arizona Public Service Company		
LG&E and KU Energy		<p>1) LG&amp;E/KU suggests that the definitions and related Reliability Standards be edited to provide a clearer understanding of what is required. When used in the requirements of COM-001, the proposed definitions for Interpersonal Communication and Alternative Interpersonal Communication read improperly (i.e., a “medium capability”). This may cause confusion as to what is required by the Applicable entities. Any further use of these terms may cause greater confusion. Suggested Alternative: Interpersonal Communication: Any instance where two or more individuals interact, consult, or exchange information. The definition of “Alternative Interpersonal Communication” would not have to be changed since it is dependent upon the definition of “Interpersonal Communication.”The change of the definitions of Interpersonal Communication and Alternative Interpersonal Communication shifts their focus to the communication itself-the event. This makes the Requirements themselves much clearer since the Requirements focus on the need that entities have the capabilities-the medium. It appears the SDT’s intent is to ensure that the event takes place by requiring that the medium for those events are in place. This is much clearer if there is a distinction between the two (the event and the medium) than if they have similar definitions (a medium and a “medium capability”).</p> <p><b>Response:</b> The RCSDT chose to use “medium” so as to not preclude the use of text, voice, electronic or other technology. The intent of the definition as well as the requirements is to require that functional entities have a means to communicate.</p> <p>2) LG&amp;E/KU question the consistency of the Applicability sections as they pertain to the TSP, LSE and PSE functions between COM-001 and COM-002. The deletion of the TSP, LSE and PSE from COM-001 is supported, but if these entities are not required to establish Interpersonal Communication (or Alternative Interpersonal Communication) capability with reliability entities (RC, BA, TOP), should they still be required to follow the reliability directive process of COM-002? If the probability of issuing a Reliability Directive to a TSP, LSE or PSE is so low that Interpersonal Communications capabilities with reliability entities is not justified under COM-001, why are the TSP, LSE and PSE still held to the</p> <p>3 way communication requirements of COM-002? Suggest the Applicability of COM-002 to TSP, LSE and PSE and associated requirements be deleted.</p> <p><b>Response:</b> The RCSDT has revised the applicability of COM-001 and COM-002 such that they contain the same functional entities. These are: RC, TOP, BA, GOP, and DP.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		

Consideration of Comments on Reliability Coordination — Project 2006-06

Organization	Yes or No	Question 6 Comment
Southern Company		<p>Comments: It appears that the requirements for entities designated in the IRO standards to have tools to access and/or monitor the system have been moved to pending standards that are not enforceable. It seems that if the newest revisions of the IRO standards are not implemented as a group there will be either missing requirements or duplicate requirements in the IRO standards.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. The implementation plans note prerequisite approvals that must occur prior to retiring requirements. FERC recently approved IRO-008, 009 and 010. The standards under this project will be filed together with FERC.</p>		
Green Country Energy, Green Country Operating Services		<p>IRO-001-2 as proposed does not include the PSE in the applicability, nor does it require the PSE to respond to a directive. However, COM-002 requires them to repeat the directive back... If the directive is that important to repeat back should they not have to act upon the directive? I think the PSE should be included in IRO-001-2 this standard as they represent and direct generation facility deployment in many cases. Including the PSE in COM-001 may be a good idea too, just for the situations listed above.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. The RCSDT has revised the applicability of COM-001 and COM-002 such that they contain the same functional entities. These are: RC, TOP, BA, GOP, and DP.</p>		
Central Lincoln		<p>The stated purpose of COM-002 is:</p> <p>“To ensure emergency communications between operating personnel are effective.” As written, the standard fails to meet this purpose because the three requirements only deal with communications at the entity level. There is no requirement for the directing entity to even try to reach operating personnel at the receiving entity. The directing entity may follow all the requirements of this standard by following R1 and R3 with the receiving entity’s receptionist, answering service, janitor, night watchman, etc. The receiving entity only needs to meet R2, parroting the directive. Again this could be accomplished by anyone with no assurance the directive reaches the operating personnel who can implement it. When we stated a similar objection during the last comment period, The SDT’s answer suggested this was a PER staffing issue, but none of the PER requirements even apply to DP/LSE directive recipients. We suggest the entity issuing the directive should be required to make an attempt to get it to those who are competent to understand and implement the directive. This is not a staffing, training, or credentials issue; it is a performance issue that falls squarely within the stated purpose of this standard.</p> <p>COM-001 R10 presents a paradoxical situation to an entity attempting to comply. Consider an interpersonal communication capability failure that lasts longer than 60 minutes past initial detection. At or before 60 minutes, the affected entity is expected to notify impacted entities. If it has no interpersonal communication capability, how shall it make this notification? And if the entity does manage to make such a notification, it has thereby proven that it does have interpersonal communication capability making such notification</p>

Organization	Yes or No	Question 6 Comment
		<p>unnecessary.</p> <p><b>Response:</b> The DP or GOP has access to additional Interpersonal Communications, in all likelihood, to make notifications for failure. There is not a requirement for an alternative, but it is highly unlikely that someone couldn't use their cell phone to make the notification.</p> <p>We again ask the SDT to consider that not all the entities in the applicability sections of COM-001 and 002 have 24/7 dispatch centers. These are typically smaller entities that were required to register because they exceed 25 MW or were asked in the past to voluntarily provide UFLS. They do not and do not need to continuously communicate with TOPs, BAs, RCs, etc; and a "reliability directive" is a theoretical thing that has never happened during the memories of thirty year employees. The directive issuing entities simply realize the limitations around the receiving entities and work around them. The financial burden on these small entities and their customers to go to 24/7 dispatch will not have a corresponding reliability benefit. And while the two COM standards do not explicitly state that entities must maintain 24/7 dispatch, when all the requirements and definitions and time horizons are taken together 24/7 continuous competent communication is implied. During the last comment period, the SDT suggested this was a registration issue beyond their control. We submit instead that this is a standard applicability question that the SDT does have control over, since it is right there in Section A.4 of the two COM standards. While we appreciate that the SDT is responding to FERC order 693 to include DPs, we note that FERC also stated: Paragraph 487: "We expect the telecommunication requirements for all applicable entities will vary according to their roles and that these requirements will be developed under the Reliability Standards development process." Paragraph 6: "A Reliability Standard may take into account the size of the entity that must comply and the costs of implementation" Paragraph 141: "...the Commission clarifies that it did not intend to ... impose new organizational structures..." Paragraph 31: "We emphasize that we are not, at this time, mandating a particular outcome by way of these directives, but we do expect the ERO to respond with an equivalent alternative and adequate support that fully explains how the alternative produces a result that is as effective as or more effective than the Commission's example or directive. We ask the SDT to exclude DPs, LSEs, and PSEs that do not have 24/7 dispatch centers from the applicability of these two standards in order to meet FERC order 693.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. There is no requirement for 24/7 support - the requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard and the standard is designed not to impose needless communications requirements. The purpose of COM-002 is "To ensure emergency communications between operating personnel are <u>effective</u>." It is not a proxy requirement to establish 24/7 operating personnel at small distribution providers. The intent is to establish a <u>method</u> of communicating Reliability Directives during Emergencies. While it is true that many small Distribution Providers are not staffed 24x7, it is typical that they have a means of communication, in many cases this may be via a receptionist, or answering service. It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive. If this return call would not be timely enough, then the issuer would determine a different mitigation plan.</p>		

Organization	Yes or No	Question 6 Comment
Lakeland Electric		COM-002-3 R2. Each Balancing Authority, Transmission Operator, Generator Operator, Transmission Service Provider, Load-Serving Entity, Distribution Provider, and Purchasing-Selling Entity that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message <b>can be</b> confirmed by the originator. (Replace 'has been' with 'can be' and add 'by the originator' to better fit into the sequence with R3.)
<p><b>Response:</b> The RCSDT thanks you for your comments. The RCSDT agrees with the intent of your comment and has modified R2 as:</p> <p>R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive issued in accordance with Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message is confirmed.</p>		
Manitoba Hydro		-The current data retention requirement of 90 days is more than adequate. Increasing this period to 12 months would result in a significant amount of work with no benefit to reliability. -Clarification required on the VSL for R9 - there appears to be no
<p><b>Response:</b> The RCSDT thanks you for your comment. The data retention periods for the set of standards proposed is consistent with the guidelines provided in the NERC Drafting team Guidelines. Your second comment is incomplete and does not reference specific standard(s) or requirement(s).</p>		
NextEra Energy, Inc.		At this stage in evolution of compliance with the mandatory Reliability Standards, it is important that any new or revised Reliability Standard clearly articulate all compliance obligations and tasks consistent with Sections 302 (6) and (8) of the NERC Rules of Procedure. COM-002, IRO-001, IRO-002 and IRO-014 do not meet this threshold. Thus, NextEra has numerous recommended corrections to provide clarity and completeness to these Reliability Standards.COM-002 R1The addition of defined terms for Reliability Directive and Emergency is a very good approach that helps provides clarity. Hence, it is also be appropriate to make the language in the requirement as clear as possible, and not add other implied or unexplained notions. Also, at times, in those regions with markets, it is not always clear whether a requirement to curtail for reliability reasons is being issued pursuant to market rules or from the Reliability Coordinator or Transmission Operator under the Reliability Standards. Therefore, it is also appropriate that the Reliability Coordinator, Transmission Operator, Balancing Authority be required to identify themselves;, and if they fail to identify themselves or fail to use the term Reliability Directive, the registered entity receiving the flawed issuance should not be consider in violation of a Reliability Standard for failing to act. Accordingly, R1 would be clearer and have the same intent, if it stated as follows:"A Reliability Coordinator, Transmission Operator or Balancing Authority have the authority to issue an oral or written Reliability Directive as authorized in [list the specific Reliability Standard requirements such as IRO-001 R8 and TOP-001 R3]. The issuance of an oral of written Reliability Directive,

Organization	Yes or No	Question 6 Comment
		<p>by a Reliability Coordinator, Transmission Operator or Balancing Authority shall: (1) use the term ‘Reliability Directive;’ and (2) identify the issuer of the Reliability Directive as a Reliability Coordinator, Transmission Operator or Balancing Authority. If a Reliability Coordinator, Transmission Operator or Balancing Authority issues an oral or written directive without using the term “Reliability Directive” or failing to identify itself as a Reliability Coordinator, Transmission Operator or Balancing Authority, the registered entity receiving the directive cannot be considered in violation for its failure to act.”</p> <p><b>Response:</b> Only reliability entities can issue Reliability Directives and only reliability entities are held compliant to NERC reliability standards. COM-002, R1 requires the issuer of a Reliability Directive to identify the action as a “Reliability Directive”, it is incumbent on the issuer or receiver to identify themselves in order establish authority, the RCSDT disagrees that identification should be part of the COM-002 standard, however, the RCSDT will pass this concern to Project 2007-02, Operating Personnel Communications Protocols SDT. Furthermore, your suggested revision is a compound requirement, making the requirement indistinct and difficult to measure and in contradiction with SAR. The RCSDT agrees that if an action is not identified as a “Reliability Directive” then the receiving entity cannot be held in violation of failing to follow a Reliability Directive.</p> <p>IRO-001The definition of Adverse Reliability Impacts uses the term “instability.” It is important that this term be technically defined in the same way “Cascading” is defined, otherwise the new requirement is not adding clarity; rather, it is maintaining the ambiguous term “instability” that will likely lead to confusion and debate.</p> <p><b>Response:</b> The RCSDT disagrees that the term “instability” is ambiguous, and further believes the term is understood in the industry. The majority of stakeholder comments do not indicate that the definition is confusing.</p> <p>R1 Similar to the comments set forth with respect to COM-001 (question #1), the term “at least” should be deleted from R1 - it serves no useful purpose from a technical or compliance perspective; instead, it will add unnecessary ambiguity to the requirement.</p> <p><b>Response:</b> The RCSDT agrees and has removed “at least” for IRO-001, R1.</p> <p>R2, as drafted, states:”Each Reliability Coordinator shall take actions or direct actions, which could include issuing oral or written Reliability Directives, of Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse</p>

Organization	Yes or No	Question 6 Comment
		<p>Reliability Impacts. “This long sentence has several significant grammatical errors that result in the reader not being able to discern the meaning of the requirement. It also unnecessarily adds verbiage that detracts from its primary focus. It is, therefore, recommended that R2 be revised as follows:</p> <p>“Each Reliability Coordinator shall take all necessary actions to prevent identified Emergencies or Adverse Reliability Impacts. These Reliability Coordinator actions shall include, to the extent necessary, the issuing of oral or written Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers located within its Reliability Coordinator Area.</p> <p><b>Response:</b> The RCSDT disagrees that the suggested revisions adds clarity, and in fact removes directing actions “to mitigate the magnitude or duration of actual events” which weakens the requirement. Phrases such as “to the extent necessary” and “necessary actions” are not measurable and lead to a more confusing requirement. Stakeholders generally agree with the proposed verbiage of the proposed requirement.</p> <p>“R3, as drafted, is confusing and inconsistent with R2, and, thus, R3 should be revised to read as follows:</p> <p>”Upon receipt of a Reliability Directive issued pursuant to R2, a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall comply with the Reliability Directive, unless compliance would violate safety, equipment, regulatory or statutory requirements. In the event that a Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider determines that compliance with a Reliability Directive would violate safety, equipment, regulatory or statutory requirements, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall, within 10 minutes after the determination, inform the Reliability Coordinator of its inability to comply.”</p> <p><b>Response:</b> The RCSDT disagrees with the suggested revision to R3. The revision creates a compound requirement with a specific time requirement. Upon recognition of the inability to perform a directed action, the receiver should immediately inform the Reliability Coordinator. Typically this would be during the original communication of the directive. The suggested 10 minute time is not technically justified and provides no reliability benefit beyond the currently worded requirement and only serves to extend the time before an RC is notified.</p> <p>IRO-002R1 and R2, as written, are confusing. It is recommended that R1 and R2 be combined to read as follows: “Pursuant to a written procedure to mitigate the impact of a Reliability Coordinator’s analysis tool outage, a Reliability Coordinator’s System Operator shall also have the authority to approve, deny or cancel a</p>

Organization	Yes or No	Question 6 Comment
		<p>planned outage for its analysis tool.”</p> <p><b>Response:</b> The suggested revision to IRO-002-2 creates a compound requirement, which is indistinct and difficult to measure and in contradiction with SAR. The SAR for this project directs the team to “Improve clarity of, improve measurability of, and remove ambiguity from the requirement”.</p> <p>IRO-014It is unclear why the terms Operating Procedure, Operating Process or Operating Plan needs to be plural, as currently written in the Standard. Hence, it is recommended that these terms be made singular, otherwise a violation may be inferred for not having more than one Procedure, Process or Plan.</p> <p><b>Response:</b> IRO-014, R1, The RCSDT disagrees with making Procedures, Processes, or Plans non-plural; this could lead to entities being audited on a procedure by procedure basis. In other words, it is meant that the weekly conference calls create an opportunity to discuss all of the Procedures, Processes, or Plans, and to not require a call for each.</p> <p>1.1 Insert the word “applicable” before “Reliability Coordinator.”</p> <p><b>Response:</b> The RCSDT disagrees with the use of applicable, as the 1.1 is subordinate to R1, which notes impacted Reliability Coordinators.</p> <p>2.1, as written, is confusing. Recommend that 2.1 read as follows:</p> <p style="padding-left: 40px;">”Review and update, if an update is necessary, on an annual basis. Annual basis means the review shall be within one month plus or minus that date of the last review.”</p> <p><b>Response:</b> The RCSDT disagrees, and believes the suggested revision is unclear. In its current draft form, the plan or procedure is required to be reviewed every 15 months, if the review indicates that there are no changes required, and then the update would simply be to change the revision date on the published procedure.</p> <p>R3 This requirement uses a very vague term “reliability-related information,” which, also, does not track the language used in R1 -- “information.” It is recommended that R1 and R3 use the same terms and read “. . . information, as defined by the Reliability Coordinator, . . . “</p> <p><b>Response:</b> The RCSDT believes the reference to R1 within R3 clearly is representative of exchange of information related to R1.</p> <p>R4 As stated above, “at least” does not add value, and, therefore, should be deleted.</p>

Organization	Yes or No	Question 6 Comment
		<p><b>Response:</b> The RCSDT disagrees. The inclusion of “at least” allows the calls take place every day or multiple times within a week if desired, and adds flexibility. e.g. if there was scheduled weekly call, however due to system conditions an interim call was held, during this interim call all of the necessary information for the week was exchanged, thus removing the need to the scheduled call, the use of “at least” allows for this kind of flexibility. R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently R1.7, it is unlikely that Reliability Coordinators whom are geographically and electrically distant will have <i>mutually agreed upon</i> operating procedures (per R1), and as such they are not applicable to R4.</p> <p>R5, as written, is confusing. The recommended fix is to delete “all other” and replace with “impacted”.</p> <p><b>Response:</b> This requirement continues the current practice of informing all RCs of ARIs. Due to the nature of an ARI, this requirement is typically implemented as an RCIS message or a hotline call to all RC’s. This is intended to make all RCs aware of ARIs and support situational awareness.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
United Illuminating Company		<p>Comments: 1. COM-002 R2 seems awkwardly worded.</p> <p>R2. Each [Entity] that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message has been confirmed. " R2 as it is written says the repeat is confirming the accuracy of the message itself. I think it is agreed that the repeat back in R2 is to allow the issuer of the Directive to confirm that the message was received accurately understood by the recipient. I suggest:R2. Each [Entity] that is the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details to allow the Issuer to confirm that the directive recipient accurately understands the Directive"</p> <p><b>Response:</b> The RCSDT agrees with the intent of your comment and has modified COM-002-3, R2 as:</p> <p style="padding-left: 40px;">R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive issued in accordance with Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.</p> <p>2. The VSL for R2 is severe and states "The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message was confirmed." The purpose of the R2 repeat-back is to allow the Issuer verify the message</p>

Organization	Yes or No	Question 6 Comment
		<p>was accurately received. This VSL penalizes the responsible entity for not accurately receiving the message. The VSL should penalize the refusal of the registered entity to repeat back the message not for receiving the message incorrectly. Suggested rewording: "The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message can be evaluated by the entity issuing the Reliability Directive"3. United Illuminating does agree with the definition of Reliability Directive and Emergency.</p> <p><b>Response:</b> The RCSDT agrees and has revised the VSL to:</p> <p>The responsible entity that was the recipient of a Reliability Directive failed to repeat, restate, rephrase or recapitulate the Reliability Directive. <del>with enough details that the accuracy of the message was confirmed.</del></p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
<p>Shell Energy North America (US), L.P.</p>		<p>The introduction of the definition of "Reliability Directive" and its connection to the definition of "Emergency" within this Project brings much needed clarity for the sector and will promote consistency between Regional Entities and within the audits of Registered Entities. Shell Energy supports the removal of Purchasing Selling Entities as a function to which IRO-001 applies. This removal recognizes that PSEs do not play a role in reliability coordination under this standard since they have no authorities and no abilities to assume or perform responsibilities associated with reliability coordination. This conclusion is reinforced by the adoption of the defined term "Reliability Directive". Where a RC, TOP, or BA needs to address an Emergency they do not contact, consult, or direct a PSE to take action that would address the Emergency. Rather, where the PSE is a user of the grid to perform or execute transactions, it is subject to the actions of these other entities that have the authority to stop, curtail, or alter the submitted transactions of the PSE in a way that aids in resolving the problem. With the fitting adoption of "Reliability Directive" into COM-002 as well, Shell Energy does not believe it is necessary or appropriate for the applicability of this standard to include Purchasing Selling Entities, as is contained in the current draft proposal. This standard does not apply to PSEs today, however, during the progression of Project 2006-06 this applicability was added to an early draft version that preceded the discussions and clarification that comes from the definition of a Reliability Directive in the standard. Shell Energy does not support the inclusion of PSEs in the current draft version of COM-002, and feels that it should be removed. The purpose of this standard is, "To ensure Emergency communications between operating personnel are effective" and relates directly to the capabilities and authorities established for the RC, TOP, or BA that requires actions to be taken by a recipient of a Reliability Directive. As noted previously, PSEs are acted upon by the entities with the necessary authority, and are not in a role that would initiate or fulfill the required actions. As additional matters related to the clarification and cleanup of the standards in this project, the implementation plans for both IRO-001 and COM-001 erroneously contain references to PSEs in the sections "Functions that Must Comply with the Requirements". These references</p>

Organization	Yes or No	Question 6 Comment
		need to be removed.
<p><b>Response:</b> The RCSDT thanks you for your comments. The applicability of COM-001 and COM-002 were revised to be consistent and only include the RC, TOP, BA, DP and GOP.</p>		
American Electric Power		<p>The language used in COM-002-3 R2 including “with enough details that the accuracy of the message has been confirmed” is subjective and ambiguous.</p> <p><b>Response:</b> The RCSDT agrees with the intent of your comment and has modified COM-002-3, R2 as:</p> <p style="padding-left: 40px;">R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive issued in accordance with Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive.</p> <p>IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (eg Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling.</p> <p><b>Response:</b> IRO-001 is written so that typical daily operating orders or directives could be used, and also to cover emergency scenarios, but stating the use of Reliability Directives is included. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives, “. This is the “direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
American Transmission Company		None

Organization	Yes or No	Question 6 Comment
ISO New England		<p>The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Thus, for certain situations, a single System Operator may actually be the Reliability Coordinator and the Transmission Operator. In other situations, the System Operator serving the Reliability Coordinator function may be adjacent to the System Operator serving the as the Transmission Operator or Balancing Authority. We believe that it should never be necessary for these System Operators to issue Reliability Directives to themselves in the first example or to their co-worker in the second example to demonstrate compliance to NERC standards. How the entity coordinates its actions among its Reliability Coordinator, Balancing Authority and Transmission Operator roles is a corporate governance issue that should not be confused or complicated by the NERC standards. Thus, we believe that standards should be made clear that the Reliability Directive is directed to another company. We believe that, in place of requiring an operator, in real-time, to state “this is a Reliability Directive,” there should be an allowance for an entity to develop procedures indicating, in advance, their expectations of three-part to their sub-operating entities. Therefore, we suggest modifying R1 to be “When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action, either verbally, when the communication is issued, or in advance through documented procedures, as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time.]” Also, we believe that the definition of Emergency, as currently cited in these draft Standards and included in the existing NERC Glossary should be modified to include the NERC Glossary term Adverse Reliability Impact to make the Standards more crisp, clear and enforceable. Because the Project 2007-03 Real-Time Operations SDT proposed to utilize the definition of Adverse Reliability Impact in TOP-001-2 R5 during the last posting, the change to the definition should be coordinated with that team. There is a text box in IRO-005-4 that indicates this standard will be retired. Yet, there still remain requirements in the standard and various other associated documentation indicates requirements are being move to this standard. Please delete the text box. IRO-014-2 R4 already includes a requirement to have weekly conference calls that should suffice. IRO-014-2 R2 seems to recognize that these Operating Procedures, Processes and Plans likely will not need to be discussed weekly as it only requires an annual update. In the definition of Reliability Directive, we suggest changing “to address an Emergency” to “to address a reliability constraint or a declared Emergency”. Further, Requirement R2 in IRO-001 contains the words “which could include issuing Reliability Directives” but Reliability Directives are not referenced anywhere else in the standard. This inclusion seems unnecessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest that these words be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a</p>

Organization	Yes or No	Question 6 Comment
		Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.
<p><b>Response:</b> The RCSDT thanks you for your comments. See response to MRO above.</p>		
ERCOT ISO		<p>The SDT did not address all of our concerns with COM-002-3 from the last posting. For entities registered as multiple functions, the combination of the definition of Reliability Directive and Requirement R1 could be confused to require a company to issue directives to itself. There are several organizations registered as a Reliability Coordinator, Transmission Operator and Balancing Authority. In these companies, it is not uncommon for those responsibilities to be distributed across multiple desks. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest that these words be removed. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. See response to MRO above.</p>		
WECC		<p>Suggested minor revision to the definition of Reliability Directive as follows (change in caps)A communication, IDENTIFIED AS A RELIABILITY DIRECTIVE, initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency. Clearly identifying a communication as a Reliability Directive provides immediate information to the recipient as to the nature of the communications.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. The RCSDT believes embedding the term in “Reliability Directive” in the definition is a not proper method for defining a term.</p>		
BGE		<p>BGE has no additional comments.</p>
Duke Energy		<p>o COM-002-3 contains the proposed definition “Reliability Directive”. We continue to believe Requirement R1 should be deleted and that this definition should contain the phrase “identified as a Reliability Directive to the recipient”. Otherwise, compliance controversies will arise when auditors second-guess the RC, TOP or BA’s judgment regarding whether or not an abnormal system condition met the definition of “Emergency”, and warranted a “Reliability Directive” with 3-part communication. A conforming change will need to be made to R2, since it refers to R1. This change in the definition of “Reliability Directive” is also needed because this term is used in other standards such as IRO-001-2, and without repeating a similar requirement to COM-002-3 requirement R1 in IRO-001-2, there is potential for confusion.</p> <p><b>Response:</b> The RCSDT disagrees as the suggestion embeds a requirement in a definition. The SDT believes the requirements of COM-002 are clear as written.</p> <p>o We disagree with the VSL for COM-002-3. This is clearly a requirement with two possible compliance failures: Failure to acknowledge a correct repeat-back, and failure to resolve an incorrect repeat-back. These failures have dramatically different consequences, which the drafting team should recognize via a graduated VSL. We think that the failure to acknowledge should either be “Lower” or “Medium”.</p> <p><b>Response:</b> The RCSDT contends that missing the requirement is a binary violation that results in a severe</p>

Organization	Yes or No	Question 6 Comment
		<p>VSL. You are including risk to the BES in your proposal for the VSL. Risk to the BES is captured in VRFs, while VSLs consider the degree to which the entity failed to meet the Requirement.</p> <p>O Requirement R2 of IRO-001-2 is unclear and should be reworded as follows:</p> <p>“Each Reliability Coordinator shall take actions or direct actions (which could include issuing Reliability Directives to Transmission Operators, Balancing Authorities, Generator Operators, Interchange Coordinators and Distribution Providers within its Reliability Coordinator Area) to either prevent identified events that could result in an Adverse Reliability Impact, or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts.”</p> <p><b>Response:</b> The RCSDT believes that the suggested revision does not add further clarity to the requirement.</p> <p>o Various changes have been made to the defined term “Adverse Reliability Impact” as this project has progressed. We believe the latest change should not be made, and the Phrase “uncontrolled separation” should be reinserted in the definition, because that phrase is part of the EAct 2005 legislation definition of “reliable operation”. Here is the text from the legislation: “The term ‘reliable operation’ means operating the elements of the bulk-power system within equipment and electric system thermal, voltage, and stability limits so that instability, uncontrolled separation, or cascading failures of such system will not occur as a result of a sudden disturbance, including a cyber security incident, or unanticipated failure of system elements.”</p> <p><b>Response:</b> During the last posting of the proposed definition, the RCSDT received the following comment and revised the definition appropriately: “This change is problematic in that any automatic protective element operation that trips a BES element could be construed to be an Adverse Reliability Impact.”. The modification eliminated the phrase “that affects a widespread area of the Interconnection” which clarified the scope of the definition. “Uncontrolled separation” has been deleted from the definition, as it is included in the definition of Cascading.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments. Please see responses above.</p>		
CECD		<p>1. COM-002 R2 states that "the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the accuracy of the message has been confirmed." Recommend a change to "the recipient of a Reliability Directive issued per Requirement R1, shall repeat, restate, rephrase or recapitulate the Reliability Directive with enough details that the desired outcome of the message is clear".</p> <p><b>Response:</b> The RCSDT agrees with the intent of your comment and has modified COM-002-3, R2 as:</p> <p>R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive issued in accordance with Requirement R1, shall repeat, restate,</p>

Organization	Yes or No	Question 6 Comment
		<p>rephrase or recapitulate the Reliability Directive.</p> <p>2. IRO-001 R2 states "Each Reliability Coordinator shall take actions or direct actions which could include issuing Reliability Directives of Transmission Operators, ...." Recommend a change to "Each Reliability Coordinator shall take actions or direct actions which could include issuing Reliability Directives [See COM-002] to Transmission Operators, ..."</p> <p><b>Response:</b> Based on feedback from other stakeholders, the RCSDT believes that the existing verbiage is clear and does not require further revision.</p> <p>3. IRO-001 R4 states entities "shall inform its Reliability Coordinator upon recognition of its inability to perform as directed per Requirement R3." Recommend a change to, entities "shall inform its Reliability Coordinator upon recognition of its inability to perform as directed."</p> <p><b>Response:</b> Based on feedback from other stakeholders, the RCSDT believes that the existing verbiage is clear and does not require further revision.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
Indeck Energy Services		
City of Springfield, IL - City Water Light and Power (CWLP)		<p>CWLP generally concurs with and supports comments previously submitted by the SERC Operating Committee where those comments are not in conflict with the specific comments above.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
South Carolina Electric and Gas		<p>1. Reliability Directives may be issued by blast calls from Reliability Coordinators. It is inefficient and may be a hindrance to reliability to require 3-part communications in these instances.</p> <p><b>Response:</b> The RCSDT agrees that the use of Blast Calls to issue Reliability Directives, in mass, is efficient and effective. The RCSDT believes Reliability Directives issued in mass should be defined by procedure, and that the procedure would establish a method of affirmation and notice of implementation.</p> <p>2. There are several organizations registered as BAs, RCs and TOPs. It is not uncommon for those entities to be distributed across multiple desks in the same control room without regard to how an entity is registered. Thus, a single System Operator may perform functions that are categorized under two or more of those functional entities. The drafting team should clarify that under no circumstances should that System Operator be required to issue a Reliability Directive to himself. This is a corporate governance</p>

Organization	Yes or No	Question 6 Comment
		<p>issue.</p> <p><b>Response:</b> The RCSDT believes that any Registered Entity or person operating as such must understand the intent of the issued Reliability Directive, and that the issuer of the Reliability Directive believe that the Reliability Directive was correctly received. COM-002 should not be construed to mean that an individual serving in two functions be required to issue a Reliability Directive to himself, but rather it is expected that such an individual would appropriately address the reliability issues as required by the function they are serving and its subsequent responsibilities</p> <p>3. In IRO-014, R1, delete sub-requirement 1.7. The requirement for weekly conference calls related to operating procedures is duplicative to R4 and could be burdensome while adding very little value under certain circumstances.</p> <p><b>Response:</b> R1, Part 1.7 requires an entity to address how and when they will hold conference calls in their Operating Plans, Processes or Procedures. R4 requires the participation in those calls.</p> <p>4. In IRO-014, R4, delete the phrase “(per Requirement 1, Part 1.7)” as a conforming change.</p> <p><b>Response:</b> R1, Part 1.7 requires an entity to address how and when they will hold conference calls in their Operating Plans, Processes or Procedures. R4 requires the participation in those calls.</p> <p>5. In IRO-014, Requirements R6-R8 allow at least the theoretical possibility that an RC may determine an Adverse Reliability Impact in another RC’s area that the other RC neither can see nor believes that any action should be taken. R7 puts the burden on the first RC to develop a plan that it cannot implement because it has no agreement with the BAs and TOPs in the other RC area. As such, this requirement is unenforceable.</p> <p><b>Response:</b> You are correct. Requirements R6-R8 are translated from IRO-016-1, Requirement R1. If an RC sees a problem and another does not see the same problem, then there may be an issue with someone’s model or processes or procedures. The RC’s are supposed to have coordinated Operating Plans, Processes or Procedures to operate reliably. R6-R8 are only applicable if one of the two (or more) RCs do not see that a problem exists. It would be a detriment to reliability for both RCs to take no action. RCs are required to coordinate actions under existing IRO-016-1, R1. If one RC identifies a problem and provides an action plan to another RC to mitigate the problem, the second RC is obligated under R8 to implement it. We have revised the R8 to clarify this intent.</p> <p>Revised R8. During those instances where Reliability Coordinators disagree on the existence of an Adverse Reliability Impact, each Reliability Coordinator shall implement the action plan developed by the Reliability Coordinator that identified the Adverse Reliability Impact unless such actions would violate safety, equipment, regulatory or statutory requirements.</p>

Organization	Yes or No	Question 6 Comment
		<p>6. Please review all the implementation plans to be sure the applicable entities match those in the standards.</p> <p><b>Response:</b> We have revised the implementation plans to reflect the appropriate applicability.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		
<p>Independent Electricity System Operator</p>		<p>1. IRO-001: Reliability Directive: We do not agree with the proposed definition since it addresses Emergencies only. There are situations where a Reliability Directive is issued such that the directed action must be taken by the receiving entity to address a reliability constraint or any condition on the BES which if left unattended could, in the judgment of the issuing entity, lead to an Emergency. These conditions themselves do not constitute an Emergency which is defined as “Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.” There could be no abnormal condition but the actions must nevertheless be taken promptly to prevent the bulk electric system from entering into an abnormal condition. We therefore suggest the term Reliability Directive be revised to: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address a reliability constraint or an Emergency.</p> <p><b>Response:</b> The RCSDT believes that your comment concerns “directives” or “instructions” for normal operational activities rather than a Reliability Directive. There is no requirement preventing an entity from issuing either directives or instructions for the situations you mention. The intent of creating a Reliability Directive definition is to ensure that communications is tightened during Emergencies (per blackout report). When an RC issues a Reliability Directive, the RC has made a deliberate decision to formally end collaboration and require specific action(s).</p> <p>2. IRO-001, Requirement R2: This requirement contains the words “which could include issuing Reliability Directives” which is not referenced anywhere else in the standard. We do not think this inclusion is necessary since without it, R2 already requires that the RC take actions or direct actions by others to prevent identified events or mitigate the magnitude or duration of actual events that result in Adverse Reliability Impacts. Whether or not a Reliability Directive is issued is irrelevant in this requirement. We suggest to remove these words. Note that COM-002 already stipulates the requirement for 3-part communication when a Reliability Directive is issued. The inclusion of “which could include issuing Reliability Directives” in IRO-001 is unnecessary. We suggest replacing “identified events” with “anticipated events”. This requirement also lists Interchange Coordinators as one of the recipients of Reliability Directives which is not consistent with the</p>

Organization	Yes or No	Question 6 Comment
		<p>implementation plan.</p> <p><b>Response:</b> R2 requires the Reliability Coordinator to act. These actions could include Reliability Directives in the case of an Emergency. However, issuing Reliability Directives might not always be necessary, as the Reliability Coordinator may be acting proactively well in advance of an emergency. R2 promotes this proactive approach, but reserves the use of Reliability Directives for circumstances that require its use. Your suggested edits are not supported by the majority of stakeholder comments. The Interchange Coordinator has been removed from the standard.</p> <p>3. IRO-014: R4 as written creates unnecessary requirements for an RC to participate in conference calls for issues that may not affect the RC itself. We suggest to reinstate the original word “impacted” as opposed to “other”, and remove the words “within the same Interconnection” since such calls and coordination may be required for RCs on both side of the Interconnection boundary. Same change suggested for R5, i.e. replace “other” with “impacted”.</p> <p><b>Response:</b> The requirement for weekly conference calls exists in IRO-015-1. The RCSDT has revised the requirement and incorporated it into proposed IRO-014-2. IRO-14-2, R4 is applicable to those Reliability Coordinators engaged in activities related to R1 and subsequently R1.7, it is unlikely that Reliability Coordinators that are geographically and electrically distant will have mutually agreed upon operating procedures (per R1), and as such they are not applicable to R4. If RCs in different interconnections have operating procedures (per R1) with each other, then these operating procedures may include specifications for conference calls at least weekly.</p> <p>4. If an entity provides Interpersonal Communication for day-to-day communication using two different media, e.g. radio and telephone, the proposed definition of Alternative Interpersonal Communication suggests that it would not be possible for one medium to be used as the Alternative Interpersonal Communication for the other since the two media are both used every day.</p> <p><b>Response:</b> The intent of AIC is to make sure there is an alternative in case the IC fails. If you have two, you may designate one as the AIC regardless of how often you use it.</p> <p>5. COM-001-2 R10 suggests that the responsible entity must wait for at least 30 minutes before notifying other entities of the failure of its Interpersonal Communication capability. We recommend changing “that lasts 30 minutes” to “that lasts or is expected to last 30 minutes”. This allows responsible entities to start notifying other entities earlier.</p>

Organization	Yes or No	Question 6 Comment
		<p><b>Response:</b> The requirement is written such that an outer bound is set for notifications. An entity does not have to wait and can begin notifications immediately if it knows that an outage will last more than 30 minutes.</p> <p>6. In IRO-005-4 R1: Delete “notify”.</p> <p><b>Response:</b> The phrase “issue an alert” was removed in the redline version but was not removed from the clean version. This was corrected.</p>
<p><b>Response:</b> The RCSDT thanks you for your comments.</p>		

## Standard Development Roadmap

*This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.*

### Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.
10. Third posting of revised standards on January 4, 2010 with comment period closed on February 3, 2010.
11. Initial Ballot conducted February 25 through March 7, 2011.

### Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the initial ballot. The team is posting for a successive ballot.

### Future Development Plan:

Anticipated Actions	Anticipated Date
1. Post Standards for a successive ballot.	January-February 2012
2. Respond to comments on Successive ballot	March - April 2012
3. Standards posted for recirculation ballot	May 2012

4. Standards to be sent to BOT for approval.	June 2012
5. Standards filed with regulatory authorities.	August 2012

### **Definitions of Terms Used in Standard**

*This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.*

**Interpersonal Communication:** Any medium that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communications used for day-to-day operation.

## A. Introduction

1. **Title:** **Communications**
2. **Number:** COM-001-2
3. **Purpose:** To establish Interpersonal Communication capabilities for the exchange of Interconnection and operating information necessary to maintain reliability.
4. **Applicability:**
  - 4.1. Transmission Operator
  - 4.2. Balancing Authority
  - 4.3. Reliability Coordinator
  - 4.4. Distribution Provider
  - 4.5. Generator Operator
5. **Effective Date:** The first day of the second calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

## B. Requirements

- R1. Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities: *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*
  - R1.1. All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.
  - R1.2. Adjacent Reliability Coordinators within the same Interconnection.
- R2. Each Reliability Coordinator shall designate an Alternative Interpersonal Communications capability with the following entities: *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*
  - R2.1. All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.
  - R2.2. Adjacent Reliability Coordinators within the same Interconnection.
- R3. Each Transmission Operator shall have Interpersonal Communications capability with the following entities: *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*
  - R3.1. Its Reliability Coordinator.
  - R3.2. Each Balancing Authority within its Transmission Operator Area.
  - R3.3. Each Distribution Provider within its Transmission Operator Area.
  - R3.4. Each Generator Operator within its Transmission Operator Area.
  - R3.5. Adjacent Transmission Operators synchronously connected within the same Interconnection.

- R4.** Each Transmission Operator shall designate an Alternative Interpersonal Communications capability with the following entities: [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]
- R4.1.** Its Reliability Coordinator.
  - R4.2.** Each Balancing Authority within its Transmission Operator Area.
  - R4.3.** Adjacent Transmission Operators synchronously connected within the same Interconnection.
- R5.** Each Balancing Authority shall have Interpersonal Communications capability with the following entities: [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]
- R5.1.** Its Reliability Coordinator.
  - R5.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area.
  - R5.3.** Each Distribution Provider within its Balancing Authority Area.
  - R5.4.** Each Generator Operator that operates Facilities within its Balancing Authority Area.
  - R5.5.** Adjacent Balancing Authorities.
- R6.** Each Balancing Authority shall designate an Alternative Interpersonal Communications capability with the following entities: [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]
- R6.1.** Its Reliability Coordinator.
  - R6.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area).
  - R6.3.** Adjacent Balancing Authorities.
- R7.** Each Distribution Provider shall have Interpersonal Communications capability with the following entities: [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]
- R7.1.** Its Transmission Operator.
  - R7.2.** Its Balancing Authority.
- R8.** Each Generator Operator shall have Interpersonal Communications capability with the following entities: [*Violation Risk Factor: High*][*Time Horizon: Real-time Operations*]
- R8.1.** Its Balancing Authority.
  - R8.2.** Its Transmission Operator.
- R9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test its Alternative Interpersonal Communications capability at least once per calendar month. If the test is unsuccessful, the responsible entity shall initiate action to repair or

designate a replacement Alternative Interpersonal Communications capability within 2 hours. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*

**R10.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall notify entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*

**R11.** Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time for the restoration of Interpersonal Communication capability. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*

### C. Measures

**M1.** Each Reliability Coordinator shall have and provide upon request evidence that it has Interpersonal Communications capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with adjacent Reliability Coordinators within the same Interconnection. Evidence could include, but is not limited to:

- physical assets
- dated equipment specifications and installation documentation
- dated test records
- dated operator logs
- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings
- electronic communications
- or equivalent evidence. (R1.)

**M2.** Each Reliability Coordinator shall have and provide upon request evidence that it designated an Alternative Interpersonal Communications capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with adjacent Reliability Coordinators within the same Interconnection. Evidence could include, but is not limited to

- physical assets
- dated equipment specifications and installation documentation
- dated test records
- dated operator logs
- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings
- electronic communications

- or equivalent evidence. (R2.)
- M3.** Each Transmission Operator shall have and provide upon request evidence that it has Interpersonal Communications capability with its Reliability Coordinator, and within its Transmission Operator Area each Balancing Authority, Distribution Provider and Generator Operator. Evidence could include, but is not limited to
- physical assets
  - dated equipment specifications and installation documentation
  - dated test records
  - dated operator logs
  - dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings,
  - electronic communications
  - or equivalent evidence. (R3.)
- M4.** Each Transmission Operator shall have and provide upon request evidence that it designated an Alternative Interpersonal Communications capability with its Reliability Coordinator and with each Balancing Authority within its Transmission Operator Area and adjacent Transmission Operators synchronously connected within the same Interconnection. Evidence could include, but is not limited to
- physical assets
  - dated equipment specifications and installation documentation
  - dated test records
  - dated operator logs
  - dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings
  - electronic communications
  - or equivalent evidence. (R4.)
- M5.** Each Balancing Authority shall have and provide upon request evidence that it has Interpersonal Communications capability with its Reliability Coordinator, each Transmission Operator that operates Facilities within its Balancing Authority Area, each Distribution Provider within its Balancing Authority Area, each Generator Operator that operates Facilities within its Balancing Authority Area, and each adjacent Balancing Authority. Evidence could include, but is not limited to
- physical assets
  - dated equipment specifications and installation documentation
  - dated test records
  - dated operator logs

- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings
  - electronic communications
  - or equivalent evidence . (R5)
- M6.** Each Balancing Authority shall have and provide upon request evidence that it designated an Alternative Interpersonal Communications capability with its Reliability Coordinator, each Transmission Operator that operates Facilities within its Balancing Authority Area, and adjacent Balancing Authorities. Evidence could include, but is not limited to
- physical assets
  - dated equipment specifications and installation documentation
  - dated test records
  - dated operator logs
  - dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings
  - electronic communications
  - or equivalent evidence (R6)
- M7.** Each Distribution Provider shall have and provide upon request evidence that that it has Interpersonal Communications capability with its Transmission Operator and its Balancing Authority. Evidence could include, but is not limited to
- physical assets
  - dated equipment specifications and installation documentation
  - dated test records
  - dated operator logs
  - dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings
  - electronic communications
  - or equivalent evidence (R7)
- M8.** Each Generator Operator shall have and provide upon request evidence that that it has Interpersonal Communications capability with its Balancing Authority and its Transmission Operator. Evidence could include, but is not limited to
- physical assets
  - dated equipment specifications and installation documentation
  - dated test records
  - dated operator logs

- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings
  - electronic communications
  - or equivalent evidence (R8)
- M9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it tested, at least on a monthly basis, its Alternative Interpersonal Communications capabilities designated in R2, R4 or R6. If the test was unsuccessful, the entity shall have and provide upon request evidence that it initiated action to repair or designated a replacement Alternative Interpersonal Communications capability within 2 hours. Evidence could include, but is not limited to dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R9.)
- M10.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it notified impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)
- M11.** Each Distribution Provider and Generator Operator shall have and provide upon request evidence that it consulted with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R11.)
- M12.**

## **D. Compliance**

### **1. Compliance Monitoring Process**

#### **1.1. Compliance Enforcement Authority**

For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

For Reliability Coordinators that work for their Regional Entity, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

#### **1.2. Compliance Monitoring and Enforcement Processes**

Compliance Audit

Self-Certification

Spot Checking

Compliance Violation Investigation

Self-Reporting

Complaint

### **1.3. Data Retention**

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- Each Reliability Coordinator shall keep the most recent twelve months of historical data (evidence) for Requirements R1, R2, R9 and R10, Measures M1, M2, M9, and M10.
- Each Transmission Operator shall keep the most recent twelve months of historical data (evidence) for Requirements R3, R4, R9 and R10, Measures M3, M4, M9 and M10.
- Each Balancing Authority shall keep the most recent twelve months of historical data (evidence) for Requirements R5, R6, R9, and R10, Measures M5, M6, M9, and M10.
- Each Distribution Provider shall keep the most recent twelve months of historical data (evidence) for Requirements R7 and R11, Measures M7 and M11.
- Each Generator Operator shall keep the most recent twelve months of historical data (evidence) for Requirements R8 and R11, Measures M8 and M11.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator is found non-compliant with a requirement, it shall keep information related to the noncompliance until the Compliance Enforcement Authority finds it compliant or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

### **1.4. Additional Compliance Information**

None

**2. Violation Severity Levels**

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R1	N/A	N/A	N/A	The Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 or 1.2.
R2	N/A	N/A	N/A	The Reliability Coordinator failed to designate Alternative Interpersonal Communications capability with one or more of the entities listed in Parts 2.1 or 2.2.
R3	N/A	N/A	N/A	The Transmission Operator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 3.1, 3.2, 3.3, 3.4, or 3.5.
R4	N/A	N/A	N/A	The Transmission Operator failed to designate Alternative Interpersonal Communications capability with one or more of the entities listed in Parts 4.1 or 4.2.
R5	N/A	N/A	N/A	The Balancing Authority failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 5.1, 5.2, 5.3, 5.4 or 5.5.

## Standard Development Roadmap

*This section is maintained by the drafting team during the development of the standard and will be removed when the standard becomes effective.*

### Development Steps Completed:

1. Draft SAR Version 1 posted January 15, 2007
2. Draft SAR Version 1 Comment Period ended February 14, 2007
3. Draft SAR Version 2 and comment responses on SAR version 1 posted March 19, 2007
4. Draft Version 2 SAR comment period ended April 17, 2007
5. SAR version 2 and comment responses for SAR version 2 accepted by SC and SDT appointed in June 2007.
6. First posting of revised standards on August 5, 2008 with comment period closed on September 16, 2008.
7. Draft Version 2 of standards and response to comments September 16, 2008–May 26, 2009.
8. Second posting of revised standards on July 10, 2009 with comment period closed on August 9, 2009.
9. RC SDT coordinated with OPCP SDT and RTO SDT on definitions relating to directives and three part communication and Draft Version 3 of standards and response to comments August 9–November 20, 2009.
10. Third posting of revised standards on January 4, 2010 with comment period closed on February 3, 2010.

11. Initial Ballot conducted February 25 through March 7, 2011.

### Proposed Action Plan and Description of Current Draft:

The SDT began working on revisions to the standards in August 2007. The current posting contains revisions based on stakeholder comments on the ~~third draft~~ initial ballot. The team is posting for a ~~30 day pre-successive ballot review~~.

### Future Development Plan:

Anticipated Actions	Anticipated Date
1. <del>Respond to comments on third posting</del> <u>Post Standards for a successive ballot.</u>	<del>March 2010</del> <u>January-February 2012</u>
2. <del>Post Standards for pre-</del> <u>Respond to comments on Successive</u> ballot period.	<del>January 2011</del> <u>March - April 2012</u>

3. Standards posted for <del>initial and</del> recirculation <del>ballots</del> . <u>ballot</u>	<del>February 2011</del> <u>May 2012</u>
4. Standards <u>to be</u> sent to BOT for approval.	<del>March 2011</del> <u>June 2012</u>
5. Standards filed with regulatory authorities.	<del>June 2011</del> <u>August 2012</u>

### Definitions of Terms Used in Standard

*This section includes all newly defined or revised terms used in the proposed standard. Terms already defined in the Reliability Standards Glossary of Terms are not repeated here. New or revised definitions listed below become approved when the proposed standard is approved. When the standard becomes effective, these defined terms will be removed from the individual standard and added to the Glossary.*

**Interpersonal Communication:** Any ~~medium~~method~~medium~~ that allows two or more individuals to interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any ~~method~~ Interpersonal Communication that is able to serve as a substitute for, and ~~is redundant to normal Interpersonal Communication and~~ does not utilize the same infrastructure (medium) as, ~~normal~~ Interpersonal Communications used for day-to-day operation.

## A. Introduction

1. **Title:** Communications
2. **Number:** COM-001-2
3. **Purpose:** To ~~ensure that operating entities have adequate~~establish Interpersonal Communication capabilities for the exchange of Interconnection and operating information necessary to maintain reliability.
4. **Applicability:**
  - 4.1. Transmission ~~Operators.~~Operator
  - 4.2. Balancing ~~Authorities.~~Authority
  - 4.3. Reliability ~~Coordinators.~~Coordinator
  - 4.4. Distribution ~~Providers.~~Provider
  - 4.5. Generator ~~Operators.~~Operator
5. **Effective Date:** The first day of the ~~first~~second calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

## B. Requirements

- ~~**R1.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall identify and test, on a quarterly basis, its Alternative Interpersonal Communications capability used for communicating real-time operating information. If the test is unsuccessful, the entity shall take action within 60 minutes to restore the identified alternative or identify a substitute Alternative Interpersonal Communications capability. [Violation Risk Factor: High][Time Horizon: Real-time Operations]~~
- R1.** Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities ~~to exchange Interconnection and operating information:~~  
[Violation Risk Factor: High][Time Horizon: Real-time Operations]:]
- R1.1.** All Transmission Operators, and Balancing Authorities ~~and Interchange Coordinators~~ within its Reliability Coordinator Area.
- R1.2.** Adjacent Reliability Coordinators within the same Interconnection.
- R2.** Each Reliability Coordinator shall designate an Alternative Interpersonal Communications capability with the following entities ~~to exchange Interconnection and operating information:~~ [Violation Risk Factor: High][Time Horizon: Real-time Operations]:]
- R2.1.** All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.
- R2.2.** Adjacent Reliability Coordinators within the same Interconnection.

- R3.** Each Transmission Operator shall have Interpersonal Communications capability with the following entities ~~to exchange Interconnection and operating information;~~ *[Violation Risk Factor: High][Time Horizon: Real-time Operations]:]*
- R3.1.** Its Reliability Coordinator.
  - R3.2.** Each Balancing Authority within its Transmission Operator Area.
  - R3.3.** Each Distribution Provider within its Transmission Operator Area.
  - R3.4.** Each Generator Operator within its Transmission Operator Area.
  - R3.5.** Adjacent Transmission Operators synchronously connected within the same Interconnection.
- R4.** Each Transmission Operator shall designate an Alternative Interpersonal Communications capability with the following entities ~~to exchange Interconnection and operating information;~~ *[Violation Risk Factor: High][Time Horizon: Real-time Operations]:]*
- R4.1.** Its Reliability Coordinator.
  - R4.2.** Each Balancing Authority within its Transmission Operator Area.
  - R4.3.** Adjacent Transmission Operators synchronously connected within the same Interconnection.
- R5.** Each Balancing Authority shall have Interpersonal Communications capability with the following entities ~~to exchange Interconnection and operating information;~~ *[Violation Risk Factor: High][Time Horizon: Real-time Operations]:]*
- R5.1.** Its Reliability Coordinator.
  - R5.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area.
  - R5.3.** Each Distribution Provider within its Balancing Authority Area.
  - R5.4.** Each Generator Operator that operates Facilities within its Balancing Authority Area.
  - ~~**R5.5.** Each Interchange Coordinator within its Balancing Authority area as well as adjacent Interchange Coordinators.~~
  - R5.5.** Adjacent Balancing Authorities.
- R6.** Each Balancing Authority shall designate an Alternative Interpersonal Communications capability with the following entities ~~to exchange Interconnection and operating information;~~ *[Violation Risk Factor: High][Time Horizon: Real-time Operations]:]*
- R6.1.** Its Reliability Coordinator.
  - R6.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area).
  - R6.3.** Adjacent Balancing Authorities.

- R7.** Each Distribution Provider shall have Interpersonal Communications capability with the following entities ~~to exchange Interconnection and operating information;~~ *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*
- R7.1.** Its Transmission Operator.
- R7.2.** Its Balancing Authority.
- R8.** Each Generator Operator shall have Interpersonal Communications capability with the following entities ~~to exchange Interconnection and operating information;~~ *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*
- R8.1.** ~~Its Balancing Authority.~~
- R8.2.** Its Transmission Operator.
- R9.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall; ~~on at least a monthly basis;~~ test its Alternative Interpersonal Communications capability; at least once per calendar month. If the test is unsuccessful, the responsible entity shall initiate action to repair or designate a replacement Alternative Interpersonal Communications capability within 2 hours. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*
- R10.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority; ~~Distribution Provider, and Generator Operator~~ shall notify ~~impacted~~ entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer. *[Violation Risk Factor: Medium][Time Horizon: Real-time Operations]*
- R11.** ~~Unless dictated by law or otherwise agreed to, each Reliability Coordinator, Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator; or Balancing Authority; Generator Operator, Transmission Service Provider, Load-Serving Entity, Purchasing-Selling Entity and Distribution Provider shall use English as the language applicable to determine a mutually agreeable time for communications between functional entities. the restoration of Interpersonal Communication capability.~~ *[Violation Risk Factor: Medium]++[Time Horizon: -Real-time Operations]* ~~[SCH]~~

### C. Measures

- M1.** Each Reliability Coordinator; ~~Transmission Operator, and Balancing Authority~~ shall have and provide upon request evidence that it has Interpersonal Communications capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with adjacent Reliability Coordinators within the same Interconnection. Evidence could include, but is not limited to:
- physical assets
  - dated equipment specifications and installation documentation
  - dated test records;
  - dated operator logs;

- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings;
- electronic communications;

~~M1.~~ \_\_\_\_\_ or equivalent, ~~that it identified and tested, on a quarterly basis, alternative Interpersonal Communications capabilities used for communicating real-time operating information. If the test was unsuccessful, the entity shall have and provide upon request evidence that it took action within 60 minutes to restore the identified alternative or identified a substitute Interpersonal Communications capability.~~ (R1.)

~~M1.~~ ~~Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated and timestamped voice recordings or dated and timestamped transcripts of voice recordings, electronic communications, or equivalent, that it has Interpersonal Communications capability with all Transmission Operators, Balancing Authorities and Interchange Coordinators within its Reliability Coordinator Area and with adjacent Reliability Coordinators within the same Interconnection.~~ (R1.)

~~M1.~~ M2. \_\_\_\_\_ Each Reliability Coordinator shall have and provide upon request evidence that could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated and timestamped voice recordings or dated and timestamped transcripts of voice recordings, electronic communications, or equivalent. Each Reliability Coordinator shall have and provide upon request evidence that it designated an Alternative Interpersonal Communications capability with all Transmission Operators and Balancing Authorities within its Reliability Coordinator Area and with adjacent Reliability Coordinators within the same Interconnection. ~~(R2.)~~ Evidence could include, but is not limited to

- ~~Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to~~ physical assets;
- dated equipment specifications and installation documentation;
- dated test records;
- dated operator logs;
- dated and ~~timestamped~~ time-stamped voice recordings or dated and ~~timestamped~~ time-stamped transcripts of voice recordings;
- electronic communications;
- or equivalent; evidence. (R2.)

~~M2.~~ M3. \_\_\_\_\_ Each Transmission Operator shall have and provide upon request evidence that it has ~~a~~ Interpersonal Communications capability with its Reliability Coordinator, ~~with each Balancing Authority and each Distribution Provider and each Generator Operator and~~ within its Transmission Operator Area. ~~(R3.)~~ each Balancing

Authority, Distribution Provider and Generator Operator. Evidence could include, but is not limited to

- ~~Each Transmission Operator shall have and provide upon request evidence that could include, but is not limited to~~ physical assets;
- dated equipment specifications and installation documentation;
- dated test records;
- dated operator logs;
- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings,
- electronic communications;
- or equivalent, ~~that evidence.~~ (R3.)

~~M3.~~M4. Each Transmission Operator shall have and provide upon request evidence that it designated an Alternative Interpersonal Communications capability with its Reliability Coordinator, and with each Balancing Authority within its Transmission Operator Area. ~~(R4.) and adjacent Transmission Operators synchronously connected within the same Interconnection. Evidence could include, but is not limited to~~

- ~~Each Balancing Authority shall have and provide upon request evidence that could include, but is not limited to~~ physical assets;
- dated equipment specifications and installation documentation;
- dated test records;
- dated operator logs;
- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings;
- electronic communications;
- or equivalent, ~~evidence.~~ (R4.)

M5. Each Balancing Authority shall have and provide upon request evidence that it has Interpersonal Communications capability with its Reliability Coordinator, each Transmission Operator that operates Facilities within its Balancing Authority Area, each Distribution Provider within its Balancing Authority Area, each Generator Operator that operates Facilities within its Balancing Authority Area, and each adjacent Balancing Authority. Evidence could include, but is not limited to

- physical assets
- dated equipment specifications and installation documentation
- dated test records
- dated operator logs

- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings
- electronic communications
- or equivalent evidence . (R5)

~~M4.M6.~~ Each Balancing Authority shall have and provide upon request evidence that it designated an Alternative Interpersonal Communications capability with its Reliability Coordinator, each Transmission Operator that operates Facilities within its Balancing Authority Area, and each Generator Operator that operates Facilities within its Balancing Authority Area and each Distribution Provider within its Balancing Authority Area, and each Interchange Coordinator within its Balancing Authority area as well as adjacent Interchange Coordinators. (R5)adjacent Balancing Authorities. Evidence could include, but is not limited to

- ~~Each Balancing Authority shall have and provide upon request evidence that could include, but is not limited to~~ physical assets;
- dated equipment specifications and installation documentation;
- dated test records;
- dated operator logs;
- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings;
- electronic communications;

~~M5.~~• \_\_\_\_\_ or equivalent, that it designated an Alternative Interpersonal Communications capability with its Reliability Coordinator and each Transmission Operator that operates Facilities within its Balancing Authority Area. evidence (R6)

~~M6.M7.~~ Each Distribution Provider shall have and provide upon request evidence that ~~could include, but is not limited to physical assets, dated equipment specifications and installation documentation, dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent,~~ that it has Interpersonal Communications capability with its Transmission Operator and its Balancing Authority. (R7) Evidence could include, but is not limited to

- ~~Each Generator Operator shall have and provide upon request evidence that could include, but is not limited to~~ physical assets;
- dated equipment specifications and installation documentation;
- dated test records;
- dated operator logs;
- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings;

- electronic communications;
- or equivalent; evidence (R7)

~~M7.~~M8. Each Generator Operator shall have and provide upon request evidence that that it has Interpersonal Communications capability with its Balancing Authority and its Transmission Operator. ~~(R8)~~ Evidence could include, but is not limited to

- ~~Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to~~ physical assets
- dated equipment specifications and installation documentation
- dated test records;
- dated operator logs;
- dated and time-stamped voice recordings or dated and time-stamped transcripts of voice recordings;
- electronic communications;
- or equivalent; that evidence (R8)

~~M8.~~M9. Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have and provide upon request evidence that it tested, at least on a monthly basis, its Alternative Interpersonal Communications capabilities designated in R2, R4 or R6. If the test was unsuccessful, the entity shall have and provide upon request evidence that it initiated action to repair or designated a replacement Alternative Interpersonal Communications ~~within 2 hours; capability within 2 hours.~~ Evidence could include, but is not limited to dated test records, dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R9.)

M10. Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)

~~M9.~~M11. Each Distribution Provider and Generator Operator shall have and provide upon request evidence that it consulted with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent, ~~it notified impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer.~~ (R10 evidence. (R11.)

M12.

## D. Compliance

### 1. Compliance Monitoring Process

#### 1.1. Compliance Enforcement Authority

##### ~~Regional Entity~~

For entities that do not work for the Regional Entity, the Regional Entity shall serve as the Compliance Enforcement Authority.

For Reliability Coordinators that work for their Regional Entity, the ERO or a Regional Entity approved by the ERO and FERC or other applicable governmental authorities shall serve as the Compliance Enforcement Authority.

#### 1.2. Compliance Monitoring and Enforcement Processes

Compliance ~~Audits~~Audit

Self-~~Certifications~~Certification

Spot Checking

Compliance Violation ~~Investigations~~Investigation

Self-Reporting

~~Complaints~~

Complaint

#### 1.3. Data Retention

The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation:

- o Each Reliability Coordinator, shall keep the most recent twelve months of historical data (evidence) for Requirements R1, R2, R9 and R10, Measures M1, M2, M9, and M10.
- o Each Transmission Operator, and shall keep the most recent twelve months of historical data (evidence) for Requirements R3, R4, R9 and R10, Measures M3, M4, M9 and M10.
- o Each Balancing Authority shall keep the most recent twelve months of historical data (evidence) for Requirements ~~R1, R2, R3, R4,~~ R5, R6, R9,

and R10, Measures ~~M1, M2, M3, M4~~, M5, M6, M9, and M10 ~~as applicable.~~

- Each Distribution Provider shall keep the most recent twelve months of historical data (evidence) for Requirements R7 and ~~R10~~R11, Measures M7 and ~~M10~~M11.
- Each Generator Operator shall keep the most recent twelve months of historical data (evidence) for Requirements R8 and ~~R10~~R11, Measures M8 and ~~M10~~M11.

If a Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider or Generator Operator is found non-compliant with a requirement, it shall keep information related to the noncompliance until the Compliance Enforcement Authority finds it compliant or for the time period specified above, whichever is longer.

The Compliance Enforcement Authority shall keep the last audit records and all requested and submitted subsequent audit records.

#### **1.4. Additional Compliance Information**

None

**2. Violation Severity Levels**

R#	Lower VSL	Moderate VSL	High VSL	Severe VSL
R4	<del>The responsible entity tested Alternative Interpersonal Communications capability but failed to take action within 60 minutes to restore the identified alternative</del>  OR <del>Failed to identify a substitute Alternative Interpersonal Communications capability</del>	N/A	N/A	<del>The responsible entity failed to test its Alternative Interpersonal Communications capability on a quarterly basis.</del>
R1	N/A	N/A	N/A	The Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 or 1.2.
R2	N/A	N/A	N/A	The Reliability Coordinator failed to designate Alternative Interpersonal Communications capability with one or more of the entities listed in Parts 2.1 or 2.2.
R3	N/A	N/A	N/A	The Transmission Operator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 3.1, 3.2, 3.3, <del>3.4</del> , or 3.45.

**F. Associated Documents**

**Version History**

<b>Version</b>	<b>Date</b>	<b>Action</b>	<b>Change Tracking</b>
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata
1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 4, 2007	Regulatory Approval — Effective Date	New
1	April 6, 2007	Requirement 1, added the word “for” between “facilities” and “the exchange.”	Errata
2	TBD	Revised per SAR for Project 2006-06, RC SDT	Revised

## Implementation Plan and Mapping Document for COM-001-2 – Communications

### Approvals Requested

The RC SDT requests the approval of COM-001-2 – Communications and two new NERC Glossary terms.

### Prerequisite Approvals

- None

### Defined Terms in the NERC Glossary

The RC SDT proposes the following new definitions:

**Interpersonal Communication:** Any medium that allows two or more individuals interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communications used for day-to-day operation.

### Conforming Changes to Requirements in Already Approved Standards

- None.

### Revisions to Approved Standards and Definitions

The RCSDT revised the COM-001-1 standard and is proposing retiring four requirements (R1, R4, R5 and R6). COM-001-1 requirement R1 is proposed to be replaced with COM-001-2 requirements R1, R2, R3, R4, R5, R6, R7 and R8 to achieve clarity to which entities were required to have to reliable communications. Requirement R2 in COM-001-1 will become requirement R9 in COM-001-2. Requirement R3 in COM-001-1 has been included within R1 of COM-001-2. Requirement R4 will remain enforceable until its inclusion into COM-003 being revised under Project 2007-02 Operating Personnel Communication Protocols and becomes mandatory and enforceable. Requirement R5 in COM-001-1 is redundant with EOP-008-0, R1 and EOP-008-1, R1 and will be retired upon the effective date of COM-001-2. COM-001-1, requirement R6 will be retired as it is an ERO procedural requirement and does not impact reliability. Changes were made to eliminate redundancies between standards (existing and proposed), to align with the ERO Rules of Procedure and to address issues in FERC Order 693.

### **Effective Dates**

The first day of the second calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

### **Retirements**

COM-001-1.1 will be retired at midnight the day before COM-001-2 becomes effective with the exception of Requirement R4. This requirement is being revised and will be included in Standard COM-003-1, Operating Personnel Communications Protocols. COM-001-1.1, Requirement R4 will be retired at midnight the day before COM-003-1 becomes effective.

**Revisions or Retirements to Already Approved Standards**

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<ul style="list-style-type: none"> <li>▪ <b>COM-001-1.1</b></li> </ul>	
<p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p><b>COM-001-2</b></p> <p><b>R1.</b> Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R1.1.</b> All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.</p> <p><b>R1.2.</b> Adjacent Reliability Coordinators within the same Interconnection.</p> <p><b>R2.</b> Each Reliability Coordinator shall designate an Alternative Interpersonal Communications capability with the following entities: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R2.1.</b> All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.</p> <p><b>R2.2.</b> Adjacent Reliability Coordinators within the same Interconnection.</p> <p><b>R3.</b> Each Transmission Operator shall have Interpersonal Communications capability with the following entities: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p>

<p><b>Notes:</b></p>	
<p><b>Already Approved Standard</b></p>	<p><b>Proposed Replacement Requirement(s)</b></p>

**COM-001-1.1**

**R5.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities.  
*[Violation Risk Factor: Lower]*

**EOP-008-0**

**R1.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have a plan to continue reliability operations in the event its control center becomes inoperable. The contingency plan must meet the following requirements:

- R1.1.** The contingency plan shall not rely on data or voice communication from the primary control facility to be viable.
- R1.2.** The plan shall include procedures and responsibilities for providing basic tie line control and procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.
- R1.3.** The contingency plan must address monitoring and control of critical transmission facilities, generation control, voltage control, time and frequency control, control of critical substation devices, and logging of significant power system events. The plan shall list the critical facilities.
- R1.4.** The plan shall include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.
- R1.5.** The plan shall include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.
- R1.6.** The plan shall include procedures and responsibilities for providing annual training to ensure that operating personnel are able to implement the contingency plans.
- R1.7.** The plan shall be reviewed and updated annually.
- R1.8.** Interim provisions must be included if it is expected to take more than one hour to implement the contingency plan for

	<p>loss of primary control facility.</p> <p>EOP-008-1</p> <p>R1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. This Operating Plan for backup functionality shall include the following, at a minimum: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]</p> <ul style="list-style-type: none"><li>1.1. The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.</li><li>1.2. A summary description of the elements required to support the backup functionality. These elements shall include, at a minimum:<ul style="list-style-type: none"><li>1.2.1. Tools and applications to ensure that System Operators have situational awareness of the BES.</li><li>1.2.2. Data communications.</li><li>1.2.3. Voice communications.</li><li>1.2.4. Power source(s).</li><li>1.2.5. Physical and cyber security.</li></ul></li><li>1.3. An Operating Process for keeping the backup functionality consistent with the primary control center.</li><li>1.4. Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup functionality.</li><li>1.5. A transition period between the loss of primary control center</li></ul>
--	---

**Implementation Plan and Mapping Document for COM-001-2 Communications**

	<p>functionality and the time to fully implement the backup functionality that is less than or equal to two hours.</p> <p>1.6. An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include at a minimum:</p> <p>1.6.1. A list of all entities to notify when there is a change in operating locations.</p> <p>1.6.2. Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.</p> <p>1.6.3. Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.</p>
--	---

**Notes:** The RC SDT proposes retiring COM-001-1 R5 as it is redundant with EOP-008-0 Requirement R1 as well as EOP-008-1 R1 which replaces it.

<b>Already Approved Standard</b>	<b>Proposed Replacement Requirement(s)</b>
<p><b>COM-001-1</b></p> <p><b>R6.</b> Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001, “NERCNet Security Policy.” <i>[Violation Risk Factor: Lower]</i></p>	<p><b>None - retire</b></p>

**Notes:** The RC SDT is recommending that R6 be retired. This is an ERO procedural issue and should not be in a reliability standard. It should be included in the ERO Rules of Procedure.

## Implementation Plan for COM-001-2 – Communications

### Approvals Requested

The RC SDT requests the approval of COM-001-2 – Communications and two new NERC Glossary terms.

### Prerequisite Approvals

- None

### Defined Terms in the NERC Glossary

The RC SDT proposes the following new definitions:

**Interpersonal Communication:** Any medium that allows two or more individuals interact, consult, or exchange information.

**Alternative Interpersonal Communication:** Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communications used for day-to-day operation.

### Conforming Changes to Requirements in Already Approved Standards

- None.

### Revisions to Approved Standards and Definitions

The RCSDT revised the COM-001-1 standard and is proposing retiring ~~three-four~~ requirements (R1, R4, R5 and R6). COM-001-1 requirement R1 is proposed to be replaced with COM-001-2 requirements R1, R2, R3, R4, R5, R6, R7 and R8 to achieve clarity to which entities were required to have to reliable communications. Requirement R2 in COM-001-1 will become requirement R9 in COM-001-2. Requirement R3 in COM-001-1 has been included within R1 of COM-001-2. Requirement R4 will remain enforceable until its inclusion into COM-003 being revised under Project 2007-02 Operating Personnel Communication Protocols and becomes mandatory and enforceable. Requirement R5 in COM-001-1 is redundant with EOP-008-0, R1 and EOP-008-1, R1 and is will be retired upon the effective date of COM-001-2. COM-001-1, requirement R6 will be retired as it is an ERO procedural requirement and does not impact reliability. Changes were made to eliminate redundancies between standards (existing and proposed), to align with the ERO Rules of Procedure and to address issues in FERC Order 693.

## Effective Dates

The first day of the ~~first~~second calendar quarter following applicable regulatory approval – or in those jurisdictions where no regulatory approval is required, the first day of the first calendar quarter following Board of Trustees adoption.

## Retirements

COM-001-1.1 will be retired at midnight the day before COM-001-2 becomes effective with the exception of Requirement R4. This requirement is being revised and will be included in Standard COM-003-1, Operating Personnel Communications Protocols. COM-001-1.1, Requirement R4 will be retired at midnight the day before COM-003-1 becomes effective.

## Mapping Document for COM-001-2

### Revisions or Retirements to Already Approved Standards

The following tables identify the sections of approved standards that shall be retired or revised when this standard is implemented. If the drafting team is recommending the retirement or revision of a requirement, that text is blue.

Already Approved Standard	Proposed Replacement Requirement(s)
<ul style="list-style-type: none"> <li>▪ <b>COM-001-1.1</b></li> </ul>	
<p><b>R1.</b> Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: <i>[Violation Risk Factor: High]</i></p> <p><b>R1.1.</b> Internally. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.2.</b> Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.3.</b> With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. <i>[Violation Risk Factor: High]</i></p> <p><b>R1.4.</b> Where applicable, these facilities shall be redundant and diversely routed. <i>[Violation Risk Factor: High]</i></p>	<p><b>COM-001-2</b></p> <p><b>R1.</b> Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R1.1.</b> All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.</p> <p><b>R1.2.</b> Adjacent Reliability Coordinators within the same Interconnection.</p> <p><b>R2.</b> Each Reliability Coordinator shall designate an Alternative Interpersonal Communications capability with the following entities: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R2.1.</b> All Transmission Operators and Balancing Authorities within its Reliability Coordinator Area.</p> <p><b>R2.2.</b> Adjacent Reliability Coordinators within the same Interconnection.</p> <p><b>R3.</b> Each Transmission Operator shall have Interpersonal Communications capability with the following entities:</p>

	<p><i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R3.1.</b> Its Reliability Coordinator.</p> <p><b>R3.2.</b> Each Balancing Authority within its Transmission Operator Area.</p> <p><b>R3.3.</b> Each Distribution Provider within its Transmission Operator Area.</p> <p><b>R3.4.</b> Each Generator Operator within its Transmission Operator Area.</p> <p><b>R3.5.</b> Adjacent Transmission Operators synchronously connected within the same Interconnection.</p> <p><b>R4.</b> Each Transmission Operator shall designate an Alternative Interpersonal Communications capability with the following entities: <i>[Violation Risk Factor: High][Time Horizon: Real-time Operations]</i></p> <p><b>R4.1.</b> Its Reliability Coordinator.</p> <p><b>R4.2.</b> Each Balancing Authority within its Transmission Operator Area.</p> <p><b>R4.3.</b> Adjacent Balancing Authorities.</p>
--	---

- **Notes:** The requirements were made clearer as to which capabilities specific entities were required to have to ~~reliability~~ reliable communications.

Already Approved Standard	Proposed Replacement Requirement(s)
---------------------------	-------------------------------------

- **COM-001-1.1**

**R1.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information: *[Violation Risk Factor: High]*

**R1.1.** Internally. *[Violation Risk Factor: High]*

**R1.2.** Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities. *[Violation Risk Factor: High]*

**R1.3.** With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability. *[Violation Risk Factor: High]*

**R1.4.** Where applicable, these facilities shall be redundant and diversely routed. *[Violation Risk Factor: High]*

**COM-001-2**

**R5.** Each Balancing Authority shall have Interpersonal Communications capability with the following entities: *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*

**R5.1.** Its Reliability Coordinator.

**R5.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area

**R5.3.** Each **Distribution Provider** within its Balancing Authority Area

**R5.4.** Each **Generator Operator** that operates Facilities within its Balancing Authority Area

**R5.5.** Adjacent Balancing Authorities.

**R6.** Each Balancing Authority shall designate an Alternative Interpersonal Communications capability with the following entities: *[Violation Risk Factor: High][Time Horizon: Real-time Operations]*

**R6.1.** Its Reliability Coordinator.

**R6.2.** Each Transmission Operator that operates Facilities within its Balancing Authority Area).

**R6.3.** Adjacent Balancing Authorities.

**COM-001-1.1**

- R5.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities.  
*[Violation Risk Factor: Lower]*

**EOP-008-0**

- R1.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have a plan to continue reliability operations in the event its control center becomes inoperable. The contingency plan must meet the following requirements:
- R1.1.** The contingency plan shall not rely on data or voice communication from the primary control facility to be viable.
  - R1.2.** The plan shall include procedures and responsibilities for providing basic tie line control and procedures and for maintaining the status of all inter-area schedules, such that there is an hourly accounting of all schedules.
  - R1.3.** The contingency plan must address monitoring and control of critical transmission facilities, generation control, voltage control, time and frequency control, control of critical substation devices, and logging of significant power system events. The plan shall list the critical facilities.
  - R1.4.** The plan shall include procedures and responsibilities for maintaining basic voice communication capabilities with other areas.
  - R1.5.** The plan shall include procedures and responsibilities for conducting periodic tests, at least annually, to ensure viability of the plan.
  - R1.6.** The plan shall include procedures and responsibilities for providing annual training to ensure that operating personnel are able to implement the contingency plans.
  - R1.7.** The plan shall be reviewed and updated annually.
  - R1.8.** Interim provisions must be included if it is expected to take

more than one hour to implement the contingency plan for loss of primary control facility.

EOP-008-1

R1. Each Reliability Coordinator, Balancing Authority, and Transmission Operator shall have a current Operating Plan describing the manner in which it continues to meet its functional obligations with regard to the reliable operations of the BES in the event that its primary control center functionality is lost. This Operating Plan for backup functionality shall include the following, at a minimum: [Violation Risk Factor = Medium] [Time Horizon = Operations Planning]

1.1. The location and method of implementation for providing backup functionality for the time it takes to restore the primary control center functionality.

1.2. A summary description of the elements required to support the backup functionality. These elements shall include, at a minimum:

1.2.1. Tools and applications to ensure that System Operators have situational awareness of the BES.

1.2.2. Data communications.

1.2.3. Voice communications.

1.2.4. Power source(s).

1.2.5. Physical and cyber security.

1.3. An Operating Process for keeping the backup functionality consistent with the primary control center.

1.4. Operating Procedures, including decision authority, for use in determining when to implement the Operating Plan for backup

	<p><u>functionality.</u></p> <p><u>1.5. A transition period between the loss of primary control center functionality and the time to fully implement the backup functionality that is less than or equal to two hours.</u></p> <p><u>1.6. An Operating Process describing the actions to be taken during the transition period between the loss of primary control center functionality and the time to fully implement backup functionality elements identified in Requirement R1, Part 1.2. The Operating Process shall include at a minimum:</u></p> <p><u>1.6.1. A list of all entities to notify when there is a change in operating locations.</u></p> <p><u>1.6.2. Actions to manage the risk to the BES during the transition from primary to backup functionality as well as during outages of the primary or backup functionality.</u></p> <p><u>1.6.3. Identification of the roles for personnel involved during the initiation and implementation of the Operating Plan for backup functionality.</u></p>

If you have questions please contact Stephen Crutchfield at [stephen.crutchfield@nerc.net](mailto:stephen.crutchfield@nerc.net) or by telephone at 609-651-9455.

### Background

The RCSDT has revised the COM-001-2, COM-002-3 and IRO-001-1 standards based on stakeholder comments received during the initial ballot and formal comment period and quality reviews of each standard.

The RCSDT has addressed comments on the applicability of all three standards and implementation plans by aligning COM-001-2, COM-002-3, and IRO-001-2 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards and implementation plans.

Several commenters had suggestions for improvements to the requirement language and applicability of COM-001-2. The RCSDT believes the standard correctly and adequately requires each applicable entity that would have capability to receive Interconnection and operating information to have Interpersonal Communications, and Alternative Interpersonal Communications to be used when the Interpersonal Communication is not available. The RCSDT made the following changes to COM-001-2 based on stakeholder suggestions:

1. The following Requirement parts were added to COM-001-2:
  - 3.5 Adjacent Transmission Operators synchronously connected within the same Interconnection
  - 4.3 Adjacent Transmission Operators synchronously connected within the same Interconnection
  - 5.5 Adjacent Balancing Authorities
  - 6.3 Adjacent Balancing Authorities
2. The phrase "to exchange Interconnection and operating information" was removed from requirements R1 through R8 to clarify that the intent of this capability is NOT for the exchange of data.
3. A new requirement was added for clarity regarding what is required of Distribution Providers and Generator Operators (i.e., collaboration between entities to restore a failed communications capability):
  - R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to

restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]

The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading:

**Reliability Directive:** A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

As a reference, we have included the existing definition of Emergency and the BOT approved definition of Adverse Reliability Impact<sup>1</sup>:

**Emergency:** Any abnormal system condition that requires automatic or immediate manual action to prevent or limit the failure of transmission facilities or generation supply that could adversely affect the reliability of the Bulk Electric System.

**Adverse Reliability Impact:** The impact of an event that results in Bulk Electric System instability or Cascading.

Based on stakeholder feedback regarding IRO-001, the RCSDT removed Requirement R1. Other requirements were removed from IRO-001 and placed in more appropriate standards. These requirements did not fit with the purpose statement of IRO-001. Requirements R5 and R6 were removed from IRO-001 and placed in IRO-005-4. Requirements R7 and R8 were removed from IRO-001 and placed in IRO-002-2. These requirements were balloted and approved by stakeholders in July of 2011 and subsequently approved by the NERC BOT on August 4, 2011.

In addition, minor clarifications were made to the language of requirements and measures in COM-002-3 and IRO-001-3 based on suggestions from quality reviews of those standards.

---

<sup>1</sup> This definition was approved by the NERC Board of Trustees on August 4, 2011. Filing with regulatory authorities is pending.

**You do not have to answer all questions. Enter all comments in Simple Text Format.**

1. The RCSDT has revised the applicability of the standards and implementation plans by aligning COM-001-2, COM-002-3, and IRO-001-2 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards. Do you agree with this change in applicability to the three standards? If not, please explain in the comment area below.

Yes

No

Comments:

2. Do you agree with the addition of "Adjacent" entities in COM-001-2, Parts 3.5, 4.3, 5.5 and 6.3 of COM-001-2? If not, please explain in the comment area below

Yes

No

Comments:

3. The RCSDT removed the phrase "to exchange Interconnection and operating information" in COM-001-2, Requirements R1 through R8 based on stakeholder comments. Do you agree with the revision? If not, please explain in the comment area below.

Yes

No

Comments:

4. A new requirement was added for clarity regarding what is required of Distribution Providers and the Generator Operators:

R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]

This requirement requires collaboration between entities to restore a failed communications capability. Do you agree with the new requirement? If not, please explain in the comment area below

Yes

No

Comments:

- 5. The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading:

Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact.

Do you agree with the proposed definition? If not, please explain in the comment area below

Yes

No

Comments:

- 6. Do you have any other comment, not expressed in questions above, for the RC SDT?

Comments:

**A. Introduction**

- 1. Title:** **Telecommunications**
- 2. Number:** COM-001-1.1
- 3. Purpose:** Each Reliability Coordinator, Transmission Operator and Balancing Authority needs adequate and reliable telecommunications facilities internally and with others for the exchange of Interconnection and operating information necessary to maintain reliability.
- 4. Applicability**
  - 4.1.** Transmission Operators.
  - 4.2.** Balancing Authorities.
  - 4.3.** Reliability Coordinators.
  - 4.4.** NERCNet User Organizations.
- 5. Effective Date:** May 13, 2009

**B. Requirements**

- R1.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide adequate and reliable telecommunications facilities for the exchange of Interconnection and operating information:
  - R1.1.** Internally.
  - R1.2.** Between the Reliability Coordinator and its Transmission Operators and Balancing Authorities.
  - R1.3.** With other Reliability Coordinators, Transmission Operators, and Balancing Authorities as necessary to maintain reliability.
  - R1.4.** Where applicable, these facilities shall be redundant and diversely routed.
- R2.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall manage, alarm, test and/or actively monitor vital telecommunications facilities. Special attention shall be given to emergency telecommunications facilities and equipment not used for routine communications.
- R3.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall provide a means to coordinate telecommunications among their respective areas. This coordination shall include the ability to investigate and recommend solutions to telecommunications problems within the area and with other areas.
- R4.** Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations.
- R5.** Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities.
- R6.** Each NERCNet User Organization shall adhere to the requirements in Attachment 1-COM-001, "NERCNet Security Policy."

**C. Measures**

- M1.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request evidence that could include, but is not limited to communication facility test-procedure documents, records of testing, and maintenance records for communication facilities or equivalent that will be used to confirm that it manages, alarms, tests and/or actively monitors vital telecommunications facilities. (Requirement 2 part 1)
- M2.** The Reliability Coordinator, Transmission Operator or Balancing Authority shall have and provide upon request evidence that could include, but is not limited to operator logs, voice recordings or transcripts of voice recordings, electronic communications, or equivalent, that will be used to determine compliance to Requirement 4.
- M3.** Each Reliability Coordinator, Transmission Operator and Balancing Authority shall have and provide upon request its current operating instructions and procedures, either electronic or hard copy that will be used to confirm that it meets Requirement 5.
- M4.** The NERCnet User Organization shall have and provide upon request evidence that could include, but is not limited to documented procedures, operator logs, voice recordings or transcripts of voice recordings, electronic communications, etc that will be used to determine if it adhered to the (User Accountability and Compliance) requirements in Attachment 1-COM-001. (Requirement 6)

**D. Compliance**

**1. Compliance Monitoring Process**

**1.1. Compliance Monitoring Responsibility**

NERC shall be responsible for compliance monitoring of the Regional Reliability Organizations

Regional Reliability Organizations shall be responsible for compliance monitoring of all other entities

**1.2. Compliance Monitoring and Reset Time Frame**

One or more of the following methods will be used to assess compliance:

- Self-certification (Conducted annually with submission according to schedule.)
- Spot Check Audits (Conducted anytime with up to 30 days notice given to prepare.)
- Periodic Audit (Conducted once every three years according to schedule.)
- Triggered Investigations (Notification of an investigation must be made within 60 days of an event or complaint of noncompliance. The entity will have up to 30 calendar days to prepare for the investigation. An entity may request an extension of the preparation period and the extension will be considered by the Compliance Monitor on a case-by-case basis.)

The Performance-Reset Period shall be 12 months from the last finding of non-compliance.

**1.3. Data Retention**

For Measure 1 each Reliability Coordinator, Transmission Operator, Balancing Authority shall keep evidence of compliance for the previous two calendar years plus the current year.

For Measure 2 each Reliability Coordinator, Transmission Operator, and Balancing Authority shall keep 90 days of historical data (evidence).

For Measure 3, each Reliability Coordinator, Transmission Operator, Balancing Authority shall have its current operating instructions and procedures to confirm that it meets Requirement 5.

For Measure 4, each Reliability Coordinator, Transmission Operator, Balancing Authority and NERCnet User Organization shall keep 90 days of historical data (evidence).

If an entity is found non-compliant the entity shall keep information related to the noncompliance until found compliant or for two years plus the current year, whichever is longer.

Evidence used as part of a triggered investigation shall be retained by the entity being investigated for one year from the date that the investigation is closed, as determined by the Compliance Monitor.

The Compliance Monitor shall keep the last periodic audit report and all requested and submitted subsequent compliance records.

**1.4. Additional Compliance Information**

Attachment 1 — COM-001 — NERCnet Security Policy

**2. Levels of Non-Compliance for Transmission Operator, Balancing Authority or Reliability Coordinator**

**2.1. Level 1:** Not applicable.

**2.2. Level 2:** Not applicable.

**2.3. Level 3:** There shall be a separate Level 3 non-compliance, for every one of the following requirements that is in violation:

**2.3.1** The Transmission Operator, Balancing Authority or Reliability Coordinator used a language other than English without agreement as specified in R4.

**2.3.2** There are no written operating instructions and procedures to enable continued operation of the system during the loss of telecommunication facilities as specified in R5.

**2.4. Level 4:** Telecommunication systems are not actively monitored, tested, managed or alarmed as specified in R2.

**3. Levels of Non-Compliance — NERCnet User Organization**

**3.1. Level 1:** Not applicable.

**3.2. Level 2:** Not applicable.

**3.3. Level 3:** Not applicable.

**3.4. Level 4:** Did not adhere to the requirements in Attachment 1-COM-001, NERCnet Security Policy.

**E. Regional Differences**

None Identified.

**Version History**

Version	Date	Action	Change Tracking
0	April 1, 2005	Effective Date	New
0	August 8, 2005	Removed “Proposed” from Effective Date	Errata

## Standard COM-001-1.1 — Telecommunications

---

1	November 1, 2006	Adopted by Board of Trustees	Revised
1	April 6, 2007	Requirement 1, added the word “for” between “facilities” and “the exchange.”	Errata
1.1	October 29, 2008	BOT adopted errata changes; updated version number to “1.1”	Errata

**Attachment 1 — COM-001 — NERCnet Security Policy**

**Policy Statement**

The purpose of this NERCnet Security Policy is to establish responsibilities and minimum requirements for the protection of information assets, computer systems and facilities of NERC and other users of the NERC frame relay network known as “NERCnet.” The goal of this policy is to prevent misuse and loss of assets.

For the purpose of this document, information assets shall be defined as processed or unprocessed data using the NERCnet Telecommunications Facilities including network documentation. This policy shall also apply as appropriate to employees and agents of other corporations or organizations that may be directly or indirectly granted access to information associated with NERCnet.

The objectives of the NERCnet Security Policy are:

- To ensure that NERCnet information assets are adequately protected on a cost-effective basis and to a level that allows NERC to fulfill its mission.
- To establish connectivity guidelines for a minimum level of security for the network.
- To provide a mandate to all Users of NERCnet to properly handle and protect the information that they have access to in order for NERC to be able to properly conduct its business and provide services to its customers.

**NERC’s Security Mission Statement**

NERC recognizes its dependency on data, information, and the computer systems used to facilitate effective operation of its business and fulfillment of its mission. NERC also recognizes the value of the information maintained and provided to its members and others authorized to have access to NERCnet. It is, therefore, essential that this data, information, and computer systems, and the manual and technical infrastructure that supports it, are secure from destruction, corruption, unauthorized access, and accidental or deliberate breach of confidentiality.

**Implementation and Responsibilities**

This section identifies the various roles and responsibilities related to the protection of NERCnet resources.

**NERCnet User Organizations**

Users of NERCnet who have received authorization from NERC to access the NERC network are considered users of NERCnet resources. To be granted access, users shall complete a User Application Form and submit this form to the NERC Telecommunications Manager.

**Responsibilities**

It is the responsibility of NERCnet User Organizations to:

- Use NERCnet facilities for NERC-authorized business purposes only.
- Comply with the NERCnet security policies, standards, and guidelines, as well as any procedures specified by the data owner.
- Prevent unauthorized disclosure of the data.
- Report security exposures, misuse, or non-compliance situations via Reliability Coordinator Information System or the NERC Telecommunications Manager.
- Protect the confidentiality of all user IDs and passwords.
- Maintain the data they own.
- Maintain documentation identifying the users who are granted access to NERCnet data or applications.
- Authorize users within their organizations to access NERCnet data and applications.

- Advise staff on NERCnet Security Policy.
- Ensure that all NERCnet users understand their obligation to protect these assets.
- Conduct self-assessments for compliance.

### **User Accountability and Compliance**

All users of NERCnet shall be familiar and ensure compliance with the policies in this document.

Violations of the NERCnet Security Policy shall include, but not be limited to any act that:

- Exposes NERC or any user of NERCnet to actual or potential monetary loss through the compromise of data security or damage.
- Involves the disclosure of trade secrets, intellectual property, confidential information or the unauthorized use of data.

Involves the use of data for illicit purposes, which may include violation of any law, regulation or reporting requirement of any law enforcement or government body.

## Violation Risk Factor and Violation Severity Level Assignments

This document provides the drafting team's justification for assignment of violation risk factors (VRFs) and violation severity levels (VSLs) for each requirement in

### COM-001-2 — Telecommunications

Each primary requirement is assigned a VRF and a set of one or more VSLs. These elements support the determination of an initial value range for the Base Penalty Amount regarding violations of requirements in FERC-approved Reliability Standards, as defined in the ERO Sanction Guidelines.

### Justification for Assignment of Violation Risk Factors in COM-001-2

The SDT applied the following NERC criteria when proposing VRFs for the requirements in COM-001-2:

#### ***High Risk Requirement***

A requirement that, if violated, could directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly cause or contribute to bulk electric system instability, separation, or a cascading sequence of failures, or could place the bulk electric system at an unacceptable risk of instability, separation, or cascading failures, or could hinder restoration to a normal condition.

#### ***Medium Risk Requirement***

A requirement that, if violated, could directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures; or, a requirement in a planning time frame that, if violated, could, under emergency, abnormal, or restorative conditions anticipated by the preparations, directly and adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. However, violation of a medium risk requirement is unlikely, under emergency, abnormal, or restoration conditions anticipated by the preparations, to lead to bulk electric system instability, separation, or cascading failures, nor to hinder restoration to a normal condition.

#### ***Lower Risk Requirement***

A requirement that is administrative in nature and a requirement that, if violated, would not be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system; or, a

requirement that is administrative in nature and a requirement in a planning time frame that, if violated, would not, under the emergency, abnormal, or restorative conditions anticipated by the preparations, be expected to adversely affect the electrical state or capability of the bulk electric system, or the ability to effectively monitor, control, or restore the bulk electric system. A planning requirement that is administrative in nature.

The SDT also considered consistency with the FERC Violation Risk Factor Guidelines for setting VRFs:<sup>1</sup>

**Guideline (1) — Consistency with the Conclusions of the Final Blackout Report**

The Commission seeks to ensure that Violation Risk Factors assigned to Requirements of Reliability Standards in these identified areas appropriately reflect their historical critical impact on the reliability of the Bulk-Power System.

In the VSL Order, FERC listed critical areas (from the Final Blackout Report) where violations could severely affect the reliability of the Bulk-Power System:<sup>2</sup>

- Emergency operations
- Vegetation management
- Operator personnel training
- Protection systems and their coordination
- Operating tools and backup facilities
- Reactive power and voltage control
- System modeling and data exchange
- Communication protocol and facilities
- Requirements to determine equipment ratings
- Synchronized data recorders
- Clearer criteria for operationally critical facilities
- Appropriate use of transmission loading relief.

**Guideline (2) — Consistency within a Reliability Standard**

The Commission expects a rational connection between the sub-Requirement Violation Risk Factor assignments and the main Requirement Violation Risk Factor assignment.

**Guideline (3) — Consistency among Reliability Standards**

The Commission expects the assignment of Violation Risk Factors corresponding to Requirements that address similar reliability goals in different Reliability Standards would be treated comparably.

---

<sup>1</sup> North American Electric Reliability Corp., 119 FERC ¶ 61,145, order on reh'g and compliance filing, 120 FERC ¶ 61,145 (2007) (“VRF Rehearing Order”).

<sup>2</sup> Id. at footnote 15.

**Guideline (4) — Consistency with NERC’s Definition of the Violation Risk Factor Level**

Guideline (4) was developed to evaluate whether the assignment of a particular Violation Risk Factor level conforms to NERC’s definition of that risk level.

**Guideline (5) — Treatment of Requirements that Co-mingle More Than One Obligation**

Where a single Requirement co-mingles a higher risk reliability objective and a lesser risk reliability objective, the VRF assignment for such Requirements must not be watered down to reflect the lower risk level associated with the less important objective of the Reliability Standard.

The following discussion addresses how the SDT considered FERC’s VRF Guidelines 2 through 5. The team did not address Guideline 1 directly because of an apparent conflict between Guidelines 1 and 4. Whereas Guideline 1 identifies a list of topics that encompass nearly all topics within NERC’s Reliability Standards and implies that these requirements should be assigned a “High” VRF, Guideline 4 directs assignment of VRFs based on the impact of a specific requirement to the reliability of the system. The SDT believes that Guideline 4 is reflective of the intent of VRFs in the first instance and therefore concentrated its approach on the reliability impact of the requirements.

**VRF for COM-001-2:**

There are eleven requirements in COM-001-2. None of the eleven requirements were assigned a “Lower” VRF. Requirements R1-R8 were assigned a “High” VRF while the other **three** requirements were given a “Medium” VRF.

**VRF for COM-001-2, Requirements R1-R6:**

- FERC’s Guideline 2 — Consistency within a Reliability Standard. Each requirement specifies which functional entities that are required to have Interpersonal Communications capability and Alternative Interpersonal Communications capability. The VRFs for each requirement are consistent with each other and are only applied at the Requirement level.
- FERC’s Guideline 3 — Consistency among Reliability Standards. These requirements are facility requirements that provide communications capability between functional entities. There are no similar facility requirements in the standards. The approved VRF for COM-001-1.1, R1 (which proposed R1-R6 replaces) is High and therefore the proposed VRF for R1-R6 is consistent.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to have Interpersonal Communications capability and Alternative Interpersonal Communications capability could limit or prevent communication between entities and directly affect the electrical state or the capability of the bulk power system and could lead to bulk power

system instability, separation, or cascading failures. Therefore, this requirement is assigned a High VRF.

- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. COM-001-2, Requirements R1-R6 contain only one objective, therefore only one VRF was assigned.

**VRF for COM-001-2, Requirement R7:**

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. COM-001-2, Requirement R7 is an analog to Parts 3.3 and 5.3 and they have the same VRF (High).
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to have Interpersonal Communications capability could limit or prevent communication between entities and directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement was assigned a High VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. COM-001-2, Requirement R7 addresses a single objective and has a single VRF.

**VRF for COM-001-2, Requirement R8:**

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. COM-001-2, Requirement R8 is an analog to Parts 3.4 and 5.4 and they have the same VRF (High).
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. Failure to have Interpersonal Communications capability could limit or prevent communication between entities and directly affect the electrical state or the capability of the bulk power system and could lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement was assigned a High VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. COM-001-2, Requirement R8 addresses a single objective and has a single VRF.

**VRF for COM-001-2, Requirement R9:**

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. COM-001-2, Requirement R9 is a requirement for entities to test their Alternative Interpersonal Communications capability and to take restorative action should the test fail and is a replacement requirement for COM-001-1.1, R2, which has an approved VRF of Medium.

- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. COM-001-2, Requirement R9 is a requirement for entities to test their Alternative Interpersonal Communications capability and to take restorative action should the test fail. The act of testing in and of itself is not likely to “directly affect the electrical state or the capability of the bulk electric system, or the ability to effectively monitor and control the bulk electric system. However, violation of a medium risk requirement is unlikely to lead to bulk electric system instability, separation, or cascading failures...” Therefore, this requirement was assigned a Medium VRF.
- FERC’s Guideline 5 — Treatment of Requirements that Co-mingle More Than One Objective. COM-001-2, Requirement R9 addresses a single objective and has a single VRF.

**VRF for COM-001-2, Requirement R10:**

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. COM-001-2, Requirement R10 is a new requirement that was assigned a Medium VRF. When evaluating the VRF to be assigned to this requirement, the SDT took into account that this requirement is a notification item, not an actual action that has a direct impact on the bulk power system. Therefore, the simple act of failing to notify another entity of the failure of Interpersonal Communications capability, while it may impair the entity’s ability communicate, does not, in itself, lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement was assigned a Medium VRF.
- FERC’s Guideline 4 — Consistency with NERC’s Definition of a VRF. COM-001-2, Requirement R10 mandates that entities notify entities of a failure of Interpersonal Communications capability. Bulk power system instability, separation, or cascading failures are not likely to occur due to a failure to notify another entity of the failure. Therefore, this requirement was assigned a Medium VRF.
- FERC’s Guideline 5 - Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R10 addresses a single objective and has a single VRF.

**VRF for COM-001-2, Requirement R11:**

- FERC’s Guideline 2 — Consistency within a Reliability Standard. The requirement has no sub-requirements; only one VRF was assigned so there is no conflict.
- FERC’s Guideline 3 — Consistency among Reliability Standards. COM-001-2, Requirement R11 is a new requirement that was assigned a Medium VRF. When evaluating the VRF to be assigned to this requirement, the SDT took into account that this requirement is a consultation item, not an actual action that has a direct impact on the bulk power system. Therefore, the simple act of failing to consult with another entity on the failure of Interpersonal Communications capability and its restoration, while it may impair the entity’s

**Justification for Assignment of Violation Risk Factors and Violation Severity Levels for Project 2006-06 – Reliability Coordination**

---

ability communicate, does not, in itself, lead to bulk power system instability, separation, or cascading failures. Therefore, this requirement was assigned a Medium VRF.

- FERC's Guideline 4 — Consistency with NERC's Definition of a VRF. COM-001-2, Requirement R11 mandates that entities consult with other entities regarding restoration of Interpersonal Communications capability. Bulk power system instability, separation, or cascading failures are not likely to occur due to a failure to consult with another entity on restoration times. Therefore, this requirement was assigned a Medium VRF.
- FERC's Guideline 5 - Treatment of Requirements that Co-mingle More Than One Objective. TOP-001-2, Requirement R11 addresses a single objective and has a single VRF.

**Justification for Assignment of Violation Severity Levels for COM-001-2**

In developing the VSLs for the TOP standard, the SDT anticipated the evidence that would be reviewed during an audit, and developed its VSLs based on the noncompliance an auditor may find during a typical audit. The SDT based its assignment of VSLs on the following NERC criteria:

Lower	Moderate	High	Severe
<p>Missing a minor element (or a small percentage) of the required performance The performance or product measured has significant value as it almost meets the full intent of the requirement.</p>	<p>Missing at least one significant element (or a moderate percentage) of the required performance. The performance or product measured still has significant value in meeting the intent of the requirement.</p>	<p>Missing more than one significant element (or is missing a high percentage) of the required performance or is missing a single vital component. The performance or product has limited value in meeting the intent of the requirement.</p>	<p>Missing most or all of the significant elements (or a significant percentage) of the required performance. The performance measured does not meet the intent of the requirement or the product delivered cannot be used in meeting the intent of the requirement.</p>

FERC’s VSL guidelines are presented below, followed by an analysis of whether the VSLs proposed for each requirement in TOP-xxx-x meet the FERC Guidelines for assessing VSLs:

**Guideline 1: Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance**

Compare the VSLs to any prior levels of non-compliance and avoid significant changes that may encourage a lower level of compliance than was required when levels of non-compliance were used.

**Guideline 2: Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties**

A violation of a “binary” type requirement must be a “Severe” VSL.

Do not use ambiguous terms such as “minor” and “significant” to describe noncompliant performance.

**Guideline 3: Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement**

VSLs should not expand on what is required in the requirement.

**Guideline 4: Violation Severity Level Assignment Should Be Based on A Single Violation,  
Not on A Cumulative Number of Violations**

. . . unless otherwise stated in the requirement, each instance of non-compliance with a requirement is a separate violation. Section 4 of the Sanction Guidelines states that assessing penalties on a per violation per day basis is the “default” for penalty calculations.

VSLs for COM-001-2 Requirements R1 through R6:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties  Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent  Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
<b>R1-R6.</b>	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The proposed requirement is a revision of COM-001-1.1, R1 and its subrequirements. Each subrequirement was separated out into a new stand-alone requirement. The VSLs for the approved subrequirements are binary and this is reflected in the proposed VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for COM-001-2 Requirement R7:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties  Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent  Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
<b>R7.</b>	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The most comparable VSLs for a similar requirement are for the proposed analog requirement and its parts COM-001-2, Part 3.3 and Part 5.3. This requirement specifies the two way nature of entities having Interpersonal Communications capability. In other words, if one entity is required to have Interpersonal Communications capability with another entity, then the reciprocal should also be required or the onus would be exclusively on one entity. Since Requirement 3 and	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

**Justification for Assignment of Violation Risk Factors and Violation Severity Levels for Project 2006-06 – Reliability Coordination**

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties  Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent  Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
		Requirement 5 are assigned binary VSLs, it appropriate for Requirement 7 to also be assigned a binary VSL.			

VSLs for COM-001-2 Requirement R8:

R#	Compliance with NERC's Revised VSL Guidelines	<p>Guideline 1</p> <p>Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance</p>	<p>Guideline 2</p> <p>Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties</p> <p>Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent</p> <p>Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language</p>	<p>Guideline 3</p> <p>Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</p>	<p>Guideline 4</p> <p>Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</p>
<b>R8.</b>	Meets NERC's VSL guidelines - Severe: The performance or product measured does not substantively meet the intent of the requirement.	The most comparable VSLs for a similar requirement are for the proposed analog requirement and its parts COM-001-2, Part 3.4 and Part 5.4. This requirement specifies the two way nature of entities having Interpersonal Communications capability. In other words, if one entity is required to have Interpersonal Communications capability with another	The proposed VSLs do not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSLs use the same terminology as used in the associated requirement, and are, therefore, consistent with the requirement.	The VSLs are based on a single violation and not cumulative violations.

**Justification for Assignment of Violation Risk Factors and Violation Severity Levels for Project 2006-06 – Reliability Coordination**

R#	Compliance with NERC's Revised VSL Guidelines	<p>Guideline 1</p> <p>Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance</p>	<p>Guideline 2</p> <p>Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties</p> <p>Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent</p> <p>Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language</p>	<p>Guideline 3</p> <p>Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement</p>	<p>Guideline 4</p> <p>Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations</p>
		<p>entity, then the reciprocal should also be required or the onus would be exclusively on one entity. Since Requirement 3 and Requirement 5 are assigned binary VSLs, it appropriate for Requirement 7 to also be assigned a binary VSL.</p>			

VSLs for COM-001-2 Requirement R9:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties  Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent  Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
<b>R9.</b>	Meets NERC's VSL guidelines. There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is a new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for COM-001-2 Requirement R10:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties  Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent  Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
<b>R10.</b>	Meets NERC's VSL guidelines. There is an incremental aspect to the violation and the VSLs follow the guidelines for incremental violations.	The proposed requirement is new and there are no comparable VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

VSLs for COM-001-2 Requirement R11:

R#	Compliance with NERC's VSL Guidelines	Guideline 1 Violation Severity Level Assignments Should Not Have the Unintended Consequence of Lowering the Current Level of Compliance	Guideline 2 Violation Severity Level Assignments Should Ensure Uniformity and Consistency in the Determination of Penalties  Guideline 2a: The Single Violation Severity Level Assignment Category for "Binary" Requirements Is Not Consistent  Guideline 2b: Violation Severity Level Assignments that Contain Ambiguous Language	Guideline 3 Violation Severity Level Assignment Should Be Consistent with the Corresponding Requirement	Guideline 4 Violation Severity Level Assignment Should Be Based on A Single Violation, Not on A Cumulative Number of Violations
<b>R11.</b>	Meets NERC's VSL guidelines. This is a binary requirement and the VSL is severe.	The proposed requirement is new and there are no comparable existing VSLs.	The proposed VSL does not use any ambiguous terminology, thereby supporting uniformity and consistency in the determination of similar penalties for similar violations.	The proposed VSL uses the same terminology as used in the associated requirement, and is, therefore, consistent with the requirement.	The VSL is based on a single violation and not cumulative violations.

# Standards Announcement

Project 2006-06 Reliability Coordination

**Three Ballot Windows Extended, Three Non-binding poll Windows **Extended One Day****  
**Formal Comment Period **Extended One Day****  
**Through 8 p.m. Eastern TODAY (Thursday, February 9, 2012)**

## [Now Available](#)

Three non-binding polls of the VRFs and VSLs associated with the standards listed below failed to achieve a quorum and have been extended by one day. In addition, to accommodate ballot pool members and other stakeholders affected by a brief unavailability of NERC web services at the end of the ballot and comment period window, the formal comment period and three ballots of these standards and their associated implementation plans will also be extended one day. The non-binding polls, ballots, and formal comment period will close at **8 p.m. Eastern TODAY, Thursday, February 9, 2012.**

- COM-001-2 – Communications
- COM-002-3 – Communication and Coordination
- IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Please log in and cast your ballots for these standards, and opinions in the non-binding polls, if you have not already done so.

## **Standards Development Process**

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. For more information or assistance, please contact Monica Benson at [monica.benson@nerc.net](mailto:monica.benson@nerc.net).

*For more information or assistance, please contact Monica Benson,  
Standards Process Administrator, at [monica.benson@nerc.net](mailto:monica.benson@nerc.net) or at 404-446-2560.*

North American Electric Reliability Corporation

# Standards Announcement

## Project 2006-06 Reliability Coordination

**Three Ballot Windows and Three Non-binding Poll Windows Now Open  
January 30 - February 8, 2012**

### [Now Available](#)

Ballot windows are open through **8 p.m. Eastern on Wednesday, February 8, 2012** for three successive ballots (one for each of the following standards and the associated implementation plans) and three non-binding polls of the VRFs and VSLs associated with each standard:

- COM-001-2 – Communications
- COM-002-3 – Communication and Coordination
- IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Clean and redline versions of each standard and the associated implementation plan and VRFs and VSLs are posted on the [project webpage](#). In addition, the following supporting materials have been posted on the project page:

- Mapping Document for each standard - Identifies each requirement in the approved version of the standard and how the requirement has been treated in the current draft.
- VRF and VSL Justification – Identifies how the proposed VRFs and VSLs for each standard meet NERC and FERC guidelines.
- Last approved versions of COM-001 and COM-002 – Because the changes from the last approved versions of these two standards are so extensive, a redline showing changes against that last approved version is not useful. The last approved versions are posted as a convenience to stakeholders.

### **Instructions for Balloting**

Members of the ballot pools associated with this project may log in and submit their votes for the standards and opinions for the non-binding polls from the following page:

<https://standards.nerc.net/CurrentBallots.aspx>.

### **Instructions for Commenting**

A formal comment period is open through **8 p.m. Eastern on Wednesday, February 8, 2012**. Please use this [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, please contact Monica Benson at [monica.benson@nerc.net](mailto:monica.benson@nerc.net). An off-line, unofficial copy of the comment form is posted on the [project page](#).

### **Special Instructions for Submitting Comments With a Ballot or Non-binding Poll**

Please note that comments submitted during the formal comment period, the ballots for the standards,

and the non-binding polls of VRFs and VSLs all use the same electronic form, and will be compiled into a single report with duplicate comments submitted by the same entity removed and duplicate comments submitted by multiple entities consolidated. **Therefore, it is NOT necessary for ballot pool members to submit more than one set of comments. The drafting team requests that all stakeholders (ballot pool members as well as other stakeholders) submit all comments through the electronic comment form.**

### Next Steps

The drafting team will consider all comments submitted to determine whether to make additional revisions to the standards.

### Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standard IRO-003-2.

The following three standards that are part of this project were approved by the ballot pool and were adopted by the NERC Board of Trustees in August 2012: IRO-002-3 Reliability Coordination – Analysis Tools; IRO-005-4 - Reliability Coordination-Current Day Operations; and IRO-014-2 – Coordination Among Reliability Coordinators. Additional information is available on the [project webpage](#).

### Standards Development Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. For more information or assistance, please contact Monica Benson at [monica.benson@nerc.net](mailto:monica.benson@nerc.net).

*For more information or assistance, please contact Monica Benson,  
Standards Process Administrator, at [monica.benson@nerc.net](mailto:monica.benson@nerc.net) or at 404-446-2560.*

# Standards Announcement

## Project 2006-06 Reliability Coordination

**Formal Comment Period Open January 9 – February 8, 2012**  
**Three Ballot Windows and Three Non-binding Poll Windows Open**  
**January 30 - February 8, 2012**

### [Now Available](#)

The following standards, and the associated implementation plans and VRFs and VSLs, have been posted for a formal comment period through **8 p.m. Eastern on Wednesday, February 8, 2012**:

- COM-001-2 – Communications
- COM-002-3 – Communication and Coordination
- IRO-001-3 – Reliability Coordination – Responsibilities and Authorities

Clean and redline versions of each standard and the associated implementation plan and VRFs and VSLs are posted on the [project webpage](#). In addition, the following supporting materials have been posted on the project page:

- Mapping Document for each standard - Identifies each requirement in the approved version of the standard and how the requirement has been treated in the current draft.
- VRF and VSL Justification – Identifies how the proposed VRFs and VSLs for each standard meet NERC and FERC guidelines.
- Last approved versions of COM-001 and COM-002 – Because the changes from the last approved versions of these two standards are so extensive, a redline showing changes against that last approved version is not useful. The last approved versions are posted as a convenience to stakeholders.

Three successive ballots (one for each standard and its implementation plan) and three nonbinding polls of the VRFs and VSLs associated with each standard will be conducted beginning on Monday, January 30, 2012 through **8 p.m. Eastern on Wednesday, February 8, 2012**.

### Instructions for Commenting

A formal comment period is open through **8 p.m. Eastern on Wednesday, February 8, 2012**. Please use this [electronic form](#) to submit comments. If you experience any difficulties in using the electronic form, please contact Monica Benson at [monica.benson@nerc.net](mailto:monica.benson@nerc.net). An off-line, unofficial copy of the comment form is posted on the [project page](#).

### Special Instructions for Submitting Comments with a Ballot or Non-binding Poll

Please note that comments submitted during the formal comment period, the ballots for the standards, and the non-binding polls of VRFs and VSLs all use the same electronic form, and will be compiled into a single report with duplicate comments submitted by the same entity removed and duplicate comments submitted by multiple entities consolidated. **Therefore, it is NOT necessary for ballot pool members to submit more than one set of comments. The drafting team requests that all stakeholders (ballot pool members as well as other stakeholders) submit all comments through the electronic comment form.**

### Next Steps

The drafting team will consider all comments submitted to determine whether to make additional revisions to the standards.

### Background

The Reliability Coordination Standards Drafting Team was tasked with 1) ensuring that the reliability-related requirements applicable to the Reliability Coordinator are clear, measurable, unique, and enforceable; 2) ensuring that this set of requirements is sufficient to maintain reliability of the Bulk Electric System; and 3) revising the group of standards based on FERC Order 693.

During the course of this project, the Reliability Coordination Standards Drafting Team incorporated changes due to the work of the IROL Standards Drafting Team. Two standards from the original Standards Authorization Request (PER-004 and PRC-001) were moved to other projects due to scope overlap. In addition, the scope of Project 2006-06 was expanded to incorporate directives from FERC Order 693 associated with standard IRO-003-2. Additional information is available on the [project webpage](#).

### Standards Development Process

The [Standard Processes Manual](#) contains all the procedures governing the standards development process. The success of the NERC standards development process depends on stakeholder participation. We extend our thanks to all those who participate. For more information or assistance, please contact Monica Benson at [monica.benson@nerc.net](mailto:monica.benson@nerc.net).

# Project 2006-06 Non-binding Poll

## COM-001-2

Ballot Results	
<b>Non-binding Poll Name:</b>	Project 2006-06 Non-binding COM-001-2
<b>Poll Period:</b>	1/30/2012 - 2/9/2012
<b>Total # Votes:</b>	274
<b>Total Ballot Pool:</b>	341
<b>Ballot Results:</b>	80.35% of those who registered to participate provided an opinion or abstention; 71.35% of those who provided an opinion or abstention indicated support for the VRFs and VSLs.

Central Lincoln
Yes
Yes
No
The new requirement presents us with a paradoxical situation. The communication has failed, so we must consult: yet consultation requires communication. We note that the SDT used the word "any", implying that multiple communication paths are required. The reality of the situation at Central Lincoln, due to our remote location, is that a single backhoe incident at the right location can take out all of our of our communication capability (including the terrestrial portion of the cellular networks) with our BAV/O, making this requirement impossible to meet for this circumstance using our present capabilities. We also note that no time limit was indicated. Most interruptions are brief, and fixed before consultation could reasonably take place. CEAs will be finding entities non-compliant for quickly fixing problems at their end without first consulting to ensure the restoration time was agreeable. To avoid non-compliance, entities will be forced delay repairs while they investigate alternative communication paths for consultation purposes. We fail to see how such an outcome improves reliability. The new requirement is one sided, requiring the DP and GOP to consult with no corresponding requirement for the TO or BA to have personnel available for such a consultation. Consultation failure or failure to mutually agree due to actions or inactions on the part of the TO or BA should not result in an enforcement action against the DP or GOP, yet that is how the requirement is written. The new requirement fails to add any "clarity" to the other requirements, and we don't see that the stakeholders thought there was a problem with DP/GOP obligation clarity. Instead, it adds new obligations with no justification for how they enhance reliability. We suggest removing the requirement.
Yes
As stated in our prior comments, we continue to have problems with COM-002 R2 and R3 as written. The SDT's answer ("It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive") addresses our concern perfectly, and we would agree with such an expectation. Unfortunately, the expressed expectation is not in the proposed standard or even in a proposed guideline for the standard.

SERC OC Standards Review Group
Gerald Beckerle
Yes
No
We are concerned regarding communications between Transmission Operators on opposite ends of DC ties which may or may not be in the same interconnection. Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous. The measures should also be verified to ensure that they align properly with the final requirements.
Yes
We suggest that this phrase should also be removed from the "Purpose" statement.
No
We suggest Requirement 11 should be deleted as the generic nature of the term "...any of its Interpersonal Communications capabilities..." could be interpreted to include communications capabilities used for internal DP/GO purposes. Such DP/GO internal communications capability would not be critical to BES reliability. Also, no BES reliability benefit is realized by the parties simply agreeing to a time for the restoration of the failed Interpersonal Communication capability.
No
We suggest adding the words "and identified as a reliability directive to the recipient" at the end of the definition of Reliability Directive. As written, this definition could lead to a dispute of what communications are Reliability Directives: leading to further dispute as to what Requirements are applicable. By adding this clarity in the definition of this term, clarity will not be needed in the application of this definition as is proposed in COM-002-3, Req 1. This would allow the removal of R1 from COM-002-3
COM-001-2 Comments Definition of Alternative Interpersonal Communication: The proposed definition uses the term "medium". What is the scope of that? Telephony is a "medium" but there is wired, wireless, satellite, etc. Was "medium" intended to differentiate voice, paper, text, email, teletype, or something else? Does the qualifying term "same" when modifying infrastructure mean something like voice versus written? What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the "same infrastructure" but a different "medium" R1 and R2 - We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or alternate Interpersonal communications. R1 - In later requirements it is proposed that the entity "...shall designate an...". It is suggested that for consistently and audit ability, this concept be used for R1, R3, R5, R7 and R8. In addition, the qualifier of "primary" should be used such that the requirements read "... shall have designated, primary Interpersonal Communications capability with the following entities:." Although it is appropriate that "Alternative" be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication) that bounds acceptable alternative methods, we do not see the need to capital "primary". R9 - The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the sub-requirements of R2, R4, and R6. There is no expectation of testing the primary Interpersonal Communications - is this intentional or an oversight? Although functional testing of this should be done as a normal course of business, should an explicit test be required with each entity in the sub-requirements of R1, R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct? R10 - The following scenario seems plausible: The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation? Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well? M9 reads "at least on a monthly basis". We suggest that this be changed to "at least once per calendar month" as written in R9. This change should also be corrected in the VSLs. M8 - We suggest removing the second "that" in the first sentence of the measure. M10 - We suggest this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read: "Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10)." M12 needs to be removed. We question why the first paragraph of Section 1.3 - Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard. COM-002-3 Comments R2 - We recommend that the following phrase (in quotes) be added to R2: Each Balancing Authority, Transmission Operator and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive "immediately upon receiving it." As written, there is no limit as to when the entity must repeat it (i.e. they could wait 2 hours) The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call). For example, is a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3? IRO-001-3 Comments We recommend that where the verb "direct/directed" or noun "direction" is used in Purpose, R1, R2 and R3, that it be replaced with the verb "instruct/instructed" or noun "instruction", as appropriate. This would help the industry avoid confusion often referred to as "big D" or "little d" directives. It is noted that the term "Reliability Directive" does that to a great degree but avoiding the

verb/noun "direct/direction" would augment the difference. R1 - At what point in time is "identified" referring to in "...to prevent identified events or..."? Is it referring to current or future events? One might assume both since the "Time Horizon" is defined as Real-time Operations, Same Day Operations and Operations Planning, but the requirement may be enhanced if explicitly stated ("...to prevent events identified in real-time or in the future or to mitigate the magnitude..."). For clarity, the scope of the authority should be limited to the Reliability Coordinator Area ("...that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area"). As written, it implies the authority should extend outside its RC Area. R2 - We question the phrase "physically implemented" and recommend that the intent be clarified in the language. We note the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011: "IRO-001 R2, R3, and R4 have replaced "Directives" with the word direction in lower case (while it appears that "Directives" is a subset of "directions"). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use "Directives" and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (eg Reliability Coordinator, market operator, etc) the staff at these entities is fulfilling. Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC "shall take actions or direct actions, which could include issuing Reliability Directives, ". This is the "direction in accordance with Requirement R2" stated in R3 and the "direction in accordance with Requirement R3" stated in R4." We believe the entity's comments remain valid and the response provided by the SDT does not address all aspects of the concern. We suggest that the language be changed to "Reliability Directive" consistent with COM-002, R3 - The requirement states the responsible entities shall "inform" its RC when unable to perform as directed but it is unclear when the notification needs to take place. Although the term "as soon as practical" may seem to be unmeasurable, as written now there is no time deadline to perform the notification - i.e. it could be 4 hours later after recognition. M2 - need to add the following words "compliance with, physically, unless" which were included in R2, therefore M2 should read "Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time -stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2) * Section 1.3, the second bullet: need to add calendar to 12 calendar months "The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers."

As per COM-001-2, R7, "Each Distribution Provider shall have Interpersonal Communications capability with the following entities..." R11 states that the DP or GO that experiences a failure of its Interpersonal Communications ability shall consult with TOPs and BAs and agree on how to restore Interpersonal Communications. We believe better language might be, "Restore Interpersonal Communications with your TOP/BA as soon as operationally feasible."
Yes
The PNGC Comment Group believes COM-002-3, R2, lacks justification for applicability to a Distribution Provider (DP). RCs in the WECC region do not communicate reliability directives to DP only entities. Having this requirement apply to DPs seems to indicate that we will need 24/7 communications capability to record and respond to calls that will never come in order to satisfy the requirement with no improvement to reliability. The SDT's response from the last round of comments: "It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive". Nowhere is this expectation provided for in the written standard. If the issuer of a reliability directive has already called the DP, are they going to then re-issue the reliability directive after the DP calls them back?

NERC uses the terms "adjacent" and "neighboring" in various standards. It is generally believed that those terms have the same meanings, but there are those who believe those terms, as used, are intended to have different meanings. To ensure a consistent usage and understanding, the definition of the term adjacent must be made known before its addition to the standard. Consideration should be given to using only one term in all standards if adjacent and neighboring are intended to mean the same thing. Both terms are used in NERC Standards, sometimes both in the same standard. For example, EOP-001-2b uses "neighboring" in R5, and "adjacent" in R3.3.

For COM-001: 1. R1.2 and R2.2: The phrase "within the same Interconnection" is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to coordinate reliability issues including curtailing interchange transactions crossing an Interconnection boundary). The SDT's response to industry comments on the previous posting that the phrase was added to address the ERCOT situation (that ERCOT does not need to communicate with other RCs and that such coordination takes place between TOPs) leaves a reliability gap. 2. R3.5 and R4.3: The phrase "synchronously connected within the same Interconnection" is also improper; it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). The reason that was used in response to the above comments (coordination among TOPs for DC tie operation) contradicts with the inclusion of this phrase in R3.5 and R4.3. 3. R4 and R6: Not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin with to enable BAs to communicate with these entities (such as operating instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails. 4. To preclude the possibility of problems arising from having different languages spoken between entities, COM-001-1.1 R4 should remain as it was or those ideas kept in the revised requirement. R4 read: "R4. Unless agreed to otherwise, each Reliability Coordinator, Transmission Operator, and Balancing Authority shall use English as the language for all communications between and among operating personnel responsible for the real-time generation control and operation of the interconnected Bulk Electric System. Transmission Operators and Balancing Authorities may use an alternate language for internal operations." 5. Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised. For IRO-001: The Data Retention Section does not reflect the revised requirements. As examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1. Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2. And, in the Data Retention Section, R4 and M4 are mentioned. However, there are only three requirements with their corresponding measures in the standard.

There is a risk of not properly identifying an abnormal condition (Emergency or Adverse Reliability Impact) in time to require specific use of the statement 'this is a Reliability Directive' when issuing switching on the system in the event of an emergency. This is a deviation from consistently using 3-way communication when an emergency occurs. It may not be apparent that an emergency exists and breaking from consistent use of expected 3-way communication could cause confusion.

R3 adds additional responsibilities for the TOP to have Interpersonal Communications capability with EACH DP and GOP in its footprint. Similarly, R4 gives the TOP responsibility to have alternative communications capability with each of these entities. This is a significant additional responsibility for the TOP to document and perhaps arrange for additional means of communication with these entities. The short time frame provided for implementation of these requirements is not consistent with the additional effort and compliance documentation that is necessary to implement these requirements. Entergy recommends that the implementation time frame for these new requirements that apply to new entities, or expand the application of COM-001 for existing entities have an effective date 12 months beyond the applicable regulatory approval. Additionally, the implementation of the requirements that apply to the DP and GOP will represent an increase in the amount of documentation that must be retained to demonstrate compliance, and in some cases may also result in their having to purchase equipment or install new alternate means of communication. What is the improvement in reliability expected as a result of these new requirements?
Yes
Entergy agrees with the inclusion of the term "Adjacent" in these requirements to limit the entities that the BA or TOP must have communications capability with to those that they border.
Yes
Yes, the requirements of this standard pertain to having communications capability. The specific content of that communication should not be the subject of the standard.
No
The DP or GOP should have to notify the TOP and BA of its communications failure, similar to the requirement in R10 for TOP and BA. The DP or GOP should restore the communications capability as soon as possible. Entergy does not agree that the TOP or BA should have to negotiate the restoration time with the DP or GOP. This is an unreasonable burden on the BA and TOP.
No
An Adverse Reliability Impact is a type of Emergency. Including a new term for Adverse Reliability Impact and including both terms in the definition for Reliability Directive doesn't add clarity. I suggest changing the definition for Reliability Directive to remove phrase "or Adverse Reliability Impact."
Entergy does not agree with including the DP and GOP in this standard. However, if they are to be included and are required to have the communications capability indicated, they should be included in R10. Why would it be important for the TOP to notify the DP that their communications method has failed, but it is not important for the DP to notify the TOP when their communications method has failed. The distinction doesn't seem reasonable or meaningful. Additionally, in the draft of COM-002-3 requirement 2 contains the language that the recipient of the directive shall "repeat, restate, rephrase or recapitulate" the directive. Why are so many synonyms of repeat necessary. Repeat or restate should be sufficient to get the point across.

In COM-001, we commented earlier that the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. The SDT's response indicates that the suggested change is not needed since additionally requiring DP and GOP entities to have Alternative Interpersonal Communication capability would impose more cost on smaller DP and GOP entities that have little or no risk impact to the bulk electric system. We disagree with this assessment since the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability. If Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, then it is deemed necessary that such communication be provided at all times, which indicates the need for an alternative capability. We once again urge the SDT to make the list of entities in R5 and R6 to be the same.
No
(1) We agree with the addition of "Adjacent" entities in the quoted parts except the qualifier "synchronously connected within the same Interconnection" need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations. (2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.
No
In the last posting, we suggest removing the phrase "within the same Interconnection" from R1 (now R2.2) since there are RCs between two Interconnections that need to communicate with each other for reliability coordination (e.g. between Quebec and the RCs the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT's response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.
Yes
Yes
(1) The proposed implementation plan conflicts with Ontario regulatory practice respecting the effective date of the standard. It is suggested that this conflict be removed by appending to the implementation plan wording, after "applicable regulatory approval" in the Effective Dates Section A5 on P. 4 of the draft standard COM-001, COM-002 and IRO-001, and on P. 2 of COM-001's Implementation Plan and P. 1 of COM-002's and IRO-001's Implementation Plans, to the following effect: ", or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities." (2) COM-001: Measure M9: "monthly basis". Suggest changing "monthly basis" to "at least once per calendar month" to be consistent with the wording in R9. (3) IRO-001: Measures M1, M2, M3 - The types of evidence are listed in paragraph form. This is not consistent with presentation style in COM-001-2 Measures, where evidence is listed in bullet format. Suggest using bullet form for consistency. (4) IRO-001, Data Retention Section: i. The retention requirements do not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4. ii. Section 1.3, second paragraph: "The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider... shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation." The word "or" between Generator Operator and Distribution Provider should be changed to "and".

No
NERC has formally defined "Adjacent Balancing Authority" in the NERC Glossary of Terms, but not "Adjacent Transmission Operator". The MRO NSRF recommends that "Adjacent Transmission Operator" be defined similar to the "Adjacent Balancing Authority" definition in the NERC Glossary of Terms.

Yes
No
Please note that the use of the word "any" as in "Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities..." will be viewed as meaning every Interpersonal Communication medium that an Entity has or uses. The NSRF recommends that the word "any" be removed from this Requirement. The NSRF recommends that R11 be revised to read: "Each Distribution Provider and Generator Operator that experiences a failure of any of its primary (or defined) Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority..." In that way it focuses it down to the communications issues with the TOP or BA. In lieu of "primary" the SDT could state "defined" as long as it is not meant to be "any". The latter part of R11 states: "...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability." This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. The NSRF recommends this be rewritten as: "...shall consult with inform their Transmission Operator or Balancing Authority as applicable as to the status of the Interpersonal Communication capability". So the new R11 would read: "Each Distribution Provider and Generator Operator that experiences a failure of its primary (or designated) Interpersonal Communication with their Transmission Operator or Balancing Authority shall inform them, as applicable, as to the status of the Interpersonal Communication capability."
Yes
Has the SDT looked at combining COM-002-3 and IRO-001-3 into a single Standard? It would allow Entities a one stop shopping place to refer to issuing and receiving a Reliability Directive. The definition of Interpersonal Communication is: "Any medium that allows two or more individuals to interact, consult, or exchange information". As stated in Question 4, the use of the word any will bring in mediums that are outside the scope of this Standard. The NSRF recommends the following: Interpersonal Communication: The primary (or designated) medium that allows two or more individuals to interact, consult, or exchange information. In Standard COM-002-3 the MRO NSRF recommends that the Effective Date be the first day of the second calendar quarter after applicable regulatory approval, to be the same as COM-001-2 and IRO-001-3. In that way all 3 standards would be effective at the same time, making implementation much smoother. The below section will lead to entities hold evidence past the 12 month retention period. This ambiguous wording will force entities to hold data past the 12 month period as stated in the following paragraph, after the below sighting. Recommend that the first paragraph within 1.3 be deleted in its entirety. 1.3. Data Retention The following evidence retention periods identify the period of time an entity is required to retain specific evidence to demonstrate compliance. For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit.

The phrase "mutually agreeable time" needs to be replaced in order to make this standard acceptable. This phrasing creates a potential violation if equipment functionality cannot be restored in the time frame preferred by another entity, even if the time of repair is beyond the control of the RE. This phrase should be replaced with "inform their TO or BA as applicable of the failure, and provide estimates as to the time the Interpersonal Communication capabilities will be restored".

for COM-001-2 Oncor takes the position that contacting all impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer as prescribed in R1 through R6 is not doable within the ERCOT interconnect for a Transmission Operator. Oncor takes the position that notification only to the RC and BA is sufficient and that those two entities have the operational functionality to contact within the prescribed time all affected Distribution Providers, Generator Operators, and other Transmission Operators. R10 - Oncor takes the position that the word "impacted" added to R10 will clarify that notification only needs to be made to the entities that are affected by the failure of a communication path. This will also more align with the language in M10 For COM-002-3 Oncor request clarity about what constitutes a "recipient". For example, if a Transmission Grid Operator performing the functions of a Transmission Operator issues a Reliability Directive to its own field operations personnel to perform an action on behalf of the same entity, does the field operations personnel as the recipient become in affect a "Transmission Operator" subject to R2.

Regarding COM-002 Requirement R1, we recommend that this requirement be reworded as follows: "When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall require that the Reliability Directive be communicated using three-part communications as described in Requirements R2 and R3 of this standard". The reason for this recommended rewording are threefold: 1. Good operating practice calls for use of three-part communications at all times. The recommended re-write encourages the use of the good operating practice of three-part communications at all times, but does not require it. 2. It is not good operating practice to require that an additional (unnecessary) phrase be used during emergency situations. During emergency situations, it is best to use standard operating protocols so as to limit unnecessary burdens on operating personnel during critical and stressful times. 3. By implementing the proposed new R1 requirement, it would effectively weaken the need for rigorous compliance with any and all directives issued by the RC's, TO's or BA's. Regarding IRO-001 Requirement R1, we recommend that the current requirement R3 be reinstated as the new requirement R1. That is, the new requirement R1 should read as follows: R1. The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. We do not support any further dilution of Reliability Coordinator authority to enforce Reliability Directives through deletion of the 30 minute maximum response time period. The timely actions in response to any Reliability Coordinator issued Reliability Directives is an essential part of the process.

R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4. R11 is not clear on the purpose of the statement " determine a mutually agreeable time for restoration" this could be driven by forces outside the control any of the entities. I think" provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage" would be better. Update M9 accordingly
Yes
The definition is acceptable, but as used may imply that all Emergency communications must be Reliability Directives.
COM-001, Although a great improvement over existing COM-001, and eliminates the data component see comments: •For R5.1 Can the solutions included to meet R1 be included, same R3.2 and R5.2, same R5.3 and R7.2, same R5.4 and R8.1 •For R5.2 Can the solutions included to meet R2 be included, same R4.2 and R6.2 •R9 a 2 hour response for a once a month test seems extreme, as would require a secondary Alternate Interpersonal Communications capability •M9 is reasonable, but should include something about communication actual repair and or time estimates •R10 The use of R1 through R6 implies notification of both Interpersonal Communications and Alternate Interpersonal Communications failures. Do you notify if you become aware after the link is back up if it was down for GT 30 minutes, and Doesn't address notifying when restored •R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4. R11 is not clear on the purpose of the statement " determine a mutually agreeable time for restoration" this could be driven by forces outside the control any of the entities. I think" provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage" would be better. Update M9 accordingly COM-002 •Since all the Requirements are related to Reliability Directives, is it implied that all "Emergency Communications" are Reliability Directives even if not designated as such per R1. •The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. A recipient's phone may not be recorded but a initiator's always should. If a receiver refused to meet the R2 requirement, an initiator should have an alternative. I.e. repeat the directive and provide potential penalties if recipient refuses to comply. Should the initiator have responsibility for providing the entire 3-way evidence as M3 implies? IRO-001, Although a great improvement over existing IRO-001, see comments: •R2 needs to be clear that it is the Reliability Coordinator's Reliability Directive that must be complied with not just any Reliability Coordinator's direction as stated. •The M2 measure could be difficult, as the operator would have to have access to documents proving the safety, equipment, regulatory or statutory requirements, which may be the assessment of an individual applying the safety rule. Is the measure requiring a deposition of the individual to be performed for each instance? With an assumed data retention of 90 day (voice) 12 month document retention the deposition would be unlikely to be acquired prior to the retention period ending. •R3 needs to be clear that it is the inability to perform the Reliability Coordinator's Reliability Directive that must be communicated not just any "Reliability Coordinator's as directed". •The Data Retention section does not align with the standard: The Reliability Coordinator shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2, Measure M2. R2 and M2 apply to the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider. There is no R4 and M4.

In R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply/demand balance is not local and in markets that allow retail competition, I'm thinking LSE is the right functional entity. For Florida, it doesn't really matter. If the LSE is the "correct" entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added

<p>IMPA does not believe that this requirement is necessary in order to ensure communication lines are restored by Distribution Providers and Generator Operators. If this requirement is kept, IMPA does not think the use of the words "a failure of any of its Interpersonal Communication capabilities" is acceptable. The wording is too inclusive and should apply to only primary Interpersonal Communication capabilities. IMPA is also concerned about how entities are supposed to know when the telephone companies may have equipment repaired in order to determine a mutually agreeable time to restore Interpersonal Communication capability. The entity may have no control over the restoration and hence would not be able to set a time other than whenever the capabilities are restored by for instance the telephone company. In addition, entities will have to keep evidence to show that a "mutually" agreeable time was reached by two or more entities. The most workable solution would be to require notification if primary Interpersonal Communication is lost and a follow-up notification when that capability is restored.</p>
No comment.
For R2 in IRO-001-3, the requirement needs to have the entities comply with their Reliability Coordinator's direction received in R1. Currently, requirement 2 directions are not linked back to R1 which means entities would have to comply with all Reliability Coordinator's directions regardless if they are associated with R1. For R7 in COM-001-2, IMPA does not believe that every Distribution Provider needs to be included in requirement 7. IMPA recommends stating that requirement 7 only applies to Distribution Providers who own an UFLS or UFLS system.

<p>IRO-001-3 R1 is not consistent with the direction taken in COM-002-3 which requires the Reliability Coordinator to identify Reliability Directive as such. The same approach should be taken with IRO-001-3 R1 so that the Reliability Coordinator is required to identify directions that are made to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts as such prior to or when issuing the directions. This extra specification is needed to eliminate any possible confusion in areas where the market operator and Reliability Coordinator are the same entity. In these areas, the Reliability Coordinator/market operator routinely gives directions to other entities that are not to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. Without the added clarification the receiving entity may not know the urgency of the situation and may not know to inform the Reliability Coordinator if they are unable to perform as required by R3.</p>

As we commented on Project 2007-03 TOP-001-2, the definition of Reliability Directive is an improvement but the definition must capture the identification concept that is reflected in the Requirement (R1). As a result, when Reliability Directive is used elsewhere, it would be clear that the communication must be identified as a Reliability Directive. We suggest the following revision to the definition and it should follow through to Project 2006-06 IRO-001-3 and Project 2007-03 TOP-001-2, eventually being added to the Reliability Standards Glossary of Terms. A communication identified as a Reliability Directive by a Reliability Coordinator, Transmission Operator, or Balancing Authority to initiate action by the recipient to address an Emergency or Adverse Reliability Impact.
Comments: IRO-001-3 uses the term "direct" in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following: To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System, R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator's request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given. R3: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.

<p>NextEra Energy, Inc. (NextEra), which includes Florida Power &amp; Light Company, believes that Requirement 11 of COM-001-2, as drafted, is too vague to be adopted as a mandatory Reliability Standard. For example, it is unclear what is meant by "shall consult." The North American Electric Reliability Corporation's (NERC) Rules of Procedure state that a foundation of any Reliability Standard is that "... [the] reliability standard shall be stated using clear and unambiguous language. Responsible entities, using reasonable judgment and in keeping with good utility practices, are able to arrive at a consistent interpretation of the required performance." The term "shall consult" is not a term generally understood or used in the electric utility industry, and, therefore, does not enable a consistent interpretation of the performance required. Accordingly, NextEra requests that Requirement 11 either: (i) be deleted; or (ii) be redrafted to read more like Requirement 10.</p>
No
<p>NextEra objects to the use of "Adverse Reliability Impact" in Reliability Standards COM-002-3 and IRO-001-3. NextEra requests that the use of Adverse Reliability Impact be revised as suggested below or be deleted from the definition of Reliability Directive. NextEra does not agree with the use of Adverse Reliability Impact in the definition of "Reliability Directive" for the following reasons: 1. This term Adverse Reliability Impact is ambiguous. In part, the term is ambiguous because it includes in its definition the term "instability," which has led to considerable misunderstanding and confusion in the industry. There are also differing views on what is (and is not) Cascading, because the definition is not sufficiently clear. For example, some believe instability and Cascading occur when an event affects multiple substations of one Transmission Operator, while others believe instability or Cascading only occur when the event affects more than one Transmission Operator's system. As mentioned in response to item 4, above, Reliability Standards must be clear and consistently interpreted. It is not appropriate to issue a Standard that perpetuates the use of terms that lack consistent interpretation. 2. While not perfect, the term Emergency is better understood in the industry, and it may include many or all of the instances of instability or Cascading intended to be captured by Adverse Reliability Impact. Consequently, it is not advisable to introduce Adverse Reliability Impact as a new term, when it is not clearly distinguishable from Emergency. NextEra is concerned that an unclear and imprecise term, such as Adverse Reliability Impact, does not promote reliability, and, such a term is particularly troublesome in the context of real time system operations. Therefore, for the reasons stated above, NextEra believes that the term Adverse Reliability Impact should be deleted from the definition of Reliability Directive. In the alternative, if Adverse Reliability Impact is not deleted from the definition of Reliability Directive in Reliability Standards COM-002-3 and IRO-001-3, NextEra requests that Adverse Reliability Impact be revised to read: "an event or condition on the Bulk Electric System that may, or is leading to, Cascading over more than one Bulk Electric System transmission system."</p>
<p>NextEra has the following additional comments. COM-002-3 The purpose of COM-002-3 is: "To ensure Emergency communications between operating personnel are effective." This stated purpose is not the same as the specific requirement that three-way communication is used for a Reliability Directive. Thus, NextEra requests that the purpose be revised to read as follows: "To ensure that when a Reliability Directive is given that the Reliability Directive is explicitly stated and three-way communication is used." Consolidation of COM-002-3 and IRO-001-3 NextEra notes a continuing area of concern with the somewhat unsynchronized approach taken in the drafting process. Reliability Standards COM-002 and IRO-001 are now on version three, and still there is a somewhat unsynchronized approach being proposed. A clear and consolidated approach seems easily achievable with minimal effort. Thus, as proposed below, NextEra requests that COM-002-3 and IRO-001-3 be combined, which also would appear to allow for the retirement of certain requirements, such as TOP-001-1 R1-4. NextEra also is concerned that the current approach may have contributed to several significant misstatements in IRO-001-3, R1-3, which use the terms "direct," "direction" and "directed," instead of the term Reliability Directive as used in COM-002-3. COM-002-3 and IRO-001-3 indicate that three-way communication only is required when a Reliability Directive is issued. This begs the question of what are the potentially other, lower classes of directives in IRO-001-3 R1-3? And why do they need to be followed with or without three-way communication? Thus, at a minimum, NextEra requests that the terms direct, direction and directed be deleted from IRO-001-3 R1-3, respectively, and that Reliability Directive be inserted. This change, and other proposed changes, are reflected in NextEra's overall proposal to combine COM-002-3 and IRO-001-3 into one COM-002-3 standard: (Note: If the term Adverse Reliability Impact is revised as proposed by NextEra, then the term would not need to be stricken) R1. Each Reliability Coordinator shall have the authority to act and to issue a Reliability Directive to a Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider within its operating region to prevent identified events that may lead to, or to mitigate the magnitude or duration of, an Emergency. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R1.1 Each Transmission Operator shall have the authority to act or issue a Reliability Directive to a Balancing Authority, Generator Operator and Distribution Provider within its operating region to prevent identified events that may lead to, or to mitigate the magnitude or duration of, an Emergency. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R1.2 Each Balancing Authority shall have the authority to act or issue a Reliability Directive to a Generator Operator and Distribution Provider within its balancing region to prevent identified events that may lead to, or to mitigate the magnitude or duration of, an Emergency. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R2. When a Reliability Coordinator, Transmission Operator or Balancing Authority issues a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time] R2. Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive. [Violation Risk Factor: High][Time Horizon: Real-Time] R3. Each Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive shall either [Violation Risk Factor: High][Time Horizon: Real-Time]: • Confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate, or • Reissue the Reliability Directive to resolve any misunderstandings. R4. Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator's Reliability Directive, unless compliance with the Reliability Directive cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High][Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R4.1 Each Transmission Operator, Balancing Authority, Generator Operator, and</p>

Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform a Reliability Directive in accordance with Requirement R4. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R5. Each Balancing Authority, Generator Operator, and Distribution Provider shall comply with its Transmission Operator's Reliability Directive, unless compliance with the Reliability Directive cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R5.1. Each Balancing Authority, Generator Operator, and Distribution Provider shall inform its Transmission Operator upon recognition of its inability to perform a Reliability Directive in accordance with Requirement R5. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R6. Each Generator Operator or Distribution Provider shall comply with its Balancing Authority's Reliability Directive, unless compliance with the Reliability Directive cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] R6.1. Each Generator Operator or Distribution Provider shall inform its Balancing Authority upon recognition of its inability to perform a Reliability Directive in accordance with Requirement R6. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning] Conclusion Given the importance of having clear and concise Reliability Standards on the issue of directives and three-way communication, until the above concerns raised by NextEra in Items 4 through 6 are addressed, NextEra intends to continue to vote "no" on COM-001-2, COM-002-3 and IRO-001-3.

Regarding R11, as written it is unclear when the DP and GOP are required to consult with their TOP or BA. "[A] failure of any of its Interpersonal Communication capabilities" could be construed to mean any internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP's or GOP's ability to communicate with the TOP or BA. It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional. Furthermore, what exactly is required in "consultation" and who would be responsible if the "consulting" entities did not come to a "mutually agreeable time" are questions that are left unanswered. LG&E and KU Services Company suggest the following language: R11. Each Distribution Provider and Generator Operator that experiences a failure of more than one of its Means for Interpersonal Communications or failure of its Alternative Means for Interpersonal Communication with their Transmission Operator or Balancing Authority shall notify their Transmission Operator or Balancing Authority regarding the time to restore the impacted Means for Interpersonal Communication or Alternative Means for Interpersonal Communication.
Yes
COM-001-2 Regarding COM-001-2 and proposed definitions, LG&E and KU Services recommends changing the terms being defined from "Interpersonal Communications" and "Alternative Interpersonal Communication" to "Means for Interpersonal Communication" and "Alternative Means for Interpersonal Communication." A communication is an exchange of information, not a medium. The medium is simply the means. LG&E and KU Services Company further recommend that each requirement be rewritten with these new defined terms as appropriate and that the word "capabilities" currently following the defined terms be removed from each of the requirements. We suggest the definition for "Means for Interpersonal Communication" be "A medium utilizing electromagnetic energy that allows two or more individuals to interact, consult or exchange information." We suggest the definition for "Alternative Means for Interpersonal Communication" be "Any Means for Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Means for Interpersonal Communications used for day-to-day operation." Finally, LG&E and KU Services Company request clarification that the requirements to have in place Interpersonal Communications and Alternative Interpersonal Communications do not establish noncompliance for the unavailability of either medium provided the reporting requirements set forth in the standard are otherwise met. All Proposed Standards LG&E and KU Services Company suggest that the first paragraph in section 1.3 Data Retention be removed from all proposed standards. It states: "...For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit. While LG&E and KU Services Company is confident that the SDT intended to clarify entities' data retention responsibilities, this paragraph could be clarified to indicate that it does not require that any additional evidence be retained and provided beyond that written in the standard's requirements

Manitoba Hydro
Yes
Yes

Yes
No
COM-001-2 R11 does not specify a timeline in which entities have to come up with a 'mutually agreeable' time to restore Interpersonal Communication capability. Manitoba Hydro believes this omission creates a reliability gap and suggests that wording be revised as follows: '... shall consult with their Transmission Operator or Balancing Authority as applicable and determine a mutually agreeable time to restore the Interpersonal Communication capability within 24 hours of experiencing the failure.'
Yes
COM-001-2 -Definition 'Interpersonal Communication' - for clarity, the definition should explicitly state that data exchange is not included. -R9 - for clarity, the wording '... within 2 hours' should be replaced with '... within 2 hours of the unsuccessful test'. Conforming change required to M9 as well. -R10 - for clarity, the wording '... as identified in R1 through R6...' should be replaced with '... with which it is required to have Interpersonal Communications capability or Alternative Interpersonal Communication capability...'. -M6 - the term 'Adjacent' needs to be capitalized in the last sentence of the paragraph as 'Adjacent Balancing Authority' is a NERC defined term. -M7 - 'that' in the first line is repeated -M9 - the wording 'on a monthly basis' should be replaced with 'once per calendar month' to be consistent with the wording of the R9. -M11 - the words 'that experiences a failure of any of its Interpersonal Communications capabilities' should be added after Operator to be consistent with the wording of the Requirement -Compliance - 1.3 bulleted sentences - the term 'historical data' should be removed. The term 'evidence' is sufficiently descriptive and is consistently used in other requirements -Data Retention (1.3) - The data retention requirements are too uncertain for two reasons. First, the requirement to 'provide other evidence' if the evidence retention period specified is shorter than the time since the last audit introduces uncertainty because a responsible entity has no means of knowing if or when an audit may occur of the relevant standard. Secondly, it is unclear what 'other evidence' besides the specified logs, recordings and emails, an entity may be asked to provide to demonstrate it was compliant for the full time period since their last audit. This comment also applies to COM-002-3 and IRO-001-3. -Data Retention (1.3) - COM-002-3 requires that voice recordings are kept for the most recent 3 calendar months but COM-001-2 requires that they be kept for the most recent 12 calendar months. Manitoba Hydro does not see the reliability benefit of storing voice recordings for longer than 3 months and suggests that voice recordings be removed as evidence for COM-001-2. Evidence of the availability of Interpersonal Communications and Alternative Interpersonal Communications can be demonstrated using the other forms of evidence listed. -VSLs (general comment) - for clarity, use for example R1.1 and R1.2 to refer to requirements instead of Part 1.1 and Part 1.2. -VSL R4 - a reference to R4.3 is missing COM-002-3 -Title - to capture the purpose and intent of the standard, the title should be changed to 'Emergency Communications'. -R2 - for clarity, the words 'back to the sender' should be added to the end of the sentence -R3 - for clarity, the words 'to the recipient' should be added to both of the bulleted sentences after 'confirm' and 'reissue'. The words 'evident from the response' should be added to the end of the second bullet. -A question for the drafting team: has it been discussed whether there should be an additional requirement which indicates that the Reliability Coordinator, Transmission Operator and Balancing Authority shouldn't take any action in a Reliability Directive until such time as it has been confirmed accurate by the sender? If so, does the team feel that its a worthwhile requirement to consider? -M2 - the words 'restate, rephrase or recapitulated' should be added after 'repeated' to be consistent with wording of the requirement. -M3 - the words 'to show' should be deleted from the end of this paragraph. IRO 001-3 -Purpose - the words 'to the Bulk Electric System' already appear in the definitions of Emergency and Adverse Reliability Impact and do not need to be repeated here. -Effective Date - the effective date should be changed to the 2nd calendar quarter following BOT approval in jurisdictions not requiring regulatory approval to be consistent with jurisdictions requiring regulatory approval. -General comment - There are repeated references to 'identified events' - It is not clear what this is referring to. M1 - M1 refers to Adverse Reliability Impacts 'within its Reliability Coordinator Area'. The requirement does not refer to 'within its Reliability Coordinator Area' - the wording in the measure and in the requirement should be consistent. -M2 - missing the word 'physically' when describing that a direction could not be implemented, should be consistent with the wording in the requirement. -Compliance - the entire section needs to be updated as it refers to requirements and measures that don't exist. -VSLs R2 - the reference to 'fully comply' is very vague. It is only a violation if the entity does not fall within the exception. - R2 VSL - For clarity, change 'RC's directive' to 'Reliability Coordinator's Reliability Directive'.
Group
Southern Company
Antonio Grayson
Yes
No
We are concerned regarding communications between Transmission Operators on opposite ends of DC ties which may or may not be in the same interconnection. Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous. The measures should also be verified to ensure that they align properly with the final requirements.
Yes
We suggest that this phrase should also be removed from the "Purpose" statement.
No
We suggest the following changes: 1. Requirement 10 should include Distribution Providers and Generator Operators, 2. Entities to be notified should be "as identified in requirements R1 through R8", 3. Requirement 11 should be deleted, and, 4. Measures (M10) and VSLs should be adjusted accordingly.
No
This definition would encompass more communication than is now included. The definition now requires that a directive be declared as a part of the three part communication. For example, sending out the voltage schedule each morning would be included as a directive using the new definition. We suggest adding the words "and identified as a reliability directive to the recipient" at the end of the definition of Reliability Directive. This would allow the removal of R1 from COM-002-3
We question why the first paragraph of Section 1.3 - Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard. We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or alternate interpersonal communications (R1 and R2). COM-001-2 Dominion VP: COM-001-2, M9 reads "at least on a monthly basis". Dominion suggests that this be changed to "at least once per calendar month" as written in R9. This change should also be corrected in the VSLs. M8 - We suggest removing the second "that" in the first sentence of the measure. M10 - Dominion suggests this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read: "Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.) * M12 needs to be removed. Southern: Definition of Alternative Interpersonal Communication: Any Interpersonal Communication that is able to serve as a substitute for, and does not utilize the same infrastructure (medium) as, Interpersonal Communications used for day-to-day operation. Comments: • The proposed definition uses the term "medium". What is the scope of that? Telephony is a "medium" but there is wired, wireless, satellite, etc. Was "medium" intended to differentiate voice, paper, text, email, teletype, or something else? • Similar to that last question - does the qualifying term "same" when modifying infrastructure mean something like voice versus written? What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the "same infrastructure" but a different "medium" R1 Each Reliability Coordinator shall have Interpersonal Communications capability with the following entities: ..... Comments • In later requirements it is proposed that the entity "...shall designate an...". It is suggested that for consistency and auditability, this concept be used for R1, R3, R5, R7 and R8. In addition, the qualifier of "primary" should be used such that the requirements read "...shall have designated, primary Interpersonal Communications capability with the following entities." Although it is appropriate that "Alternative" be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication) that bounds acceptable alternative methods, we do not see the need to capital "primary". R9 Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall test its Alternative Interpersonal Communications capability at least once per calendar month. Comments • The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the subrequirements of R2, R4, and R6. • There is no expectation of testing the primary Interpersonal Communications is this intentional or an oversight? Although functional testing of this should be done as a normal course of business, should an explicit test be required with each entity in the subrequirements of R1, R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct? R10 Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall notify entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer. Comments • The following scenario seems plausible: The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation? General Question • Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well? COM-002-3 Southern R1 When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. Comment • It is recommended that the requirement be clarified that the Reliability Directive be identified as such during its delivery. (e.g. "...shall identify the action as a Reliability Directive to the recipient during its delivery.") R2 Each Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive. Comment • It is recommended that the requirement be clarified that an entity receiving a Reliability Directive repeat, restate, rephrase or recapitulate it immediately upon receiving it. (e.g. "...shall shall repeat, restate, rephrase or recapitulate the Reliability Directive immediately upon receiving it.") As written, there is not limit as to when the entity must repeat it (i.e. they could wait 2 hours) General Question • The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call) . Is, for example, a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by Individual confirmation required in R3? IRO-001-3 Dominion VP R2 - Dominion questions the phrase "physically implemented" and recommends that the intent be clarified in the language. Dominion notes the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011: "IRO-001 R2, R3, and R4 have replaced "Directives" with the word direction in lower case (while it appears that "Directives" is a subset of "directions"). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use "Directives" and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (eg Reliability Coordinator, market operator, etc) the staff at these entities are fulfilling. Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC "shall take actions or direct actions, which could include issuing Reliability Directives, ". This is the "direction in accordance with Requirement R2" stated in R3 and the "direction in accordance with Requirement R3" stated in R4." Dominion believes the entity's comments remain valid and the response provided by the SDT does not address all aspects of the concern. Dominion suggests that the language be changed to "Reliability Directive" consistent with COM-002. M2 - need to add the following words "compliance with, physically, unless" which were included in R2, therefore M2 should read "Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time -stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator's direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator's direction. (R2) Section 1.3, the second bullet, need to add calendar to 12 calendar months Southern General recommendation • It is recommended that where the verb "direct/directed" or noun "direction" is used in Purpose, R1, R2 and R3, that it be replaced with the verb "instruct/instructed" or noun "instruction", as appropriate. This would help the industry avoid confusion often referred to as "big D" or "little d" directives. It is noted that the term "Reliability Directive" does that to a great degree but avoiding the verb/noun "direct/direction" would augment the difference. R1 Each Reliability Coordinator shall have the authority to act or direct others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts. Comment • At what point in time is "identified" referring to in "...to prevent identified events or..." Is it referring to current or future events? One might assume both since the "Time Horizon" is defined as Real-time Operations, Same Day Operations and Operations Planning but the requirement may be enhanced if explicitly stated ("...to prevent events identified in real-time or in the future or to mitigate the magnitude..."). • For clarity, the scope of the authority should be limited to the Reliability Coordinator Area ("...that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area"). As written, it implies the authority should extend outside its RC Area. R2 Editorial comment - The words "compliance with" are in a different font in the posted version. R3 Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. Comment The requirement states the responsible entities shall "inform" its RC when unable to perform as directed but it is unclear when the notification needs to take place. Although the term "as soon as practicable" may seem be unmeasurable, as written now there is no time deadline to perform the notification - i.e. it could be 4 hours later after recognition.

No
PPL has concerns with the use of the word "any" in this requirement. PPL recommends striking the words "any of" and instead using "Its primary" as follows: Each Distribution Provider and Generator Operator that experiences a failure of its primary Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...". In the current version, it is unclear when the DP and GOP are required to consult with their TOP or BA. "[A] failure of any of its Interpersonal Communication capabilities" could be construed to mean an internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP's or the GOP's ability to communicate with the TOP or BA. It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional.

Yes
No
"to exchange interconnection and operation information" was removed from the requirements in COM-001-2 but remains in the purpose. For consistency it needs to be removed. It could read "To establish Interpersonal Communication capabilities for the exchange of information necessary to maintain reliability."
No
Capability is not used consistently in R7 and R11. It changes from singular to plural.
In IRO-001-3 "authority" should be removed and the verbage returned to "shall act." In COM-002-3 R2 and in Applicability we suggest removing the Distribution Provider as the RC would not likely give a Reliability Directive to a Distribution Provider. The Reliability Directive would more likely come from the Transmission Operator to the Distribution Provider. In COM-002-3 R3 we suggest replacing "Reissue" with "Restate." You are not technically reissuing the Reliability Directive.

Yes
Yes
Yes
Regarding COM-002 Requirement R1, we recommend that this requirement be reworded as follows: "When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall require that the Reliability Directive be communicated using three-part communications as described in Requirements R2 and R3 of this standard". The reason for this recommended rewording are threefold: 1. Good operating practice calls for use of three-part communications at all times. The recommended re-write encourages the use of the good operating practice of three-part communications at all times, but does not require it. 2. It is not good operating practice to require that an additional (unnecessary) phrase be used during emergency situations. During emergency situations, it is best to use standard operating protocols so as to limit unnecessary burdens on operating personnel during critical and stressful times. 3. By implementing the proposed new R1 requirement, it would effectively weaken the need for rigorous compliance with any and all directives issued by the RC's, TO's or BA's. Regarding IRO-001 Requirement R1, we recommend that the current requirement R3 be reinstated as the new requirement R1. That is, the new requirement R1 should read as follows: R1. The Reliability Coordinator shall have clear decision-making authority to act and to direct actions to be taken by Transmission Operators, Balancing Authorities, Generator Operators, Transmission Service Providers, Load-Serving Entities, and Purchasing-Selling Entities within its Reliability Coordinator Area to preserve the integrity and reliability of the Bulk Electric System. These actions shall be taken without delay, but no longer than 30 minutes. We do not support any further dilution of Reliability Coordinator authority to enforce Reliability Directives through deletion of the 30 minute maximum response time period. The timely actions in response to any Reliability Coordinator issued Reliability Directives is an essential part of the process.

Yes
Yes
We concur with the addition of "Adjacent" but ask that the SDT give some consideration to allowing an exemption in R6.3 for relatively small loads, less than 20 MW, that are pseudo tied into a Balancing Authority. Loss of these facilities would not place a burden on the BES and should not require Alternative Interpersonal Communications capabilities.
Yes
No
We would suggest deleting the phrase "any of" in the Requirement. It would then read "Each DP and GOP that experiences a failure of its Interpersonal Communication...". Also, how does the DP or GOP consult with its TOP or BA when it loses its Interpersonal Communications capability? To do this wouldn't they have to have an Alternative Interpersonal Communications capability?
Yes
COM-001-2: Requirement 10 is too open ended as written. The measure, M10, indicates that only impacted entities need to be notified. The requirement should be changed to make it consistent with the measure. The requirement would then read "Each RC, TOP And BA shall notify impacted entities as identified...". Requirements 3 and 5 places the responsibility for establishing Interpersonal Communication capability on the TOP and BA. It is quite conceivable that a TOP or BA may not know all, or newly, registered DPs and GOPs in its respective area. In Requirements 7 and 8, the DP and GOP, respectively, are in turn responsible for establishing Interpersonal Communication capability. The TOPs/BAs and the DPs/GOPs should not be responsible for this. The DPs and GOPs should be held accountable for requesting that capability of their TOP and BA. Therefore, we suggest adding the following phrase at the end of Requirements 3.3, 3.4, 5.3 and 5.4 – "that has requested Interpersonal Communications capability." Then R3.3 would read "Each Distribution Provider within its Transmission Operator Area that has requested Interpersonal Communications capability." COM-002-3: Requirement 2/Measure 2: There is an inconsistency between the requirement and the measure. The requirement allows the recipient to repeat, restate, rephrase or recapitulate the directive. Measure 1 only mentions repeating the directive.

Georgia System Operations
No
While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related. Accordingly, NERC's Reliability Functional Model V5 describes and identifies the DP's relationships with other Functional Entities to the TOP and BA with respect to Real Time. Real Time 7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority. 8. Implements system restoration plans as coordinated by the Transmission Operator. 9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment.
Yes
No
: The intent of this requirement is not yet clear. Technically, the air we breathe, as well as other mediums like "any" cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. The burden for compliance evidence to demonstrate failure of "any of its Interpersonal Communication capability" would seem unobtainable and could prove to be a daily occurrence (dropped phone calls, etc.). The following is suggested: R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capability shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.
Yes
Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator "to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact". Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3. COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: "When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive". What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact? Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. It is recommended that the treatment of Reliability Directives shall be consistent with those being developed for TOP-001-2 as proposed by the Real-Time Operations drafting team (Project 2007-03). As such, consider using the following language for R2: "Each TOP, BA, and GOP shall comply with each identified Reliability Directive issued and identified as such by its RC, unless such actions would violate safety, equipment, regulatory, or statutory requirements." Accordingly, please consider using the following language for R3: "Each TOP, BA, and GOP shall inform its RC of its inability to perform an identified Reliability Directive issued by that RC." Again, we do not believe the DP would receive an identified Reliability Directive directly from the RC and the DP applicability should be removed from this standard. The DP is appropriately captured under COM-002 and TOP-001 with respect to Reliability Directives. Accordingly, NERC's Reliability Functional Model V5 describes and identifies the DP's relationships with other functional entities to TOP and BA with respect to Real Time. Real Time 7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority. 8. Implements system restoration plans as coordinated by the Transmission Operator. 9. Directs Load-Serving Entities to communicate requests for voluntary load curtailment. The following comments are regarding COM-001-2. The SDT should include an additional qualifier to Interpersonal Communications within the context of these requirements, for example (operational or dispatch center communications??). Technically, the air we breathe, as well as other mediums like "any" cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. Assuming at least one employed individual can speak, all entities could demonstrate compliance of this capability at all times, therefore, it is not clear the intent of these requirements are accurately being presented. It is recommended to include the use of "signed attestation letters" as examples of evidence under M4 and M11 and other measures as appropriate.

No
Although we agree with the intent of the requirement, we are concerned with the use of "any of its Interpersonal Communication". The word "any" is very inclusive and the team should consider narrowing it down to those capabilities that may adversely impact reliability.
Yes
Definition of Interpersonal Communications - We understand that the team does not want to be prescriptive as far as the specific types of communication mediums since we live in an age of many forms of communication. But in this case it may be helpful to give examples in the definition. An auditor may interpret Interpersonal Communication to strictly include voice-related and two-way conversations. Depending on the circumstances, other mediums may be adequate, such as blast calls or instant messaging. This should be clarified in the definition. COM-001-2 - In R9, it should be clear that the 2 hour timeframe is for initiation of corrective action because mitigation may take much longer. We suggest the last sentence of R9 state: "If the test is unsuccessful, the responsible entity shall, within 2 hours, initiate action to repair or designate a replacement Alternative Interpersonal Communications capability." - In R10, the phrase "R1 through R6" should state "R1 through R8". COM-002-3 - In R2, the use of the term recapitulate may not be appropriate. This term means "to summarize" the directive. Three-part communication during emergency situations should assure that the essential details of the directives are understood and a summary may inadvertently leave out important information. - The effective date of COM-002-3 should be consistent with COM-001-2 and IRO-001-3 and state "the 1st calendar day of the 2nd calendar quarter". It currently shows the "1st calendar quarter in the standard and implementation plan. IRO-001-3 - The third bullet under Data Retention addresses requirement R4 and measure M4 neither of which exist in the standard. - In R1, the word "and" is missing between Generator Operator and Distribution Provider. - VSL for R2 - "NA" should be removed from the High VSL - Furthermore, the VSL should include language for instances when the entity cannot meet the RC's directive as afforded by R2.

Ingleside Cogeneration LP
Yes
Ingleside Cogeneration LP believes that the intent of these three standards is to ensure reliable normal and emergency communications between BES operating entities. It should be the rare exception that BES-critical information must be communicated directly to an LSE, PSE, and TSP and IC. The impact of the Standards would be lessened if diffusely applied to multiple entities who do not normally engage in operations communications.
No
In the background section of this ballot, the project team indicates that the removal of the phrase is intended to signal that these requirements do NOT apply to the exchange of data. Although Ingleside Cogeneration LP agrees that the phrase is not a helpful description of the need for inter-entity communications - and should be removed - we do not see how the remaining language achieves the project team's purpose. It seems the confusion stems from the multitude of data communication types. Email messages between operating entities may be a valid communications path under COM-001-2, while telemetry/control is covered under other Standards. We believe that a technical guideline may be an appropriate vehicle to distinguish what types of communications are subject to these requirements, and which are not.
No
Most of Ingleside Cogeneration's communications capabilities rely on carriers who will immediately deploy technicians to repair land-based or wireless systems when they break. Although we may contact the carrier to inform them that the systems are not available - or to determine their progress - we do not want them waiting for our go-ahead before proceeding. If the intent of this requirement is to validate the operation of the repaired connection, or to establish interim means of communications with other operating entities, then Ingleside Cogeneration believes a re-write is in order. There is no reliability purpose being served otherwise that we can tell.
Yes
Ingleside Cogeneration agrees that it is important to clearly denote when a directive must be issued. In previous definitions, we believed that imprecise language made it difficult for the BA, RC, or TOP to determine if a gray area situation required a directive or not. With a more precise definition, it will eliminate second guessing by auditors that a directive was necessary because an outcome turned out poorly - even if an Emergency was not declared or an Adverse Reliability Impact did not occur.
Ingleside Cogeneration LP is concerned that the entity-to-entity organization of the COM Standards is quickly being outdated by voice and video conferencing or one-to-many broadcasts. In addition, email may be a preferred mode of most communications to and from small Generator Operators. It is not clear that these technologies are precluded from consideration by COM-001 and COM-002 - which means that some auditors may believe that they are. This leads to inconsistent application of the compliance criteria, and may discourage the use of some powerful technologies. It appears to us that some technical guidelines would be appropriate to help entities and auditors decide which are applicable under these Standards.

Yes
(1) In COM-001, the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. Although the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability, the proposed standard does not require the capability in all cases. At the same time, this standard does not preclude such capability. Even though Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, there are other communications paths which can be used in the case of the loss of that capability. Since TOPs are also required to have the capability, the BA can call the TOP and ask the TOP to contact the DP/GOP for them until they can implement capability. In addition, it is difficult to visualize entities which would not have the public telephone system or even cell phones available for use in the event of the loss of the capability.
Yes

(1) We agree with the addition of "Adjacent" entities in the quoted parts. However, there are some entities which may need the capability even though they are not "synchronously connected within the same interconnection". This standard does not require them to have the capability, but it does not preclude such capability. In these cases, those entities should evaluate whether the need for the capability is a reliability need or market coordination. If the entities were connected synchronously, actions taken by an entity could have immediate effect upon other entities. However, if not synchronously connected, changes in flows across the asynchronous ties would have to follow the interchange scheduling process with approval by all involved entities before changes could be enacted. Some TOPs do communicate with other TOPs even in another interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). (2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.
Yes
We urge the SDT to remove the phrase. If necessary, regional situations can be addressed by a regional variance.
Yes
Yes
The Data Retention Section in IRO-001 does not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4. Additional comments associated with COM-002 We are concerned with the use of "shall" in the measurement sections. "Shall" statements should only be used in the Requirements, as these are the only enforceable items in the standard. The measures should not limit how we show compliance. If there are specific issues that the drafting team is proposing to be a requirement, they should be added to the requirements section of the standard. Measurement M1 should also allow entities to develop procedures, that are distributed to and trained on, in advance with recipients of directives that meet the requirements for the communication of what constitutes a Reliability Directive. The last sentence in the measurement should be revised to read: "Such evidence could include, but is not limited to, dated and time-stamped voice recordings, dated and time-stamped transcripts of voice recordings, or dated operator logs to show that it identified the action as a Reliability Directive to the recipient or approved procedures that identify what constitutes a Reliability Directive and when Reliability Directives are issued." (R1) The Data Retention section states: "For instances where the evidence retention period specified below is shorter than the time since the last audit, the Compliance Enforcement Authority may ask an entity to provide other evidence to show that it was compliant for the full time period since the last audit." It is unclear on how an entity would be expected to provide evidence beyond 3 months when requested if the data retention period and established procedures do not require the evidence to be retained. The SDT should provide examples of what other types of evidence could be expected or the phrase should be removed.
Group
Florida Municipal Power Agency
Frank Gaffney
Yes
In COM-001-2 R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, it may be that the LSE is the more appropriate functional entity. For instance, the Functional Model when discussing LSE on page 55 states that one of the LSE's real time duties is: "12. Receives requests from the Balancing Authority and Distribution Provider for voluntary load curtailment." If the LSE is the more appropriate entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added. For Florida, which does not have retail competition, it doesn't matter whether the DP or the LSE is more appropriate; hence, the "yes" answer.
Yes
Yes
No
By use of the term "any" in the phrase "a failure of any of its Interpersonal Communication" the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk. To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which does not require DPs or GOPs to have Alternative Interpersonal Communications capability. A possible solution is through use of the terms "Primary" for R3 and "Alternate" for R4 and then make R11 applicable to Primary only.
Yes
In the definition of Interpersonal Communication, the use of the word "medium" is ambiguous. Suggestions for alternatives: "system", "channel". COM-001-2, R1 and R3, the phrase: "have Interpersonal Communications capabilities", what if the communication system fails? Is that an immediate non-compliance (especially R3.3 and R3.4 which do not require a redundant system). Suggest using EOP-008 type of language to allow restoration of failed equipment without non-compliance. COM-001-2 R9 - "Each... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity. In addition, the type of testing is unclear and ambiguous. There is also ambiguity in the terms "direct", "directive", "direction" and "Reliability Directive". The SDT may want to consider using the terms "instruct" and "instruction" in place of "direct", "directive", "direction" to more clearly distinguish from a Reliability Directive.
Individual
Greg Rowland
Duke Energy
Yes
Yes
However, we believe that the phrase "synchronously connected within the same interconnection" should be struck, because TOPs are controlling DC ties and should be required to have communications with each other.
Yes
However, the definition of Interpersonal Communication should also be expanded to clearly include the drafting team's intent that the capability is NOT for the exchange of data. The phrase "for the exchange of interconnection and operating information" should also be struck from the Purpose statement.
No
The phrase "consult with... to determine a mutually agreeable time" makes this requirement too open-ended to be auditable and enforceable. We question why R11 does not establish a timeframe for notification similar to R10, which requires the RC, TOP or BA to make notification within 60 minutes of failure detection. We also question why DPs and GOPs are not required to have Alternative Interpersonal Communications capability in order to be able to make such notifications.
No
• Since FERC has not yet approved the new definition of Adverse Reliability Impact, we believe the term "Adverse Reliability Impact" should be replaced by the words of the BOT-approved definition: "the impact of an event that results in Bulk Electric System instability or cascading". • Also, add the phrase "and the communication is identified as a reliability directive to the recipient" to the end of the definition of Reliability Directive. This will eliminate potential confusion regarding when a communication is a Reliability Directive, and when a communication is a routine instruction. Revising the definition in this manner may also eliminate the need Requirement R1 of COM-002-3. If R1 is retained, we suggest rewording as follows: "Each Reliability Coordinator, Transmission Operator, or Balancing Authority shall identify a Reliability Directive to the recipient when it issues a Reliability Directive that requires an action or actions to be executed." • Proposed reworded definition: "Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or the impact of an event that results in Bulk Electric System instability or cascading, and the communication is identified as a Reliability Directive to the recipient."
• COM-001-2 does not specify how much time an entity is allowed to restore failed Interpersonal Communications capability or failed Alternative Interpersonal Communications capability. R1 through R6 require that the RC, TOP and BA have both. R7 and R8 require that DPs and GOPs have Interpersonal Communications capability. An auditor could find an entity non-compliant with these requirements upon failure of either capability. R9, R10 and R11 specify actions to take upon failure, but do not relieve entities of responsibility under R1 through R8. • COM-001-2 R9, M9 and VSLs – M9 and VSLs should be revised to be consistent with wording of R9 phrase "at least once per calendar month". • COM-001-2 R10, M10 and VSLs – Clarity is needed regarding when the 60-minute clock starts. For example, suppose a failure is detected immediately upon occurrence of the failure. Does the 60-minute clock start immediately, or after the failure has lasted 30 minutes? When does the 60-minute clock start if a failure is detected and the entity is unsure when it occurred? • COM-001-2 R10, M10 and VSLs – If the failure only lasts for 35 minutes, it appears that the RC, TOP or BA is still required to notify entities identified in R1 through R6. Is this the drafting team's intent? • COM-001-2 R10, M10 and VSLs – Should be revised since the RC, TOP and BA are only required to have Alternative Interpersonal Communications capability with other RCs, TOPs and BAs per R2, R4 and R6. Suggested rewording for R10: "Each Reliability Coordinator, Transmission Operator and Balancing Authority shall notify entities with which it is required to have Alternative Interpersonal Communications capability as identified in R2, R4 and R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer." • COM-001-2 M11 and VSL – Replace the word "their" with the word "its". • COM-001-2 Data Retention – The way Data Retention is being enforced, this whole section could just be reduced to a blanket statement that an entity must be able to provide evidence that it has been in compliance since its last audit. • COM-002-3 R2, M2 and VSL – Replace "and" with "or". Also, the phrase "repeat, restate, rephrase or recapitulate" seems excessive and may be intended to avoid a violation where an entity fails to repeat the Reliability Directive word for word. Suggested rewording: "Each Balancing Authority, Transmission Operator, Generator Operator or Distribution Provider that is the recipient of a Reliability Directive shall repeat the Reliability Directive back to the issuer with sufficient accuracy so that understanding can be confirmed." • COM-002-3 R3, M3 - Replace "and" with "or". • IRO-001-3 – We believe that the Purpose and the Requirements of this standard should be focused solely on situations where the Reliability Coordinator issues Reliability Directives to prevent an Emergency or Adverse Reliability Impact. • IRO-001-3 – The Purpose should be rewritten as follows: "To establish the authority of Reliability Coordinators to issue Reliability Directives to other entities to prevent an Emergency or the impact of an event that results in Bulk Electric System instability or cascading." • IRO-001-3 – R1 should be rewritten as follows: "Each Reliability Coordinator shall have authority to act or to issue Reliability Directives to others, including but not limited to the Transmission Operator, Balancing Authority and Generator Operator within its Reliability Coordinator Area to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or the impact of an event that results in Bulk Electric System instability or cascading." • IRO-001-3 – R2 should be rewritten as follows: "Each Transmission Operator, Balancing Authority, Generator Operator or Distribution Provider shall comply with a Reliability Directive issued by the Reliability Coordinator unless the Reliability Directive cannot be physically implemented or unless such action would violate safety, equipment, regulatory, or statutory requirements." • IRO-001-3 – R3 should be rewritten as follows: "Each Transmission Operator, Balancing Authority, Generator Operator or Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to comply with a Reliability Directive in accordance with Requirement R2." • IRO-001-3 Measures and VSLs – Should be revised to conform with the above suggested revisions to requirements.

ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process. Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).
No

ERCOT ISO
No
Some concern for removal of LSE in particular from R2 and R3 from current IRO-001-2 R7 for the ERCOT region. ERCOT Region has QSE's that manage Load Resources. There may be some QSEs that are not registered as a GOP that deploy Load Resources. Per the current LSE JRO, QSEs with Load Resources are registered as LSEs. Not requiring them to deploy Load Resource directives could be perceived as a reliability gap created from previous version to this version. PSEs could be removed as long as they fall under BA authority.
Yes
These changes will clarify intentions regarding the undefined term "adjacent".
Yes
Yes
Yes
The definition of Reliability Directive appropriately clarifies the importance of knowing the level of importance of any instructions being issued. If there is no room for variance from the specific action required, or if there is no time to further negotiate or discuss the action required, it is important that the instruction be identified as a Reliability Directive and for such instructions to be followed in a timely fashion. Normal operating instructions typically do not rise to this level of urgency and some variation from the words will not result in unmanageable reliability impacts. Also, there typically may be time for addressing the instructions in more than one way.
Regarding COM-001-2: We are not clear on the time horizon of requirements for COM-001-2. Based upon the purpose statement, it appears that establishment would be ahead of real time. Wording in the requirements could be construed as maintaining at all times vs. establishing communications. The timeline for mandatory/effectiveness may not be acceptable to establish communications with DPs if hardware procurement/projects must take place. Regarding IRO-001-3: We have some concern for the removal of LSE in particular from R2 and R3 from current IRO-001-2 for the ERCOT region. The ERCOT region has QSEs that manage Load Resources. There may be some QSEs that are not registered as a GOP that deploy Load Resources. Per the current LSE JRO, QSEs with Load Resources are registered as LSEs. Not requiring them to deploy Load Resource directives could be perceived as a reliability gap created from the previous version to this version. PSEs could be removed as long as they fall under BA authority. The Data Retention section should be corrected to match the new requirements numbers and elimination of the previous version R1 with ERO. The Version History mentions six requirements retired, but only details five.

ReliabilityFirst
Yes
Yes
ReliabilityFirst agrees with adding the term adjacent but is unclear what the term adjacent is referring to. Does it mean directly connected or is it more than one layer out.
Yes
No
ReliabilityFirst believes Distribution Provider and Generator Operator should be added to Requirement R10 and Requirement R11 should be removed. Finite time frames should be prescribed for each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities. ReliabilityFirst believes that the failure of Interpersonal Communication between Distribution Providers/Generator Operators and Transmission Operators/Balancing Authorities could have the same negative effects similar to the failure of Interpersonal Communication by the Reliability Coordinator, Transmission Operator, and Balancing Authority.
No
ReliabilityFirst believes the definition of "Reliability Directive" should be all inclusive and include "all" actions initiated by the Reliability Coordinator, Transmission Operator or Balancing Authority (not just Emergency or Adverse Reliability Impacts). Even though Emergency or Adverse Reliability Impacts are defined, during operations, it may become a gray area to whether or not it falls under the intent of a "Reliability Directive." Furthermore, if the system falls under a condition that results in an Adverse Reliability Impact, it may be too late for a Reliability Coordinator, Transmission Operator or Balancing Authority to issue a Reliability Directive. ReliabilityFirst recommends the following for revision to the term "Reliability Directive": Reliability Directive - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where an action by the recipient is required.
Comments on COM-001-2 1. Applicability Section a. RFC recommends adding the Generator Owner to the applicability section of the standard along with corresponding Requirements R8 and R11. ReliabilityFirst believes to maintain system reliability and based on certain business practices in effect, Generator Owners need to be required to have associated Interpersonal Communications with its Balancing Authority and Transmission Operator. 2. Requirement R7 and R8 a. ReliabilityFirst seeks further clarity on why the Distribution Provider and Generator Operator are not required to designate an Alternative Interpersonal Communications capability? Requirements R7 and R8 require the Distribution Providers and Generator Operators to have Interpersonal Communications capability but there is not corresponding requirement to have an Alternative Interpersonal Communications capability. ReliabilityFirst recommends adding two new requirements for the Distribution Provider and Generator Operator to designate an Alternative Interpersonal Communications capability. This will be consistent with how Requirements R1 through R6 are set up. 3. Requirement R9 a. Assuming new requirements for the Distribution Provider and Generator Operator to designate an Alternative Interpersonal Communications capability (based on previous comment) are added to the standard, the Distribution Provider and Generator Operator will need to be added to Requirement R9 to test its Alternative Interpersonal Communications capability at least once per calendar month. 4. Requirement R10 a. Based on the ReliabilityFirst comment submitted for Question 4, ReliabilityFirst believes the Distribution Provider and Generator Operator should be included in Requirement R10. b. Since Interpersonal Communications capabilities is a very important piece of operating the BES in a reliable manner, ReliabilityFirst believes the timeframe in which an entity is required to notify the entities is too long. ReliabilityFirst recommends the following language for Requirement R10: i. Each Reliability Coordinator, Transmission Operator, Balancing Authority, Distribution Provider and Generator Operator shall notify entities as identified in Requirements R1 through R8 of a failure of its Interpersonal Communications capabilities that lasts 15 minutes or longer. The notification shall be made within 30 minutes of the detection of a failure. 5. VSLs for Requirement R1 through R8 a. ReliabilityFirst suggest gradating the VSLs for R1 through R8. Listed below is an example of how to grade the VSL for R1. The same type of approach could be used for R2 through R8 as well. i. High VSL- the Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 and 1.2. ii. Severe VSL- The Reliability Coordinator failed to have Interpersonal Communications capability with one or more of the entities listed in Parts 1.1 and 1.2. 6. VSL for Requirement R9 a. For consistency with the requirement language, ReliabilityFirst recommends adding the words "at least on a monthly basis" to the Lower, Moderate and High VSLs and adding the words "if the test was unsuccessful" to the end of the Lower, Moderate and High VSLs. Listed below is an example of the Lower VSL. i. The responsible entity tested the Alternative Interpersonal Communications capability at least once per calendar month but failed to initiate action to repair or designate a replacement Alternative Interpersonal Communications in more than 2 hours and less than or equal to 4 hours if the test was unsuccessful. 7. VSL for Requirement R10 a. ReliabilityFirst provided alternate language for R10 in the comments listed above. If the alternate language is not incorporated, ReliabilityFirst recommends the following language for the Lower VSL. Similar language could be used for the Moderate, High and Severe VSLs as well. i. The responsible entity failed to notify entities as identified in Requirements R1 through R6 more than 60 minutes but less than or equal to 70 minutes of the detection of a failure of its Interpersonal Communications capabilities. b. If the alternate language for R10, in the comments listed above, is incorporated, ReliabilityFirst recommends the following language for the Lower VSL. Similar language could be used for the Moderate, High and Severe VSLs as well. i. The responsible entity failed to notify entities as identified in Requirements R1 through R6 more than 30 minutes but less than or equal to 740 minutes of the detection of a failure of its Interpersonal Communications capabilities c. For Moderate VSL (the VSL after the OR statement), ReliabilityFirst recommends using a percentage rather than the "least one, but not all" statement. For example, if there is say 100 impacted entities and the applicable entity only notify 1, they would only fall under the Moderate. In another scenario there is say 100 impacted entities and the applicable entity only notified 99, they would also fall under the Moderate as well. The use of percentages will help even this out. 8. VSL for Requirement R11 a. For consistency with the requirement language, ReliabilityFirst recommends the following language: i. The responsible entity that experiences a failure of any of its Interpersonal Communication capabilities failed to consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. Comments on COM-002-3 1. Requirement R1 a. Based on ReliabilityFirst suggested change to the definition of "Reliability Directive" as noted in Question 5, ReliabilityFirst recommends deleting Requirement R1. Based on the suggested definition, any communication initiated, where an action by the recipient is required, is considered a "Reliability Directive." Thus, there would no longer be a need for responsible entity to identify the action as a "Reliability Directive" to the recipient. 2. VSL for Requirement R3 a. For consistency with the requirement language, ReliabilityFirst recommends the following language: i. The responsible entity issued a Reliability Directive, but failed to confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate. Comments on IRO-001-3 1. Requirement R1 a. ReliabilityFirst seeks further clarity on why Requirement R1 only requires the Reliability Coordinator to have the "authority to act" rather than requiring the Reliability Coordinator to actually "take action" to prevent identified events that result in an Emergency or Adverse Reliability Impacts. Having the "authority to act" does not inherently require the Reliability Coordinator to take action, if appropriate. b. ReliabilityFirst seeks further clarity on the language "to prevent identified events." If the event was already identified, how can the Reliability Coordinator act to prevent it? ReliabilityFirst recommends adding the word "potential" in between the words "prevent" and "identified." 2. Requirement R3 a. There is no time qualifier specified in Requirement R3 dealing with the timeframe in which the applicable entity has to inform its Reliability Coordinator of its inability to perform as directed in accordance with Requirement R2. Without a time qualifier, Requirement R3 is open ended and could cause issues if the applicable entity does not inform its Reliability Coordinator upon recognition of its inability to perform as directed in a timely manner. ReliabilityFirst recommends the following language for Requirement R3: i. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator within 30 minutes upon recognition of its inability to perform as directed in accordance with Requirement R2. 3. VSL for Requirement R1 a. Requirement R1 requires the Reliability Coordinator to "... have the authority to act" - and the VSL does not reflect this language. ReliabilityFirst had questioned why Requirement R1, does not specifically require the RC to take action or direct actions in a comment submitted under Requirement R1. If the SDT does not change the language in Requirement R1, ReliabilityFirst recommends the following language: i. The Reliability Coordinator failed to have the authority to take action or direct actions, to prevent an identified event that resulted in an Adverse Reliability Impact

4. VSL for Requirement R2 a. For the High VSL, the words "fully comply" are ambiguous and open to interpretation. ReliabilityFirst recommends only having a Severe VSL. b. The Severe VSL states "directive" while Requirement R2 states "direction". To be consistent, ReliabilityFirst recommends the following language: i. "The Responsible Entity failed to comply with its Reliability Coordinator's direction"

In COM-001-2 R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, it may be that the LSE is the more appropriate functional entity. For instance, the Functional Model when discussing LSE on page 55 states that one of the LSE's real time duties is: "12. Receives requests from the Balancing Authority and Distribution Provider for voluntary load curtailment." If the LSE is the more appropriate entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added. For Florida, which does not have retail competition, it doesn't matter whether the DP or the LSE is more appropriate; hence, the "yes" answer.
Yes
Yes
No
By use of the term "any" in the phrase "a failure of any of its Interpersonal Communication" the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk. To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which does not require DPs or GOPs to have Alternative Interpersonal Communications capability. A possible solution is through use of the terms "Primary" for R3 and "Alternate" for R4 and then make R11 applicable to Primary only.
Yes
In the definition of Interpersonal Communication, the use of the word "medium" is ambiguous. Suggestions for alternatives: "system", "channel". COM-001-2, R1 and R3, the phrase: "have Interpersonal Communications capabilities", what if the communication system fails? Is that an immediate non-compliance (especially R3.3 and R3.4 which do not require a redundant system). Suggest using EOP-008 type of language to allow restoration of failed equipment without non-compliance. COM-001-2, R9 - "Each ... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity. In addition, the type of testing is unclear and ambiguous. The is also ambiguity in the terms "direct", "directive", "direction" and "Reliability Directive". The SDT may want to consider using the terms "instruct" and "instruction" in place of "direct", "directive", "direction" to more clearly distinguish from a Reliability Directive.

Yes
Yes
Yes
Agree, however, the ability for a DP or GOP to have such consultation with its TOP or BA would likely be hampered by the failure of the Interpersonal Communications itself. DP and GOP are only required to have a single source for this Interpersonal Communications.
Yes
The meaning of R9 is open to some interpretation. It states that if the monthly test is unsuccessful, the entity shall "initiate action to repair or designate a replacement" AIC within 2 hours. The meaning of this is unclear in several ways: First, does "initiate action" apply to the remainder of the sentence or just to the "repair" option? Second, what constitutes initiation of action? Is it the intent of the SDT that the alternate interpersonal communications be restored within a 2-hour limit? If so, the words do not clearly state that, and it seems an impossible task to ensure no more than 2-hr outage to an alternate communications medium. I am voting affirmative under the interpretation that one must only "initiate" the repair or "initiate" the designation of a replacement option within this tight 2-hour limit.

MISO requests clarification regarding (1) when Distribution Providers/Generator Operators have an obligation to collaborate with Transmission Operators versus Balancing Authorities; and (2) the obligation of Transmission Operators to inform Balancing Authorities (and vice versa) of an agreed upon time for restoration of Interpersonal Communication capability when collaboration occurs only between Transmission Operators and Distribution Providers/Generator Operators or, conversely, Balancing Authorities and Distribution Providers/Generator Operators.
No
The proposed definition of Reliability Directive is unacceptable because the use of the defined terms "Emergency" and "Adverse Reliability Impact" results in an undefined, broadened scope of responsibility for Reliability Coordinators when coupled with the definition of the Bulk Electric System. This may lead to confusion/ambiguity for Reliability Coordinators that must be clarified to ensure compliance. Further, this broadened scope may mis-direct Reliability Coordinator's attention and mitigation efforts to small-scale, localized issues that represent no true threat to the operation of the Interconnection.
COM-001-2, R2 and R6: MISO requests clarification as to whether the designation of Interpersonal Communications and Alternative Interpersonal Communications methods by Responsible Entities must be formally documented and/or agreed upon with those entities with which communications capability must be established. COM-001-2, R9: MISO suggests that the designation of Alternative Interpersonal Communications methods should not require formal documentation and may be agreed upon (when necessary) informally with those entities with which communications capability must be established in the event of an unsuccessful test of its Alternative Interpersonal Communications capability. COM-001-2, Requirement R10: MISO requests clarification as to whether "impacted entities" refers to those entities with which the Responsible Entity must have Interpersonal Communications and Alternative Interpersonal Communications capability. Further, MISO requests clarification as to whether the notification required by R10 must be made using the Alternative Interpersonal Communications method selected by the Responsible Entity. COM-002-3, R1 - R3: MISO respectfully submits that, while it appreciates the distinction in responsibilities proposed in the new COM-002-3 and acknowledges that such distinction is beneficial, these requirements increase compliance risk and potential penalty liability without attendant benefit to the reliability of the Bulk Electric System. MISO respectfully suggests that Requirements 2 and 3 be converted into sub-requirements as follows: R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time] R1.1. When the Reliability Coordinator, Transmission Operator or Balancing Authority identifies a stated action as a Reliability Directive, the receiving Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider shall repeat, restate, rephrase or recapitulate the Reliability Directive to the Issuing Reliability Coordinator, Transmission Operator or Balancing Authority. [Violation Risk Factor: High][Time Horizon: Real-Time] R1.2. When the Reliability Coordinator, Transmission Operator, and Balancing Authority that issues a Reliability Directive receives a response from the receiving Balancing Authority, Transmission Operator, Generator Operator, and Distribution Provider, it shall then either [Violation Risk Factor: High][Time Horizon: Real-Time]: • Confirm that the response from the recipient of the Reliability Directive (in accordance with Requirement R2) was accurate, or • Reissue the Reliability Directive to resolve any misunderstandings.

Yes
No
(1) Requirements R1, R2, R3 and R4 should apply to all adjacent Reliability Coordinators and Transmission Operators, regardless of whether they are in the same Interconnection. The ERCOT Interconnection is asynchronously connected to adjacent Interconnections, and it is imperative that Functional Entities within Texas RE's purview be able to exchange operating information with Transmission Operators and Reliability Coordinators in those adjacent areas, even if they are in a different Interconnection. (2) Requirement parts R5.5 and R6.3 refer to "Adjacent Balancing Authorities." Measures M5 and M6 refer to "adjacent Balancing Authority" - note the small "a" on adjacent. "Adjacent Balancing Authority" is a defined term in the NERC Glossary, which has a more specific meaning than "adjacent Balancing Authority." Which term is intended in R5.5 and R6.3? If you don't intend to use the defined term, perhaps use a word like "contiguous" or "neighboring" rather than "adjacent."
Yes
No
(1) Why does R10 refer to "failure of its Interpersonal Communications capabilities" while R11 refers to "failure of **any of** its Interpersonal Communications capabilities"? What is the distinction that is

intended by addition of the words "any of"? (2) As a Compliance Enforcement Authority, we have several fundamental questions regarding what is intended in this standard. It appears the drafting team is using the defined term "Interpersonal Communications" to refer to a designated primary communication medium, and the term "Alternative Interpersonal Communications" to refer to one or more designated backup communication mediums. Is that correct? This should be clarified in the Standard. (3) There is ambiguity in the current draft because the defined term "Interpersonal Communications" appears to include primary, back-up and all other mediums that may be available (which may include landline phone, cell phone, satellite phone, instant messaging, email, and data links, all in one facility), including any "Alternative Interpersonal Communications". Do R10 and R11 apply to ALL available mediums, or just to the designated primary and back-up mediums? Does R9 apply to ALL available back-up mediums, or just to a specifically designated back-up medium?

No

We oppose the definition of Reliability Directive as it is currently being proposed in this standard because three-part communication should not be required only after an Emergency or Adverse Reliability Impact actually occurs. In particular we object to the removal of the word "expected" (or "anticipated") from the definition, because Reliability Directives may be required before a situation escalates to an Emergency, in order to prevent the Emergency from occurring. This proposed change potentially undermines efforts required to avoid emergencies and events. We note that there are instances in other Reliability Standards where "anticipated" conditions require actions to be taken (e.g. TOP-001-1 R5 and EOP-002 R4), when clear, concise, and definitive communication, verbal or electronic, is required to avoid or mitigate an impending emergency

(1) There are numerous errors in the Mapping Document in referencing the current version of the standard and requirement. Specifically, referencing IRO-001-2 where it appears that the document should reference standard IRO-001-3. In addition, the notes on page 2 of COM-002-3 are incorrect. (2) In the VRF/VSL Justification document, there are numerous errors in referring to standard versions and requirements: (3) In IRO-001-3, R1 – What is an "identified event," and who "identifies" an event that requires compliance with this requirement R1? An RC may choose not to "identify" an event, such as a limit violation, and run the risk of causing or exacerbating an emergency. If the RC does not "identify" the event, it may become an actual event and then fall within the standard. (4) In the VSL for IRO-001-3, R1, there should be language in the VSL to capture the term "Emergency," which was added in the Requirement. The High VSL for R2 needs to be fixed. (5) In IRO-001-3, R1, remove the "s" in the phrase "Adverse Reliability Impacts." (6) Referring to the Implementation Plan for IRO-001 – There is a different list in the Implementation Plan (R2, R4, R5, R6, R7, R9) than the Revision History of the Standard (R2, R4, R5, R6, R8). Where is the retirement of R1 shown? (7) Referring to COM-001-2: Measure 7, the word "that" is inadvertently repeated in the first sentence. (8) In COM-001-2, Measure 9, is "at least on a monthly basis" to be interpreted differently than "at least once per calendar month" as stated in the requirement? (9) In COM-001-2, there is a "Measure 12" bullet that should be removed. (10) Referring to COM-002-3: Electronic directives (which may be issued over many different types of electronic communication channels) are increasingly necessary to manage the modern, dynamic Bulk Power System (generation and transmission) on a real-time basis. The effective use of electronic directives is undermined by this proposed Standard in its current form. This draft standard, in conjunction with other standards that refer to directives, appears to require that directives (at least Reliability Directives) be given verbally. The failure of the NERC standards to address electronic directives may cause significant manpower issues for BAs with large portfolios of generation to manage. (11) In the VSL for COM-001-2 R4, a reference to Part 4.3 should be added. (12) In IRO-001-3, Part 1.3 Data Retention, the reference in the first bullet to "Electric reliability Organization" is incorrect. We think it should say "Reliability Coordinator" instead. The other references to entities and to Requirements in this Part 1.3 also appear to be incorrect and need to be updated and corrected. (13) Referring to COM-001-2, the prior version of this standard included Requirement R5: "Each Reliability Coordinator, Transmission Operator, and Balancing Authority shall have written operating instructions and procedures to enable continued operation of the system during the loss of telecommunications facilities." This Requirement has been removed from the present draft of COM-001-2. The mapping document seems to suggest that this Requirement was moved to EOP-008, but it is not there. We are concerned that removal of this Requirement will result in a reduction in the level of BES reliability and introduce a potential reliability gap.

Yes

No

(1) We agree with the addition of "Adjacent" entities in the quoted parts except the qualifier "synchronously connected within the same Interconnection" need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations. (2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.

No

(1) In the last posting, there were suggestions of removing the phrase "within the same Interconnection" from R1 (now R2.2) since there are RCs between two Interconnections that need to communicate with each other for reliability coordination (e.g. between Quebec and the RCs the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT's response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.

Yes

Yes

(1) The proposed implementation plan conflicts with Ontario regulatory practice respecting the effective date of the standard. It is suggested that this conflict be removed by appending to the implementation plan wording, after "applicable regulatory approval" in the Effective Dates: Section A5 on P. 4 of the draft standard COM-001, COM-002 and IRO-001, and on P. 2 of COM-001's Implementation Plan and P. 1 of COM-002's and IRO-001's Implementation Plans, to the following effect: ", or as otherwise made effective pursuant to the laws applicable to such ERO governmental authorities." (2) COM-001: Measure M9: - "monthly basis". Suggest changing "monthly basis" to "at least once per calendar month" to be consistent the wording in R9. (3) IRO-001: Measures M1, M2, M3 – The types of evidence are listed in paragraph form. This is not consistent with presentation style in COM-001-2 Measures, where evidence is listed in bullet format. Suggest using bullet form for consistency. (4) IRO-001, Data Retention Section: i. The retention requirements do not reflect the revised requirements. For example: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4. ii. Section 1.3, second paragraph: "The Reliability Coordinator, Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider... shall keep data or evidence to show compliance as identified below unless directed by its Compliance Enforcement Authority to retain specific evidence for a longer period of time as part of an investigation." The word "or" between Generator Operator and Distribution Provider should be changed to "and".

It is not clear the distinction between an Emergency and ARI. We would like to confirm that Since ARI is the impact of an event that results in instability or cascading, that an ARI is a subset of an emergency? Or said differently is an ARI simply instability or cascading? Ultimately if ARI is a subset of Emergency, then why do we need both in the requirement?

COM-001 The drafting team has complicated the requirements by having different requirements between RC/TOP/BA and other entities such as GOP/LSE/DP. The proposal is for redundancy to be required only between RC/TOP/BA. The requirement should be simplified to require all identified entities to have plans for loss of primary communication channels. This could include third parties as a communication channel. COM-002 The drafting team added a requirement to identify a Reliability Directive is being initiated during an emergency to track 3-part communication for compliance purposes. This will change and complicate the communication protocols between normal and emergency operations simply to simplify compliance assessments. The NYISO is asking for clarification that an entity may identify Reliability Directives as a category of communications to be communicated through procedures and training; and will not require a different communication protocol between normal and emergency operations. Affective communications can only be achieved through consistent processes for all conditions. Compliance assessments should be made on when we are in an emergency or not, and not on how the dialogue was initiated.

We are pleased that the drafting team addition provides additional description on the process for communicating failed Interpersonal Communication. However additional clarity should be made regarding if there is an expectation that the Interpersonal Communication should be available 24x7. There are many Distribution Providers that do not have a 24x7 managed facility that can view and respond to a communication received in real time on the Interpersonal Communication device. These DPs rely on on-call personnel for off-hour emergencies such as an outage on the distribution system. The on-call personnel may use a cell phone, pager, etc. In other cases the Transmission Operator or Balancing Authority may communicate by email and response is provided during business hours. In these cases, if the Transmission Operator or Balancing Authority had a system emergency they have the ability to isolate the distribution system from the grid and therefore do not require a 24x7 manned distribution. If the intent of the Standard is for ensuring real-time communication than the applicability should be limited to those Distribution Providers who have been required by the Transmission Operator or Balancing Authority to have a manned 24x7 manned facility. Many of the DPs referred to here have not received a real-time call in the last 20 years. Requiring them to staff 24x7 for a condition likely not to occur is cost prohibited and does not improve reliability.

No
While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.
Yes
Yes
We thank the drafting team for making this change and for the clear communication that the intent of this standard is not for data exchange in the response to comments. However, we do believe one additional change is necessary to make the intent absolutely clear. The purpose of statement of COM-001-2 still includes the phrase "to exchange Interconnection and operating information". Since a standard must stand on its own, we believe it is necessary to remove that phrase from the purpose statement to avoid misinterpretations in the future. Auditors and enforcement personnel are not required to understand the development history when enforcing the standard. Furthermore, the purpose is really to enable communications between these functional entities.
No
Requirement R11 does not fully address the issue of what is required by Distribution Providers and Generator Operators and introduces new issues. First, while the standard is intended to clarify that the Distribution Provider and Generator Operator do not need backup communications capability, it simply does not. Distribution Providers and Generator Operators are required to have an Interpersonal Communications capability in Requirement R7 and R8 respectively. Unfortunately, the effectiveness of these requirements persists even when the Distribution Provider or Generator Operator experiences a failure of its Interpersonal Communications capability. When Requirement R11 applies, the Distribution Provider or Generator Operator will still be obligated to comply with Requirements R7 and R8 respectively and will, in fact, be in violation of these requirements because the Distribution Provider or Generator Operator no longer has the capability. Second, capability is used inconsistently between Requirement R7 and R11 which leads to confusion. In Requirement R7, it is singular while in Requirement R11 is plural. It needs to be clear that only the failure of the capability identified in R7 and R8 needs to be reported by the Distribution Provider and Generator Operator respectively. Third, if the requirements focused on communications devices rather than capabilities, they would come closer to communicating the intent. Requirement R11 would better complement Requirement R7 and R8 if the focus was on having a communication medium or device. A Generator Operator with an installed communications device or medium still has that device or medium even when it is not functioning properly and could still meet Requirements R7 and R8. However, they don't have the Interpersonal Communications capability if the device is not functioning properly.
Yes
The following comments are regarding IRO-001-3. We disagree with including "authority" in this standard. FERC Order 693a, paragraph 112, made it clear that the authority of a registered entity is established through the approval of the standards by FERC. Thus, a Reliability Coordinator gets its authority to issue Reliability Directives by having a requirement that states it must issue Reliability Directives approved by the Commission. Please change "shall have authority to act" in Requirement R1 back to "shall act". Please also remove all other vestiges of authority from the standards including in the purpose, measures and VSLs. Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator "to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact". Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and trigger the use of three-part communications identified in COM-002-3. COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: "When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive". What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact? Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. For clarity and consistency, Requirement R2 and R3 should also be clear that the responsible entities will respond to the Reliability Coordinator's Reliability Directives. Furthermore, this would make the standard consistent with how Reliability Directives are handled by the Transmission Operator in the draft TOP-001-2 standard proposed by the Real-Time Operations drafting team (Project 2007-03). The Data Retention section needs to be modified. The first bullet applies to the Electric Reliability Organization and Requirement R1 and Measure M1. The actual requirement and measure apply to the Reliability Coordinator. Furthermore, five calendar years exceeds the audit period of three years for a Reliability Coordinator. The second bullet incorrectly applies to the Reliability Coordinator and Requirement R2 and Measure M2. Requirement R2 and Measurement M2 apply to Transmission Operators, Balancing Authorities, Generator Operators and Distribution Providers. The third bullet mentions Requirement R4 and Measurement M4. There is no Requirement R4 and Measurement M4 in the standard. The VSLs for Requirement R1 are not consistent with the requirement. The VSL states that it is for failure to act while the requirement compels the Reliability Coordinator to have the authority to act. This modifies the requirement which is not allowed under FERC VSL guidelines. The VSLs for Requirement R2 need to include the "unless" clause from the requirement. Otherwise, the VSL implies that the responsible entity violated the requirement for failing to follow the directive even if they could not for one of the reasons listed in the requirement. This again is not consistent with FERC guidelines that state VSLs cannot modify the requirement. The following comments pertain to COM-001-2. We recommend striking "capability" from all of the requirements. It is not clear to us how this helps when a definition for Interpersonal Communications is written already and applies to a communication medium. Furthermore, we think it causes confusion and actually contradicts the intent of the standard. Because Requirements R1, R3, R5, R7 and R8 focus on capability, the responsible entity will be in violation anytime it medium that it uses for the primary capability does not function properly. Whereas if the requirement stated that the responsible entity was to designate a primary communications medium, the responsible entity is not in violation if that medium is not functioning properly. It would be clear that Requirement R2, R4 and R6 are intended to be complementary. Furthermore, it is not clear why Requirements R1, R3, R5, R7 and R8 state that the responsible entity shall "have" when the companion Requirements R2, R4, and R6 state "designate." Since Requirement R10 deals with a failure of its Interpersonal Communications capabilities and not Alternate Interpersonal Communications capability, it should only refer to the entities in Requirements R1, R3, and R5. Currently, it includes R1 through R6. We suggest changing "physical assets" to "demonstration of physical assets". Since evidence is provided to the auditor and the auditor takes the evidence with them, providing them evidence that is a "physical asset" would be problematic. We believe that the VSLs could be written to provide more gradations. For example, if a Transmission Operator or Balancing Authority failed to have Interpersonal Communications capability with a Distribution Provider but had Interpersonal Communications capability with all other required entities, it has met the vast majority of the requirement. Since VSLs are a measure of how much the requirement was missed by the responsible entity, jumping to a Severe VSL does not seem to adequately capture that the responsible entity met the vast majority of the requirement. Requirements R4 and R6 even seem to recognize this by not including Distribution Provider in the list of entities to which the Transmission Operator or Balancing Authority are required to designate Alternate Interpersonal Communications capability. The following comments pertain to COM-002-3. While COM-002-3 is well written to explain the three-part communications requirements and makes it perfectly clear when Reliability Directive has been issued, the opening clause leaves the responsible entity open to second guessing on whether they should have issued a Reliability Directive. This problem could be solved by changing the opening clause to "When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive". In the second bullet of Requirement R3, we suggest using "Restate" in place of "Reissue". The responsible entity is not really reissuing the Reliability Directive. They are still in the act of trying to get the Reliability Directive issued and are simply re-communicating it because it was not understood.

Requirements R4.3 and R6.3 require TOP's and BA's to establish alternative means of "interpersonal communications" with other TOP's and BA's without regard to the reliability impact each TOP or BA has on the interconnection. Why would it be necessary for a TOP with one 161kv transmission line or a BA with 100 MW of total load, or one GOP with a 30MW unit to realize additional costs when the facilities they operate have little reliability impact? Rationale criteria should be included here to identify the TOP's and BA's where alternative means of "interpersonal communications" should be implemented. Furthermore, these requirements do not recognize the condition when another party refuses to install alternative communication equipment. TOP's and BA's have no authority over other TOP's and BA's to establish alternative means of communication. Requirements that are dependent on the actions of other parties over which you have no control or authority are poor requirements. In addition, most RC's have established satellite telephone systems as back-up communication with TOP's and BA's. Some RC's may have to establish additional communication systems with some BA's as these requirements impose to avoid Standards of Conduct issues.
Yes
No
How does a DP or GOP experiencing a failure of its "interpersonal communications" consult with its TOP or BA to determine a mutually agreeable time for restoration of "interpersonal communications"? There are no requirements that require alternative "interpersonal communications" for the DP and GOP. This requirement cannot be fulfilled and should be removed.
Yes
R9 – considering the reliability of communication systems and System Operator attention may be on more important operational concerns, a 2 hour response to a problem with the alternative means of communication is over sensitive. Allowing for sometime in an operating shift would be more in line, such as 8 hours. Violation Severity Levels for COM-001-2: The VSL's for requirements R1-R8 and R11 do not recognize the efforts of Entities to meet the requirements. If an Entity failed to establish communications or alternative communications with 1 Entity out of 20 should that be Severe? Implementation Plan for COM-001-2: The implementation plan is too aggressive at completing in 6 months after regulatory approvals. Establishing agreements with other RC's, TOP's and BA's for alternative "interpersonal communications" regarding the various types of communications available that meet these requirements will take more than 6 months. Recommend 12 months to allow Entities sufficient time to reach agreements and to establish the communications.

# Consideration of Comments

## Reliability Coordination – Project 2006-06

The Reliability Coordination Drafting Team thanks all commenters who submitted comments on the fifth formal posting for Project 2006-06—Reliability Coordination. These standards were posted for a 30-day public comment period from January 9, 2012 through February 8, 2012. Stakeholders were asked to provide feedback on the standards and associated documents through a special electronic comment form. There were 62 sets of comments, including comments from approximately 170 different people from approximately 106 companies representing 9 of the 10 Industry Segments, as shown in the table on the following pages.

### Summary Consideration

The RCSDT received comments from stakeholders, where a majority of those comments were focused on compliance elements of the standards, various errors, and other ambiguities. The RCSDT believes it has been responsive to the many comments and has either provided adequate explanation, where applicable, as well as incorporating the needed clarifications or corrections. There were no strong minority issues revealed in the comments which the RCSDT could not address. Revisions made to the standards are summarized in the following sections by standard.

#### COM-001-2

In the last posting and successive ballot, the standard received approval from about half of the ballot body with numerous comments. The RCSDT made substantive changes to the standard based on comments. The changes to COM-001-2, R3 and R4 require the standard to undergo a second successive ballot. The RCSDT believes it has addressed stakeholder comments and concerns in such a way that the standard is improved and meets the expectation expressed in comments for reliability and industry approval. Upon achieving industry consensus, this standard will advance to a recirculation ballot.

**Purpose:** Removed the text “for the exchange of Interconnection and operating information” based on comments received and due to the fact that the standard is for capability, which enables information exchange under other standards.

**Effective Date:** The language in the effective date was made consistent with current Standard Drafting Guidelines.

**Requirements:** Most changes were minor. In places where the capitalized word “Adjacent” began the requirement Parts, the RCSDT added the word “Each” and made “Adjacent” lowercase to avoid the perception of a defined glossary term. This change occurred in Parts 1.2, 2.2, 3.5, 4.3, 5.5, and 6.3. A significant change occurred in requirements R3 and R4. The RCSDT addressed stakeholders concerns

about the use of “synchronously connected within the same Interconnection.” This was addressed by removing the phrase “within the same Interconnection;” however, other comments were concerned that synchronously did not address DC ties. The RCSDT addressed this by adding a Part, which reads, “Each Transmission Operator asynchronously connected” to Requirements R3 and R4. Requirement R10 was updated to more accurately reflect the reference to other requirements. It should not have referenced R1 through R6; but, rather, R1, R3, and R5. Requirement R11 was updated to address stakeholder concerns about reaching a “mutually agreeable time,” so was changed to “mutually agreeable action.” Other minor changes included making plural terms singular and replacing “per” for “each” for readability and understanding.

Some commenters had concerns about conditions of non-compliance if the entity’s Interpersonal Communication capability failed. To address this concern, the RCSDT added conforming language to Requirements R1, R3, R5, R7 and R8 that bridges the potential gap in non-compliance for a failed Interpersonal Communication capability.

**Measures:** Most changes to the measures were non-substantive and provided better formatting for readability. Measures M3 and M4 were updated to align with the changes to the parts of Requirements R3 and R4 regarding synchronous and asynchronous. Several measures had inconsistent example evidence for the performance of the requirement. For example, time (hour/minute) based elements are introduced in R9 and R10; however, the measures did not note using dated and “time-stamped” evidence. Likewise, previous requirements did make use of “time-stamped” where there was no time based (hour/minute) performance. The RCSDT found this an unnecessary compliance burden. Other minor changes included making plural terms singular and replacing “per” for “each,” for readability and understanding.

**Compliance, Compliance Enforcement Authority:** The language in the CEA section was made consistent with current Standard Drafting Guidelines.

**Compliance, Data Retention:** The language in the data retention section was made consistent with current Standard Drafting Guidelines. The bulleted items were reformatted for consistency and readability.

**Violation Severity Levels:** Clarifying changes were made to the VSLs. Terms were made singular, the word “Requirement” added to appropriately designate the applicable requirement, and added the two newly-created parts from Requirements R3 and R4. The RCSDT added High VSLs for Requirements R1 through R8 to conform with VSL Guidelines. Requirements R1 through R8 are not binary only.

### **COM-002-3**

The changes to COM-002-3 are considered non-substantive; therefore, the standard will advance to a recirculation ballot. The RCSDT believes it addressed stakeholder comments and concerns in such a

way that the updated sections of the standard is improved and overall meets industry's expectation for approval. Following approval, this standard will be submitted for adoption by the NERC Board of Trustees

**Effective Date:** The language in the effective date was made consistent with current Standard Drafting Guidelines.

**Requirements:** For the named functional entities in Requirements R2 and R4, the conjunction "and" previously used has been changed to "or," based on comments received from stakeholders.

**Measures:** Corresponding changes to Measures M2 and M3 were made in regards to Requirement R2 and R3. Measure M2 received an addition to include the phrasing, "restated, rephrased, or recapitulated" for consistency with Requirement R2.

**Compliance, Compliance Enforcement Authority:** The language in the CEA section was made consistent with current Standard Drafting Guidelines.

**Compliance, Data Retention:** The language in the data retention section was made consistent with current Standard Drafting Guidelines. Some bulleted items were corrected to accurately align them with the respective requirements.

**Violation Severity Levels:** One clarifying change was made to the R3 VSL. The RCSDT added a High VSL to accurately capture the condition where the entity failed to confirm the response of the recipient and removed the first part of the Severe VSL.

### **IRO-001-3**

The changes to IRO-001-3 are considered nonsubstantive; therefore, the standard will advance to a recirculation ballot. The RCSDT believes it addressed stakeholder comments and concerns in such a way that the updated sections of the standard are improved and overall meets industry's expectation for approval. Following approval, this standard will be submitted for adoption by the NERC Board of Trustees

**Effective Date:** The language in the effective date was made consistent with current Standard Drafting Guidelines.

**Requirements:** In requirement R1, the last word (glossary term) was made singular for clarity and consistency with the definition. Requirement R2 was missing a conjunction in the functional entities, and this has been added.

**Measures:** Measure M1 was updated to use past tense language, consistent with drafting guidelines. Also, the parenthetical on “Reliability Directive(s)” was removed and the glossary term made singular for consistency with R1. Measure M2 addressed stakeholder comments by adding the word “physically,” phrase now reads, “physically implemented” to be consistent with Requirement R2, as well as making the term “direction” singular.

**Compliance, Compliance Enforcement Authority:** The language in the CEA section was made consistent with current Standard Drafting Guidelines.

**Compliance, Data Retention:** The language in the data retention section was made consistent with current Standard Drafting Guidelines. Some bulleted items were corrected to accurately align them with the respective requirements and remove inaccurate bullets from previous postings.

**Violation Severity Levels:** Clarifying changes were made to the R1 VSL. The phrase, “exercise its authority” was added, based on stakeholder comment, to more accurately reflect Requirement R1. The RCSDT removed the High VSL from R2, and more accurately incorporated it into the Sever VSL.

### **Additional Information**

All comments submitted may be reviewed in their original format on the standard’s project page:

[http://www.nerc.com/filez/standards/Reliability\\_Coordination\\_Project\\_2006-6.html](http://www.nerc.com/filez/standards/Reliability_Coordination_Project_2006-6.html)

If you feel that your comment has been overlooked, please let us know immediately. Our goal is to give every comment serious consideration in this process! If you feel there has been an error or omission, you can contact the Vice President of Standards and Training, Herb Schrayshuen, at 404-446-2560, or at [herb.schrayshuen@nerc.net](mailto:herb.schrayshuen@nerc.net). In addition, there is a NERC Reliability Standards Appeals Process.<sup>1</sup>

---

<sup>1</sup> The appeals process is in the Standard Processes Manual: [http://www.nerc.com/files/Appendix\\_3A\\_StandardsProcessesManual\\_20120131.pdf](http://www.nerc.com/files/Appendix_3A_StandardsProcessesManual_20120131.pdf)

## Index to Questions, Comments, and Responses

1. The RCSDT has revised the applicability of the standards and implementation plans by aligning COM-001-2, COM-002-3, and IRO-001-2 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards. Do you agree with this change in applicability to the three standards? If not, please explain in the comment area below. ... 14
2. Do you agree with the addition of “Adjacent” entities in COM-001-2, Parts 3.5, 4.3, 5.5 and 6.3 of COM-001-2? If not, please explain in the comment area below. .... 28
3. The RCSDT removed the phrase "to exchange Interconnection and operating information" in COM-001-2, Requirements R1 through R8 based on stakeholder comments. Do you agree with the revision? If not, please explain in the comment area below. .... 39
4. A new requirement was added for clarity regarding what is required of Distribution Providers and the Generator Operators: R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations] This requirement requires collaboration between entities to restore a failed communications capability. Do you agree with the new requirement? If not, please explain in the comment area below..... 47
5. The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact. Do you agree with the proposed definition? If not, please explain in the comment area below. .... 76
6. Do you have any other comment, not expressed in questions above, for the RC SDT?..... 96

**The Industry Segments are:**

- 1 — Transmission Owners
- 2 — RTOs, ISOs
- 3 — Load-serving Entities
- 4 — Transmission-dependent Utilities
- 5 — Electric Generators
- 6 — Electricity Brokers, Aggregators, and Marketers
- 7 — Large Electricity End Users
- 8 — Small Electricity End Users
- 9 — Federal, State, Provincial Regulatory or other Government Entities
- 10 — Regional Reliability Organizations, Regional Entities

1. The RCSDT has revised the applicability of the standards and implementation plans by aligning COM-001-2, COM-002-3 and IRO-001-3 to apply to the same entities and by removing LSE, PSE and TSP as applicable entities from the COM standards. Additionally, the Interchange Coordinator has been removed as an applicable entity from the standards. Do you agree with this change in applicability to the three standards? If not, please explain in the comment area below.

**Summary Consideration:** Most commenters agreed with removing the LSE, PSE, and TSP from the three standards. Some did not agree with keeping the Distribution Provider (DP) within the standards. The RCSDT in being responsive to the FERC directive in Order No. 693, Paragraph 487, considered the DP entity; however, concluded having the DP is appropriate in responding to the directive to allow for reliable operations in normal and emergency situations. In reference to the implementation for DPs and GOPs, the RCSDT believes there is not a significant burden for most DP and GOP entities to implement an Interpersonal Communication capability. Some comments referenced the NERC Functional Model V5 concerning DP and GOP entities; however, the model is clear on the basic activities and supports the DP and GOP being applicable to the standards. The model also supports the removal of LSEs, for example. The RCSDT did not modify the applicability of the standards with regard to functional entities.

Organization	Yes or No	Question 1 Comment
ACES Power Marketing Standards Collaborators	No	While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.
<p><b>Response:</b> The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP in COM-001, and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p>		
Entergy Services, Inc	No	R3 adds additional responsibilities for the TOP to have Interpersonal Communications capability with EACH DP and GOP in its footprint. Similarly, R4 gives the TOP responsibility to have alternative

Organization	Yes or No	Question 1 Comment
		<p>communications capability with each of these entities. This is a significant additional responsibility for the TOP to document and perhaps arrange for additional means of communication with these entities.</p> <p>The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP and GOP. The intent is to have Interpersonal Communication capability with the DP and GOP, and not to build additional communication facilities, but to be able “to interact, consult, or exchange information.” In contrast to R3, R4 does not include the DP or GOP. No change made.</p> <p>The short time frame provided for implementation of these requirements is not consistent with the additional effort and compliance documentation that is necessary to implement these requirements. Entergy recommends that the implementation time frame for these new requirements that apply to new entities, or expand the application of COM-001 for existing entities have an effective date 12 months beyond the applicable regulatory approval.</p> <p>Additionally, the implementation of the requirements that apply to the DP and GOP will represent an increase in the amount of documentation that must be retain to demonstrate compliance, and in some cases may also result in their having to purchase equipment or install new alternate means of communication.</p> <p>The RCSDT believes that six months is adequate, considering additional facilities should not have to be built to establish communications with the DP and GOP; similarly, compliance documentation should not impose significant work on the entities part. No change made.</p> <p>What is the improvement in reliability expected as a result of these new requirements?</p> <p>The expected reliability result is addressed in the FERC directive (P487, Order 693), “...ensure there is no reliability gap during normal and</p>

Organization	Yes or No	Question 1 Comment
		<p>emergency operations. For example, during a blackstart when normal communications may be disrupted, it is essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators.” No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>Independent Electricity System Operator</p>	<p>No</p>	<p>In COM-001, we commented earlier that the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. The SDT’s response indicates that the suggested change is not needed since additionally requiring DP and GOP entities to have Alternative Interpersonal Communication capability would impose more cost on smaller DP and GOP entities that have little or no risk impact to the bulk electric system.</p> <p>We disagree with this assessment since the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability. If Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, then it is deemed necessary that such communication be provided at all times, which indicates the need for an alternative capability.</p> <p>We once again urge the SDT to make the list of entities in R5 and R6 to be the same.</p>
<p><b>Response:</b> The RCSDT asserts the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Additionally, requiring DP and GOP entities to have Alternative Interpersonal Communication capability only imposes more cost on smaller DP and GOP entities that have little or no risk impact to the Bulk Electric System. No change made.</p>		

Organization	Yes or No	Question 1 Comment
Georgia System Operations	No	<p>While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.</p> <p>The RCSDT is addressing a FERC directive (P487, Order 693) to include the DP in COM-001, and the RCSDT has included the DP in COM-002 and IRO-001 applicability because these standards are related to reliability communications. The RCSDT agrees with the point that communication will most likely be from the BA or TOP; however, the communications may come from the RC. No change made.</p> <p>Accordingly, NERC’s Reliability Functional Model V5<sup>2</sup> describes and identifies the DP’s relationships with other Functional Entities to the TOP and BA with respect to Real Time.</p> <p>Real Time<sup>3</sup></p> <p>7. Implements voltage reduction and sheds load as directed by the Transmission Operator or Balancing Authority.</p> <p>8. Implements system restoration plans as coordinated by the Transmission Operator.</p> <p>9. Organization	Yes or No	Question 1 Comment
		corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.
<b>Response:</b> See response above.		
ERCOT ISO	No	Some concern for removal of LSE in particular from R2 and R3 from current IRO-001-2 R7 for the ERCOT region. ERCOT Region has QSE’s <sup>4</sup> that manage Load Resources. There may be some QSEs that are not registered as a GOP that deploy Load Resources. Per the current LSE JRO, QSEs with Load Resources are registered as LSEs. Not requiring them to deploy Load Resource directives could be perceived as a reliability gap created from previous version to this version. PSEs could be removed as long as they fall under BA authority.
<b>Response:</b> The RCSDT believes the DP is the correct entity because the LSE does not own assets. The definition of LSE is, “The functional entity that secures energy and transmission service (and reliability related services) to serve the electrical demand and energy requirements of its end use customers.” In contrast, the definition of a DP is, “The functional entity that provides facilities that interconnect an End-use Customer load and the electric system for the transfer of electrical energy to the End-use Customer.” Additionally, the Functional Model V5 demonstrates this under the Reliability Coordinator, “18. Issues corrective actions and emergency procedures directives (e.g., curtailments or load shedding) to Transmission Operators, Balancing Authorities, Generator Operators, Distribution Providers, and Interchange Coordinators.” No change made.		
City of Green Cove Springs	Affirmative	COM-001-2: In R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, I'm thinking LSE is the right functional entity. For Florida,

<sup>4</sup> Qualifying Scheduling Entities, (<http://www.ercot.com/services/rq/qse/>)

Organization	Yes or No	Question 1 Comment
		<p>it doesn't really matter. If the LSE is the "correct" entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added.</p> <p>The RCSDT believes the DP should be included and that the LSE should not because the Functional Model V5 addresses this case. See Page 47, "Distribution Provider," of the Functional Model V5, Item 9. "Directs Load-Serving Entities to communicate requests for voluntary load curtailment." The DP is the asset owner and would direct the LSE to perform actions. No change made.</p> <p>COM-001-2, R9 – "Each ... shall test its Alternative Interpersonal Communications capability", suggest adding the phrase "to each entity for which Alternative Interpersonal Communications is required" to add clarity.</p> <p>The RCSDT believes the additional phrasing has little value to the overall requirement. The requirement specifically applies to those responsible entities listed, and it further aligns with R2, R4 and R6. No change made.</p>
<p><b>Response:</b> See response above.</p>		
Beaches Energy Services	Affirmative	<p>COM-001-2: In R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply/demand balance is not local and in markets that allow retail competition, I'm thinking LSE is the right functional entity. <p><b>Response:</b> The RCSDT believes the DP should be included and not the LSE because the Functional Model V5 addresses this case. See Page 47, "Distribution Provider," of the Functional Model V5, Item 9. "Directs Load-Serving Entities to communicate requests for voluntary load curtailment." With regard to R7, the DP is the asset owner and would direct the LSE to perform actions. No</p>		

Organization	Yes or No	Question 1 Comment
change made.		
MISO Standards Collaborators	Yes	<p>(1) In COM-001, the entities in R4 and R6 (now R5 and R6) should be the same, i.e. the BA needs to have the Interpersonal Communication capability as well as the Alternative Interpersonal Communication capability with the same entities. Although the need to have Alternative Interpersonal Communication capability should be assessed from the viewpoint that whether or not the absence of such capability can adversely affect reliability, the proposed standard does not require the capability in all cases. At the same time, this standard does not preclude such capability. Even though Interpersonal Communication capability is needed between a BA and a DP/GOP to communicate reliability instructions or directives, there are other communications paths which can be used in the case of the loss of that capability.</p> <p>Since TOPs are also required to have the capability, the BA can call the TOP and ask the TOP to contact the DP/GOP for them until they can implement capability. In addition, it is difficult to visualize entities which would not have the public telephone system or even cell phones available for use in the event of the loss of the capability.</p>
<p><b>Response:</b> The RCSDT stresses the standard meets FERC Order 693 regarding DP and GOP entities by requiring these entities to have Interpersonal Communication capability. Additionally, requiring DP and GOP entities to have Alternative Interpersonal Communication capability only imposes more cost on smaller DP and GOP entities that have little or no risk impact to the Bulk Electric System. No change made.</p>		
Florida Municipal Power Agency	Yes	<p>In COM-001-2 R5.3, should a BA have communications with a DP or LSE? For the TOP, it is the DP because the load influence is very local; however, for a BA the supply / demand balance is not local and in markets that allow retail competition, it may be that the LSE is the more appropriate functional entity. For instance, the Functional Model when discussing LSE on page 55</p>

Organization	Yes or No	Question 1 Comment
		<p>states that one of the LSE’s real time duties is:            “12. Receives requests from the Balancing Authority and Distribution Provider for voluntary load curtailment.”<sup>5</sup></p> <p>The RCSDT believes the DP should be included and not the LSE because the Functional Model V5 addresses this case. See Page 47, “Distribution Provider,” of the Functional Model V5, Item 9. “Directs Load-Serving Entities to communicate requests for voluntary load curtailment.” In this case (COM-001), the load curtailment is voluntary and would generally be for economics, the exchange of operating information and not reliability actions. No change made.</p> <p>If the LSE is the more appropriate entity, then R7 would need to be changed and a new requirement specific to LSE's would need to be added.</p> <p>For Florida, which does not have retail competition, it doesn’t matter whether the DP or the LSE is more appropriate; hence, the “yes” answer.</p> <p>With regard to R7, the DP is the asset owner and would direct the LSE to perform actions. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>Georgia Transmission Corporation</p>	<p>Yes</p>	<p>While we agree with removing LSE, PSE, and TSP, we do not agree with the need to include Distribution Provider in all the standards. For example, in IRO-001-3, the Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. Indiana Municipal Power Agency		No comment.

2. Do you agree with the addition of “Adjacent” entities in COM-001-2, Parts 3.5, 4.3, 5.5 and 6.3 of COM-001-2? If not, please explain in the comment area below.

**Summary Consideration:** The majority of comments were regarding COM-001-2, R3 and R4. Concerns included issues with the use of “Adjacent Transmission Operators” and “synchronously connected within the same Interconnection.” The capitalized word “Adjacent,” beginning the requirement gives the appearance of an undefined glossary term. Therefore, the RCSDT addressed this by starting the applicable Parts of those requirements with “Each” to form “Each adjacent Transmission Operator...” and avoiding the need for another glossary term for something that is widely understood within the industry. The RCSDT made an additional clarifying change to address the issue that some Transmission Operators may not be adjacent for situations other than synchronously connected within the same Interconnection in the traditional understanding. For example, some entities have connections beyond the interconnection and some connections are asynchronous. To address this concern, the RCSDT separated the requirements to identify “synchronously connected” and “asynchronously connected,” and removed the “within the same Interconnection” criteria. Other minor formatting and reference errors were noted and corrected.

Organization	Yes or No	Question 2 Comment
SERC OC Standards Review Group	No	<p>We are concerned regarding communications between Transmission Operators on opposite ends of DC ties, which may or may not be in the same interconnection.</p> <p>Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous.</p> <p>The measures should also be verified to ensure that they align properly with the final requirements.</p>
<p><b>Response:</b> The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators, and has eliminated the phrase “within the same interconnection.” See change in COM-001-2, R3 and R4. Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p>		

Organization	Yes or No	Question 2 Comment
Northeast Power Coordinating Council	No	<p>NERC uses the terms “adjacent” and “neighboring” in various standards. It is generally believed that those terms have the same meanings, but there are those who believe those terms, as used, are intended to have different meanings. To ensure a consistent usage and understanding, the definition of the term adjacent must be made known before its addition to the standard. Consideration should be given to using only one term in all standards if adjacent and neighboring are intended to mean the same thing. Both terms are used in NERC Standards, sometimes both in the same standard. For example, EOP-001-2b uses “neighboring” in R5, and “adjacent” in R3.3.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarify changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
MRO NSRF	No	<p>NERC has formally defined “Adjacent Balancing Authority” in the NERC Glossary of Terms, but not “Adjacent Transmission Operator.” The MRO NSRF recommends that “Adjacent Transmission Operator” be defined similar to the “Adjacent Balancing Authority” definition in the NERC Glossary of Terms.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarify changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
Kansas City Power & Light	No	<p>Requirements R4.3 and R6.3 require TOP’s and BA’s to establish alternative means of “interpersonal communications” with other TOP’s and BA’s without regard to the reliability impact each TOP or BA has on the interconnection. Why would it be necessary for a TOP with one 161kv transmission line or a BA with 100 MW of total load, or one GOP with a 30MW unit to realize additional costs when the facilities they operate have little reliability impact?</p> <p>Rationale criteria should be included here to identify the TOP’s and BA’s where</p>

Organization	Yes or No	Question 2 Comment
		<p>alternative means of “interpersonal communications” should be implemented.</p> <p>Furthermore, these requirements do not recognize the condition when another party refuses to install alternative communication equipment. TOP’s and BA’s have no authority over other TOP’s and BA’s to establish alternative means of communication. Requirements that are dependent on the actions of other parties over which you have no control or authority are poor requirements.</p> <p>In addition, most RC’s have established satellite telephone systems as back-up communication with TOP’s and BA’s. Some RC’s may have to establish additional communication systems with some BA’s as these requirements impose to avoid Standards of Conduct issues.</p>
<p><b>Response:</b> The RCSDT has not placed any limiting applicability on entities in being responsive to the FERC directive (P487, Order 693), “...ensure there is no reliability gap during normal and emergency operations. For example, during a blackstart when normal communications may be disrupted, it is essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators.” The RCSDT does not prescribe the criteria for alternative means of Interpersonal Communication capability, so each entity may determine its own needs to meet the requirement. With regard to requiring other BAs or TOPs to install Alternative Interpersonal Communication capability as registered entities, other BAs or TOPs have the same responsibility to comply with the requirement. Having a satellite backup is an acceptable form of communication; however, the RCSDT does not understand the comment about the Standards of Conduct issues. No change made.</p>		
Southern Company	No	<p>We are concerned regarding communications between Transmission Operators on opposite ends of DC ties, which may or may not be in the same interconnection.</p> <p>Similarly, COM-001, R1.2 limits the requirement of adjacent Reliability Coordinators to the same interconnection and this should not be limited to the same interconnection whether it is synchronous or non-synchronous.</p> <p>The measures should also be verified to ensure that they align properly with the final requirements.</p>
<p><b>Response:</b> The RCSDT has made clarifying changes by adding Parts to R3 and R4 to address asynchronous connections between</p>

<p>Transmission Operators and have eliminated the phrase “within the same interconnection.” See change in COM-001-2, R3 and R4. Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinators from one Interconnection to another. No change made.</p>		
Xcel Energy	No	<p>In COM-001-2, R4.3. Adjacent Transmission Operators synchronously connected within the same Interconnection. This new requirement has a term that is not defined Adjacent Transmission Operators.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarifying changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>		
Independent Electricity System Operator	No	<p>(1) We agree with the addition of “Adjacent” entities in the quoted parts except the qualifier “synchronously connected within the same Interconnection” need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same interconnection.” See change in COM-001-2, R3 and R4.</p> <p>(2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for catching this oversight. The corresponding TOP entity in R3.5 has been added to the Measure M3.</p>
<p><b>Response:</b> See response above.</p>		

Organization	Yes or No	Question 2 Comment
Exelon	No	May have an unintended effect on registrations as some GOPs use an intermediately dispatch organization that perform actions on behalf of the generating units.
<p><b>Response:</b> Having an intermediary dispatching actions for generation units is okay; however, the responsible GOP should have adequate agreements to perform these activities; for example, a Joint Registration Organization (Type 1) or Coordinated Functional Registration (Formerly Type 2). No change made.</p>		
ISO New England	No	<p>ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).</p>
<p><b>Response:</b> Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. No change made.</p>		
Texas Reliability Entity	No	<p>(1) Requirements R1, R2, R3 and R4 should apply to all adjacent Reliability Coordinators and Transmission Operators, regardless of whether they are in the same Interconnection.</p> <p>The ERCOT Interconnection is asynchronously connected to adjacent Interconnections, and it is imperative that Functional Entities within Texas RE's purview be able to exchange operating information with Transmission Operators and Reliability Coordinators in those adjacent areas, even if they are in a different Interconnection.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase "within the same Interconnection." See change in COM-001-2, R3 and R4.</p> <p>(2) Requirement parts R5.5 and R6.3 refer to "Adjacent Balancing Authorities."</p>

Organization	Yes or No	Question 2 Comment
		<p>Measures M5 and M6 refer to “adjacent Balancing Authority” - note the small “a” on adjacent. “Adjacent Balancing Authority” is a defined term in the NERC Glossary, which has a more specific meaning than “adjacent Balancing Authority.” Which term is intended in R5.5 and R6.3? If you don’t intend to use the defined term, perhaps use a word like “contiguous” or “neighboring” rather than “adjacent.”</p> <p>The RCSDT thanks you for your comment and recognizes the confusion created by having “Adjacent” start the sentence. This gave the appearance of a defined NERC glossary term. The RCSDT has made clarifying changes to the requirements and measures to eliminate this problem. See changes to COM-001-2, R1.2, R2.2, R3.5, R4.3, R5.5, and R6.3.</p>
<p><b>Response:</b> See response above.</p>		
Hydro One Networks Inc.	No	<p>(1) We agree with the addition of “Adjacent” entities in the quoted parts except the qualifier “synchronously connected within the same Interconnection” need to be removed from Parts 3.5 and 4.3 since TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors). Even in the case of ERCOT, TOPs on the two sides of a DC tie do communicate with each other for daily operations.</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p> <p>(2) Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for catching this oversight. The corresponding TOP entity in R3.5 has been added to the Measure M3.</p>
<p><b>Response:</b> See response above.</p>		

Organization	Yes or No	Question 2 Comment
SPP Standards Review Group	Yes	<p>We concur with the addition of “Adjacent” but ask that the SDT give some consideration to allowing an exemption in R6.3 for relatively small loads, less than 20 MW, that are pseudo tied into a Balancing Authority. Loss of these facilities would not place a burden on the BES and should not require Alternative Interpersonal Communications capabilities.</p>
<p><b>Response:</b> The RCSDT has not placed any limiting applicability on entities in being responsive to the FERC directive (P487, Order 693), “...ensure there is no reliability gap during normal and emergency operations. For example, during a blackstart when normal communications may be disrupted, it is essential that the Transmission Operator, Balancing Authority and Reliability Coordinator maintain communications with their Distribution Providers and Generator Operators.” The RCSDT does not prescribe the criteria for alternative means of Interpersonal Communication capability so each entity may determine its own needs to meet the requirement. With regard to requiring other BAs or TOPs to install Alternative Interpersonal Communication capability as registered entities, other BAs or TOPs have the same responsibility to comply with the requirement. Having a satellite backup is an acceptable form of communication. No change made.</p>		
MISO Standards Collaborators	Yes	<p>(1) We agree with the addition of “Adjacent” entities in the quoted parts. However, there are some entities which may need the capability even though they are not “synchronously connected within the same Interconnection.” This standard does not require them to have the capability, but it does not preclude such capability. In these cases, those entities should evaluate whether the need for the capability is a reliability need or market coordination. If the entities were connected synchronously, actions taken by an entity could have immediate effect upon other entities. However, if not synchronously connected, changes in flows across the asynchronous ties would have to follow the interchange scheduling process with approval by all involved entities before changes could be enacted. Some TOPs do communicate with other TOPs even in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors).</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the</p>

3. The RCSDT removed the phrase "to exchange Interconnection and operating information" in COM-001-2, Requirements R1 through R8 based on stakeholder comments. Do you agree with the revision? If not, please explain in the comment area below.

**Summary Consideration:** Several commenters noted the phrase “to exchange Interconnection and operating information” should also be removed from the Purpose statement. The RCSDT agrees and removed this phrase from the Purpose statement. Some concerns also noted COM-001-2 should also add additional language to clarify the standard is not for the exchange of data. Since the standard focuses on having communication capability, the additional clarity is not needed; therefore, the RCSDT made no change. Some commenters noted items which have been addressed in the questions above.

Organization	Yes or No	Question 3 Comment
Global Engineering and Energy Solutions	No	
Independent Electricity System Operator	No	<p>In the last posting, we suggest removing the phrase “within the same Interconnection” from R1 (now R2.2) since there are RCs between two Interconnections that need to communicate with each other for reliability coordination (e.g. between Quebec and the RCs in the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT’s response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.</p>
<p><b>Response:</b> The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and has eliminated the phrase “within the same Interconnection.” See change in COM-001-2, R3 and R4.</p>		

Organization	Yes or No	Question 3 Comment
Great River Energy	No	<p>"to exchange interconnection and operation information" was removed from the requirements in COM-001-2 but remains in the purpose. For consistency, it needs to be removed. It could read,</p> <p><i>"To establish Interpersonal Communication capabilities for the exchange of information necessary to maintain reliability."</i></p>
<p><b>Response:</b> The SDT agrees and has made a conforming change to the Purpose of COM-001. See revised Purpose statement.</p>		
Ingleside Cogeneration LP	No	<p>In the background section of this ballot, the project team indicates that the removal of the phrase is intended to signal that these requirements do NOT apply to the exchange of data. Although Ingleside Cogeneration LP agrees that the phrase is not a helpful description of the need for inter-entity communications - and should be removed - we do not see how the remaining language achieves the project team's purpose.</p> <p>It seems the confusion stems from the multitude of data communication types. Email messages between operating entities may be a valid communications path under COM-001-2, while telemetry/control is covered under other Standards. We believe that a technical guideline may be an appropriate vehicle to distinguish what types of communications are subject to these requirements, and which are not.</p>
<p><b>Response:</b> The RCSDT has drafted performance requirements that are intended to be flexible enough to accommodate different technologies and innovation by industry. It is not the intent of the drafting team to establish all the possible methods of communicating. Drafting teams generally do not create guidelines. No change made.</p>		
ISO New England	No	<p>ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to</p>

Organization	Yes or No	Question 3 Comment
		have communications facilities (electronic or voice).
<p><b>Response:</b> Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. No change made.</p>		
Hydro One Networks Inc.	No	<p>(1) In the last posting, there were suggestions of removing the phrase “within the same Interconnection” from R1 (now R2.2) since there are RCs between two Interconnections that need to communication with each other for reliability coordination (e.g. between Quebec and the RCs the Northeast such as IESO, NYISO, NBSO and ISO-NE, and between the RCs in WECC with the RCs in the Eastern Interconnection). Such coordination may include but not limited to curtailing interchange transactions crossing Interconnection/RC boundary, as stipulated in IRO-006. The SDT’s response to our comments citing that the phrase was added to address the ERCOT situation leaves a reliability gap to the other situations. We again urge the SDT to remove the phrase. If necessary, the ERCOT situation can be addressed by a regional variance.</p>
<p><b>Response:</b> Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinators from one Interconnection to another. No change made.</p>		
SERC OC Standards Review Group	Yes	We suggest that this phrase should also be removed from the “Purpose” statement.
<p><b>Response:</b> The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
MISO Standards Collaborators	Yes	We urge the SDT to remove the phrase. If necessary, regional situations can be addressed by a regional variance.
<p><b>Response:</b> The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		

Organization	Yes or No	Question 3 Comment
ACES Power Marketing Standards Collaborators	Yes	<p>We thank the drafting team for making this change and for the clear communication that the intent of this standard is not for data exchange in the response to comments. However, we do believe one additional change is necessary to make the intent absolutely clear.</p> <p>The purpose of statement of COM-001-2 still includes the phrase “to exchange Interconnection and operating information.” Since a standard must stand on its own, we believe it is necessary to remove that phrase from the purpose statement to avoid misinterpretations in the future. Auditors and enforcement personnel are not required to understand the development history when enforcing the standard. Furthermore, the purpose is really to enable communications between these functional entities.</p>
<p><b>Response:</b> The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
Southern Company	Yes	We suggest that this phrase should also be removed from the “Purpose” statement.
<p><b>Response:</b> The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
Entergy Services, Inc	Yes	Yes, the requirements of this standard pertain to having communications capability. The specific content of that communication should not be the subject of the standard.
<p><b>Response:</b> The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p>		
We Energies	Yes	Please add "does not include telemetered or derived data"
<p><b>Response:</b> The standard COM-001 is for Interpersonal Communication capability, which facilitates the communication (i.e., “... to interact, consult, or exchange information.”) and not the exchange of data which is addressed in IRO-010. No change made.</p>		
Duke Energy	Yes	However, the definition of Interpersonal Communication should also be expanded to clearly include the drafting team’s intent that the capability is NOT for the exchange

Organization	Yes or No	Question 3 Comment
		<p>of data.</p> <p>The phrase “for the exchange of Interconnection and operating information” should also be struck from the Purpose statement.</p>
<p><b>Response:</b> The SDT agrees and has made a conforming change to the Purpose of COM-001: See revised Purpose statement.</p> <p>The standard COM-001 is for Interpersonal Communication capability, which facilitates the communication (i.e., “... to interact, consult, or exchange information.”) and not the exchange of data which is addressed in IRO-010. 4. **A new requirement was added for clarity regarding what is required of Distribution Providers and the Generator Operators: R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations] This requirement requires collaboration between entities to restore a failed communications capability. Do you agree with the new requirement? If not, please explain in the comment area below.**

**Summary Consideration:** Most of the comments pertain to compliance and clarity concerns; for example, the use of “any of” in the requirement. The phrase “any of” has been eliminated to resolve this concern. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure. Other comments recommended using the terms, such as, “primary,” “secondary,” “device,” “means,” and “medium” with regard to the proposed definitions. The RCSDT emphasizes the requirements are for “capability” and adding such proposed terms is not needed to achieve the necessary clarity. Some commenters raised concerns about being able to reach “mutually agreeable time” for restoration. The RCSDT addressed these concerns by revising the phrase to “mutually agreeable action,” which allows the applicable entities to reach consensus on the effort needed to restore communications. This change also provides flexibility to the entities in addressing the steps to restore communications rather than focusing on the time for restoration. The requirement does not limit the sources of information. Allowing the DP and GOP to reach a mutually agreeable action, eliminates the need for Alternative Interpersonal Communication capability considering the limited impact a failure might have on DPs and GOPs overall. From a compliance standpoint, the DP or GOP that is working to restore its Interpersonal Communication capability is not out of compliance as far as the entity is meeting the requirement for taking action to restore its capability. Other similar concerns pertained to having 24/7 dispatch, which is an operational function. The requirements are constructed around having communication capability. The RCSDT understands there may be entities that have certain operations where there is not 24/7 staffing and these cases should be addressed by their operation with other entities through agreements, procedures or other means as needed for reliable operations. Other minor corrections and formatting issues noted were reviewed and corrected accordingly.

Some commenters were concerned that large entities would not be capable of meeting the 60-minute notification upon the loss of their Interpersonal Communication capability. The RCSDT notes this pertains to the BA, RC, and TOP, which are required to have an Alternative Interpersonal Communication capability, and should have the ability to accomplish the required notification. Also, the loss of Interpersonal Communication capability may not always impact the entire capability. This time frame does not apply to the DP and GOP since the Alternative Interpersonal Communication capability is not required for these functional entities. Other minor formatting and corrections to references were made, such as, focusing on using the singular form of words rather than the plural to avoid confusion.

Organization	Yes or No	Question 4 Comment
Alliant Energy Corp. Services, Inc.	Negative	COM-001-2: Alliant Energy is opposed to the use of the word "any" as it is too broad. It should be revised to the primary Interpersonal Communication capabilities with the Transmission Operator or Balancing Authority.
<p><b>Response:</b> The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>		
Wisconsin Electric Power Marketing; Wisconsin Electric Power Co.	Negative	R11 is not clear on the purpose of the statement “determine a mutually agreeable time for restoration” this could be driven by forces outside the control any of the entities. I think, “provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage” would be better.
<p><b>Response:</b> The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>		
Lakeland Electric	Negative	Use of the term "any" in the new R11 and immediate non-compliance if there is a failure in a communication system.
<p><b>Response:</b> The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
SERC OC Standards Review Group	No	We suggest Requirement 11 should be deleted as the generic nature of the term “...any of its Interpersonal Communications capabilities...” could be interpreted to include communications capabilities used for internal DP/GO purposes. Such DP/GO internal communications capability would not be critical to BES reliability. Also, no BES reliability benefit is realized by the parties simply agreeing to a time for the

Organization	Yes or No	Question 4 Comment
		restoration of the failed Interpersonal Communication capability.
<p><b>Response:</b> The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
Pacific Northwest Generating Cooperative	No	<p>As per COM-001-2, R7, “Each Distribution Provider shall have Interpersonal Communications capability with the following entities...” R11 states that the DP or GOP that experiences a failure of its Interpersonal Communications ability shall consult with TOPs and BAs and agree on how to restore Interpersonal Communications. We believe better language might be, “Restore Interpersonal Communications with your TOP/BA as soon as operationally feasible.”</p>
<p><b>Response:</b> The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable restoration time for its Interpersonal Communication capability with its TOP or BA. That is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>		
MRO NSRF	No	<p>Please note that the use of the word “any” as in “Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities...” will be viewed as meaning every Interpersonal Communication medium that an Entity has or uses. The NSRF recommends that the word “any” be removed from this Requirement.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The NSRF recommends that R11 be revised to read:</p>

Organization	Yes or No	Question 4 Comment
		<p><i>“Each Distribution Provider and Generator Operator that experiences a failure of any of its primary (or defined) Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...”</i></p> <p>In that way it focuses it down to the communications issues with the TOP or BA. In lieu of “primary” the SDT could state “defined” as long as it is not meant to be “any.”</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p> <p>The latter part of R11 states; “...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.” This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. The NSRF recommends this be rewritten as:</p> <p><i>“...shall consult with inform their Transmission Operator or Balancing Authority as applicable as to the status of the Interpersonal Communication capability.”</i></p> <p>So the new R11 would read:</p> <p><i>“Each Distribution Provider and Generator Operator that experiences a failure of its primary (or designated) Interpersonal Communication with their Transmission Operator or Balancing Authority shall inform them, as applicable, as to the status of the Interpersonal Communication capability.”</i></p> <p>The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>
<p><b>Response:</b> See response above.</p>		

Organization	Yes or No	Question 4 Comment
<p>LG&amp;E and KU Services Company</p>	<p>No</p>	<p>Regarding R11, as written it is unclear when the DP and GOP are required to consult with their TOP or BA. “[A] failure of any of its Interpersonal Communication capabilities” could be construed to mean any internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP’s or GOP’s ability to communicate with the TOP or BA.</p> <p>If the DP or GOP loses its Interpersonal Communication with an entity it is required to have the capability with, then the entity must consult with that entity to determine a mutually agreeable action (was time) to restore. A failure of the entity’s capability means the entity is no longer able to communicate with its BA or TOP, then it must consult with the affected entity.</p> <p>It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional.</p> <p>Furthermore, what exactly is required in “consultation” and who would be responsible if the “consulting” entities did not come to a “mutually agreeable time” are questions that are left unanswered.</p> <p>LG&amp;E and KU Services Company suggest the following language:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of more than one of its Means for Interpersonal Communications or failure of its Alternative Means for Interpersonal Communication with their Transmission Operator or Balancing Authority shall notify their Transmission Operator or Balancing Authority regarding the time to restore the impacted Means for Interpersonal Communication or Alternative Means for Interpersonal Communication.</i></p> <p>The RCSDT thanks you for your comment; however, great lengths were taken in communicating mediums regarding IC and AIC and finds that adding “Means” to the proposed terms being defined diminishes clarity of the definition. No change made.</p>

Organization	Yes or No	Question 4 Comment
<p><b>Response:</b> See response above.</p>		
<p>PPL Electric Utilities and PPL Supply NERC Registered Organizations</p>	<p>No</p>	<p>PPL has concerns with the use of the word “any” in this requirement. PPL recommends striking the words “any of” and instead using “its primary” as follows:</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p><i>Each Distribution Provider and Generator Operator that experiences a failure of its primary Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...</i> In the current version, it is unclear when the DP and GOP are required to consult with their TOP or BA.</p> <p>The RCSDT notes that the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p> <p>“[A] failure of any of its Interpersonal Communication capabilities” could be construed to mean an internal phone line of either the DP or GOP failing. Internal phone lines do not affect either the DP’s or the GOP’s ability to communicate with the TOP or BA.</p> <p>It is also unclear whether a failure of an interpersonal communication capability would require consultation if there were multiple other interpersonal communication capabilities that were still fully functional.</p> <p>The RCSDT believes an entity meets the intent of the requirement when it has Interpersonal Communication capability, whether through a single capability or multiple capabilities. A single failure of an entity’s capability would not require any consultation if the entity continues to have the capability. The drafting team has removed the phrase “any of” as a clarifying change. Additionally, the RCSDT made a</p>

Organization	Yes or No	Question 4 Comment
		clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.
<b>Response:</b> See response above.		
SPP Standards Review Group	No	<p>We would suggest deleting the phrase ‘any of’ in the Requirement. It would then read:</p> <p><i>‘Each DP and GOP that experiences a failure of its Interpersonal Communication...’</i></p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Also, how does the DP or GOP consult with its TOP or BA when it loses its Interpersonal Communications capability?</p> <p>To do this wouldn’t they have to have an Alternative Interpersonal Communications capability?</p> <p>The RCSDT believes each entity must determine how to accomplish this (R11) and having another requirement or change would be overly prescriptive. No change made.</p>
<b>Response:</b> See response above.		
Western Electricity Coordinating Council	No	<p>We have two concerns with R11 as worded.</p> <p>First, the term "as applicable" is undefined. Who decides what is applicable. We suggest that words clarifying which entity, TOP or BA, the DP and GO experiencing a failure of any of its Interpersonal Communication capabilities must consult with.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “as applicable” in COM-001, R11.</p>

Organization	Yes or No	Question 4 Comment
		<p>Second, the inclusion of the "mutually agreeable" time to restore the Interpersonal Communication capability is problematic. Although unlikely, two entities could "mutually agree" to an exceptionally long time frame for restoration (two years) and that unreasonable timeframe would meet the requirement as long as they both agreed. Suggest some finite time limit be included.</p> <p>The RCSDT has made clarifying changes to R11 to reference "mutually agreeable action," rather than "time" for restoration. The use of "action" eliminates the need for a timeframe. New information regarding the restoration parameters may change under a mutually agreeable action.</p>
<p><b>Response:</b> See response above.</p>		
FirstEnergy	No	<p>Although we agree with the intent of the requirement, we are concerned with the use of "any of its Interpersonal Communication." The word "any" is very inclusive and the team should consider narrowing it down to those capabilities that may adversely impact reliability.</p>
<p><b>Response:</b> The RCSDT appreciates your comment and has made clarifying changes by removing the phrase "any of" in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p>		
Florida Municipal Power Agency	No	<p>By use of the term "any" in the phrase "a failure of any of its Interpersonal Communication" the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase "any of" in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which</p>

Organization	Yes or No	Question 4 Comment
		<p>does not require DPs or GOPs to have Alternative Interpersonal Communications capability.</p> <p>A possible solution is through use of the terms “Primary” for R3 and “Alternate” for R4 and then make R11 applicable to Primary only.</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard except that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>Global Engineering and Energy Solutions</p>	<p>No</p>	<p>We are pleased that the drafting team addition provides addition description on the process for communicating failed Interpersonal Communication. However additional clarity should be made regarding if there is an expectation that the Interpersonal Communication should be available 24x7. There are many Distribution Providers that do not have a 24x7 managed facility that can view and respond to a communication received in real time on the Interpersonal Communication device. These DPs rely on on-call personnel for off-hour emergencies such as an outage on the distribution system. The on-call personnel may use a cell phone, pager, etc. In other cases, the Transmission Operator or Balancing Authority may communicate by email and response is provided during business hours. In these cases, if the Transmission Operator or Balancing Authority had a system emergency they have the ability to isolate the distribution system from the grid and therefore do not require a 24x7 manned distribution.</p> <p>If the intent of the Standard is for ensuring real-time communication than the</p>

Organization	Yes or No	Question 4 Comment
		<p>applicability should be limited to those Distribution Providers who have been required by the Transmission Operator or Balancing Authority to have a manned 24x7 manned facility. Many of the DPs referred to here have not received a real-time call in the last 20 years. Requiring them to staff 24x7 for a condition likely not to occur is cost prohibited and does not improve reliability.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment. There is no requirement for 24/7 support. The requirement is to have communications capability. The type of system (e.g., On-Call) is not prescribed in the standard, and the standard is designed not to impose needless communications requirements. The Purpose of COM-001-2 is, “To establish Interpersonal Communication capabilities necessary to maintain reliability. No change made.</p>		
<p>ACES Power Marketing Standards Collaborators</p>	<p>No</p>	<p>Requirement R11 does not fully address the issue of what is required by Distribution Providers and Generator Operators and introduces new issues.</p> <p>The RCSDT notes that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability requires restoration. This would provide allowances for those entities, which have little or no impact on the reliability of the BES. No change made.</p> <p>First, while the standard is intended to clarify that the Distribution Provider and Generator Operator do not need backup communications capability, it simply does not. Distribution Providers and Generator Operators are required to have an Interpersonal Communications capability in Requirement R7 and R8 respectively. Unfortunately, the effectiveness of these requirements persists even when the Distribution Provider or Generator Operator experiences a failure of its Interpersonal Communications capability. When Requirement R11 applies, the Distribution Provider or Generator Operator will still be obligated to comply with Requirements R7 and R8 respectively and will, in fact, be in violation of these requirements because the Distribution Provider or Generator Operator no longer has the capability.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The</p>

Organization	Yes or No	Question 4 Comment
		<p>intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>Second, capability is used inconsistently between Requirement R7 and R11, which leads to confusion. In Requirement R7, it is singular while in Requirement R11 is plural. It needs to be clear that only the failure of the capability identified in R7 and R8 needs to be reported by the Distribution Provider and Generator Operator respectively.</p> <p>The RCSDT thanks you for your observation and has modified COM-001-2 R11 to be singular and to more clearly address the entities being consulted with upon a failure.</p> <p>Third, if the requirements focused on communications devices rather than capabilities, they would come closer to communicating the intent. Requirement R11 would better complement Requirement R7 and R8 if the focus was on having a communication medium or device.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity. In regards to a device not functioning properly is contrary to R10, notification of Interpersonal Communication capability failure. Please refer to the definition of Interpersonal Communication and Alternative Interpersonal Communication. No change made.</p> <p>A Generator Operator with an installed communications device or medium still has that device or medium even when it is not functioning properly and could still meet Requirements R7 and R8. However, they don't have the Interpersonal Communications capability if the device is not functioning properly.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p>

Organization	Yes or No	Question 4 Comment
<p><b>Response:</b> See response above.</p>		
<p>Kansas City Power &amp; Light</p>	<p>No</p>	<p>How does a DP or GOP experiencing a failure of its “interpersonal communications” consult with its TOP or BA to determine a mutually agreeable time for restoration of “interpersonal communications”? There are no requirements that require alternative “interpersonal communications” for the DP and GOP. This requirement cannot be fulfilled and should be removed.</p>
<p><b>Response:</b> The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable restoration time for its Interpersonal Communication capability with its TOP or BA; that is precisely why R11 is written in this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. The RCSDT has made clarifying changes to R11 to use mutually agreeable action, rather than time for restoration.</p>		
<p>Southern Company</p>	<p>No</p>	<p>We suggest the following changes:</p> <ol style="list-style-type: none"> <li>Requirement 10 should include Distribution Providers and Generator Operators, The RCSDT stresses that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities, which have little or no impact on the reliability of the BES, while not requiring them to obtain Alternative Interpersonal Communication capabilities. Making the proposed changes would eliminate this flexibility. Removing R11 takes away the RCSDT’s effort to include those provisions in the standard. No change made.</li> <li>Entities to be notified should be “as identified in requirements R1 through R8”, The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</li> </ol>

Organization	Yes or No	Question 4 Comment
		<p>3. Requirement 11 should be deleted, and, The RCSDT thanks you for your comment. COM-001-2 R11 requires the entity to consult with its BA or TOP when it experiences a failure of its Interpersonal Communication capability. The BA or TOP need to know communication is compromised between the DP or GOP.</p> <p>4. Measures (M10) and VSLs should be adjusted accordingly. The RCSDT did not elect to include the DP and GOP in R10; therefore, Measure, M10 and the corresponding VSLs were not adjusted. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>Central Lincoln</p>	<p>No</p>	<p>The new requirement presents us with a paradoxical situation. The communication has failed, so we must consult; yet consultation requires communication. We note that the SDT used the word “any”, implying that multiple communication paths are required. The reality of the situation at Central Lincoln, due to our remote location, is that a single back hoe incident at the right location can take out all of our of our communication capability (including the terrestrial portion of the cellular networks) with our BA/TO; making this requirement impossible to meet for this circumstance using our present capabilities.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Furthermore, R11 addresses the direction given in Order 693 that DP and GOP entities do not necessarily need to have Alternative Interpersonal Communication capability. The requirement allows flexibility in “consult with” by not naming the method. If all communications are out, then the DP or GOP may have to meet the requirement by an in-person consultation.</p>

Organization	Yes or No	Question 4 Comment
		<p>We also note that no time limit was indicated. Most interruptions are brief, and fixed before consultation could reasonably take place. CEAs will be finding entities non-compliant for quickly fixing problems at their end without first consulting to ensure the restoration time was agreeable. To avoid non-compliance, entities will be forced delay repairs while they investigate alternative communication paths for consultation purposes. We fail to see how such an outcome improves reliability.</p> <p>The DP and GOP are only required to have Interpersonal Communication capability. If the DP or GOP restores its Interpersonal Communication capability before it could reasonably contact the affected entity by another method, there is no failure to comply. The DP or GOP could then consult with the affected entity to determine a mutually agreeable action. In this case, the RCSDT believes the "action" would then be the entities acknowledging the failure and the repair; therefore, no mutually agreeable action is needed. The RCSDT recognizes there is no way to account for all the various circumstances in a failure. To comply, the DP and GOP are still required to consult the entity which the failure affected regardless of whether the Interpersonal Communication capability was restored or is still failed. No change made.</p> <p>The new requirement is one sided, requiring the DP and GOP to consult with no corresponding requirement for the TO or BA to have personnel available for such a consultation. Consultation failure or failure to mutually agree due to actions or inactions on the part of the TO or BA should not result in an enforcement action against the DP or GOP, yet that is how the requirement is written.</p> <p>The RCSDT notes that once the failure has been detected, the responsible entity must make the consultation with the BA or TOP; that relieves the compliance burden. While the RCSDT understands your concern about single points of failure, the question becomes should this relieve the DP or GOP of the requirement for having Interpersonal Communication capabilities. No change made.</p> <p>The new requirement fails to add any "clarity" to the other requirements, and we don't see that the stakeholders thought there was a problem with DP/GOP obligation</p>

Organization	Yes or No	Question 4 Comment
		<p>clarity. Instead, it adds new obligations with no justification for how they enhance reliability. We suggest removing the requirement.</p> <p>Based on the RCSDT’s understanding of the comments received on the previous posting, the industry desired additional clarity on specifically what communication capabilities the DP and GOP were required to have. There was confusion that the standard did not specifically say that the DP and GOP were required to have Alternative Interpersonal Communication capabilities. R11 clarifies that a DP and GOP are not required to have Alternative Interpersonal Communication capability if the DP or GOP consult with their TOP or BA, whichever is applicable in the given situation, and they mutually agree that the restoration action does not adversely impact the reliability of the BES. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>Entergy Services, Inc</p>	<p>No</p>	<p>The DP or GOP should have to notify the TOP and BA of its communications failure, similar to the requirement in R10 for TOP and BA. The DP or GOP should restore the communications capability as soon as possible. Entergy does not agree that the TOP or BA should have to negotiate the restoration time with the DP or GOP. This is an unreasonable burden on the BA and TOP.</p>
<p><b>Response:</b> The RCSDT notes that R11 does not exempt the DP or GOP from notifying its TOP or BA when they experience a communication failure. There is nothing in R11 that says a DP or GOP does not have to restore its communications capability. What is in R11 is flexibility. The RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. While one could consider this a negotiation, the notification is required so some sort of communication must be made. All that is being asked of the BA and TOP is to give some consideration for the entities involved and the overall situation. The SDT modified the requirement so mutual agreement must be reached on an “action” for restoration rather than a “time” for restoration.</p>		
<p>Liberty Electric Power LLC</p>	<p>No</p>	<p>The phrase "mutually agreeable time" needs to be replaced in order to make this standard acceptable. This phrasing creates a potential violation if equipment functionality cannot be restored in the time frame preferred by another entity, even</p>

Organization	Yes or No	Question 4 Comment
		<p>if the time of repair is beyond the control of the RE. This phrase should be replaced with "inform their TO or BA as applicable of the failure, and provide estimates as to the time the Interpersonal Communication capabilities will be restored."</p>
<p><b>Response:</b> The RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn't mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. However, what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are and a determination of what is amicable to both parties. The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p>		
We Energies	No	<p>R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4.</p> <p>R11 is not clear on the purpose of the statement "determine a mutually agreeable time for restoration" this could be driven by forces outside the control any of the entities. I think" provide estimated restoration and actual restoration time and determine mutually agreeable alternative during outage" would be better.</p> <p>Update M9 accordingly.</p>
<p><b>Response:</b> The RCSDT has made clarifying changes to R11 to use mutually agreeable action, rather than time for restoration.</p>		
Indiana Municipal Power Agency	No	<p>IMPA does not believe that this requirement is necessary in order to ensure communication lines are restored by Distribution Providers and Generator Operators. If this requirement is kept, IMPA does not think the use of the words "a failure of any of its Interpersonal Communication capabilities" is acceptable.</p> <p>The RCSDT notes the intent of this requirement is not to ensure that DP and GOP communication lines are restored. The intent of this requirement is to provide some flexibility for the DP or GOP that does not have an impact on the reliability of the BES. Depending on the impact of the given entity, the TOP or BA can be flexible in specifying when the Interpersonal Communication capability must be restored,</p>

Organization	Yes or No	Question 4 Comment
		<p>rather than requiring the availability and use of an Alternative Interpersonal Communication capability. No change made.</p> <p>The wording is too inclusive and should apply to only primary Interpersonal Communication capabilities. IMPA is also concerned about how entities are supposed to know when the telephone companies may have equipment repaired in order to determine a mutually agreeable time to restore Interpersonal Communication capability. The entity may have no control over the restoration and hence would not be able to set a time other than whenever the capabilities are restored by for instance the telephone company.</p> <p>The RCSDT deliberately avoided the use of primary and secondary mediums and elected to use communications capabilities. As such, R11 applies to Interpersonal Communication capabilities of the DP and GOP. The RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. No change made.</p> <p>It does not mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. However, what transpires in the consultation is a realization of the situation, what the impacts to reliability are and a determination of what is amicable to both parties. No change made. The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p> <p>In addition, entities will have to keep evidence to show that a “mutually” agreeable time was reached by two or more entities. The most workable solution would be to require notification if primary Interpersonal Communication is lost and a follow-up notification when that capability is restored.</p> <p>The RCSDT notes that R11 does not limit the sources of information used by the DP or GOP in establishing a mutually agreeable restoration action for its Interpersonal Communication capability with its TOP or BA; that is precisely why R11 is written in</p>

Organization	Yes or No	Question 4 Comment
		<p>this manner. This allows flexibility on the part of the TOP and BA in determining when the Interpersonal Communication capability must be restored. In situations where there is little or no impact to the reliability of the BES, some flexibility could be allowed without requiring the acquisition of Alternative Interpersonal Communication capability. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>NextEra Energy, Inc.</p>	<p>No</p>	<p>NextEra Energy, Inc. (NextEra), which includes Florida Power &amp; Light Company, believes that Requirement 11 of COM-001-2, as drafted, is too vague to be adopted as a mandatory Reliability Standard.</p> <p>For example, it is unclear what is meant by “shall consult.” The North American Electric Reliability Corporation’s (NERC) Rules of Procedure state that a foundation of any Reliability Standard is that: “. . . [the] reliability standard shall be stated using clear and unambiguous language. Responsible entities, using reasonable judgment and in keeping with good utility practices, are able to arrive at a consistent interpretation of the required performance.” The term “shall consult” is not a term generally understood or used in the electric utility industry, and, therefore, does not enable a consistent interpretation of the performance required. Accordingly, NextEra requests that Requirement 11 either:</p> <ul style="list-style-type: none"> <li>(i) be deleted; or</li> <li>(ii) be redrafted to read more like Requirement 10.</li> </ul>
<p><b>Response:</b> The RCSDT believes the term, “consult,” is well understood. Basically, entities must have a conversation. No change made.</p>		
<p>Manitoba Hydro</p>	<p>No</p>	<p>COM-001-2 R11 does not specify a timeline in which entities have to come up with a ‘mutually agreeable’ time to restore Interpersonal Communication capability. Manitoba Hydro believes this omission creates a reliability gap and suggests that wording be revised as follows: ‘... shall consult with their Transmission Operator or</p>

Organization	Yes or No	Question 4 Comment
		Balancing Authority as applicable and determine a mutually agreeable time to restore the Interpersonal Communication capability within 24 hours of experiencing the failure.'
<p><b>Response:</b> The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration. The RCSDT believes R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities, which have little or no impact on the reliability of the BES while not requiring them to obtain Alternative Interpersonal Communication capabilities. No change made.</p>		
Great River Energy	No	Capability is not used consistently in R7 and R11. It changes from singular to plural.
<p><b>Response:</b> The RCSDT thanks you for your observation. Generally, the singular implies the plural or vice-versa. The RCSDT has corrected R10 and R11 to be consistent with the singular application.</p>		
American Electric Power	No	Regarding COM-001-02 R10 and R11, some of the entity pairs (for example, BA to a GO) are not required to have alternative inter-personnel communication. How can the notification occur with 60 minutes for example, when primary communication is not available for a role that doesn't require an alternate means of communication? In addition, requiring notification within 60 minutes in Requirement 10 would not be feasible for larger entities that might have hundreds of contacts to make.
<p><b>Response:</b> The RCSDT thanks you for your comment. The notification within 60 minutes found in R10 pertains to the BA, RC and TOP; therefore, these entities are required to have designated Alternative Interpersonal Communication capability with other entities and more specifically other BA, TOP and RC entities. It is understood by virtue of R11 that the DP and GOP may not have Alternative Interpersonal Communication capability and may not be notified within 60 minutes. No change made.</p>		
Georgia Transmission Corporation	No	The intent of this requirement is not yet clear. Technically, the air we breathe, as well as other mediums like "any" cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. The burden for compliance evidence to demonstrate failure of "any of its Interpersonal Communication capability" would seem unobtainable and could prove to be a daily

Georgia System Operations	No	<p>The intent of this requirement is not yet clear. Technically, the air we breathe, as well as other mediums like “any” cell phone, fax lines, and/or email accounts would qualify under this proposed definition of Interpersonal Communication. The burden for compliance evidence to demonstrate failure of “any of its Interpersonal Communication capability” would seem unobtainable and could prove to be a daily occurrence (dropped phone calls, etc.). The following is suggested:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capability shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.</i></p>
<b>Response:</b> The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.		
Ingleside Cogeneration LP	No	<p>Most of Ingleside Cogeneration’s communications capabilities rely on carriers who will immediately deploy technicians to repair land-based or wireless systems when they break. Although we may contact the carrier to inform them that the systems are not available – or to determine their progress – we do not want them waiting for our go-ahead before proceeding. If the intent of this requirement is to validate the operation of the repaired connection, or to establish interim means of communications with other operating entities, then Ingleside Cogeneration believes a re-write is in order. There is no reliability purpose being served otherwise that we can tell.</p>
<b>Response:</b> The RCSDT believes there is nothing in R11 that says repairs by communication technicians should wait on anyone for a		

Organization	Yes or No	Question 4 Comment
		<p>go-ahead. The RCSDT sees it working this way: When a communication link goes down, a communication technician is dispatched as soon as the failure is noted and according to the agreements regarding repair between the provider and the user. When the user contacts the provider, an estimate of the anticipated repair time should be provided. One would expect this type of arrangement in service agreements. The user, DP or GOP, then takes that time to the consultation with the TOP or BA. Based on this anticipated restoration time and the impact the DP or GOP has on the reliability of the BES, a mutually agreed to restoration action is established. No change made.</p>
<p>Duke Energy</p>	<p>No</p>	<p>The phrase “consult with... to determine a mutually agreeable time” makes this requirement too open-ended to be auditable and enforceable.</p> <p>The RCSDT has made clarifying changes to R11 to use mutually agreeable action rather than time for restoration.</p> <p>We question why R11 does not establish a timeframe for notification similar to R10, which requires the RC, TOP or BA to make notification within 60 minutes of failure detection.</p> <p>The RCSDT thanks you for your comment. The notification within 60 minutes found in R10 pertains to the BA, RC and TOP; therefore, these entities are required to have designated Alternative Interpersonal Communication capability with other entities and more specifically other BA, TOP and RC entities. It is understood by virtue of R11 that the DP and GOP would not have Alternative Interpersonal Communication capability and would not be notified within 60 minutes. No change made.</p> <p>We also question why DPs and GOPs are not required to have Alternative Interpersonal Communications capability in order to be able to make such notifications.</p> <p>The RCSDT believes that R11 grants the DP and GOP flexibility in determining, in conjunction with its TOP or BA, when its Interpersonal Communication capability must be restored. This would provide allowances for those entities which have little or no impact on the reliability of the BES while not requiring them to obtain Alternative Interpersonal Communication capabilities. The requirement allows flexibility in “consult with” by not naming the method. If all communications are out,</p>

Organization	Yes or No	Question 4 Comment
		then the DP or GOP may have to meet the requirement by an in-person consultation. No change made.
<b>Response:</b> See response above.		
ISO New England	No	ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such “requirements” (i.e. capabilities) should be verified through an entity certification process.  Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).
<b>Response:</b> Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. No change made.		
ReliabilityFirst	No	ReliabilityFirst believes Distribution Provider and Generator Operator should be added to Requirement R10 and Requirement R11 should be removed. Finite time frames should be prescribed for each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities. ReliabilityFirst believes that the failure of Interpersonal Communication between Distribution Providers/Generator Operators and Transmission Operators/Balancing Authorities could have the same negative effects similar to the failure of Interpersonal Communication by the Reliability Coordinator, Transmission Operator, and Balancing Authority.
<b>Response:</b> If the RCSDT made the changes proposed, the standards loses the flexibility of the TOP and BA to work with DPs and GOPs which have little or no adverse reliability impact on the BES. The RCSDT feels we need to maintain this flexibility. In fact, FERC directed NERC to do so in Order 693. No change made.		
City of Vero Beach	No	By use of the term “any” in the phrase “a failure of any of its Interpersonal

Organization	Yes or No	Question 4 Comment
		<p>Communication” the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>To truly further the goals of reliability, the requirement should align with R3.3 and R3.4 which requires a primary Interpersonal Communications capability and R4 which does not require DPs or GOPs to have Alternative Interpersonal Communications capability. A possible solution is through use of the terms “Primary” for R3 and “Alternate” for R4 and then make R11 applicable to Primary only.</p> <p>The RCSDT deliberately stayed away from the use of primary and secondary mediums and prefers to use communications capabilities. Further, the RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn’t mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. But what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are and a determination of what is amicable to both parties. No change made.</p> <p>The RCSDT emphasizes the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>
<p><b>Response:</b> See response above.</p>		
Midwest Independent	No	MISO requests clarification regarding

Organization	Yes or No	Question 4 Comment
Transmission System Operator		<p>(1) when Distribution Providers/Generator Operators have an obligation to collaborate with Transmission Operators versus Balancing Authorities; and</p> <p>(2) the obligation of Transmission Operators to inform Balancing Authorities (and vice versa) of an agreed upon time for restoration of Interpersonal Communication capability when collaboration occurs only between Transmission Operators and Distribution Providers/Generator Operators or, conversely, Balancing Authorities and Distribution Providers/Generator Operators.</p>
<p><b>Response:</b> The RCSDT believes, (1) As specified in R11, the DP and GOP have an obligation to consult with their TOP and/or BA with who they are experiencing an Interpersonal Communication capability failure. If the DP or GOP experiences a failure with the TOP, then they consult with the TOP. If that failure is with the BA, they consult with the BA. If the failure is with both the TOP and BA, they consult with both. (2) There is no such obligation. Both the TOP and BA are required to have Alternative Interpersonal Communication capability, which would be used as a substitute for the Interpersonal Communication capability. No change made.</p>		
Texas Reliability Entity	No	<p>(1) Why does R10 refer to “failure of its Interpersonal Communications capabilities” while R11 refers to “failure of **any of** its Interpersonal Communications capabilities”?</p> <p>What is the distinction that is intended by addition of the words “any of”?</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>(2) As a Compliance Enforcement Authority, we have several fundamental questions regarding what is intended in this standard. It appears the drafting team is using the defined term “Interpersonal Communications” to refer to a designated primary communication medium, and the term “Alternative Interpersonal Communications” to refer to one or more designated backup communication mediums.</p> <p>Is that correct?</p>

Organization	Yes or No	Question 4 Comment
		<p>This should be clarified in the Standard.</p> <p>(2) The RCSDT deliberately stayed away from the use of primary and secondary mediums and prefers to use communications capabilities. However, you are correct in considering the Alternative Interpersonal Communication capability as a substitute for the Interpersonal Communication capability, as specified in their respective definitions. No change made.</p> <p>(3) There is ambiguity in the current draft because the defined term “Interpersonal Communications” appears to include primary, back-up and all other mediums that may be available (which may include landline phone, cell phone, satellite phone, instant messaging, email, and data links, all in one facility), including any “Alternative Interpersonal Communications.”</p> <p>(3) Interpersonal Communication capability could use any of the mediums mentioned in your comment. Likewise, the Alternative Interpersonal Communication capability could be any of those mediums, as well, provided that it did not use the same infrastructure as the Interpersonal Communication capability. No change made.</p> <p>Do R10 and R11 apply to ALL available mediums, or just to the designated primary and back-up mediums?</p> <p>Does R9 apply to ALL available back-up mediums, or just to a specifically designated back-up medium?</p> <p>The RCSDT deliberately stayed away from the use of primary and secondary mediums and prefers to use communications capabilities. Further, the RCSDT has gone to great lengths to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn’t mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. But what transpires in the consultation is a realization of what the situation is, what the impacts to reliability are</p>

Organization	Yes or No	Question 4 Comment
		and a determination of what is amicable to both parties. No change made.
<b>Response:</b> See response above.		
Dominion	Yes	<p>Dominion agrees with the intent of R11; however, suggest language changes for consistency with R10 as follows:</p> <p><i>R11. Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability. [Violation Risk Factor: Medium][Time Horizon: Real-time Operations]</i></p>
<b>Response:</b> The RCSDT has made clarifying changes to R11 to use mutually agreeable action, rather than time for restoration.		
NV Energy	Yes	Agree, however, the ability for a DP or GOP to have such consultation with its TOP or BA would likely be hampered by the failure of the Interpersonal Communications itself. DP and GOP are only required to have a single source for this Interpersonal Communications.
<b>Response:</b> RCSDT did not want to burden the DP and GOP with having Alternative Interpersonal Communication capability based on Paragraph 508 of Order No. 693. There are multiple avenues of communication technology available to comply with R11. No change made.		
NIPSCO		If the Interpersonal Communication is down, and no backup is required for the DP and GOP, how are they to consult and collaborate?
<b>Response:</b> RCSDT did not want to burden the DP and GOP with having Alternative Interpersonal Communication capability based on Paragraph 508 of Order No. 693. There are multiple avenues of communication technology available to comply with R11. No change made.

5. The proposed definition of Reliability Directive shown in COM-002-3 was revised to include Adverse Reliability Impact as shown to more fully address emergencies or events that might lead to instability or Cascading: Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse Reliability Impact. Do you agree with the proposed definition? If not, please explain in the comment area below.

**Summary Consideration:** There were a significant number of comments about the definition of Reliability Directive with accompanying suggested language; for example, having the definition to prescribe a level of performance. The practice of writing a level of performance within a definition is discouraged and generally prevents future use of the term. Several comments pertained to compliance with the requirements; for example, would an entity be required to use three-part communication for a voltage schedule? The requirements do not preclude an entity from doing so; however, the requirements focus on the situation of addressing an Emergency or Adverse Reliability Impact. Other concerns were raised that the terms “Emergency” and “Adverse Reliability Impact” are the same. The RCSDT believes these terms capture independent conditions. The term “Emergency” implies situations where the event is anticipated or currently happening. Likewise, Adverse Reliability Impact clearly identifies a potential or actual event in the phrase, “an event that results in.” The RCSDT notes the definition of Adverse Reliability Impact is the revised term, which is NERC Board of Trustees adopted and is pending regulatory filing in IRO-014-2. Additionally, using the currently adopted version does not capture the full spectrum of the proposed definition by the RCSDT.

The development of the term Reliability Directive concept places a heightened awareness on actions that are required to avoid an Adverse Reliability Impact. Additionally, the use of “direct” is consistent with the uses of “direct” in other standards. A commenter had a concern about the removal of “issued in a clear, concise, and definitive manner” would lead to repeating the process. The RCSDT believes it to be in the interest of the issuer to do this without the burden of a requirement. Additionally, this type of requirement would be difficult to measure and by virtue of the issuer having to confirm the Reliability Directive; it is to the issuer’s advantage to be clear for efficient communications. Other minor formatting and corrections to references were made to align requirements, measures, and compliance components. Several other comments were made that are addressed in the questions above.

Organization	Yes or No	Question 5 Comment
Constellation Power Source Generation, Inc.	Negative	As we commented on Project 2007-03 TOP-001-2, the definition of Reliability Directive is an improvement but the definition must capture the identification concept that is reflected in the Requirement (R1). As a result, when Reliability

Organization	Yes or No	Question 5 Comment
		<p>Directive is used elsewhere, it would be clear that the communication must be identified as a Reliability Directive.</p> <p>We suggest the following revision to the definition and it should follow through to Project 2006-06 IRO-001-3 and Project 2007-03 TOP-001-2, eventually being added to the Reliability Standards Glossary of Terms.</p> <p><i>A communication identified as a Reliability Directive by a Reliability Coordinator, Transmission Operator, or Balancing Authority to initiate action by the recipient to address an Emergency or Adverse Reliability Impact.</i></p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p> <p>IRO-001-3 uses the term ‘direct’ in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following:</p> <p>To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.</p> <p><i>R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or</i></p>

Organization	Yes or No	Question 5 Comment
		<p><i>Adverse Reliability Impacts.</i></p> <p><i>R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given.</i></p> <p><i>R3: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.</i></p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. The RCSDT believes using the word “request” makes the requirement conditional and is not consistent with the purpose of the standard. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>MidAmerican Energy Co.</p>	<p>Negative</p>	<p>Do not nest definitions.</p> <p>The use of the word “any” in the COM-002-3 and IRO-001-3 definition of “Emergency” is too broad and should be deleted. The use of “any” in regulatory standards almost always causes unintended consequences.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The definition should be shortened to read:</p> <p><i>“Abnormal system condition that requires automatic or immediate manual actions to prevent or limit Bulk Electric System transmission facility or generation failures that</i></p>

Organization	Yes or No	Question 5 Comment
		<p><i>could result in instability, uncontrolled separation, or cascading.”</i></p> <p>The RCSDT appreciates the suggested rewording of the definition. The suggestion creates a disconnect with the already approved NERC glossary term. Additionally, the proposed definition adds new words which were not included originally. The RCSDT does not propose a new definition of Emergency. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>Tennessee Valley Authority</p>	<p>Negative</p>	<p>We suggest adding the words “and identified as a reliability directive to the recipient” at the end of the definition of Reliability Directive.</p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p> <p>For R2, we question the phrase “physically implemented” and recommend that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions where an entity may not be able to physically implement the direction; for example, an entity that does not have the right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p>
<p><b>Response:</b> See response above.</p>		

Organization	Yes or No	Question 5 Comment
SERC OC Standards Review Group	No	<p>We suggest adding the words “and identified as a reliability directive to the recipient” at the end of the definition of Reliability Directive. As written, this definition could lead to a dispute of what communications are Reliability Directives; leading to further dispute as to what Requirements are applicable. By adding this clarity in the definition of this term, clarity will not be needed in the application of this definition as is proposed in COM-002-3, Req 1.</p> <p>This would allow the removal of R1 from COM-002-3</p>
<p><b>Response:</b> The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. <p><b>Response:</b> See response above.</p>		
Entergy Services, Inc	No	<p>An Adverse Reliability Impact is a type of Emergency. Including a new term for Adverse Reliability Impact and including both terms in the definition for Reliability Directive doesn’t add clarity. I suggest changing the definition for Reliability Directive to remove phrase “or Adverse Reliability Impact.”</p>
<p><b>Response:</b> The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Likewise, the definition of Adverse Reliability Impact clearly identifies as a potential or actual event in the phrase, “an event that results in.” Both conditions are important to the definition. The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk</p>		

Organization	Yes or No	Question 5 Comment
Electric System instability or Cascading.” No change made.		
NextEra Energy, Inc.	No	<p>NextEra objects to the use of “Adverse Reliability Impact” in Reliability Standards COM-002-3 and IRO-001-3. NextEra requests that the use of Adverse Reliability Impact be revised as suggested below or it be deleted from the definition of Reliability Directive. NextEra does not agree with the use of Adverse Reliability Impact in the definition of “Reliability Directive” for the following reasons:</p> <ol style="list-style-type: none"> <li>1. This term Adverse Reliability Impact is ambiguous. In part, the term is ambiguous because it includes in its definition the term “instability,” which has lead to considerable misunderstanding and confusion in the industry. There are also differing views on what is (and is not) Cascading, because the definition is not sufficiently clear. For example, some believe instability and Cascading occur when an event affects multiple substations of one Transmission Operator, while others believe instability or Cascading only occur when the event affects more than one Transmission Operator’s system. As mentioned in response to item 4, above, Reliability Standards must be clear and consistently interpreted. It is not appropriate to issue a Standard that perpetuates the use of terms that lack consistent interpretation.</li> <li>2. While not perfect, the term Emergency is better understood in the industry, and it may include many or all of the instances of instability or Cascading intended to be captured by Adverse Reliability Impact. Consequently, it is not advisable to introduce Adverse Reliability Impact as a new term, when it is not clearly distinguishable from Emergency. NextEra is concerned that an unclear and imprecise term, such as Adverse Reliability Impact, does not promote reliability, and, such a term is particularly troublesome in the context of real time system operations. Therefore, for the reasons stated above, NextEra believes that the term Adverse Reliability Impact should be deleted from the definition of Reliability Directive. In the alternative, if Adverse Reliability Impact is not deleted from the definition of Reliability Directive in Reliability Standards COM-002-3 and IRO-001-3, NextEra</li> </ol>

Organization	Yes or No	Question 5 Comment
		<p>requests that Adverse Reliability Impact be revised to read:</p> <p><i>“an event or condition on the Bulk Electric System that may, or is leading to, Cascading over more than one Bulk Electric System transmission system.”</i></p>
<p><b>Response:</b> The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Likewise, the definition of Adverse Reliability Impact clearly identifies as a potential or actual event in the phrase, “an event that results in.” Both conditions are important to the definition. The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” No change made.</p>		
Niagara Mohawk (dba National Grid)	No	<p>The "adverse reliability impact" definition is not clear, is this an actual event or contingency? The words imply it is an actual event, which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p>
<p><b>Response:</b> The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
BGE	No	<p>BGE would prefer that the definition of Reliability Directive include the requirement to identify the fact that a Reliability Directive is being issued. See the following proposed definition:</p> <p><i>Reliability Directive: A communication initiated and identified as a Reliability Directive, by a Reliability Coordinator, Transmission Operator or Balancing Authority where action by the recipient is necessary to address an Emergency or Adverse</i></p>

Organization	Yes or No	Question 5 Comment
		<i>Reliability Impact.</i>
<p><b>Response:</b> The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p>		
Duke Energy	No	<p>-Since FERC has not yet approved the new definition of Adverse Reliability Impact, we believe the term “Adverse Reliability Impact” should be replaced by the words of the BOT-approved definition: “the impact of an event that results in Bulk Electric System instability or Cascading.”</p> <p>The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The RCSDT thanks you for your comment; however, by inserting the text of the currently adopted version of the Adverse Reliability Impact definition would create a loss of continuity in the intent of the pending definition. No change made.</p> <p>-Also, add the phrase “and the communication is identified as a reliability directive to the recipient” to the end of the definition of Reliability Directive. This will eliminate potential confusion regarding when a communication is a Reliability Directive, and when a communication is a routine instruction. Revising the definition in this manner may also eliminate the need Requirement R1 of COM-002-3.</p> <p>If R1 is retained, we suggest rewording as follows:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, or Balancing Authority shall identify a Reliability Directive to the recipient when it issues a Reliability Directive</i></p>

Organization	Yes or No	Question 5 Comment
		<p><i>that requires an action or actions to be executed.”</i></p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p> <p>-Proposed reworded definition:</p> <p><i>“Reliability Directive: A communication initiated by a Reliability Coordinator, Transmission Operator, or Balancing Authority where action by the recipient is necessary to address an Emergency or the impact of an event that results in Bulk Electric System instability or Cascading, and the communication is identified as a Reliability Directive to the recipient.”</i></p> <p>The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). Definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. Organization	Yes or No	Question 5 Comment
<p><b>Response:</b> See response above.</p>		
<p>ReliabilityFirst</p>	<p>No</p>	<p>ReliabilityFirst believes the definition of “Reliability Directive” should be all inclusive and include “all” actions initiated by the Reliability Coordinator, Transmission Operator or Balancing Authority (not just Emergency or Adverse Reliability Impacts). Even though Emergency or Adverse Reliability Impacts are defined, during operations, it may become a gray area to whether or not it falls under the intent of a “Reliability Directive.”</p> <p>The RCSDT appreciates your comment about including all actions initiated by the BA, RC and TOP; however, the RCSDT has determined that the development of the Reliability Directive concept improves reliability by placing a heightened awareness on actions that are required to avoid an Adverse Reliability Impact. Additionally, the industry does not support the proposed suggestion above based on previous postings and comments. No change made.</p> <p>Furthermore, if the system falls under a condition that results in an Adverse Reliability Impact, it may be too late for a Reliability Coordinator, Transmission Operator or Balancing Authority to issue a Reliability Directive. ReliabilityFirst recommends the following for revision to the term “Reliability Directive”:</p> <p><i>Reliability Directive - A communication initiated by a Reliability Coordinator, Transmission Operator or Balancing Authority where an action by the recipient is required.</i></p> <p>The RCSDT has determined that the development of the Reliability Directive concept as currently drafted, improves reliability by placing a heightened awareness on actions that are required to avoid an Adverse Reliability Impact. Additionally, the industry does not support the proposed suggestion above based on previous postings and comments. No change made.</p>
<p><b>Response:</b> See response above.</p>		

Organization	Yes or No	Question 5 Comment
Midwest Independent Transmission System Operator	No	<p>The proposed definition of Reliability Directive is unacceptable because the use of the defined terms “Emergency” and “Adverse Reliability Impact” results in an undefined, broadened scope of responsibility for Reliability Coordinators when coupled with the definition of the Bulk Electric System. This may lead to confusion/ambiguity for Reliability Coordinators that must be clarified to ensure compliance. Further, this broadened scope may mis-direct Reliability Coordinator’s attention and mitigation efforts to small-scale, localized issues that represent no true threat to the operation of the Interconnection.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment; however, the RCSDT believes the definition actually narrows the responsibility by framing the condition(s) within which it is appropriate for anticipated actions necessary to address an Emergency or Adverse Reliability Impact. The IRO standards require the Reliability Coordinator to respond to issues regardless of the scale of issues. No change made.</p>		
Texas Reliability Entity	No	<p>We oppose the definition of Reliability Directive as it is currently being proposed in this standard because three-part communication should not be required only <b>after</b> an Emergency or Adverse Reliability Impact actually occurs.</p> <p>In particular, we object to the removal of the word “expected” (or “anticipated”) from the definition, because Reliability Directives may be required before a situation escalates to an Emergency, in order to prevent the Emergency from occurring. This proposed change potentially undermines efforts required to avoid emergencies and events.</p> <p>We note that there are instances in other Reliability Standards where “anticipated” conditions require actions to be taken (e.g. TOP-001-1 R5 and EOP-002 R4), when clear, concise, and definitive communication, verbal or electronic, is required to avoid or mitigate an impending emergency.</p>
<p><b>Response:</b> The RCSDT notes that the term, “Adverse Reliability Impact,” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the</p>		

Organization	Yes or No	Question 5 Comment
<p>application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
<p>New York Independent System Operator</p>	<p>No</p>	<p>It is not clear the distinction between an Emergency and ARI. We would like to confirm that Since ARI is the impact of an event that results in instability or cascading, that an ARI is a subset of an emergency?</p> <p>Or said differently is an ARI simply instability or cascading? Ultimately, if ARI is a subset of Emergency, then why do we need both in the requirement?</p>
<p><b>Response:</b> The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Additionally, the term “Adverse Reliability Impact” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential impacts of events and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
<p>Oncor Electric Delivery</p>	<p>Affirmative</p>	<p>"Oncor requests clarity about what constitutes a “recipient.”</p> <p>For example, if a Transmission Grid Operator performing the functions of a Transmission Operator issues a Reliability Directive to its own field operations personnel to perform an action on behalf of the same entity, does the field operations personnel as the recipient become in affect a “Transmission Operator” subject to R2?"</p>
<p><b>Response:</b> The term “recipient” in this case is referring to entity-to-entity communication and is inferred by Requirement R2 naming the entities. No change made.</p>		
<p>Constellation Energy</p>	<p>Affirmative</p>	<p>As we commented on Project 2007-03 TOP-001-2, the definition of Reliability</p>

Organization	Yes or No	Question 5 Comment
Commodities Group		<p>Directive is an improvement but the definition must capture the identification concept that is reflected in the Requirement (R1).</p> <p>As a result, when Reliability Directive is used elsewhere, it would be clear that the communication must be identified as a Reliability Directive.</p> <p>We suggest the following revision to the definition and it should follow through to Project 2006-06 IRO-001-3 and Project 2007-03 TOP-001-2, eventually being added to the Reliability Standards Glossary of Terms.</p> <p><i>“A communication identified as a Reliability Directive by a Reliability Coordinator, Transmission Operator, or Balancing Authority to initiate action by the recipient to address an Emergency or Adverse Reliability Impact.”</i></p>
<p><b>Response:</b> The RCSDT thanks you for your comment; however, the suggested improvement is addressed in the requirement COM-002-3, R1 (see below). The definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p> <p>“R1. When a Reliability Coordinator, Transmission Operator or Balancing Authority requires actions to be executed as a Reliability Directive, the Reliability Coordinator, Transmission Operator or Balancing Authority shall identify the action as a Reliability Directive to the recipient. [Violation Risk Factor: High][Time Horizon: Real-Time]”</p>		
National Grid	Affirmative	<p>Delete reference to "adverse reliability impact" in R1. The "adverse reliability impact" definition is not clear, is this an actual event or contingency?</p> <p>The words imply it is an actual event which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment; however, the RCSDT believes the definition captures two independent conditions, anticipated and after or post event. The definition of Emergency implies situations where the event is anticipated or currently happening. Additionally, the term “Adverse Reliability Impact” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-</p>		

Organization	Yes or No	Question 5 Comment
<p>014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>		
Wisconsin Public Service Corp.	Affirmative	<p>The Standards Drafting Team has provided a great deal of clarity regarding Reliability Directives, however we believe BES reliability would be further enhanced if Reliability Directives were still required to be issued in a clear, concise, and definitive manner. Under Emergency conditions, we feel this would enhance communications effectiveness and expedite parties taking necessary actions quickly.</p>
<p><b>Response:</b> The RCSDT believes the current form of the requirements accomplish this objective. If the issuer is not clear, concise and definitive, it would lead to the issuer having to repeat the process. It is incumbent and beneficial to the issuer to meet this performance without a specific requirement to instruct. Additionally, measuring clear, concise and definitive manner poses significant issues. No change made.</p>		
We Energies	Yes	<p>The definition is acceptable, but as used may imply that all Emergency communications must be Reliability Directives.</p>
<p><b>Response:</b> The RCSDT thanks you for your comment; however, definitions should avoid a structure that identifies an action or performance of an entity. The Standard Processes Manual (SPM), “Process for Developing a Defined Term”, Page 22 states in the first paragraph: “Definitions shall not contain statements of performance Requirements.” No change made.</p>		
Ingleside Cogeneration LP	Yes	<p>Ingleside Cogeneration agrees that it is important to clearly denote when a directive must be issued. In previous definitions, we believed that imprecise language made it difficult for the BA, RC, or TOP to determine if a gray area situation required a directive or not. With a more precise definition, it will eliminate second guessing by auditors that a directive was necessary because an outcome turned out poorly - even if an Emergency was not declared or an Adverse Reliability Impact did not occur.</p>
<p><b>Response:</b> Thank you for your comment.</p>		

Organization	Yes or No	Question 5 Comment
ERCOT ISO	Yes	The definition of Reliability Directive appropriately clarifies the importance of knowing the level of importance of any instructions being issued. If there is no room for variance from the specific action required, or if there is no time to further negotiate or discuss the action required, it is important that the instruction be identified as a Reliability Directive and for such instructions to be followed in a timely fashion. Normal operating instructions typically do not rise to this level of urgency and some variation from the words will not result in unmanageable reliability impacts. Also, there typically may be time for addressing the instructions in more than one way.
<b>Response:</b> Thank you for your comment.		
NIPSCO		The question of whether one is in a state of Emergency or Instability, or in an Abnormal Condition can be still be subjective; it may be difficult to provide evidence for an audit.
<b>Response:</b> The responsible entity determines “state of Emergency or instability” and acts accordingly. No change made.

## 6. Do you have any other comment, not expressed in questions above, for the RC SDT?

**Summary Consideration:** This question yielded the most comments overall and many are duplicative of previous comments. For those duplicative comments, the RCSDT respectfully directs summary consideration of those comments to the above questions. Several commenters noted these standards are not “results-based” and this is mainly due to the project’s ongoing work. The standard(s), in a way, appear more results-based by not being prescriptive; however, the specific standards do not implement the results-based formatting. There were many comments about aligning the three standards to have the same implementation plan. The RCSDT agrees and aligned all three with the same implementation. Some comments questioned the need to have an authority requirement for the Reliability Coordinator in IRO-001-3, R1 because it appears to be granted under the ERO registration criteria. The ERO criteria does not provide for this authority. Additionally, IRO-001-3 does not limit the Reliability Coordinator’s authority to issuing only Reliability Directives. The Reliability Coordinator has the authority to direct, which could include Reliability Directives (a subset of direction or directing) is the theme carried out in each requirement. Some comments asked about direct, direction, and when an Emergency or Adverse Reliability Impact would be identified. The terms “direct” and “direction” are consistent with the intent of the standard in its authority and “identify” is upon recognition, which is a condition when the Reliability Coordinator would be acting or directing others to act. The requirements do not preclude the Reliability Coordinator from taking action for other situations, even if it is aware of situations beyond its area. A few comments concerned adding a time element to the requirements, such as, preventing events in Real-time; however, the assigned Time Horizons provide for this under Real-time Operations and Same Day Operations.

Comments noted a difference in “shall have” and “shall designate” within the requirements of COM-001-2. The intent of allowing an entity to “designate” allows the entity to designate the Alternative Interpersonal Communication capability providing greater flexibility in meeting the requirement. Additionally, there were comments about testing the Interpersonal Communication capability in addition to the Alternative Interpersonal Communication capability. The RCSDT intentionally omitted testing the Interpersonal Communication capability because routine use is sufficient to demonstrate functionality. The standard COM-001-2 measures have been updated to appropriately reflect the specific requirements and make the evidence examples clearer. There were several concerns about the designating a replacement Alternative Interpersonal Communication capability within two hours. The RCSDT notes the performance is to designate a replacement, not to accomplish the repairs. The reliability need is to designate what the Alternative Interpersonal Communication capability will be, should it be called upon. Commenters raised concerns about most of the VSLs in COM-001-2 being Severe. These VSLs are Severe because there are essential to reliability. By the construction of the requirement, VSLs are binary, which requires the VSLs to be Severe according to NERC VSL Guidelines. Some comments questioned the removal of requirement, R4. This requirement remains enforce until the approval of COM-003-1 under Project 2007-02.

Several commenters noted that COM-002-3 seems to be requiring the “how” to accomplish the communication coordination. The RCSDT emphasizes the requirements state the “what,” rather than “how.” In a basic sense, the “what” is highlighted by R1 by

identifying the communication as a Reliability Directive, next in R2 the recipient responds accordingly, and R3 the issuer confirms the communication. How the process is accomplished is up to the entity.

Some commenters were concerned about the measures and evidence. The measures are examples, and the entity is not limited to the examples provided; including letters of attestation, where appropriate. The RCSDT addressed other document errors, formatting issues, referencing, and mismatch issues raised in the comments. The Effective Date, Compliance, and Data Retention sections have been updated to the most current language used in standards through the standard review process.

Organization	Yes or No	Question 6 Comment
Alberta Electric System Operator	Abstain	IRO-001-3: The Alberta version of IRO-001 will outline limitations to the authority of the RC, that are required by Alberta legislation.
<p><b>Response:</b> The standard drafting team (SDT) has drafted requirements to address the purpose of the standard, repeated here: To establish the authority of Reliability Coordinators to direct other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System. The requirements have been drafted within the context established by the NERC Functional Model V5, and describes interrelationships of the functional entities in accordance with the Functional Model V5. Please address any variations from this structure, which may be required by Alberta legislation, with NERC as the ERO. No change made.</p>		
City Utilities of Springfield, Missouri	Affirmative	City Utilities of Springfield, Missouri supports comments submitted by SPP.
<p><b>Response:</b> Thank you for your comment.</p>		
United Illuminating Co.	Affirmative	COM-001-2: UI votes Affirmative with the comment that R1 through R9 are requirements in the Planning Horizon not the Real Time Operations horizon. These requirements are scoped to the establishment of communication processes with other entities not with actions taken by operations.
<p><b>Response:</b> The RCSDT recognizes that, in most instances, the establishment of communications capability and the designation of Alternative Interpersonal Communications capability will have taken place at some time in the past (which could be the operations planning horizon for the present Real-time instance). However, the full reason for such action is to be sure that the communications capability is in place and functional during the Real-time Operations horizon for use in Real-time operating actions. Therefore, the</p>		

Organization	Yes or No	Question 6 Comment
<p>RCSDT has established the applicable time horizon to be the Real-Time Operations horizon. No change made.</p>		
<p>SERC Reliability Corporation</p>	<p>Affirmative</p>	<p>COM-002-3 Comments</p> <p>R2: We recommend that the following phrase (in quotes) be added to R2: Each Balancing Authority, Transmission Operator and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive "immediately upon receiving it."</p> <p>As written, there is no limit as to when the entity must repeat it (i.e. they could wait 2 hours) The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call).</p> <p>For example, is a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3?</p>
<p><b>Response:</b> The requirement aims at being a performance-based requirement, and states a description of “what” communication must take place, but does not prescribe “how” the communication is to be made. Adding the suggested phrase “immediately upon receiving it” introduces the ambiguous term “immediately,” for which there is neither plain meaning nor simple explanation. What must happen is that the recipient must respond in such a way that the issuer may determine whether the message has been properly understood. The RCSDT concludes that the proposed language gives plain meaning. No change made.</p> <p>The question about whether a roll call of receiving entities is expected to be held is asking for prescription of “how” to accomplish what is required. The RCSDT recognizes that there is more than one way to accomplish the confirmation when more than one entity received a Reliability Directive at the same time. What is required is for the recipient to respond in such a way that the issuer may determine whether the message has been properly understood. One way for that to occur would be, as you suggest, for the entities to individually respond. Another way would be for a pre-established protocol or procedure (e.g., roll-call, all-call, etc.) to be in place and used in such cases. The RCSDT has determined that prescribing “how” to ensure that “what” is required has been accomplished is not required and that the individually adopted procedures or protocols could offer many different ways to ensure effectiveness. No change made. The RCSDT concept is that “All Call” compliance is related to having a document that explains how the entity responds. No change made.</p>		

Organization	Yes or No	Question 6 Comment
Alliant Energy Corp. Services, Inc.	Affirmative	COM-002-3: Alliant Energy recommends that the Effective Date be the first day of the second calendar quarter after applicable regulatory approval, to be the same as COM-001-2 and IRO-001-3. In that way all 3 standards would be effective at the same time, making implementation much smoother.
<p><b>Response:</b> Thank you for your comment. The RCSDT will adjust the standards to have the same implementation date.</p>		
Wisconsin Electric Power Co.	Affirmative	<p>COM-002-3: Since all the Requirements are related to Reliability Directives, is it implied that all “Emergency Communications” are Reliability Directives even if not designated as such per R1?</p> <p>-The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. A recipient’s phone may not be recorded but an initiator’s always should. If a receiver refused to meet the R2 requirement, an initiator should have an alternative (i.e., repeat the directive and provide potential penalties if recipient refuses to comply).</p> <p>Should the initiator have responsibility for providing the entire 3-way evidence as M3 implies?</p>
<p><b>Response:</b> The RCSDT would like to highlight that communications is not a defined term in the NERC Glossary of Terms used in Reliability Standards, nor is it defined in this standard. Thus, the plain meaning of communications is intended. The RCSDT has not implied a defined term in the wording of the purpose statement of the standard, nor in the requirements themselves, that any communication is a Reliability Directive unless the issuing functional entity identifies the actions to be taken as a Reliability Directive. Therefore, not all communications during Emergencies will be Reliability Directives. No change made.</p> <p>COM-002, R2: The RCSDT included some examples of how to provide the evidence needed for Measure M2. The examples are not intended to be an all-inclusive list. The RCSDT does point out, though, that dated operator logs could provide such evidence. The RCSDT does not believe that the recipient has the alternative to refuse to perform, as required. However, the RCSDT does bring attention to standard IRO-001-3, which requires entities to comply with directions unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory, or statutory requirements. No change made.</p>		

Organization	Yes or No	Question 6 Comment
<p>COM-002 M3: The Measure is correct as written. The issuer only needs the evidence that it confirmed the response was accurate or reissued according to the requirement. Evidence does not necessarily mean the entity must have the entire three-way conversation captured (i.e., recording), but evidence the entity confirmed or reissued according to requirement. No change made.</p>		
<p>Wisconsin Electric Power Marketing</p>	<p>Affirmative</p>	<p>COM-002-3: Since all the Requirements are related to Reliability Directives, is it implied that all “Emergency Communications” are Reliability Directives even if not designated as such per R1.</p> <p>The M2 measure could be difficult for a recipient such as a Distribution Provider or Generator Operator. A recipient’s phone may not be recorded but an initiator’s always should. If a receiver refused to meet the R2 requirement, an initiator should have an alternative. i.e., repeat the directive and provide potential penalties if recipient refuses to comply. Should the initiator have responsibility for providing the entire 3-way evidence as M3 implies?</p>
<p><b>Response:</b> The RCSDT would like to highlight that communications is not a defined term in the Glossary of Terms used in NERC Reliability Standards, nor is it defined in this standard. Thus, the plain meaning of communications is intended. The RCSDT has not implied in the wording of the purpose statement of the standard, nor in the Requirements statements themselves, that any communication is a Reliability Directive unless the issuing functional entity identifies the actions to be taken as a Reliability Directive. No change made.</p> <p>COM-002, R2: The RCSDT included some examples of how to provide the evidence needed for measure M2. The examples are not intended to be an all-inclusive list. The RCSDT does point out, though, that dated operator logs could provide the evidence. The RCSDT does not believe that the recipient has the alternative to refuse to perform as required. No change made.</p> <p>COM-002 M3: The Measure is correct as written. The issuer only needs the evidence that it confirmed the response was accurate or reissued according to the requirement. Evidence does not necessarily mean the entity must have the entire three-way conversation captured (i.e., recording), but evidence the entity confirmed or reissued according to requirement. No change made.</p>		
<p>Southwest Transmission Cooperative, Inc.</p>	<p>Affirmative</p>	<p>COM-002-3: While COM-002-3 is well written to explain the three-part communications requirements and makes it perfectly clear when a Reliability Directive has been issued, the opening clause leaves the responsible entity open to second guessing on whether they should have issued a Reliability Directive. This</p>

Organization	Yes or No	Question 6 Comment
		<p>problem could be solved by changing the opening clause to “When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.”</p> <p>In the second bullet of Requirement R3, we suggest using “Restate” in place of “Reissue.” The responsible entity is not really reissuing the Reliability Directive. They are still in the act of trying to get the Reliability Directive issued and are simply re-communicating it because it was not understood.</p>
<p><b>Response:</b> The RCSDT believes the offered suggestion does not improve COM-002-3, R1. No change made.</p> <p>COM-002-3, R3: The communications described are not intended to be a once-through process. Effective communications, sometimes referred to as three-part or three-way, often may be effective only after numerous iterations. The RCSDT believes the likely first effort to clarify would be to re-issue the instructions just to determine whether the recipient simply “heard wrong.” Using the word re-state seems to imply that the wording is incorrect in some way or for some other reason needs to be said a different way. The RCSDT believes it is more likely that the issuer is attempting to bet the recipient to understand and therefore believes that reissue is more appropriate. No change made.</p>		
Public Utility District No. 1 of Okanogan County	Affirmative	IRO-001-3: Need to correct language in Data Retention section 1.3. references R3 R4 and M3 and M4. There is no R4 and M4.
<p><b>Response:</b> The RCSDT agrees and thanks you for your comment. The language has been changed to eliminate R4 and M4 references.</p>		
Sierra Pacific Power Co.	Affirmative	<p>IRO-001-3: R1 appears to be unnecessary due to the authority that is already inherent through the functional model.<sup>8</sup></p> <p>Further, the measure for R1 does not properly cover the requirement that the RC "have authority"; rather, it measures whether the RC exercised that authority.</p>

<sup>8</sup> NERC Functional Model Version 5, ([http://www.nerc.com/files/Functional\\_Model\\_V5\\_Final\\_2009Dec1.pdf](http://www.nerc.com/files/Functional_Model_V5_Final_2009Dec1.pdf))

Organization	Yes or No	Question 6 Comment
<p><b>Response:</b> The RCSDT agrees that the standard requirements language is consistent with the authority that is inherent in the Functional Model V5. However, the Functional Model V5 does not constitute enforceable requirements for entities to follow. Such requirements are established within the Reliability Standards. The Functional Model V5 provides good guidance for a consistent structure throughout the Reliability Standards. In addition, the Reliability Coordinator’s reliability certification is established through Regional Entities and the authority to act is measured. No change made.</p>		
<p>Platte River Power Authority; Portland General Electric Co.; U.S. Army Corps of Engineers</p>	<p>Affirmative</p>	<p>IRO-001-3: Requirement R1 of IRO-001-3, requiring the Reliability Coordinator to have the authority to act or direct actions, appears to be unnecessary because it seems that this authority is granted when the entity is certified as the Reliability Coordinator.</p> <p>Additionally, the associated Measure M1, as worded, does not provide evidence that the Reliability Coordinator has the authority to act or direct other to act, but rather provides evidence that the Reliability Coordinator acted or took action to direct others.</p>
<p><b>Response:</b> IRO-001-3, R1: The RCSDT agrees that the requirement is consistent with intended functions of a Reliability Coordinator when the entity is recognized as a Reliability Coordinator. The RCSDT has been informed by the ERO that registration criteria do not provide for certification of this authority In addition, the Reliability Coordinator’s reliability certification is established through Regional Entities and the authority to act is measured. No change made.</p>		
<p>National Grid</p>	<p>Negative</p>	<p>- Requiring RCs, TOPs and BAs to state an action as a "reliability directive" complicates communications during a time when response time and clarity are important. If those issuing a directive don't get a repeat back they just need to ask for one. The requirement just needs to define "what" is required not "how." This can be handled by procedures and training.</p> <p>COM-002-3, R1: The requirement states “what” must be done: the action(s) are to be identified as a Reliability Directive. The requirement does not establish “how” the action is to be done. The RCSDT agrees that, under conditions such as you describe, time may be of the essence. Much as in military operations, discussion time is over and action is required when the recipient understands an order has been given.</p>

Organization	Yes or No	Question 6 Comment
		<p>Discussion of disagreement or alternatives may occur later, if and as needed, but no more time can be consumed discussing the directions given. The RCSDT has not prescribed “how” these things must be done, and the RCSDT recognizes there is more than one way. The RCSDT has determined it is appropriate to place the responsibility on the recipient to give a response. The RCSDT agrees that the issuer may ask for a response if one has not been given, but the responsible entity to perform the action is the recipient. The RCSDT agrees that procedures and training are good practices appropriate for this process, but the standard requirements establish what must be done, not how personnel are prepared to do it. No change made.</p> <p>- Delete reference to "adverse reliability impact" from the "Directive" definition. The "adverse reliability impact" definition is not clear, is this an actual event or contingency?</p> <p>The words imply it is an actual event which is already covered in the "Directive" definition. If the intent is to apply directives to potential stability or cascading contingencies it should say so.</p> <p>The RCSDT notes that the term, “Adverse Reliability Impact” is a currently defined NERC Glossary term; however, the term as it appears in the standard is the revised term, which is NERC Board of Trustee adopted and pending regulatory filing in IRO-014-2: “The impact of an event that results in Bulk Electric System instability or Cascading.” The pending definition covers the application to potential instability and cascading conditions. The RCSDT included the phrase “to address” in the proposed definition of “Reliability Directive” to account for (1) potential and (2) actual events leading to an Emergency or Adverse Reliability Impact.” No change made.</p>
<p><b>Response:</b> See response above.</p>		
SERC Reliability Corporation	Negative	COM-001-2 Comments Definition of Alternative Interpersonal Communication: The proposed definition uses the term "medium."

Organization	Yes or No	Question 6 Comment
		<p>What is the scope of that? Telephony is a "medium", but there is wired, wireless, satellite, etc.</p> <p>Was "medium", intended to differentiate voice, paper, text, email, teletype, or something else? Does the qualifying term "same", when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the "same infrastructure" but a different "medium."</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity. Please refer to the definition of Interpersonal Communication and Alternative Interpersonal Communication. Medium: the plain meaning of the word medium in noun form is a vehicle for ideas, a means of conveying ideas or information. The RCSDT recognizes there are many differing technologies for accomplishing communications and it is not necessary to prescribe which to use. A common medium is telephony, and the commenter is correct that there are different technological forms of telephony. What is required is that there be a medium in place so that Interpersonal Communication capability exists. No change made.</p> <p>R1 and R2 - We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or Alternate Interpersonal Communications.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>R1 - In later requirements it is proposed that the entity "shall designate an." It is</p>

Organization	Yes or No	Question 6 Comment
		<p>suggested that for consistency and audit ability, this concept be used for R1, R3, R5, R7 and R8.</p> <p>The RCSDT believes the requirements achieve the desired intent of the standard. Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>In addition, the qualifier of "primary" should be used such that the requirements read:</p> <p><i>"shall have designated, primary Interpersonal Communications capability with the following entities:"</i></p> <p>Although it is appropriate that "Alternative" be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication) that bounds acceptable alternative methods , we do not see the need to capital "primary."</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p> <p>R9 - The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the sub-requirements of R2, R4, and R6. There is no expectation of testing the primary Interpersonal Communications - is this intentional or an oversight?</p> <p>Although functional testing of this should be done as a normal course of business,</p>

Organization	Yes or No	Question 6 Comment
		<p>should an explicit test be required with each entity in the sub-requirements of R1, R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct?</p> <p>The RCSDT intends each Alternative Interpersonal Communication capability to be verified functional by testing. If an entity has only one such capability, then only one test would be required. You further ask whether the absence of required testing of the “primary” (word is not in the requirement) Interpersonal Communication capability is intentional. The RCSDT intentionally left it out because the communications capability is used routinely and the use is sufficient to demonstrate functionality. With respect to phone numbers, these are procedural matters to be addressed by each individual entity and by including phone numbers it would make the requirement prescriptive. The requirement is to test capability. No change made.</p> <p>R10 - The following scenario seems plausible: The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation?</p> <p>Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well?</p> <p>Yes, the entity experiencing the failure is required by R10 to notify the entities as identified within the 60-minute time frame. The RCSDT believes these situations would be few in numbers and not overly burdensome to perform. No change made.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>M9 reads “at least on a monthly basis.” We suggest that this be changed to “at least once per calendar month” as written in R9. This change should also be corrected in the VSLs.</p>

Organization	Yes or No	Question 6 Comment
		<p>The RCSDT agrees and has changed the language in COM-001-2, M9 to agree with the language in R9.</p> <p>M8 - We suggest removing the second “that” in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional “that”.</p> <p>M10 - We suggest this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</i></p> <p>The RCSDT agrees and has changed the language in COM-001-2, M10 to include language consistent with the language in R10.</p> <p>M12 needs to be removed.</p> <p>COM-001-2, M12: The RCSDT agrees that the heading “M12” has no corresponding requirement and was overlooked in format clean-up. The “M12” heading has been removed.</p> <p>We question why the first paragraph of Section 1.3” Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p>

Organization	Yes or No	Question 6 Comment
<p><b>Response:</b> See response above.</p>		
<p>Independent Electricity System Operator</p>	<p>Negative</p>	<p>COM-001-2:</p> <p>1. R1.2 and R2.2: The phrase “within the same Interconnection” is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to curtail interchange transactions crossing Interconnection boundary). The SDT’s response that the phrase was added to address the ERCOT situation and citing that ERCOT does not need to communicate with other RCs leaves a reliability gap.</p> <p>Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p> <p>2. R3.5 and R4.3: The phrase “synchronously connected within the same Interconnection” is also improper; it needs to be removed. TOPs do communicate with other TOPs including those asynchronously connected and in another Interconnection (e.g. between Quebec and all of its asynchronously interconnected neighbors).</p> <p>The RCSDT has made clarifying changes by adding a Part to R3 and R4 to address asynchronous connections between Transmission Operators and have eliminated the phrase “within the same interconnection.”</p> <p>3. R4 and R6: not requiring an Alternative Interpersonal Communication capability between the BAs and the DP and GOP can result in a reliability gap. If Interpersonal Communication capability between the BAs and these entities is required to begin with to enable BAs to communicate with these entities (such as operating</p>

Organization	Yes or No	Question 6 Comment
		<p>instructions or Reliability Directives) to ensure reliable operations, then an alternative capability is also needed to ensure this objective is achieved when the primary capability fails.</p> <p>The RCSDT refers the Order No. 693 in Paragraph 508 to clarify the reason the DP and GOP are not required to have Alternative Interpersonal Communication and is as follows: “(1) expands the applicability to include Generator Operators and Distribution Providers and includes Requirements for their telecommunications facilities; (2) identifies specific requirements for telecommunications facilities for use in normal and emergency conditions that reflect the roles of the applicable entities and their impact on Reliable Operation and (3) includes adequate flexibility for compliance with the Reliability Standard, adoption of new technologies and cost-effective solutions.” In addition, R11 requires the DP and GOP to consult with its BA and TOP to determine a mutually agreeable action for restoration. No change made.</p> <p>4. Measure M3 does not cover the added R3.5 condition (having Interpersonal Communications capability with each adjacent TOP). M3 needs to be revised.</p> <p>The RCSDT thanks you for your comment and has made conforming changes to make to COM-001-2, M3.</p>
<p><b>Response:</b> See response above.</p>		
<p>Wisconsin Electric Power Marketing; Wisconsin Electric Power Co.</p>	<p>Negative</p>	<p>COM-001-2: Although a great improvement over existing COM-001, and eliminates the data component see comments:</p> <ul style="list-style-type: none"> <li>-For R5.1 Can the solutions included to meet R1 be included, same R3.2 and R5.2, same R5.3 and R7.2, same R5.4 and R8.1.</li> <li>-For R5.2 Can the solutions included to meet R2 be included, same R4.2 and R6.2.</li> </ul> <p>COM-001-2, R5: In a word: Yes. The requirement is to have capability, and that capability does not have to be different from what the entity on the other end has. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R9 a 2 hour response for a once a month test seems extreme, as would require a secondary Alternate Interpersonal Communications capability.</p> <p>-M9 is reasonable, but should include something about communication actual repair and or time estimates.</p> <p>COM-001-2, R9: The requirement is to “initiate action to repair or designate a replacement Alternative Interpersonal Communication capability...” within two hours. The RCSDT recognizes that many different contracts or other arrangements may exist to address repair. However, the RCSDT finds that entities should know what they have and how to initiate repair and those two hours to do so is reasonable. No change made.</p> <p>COM-001-2, M9: The requirement is to have evidence that either repair was initiated or an Alternative Interpersonal Communication capability was designated within two hours. The RCSDT understands that, in extreme cases, the entity may need to make its initial Alternative Interpersonal Communication capability its Interpersonal Communication capability and then designate another Alternative Interpersonal Communication capability, if the repair times are so long that to continue in that mode for that long would present a reliability risk. Such arrangements, if they exist at all, are very rare. No change made.</p> <p>-R10 The use of R1 through R6 implies notification of both Interpersonal Communications and Alternate Interpersonal Communications failures. Do you notify if you become aware after the link is back up if it was down for GT 30 minutes, and doesn’t address notifying when restored?</p> <p>COM-001-2, R10: The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p> <p>Yes, there is no requirement to notify identified entities the Interpersonal Communication have been restored. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>-R11 Implies that R8 and R9 are independent and redundant to R5.3, R5.4 and R3.3 and R3.4.</p> <p>Update M9 accordingly.</p> <p>COM-001-2, R11: The RCSDT believes you intended to refer to R7 and R8, rather than R8 and R9. The RCSDT does not believe that the language implies that the communications capability required by R7 and R8 are independent, but they may be. If the entity which is registered as a DP is also registered as a GOP, although unlikely, then the capability could be met by the same medium. Neither does the RCSDT believe that R11 implies that R7 and R8 are redundant to R3.3 and R3.4 or to R5.3 and R5.4. No change made.</p>
<p><b>Response:</b> See response above.</p>		
Tampa Electric Co.	Negative	<p>COM-001-2:</p> <p>By use of the term “any” in the phrase “a failure of any of its Interpersonal Communication” the standard will actually create a disincentive for redundant communications with DPs and GOPs due to compliance risk. It needs to be limited to primary Interpersonal Communications with its TOP and/or BA.</p>
<p><b>Response:</b> The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p>		
Cogentrix Energy, Inc.	Negative	<p>COM-001-2:</p>

Organization	Yes or No	Question 6 Comment
		<p>Definition of Alternative Interpersonal Communication: The proposed definition uses the term “medium.”</p> <p>What is the scope of that? Telephony is a “medium” but there is wired, wireless, satellite, etc. Was “medium” intended to differentiate voice, paper, text, email, teletype, or something else?</p> <p>Does the qualifying term “same” when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system.</p> <p>That is the “same infrastructure” but a different “medium” R8 Revision:</p> <p>GOP cannot dictate to the BA or TOP what types of Interpersonal Communication will be used, but they can work with them to establish a common tool.</p> <p>COM-001-2, “Medium”: the plain meaning of the word medium in noun form is a vehicle for ideas, a means of conveying ideas or information. The RCSDT recognizes there are many differing technologies for accomplishing communications, and it is not necessary to prescribe which to use. A common medium is telephony, and the commenter is correct that there are different technological forms of telephony. What is required is that there be a medium in place so that Interpersonal Communication capability exists. Your comment poses compliance questions but does not suggest changes. No change made.</p> <p>COM-001-2, Definition of Alternative Interpersonal Communication: You ask whether the use of the word “same” as a modifier of infrastructure mean something like voice versus written? It could, but is not required to. The RCSDT intends the language to indicate that whatever causes the loss of the Interpersonal Communication capability should not be a common cause of failure of the Alternative Interpersonal Communication capability. Thus, one telephone number could serve as the Interpersonal Communication capability and another telephone</p>

Organization	Yes or No	Question 6 Comment
		<p>number could serve as the Alternative Interpersonal Communication capability, as long as whatever causes the failure of the Interpersonal Communication capability does not automatically cause the failure of the Alternative Interpersonal Communication capability. No change made.</p> <p>R8 Balloting:</p> <p>R8. Each Generator Operator shall have Interpersonal Communications capability with the following entities:</p> <p>R8.1 Balancing Authority</p> <p>R8.2 Transmission Operator</p> <p>R8 Suggestion:</p> <p><i>R8. Each Generator Operator shall coordinate with the BA and TOP to establish Interpersonal Communications capability as requested by the BA and TOP.</i></p> <p>The standard establishes requirement for communication capability appropriate to ensure reliability. There is no requirement for it to be different from the Interpersonal Communication capability that its Balancing Authority has with it, nor the Interpersonal Communication capability that its Transmission Operator has with it. Cooperation and coordination is always encouraged and is an excellent practice, but is not required by this standard. Thank you for your suggestion. No change made.</p>
<p><b>Response:</b> See response above.</p>		
Oncor Electric Delivery	Negative	<p>COM-001-2:</p> <p>Oncor takes the position that contacting all impacted entities within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasts 30 minutes or longer as prescribed in R1 through R6 is not doable within the ERCOT interconnect for a Transmission Operator.</p>

Organization	Yes or No	Question 6 Comment
		<p>The standard establishes requirement for Interpersonal Communication capability between entities for reliability purposes. The RCSDT recognizes that there are many different organizational arrangements and structures within the North American continent. The standard establishes “what” is required, but does not prescribe “how” it must be done. No change made.</p> <p>Oncor takes the position that notification to the RC and BA only is sufficient and that those two entities have the operational functionality to contact within the prescribed time all affected Distribution Providers, Generator Operators, and other Transmission Operators.</p> <p>Oncor also takes the position adding the word “impacted” to R10 will clarify that notification needs to be made only to the entities that are affected by the failure of a communication path.</p> <p>This will also more align with the language in M10."</p> <p>Thank you for your suggestion. The word “impacted” was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word “impacted” to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, “R1 through R6” to “R1, R3, and R5,” to clarify that it applies to the capabilities with the RC, the TOP, and the BA.</p>
<p><b>Response:</b> See response above.</p>		
National Grid	Negative	<p>COM-001-2:</p> <p>Overly prescriptive, not results-based. R7 &amp; R8 are not necessary. Every entity at a minimum has a contact with a phone as their "Interpersonal Communications capability." Just need to require that every entity has a plan if they lose their primary communication channel ("Interpersonal Communications capability").</p>
<p><b>Response:</b> The standard establishes requirement for communication capability appropriate to ensure reliability. In addition, R7 and R8 are responsive to FERC Order No. 693. Entities may use the telephone cited in the example as their Interpersonal Communication</p>		

Organization	Yes or No	Question 6 Comment
<p>capability. Requirement R11 as modified addresses the loss of Interpersonal Communication capability. No change made.</p>		
<p>Lincoln Electric System</p>	<p>Negative</p>	<p>COM-001-2: Please clarify whether R10 is intended to address both Interpersonal and Alternative Interpersonal Communications or only Interpersonal Communication.</p> <p>Although R10 identifies only Interpersonal Communication within the requirement, the reference to Requirements R1-R6 appears to include Alternative Interpersonal Communication as well. LES is concerned that if an entity's Interpersonal Communication is fully functional but discovers a failure in its Alternative Interpersonal Communication, the entity would still be required to notify entities per R10.</p>
<p><b>Response:</b> The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than "R1 through R6," since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p>		
<p>ISO New England, Inc.</p>	<p>Negative</p>	<p>COM-001-2: Please see comments submitted with the project... ISO-NE does not believe COM-001, in its entirety, is a results-based standards and therefore does not support the draft as written. We believe such "requirements" (i.e. capabilities) should be verified through an entity certification process.</p> <p>Additionally, results-based requirements should be the driver to have the capability to achieve them; on other words, there is no other way to reliably dispatch than to have communications facilities (electronic or voice).</p>
<p><b>Response:</b> Although this is not a results-based standard, the RCSDT believes it is a significant improvement over the current COM-001 standard. The RCSDT will forward your comment to NERC staff for consideration.</p>		
<p>Commonwealth of Massachusetts Department of Public Utilities</p>	<p>Negative</p>	<p>COM-001-2: Primary concern here is with the phrase "within the same interconnection" which appears in R1.2 and R2.2. This removes any standard requirement for adjacent RCs that may not be in the same interconnection from communicating with each other. This constitutes a "gap" in reliability and is a</p>

Organization	Yes or No	Question 6 Comment
		concern.
<p><b>Response:</b> Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal Communication capability; however, it does not preclude or limit the Reliability Coordinator from establishing Interpersonal Communication capability with others. The RCSDT does not see where there is a need to communicate with other Reliability Coordinator’s from one interconnection to another. No change made.</p>		
Detroit Edison Company	Negative	<p>COM-001-2:</p> <p>R9. I believe 2 hours is too short, suggest "within 24 hours."</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is NOT to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>R11. "mutually agreeable time" creates issues. What if TO and BA have differing time frames?</p> <p>Which entity bears the violation if agreement cannot be reached?</p> <p>Alexander Eizans</p> <p>COM-001-2, R11, For, “mutually agreeable time,” the “what” is required is to consult and determine a mutually agreeable time and the “How” that is to be done is too prescriptive to be included within a standard because of the great number of possible scenarios, organizational arrangement, and sizes of entities involved. No change made.</p> <p>I am concerned with the evidence listed under the measures (see M6, M7 and M8).</p>

Organization	Yes or No	Question 6 Comment
		<p>Dated equipment specifications and installation documentation is to much. I know this is listed as "could include" but at one point could become "must include."</p> <p>Jeffrey DePriest</p> <p>COM-001-2, M6, M7, and M8, "could include" may some day become "must include": "What" is required is to provide evidence. A list, which could include but is not limited to various forms of evidence is presented for consideration, but the entity may, and is encouraged to do so when it is appropriate, provide other forms of equally appropriate evidence. No change made.</p> <p>R9 define "unsuccessful test."</p> <p>Is it a mechanical failure of equipment or failure of one or more entities to respond to the test?</p> <p>If mechanical failure, does the 2 hour window to initiate repairs mean notification to proper business unit or do repairs have to actually begin (crew investigating). If crews need to be on site 2 hours is too limiting.</p> <p>COM-001-2, R9, define "unsuccessful test": The RCSDT notes that your words are a paraphrase of the actual standard requirement language. In its simple form, a test is unsuccessful when the capability fails to perform as expected. The entity may have an elaborate contract in place with very specific technical specifications within which the capability is to perform. The test may be unsuccessful if it does not meet those technical specifications, although the intent of the standard is for the entities to be able to communicate, usually verbally, with one another so as to operate reliably. The standard does not prescribe the performance expectations for the capability apart from the expectation that communication capability is to exist. The RCSDT recognizes that there may be many variations of service, maintenance, and repair agreement implemented for these communication capabilities. Whatever the agreement provides for initiation of the response and repair is what is required. This standard cannot prescribe all the possible combinations or scenarios. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>- R11. Mutual Agreeable time is vague.</p> <p>Barbara Holland</p> <p>COM-001-2, R11, “mutual agreeable time” is too vague: “What” is required is to consult and determine a mutually agreeable time. “How” that is to be done is too prescriptive to be included within a standard because of the great number of possible scenarios, organizational arrangement, and sizes of entities involved. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>Madison Gas and Electric Co.</p>	<p>Negative</p>	<p>COM-001-2:</p> <p>The definition of Interpersonal Communication is: “Any medium that allows two or more individuals to interact, consult, or exchange information.” Recommend that the word "any" be removed from Interpersonal Communication and recommend the new definition be "The primary (or designated) medium that allows two or more individuals to interact, consult, or exchange information."</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. No change made.</p>

Organization	Yes or No	Question 6 Comment
		<p>R11, Please note that the use of the word “any” as in “Each Distribution Provider and Generator Operator that experiences a failure of any of its Interpersonal Communication capabilities...” will be viewed as meaning every Interpersonal Communication medium that an Entity has or uses.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase “any of” in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>Recommend R11 be updated to read:</p> <p><i>“Each Distribution Provider and Generator Operator that experiences a failure of any of its primary (or defined) Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority...”</i></p> <p>In that way it focuses it down to the communications issues with the TOP or BA.</p> <p>In lieu of “primary” the SDT could state “defined” as long as it is not meant to be “any.” The latter part of R11 states; “...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability.” This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. Recommend this to be “...shall consult with inform their Transmission Operator or Balancing Authority as applicable as to determine a mutually agreeable time to restore the status of the Interpersonal Communication capability.”</p> <p>Thus R11 is recommended to read as:</p> <p><i>“Each Distribution Provider and Generator Operator that experiences a failure of its primary (or designated) Interpersonal Communication with their Transmission Operator or Balancing Authority shall inform them, as applicable, as to the status of the Interpersonal Communication capability.”</i></p>

Organization	Yes or No	Question 6 Comment
		<p>This allows for situational awareness and supports the reliability of each system. Additionally, the RCSDT notes that the requirement refers only to Interpersonal Communication capabilities. Adding the phrase “to the primary” is not needed. Please refer to the definitions of Interpersonal Communication and Alternative Interpersonal Communication for clarification. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>New York Independent System Operator</p>	<p>Negative</p>	<p>COM-001-2: The drafting team has complicated the requirements by having different requirements between RC/TOP/BA and other entities such as GOP/LSE/DP. The proposal is for redundancy to be required only between RC/TOP/BA. The requirement should be simplified to require all entities to have plans for loss of primary communication channels. This can include third parties as a communication channel.</p>
<p><b>Response:</b> The term “Interpersonal Communication” is a defined term in this standard. As such, it has a different meaning than “Alternative Interpersonal Communication,” thus there should be no confusing of the two. In addition, the word “primary” purposely does not exist in the requirements since the RCSDT did not intend to create a requirement for redundancy. Redundancy continues to be a good practice, but it is not required by this standard. Only that some entities must have both an Interpersonal Communication capability and a designated Alternative Interpersonal Communication capability. The DP and GOP are not required to have Alternative Interpersonal Communication; however, R11 addresses the loss of communication capability (plan). No change made.</p>		
<p>Public Utility District No. 1 of Lewis County</p>	<p>Negative</p>	<p>COM-001-2: This standard should be combined with COM-002.</p>
<p><b>Response:</b> The standard COM-001-2 is capability based (equipment) and COM-002-3 is communication and coordination based. Each fulfills independent concepts. No change made.</p>		
<p>Southwest Transmission</p>	<p>Negative</p>	<p>COM-001-2:</p>

Organization	Yes or No	Question 6 Comment
Cooperative, Inc.		<p>We believe that the VSLs could be written to provide more gradations. For example, if a Transmission Operator or Balancing Authority failed to have Interpersonal Communications capability with a Distribution Provider but had Interpersonal Communications capability with all other required entities, it has met the vast majority of the requirement. Since VSLs are a measure of how much the requirement was missed by the responsible entity, jumping to a Severe VSL does not seem to adequately capture that the responsible entity met the vast majority of the requirement. Requirements R4 and R6 even seem to recognize this by not including Distribution Provider in the list of entities to which the Transmission Operator or Balancing Authority are required to designate Alternate Interpersonal Communications capability.</p>
<p><b>Response:</b> The RCSDT has applied the VSL to the Severe column because not having Interpersonal Communication capability with any entity is detrimental to reliability. No change made.</p>		
Tennessee Valley Authority	Negative	<p>COM-001-2: We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or Alternate Interpersonal Communications (R1 and R2).</p>
<p><b>Response:</b> The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p>		
Southwest Transmission Cooperative, Inc.	Negative	<p>COM-001-2: We thank the drafting team for its efforts but believe there are still issues that need to be addressed. We thank the drafting team for clarifying that the intent of this</p>

Organization	Yes or No	Question 6 Comment
		<p>standard is not for data exchange in the response to comments.</p> <p>However, we do believe one additional change is necessary to make the intent absolutely clear. The purpose of statement of COM-001-2 still includes the phrase “to exchange Interconnection and operating information.” Since a standard must stand on its own, we believe it is necessary to remove that phrase from the purpose statement to avoid misinterpretations in the future. Auditors and enforcement personnel are not required to understand the development history when enforcing the standard. Furthermore, the purpose is really to enable communications between these functional entities.</p> <p>The SDT agrees and has made a conforming change to the purpose of COM-001.</p> <p>Requirement R11 does not fully address the issue of what is required by Distribution Providers and Generator Operators and introduces new issues.</p> <p>For, “mutually agreeable,” the “what” is required is to consult and determine a mutually agreeable time and the “how” that is to be done is too prescriptive to be included within a standard because of the great number of possible scenarios, organizational arrangement, and sizes of entities involved. No change made.</p> <p>First, while the standard is intended to clarify that the Distribution Provider and Generator Operator do not need backup communications capability, it simply does not. Distribution Providers and Generator Operators are required to have an Interpersonal Communications capability in Requirement R7 and R8 respectively. Unfortunately, the effectiveness of these requirements persists even when the Distribution Provider or Generator Operator experiences a failure of its Interpersonal Communications capability. When Requirement R11 applies, the Distribution Provider or Generator Operator will still be obligated to comply with Requirements R7 and R8 respectively and will, in fact, be in violation of these requirements because the Distribution Provider or Generator Operator no longer has the capability.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The</p>

Organization	Yes or No	Question 6 Comment
		<p>intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>Second, capability is used inconsistently between Requirement R7 and R11 which leads to confusion. In Requirement R7, it is singular while in Requirement R11 is plural. It needs to be clear that only the failure of the capability identified in R7 and R8 needs to be reported by the Distribution Provider and Generator Operator respectively.</p> <p>The RCSDT thanks you for your observation. Generally, the singular implies the plural or vice-versa. The RCSDT has corrected R10 and R11 to be consistent with the singular application.</p> <p>Third, if the requirements focused on communications devices rather than capabilities, they would come closer to communicating the intent. Requirement R11 would better complement Requirement R7 and R8 if the focus was on having a communication medium or device. A Generator Operator with an installed communications device or medium still has that device or medium even when it is not functioning properly and could still meet Requirements R7 and R8. However, they don't have the Interpersonal Communications capability if the device is not functioning properly.</p> <p>The RCSDT thanks you for your comment. Requirements R7 and R8 have been revised to account for the failure of Interpersonal Communication capability. The intent of R11 is to require the responsible entity to take action upon the failure of its Interpersonal Communication.</p> <p>We recommend striking "capability" from all of the requirements. It is not clear to us how this helps when a definition for Interpersonal Communications is written already and applies to a communication medium. Furthermore, we think it causes confusion and actually contradicts the intent of the standard. Because Requirements R1, R3, R5, R7 and R8 focus on capability, the responsible entity will be in violation anytime its medium that it uses for the primary capability does not function</p>

Organization	Yes or No	Question 6 Comment
		<p>properly. Whereas if the requirement stated that the responsible entity was to designate a primary communications medium, the responsible entity is not in violation if that medium is not functioning properly. It would be clear that Requirement R2, R4 and R6 are intended to be complementary.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>Furthermore, it is not clear why Requirements R1, R3, R5, R7 and R8 state that the responsible entity shall “have” when the companion Requirements R2, R4, and R6 state “designate.”</p> <p>Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>Since Requirement R10 deals with a failure of its Interpersonal Communications capabilities and not Alternate Interpersonal Communications capability, it should only refer to the entities in Requirements R1, R3, and R5. Currently, it includes R1 through R6.</p> <p>The RCSDT thanks you for pointing this out. The RCSDT has modified the language of R10 to refer to R1, R3, and R5, rather than “R1 through R6,” since the responsible entities are limited to the RC, the TOP, and the BA in these requirements.</p>
<p><b>Response:</b> See response above.</p>		
New York Independent	Negative	COM-002-3: The drafting team added a requirement to identify a Reliability Directive is being initiated during an emergency to track 3-part communication for compliance

Organization	Yes or No	Question 6 Comment
System Operator		<p>purposes. This will change and complicate the communication protocols between normal and emergency operations simply to simplify compliance assessments. The NYISO is asking for clarification that an entity may identify Reliability Directives as a category of communications to be communicated through procedures and training; and will not require a different communication protocol between normal and emergency operations. Affective communications can only be achieved through consistent processes for all conditions. Compliance assessments should be made on when we are in an emergency or not, and not on how the dialogue was initiated.</p>
<p><b>Response:</b> The RCSdT believes the standard allows for this condition, and the method of implementation is up to the entity. No change made.</p>		
Illinois Municipal Electric Agency	Negative	<p>Illinois Municipal Electric Agency supports and encourages SDT consideration of comments submitted by the SERC OC Standards Review Group.</p>
<p><b>Response:</b> Thank you for your comment. See response to SERC comments.</p>		
Wisconsin Public Service Corp.	Negative	<p>In COM-002-3, the Standards Drafting Team provided great clarity to the industry and also reduced risk to the BES, by clearly defining Reliability Directives and how the RC, TOP, and BA must utilize them. Unfortunately, they failed to maintain this level of clarity in IRO-001-3, where they state:</p> <p><i>R2. Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s direction unless compliance with the direction cannot be physically implemented or unless such actions would violate safety, equipment, regulatory or statutory requirements. [Violation Risk Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p><i>R3. Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as directed in accordance with Requirement R2. [Violation Risk</i></p>

Organization	Yes or No	Question 6 Comment
		<p><i>Factor: High] [Time Horizon: Real-time Operations, Same Day Operations and Operations Planning]</i></p> <p>The use of “direction” and “directed” essentially makes any request equivalent to a Reliability Directive. In addition, IRO-001-3 as written is largely redundant of COM-002-3. Given this, we recommend that the Standards Drafting Team consider granting the RC authority to issue Reliability Directives by adding this requirement to COM-002-3 and then eliminate IRO-001-3.</p> <p>The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. No change made.</p>
<p><b>Response:</b> See response above.</p>		
<p>Wisconsin Electric Power Marketing; Wisconsin Electric Power Co.</p>	<p>Negative</p>	<p>IRO-001-03: Although a great improvement over existing IRO-001, see comments:</p> <ul style="list-style-type: none"> <li>-R2 needs to be clear that it is the Reliability Coordinator’s Reliability Directive that must be complied with not just any Reliability Coordinator’s direction as stated.</li> </ul> <p>The RCSDT notes that the intent of the standard is not intended to limit the RC authority to Reliability Directives. The Reliability Coordinator issuing the Reliability Directive is the one, which the recipient must comply. It is assumed that a BA or TOP has a relationship with one, and only one, RC for a given Balancing Area or Transmission Operator Area (some may have multiple, disconnected areas, that are subject to different RCs). No change made.</p> <ul style="list-style-type: none"> <li>-The M2 measure could be difficult, as the operator would have to have access to documents proving the safety, equipment, regulatory or statutory requirements, which may be the assessment of an individual applying the safety rule. Is the measure requiring a deposition of the individual to be performed for each instance?</li> </ul> <p>In the RCSDT’s opinion, the Measure M2 does not contemplate depositions. If an entity cannot comply with a Reliability Directive for one of the stated reasons, it should have documentation, such as an attestation, to support that stated reason</p>

Organization	Yes or No	Question 6 Comment
		<p>available during an audit. No change made.</p> <p>With an assumed data retention of 90 day (voice) or 12 month document retention, the deposition would be unlikely to be acquired prior to the retention period ending.</p> <p>Data retention is a significant issue when the data being recorded is voluminous, supporting a 90-day retention period. No change made.</p> <p>-R3 needs to be clear that it is the inability to perform the Reliability Coordinator’s Reliability Directive that must be communicated not just any “Reliability Coordinator’s as directed.”</p> <p>The RCSDT believes R3 contains the full communication set of “action or direction” and the subset, Reliability Directive, is included; therefore, the respective entity is still required to inform the RC. The RCSDT believes the requirement is clear in regards to Reliability Directives. No change made.</p> <p>-The Data Retention section does not align with the standard: The Reliability Coordinator shall retain its evidence for the most recent 90 calendar days for voice recordings or 12 months for documentation for Requirement R2, Measure M2.</p> <p>R2 and M2 apply to the Transmission Operator, Balancing Authority, Generator Operator, or Distribution Provider.</p> <p>There is no R4 and M4.</p> <p>Data retention related to IRO-001-2, R2/M2 was changed to agree with your suggestion. The changes were more involved – several sections were changed, including removing the reference to R4/M4.</p>
<p><b>Response:</b> See response above.</p>		
<p>SERC Reliability Corporation</p>	<p>Negative</p>	<p>IRO-001-3 Comments</p> <p>We recommend that where the verb "direct/directed" or noun "direction" is used in Purpose, R1, R2 and R3, that it be replaced with the verb "instruct/instructed" or</p>

Organization	Yes or No	Question 6 Comment
		<p>noun "instruction", as appropriate. This would help the industry avoid confusion often referred to as "big D" or "little d" directives. It is noted that the term "Reliability Directive" does that to a great degree but avoiding the verb/noun "direct/direction" would augment the difference.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1 - At what point in time is "identified" referring to in "to prevent identified events or"? Is it referring to current or future events?</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See Standards IRO-008 and IRO-009. No change made.</p> <p>One might assume both since the "Time Horizon" is defined as Real-time Operations, Same Day Operations and Operations Planning, but the requirement may be enhanced if explicitly stated ("to prevent events identified in real-time or in the future or to mitigate the magnitude"). For clarity, the scope of the authority should be limited to the Reliability Coordinator Area (that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area). As written, it implies the authority should extend outside its RC Area.</p> <p>R2 - We question the phrase, “physically implemented,” and recommend that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions were an entity might not be able to physically implement the direction. For example, entities that do not have the right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>We note the following comment and response posted under Consideration of Comments on Initial Ballot , ” Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25, ” March 7, 2011:</p>

Organization	Yes or No	Question 6 Comment
		<p><i>“IRO-001 R2, R3, and R4 have replaced “Directives with the word direction in lower case (while it appears that “Directives is a subset of “directions). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g. Reliability Coordinator, market operator, etc) the staff at these entities is fulfilling.</i></p> <p><i>Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the “direction in accordance with Requirement R2 stated in R3 and the “direction in accordance with Requirement R3 stated in R4. We believe the entity comments remain valid and the response provided by the SDT does not address all aspects of the concern.</i></p> <p>We suggest that the language be changed to “Reliability Directive consistent with COM-002.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>R3 - The requirement states the responsible entities shall “inform its RC when unable to perform as directed but it is unclear when the notification needs to take place. Although the term “as soon as practical may seem be un-measurable, as written now there is no time deadline to perform the notification” i.e. it could be 4 hours later after recognition.</p> <p>M2,” need to add the following words “compliance with, physically, unless which</p>

Organization	Yes or No	Question 6 Comment
		<p>were included in R2, therefore M2 should read,</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator’s direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator direction. (R2)”</i></p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2 Measure M2.</p> <p>Section 1.3, the second bullet; need to add calendar to 12 calendar months</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>
<p><b>Response:</b> See response above.</p>		
<p>Dominion Virginia Power; Dominion Resources, Inc.</p>	<p>Negative</p>	<p>IRO-001-3: Dominion does not support the use of “Reliability Coordinator’s direction” in IRO-001-3 and would prefer that the language be changed to “Reliability Directive” consistent with the use in COM-002-3.</p>
<p><b>Response:</b> The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” The RCSDT feels the use of direct and directed is consistent with the purpose and application of those terms in other standards. No</p>		

Organization	Yes or No	Question 6 Comment
change made.		
Constellation Energy Commodities Group	Negative	<p>IRO-001-3:</p> <p>IRO-001-3 uses the term ‘direct’ in its purpose statement, R1, R2 and R3. To avoid confusion with a Reliability Directive (both for auditors and entities), we suggest the following: To establish the authority of Reliability Coordinators to make requests of other entities to prevent an Emergency or Adverse Reliability Impacts to the Bulk Electric System.</p> <p><i>R1: Each Reliability Coordinator shall have the authority to act or request others to act (which could include issuing Reliability Directives) to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impacts.</i></p> <p><i>R2: Each Transmission Operator, Balancing Authority, Generator Operator, Distribution Provider shall comply with its Reliability Coordinator’s request unless compliance with the request cannot be physically implemented, or unless such actions would violate safety, equipment, regulatory or statutory requirements, or unless the TOP, BA, GOP or DP convey a business reason not to comply with the request but express that they will comply if a Reliability Directive is given.</i></p> <p><i>R3: Each Transmission Operator, Balancing Authority, Generator Operator, and Distribution Provider shall inform its Reliability Coordinator upon recognition of its inability to perform as requested in accordance with Requirement R2.</i></p>
<p><b>Response:</b> This standard provides for the authority of the RC to act or direct actions, and not request. The RCS DT believes by using the word “request” make the requirement conditional and is not consistent with the purpose of the standard. No change made.</p>		
Tampa Electric Co.	Negative	<p>IRO-001-3:</p> <p>R1 VSL should have the phrase "exercise their authority" inserted between "to" and "take" in the first sentence. Otherwise it could be read that the RC would be in violation of the standard requirement for any event that resulted in an Adverse</p>

Organization	Yes or No	Question 6 Comment
		Reliability Impact whether he issued a Reliability Directive or not.
<p><b>Response:</b> Thank you for your comment. The RCSDT has added the additional clarifying language.</p>		
Independent Electricity System Operator	Negative	<p>IRO-001-3:                      The IESO is unable to support this standard as written since Data Retention Section does not reflect the revised requirements. For examples: the Electric Reliability Organization is no longer a responsible entity; the Reliability Coordinator should replace the ERO for keeping data for R1; Transmission Operator, Balancing Authority, Generator Operator and Distribution Provider should replace the Reliability Coordinator for keeping data for R2; and there is no R4/M4.</p>
<p><b>Response:</b> The RCSDT agrees and has made conforming changes in Data Retention.</p>		
Southwest Transmission Cooperative, Inc.	Negative	<p>IRO-001-3:                      We thank the drafting team for their efforts but believe this standard needs additional work. We disagree with including “authority” in this standard. FERC Order 693a, paragraph 112, made it clear that the authority of a registered entity is established through the approval of the standards by FERC. Thus, a Reliability Coordinator gets its authority to issue Reliability Directives by having a requirement that states it must issue Reliability Directives approved by the Commission. Please change “shall have authority to act” in Requirement R1 back to “shall act.” Please also remove all other vestiges of authority from the standards including in the purpose, measures and VSLs. Requirement R1 should require the use of Reliability Directives. The requirement compels the Reliability Coordinator “to direct others to act to prevent identified events or mitigate the magnitude or duration of actual events that result in an Emergency or Adverse Reliability Impact.” Reliability Directives are necessary to address Adverse Reliability Impacts or Emergencies and</p>

Organization	Yes or No	Question 6 Comment
		<p>trigger the use of three-part communications identified in COM-002-3.</p> <p>The RCSDT believes that other standards (i.e., IRO-009 - R3 &amp; R4, EOP-002 - R1 and R8) address the action of others; and if the term “authority” is omitted, creates a generic requirement. Such as what has been suggested puts the RC in a double jeopardy situation. No change made.</p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>COM-002-3 R1 really compels the Reliability Coordinator to use a Reliability Directive for Emergencies and Adverse Reliability Impacts with the opening clause: “When a Reliability Coordinator, Transmission Operator, or Balancing Authority determines actions need to be executed as a Reliability Directive.” What else could be more important for a Reliability Coordinator to issue a Reliability Directive than for an Emergency or Adverse Reliability Impact?</p> <p>Thus, not requiring the use of Reliability Directives for Adverse Reliability Impacts and Emergencies makes IRO-001-3 R1 and COM-002-3 R1 inconsistent. For clarity and consistency, Requirement R2 and R3 should also be clear that the responsible entities will respond to the Reliability Coordinator’s Reliability Directives.</p> <p>The RCSDT notes that IRO-001-3 addresses direction, which may include a Reliability Directive. The responsible entity receiving the direction, at a minimum, must comply with the RC’s direction, unless the receiver cannot physically implement or unless such actions would violate safety, equipment, regulatory, or statutory requirements. The standard IRO-001-3 is not limited to only actions that are Reliability Directives. On the other hand, the standard COM-002-3 requires the BA, RC, and TOP to identify the communication as a Reliability Directive and to use three-part communication when actions are required to be executed as a Reliability Directive. No change made.</p> <p>Furthermore, this would make the standard consistent with how Reliability Directives are handled by the Transmission Operator in the draft TOP-001-2 standard proposed by the Real-Time Operations drafting team (Project 2007-03). We do not agree with</p>

Organization	Yes or No	Question 6 Comment
		<p>the need to include Distribution Provider in IRO-001-3. The Distribution Provider will likely never receive a Reliability Directive directly from its Reliability Coordinator. More likely, the Reliability Directive will be issued by the Transmission Operator or Balancing Authority depending on if the issue is security or adequacy related.</p> <p>The RCSDT notes that IRO-001-3 is an authority standard, the DP may not likely receive a Reliability Directive from the RC; however, in the case they do, they are required to comply with the requirement. No change made.</p>
<p><b>Response:</b> See response above.</p>		
Northeast Utilities	Negative	NU contributed in and joins on the comments submitted by NPCC.
<p><b>Response:</b> Thank you for your comment.</p>		
MidAmerican Energy Co.	Negative	<p>COM-001-2:</p> <p>The definition of Interpersonal Communication is too broad and should be revised to read,</p> <p><i>"the primary defined communication system used to communicate between NERC defined reliability entities when operating the Bulk Electric System."</i></p> <p>Examples may include a telephone system as a primary system and an email system as an alternative system.</p> <p>R11 is too broad and should either be deleted or revised to read:</p> <p><i>"Each Distribution Provider and Generator Operator that experiences a failure of its defined primary Interpersonal Communication capabilities with its Transmission Operator or Balancing Authority..."</i></p> <p>The RCSDT deliberately avoided the use of primary and secondary mediums and elected to use communications capabilities. As such, R11 applies to Interpersonal Communication capabilities of the DP and GOP. The RCSDT has gone to great lengths</p>

Organization	Yes or No	Question 6 Comment
		<p>to provide some flexibility for those DPs and GOPs with little or no impact on the reliability of the BES. FERC directed NERC to provide for this consideration. Therefore, we use the language as proposed in R11. Mutually agreeable implies that both parties are willing to accept the outcome. It doesn't mean that a DP or GOP must comply with the wishes of its TOP or BA because as you state that could be beyond the control of the DP or GOP. No change made.</p> <p>The use of the word "any" could end up applying to an intercom and not to a primary mode of communication such as telephone system or email system.</p> <p>The RCSDT appreciates your comment and has made clarifying changes by removing the phrase "any of" in COM-001, R11. Additionally, the RCSDT made a clarifying change to indicate the DP and GOP only need to consult with the entity affected by the failure.</p> <p>The latter part of R11 states; "...shall consult with their Transmission Operator or Balancing Authority as applicable to determine a mutually agreeable time to restore the Interpersonal Communication capability." This ambiguous statement does not support reliability. Consulting with a TOP or BA does not solve the problem of the lack of Interpersonal Communication capabilities. This statement should be deleted or revised to read:</p> <p><i>"Each Distribution Provider and Generator Operator that experiences a failure of its defined primary Interpersonal Communication with their Transmission Operator or Balancing Authority shall notify the applicable TOP or BA as to the status of the Interpersonal Communication capability."</i></p> <p>The RCSDT believes non-compliance is not due solely to the failure of any Interpersonal Communication capability, but must be accompanied by a failure to consult with the applicable Transmission Operator or Balancing Authority to establish mutually agreeable action for restoration. No change made.</p>
<p><b>Response:</b> See response above.</p>		

Organization	Yes or No	Question 6 Comment
<p>SERC OC Standards Review Group</p>		<p>COM-001-2 Comments</p> <p>Definition of Alternative Interpersonal Communication:</p> <p>The proposed definition uses the term “medium.”</p> <p>What is the scope of that?</p> <p>Telephony is a “medium” but there is wired, wireless, satellite, etc. Was “medium” intended to differentiate voice, paper, text, email, teletype, or something else?</p> <p>Does the qualifying term “same” when modifying infrastructure mean something like voice versus written?</p> <p>What about situations where the primary telephone system is Voice Over Internet Protocol (VOIP) and it is using the same computer network infrastructure as an email or messaging system. That is the “same infrastructure” but a different “medium” R1 and R2 –</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>We suggest the drafting team look at Standard EOP-008, Requirements R3 and R8 and add appropriate language in Standard COM-001-2, to avoid instantaneous non-compliance for loss of Interpersonal Communications and/or alternate Interpersonal communications.</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity;</p>

Organization	Yes or No	Question 6 Comment
		<p>therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>R1 - In later requirements it is proposed that the entity “...shall designate an...” It is suggested that for consistency and audit ability, this concept be used for R1, R3, R5, R7 and R8.</p> <p>In addition, the qualifier of “primary” should be used such that the requirements read:</p> <p><i>“... shall have designated, primary Interpersonal Communications capability with the following entities:”</i></p> <p>Although it is appropriate that “Alternative” be capitalized since it is used in a defined term (i.e. Alternative Interpersonal Communication”) that bounds acceptable alternative methods , we do not see the need to capital “primary.”</p> <p>Each entity listed must “have” an Interpersonal Communication capability and for Alternative Interpersonal Communication capability able to “designate” the alternate. The team established these requirements to provide flexibility to the industry. No change made.</p> <p>R9 - The requirement is unclear if the required monthly test is a general functionality test or if there is the expectation of testing the designated Alternative Interpersonal Communications with all of the entities defined in the sub-requirements of R2, R4, and R6.</p> <p>There is no expectation of testing the primary Interpersonal Communications - is this intentional or an oversight?</p> <p>Although functional testing of this should be done as a normal course of business, should an explicit test be required with each entity in the sub-requirements of R1,</p>

Organization	Yes or No	Question 6 Comment
		<p>R3, R5, R7 and R8 to insure, for example, that all the phone numbers are correct?</p> <p>COM-001-2, R9: The requirement is to initiate repair or designate an Alternative Interpersonal Communication capability within two hours. The requirement is not to have the repair completed within two hours. The requirement recognizes that the entity may use its Alternative Interpersonal Communication capability now as its Interpersonal Communication capability, and then, if it decides to do so, designate another, if you may, “new” Alternative Interpersonal Communication capability. This is not required, but is an option that the entity can consider. The entity may already have a maintenance and repair agreement in place that will respond and repair the failed capability. No change made.</p> <p>R10 - The following scenario seems plausible:</p> <p>The Interpersonal Communications fails and is detected at 14:00 and gets fixed at 14:35. It lasted more than 30 minutes but is fixed. As written the requirement would require the responsible entity to notify entities identified in R1 through R6 by 15:00 (i.e. 60 minutes from detection) even though the problem no longer exists. Is that the expectation?</p> <p>The RCSDT proposes that upon detection of failure that continues at least 30 minutes, starts the 60-minute clock. The 30 minutes allows an entity time to restore or determine if they can restore its Interpersonal Communication capability before the clock starts. No change made.</p> <p>Does COM-001 apply only to primary control centers or back-ups, per EOP-008, as well?</p> <p>The RCSDT reviewed both EOP-008-0 and EOP-008-1, which is subject to future enforcement. In either version, the team believes there is no need to add additional language to the standard. No change made.</p> <p>The RCSDT believes that prescribing a device or medium would limit an entity; therefore, “capability” is used to avoid being prescriptive and to provide flexibility. This was not intended by the drafting team. The intent is to give the entity the</p>

Organization	Yes or No	Question 6 Comment
		<p>flexibility in meeting the requirement. A loss of Interpersonal Communication capability is covered by R10, notification of Interpersonal Communication capability failure. No change made.</p> <p>M9 reads <i>“at least on a monthly basis.”</i> We suggest that this be changed to <i>“at least once per calendar month”</i> as written in R9. This change should also be corrected in the VSLs.</p> <p>The RCSDT agrees and the language in M9 has been changed to agree with the language in R9 and the VSL.</p> <p>M8 - We suggest removing the second <i>“that”</i> in the first sentence of the measure.</p> <p>COM-001-2, M8: The RCSDT agrees and the language in M8 has been changed to delete the additional <i>“that.”</i></p> <p>M10 - We suggest this be revised to coincide with changes made in R10 (deleting impacted and adding as identified in Requirements R1 through R6), therefore M10 should read:</p> <p><i>“Each Reliability Coordinator, Transmission Operator, and Balancing Authority, shall have and provide upon request evidence that it notified entities as identified in Requirements R1 through R6 within 60 minutes of the detection of a failure of its Interpersonal Communications capabilities that lasted 30 minutes or longer. Evidence could include, but is not limited to dated operator logs, dated voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent evidence. (R10.)”</i></p> <p>The word <i>“impacted”</i> was removed in previous postings. For further clarification, the RCSDT has modified M10 to remove the word <i>“impacted”</i> to be consistent with R10. For additional clarity, the RCSDT also changed the phrase in R10 and M10, <i>“R1 through R6”</i> to <i>“R1, R3, and R5,”</i> to clarify that it applies to the capabilities with the RC, the TOP and the BA.</p> <p>M12 needs to be removed.</p>

		<p>The RCSDT appreciates your comment and has deleted Measure M12 that was left in error.</p> <p>We question why the first paragraph of Section 1.3 - Data Retention has been included in each of these three standards. We suggest that it should be removed from each standard.</p> <p>The RCSDT thanks you for your comments. The Data Retention language has been updated to be consistent with the Standards Drafting Guidelines.</p> <p>COM-002-3 Comments</p> <p>R2 - We recommend that the following phrase (in quotes) be added to R2:</p> <p>Each Balancing Authority, Transmission Operator and Distribution Provider that is the recipient of a Reliability Directive shall repeat, restate, rephrase or recapitulate the Reliability Directive “immediately upon receiving it.” As written, there is no limit as to when the entity must repeat it (i.e. they could wait 2 hours)The Standard is not clear as to what each entity is to do when more than one entity receives a Reliability Directive at the same time (e.g. during a RC area teleconference call). For example, is a roll call of receiving entities expected to be held so that they individually can repeat, restate, rephrase or recapitulate the Reliability Directive followed by individual confirmation required in R3?</p> <p>The requirement is aimed at being a performance-based requirement and states a description of “what” communication must take place, but does not prescribe “how” the communication is to be made. Adding the suggested phrase “immediately upon receiving it” introduces the ambiguous term “immediately,” for which there is neither plain meaning nor simple explanation. What must happen is that the recipient must respond in such a way that the issuer may determine whether the message has been properly understood. The RCSDT concludes that the proposed language gives plain meaning. No change made.</p> <p>IRO-001-3 Comments</p>

Organization	Yes or No	Question 6 Comment
		<p>We recommend that where the verb “direct/directed” or noun “direction” is used in Purpose, R1, R2 and R3, that it be replaced with the verb “instruct/instructed” or noun “instruction”, as appropriate. This would help the industry avoid confusion often referred to as “big D” or “little d” directives. It is noted that the term “Reliability Directive” does that to a great degree but avoiding the verb/noun “direct/direction” would augment the difference.</p> <p>The RCSDT feels the use of “direct” and “directed” is consistent with the purpose and application of those terms in other standards. No change made.</p> <p>R1 - At what point in time is “identified” referring to in “...to prevent identified events or...?” Is it referring to current or future events? One might assume both since the “Time Horizon” is defined as Real-time Operations, Same Day Operations and Operations Planning, but the requirement may be enhanced if explicitly stated (“...to prevent events identified in real-time or in the future or to mitigate the magnitude...”).</p> <p>The context of “identified” is when a set of system conditions is recognized that could lead to an Emergency or Adverse Reliability Impact, which may require action. See standards IRO-008 and IRO-009. No change made.</p> <p>For clarity, the scope of the authority should be limited to the Reliability Coordinator Area (“...that result in an Emergency or Adverse Reliability Impacts within its Reliability Coordinator Area”). As written, it implies the authority should extend outside its RC Area.</p> <p>The RCSDT believes that limiting the scope to the RC’s area would be too limiting and not account for potential conditions where an adjacent RC may have lost its wide-area view and requests the assistance of another RC or vice-versa. No change made.</p> <p>R2 - We question the phrase “physically implemented” and recommend that the intent be clarified in the language.</p> <p>The RCSDT believes there may be conditions where an entity may not be able to physically implement the direction. For example, an entity that does not have the</p>

		<p>right to access certain equipment or cannot manually operate a broken apparatus. We feel the proposed language achieves the intended purpose. No change made.</p> <p>We note the following comment and response posted under Consideration of Comments on Initial Ballot - Reliability Coordination (Project 2006-06) Date of Initial Ballot: February 25 - March 7, 2011:</p> <p><i>“IRO-001 R2, R3, and R4 have replaced “Directives” with the word direction in lower case (while it appears that “Directives” is a subset of “directions”). We believe that this muddies the waters and could bring numerous conversations and dialog into scope unnecessarily. The end result is that the RC has the right to issue and use “Directives” and anything short of this could just be communications. For example, a number of entities that are Reliability Coordinators also facilitate energy markets. There are many communications related to markets that probably should be out of scope with respect to the standards. Furthermore, it might not be clear what role (e.g., Reliability Coordinator, market operator, etc) the staff at these entities is fulfilling. Response: IRO-001 is written to cover both typical daily operating scenarios and also emergency scenarios. The required performance encompasses issuing and responding to Reliability Directives as well as other directions. The requirement language specifically ties back to Requirement R2 which states that the RC “shall take actions or direct actions, which could include issuing Reliability Directives.” This is the “direction in accordance with Requirement R2” stated in R3 and the “direction in accordance with Requirement R3” stated in R4.”We believe the entity’s comments remain valid and the response provided by the SDT does not address all aspects of the concern.</i></p> <p>The word “direction” connects with the language in the R1 (act or direct). Reliability Directives is a subset of “direction.” No change made.</p> <p>We suggest that the language be changed to “Reliability Directive” consistent with COM-002.</p> <p>R3 - The requirement states the responsible entities shall “inform” its RC when</p>

		<p>unable to perform as directed but it is unclear when the notification needs to take place. Although the term “as soon as practical” may seem be un-measurable, as written now there is no time deadline to perform the notification - i.e. it could be 4 hours later after recognition.</p> <p>The proposed requirement uses the term “upon recognition.” No change made.</p> <p>M2 - need to add the following words “compliance with, physically, unless” which were included in R2, therefore M2 should read:</p> <p>The RCSDT thanks you for your comment and has added the word “physically” to the IRO-001-2, Measure M2.</p> <p><i>“Each Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator and Distribution Provider shall have and provide evidence which may include, but is not limited to dated operator logs, dated records, dated and time-stamped voice recordings or dated transcripts of voice recordings, electronic communications, or equivalent documentation, that will be used to determine that it complied with its Reliability Coordinator’s direction(s) per Requirement R1 unless compliance with the direction per Requirement R1 could not be physically implemented or unless such actions would have violated safety, equipment, regulatory or statutory requirements. In such cases, the Transmission Operator, Balancing Authority, Generator Operator, Interchange Coordinator or Distribution Provider shall have and provide copies of the safety, equipment, regulatory or statutory requirements as evidence for not complying with the Reliability Coordinator’s direction”</i></p> <p>(R2) “Section 1.3, the second bullet; need to add calendar to 12 calendar months.” The comments expressed herein represent a consensus of the views of the above named members of the SERC OC Standards Review group only and should not be construed as the position of SERC Reliability Corporation, its board or its officers.”</p> <p>The RCSDT appreciates your comments and conforming changes have been made to the Data Retention section.</p>

<p><b>Response:</b> See response above.</p>		
<p>Pacific Northwest Generating Cooperative</p>		<p>The PNGC Comment Group believes COM-002-3, R2, lacks justification for applicability to a Distribution Provider (DP). RCs in the WECC region do not communicate reliability directives to DP only entities. Having this requirement apply to DPs seems to indicate that we will need 24/7 communications capability to record and respond to calls that will never come in order to satisfy the requirement with no improvement to reliability. The SDT’s response from the last round of comments:</p> <p>“It is the expectation that an issuer of a Reliability Directive would request a return call by the Distribution Provider operating personnel, then issue the Reliability Directive.” Nowhere is this expectation provided for in the written standard. If the issuer of a reliability directive has already called the DP, are they going to then re-issue the reliability directive after the DP calls them back?</p>
<p><b>Response:</b> In COM-002-3, the DP may or may not receive a Reliability Directive from the RC; however, in the case they do, they are required to comply with the requirement. The measures do not require recordings. Evidence may include things like dated operator logs. No change made.</p>		
<p>Northeast Power Coordinating Council</p>		<p>For COM-001:</p> <p>1. R1.2 and R2.2: The phrase “within the same Interconnection” is improper; it needs to be removed. RCs between two Interconnections still need to communicate with each other for reliability coordination (e.g. between Quebec and the other RCs in the NPCC region to coordinate reliability issues including curtailing interchange transactions crossing an Interconnection boundary). The SDT’s response to industry comments on the previous posting that the phrase was added to address the ERCOT situation (that ERCOT does not need to communicate with other RCs and that such coordination takes place between TOPs) leaves a reliability gap.</p> <p>Requirement R1 addresses a reliability need for adjacent Reliability Coordinators synchronously connected within the same Interconnection to have Interpersonal</p>
